3296. Everything that comes from the Mines Office bears Mr. Gilliat's endorsement? At page 192 of the Mines papers we have Mr. Keighran, Overseer of Public Watering Places, summoning a lessee for neglecting the condition of his lease; and Mr. Gilliat, in a minute upon Mr. Keighran's report, traverses the decision of the bench in the case and states:—"The conditions were the same as when he executed his lease, except that the Willandra Creek was then empty." I mention this as simply showing that there was no permanent water there at all, and that, practically, there is no permanent water in the creek; inasmuch as the water comes down there when the Lachlan is about two-thirds full, and would then run to waste if it were not for certain efforts made by the lessees; but even by these efforts, permanent water has not been made in the creek. The next case is the Cobham Lake Tank; it is objected to on account of the uncompleted works being submerged. Well, I consider the fact of these works being submerged as being rather an argument in favour of the selection which has been made of the site, inasmuch as it proves the spot selected was the natural conserving ground, while the data that have been collected and obtained in regard to the filling of this lake, prove that is only at long intervals that the lake itself can be relied on for any comparatively permanent supply.

3297. Are you aware that though some of these lakes have been dry for many years, after they have once become filled, that the water, resting for some time, eventually becomes so salty that it cannot be used? Yes.

3298. Would not that apply to Cobham Lake tank? No; because the water would be prevented from resting to the extent which would allow it to become salty. The water in the body of the lake, when the lake is full, is quite fit for human consumption; and the water is actually conserved within the boundaries of the embankments within the lake.

3299. When the water rests, the last water which remained in the lake would go into the tank, and would become so impregnated with salt that it would not be fit for use? I do not think so; the conditions that existed at the time this tank was made do not exist now. The water will be admitted into this tank by an inlet pipe, and the consequence is that we can shut it off if we find it necessary to do so. Consequently, we can have the water in a state of greater purity in the tank than it would be if it were allowed outside in the bed of the lake, exposed and absorbing saline matter for a long time.

3300. Are not the beds of some of these so-called lakes of very porous soil, and undesirable places as sites for tanks? There are some cases, I admit, where you will find drift in the lake beds. In fact, in this case towards the northern end, there is a salt shallow drift; but in this particular spot where the tank has been placed, we have not come upon any drift in the excavation so far as it has been carried out.

3301. Mr. Woore.] Whereabouts is the tank situated in the lake? It is towards the south-eastern end, I think.

3302. Chairman.] It has been suggested that in making tanks on the edge of these lakes you do not get good hard firm soil; and although the catchment may be easy, it is contended that it is an error in the choice of sites not to sink in good hard soil? The site of this tank was not selected by me; and the tank has been constructed partly since I have been up here. I cannot swear to this, but Mr. Hanna will be here and he will tell you positively that the tank was constructed on the edge of the lake. But I do not know of any case where works have been constructed on the edge of these cane-grass swamps; and certainly no case where a tank has been constructed in them. As to the Dry Lake tank, the same argument has been advanced against it—that it is submerged; but that particular site, although not recommended by Mr. Gilliat, for the immediate construction of a tank—of course it is understood that Mr. Gilliat is an officer of the Mines Department—was named by him as being a place that would make a splendid site for a tank. One reason for constructing a tank there was that at the time of my visit special instructions were given to arrange for works along the road. The only watering place in the locality was in the hands of a private owner—a man by the name of Smith—and this man had the command of the water. I thought it a rather injudicious thing that the public should be at the mercy of a man who, although he made professions that he would supply water at reasonable rates, still had the power in bad seasons to demand any rate that he thought fit, or to refuse the water altogether. That tank, I may say, has been completely submerged—the embankments and everything else being out of sight; a state of things which according to the evidence of the residents in the district was never known before. Seaville's tank was a similar case, and the same argument was urged against that. In that case I must leave the statement to the local officer, as I never saw the site of the tank. Then there is the Booorbarban tank, on the road from Deniliquin to Hay. The objection to that is its proximity to a water-hole. That work was recommended by Mr. Gilliat in one of his annual returns and in his recommendations for works in 1882.

3303. Mr. Gilliat, I think, says that he generally recommended sites to be adopted within certain limitations. He might choose a particular site, but perhaps you would not sink the tank within a mile or a quarter of a mile of it; and he states that that is where the discrepancy arose? If Mr. Gilliat meant that we should sink a tank in the creek, then I admit that it is not sunk there; but it is sunk on the overflow from the creek, and within about 100 yards of the creek itself.

3304. Are you aware that Mr. Gilliat has objected to the rejoinder made by the Works Department that when he selected a site that site was not adhered to, and therefore the remark about the injudicious selection of sites did not apply, because his selections were departed from to a certain extent by the Works Department? The actual spot where these works were placed was chosen, I will admit, by the Works officers themselves, on the recommendations of the Mines officers as to the necessity of water in the vicinity.

3305. The next case is that of the Peri Springs? I have never been up the road, so cannot say anything about that; but I have seen the Tarella tank since it was started; the site of this I fixed myself. The objection to this tank is presumably that there is permanent water close by.

3306. Mr. Woore.] So that the Works officers were responsible for the actual spot chosen? Yes; the Works

Works officers were responsible for all constructive details, which includes the selection of the best and most efficient catchment within a reasonable distance from the point necessary to properly divide the stages of the stock route. The objection to the J.K. well is exactly the same; that it was placed in proximity to permanent water. At the time I selected the site I did not consider that it was desirable to interfere with the water that had been conserved by the Crown lessees, more particularly in a district where water was more valuable than in any other part of Riverina. The lessee of the Wannaminta run offered to improve the works for the conservation of water at that particular spot to allow travelling stock to water there, on condition that he should be paid 6d. per cubic yard for the earthworks involved in carrying out these improvements. It was decided or recommended by the Works Department that, in the interest of the travelling public, an independent watering place should be provided, and the decision was endorsed by the then Minister for Mines, Mr. J. P. Abbott, in the following minute, bearing date 3/7/84:—"I think tenders should be accepted for a well, as by this means a more permanent water supply is likely to be had, and entirely independent of the lessee." The same remark applies, as I have said, to the Tarella tank.

3307. Does the minute of Mr. Abbott apply to that particular case, or does it apply generally? It applies to that particular case, but the principle was applied generally—that principle has been a guide to the Department in all subsequent cases. It covered our action. But there are no other cases except this at which it occurred at the time, with the exception of the Roto well. But I have proved by Mr. Gilliat's own statement that the creek was dry at the time the work was handed over to the lessees.

3308. *Chairman.*] Have you had anything to do with the sinking of the Old Gunbar well? In 1882 I was instructed to examine the road from Carrathool to Hillston and select sites for watering places. I made certain alternative recommendations, and from the evidence which I obtained during my trip I recommended that wells should be constructed, because I thought there was a very reasonable chance of obtaining good stock water, as these reports show:—

Sir,

Hillston, 29 March, 1882.

I have to forward the following report, on my examination of the road from Carrathool to Hillston, with a view to the selection of sites for tanks on this line:—

14 miles from Carrathool.—The "Dry Lake" is a very suitable situation for conserving water, and a tank here would, if the ground prove retentive, provide permanent water. The local drainage from the plains is very considerable, and in wet seasons when the Merool is full this swamp is fed by back water from the creek.

2 miles from Carrathool.—About 1 mile south of the "Corner" the Merool Creek crosses this road. This would be a very good site for a tank. The local drainage is not as good here as at Dry Lake, and the supply would be more dependent on waters brought down the creek. The Merool in this locality is more distinguishable by the belt of timber along its course than by any marked depression. There is however a considerable width of waterway here in wet seasons, about 1,500 yards. Very good water has been obtained on this creek in a shallow well about half a mile from the road, and it is very probable that similar water could be obtained at the Dry Lake.

36 miles from Carrathool.—The Burnt Stump, or Gunbar Swamp, is crossed by this road, and is a very good site for a tank, as there is a very good local drainage, which in wet seasons would be supplemented by water flowing from a watershed extending some 2 or 3 miles. In ordinary seasons this is collected by a chain of swamps, but in more favourable times they overflow, and then our proposed tank would, if not otherwise filled, have the benefit. Between this site and the previous one good water has been obtained in several places at about 15 feet. The supply is generally very good, and the water suitable for human consumption.

At Gunbar Hotel, one of these wells has watered 300 head of horses and cattle during the drought, and on a selection 2 or 3 miles south of it a similar shallow well has yielded 10,000 gallons a day.

I am informed that the level of the water in these wells, which is about 11 feet below the surface, has been but little affected by the long continuance of dry weather.

39 miles from Carrathool.—About a mile and a half north of Old Gunbar station there is another swamp, which offers a most favourable site for a tank. This is also a promising locality for a shallow well.

52 miles from Carrathool.—M'Kinlay's. At the public-house here a well has been sunk in which a strong supply of good water was obtained at a depth of 120 feet—the water rising between 20 and 30 feet.

58 miles from Carrathool.—6 miles from M'Kinlay's there is a very favourable site for a tank in a swamp near the Crow's Nest. Watermarks are visible on the trees growing in this basin which prove that from 2 to 3 feet of water collects in the wet seasons, and as the area is very considerable this would give an ample supply for storage.

72 miles from Carrathool.—The Lachlan River is touched about 6 miles below Hillston, which is distant about 78 miles from Carrathool, and 80 miles from the Murrumbidgee.

After careful observation and inquiry, I have to make the following recommendations for your consideration, involving, as they do, a departure from Mr. Gilliat's proposal for watering this line.

Before any works are let I would strongly recommend trial holes being sunk at the following places:—

Dry lake, 14 miles from Carrathool.

29

"

"

25

"

"

Swamp 58

"

"

In the event of water being obtained at the usual shallow depth of from 15 to 18 feet, I would recommend tanks being sunk to tap the drift—to be 20 yards by 3 yards in the bottom, with batter of 1½ to 1. This will expose a large area of drift, and will I feel assured give a supply that will prove fully equal to the demands made on it by travelling stock. I would also recommend that the water be lifted into service tanks of similar construction to those built by this Department for the wells on the Booligal and Wilcannia road. Stock to be watered from troughing fed from this service tank.

In cases where a supply does not exist near the surface good water is found at depths ranging from 50 to 120 feet, and this being the case I am of opinion that wells will, in this district, be equally serviceable as tanks, and at the same time more economical.

If you do not approve of either of these proposals, I have to recommend tanks at Dry Lake, at Gunbar Swamp, and at the swamp near the Crow's Nest.

These works will divide the distance from the Murrumbidgee to the Lachlan into four stages, as follows:—

| | |
|---------------------------------|-----------|
| 1st. To Dry Lake | 16 miles. |
| 2nd. To Gunbar Swamp | 22 " |
| 3rd. To Crow's Nest Swamp | 22 " |
| 4th. To Lachlan River | 14 " |

In the event of your favouring any proposals for wells, either shallow or deep, Mr. Gordon, who has accompanied me over the line, should be instructed to at once let the sinking of trial shafts, and if you decide on constructing tanks, he should at once call for tenders for excavating them.

Three contractors accompanied me as far as Gunbar; there two of them left, and I cannot recommend the acceptance of any of the offers made. I attach the tenders for your information. I am strongly of opinion that the shallow-seated drift I have drawn your attention to can be most successfully utilized, if a sufficient area of it is exposed.

I would also call your attention to the possibility of making these drifts still more valuable by assisting nature, and sinking soakage shafts in suitable sites to more fully allow the surface waters flowing into them during storms and wet seasons. In many localities dry drifts are to be found near the surface, underlaid and overlaid by impermeable clay-beds, and I think it well worth, not only consideration, but practical trial, whether by such soakage pits water cannot be stored near to, but below, the surface.

In

A. P. Wood.
16 Mar., 1888.

In lifting water from our wells I do not think we have sufficiently considered the importance of wind power as an agent. This, with other questions bearing on our policy in this country, will be treated on in my general report.

The Commissioner for Roads, Sydney.

Sir,

I closed my report of yesterday's date without giving any estimate of probable cost of proposed works. This information is given below:—

| Tanks. | |
|-----------------------------------|------------|
| 1. Dry Lake | £1,500 0 0 |
| 2. Gunbar Swamp | 1,500 0 0 |
| 3. Crow's Nest Swamp | 1,500 0 0 |
| | £4,500 0 0 |
| Wells. | |
| 1. Dry Lake..... | £800 0 0 |
| 2. Gunbar Swamp | 800 0 0 |
| 3. Crow's Nest Swamp | 800 0 0 |
| | £2,400 0 0 |
| Tanks supplied under ground. | |
| 1. Dry Lake..... | £700 0 0 |
| 2. 28 miles from Carrathool | 700 0 0 |
| 3. 42 miles from Carrathool | 700 0 0 |
| 4. 58 miles from Carrathool | 700 0 0 |
| | £2,800 0 0 |

This last system will, I think, be found practicable at three of the above places—where not practicable, wells are almost a certainty, and that with water fit for human consumption.

If tanks are decided on, the question of type might be left for consideration, as at present I am still in favour of lifting the water; and on this point my views are borne out by those of parties I have spoken to on the matter.

Tenders might be invited for excavating the storage tank, and for running the earth to bank at a distance of 11 yards in the clear from top of excavation to the edge of bank. This bank is not necessarily for use to increase storage, but forms a most valuable check on evaporation. While the work of excavation is in progress the other details might be under consideration.

The Commissioner for Roads, Sydney.

ARTHUR P. WOOD,
10/5/82.

Works on Road from Carrathool to Hillston.

I have given Mr. Wood's valuable report on the different classes of works for water supply between Carrathool and Hillston most careful consideration.

In making his recommendation, Mr. Wood's remarks, "that they involve a departure from Mr. Gilliat's proposals." The matter is not of great importance, perhaps, but I may say that it was not until after my schedule of works for the current year was prepared that the urgent necessity of these works was pressed for consideration on the Department, and that my recommendation of tanks (which is what I presume Mr. Wood alludes to) was made before the road had been examined; of course subject to the information I should subsequently obtain.

Since then I have had an opportunity of seeing a portion of the road and obtaining the opinion of gentlemen well acquainted with the country and of one resident upon it, and have ascertained that, in his opinion, good water, in a very fair supply, may be counted on at a depth of from 60 to 100 feet. From pressure of other work I have been unable to give this question earlier consideration and had proposed deferring it until I had made a personal examination of the road. But as the Commissioner and Engineer for Roads and Bridges pressed for immediate action, and I am deeply impressed with the importance of this Department causing no delay in the operations of the Department of Public Works, I beg leave to submit at once the following remarks for the consideration of the Hon. the Secretary for Mines:—

Mr. Wood suggests three plans for watering this line of road,—two with tanks, and one with wells.

In my report of 1880 I stated that "where an ample supply of good water can be obtained at a moderate depth, wells with proper whims, troughing, &c., are probably the cheapest and most reliable form of work for water supply."

The information I have obtained agrees with that of Mr. Wood's—that sufficient supply can be gained at a moderate depth. I should hesitate about depending on the supply from a shallow shaft, but would urge that in each case the shaft should be sunk until the stronger supply is struck at from 60 to 100 feet.

The sites named by Mr. Wood had all been mentioned to me as suitable, and are as follows:—

| | |
|---------------------------------------|----|
| Carrathool to Dry Lake, 14 miles..... | 14 |
| " Burnt Stump Swamp, 58 miles..... | 22 |
| " Crow's Nest, 58 miles..... | 22 |
| " Lachlan, 72 miles | 14 |

I would, therefore, submit that the request of the Commissioner—that the sites for these works be approved of—should be complied with, and that steps should at once be taken to secure the reserves at the points named.

HARRY GILLIAT, 10/5/82.

3309. *Chairman.*] You came to the conclusion, after travelling that road, that wells would be better at Dry Lake, Gunbar, or Burnt Stump and Crow's Nest? Yes; the sites of these works having been referred to the Mines Department were approved of by Mr. Gilliat in his report of 10/5/82.

3310. Then Mr. Gilliat also came to the conclusion that the sites were proper ones, and that wells were suitable, and that water might be obtained at depths from 60 to 100 feet? Yes; the local officer had a trial shaft put down at the Burnt Stump or Old Gunbar, and a sample of water was forwarded to the office. The trial shaft was put down to a depth, I think, of 95 feet—I will not be certain as to the exact depth—and the water was approved of. It was never referred to the Mines Department, but the water was so good that I would not object to drink it myself, and on the strength of the sample the main shaft was sunk.

3311. How far away was the main shaft from the trial shaft? Well, to the best of my recollection I think it was about 100 feet, and the water we then obtained is, as we admitted, unfit for stock.

3312. How do you account for this discrepancy between the two samples of water obtained—one from the trial shaft and the other from the main shaft? It is certainly very difficult to account for; but it is an extraordinary fact that in the country I speak of you may put down a shaft in one place and get water utterly unfit for stock, while you may go 100 yards away and obtain water that is fit, not only for stock, but for human beings as well.

3313. And in this instance you only went 50 yards away? Yes. I know another case at Teryaweynia, where there was an accommodation house. The owner sunk in front of his house, and obtained water which was utterly unfit for human consumption, while in a shaft put down not quite 100 yards distant at the back, he obtained very good water indeed.

3314. Another suggestion that has been made is, that the contractors are so anxious to obtain this work that they will substitute good water for bad water in order to be allowed to put down a well at some particular place? Such a thing would, I admit, be quite possible. 3315.

3315. *Mr. Woore.*] But, at any rate, you were misled by being told that this water came from the bottom of the trial-shaft? I do not admit even that, because it is quite possible that good water may have been obtained in the trial-shaft, and that the main shaft may have given bad water. A. P. Wood.
16 Mar., 1888.

3316. But, at all events, you were misled into sinking a main shaft by the fact of your being told that good water had been obtained in the trial-shaft? Yes.

3317. *Chairman.*] In those other wells that have the reputation of being too salty even for stock, how were they sunk;—does the same remark apply to them as to the Old Gunbar or Burnt Stump well? I do not admit the fact at all, Mr. Chairman; at the Holy Box well a trial-shaft was put down—I am speaking now from reports—I was not present, and cannot speak from my own direct knowledge—a trial-shaft was put down, and fair stock water obtained. The main shaft was then put down, and similar quality of water obtained. After transfer to the Mines Department, the well was condemned as being unfit for consumption by stock; and after the lapse of some time the Works Department started to put a tank down in the immediate vicinity to supply the public wants at that particular stage. After we had started the work we applied to the Mines Department to be allowed to use the material in the top works to effect a saving in the construction of the works then in hand. When the well was handed back to the Works Department I instructed the contractor for the tank to have it thoroughly baled out in order to test the quality of the water. This was done, and on my reaching Wilcannia about a week afterwards I received a telegram from the contractor and from the local road superintendent to the effect that the stock then passing had been successfully watered there. On the strength of this report the tank works were stopped; the well was further tested; further equally favourable reports were received, and ultimately the tank works were abandoned. Since then there has been a conflict of opinion between the two Departments as to whether the water is or is not fit for the use of stock.

3318. *Mr. Woore.*] Of your own knowledge can you say that the water has since been used for stock purposes almost continuously? No, not continuously. It has been used, though. There has been a man left in charge of the place, and the water has been ready for anyone to use; but I cannot say that it has been continuously used.

3319. Have travelling stock watered there just the same as at any other public watering place? I cannot say that of my own knowledge.

3320. *Chairman.*] Is it a fact that the water is so salty that it destroys the iron troughing? I cannot say that of my own knowledge, either; but, in fact, any water, unless it is absolutely filtered, will destroy ordinary galvanized iron if you give it time. I am not speaking in that restricted sense; of course all water contains minerals which will destroy iron in time.

3321. *Mr. Woore.*] It is alleged that a lot of salt could be scooped up in the troughs? Yes; I saw it in the main tank, presumably where water had been left for some time and evaporated, and there was a lot of salt in the bottom of it. We could furnish you with a sample of the water taken from the Holy Box well, which was taken out in the presence of one of our officers. It is now in Mr. Bennett's office, and I have drunk it myself, and have lived for many a long day on worse water. In my opinion it is equally as good as the water at the Jumping Sand Hill, and that was always considered good water.

3322. *Chairman.*] What about the Dolmoreve and Willandra wells? I will take the Dolmoreve well by itself. I do not know where the line is to be drawn between what is good stock water and what is utterly bad stock water. I will simply instance the report made by one of the overseers of public watering places, who said:—"I boiled some of the water, and tasted it after it became cold; also made tea of it. In each of these cases it was quite undrinkable. With constant baling, however, I cannot understand why it should be unsuitable for stock. I gave this as my opinion to Mr. Lindsay, the manager of Til Til station, who informed me that some of the wells that their sheep watered at were no better, if even as good, as the Dolmoreve; and that if the Government would let him water his stock at it, instead of baling and letting the water run to waste, he would gladly avail himself of it, and would not be afraid of his sheep being injured in any way from drinking the water. It is now nineteen years since I first went to the Kilfera back-blocks, were I remained for about two years, and was at the sinking of several wells, the water being quite as brackish as Dolmoreve well, and decidedly more worse-smelling, yet the sheep drank freely of the water, and without any ill effects; in fact, some of this description of water at the homestead well (Kilfera) was condensed at the well by a condenser, and turned out quite drinkable for human beings, thus saving long cartage of water. In reference to the Dolmoreve well, I would respectfully suggest that if the water as at present drawn is not considered by the general stock-travelling public to be sufficiently good for watering purposes, that the well should be constantly baled dry, and boring rods used to deepen the present shaft, on the chance of striking fresher water. Should the new supply turn out no better than the old, I would then respectfully suggest that trial bores be sunk in the vicinity of the Dolmoreve well, so that, if successful in securing better water, the whole of the Dolmoreve whim, plant, may come in, with short distance carting for the new well." Of course, I do not pretend to be an expert with regard to stock.

3323. Then about the Willandra well? Remarks have been made about this well before it has been finished. Objection is now taken to the site.

3324. They state that this well was not asked for by the Mines Department? The well has not yet been completed, nor handed over, and therefore the Mines Department have not any right to say anything about it. We have had a lot of trouble with this well on account of the drift, &c. As to the other charges in connection with this well, I think I can disprove them under another heading. It was stated by Mr. Gilliat in his evidence that only one work was recommended between Clare and Balranald. He says:—"On the road from Balranald to Ivanhoe the water supply is required chiefly for carriers and their teams, and the works do not need to be on so large a scale, or so close to each other, as upon roads more frequently used by travelling stock. I am of opinion that, if the proposed tank at Clare is completed, one other, half way from Clare to Ivanhoe, will be sufficient." The statement is repeated on page 27 of the blue book before the Commission; yet in Mr. Gilliat's recommendations for works for 1884, which guided us in constructing these watering places, he recommends two works, both of 20,000 cubic yards capacity. One of these is 9 miles north of Clare, and another 10 miles south of Kilfera. [The witness then put in evidence the following]:—

Pumps for Tanks.

(83,383 A.)

I SUBMIT for the consideration of the Commissioner the following memoranda bearing on the application of pumping gear to the tanks now being constructed by this Department.

The designs lately prepared for these works provide for a M'Comas water lift or chain pump—this is to be fixed in a timbered shaft, communicating by a timbered adit with the main reservoir. Department of Public Works.
Tenders

A. P. Wood.

Tenders having been invited for some of the proposed works, it has been found that the cost of the timber-work required ranges from £150 to £300.

16 Mar., 1888.

Apart from the cost, there can be no doubt that so much timber-work in this submerged work is an element of weakness.

This has never been disputed, but it was considered that other descriptions of pumps which would have obviated the necessity for all this timber-work would have been more liable to damage—would have required skilled labour to repair them, and would possibly be out of order at the very time they were most required.

Further consideration of the question, and also the further development of the country, the railway extensions rendering transport of such appliances easier, and the increase in traffic and settlement, facilitating repair, and making the works more necessary, has led to the conclusion that the risks of failure in the timbered shaft and adit, combined with the great cost of same, balance or more than balance the objections to the use of higher class pumping gear.

The decision as to the class of pump to be employed must be guided by the varying conditions surrounding each work. Where timber is readily obtained, it might be advisable to employ steam, which has the advantage of compact power, and of being available in the worst seasons, when it might be impossible to keep horses to do the work.

If steam power is used it would be well to consider whether under certain conditions its employment should not be extended, and the water collected outside the embankments, pumped over them. This course would require the use of more powerful pumps, but would be a source of very considerable economy, and would reduce the cost of storing the water by 40 to 50 per cent. In addition it would make these works more reliable during long-continued dry seasons.

This plan could be adopted in cases where tanks were constructed in shallow swamps and hollows, where the banks of the basin are not of sufficient height to admit of water being collected by catch drains before reaching swamp, and brought by gravitation over the embankments.

The same pump, could, if required, be used to supply service tank, but as long as water was stored in main tank above the ground level, there would be no necessity for this, as the troughing could be fed by gravitation.

When pumps are used for the purpose, a small centrifugal will probably be found most suitable for the work.

Where the natural features of the ground do not favour the necessary storage of water outside the tank embankments to pump into the tank, or where they are favourable for filling the tank by gravitation over the embankments, then a large size pump will be unnecessary, and a small "special" to deliver two or three thousand gallons an hour will be sufficient, and will prove best adapted for the work of supplying the service tank and troughing.

Where timber is not available within a reasonable distance steam power is out of the question, and either wind or horse-power must be utilized for lifting the water.

Wind-power should prove the most economical in its action, and in open plain country where timber for steaming cannot be obtained, the most favourable conditions exist for steady and constant winds.

Should it be decided to employ wind-power in any of the many cases where it could be applied, larger service tanks than those needed when steam or animal power is used would have to be constructed, so that a sufficient quantity of water could be stored for feeding the troughing to meet the demands of travelling stock when wind was wanting, or of too little force.

This drawback would not so much affect windmills employed for pumping water into main tanks.

The use of horse-power must for practical reasons be more limited than either steam or wind, and could not be successfully employed for aiding in the storage of water, as the number of horses required would be too great, and the conditions surrounding their maintenance of a very uncertain character.

For the limited pumping required for supplying stock with water drawn from the storage tank, horse-power can be successfully applied, though as previously remarked they might when most wanted be found too weak for their work, or possibly be lost.

The use of pumps in connection with our wells is also worth consideration, and a trial should be made to test the advantages attached to them.

The cost of sinking a shaft for a pump would be much less, and existing top-works (whim and poppets) could be dispensed with. This would go a considerable way towards meeting the cost of pumping gear, which it cannot be denied should be a great improvement on the primitive whim.

Mr. M'Donald might be instructed to assist in the selection of suitable machinery and in preparing estimates of probable cost of all or any of the schemes submitted, embracing the application of steam, wind, and horse-power.

The Commissioner for Roads, Sydney.

ARTHUR P. WOOD.

Mr. M'Donald to assist as far as possible; but as I have already instructed, I think we should first try a horse or wind pump and a steam special pump at a suitable place, and as waiting to design windmill may delay, Messrs. Wood and M'Donald should carry out the verbal instructions already given to find out the most suitable pump and horse gear, and the most suitable boiler and special pump now available in Sydney. Let me know price, and I will get Minister's authority to purchase. When both have been worked under the conditions required, we will be in a better position to decide. In the meantime that need not prevent the further consideration of the subject in offices, as the preparation of designs for alternative windmill or horse gear.

Mr. Wood to consider the best place to send each machine.

W. C. B., 6/10/82.

[The Commission adjourned.]

THURSDAY, 22 MARCH, 1888.

The Commission met at 10 a.m.

Present:—

HON. G. H. COX, M.L.C., CHAIRMAN.

MAJOR PENROSE, R.E.

J. C. WOORE, Esq.

Arthur Pepys Wood called in and further examined:—

A. P. Wood.

22 Mar., 1888.

3325. *Chairman.*] You mentioned on Friday last that some of the other witnesses will probably be in a position to say more about the Willandra well than you? Yes; and also in reference to the works on the Balranald to Ivanhoe road, and the Paroo works.

3326. The next two wells which are referred to are the Normanstone and Baloola, and they are found fault with because they are sunk in basalt? Yes; I believe that that is the reason.

3327. Do you think that there is any validity in such an objection as that? I do not. I know many wells that have been sunk through basalt rock, and they have proved very good water-yielding wells indeed. I can instance another well upon the same road, at Mannum, and there are several also in the Liverpool Plains district, but I do not know their names; but on Garrawilla Station there are some where a plentiful supply of water has been obtained in basalt. There is another point in connection with this. Mr. Gilliat states that we did not put the wells on the sites recommended by him.

3328. Of course there are places where you will not get water in basalt because the basalt sometimes overlies dry country? Yes; and it did so in those two cases of Normanstone and Baloola. Mr. Gilliat says that tanks were recommended there, yet here is his own report in which he recommends wells as against the recommendations of his officers for tanks:—"The first site recommended by Messrs. Mackie and Dove is for a well at the junction of the Mannum and Burloo Creeks, parish of Mannum, county of White, 15 miles from Coonabarabran. The site is well selected, and the indications are good for a large supply of water. The site and position of reserve I have marked in red upon the annexed tracing. I may say,

say, in conclusion, that tanks of the size suggested by Messrs. Mackie and Dowe, say of 4,000 cubic yards, are of no use in keeping open traffic. There is every reason to believe that water can be obtained by sinking at a moderate depth, and wells are at once a cheaper and more durable source of supply. I have therefore to recommend that these works be approved for construction." [Witness produces tracings of Baloola and Normanstone Wells, to show that the actual sites adopted were within short distances of the sites pointed out by the Mines Department.]

A. P. Wood,
22 Mar., 1888.

3329. *Mr. Woore.*] Does this report of Mr. Gilliat's apply to those wells? Yes; what I quoted just now applies. To the best of my recollection Mr. Gilliat says in his evidence, given before this Commission, that his Department recommended tanks at these places.

3330. *Chairman.*] I notice that at page 154 of the Mines blue book, Mr. Gilliat says of this Baloola well:—

Baloola Well.—I examined the site of this well on the 17th June, 1884, but, as the works not being completed, reserved my report. I find from my journal at that date: The position chosen is about a quarter of a mile from where I would have put it. The shaft has been sunk on the shoulder of the hill, and is now down 94 feet; 9 feet of stiff clay, 5 feet of sandstone, the remainder basalt; no water. On the flat below, in the black soil, water is usually obtained at from 80 to 100 feet. The station, I think, has a well in the neighbourhood.

Normanstone Well.—This shaft has been sunk 4 miles from the site selected by me on Basin Plain.

—? Instead of being 4 miles from the spot chosen it is only a few chains. I think you will find a statement similar to that in the evidence.

3331. Has water been since found in either Baloola or Normanstone wells? No; not in Baloola. In the Normanstone well we have a very small supply—only about 200 gallons per hour—and we are now proposing to drive at the level of the inflow.

3332. Did you get through the basaltic formation? Yes.

3333. And in regard to the Baloola well? In regard to that I may say that we have got down to 200 feet, and it is practically dry, but boring operations are now going on.

3334. What have you got into? We have got into a sort of shale, not solid rock. I think it belongs to the carboniferous formation.

3335. You know that other wells sunk in the neighbourhood have given an abundant supply of water? Yes.

3336. *Major Penrose.*] I see here that Mr. Gilliat asks for a tracing of which there is no record in his Department; this is not the tracing referred to by Mr. Gilliat here? It cannot be. These are the original instructions sent to Mr. Wilson:—

Mr. Wilson will prepare plans and specifications (copies herewith) and invite tenders for wells at the undermentioned places on the road from Coonabarabran to Gunnedah:—

1. Near the junction of the Mannum and Burloo Creeks, about 15 miles from Coonabarabran.
2. 13 miles from Rocky Glen, and 34 from Coonabarabran.
3. About 55 miles from Coonabarabran, and about 43 from Melally.

Attached is a sketch showing the approximate positions of these proposed works. Mr. Wilson will report on the necessity for extending the reserves round the wells, and forward a sketch showing any alienation interfering with such extensions.

The specifications will provide for sinking 100 feet, and intending tenderers must be instructed to give a schedule rate at which reductions from, or additions to, this depth can be valued. Tenderers must also give a separate price for service tank and for troughing.

Mr. Wilson will examine this line of country, and if he thinks any slight alteration in the sites advisable, report same to the office, giving his reasons for same; he will not, however, delay calling for tenders on this account.

3337. *Chairman.*] Do you know the Liverpool Plains country? I do to a certain extent. I have gone over the roads there on several occasions.

3338. The soil of that country is loose black soil? Yes.

3339. And quite unsuitable, in most instances, in your opinion, for tanks? As a rule it is.

3340. Wells, generally speaking, having been successful in the locality, you thought they were infinitely preferable to tanks? Well, I certainly agree with the recommendation of Mr. Gilliat himself in that respect. He recommended that in the papers which came to our Department from the Mines Office.

3341. The next case is the Milparinka well, which is said to have been put down in vertical slate formation? It is in alluvial, not rock at all. But assuming that it has been put down in vertical slate formation, as we have obtained a good supply of water, I do not think there is any reason to find fault.

3342. *Mr. Woore.*] Has this Milparinka well been handed over? I would not like to say that without reference to the papers; but I am under the impression that it has not been handed over.

3343. Then probably this comment was made before the water was struck? I cannot find out in the papers where this statement has been made. I remember now that the well has not been handed over.

3344. *Major Penrose.*] You will be able to hand it over all right? Yes.

3345. Is it good water? Yes; fairly good water—water that could be used at a pinch by human beings. It is a little brackish, but only very slightly.

3346. *Chairman.*] What about the Menamurtee well? There was no distinct sanction obtained for this well, but I think it is fairly covered by the decision of the Minister for Mines in the case of the J.K. well. You will notice on page 217 of the Mines blue book a minute from Mr. J. P. Abbott, then Minister for Mines, in these terms:—"I think tenders should be accepted for a well, as by this means a more permanent water supply is likely to be had, and entirely independent of the lessee." There are one or two other cases that I would like to draw attention to; they are mentioned in the evidence. The Ivanhoe case was one of those referred to by the Mines officers.

3347. *Major Penrose.*] Apparently there were altogether three sites selected for that tank? Yes.

3348. *Chairman.*] You wrote here at the beginning of March, 1885, recorded at page 66 of the Mines blue book, referring to the Ivanhoe case:—

When works for watering stock routes were first undertaken in 1870 a well was sunk at Ivanhoe, which yielded a plentiful supply of good water. This well was subsequently handed over to the Mining Department, fell into disrepair, and was ultimately condemned by its officers.

In 1882 application was made for a tank at this place, but in view of the fact that good water has been proved to exist under ground, a well was strongly recommended by the Department, both on the score of economy and certainty of supply. This proposal was strongly opposed, and tenders were then invited for constructing a tank on the Balranald road, about 1 mile west from the township; but owing to the seasons, no reasonable tenders were received, or, when accepted, were not taken up. This occurred time after time, until a change took place in the season, and tenders were again invited, and Casey's tender accepted, for constructing a tank at the site already mentioned. This being settled, the lessees of Kilfera run, in conjunction with some of the townspeople, brought pressure to bear, and the site was removed to the Box Swamp, about 1 mile east of the town, on Ticehurst run. Here the contractor was served with a notice by the lessee that he was trespassing, and it was then discovered that the land was selected a few weeks before.

The question of site was ultimately settled by constructing the tank on the village reserve, which pleases Kilfera, Ticehurst, and the residents of the township.

Just

A. P. Wood. Just give the facts in connection with the sinking of the well? At the first onset the Department wished to put down a new well in place of the abandoned well sunk in 1871. This course they proposed following on account of the known quality of the water in that well. But as the townspeople wished to use the water for drinking purposes, a good deal of pressure was brought to bear to have a tank sunk in lieu of a well. This desire was eventually acceded to, and a site chosen on the Ivanhoe to Balranald road, about a mile to the west of the town. Then the townspeople, in connection with the owners of the Kilfera pastoral holding, on which the site of the tank was situated, brought pressure to bear to have the site again altered.

22 Mar., 1883

3349. *Major Penrose.*] After the work of sinking had been commenced? No; we had not commenced the work. Mr. Williamson, the leading townsman of Ivanhoe, was very anxious that we should have the site in his paddock, which he offered to part with to the Government on condition that he was allowed a much larger area—I forget the proportion—adjoining his ground to the northward, in addition to a certain sum to be fixed as the purchase money for the 50 acres to be taken for the tank site. We then selected a site about a mile to the east of the town; trial holes were put down, and the contract for the construction of the tank let.

3350. Without further reference to the Mines Department? Yes, I think so; but I am under the impression that the papers would show that the Mines Department knew of it. Between the time of sinking the trial holes and the arrival of the contractor on the ground, the lessees of the Ticehurst run selected the site that we had chosen; and when the contractor arrived he was ordered off the place. After some little delay, and after further political pressure from the members for the district and local people, the site was fixed where the tank is now constructed. And, in my letter, on page 66 of the Mines blue book, which was referred to the Mines Department, this site was mentioned; and, in a minute on the same page, signed by Mr. H. Gilliat, it is stated:—"The exception taken by this Department to a well at Ivanhoe has always been based on the ground that the subterranean water, while good stock water, was too brackish for domestic purposes; second, that any watering place constructed here would be required for the use of the township, as well as for stock purposes. It was therefore submitted the watering place should be a tank, and within a convenient distance of the township. These conditions are, I think, fully met with in the site Mr. Wood has selected." I do not think there is anything else necessary. It has been stated by some witnesses who have been examined before the Commission that this particular site catches all the town drainage, and renders the water unfit for human consumption. There was a drain there which I objected to during one of my trips; but more on account of its destroying the allotments that were to be put up for auction than on account of any evil effects that the drain is likely to have upon the water. The site recommended by Mr. Gilliat in Mr. Williamson's paddock carries the drainage of nearly the entire township, which must go there owing to its position. And, therefore, I think, from that point of view, the site which we have selected, and which has been approved of by the Mines Department, is much preferable to the site in Mr. Williamson's paddock.

3351. Then you were in a manner forced to put the tank where you did eventually place it? Yes; it was owing to the pressure which was brought to bear, and from which, I am sorry to say, no public Department is completely free.

3352. *Chairman.*] Will you turn to page 68 of the Mines blue book, and observe the diagram showing the way the water runs. The road from Booligal to Wilcannia runs through the township. Are these drains which are above it the drains which convey the water into the tank? Yes.

3353. Consequently, the water, instead of flowing from the tank when full, flows towards the township of Ivanhoe? Yes; it is in a sort of valley.

3354. *Major Penrose.*] You mean to say that the tank is higher than the major part of the town? No; I do not mean that.

3355. *Chairman.*] According to the diagram shown here it would appear that the drains which conduct the water into the tank are above the township? Yes, with the exception of Cobb & Co.'s stables; and even these are below the drain that formerly assisted to fill the tank. But this drain has since been closed up. But in addition to the stables there is a public-house and a few other buildings.

3356. But no water from these buildings can flow into the tank? No; at least not by the drains, though it is possible that it might come down by an indirect course.

3357. *Major Penrose.*] Mr. Low, one of the Inspectors of Public Watering Places, says in his evidence about this tank:—"Drains.—These are badly constructed, evidently with no intention of leading water to main tank, much of them running from instead of to the main tank. Two of those drain water from the tank, the other runs parallel to the main road, overflows silt-tank, and fills a private tank belonging to Elliot?" As regards the state of the works at the time Mr. Yeo took charge of the tank, it is correct. But I am now giving evidence which it would be better for you to obtain from Mr. Stilwell, Assistant Engineer in that district. You will find when you have examined him that it will be very easily accounted for.

3358. *Chairman.*] The site was objected to on account of the character of the soil? Our local officers objected to it.

3359. Then why was the tank sunk in such a place when the soil was so unsuitable? On account of the opinion given by Mr. Webb, one of the owners of Kilfera station, who said that he had tanks in similar ground, and that they held well; and also because this statement of Mr. Webb was supplemented by a guarantee to the extent of £500 to puddle the Ivanhoe tank in the event of his opinion being wrong. This was why the site was adopted.

3360. In any instance in connection with the drains leading to this tank, does the water run from the tank instead of towards it? I cannot say from my own knowledge, but I should say from what I know of the conformation of the country that such a thing is extremely improbable.

3361. Then it is not a fact that the drains supposed to lead water to the tank, lead water from it? From my own knowledge of the ground and of the works, I should say most decidedly not, so far as I could judge by the eye. Of course I did not see the water running when I was there.

3362. There is another tank that is mentioned as having an injudiciously selected site—Gunaramby. It is referred to in the evidence, as follows:—

Gunaramby Tank.—This has been excavated in rotten copai ground, which, owing to steepness of batters, has fallen in to a very large extent. A good site for a tank could easily have been secured near to this. Drains.—These are badly laid out, and the system of leading water round excavation inside of embankments in ground such as this must lead to damage and washing in of batters.

—? Copai is found in the best ground.

3363.

3363. *Major Penrose.*] But apart from that fact, is it rotten ground? This ground, when the water is not upon it, dries up, and when exposed to the sun cracks up into little sections. It is friable to that extent; but it is not friable ground as I understand the term. A. P. Wood.
22 Mar., 1888.

3364. Does the tank stand well? I have not seen it since it has been filled with water. I believe it is full now—at least this is the effect of the last report we had from our local officer.

3365. Are there any other tanks that we have omitted to ask you about, and which you would like to refer to? In reference to this Gunaramby tank, it has been complained that we have put it in a wrong site, in a swamp, instead of high ground that was near the swamp, and that we have had feeds to this tank. It is put on the edge of a swamp, where the rising ground commences, that rising ground being used as one of the four enclosed sides. It is fed from the swamp level through an inlet pipe with a valve, and from the upper level, from the higher ground, through a shoot; so that, when the water rises to the level of the swamp, we close the valve, and you get a good supply of water by gravitation to fill the tank above the natural level of the swamp itself.

3366. Is it not a fact that the soil of this swamp is very open and porous, full of cracks, and that it is very difficult to collect water in it, except after very heavy rains? In some swamps I will admit that this is the case; but in others, it is just the reverse. The cane grass swamps form splendid catching ground.

3367. But is it not a fact that these swamps are generally in very friable ground, which cracks very much in dry weather, and so requires a very heavy rainfall to make the water run? Only some swamps. Some of our best holding tanks are in these situations, and, in this case, we used both the hard edge of the swamp as well as the swamp itself as a catchment area. There is one point you have taken exception to—the way in which drains are cut on the berm; Mr. Low, in his evidence, states that in one case he was frightened the whole berm would be washed away.

3368. The objection that has been taken is this: that instead of the water flowing directly into the main tank from the silt-tank, it is conducted round the top of the excavation, by an open drain, before it is allowed to flow into the main tank. Why is this done? To save the expense of an extra shoot. There would have been a second shoot necessary if the water had been conveyed direct. Instructions were given by Mr. Stilwell, in my presence, that this drain was to be protected with copai, and when that has been done, or if it has been done, I do not think there is much danger of any evil resulting from it. At the same time, as a matter of economy, a second shoot would have been preferable. Then there is the Polygonum Hut well, referred to in the evidence given by the Mines officers. It is said, in the first place, that the water from this well is unfit for stock, if I remember aright. Well, the water in this well is not only fit for stock, but it is very fair water for human consumption. It is stated, also, that there is a swamp close by, whereby a grip or drain might be made for £5, which would be sufficient to conserve a quantity of water that would meet all the requirements of the travelling public. In reference to the last statement, I must say that I put down a bore at this particular spot in 1869, and camped on the ground where it is stated a permanent supply could be obtained by storage.

3369. I think the word used is "whip," not "grip." The statement is that a whip, costing £5, could be put up instead of a windmill? I think the statement must have been made in another portion of the printed document, because it is distinctly stated that a well is unnecessary. I am aware that some remark is also made about a whip costing £5, by which water could be drawn.

3370. *Mr. Woore.*] Is not this the case in which it is said that the water evaporates as fast as it is drawn? Yes, this is the case so referred to; but it is not a fact that the water evaporates as fast as it is drawn. As soon as a certain quantity of water is brought up, and the tank filled, the windmill should be thrown out of gear.

3371. We were given to understand that the windmill would not draw more water than would go off in evaporation? That is not the case. Had it been the case we could never have filled the tank; because in addition to the evaporation the soakage there was tremendous.

3372. *Chairman.*] During his evidence Mr. Low made the following statement about windmills:—"I would not like to object to windmills as a method of lifting water, but I should object to them where there is only one man stationed because if anything goes wrong a man cannot put it right without assistance." You have heard the last statement from Mr. Low about the use of windmills? What have you to say in regard to them? I consider if the conditions are favourable that it is the most economical way to raise water. It is the only windmill which we have tried. This is on an open plain where scarcely a day passes but there is a fairly strong wind blowing to keep the mill at work; and we find that the duration of these winds is ample to allow of a sufficient quantity of water being pumped into the service tank to provide for any consumption that may be called on. We have to make larger service tanks to meet such a contingency as calm weather.

3373. *Mr. Woore.*] What part of the country is this in? It is about 15 or 16 miles south of Mossgiel.

3374. *Major Penrose.*] Reference has also been made here to the Mulya tank. It has been said that this tank has been constructed for about five years and yet there is no water in it? I am not sure that that tank has yet been handed over to the Mines Department. If it has been handed over it has occurred within the last month or two. I admit that it is not a good site, but in that locality it is impossible to get a really good site. To divide the stage between the Darling and the next tank at Kerrigundi, this was the best site obtainable. We were hampered to a very large extent in fixing the sites by the necessity of dividing the routes into stages with equal distances between.

3375. *Chairman.*] Now with respect to faulty design and defective construction a great deal has been said here. In the first place we have been told that the batters of all these tanks are altogether too steep? There is a good deal of conflicting evidence about that. I have read the evidence through and there seems to be as many witnesses in favour of the steep batters as against them. The general opinion seems to favour the steepest batter consistent with the nature of the soil, and this is what we have endeavoured to carry out. I readily admit that in some of the older tanks—notably those in the Liverpool Plains at Galatbera and Boggy Creek on the road between Narrabri and Moree—the batters (which are 1 to 1) were far too steep for the nature of the soil. But I am not aware of any other cases where tanks have suffered to any extent from the slopes that have been adopted.

3376. That is a batter of 2 to 1? Well, the batters vary from 2 to 1, to 1½ to 1, and on the Wilcannia and Mount Brown roads we adopted a 3 to 1 batter.

3377. Then who has the discretion of fixing what the slopes shall be? The local officer. He is particularly instructed not to adhere slavishly to the specifications in regard to this matter.

- A. P. Wood. 3378. And after sinking the trial-shaft has he the discretionary power to order a certain slope which from experience he believes to be desirable? Yes.
- 22 Mar., 1888. 3379. *Mr. Woore.*] So that no hard and fast rule is carried out in regard to the batters of the tanks? No.
3380. And never has been? No; never has been.
3381. *Chairman.*] You are aware that all these tanks with comparatively steep slopes are not intended for the direct watering of stock? No; not for open watering of stock.
3382. Consequently the steepest possible slope or batter consistent with the soil has always been adopted? I will not say has always been adopted, because in one or two cases we have adopted more gentle slopes in order to cheapen the cost of the work.
3383. Now is it a fact that the tanks excavated by the Government cost very much more than tanks sunk by private individuals? Yes; I believe that is a fact.
3384. Will you explain the reasons why? Well there are many reasons why? In the first place the very question that you have just touched on includes one reason—the steepness of the slopes.
3385. Precluding the use, I presume, of ploughs and scoops? No; the contractors do use the scoops still to a very large extent. The contractor roughs out the tanks with the ploughs and scoops.
3386. *Major Penrose.*] You have known all along, I presume, that the Government tanks cost more than private tanks—that is to say from their construction they must necessarily be dearer? Yes.
3387. We have been given to understand that it is impossible to use ploughs and scoops on one of these steep batters? It would be impossible to finish the work with ploughs and scoops, but a portion of the earthwork can be taken out with them.
3388. Are ploughs and scoops universally used? No; I will not say that, because there are some contractors who prefer tip-drays to ploughs and scoops. Mr. Gleeson, a man who has constructed a great many tanks in Southern Riverina, used to say that he could do the work cheaper by means of tip drays.
3389. We have been told that if the Government would allow the slopes of these tanks to be made longer that it would cheapen the work? There can be no doubt but that it would lessen the cost to some extent.
3390. Do you know to what extent it would lessen the cost? It was stated, I think, in a communication from Mr. Budd. He is the only contractor who ever made an alternative offer to the Department. I have gone into the question once or twice myself, and I think that with a couple of flat slopes the cost ought to be lessened by 2d. or 3d. per cubic yard.
3391. Now would that lessened cost be commensurate with the lessened efficiency of the tanks so constructed—I mean taking into consideration the greater amount of surface which would be exposed to evaporation and to capillary attraction? No; the main depth of the water would be reduced to a great extent, and there would be a larger evaporation area.
3392. And a much larger soakage area? Yes; but that would not be a very large element.
3393. *Chairman.*] Have you ever worked the problem out? Yes.
3394. And what conclusion have you come to? Taking the tanks with $1\frac{1}{2}$ to 1 slopes and the tanks with 4 to 1 slopes, there would appear to be a difference of 50 per cent in the main depth and 30 per cent in the evaporation area, with an additional 30 per cent in the soakage area.
3395. *Mr. Woore.*] That is, tanks with equal slopes all round? Yes; I have not taken the estimate with merely the end slopes at 4 to 1.
3396. *Major Penrose.*] The comparison is between tanks of equal capacity? Yes; and of similar maximum depth.
3397. *Chairman.*] Consequently the Government tanks, which it was presumed would last through a considerable drought, must necessarily cost a great deal more than private tanks, and would justify the expenditure? Well, that is the opinion the Department has arrived at, and it is the opinion which has actuated us in the construction of the works. I might mention that the station owners have to adopt these flat slopes on account of the open watering of the stock, but according to the evidence given before the Royal Commission on the Conservation of Water it seems that a large number of station owners were of opinion that their tanks never would have lasted a drought through. The flat slopes and open watering are to a very great extent, in my opinion, the cause of the non-permanency of the water.
3398. Then you think there are other reasons still why the Government tanks should cost more than those put down by private individuals? Yes, there are other reasons. In the first place a contractor who works for a station owner has every facility given him for carrying out the works—water, grass, supplies of every kind are available. And then there is another most important feature of the case, that the squatter generally constructs his tanks at a time when there is plenty of grass and water in the immediate neighbourhood of the site selected; while the Government are obliged to construct their works whether the season is dry or not, and without the option of selecting sites where grass and water can be obtained.
3399. With regard to delay in payments—we have been given to understand that this is one of the reasons why contractors ask large prices from the Government? I am inclined to doubt that that can be any reason. There have been no delays in payment except in one or two trivial cases where final payment involving only small amounts have been concerned; and where there has been a hitch between the contractor and the local officer, necessitating correspondence and a certain delay consequent thereon.
3400. Well, we have had it in evidence that one man was obliged to go through the Insolvent Court on account of the difficulty which he experienced in obtaining the balance of the money that was owing to him? I am very sorry to say that a great many of the contractors have become insolvent, but not from that cause. Neither can it be from the reason mentioned by the officers of the Mines Department that the contractors received too much money for the work which they performed for the Government.
3401. *Mr. Woore.*] Do you know that many of the contractors have gone insolvent? Yes.
3402. *Chairman.*] Thus showing that they did not as a rule make money out of the work performed by them for the Government? Presumably they did not make money. It is a very strange thing that as a general rule the contractors will take work from the squatter where the work is available, when they will not take it from the Government. I think this clearly shows that the Government do not give excessive prices for the character of the work performed. We may be paying more than the squatters pay, but there is not a large profit attached to it—that is, allowing for the conditions under which the work is taken

taken from the Department—in regard to feed and rations. To show that we did everything that we could to accelerate payments to our contractors in the back country I would like to put in evidence this circular issued to our officers as far back as 1883:—

A. P. Wood.
22 Mar., 1888.

Department of Public Works. Office of Commissioner and Engineer for Roads, Sydney, 5 February, 1883.

(Circular.)

WITH the view of as far as possible assisting contractors for tanks, you are authorized to make payments in future as under, subject to the following regulations.

1. That when a measurement is made for an advance, 50 per cent. of the value of the work done can be paid at the time, the remaining 30 per cent. to be returned for as a further advance on a separate voucher which will be paid immediately upon receipt at head office, and officer advised by telegram. It must, however, be accompanied by receipted voucher for amount paid in advance.

2. That no payments in excess of 75 per cent. of the amount of officers' guarantee policy to be made to any other contractor (unless total is within that sum) until E. T. advice of lodgment to officer's credit of prior payment is made.

3. Receipt, stamped and witnessed must be obtained on the regular form at the time of making the payment.

4. Telegraphic advice of such payment having been made must be at once forwarded to head office.

(Signed) P. H. FLYNN,

For Commissioner and Engineer for Roads.

3403. There has been a general consensus of opinion that great delays occur in making these payments? All I can say is that the delays which take place are delays necessary to any Department having large disbursements of public money. The checking of accounts of course necessitates delay to some extent, but as soon as a man's account is passed for payment it goes to the Treasury, is returned to us and is paid after being examined, and having been placed to our credit. Certainly all this means delay, but there must be delay if you are to have a proper check over public expenditure.

3404. *Mr. Woore.*] Is there not a considerable delay sometimes in inspection? Well, the best answer I can give to that is that I have driven over most of these roads while the major portion of the works were in course of construction, and I never heard any complaint from the contractors on that ground. And I may say that if contractors have any cause of complaint they are generally very ready to make it. That is my experience of them.

3405. In the event of a tank being filled before the inspector comes round what is done then? I have only known two cases where that has occurred. The tank is measured afterwards by sounding. I believe the Purnamoota tank was one of those which was filled that way.

3406. *Major Penrose.*] I should think that would be a very good way of measuring? Yes; because you have a good level to work from.

3407. *Chairman.*] Is it a fact that the Department is so strict, that although the tanks may be the full depth, if there are any inequalities on the bottom the work will not be passed unless the contractors smooth it over? No; that is not a fact. I can say emphatically that it is not a fact.

3408. Again it is said that the Government are very particular in having the tanks dressed down with such nicety that this in itself causes a large expenditure? No; that is not a fact. So long as the spirit of the contract is fulfilled we are not particular as to the letter, and you will not have much difficulty in finding in this evidence statements which are rather contradictory on this point. Some of the Mines officers said themselves that the banks were not neatly trimmed.

3409. It has also been said most distinctly that unless men have considerable means, they are unable in consequence of these delays to tender for Government works—hence the paucity of tenderers in comparison with the number of tenderers for private tanks? I do not see that the work in connection with these tanks require contractors that have any particularly large amount of capital. A man with a plant, ploughs, and scoops, and bullocks, is in just as good a position if he has enough money to last him for a month, as the man who had £1,000 at his back.

3410. But whenever a tank-sinker is working for a squatter, he can go to the squatter and get a percentage of his money. On the other hand it may not be convenient for the road superintendent to inspect the works, and he may not come round for weeks after the work has been finished. The contractor wants money and has to pay for everything he gets from outside, the consequence being that he is in a worse position than the tank-sinker who is working for private individuals? There is a certain amount of reason in that statement of the case, but it has only a limited application. I think you will find that as a rule all these men have had payments at intervals of about a month, and a man ought to be able to pay the wages of his employees for that time. If not I think he had better leave contracting alone, and work some time longer and save a little more money. Assuming that a man was kept three months out of his money, I am certain that it must have been an exceptional case, and it is scarcely fair to bring an exceptional case to prove a rule.

3411. Yet it is exceptional cases which weigh with contractors, because they know what is going on, and what happens to one may occur to another? I am only assuming that such a case exists, because I really do not think that there has been any great delay.

3412. What has been the longest delay that you have known? I would not like to answer that from memory. There was one case in which a man named Bell was concerned, and in which a small amount of money only was involved, but it hardly comes within the scope of your question. There was a delay of some months in this case, but it was owing to a dispute between the local officer and the man. After the final payment for the work that had been actually made, this Mr. Bell entered claims for extras which the local officer had presumed were included in the first payments, and when the matter was gone into it was found that the contractor was entitled to a portion of the amount which he claimed.

3413. It has been said that 2s. 6d. per cubic yard has been given for excavation work—is that true? Not to my knowledge.

3414. But would you know it if it were true? Yes; a paper has been sent you in reference to the completion of one or two of these works. It is possible that such a price has been given by the Railway Department, but 1s. 9d. per cubic yard is the highest price that we have paid.

3415. *Major Penrose.*] One of the charges made is that you have adopted a certain size of tank without reference to the formation of the soil, and it is stated that this is especially true with regard to the Cobar district? We have been guided by instructions. When we received instructions from the Mines Department to carry out certain works the site of the tanks required was generally fixed by them.

3416. We have had witnesses here who stated that in part of the Cobar district 10,000-yard tanks would be ample for all purposes. Mr. Cotton, an official of the Mines Department, said so, and I believe Mr. Chesney gave evidence to the same effect? These tanks were carried out under the Mines recommendation that they should be 20,000-yard tanks. I put in recommendation. [See Appendix.]

A. P. Wood. 3417. *Chairman.*] I asked Mr. Bennett a similar question about the Walla Walla tank, and Mr. Bennett said that he was not responsible—that he was obliged to carry out the works according to the size fixed by the Mines Department? In that case I do not think the Mines Department mentioned the size of the tank. We only received general instructions to carry it out.

22 Mar., 1888.

3418. The allegation is that the Walla Walla tank is a very expensive one, and that it was needless because the water would only be used by a number of selectors in the vicinity? We do not maintain that the work is at all necessary. We have nothing at all to do with that question. Certain works are recommended by the Stock Branch of the Mines Department, and our duty is simply to carry them out. We have to do this without any reference to the question as to whether such works are going to offer an equivalent benefit to the public or not.

3419. *Mr. Woore.*] This point as to the necessity for the works has to be decided by the Mines Department? Yes, we simply construct.

3420. *Major Penrose.*] Another allegation made with regard to these tanks is that square embankments have been put round when they might have been run out as wings to the hill side? Wherever such features were obtainable we ran out the embankments as wings to the high ground.

3421. *Chairman.*] We find that instead of having tanks of 860,000 gallons capacity we have tanks of three million gallons capacity? There would be no use in putting down tanks of 5,000 yards capacity. If you carried that down to 18 feet it would be almost practically speaking an inverted pyramid. And without you go to 18 feet deep you cannot have permanent water.

3422. That all depends upon the nature of the rainfall. In the Albury district they have a rainfall of 24 inches? To a certain extent it depends upon the rainfall, but it also depends upon the catchment. They suffered for two years down there from the drought, and there was not a drop of water to be had.

3423. Then if the Mines Department make this recommendation for a small tank why does the Works Department go out of its way to construct these very expensive works? There are two reasons. In the first place we had other tanks recommended by the Mines Department in that district of 15,000 yards capacity, and in the second place it was better to be on the safe side and err in the matter of storage, especially as the cost of extra excavation bears but a small proportion to the cost of the appliances. You would have the same expensive appliances with a small as with a large tank.

3424. *Major Penrose.*] A 5,000-yard tank is a very small one in your opinion? Yes, very small, and perfectly useless.

3425. *Chairman.*] As this Walla Walla tank was put there apparently for the use of the ordinary traffic was it not sufficient, seeing that it was not on a stock route, as this was not very urgent work, and the rainfall much larger and less uncertain than at other places. I am inclined to think the allegation that unnecessary expense was incurred here was somewhat borne out? Well, the tank we were recommended to construct was 15,000 yards. I would like to put these documents in evidence, as they show that the tank was not constructed at our instance:—

Public Tank at Walla Walla.—I was under the impression, from my knowledge of the district for which the tank is asked, that a considerable amount of both stock and ordinary traffic passes through the proposed site. I requested the local inspector, Mr. Mackay, to report as to this and also to the other places at which water is to be obtained on the road from Albury to Doodle Cooma (one of the cross-country roads from the Murray to the Murrumbidgee) in the dry season of the year, Mr. Gilliat's report not having touched fully on these points. Mr. Mackay reports that there is a large amount of general traffic on this road, but is unable (having only lately been appointed) to state the extent of the stock traffic, and he further says that there is no water in dry seasons available to the public, except by sufferance, on this stretch of road, which is about 45 miles in length. It would seem, therefore, that the work applied for should be carried out, especially as it would also meet the requirements of the settlers who sign the memorial, and I would suggest that it be considered in the same class as the other works asked for on the road from the Murray to the Murrumbidgee, the construction of which, however, should, I think with Mr. Gilliat, give place, in the meantime, to the more urgent works in the outlying waterless portions of the Colony, where the rainfall is much more uncertain and very much less.

If this be approved, Mr. Day, M.P., might, perhaps, be informed, and the papers forwarded to the Department of Works.—A. B.

Stock Branch, 24/10/82. The Under Secretary for Mines.

I do not see that any action can be taken by this Department in this case. The Jindera papers, which were given to the Mines some time ago, are now required in this office.—W.C.B., 13/11/82.

(82-342)

Sir,

Stock Office, Albury, 12 June, 1882.

I have the honor to report that, having visited Walla Walla, and inspected reserve No. 730, I would recommend that a tank of say not less than 5,000 yards be excavated in the south bank of Petric's Creek at one or two eligible sites between the Walla Walla road and the swamp, and that the earth taken from the tank be used to form two dams across the creek, one to throw the water into the tank, and the other to dam the water in the creek a few hundred yards lower down, where the bed of the creek is wider and deeper.

I would also recommend that the tank be enclosed with a secure sheep and cattle-proof fence, and that pumps and troughing be fixed for watering stock, as if they are allowed access to the water it would soon become unfit for household use.

I have, &c.,

GEO. E. MACKAY.

I am unable to offer an opinion upon these papers before personally inspecting. I would recommend that the decision with regard to this application be suspended until my return from the west, when I could in three days visit the site proposed, and ascertain the amount and character of the traffic to be supplied; and if it then appears desirable, the work could then be included in the schedule of new works for 1883.—H.G., 16/6/82.

Sir,

Stock Office, Albury, N.S.W., 18 October, 1882.

I have the honor to acknowledge the receipt of your B.C. 12/10/82, attached to Mr. Gilliat's report on the application for a public tank at Walla Walla. I regret that I am quite unable to state what amount of stock travel by the route mentioned; but there is a large amount of ordinary traffic, and the Billabong Creek is the only point between Albury and Doodle Cooma where travellers can obtain water in summer-time without being dependent on the owners of the adjoining freehold lands. And now the Billabong does not afford sufficient water for any considerable number of stock when accessible from the road in an ordinarily dry season.

I have, &c.,

GEO. E. MACKAY.

3426. *Mr. Woore.*] What is the cubic measurement of this tank? It contains about 3,000,000 gallons. I will find out the cubic contents of the tank itself.

3427. *Chairman.*] It would be about 15,000 yards? Well, that is what they said. Lowesdale and Daysdale were the other works. They were on the road from Urana to Corowa; at Coree and Daysdale there were 15,000-yard tanks also.

3428. Consequently the Walla Walla tank was constructed with the same capacity? Yes; in accordance with the general recommendation.

3429.

3429. And Mr. Mackay's very simple request was not confirmed by the heads of his own Department? No. A. P. Wood.
The recommendations of the Mines Department always guide us in regard to the size of these tanks.

3430. *Major Penrose.*] During the early history of these public works you constructed them much smaller than now? Yes; we then had double tanks; but Boonoonoona, which is one of the early works, was 18,000 yards capacity. 22 Mar., 1888.

3431. *Chairman.*] Referring to the published papers from the Mines Department, we see a letter here from Mr. Gilliat, stating that the Walla Walla tank was unnecessary. He says, in a report bearing date 9th October, 1882:—" Bearing in mind the large expenditure required in the dry districts of the Colony, the comparatively good rainfall here, and the trifling expense at which water can be conserved by the settlers themselves, and the fact that the construction of a tank here would be taken as a precedent, and be followed by numbers of applications for similar works, which would be convenient, but not absolutely necessary for the well-being of the settlers, I am not prepared to grant this application."? I know that in a letter from Mr. Bruce, dated 24th October, 1882, Mr. Bruce recommends the Works Department to carry out this work on the same plan as the others in the Murrumbidgee district.

3432. *Major Penrose.*] Then, is this published correspondence with reference to the Walla Walla tank misleading and incomplete? Yes; inasmuch as Mr. Bruce's letter does not appear in it. On page 141 of the Mines blue book, two or three works are mentioned as having been begun, without reference to the Mines Department. All these cases are easily explained. The Black Swamp tank on the road from Deniliquin to Hay is an error. It is a mistake for them to say that this tank was constructed without reference to the Mines Department. That is one of the works upon their list. As to the Nymagee tank, between Cobar and Condobolin, that tank was constructed under the authority of the Minister for Works. We have the papers if you should wish to see them. The work was undertaken on a petition from the residents of Nymagee, and the object was to give a supply of water to the town.

3433. There were sufficient grounds for the construction of a tank apart from the supply of water for stock? Yes; the Jindera case is a similar one to that of Nymagee, action having been taken by direction of the Minister for Works. The Galathera tank, between Narrabri and Moree, was constructed before the works were taken over by the Mines Department in 1878. A special vote of £3,000 was set apart for tanks and wells in the Liverpool Plains district at the instance, I think, of the local member, and it was with a portion of this money that the Galathera tank was constructed.

3434. Mr. Chesney states that the fourth tank is unnecessary, and his evidence would lead us to infer that Government tanks have been in nearly all cases built with four embankments, and that no provision has been made by running out embankments as wings to conserve the water above the natural surface? All the tanks on the road from Cobar to Bourke, with the exception of the one at Helman's, are constructed with three embankments abutting on natural rising ground, and this has been done as far as the features of the country will allow. Then on the Cobar to Louth road, at Cuttygullyaroo and at Kerrigundi, the water is conserved above the surface, but at the other two sites the features of the country do not allow of this being done.

[The Commission adjourned until the afternoon, when the sitting was resumed.]

3435. *Chairman.*] The next thing we would wish to go into is this charge of using expensive material; it has been urged that your Department has spent a good deal of money on machinery where a much simpler style of pump would have answered all purposes;—what have you to say in regard to that? Well, in the first place, it is simply a matter of opinion. I think I can advance other opinions against those advanced against us.

3436. Do you not think that is a matter of pounds, shillings, and pence rather than a matter of opinion? No; I think it is to a very great extent a matter of opinion. But even, as a matter of pounds, shillings, and pence, what the Mines Department have proposed is more expensive than what we have adopted. The original machinery that was used in the Department was a M'Comas water lift, which involved a great amount of timber-work and submerged timber-work. And so far as these early works were concerned the cost of supplying M'Comas lifts was very much greater than the cost of the new types of pump that we have adopted for our works since 1882. What was recommended by the Mines Department was a double whip. Well, I went into that and I found that the cost amounted to something like £200, involving a great amount of submerged timber-work, and in addition necessitated the use of horses. We were recommended to apply this form of lifting gear to the tanks already constructed, as well as to those projected, and as most of the tanks then constructed were full or partly full of water it would have been a matter of impossibility, without the use of divers, to have carried out the work. I submit tracings of the double whip from the Mines Department. The two kinds of pumps that we have since adopted are horse-gear and steam.

3437. In all the evidence so far the steam-pumps have been called the Tangye pumps? Well, they are not all Tangye's. The horse-gear pumps are the Holman and the Amos & Smith. The latter has been adopted latterly as being simpler than the former. The steam-pumps that we have principally adopted are the Tangye, which is called the "special" on account of its simplicity. But we have also some of the Amos & Smith type, and two direct-acting pumps from Appleby & Co., which do not belong to any recognized type.

3438. What is the relative cost of these pumps? The Holman pump, with the horse-gear, is £49, delivered in Sydney. The cost of the special Tangye steam-pump is £87 10s., with the boiler. One of these pumps is now at work at the Centennial Park, and may be seen by the Commission. The Amos & Smith pump and horse-gear costs £52 or £53, and the steam-pump £120. The cost of the Appleby pump is about £125.

3439. Then the cost of erection of these horse-gear pumps would be very considerable? With the Holman pump it would be a very considerable item, because we would have to put the pump in a timbered well.

3440. The same remark would apply to the scheme submitted by the Mines Department? No, not exactly.

3441. Will you just state what would be the relative cost of these horse-gear pumps and steam-pumps in the matter of erection? The steam-pumps are about the most cheaply erected of the lot, because they only require sleepers to carry the bed-plate. 3442.

A. P. Wood. 3442. So that with the cost of erection thrown in, the expense of the horse-gear pumps would be about equal to the cost of the steam-pumps? Nearly so; with the exception of the Amos & Smith, which does not require the same expensive timbering.

22 Mar., 1888.

3443. *Mr. Woore.*] Then there is the cost of horse, harness, feed, and so forth? Yes; we have found that in the timbered districts, where we only erect steam-pumps, in regard to cost the steam-pumps are cheaper than the horse-pumps. The Mines Department are paying—and we have had to do the same—their caretakers as much as 10s. per day, while the men who take charge of the steam-pumps only receive from 7s. to 7s. 6d. per day.

3444. *Chairman.*] And there would be added to that, I presume, the cost of firewood? Yes; that is obtained by the caretaker, and is brought in, or should be brought in, by him in good seasons, while as with the horse-gear pump, the expense of working in the seasons would be very heavy.

3445. *Major Penrose.*] Could not the M'Comas pump have been put up in a cheaper manner by erecting it further out on staging? Not with the big pumps that were used originally. We used a 4-inch M'Comas; but if we were to put it further in the tank, some very heavy staging would be required to meet the strain. Besides, there would be 79 feet of belting from the point to the horse-walk.

3446. But we are speaking of the M'Comas hand-lift? The thing is utterly impracticable.

3447. *Chairman.*] Why? For the simple reason that no man could possibly raise the amount of water required. Of course in erecting a pump you must provide for the maximum depth from which the water must be lifted; that is, to lift a sufficient supply from the greatest depth of the tank, to meet the requirements of travelling stock in dry seasons. The maximum depth from which water would require to be lifted is about 27 feet.

3448. How much water could a man lift 27 feet in a day? A man's work at a winch would be about 2,600 foot pounds per minute. A gallon of water weighs 10 lb., and reckoning the height from which the water has to be lifted at 26 feet, a man would lift 10 gallons per minute, which is 600 gallons an hour, and at eight hours a day would be 4,800 gallons. This would be the total result of eight hours steady work in a blazing sun. Of course caretakers may be exceptional men, but in my opinion they are not.

3449. You are speaking now of the maximum amount of work that would be required? Yes.

3450. But in an ordinary season it would not be more than half that? Well, if you will fix the level of the water I will be able to answer it.

3451. Well, say that the caretaker had only to pump half the depth you speak of? Then the caretaker could pump 10,000 gallons per day of eight hours working continuously.

3452. *Major Penrose.*] Do you think that a man could keep up that rate of work, 2,600 foot pounds per minute, for eight hours, in that climate? Well, he would be supposed to. This is the result of a long series of observations that have been made on the subject. There is one thing that has not been allowed for in that result, and that is the friction, which in the M'Comas is a very important factor.

3453. We have had it in evidence from some of the witnesses that they have known of men to water 10,000 sheep per day with one of Flood's lifts? Well, I believe it is possible with a short lift, because it is stated there that the drovers sometimes assist the caretakers; but then that is no question of one man's work.

3454. One witness said that this could be done from a 20-foot lift? I am certain that it cannot be done. Of course if you keep a gang of men, each taking a five minutes' turn, they can put in a great deal more energy into their work than they could if each man worked continuously for eight hours. Professor Rankin says as the result of experiments, that one man turning a crank or winch is equal to the following work:—

| Effort in lb. | Velocity ft. per sec. | Hours work pr. day. | Ft. lb. per sec. |
|---------------|-----------------------|---------------------|------------------|
| 12·5 | 5·0 | 8 | 62·5 |
| 18·0 | 2·5 | 8 | 45·0 |
| 20·0 | 14·4 | 2min..... | 288·0 |

But of course you have to deduct friction from this result, and with the M'Comas I should say that the friction would be at least 20 per cent.

3455. *Chairman.*] Then it is said that it is desirable to give more work to these caretakers? It is indeed; there is no doubt about that.

3456. Then why not utilize their labour instead of employing expensive machinery? Well, it does not appear that they can do the work which they are really paid for, judging from the reports which we receive from our field officers as to the state in which the works are kept; and if they are given the excuse of having to attend to additional duties apart from those they are now supposed to attend to, I should say that the result would not be a satisfactory one.

3457. *Mr. Woore.*] You think that the care of the tank and the drains, and the watering of stock, and such duties are sufficient to keep the caretaker employed? Certainly not—not at all sufficient to keep an active man in work.

3458. Of course, sometimes everything being in good repair, and no stock watering at the tank, he would not be employed? Quite so; he has nothing whatever to do at times except to read the *Gazette*.

3459. How would you suggest profitably employing a caretaker's labour during slack times? The caretaker could not be employed raising water, because during these slack times there is no demand for water. When the service tank was full there would be no necessity for any further labour.

3460. But the caretaker is a necessity? Yes.

3461. Would you be in favour of a caretaker looking after two or three tanks? No; that would be quite out of the question, because it is quite possible that sheep might be travelling in different directions at the same time.

3462. Then there is nothing for it but to allow the caretaker to retain his easy billet? No; nothing. There is no doubt that if a man could himself raise and store enough water to meet the requirements of 50,000 or 100,000 sheep, the difficulty would be got over, because he would put in all his spare time at the winch.

3463. Admitting that these men have a great deal of idle time on their hands, does not their presence at these tanks in times of flood sometimes save the works from damage to such an extent as would pay their wages for the whole year? Yes.

3464. Is it necessary, then, that someone should be there whether there is anything to do or not? Yes; for

for, supposing a drain is foul by brushwood coming down, causing the water to go in another direction, if the caretaker is present he will remove the difficulty, and the water will go into the tank. So that a caretaker may save great loss of water and the tank from great damage.

3465. *Chairman.*] Is it not a fact that at all these public watering places paddocks are fenced in for the use of the caretakers? Yes; at most of the watering places paddocks are fenced in for the use of the caretaker or the lessee.

3466. Consequently if the caretaker or lessee chooses to allow horses or cattle in, the owners must pay an agistment rate? Yes.

3467. Can you suggest any means of employing these men by which this army of caretakers may be made to earn their wages? Taking the average of the men they are really earning their wages now.

3468. In what way? Although a man may not have enough work to keep him constantly going during the whole time he is stationed at a tank, yet he has to be constantly on the watch. There is no necessity to employ young and active men. What these tanks want are men who are about half fit to go into the benevolent asylum—not men who are blind, but men who can dodge about like our maintenance men, patching up little things here and there. These are men who are past their prime, and are yet well able to do the work allotted to them. They could go about cleaning drains and filling ruts in the embankments, and fettling up the work, cleaning out the silt tank is also a part of the caretaker's duty; and then in times of heavy rain they are on the spot, and if they are only watchful they can save, perhaps in an hour or two, what might be the value of their wages for the entire year. I believe, although we are blamed for sticking to a hard and fast rule, if the Mines Department had not stuck to another hard and fast rule in regard to these lease areas, that they could have done a great deal better with the fencing. Originally it was intended that only 200 acres should be fenced in, and regulations were made out giving the caretakers certain rights. What I now understand is that the conditions have never been altered, and that, although 640 acres have now been fenced in, there is no greater inducement given to the caretaker or lessee than when the area was only 200 acres.

3469. If it were possible to lease these tanks, it would of course get rid of a great deal of the expenditure? Some of the greatest complaints that have been made have been made concerning the tanks which were leased. More particularly those which were leased to Messrs. Cobb & Co., the coach proprietors.

3470. *Mr. Woore.*] Do the men now employed as caretakers keep the tanks in proper order? Well, judging by the reports which we have received from our officers, and from what I see on some of my inspections, I should say that some of the caretakers do not keep the tanks in proper order.

3471. And the caretakers in most instances are able-bodied young men? Yes.

3472. That being the case, would the tanks fare better, when even able-bodied men do not keep them in proper order, if they were in the hands of old men? Yes; because an able-bodied man is more independent than an old man. An old man would work to be kept in his situation. These young men are rather fresh, and when they get a few pounds together, it is a matter of perfect indifference to them whether they leave or whether they remain on duty.

3473. *Chairman.*] What is your conclusion as to the best forms of machinery to use on these tanks for lifting water? The conclusion that I have arrived at is, that where timber is available, the special steam pump is the simplest and most effective machine you can use. I repeat again that this is true where timber is available, but where it is not available, the Amos & Smith horse-gear pump is the best—that is, of the type that I am acquainted with. There may be some better ones.

3474. Have you had anything to do with fencing? Yes.

3475. We have had various complaints from the Mines Department, and from independent witnesses also, that your fencing is excessively costly? Will you excuse me for one moment before we drop the other subject. I would draw your attention to Mr. Gilliat's approval of the type of pump that we used. In his evidence before the Royal Commission for the Conservation of Water he stated that the Tangye pump was one of the most simple and effective pumps he had ever seen, and that with a few renewals in the shape of bucket leathers, it was such a pump as could be worked by any ordinary bush hand.

3476. Now with regard to the excessive cost of fencing we have been told that these fences of yours have cost as much as £120 per mile? They have.

3477. And we have been informed by various witnesses that squatters pay about £45 per mile for their fences? That I do not know, but I do know that there is a wonderful difference in the class of fence. Our instructions for these fences came originally from the Mines Department. Mr. Bruce, who was then in charge of this particular branch, recommended fences with six wires and a top rail for the tanks in the leasehold areas. [*Recommendation produced. See Appendix.*]

3478. For the caretakers' paddocks as well as the tanks? Yes; for the lease areas. Mr. Gilliat, in a letter of the 16th October, 1883, recommends that the fences should be of a substantial character and sheep proof; the posts to be not more than 8 feet 6 inches from centre to centre, five wires and a top rail where timber is plentiful.

3479. Then why did you extend these very expensive fences round the caretakers' paddocks when they were only intended to protect the main works? But Mr. Gilliat recommends it for the caretakers' paddocks as well. We have adopted it except in two or three cases, but then we have lessened the expense by omitting the top rail.

3480. During the erection of these fences were representations ever made to you by the Mines Department that you were spending too much money on them? No, never.

3481. When did the first complaint appear; when did you first hear the complaints about this excessive cost of fencing? About the time that Mr. Gilliat recommended the transfer of the whole thing over from one Department to the other.

3482. *Mr. Woore.*] Was it the duty of the Public Works Department to decide what sort of fencing you were to put up, or did you act as in the case of the tanks, merely to carry out the suggestions of the Mines Department? We acted to the best of our judgment on general lines. We were instructed to enclose certain areas of land. We had a certain type of fence recommended to us by the Mines Department, and finding that type too expensive, we adopted another that was less expensive, and I think equally serviceable.

3483. *Major Penrose.*] In Mr. Low's evidence the case of the Boonoona tank was mentioned, and he stated that the fence round the tank cost £120 per mile? He is very nearly correct. It cost £112 per mile.

A. P. Wood.
22 Mar., 1888.

A. P. Wood. 3484. Mr. Low says :—" The erection of this fence, in comparison with the prices paid by station owners in this district, I consider to not be worth more than £26 per mile, inclusive of wire, and in this opinion I am borne out by Mr. Webb, of Kilfera, who has had much fencing in this locality, and who, after inspecting this fence, values it at £26 per mile, exclusive of wire ;"—how much would the wire be worth there? Well, I have not made an estimate just now.

22 Mar., 1888.

3485. Mr. Low says, in another place in his evidence, that he would estimate the wire at £30 per mile, and the posts and so forth at £26 per mile, which would make the cost just £56 per mile, and just exactly half what was given by the Works Department? It is a funny think that Mr. Low—yes, he is the gentleman—in 1887, fared no better than we did. I think he called for tenders for a fence at Ivanhoe, in connection with a lease area there, and for a similar style of fencing to that which we erected. The tender he received was £100 per mile. He received another tender for £75 per mile, but that involved a modification of the design of the specification.

3486. Was the gauge of wire used suggested by Mr. Bruce? No. Mr. Bruce suggested a top rail, but that was merely round the main works. The top rail was also recommended by Mr. Gilliat.

3487. *Chairman.*] Mr. Bruce did not then recommend this heavy gauge of wire? No; the gauge we picked ourselves. Objection has been taken I believe to the No. 4 gauge as a top wire.

3488. *Major Penrose.*] With regard to the fence at the tank at Ivanhoe—that was the same contract? Yes; the same as Boonoon.

3489. Mr. Low makes a calculation about the fence at Ivanhoe in which he makes it appear that, by sub-letting, the cost of the fence was only £82 per mile, and that the first contractor gained a clear £33 11s. per mile—that is on the supposition that the Government paid £120? He is wrong in that. It was only £112 per mile.

3490. The calculation was evidently made on the supposition that the cost was £120 per mile; how was this contract let? Tenders were invited for the different works. We invited tenders three different times, and this was the lowest tender received on the last occasion, and lower than any previously received.

3491. Was the work pressing? Well, we were urged by the Mines Department to get it done, but whether it was pressing or not is another question. As I have said we called for tenders three times for it.

3492. *Chairman.*] Why did you use this excessively heavy wire for the caretakers' paddocks as well as for the tanks? Simply because the fence was required for cattle as well as for sheep. We thought a top wire would offer a greater resistance, and would be a better safeguard. With a fine wire, cattle would not be balked in the same way as they would with a No. 4.

3493. Do squatters in fencing public stock routes and roads use such heavy wire? No; I am not aware that they do; but I think there is a great difference between the two cases. In one case you have a station paddock—supposing the stock route is fenced—and in a bad season station paddocks are very little better than the stock routes. In the other case, you have a special lease area where the caretaker is only allowed to put in a very limited number of stock, and where in all probability there is far better feed than on the stock route. Again, these fences are in close proximity to the watering places, and when cattle are being watered they rush about—perhaps being drafted—and consequently a stronger fence is required than would be needed under ordinary conditions. There is one extraordinary thing that I would like to point out—that as far back as 1883, when I travelled with Mr. Gilliat to hand over some of these works to him, he expressed himself as perfectly satisfied with all the appliances, and in fact with everything pertaining to the tanks. And in the presence of Mr. Cronin, the local officer at Deniliquin, he stated that nothing could be more perfect. Now we have to deal with an altered view altogether.

3494. You think that Gilliat has grown wiser as he has grown older? It is possible.

3495. There is another very grave charge made against your Department; and it is this, that you spent enormous sums of money in putting up gates that were utterly beyond the requirements—gates, for instance, to caretakers' paddocks to which there is neither ingress nor egress except by the caretaker's own horse. Why was this done? We have simply acted, as I have said before, under instructions. Some of the local officers will prove that Mr. Gilliat on the very trip that I am alluding to, referred to this very question, and recommended—I think at Cuttygullyaroo, if I remember aright—that a gate should be put in. But there is nothing particularly expensive about this style of gate.

3496. It cost £15? Yes; but these gates were not let singly, and you cannot pick them out of a tender. Supposing a contractor put in a lower tender for fencing and a higher one for gates, although his price is excessive for the gate still he is lower for the whole work, and therefore the gate has to be taken in connection with the whole work.

3497. But why specify such an expensive form of gate when a more primitive one would have answered all requirements? My impression is that where cattle are constantly passing through these gates, the gates require to be strongly constructed. On the stock routes the station gates, which are simply and cheaply constructed, are generally found to be utterly wanting, and are hanging up alongside the fence.

3498. I think one witness mentioned that the gates are only used by the caretaker's horse going through? I believe it is true in one case, but that is a purely exceptional case. I know it was mentioned as having taken place in the Albury district, but the local officer will give you evidence about that.

3499. Now the next question is one that has caused a great deal of ill-feeling between the two Departments—that is, the interference by the road superintendents with the caretakers? I have seen a good deal of neglect on the part of the caretakers, and when you are going into the matter of wasteful expenditure I would like to speak about the cottages.

3500. *Mr. Woore.*] Will you give us some information about this interference? I know there has been a good deal of ill-feeling, particularly in the Hay district, in consequence of the reports that Mr. Stilwell, in the course of his duty, has been obliged to send in, in regard to the neglect of the men employed under the Mines Department.

3501. Do you know anything of your own knowledge about this interference? Not of actual interference, but I know a great deal about the neglect of the caretakers.

3502. Great complaint has been made to us of interference by your road superintendents with the officers of the Mines? Well, I cannot say anything about that; but their neglect has called for action by our officers.

3503. Can you mention any case of gross neglect by caretakers which, in your opinion, would justify the so-called

so-called interference? On my last visit to the Hay district I had to report on the neglect of the caretakers at Tom's Lake, Boonoona, Ward's tank, and 48-mile tank, on the road from Booligal to Wilcannia, and in regard to the caretakers at several of the tanks on the road from Ivanhoe to Balranald. I think this carelessness would fully warrant our local officer in writing as strongly as he has done on previous and subsequent occasions to the head office in Sydney.

A. P. Wood.
22 Mar., 1888.

3504. Is that all you have to say on the subject? Well, I think that is the only district where this so-called friction with the field officer has been complained of.

3505. *Major Penrose.*] What did you find fault with? With the utter neglect of public works. The drains were fouled and silted up, the pumping machinery was neglected and worked without oil, and all the appurtenances neglected.

3506. Was it the duty of the caretaker as a rule to clean out the silt tank, because there is a great deal of correspondence here about the cleaning out of the silt tank at Merri Merriwa? Yes; that is at page 167 of the Mines blue book. Mr. Gilliat writes a minute on a paper to this effect:—"The cleaning out of these works will, I suppose, have to rest with the Works Department, no further action can be taken by this Department." This was in 1886, yet in 1887, when we cleaned out this silt tank, Mr. Gilliat states:—"It is of course very probable, owing to the wet season, that the caretaker has been obliged to wait until the tank is dry enough to clean it; but it will be observed on 87-4,648 that the contractor engaged by the Works Department is compelled to do the same. But the main point, which does not appear to occur to the officers of the Works Department, is that any proven neglect on the part of the caretaker can hardly be regarded as a justification for expending public money on a contract to do work that should properly be performed by a public servant, and that a due regard for the public service would have led them to show to this Department that the caretaker's duties were neglected."

3507. Then he says, "Since writing the above, my attention has been called to the minute of Mr. Bennett, which is written as a minute on the report of the road superintendent, that the embankments of the tank are kept in good order:—"I think this should go to the Mines. We report bad men; a good man should have the benefit of the favourable report so far as it may weigh with the authorities of the Mines.—W.C.B., 14/8/86. Under Secretary for transmission to Mines." That is all to the credit of the caretaker for the way in which the tank was maintained. That was a flattering minute which the Commissioner wrote, thinking that it was only right to let a man see that he recognized when work was well done. I think that is a sufficient reply to the accusation of the Mines Department in regard to our clearing out the Merri Merriwa tank.

3508. Apparently you still considered it the duty of the caretaker to clean out the silt tank? Yes, we did; and then we got this minute from Mr. Gilliat that the work properly devolved on our Department.

3509. But when it became a large job, would you still expect the caretaker to do it? Yes; it is the caretaker's proper work, and he ought never to allow the silt tank to become full.

3510. *Mr. Woore.*] Ought he not to clean out the silt tank whenever opportunity offers and keep it clean? Most decidedly; it is his duty to do so.

3511. There has been some complaint made about the greasing of service tanks—that a certain substance has been used which has so affected the water that the stock will not drink it? I may state that the composition which we used was a mixture of tar, pitch, and tallow, in the proportion of 1 gallon of tar to 1 lb. of pitch, and 2 lb. of tallow. This composition was recommended to me when I met Mr. M'Kinney, the engineer to the Water Conservation Commission, down at Hay, some time ago. He stated that the composition was a very serviceable one for the purpose, and on the strength of his recommendation we tried it. For the first few days it did produce a film upon the water, but the second water that ran into the tank has never been deteriorated in the slightest degree, as the composition became hard on the tank.

3512. Then it makes a hard cement-like covering? Yes; but I am speaking from Mr. Stilwell's report.

3513. Notwithstanding the complaints that have been made about this substance having been employed, you still believe that it was a good thing to use? From the reports that I have received I do most decidedly think it was a good thing to use.

3514. Then its effect on the water was only temporary? That is all.

3515. I suppose you are aware that in the case of a cement tank the first water that goes in cannot be used? Yes; I am aware of that.

3516. On these complaints being made, did you consult the Mines Department and give up the use of the composition? Yes; we stayed this work on account of the objection of the Mines Department, and the works having been handed over to them, we did not feel warranted in persevering in its use.

3517. It was not a case of failure? No; they made a great deal about our having paid a man £6 per week to do this work. Well, this man makes periodical trips up the stock route, putting the horse-gear and other pumps into working order. He is a travelling mechanic employed by us, and as he was passing along he was instructed by the local officer to put this composition on the tank. There is no doubt that this man was paid £6 per week for his work, but considering that he only took a day to do the work, it was really much cheaper than specially sending a lower-wage man a long distance to do it.

3518. Then a man was not sent specially to do this work, but performed it while on his tour? Yes; just so. I would like to put these papers here in evidence. (*See Appendix*).

3519. *Major Penrose.*] In this matter of putting composition on the tanks were the officers of your Department within their proper sphere? We considered that we were within our proper sphere, because there had been a great many conflicting opinions expressed as to where the line of demarcation was drawn between the two departments. We had been called in on so many occasions to effect trivial repairs that ought to have been carried out by the caretakers themselves, that we felt perfectly justified in adopting this course to protect public property; but when the Mines Department raised a distinct opposition, the local officer was instructed not to proceed any further.

3520. Do you think that if this painting of the tanks had been a success—and admitted by the Mines Department to be a success—that you would have heard anything about this question of alleged interference? Had they admitted that it was a success I do not suppose there would have been any talk about interference.

3521. Although the interference—if it were interference—would have existed just the same? Yes.

3522. *Mr. Woore.*] Are there any other cases that you can call to mind of alleged interference? Not any of which I have personal knowledge.

3523.

- A. P. Wood. 3523. *Major Penrose.*] Have you ever had complaints sent in by your road superintendents that you had reason to believe were unfounded? No; I have the greatest faith in the officers. They are some of the best men we have in the department.
- 22 Mar., 1888. 3524. You thought that the road superintendents had been merely doing their duty? Simply that, and nothing else.
3525. And that they had not been vexatious in their complaints? No; I am certain of it.
3526. *Mr. Woore.*] And they have not been actuated by an unfriendly feeling? No, I would not like to say that, because such feeling must be only natural under the circumstances.
3527. But you do not think that this feeling induced them to exaggerate their reports in any way? No; I do not believe that; they are men of too much integrity to allow their public actions to be influenced by any personal feeling.

[The Commission adjourned.]

FRIDAY, 23 MARCH, 1888.

The Commission met at 10 a.m.

Present:—

HON. G. H. COX, M.L.C., CHAIRMAN.

MAJOR PENROSE, R.E.

J. C. WOORE, Esq.

Arthur Pepsy Wood called in and further examined:—

- A. P. Wood. 3528. *Mr. Woore.*] I see by the evidence of one witness here that the contractors can make up the surface of the ground, and so add to the apparent depth of the tank? I do not think that is possible under our present arrangements. But supposing that the ground were made up to the higher level, the overflow of water through this open shoot from the outside to the inside would of itself prove the existence of such a fraud.
- 23 Mar., 1888. 3529. *Chairman.*] But this is done in the measuring up of the work and before the tank is tested? Well, even the very lay of the shoot would at once expose it. In passing from the natural level of the ground outside the tank to the level of the berm within the embankment, any such error in levels would be discovered in the laying of the shoot. I may say that I had heard of such things being done in 1883, and I produce a circular which was written to the officers, instructing them to fix a peg in each corner of the tank, and have a bench mark so as to get the level of each peg with the bench mark, and then when finally measuring up to take these levels again.
3530. *Mr. Woore.*] It was stated in evidence by Mr. Earngey, that by raising the surface of the ground the excavation could be made to appear deeper than it really was, and that this has been done to the extent of 2 or 3 feet? Well, I maintain that it is utterly impossible to do any such thing without its being at once discovered. It is quite possible that a few inches might be put on or added accidentally, but it cannot be done on any scale at all worth considering.
3531. *Chairman.*] Then with regard to want of attention that has been implied in laying out these works. It has been the custom in some instances, it would appear, for the officer in charge to go up and down in the coach, and all the information he could obtain would be that which was procurable from Cobb & Co.'s coachman or the local publican, at whose house the officer stopped. It has been further said that he never learned anything of the local requirements from any person more interested? I think I have given that statement my most emphatic eniادل before. The only occasion on which Mr. Earngey could possibly have formed an opinion was that on which he went up to take charge of the district on Mr. Cambridge's removal. Mr. Earngey ought to have been aware that on that occasion I travelled in a buggy or waggonette with Mr. Barlow, the district surveyor, and Mr. Cambridge, who was to hand the district over to him, and with whom Mr. Earngey himself came back from Tibbooburra. So that Mr. Earngey has been swearing what he must know to be absolutely false. I know that the officers of the various districts, Mr. Cronin, of Deniliquin; Mr. Stilwell, of Hay; Mr. Coleman, of Bourke; Mr. Adam, of Cobar; and Mr. Adams, of Walgett, all invariably travel in buggies.
3532. Then another way in which it is said the Department is swindled is this. An officer is usually alone when he is proceeding to measure up these works, and the consequence is that he has to employ the contractor's men to assist him in using the measuring tape; and it has been said that whether the man is at the top or the bottom of the tank the swindle can be perpetrated with equal facility? It is possible if you have a very short-sighted man at one end of the tape that this may be done, but I do not believe from the character of the officers we have in the field connected with these works that such a swindle as this could be perpetrated on them. I think they are too keen. I admit the possibility of this thing being done if a man is really inattentive to his duties, but many things which are said to have been done never took place at all. The contractor sometimes thinks that he stands better amongst his workmen than other contractors if he pretends that he has been able to swindle the Government.
3533. *Mr. Woore.*] You were asked yesterday about delay in payments. Now here is a rather prominent case which it may be well to bring under your notice. Mr. Budd, in his evidence, makes the following statement. The questions are:—
2312. *Chairman.*] This is owing, I presume, to the want of the inspection of the work by some officer? Yes; sometimes months elapse without any reports having been made, and in one case I had four months to wait, and had to pay an agent £50 to collect the money. I had to employ an agent named Cummings to get this money for me.
2313. Did this delay take place after the work had been completed? Yes, and in another case I was six months waiting before I got the balance of my money? This occurred in connection with the work done at the Nullamut tank.
- ? I know nothing of this alleged delay. In the first place, it was before I took charge; but still I can easily find out whether such a delay occurred, and what was the cause of it.
3534. *Major Penrose.*] In connection with these charges of interference by the Works officers and the overseers, can you state to the Commission the exact facts of the case as they appear from the papers in your possession? I may state that some considerable time back—in July, 1883—there was a disagreement

as to which Department should undertake the repairs of these works after their being transferred to the Mines Department, and it was then decided that the Works Department should have the repairs, but that the Department of Mines should be allowed, in any case of great emergency, to spend a sum not exceeding £10 upon any repairs that might be required. About twelve months afterwards it was also decided in a minute from the Mines Department that the caretakers and lessees of these works should, in view of any repairs being required, place themselves in immediate communication with the officers of the Works Department in order that these repairs might be effected. In connection with this matter I desire to put in the following documents as evidence :—

A. P. Wood.
23 Mar., 1888.

Public Tanks and Wells.—Departmental Arrangements.

As doubts have arisen as to which portions of the business relating to the several classes of public watering places should be conducted by the Department of Public Works, and which by the Department of Mines, the following statement of the different classes of works, and of the principal action called for with regard to these works is submitted, with the view of its being definitely settled which Department shall take the action as the necessity arises. The public watering places may be divided into three classes—A, B, and C.

Class A are those works which are situated at a distance from any town or village, and solely for the use of travellers, teamsters, and travelling stock.

Class B are those which are partly for the use of travellers, teamsters, and travelling stock, and partly for that of the inhabitants of towns and villages near which the works are situated, and—

Class C are those which are almost entirely for the use of the inhabitants of towns and villages, and of course also of ordinary travellers and of teamsters, but only to a small extent of travelling stock.

The principal steps again to be taken with respect to these works are the following :—

1. To decide as to the necessity for the construction of a watering place on any particular line of road, or in any particular locality.
2. To decide as to the exact site.
3. To decide as to the description of the work, *i.e.*, whether it is to be a tank, well, or dam.
4. To determine its dimensions and capacity.
5. To settle the form of construction.
6. To determine the sort of watering appliances.
7. To decide as to the extent and description of the fencing.
8. To determine the area of land to be let.
9. To the supervision and management after construction.
10. The carrying out of repairs and alterations.

With regard to works of Class A, I believe it is definitely arranged that steps (1) shall be taken by the Department of Mines, (2) by the Works, (3) by the two Departments jointly, (4) by the Mines, (5) by the Works, (6) by the two Departments, and (7), (8), and (9) by the Mines, and (10) by the Works.

As to Class B and C, nothing definite has I believe as yet been decided into which Department shall take the steps here mentioned, and it is principally with a view to this being settled that this memo. is now submitted.

A. B., 22/2/83.

I shall be glad if the Commissioner for Roads will favour me with his views upon this matter, as it will be well to have these several matters settled. For Minister for Works.—J. P. ABBOTT, 26/8/83.

Class B might be dealt with as Class A, and No. 4 should be decided jointly by the two Departments—practically it has up to this been decided by the Works. Class C, which is being dealt with by Harbours and Rivers, should be together under the Works.—W. C. B., 3/4/83.

The recommendation of the Engineer-in-Chief for Roads, &c., may be approved.—H. W., 6/4/83. Approved.—J. P. ABBOTT, 7/4/83.

I would refer this to the Minister for Works with a view to the recommendation of Mr. Bennett as to Class C being at once carried out. It seems to me ridiculous that three departments should be dealing with these tanks, &c.—J. P. ABBOTT, 7/4/83.

Departmental Arrangements *re* Tanks and Wells.

Sir,

Department of Mines, Sydney, 24 April, 1883.

Referring to my B. C. communication numbered as per margin 83-286, Tanks and Wells, and forwarded to you on the 9th inst., I have the honor to request that I may be informed if the Minister for Works has given his decision thereon, and if so, that the papers might be returned to this Department.

I have, &c.,

HARRIE WOOD,
Under Secretary for Mines.

The Under Secretary, Public Works, Sydney.

Papers were returned by me.—W. C. B., 28/4/83. Mr. Bennett for further report.—F. A. W., 5/6/83.

As the repairs and alterations called for on existing works are very extensive and now of a character which calls for professional knowledge, I would beg leave to withdraw the recommendation made by me in the accompanying memo.—that these repairs and alterations should be made by this Department, and to suggest that they be carried out by the Department of Works.—A. B., 6/7/83. The Under Secretary for Mines.

For the Commissioner for Roads.—J. P. ABBOTT, 7/7/83.

Before resuming charge of the maintenance of these works I would point out that this is the second or third time they have been handed to us to maintain. On the previous occasions the repairs required almost amounted to reconstruction, but as I have always thought that the maintenance should be retained by this Department, I will endeavour to carry out the instructions of the Minister. As there are no funds at my disposal for this purpose it would be advisable to transfer the balance of vote obtained last session by Mines to the credit of Works at the Treasury. It would also be useful if a list of repairs or alterations proposed by Mines Department was supplied. I presume it will be necessary to supply drinking arrangements to all the tanks.—W. C. B., 15/7/83.

Tanks and Wells.—Transfer of Maintenance and Alterations to the Department of Public Works.

Sydney, 12 July, 1883.

As the Department of Mines has determined to hand over the alterations to and maintenance of tanks and wells to this Department, information should be furnished as to the amount still available for this service, and steps taken to transfer the existing balance. A list should also be furnished giving the names of and wages received by the different caretakers.

Steps will be at once taken to provide the necessary watering appliances for the earlier works constructed, when the difficulties surrounding the question necessitated the adoption of a system that, though at the time best suited to meet the case, is now capable of considerable modification and improvement.

It must be borne in mind that this Department has had no control over any of these works since they have been constructed, and that from sundry causes much will require to be done to bring them up to the same standard of efficiency possessed by our more recent works.

A. P. W.

Tanks and Wells, Stock Branch.

Department of Mines, 31/8/83.

As the Commissioner for Roads is prepared to carry out any repairs or alterations to the public watering places which the Minister for Mines may deem necessary—the only question to be settled seems to be the proposal that the Department of Mines should, on an emergency in order to keep its works serviceable, effect repairs which floods or accidents rendered necessary to the extent of £50; and as the Works Department will, as a rule, have some of its staff on the line of road on which the watering places are situated, the proposal might perhaps after all (seeing there are objections to it) be withdrawn, and the arrangement which has otherwise been agreed to, finally settled between the departments.

The proposal that urgent repairs to the extent of £50 might be carried out by the Department of Mines was made in the interests of the public, and to save the Works Department the trouble and inconvenience entailed by having to send hands to do slight but urgent repairs, which might be at once carried out under the directions of the Inspector of Public Tanks and Wells, or one of the overseers on the spot.

Mr.

A. P. Wood.
23 Mar., 1888.

Mr. Bennett estimates that £12,000 will be required for repairs and alterations. I do not think that amount would be available, but £10,000 might be so after setting aside, say £6,000, for boring and expense of Public Tanks and Wells branch; from the balance of the vote of £23,027 taken by this Department for public tanks and wells, which amounts at this date to £16,490 ls. 3d.
The Under Secretary for Mines.

A.B., 29/8/83.

Stock Branch, Department of Mines, 27 July, 1883.

With a view of preventing any future misapprehension of the extent of the duties of each of the Departments, I may suggest that it does not appear to have been the intention of the Chief Inspector of Stock, in his memo. herewith, to convey that this Department desired to resign the maintenance of the tanks and wells; as it seems to appear from the minute of the Commissioner and Engineer of Roads and Bridges he has understood the proposal.

The intention (if I rightly understand it) is that repairs, other than such as devolve on the lessees, or of such description as can be performed by the caretakers under the direction of the overseer—or in cases of emergency where the inspector may think it advisable to undertake a certain outlay to meet some immediate requirements—should, on the approval of the Hon. the Secretary for Mines, be forwarded to the Roads and Bridges for execution, that branch of the Department of Public Works having the necessary staff.

A list of the repairs considered urgent has been furnished to this Department, with special reports on the Boonoono, Quondong, and One Tree Tanks. Although the latter would come appropriately under class C, in which case the control would not rest with this Department if the proposed arrangement is carried into effect.

H.G., 24/7/83.

The list of papers will follow in a day or two.—H.G., 24/7/83.

The explanation of the Inspector of Tanks might be forwarded to the Works, and it might perhaps be desirable to limit the repairs to be done by this Department to such as would not exceed, say, £50.—H.W., 1/8/83.

Approved.—J. P. ABBOTT. The Under Secretary for Public Works, 3rd August, 1883.

I am prepared to carry out zealously all instructions that I receive, but it is rather bewildering to have contradictory suggestions to act on. I have already dealt with the Narrabri and Boggy Creek works, as their restoration did not admit of delay. I fear the divided responsibility proposed in Mr. Gilliat's, Mr. Bruce's, and Mr. H. Wood's suggestions will be prejudicial to the efficient maintenance of these works, as the division of duties, through fixing a minimum outlay for the Mining Department, does not say if that amount (£50) is to be the minimum outlay for the Department. If it is not so intended there will be an overlapping of control and a consequent absence of responsibility, and if it is intended as a minimum outlay for this office, I would point out that really efficient maintenance depends entirely on attention to details, e.g., the old adage of "a stitch in time saves nine." It is reported to me by Mr. Wood that all the works seen by him latterly require thorough restoration and renewal. Some of the renewals proposed by Mr. Gilliat can be postponed by timely repair to the existing works, but at the least some £12,000 will be required, and there are no funds for this purpose at the disposal of this Department.—W.C.B., 20/8/83.

Under Secretary.—J.R. Will my hon. colleague of Mines favour me with his views upon Mr. Bennett's report?—F.A.W., 23/8/83. Submitted.—A.B., 27/7/83. The Under Secretary for Mines.

Urgent repairs to Public Tanks and Wells.

Department of Mines, Stock Branch, Sydney, 18 July, 1884.

MEMO.—Referring to the accompanying papers, from which it will be seen that considerable damage was done, and more rendered imminent through the want of immediate attention and temporary repairs, I would suggest that, as no objection was taken by the Works Department to any repair, however urgent or temporary, being made at the instance of the officers of the Mines Department (see accompanying papers herewith), that the caretaker or lessee, as the case may be, should be allowed to communicate direct with the proper officer of the Works Department, as well as with the overseer or head officer in order that there may be as little delay as possible in the necessary repairs being made.

In the event of there being no officer of the Works Department in any of the districts that Department might perhaps be asked whether they would not empower the overseer to carry out urgent repairs to the extent of, say, £20 or £30.

The Under Secretary for Mines.

A.B., 17/7/84.

I shall be glad if Mr. Bennett will have this attended to at once.—J. P. ABBOTT, 23/7/84.

The repairs to the Balranald and Ivanhoe road have been reported as completed. It must not be forgotten that they were handed over to us in the state complained of. As there are officers of this Department in all districts where tanks are constructed, there can be no necessity to empower the "overseer" to expend any sum in repairs; but I think the suggestion that the lessees or caretakers should report any urgently-needed repairs to our local officers is a good one, and might be carried out with benefit.—A.P.W., 23/9/84.

The Secretary for Mines will be advised in a day or two of all the works of which repairs have been completed.—W.C.B., 29/9/84. Tanks and wells.

Respecting Repairs to Tanks and Wells.

Sir,

Department of Mines, Sydney, 31 August, 1883.

Referring to your blank cover communication of the 27th inst. (83-7,876, Works), forwarding report from Mr. Commissioner Bennett as to the future carrying out of repairs to tanks and wells, I have the honor to forward herewith a copy of the decision thereon as given by the Minister for Mines.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

The Under Secretary for Public Works, Sydney.

Steps should be taken to have the Treasury advised of the transfer of the £10,000.—W.C.B., 4/9/83.

So that from these papers I think it will be seen we were actually charged with the maintenance and repairs to these works.

3535. *Major Penrose.*] Since these papers were written has anything been done to disturb that arrangement? Nothing except what I will call the arbitrary action of some of the officers of the Mines Department in regard to it.

3536. *Chairman.*] This completes the documents which have passed between the Departments in connection with this matter? Yes. I would like to add something to the evidence which I gave in regard to fencing last night. I would wish to point out that one great source of loss to the country in regard to these tanks arises more from the extraordinary shapes of the lease areas than from the asserted excessive cost of the works. The Mines Department have employed their own surveyor in the majority of cases to lay out the leases, and as they have no power to lay out Crown lands other than those dedicated to stock routes or as reserves within their control, they had to lay out these areas in long narrow strips along the stock routes. The consequence of this is that there is a great increase in the quantity of fencing. A great deal more has to be done than if the Lands Department had sent their surveyors, who could have dealt with the Crown lands outside the limits of the stock route.

3537. Are we to understand that the Mines Department employ surveyors as well as their various other officers? Yes; they do. The strip of land at the Woolondool well, for instance, set apart as a special lease, is about three miles long and only about 30 chains wide.

3538. *Mr. Woore.*] The shape of the area would not affect the cost per mile? Of course it would not affect the cost per mile, but it would entail a far greater mileage of fencing. I am not using this as an argument bearing on the cost of fencing per mile.

3539. *Major Penrose.*] We have had it in evidence that there was great delay in getting these areas surveyed by the surveyors of the Lands Department? Yes; that was in the very early days, but afterwards the Mines Department took the matter into their own hands.

3540.

3540. *Mr. Woore.*] Was the Mines Department confined in its selection of special leases to the land under its own control? Yes. A. P. Wood.

3541. That being the case could these areas have been surveyed in a more economical shape for fencing than that in which they have been laid out, seeing that the Department was confined to the stock route? No. I will not say that, but then if the matter had been left to the Lands Department this extra mileage expense would not have been incurred, because the officers of the Lands Department would have the power to go beyond the stock route and on to the crown lands adjoining. 23 Mar., 1888.

3542. *Chairman.*] Can you give us any information with regard to the alleged subletting of contracts? No; but I believe this has been the general custom in many things, and in fencing particularly. In excavation there is not so much room for subletting, and the contractor himself generally does the work. There is one case that might be instanced—on the Cobar to Wilcannia road, where the earthworks were stated to be sublet to another man at a considerably less rate than that paid by the Government; but in that case there was an actual transfer from one man to another on the original terms; the first contractor having obtained two jobs and not being prepared to carry out more than one.

3543. Now with regard to the construction of wells and the erection of all the head works before the supply and quality of water was proved—we have been told that contracts have been made for the whole work to one man, who erects the whim before there is any water found at all. It is stated that the head gear is all erected on the site of the well before anything else is done. Can you give us any information with regard to this? In the first place the contract is let in bulk as you have just stated. The contract includes the sinking of the well and the erection of the head gear, but the practice is not to allow the contractor to put up the headworks until the water is found and its quality is proved. Trial-shafts are as a rule put down and if they are not put down the headworks have, except in one case, not been erected till the finding of the water. It is cheaper to let the whole work in a lump in this way than to have two separate contracts, one for the sinking of the shaft and the other for the erection of the headworks. One man will take the work at a lesser rate than could be obtained under any system of dividing the work.

3544. *Mr. Woore.*] What instance is that you speak of where headworks were allowed to be erected before the water was found? I was referring to a case on the Mount Brown road.

3545. That work has not been handed over yet? No; it was stated by one witness that the Normanstone well was a case in point, but the Normanstone well had no headworks at all. At the Baloola well the contractor started to erect the service tank and was stopped. The whim was erected, but that is very often necessary in carrying on the sinking of the main work.

3546. *Chairman.*] But the whole question hinges on this, is it desirable to sink wells until you have proved the water by putting down a trial-shaft? But we have sunk trial-shafts. We did it at Gunbar.

3547. But I am speaking of this other contract? Well, it would be cheaper to sink the main shaft on speculation than to put down this trial-shaft on rock.

3548. Is not that then a case where boring should come in? Decidedly.

3549. Why was not a bore used in these two cases of Normanstone and Baloola? It would have been a decidedly preferable course to have adopted. The sites were selected first by the Mines Department and we sunk the wells afterwards at the places stated. But it would have been a better course had the Department bored in the first place.

3550. Now we have also had it in evidence that some of these wells have cost as much as £10 per foot? I do not know where they are, except it be the well which was put down at Tibbooburra by the Mines Department and which cost about £15 per foot.

3551. Will you turn to the second page of the *précis* of evidence. It is said that a portion of the headworks of the Willandra well were placed upon the private property of the Kilfera run owners? That includes all the top works, whim, service tank, troughing, and so forth. It has been put in such a way as to lead to the conclusion that it was for sinking only; it is the same thing as the Holy Box well. There was an encroachment on an old conditional purchase of Mr. Webb's who did not actually know of the position of this conditional purchase, according to his own statement.

3552. *Major Penrose.*] Then, it is said that the construction of this well was not asked for by the Mines Department? I gave it in evidence on the first day that the Mines Department distinctly asked us for two works between Clare and Ivanhoe, but Mr. Gilliat now says that he only asked for one.

3553. Apparently they asked for tanks? Yes; and we put down a trial-shaft in the first place. Mr. Gordon, the local officer, stated that good water had been obtained, and on the strength of that statement we put down a well, but we never bottomed it, on account of having reached running sand or drift. Another well is now being sunk adjacent and the head-works utilized, the other shaft having been abandoned.

3554. *Chairman.*] Would it not have been better under the circumstances to have sunk a tank instead of trying a new well? Considering that the existence of good water had been proved by the trial-shaft, I thought a well would be more economical and more reliable for permanent water than a tank.

3555. Now with regard to the Wooloondool well, I see that the allegation is that the "well has been bored from bottom of shaft, neither pipe nor floor placed in well. Bore liable to, and is constantly choked from silt. Constant baling, even when water is not required, necessitating great wear and tear and useless labour, insisted on by Works Department, as necessary to keep bore from silting. Bore choked on many occasions, and has caused much needless labour and correspondence. The Works Department endeavour to show it is the fault of the Mines caretaker or lessee." What have you to say with regard to that? This well has been bottomed on good stiff clay. It was bored through that stiff clay, and the bore-hole is now larger than it was originally, and is not choked by any swelling ground. I admit that when the well is standing for a considerable time, that the silt deposits will choke the bore. It is usually freed by putting a rod down it, which any man could do, but the putting down of a pipe would rather increase the evil, because it would have a fixed and lesser diameter than that of the existing bore. In fine silt drift like that, I think it is almost impossible—indeed I believe it is impossible—to keep the bore clear, unless the well is in constant use, and there is a current of water through the bore-hole.

3556. *Major Penrose.*] As I understand you this bore has been made through stiff clay? And the drift is below it. The water is artesian and rises above the level of the bottom of the shaft.

3557. *Mr. Woore.*] Is not this bore, having been put through clay, liable to get choked? Yes; but it increases in size by the flow and force of the water. Of course there are cases where putting a small pipe down a bore would answer the purpose, but in this case it is not necessary, because the bore is in good stiff sound clay. They would find that they would have just as much difficulty in keeping the pipe clear as in keeping the bore clear. 3558,

A. P. Wood. 3558. The only way to stop the bore from getting choked is to pump? Yes, without pumping in a case like that, they would find the drift increase. We have had reports that the well has run dry, but if it has, it is due to their neglect of this bore. Their statements have all proved groundless. Mr. Keighran reported in a great state of excitement that a large number of stock were coming along, and that there was not sufficient water at this place. Mr. Stilwell went out from Hay, pricked the bore, and found an unlimited supply of water there.

23 Mar., 1888.

3559. *Chairman.*] I would ask you to look at page 3, where the Holy Box well is referred to:—"This well was sunk and small supply of fresh water tapped, followed by a great flow of salt water, which, when twice analysed was declared unfit for use. Evidence as to saltness was submitted. Well was abandoned and tank commenced. Works officer stopped work at tank when about 3 feet deep, declaring well water good. Well again handed to Mines and constant baling insisted on, to improve quality of water; this done without result. Cost of well and price referred to—94 feet deep, cost over £1,000. Mines has to bear cost of maintenance and employ caretaker to bale and protect head works. There is no prospect of leasing salt wells. Caretaker has carted drinking water 17 miles. Whim, service tank, and troughs erected before quality of water decided suitable. Iron in troughs destroyed by action of salt. Well almost useless for stock and quite unfit for travelling public?" Perhaps I had better give the whole history of this well. It was originally sunk in 1878, by Mr. Cambridge, when good water was reported as having been obtained. It was transferred, with other works, to the Mines Department, in 1879, and was condemned by them as being unfitted for stock. A year or two afterwards we were instructed to construct a tank close to the swamp. A contract was let for it, and in view of the top works of this well being in good order and that they could be utilized for new tank works, our Department applied to the Mines for transfer of them, intending to dismantle the well. The Mines Department transferred the Mines to us. Shortly afterwards I was travelling up the road and from what I heard I thought it was advisable to have the water of the well thoroughly tested before dismantling. I employed the contractor for the tank to bale down the well, which he did and found that the water was of a very good quality, and at the very time 10,000 sheep watered there, according to a telegram which he sent me to Wilcannia. Since that time several lots of sheep have watered there; and horses, to my certain knowledge, have drunk the water. I therefore considered that the objections raised to the well by the Mines Department were based on their original action when, at the onset, they condemned the water without giving it a good test. We have a sample of this water in town, which we will submit to you, if necessary.

3560. *Major Penrose.*] Prior to your baling the well you had urged this baling on the Mines Department as necessary? Yes; I believe it was done, but it was done on the strength of Mr. Cambridge's report that the water should be thoroughly tested before being condemned. Testing of course necessitated baling. But the opinions formed in regard to stock water are very conflicting. The Jumping Sand Hill well was said to be unfit for stock, but it has turned out to be the very best water in the district, and the same may be said of the Lignum Hut well. I have seen the letters in the Mines Blue Book concerning these matters, and I think that the quality of the water is very often a matter of opinion.

3561. Sometimes you find that if a well is baled out the water improves? Yes.

3562. *Mr. Woore.*] Might not the refusal to the stock of water have occurred from the troughs and service tank not being kept clear of saline sediment, and the water taken from the well being affected by this sediment? Yes; Mr. Gordon says at page 36 of the Mines blue book, that Parker informed him that Mr. Evans, the manager of Conoble, said he would work the well during the summer months if allowed. Mr. Croydon adds that it might be well to let him do so in order that the efficiency of it might be established. And I know, from other hearsay evidence, that Mr. Evans was anxious to get hold of this well himself. If the water were so bad I do not think that Mr. Evans or any other station manager would be desirous of getting the well into his hands.

3563. What is being done with the well now? It is in charge of the Mines Department. When I last visited it, two years ago, I drank the water from the well, and would not object to drink such water at any time on a pinch. It was brackish but still drinkable. There is another statement that conveys a wrong impression, that the well was over 90 feet deep and cost £1,000. That amount includes the headworks.

3564. Then this sum of £1,000 is inclusive of machinery, timber, and so forth? Yes; and we will furnish you with the final voucher if necessary.

3565. *Chairman.*] Now about the Mount Manara well, it has been said that the whim and head works were erected before the water had been tested? I can swear positively that that statement is not correct, because the work was done under me in 1870, and there is sufficient corroborative proof in that the service tank was made of exceptionally large size to meet the small yield of water that was obtained; and as we had not expected the small yield when we started the sinking, it proved that the headworks had been constructed after the water had been discovered.

3566. Then the report goes on to say that the tank was finally abandoned and another constructed 4 miles away? Under instructions from the Mines Department a tank was constructed 4 miles away.

3567. *Major Penrose.*] Do you think that that well is still a useful one? With repairs it would be; it is put down in good sound ground, part of it in slate rock. I have myself heard that it yielded with the extra surface and storage very nearly sufficient for the travelling stock. Its yield is, I think, about 400 gallons per hour, and with a large service tank, I think it will meet all requirements. There was one objection to it, and that is, it had to be sunk to a very considerable depth—200 and odd feet.

3568. Would that supply have been increased by driving? We did drive. But even assuming that the headworks had been erected before the machinery was put down, we were justified in doing it, because I think we had put down a bore there, and good water was obtained before we started. It was splendid water; nearly fresh.

3569. *Chairman.*] Would it not be possible to find out from the bore what the supply would be? Not very easily.

3570. Now, as to the Dolmoreve well, does the same thing apply to that as to the Holy Box well;—it is said that the caretaker here has to go 4 miles for fresh water? I have seen a report from one of their own officers, in which it is stated that the water is very fair stock water. It is stated at page 111 of the Mines blue book by Mr. Gilman, an acting overseer of public watering places:—

With constant baling, however, I cannot understand way it should be unsuitable for stock. I gave this as my opinion to Mr. Lindsay, the manager of Til Til Station, who informed me that some of the wells that their sheep watered at were no better, if even as good, as the Dolmoreve, and that, if the Government would let him water his stock at it, instead of baling and letting the water run to waste, he would gladly avail himself of it, and would not be afraid of his sheep being injured in any

any way from drinking the water. It is now nineteen years since I first went to the Kilfera back-blocks, where I remained for about two years, and was at the sinking of several wells, the water being quite as brackish as Dolmoreve well, and decidedly worse smelling, yet the sheep drank freely of the water without any ill effects; in fact some of this description of water at the homestead well (Kilfera), was condensed at the well by a condenser, and turned out quite drinkable for human beings, thus saving long carriage of water. A. P. Wood. 23 Mar., 1888.

3571. *Major Penrose.*] The baling of 6,000 gallons a week was not very arduous work for one man? No; not from that well. A man ought to have been able to bale 1,000 gallons per hour. The baling of 6,000 gallons per week, or 1,000 gallons per day, would have had no effect.

3572. *Chairman.*] You have read of the case of the breakage of the wire rope;—no doubt a wire rope would very soon corrode in this water? Yes; and it would be owing to the neglect of the caretaker in allowing it to remain in the water. He should have suspended the bucket mid-way. A wire rope will corrode more rapidly in brackish water than in fresh water.

3573. What sort of rope do you use in these wells? Except in one case, where we had a coil of black iron rope sent us, all the wire ropes were galvanized.

3574. You do not use steel ropes? They are steel.

3575. *Major Penrose.*] Then the Dolmoreve well is perfectly useless? Yes; according to the Mines Department.

3576. And you think it has not had a fair trial? I will not say that as a fact, as I do not pretend to be a judge on the point.

3577. *Chairman.*] As to this costly hutting for caretakers, can you give us any information with regard to that? We were instructed by the Mines Department to have these huts erected. They recommended at the time, two-roomed cottages, 24 x 12, with iron roof, windows, floors, chimneys, and so forth, the cost of which was estimated by Mr. Bruce to range from £56 to £100, according to the part of the Colony in which they were erected. Mr. Bruce issued a circular to the officers in his Department in July, asking them to submit estimates of the cost of the different classes of buildings of that size; and it seems from the estimates of his own local officers that in Bourke the cost would be £100 for a two-roomed dwelling of a type like that recommended by Mr. Bruce—weatherboard, with iron roof, floor, and so forth. At Cobar the cost would be £80; at Hay, from £80 to £90; at Cannonbar, £56; at Narrabri, from £63 to £90; and at Wilcannia, £80. In the average the cost of these works is considerable, but the Mines estimate does not embrace the three-roomed cottages for which tenders were received and plans and specifications issued by us.

3578. *Major Penrose.*] Were your huts bigger than theirs? They were the same size, taking the front part of the main building; but there was a skillion room at the back of our huts which was not in the Mines—that being added on the recommendation of that Department, which is quoted on page 137 of the Mines blue book. The works which they compare against ours are, judging by the reports received from our local officers, of a different class altogether; but very likely the local officers themselves can speak about that when they are examined before you.

3579. Do you think that the tenders sent in for the cottages for which you issued specifications were fair and reasonable tenders? I do.

3580. *Chairman.*] With regard to the defective construction of troughing—which really means that the animals had a difficulty in getting to the troughs—can you give us any information about the original design as shown in your plan? The plan produced shows how the guard to the trough has been erected, and when the works were being handed over to the Mines Department Mr. Gilliat expressed uniform approval of them. We—that is the officers of the Works Department—do not pretend to have an intimate knowledge of stock, and we only acted on the opinions expressed by those whose speciality it was.

3581. *Major Penrose.*] Was the design for the troughing submitted to the Mines Department in the first instance? Before we ever adopted it I saw it at a station when travelling along the road from Hillston to Cobar. I made a sketch of it on that occasion, which I included in my report, as I thought it was a good idea. The report and the sketch were sent on to Mr. Gilliat and approved of by him, and when we handed over these works (which include this type of troughing) he expressed approval with a slight exception that the sharp edge of the rail which caught in the wool of the sheep should be trimmed. In these Mines Papers, at pages 174 and 175, Mr. Gilliat expressed his approval of this troughing, and said that, although it required a little alteration, the caretaker, if he was a man of any energy, could do it.

3582. You are now aware that this fence is being taken up and a centre rail being put down? Yes; they throw the rail more over the centre than before. We are now using steel troughing, as shown in the plan. The other is a thing of the past.

3583. We have gathered from your evidence and the evidence of others that a considerable amount of friction exists between the two Departments? Yes; there is a good deal of what may be called friction with no doubt a certain amount of animus; and I must confess that our officers feel it just as much as the Mines officers do, and I think they would be wanting in "go," in energy, and in self-respect if they did not feel it. Men could not be expected to feel otherwise when the character of their work has been unjustly depreciated by the officers of another Department.

3584. You think it was a mistake to have ever taken over the control and maintenance of these works from the constructing Department? Yes; I think that whatever Department has the constructing of the works should also have the maintenance.

3585. You think it is almost impossible to carry on satisfactorily these public works if this dual control is to continue? Well, dual control has proved as evil in this case as in others.

3586. Then what would you suggest to get rid of this unfortunate difference? That one Department or the other should have the control of the works until such time as local government becomes the order of the day.

3587. In fact you believe that local government would tend to lessen the expense of these works, and enable them to be carried out more efficiently? Well, I do not know that they could be carried out more efficiently than they are carried out at the present time.

3588. I mean with a better regard to the requirements of the public, from the more intimate knowledge which the members of the local bodies would have of the locality in which the works were to be put down? Well, I think it would be better, and for this reason—that many works which are practically unnecessary would not be carried out under a system of local government, as they are at present under the pressure which is brought to bear from political sources upon the Government of the country.

3589. For instance, at present where a small tank would meet all legitimate public requirements, pressure is brought

A. P. Wood. brought to bear to have a large tank put down? Well, I am not in favour of small tanks to start with. If you have a good catchment and a good rainfall perhaps there is no necessity for the construction of a public tank at all.

23 Mar., 1888.

3590. What I mean is this,—that if a small tank only were required the people who have to pay for the work under a system of local government, would take care that only a small tank were put down? Yes; there is no doubt that it would form a very useful check on public expenditure.

3591. As the Department of Public Works does not pretend to interfere with the stock arrangements, at whose instance would these public works be commenced? Assuming that the works were in our hands for construction and maintenance the difficulty would be very easily dealt with. The Stock Branch is attached to the Mines Department. It would be for the Stock Branch to say that a certain route required watering, and then leave everything else in the hands of the constructing Department, without any interference with the works or the officers of the Department. The Stock Branch would merely say that water was required at certain stages, and we would pick out these sites in accordance with these stages. We would then act entirely irrespective of the Mines Department from the commencement of the work to the finish.

3592. *Mr. Woore.*] There would be no possibility of friction under such an arrangement as that? No.

3593. After these works were constructed who would take care of them? The constructing Department, as I have said. I would decidedly recommend that the revenue received from the watering of stock should be collected, as was suggested some time back, by the stock inspectors, at the time they were issuing traveller's permits. That would free us entirely from any connection with the levying of tolls and rates.

3594. *Major Penrose.*] The caretakers would then be merely responsible for seeing that the water was supplied? Yes; and for keeping the works in order.

3595. *Chairman.*] Are you aware how similar public works are constructed and maintained in Queensland? By the Divisional Boards—from what I have heard. In Victoria I understand that they have local water trusts. The central Department simply acts as a check upon the expenditure of the money lent by the Government to these trusts for the construction of the works.

3596. And you think some such system as that in vogue in Queensland and Victoria would be very desirable in New South Wales? I do; and I believe that a system of local government would be a very great boon.

3597. Now we have heard that great success has attended the boring for artesian water in one or two instances? Yes.

3598. Do you know anything about the country—about the sub-soil—where this water has been found? I know the country a little, but I have not seen the sections of the bores. These bores are not in my opinion the success they are supposed to be by the notices in the newspapers. Mr. Coleman can give you evidence on this point if you should require it. He knows that country, and what has been there.

3599. Does not that simplify the whole matter in that particular part of the country? We understand that it is in this cretaceous formation that you get this abundant supply of artesian water, and if this is the case, will it not do away with the necessity of tanks and caretakers in that part of the country? On the assumption that an abundant supply of water has been obtained it will do away with the whole machinery of public watering places.

3600. *Major Penrose.*] Has this question of artesian boring ever been taken up by your Department? No; we have bored with the ordinary rod, but only on a very limited scale—down to 200 feet.

[The Commission adjourned until the afternoon, when the sitting was resumed.]

William John Hanna called in and examined:—

W. J. Hanna. 3601. *Chairman.*] What are you? I am a road superintendent.

3602. In what district? Wilcannia district; but my local quarters have been shifted to the Barrier, and the name of the district has not yet been settled. I think I had better say the Wilcannia district.

3603. How long have you been in your present situation? About four and a-half years in the west.

3604. Have you had the superintendence of many of these tanks or public watering places? Yes; a great many of them.

3605. In fact I suppose in that part of the country there have been a great many works done lately, owing to the influx of population? Yes; and the scarcity of naturally-conserved water.

3606. *Mr. Woore.*] In what way were you occupied in your Department before you went to the west? I was for four and a-half years in charge of the Young district, and a little over nine years altogether in the service.

3607. *Chairman.*] You are aware that allegations have been made by officers of the Mines Department and also by private individuals, finding fault in various ways with the work done by the Public Works Department? Yes.

3608. These allegations take the form of statements that the sites of the tanks were improperly selected, that the construction was defective and costly, and so on? Yes; and some of the sites, I believe, were selected by the officers of the Mines Department themselves.

3609. Is it usual to consult the officers of the Mines Department or those in the Stock Branch of the Department, in selecting sites? Yes; it has been done by the head office. I do not do so. I report to the Engineer-in-Chief for Roads direct.

3610. Will you state exactly what your position and duties are in regard to this matter—how these things are brought about and what puts you in action? I suppose pressure is in some way brought to bear on the Government to put watering places on a certain route? I act under instructions. The necessity for watering various routes at particular stages is sometimes brought up by the people themselves and sometimes by municipalities. Then the matter is brought under the attention of the head office in Sydney. If sent to the Works Department, I am requested to report; but sometimes the application goes to the Mines Department, and then the officers of that Department deal with the matter. When my report is received in the head office, I believe the custom is to send it on to the Mines Department for their approval or otherwise.

3611. And when the matter goes first to the Mines Department do they forward it to the Public Works Department for approval? It is sent on to the Roads Department.

3612. I mean is there reciprocity;—do the Mines when they receive an application for a watering place send

- send it on to your Department for approval? I am not aware that they do. I think that they obtain reports from their stock inspectors; but whether they act upon these reports or not, I cannot say.
3613. Then your report having gone to the Mines Department is returned to the Works Office? Yes.
3614. What next? It is returned with their instructions upon it, either approving of the site or recommending otherwise. I am speaking now of what I understand of the custom of the head office, so far as I am aware of it.
3615. Then in any instance do you ever commence the excavation of a tank without having received the approval of the Mines Department? I do not know that all are referred to the Mines Department. For instance, the tank at Broken Hill—that was not referred to the Mines Department.
3616. *Major Penrose.*] But that was a tank for a town? Yes; but I notice that Mr. Low sent in a report upon it.
3617. *Chairman.*] Was that a complaint? No; merely with regard to the cost of the work and the dimensions of the tank.
3618. And yet it is a matter with which that Department had nothing whatever to do? Nothing whatever.
3619. Then let us distinctly know who it is that fixed the exact site of the works;—is it your Department? Yes, in most cases. The Mines Department indicate the general position, and we chose the exact site.
3620. Then the usual course is followed? Yes; tenders are invited and the work is undertaken. I supervise it as the work advances.
3621. *Major Penrose.*] What do you do when you receive an order to put down a tank? I fix the site, draw out specifications as a rule, and invite tenders.
3622. You draw out a design of the tank? Sometimes it is done in the head office, and sometimes I do it myself.
3623. But the general design is liable to modification by the officer on the spot to suit the circumstances of each particular case? Yes; some of the tanks are square, like these on the plan produced, but there are very few of them in my district.
3624. You have a considerable amount of latitude allowed you as regards depth? Yes; and if I deem such alterations necessary, I report to the head office; but any little alteration, such as surface dimensions, I do not.
3625. *Chairman.*] Who fixes the capacity and size of the tank which may be required, or are they all on one plan? It is all according to the importance of the road.
3626. But who decides that? It is decided in the head office. I generally recommend what I consider would be a proper size; but a decision is arrived at in the head office by the Works or Mines Department.
3627. But which Department does this? The Mines Department, knowing more about the stock routes, might be the best to say what the size of the tanks should be? No; I cannot say which Department decides as to the size of the tank.
3628. *Major Penrose.*] I suppose you can modify the disposition of the embankments, if necessary? Yes.
3629. And generally you can modify this design to a considerable extent? Yes; I have only one tank that is exactly like the plan produced. The slopes are nearly all 3 to 1, on account of the looseness of the soil. The tank at Broken Hill is 2 to 1, because it is sunk in exceptionally good ground; and it being for a town supply, it would never be necessary under any circumstances to allow the stock to go into it. 80 × 60 and 90 × 60 are about the average surface dimensions.
3630. Can you state what tanks are 3 to 1 in your district? Yes; I will give you a list of the tanks that have 3 to 1 batters. I have only three tanks in the whole district, namely, the 12, 35, and 48-Mile, on the Booligal road, that have a batter of 1½ to 1. The next steepest-sloped tank in my district is the 26-Mile tank, which has a batter of 2 to 1.
3631. Can you tell us the names of some of those which have 3 to 1 batters? Waratta, Maxwell's or Murlippa, Tarella, Peak, Dry Lake, Cobham, Rathole, and Thackaringa. That is all I will say just now. I believe the Silverton, Day Dream, and Purnamuta tanks have also 3 to 1 batters.
3632. *Chairman.*] You or some other officer in your Department occasionally pay visits to these tanks, measure up work, and pass vouchers? Yes; I try to get round the district about once a month.
3633. Then, when the work is completed, you attend, as soon as possible, to make final measurements? Yes; and if there is a large balance owing to the contractor, I pay him 50 per cent. in advance, that is, when I get back to head-quarters. The balance is then sent on to the head office for payment, and is paid in about three weeks.
3634. That is the plan now adopted? Yes, and has been adopted ever since I have been in the district.
3635. And such delays as we have heard of—delays of months and months—before the final payment is made, never occurred to your knowledge? No, not to my knowledge. In some cases payment is delayed, but it is simply a case where the contractor has left something undone, or has disregarded instructions, or refused to do certain things which I considered necessary.
3636. So that in the event of any long delay occurring, the blame rests with the contractor himself? Yes; but final payments are sometimes delayed for various causes. These, being small, cannot cause much inconvenience.
3637. *Major Penrose.*] Do you ever make any other progress payments? Yes, every time I go round. On some works I have made as many as thirteen advances while the work was in progress.
3638. *Chairman.*] Now, when the work is finally measured up, what guide have you to prevent any swindling on the part of the contractor? On nearly all new works that were started under me, I took the levels at each corner of the tank. If the ground is irregular, I take the levels in two or three other places, and connect these levels with the bench marks. I produce my field-books for 1885-6-7. [*The books referred to were then examined by the Commission.*]
3639. Is it possible for a contractor to so disguise the levels that in the final measuring up he will be able to get paid for more excavation than he has really performed—of course it is possible to pull up the pegs? Yes; it is possible to pull up the pegs, but they cannot shift the bench marks.
3640. But is it not possible, by manipulating the ground, to cheat the Government in this way? It is quite impossible for a contractor to make an alteration of half an inch if you had a bench mark. I never require the surface levels after they have been taken the first time. I can fix the pegs within a quarter of an inch of where they were originally.
3641. *Major Penrose.*] How long have you used this method? Ever since I have been in the district.
3642. *Chairman.*] Are you aware that your predecessors have always taken the same precautions that you state

W. J. Hanna.
23 Mar., 1888.

W. J. Hanna. state you have adopted? I cannot say that. There may be some cases where these precautions are unnecessary, such as places where the ground is perfectly level—where you have a plain to deal with. The contractor cannot alter the ground in that case without being detected, as you can get the average surface inside the tank by going a chain or two from the embankments.

23 Mar., 1888. 3643. *Major Penrose.*] Did you follow this method in consequence of the circular which had been issued from the head office? I believe there was a circular sent out to this effect, but I did not receive it nor did I act in consequence of it.

3644. Then these precautions that you took were only ordinary precautions? Yes; I found it so much more satisfactory. It avoids all possibilities of having any disputes with contractors. It is a thing that you go into Court and swear to, whereas with the ordinary surface marks it is not so easy to say. As I have said, there may be cases where I have not had an opportunity to take these levels, and where they are not, as on plain country or level surface, absolutely necessary. In such a district as the western you cannot always be carrying instruments around, and sometimes I have had to start work without being able to take these levels; but these are exceptional cases, where the natural surface of the ground is a sufficient guide.

3645. *Chairman.*] Then you think that with an ordinarily sharp man, imposition by contractors is not possible? No; not to any extent. I followed this practice as much to avoid troubles and disputes with contractors as for any other reason, because I do not see that a contractor can get any advantage when I adopt that plan.

3646. Another way in which it has been said the Government has been cheated, is that they have to get a contractor or one of his men to help the road superintendent in the final measurement of the work. The general custom is said to be, if the man happens to be below to gather some of the tape in his hand, and if he is above to give an improper site to the levels—in either case the Government being cheated? Well, I use a levelling-staff, so that they cannot take anything off the end of the staff. Besides I doubt if a contractor would care to risk that, although it may have been attempted in some instances.

3647. Some of them seem to take a pride in doing it? Yes; but there is always the danger of being found out, and I think anything like that would be very soon found out.

3648. Having measured up the tank I suppose it is then handed over to the Mines Department? Yes; after the appliances are erected.

3649. Then, after this have you any control over these tanks? No; but in going over my ordinary rounds I continue to visit the tanks, and report to the head office how the works are, the quantity of water in the tank, and the general appearance of the works.

3650. Then, in the event of negligence being apparent in the management of the works, what would you do? I report to the Engineer-in-Chief for Roads.

3651. Not to the Inspector of Public Watering Places? Oh, no; I have nothing to do with them officially.

3652. Is it by instructions that you report to the head of your Department? Yes.

3653. Do you not think it would be desirable when you see negligence exhibited by the caretaker, that you should report to the caretaker's superior, and let him attend to the matter—would that not involve less red-tapeism? Yes, it would. But if these instructions were not attended to I might be blamed by the head office for not reporting, and justly so.

3654. Then, in the event of any serious repairs necessary from the heavy rains having to be made in the embankment, what do you do—do you find out for yourself or is it reported to you? I generally find it out myself first. After heavy falls of rain I make inquiries in any way I can as regards the state of the works, and if serious damage is reported to any watering place I go there and inspect and see for myself as soon as possible. Having done that I report to the head office.

3655. Then, in the event of a minor repair only being required, what do you do? I follow the same course whether the repair required be a light or heavy one.

3656. Are you aware that the Mines Departments retain the power of repairing small damages without reference to the Works Department? Yes; I believe they have the power to do any repairs up to a certain sum.

3657. How comes it, then, that you also apparently interfere with the works under their charge, and report these trivial matters to the head office—supposing the repair cost only a few pounds? I do not wish to interfere. The fact of my reporting to the head of my Department, does not interfere with their taking any action that they may desire. I simply report if anything has gone wrong, and further action rests with the Engineer-in-Chief or with the Mines Department. My action does not interfere with their doing anything they consider urgent or needful.

3658. But do you not think that all this tends to produce friction and charges, and countercharges between the two Departments? Yes; it does.

3659. Then, in the event of some heavy work having to be performed, you go through the same course? Yes; I report the matter, and if there is anything very urgent, and where a delay of necessary repairs would cause further damage, I take action myself on my own responsibility and telegraph what I have done to the head office.

3660. Then, in going round to inspect any damage that may be done to the tank—if you see repairs going on under an Inspector of Public Watering Places you take no action? Well, in reporting the quantity of water in a tank, &c., I would very likely refer to the matter and say that the repairs were in hand and progressing satisfactorily.

3661. Do you also report to the head office when the silt-tank is filled up and nothing is done—is it your duty to report that fact? Yes, it is my duty to report anything that is defective about the works or any negligence.

3662. Although all this is properly within the sphere of the caretaker and a part of his duty? Yes.

3663. *Major Penrose.*] Did you ever have any complaints from contractors about delays in payments in your district? If the contractors were kept a day behind their time they would, and do complain, but I have never had anything that I would regard as a serious complaint.

3664. The progress payments would be quite enough, you think, to enable them to carry on the works, the final payment being a very small one? Yes, as a rule very small. In making progress payments I pay 50 per cent. in advance, and the balance is paid in about three weeks. Suppose a man has £200 worth of work done. I deduct 20 per cent. leaving a balance of £160. Of this, £80 is paid in advance as soon as

I reach my headquarters, and placed to the contractor's credit in the bank. The remaining £80 is sent on for payment, and is paid in the usual way in about two or three weeks. I will instance one case—the case of the Menamurtee well. There the total amount of the contract was £566 8s. 8d. The advances paid were £75, £77, £143, £145, and £110, leaving the balance as the sixth and final payment of £16 8s. 8d. 3665. What were the intervals between these several payments? I cannot say here. They extended over about a year I suppose. It will be fully that. I can give you instances where there have been thirteen payments on one work.

3666. *Chairman.*] Have you ever known an instance where a man was forced into the Insolvency Court by delays in getting the balance of his money? No; such a case should not occur under the arrangements made by the Department.

3667. If you find that the caretakers are not competent men to take charge of the works do you allow them to retain charge, or do you caution them? Caretakers are employed by the Mines Department, and are solely under their control.

3668. You have never given such an order as "You must not touch that pump?" No, I have never given such an order as that, but I have explained several things to the caretakers in a friendly way, telling them, of course, at the same time, that if they were not satisfied with my instructions they had no need to pay any attention to them. Some of them did follow my instructions, but very few; others ignored them, and I gave up trying to help them.

3669. It has been stated here that very improper sites for tanks and wells have been chosen—some of them in your district are sunk in the bed of a lake, and are now submerged? I presume you are referring to Dry Lake and Cobham.

3670. Yes, and to other cases where it is said very much better sites might have been chosen in the immediate vicinity? Well, I prefer a tank site in a place where the water is likely to accumulate. I think it has been said with regard to Cobham that we constructed a tank in the lake. Well, it is quite true that it is submerged, but it is not in the lake, and the fact of its being submerged is not, I think, a sound argument against the site.

3671. *Mr. Woore.*] You say it is not in the lake? No, not in the lake proper. Here is a report of mine on the subject.

Cobham Tank.

Silt tank is completed, but will not hold; bottom is in fine white sand; when at Cobham on the 4th there was a heavy thunderstorm, which, judging from what I saw, and the marks on watercourse, should have put at least 3 feet of water in silt-tank.

The greatest depth was 9 inches, and when leaving on the 6th, this was almost gone.

Samson states on a previous occasion when the excavation was down 5 feet, the tank was filled to overflowing, and dry a fortnight afterwards.

On the way to Tibbooburra I asked Samson to get a shaft put down in centre of main tank to be ready for inspection on return.

Section is forwarded herewith showing the thickness of the various strata passed through. From 6 to 13 feet puddling would be required. The watershed is of such a sandy nature that a long time would elapse, and consequently great loss of water, before any benefit could be expected from edposition.

I had a second shaft put down nearer the lake, and found that after passing the surface drift (about 1 foot thick) the sinking was through tough white and red clay up to 16 feet 4 inches. At 17 feet a stratum of sand was struck from which the salt water rose 4 feet in two days. This I believe is the same stratum passed through as the one at 25 feet when boring. (See sketch).

I do not think there would be much difficulty in sinking to full depth (18 feet); the working in the tank would I believe be sufficient to puddle the sides and prevent the salt water coming in in such quantities as to interfere with the progress of work, and probably stop the soakage altogether.

I would, however, prefer sinking only to a depth of 16 feet, and having only three embankments, there would be no necessity for piping. When full the water would be about 3 feet above surface.

As three banks instead of four will be a disadvantage to contractor, I would not recommend any reduction in price, owing to the depth being altered.

Samson informed me that he is now ready to proceed with the work.

On last visit I marked out the site referred to, so that no time would be lost in case the Commissioner approved.

W. J. HANNA, 15/10/83.

Mr. Hanna telegraphed to to arrange for tank as he proposes, but to utilize the lake if possible.—A.P.W., 22/10/83.

3672. Is it not within the banks of the lake? Yes, but not within the lake proper. There is a sand ridge between the tank and the lake. I am responsible for that site, and I am prepared to meet any objections that may be raised against it.

3673. Is not the tank below the high-water mark of the lake when the lake is full? Yes, but Cobham Lake has no outlet. The tank is below the high water level, I admit.

3674. *Chairman.*] With regard to Cobham Lake the objection has been raised that in the event of the lake drying up, and the water becoming more and more salty, eventually the water left in the tank would become unfit for use? Water in the tank would have no connection with salt water in the lake, because the bed of the lake is several feet lower than the surface of the tank, and the tank is not fed entirely from the lake, but from outside sources. I altered that site from the one that was originally selected, but only a few yards. I would like to read you my report, and my reasons for having done this:—

Cobham Tank.

(14/11/83.)

Work has been commenced on the site.

Herewith I forward sketch plan showing position of tank as regards the lake, and also section from edge of lake to silt-tank on former site.

The ground above the sand ridge I have chosen for the following reasons: The sandy stratum in which the salt water is found was struck at a depth of 24 feet in centre of main tank as originally laid out, and at nearly 17 feet in shaft put down on present site.

At the opposite side of the lake the same stratum is found in several shafts to be only 8 feet below the surface. I did not sink at edge of lake near the tank, but conclude from the above tests, and levels taken, that the stratum of sand yielding salt-water lies about 8 feet below bed of the lake, and in a parallel position.

If, therefore, we put down the tank on edge of lake the salt-water would be struck at the above depth, which might interfere with further sinking, and at this height from bottom of tank would probably affect the quality of the water.

I find also that the rain which would put 1 inch of water in the lake would be sufficient to fill the tank several times from the present catchment.

For instance, during the last heavy rain, although Evelyn Creek (flowing into Cobham Lake) was for a short time running bank high at Milparinka, washing away a portion of the dam, at that place the Coalley waterhole (half way to Cobham) was not filled. Then about a mile north-west from Cobham there is another lake 3 or 4 miles in area, which receives
about

W. J. Hanna.
23 Mar., 1888.

W. J. Hanna. about 2 feet of water before overflowing into Cobham Lake. My informants in reference to the state of the creek at Milparinka were two residents who may have slightly exaggerated; but making every allowance, there is ample proof that a supply from the lake into the tank could only be obtained when not wanted.

23 Mar., 1888.

If a site could have been chosen on edge of tank without cutting the salt-water stratum and without incurring the expense of fluming (over the sand ridge), that of course would have been preferable; but under the circumstances, the position as now set out and shown on sketch, I think is better.

Samson claims payment (£30) for some clearing done on the former site. As the alteration has caused no extra clearing, save one small dead tree, I hardly think his claim is a just one.

W. J. HANNA, 14/11/83.

The Commissioner and Engineer for Roads.

I agree with Mr. Hanna that Samson is not entitled to extra payment.—A.P.W., 20/11/83.
Samson will be informed accordingly.—W.J.H., 26/11/83.

My reason for altering the site was that I found the ground near the silt-tank was too porous, and that the catchment was of such a sandy nature that it would be a long time before the tank would be anything like retentive by the deposition of silt.

3675. *Mr. Woore.*] You say still that the tank is not in the lake. I know this place pretty well myself; and if it be within the sand hills around the lake it must be within the lake? The bed of the lake proper is a layer of black clay about 8 feet thick and almost level, but on the outside there is sandy clay ground.

3676. *Major Penrose.*] Was Cobham tank filled by rain-water before the filling of the lake? I really cannot say.

3677. *Mr. Woore.*] At any rate that tank was placed there not on account of any advantage from the flood-waters of the lake, but rather to fill independently of the lake? Yes; if we had put the tank on the bed of the lake proper—on the black soil—we would only have sunk 8 or 9 feet before striking the salt stratum. But by adopting the present position on the south side of the sandy ridge we would get down 16 feet 4 inches before reaching the salt-water stratum.

3678. Do you think that the catchment there is preferable to the catchment of about 4 miles southerly from the lake where there are clay pans? I think I know the place referred to by Mr. Tully, but I have made no examination of it. I do know that the catchment of Cobham Lake is ample for all requirements.

3679. *Major Penrose.*] Is the tank in the place where it is required for stock? Yes; I only shifted the tank a few yards away from the site where it was placed originally.

3680. *Chairman.*] Had you anything to do with the choosing of the site of the tank at Dry Lake? No; I had nothing to do with any of the original sites of tanks on the Mount Brown road.

3681. *Major Penrose.*] Will you be able to erect the watering appliances at Cobham Lake so that in the case of another flood they will not be submerged? The appliances would be erected on the shore line of the lake on the high water level.

3682. *Mr. Woore.*] What depth of water was there above the embankment of the tank at Cobham when the lake filled this time? Well I really cannot say; I never tested it. I should say about 10 feet; that is from the natural surface of the ground.

3683. The embankments were completely submerged? Yes.

3684. You do not know how high the water was above the embankments? I should say about 4 feet.

3685. But still you would be able to keep your watering appliances dry? Yes; the ground rises very quickly.

3686. Even then, I suppose, it is only a question of a greater flood coming to increase the depth of the water in the lake? Yes, a still greater flood. There is no outlet.

3687. And there is no doubt that the water has been very much higher than when this tank was submerged? I was under the impression that that was the highest flood we had had up there.

3688. *Chairman.*] Can you tell us generally about the tank at Seaville's? I have heard that the tank was put there to benefit some particular individual, whereas it is 3 or 4 miles away from the public-house, and 12 miles away from Wilcannia instead of 9. Although I am not responsible for the selection of this site, still I think I can refute some of the statements that have been made concerning it.

3689. A number of these places are objected to on account of their being alongside permanent water. There is one place we have had a great deal of evidence about, the Peri Springs, where a tank was excavated within a short distance of what was thought to be permanent water, and your Department has been blamed for an expenditure of money, where it is said there is no occasion for it? I have not been past that place lately. If the springs would yield sufficient to meet all requirements, of course a tank might have been dispensed with. But whether the springs would be equal to the strain upon them or not I could not say. And then there is the right of the station owners to be considered.

3690. In dry times the lessee would have required the water for his own stock—would there then have been sufficient water for the travelling stock? I cannot say. I think it is doubtful. To try to improve these springs would mean running a risk of losing the supply from them altogether.

3691. *Mr. Woore.*] You were not there in the early days when this tank was put down? No, I was not. The Tarella and Menamurtee watering places are also said to be near permanent water, but I think it is questionable whether these waters can be considered as permanent in a severe drought. The Tarella dams are very much silted up, and the same thing may happen to any waterhole. Then the lessees in these early days constructed these works at great expense and inconvenience—at a time when labour was expensive; and is it fair then to deprive these individuals of their works when the Government are in a position to put down watering places along these routes? I do not see why the Government should take possession of these works, which have been put down at large expense by the early pioneers. I cannot see why the Government should continue to deprive the lessees of the use of the works. That is the view I have taken up to this. In the face of the minute made by a former Minister of Lands, I think it is questionable whether the Government can have any claim upon this water artificially conserved by the lessees. If they are monopolised by the Government the lessees are deprived of the use of them just at the time when they are most required, and when there is a great demand for water by travelling stock.

3692. *Chairman.*] Is there much traffic on the Mount Brown road? Yes, it was one of the most important roads in the colony. It is the main road from Queensland.

3693. And the same may be said of the Paroo? Yes.

3694. Can you give us any idea of the number of stock that would pass along one of these roads in one day? No, I cannot.

3695. What is the maximum demand that a caretaker would require to find water to meet, supposing one mob were going one way, and another mob another way? Mobs going both ways, a caretaker might have to provide for watering 20,000 sheep.

3696. Have you ever heard of one caretaker having to supply as many as that in one day? No, I have not. W. J. Hanna.
3697. Now, with regard to the injudicious sites of the Box Creek watering place, Youhill Plains, Kerrigundi—these are all said to be injudicious sites—were they made before your time? These are wells in which the water is said to be salt? I have no information about them; they are not in my district; there are no salty wells in my district that the Mines Department have taken exception to. 23 Mar., 1888.
3698. *Major Penrose.*] What about the Meenamurtee well? That is good water. I do not think that any objection, so far as I am aware, has ever been raised by the Tarella lessees to stock watering at their dams, but the question is whether their successors would be of the same mind. Besides, as I have said, these dams are fast silting up.
3699. Do you lay out drains yourself? Yes, and if necessary grade them.
3700. And what is the steepest slope that you have allowed with drains? Most that I have done I have laid out with the eye, having sloping country to deal with. When contouring hills I use levels, and allow a fall of one inch to the chain.
3701. *Mr. Woore.*] The less fall the better, I suppose? Yes; it is not desirable to have a great fall, because the water will then carry more silt along with it. I generally lay out the last 5 or 10 chains nearly level, so that the silt will not accumulate there. The heaviest silt is caught in the drains, and the caretakers can clean them out with a shovel after the water stops running.
3702. *Chairman.*] And what do the drains cost per chain in your district? I have had some done recently at 4s. 5d. That is the cheapest I have had done, I think.
3703. What are these—6 feet? Six feet broad and 9 inches deep.
3704. What is the highest sum that you have had to give per chain? I think I have paid as high as 7s.
3705. I suppose 12s. or 15s. per chain would be rather an excessive price? Yes; I think 12s. or 15s. per chain would be high, but prices vary very much according to the nature of the ground and the seasons. Some main drains I have made 12 feet wide and 9 inches deep, and they have cost about 9s. per chain.
3706. *Major Penrose.*] Have you ever found the design for fluming defective? No; I think the design is suitable in every way.
3707. It has been objected that the construction of the fluming, where it enters the embankment, is defective. Have you ever noticed any difficulty in this case? I have not experienced any difficulty. If I suspected a heavy rush of water into the tank after a heavy thunderstorm I would put on a cover of 2 feet of earth so as to prevent the water from flowing over the shoot, but it is very seldom that the water would come down so quickly as to overflow a 4 by 2 flume.
3708. Are all your tanks 18 feet deep? Most of them are; but some of them, on account of the nature of the ground, we cannot get down to 18 feet. I always try to get to that depth or as near it as I can.
3709. *Chairman.*] Would you make the batters steeper if the ground were sufficiently firm to stand it? Tanks would be all the better for steep batters for the purpose of conserving water, but it would add a little to the expense.
3710. Have you ever made a calculation as to the relative merits and expense of the two kind of batters? If you had very steep batters the expenditure would be greater, and you would have a greater depth of water in comparison with the amount of excavation. But if you have very much longer slopes the expenditure would be less and the surface exposed to evaporation would be greater. Now which is the best—to make the steep batters, which will conserve more water and pay the extra price, or have more gentle slopes with greater evaporation at a lessened expenditure? Well, 2 to 1 slopes are, no doubt, preferable; but in a district like the Western district bullocks cannot work on 2 to 1 slopes. There is no grass or natural feed for horses except salt bush, and for that reason I prefer 3 to 1 slopes, made with the usual ploughs and scoops which are used in the district.
3711. *Major Penrose.*] You say that in many parts of the country a 2 to 1 slope is practicable? Yes, and advisable; provided the difference in price between the two kinds is not too great.
3712. *Chairman.*] It has been said here that your Department have adopted too expensive forms of machinery for lifting water. Have you come to any conclusion on this matter, or have you made any calculation as to which is the most economical—steam, horse, or man power? Well, I am strongly in favour of steam, as being not only more economical but more efficient. It costs a little more at the beginning, but this extra cost is only very trifling.
3713. I suppose the machinery which is attached to the horse-gear brings up the expenditure nearly equal to the cost of the steam-pump? Yes; it makes the difference in price very little, and besides if you have steam-power, whatever kind of season you have, you are independent of horse-power.
3714. *Major Penrose.*] What form of hand-pump have you seen—what are you comparing it with? I say that steam is superior both to horse and man power.
3715. But you have no hand-pumps on your public watering places, and therefore you must be comparing it with the hand-pumps used on stations? Yes; I have seen the M'Comas lift on tanks. If the M'Comas lift is adopted, the difference between the expense of erecting it and the steam-pump would not be so much. The M'Comas lift I do not think could be erected under £20; cost and carriage added, about £27. At one of the tanks the steam-pump would cost about £90. But if the M'Comas lift is to be adopted who would work it? If the caretakers have not got time to do the little ordinary work that is required about a tank, how are they to make time to do the pumping? And in the event of a large mob of stock (cattle or sheep) travelling, a man would require to work very hard for a few days. The question is, will the caretakers do the work? Besides the supply from the M'Comas lift might fail at the time when it is most wanted.
3716. *Chairman.*] Would not the same thing apply to steam-pumps? I do not see that there is anything to support that idea. It has not been so in my experience. The Mines Department state that the steam-pumps require skilled men. Now I had a man working at the 26-Mile tank who never saw a steam-pump before, and that pump is working splendidly to this day. The man at the Peak tank on the Mount Brown road never worked a steam-pump before, yet he is now working one of these pumps without any trouble. And next month I am putting a man on to take charge of the Broken Hill tank and pump, and I do not think that he has ever seen a steam-pump working or has ever turned on steam in his life, and yet that watering place is by far the most important one in the Colony. If a man who has never seen a steam-pump and has never turned on steam in his life, can go and do the work after two or three hours' instruction, surely it is not correct to say that skilled labour is absolutely necessary in the working of these pumps. 3717.

- W. J. Hanna. 3717. *Mr. Woore.*] I think you said that the cost of erecting the M'Comas lift at a tank would be about £20? Yes; I was giving the total cost of erecting, but I was only speaking roughly.
- 23 Mar., 1888. 3718. Would you be surprised to hear that the cost is said to be very much more than that? It is quite possible. The cost of carriage is sometimes very excessive.
3719. *Chairman.*] Have you had much fencing done in your district? Yes; a considerable amount.
3720. Do you consider it unnecessarily expensive—would not a cheaper fence answer all purposes? A cheaper fence might answer the purpose, but it would not last the same length of time. I do not think the present class of fencing is much too strong.
3721. Would you erect the same style of fencing round the caretaker's paddock as round the tank? Well, if the tank is outside the tenant's lease it should have a stronger fence; but where it is enclosed I would put the same fence as is put round the land to be leased.
3722. *Major Penrose.*] Are the posts unnecessarily deep in the ground? No; I do not think that any-one would consider 2 feet as being too deep for posts.
3723. I think the specifications say that the posts shall be sunk 2 feet 6 inches, and that has been objected to as absurd? Mine are only 2 feet deep.
3724. Then you do not follow this specification? No; not strictly.
3725. *Chairman.*] Will you just describe the kind of fencing that you put up in your district? Round posts, 5 to 6 inches in diameter, according to the class of timber; split posts, 9 x 3, 6½ feet long, 10 feet apart, centre to centre, and 2 feet in the ground; straining posts, every fourteen panels sunk 2 feet 6; corner posts, 7 to 9 inches diameter, sunk 3 feet below the surface; strutted from top of posts to foot of fencing post on each side; seven wires.
3726. What does that cost per mile, and what is the gauge of the wire? The wire is 5 and 7 gauges. I have to make the gauge according to the wire I can obtain. We can only get wire by river from Melbourne. Very often I cannot get No. 4 or No. 5; but I can always get Nos. 6, 7, and 8. I ascertain what gauge of wire is procurable, and advertise accordingly.
3727. Of course the heavier gauge means a very much heavier fence, besides adding to the cost of carriage? Yes.
3728. And do you think that wire of Nos. 4 and 5 gauge makes altogether too heavy a fence? Well, I think No. 4 is rather heavy; but I believe the reason for adopting it is because we did not put up a top rail.
3729. *Mr. Woore.*] The Mines Department suggested a top rail? Yes.
3730. *Chairman.*] A larger wire makes a better baulk? Yes. In many places in the west you cannot get top rails.
3731. If you were to make a suggestion that lighter wire would be preferable, would that be entertained in your Department, so as to lessen the expense? I believe it would be considered.
3732. You never saw such heavy wire round the squatters' paddocks? No.
3733. *Mr. Woore.*] What is the cost per mile of such a fence as you generally put up? It would range from £64 to £100 per mile.
3734. *Chairman.*] In accordance with the locality and the scarcity of timber? Yes.
3735. *Major Penrose.*] Is not this one of your specifications? Yes; and we follow it as closely as we can. We are allowed some latitude, as a specification which would apply to one district might not be desirable in another. In some districts you can get timber easily; but in the west you might have to go 20 miles to get timber of the dimensions specified here.
3736. *Mr. Woore.*] So that these specifications need not be followed in their entirety. You have a great deal of latitude? Yes; it is impossible to draw out specifications that will suit all parts of the Colony.
3737. *Chairman.*] In your neighbourhood, where you pay £100 per mile, what will the squatter pay for his fencing? Well, I really do not know; but the fences in these districts are very weak; they are small short posts, about as thick as your arm.
3738. Are they not sufficient protection against cattle? No; bullocks would walk through them. Even with the fences we have there is sometimes difficulty in keeping them out.
3739. *Major Penrose.*] Then you think the top wire ought to be stronger than the others? Yes; for that purpose. Barbed-wire would be the best for the top, but it is too expensive.

[The Commission adjourned.]

THURSDAY, 12 APRIL, 1888.

The Commission met at 10 a.m.

Present:—

HON. G. H. COX, M.L.C., CHAIRMAN.

MAJOR PENROSE, R. E.

J. C. WOORE, Esq.

William John Hanna called in and further examined:—

- W. J. Hanna. 3740. *Chairman.*] You have some further evidence to offer, I believe, Mr. Hanna? Yes; in connection with the cost of works. I may explain the course that has been adopted for all works except those of a trifling or urgent nature. Tenders are invited in the local papers, and about two weeks allowed for receipt of tenders. Specifications are forwarded to some of the nearest Court-houses for inspection by those desirous of tendering. Contractors living or working in places too far removed from these centres can get any information they require on application, and if time permits, a copy of specification would be forwarded if necessary. I shall refer very briefly to the cost of fences, tanks, and caretaker's cottages. Here are schedules of the last tenders received. [*Schedules produced.*] Reference to these and other tenders will be sufficient to show that there has been in most cases no lack of competition, and considering the nature of the works, seasons, and distances from which timber had to be carted, the prices paid, I think, are only fair and reasonable. The Mines officers, when comparing the prices paid by stations with those paid by this Department, apparently forgot to take into consideration the difference between the two classes of fencing. All stations in my district, with perhaps a few exceptions, are sheep stations, and the fences are consequently of a description suitable to the requirements; but I would respectfully submit that, however good and secure such fences are for sheep paddocks, they would be totally inadequate for enclosing

enclosing small paddocks where stock of all kinds including horses and working bullocks would be occasionally depastured. The value of these paddocks will also in a great measure depend upon the security afforded by the fencing. Mr. Low states in his evidence that the fences at the 26-Mile, the 35-Mile, and the 48-Mile tanks cost £95 per mile, and that no timber was carted more than 5 miles at the 26-Mile and 48-Mile tanks, and not more than 4 miles at the 35-Mile tank; whereas the actual price paid was £94 per mile, and the distance which the posts had to be carted was greater than Mr. Low represents. The distance was 1 or 2 miles more. Then Mr. Low states that the drains at the 26-Mile tank were let at 4s. 6d. per chain, and that they were sublet at 3s. 6d. to the man who did the work. I am informed by the contractor that he paid Walters, the sub-contractor, the same price as he received himself, which, as I have said, was 4s. 6d. per chain.

W. J. Hanna.
12 April, 1888.

3741. *Mr. Woore.*] That is not evidence? Mr. Low's evidence is only hearsay also. If I had known sooner I could have had the correct price ascertained and sworn to. I would not have referred to this matter, only that I saw it in Mr. Low's report.

3742. *Chairman.*] That was put in evidence as a written report? In reading over these papers and reports I was strongly impressed with the evident intention of making everything appear in the worst possible light, and I have referred to these items chiefly on that account. I desire to hand in tenders for fencing received only a few days ago from several practical men who have a thorough knowledge of the work. [*Witness hands in tenders for fencing, the prices in the schedules ranging from £57 to £165 per mile for work in the Wilcannia and Mount Brown districts.*]

3743. *Mr. Woore.*] And public competition is invited in every possible way? Yes; and when tenders are considered too high fresh tenders are invited, as will be done in the case of the Day Dream and Purnamoota tanks. The estimated cost of fencing the Day Dream and Purnamoota tanks, according to the specifications, was £131 5s. per mile. It is our intention to invite fresh tenders and to further notify the specifications in these cases.

3744. *Chairman.*] Why was this excessive cost of £131 per mile necessary? Just state the reason for it fully? My reasons are on account of the distance that the timber had to be carted, and the scarcity of labour in the locality.

3745. *Mr. Woore.*] What was the distance that the timber had to be carted? Over 20 miles. There was also a difficulty in getting teams and men.

3746. On account of the place being in the vicinity of the mines? Yes.

3747. *Major Penrose.*] Do you think the design of the fence could be altered without prejudice to its character as to stability? Yes; to some extent.

3748. *Mr. Woore.*] Would the distance the wire had to be carted affect the question? No; it would not to any great extent. The wire would have to be carted 16 miles to the Day Dream tank, and about 20 or 25 miles to the Purnamoota tank.

3749. And in that country where there is a good deal of rock would not the sinking be pretty hard? Yes; the ground there is harder than usual. As the Day Dream tank there will be rock, and also at Purnamoota. Although the wire has only to be carted a comparatively short distance it has to come by rail from Adelaide.

3750. Adelaide is the nearest market to that place? Yes.

3751. *Major Penrose.*] Do you think that the design of this fence is unnecessarily expensive for that district? In this case it is. The specifications in this case will be further modified, and fresh tenders will be invited with a view to make a reduction in the cost of the fence.

3752. In what way will you modify the specification? By reducing the size of the posts and the wire.

3753. Not the distance apart? Yes; it will also be advisable to alter the distance from 10 to 12 feet, making the distance apart 12 feet instead of 10 and the straining posts 20 to 25 panels apart instead of 14.

3754. *Mr. Woore.*] What would you estimate the cost to be of this modified class of fencing that you now suggest? About 25 to 27s. per chain.

3755. But the cost per mile—what would that be? It would be from £100 to £110 per mile.

3756. *Chairman.*] Has your attention ever been directed to the fact that where timber is so scarce iron might be substituted with a good result? No; I do not think that iron fences would be suitable for enclosing the leased areas.

3757. *Mr. Woore.*] I suppose it is the labour that causes this fencing to be so expensive? Yes; and the distance for carting the timber. Labour in that district is not only high, but it is very much below the average.

3758. *Chairman.*] It has been stated here that the shifting of a fence, the expense of which was estimated at £3, actually cost £50, on account of what has been called red-tapeism? That work was not done, and no expense incurred in connection with it. As the shifting of the fences was not urgently required, I did not think that it was advisable to proceed with the work until the leased area was being fenced, when the alteration recommended by the Mines Department could be carried out at a cheaper rate, and without any additional trouble and expense as regards inspection. Here is a report having reference to the subject, which I wish to put in evidence:—

Goomboolara Tank.

Sir,

Tallywalka, 17th December, 1885.

Herewith I forward dimensioned sketch (distances paced) of fencing asked for in connection with instructions issued by Mines Department to have fences shifted.

In November, 1884, portion of the fencing (marked red on sketch) was removed back, and the remainder tightened up and put in order.

Had we known at that time, the same trouble and very little extra expense would have made the alterations required now. It will therefore be advisable to have the distances marked on sketch, so that we may know exactly what is wanted before taking action.

The existing fences are in good order and the embankment constructed last year (see report of 26/11/84) to block watercourses and turn the water into silt tank, I was glad to find uninjured by the unusually heavy flood which occurred in January last.

The inlet pipe is completely stopped at the outer end which may account for the water being about 3 feet below surface in main tank.

Station and travelling stock alike have free access to water, there being no person in charge. The latter remarks apply also to Warramurtie Tank, but the Department is no doubt aware of these facts as the tanks are under control of the pastoral lessees.

I have, &c.,

W. J. HANNA,

Road Superintendent.

The Engineer-in-Chief for Roads, Sydney.

Sketch should be sent to Mines with a request that they will mark the position of fencing required by their officers. Sketch sent 31/12/85.

3759.

W. J. Hanna. 3759. Then this expense was never incurred at all? No.

12 April, 1888. 3760. *Mr. Woore.*] Is this statement at page 19 of the *précis* made by the Mines Department not correct: "The proposed alteration would have cost exactly £3, for which sum the caretaker was fully prepared to do the work. Red-tape routine, however, and Sydney bureaucracy demanded an official inspection by an inspector; even one inspection was not sufficient and two had to be made. The travelling expenses of this inspector amounted to over £30, so what it really cost to supervise the outlay of this £3 is almost beyond calculation."? No expense whatever was incurred. The fence will be shifted when the leased area is being fenced in for which a tender has now been accepted. I do not think that the statement in the *précis* refers to the Warramurtie tank, but rather to the tank at Goomboolara.

3761. *Major Penrose.*] But how do you know that it is the Goomboolara tank—do the circumstances stated fit the case? I think that all the circumstances stated apply to that case. Goomboolara must be the tank referred to, because no correspondence has taken place with regard to the alterations of a fence at the Warramurtie tank.

3762. *Chairman.*] You must have noticed in the *précis* a letter from a Mr. Earngey, stating that the Works officers relied upon coachmen and publicans for their information in regard to the selection of sites, and that they took no trouble to view these sites for themselves. Now what have you to say to that? It has been said with reference to the selection of sites that we have been guided by information received from coachmen and interested parties, publicans, &c., and that we have fixed sites from the box of a coach. In reply to this charge I may state that I am not above receiving information from any one who can give it, whether he is a squatter, a publican, or a coach-driver; and from these men I have often received valuable information, from which, and my own observations, I arrive at a conclusion and act accordingly. If it could be shown to me, before it was too late, that the site for a watering place was in a position that would do an injury to any individual, and if another site equally good could be found, without unduly affecting the length of stage, I would consider it my duty to alter that site, and the same remarks apply in a similar way to the laying out of a new road or making deviations; but that I have ever pandered to the wishes of any man, to the detriment of the public interest, beyond what I have now stated, is, to use the mildest term, not true. Mr. Tully has also referred to this question in a similar way. For my own part I have to give his remarks also the same emphatic denial.

3763. *Major Penrose.*] I do not think that Mr. Tully meant all that. I will read you what he said:—

2487. In your opinion do the road superintendents out there take any trouble to obtain local information as to the best position to put down these tanks in? I have heard it frequently stated that they do not inquire sufficiently or get the advice of the older residents there.

2488. *Mr. Woore.*] You have only heard that? That is all. All I know is that they did not come to me for information. Had they done so I would have given them every information in my power.

2489. And are you aware of any local people in the neighbourhood having been asked their opinions? No; I am not aware of it.

2490. Are you aware that in the early days mistakes were made by the squatters in constructing excavations and in putting up dams that were washed away? Many mistakes were made in the early days. I know that some dams on Bunker Creek and other places were washed away.

2491. So that it could scarcely be expected that the Government officers should be infallible, as if other men made mistakes they were liable to do the same? Yes; mistakes were made all round.

3764. *Chairman.*] You have heard the allegations that have been made with respect to this Day Dream Tank;—what have you to say about the matter? I shall give you all the information I have on the subject, which is embodied in this report:—

THE faulty work referred to was in one of the suction pipe couplings, which I believe was rather small, and as there were none at hand the contractor, in order to complete his contract, beat down the thread and slipped each end of pipe into the coupling, making, or trying to make, the joint air-tight with red lead and hemp. I cannot say whether the officer in charge was or was not aware of this. It may have been done with his knowledge to avoid delay. I have acted similarly under similar circumstances. For instance: There was no reducing sockets sent with pump recently forwarded for Broken Hill tank. I could not get them to buy or borrow in Broken Hill, and was therefore obliged to lay the end of suction pipe against the flange and make the connection air-tight with white lead and hemp, otherwise a most serious delay would have taken place. And that joining, although a temporary one, has stood well. It has also been stated that the work was taken over from the contractor without being tested. That is correct, as I understand there was no water at the time in the excavation. I may further state that Mr. Crummer, who was then in charge, informed me that he arranged with Mr. Crommelin, the local officer, to go out on a certain day to inspect and take over the works; that Mr. Crommelin failed to keep the appointment, but gave this certificate (produced), to the effect that he had taken over the works in good order and condition. After Mr. Crommelin's next visit he informed Mr. Crummer that the pump would not work, and it was then arranged that the caretaker at Silvertown tank, who was employed by this Department, should go out and put it in order. Both officers were to blame, and if Mr. Crommelin, after finding that the pump would not act, had allowed Mr. Crummer to make the necessary alteration instead of reporting as he did, the matter would have been amicably settled without causing so much trouble to the Departments or ill-feeling between the officers.

3765. *Mr. Woore.*] How was it that the Works Department did not provide against such a contingency as the pipes not fitting? The Works Department were not to blame in this case. It was Tangye Bros., who omitted to send the reducing sockets. The trouble was caused by the fact that the connecting socket, that screws into the flange, did not come.

3766. Then it was caused by the want of some appliance which should have been on the ground, and which did not come? It was in the case of the Broken Hill tank that the sockets were not sent with the pump. It was through no fault of the Works Department. These things were all ordered by the Department; but not sent by Tangye Brothers.

3767. *Chairman.*] In the evidence given by Mr. Tully with regard to the Goomboolara tank, what have you to say to the allegation as to the unsuitable position in which it is excavated? Mr. Tully's objections to the site are, to use his own words, that "the tank is put on a neck of water running into the lagoon, which holds about 5 or 6 feet of water more than the site of the tank. The water to go into the lagoon must pass the tank. I have frequently seen the water going into the lagoon without filling the tank." There is a natural depression in the ground near the tank, which might hold about 5 feet of water, but as you will see from this sketch, there is a well defined water-course running direct into the silt tank, so that I cannot see how this depression or lagoon (being of limited capacity), can interfere to any great extent with the filling of the tank. When the quantity of water flowing in is greater than the inlet pipe can discharge, the surplus would find its way round the embankment into the lagoon, which, I believe, is included in the tenant's lease, and can therefore be used for watering stock. Mr. Tully, I think, must be

be mistaken, when he states that "the tank cannot fill unless the Paroo is running, and unless it runs pretty high, it will fill the lake, but will not fill the tank." The next question is: "Then, there is no local catchment," and Mr. Tully replies, "No; there might be local rains that would run the Paroo for some time." Well, if local rains put sufficient water into the Paroo channel to make it run for some time, surely there must be a local catchment. Mr. Tully has also stated that at certain places he would admit stock to the tanks, and thereby do away with the necessity for caretakers. In my opinion this would be a very serious mistake, as such places would soon become a camping ground for station-stock, drovers, and others. The water would not last long in a dry season, would become polluted, and the tank eventually get into a bad state. Wherever a watering place is considered necessary, some one should, I think, be placed in charge.

3768. The next complaint is with reference to the site of the Tarella tank? I do not understand what is meant by the inlet tank taking the stream out of its course, and the only explanation I can give concerning the opening, which, it is said, would run the water down instead of up, is that the contractor must have been under the impression that the creek ran in the opposite direction.

3769. The statement was, that, unless the Paroo ran, there was no chance of the tank filling? The Paroo might not run throughout its full length; but it runs frequently in places from local rains—a fact which Mr. Tully admits himself.

3770. The main channel of the Paroo might run a few inches deep for a long distance, but it would not run into the branches, unless there were a pretty good "fresh" in the river; and Mr. Tully states that when it ran high, it would spread out into these sub-branches;—are we to understand that this is correct, and that the tank could not be filled unless the Paroo was running? Well, it all depends upon what is understood by the Paroo running.

3771. It matters not if it only runs for a mile? The tank is in the bed of the Paroo channel, and depends upon that chiefly for the source of its supply; but there is also a local catchment.

3772. *Mr. Woore.*] In addition to that? Yes; and the Paroo channel, although flat, is a catchment in itself.

3773. *Major Penrose.*] Do you consider the site of the tank a good one? Yes; I think the site is very good.

3774. *Mr. Woore.*] And have you ever known this natural depression to be filled, and the tank left empty? No; I have not. Before any water from the water-course flows into this lagoon or depression it must go into the silt tank and then through the discharge pipe, which if not able to take off the water as quickly as it flows in, the water will flow into the depression.

3775. Was the object of placing the tank there—to intercept the water and prevent it from running into the depression which you speak of, where it would be more exposed to evaporation? Well, I cannot say. I had nothing to do with the selection of the site, and I could hardly say what the object was. I am only speaking of the question as it now stands.

3776. *Chairman.*] We are more anxious to hear you more directly on the charges which have been made against yourself. Was not the Rathole tank excavated under your directions? It was.

3777. It has been stated here by Mr. Low that the embankments showed signs of water-wash within 3 inches of the top? Yes; but before that tank was completed we had a chance of getting it filled. The water was let in, and the contractor was to finish up the embankments afterwards. There was also some trimming to do to the slopes, and the same contractor had another contract for excavating a tank at Thackaringa, and this work he was unable to complete, owing to the drought. The contract, therefore, had to be cancelled, and the sureties called upon to finish the work. The embankments at the Rathole tank were, therefore, not finished, and I kept about £100 back, pending the completion of the embankment. That money the contractor had to forfeit, as I did not think the trimming of these embankments of sufficient importance to warrant further expenditure, as I thought that the caretaker could easily do all that was necessary to put these embankments into fair order.

3778. *Mr. Woore.*] But these embankments you say were not completed? No; because we had to let the water in.

3779. But would it be the duty of the caretaker to complete the embankments;—is it not their duty to keep things in repair and not to construct? Well, all that was necessary for perfect safety could be done in four hours with a wheel-barrow. The embankment is safe as it is if the caretaker simply allows the water to follow its natural course when the tank is full.

3780. Has this embankment been completed up to the present time? No; I am not aware that it has. I have pointed out to the caretaker what should be done.

3781. Has any damage been done because of its not having been completed? No; a little damage was done by a heavy flood some time ago, but no damage of any consequence; in any case the damage did not occur through the embankment not being completed. I have had the tank full almost to the top of the embankment, or within 3 inches of the top; and even then I considered it quite safe.

3782. Did you not consider that allowing the water within 3 inches of the top was rather dangerous? No; not when a caretaker is on the ground. I would like to read you a report sent in in December, 1886, which may help you to understand this matter:—

Sir,

Mount Brown Road, 23 December, 1886.

In pursuance of your instructions I have inspected the Rathole tank, referred to in telegram attached, and submit herewith the following report, with sketch.

The rainfall causing the alleged damage occurred on the *ultimo*, when 160 points were registered; fall extending over about 18 hours.

This fall, although heavy, was not in any way calculated to endanger the safety of earthworks, and was less than a former record, when, as in this instance, the tank remained uninjured. I am therefore at a loss to know where the "400 feet temporary embankment" was that is said to have been "washed away." No temporary embankment, that I am aware of, was ever constructed, and no embankment has been washed away.

Referring to the accompanying sketch, it will be seen that two drains have been cut, to intercept the water coming down the numerous water-courses from the hills distant about 60 chains. The main drain, running N.E., also serves the purpose of draining from the creek when required. For instance, in dry seasons, rain, as a rule, falls in brief heavy showers or thunderstorms, and these, generally speaking, are very patchy. At such times it is necessary to draw from every available source, and when tank is full, nothing could be more simple than cutting off the supply at the places marked on sketch, by cutting through the drain-bank and allowing the water to follow its natural course.

In connection with this matter, I think the caretaker is very much to blame. Noticing on previous visit that he was either neglecting this duty, or not aware of it, I pointed out to him how to act; but no attempt whatever was made to carry out these instructions; consequently, when tank was full, the water broke through drain close to embankment, forming a bywash, which, if allowed to continue, will eventually form into a creek, and become a source of trouble and expense, besides endangering the work.

There

W. J. Hanna.
12 April, 1888.

W. J. Hanna.

12 April, 1888.

There is another matter in connection with the embankments to which I would draw attention. These were not properly completed, and for this omission a deduction of £100 was made.

The lower end of the embankment is too low, and when speaking to caretaker *re* drains, told him to throw up sufficient material to raise the embankment 18 inches or 2 feet. These instructions have also been ignored. The embankment at present will impound from 23 to 24 feet, and by raising as suggested and keeping up banks of drains another foot could be added, and the work would provide healthy exercise for caretaker.

After drains ceased running, about 18 inches of water was unfortunately allowed to flow out that could have been retained with perfect safety.

I have, &c.,

W. J. HANNA,

Road Superintendent.

The Engineer-in-Chief for Roads, Sydney.

How much passed away altogether. The man in charge in this case should, I think, be dismissed, the neglect to take steps to prevent waste of water is the best evidence of his unfitness.—W.C.B., 5/1/87.

These were the telegrams upon which I acted in making my report:—

Telegram from Sydney, addressed to W. J. Hanna, Road Superintendent, December 7th, 1887:—Mines officer reported as follows:—Rathole tank in precarious state from damage by late heavy rains; 400 feet temporary embankment washed away; flood water rose to within 6 inches of top of embankment at lower end of main bank; it would have carried away but for timely cessation of rain; shall I employ men repair at once; urgent.

P. FLYNN

(For Commissioner of Roads).

Telegram from Sydney, addressed to W. J. Hanna, Road Superintendent:—Local Mines officer reports that Rathole tank very much damaged by late rains, and in "precarious" state. Please wire Crummer if he knows of it, and report at once what grounds there are for such a statement. If true, steps must at once be taken to repair damage and prevent recurrence.

A. P. WOOD,

Assistant Engineer.

11/11/86.

I wish also to state, in justice to Mr. Low, that this caretaker—in fact all the caretakers in the Silverton district except one—were dismissed. This was done on his last visit. Now here is the telegram which I addressed to the Commissioner for Roads on the 9th July last:—

Rathole Tank.

Water 3 feet below top of lower embankment; over 2 feet of water lost that should have been impounded; surplus water still allowed to flow past south embankment, also underneath service tank and portion of troughing; south fence seriously damaged; water-course is being formed that will eventually, if allowed to continue, render tank useless. All danger easily averted by cutting off supply at places referred to in previous reports. Such negligence should not be allowed in connection with an important work like this.

W. J. HANNA,

Road Superintendent.

3783. *Mr. Woore.*] But you do not know the reason? No; I only know that the men either resigned or were dismissed.

3784. *Major Penrose.*] In Mr. Low's evidence he says:—"Embankments have in no case I have seen been erected with a view to conserving water inside and by them, as is usually done with amphitheatre tanks, not one of them being finished with the slightest pretension to being level on top. In fact, any that I have levelled are lowest on the low ground, where they were filled with water and the great weight would be; consequently in most danger of breaking away?" There are no tanks in my district where any of the embankments are too low for the purpose of impounding water above surface except the Rathole Tank, and I question very much whether the embankments of that tank can be considered as being too low. From 5 to 6 feet can be safely stored above surface.

3785. *Chairman.*] Have you ever had any trouble, other than that which you have mentioned, with the caretakers? Well, I have found the caretakers repeatedly neglecting their duties at the Thackaringa, Day Dream, and Purnamuta tanks, as well as at the Rathole tank.

3786. To whom did you complain about these matters? To the Engineer-in-Chief for Roads, the head of my Department.

3787. Did you ever tell the caretaker he was neglecting his duty, and that he ought not to continue to do so? Yes; I have told them sometimes what they should do, but they paid so little attention to what I have said that I seldom interfere with them now unless there is something requiring immediate attention.

3788. Would it not have been advisable, when you found that the caretakers did not attend to their instruction, to apply to their masters (the overseers), or the inspectors of public watering places, telling them about the neglect, rather than reporting it to the head office of your own Department? Well, it would have been advisable if matters were so arranged that I could do so.

3789. Of course, you see that it is undesirable that these caretakers should have two masters? Yes; and I think it is equally undesirable that the tanks should have two superintendents or two officers in charge of them. I have never given any of these caretakers to understand that they were in any way responsible to me.

3790. *Mr. Woore.*] Because they are actually not responsible to you? No; I have never led them to believe any such thing.

3791. In case of gross neglect, such as that at the Rathole tank, do you make a report to the Engineer-in-Chief for Roads? Yes; I always do. There are several telegrams about the Rathole tank, as well as others.

3792. *Major Penrose.*] Did you make any representations to the officers of the Mines Department in that district as to the urgency of this matter? Well, I believe I have done so, but I cannot say positively.

3793. *Chairman.*] I understand from your reply to a previous question that it seems a red-tape or round-about way of doing things; you do not apply to the person in charge to remedy the thing; now, would it not be better and more advisable to write to the overseer in charge and draw his attention to the fact, instead of reporting to the head of your Department, who can only refer it to the Mines Department? Yes; it might be better if so arranged. If I received instructions to report in that way I should do so; but at the same time the overseer could tell me to mind my own business, because he would not be responsible to me in any way.

3794. When you have seen this culpable neglect of public works by the caretakers generally, do you not think that the overseer in charge or the Inspector of Public Watering Places, as the case may be, should have taken action in the matter, as he must have seen it as well as you? Yes; I think he should.

3795. Can you recollect any instance where you drew the attention of the inspector or overseer to any culpable negligence on the part of the caretaker, and where your action was ignored? I do not at present remember an instance.

3796.

3796. You have general instructions to see that all these works which have passed through your hands, and which are now out of your control, are properly maintained—you have general instructions if anything goes wrong with them to report to the head of your Department? Yes.
3797. *Major Penrose.*] What was it that caused you to visit the Rathole Tank after it had been handed over to another Department? To report on the state of the works and the depth of water.
3798. Then after the tanks are handed over to the Mines Department you still go and visit them? Yes; but not specially unless some serious damage takes place. On my ordinary rounds I pass the watering places, and in doing so see how the works are, the state of the drains, and report as to the condition in which I find them.
3799. You naturally take an interest in the works? Yes; having constructed them, I do most decidedly.
3800. Have you had much to do with the hutting for caretakers? I have just put up one cottage at the 26-Mile tank on the Booligal road, 46 miles from Wilcannia. I had it put up by the caretaker. I supplied the material, and the caretaker put up the cottage himself.
3801. How long since? About five or six months ago.
3802. But had not the whole control of this matter of caretakers' cottages been handed over to the Mines Department? I am aware that the Mines Department have erected a number of cottages for caretakers in the Silverton district; but whether the work was taken over altogether or not, I cannot say.
3803. If that were the case I should like to know how you came to erect this particular hut? This caretaker is a first-class man, and I suggested that he should be supplied with material and allowed to put up the building himself.
3804. *Mr. Woore.*] I presume to save expense? Yes, that was the object; the caretaker has put up the house and attended to other duties as well. He has kept his earthworks, pump, service tank, and troughing in first-class order at the same time.
3805. *Chairman.*] At the time you were not aware that the matter of hutting had been handed over to the Mines Department? I was not. It was a considerable time ago since this hut was sanctioned, because I had to get the timber ($\frac{3}{4}$ -inch weather-boards) from Echuca.
3806. What was the cost of the hut? I think that the material and carriage would cost about £50.
3807. What accommodation was provided? Three rooms and an outer or verandah-room.
3808. What kind of huts have been erected by the Mines Department in the Silverton district for the caretakers? Have you seen any of them? Yes; I have seen them all, and have been inside one of them. They are made of deal, with uprights $3\frac{1}{2}$ by $1\frac{1}{2}$ inches. The corner studs are, I think, 3 by 3. The uprights seem to be very wide apart.
3809. *Mr. Woore.*] The building has a frame made of deal? Yes; and covered outside with corrugated iron.
3810. Is there a ground plate on blocks? Yes; the cottages rest upon blocks about 4 inches in diameter. There is a light deal flooring and one partition which goes up to the level of the wall plates. They have iron chimneys and iron doors, as far as I can remember.
3811. *Chairman.*] What would you estimate would be the cost of a building like that? From £40 to £50, I should think.
3812. *Mr. Woore.*] Do you think that these huts erected by the Mines Department are suitable for caretakers? No; I do not.
3813. *Chairman.*] Are these caretakers single men? Some of them are single and some of them are married.
3814. And huts like these would be unsuitable for married men? Yes; they are unsuitable, but they have to live in them, notwithstanding.
3815. *Mr. Woore.*] Is the iron covered with any refrigerating mixture? No; the iron is left bare. There is no painting whatever, no lining inside, no spouting, and no tanks to conserve water from roof.
3816. *Major Penrose.*] I suppose a house like that would make it hard to get good men as caretakers—would it not increase the difficulty of getting decent men as caretakers? It would to a certain extent.
3817. But a better cottage would induce a better man to apply for the position? Yes; although a man might at first be glad to accept the situation and then improve things afterwards.
3818. *Chairman.*] Is there any other evidence you would like to give? No; I cannot say that there is anything else in my district that I have anything to say about.

[The Commission adjourned until the afternoon when the siting was resumed.]

Alexander Adam called in and examined:—

3819. *Chairman.*] You are a road superintendent in the Cobar district? Yes.
3820. How many years have you been located there? I think I have been about seven years in the district.
3821. Have you had the management of a large number of tanks in your district during that time? Yes.
3822. Are the tanks that you have had constructed under your supervision carried out under the same specifications as those tanks which you found constructed when you arrived in that district? An alteration was made in the slopes from $1\frac{1}{2}$ to 1 to 2 to 1. These more recently constructed were 2 to 1.
3823. Upon whose recommendation was the change made? There were plans supplied from the head office with the alterations in them. I had recommended it twice myself previous to this.
3824. Have you found that the steep batters were liable to be fretted away by the action of the water? No; I did not find that. I thought that the other slope might hold better. They did not give way in any case; but still I thought that the flatter slope would be preferable.
3825. For what reason? Well, I thought that the tanks with these batters would hold better.
3826. *Major Penrose.*] You mean that the silt would more certainly settle on the batters? Yes.
3827. *Chairman.*] Who chooses the sites for these tanks? In a number of instances Mr. A. P. Wood, the assistant engineer, chose them. The others I chose myself.
3828. What assistance had you in making choice of the sites you selected yourself? My own judgment principally. I made inquiries from all parties who were likely to have knowledge on the matter; but it is a very simple matter, to anyone who has had any experience, to find the best sites.

A. Adam.
12 April, 1888.

- A. Adam. 3829. Do you generally consult the officers of the Mines Department in the construction of these works? The only instructions we received from the Department was to fence the tenant's lease. They had nothing to do with anything else.
- 12 April, 1888. 3830. *Major Penrose.*] How many tanks have you constructed since you took charge of this district? On the Cobar to Hillston road there are seven tanks and one well—one tank at Mount Hope. There are seven tanks on the Cobar-Nyngan-Condobolin road, one called Keighran's tank, between Nyngan and Priory; and there are four tanks now under construction (three of which are nearly completed) on the Cobar to Wilcannia road.
3831. *Mr. Woore.*] Are these being constructed under your supervision? Yes.
3832. *Chairman.*] Were there many tanks constructed previously to your taking charge of the district? Yes; there were about four. That is all in my district proper; but recently there have been three others handed over to my charge.
3833. I presume you are instructed to provide watering places at so many miles apart for the convenience of travelling stock? Yes; every 15 miles.
3834. And you chose the exact locality, as nearly as possible, in order to meet the requirements of travelling stock? Yes.
3835. Have you any discretion allowed you with regard to alterations in the specifications? In the case of some of the tanks I had to alter the slope from $1\frac{1}{2}$ to 1 to 2 to 1.
3836. Did you ever undertake to modify the depth of a tank? The depths were nearly always put down according to my recommendations.
3837. You had previously put down trial shafts? Yes; and I recommended depths in accordance with what I discovered from these trial shafts. The specifications are sent from the head office with some blanks left in them. I frequently altered the banks so as to make dams by running out wings to the higher ground on either side.
3838. In the Cobar district the tanks are generally made in valleys, it being a different style of country to the open interior? Yes.
3839. I suppose you have had circular instructions showing distinctly what your duties were under the Department? Yes.
3840. And certain discretionary powers were placed in your hands? Yes.
3841. So that you were not compelled to stick to any hard and fast rule with regard to the construction of these works? Well, we had a general plan supplied, and any alterations had to be sent to the head office for approval.
3842. But still you had discretionary powers? Yes; but I never did anything without getting the sanction of the head office to my suggestions.
3843. Have any complaints been made of the selection of improper sites for tanks in your district? No; not in any case.
3844. Was any complaint ever made that one of the tanks—the Mulya tank—had a very bad catchment area, and that there was little or no water in it? Yes, in that case; but that tank was not in my district. It is only recently that it was handed over to me. I did not choose the site.
3845. But do you think that the site was ill-chosen? It was a very difficult matter to get a good site at that distance.
3846. Was it as good a site as could have been obtained in that neighbourhood? It is possible that it might be improved a little; but, as I have said, it was a very difficult matter to get a good site in that locality.
3847. *Mr. Woore.*] And in your opinion it is the best site that could have been obtained about there? I am not sufficiently acquainted with that part of the country to be able to give any definite opinion. As far as I could see there were really no good sites in the locality at all. This Mulya tank is also called the 64-Mile tank, and is on the Louth to Cobar road.
3848. *Major Penrose.*] Did these specifications go down to you with everything filled in? The specifications came down to us to fill in the measurements as to what the dimensions of the tank were to be.
3849. Then you had discretion to say what should be the cubic capacity of the tanks? Yes. There were general directions that so many tanks were to be put down with a certain capacity.
3850. *Chairman.*] We have had handed to us by Mr. Bennett a printed circular headed "Supplementary General Instructions re Tanks and Wells," dated 19th January, 1882, and in accordance with this printed form we find that the road superintendents are given a good deal of discretionary power;—have you not received such instructions? I do not remember just now ever having received a copy of that circular. The sites of most of the tanks were approximately fixed by Mr. Wood, who drove round with me first of all. He gave me directions to take levels, and the sites of most of the tanks in my district were selected in that way.
3851. I see that the first clause of that circular states that the sites of the proposed works are to be fixed by the officers of the Mines Department. Now I want to know from you whether any one was joined with you in fixing the positions of these sites, and you said distinctly not—that you formed your own decision irrespective of the Mines Department? I believe there are communications beforehand between the Mines Department and the Works office—before these sites are chosen. After that I had to fix the exact position.
3852. I want you to be very careful in this matter, because it appears to be one of those things which have led to a good deal of friction. It has been said that the Mines Department's choice of sites was ignored; and if it has been laid down by instructions that you are to be guided by them, is it any wonder that a certain amount of friction takes place? I think that the sites were usually chosen by Mr. Wood in connection with some officer of the Mines Department. I had nothing to do with the matter except to carry out the instruction of my superior officer.
3853. And were you always told to take levels, and to find the best sites? I was told approximately where to put the tanks by Mr. Wood, and I took levels in order to get the best positions.
3854. And you took the best means of finding out the best places by taking levels? Yes; within 2 miles of the place.
3855. You have heard of no complaints made by the officers of the Mines Department with regard to any sites selected by you in the Cobar district? No, none whatever.
3856. *Mr. Woore.*] Has anyone made any complaint that you are aware of, about the sites of the tanks now under your charge? No; all the tanks in my district have been filled over and over again every year.
- 3857.

3857. Have you heard any complaint made about this Mulya tank? Yes; one of the officers of the Mines Department (Mr. Cotton) has spoken about it. That is the only complaint I have heard of. A. Adam.
3858. Do you know if this tank has been filled? I was told by the caretaker that there were 12 feet of water in it at one time. 12 April, 1888.
3859. Has any water run into this tank since you took charge of it? No; it is only within the last six or eight months that I had charge of it, and there has been no heavy rain since.
3860. *Major Penrose.*] Could the catchment area of this tank be easily improved? I laid out about a mile or so of drains which will, I think, bring in a good body of water.
3861. *Mr. Woore.*] So that the tank is not at all a useless work? No; I think that the tank is right enough. It will readily fill with ordinary rain by making the proper drains.
3862. *Chairman.*] The whole of the tanks in your district are fitted up with machinery for lifting the water? Yes; we have now no open tanks.
3863. The machinery you use is chiefly the Tangye steam-pumps? Yes; the Tangye steam-pump and the Amos and Smith.
3864. Do you know whether any difficulty has been found in keeping these pumps in proper order? I know that there has been very little difficulty.
3865. Do you not think that they are the best pumps that could be supplied under the circumstances? Yes.
3866. You consider them the most effective and the cheapest—of course I do not mean as to first cost? Yes; I consider them to be the cheapest in the long run.
3867. And any charges that have been made that this machinery is enormously expensive is, you think, without foundation? Yes, I do.
3868. Do you think that the M'Comas pump, which is worked by hand, would be cheaper than these pumps, or less liable to get out of order? It would certainly be cheaper, but I do not think it would be nearly so effective.
3869. By cheapness, I mean not only the cost of the pump, but also of the fixings. Does it not cost a good deal to put these lifts into position? I have no M'Comas pumps in my district at all.
3870. *Major Penrose.*] But you think that the tanks which you have constructed are larger than they need be, considering the requirements of the district? I think they might be smaller.
3871. They all have good catchments? Yes.
3872. Are you of opinion that a smaller tank would answer all purposes? They are none the worse for being large, but I think 15,000 cubic yard tanks would do in any district.
3873. *Chairman.*] What is the capacity of those now constructed in your district? Eighteen thousand yards. I think the fact of their being large, if it is a fault, is one on the right side.
3874. *Mr. Woore.*] It is better to have them too large than too small? Yes.
3875. *Chairman.*] Have you ever lived on the open plain country where the rainfall is very small? No; but I may state that the rainfall in the Cobar district one year was only 7 inches—as low a rainfall, I think, as anywhere else—and yet there remained plenty of water in our tanks all through.
3876. Have you had to do much with fencing in your district? Yes; I fenced in all the tanks.
3877. What has been the average cost of this fencing per mile? It has varied from £58 15s. to £71 per mile.
3878. Do you think the present specifications for fencing call for the erection of a too costly fence? I do not think so.
3879. Do you not think that the wire might be a lighter gauge? Well, I think it is a fair thing as it is; it might be altered, but the fence would not then be so good as the present style of fences.
3880. *Mr. Woore.*] What size of wire do you use? No. 4 gauge as a top wire, and No. 7 (modified in some cases to No. 8) for the lower wires.
3881. *Chairman.*] Why do you use a No. 4 wire? In cases of cattle attempting to jump over. It is a very strong wire, and will hold a bullock on top of it if he attempted to jump it.
3882. What sort of posts are used for the fences in your district? Split posts generally.
3883. Is not timber fairly plentiful in the Cobar district, when compared with the plains beyond? Yes.
3884. Now, do you really think it is necessary to have this expensive fence—expensive as compared with those put up by squatters? Of course we understand that a fence should be a strong one round the tank, but is the same substantial kind of fence necessary round the caretaker's paddock? I have said that the fence round the caretaker's paddock is different to that round the tank. There is a top rail and five No. 4 wires round the tank itself—that is, close round the embankment of the tank.
3885. Why is No. 4 wire placed there when you have a top rail? That was done according to the instructions which we received.
3886. Did you find it necessary—do you not think that a very much smaller wire would be sufficient? Well, wire of a less gauge might possibly do.
3887. *Mr. Woore.*] Are all these tanks of yours fenced in that way—with a No. 4 wire? Yes; I think so.
3888. *Chairman.*] Have you ever made any recommendations to the head of your Department that the specifications for fencing called for wire which was unnecessarily heavy? Yes; I did this in the case of the tenant's lease. The same specification was given to me for the tank as for the tenant's lease, and I wrote down to the head office about it at once. I told them that I thought it would be an unnecessarily heavy fence, and the specification was altered.
3889. *Mr. Woore.*] Do you mean to say that you were instructed to put up a top rail and five No. 4 wires round the tenant's lease? Well, I only received one specification, and I wrote down to Sydney to say that I thought it would result in unnecessary expense, and I got the specification back with this alteration—that the top wire was to be No. 6 and the others No. 7, without any top rail at all.
3890. *Major Penrose.*] Is that the specification dated 1887 that you now allude to? Yes; this is the most recent specification.
3891. You see that there is some difference between the two specifications? Yes.
3892. Is the practice you are now following in your district in accordance with the latest form of specification? Yes.
3893. Have you put up any fences under this specification round the tenant's lease? It has only come recently to me. At most of the straining-posts in the fences put up by me the wires were spliced in the usual way.
3894. And you have not left out straining-posts in any instance yet? No.

- A. Adam. 3895. Do you think it is desirable to do so? I do not think it makes much difference. I think the fence will answer just as well.
- 12 April, 1888. 3896. Why do you think so—because the posts are so well secured to the ground? Yes.
3897. *Chairman.*] Do you not think that the depth which the posts are sunk in the ground is unnecessarily great? Well, I think that 2 feet ought to be sufficient.
3898. Have you ever had any difficulty with the caretakers, or have you ever been obliged to find fault with them for carelessness? Yes; several times.
3899. Then state generally what their negligence consisted in? They would not keep the drains clean, and generally would not attend to the tanks. The pumping gear is sometimes left in a very dirty condition. It is not kept as it should be.
3900. When you have had reason to find fault with a caretaker, to whom do you send your complaints about him? I spoke to the caretakers themselves several times, and if the matter that I complained of was not attended to I brought it under the notice of the head of my Department.
3901. The caretakers are placed in their positions by the Mines Department? Yes; but a good many of them were placed there by myself and then taken over by the Mines Department.
3902. When they were placed there by your authority I suppose you took good care that they carried out your instructions? Yes.
3903. And since they came under the Mines Department they have been in the habit of disregarding your instructions? Yes.
3904. Have they ever told you as much as that they would not comply with your instructions? Yes; two or three of them did so.
3905. *Major Penrose.*] But had they any very detailed instructions from the overseer of watering places what to do to take care of the tanks? Yes; I believe they are acting under instructions.
3906. Have you seen these instructions? No; I do not think that I have.
3907. *Chairman.*] Have you instructions to occasionally report on these works after they have passed out of your hands? Yes; I am instructed to report every month. I generally go round once every month, and when I do I am supposed to report on them.
3908. Do you think that this tends to promote friction between your Department and the Department of Mines? Well, in two or three instances I believe it has done so. But since Mr. Cotton came to the district I have had no difficulty. Several other overseers are in my district, and there was a slight disagreement with one of them.
3909. Did you ever complain of the negligence of the caretakers to the overseers? I do not think I did, so far as I can remember. I wrote to the head of our Department, and he communicated with the Mines Department on the matter.
3910. *Major Penrose.*] Do you ever go round with Mr. Cotton? No; it is not my practice, but sometimes when we were going in the same direction we went together.
3911. And would you go to the tanks together? Yes; in several instances it occurred.
3912. And Mr. Cotton would report on the tank to his Department and you to your Department? Yes, he would report to his Department and I to mine.
3913. And you might inadvertently recommend something that would be at variance with what Mr. Cotton would recommend? It might happen, but I do not think it would often be the case.
3914. *Chairman.*] We have had a contractor here who gave evidence before us, named Budd, and he stated that he felt quite sure favoritism was shown in certain matters? I will read a copy of what I wrote to the head of my Department in reference to this statement of Mr. Budd's:—
- “Mr. Budd states that contractors for Barnato tank had to cart the water the whole of the time the main tank was being excavated, and that the supply tank had been filled time after time. It is true contractors had to do this, but it was owing to the very dry weather in the vicinity of this tank, which has lasted some seven or eight months. As a matter of fact, the supply tank has not been filled once during the whole of that time. About 1 foot of water only was put into tank by a shower on one occasion, but it has been empty most of the time. Contractor Budd also states that tenders should be opened before a Board, and not before one man in the country. He also states that he believes there is collusion between Government officers and contractors. This, and a number of other statements made in regard to partiality shown to other contractors, are entirely without foundation. It is of no consequence to me who the contractors are, provided they do their work properly. Tenders are not opened before one man—myself, as stated by Budd—but before the Police Magistrate along with myself, and we both initial them. Budd also states that I told him he need not tender for the tanks on Wilcannia road, as I thought there were plenty tendering without him. I may state in reply, that this conversation never took place. I had no objection to Budd personally, or as a contractor, and I cannot understand him making such a statement, except that he was a fool in the hands of a certain storekeeper, who wishes to injure me, and to whom Budd owes a large sum of money. I have, on more than one occasion, gone out of my way to oblige Budd. I inspected his contracts every month, as I did with all contractors in the district, and if he or any other contractor asked for an advance on the work, I measured the work and forwarded vouchers at once—provided, of course, that they had done a fair amount of work since previous advance to entitle them to another. In regard to tanks let to Couts and Holly on the Wilcannia road, I may state that they were the lowest tenderers for two of the tanks, both of which were officially approved of in Sydney. It was only after their tenders were officially accepted that contractors informed me that they could not do both at the same time, or within time allowed, and asked me if I had any objection to their transferring one of the tanks to Budd or Hendry. I replied that I had no objection to either of these men, and they could arrange the matter between themselves, but as their tender had been officially accepted for both tanks, bonds for both tanks would better be made out in their names to avoid delay and complication. This they were quite willing to do. Budd also asked me if I had any objection to his getting one of the tanks from Couts and Holly. I replied that I had none whatever.”
3915. Then Mr. Budd also states that the contractors were in the habit of “taking in” the officers of the Works Department in the matter of measuring up the works, and that it was a very simple matter to deceive them, and thus get paid for more work than they really performed? Well, that charge was made against Mr. Budd himself by another contractor, so I carefully measured up the tank referred to and found that it was all right. I had heard that he had raised the berm of the embankment inside by 1 foot.
3916. *Mr Woore.*] Did you not check and test it? Yes; I had no bench mark, but in this case the natural surface of the ground scarcely varied at all. I ran the levels across it, and found that there was only a difference of an inch or so.
3917. Is it possible for a contractor to deceive an officer in measuring these works by gathering up one end of the tape? No; I do not think it could be done.
3918. Do you measure by rod or by tape? I use the tapes and the levelling staff. You cannot use a levelling staff all the time.
3919. *Major Penrose.*] Do you take your own man with you when going to measure these tanks? Yes, very frequently; but in some cases I have measured with the assistance of the contractors. But very often I bring my man with me. 3920.

A. Adam.

12 April, 1888.

3920. Have they ever tried to deceive you in this way? No; I have never found any one of them try to do so. I watched very carefully to see; but found nothing.
3921. Do you keep a field-book showing the measurements of the tanks? Yes.
3922. And sight plan levels in corners? Well, not of levels; I merely take an average of all of them, and then take the mean. I take four corners and the centre.
3923. Then you refer the levels of these corners to the bench mark? Yes; but the ground is generally so level that there is no difference between the points.
3924. Is it necessary in every case? No.
3925. *Chairman.*] Have you had anything to do with the construction of wells in your district? I have only put down one well.
3926. Has that been a success or otherwise? It has been a success. The water is good. The well is 162 feet deep, and there is about $4\frac{1}{2}$ feet of water in it, which comes up so quickly that you cannot lower the depth. The water has never gone down more than an inch or 2 inches at the outside.
3927. What machinery do you use? I use a whim. There is a supply tank 55 feet long, 15 feet wide, and 5 feet deep.
3928. *Major Penrose.*] What is the name of this well? The Roto north.
3929. Did you lay the well out yourself and choose the site? Yes; but I was told approximately where a well was wanted.
3930. What steps did you take before this well was sunk? I first called for tenders for putting down a trial shaft, and it was put down. The contractor then stated before the shaft was put down that rock ought to be struck there; and when we put down the shaft no rock at all was struck.
3931. Did you test the water before you sunk the well? No; we did not. We estimated from what we had seen of other wells that water would be got at a certain depth.
3932. What was the cost of that well, do you remember? I cannot say just now. I think the cost was somewhere about £1,000.
3933. But what was the cost per foot? I think it was about £2 15s. per foot, as far as I remember.
3934. *Chairman.*] Is that a reasonable price when compared with the wells sunk by squatters in the neighbourhood, or is it much in excess? I think the price is a reasonable one. The work is very much more substantial than that done by squatters.
3935. In what way? Well, the slabbing is much better.
3936. *Mr. Woore.*] Does the price you have mentioned include everything about the well? No; only the timbering and shaft.
3937. *Chairman.*] Allegations have been made that the cost of all these works carried out by the Government are greatly in excess of the cost of similar works to private individuals—now, we would like to know what has been the usual cost in your locality of tanks per cubic yard? Well a great number of them were sunk in the worst days of the drought, and at that time a good many of them cost 1s. 9d. per cubic yard for excavation. There was then no grass, and water and feed had to be carted. Chaff was then some £60 per ton, corn 27s. per bushel, and other things proportionately high.
3938. *Major Penrose.*] And I suppose the contractors had in many instances to go long distances for water? Yes.
3939. Some contractors have said that it would cheapen the cost of works enormously—about 3d. per cubic yard—if the silt-tank were constructed first and the tenant's lease fenced in beforehand, because then they would have plenty of grass and water? Well, it would make a difference; but in these bad seasons grass will grow nowhere, no matter whether the ground is fenced in or not.
3940. You attribute the heavy expense to the bad seasons? Yes.
3941. Squatters would not think of doing work in such seasons? They might do it in some cases of urgency, but it would not be done generally. There was not a blade of grass all over the country when I went there first.
3942. Have you had anything to do with the putting up of huts for caretakers in your district? Yes; I called for tenders for some, but I only put up one.
3943. What sort of hut was that—what was the accommodation and the cost? I think the cost went from £90 to £100. I called for tenders for all the different routes, and I had tenders ranging from £78 to £85—that is, taking a number of the cottages together. Where a contractor takes a number of the cottages they can be done much cheaper. I notice that the Mines Department state that they could put up these cottages in my district at £50, and that the average hitherto had been £82 10s.; but they do not arrange for any painting at all, while we put on three coats of paint. Besides there is not the same accommodation in their cottages as in ours; they have no guttering or piping, and no tank.
3944. Mr. Allison, who is a large squatter in your district, complained to me that he had lost some hundreds of sheep through the defective construction of the troughing at Nullamut tank? That is a tank on the road to Bourke. It only lately came under my care, and I cannot say much about it. It is one of the old tanks that was put down there afterwards—within the last few years. The railing was altered before I took charge of the tank.
3945. Have you heard at all that sheep have died from want of water; and that, owing to this railing, they have refused to drink? I have heard of that occurring to “weaners” several times. They were not accustomed to the troughs, and did not know how to get to them.
3946. But, in spite of that, you do not think it advisable to allow the sheep to water directly at the tanks, and without the aid of troughing? No; and I think it would be a most objectionable thing to allow them to do so. I saw a number of sheep dead at one of these open tanks, and the stench was so great that one could not go within a mile of the place. I see that Mr. Budd states in his evidence that he had tendered for work on the Wilcannia road, and had increased the prices as the depths vary, and as the ground became harder. He said also that he was prepared to submit a tender at a very much reduced price if a concession were made that the slopes should be 6 to 1. The tender he puts in is for the excavation of a tank 14 feet deep for 1s. $1\frac{1}{2}$ d. per cubic yard; for a 16-foot tank, 1s. 3d. per cubic yard; and for an 18-foot tank, 1s. $5\frac{1}{2}$ d. per cubic yard. Now, the Springfield tank excavated by him, with batters of 2 to 1, was actually excavated for less per yard than the prices quoted by him. The prices for the Springfield tank were: 14 feet, 1s. $0\frac{1}{2}$ d.; 16 feet, 1s. $1\frac{1}{2}$ d.; 18 feet, 1s. $2\frac{3}{4}$ d. That is a saving of 1d. on 14 feet, $1\frac{1}{2}$ d. on 16 feet, and $2\frac{3}{4}$ d. on the 18 feet.

3947.

- A. Adam. 3947. But Mr. Budd's remarks may not have reference to the same tank? [No answer.]
 12 April, 1888. 3948. *Mr. Woore.*] Can you give us any explanation about this horse-walk at the Muriel tank? Yes; the horse-walk is not run into the main excavation at all. It touches the outer edge of the roadway.
 3949. Is it between the large excavation and the main embankment? Yes.
 3950. And did any earth thrown in to make this horse-walk go into the excavation of the tank? I do not see that it could.
 3951. But I am asking you whether it did or not? No; I do not think that any of the earth to form the horse-walk fell into the excavation of the tank.
 3952. So that, if it has been represented here that a very large quantity of this earth fell into the excavation and partly filled it up, the statement is not correct? No; most of the people who see it call the area covered by the water the excavation.
 3953. Did this earth, being thrown into the position that you state, any way damage the tank, or decrease its capacity for holding water? No; the area covered by the water is a few acres, and the water is 4 or 5 feet above the excavation.
 3954. *Major Penrose.*] Why was the horse-walk not made on the main embankment or outside it, away from the water? In the previous pump which I put down I was instructed to place the pump 60 feet from the edge of the excavation, and I understood that the same thing applied to this pump as to the previous ones.
 3955. *Mr. Woore.*] And you believed that these instructions applied to the Muriel tank? Yes; it was the same kind of pump, and I thought the same thing applied.
 3956. You admit that the earthwork for the roadway would have been better if it had been put outside the embankment? Yes.
 3957. What was the result of placing it in its present position;—is it any disadvantage? No; it is no disadvantage; but I think it would have been preferable if it were put in the other way.
 3958. Was it an extra expense? It was an extra expense to put it where it is; because, had it been put on the other side, there would not have been so much work to do, as the main embankment could have been utilized.
 3959. Then you are prepared to admit that unnecessary expense has been incurred in this case? Yes.
 3960. And that this was the result of a misunderstanding? Yes.
 3961. *Major Penrose.*] Why did you think that you ought not to exceed the limit of 60 feet from the water? Well, I did not know, unless it were to reduce the amount of friction through a long length of piping.
 3962. *Mr. Woore.*] Is there anything else you would wish taken down? I wish to say, with regard to the sites of the tanks, that the objections made by the officers of the Mines Department to the sites are sufficiently answered when I state that all the tanks have been filled over and over again.
 3963. That is, all the tanks under your charge? Yes; I think this is a sufficient answer—that the tanks have filled, and that a quantity of water went to waste many times—enough to fill two or three tanks. Then, in regard to the cost of the tanks, I notice that in some evidence given by the Mines officers, it is stated that we should have conserved more water above the natural surface of the ground. This would have involved extra expense, because it would have required several hundred feet of fluming and additional pumping apparatus. Most of these tanks are 18 feet deep, and hold quite sufficient water for all requirements without storing it above the excavation.
 3964. *Major Penrose.*] Had you many of these tanks constructed before the long drought? No; it was before I went up that the drought was bad.
 3965. Did not the drought continue up to 1885? No; the long drought was in 1881 to 1884. That was when I went up there first. I drove from Dubbo to Cobar and did not see a blade of grass on the whole trip.
 3966. And some of the tanks were put down at that time? Yes; a number of them. Most of the tanks under my charge were put down since I went up there.
 3967. Have any of the tanks at any time given out? Yes; the Hermitage tank gave out in the drought.
 3968. Is that a large tank? It was 12,000 yards, I think; but I am not sure as to the cubic contents. One thing about this was that the drains were defective—there were not sufficient drains put down. I increased the size, and put down 2 miles of fresh drains, and the tank has improved since then.

[The Commission adjourned.]

FRIDAY, 13 APRIL, 1888.

The Commission met at 10 o'clock.

Present:

HON. G. H. COX, M.L.C., CHAIRMAN.

MAJOR PENROSE, R.E. | J. C. WOORE, Esq.

John Coleman called in and examined:—

- J. Coleman. 3969. *Chairman.*] You are Superintendent of Roads and Bridges? Yes.
 13 April, 1888. 3970. What is your district? The district of Bourke.
 3971. How many years have you been stationed in that district? Six years—between five and a-half and six years.
 3972. Have you had construction of or management of any tanks in your district? Yes; I have to look after twelve or thirteen tanks altogether.
 3973. Who chose the sites and situations of those tanks? Some of these sites were chosen before I took charge of the district; as to others I received instructions from the head office to put tanks at particular sites, or as near as possible to the sites mentioned.
 3974. But by whom were these sites chosen? The latter sites were chosen by our Department, I think, with the approval of the Mines Department.
 3975. Have any complaints been made with regard to the situation of these tanks? Yes; in several cases. The Mulya tank is one of those that have been complained of.
 3976. Where is that tank? It is 14 miles from Louth, on the Louth to Cobar road.

3977.

3977. What is the allegation in regard to that tank? That it is not a good site; but it is almost impossible in that country to get a good catchment. J. Coleman.
3978. But is the tank placed in the best position to be found in that locality? Yes; the best position that we could find. In fact, when we chose the site, that was the only place where water was lying on the ground, and that was why we chose the site. 13 April, 1888.
3979. How long has that tank been finished. Nearly two years, I think.
3980. And has since been filled? Yes; it has had 12 feet of water in it, so far as my memory serves me.
3981. Steps have been taken, I believe, to extend the catchment area so as to increase the water supply? Yes; originally the drains were not sufficiently long, but since then they have been increased.
3982. You think now that the increased catching drains should be ample in a moderate season to fill the tank? I do. Since then, as I have said, the drains to the tank have been increased in length, and now the thing is all right.
3983. *Major Penrose.*] Is it true that the drains are so constructed that the water runs back instead of into the tank? No; the drains have been levelled; every chain of the ground has been levelled.
3984. It has been said that the site of this Mulya tank was bad holding ground; that it would never hold water? It is good holding ground from about 1 foot 6 inches below the surface; but my experience of the country is that a tank, after being filled several times, will hold water to the top. Of course it is very difficult in that country to get good holding ground right throughout. It must be remembered that we are confined to certain distances in putting down these tanks.
3985. I presume a tank will always hold better after it has been filled two or three times? Yes.
3986. What are the slopes to that tank? $1\frac{1}{2}$ to 1.
3987. Is that a sufficiently gentle batter, in your opinion? Well, not in all cases.
3988. But for this particular tank? Yes; I think it is sufficiently gentle in this case.
3989. *Chairman.*] It was said, with regard to this tank that a mistake was made in the levelling of the drains, so that the water could only get into the tank by being backed up for a certain distance? The drains were properly levelled by myself, and this was done when the tank was under construction. The whole of the drains, except those recently made, were levelled by me.
3990. Then this statement of Mr. Mackenzie's (the inspector of public watering places) is not correct? No.
3991. The only thing is that you have increased the drains, so as to increase the catchment area. Yes. I did not interfere in any way with the levels of the existing drains.
3992. Now, with regard to this Booroondarra tank? That tank has an excellent catchment.
3993. We have had a charge, too, about the Ford's Bridge tank—that it was not properly situated? It is certainly not good holding-ground, but it is improving every year.
3994. *Mr. Woore.*] And is it well situated as to catchment, &c.? Yes; it is well situated.
3995. *Chairman.* It is said that this tank might have been placed where there is a good hard clay pan catchment? It is on the edge of the clay pans.
3996. So that it means this: that the tank is put on the edge of the clay pans, so that the least shower will send the water to the tank? Yes; the fact of the matter is that we took the water from the clay pan itself on one occasion; but we thought the present catchment from the hills was quite sufficient to fill it.
3997. *Mr. Woore.*] Is this the best catchment to be found in the vicinity? Yes, and well situated.
3998. Has the tank ever filled? Sometimes it has done so, but it depends upon the quantity of the rain. In an ordinary rainfall it would fill.
3999. *Chairman.*] What is the present usual slope of the batters? About 2 to 1. It has been altered from $1\frac{1}{2}$ to 1 to 2 to 1.
4000. Did you find any tanks excavated under your supervision in which it would have been desirable to increase the batter from $1\frac{1}{2}$ to 1 to 2 to 1? Yes; in loose country. The object of making tanks with a batter of 1 to 1 was to get in as large a volume of water as possible, and do away with the evaporation.
4001. Have you had any discretionary power to alter the batter? It was never necessary for me to do so.
4002. You found the batter of 2 to 1 ample? Yes; I think so.
4003. One of the chief complaints made about the steepness of the batters is that it increases the cost of construction so materially that the men cannot use ploughs and bullocks on these steep sides? They do use them, and in this way—by leaving a roadway, which they cut out afterwards. I should say that it does increase the cost a little; but this is not the only reason why our works cost more than the works of squatters. There are other reasons still.
4004. Will you just state them briefly? One of the principal reasons is that the contractor doing work for the stations has many facilities afforded him. He gets his rations at nominal prices almost, and in many cases the station owners have carted water for their contractor. Whereas, if one of our contractors starts to put a tank down upon a run, which is, to a certain extent, directly opposed to the interests of the squatter, he charges him larger prices for his rations and his sheep, and very often charges him for water. In fact, they put many obstacles in the way of the contractor putting down a Government tank. This, however, does not apply in all cases.
4005. Why do these station owners regard these public watering places as being inimical to their interests? Because wherever we put down a tank on a run we reserve or take away a certain amount of their country from them.
4006. So that it is not the putting down of a tank they object to so much as to a slice of their country being taken away from them? Yes; and the travelling stock are then forced through the run.
4007. Is it a fact also that there is considerable delay in the payment to contractors by the Government? No; not in my district. Until quite recently I have paid 50 per cent. right off, and as soon as the work has been measured up I pay 20 per cent. more, in the usual course of affairs. But, of course, there are delays sometimes when questions are raised in regard to certain things in the voucher.
4008. *Major Penrose.*] But this is only in respect to the balance, which amounts to only a small sum? Yes; in very few cases indeed have there been any delays in the making of payments in my district.
4009. Have any regulations been made with respect to payments, other than those which existed when you took charge? Not that I am aware of. We only paid for work first in the usual course of affairs; but certain arrangements were made afterwards, about four years ago, and the contractors were paid on the measurement of the work, 50 per cent., and the remaining 25 per cent. was paid on the usual vouchers being forwarded to Sydney.
- 4010.

- J. Coleman.
13 April, 1888.
4010. I suppose the contractor has sometimes to wait for his money, owing to the Inspector being engaged in other parts of the district? Yes; that occasionally occurs. They have to make complaints if the works are not properly completed.
4011. But I am speaking now of progress payments? We now pay 75 per cent.; and in extreme cases, if the contractor is really actually in want of money, we give it to him, as before stated.
4012. *Mr. Woore.*] But several weeks may intervene, owing to the absence of the Inspector in another part of his district, before the final payment is made? Yes.
4013. What is the longest delay you have known to occur from the fact of an inspector being unable to inspect? I cannot say just now. It might be three or four weeks—sometimes more. We are only supposed to measure up once a month.
4014. *Chairman.*] Now another statement has been made by these contractors;—that the Roads Department are too particular with regard to the dressing of the banks, &c. It has been said that they must make the bottom quite level, and that even if the excavation is of the required depth, and there are small holes in the bottom, these must be filled up, in order to make it smooth? Such a thing as that has never occurred under my supervision. Of course the Mines Department are very particular when taking over the works to have the embankments all square and level throughout. They insist, when the works are being handed over to them, that there shall be this extreme nicety and finish in the work.
4015. After it has been passed by the Inspector? Yes.
4016. *Mr. Woore.*] Can you mention any particular case where this has occurred? Yes; it occurred in connection with the Mulga No. 5 tank, on the road from Byrock to Brewarrina. This particular tank had been completed, but had not been taken over from the contractor by the Works Department. Previous to our visit with Mr. Mackenzie, an overseer of public watering places, the rain-storm occurred, and scoured the embankments; also causing a settlement on the top, and Mr. Mackenzie would not take the work over, although I promised to make everything good. This was some six months ago, and the tank remains on our hands now.
4017. Did this scouring that you mentioned seriously affect the tank in any way, or did it merely affect its appearance? It merely affected its appearance. The tank itself was in no way affected by it.
4018. *Major Penrose.*] I notice that Mr. Waddell mentions this tank as having been completed for some time, but that it was not in order. Is that the explanation? Yes. While we were there my engineer broke the feed-pipe of the boiler. Everything else was in proper order. We guaranteed to fix up everything if they would take the work over, but they would not do so. The consequence of all this is that the Mines Department have lost over six months' revenue from this tank. I went over to this tank to effect a double transfer. I approved of the works as carried out by the contractor, but after this the Mines officer refused to take it over.
4019. Then in your opinion this slight damage to the feed-pipe would not have affected the tank as a public watering place? No; besides we guaranteed to put everything in working order. In fact we would have had to do so.
4020. *Mr. Woore.*] And why has this delay of six months been caused? The Mines officer has never visited the place since.
4021. Have you reported the tank as complete and ready to be handed over to the Mines Department? Yes; several times.
4022. And have you had any intimation from the Mines Department, or from your own, that they declined to take over this tank? No; and I do not know what reason they may have now for not taking it over. I had a memorandum the other day from the Mines Department asking when the tank would be ready to be handed over, and I replied that it was ready six months ago.
4023. How long is it since you sent that reply? About a fortnight ago; and to my knowledge nothing has since been done towards taking the work over.
4024. It is alleged that the Works Department adopt a certain form of tank without reference to the formation or nature of the soil;—what have you to say about that? Well, it remains within the discretion of the officer to a certain extent. The officers have discretion and give reports as to the shape or make of a certain tank. They are not actually bound to hard-and-fast rules. If I had a tank to make where the ground was not suitable for a square tank I would report to the Department, and make recommendations to the Engineer-in-Chief.
4025. As to the batters, do you use your discretion without reference to the Department in regard to them? Yes.
4026. *Major Penrose.*] And as to the form of the embankment? Yes; I would run it out, if thought necessary.
4027. *Mr. Woore.*] In making the slope of the batters do you take into consideration the nature of the soil that you have to work in? Yes; we do.
4028. *Major Penrose.*] Have you ever found it necessary to recommend a batter of more than 2 to 1? No; I think 2 to 1 is quite sufficient for any soil in my district. There may be an odd case where it is not so, but I think, taking it right throughout, as a rule the batter mentioned is sufficient. Of course the steeper the batter is the better it must be for the conservation of water in a warm climate.
4029. Provided, of course, that the sides keep tight? Yes.
4030. And, therefore, you make the sides as steep as you can? Yes; we want to keep the water in as small a surface area as possible.
4031. Have you ever found any sides giving way on account of the batters being too steep? No; except through wind action on the water. The sides will give way in most soils from that cause. The surging action of the water causes the earth-works to drop in, but that would happen in any case, though not to such a great extent.
4032. And, of course, in those where there is a steep batter more than where there is a sloping one? Yes.
4033. A good deal has been made of this wave action;—do you think it has any practical disadvantage? No; it simply alters the appearance of the work—that is all. It might cause a small quantity of earth to fall in, but not the amount supposed; and it would not reduce the capacity of the tank except to a small extent.
4034. *Mr. Woore.*] Do you think that the embankments made round these public tanks shelter the water from the wind? Yes; and prevent the action of the water on the tank. This is the object of putting earthworks round. I may mention in reference to the price paid for our tanks that, as a rule, contractors for.

for squatters are allowed to deposit their earth wherever they please, whereas we put our earth uniformly round the excavation to prevent this wave action, and in this way we economize a lot of water. J. Coleman.

4035. But the formation of these embankments in this shapely manner increases the expense? Yes, 13 April, 1888.

slightly; that is one of the reasons for the larger cost.

4036. But you think this is quite compensated for by the shelter afforded to the water? Yes; I do.

4037. To put the matter in plain words, you think what is gained is worth the price paid for it? Yes; I think it is worth the extra expense.

4038. *Major Penrose.*] It has been said that the inlet from the silt tank to the main tank is in many instances defective in design and in construction? It is not so; not to my knowledge.

4039. You will see in the evidence that Mr. Mackenzie says in his report, "In conclusion, I wish to bring under your notice the state of inlet from silt to main at some of the tanks in my district, which in many cases is a narrow cutting through the earthwork of embankments, which, in time of flood, keeps cutting away and filling in, and, consequently, all loose earth is carried into main tank; this could be remedied by having the sides of embankments logged or stoned, to prevent cutting the tanks. Where this is most required is at Helman's tank, Booroondarra and Mulga No. 5"? A great deal of that depends upon the caretaker or lessee. In many cases this shoot is impeded considerably after rain. When once you get rain, scouring takes place, and unless it is properly attended to at once the thing will continue. In other cases the caretakers put stones in to prevent this scouring—they do this in their spare time. A little care on the part of the caretaker would prevent any danger whatever, and would keep the shoot in proper order.

4040. You do not consider it necessary to "pitch" the drains or "log" the embankments? No; but loose stones are sometimes put in to prevent the action of the water. It is one of the instructions to the caretakers that they are to pay particular attention to this shoot.

4041. *Mr. Woore.*] Do you think it necessary, in the first instance, to protect the shoot in any way? This that I now speak of would be a protection.

4042. But you say that this is not done by the Works Department, but only by the caretakers? In some cases the ground is too hard to scour away. It is the duty of the caretakers to keep it in repair.

4043. In cases where the ground is liable to scour away much, do not the Works Department protect it in some way? Yes; we cut out the drain and board it over, after making provision to prevent scouring in the inlet shoot. What Mr. Mackenzie means here is actual scouring of open drains, and I think in these cases it is necessary to put in stones.

4044. Should not this be done before handing the works over to the Mines Department? No; I do not think so, because it would not give them much trouble to do it.

4045. It is also alleged that in many cases there has been great carelessness shown in laying out drains running into these tanks? No; I know of no such cases in my district.

4046. Now as to the excessive cost of construction of drains? I have no information on that subject.

4047. *Major Penrose.*] What price do you pay for construction of drains? From 14s. to 15s. per chain. The cost averages from 10s. to 15s. per chain.

4048. What are the sections? From 12 to 15 feet wide and 9 inches deep.

4049. And is that the usual price for these drains? Yes; that is the usual price.

4050. *Mr. Woore.*] How much of that kind of drain could a man do in a day in ordinary soil? Well, I cannot say, I am sure. They plough and scoop it out, but then they have to trim it out afterwards with shovels.

4051. It has also been alleged that the forms of machinery for lifting water at some of the watering places are too expensive and necessitate great cost for maintenance? I do not see that the cost of maintenance is any greater than it would be with other forms of machinery. There would have to be a caretaker there to look after the place just the same as if there were no pump there.

4052. What sort of pumps is used? Tangye's steam and horse pumps, and the Amos & Smith's steam and horse pumps.

4053. Do you think that these are the most economical kinds of pumps that could have been adopted for the purpose? I do.

4054. And not liable with ordinary care to get out of order? The machines which I recommended are the Amos & Smith's horse-pumps and the Tangye steam pump. Any man of ordinary intelligence could after a little experience work them, protect, and keep them in order. I think any ordinary workman should be able to do it.

4055. It has been said that the M'Comas pump is very much cheaper and very much better than the others? Well, it might be for small station work, but not for work of such importance as we do.

4056. Have you seen any of these M'Comas pumps in use? Yes; on stations, but never at any of the public watering places.

4057. Do they not lift a sufficient quantity of water? Yes; but it takes too long to lift the water. One man cannot possibly lift sufficient water with a M'Comas pump to water the stock that go along a road.

4058. *Major Penrose.*] Have you any idea how many sheep or cattle have been watered at any tank in your district in one day? Well I cannot say for a certainty, but about 20,000, I should think.

4059. *Chairman.*] What amount of water would they require? Well, at least 20,000 or 30,000 gallons—that is, including what would necessarily go to waste. Of course the pump would have to be kept going while the stock were drinking in order to keep up the supply.

4060. *Major Penrose.*] Do you think that the public watering places in your district will be much more largely used in future? No; I do not think so to any great extent; on the Queensland road they will. On the Barrington and Hungerford tracks, I think that more stock will come down than have come down within the last two or three years. I think that as soon as the Wanaaring track is opened up, a great amount of stock will come through there.

4061. Some tanks, then, will have more pressure put upon them than now exists? To a great extent this will divide the traffic, but with a considerable increase. I do not think there will be any more pressure upon any particular tank.

4062. I suppose that most of the public tanks constructed in your time have had no real pressure put upon them? No.

4063. *Mr. Woore.*] Is there not another form of pump being used—the Amos & Smith steam pump? Is that a complicated pump? No; not at all complicated, but those that I have mentioned are more simple, and are not so liable to get out of order.

- J. Coleman. 4064. *Major Penrose.*] Have you ever employed any maintenance men to keep these pumps in repair? Yes; I send one round occasionally, but I do not keep him constantly employed; he is not wholly employed at that work.
- 13 April, 1888. 4065. *Mr. Woore.*] If these pumps could be kept in order by caretakers of ordinary intelligence, what necessity is there to retain a travelling mechanic to keep them in order? Well, sometimes things go wrong and repairs are required which a caretaker cannot do. This man goes round occasionally and tutors the caretakers in the working of the engines.
4066. Have you had much to do with fencing in your district? Yes.
4067. Do you consider the specifications for fencing call for a fence of too expensive a character for your district? No; I do not.
4068. You are aware that the Government pays a great deal more for fences than the squatters do? Yes; and for the simple reason that a contractor will charge more in proportion for a small amount of fencing than he will for a large contract. Besides on a station he gets every facility for doing his work, which, as in the case of excavations, he does not get when erecting a fence for the Government.
4069. It has been said here that although a strong and expensive fence might be necessary round a tank, there is no necessity to put an equally strong fence round the caretaker's paddock? I do not think that the fences are at all too expensive. If the whole lease is fenced in, it is never more than $2\frac{1}{2}$ miles, and of course a contractor will do 30 or 40 miles of fencing much cheaper in proportion than he will fence $2\frac{1}{2}$ miles.
4070. Do you think that the gauge of the wire used is unnecessarily heavy? No; we put five No. 6 wires and one No. 4.
4071. If this very strong wire (No. 4 gauge) were on top, you would not require such strong wire underneath? Well, No. 6 is not a particularly strong wire; certainly not as strong as No. 4.
4072. *Chairman.*] I believe that horses are sometimes placed in the caretaker's paddocks? Yes; the lessee has the right to agist 40 head of stock, according to the terms of his lease. The object of the Mines Department in doing this is to lease as many of the tanks as they can, and so do away with the necessity of having caretakers. I think the privileges of the caretaker extend to having cattle and horses for himself and for the working of the pump, or something of that sort?
4073. *Mr. Woore.*] Notwithstanding the great strength of these fences round the caretakers' paddocks, have you ever known any of them to be broken down by stock? I have seen them broken, but I do not know how they were broken. I have never seen it done. I have noticed, also, the wires broken on several occasions round the special leases.
4074. Have you ever seen a No. 4 wire broken? No, I do not say that. It might be, but I am certain I have seen the others broken.
4075. Do you think that it is necessary to sink the posts to such a great depth? No, not in all cases. In loose, red, sandy country I should say that it would be necessary.
4076. Why should it be so even, then, if there are good straining-posts in the fence? On account of the driving wind, which takes the wind away from the post.
4077. An extra 6 inches of sinking adds considerably to the cost, does it not? No; not very much per post.
4078. But I mean that the sinking of a post an extra 6 inches in the ground makes a difference? Yes.
4079. Do you think that the specifications as printed might be modified without detriment to the stability of the fences, and lessening of the expense? Yes.
4080. *Chairman.*] I believe that timber is fairly plentiful in your district? In some cases; as compared with the plains, it is plentiful.
4081. What is the highest price you have ever paid for fencing in your district? I think it is £88 per mile; that is, for fences round the special leases.
4082. What is it that goes to make up this cost? We have six wires; posts 10 feet apart, sunk 2 feet 6 inches in the ground; straining-posts every 12 panels, sunk also 2 feet 6 inches in the ground, with a post 9 inches in diameter.
4083. Were the other posts round stuff? They were split posts 9 x 3. The timber was of various sorts—hardwood, ironwood, &c. We have no pine in this particular part of the country. We have gidya, but not in this particular fence.
4084. Can a substantial fence be put up round these tenants' leases for £45 per mile—the same sum as the squatters' fences are put up for? It could be put up, but it would not be the same sort of fence that we erect.
4085. But supposing that the squatters' fences last for fifteen years, and yours for thirty years—would the difference in durability be equal to the increased cost? I may say that most of this work was done in the middle of the drought, and of course we would do it cheaper now if we had it to do. The carriage of the material then cost a great deal of money.
4086. While admitting that the Government work should always be strong, yet it is considered that in many instances too much money is spent on it. We want your opinion? Well, I think the design might be modified to some extent.
4087. *Mr. Woore.*] Do you think that these strong fences that you are asked about are worth the money, or do you think that too much has been paid for them? No, I think not; considering that the most of the work done was done in the middle of the drought when everything was very dear indeed.
4088. Have you ever had to call for fresh tenders? Yes; and I think the fact that there has been so much competition proves that we have had our work done in the cheapest market.
4089. *Chairman.*] Have you ever known any contracts to be sublet at very much reduced rates? No; I have not. Men may have sublet the providing and the putting in of the posts, but I do not think any great profit was made. In no case of tank excavation have I ever known of the subletting of work.
4090. *Major Penrose.*] You always estimate the cost of a fence yourself? Yes.
4091. And as a rule some of the tenders are higher and some lower than your estimate? Yes.
4092. Do you generally accept the lowest tender? Invariably.
4093. Although it may seem to you to be an absurdly low price? Yes; I accept the tender, but occasionally they refuse to carry out the work; but I always recommend that the lowest tender be accepted. In a few instances contractors have declined to go on with the work.
4094. *Chairman.*] What kind of gates have you put up at these paddocks? Five-barred gates 12 feet long.

4095. What is the cost? They vary in price from £10 to £15. The latter figure is, I think, the maximum.
4096. Do you think it necessary to have such costly gates? Well, it is necessary that the gates should be substantial. And they seem to last very well.
4097. Have you ever seen gates made of battens and bolted together with bolts and nuts, without any mortices? No, I have not seen anything of that kind.
4098. *Major Penrose.*] Are not these gates let with the fences? No; they are a separate item. The contractor gives a special price for the gates.
4099. *Mr. Woore.*] In speaking of the cost of the fences, do you include the gates? No; a special price is always given for the gates.
4100. *Chairman.*] Now have you ever had any trouble with the caretakers employed by the Mines Department? No; not directly. I have had no actual interference with them. I have often had to instruct them to do certain things, and, as a rule, they did what they were told.
4101. Are these the caretakers who are under the Mines Department? Yes.
4102. By what right, then, did you give them instructions? I had actually no right to give them instructions; but if I saw anything going wrong, I thought it was my duty to do so.
4103. Was this resented in any way? No; not by the caretakers.
4104. And when you have had occasion to find fault, has any caretaker ever resented it or told you that you had no business interfering with him? No.
4105. Then they generally complied with your directions? Yes; but it was after some time. However, what I asked was generally done in the end.
4106. And if the work is in any way neglected you report to the head of your Department? Yes.
4107. Do you ever report the matter to the overseer of public watering places? Yes; in my experience the only actual trouble I have had with the Mines Department is in the handing over of works to that Department.
4108. *Major Penrose.*] Have you ever found repairs were carried out by the Mines Department which you considered were unnecessary or detrimental? The only repair that I noticed was this alteration to the troughing, &c.
4109. That, I understand, has to be carried out by the Mines? Yes. On the Tindarey tank they have altered the rail by placing it down the centre.
4110. And the Works Department are carrying that out now? Yes; it was done as an experiment by the Mines Department.
4111. Have you ever had any trivial matters referred to you that ought to have been done by the caretakers? No.
4112. *Chairman.*] Have any wells been sunk in your district? No.
4113. Have you had anything to do with hutting? No.
4114. Now, then, as to the troughing—which seems to be a vexed question in the adjoining district of Cobar—a great many complaints have been made about these troughs, and it was said that it was impossible for sheep to water at them, in consequence of which a great many died? There have been complaints of the old system of troughing, but these complaints did not include anything about the loss of sheep. I think that occurred years ago, in the open tanks.
4115. Have drovers never made any complaints to you that sheep would not drink at the troughs? Yes; they did under the old principle of troughing; but I think they are now perfectly satisfied with what we are doing.
4116. We were told that the guards, while allowing the larger sheep to drink, effectually shut out the smaller sheep from the water? Yes. The difficulty under the old system was that large cattle could drink, but smaller ones could not; but I think that the rail down the centre and the iron troughing is very much more perfect, and have remedied any difficulty which existed.
4117. You would never, I presume, recommend a return to the old system of watering stock from open tanks? Certainly not. It caused a great waste of water.
4118. Now, in the event of a contingency such as this arising, that a large number of travelling stock came up to the water and there were no means of watering them, what would you do? We should in that case have to let them into the tank.
4119. But they could scarcely drink owing to the steep batters that you make to the tanks? That would be the only way to do.
4120. Do you think that it would be desirable to have one side of the tank made with a gentler batter to meet such a contingency as this? I do not see that any danger is likely to occur if we have steady men to work these pumps.
4121. Have you ever felt any inconvenience or trouble from the present control over the tanks and wells—one Department having the construction and the other the management? I certainly think it would be very much better for everybody if the whole were under one head; and especially so for one reason, the delay in taking over the works from one Department to another, causing a very large loss to the public revenue.
4122. And then to do larger repairs when necessary? This is one of the principal arguments in favour of taking the whole thing under one common head. In the case of this Mullga No. 5 tank I guaranteed if the Mines officer took it over, to do anything which was required to put the work in good order.
4123. Are you occasionally called upon to make good damage done by heavy rains? In some few cases I have done so. I have put on horses and carts occasionally to assist the caretakers.
4124. I presume the silt tanks occasionally fill up? Yes; and I have occasionally had them cleaned out.
4125. Is not that still the duty of the caretaker? Well, it should be. The inspectors of public watering places have permission to spend up to £10 in making repairs, and they could do it.
4126. Will you now tell us when you lay out the site for a tank what course do you adopt? I test the lay of the country as to the catchment, and then I take general opinion on it; but I use my own judgment, combined with general opinion. The people who have travelled the country for years ought to know the chief catchments. I then peg out what I consider is a reasonable site of a catchment to fill the excavation. One cannot well take a long time in getting information, but I get what information I can from outside and use it with my own.
4127. Do you put down trial shafts? Yes; we do that first in order to test the nature of the ground.
4128. *Major Penrose.*] How many trial shafts do you put down? We put down two or three in different places. Of course occasionally we have to shift our tank sites if we get into bad ground.

- J. Coleman. 4129. *Chairman.*] And having tested the nature of the ground you draw up specifications and call for tenders? Yes.
- 13 April, 1888. 4130. To whom are these tenders sent? To the head office in Sydney, together with my recommendations.
4131. But are they not opened by the local officer? Yes; in the presence of the Clerk of Petty Sessions, who checks and countersigns them, and then signs the schedules of tender.
4132. Is it at all possible that any favoritism can be shown to any tenderer? Not the slightest. The lowest tender is in every case recommended for acceptance.
4133. In the event of the work then being carried on under your supervision, could you, if you found it necessary, modify the specifications in any particular? So far as the capacity of the tank is concerned we could make the tank either larger or smaller. There is a clause in the specifications allowing for that.
4134. Can you alter the batter or the depth? Yes; I would recommend it to the Department if I thought anything of that sort necessary.
4135. Have you ever found out any attempt on the part of the contractors to deceive you in the measurements? In very few cases. The only difficulty I found was in getting the slopes properly made; sometimes they rounded the slopes.
4136. In the event of a rock being come upon which had not been discovered by the trial shaft, do you think the contractor should have compensation? No; because I think the shaft generally shows them what they have to do. In fact, no claim has yet been made for any such compensation. I generally put down trial shafts first and then every contractor is at liberty to test the ground further if he likes.
4137. *Mr. Woore.*] But he is not allowed any compensation if he comes upon rock which was not shown in the trial shafts? No; he has every opportunity to test the ground.
4138. *Chairman.*] We have had it in evidence here that one contractor came upon rock and that he lost money by the contract. It was stated that had this work been done for a squatter the squatter would have made some allowance? As I have said, the contractor has every opportunity to test the ground. If we were to compensate the contractors for this we should have to compensate them also for every kind of loss imaginable. Frequently the contractors put in prices for rock, and if they do not protect themselves in this matter it is simply their own fault. It has occurred in one case that a contractor came to rock and was paid for it, as it was known to exist, his tender containing a price for such work; but there have been other cases where contractors came to rock or conglomerate and were not paid for it.
4139. *Mr. Woore.*] Have you ever known men to lose by their contracts? Well, possibly they might have done so. Certainly this sort of ground would not pay them so well as ordinary alluvial sinking.
4140. *Major Penrose.*] Was that cement which you have spoken of found in any of the trial shafts that were put down? Yes; the contractors knew of it. I would like to draw your attention to the evidence given here by Mr. Mackenzie:—
1671. *Mr. Woore.*] Has there been any carelessness shown in not taking advantage of the formation of the ground and utilizing catchment area so as to avoid collection of silt? This is what I have mentioned before. There is the Kerrigundi tank, which is placed in a depression of undulating country, and the drains go into it from a very steep slope; consequently everything is washed down into it from the hills. It is most difficult to keep the silt tank clean, and at the present time I believe the water is only 3 feet deep.
- I want to say now that there are no drains at all to this tank. There are drains to carry the surface water clear of the troughing, but that is all. The site of this tank is one of the best on the road.
4141. Was the site of this tank chosen by you? No; by my predecessor in the district.
4142. Do you think that the objections to the sites are uncalled for? Yes; I do think so. I always expend a great deal of care in the selection of sites. The only tank in my district, the site of which is said to be badly chosen is Mulya. I do not know the other districts at all. In some cases an uneducated man may be a very efficient man as a caretaker, but at the same time he is not capable of keeping the set of books that are required of him. So that very often a good working man is sacrificed to a man who can merely keep a set of books.
4143. *Chairman.*] Supposing a scheme were devised making it compulsory on the drovers to pay for the watering of their stock at the time of getting their permit to travel, would such a scheme be a good one, in your opinion? It always has been my opinion that such a scheme would be a good one. It would do away with the necessity of keeping books by caretakers. I think it is very desirable also for the reason that it will bring in a greater amount of revenue to the country. We will suppose that a drover starts from Barrington with 25,000 head of sheep and is travelling towards Hillston, on the Lachlan. When he obtains his permit he should have to pay for every tank on the road between these two places. The Stock Inspector would say to him, "You have so many public watering places to water at and we will charge you 10s. per 1000 of your stock for each one of these watering places." He is compelled to pay this amount, whereas under present circumstances if there is water to be had elsewhere on the road he gets it and passes by the public watering place. Now I hold that as these public watering places were constructed for the use of travelling stock, the travelling stock should be made to pay for every one of them. This is the only way I can see of dealing with the matter. By not having to attend to this book-keeping the caretaker could be made less responsible, and it would give him more time to attend to his work.
4144. Do you think it desirable to fence off these travelling stock routes, excepting those which have any frontages to water? It would be a very good thing for the squatter.
4145. But it would not be a very good thing for the travelling public? No; not in all cases. In some cases stock have to go by other roads.
4146. But they do it at their peril? Yes.
4147. But if the road were fenced off the squatter could not eat off the grass as he does sometimes now? I think if there could be some arrangement devised by which the Government would pay one-half and the squatter the other half, it would be a good arrangement. It would be a good thing for the travelling public. The squatter now has to pay for his run, which contains the travelling stock route, and of course has a right to eat off the grass.
4148. *Mr. Woore.*] Would not this fencing mean a tremendous expense to the country? Yes.
4149. And even if the squatters paid one-half the cost of the fencing it would still be a great expense to the country? Yes; and I hardly think the expense would be justifiable.
4150. *Chairman.*] Are there any other suggestions that you would like to offer to this Commission? Not that I can think of just now.

4151. Now do you think it would be advisable to place these works in the hands of local bodies? I think the Local Government Bill will deal with that. But as for the control of stock, that would be a different matter. Different bodies would want to collect portions of the money. Local bodies would of course take charge of the tanks and make a revenue out of them. The present system is not at all desirable, the works being under two Departments. J. Coleman.
13 April, 1888.

4152. *Major Penrose.*] Do you think it will ever be possible to get rid of caretakers? No; I think it will always be necessary to get somebody to look after the machinery. It would, I think, be very advisable to hand these works over to lessees, if you could have it done. But, under the arrangement that we were speaking of, caretakers would still be necessary.

[The Commission adjourned.]

WEDNESDAY, 18 APRIL, 1888.

The Commission met at 10 a.m.

Present:—

HON. G. H. COX, M.L.C., CHAIRMAN.

MAJOR PENROSE, R.E.

J. C. WOORE, Esq.

Edward George Cronin called in and examined:—

E. G. Cronin.

18 April, 1888.

4153. *Chairman.*] What are you? I am Road Superintendent for the Deniliquin district.

4154. How long have you been in that district? A little over six years.

4155. Have any tanks been constructed under your supervision during that time? One only.

4156. What tank is that? Black Swamp tank.

4157. When you were selecting the site for that tank were you only responsible, or did the Mines Department give you any assistance? I think the selection of the site emanated from a conference between Mr. Gilliat and Mr. Wood.

4158. Did the Mines Department fix the site, or merely select the locality? Well, I would not be certain about that. A conference took place, I think, and I got a memorandum from Mr. Wood to sink trial shafts to try for water. The exact place was left to my discretion. Instructions were first given to sink for a well, but as we could not get good water, I was instructed to sink a tank.

4159. Has any fault since been found with the site by the Mines Department? None whatever; and I do not think it was possible to have found fault with it. In fact Mr. Gilliat specially praised the work when he came to take it over.

4160. What batter did you give the sides for the tank? $1\frac{1}{2}$ to 1.

4161. Is that the usual batter, or is it an excessive one? I would not consider it so in my district.

4162. Is that batter sufficient for the nature of the soil? Quite sufficient.

4163. Have you travelled much outside your district? Yes; previous to having charge of the Deniliquin district I had the Hay district under my supervision.

4164. And are there many tanks in that district? There are.

4165. From what you know of that district you think that the sites there are well chosen? Yes; so far as my experience goes with regard to that district, they are well selected.

4166. And having due regard to the necessity of putting them a certain distance apart? Yes.

4167. Have you ever noticed much wash-away in these tanks owing to the steep batters? Of course it would be attributed to the batters; but it is merely a frittering away of the top soil on account of the water getting between the soil and the clay at a lower level than the natural surface of the ground. This slides to the bottom and the tank forms its own batter.

4168. Do you not think that in any instance like this it would be desirable to make a greater slope? I think that no matter what the slope was the tank would still fritter away at the berm, owing to the wind—that is, in friable soil.

4169. You are aware that making these steep batters necessitates increased expense in excavation? Yes.

4170. Then, taking so much for granted, is it desirable to go into this extra expense when the tank will eventually slip in and form its own slopes? I would simply like to repeat, in answer to that question, that in any case there would still be the frittering away at the berm.

4171. But if it was a very gentle batter it could not slip in? The earth must go somewhere, and the action of the wind will carry it back. There are many things to consider in connection with these tanks, and the principal one is as to the permanency of the water at the public watering places. By the construction of the steep batters we reduce the evaporation.

4172. Just state the reasons which actuated the Department in making these steep batters, and reply in your own way, if you wish it, to the arguments of those who are in favour of gentle slopes? The main object of these steep slopes was to conserve water with as little superficial exposure as possible. Now, with regard to the adverse opinion as to the slopes of tanks, I can only look upon our works in most instances as being carried out to the true intent and purpose of the end in view; and that with any easier slopes to such tanks it would be necessary that the tank should be deepened in order to give the same cubical contents of water.

4173. And this deepening of the tanks would, of course, increase the cost of excavation? Yes; it would bring up the cost to a similar amount, at least, to what is now paid.

4174. *Major Penrose.*] But you might get the same cubical contents by taking a larger superficial area and a lesser depth? Of course.

4175. *Mr. Woore.*] In order to reduce the expense it would be necessary that the batters should be such as would allow bullocks to draw scoops up? Yes; and that would be a batter of about 4 to 1. It would be necessary to have a larger extent of the surface of the ground opened up or go to a greater depth, and I do not think it would be advisable to expose the water to greater exposure than at present.

4176. You were talking about this frittering action on the banks—has it ever extended, in your experience, far enough to endanger the embankment? No.

4177.

E. G. Cronin. 4177. *Major Penrose.*] And what do you consider it has ever reduced your batter to? Very probably to about 2 to 1—about 3 feet back. The actual amount would depend upon the depth of the tank. I would say the average would be 9 feet back. It has not extended to the drain between the berm and the embankment.

18 April, 1888.

4178. *Chairman.*] Then comes the point, would it not be much better to make a gentler slope originally than to have the banks slipping in afterwards? No; because the bank would still go somewhere.

4179. Now, do you not think it would be desirable to have gentler slopes on one side in order to enable the contractor to get the stuff out? No; I think the benefit the contractor would derive from this would not be such as to justify the upsetting of the professional opinion already given why the slopes should be steep.

4180. Then let us look at it from another point of view. In the event of the pump getting out of order would it not be desirable to have one slope to the tank more gentle than the others, in order to allow travelling stock to water at the tank direct until the necessary repairs had been effected? Well, in the first place I can hardly admit that with proper care the pumps will get out of order. In fact, a Chinaman could understand and work the pumps we provide at these tanks and wells; and I think it is hardly worth while providing for a contingency that may never occur.

4181. *Mr. Woore.*] Do you not think that making one of these slopes with a less batter than the others would be dangerous, inasmuch as drovers would sometimes take advantage of it? Yes; I am of that opinion. It would lead caretakers to be very reckless, and in order to save themselves from pumping they would very likely allow stock to go into the tanks. I think, too, it would lead to dishonest practices between the drovers and the caretakers.

4182. *Major Penrose.*] With regard to this washing-down of the batters, is it not the duty of the caretaker to keep the batters up, if he can? Most undoubtedly it should be.

4183. And can he prevent by proper care and attention any undue washing-away of the batters? Yes; it has been done at Black Swamp. The system of facine work has been carried out by the caretaker to protect part of the bank with ordinary lignum bushes and sticks.

4184. That is, to adopt a similar plan to that adopted in every large embankment on which pitching is put? Yes. This facine work merely acts against the force of the waves. Wherever the bank has started to wash this has been found to be a practical plan to prevent it.

4185. Does this washing-away take place at every tank? No; I think not; only at those tanks where the top of the surface is of a friable nature, and where the banks are acted upon by strong prevailing winds.

4186. *Mr. Woore.*] When the bank frets away would not this rivetting with lignum bushes be apt to wash into the water and foul it? No; I do not think so. The stakes are driven into the clay.

4187. *Major Penrose.*] Does this washing-away seriously interfere with the efficiency, as regards depth or otherwise, of any tank that you know of? So far as my experience goes I know of no such case.

4188. *Mr. Woore.*] Has any tank that you have protected with lignum in the way that you describe been afterwards filled to the berm? Yes.

4189. And what was the effect when the water went down? The facine work was wholly intact. Black Swamp tank is the only tank I have had constructed.

4190. *Chairman.*] What forms of machinery are used in the Deniliquin district for lifting water? The Tange pump and some horse-gear pumps.

4191. And are these very effective? Yes, very effective.

4192. Which do you consider most desirable—horse or steam pumps? Of course we must be guided by the circumstances of the case.

4193. You would not have steam machinery where you could not get wood, but where you could get it you would advise steam rather than horse power;—have you ever gone into the question at all? Well, not very seriously. A good deal depends upon the class of caretakers and upon the surrounding circumstances. We adapted our works and our lifting appliances in each case to suit the surrounding circumstances.

4194. Presuming that the caretakers' wages are increased from 1s. 6d. to 2s. per day on account of supplying a horse, would you not in that case recommend the adoption of steam-power? It would even then depend upon the surrounding circumstances.

4195. I have been giving you the circumstances—the caretaker provides his own horse and has to pay for supplies for the horse as well as for himself? Yes; but on the other hand we have to pay for the timber for the steam-engine, and if we are obliged to cart it a long distance the cost would be very great. In some cases it might be advocated. Of course it is a difficult thing to give an answer to such an all-round question as that.

4196. What kind of machinery would you order yourself—steam or horse-power—presuming that you had the surroundings enabling you to make a choice between them? I certainly should prefer to order motive-power by steam in preference to horse-power, where the surrounding circumstances would admit of it.

4197. *Mr. Woore.*] Are you of opinion that any hard and fast rule should be laid down, either for the construction of tanks or for the adoption of water-lifting machinery; or in each case would you not be guided by the local circumstances? I am of opinion that it is very necessary in the first instance to refer to the type designs, and if these designs apply to the tank or well about to be constructed, then they should be adopted. But it is within the power of the constructing officer to make those alterations which the case demands.

4198. *Major Penrose.*] You mean, to suggest alterations? Yes; we have discretionary powers, and whatever we recommend is invariably carried out.

4199. *Chairman.*] Then you do not think it is desirable to have a cheaper mode of lifting water—say by a hand-pump? Certainly not.

4200. Why? Because we have proved, in a practical manner, that hand-power is not equal to the demands made upon it.

4201. *Major Penrose.*] How did you prove it—by testing it? I cannot give the exact particulars; but the thing is almost self-evident.

4202. *Chairman.*] It has been said that one man, with a M'Comas lift, can water 10,000 sheep in a day? [No answer.]

4203. Do you think that is possible; and, if so, would it be sufficient? No. My opinion of this matter is more or less theoretical; but still it is borne out by the owners of stations, who, at the present time, are using the same class of lifting appliances as ours. E. G. Cronin.
18 April, 1888.

4204. *Mr. Woore.*] Similar to those used at public watering places? Yes; similar to those that we are using. I know of instances where the Tangye steam-pumps are applied in my district on stations to the lifting of water.

4205. *Major Penrose.*] Is the M'Comas lift much used by station owners in your district? I do not know of any stations where they are used; and, in fact, it was only recently that I spoke to a majority of the squatters in my district, as to whether they would purchase the M'Comas water-lift at Box Creek, for which we had no use. They condemned the M'Comas lift, and said they would not have anything to do with it. They said that they would not have it at any price.

4206. *Chairman.*] I believe the expense of fitting up a M'Comas lift would be very great? Yes; there is a great deal of gear in connection with it.

4207. *Mr. Woore.*] Have you seen any of the M'Comas lifts put up? Yes; I have seen them after being erected. I should think that our pumping gear should be of the simplest kind, and we have adopted that idea now. I think the machinery for lifting water should be of the simplest nature compatible with the cost of erection and after maintenance.

4208. And could anything be more simple than the forms of machinery now adopted by the Department? No; nothing more simple.

4209. It has been alleged that some of the fences round the lessees' paddocks are faulty in construction and excessive in cost. What have you to say to that? With regard to faulty construction, I think the charge is not justified. As to the excessive cost, I can only say that no matter what the works cost, they can be done for less. But work done at less expense would not be of the national description that all works under the hands of Government should be.

4210. Do you think that these fences have cost more than they are worth? No.

4211. You think that the prices paid for them was a fair price for that class of work? Yes; a fair price for the class of work, so far as my experience goes.

4212. Now, what is the class of work in these fences? Well, I can only speak of my own district. I have had the posts which are erected, split 9 by 3 and 8 by 4 respectively; they are split posts. They are 2 feet 6 inches in the ground, 9 to 10 feet apart, the top wire being No. 4, to take the place of a rail; the rest of the wires were Nos. 7 and 8 gauge. Of course if we start with No. 8 we use it right through.

4213. And how many straining-posts? A straining-post every twenty-second post of round timber, 9 to 12 inches in diameter. They are put 3 feet in the ground.

4214. Are the fences which you describe round the caretakers' paddocks, or round the tank itself? This fence is round the caretaker's paddock.

4215. Do you think that 2 feet 6 inches is an unnecessary depth for posts to be in the ground? No; I should not think so, in view of the object.

4216. I suppose you admit that if the posts were only 2 feet in the ground, it would mean a considerable lessening in the cost of construction? Yes.

4217. What is the difference in cost between sinking holes 2 feet and 2 feet 6 inches in the ground? I think the difference would be about £3 per mile.

4218. Would not that depend upon the kind of ground? Yes.

4219. Are the posts put down 2 feet 6 inches in the ground, irrespective of the kind of soil? Yes; the soil does not differ much below the surface.

4220. And do you not think it is unnecessary to do that? No; our fences require stability, and we want them as a protection against horned cattle as well as sheep.

4221. Now, with regard to the No. 4 wire, do you not think that it would be as effective if No. 6 were used, and considerably less expensive? Well, it stands to reason that No. 4 is stronger and more expensive than No. 6.

4222. But is there not an objection to it on this ground, that one man cannot strain it properly? I know of no instance in my district where it cannot be done.

4223. You think that, taking them altogether, these fences are of a good class for what they are intended for? I consider that we have studied economy in the erection of these fences, and in fixing on No. 4 gauge wire instead of a top rail. The object of fencing is not only to keep sheep but also horned cattle from breaking into the paddock. The Mines Department recently erected a fence at the Colombo dam. It has six wires above the ground, and the top wire is only 3 feet 6 inches high. It is a sheep fence. I am informed that the contractor's price was £44 per mile for it, in fact the contractor told me so himself.

4224. Was that a good fence? It was a pine fence, but not suitable for the purpose.

4225. What should be the cost of this fence as you describe it? It would depend upon the carriage of the timber. In some instances we have had to cart timber 60 miles.

4226. As you have had some fencing done yourself, can you give us some instances as to what are the highest prices you have known to have been paid for fencing? The highest price ever paid for our fencing in the Deniliquin district was 25s. per chain.

4227. But I want to know the cost per mile? It would be £100 per mile. But in this instance the timber had to be carted 63 miles.

4228. What is the lowest price that you have known to be paid for fencing? The lowest price paid for fencing in the Deniliquin district of the class described is £74 per mile; that is, for fences round the caretakers' paddocks.

4229. Have you ever seen such a fence as you describe as having been put up by the Works Department, erected on any station;—have you ever seen these fences so substantial and costly? No; I have not. It would never pay a station owner to erect a fence of that description; neither are such fences required on stations.

4230. *Major Penrose.*] Have you seen the specifications, for fencing, issued in 1887? Yes; I have seen them.

4231. You see that there are no straining-posts stipulated for there? Yes. I think it certainly would be better to strain to one post; but I have had no experience in that class of work—fencing without such strainers. I find that all wires can be expeditiously strained by adopting one straining-post.

E. G. Cronin. 4232. *Mr. Woore.*] Do you think that straining-posts are indispensable in the making of good fences? I would not say that.

18 April, 1888. 4233. *Major Penrose.*] What is the type of fence round the tanks in your district? Post and top rail, split and morticed, with four or five wires.

4234. *Mr. Woore.*] In the evidence of some of the Mines witnesses it is said that gates of a very expensive character, and altogether too good for the purpose, are put up in the caretakers' paddocks? With regard to the charge of the Mines Department that the gates are too costly, I think the onus rests to a certain extent with the Mines officers themselves; because when Mr. Gilliat accompanied Mr. Wood to Black Swamp tank in 1883 for the express purpose of taking delivery of the works which were completed, Mr. Gilliat spoke in the most favourable manner of the works at Black Swamp tank, and he made a special request that a gate similar to the one already constructed at the north-west corner of the works should be fixed at another corner of the paddock.

4235. And was it erected accordingly? It was.

4236. Now will you describe the construction of these gates and what they are made of? This particular gate in question—and this particular class of gate, which I believe is one of the gates complained of—is constructed of soft wood, 12 feet wide, 4 feet high, morticed and bolted. It has three cross bars and uprights, hinged to a post apart from the fence. The gates are also painted white.

4237. What do they cost each? From £10 to £12.

4238. And how many gates are there in the caretaker's paddock? One is quite sufficient.

4239. But as a rule how many are there? There is usually one, but in some cases there are two.

4240. *Major Penrose.*] Altogether at a watering place there are only two gates? That is all.

4241. *Mr. Woore.*] Apart from Mr. Gilliat's request about this gate that you spoke of, do you not think that a much less expensive gate would have answered the purpose? A gate might be constructed cheaper, but I venture to say that the cost of our gates is caused by the strength of their construction.

4242. I suppose you put up a gate in accordance with the fence;—if you have a first-class fence you put up a first-class gate? Yes; we put up a gate in keeping with the fence.

4243. It has been alleged here that great interference has taken place by the officers of the Works Department with the caretakers and overseers of the Mines? I have merely heard that such has taken place; I do not know anything of my own personal knowledge. That may be accounted for by the fact that I have sensible overseers in my district. When anything has been required in the district of which I have charge, the overseer invariably asked me for my opinion in writing, accompanied by plans of any proposal that the Mines wished to adopt.

4244. Then nothing has come under your notice in any way tending to show that there has been interference with the caretakers by the Roads officers? No; everything went on very smoothly in my district.

4245. And there has been no friction between you and the caretakers? No; we had instructions to assist them in every way we could, and we did so.

4246. *Major Penrose.*] You stated just now that the Mines Department had erected a fence at a dam;—were fences at that time being constructed by the Works Department? I think so. I must say that this dam was constructed by the homestead lessee. The water flows out of the Yanko into the Colombo Creek, and at a point on a branch of the creek the dam was made. The Mines Department took it over, used it, and made a public watering place of a big water-hole at the back of it.

4247. Can you explain why it was that the Mines Department fenced this place when the Works Department fenced all the others? I can only account for it in a certain light. They were laying charges of extravagance against the Roads officers, though at the same time their own Department had been guilty of paying a caretaker about 8s. a day for over two years at this watering place, when the revenue from it was only a few pounds per year. And they did this while there were people in the locality who were only too anxious to give a decent rental for it.

4248. All I wanted to know was why the Mines Department fenced this one watering place when you fenced all the others? Well, the reason for that I really do not know. But, as I have said, a caretaker was placed at this dam by the Mines Department, and kept there for two years, at 8s. per day when the place could have easily been let. To my own knowledge people were anxious to get a lease of it. I know that similar things have occurred at Pretty Pine well, near Deniliquin, and at the Wanganella well, 30 miles north of Deniliquin.

4249. You say that all these places might have been leased at a fair rental? Yes; and in support of this statement I wish to hand in a letter from Mr. H. J. Poynter, of Wanganella, showing that the Government could have derived a revenue from this well by leasing it:—

Dear Sir,

Yours to hand *re* Mr. Laing. He was appointed caretaker, Government well, Wanganella, in September, 1886, at a salary of 8s. per day. I tendered for the well on the 11th May, 1886. *Re* charge by Mr. Laing for stock; he used to charge 1s. per head per night. What he used to charge by the week I do not know—2s. 6d. per head, I believe, but am not certain. I could not say what number of stock he used to have. I would be willing to give 2s. per acre per annum for the paddock, and to keep a man there as well to keep everything in good repair.

Wanganella, 13 February, 1888.

I am, &c.,
H. J. POYNTER,
Wanganella.

Edward Cronin, Esq.

4250. Was the tenant's lease fenced off at that time? Yes; it was being fenced.

4251. Were tenders called for by the Mines Department? Yes; and about £70 was the highest bid.

4252. How, then, do you account for the watering place not having been let? The highest bidder was the manager of a station, who afterwards refused to take it up, having himself found water close by; but I believe there were other tenders a few pounds under his. The Mines Department could easily have obtained a revenue of about £40 a year for it.

4253. Has this Wanganella well been leased since? No; the caretaker is still there, and it has not been leased at all.

4254. Then if this tender had been accepted in May, 1886, how much would the country have gained from it since? Well, supposing £10 was taken in fees for 1887, there would have been a clear gain to the country of £280 on this watering place alone—that is, if it had been let in May, 1886, at £40 a year, the rent offered by Poynter.

4255. Do you know of any other instances? Yes; there are two or three cases, but I have no definite knowledge.

4256. Do you know any other instances of loss to the country by the Mines Department failing to let these watering places? I have been told about it, but I have no knowledge of my own. E. G. Cronin.
4257. Are these three places that could have been leased still attended by caretakers? No; only Wanganella has a caretaker; all the others have been leased. 18 April, 1888.
4258. *Chairman.*] Do you think it desirable that tanks and wells should be leased rather than that caretakers should be placed in charge? Yes.
4259. Are the public watering places as well looked after by the lessees as by caretakers? Yes; just as well. A lessee can be bound down and made to look after the works. In fact they always do it.
4260. Are you instructed to visit the tanks and wells in your district occasionally? I am instructed to report upon them every time I pass round or that I see them. I report to the head office, to the Commissioner for Roads.
4261. Have you ever had reason to find fault with the caretakers during your visits? No; everything has gone on smoothly in my district.
4262. Have you had anything to do with the construction of wells? Yes; I have constructed four wells.
4263. *Mr. Woore.*] If this system of keeping caretakers at public watering places is to be universally adopted, is there any necessity for having these large and expensive paddocks fenced off? None whatever. If caretakers are to be kept there money is being wasted.
4264. These paddocks were fenced off with the idea of leasing the works? Yes; in order that a revenue might be derived from them.
4265. *Chairman.*] Coming to the wells which you have sunk, can you tell us where these wells are situated? The Pretty Pine well is near Deniliquin, the Wanganella well is 30 miles north of Deniliquin, the Murray Hut well is 15 miles north of Tocumwal, and the Berrigan well is 10½ miles south of Jerilderie.
4266. Why was the usual plan of tank sinking not adopted in these instances—why was it thought more desirable to sink wells? By way of economy, to commence with. A tank was recommended by the Mines Department at Murray Hut, but after testing the ground, the Roads Department found that suitable water could be obtained from a well, showing that a great saving could be effected thereby.
4267. What would be the difference in cost between sinking a tank and sinking a well? Roughly speaking, about £500 less than a 15,000 cubic-yard tank. A well would cost about £700 less than a 20,000 cubic-yard tank.
4268. And one would be absolutely permanent while the other would not be so? Yes.
4269. Then wells have been adopted in this locality, because it is known that good water can be had? Yes; there is very good water along that road.
4270. Is it the intention of your Department to continue the sinking of wells wherever water is now required in the district? I would certainly advise trial shafts.
4271. On whose recommendation were these wells sunk instead of tanks? I think on the recommendation of Mr. Wood of our Department.
4272. What did the officers of the Mines Department say about them—did they agree? I believe so—at least I heard nothing from them against the wells. I heard no complaints as to their wishes not being carried out; though they had recommended a tank at Murray Hut.
4273. Who selected the sites of these wells? I did. Mr. Gilliat selected the site for a tank at the same place. I saw a big stick stuck in the ground, and heard that Mr. Gilliat had been there.
4274. You have since found no reason to change your opinion as to the desirability of having wells instead of tanks? No; not at Murray Hut, and I might say that the same remark applies to the other three.
4275. Have all quite fulfilled your expectations? Yes.
4276. *Major Penrose.*] Have these wells had to withstand any sudden demand? Yes.
4277. *Chairman.*] What machinery is used at these wells for lifting water? A whim and buckets.
4278. Are they satisfactory? They are.
4279. What is the cost of one of these whims with all appliances? Taking the average cost I should say it would be about £200.
4280. And this, of course, necessitates keeping a horse? Yes.
4281. In times of great demand for water, would one horse be quite sufficient? Yes; and there would be no need of relays.
4282. *Major Penrose.*] Do you think that these whims are unnecessarily expensive in design? No; I do not.
4283. It has been stated here that a perfectly good whim can be put up for £50? Well, I daresay a Chinaman could put up one for £30. There is no doubt a station owner can put up one cheaper than the Government. But I do not think that the expense of our whims could be lessened with advantage, as the work required of them is such as to necessitate a very strong and permanent structure; and of a different class to those in use on stations. In most instances squared timber is cheaper on account of the long distance which it had to be carted. Mr. Gilliat specially approved of the Berrigan and Murray Hut wells, referring particularly to the top works.
4284. How long have you known these Government whims to remain at work—how many years have you known one to be erected? About four years, I think.
4285. Have they been costly in repairing? No; the fact is there have been no repairs to speak of, except the screwing up of the bolts.
4286. And you think that that is due to the exigencies of construction in the first instance? Yes.
4287. *Chairman.*] If you could have used your own discretion, would you have had horse-whims or steam-power at these wells? Of course circumstances alter cases.
4288. I am speaking now with regard to the wells in your district. If you had been able to use your own discretion would you have used steam-power instead of horse-whims, the latter necessitating, of course, the use of a horse and paddock for him? Well, with regard to Murray Hut and Berrigan wells, I would have preferred whims.
4289. Why would you have preferred whims in these two instances to horse-power? Because at the Murray Hut well the water is slightly brackish, and the other well at Berrigan, was constructed at a time when there was an exceptional demand for water along the road; and is not of much value at other times; consequently it would be difficult to lease.
4290. Now, with regard to the other two? As to the Pretty Pine well I should prefer steam-power, on account of the abundance of timber for firewood close by, and the fact of a reliable man being always stationed in the locality who would lease the work, and would not abuse it.

- E. G. Cronin. 4291. And what about Wanganella? Well, with regard to that, I think it would come under the same category as Murray Hut and Berrigan, there being a long cartage for the timber.
- 18 April, 1888. 4292. What objection have you to brackish water in connection with steam-power? I understand that it tends to shorten the life of the boiler. There are minerals in the water which would destroy the boiler.
4293. You never attempted to sink wells in this locality before you found that there was water underneath? No; not in any case.
4294. Now, about the hutting for caretakers. It has been stated here that the Works Department were about to construct caretakers' huts at an excessive price which the Mines Department objected to, and the huts have since been erected by the Mines at about half the price which the Works Department would have paid? Well, that is not borne out by any work which they have done in my district. In fact, I think, the hut erected at Wanganella well carries with it a great waste of money.
4295. What did it cost? I can only go by what I have heard—that this hut cost about £48 5s. It is built of two rooms, with galvanized iron roof, covered in with weather-boards. The hut is altogether, and in every way, inferior to the huts that we have erected in the Deniliquin district.
4296. And has it less accommodation? Yes. Tenders were invited by the Works Department for a hut in this locality. It was to have three rooms, and be of greater strength, with water-tank, spouting, and painting similar to the type design produced, and the lowest tender was £69. Comparing the design adopted by the Works Department with the design carried out by the Mines, I should say that the hut put up by the Works Department is certainly worth double the other. The amount stated by the Mines Department for the erection of this hut might, I think, have added to it the value of the caretaker's time and the cost of the bricks, which were obtained gratis. And yet the building is of a rickety nature; for if you put your hand against it with force, you would knock almost everything off the shelves; and it is hardly able to withstand the force of the wind.
4297. Have you any huts in your district that are built wholly of iron? No.
4298. And you think this Wanganella hut is a fair sample of those in other parts of the country? That I cannot say. This is the first one the Mines Department have erected in my district, and they may have been taught a lesson by it.
4299. Are you aware that complaints were made about defective construction of troughing? Yes.
4300. And your Department has seen to it that a much better system has been adopted since? Yes. The Mines Department had no reason to bring that matter up at all, because we made the alterations before the friction commenced. We exhibited no slowness or delay in adopting this.
4301. Now with regard to the necessity for caretakers. Is it not desirable that lessees should be substituted for caretakers, and that the latter should be done away with in the management of the works? Where the works can be leased they should be leased without delay. And where they could not be leased the fact could be very easily found out by advertising before the enclosed paddocks were made, stipulating the area to be enclosed within a certain time. Then, I think, the area enclosed might be very much reduced. And where these watering places have steam appliances for lifting water under caretakers, there is hardly any necessity for fencing the paddock off.
4302. *Mr. Woore.*] And does it not follow that there would be a very great saving? Most undoubtedly.
4303. *Chairman.*] At present the caretakers must be men of some education, because they have to keep accounts; but there has been a method mooted by which this could be done away with. This is to compel the drovers before they leave, and when obtaining their permits, to pay a certain sum for using the water in the districts through which they have to pass, whether they used the water or not? Yes; I believe that idea originated with Mr. A. P. Wood, and that he mentioned it to Mr. Gilliat when at Black Swamp.
4304. From your knowledge of the country do you think this desirable? It is undoubtedly the best course to adopt.
4305. These works are erected for the express purpose of supplying water to travelling stock;—do you think that the owners of travelling stock should pay for the water whether they use it or not? Yes; it is a very good idea.
4306. Do you think it would be desirable to have the travelling stock routes fenced off from the squatter's lease, excepting those portions having water frontages? I think so; on main roads.
4307. Why do you think this desirable? Well, the Works Department have for years past been carrying out works for the watering of stock in order that in seasons of extreme drought—when necessarily there is very little grass—stock will be able to move from the perishing country to places where there is more grass. And I may be allowed to add that the preservation of grass for such traffic is equally necessary as providing water.
4308. *Major Penrose.*] And that object would be gained, you think, by fencing off the stock route? Yes.
4309. *Chairman.*] Of course you know that the squatter pays rent for these stock routes; and naturally he takes care that there shall be no grass left on them? Yes; I have had great experience of that, more so in the Hay than in the Deniliquin district.
4310. Do you think it would be desirable to put all these watering places under the control of local bodies? Yes; evidently they must come under local bodies when the Local Government Bill is brought forward.
4311. But, pending the passing of this measure, do you think it is desirable to continue the present system of dual control? Certainly not. Pending the Local Government Bill being passed into law, the public watering places should be placed in the hands of one Department.
4312. *Major Penrose.*] Why should not the present arrangement continue until something better takes its place? Well, I cannot give any better reason than that stated to the Commission. There is a double sense to start with in the matter of supervision.
4313. Is the Mines Department ready to take over the construction of the works, and on the other hand is the Works Department ready to take over the maintenance? I think our Department could construct the works and attend to the maintenance as well. But of course this is a matter which should be left to others to decide.

[The Commission adjourned until the afternoon, when the sitting was resumed.]

Edmund Caswell Bowyer-Smijth was called in and examined :—

4314. *Mr. Woore.*] What are you? I am a civil engineer and road superintendent for the Albury district.

4315. How long have you been in the public service? About five years in this Colony, and four years in the Government service in South Australia.

4316. How long have you been in charge of the Albury district? About four years.

4317. How many public watering places are there in the district of which you have charge? Seven.

4318. What are they—tanks or wells? All tanks—six tanks and a dam.

4319. Were any of these works constructed under your supervision? Yes; Brocklesby, Lowesdale, Daysdale, and Carson's Swamp.

4320. Have you read the evidence of the Mines officers? I have had extracts from it sent down to Albury, and have no doubt read the portion you wish me to speak of.

4321. It is alleged that there are faults of judgment in the selection of sites for tanks;—now, have any complaints been made with regard to this of tanks in your district? Do you mean by the Mines Department or by the outside public?

4322. By anybody? Well, I cannot say that there have been.

4323. It is said that the sites are unsuitable; that there is a want of proper catchment, &c.? The only thing I remember is that the Mines Department were under the impression that the tank at Walla Walla is bigger than it need be. But, so far as I know, there has been no complaints about sites. I think, most decidedly, that the sites are very good, and suitable for the purpose.

4324. It has also been alleged that there are defects in design, and faults in the construction of some of these works—not particularly in regard to works in your district; but generally. Have any complaints of this kind come to your knowledge? No; I had the building of four out of seven in my district, and if there had been anything wrong with the construction of them I should have reported the matter, and had it altered. So far as I have seen there is no fault. They have stood the test, and now they are full I think they were honestly and well designed.

4325. It has been said that the batters are too steep? Well, one of my tanks, which is made in very hard ground, has a batter of $1\frac{1}{2}$ to 1. This is Brocklesby. The remainder of my tanks are all 2 to 1. The ground is very hard, and capable of standing; the batters also have stood admirably.

4326. Have the batters of any of your tanks become damaged by their being too steep? Not that I know of. Of course I cannot answer for Jindera, because it is full.

4327. And there is no batter steeper than the one you have mentioned? I believe Jindera is 1 to 1; but it has been full since I have been in the district.

4328. And you are of opinion that it is a good thing to have the batters as steep as possible? Yes; as steep as the ground will allow, conserving the water more effectively from evaporation.

4329. Now, in these tanks that you have had constructed under your supervision, have you been tied down to any particular form of tank by a hard-and-fast rule? I have not been tied down to a certain type. I can use my own judgment in altering the batters or anything else to suit the nature of the ground. Of course I would consult the head office first and make suggestions. Certain dimensions were given to me; but, if necessity arose, I should have represented the matter, so as to have the dimensions altered.

4330. It is said also that there is something wrong in the flumes and inlet pipes, and in the laying out of drains? I have heard of no complaints in regard to that.

4331. You know the Walla Walla tank? Yes; there is no trouble with the fluming there, nor with the fluming at any of the tanks in my district.

4332. Was this Walla Walla tank constructed before you took charge of the Albury district? Yes.

4333. What is your opinion with regard to the capacity of the tank;—do you think it is altogether too large for the purpose for which it was intended? I do not think it is. There is no use in putting down a tank unless you put down one of a respectable size. The only water within 3 miles of this tank is the Billabong Creek, and that gives out sometimes. It is a great godsend to people in the neighbourhood, and there is a small township close by. This is the only water that is permanent, and when the creek dries up there is simply no water in the neighbourhood, and the inhabitants are entirely dependent upon it. Therefore, I do not think the tank is in any way too large. There is a large swamp near the tank, which has been filled this season for the first time in many years. There is now no more than 4 feet of water in it, and in summer the depth would not be more than 6 inches.

4334. *Major Penrose.*] I notice in Mr. Boulton's report it is said :—“The tank is almost surrounded by water; the creek which flows down to the tank is now running a strong wide stream (30 feet) down the byewash into the Walla swamp, in which the water is now backed up within a few feet of the end of the troughs. In view of the fact that the takings for stock-watering here since the tank was made are almost nil, and that the water in the swamp will, in my opinion, last for two years or more, it is, I think, a matter for consideration whether any additional expense should be incurred at this place in carrying into effect Mr. Low's recommendation that a wing embankment should be made to protect the troughs, or that the byewash should be made into an overshot dam, or that the railing at the troughs should be altered, or new shoots fixed to embankments. In the event of it being decided to carry them out, considerable time must elapse before anything, owing to the boggy state of the place, can be done.” You do not agree with what is said there? No; I do not. There is only 4 feet of water in the place, and that would not last through a dry summer. The evaporation would be half an inch daily at least, besides the soakage.

4335. Both Mr. Low and Mr. Boulton complain of the state of the embankments to this tank? The embankments are supposed to be looked after by the Crown lessee; and, as a matter of fact, Mr. Douglas, of Walla Walla, has had a summons served on him to repair the banks. Some repairs were wanted; but it was for the Mines Department, which is the responsible body, to look after that.

4336. Then this statement is made by Mr. Low :—“I do not think that the Government are justified in spending a large sum of money in such a place as this Walla Walla tank is constructed in, where, at the time of my inspection, there was natural water enough to last for two years”? With reference to this, my answer is the same. Now, with respect to the statement made in Mr. Low's letter of the 26th July, and in his report, that has only connection with water running round the tank after there had been a rainfall of three inches in about twenty-four hours, which occurred about eighteen months ago. The cause of this was the bursting of five dams on Petrie's Creek above the site of the tank—a thing which could not have been foreseen.

E. C. B.
Smijth.

18 April, 1888.

4337. *Mr. Woore.*] Was there much damage done? No; the only thing was that there remained traces of heavy streams of water.

4338. Now, with reference to Hovell's dam, it has been said that there has been a great waste of public money here by cutting a byewash through the rock when the natural byewash would have sufficed? Well, there was a certain amount of material required to form an embankment, and I saw no reason why we should not take it from the hill, and by making this byewash through the solid rock, get it there rather than elsewhere—possibly some distance away. We thereby made a much safer byewash than by letting the water run round the other way. And for this reason: that, supposing the natural byewash had scoured out, as would most certainly be the case, the level of water in the dam would be lowered to a corresponding extent. Supposing that the creek were to come down and scour out 3 or 4 feet deep, that would lower the water to a corresponding extent.

4339. Do you think, then, that the dam cost no more by taking the material to construct it with from this byewash than it would have cost had you obtained the material any where else? I cannot say that without going into the quantity, but I think the difference would be very slight; and the advantage of having the byewash where it is more than outweighs the difference in cost.

4340. If the surplus water, instead of going through the rocky byewash, were allowed to escape round the other end of the dam, is the fall such as would cause a considerable scour in the ground? I think it is most probable it would. On referring to the plan of Hovell's dam, I see that the fall is set down as 6 feet in 20 chains, and that is quite sufficient, in my opinion, to cause a very considerable scour; and probably would if the amount of water were large. Getting small bodies of water it would not scour, but the velocity of a large body of water would be enormous.

4341. *Major Penrose.*] It has also been stated about this, that it is an expensive byewash, and that none of the excavated material was used in the embankment, but was allowed to lie about there? The dam was built, I believe, 12 years ago, and so I cannot tell. I was under the impression that the stuff was used in the embankment—in fact, I never had the smallest doubt on the subject. The embankment always appeared to me to have been formed from the stuff that was taken out of the cutting, and so far as I know it has been taken all round the embankment. Besides, boulders may have washed down the embankments.

4342. Is it your opinion that there has been no waste of public money in the construction of this work, and that it is well and properly constructed? Yes; that is my opinion.

4343. It was far preferable to make a byewash where it was made than round the other way? Yes.

4344. It is also said in the latter part of this report: "The existing byewash is excavated through the spur spoken of, from 1 to 15 feet deep through solid rock, almost as wide as a railway cutting, about 70 yards long"? I do not think it is solid rock; I should call it shale.

4345. Both Mr. Low and Mr. Boulton said that the end of the embankment here on the flat ground should have been protected by "logging" if there were any fear of the abutment of the embankment washing away? Well, it appears to me that it would have to be logged right down to where the water runs out. If this byewash had been chosen, it could have been protected; but what it would have cost is another matter. This, however, would not have prevented the ground from scouring away.

4346. *Chairman.*] The next matter we want to inquire about is the expensive forms of machinery used in raising water. Do you think that the machinery used is too expensive for the work to be done? No; I do not.

4347. Your machinery consists of Tangye's steam and horse pumps? Yes.

4348. Would not hand-power pumps have been suitable for your purpose? I do not think so. I have never seen one at work at these places.

4349. Which kind of pumps do you prefer—steam or horse pumps? I have had no experience of steam; mine are all horse pumps, and I cannot give any opinion.

4350. Do you not think that where firewood is to be obtained readily, steam would be more economical than horse-power? You see that the use of a horse entails paddocks, fences, and other things, which mean money, and then it seems that the caretaker, who has a horse, gets extra wages for the use of horse;—under these circumstances, which do you think would be most desirable—horse or steam-power, supposing firewood was obtainable? That question opens up rather a wide field. With steam you must have a man who can attend to an engine.

4351. We have had it in evidence here that men who attend to engines get less wages than men who have horses of their own? Yes.

4352. *Mr. Woore.*] It appears also that these Tangye pumps are so simple that any man of ordinary intelligence, after being shown once or twice, knows all about them? Well, I have had no experience with engines; but personally I should prefer to have a Holman horse-pump. The feed of the horse costs nothing.

4353. *Chairman.*] But the fencing does? Yes; that is true.

4354. *Mr. Woore.*] Where you employ caretakers, would it not be more economical to have steam-power than to incur this extra cost of fencing? In my district all the works are leased, or will be leased, and it is this special lease area that induces people to come forward and lease the works.

4355. But I am speaking of places where the works cannot be leased? I do not know. I have 20 men in my employment who are working at 8s. 6d. per day, and who feed their own horses.

4356. These are caretakers? No; they are maintenance men on the roads. They get 8s. 6d. per day, and the billets are sought after.

4357. *Chairman.*] Have you had anything to do with fencing in your district? Yes.

4358. It has been alleged that the cost of fences put up by the Government is excessive; that the specifications are unnecessarily strict, and that the cost of the work has been altogether out of reason. Now, do you know what the fences that surround the tanks and caretakers' paddocks in your district have cost? Well, I think I am right in speaking from memory in saying that the cost would be about £80 per mile.

4359. And what does fencing cost the Crown lessees—what do the squatters pay? I should not like to say; but I think about £65 to £70 per mile. That, however, is only my opinion. It depends to a great extent on how far you have to cart the timber. Good fencing timber is very scarce in these districts, and in fencing these special lease areas a man will split 100 posts, out of which I will condemn 30. He may get rid of the rest by selling them to the selectors and others. But when the Government puts up a fence it puts up a good one.

4360. And you think the fences are well worth the money that they cost? Yes; of course the fence is a far better one than the squatter will put up. But it is money well spent, for the fence will last as long again.

E. C. B.
Smijth.

18 April, 1888.

4361. Do you not think that the gauge of the wire used in these fences put up by the Government is unnecessarily large? No; I do not think so.

4362. What gauge is used by the Government in fencing in the Albury district? No. 7 wire.

4363. And for a top wire? I have got a barbed wire for that. The squatter generally uses No. 8; but that is only one size smaller.

4364. Then the ordinary specification for fencing does not apply to your district? Yes; we use five No. 7 wires to run through each post. The specification which I see here does not apply. I have a special specification. This specification is for No. 4 wire; but that is only round the tank itself. The special lease area is fenced in with No. 7 wire, and a barbed wire on top.

4365. *Major Penrose.*] You think a very strong fence is necessary round the tank itself? I think it is advisable, because I can understand a mob of wild bullocks trying to rush a tank. I think if you totted up the difference in cost between a small wire and a large one, it would be found to be very small.

4366. *Chairman.*] Have you ever had any difference with the officers of the Mines Department? No; we have always worked harmoniously together.

4367. And it is your duty, although you have given up the works which you have constructed, to look after them as you pass along? Yes; I am always supposed to look at a tank in passing.

4368. Has that led to any unpleasantness? No; but if I saw anything wrong I would mention it to the local overseer of public watering places. But, as a matter of fact, none of the works have been damaged since I handed them over.

4369. *Major Penrose.*] I believe that the Carson Swamp tank is one of those from which the stock drink direct? Yes; it has a roadway on the side.

4370. Why was that made different from the other tanks? I think it was done more on the score of economy than for any other reason; because there are not many travelling stock, and the inhabitants round there would be likely to use it, though this would be sufficient for all their wants. There is not much traffic there.

4371. Is this roadway pitched? Yes; but not the whole width.

4372. I see that as soon as the Mines Department got this tank into their care they wanted to alter the fence? Yes; they wanted to take the wires out so that sheep could go down, and the top rail would keep out the bullocks. If the bullocks went in in wet weather they would sink and get bogged, but it would not matter to the sheep. That, I think, was the idea of the local inspector of stock.

4373. And this has been carried out? Yes.

4374. *Mr. Woore.*] How does this form of tank seem to answer—an open tank for stock to go into? I should say that is a question which depends on the number of stock that went into it. If the number was small it would answer well, but if there were many travelling stock it would not answer.

4375. You think that no stock should be allowed into the water along the main stock routes? Yes; because stock going in foul the water most terribly.

4376. It has been suggested by some witnesses to have one of the slopes of the tanks made with a gentler batter, so that stock might be allowed to water direct in case of necessity—in case of the pump or appliance breaking down? Well, that is purely a matter of opinion, and very hard to say.

4377. Do you not think it would involve the danger of undue advantage being taken by the drovers, and possibly collusion between them and the caretakers? Yes; and there is no doubt that the evaporation on one of these long flat slopes would be very great.

4378. Are there no wells in your district? No; none.

4379. Have you had anything to do with erecting huts for caretakers? No.

4380. Are there many travelling stock in your district usually? Yes; a good deal.

4381. Is there any difficulty with regard to the travelling stock routes—I mean in connection with the rights of the lessees through whose runs these travelling stock routes pass? In what way do you mean?

4382. You are aware, probably, that the lessee leases and pays rent for the run through which these travelling stock routes pass—have you found any dissatisfaction or ill effects from that cause? Well, that is not a matter I can say much about. I only know a travelling stock route from seeing it.

4383. Have you any complaints made to you by drovers? No; they would not make them to me but to the inspector of stock, who is also an inspector of public watering places.

4384. Are you aware that there is a considerable amount of friction between the Works and the Mines Departments with regard to the dual control over these works? Yes; I have heard of it.

4385. Have you any personal knowledge as to the origin of this friction? I think it is always the way when two sets of people have to look after the same work. I do not think dual control will ever answer.

4386. And you think it undesirable that it should continue? Yes; because it is bound to lead to friction.

4387. What would you suggest to stop the present state of unpleasantness? I should say to leave the construction and maintenance entirely in the hands of the Works Department. We had to construct the works, and I see no reason why we should not continue to look after them; for, as it is, if anything was seriously wrong we have to put it right, and there is always something unsatisfactory in doing another man's work.

4388. Is it possible that the damage may have been caused by neglect on the part of the officers of the Mines Department? Yes; and if the tank is handed over in good condition it must necessarily be so—under ordinary circumstances it must be so.

4389. And if that caretaker was under your supervision you would see to it that he did his duty? Yes; and I should hold myself responsible if anything went wrong.

4390. *Major Penrose.*] Can you tell what the cost of excavation has been in your district? The cost of excavation at Carson's Swamp tank was 1s. 1d. per cubic yard; at Brocklesby's, 1s. 3d.; and at Drysdale, about 1s. 3d.—it was a lump sum sent in.

4391. Are these prices largely in excess of what the squatters pay—when you take into account what the Government tanks are and what the squatters' tanks are? Not largely in excess when you take into account what the Government tanks are and what the squatters' tanks are. There is an extra depth in the Government tanks, and the price given is not too much for the work.

E. C. B.
Smijth.
18 April, 1888.

4392. What other reasons are there for the extra cost? One is the extra depth, another is the form of the embankments round the tank. To do that at any time increases the depth, and several feet of water are gained by pumping over the embankments. Another is that in the case of a squatter's tank a contractor is given every convenience in the shape of water and feed; and then, in addition, there is the question of the slopes.

4393. *Mr. Woore.*] And the squatter chooses his own time? He chooses a good season for the work? Yes; and the Government have to go on whether there is a drought on or not.

4394. *Major Penrose.*] Now, as regards the slopes, how do they affect the case? They make an immense difference. The squatter's tank is generally made with a slope of 6 to 1 at each end, which allows the bullocks to go out without turning. Now, a contractor cannot use a scoop in the same way in a Government tank, and the stuff that comes out has to be taken out in a dray.

4395. But do not the squatters try to make their water as permanent as the water in the Government tanks? Yes; but I do not believe there is a tank in the district, except the Government tanks, that would stand a four years' drought.

4396. *Mr. Woore.*] Even in the largest squatters' tanks that you know, would they ever have the demand made upon them in the dry season which would fall on the Government tanks? Not at all. The Albury district is thickly populated, and in the event of a dry season coming the selectors' tanks would all dry up and the whole population would have to depend on these Government tanks.

4397. *Chairman.*] Is it said that in Albury, where you have an ample rainfall, you use no discretion, but go and construct enormous tanks at great expense? Yes; but where you get an ample rainfall you get a large population. I know that about three years ago there was a severe drought in the Albury district, and many people had to drive their stock down 15 miles to the Murray for water. They left with them one day and returned the next. This occurred to the west of Walla Walla—more in the direction of Carson Swamp.

4398. So that you do not think the Works Department is open to the charge of recklessness which has been alleged here? No; I do not think so.

4399. *Major Penrose.*] Now, in laying out these tanks it has been alleged in many instances the work has been carelessly done and that contractors have defrauded the Government by piling up earth inside the berm, and have not gone down the full 18 feet below the natural surface? I do not think they got over me in that way. I always levelled with corner pegs and bench marks outside the tanks.

4400. *Chairman.*] There may be other matters of which you wish to give evidence. If so, we shall be glad to receive it? I know of no tanks outside my district, and could give no opinion beyond it.

[The Commission adjourned.]

THURSDAY, 19 APRIL, 1888.

The Commission met at 10 a.m.

Present:

HON. G. H. COX, M.L.C., CHAIRMAN.

MAJOR PENROSE, R.E. | J. C. WOORE, Esq.

Arthur William Stilwell called in and examined:—

A. W.
Stilwell.
16 April, 1888.

4401. *Chairman.*] You are Assistant Engineer and Road Superintendent in the Hay district? Yes.

4402. How many years have you been in this district? About three years and a quarter.

4403. Have many tanks been excavated under your supervision during that time? Yes; as nearly as I can remember, seven tanks have been excavated.

4404. Who chose the sites of these tanks? I chose the sites of several of them myself, and others were chosen before I went to the district by Mr. Gordon, in conjunction, I think, with Mr. Wood.

4405. In saying you chose the sites of several of these tanks yourself, I presume you mean that you were acting under certain instructions—that you had a place pointed out to you? Yes; we were instructed to excavate these tanks within a certain distance—the exact sites I chose myself.

4406. I presume the officers of the Mines Department regulated the distances apart? Yes; they fixed the sites approximately. They stated they wanted a tank at a certain place, and we put it there as nearly as possible.

4407. Have any tank sites selected by you been objected to by the Mines Department as unsuitable? No; there has been no objection made directly to me, but I see in the evidence that Mr. Low stated that Dowdigan's was not a good site.

4408. Why was the site of this tank alleged to be a faulty one? The objection was to the catchment—that was not sufficient, in his opinion. I think it was Mr. Low or Mr. Boulton who said that.

4409. Is that a fact? No, it is not. In my opinion the site is a very good one; and I may say that it was approved of by Mr. Cronin, who gave evidence here yesterday.

4410. *Mr. Woore.*] Is it the best site to be had, all things considered? Yes; it is at the junction of the stock routes, and it is the best site we could obtain there. Certainly a better one might have been obtained further on; but it is the best site, and satisfied all requirements.

4411. *Chairman.*] Will you state what tanks were excavated under your supervision? Yes; the Ivanhoe Clare, Carowra Swamp, Hulong, Mount Elliott, and Pulletop, and there are two others in course of construction at Harmon's and Waterman's.

4412. We will take the Ivanhoe tank first. Strong complaints have been made with respect to Ivanhoe tank—complaints which I presume you have heard of, or read in the evidence? Yes.

4413. Now perhaps the better way for you would be to reply to this evidence in your own way, and without our asking questions;—you might give a history of the matter in your own words? I may state first concerning this Ivanhoe tank that another site was first chosen (about 1½ miles away from the township) by Mr. Wood, in conjunction with Mr. Gordon. The land on which that site was situated was selected by the squatter who took it up as a conditional purchase. On this account we were prevented from proceeding with the works. Another site had consequently to be chosen, and that in the township was adopted as the best alternative site after the other had been taken.

4414.

A. W.
Stilwell.
19 April, 1888.

4414. *Mr. Woore.*] Was the township a surveyed township at that time? It was. At the time there was no objection on the part of the people. I spoke to Mr. Williamson and others, and they concurred that it was a suitable site, and would be advantageous.

4415. Was that the general opinion of the people in the locality? Yes; so far as I could ascertain, it was. I heard nothing to the contrary until some time after the work had been in progress. The site in the township was the only one available without going below and getting the drainage from the town. At present we have no drainage from the town at all.

4416. *Major Penrose.*] Is this site on Mr. George Williamson's land? No; it is on the surveyed village site.

4417. I see that Mr. Gilliat says here:—"I am in correspondence with Mr. George Williamson, of Ivanhoe, upon whose land the only available site for a tank in the neighbourhood is found, which I shall have the honor to submit to you, if it terminates in a reasonable proposal, with a recommendation for the construction of a tank at this place"? So far as I remember Mr. Williamson wanted compensation, and the site being below the town, I thought it was unsuitable. At that place we would have got the drainage from the township; I, therefore, chose this site as being the most suitable, taking everything into consideration. It is on the stock route, at the junction of the roads from Hay to Wilcannia, and from Balranald to Ivanhoe. It is also in a position where it affords a suitable supply for the township. In selecting the site I drove round and examined all the suitable places and conferred with most of the residents. So far as I could ascertain, all the residents concurred that it was the best site available. When the work was in progress I heard indirectly that the townspeople were raising objections to the tank on account of the obstruction it would cause in bringing stock through the township, and also because it occupied an area which might at some time have been sold for business purposes. One of the drains to the tank was afterwards modified so that the allotments in the township might be sold if necessary. I think there was no further complaint after that except that as to driving stock through, and it was said that this was an objection which could not be very well got over.

4418. *Chairman.*] Is it a fact that the road crosses these drains at a number of places? It crosses the drains to the south once, but that is some half-mile from the tank.

4419. Is it true that the drainage from Cobb & Co.'s stables will flow into this tank? No; the stables are below the drain. A piggery, too, has been spoken of, but that is also below the drain. There are no residences or buildings of any kind above the drain; I am positive of this.

4420. And with the exception that it is somewhat inconvenient for travelling stock there is no other objection which can be taken to the site? Not that I know of.

4421. Have you heard any complaint about the Clare tank? I see in the evidence a statement by Mr. Low that the tank has been placed in a swamp, or something of that sort. As far as I can ascertain the objection is that the tank is situated too low on the swamp. Of course it is put there on account of catchment—to get as large a catchment area as possible. It is a fact that the tank was surrounded by water, as stated by Mr. Low. The rainfall was very exceptional during that season; and we had tapped another swamp by cutting a drain through, which increased the flow into the swamp. If it were at any time found desirable to reduce the flow it could easily be done by intercepting this drain. A man could have done this in half an hour.

4422. Is this swamp in hard or in soft ground? It is in lignum ground; it is soft, but still very good holding ground.

4423. Then the only objection that could strike anyone would be that the ground surrounding might become boggy? I have pointed out that that could be prevented by obstructing the drain from the upper swamp. This tank is necessarily put on a low level to obtain a catchment by gravitation.

4424. Was there any hard clay-pan there? No; not in the catchment. The site is the best one in the locality. It was not chosen by me but my predecessor, Mr. Gordon; but still I agreed with him that it was the best available site, so that I am quite responsible for it.

4425. *Major Penrose.*] You say that by the management of these drains from the upper swamp the supply of water round the tank could be regulated? Yes; with a little management on the part of the caretaker that could be prevented in future.

4426. *Chairman.*] Is it the case that in this black soil it takes a very heavy rainfall to make the water run? Yes; generally it is the case.

4427. *Mr. Woore.*] But with regard to this particular case? Yes; but the drainage there was quite adequate, as was proved by the tank being filled. I may state that if it had not been for the water, which was not retained in the tank, the water in the swamp would have evaporated much more quickly. But owing to the valve being left open the water escaped into the swamp. The erosion of the tank by the lapping of the water is very trifling indeed, and will not go any further.

4428. *Major Penrose.*] What about the foundations? They are perfectly secure, because the water has been all round them, and nothing has been disturbed.

4429. *Chairman.*] When you last visited this Clare tank you found that the sluice had not been closed, that the water had escaped into the swamp and had evaporated? Yes; that is so.

4430. And when you complained to the caretaker for not having attended to this, what did he say? He told me that he left the sluice open by Mr. Low's instructions, as he considered the embankments were in danger. But they were not in the slightest danger, being then 10 feet high above the water level.

4431. *Major Penrose.*] How much water could you have conserved over the natural surface? About a foot had escaped then. If the valve had been shut we could have saved a foot more.

4432. And this would mean a great deal of water? Yes; about 280 feet square.

4433. *Chairman.*] What about Tom's Lake tank? It is in my district, but it was not constructed by me.

4434. I believe Pulletop is one of yours;—complaint has been made about that tank that there is too rapid a fall into the tank by the drains thereby causing silt to get in? The fall is somewhat steep, and more or less silt is carried down by the drain; rather more than the usual quantity of silt. But the silt tank is quite adequate to meet all requirements if properly attended to.

4435. *Mr. Woore.*] Could the steepness of these drains have been avoided? Not very well in this case.

4436. But Mr. Low said that it could? I took everything into consideration. If the drains had been taken at right angles to the flow, the soil being hard, the water would have broken over the drains. There is a high range above, and as the rainfall is exceptionally heavy we should have lost a lot of water if we had had gentler slopes. The drains now keep clear at the expense of the silt tank, but there are ample opportunities

A. W.
Stilwell.
19 April, 1888.

opportunities of clearing that occasionally. The drains must have been put in obliquely, otherwise a heavy fall of water would run across the drains instead of flowing into the silt tank—that is, if the drains had been put at right angles to the flow.

4437. *Chairman.*] Now, it is said here with regard to the same tank that the water-lifting appliances are placed in the most unsuitable site, &c.? The water-lifting appliances are not on the lowest ground, but on one side of the tank, and there is no danger whatever of the water flowing under or around them so as to create a scour. There have been heavy rains since; but there has been no damage done to speak of. The drains were cut, and the water diverted round, by the caretaker sending it down under the service tank and troughs, creating a slight scour round the service tank piers. The caretaker should not have done this.

4438. I see a complaint that this byewash is not excavated? No; this is not a dam, and we do not excavate byewashes round tanks. There would be no use in it; and if at any time the tank was full, and we found it necessary to prevent a further inflow, the water could be taken down the channel in the creek, which would be, to all intents and purposes, a byewash.

4439. Another complaint is about these embankments, it being said that “they have been erected with no regard to being level; in fact, at the corner opposite water-lifting appliances, lowest being 2 feet 7 inches lower than middle of the embankments, thus further endangering water-lifting appliances. It seems that the embankments are said to be not level, and that they are lower when they ought to be higher? They are not quite level; but I do not think it is at all the case that they are lower where they ought to be higher. There are inequalities along them, here and there, and the maximum would be 2 feet at the highest and lowest points. The work was not abandoned by the contractor. He left the embankment in an improper shape, and I had the matter rectified at his expense; but the embankments were not made thoroughly level on top. There is now no defect, except as regards appearance.

4440. The contractor was mulct in expenses through his neglect? Yes; the cost of the rectification of the embankments was deducted from his payment.

4441. *Mr. Woore.*] Why were they not levelled up in the usual way? Well, I thought it would be putting the contractor to an unnecessarily heavy expense; we are generally taxed with being too strict with these embankments.

4442. *Chairman.*] It has been said that one reason why the contractors are chary of taking contracts from Government, is because the road superintendents insist upon the strict letter of the specifications being carried out? Well, I should have passed this, although the embankments were not quite level in accordance with the specifications. We do not insist on the strict letter, although we are no doubt more strict than the squatters with regard to details. There is a slight increase in the cost of works owing to this, but it is not material.

4443. *Mr. Woore.*] If the contractor had gone on and finished the work as it is now, would you have passed it? Yes; I would.

4444. *Chairman.*] Now, with regard to the Mount Elliott tank drains, it is said that “These have been constructed evidently with little or no idea of what is required of a drain. These drains have been excavated down face of hill, and, although my inspection was immediately after heavy rains, I could discover no trace of water having run into these nor waterwash. Had one of these drains been extended about half a mile it would have caught the water in a good natural watercourse, which, in any ordinary season, would be quite equal to filling this tank, thereby saving the outlay incurred for what is and will remain useless?” These drains have proved useful. They were cut in an oblique direction on the line of flow to prevent the interception of the water. The ground is very flat, and a lot of water is lost in slight depressions in the ground. The tank has been filled repeatedly; otherwise the drain spoken of would have been extended; but I found it unnecessary to do so. The tank is filled now, and has been since its construction; therefore a further extension of that drain would have been an unnecessary expense.

4445. Now with respect to the Hulong tank drain, Mr. Low says:—“One is here so constructed as to run water from instead of to main tank. This showed plainly at the time of my inspection, owing to the water lying in different parts of the drain, which had been banked up to prevent water running from main tank. Were this drain opened up and main tank full, I feel confident it would run quite 1 foot of water out.” This means that the Hulong tank drains would run the water out of the tank instead of into it, to the extent of 1 foot? The only reply I can give to that statement is to flatly contradict it. It is not the case at all. I took the levels for these drains myself. The swamp consists of gilgai holes. The drains are cut through the hummocks and embanked across the holes. The water remains in these depressions, and owing to the negligence of the caretaker the embankments at times break away and the water escapes into the swamp that should have run into the tank, and would have done so in the ordinary course of things.

4446. *Mr. Woore.*] Is that owing to the negligence of the caretakers? Yes—that the embankments give way is.

4447. *Chairman.*] The next case mentioned is Tom’s Lake tank, of which it is said: “Is here excavated in a rotten boggy swamp, a place which was well known to all travellers on that road as a spot to be avoided after rain, owing to its boggy nature. Had this tank been excavated about three quarters of a mile northerly of its present site, it would have been on much better holding ground, and on ground naturally less liable to cut up, which in fact is an old natural watercourse, into swamp, which has cut up little if any. Mr. Overseer Keighran, of Hay, has for many years known this place, and fully bears me out in my remarks”? The site of this tank was not fixed by me, but it was only at this low level that a catchment was obtainable. Now as to the ground not being good holding ground, it has been proved to be quite the reverse, and exceptionally good holding ground indeed. As to the boggy swamp, that is behind and away from the tank and from the line of access to the troughing. The swamp that Mr. Low speaks about is a mile further on, and we have obtained a catchment from that by cutting an intercepting drain with an embankment across the other flow.

4448. Then this tank is not in the swamp, but on the edge of it? Yes; it is in the swamp—necessarily so to obtain a catchment.

4449. How did you arrange that the troughing was not in the swamp? The troughs are on the edge of the swamp and clear of the bad ground, and stock going down to the troughing go down on sound ground.

4450. Consequently if the troughing can be got at, you think it is immaterial where the tank is placed? Yes. It is good holding ground, and the tank keeps full.

A. W.
Stilwell.

19 April, 1888.

4451. *Mr. Woore.*] Mr. Low says there is a better place than this about three quarters of a mile north of it? Yes; but we have obtained the water from that place. In any case I do not think it would have been a better site, and we commanded a greater catchment area by having the tank where it is than if one had been put at any other place.

4452. *Chairman.*] This is what is said of the drains to this tank:—"These are badly constructed, especially one alongside of road which for some distance from its commencement runs water from instead of to main tank. This drain crosses main road almost in front of main tank, having a direct and sudden fall without the waters as is usual passing through a silt-tank. Owing to no silt-tank being here, and the drain being much cut up both by traffic and nature of ground, much silt must have been carried into main tank, which I feel confident is quite half silted up. This drain could easily and practically have been led to opposite end of tank when water could have run through swamp and silt-tank, thus allowing silt to settle and not be carried into main tank."? That statement is directly at variance with the facts. There is a silt-tank on this side of the tank, through which all the flow must pass into the tank. Then the drain referred to is the intercepting drain from the swamp that I spoke of. It has been much neglected by the lessee under the Mines Department. It is silted up and obstructed by vegetation and all flow prevented. In consequence of this the embankment across the swamp, to divert the water into the drain, has been partially destroyed. The tank is also fed from the swamp side through another inlet, and goes through another silt-tank from that side. But if the water were allowed to escape from this main drain into the swamp before going into the tank, as Mr. Low suggests, we could conserve no water above the berm level. As it is, the water is conducted in on the eastern side, and we can conserve 2 or 3 feet of water above the berm level, which is an immense augmentation of the supply.

4453. Is much silt deposited in the main tank owing to the carelessness of the caretaker? I cannot say positively, but I think it is an exaggeration to say that the tank is half filled with silt. I do not think it is anything like half filled. I feel confident that it is not half filled.

4454. Is the Gunaramby tank in your district? Yes.

4455. This is what is said of the tank in the report:—"This has been excavated in rotten copai ground, which owing to steepness of batters, has fallen in to a very large extent. A good site for a tank could easily have been secured near to this"? This site is very similar to that at Tom's Lake. We obtain a flow from both sides of the tank up to the berm level, and above that level from the higher catchment on one side; but in this case as the catchment above the tank is small in area, the water is taken round the berm into the inlet on the lower side. It was objected by the Mines Department that this was dangerous and would lead to the cutting away of the berm and the destruction of the batters of the tank. But it has been proved not to be the case, and the tank has been several times filled by heavy rains.

4456. Why do you depart from the usual course in bringing the water round in this way? To save what I consider would be an unnecessary expenditure. It would cost £100 to put down another inlet shoot. The catchment was small in area above the tank, and by diverting the water round the tank to the inlet on the lower side we obviated the necessity of another inlet shoot. And it has proved to be quite safe to do so.

4457. *Major Penrose.*] Does this tank conserve over the natural surface of the ground? Yes; it is a similar tank to Tom's Lake tank. It has embankments on three sides and wings. We might conserve 6 feet of water there.

4458. *Mr. Woore.*] How could that affect the drains round the tank? They would not be materially affected except by being silted up by sediment, which could easily be cleaned out when the water subsided.

4459. *Chairman.*] The next case mentioned is the Box Creek tank and dam. Are these in your district? Yes.

4460. This is what is said:—"One embankment here forming a dam would have been quite sufficient for requirements instead of the large outlay for tank and dam. In this opinion I am borne out by Mr. Lindsay, manager, Til Til station"? There is no dam here at all. The tank is constructed in the shallow bed of Box Creek. It has embankments round on four sides. The embankments have had the effect of damming the creek.

4461. Is it desirable to have tanks put in the beds of creeks? No; but in this case the country is very flat. The water flows down from the Lachlan by billabongs and deposits all the sediment on the way. It flows something like 100 miles, and it is upwards of a month in reaching this tank after it leaves the Lachlan.

4462. Then it is said further about the same matter:—"The embankments around excavation are of no practical use and must have increased cost of tank considerably. The site would have been a more favourable one, and more water conserved had a simple dam been constructed down creek about three-quarters of a mile near to 'Thompson's Hotel';" I believe you have already explained about the embankments—that they conserved water above the level surface? Yes; the water is thus conserved above the natural surface if the valves are closed—when the tank is at its fullest—and the water not allowed to go back again. These embankments also serve to protect the water from wind action.

4463. What is the depth of this billabong? From a guess I should say from about 8 to 10 feet, and that would not be nearly sufficient.

4464. So that a mere dam in this creek would not have been permanent? No; certainly not. It would not have provided permanent water.

4465. Had it been selected three-quarters of a mile down, would that have made a permanent dam? I think the depth of the creek is the same all along. I think it would be about the same.

4466. Then the report deals with the new works 16 miles from Balranald:—

Main tank.—This excavation at my inspection was almost completed. The site is certainly not a good one; a much better one could have been procured within half a mile. The present excavation will require a large outlay for drains if even by these it can be filled with a fair rain.

Drains.—There were 50 chains 6 feet x 9 inches excavated here, although there had been heavy rains shortly before my visit. These had run no water into silt-tank, in fact they never will, as both drains in some places were full of water, but quite dry near to tank, thus showing that they would run water from instead of to main tank. Contractor informed me that he was getting 6s. 6d. per chain for these drains, which is quite 2s. per chain more than the work is worth, when he was, from rain, unable to work in tank and not as if he were losing time going to and from a small job.

—? I think I have stated that the site is the best that could have been obtained with regard to the convenience of watering stock from both stock routes.

A. W.
Stilwell.
19 April, 1888.

4467. Then about the drains? Well, I hardly like to say it, but in my opinion the statement is at direct variance with the facts. At the time I visited this place I could not measure the silt tank, because it was full to overflowing, and the ground surrounding it was submerged by water brought down by these very drains. I think this was in November last. The drains showed scour, but there was no water standing in them, proving that the levels were correct.

4468. How much water is now in the tank? The inlet shoot has just been completed. The work itself is not yet completed, and consequently there is no water in the tank at present.

4469. *Major Penrose.*] You say there is plenty of water at the silt tank and near the main tank now? Yes; and it had to be dammed out of the main tank owing to the construction not being completed.

4470. *Chairman.*] Then it was quite unnecessary for Mr. Low to have made any remarks about this tank, until the works were handed over by you to the Mines Department? I think so. The same remark would apply to the fences, which have not been handed over to them yet.

4471. Have you read the evidence? Yes; but not with particular attention, and not at all with respect to anything outside my own district.

4472. Well, we have had a great deal of testimony here tending to show that there had been faulty design and faulty construction with respect to these tanks, thus enormously increasing their cost to the country? If I understand aright that applies to the ratio of the batters to the tanks.

4473. Yes, and in many other ways. In the first place it is said that the batters are too steep, preventing the contractors from constructing the works at a reasonable cost, as compared with the tanks constructed by the squatters;—just state what are the batters to your tanks? $1\frac{1}{2}$ to 1 is the maximum batter in my district, but the average is 2 to 1. The steepness of the batters does doubtless increase the cost, but we made them advisedly steep, considering that the increased cost was warranted. It would give less area to be exposed to evaporation for one thing, and comparison of our tanks with the tanks of the squatters would be altogether unfair, because the conditions are altogether different. Our tanks are constructed for practically an unlimited number of stock, but squatters know exactly the number of stock they want to feed. We do not know how many travelling stock may come along the road. We have to allow a margin on the safe side. I still submit that the conditions are altogether different, and therefore no comparison can fairly be instituted between our works and the works of the squatters.

4474. It has been stated that if you had one of these slopes made gentler it would decrease the cost of the work? Well, it would decrease the cost very slightly. The scoops could not turn round, and if they could not turn you might as well use drays.

4475. Have you any discretion in the construction of these works—to alter the batter in accordance with the friableness or stability of the ground? Yes, certainly. There is a specified batter, but we can depart from it. In the new specifications I think a blank is left for the batter. In the old specifications the batter of $1\frac{1}{2}$ to 1 is specified.

4476. *Major Penrose.*] But even that did not bind you down to anything? No; we had discretion. If we considered that any ground necessitated it we could recommend an alteration in the ratio of the batters, and the alteration would be approved of by the head of the Department.

4477. Then the Government tanks are really much cheaper than the squatters' tanks, considering the depth and other things? Yes; the depth of our tanks is 18 feet, and I think the maximum depth of the squatters' tanks is from 14 to 16 feet, so far as I know.

4478. Then the extra 2 feet would naturally increase the cost? Yes; I think so.

4479. And the increased cost would, in your opinion, be fairly compensated for by the more certain permanency of the water? We considered so.

4480. It has been stated that the banks round these tanks, not having been utilized in many cases, have been built at an altogether unnecessary expense? Well, we considered that their construction was warranted by the protection which they gave from evaporation; and they are constructed with that intention only in some places.

4481. *Mr. Woore.*] And could they have been utilized in any instance to conserve more water? Where they could be so utilized we tried to do so; but in many cases they could not be utilized to any appreciable extent.

4482. *Chairman.*] Did you ever find that these $1\frac{1}{2}$ to 1 batters were liable to fall in by the action of the water? No; not to any appreciable extent. No matter what the batter might be there is always bound to be a slight erosion from the wave action at the surface of the water. That occurs at different levels all down the tank as the water falls.

4483. *Mr. Woore.*] But is not that erosion considerably decreased in old tanks? Yes; when the banks become hardened. It is only in the new works that this takes place, and not then to any appreciable extent. If I had to construct these tanks again, knowing what I know now, I would put in the same batters.

4484. *Chairman.*] Can you give any other reason why the Government have paid more money for these works than the squatters? Yes, there are many other reasons. A contractor for a squatter has many advantages given him which we cannot offer. As a rule, the squatter's contractor has grass and water free; but in our case it is quite the reverse. Their contractors occasionally—in fact, almost invariably—have the use of the bullocks belonging to the station-owner, who is anxious to get them broken in by the contractors. The squatter's contractor has also every facility offered to him for obtaining supplies at a low rate.

4485. Is that the case with the Government tanks? Where we can do so we select a good season, but, as a rule, we cannot do so. As a rule we have little discretion as regards that, because when a tank is ordered to be made it has to be made.

4486. Is it a fact that the persistence with which officers of your Department insist upon the literal wording of the specifications being carried out tends to increase the cost, and necessitates the contractors tendering at a higher rate, owing to this extreme nicety shown in the finishing work? It may, to a slight extent, increase the cost, but in our case we must adhere to some type of construction. There can be with us no loose methods of constructing works. For instance, a work is let according to a certain plan and specification publicly tendered for; and if afterwards the plan and specification is departed from and any laxity allowed, the unsuccessful tenderers would soon hear of it, and would have good grounds of complaint, and would not be slow in making these complaints heard through the Member for the district.

4487. A contractor whom we examined has stated that he has known a case where a tank has been sunk 18 feet; that some holes were left in the bottom, and that the constructing officer insisted on these holes being filled up? Well, I can only speak for work which I have supervised myself; but I think this is a very improbable story. I would not have done so had it been my case, and I hardly think anyone else was so foolish as to insist upon such a ridiculous thing being done.

A. W.
Stilwell.
19 April, 18

4488. It has also been stated that in one or two instances the road superintendent has insisted on the embankments being dressed down, as if it were a matter of great importance? I think this is an exaggeration; we do certainly insist upon a certain amount of neatness and uniformity, and we are bound to it by the plans and specifications, as I said before.

4489. It has been said also that you insist that the earth shall be taken a great distance away from the embankment? The distance is about 30 feet, and I do not consider it too far. I think the distance the squatters take their spoil is in some cases even greater.

4490. Is it a fact that contractors have to wait occasionally long periods for their money? Not to my knowledge; not a very long time. A special regulation was made with regard to that in payment for works at tanks and wells.

4491. But, although there is now a new arrangement, it is said that many men have been ruined by this delay? It is not a new arrangement. The regulation was made in 1883, and provided for the payment of an advance of 50 per cent.

4492. *Major Penrose.*] Is it since 1883 that most of the tanks were made? Yes.

4493. *Chairman.*] So that the practice could not force a man to go into the Insolvent Court now? I cannot conceive such a thing occurring. Of course there is always an unavoidable delay in Government payments as compared with the making of payments by a private individual. A certain routine must be gone through; but we have tried to lessen the delay as much as possible.

4494. *Mr. Woore.*] Do you think that this delay is worth taking into account by the contractors? I think not. I think that to a man of means it does not stand in the way at all.

4495. *Major Penrose.*] The delay now is only with respect to the final payments? That is all. There are progress payments also. The payment of 50 per cent. of the value of the work done is a progress payment; otherwise a progress payment has to be certified by me, and checked in the head office. It entails a delay of a fortnight or three weeks, between the date of my certificate and the date of payment. I have to travel over 200 miles square of country, and I cannot be in every place at the same time. I try to arrange to travel so as to meet the requirements of the contractors. We obviate any difficulty by giving them 50 per cent. of the money on the spot.

4496. *Chairman.*] We notice that as much as 1s. 9d. per cubic yard has been given for a number of tanks;—do you think that, under the circumstances, this price is an excessive one? I do not know of 1s. 9d. having been given, speaking from my own knowledge. The highest price given in my district was 1s. 7½d. This was for the Carowra Swamp tank, which was constructed in a bad season. The contract was let in a very dry season, and the rain came before it was completed.

4497. I suppose that this was a season when a squatter would not have undertaken such a work? Yes; and we were compelled to do it by the necessities of the case.

4498. Is it a fact that these works have been taken by contractors and let to sub-contractors, at a rate very much lower than the original rate? I do not know of any tank work having been sublet; all was carried out by the contractors themselves.

4499. Are you aware whether, as a rule, the contractors have made money out of their contracts? Well, that is more a matter of inference than anything else. I know that several of them have become insolvent, and most of them are, apparently, poor men.

4500. So that these so-called excessive prices have not, at all events, enriched the contractors? I do not see how excessive prices can be obtained for works which are submitted to public competition.

4501. Reverting again to the Ivanhoe tank, it has been said that the drains leading into this tank are very faulty in construction, as well as being excessively costly. I notice here at page 187 of the Mines blue book:—

The drains here have evidently been constructed with no respect as to what a drain is for. One drain for a good half-mile running water from tank; another is brought along road to Mossiel, and cut up very badly by both stock and teams. The water from this drain overflows silt-tank, which is very small, and partly upon main road, and runs into Elliot's tank on opposite side of road, which water Elliot afterwards sells to the public. Another long drain runs through township allotments, which have been sold, and are now being blocked up.

—? Now, as to the defective level—this applies to the northern drain. This drain had to be constructed about 30 chains, and the scrub cleared. It was then found that an advantageous extension might be made, by making the cutting about 3 feet deep through a slight rise for 15 chains. Before the tank was handed over, I set the caretaker to make this cutting, and when the tank was handed over the Mines officers discontinued this work; consequently that end or portion of the drain is ineffective. It was Mr. Yeo who did this. I think the next statement is that the drains run along the Mossiel road. It crosses the road obliquely, but at the crossing point a stone causeway has been put in, so it is not cut up. The drain is still in use. Now, as to the drain running through the township, we were asked that this drain might be altered, owing to the allotments in the town being required for sale, and a portion of one of the drains was abolished for that purpose. I do not know that the allotments were since sold.

4502. Another statement is that the water overflows the silt-tank and runs into Elliot's tank? Well, I visited the place shortly after that statement was made, and I found that the loss of water was occasioned by the neglect of the upper drains. The water had overflowed them, and consequently overflowed the lower drains and had escaped altogether. If proper attention had been given to the upper drains this could not have occurred.

4503. You heard what the Minister said about this:—"I cannot help saying, after having seen this tank, that, in my opinion, a very improper situation was selected, and the work, in my estimation, is badly done?" No specific charge is made, so I cannot well answer that.

4504. I suppose when this tank was excavated it was done to serve the town as well as to serve the travelling stock? Yes, and the townspeople have largely availed themselves of it ever since.

4505. And you think that no other site would have been so convenient for the townspeople and for travelling stock combined? No; and any other site would not have been so good from an engineering point of view, for the supply would have been contaminated by the township; but this is above it.

A. W.
Stilwell.
19 April, 1888.

4506. *Mr. Woore.*] We have been given to understand that the whole drainage of the township goes into this tank? The statement is quite contrary to fact.

4507. *Major Penrose.*] If care is taken not to build above the catchment will this tank continue to give pure water to the town? Yes; I made application to have this portion of the village area revoked and proclaimed a public reserve.

4508. *Chairman.*] Now, we have had some very heavy charges made of the extreme and exorbitant prices paid for the drains to this tank. Here is what is said by Mr. Yeo:—"The drains at the Ivanhoe Tank were made by Messrs. Farrell and Gallagher, who received 15s. per chain, which was an exorbitant price, as stations in the district were only giving 3s. 6d. to 5s. per chain, and I might mention that a reliable person informed me at the time the contract was let that one of the contractors, while consulting his partner as to what price they should do the work for, said they should ask 7s. 6d. per chain, which, he said, would pay them well, but his partner said, 'As it's Government work let us ask 15s. per chain,' which they did, and got. I might also mention that the drain running from the north-east corner of the main tank, from a point about half a mile from the main tank should not have been passed by the road superintendent, as it was never graded properly, and the water runs in the opposite direction to the tank. No tenders were called for the cutting of these drains?" I am not quite sure that the price paid was 15s., but I know that an excessive price was paid for the drains. It is true that tenders were not publicly invited in the press, but on several occasions I endeavoured to obtain tenders locally. The newspaper published nearest to the place is 140 miles distant, at Hay. I notified the matter at the post office at Ivanhoe, and made it public as well as I could otherwise. I also endeavoured to obtain a tender from the contractor for the tank, and the lowest I could obtain from anyone was from this man Gallagher. Lower prices probably might have been obtained by waiting, but in that case we should have lost the first rainfall into the tank; and rather than entail the risk of this it was considered advisable to let the drains. Of course, I cannot say anything as to what was said about the contractors first arranging to ask only 7s. 6d. I left word with everybody in the town, with the postmaster and others, that I wanted tenders for the drains.

4509. What was the size of these drains? The drains were 6 feet wide by 1 foot deep. I think the figures are given in my papers. In this case the drains are not included in the tank contract, and the price demanded by the tank contractor was largely in excess of the price of this man Gallagher.

4510. *Mr. Woore.*] It is not possible to include the drains in the contract for the tank, as when that is let, it may not be known what is the exact extent of the drainage? We can specify the drains without stating the amount.

4511. Would the cost of the work be cheaper if it were all given in the one contract? Yes; I think so; but this contract for the tank was let before I went to the district.

4512. In dividing your work up in this way you are simply placing yourself in the hands of the Philistines? Yes; I agree with you that it would be better. But I am not in any way responsible for the fact that the drains were not let with the tank.

4513. Who is the officer responsible for that? The contract was let under Mr. Gordon, my predecessor.

4514. *Chairman.*] Have you stated what is the size of these drains at Ivanhoe tank? I cannot say positively, but I think they are 6 feet wide and 1 foot deep.

4515. Do you not think that 15s. per chain is an exorbitant price to give for this work? Yes; and I considered it so at the time; but rather than allow the tank to remain without being filled I gave it. If, on the other hand, I had not let the drains even at that price, I would have lost the water from the tank in consequence of not obtaining the first flow, and it would have been looked on as a very false economy; and, in fact, would have been so.

4516. *Mr. Woore.*] Would you probably have had to wait an indefinite time to get the work done cheaper? Yes. No doubt they could have been done cheaper if I had waited, but I did not know how long I might have had to wait. Of course, for my own credit's sake, I would let the drains as cheaply as I could; but it was a matter of great urgency to have the drains constructed then. I think the man Farrell, one of the contractors, is now employed as a caretaker by the Mines Department. He is one of the men who, according to Mr. Yeo, conspired to get these exorbitant prices from the Government. He is employed at Mossgiel, I think.

4517. *Chairman.*] At page 184 of the Mines blue book in connection with Tom's Lake tank, I notice the following statement:—"With reference to the main drain and the broken dam, the drain is, I should say, considerably over a mile long, from 12 to 14 feet wide, and from 3 to 5 feet deep"? I daresay it is of these dimensions.

4518. "It starts from a watercourse, and a wide low dam across this forces the water into the drain. The water will have, I think, to rise 3 feet in this dam before it enters the drain. From appearances the water has been within an inch of flowing over the dam; the break, which is a cutting in the solid earth about 20 yards wide, evidently saving the dam, the bottom level of the drain being in places too high to carry the amount of water"? That is owing to the drain being obstructed.

4519. "If this cutting or bye-wash is to be repaired, I think the whole dam should be raised 2 feet for safety. The water will then flow down the drain to the place where the water has escaped into the swamp, and where, I think, the ground surface is lower than at the tank. The earth excavated from the drain is placed in irregular heaps each side without making a continuous bank, and it is between these heaps the water has made its way and cut down. The drain continues, and ends abruptly about a chain from and parallel to the tank. A small dam throws the water by a small drain into the tank. I was informed the drain was originally of uniform size, but owing to the obstruction of the traffic was filled in. The main road, I must mention, passes between the drain and tank, and follows the drain the whole way; and, I am told, that when the water came through to the tank, the space here was a perfect bog-hole. The original intention was, I suppose, to bring sufficient water down to fill up the embankments, and to do this I think it will be necessary to raise the dam and bank the earth along the low portion of the main drain in a form that can be utilized as a roadway, and to construct a culvert, and open up the drain again. I found the drain scoured and cut, which, owing to the friable nature of the soil, is inevitable, but not so much silted. The caretaker informs me that he and a man were at work in the water endeavouring to arrest the flow of water from the drain into the swamp, but were unsuccessful. The dam and drain also, I believe, are off the public watering place, and the amount of water lodging in the dam militates against the tank, since the lessee cannot charge for water from it." Are these statements correct? I did not take the levels for the drains myself, but to the best of my belief, the defect in the

the drain is not due to any fault of construction, but to the want of proper maintenance. The drain is obstructed and silted up by vegetation.

4520. Is not the drainage sufficient without going to another creek to supplement the supply? Not having constructed the tank, and not having had the original design to deal with, I have not gone into the question fully. I do not know the drainage area to be dealt with, but I think I should have made this drain myself; had I the work to do, to obtain a supplementary supply.

4521. *Major Penrose.*] Do you know that water has ever come down by this drain? Yes, it has come down; but I cannot say that it has come all the way from the swamp, because the drain has always been more or less obstructed since I have been there.

4522. *Chairman.*] In reading the evidence are there any other matters you would like to refer to in connection with the drains? I think not.

4523. The next matter that we have to go into is the expensive forms of machinery for lifting water. It has been stated that you have used appliances which necessitated a greater cost for maintenance. What water-lifting machinery have you in your district? We have the special Tangye steam-pump, the Holman horse-gear pump, and the Amos & Smith horse-gear pump.

4524. Have these different forms of machinery been erected in accordance with the requirements of the localities; have they been put up with regard to the surrounding circumstances? Yes, and in no case has steam-power been used where fuel is not obtainable within a short distance. In the other cases there are paddocks provided for the caretakers' horses, but I should prefer steam-power in all cases if fuel were available. But it is not so.

4525. But does not the use of steam-power necessitate a greater expense? No, I think not; because the cost of erection is less than the other.

4526. But how about the cost of maintenance? Well, I think the caretakers who look after steam-pumps are paid less than the caretakers who keep horses for the horse pumps.

4527. And I believe there is another matter to be taken into consideration—that there is no need for paddocks to be fenced off if steam-pumps be erected? Yes; but we have nothing to do with the fencing; We fence simply in accordance with the instructions of the Mines Department.

4528. But there would be no necessity for paddocks in case steam pumps were used, as horses would not be required? Certainly not.

4529. Do you think that the use of hand-power pumps would be desirable, or would lessen the expense in any way? I think the reverse would be the case. I believe that hand-power pumps would be ineffectual and would not meet requirements.

4530. And I suppose the cost of erecting and fitting them up would be so great as to bring up the total cost to more than that of the steam-pumps? Yes; the cost of erecting the M'Comas lift would be much larger than the cost of putting up our present appliances. A M'Comas lift would entail the use of a great deal of timber, and as that country is untimbered it would mean the incurring of great expense.

4531. *Major Penrose.*] How do the squatters in the district lift water from their tanks? I think they use the M'Comas lift. They have only a small quantity of water to lift, and they can take their own time to do it. They know also exactly what they want.

4532. And with respect to the putting up of these lifts? It is simply a hand-gear lift, rigged on staging over the tank. So far as I know, where squatters do raise water they use the M'Comas lift.

4533. *Chairman.*] Is it a fact that the Tangye steam-pumps require very little skill in their management and working? Yes; any man of ordinary intelligence could learn all about them in twenty-four hours.

4534. Then they are not at all liable to get out of order? No; quite the reverse.

4535. *Major Penrose.*] Are windmills used at all? I have only one in my district—at the Lignum Hut well. Of course I only know of my own district, but there may be others in use. I do not know of any case where the squatters use windmills to raise water for their stock.

4536. What is your opinion with regard to that form of lifting water for stock? It would entail the use of a large service tank, as you cannot rely upon always getting wind to run the machinery.

4537. *Chairman.*] The next matter we wish to inquire about is the alleged excessive cost of the fencing. Some of the most expensive fences that have been erected under your Department are said to have been put up in your district, and I think you are to a large extent held responsible for it. We have had it in evidence that fences have been erected at the extreme cost of £116 per mile;—will you give the Commission some information with regard to these allegations? I think £112 per mile was the highest price paid for fencing—that is, on the road between Booligal and Mount Manara. Tenders were called for publicly in the local newspaper three times, and the lowest tender was eventually accepted.

4538. Do you think that the specification for this fencing entails unnecessary expense on the Government? No; because I think that the fences required for these watering places should be more substantial than those used on stations. Our fences are virtually road fences, and the greater part of them are put up between the stock route and the paddock, and are meant to keep out large stock as well as sheep.

4539. It may be said that expensive and very substantial fences are necessary round tanks, but would that apply also to the fences round the caretakers' paddocks? Not to the same extent, certainly; but it would apply with certain exceptions. For instance, the fences round the paddocks require to be of a much more substantial character than station fences, because the fence round the paddock is practically a road fence.

4540. But only on one side? But very often there are large stock in the paddocks—cattle as well as sheep. Three sides of the paddock are on the stock route, and the other-side is leasehold land.

4541. What are the specifications of the fences put up by you—do they include a top rail? No; I will give full particulars if necessary. The posts are 9 inches by 3 inches, sunk 30 inches in the ground, 5 feet out; the panels are 10 feet long, with five No. 6 wires and a top wire of No. 4 gauge. There are straining posts at intervals of 12 panels, and they are put 3 feet in the ground.

4542. Do you not think it is quite unnecessary to have these posts 30 inches in the ground, and that it increases the cost? I have had very little experience with fencing until I went down to that district, and I should say, judging from what I saw, I did no more than what was necessary for public requirements.

4543. Are you aware whether squatters put the posts of their fences so deep in the ground on roadsides? No; I do not think they do.

4544. And do you not think they would do so if they thought it was necessary? Well, that would be merely an inference.

4545. But if the squatters found that a less depth was sufficient, why should the Government go to the extra expense? As substantial fences to retain stock and to exclude stock on stock routes, I do not think the fences are excessive with regard to the depths of the posts or to anything else. 4546.

A. W.

Stilwell.

19 April, 1888.

A. W.
Stilwell.
April, 1888.

4546. Do you ever depart from the specification which you have just mentioned? No; I have seen no cause to depart from the specification except in the case of straining posts.
4547. Why did you do it in this case? It was done at the suggestion of Mr. Wood, made during one of his visits of inspection. It was done to avoid splicing the wires. We used a No. 4 and a No. 6.
4548. *Mr. Woore.*] Do you think that No. 4 wire could be strained by one man to its full length? The straining has been done without straining posts, and the wire has been fairly strained. The weight is supported every 10 feet by the posts.
4549. *Chairman.*] Then there is another objection to this—where you strain to split posts, has it not the tendency to split the post in two? Yes; I think that is objectionable.
4550. *Mr. Woore.*] Is that plan of doing without straining posts to be continued? No; on account of the objection raised by the Mines Department we went back to the other style of fencing.
4551. *Major Penrose.*] When did you last see the Ivanhoe fence? In November last.
4552. Had it then been long completed? Yes; several months. A portion of it had been completed a long time.
4553. Was it in a good condition? Yes. Apparently there was no tendency of the posts to split, or to go sideways.
4554. Was this omission of straining posts a concession to the contractor, or was it done by way of experiment? It was done as an experiment.
4555. Has it tended to cheapen the cost of the work? In this case the contractor had straining posts provided, so that there was no alteration in the cost.
4556. But it might tend to cheapen the cost? Yes.
4557. *Mr. Woore.*] And was it with the object of reducing the cost of the fence that this experiment was tried? Yes, and of doing away with the splicing of the wire, to avoid the danger of breaking at the splices.
4558. *Chairman.*] You have not told us why you paid £112 per mile for fencing—did you not think at the time the tender was received that the price was an excessive one? Yes; but tenders had been repeatedly invited, and we saw no prospect of our being able to get a lower tender, and the construction of the work was urged by the Mines Department; therefore we saw no alternative but to accept.
4559. *Mr. Woore.*] Do you think that the price was too high for such a fence? I think it could have been done cheaper, had the season been a good one.
4560. But do you think that the fence is a good one? Well, the contractor had great difficulty in getting his timber. In the case of the Holy Box and Lignum hut wells the timber had to be drawn 25 miles. When this work was let the weather was bad. For the works at Tom's Lake and the Jumping Sand Hills the contractor had to go for timber some 60 miles. This is, of course, merely the contractor's statement, and not the result of my observations.
4561. *Chairman.*] What sort of posts were those that were used? Some of them were round. In one or two cases, up near Mount Manara, I had used belar.
4562. *Mr. Woore.*] From your knowledge of the country, do you believe the contractor's statements as to the distance which he had to draw the timber? Well, not in all cases; but in these cases I do. Certainly the contractor in one case might have got timber close at hand, had he not been prevented by the lessee of the run. I mention this to show the conditions under which our fencing is done as compared with station fences.
4563. *Chairman.*] Do you not think that some discretion should be allowed to the officer-in-charge to allow other timber to be used than pine? I do not insist on pine being used; but I got it because it was more easily obtainable. I think that pine is the easiest obtainable timber in that part of the country, and not mulga, gidya, or belar. It was for this reason that I used it. Here is a letter from a contractor now fencing the Box Creek and Youhll Plains tanks:—

Mr. Stilwell, Engineer of Roads Department, Hay.

Sir,

Balarald, 27 March, 1888.

I have to state that having cut all the timber for Box Creek tank, on Magenta pastoral holding, I have, under great difficulty, obtained and now on the tank ground, (700)* The manager of Magenta refuses to allow me to cart, so I have to get through to cut one fence, as there is no water on the main road; and if the manager of Magenta would allow me Mr. M'Intyre's D block, [but he] point blank refuses to do so. I have taken three 400-gallon tanks and have made troughing to water the bullocks, but the water is positively refused. I must ask that I be allowed time on contract until rain falls, as, even if I abandon the timber cut on Magenta, I am in the same, or even worse, position for water on Sunbury [?] holding. I wired to you to-day as to the legality of my action; but Mr. Cronin, who is at Balarald to-day, has just told me I am in the wrong, and cannot cut the fence or take the water. I trust you will give the advance asked, and ease my position, and the time also, as it is not, humanly speaking, possible to get the timber until fully 1 inch rain falls; then a month will see the matter out.

I have, &c.,
W. J. MEREDITH,
Contractor, Balarald.

In some places where I am doing fencing, perhaps the lessee will have all the timber cut and stacked for his own use. That timber would come in for station fences, the price of which is quoted against us, while we have correspondingly longer distances to go for the timber.

4564. Now, in this particular place, Ivanhoe, can the round timber be used without going to this enormous cost? I do not refuse to take round posts if they give me good scantling. I would not stick to a hard and fast rule of 9 by 3 timber; and, in many cases, round posts are put in.

4565. There is a statement here, made by one of the witnesses, which I would like to call attention to:—

Fencing.—This was originally let to one Bevan, I am informed by Mr. George Williamson, J.P., Ivanhoe, and Mr. Brougham, Ticehurst, at £116 or £120 per mile, who sublet to Elliot, who afterwards sublet to Anderson (my informant) at the following:—30s. per 100 posts splitting; 100s. per 100 posts carting; £18 per mile erecting and wiring. The panels are supposed to be 10 feet, which would allow of the following:—

| | | | | |
|------------------------------------|---|-----|----|---|
| 530 posts, splitting, at 30s. | £ | 7 | 19 | 0 |
| 530 posts, carting, at 100s. | | 26 | 10 | 0 |
| Erecting, per mile | | 18 | 0 | 0 |
| Wire | | 30 | 0 | 0 |
| | | £82 | 9 | 0 |

The allowance for wire is ample, thus leaving a profit from first contract price of at least £33 11s. per mile.

—? [No answer].

4566.

* Several words undecipherable.

A. W.
Stilwell.
19 April, 1888.

4566. *Mr. Woore.*] Do you think the contractors made such a profit as that? Well, I doubt it very much. I know nothing about this sub-letting, and I doubt very much that it is done. No doubt a good deal of the work is done by piece, and that is what I presume they call sub-letting.

4567. Then he goes on to say:—"This description of fencing is new to me, and I unhesitatingly condemn same. In this opinion I am borne out by Messrs. Webb (Kilfera), Brougham (Ticehurst), and Laird (Mosgiel), all of whom have had much experience in fencing and fencing timber in this particular district, and neither of whom would erect a fence without straining-posts?" Well, I am not responsible for this, and, as the work has not been handed over, they are criticising work which has not yet come into their hands.

4568. *Major Penrose.*] Have you any idea or knowledge as to whether these contractors who did the fencing by piece made a profit out of it? I cannot say; but one contractor told me that he had got nothing out of it. He said also that he would not do similar fencing under similar conditions at the same price again.

4569. *Mr. Woore.*] But you admit and have stated that the price was excessive? Yes; at the time of letting. We called for tenders repeatedly, and we had no alternative but to let the work.

4570. *Major Penrose.*] What was the amount of the highest-priced tender you received? I cannot remember just now, but I know that we accepted the lowest tender. These works are open to the same men that construct the squatters' tanks; and if so much more money were to be made out of Government works, then why do not these men tender for our works? Of course, our's is better work, but even so, there are proportionately higher rates paid for it.

4571. *Chairman.*] Do you think it is necessary to have this large gauge of wire—No. 4 on top, and No. 6 wire under? Yes.

4572. Why?—you must know it entails extra expense? Because cattle often break the lighter wire by thrusting themselves against it. I have seen working bullocks do this repeatedly in their endeavour to get into the paddocks if there is no feed on the road. The top wire takes the great strain that is made on the fence under such circumstances.

4573. Why insist on a No. 6 wire when the squatters are satisfied with a lesser gauge? Well, heavy wire will last longer than light wire; and I think the extra expense is justified by the extra durability.

4574. Why, a fence is useful only so long as the posts will last? Yes.

4575. Is it, then, desirable to use this extra strong wire, which will last longer than the posts? I cannot say. I have not had sufficient experience to say definitely. My experience is not sufficiently lengthy to enable me to say whether the wire will outlast the posts or not.

4576. Statements have been made here by officers of the Mines Department to the effect that they would put up a sufficiently good fence for from £50 to £55 per mile, intending, no doubt, to show that the expenditure by the Works Department was excessive? I think these are merely unsupported statements. Mr. Low put it to the test once by calling for tenders, but he got no reply, except one to do the work at £90 per mile.

4577. A statement has been made by one of the witnesses that the fence round Mount Manara paddock cost £120 per mile? It cost the same as the Ivanhoe fence, which was £112 per mile. I know the work was delayed for months owing to the contractor being unable to get any timber at all. He could not get permission, either, to cross the paddock or get water from the station tank, and the work was suspended on account of this.

4578. It was said here by Mr. Low that at the Mount Manara paddock the fence cost £120 per mile, and that the timber had not to be carted more than 5 miles. Can you give us any information why this enormous price was charged for the fence? It was included in the same contract as the other, for which we called for tenders three times. As to the distance from timber, I cannot contradict the statement positively, but I know that the contractor had very great trouble in getting the timber.

4579. *Mr. Woore.*] At any rate was this the lowest price that you could possibly get the work done for after calling for tenders? Yes. With regard to the fence at Ivanhoe, and the diverting of the stock through the township, which has been complained of, the plan was submitted to the Mines overseer, Mr. Yeo, before the work was undertaken, and it was approved of by him verbally, not in writing.

4580. *Chairman.*] Another matter is the very expensive gates that you are alleged to have had erected at these paddocks? There are no separate prices for these gates. The contract is let in bulk sum, and gates are included in the price submitted. They may be specified in the contractor's schedule, and in some cases we have omitted gates, at the prices stated.

4581. Do you think that these gates, which cost £15, are necessary? No, I think the gates are not unnecessarily expensive. A general fault with the ordinary gates is that they are more or less dilapidated and in a state of disrepair.

4582. Have you seen any squatters' gates made wholly of battens without morticing—why not adopt these? There is nothing very elaborate about our gates. They are a little costlier than the others, but very little. They are made in the town and sent out, and there is very little extra cost in putting them together in the way we do. In our case, if the bars break they can be taken out with very little trouble.

4583. You are concerned to some extent in these charges of interference with caretakers and overseers? I have a good deal to say about that. This is the cause of the friction between the two Departments.

4584. Just state the facts with regard to the care, or want of care, shown to the works under your control? I cannot say that I have ever interfered with men under the Mines Department at all. I have given no instructions to them, and have been very careful not to do so. Charges to this effect have been brought against me, notably in connection with the Pulletop tank, where the lessee excused himself from neglect by stating that I had countermanded the overseer's instructions, but the statement is utterly false.

4585. Can you say anything about the other case, where you had been called on to remedy the most trivial matter, which could have been undertaken by the caretaker, and who, it is said, showed utter ignorance of and want of attention to his duties? Well, I want to read a report in reference to this case of the Box Creek tank. There has been no co-operation whatever between the two Departments; and instead of co-operation we have had only conflict and collision. We have been trying to maintain the efficiency of the works in the interests of the public, but the Mines overseers and caretakers appear to be doing the reverse. That is my opinion, and the inference which I draw from their actions. A joint control is, perhaps, in any case undesirable; but if there had been any co-operation on the part of the Mines officers,

A. W.
Stilwell.
19 April, 1888.

officers, a *modus vivendi* might have been discovered which would have allowed the works to be carried on to the public satisfaction. The object of these men appeared to me to be to bring the works into disrepute in order to get them taken out of our hands, and they have demoralized the contractors and many of the men by telling them that they would have the sole control of the works shortly. I would like to put in these documents in evidence :—

Box Creek Tank.—Balranald to Ivanhoe Road.

The Commissioner for Roads,—
Sir,

Hay, 16 November, 1887.

On visiting this tank on the 9th instant it was found to be full to berm level. The service tank, iron on concrete piers, was in good repair, but contained little water. The pump, a Smith & Amos' horse-power, was not in working order, and had been in this state upwards of two months; the caretaker not knowing what was the matter with it, and Inspector Low, who had visited in the interim, not being able to instruct him. No water had consequently been pumped, and the pump was publicly reported as broken down—a failure, in fact. The Mines overseer at Euston had, some time previous to my visit, reported to me that the pump would not act, and requested me to send the travelling mechanic to repair it. As the mechanic was then employed at the other end of the district, some 200 miles away, I replied that he could not then go, but suggested that the caretaker be instructed to pack the pistons. On opening the cylinders I found that the pistons were working loosely in them, failing to produce a vacuum, and consequently, of course, no water could be raised. I cleaned the cylinders and packed the pistons, and in half an hour from the time of my arrival the pump was working in a perfectly satisfactory manner. There was no defect whatever in the pump, the failure in action being solely owing to want of attention in packing the pistons, the caretaker not knowing that this is occasionally necessary, as is the renewal of bucket leathers in other types of pumps.

The troughing at this tank is to be renewed, and the steel troughing with timber for bearers, rail, &c., is on the ground, and its erection by the travelling mechanic will shortly be in hand.

The fencing of tenant's lease—640 acres—is let, the wire is on the ground, and the posts cut in the bush; hauling in is to be started immediately.

With regard to what is stated above as to the pump, the case may, I think, be cited as fairly typical—not by any means as specially strong or exceptional, as showing the character of the supervision by the Mines officers. If the renewal of a bucket leather or the packing of a piston is not the duty of a caretaker, what is? This man was willing enough to do it. I believe he was anxious to put his pump in working order. He assisted me with alacrity in doing so, but he did not know how to, and his overseers could not tell him. First I am requested by the overseer to send my mechanic to do it, which would have been virtually wasting his time and the £6 or £8 his trip would have cost. Next, the tank is visited by one of the newly-appointed inspectors, supposed to represent the sum of the theoretical and practical knowledge of his Department, who looks at the pump presumably as wisely as he can, shakes his head over it, much as a doctor does when he fails to diagnose a case, and means the reverse to be inferred, says something indefinite as to the foot-valve, and departs, leaving his unfortunate caretaker as wise and as helpless as before. Lastly, on visiting the work, I have myself to do what an instructed caretaker would have done two months before in 15 minutes without any defect being heard of.

The Mines Department, at length apparently recognizing what has long been patent to everyone, viz., that their overseers or stock inspectors were incompetent, have latterly amended their supervision by the appointment of inspectors—officers, I believe, of a higher grade, and inferentially possessed of superior qualifications. It was one of these gentlemen who visited this tank, as stated above, and who has acquitted himself in a similar manner in other instances. It was another of them, now, I believe stationed at Narrandera, who, a few months ago, went through the district in the happy confidence of youth and inexperience, with little or nothing in the shape of knowledge, either theoretical or practical, to give him pause—criticising, amending, condemning. Among other suggestions he made, I remember a sapient one respecting the suction joint of this very Box Creek pump, but who failed apparently to discover, what was very obvious to most others, that it would have been conducive to better results had his novitiate been passed previous to entering upon these duties—that, at least, a little rudimentary knowledge, which would have been acquired by say a six-months' apprenticeship as caretaker, would have been a desirable preliminary.

I have, &c.,

A. W. STILWELL.

Ivanhoe Tank.

The Commissioner for Roads,—
Sir,

Hay, 1st December, 1887.

On the 12th ultimo there was 11 feet 2 inches of water in this tank; there had been no rain to replenish it for fully two months. The rate of subsidence is now 4 inches a week, or '57 inch daily.

The embankment was in good repair, as also the drains and silt-tank.

The service tank, iron on concrete piers, in good repair, but contained little water.

The pump, Tangye's special steam, needed cleaning, and had not been worked for upwards of a month, the foot-valve having been taken off and sent away to Sydney for a new spring by the Mines overseer. The suction joint was elevated out of the water.

This was quite a needless stoppage of this pump. The renewing of the spring is a very simple matter, or, indeed, the pump could be kept at work without it. Stock in the interim had to go elsewhere for water.

The troughing, except for the alteration in dwarf-rail previously reported, was in good repair.

The fencing in of 640 acres, tenant's paddocks, H. Bevan, contractor, was finished.

I have, &c.,

A. W. STILWELL.

4586. *Major Penrose.*] When these works were handed over, did the Mines officers get any description of them? They had every information they asked for given them, and a receipt in full for all the articles handed over was taken. If they wanted information they and their caretakers, too, could always have it.

4587. *Chairman.*] Does not this tend to cause friction between the Department, that you have the privilege of making large repairs, while the Mines Department are allowed to make only small repairs? Yes; I think it does; but if there was any hearty co-operation it need not do so. But their object, so far as I could see, was diametrically opposed to ours.

4588. The principal friction appears to have arisen in your district, and in connection with yourself? Well, I can only speak for myself. I may at times have been a little put out by the gross neglect of these men, but I remember using no hasty words to them. I was always very careful not to give them any instructions, and carefully avoided at any time giving them orders. I see that most of the friction is attributed to me, but the complaints in my reports are attributable to the negligence of their men.

4589. An instance was mentioned in which a caretaker was ordered to clean out a silt-tank, and it is said that you came along and directed him to stop, saying that you would get it done for him? I do not think such a thing occurred in my district. I do not remember anything about it.

4590. The facts are referred to at page 57 of the Mines blue book :—

It is, of course, very probable, owing to the wet season, that the caretaker has been obliged to wait until the tank is dry enough to clean it, but it will be observed on 87-4,648, that the contractor engaged by the Works Department is compelled to do the same. But the main point which does not appear to occur to the officers of the Works Department, is that any proven neglect on the part of the caretaker can hardly be regarded as a justification for expending public money on a contract to do work that should properly be performed by a public servant, and that a due regard for the public service would have led them to show to this Department that the caretaker's duties were neglected?

—? In this case the contract was let for enlarging the silt-tank and for making an alteration in the intake of of the shoot. I told the caretaker that the contractor would be there in a few days to enlarge the silt-tank, and that his cleaning it out would be needless. That was done, and the contractor went out and enlarged the tank.

4591.

A. W.
Stilwell.
19 April, 1888.

4591. *Major Penrose.*] Had the silt-tank in this case silted up through the carelessness of the caretaker? No. The silt-tank had only recently been constructed. It needed cleaning out, but not urgently, and there was nothing to complain of with regard to the caretaker.

4592. *Chairman.*] Now, with regard to the tank at Merri Merriwa:—"I think this should go on to the Mines. We report bad men. A good man should have the benefit of the favourable report, as far as it may weigh with the authorities at the Mines.—W.C.B., 14/8/86. Under Secretary, for transmission to Mines." He apparently makes a very grave charge—that public money has been spent in doing what ought to have been done by the caretaker. That applies to your case, too, although it is not yours? Of course divided control leads to many things of that sort, but it need not have done so had there been co-operation and singleness of purpose on the part of those concerned.

4593. *Mr. Woore.*] What have you to say with reference to the charges in Mr. Boulton's letter, referring to Hulong tank, dated 21st December, 1886, referred to at page 42 of the Mines blue book:—

Referring to my instructions to visit the Hulong tank, I have now the honor to inform you that I did so, and found that Mr. Road Superintendent Stilwell, after Mr. Overseer Elworthy had instructed the caretaker to coal-tar the boiler, &c., in accordance with your circular, 3rd September last, had issued fresh orders to the caretaker to paint it red and to apply to Mr. Elworthy for paint. Mr. Elworthy instructed the caretaker to prepare the newly-dished top of the embankment for the reception of a shoot for carrying off the storm-water and material, for which Mr. Elworthy was supplying. These instructions were also countermanded and a length of India-rubber hose, 2½ inches in diameter, was supplied by Mr. Stilwell to carry off all the storm-water from the four embankments. I need hardly say how totally inadequate this is, and must, at the same time, protest against such a useless waste of money and such a childish innovation, that in the eyes of the travelling public so reflects upon the public watering places officer.

—? I deny that I ever interfered with the instructions of the overseer.

4594. What did you do? I took out the rubber hose forming the syphon and gave it to the caretaker and instructed him how to use it; but as he told me that he had instructions from his overseer to put in the shoot I did not countermand these instructions, but took the hose away again.

4595. *Major Penrose.*] Did you find this rubber hose effectual in that case? I tried it at Mount Elliott, and found it effectual there.

4596. I believe there is a very small drainage area on the top of the embankments? Yes; and you can conduct the drainage to one or two points, as the top of the embankments are concave.

4597. Do you think it necessary to have four shoots, one foot across, to carry off the water from the top of the embankment? No.

4598. *Mr. Woore.*] What is the width usually of the top of these embankments? About 10 feet.

4599. Does the syphon serve to drain off the water and prevent it from scouring down the sides? Yes; this syphon that I used was quite sufficient for the purpose on a similar embankment.

4600. And when the Mines officers complained about it you took it away? I did not interfere with the caretaker at all. The only inference that I can draw from the actions of the Mines officials with regard to neglect and their reports as to works being insufficient, is that they wish to bring the works into disrepute with the object of wresting control from the Works Department. This is the most simple explanation, and it is only a fair inference, though a very hard thing to say, perhaps.

4601. Have you endeavoured to conciliate the officers of the Mines Department and to show them that you would meet them half way? Well, I have never met either Mr. Boulton or Mr. Low, and there cannot be anything personal between us. I met some of the subordinate officers of the Mines Department, but no friction took place between us. I know Mr. Keighran, at Hay, and get on very well with him.

4602. So that this friction principally appears in the correspondence? Yes, and refers principally to the action taken by Messrs. Boulton and Low.

4603. *Major Penrose.*] It appears that you suddenly found your works were subjected to elaborate criticism, when before you never heard anything against them? Yes.

4604. *Mr. Woore.*] And has this criticism been confined to the officers of the Mines Department, or have you had any complaints from the general public? No; I have heard no complaints from the general public, except such as were based on reports which seemed to be circulated by the Mines officials. I certainly did hear some complaints about troughing. It was said that the railing formed an obstruction to the watering of stock. But that is the only thing which I can call to mind.

4605. You know what the charges are with respect to the Dolmoreve well; and, if so, what have you to say to them? Yes; I know them. I had a man there named Flynn. A bucket was lost in the well on the 10th July. I cannot say whether the bucket was recovered then or not, but on the 8th August I reported that the travelling mechanic had stated that the well rope was broken, and that the centering below the water level was forced out by the fall of the bucket. There was great difficulty, with the assistance of a man and horse, in lowering the water, effecting the repairs, and recovering the bucket. A new rope and bucket had been sent out. The breakage of the rope had apparently been occasioned by the end near the bucket being injured by the action of the water in the well in which the bucket had been left suspended during intervals of baling. The bucket should have been raised out of the water. The mechanic also reported that on his first going to the well on this occasion he could obtain no assistance from the caretaker owing to his absence at an inn 7 miles away, where he was drinking. The caretaker finally returned in a state of intoxication. The bucket had fallen full of water from the top of the well down to the bottom. The water in this well is pretty brackish, and the rope corroded. I told the caretaker this, and asked him to keep the bucket suspended out of the water.

4606. Mr. Low stated here that he would not trust himself on a wire rope? Yes; but I think the wire ropes are the best that can be used.

4607. *Major Penrose.*] What kind of rope was this? Galvanized steel ropes, and I think they are 1½ inches in circumference. The breaking strain of such a rope is absurdly beyond anything that we ever put on them. As to a man stating that he would not trust himself on such a rope it only shows his ignorance of the whole question.

4608. Is there anything else you would like to add with respect to these statements about interference? Not that I can think of.

4609. You think there was no unnecessary delay in effecting those repairs? Well, I cannot remember—that all refers to the one case. If so, there was delay; but that might be accounted for by the fact that the country was all under water at the time and there was no necessity for the work. No water was then required from tanks and wells, because the country was flooded; and there being no urgency, the matter was allowed to stand. I had a new rope and bucket sent out as soon as possible. The caretaker might have done what my man did,—get the rope and bucket up with assistance. 4610.

- A. W. Stilwell.
19 April, 1888.
4610. Are the caretakers put on these watering places by the Mines Department capable men, as a rule? No; capable men are the exception, not the rule.
4611. Are many of the watering places in your district leased? Very few.
4612. And you think that many of the caretakers, if kept up to the mark, would effect these repairs themselves? Yes; and might save unnecessary though trifling expense. There could be nothing more clear than that case at Box Creek.
4613. *Mr. Woore.*] Then it is in consequence of the incapacity of many of these caretakers that friction has arisen? There is no doubt about it—the incompetence of the caretakers and of the Mines officials, who go away and leave things as they find them.
4614. You wish us to infer, then, that some of the Mines officers are scarcely capable of putting things in proper order? Yes, that is the only inference I can draw.

[The Commission adjourned.]

FRIDAY, 20 APRIL, 1888.

The Commission met at 10 a.m.

Present:—

HON. G. H. COX, M.L.C., CHAIRMAN.

MAJOR PENROSE, R. E., | J. C. WOORE, Esq.

Arthur William Stilwell recalled and further examined:—

- A. W. Stilwell.
20 April, 1888.
4615. *Witness.*] Before going further I would like to read a report, sent in answer to a circular received from Mr. A. P. Wood, with reference to the appointment of the Commission, which will be found at page 9 of the Mines blue book:—
(Copy, Tanks 87-869).

As to Construction, Effectiveness, and Maintenance of Tank and Well Works in Hay District.

The Commissioner and Engineer for Roads,—
Sir,

Mossgiel, 12 November, 1887.

With reference to your memo. of 3rd instant, attached:—

1. No works have been sub-let by contractors, but piece work has in some instances been let by them. For instance, the sinking of Dolmoreve and Willandra wells was let by the contractor, at per foot, to gangs of men, he putting all material and appliances on the ground. Piece work is similarly let in fencing contracts. The getting of the posts, haulage, and the erection of the fence, are generally let separately, the contractor finding the wire and tools, frequently working himself. No tank works have been sub-let. The construction of appurtenances may probably have been sub-let as piece work.

2. Any information obtained by me respecting contractors' profits is to the effect that they have been the reverse of excessive, and they are declining these works for that reason. For the last works let there was the greatest difficulty in obtaining tenders, although every possible publicity was given. The contractor who has just completed one of these works (tank at Dowdigans) says he could not take another at the same price; that although he remained constantly with his men, and worked hard himself, he has made next to nothing; that he has always done better at station contract work, and will either go back to that or sell his plant. Squatters on whose runs Government tanks, &c., have been constructed have in several instances told me that from what has come to their knowledge the contractors could not have cleared anything out of their work. Business people with whom the contractors have had financial or other dealings have reported the same. Several of the contractors have got into financial difficulties. Few of them tender for tank work more than once.

3. No works have been let except by public competition. Extensions of contracts have been made by task, and these have principally been caused in fencing contracts by the method of setting out the areas by the Mines officers.

4. As to the maintenance of these works by the Mines Department, it is a fiction, a pretence. There has been no maintenance in the proper sense of the term; rather the reverse. I take it that the occasion demands plain speaking, whatever reluctance there may be to breaking through the reticence usually observed respecting the operations of another Department; and so, as to this so-called maintenance, the most gross ignorance, the most utter negligence and indifference as to the welfare of the works or the public benefit do not explain or adequately describe it; because it has, in addition to these negative qualities, the positive one of endeavouring to bring the works into disrepute—to depreciate them, to bring discredit upon them. The only capacity or ingenuity displayed in this "maintenance" has been in this direction. Unfortunately, the public in Riverina, Victorian in proclivities and alien to the Government of this Colony and all its doings, has lent itself only too readily to this; and it is to a superficial public opinion, thus educated, that the late misrepresentations of the Press reporters who travelled through the district with the Minister, are partly due. With few exceptions the men employed as caretakers are totally unfit for the post—ignorant of everything except the situation, and only alive to magnifying and advertising defects which, when they are not imaginary, are nearly always due to their own incompetence or negligence. Disreputable people have been put in charge who, when such a small matter as the necessity for tightening the fence wires around a tank is pointed out, have said they were not sent from Sydney to work but merely to take charge; who for a great part of the time have been absent, drinking at the nearest inn, and from whom nothing but the most unblushing falsehoods could be elicited. I have frequently found caretakers absent rabbiting. The man at Lignum Hut well, in addition to shamefully neglecting the windmill and pump, thereby causing disrepair and breakage, keeps the mill idle to save the necessity of attending to it, allowing the service tank of embanked earth to be damaged by becoming empty and contracting. A travelling mechanic has to be employed by this Department to effect repairs, &c., that should properly devolve upon these caretakers. He has sometimes to be sent as much as 100 miles merely to renew a pump bucket leather or some such trifling matter. I have had to send my assistant 50 miles, when the road was almost impassable, merely to put in a pin connecting the horse-works with the pump-rod, which took, I suppose, two minutes to do, but which the caretaker would not touch. I have frequently, on my rounds, to stop and take a pump apart and clean it myself, the caretaker perhaps assisting, perhaps merely looking on and making depreciatory or sarcastic remarks. Mr. Wood has had similar experiences. I have known a pump to be partly taken apart and left so, lying about the horse-walk for six weeks by the instruction of the Mines overseer, who gave out, as did also the caretaker, that the pump was defective; and I heard it so spoken of by the public 50 miles away, and have myself put it to rights so that it worked perfectly, in half an hour.

Wells are frequently left without baling for weeks, causing the bore to become choked, when it is reported by the Mines officials that the supply has failed. Pumps have repeatedly been reported by overseers and caretakers ineffective, that they would not throw enough water to fill the service tank in less than two days, when a test has always shown that they would do so in from six to eight hours if fairly worked. Holy Box well was abandoned by the Mines officials because, as they gave out, the water was unfit for stock. I found the appliances being destroyed by the public. Put a man in charge, and made him draw water daily. When fairly tested the quality proved to be excellent, but the Mines overseer at Ivanhoe still kept reporting that it was bad, preventing the public from using it; and it was only after some persistence that this opposition was overcome and they were induced to take charge of it. It is now one of the best wells in the district.

At Boonoon tank, some months ago, the Mines overseer had the valve opened and some 3 or 4 feet of water let out of the tank, because he said he thought the embankment was endangered; and two days ago I found a similarly absurd waste of water, by direction of Inspector Low, at Clare tank, where the valve was left open so that the water might escape into the swamp. About 2 feet had been lost.

At

A. W.
Stilwell.

20 April, 1888.

At Mount Manara tank the overseer ordered all the water to be run to waste out of the service tank because a few of the foundation piers had the outer casing of cement slightly scaled off at the edges. This was apparently done to substantiate a report that the foundations of the tank had failed, and that it would have to be taken down, which I heard repeated all along the road. There was found to be no defect in the strength of the piers, and their appearance has been restored by the mechanic—about half a day's work. A few days ago, at Box Creek tank, the caretaker told me he could not make the pump act, that it had been so nearly three months, during which time he had not been able to raise any water, and his service tank was thus nearly empty; that Inspector Low had been there, but could not say what was wrong beyond some absurdity as to the foot valve being out of position. I found the pump very dirty and neglected. Cleaned it and packed the pistons with hemp that the caretaker had in his possession, and in less than an hour had the pump working well. Now, there was nothing here that the most ordinary care or intelligence could not have accomplished, and yet, in spite of the visit of the Mines inspector, this pump was lying disabled—as far as the public were aware hopelessly so—and would have remained so indefinitely, so far as action of the Mines officials was concerned. At Ivanhoe tank, this morning, I found the pump also disabled, Inspector Low being, I was informed, there at the time, although I did not see him. The foot valve of this pump had been sent quite needlessly to Sydney about a month ago. The pump, the caretaker said, worked well enough before, and it had during that time been idle; and stock, instead of watering at the tank, had been taken to private tanks in the township. Now, all that was required was a piece of ordinary fencing wire bent spirally for a spring for the valve. Anyone could have put it in, or for that matter the pump will act without the foot-valve at all; and yet it is kept idle and publicly reported broken down. I heard so miles away down the Balranald road, while stock have to go for water elsewhere; and this occurs where, in addition to the caretaker, there are stationed an overseer and an inspector of the Mines Department. I also found yesterday, at Gunaramby tank, the pump had been for some time worked with a dry bearing, and with one of the clamp bolts of the brasses on the horse-works loose, damaging the bearing; and here both Inspector Low and the overseer had visited a day or two before. Numerous similar instances to the above might be cited without exhausting the list, or of adequately conveying the utter futility of the system.

5. There has been little actual clashing with the Mines officers, because my function, after construction of the works, is restricted to looking on, effecting repairs with my own hands, or sending a man of my own to do them. I can give no instructions to the Mines caretakers. The Mines officers stopped the coating of the service tanks and troughing by this Department with composition for their preservation, alleging that it polluted the water. The overseer at Ivanhoe objected to the inlets at Gunaramby tank, and wished to insist upon an additional one. As this was not done he gave out that the first heavy rain would burst over and destroy the tank batters. This has not proved to be the case. The overseer at Euston objected to the inlet at Youhll Plains tank, and reported that an additional one was required. His caretaker was induced to pay a little attention to his drains, and the inlet asked for, which would have cost at least £100, was proved quite unnecessary.

The shape of lease areas, as set out by the Mines Department, is quite at variance with the suggestions of this Department, and has enormously, and without any corresponding benefit, increased the cost of enclosing them. Inspector Low has interfered with a contractor under this Department and ridiculed his work—fencing of lease areas, Whitton to Enabalong. The same gentleman has recently ordered my travelling mechanic to repair the service tank and well runners at Holy Box. On visiting them to-day I find the tank holding well and the runners in good repair. It appears the caretaker let a bucket down lower than usual, below the point to which the runners extend, and it caught but was soon freed again. As the mechanic reported, Mr. Low had sent him word that the runners had given way; I at once sent up from Hay, timber for new runners and a canvas bucket to lower the water, by coach—as it turns out, an unnecessary expense. The embankment at Pulletop tank was allowed to remain much out of repair for months by the Mines officers, on the plea that their lessee had said I directed him not to touch it; and founded on this falsehood, Mr. Gilliat made an elaborate complaint of my interference with the functions of his officers.

6. So far I have only obtained the attached opinion in writing—from Mr. J. Waugh, of Clare station—as to the relative advantages of the tank and trough systems of watering stock, but on my return to Hay in a day or two, I expect to receive several others which will be then forwarded. Mr. Parsons, of Mossiel station, and Mr. J. Evans, of Conoble station, are both of opinion that our system is the only one practicable for travelling stock; while Mr. Parsons says, even on his run, he waters all his sheep from troughing.

7. As to prices paid by squatters for excavation in bad seasons, it will be noted what Mr. Waugh says in his letter, and I will obtain and forward other statements. Mr. Parsons says he paid 1s. 1d. a cubic yard for 15 feet deep, 4 to 1 slopes, and gave all advantages, such as free grass and water, &c., to his contractors.

8. As to our appurtenances, the conditions to be met differ materially from those obtaining on the runs where a very limited and known number of stock is to be provided for at each tank or well. On the stock routes all contingencies must be provided against, and in addition to larger reservoirs, more extensive and perfect appliances have to be afforded. To meet these conditions our appurtenances are, I believe, the best so far devised. The iron service tanks and the new type of steel troughing, for simplicity of construction, durability, and effectiveness, cannot be excelled. This opinion I have heard generally expressed even by some who, not fully realizing the conditions or requirements, demur at the cost. As to the water-lifting appliances, the M'Comas lifters have been discarded in favour of pumps, because of the amount of timber (a serious item of cost in this timberless district) required in connection with them for well and staging, and also because of the greater amount of other perishable material, leather, &c., in belting and buckets of which they are composed, as compared with the pumps.

9. The pumps in use in this district are the Holman, and Amos & Smith's horse power, and the Tangye special 3-horse power steam. All of them are of the utmost simplicity of construction. In connection with the steam-pumps there is practically no machinery, the power being applied direct from the steam to the pump cylinder, and the pistons working in both are attached to the same rod. Any man of ordinary intelligence can learn all about them in an hour.

About the horse-pumps, there is nothing more complicated than the horse-works, which are the same as required for a M'Comas lift; attachment is made to a plunger or piston rod, and the rest is simply a piston working in a cylinder. The only repairs required are occasional renewal of bucket leathers, also required with the M'Comas lift, a little packing and tightening of bolts, occasional cleaning and oiling. I should think a blackfellow could learn how to keep them in repair in less than a day. They are incomparably easier and less expensive to erect than the M'Comas lift. The horse-pumps will throw from 3,000 to 4,000 gallons an hour without distressing the horse. The steam-pumps will throw from 5,000 to 7,000 gallons an hour. I consider that they are thoroughly effective and perfectly adapted for the purposes to be served. As to their maintenance by the Mines officials, need more be said?—when a pump is worked with dry bearings, when steam-pumps are allowed to become so foul and rusty that they cannot be started, when pumps are reported disabled and left unworked for months because a bucket leather requires renewing, or because a piece of wire is required in a valve, the only question is as to whether it would be worse or better if there were no "maintenance" at all.

I have, &c.,

A. W. STILWELL.

Hay, 16th November, 1887.

The Commissioner for Roads,—

MEMO.—Attached are letters from Messrs. A. M'Farland, J. Russell, and D. Grant forwarded in conjunction with my report of 12th, with which a letter from Mr. J. Waugh. All of these gentlemen are squatters in this district, and it will be observed that they all favour the trough system of watering for travelling stock. I expect to receive further letters in the course of the next few days, which will be duly forwarded.

Mr. Webb, of Bladen Park station, whom I met at Mossiel, told me he considers our system the only one suitable. He much admires the buckled plate tanks and steel troughing. He gives the cost of excavation on his station at 1s. a cubic yard for 15 feet deep and 4 to 1 slopes. At this price the contractor had not to feed his horses, having station grass. He considers our dry season prices, when contractors had to feed, not at all excessive.

A. W. STILWELL.

A. W. Stilwell, Esq., Hay,—

Dear Sir,

Clare, 11 November, 1887.

In reply to yours of the 5th instant, I beg to state that I have tried both systems, and find watering by troughs preferable to allowing stock free access to an open tank, for which my reasons are that cattle cut the slopes of the tank away, and weak sheep coming to water after them cannot drink, and if they try to do so invariably get bogged. Also watering at troughing keeps the tank water far cleaner, as no impurity can find its way into the excavation. I am adding troughing to my tanks yearly, so convinced am I of its superiority to letting stock at the main body of water.

A. W.
Stilwell.
20 April, 1888.

In seasons such as 1884 and 1885, 1s. 6d. per cubic yard for tanks (say) 16, and not over 20, feet deep is the lowest I can do them at. The side slopes to be not less than 2 to 1 in the best soil, and in some soils $2\frac{1}{2}$ to 3 to 1 of a slope, and this is for tanks to which stock have no access; and, if stock are to have access to the water, the slopes should be from 3 to 4 to 1. The price, 1s. 6d., may seem high to some, but when it is considered that horse feed has to be carted, and water also in some cases, from 5 to 10 miles, the figure will not be so very much out of the way.

I have, &c.

JOHN WAUGH.

A. W. Stilwell, Esq., Assistant Engineer, Hay,—
Dear Sir,

Thelangerin, Hay, New South Wales, 12 November, 1887.

Yours of the 5th instant to hand, *re* watering stock at tanks.
I have several years experience of both the methods you mention, viz., that of allowing the stock free access to the tank or reservoir, and the other of pumping the water into receiving tanks, and allowing it to flow from these into troughs by means of self-acting valves, so that a supply of water is always in the troughs. I unhesitatingly give my opinion in favour of the latter method, as being by far the most economical way of using the water and preserving the tanks from silting up.

When stock are allowed to run in the tanks in dry weather they pulverise the embankments into fine dust, which is blown into the excavation; and they waste large quantities of water by carrying it out in the fleece (I am speaking, of course, of sheep) to be licked up by the sun. In fact, I tried the experiment, about three years ago, with two tanks of about 7,000 cubic yards each. The water from one was pumped up for the sheep, and the other the sheep had free access to. The result was that the latter was dry in about six months, and the former lasted well into the following season. I forgot to say that each had 6,000 sheep watering at them of a similar description, and quite similar country; by the way, we had to reduce the number of sheep on the tank they had free access to, when they had been on it about three months, in order to eke out the supply of water.

With regard to cost of excavations in dry seasons, when the contractors had to buy and cart feed for the horses, I paid 14d. and 15d. per cubic yard; depth of excavations, 12 to 14 feet, with slopes of 3 feet in 1 foot.

Yours, &c.,

A. McFARLAND.

A. W. Stilwell, Esq., Assistant Engineer,—
Dear Sir,

Eli Elwah, Hay, New South Wales, 15 November, 1887.

In reply to yours of the 5th November, I am of opinion that the better plan is to fence off the tank and pump the water into troughs, as stock will get a cleaner drink and there will be less waste.

With regard to excavating tanks:—Ten years ago I used to give 12d. a yard; latterly I found a man half the bullocks and scoops, and he did the job for 6d. a yard. Of course he got the grass. Our tanks are no great size, running from 3,000 to 4,000 cubic yards. They are rather shallow, being 10 feet at the deepest, and are made 1 in 3 at the sides, 1 in 6 at the ends. All are open to stock, as in droughts we have to depend on the wells. I believe with large tanks a windmill would be found to work well. About Mannambool, all stock are watered from shallow wells and windmills. Regretting I am unable to give you any more information,

I am, &c.,

JAMES RUSSELL.

A. W. Stilwell, Esq., Roads Office, Hay,—
Dear Sir,

Illillawa, 14 November, 1887.

In reply to your letter of the 5th instant, asking an opinion as to "The relative merits of allowing stock free access to the water in tanks and dams, and of preventing access and elevating the water and supplying it in troughs."

On stations in this district where the ground is fairly retentive and catchment areas good, the stock is generally allowed free access to the water, preference being given to a larger first outlay in the number and quantity of tank supply, to the other method of merely excavating for a certain necessary supply only, which to prevent waste must be doled out economically in a trough, thereby no doubt effecting a saving in providing the water, but committing one to the cost of elevating machinery which is more or less troublesome to maintain, and to labour too costly for the work to be obtained.

For the above reasons it seems to me the free access system prevails on all sheep stations here.

But in the case of tanks on travelling stock routes, with which I presume you are mostly concerned, I fear free access could not be allowed. Were it for sheep alone, with the sites well chosen on hard red ground and slopes 5 or 6 to 1, and the supply brought in carefully through a water tight box or drain, a great deal of trouble and expense could be avoided by leaving them open. But as travelling cattle—in large mobs—and also horses must be supplied, they will cut up any slopes on this clayey country, so that before the water receded half way down, a boggy ridge would present itself around the water-line, which would make it destructive for sheep to approach, and dangerous for large stock also, together with greatly hastening the process of silting up the tank.

Therefore with regard to the public tanks on the stock routes; for the supply of cattle, horses, and sheep, the most satisfactory way presenting itself to my mind is the use of the simplest possible kind of elevating machinery and good troughs.

And now as to the cost of tanks and the best slopes. We could have got any quantity excavated in the seasons of 1884 and 1885 at the following rates per cubic yard, viz.:—For tanks under 8,000 yards, 14 feet deep, 10d.; for tanks from 8,000 to 15,000 yards, 15 feet deep, 1s.; for tanks from 15,000 to 20,000 yards, 20 feet, 1s. 3d.; and the stuff carefully embanked (say) 20 yards away from the excavation. Of course our slopes would be 5 or 6 to 1, enabling ploughs and scoops to work freely; these being generally accepted as the best slopes, where free access is allowed, although it increases evaporation.

But for tanks from which it is intended to raise the water 3 to 1 slopes should be sufficient, on two sides at least, and say longer slopes on two sides or ends, for the sake of cheapness in construction.

In giving you the prices at which we could get the work performed, I must say out of fairness to contractors that in private contracts, there is no delay to the honest workman in getting his work completed, and taken off his hands with immediate payment, while I understand the opposite is generally the case in Government works. Trusting you will not consider the foregoing rather a digression from the subject of your letter.

I am, &c.,

DON GRANT.

Ivanhoe Tank.

Extract from Mr. Stilwell's report No. 87-918.

The pump—Tangye's special steam—needed cleaning, and had not been worked for upwards of a month, the foot valve having been taken off and sent away to Sydney for a new spring by the Mines overseer; the suction joint was elevated out of the water.

This was quite a needless stoppage of this pump; the renewing of the spring is a very simple matter, or indeed the pump could be kept at work without it.

Stock in the interim had to go elsewhere for water.

1/12/87.

A. W. STILWELL,

Clare Tank.

The Commissioner for Roads,—
Sir.

Hay, 1 December, 1887.

On the 11th ultimo, I found this tank full to 9 inches above berm level. There had been nearly 2 feet more water in, but the valve had been left open, the caretaker said, by order of the Mines Inspector, and it had escaped.

In addition to this being a most absurd waste of water, it tended to prevent the drying of the ground at the service tank and troughing, both of which were surrounded by about 9 inches of water. The service tank was empty, the water having been run off as a precautionary measure during the flooding of ground around the foundations. The inside of the tank was much rusted, showing the want of the composition with which it was intended to coat all the tanks and troughing, but which was prevented by the objection of the Mines. The tank and foundations were otherwise in good repair.

The embankment was eroded at foot by wave action. The pump, Smith and Amos' horse-gear, very dirty and neglected.

The accumulation of water round this tank is owing to a drain having been cut through a sand rise to a swamp at a slightly higher level. To augment the supply this has proved most effectual, while if it is at any time found desirable to curtail

curtail the supply so as to prevent flooding of the service tank foundations and the troughing, it can readily be done by obstructing the drain, and so retaining the water in the other swamp, but if the water had not been allowed to escape from the tank, the water outside would have disappeared before.

The fencing in of 640 acres—tenant's lease—H. Bevan, contractor—is finished, except portion of the wiring, which should be done in a fortnight.

A. W.
Stilwell.

20 April, 1888.

I have, &c.,

A. W. STILWELL.

4616. *Chairman.*] You state in that letter that you never gave any work except by contract and by public tender? Yes.

4617. But is it not a fact that you gave the fencing of the tank at Ivanhoe without calling for tenders? No; that work was given as an extension of an existing contract on which there had been other extensions, necessitated by the alterations of the survey made by the Mines Department.

4618. Is it a fact that you ever told the caretaker of the Mines Department never to touch the pump, as he did not understand it? No; certainly not.

4619. Were you in the habit of giving orders to the caretakers? No, not orders. I have pointed out omissions and neglect on their part, and have offered them suggestions; but I never gave them what they could take as orders or definite instructions to do any work.

4620. You said that the overseer had demanded another inlet to the tank at Youhll Plains? Yes.

4621. Which would necessitate a cost of something like £100? Yes; that at the least.

4622. Has that ever been done? No.

4623. And has the tank ever been filled? Yes; it is full now, and has been full two or three times since then.

4624. Then the carrying out of the request of this overseer would have entailed unnecessary expense? Yes; the same thing occurred at the Gunaramby tank; but before referring to that, I would like to make a further explanation as to this friction. In most instances, friction arises in this way: It is one of my duties to occasionally inspect these tanks and well works, and report the result to my chief. In the course of these inspections I find that, owing to the incapacity and misrepresentations of the Mines officials, and owing to the gross negligence and incompetence of their caretakers, there is an absence of any efficient maintenance on these works, and consequently that the works are wantonly brought into public disrepute. I send in reports in accordance with my instructions, giving details. How could I do otherwise? Am I to condone or suppress these facts, hush things up, and smooth matters over in order to avoid friction with the Mines officers at the expense of the works which I naturally take a great interest in—to the prejudice of my Department and my own reputation? These reports are objected to by the officers of the Mines, and hence the friction. But I would submit that, if in the execution of my plain duty in endeavouring to protect the works and to promote their efficiency in the interests of the public and my Department, this friction as regards the Mines officials is the result, then so much the worse for the result and for the causes produced by the other side which lead to that result. So much the worse, also, for the divided control, but not so much the worse for the works or the public. Had it been otherwise, had the supervision exercised by the Mines officers been effective, and had they evinced a desire to promote the efficiency and good repute of the works, had their goal been the same as ours, there might still have remained a feeling of rivalry or emulation; but, as I said yesterday, a *modus vivendi* would have been possible, as has been pointed out by Mr. Bennett, and some good might have resulted from this divided control. But as it is, I cannot charge myself with any desire to needlessly cause friction. I cherish no personal animus towards the Mines officers, but I cannot retract or withdraw anything that I have advanced. I cannot even say that under the circumstances I regret that this friction occurred. It has been the inevitable outcome of the system of divided control and responsibility, and of the Mines officers taking the view they did of their share of the work. Had they been solely responsible for these works—had they felt, as the Works officers necessarily did, that their interests and the interests of the works were one and the same, and that in promoting the one they were promoting the other, their conduct would, I think, have been very different.

4625. *Major Penrose.*] Have you ever given the Mines officials or caretakers advice or instructions not to interfere with the machinery internally? To the best of my recollection, no.

4626. *Mr. Woore.*] Are you aware of any reason why the works connected with any public watering place should be handed over from the Works Department to another Department for maintenance any more than any other public works? No; certainly not.

4627. So far as you know, are any other public works of this character handed over from the Department constructing them to another Department for maintenance? No; and I think that this action with regard to tanks and wells is quite exceptional. I would like to hand in this report in reply to the charge of Mr. Elworthy in connection with Pulletop tank:—

The Commissioner and Engineer for Roads,—

Sir,

Hay, 9 February, 1887.

Referring to the attached papers, it is to be observed that Mr. Elworthy does not state that I countermanded his instructions to the tenant (O'Neill), but that the tenant informed him so. An obvious preliminary on Mr. Elworthy's part would have been to ascertain whether such were the facts. For your information I may state that it is about the reverse of the fact; but, as this was not elicited by Mr. Elworthy, it may perhaps be neglected as irrelevant; and now, apparently, the points to be considered are that this man's unsupported statement is taken by his overseer (as he intended it should be) as an excuse for gross neglect, for some two months, of a most obvious and urgent duty; and then his hand is unwittingly played further to by Mr. Elworthy's report and Mr. Gilliat's consequent minute being based upon it.

It would really appear that up to the present Mr. O'Neill has been master of the situation. I do not see how any responsibility regarding it rests with this Department. In fact, the matter should be one, as Mr. Gilliat somewhat elaborates in his minute, so obviously and solely between the Mines officer and their tenant, and unless it had been forced upon me I should have had some delicacy or reluctance in dealing with it at all.

I can, however, heartily concur in what Mr. Gilliat says respecting the interference of officers with the men under another Department, the more especially as this has been at times somewhat realized for me by actions of his overseers at works still under my jurisdiction; but I confess that I have failed to draw from it the somewhat anomalous conclusion that it is impossible an officer can successfully accomplish his work if his orders are countermanded by an officer of another Department possessed of no authority to interfere.

On the contrary, I have found little difficulty in maintaining my authority, and little harm has resulted; and I have taken it all in good part, as evincing only mistaken zeal on the part of his officers.

I have, &c.,

A. W. STILWELL.

4628. Do you think it is a good or bad principle to hand over works constructed by your Department to another Department for maintenance? Well, if the other Department were made solely responsible after the handing over, but little harm or prejudice to the works might result.

4629.

A. W.
Stilwell.
20 April, 1888.

4629. But do you think the principle is a good one or a bad one? I decidedly think it is a bad one; more especially in this case, where the responsibility rests with us.

4630. Do you think it would be advisable for the Department which now has the maintenance to have also the construction of these works; or would that not create another Works Department, and entail more expense? I should say that the work of construction had better remain with the Department whose officers are competent to construct as well as to maintain. It is very doubtful whether the Mines Department have officers competent to construct the works.

4631. But even supposing that they have, would it not create another Department of Works, and entail a great deal of expense on the country? As regards field work it might, but it would not as regards office work. The preparation of the plans and specifications is all now in our hands.

4632. It would mean a separate and special Department of Works? Yes.

4633. Is there any reason why the Department of Works should not have the sole responsibility of maintaining, as well as constructing, these public watering places? No reason at all that I know of; rather the reverse. It would lessen the expense. We must necessarily have men in these districts to do the road works, and these officers could attend to the works attaching to public watering places. If this work were taken away from me I should still have to remain in the Hay district.

4634. Would it be a saving to the country for the Works Department to have in its hands the sole maintenance of these watering places? It would be a saving in this respect—that the roads officers are necessarily in the district, and, therefore, their supervision over tank and well works does not entail any additional outlay in regard to the salaries of officers, and so on. On the other hand, if the works were taken from our Department our officers would still necessarily be employed in the districts where they are at present, and the supervision of the tank and well works by other officers would, therefore, be an additional and unnecessary expense.

4635. But the Works Department, having the sole construction and maintenance of these works, would render the employment of the officers under the Mines Department, who are now charged with the control and maintenance, unnecessary? Most decidedly it would.

4636. And this would be a great saving to the country? Yes; a saving in men and salaries. This refers to the inspectors of public watering places, and not to the inspectors of stock, who would still be required. The only saving there would be in regard to them is so far as their travelling expenses were concerned.

4637. Do you think that in the event of the maintenance being handed over to the Works Department it would be advisable for the Stock Branch of the Mines Department to suggest localities where public watering places are required;—do you think they should have that much to say in the matter? Yes; the Stock Branch are more particularly acquainted with the requirements of the routes. I think that would be a good arrangement, and that is as far as they should be allowed to go.

4638. That would make them responsible for showing where a necessity existed for a public watering place? Yes. We do not pretend to know much about stock.

4639. *Major Penrose.*] But then, on the other hand, why charge the Department of Works with the construction and maintenance of these watering places, which are mainly for stock;—why charge that to a Department that knows nothing about stock? We know nothing about stock as to the requirements of the stock on the stock routes for water, but as to the actual construction of the works we do know a good deal. It is the business of the stock officers to know the movements of travelling stock. Most of these stock officers themselves will tell you that it is an utter absurdity that they should have anything to do with the construction or maintenance of these works; that they know nothing about them, and would rather not have the responsibility of looking after them.

4640. *Chairman.*] Are there any wells in your district? Yes. I have had the supervision of the completion of some of them, but I did not select any sites.

4641. It is said that the Willandra well, which is only 102 feet deep, has cost £1,050? That applies not only to the well, but to the appliances at it. I cannot say whether the amount stated there is correct or not.

4642. Can you tell us what is the usual price for sinking and timbering wells? The prices paid in the Hay district for sinking and timbering have ranged from 22s. 6d. to 42s. 6d. per foot.

4643. What is the cost of the headworks? A wooden service tank, iron-lined, ranges according to localities from £200 to £400. The troughing (300 feet) ranges from 20s. to 30s. per foot. Then there is the whim and head-frame over the well—they would cost, I should say, from £50 to £60.

4644. Then all these added together would about make up the cost stated here? Yes; but I cannot give you the exact amount paid for this well.

4645. Would the same remark apply to Holy Box well? Yes; but that was done many years ago.

4646. In any instance that you are aware of, have wells been sunk without your first knowing whether water was below or not, or whether the water was of any value for watering stock? No. My knowledge and experience tends to the reverse—that trial-shafts have always been previously sunk. In one case I sunk a trial-shaft in my district, and the result, not being satisfactory, we substituted a tank. This was at Hulong.

4647. *Major Penrose.*] The sinking of a well would cost about half that of a tank? Yes.

4648. *Chairman.* What about the Wooloodool well? This well was finished before I went to the district. The complaints made in this case, and in the case of the Dry Lake well, are utterly without foundation. There was no necessity for a floor and piping, which would have entailed expense, without any benefit at all, as far as I can see.

4649. *Major Penrose.*] I think you said that this choking was due to neglect of baling on the part of the caretaker? Yes; and this is the case with all the wells. If they are left unbaled the silt gets hard in the bore.

4650. *Chairman.*] Have you had anything to do with the erection of huts for caretakers? Nothing more than the calling for tenders. I have obtained tenders and submitted them. No huts were erected under my supervision, but I have since seen some of those erected by the Mines officers.

4651. Have you had anything to do with artesian boring? No; I have bored to ascertain what supply could be obtained by sinking a well. I have given the matter some consideration.

4652. You are aware that in some instances very successful results have been obtained? I have heard it so reported, but I do not know it of my own knowledge.

4653. Do you know anything of geology as it bears on the character of this artesian supply? I have a general knowledge of geology, but nothing special.

4654.

A. W.
Stilwell.
20 April, 1888.

4654. You are aware that when you get to a certain formation an abundance of good water may be anticipated, even though the formation is below the place where the salt water has been obtained? Yes; I think that has been proved.
4655. And do you not think that in future in this country artesian boring should be carried on? In that country, but in that country only; which I think is only of very limited area as compared with the whole of Riverina.
4656. *Mr. Woore.*] At anywhere south of the Darling in any of the wells known to you, whether public or private wells, has this cretaceous formation been touched in which artesian water is found? No; there are no such wells to my knowledge.
4657. What is the deepest well that you know of south of the Darling? Speaking from memory, I should say that there are none over 150 feet deep.
4658. How, then, do you arrive at the conclusion that the area is very limited in which cretaceous formation may be found? In this way—that the area of elevation from which this artesian supply must come is very small relatively to the extent of the country; that is, to the depressed area or flat country. Therefore an adequate supply cannot be expected.
4659. Is not that a geological question which is as yet involved in doubt? I think it is rather a matter of common sense.
4660. *Chairman.*] At present I believe the stock routes are all defined, although not fenced in? Yes.
4661. From your knowledge of that country do you not think that it would be desirable to have these routes fenced in, and wholly, instead of partly set apart for the use of travelling stock? Most decidedly, I think that the stock routes should be withdrawn from lease.
4662. Now, I would like to have your reasons for thinking so? Well, it is simply because the lessee paying rent for the travelling stock route, feeds the grass off it first before availing himself of the grass on the rest of his run. After rain the travelling stock route is fed off first and left bare; so that when the route is most wanted to save stock in dry seasons it is very often that stock are prevented from travelling from there being no feed left on the road, thus rendering the route almost useless. I know of my own knowledge that during the last drought sheep died round our tanks in thousands from want of feed, though there was plenty of water.
4663. Of course it would not do to fence off the river frontages? No; I did not mean that, either.
4664. Do you think it would be desirable to hand over these public watering places eventually to public bodies, who would have a more intimate knowledge of the requirements of stock than the present authorities? In some respects it would; in others, decidedly not.
4665. Why? Well, from what I have seen and heard, many abuses obtain with these local bodies. Take the case of road trustees, for instance. Road works are let where they most benefit individuals or townships or are let in a manner to benefit individuals, and in some cases the friends of the people having control. I think there would be for some time quite as much abuse under that system as under the system of centralization, but that remark applies more to road work than tanks and wells.
4666. *Mr. Woore.*] In the event of the passing of a Local Government Bill the construction and control of public watering places would be under local authority? Yes.
4667. Do you think that would be a public benefit eventually? Yes. No doubt it would result in a better system being established.
4668. You are aware that a similar system prevails in Queensland? Yes; but I do not think that the road boards there answer the purpose well. The same system exists in Victoria with regard to water supply and other requirements. I have heard it stated about Queensland that these local bodies are made up partly from townspeople and partly from residents in the country. The townspeople are always on the spot, and attend all the meetings, and carry matters their own way, causing works to be done to suit their own people, and not the people in the country.
4669. *Chairman.*] You know that under the present system the country is involved in heavy cost by these public watering places, from which a very small income is derived? Yes.
4670. Do you not think that it would be a fair thing to make those people, for whom the watering places were made, pay for the maintenance? Yes, I do.
4671. It has been suggested that all drovers of travelling stock should, at the time of getting their permit to travel, pay for watering at all the tanks they may pass getting to their destination, whether they use the water or not. Of course in good seasons they do not go to the tanks, although the country has been to the expense of making them on their account. Now do you not think it would be fair to make every drover who travels these routes contribute towards the expense of maintenance? Yes; most decidedly so. Something of that sort would be a very desirable arrangement, and far preferable to the existing arrangement in every respect.
4672. At present the caretakers have to keep books? Yes.
4673. Although they may be very illiterate men? Yes. There is virtually no check, or very little, so far as I can see. In large items there may be, but in small ones there cannot.
4674. But under this arrangement there would be no necessity for these men keeping the books? No; as a rule the educated men are the worst caretakers.
4675. *Mr. Woore.*] Do you think it is absolutely necessary to have some person in charge of each of these public watering places—either a lessee or a caretaker? I have thought of that subject frequently. It would be very desirable if men could be done without at these places. Still I do not see that it can be avoided, but where possible they should be lessees.
4676. *Major Penrose.*] Do you think that all the works possible in your district have been leased? Certainly not; quite the reverse.
4677. And can you give any reason why they are not leased? No. I know that in one case two tanks were let, but some mistake was made in drawing up the lease, and the thing fell through, and they now remain unlet. There are only two or three works in the whole district that are let.
4678. Have you ever known a case where a man, anxious to lease these works, was unable to get them? I cannot say that.
4679. *Mr. Woore.*] Would it not be advisable on the less frequented stock routes to have tanks so constructed that stock could water direct at them, and so save the expense of caretakers;—are there no such routes in your district? No; and I do not think it would be advisable to adopt that arrangement.
4680. Will you explain the reasons? The same reason would apply in this case as apply generally. When the water would be most required it would be polluted and wasted. There might be a saving effected in this way:

A. W.
Stilwell.
20 April, 1888.

way: to have only a pump and troughing, and no service tank, and where the traffic is very slight, and the movements of the stock known beforehand, men could be sent ahead to pump. But still it would be necessary to keep a man there for the protection of the works. Any stock route is liable to great increases of traffic, more especially in bad seasons, when the more frequented routes are bare, and when circuitous routes are adopted for the sake of the feed that is upon them. Or sometimes rain may have fallen in that particular locality and have not fallen somewhere else. A little rain falling on one of these slightly-frequented routes would bring a lot of stock that way, and if appliances were not at the watering places, the water would be unavailable.

John Henry Adams called in and examined:—

J. H. Adams.
20 April, 1888.

4681. *Chairman.*] You are a road superintendent? Yes.
4682. For what district? For the Walgett district.
4683. How long have you been stationed there? About eight years.
4684. Have you had the supervision of many tanks and wells in that district? Yes; of all the tanks that are there.
4685. How many are there? Four.
4686. What are their names? Bunghill, Boro, Lightning Ridge, and Glendon tanks.
4687. What about Galathera and Boggy Creek tanks? They are not in my district.
4688. You have heard what was written by Mr. Doyle, in January, 1883, about the Boro tank—that it was damaged by heavy rains,—was this due to any fault in construction? I made the final measurement of the tank in 1882, and the tank was almost immediately afterwards filled with water; and so it would be difficult—indeed impossible—to describe the damage mentioned by Mr. Doyle. The tank was full of water, and the communication pipe could not be seen.
4689. Was the damage which this tank sustained attributable to want of care and attention or to faulty construction, or was it something beyond the control of the Department? It was quite impossible to say whether any damage occurred at all or not. I could not, indeed.
4690. And yet this occurred five years ago? There never has been a failure in consequence, and stock is watering there now.
4691. But it is stated here that the water would not run into the tank? It must do so.
4692. Now, here again Mr. William Regan, the caretaker, writes:—

I beg to call your earliest attention to the present condition of the tank at this place. There has no water come through the suction-pipe from supply tank during the past four months. The water in drinking tank is 3 feet less than the supply tank. The stones all round the drinking tank are dropping down, having no foundation. Every morning for the past week I have pulled out from the drinking tank bogged and dead sheep.

—? The proof is that the water is there, or the sheep could not have drunk. The matter of the stone pitching getting loose also proves that it has been used by stock, and that the water must have been there. I have had to report Regan several times, and the man was subsequently dismissed. He was quite old and useless.

4693. *Major Penrose.*] You think that he ought to have done these things himself? Yes.
4694. *Chairman.*] Has your Department discontinued the making of tanks of this character now? Yes.
4695. Then the complaints are really attributable to the want of care and attention on the part of the caretaker? I should say so.
4696. Now about the Bunghill tank, Mr. Doyle, on the 1st March, 1884, writes:—

I found this tank contains 12 feet of water, taking the depth from the end of the platform, as shown in the accompanying sketch; the water is 3 feet below the top of the tank, and, allowing the tank to have been 18 feet deep, this shows a silting up of about 3 feet. I fancy the silt has accumulated more at the mouth of the roadway. This tank sustained a considerable amount of damage at the first rush of water after its completion; it carried away part of the brake between the silt tank and the main tank, shown in the sketch. The water is sweet and wholesome; but the supply-pipe from the main tank to the drinking tank acts very feebly, doubtless on account of the silt in the drinking tank choking up the mouth of the pipe. In consequence of the steepness of the batter in the main tank the ripple of the water has undermined a considerable quantity of earth at the edges, and caused it to cave into the tank. The drinking tank cannot be said to be in good order; the rough paving-stones that were placed on the sloping surface of the sides and end have become very much displaced, and a great number of them have slipped in towards the bottom of the tank; it would, in my opinion, be advisable to have the stones broken into ordinary sized metal, so as it would mix with the earth and form a more solid foundation for stock. The silt tank into which the drains empty is filled up to within 2 feet of the top with silt. This should be cleaned out, and, in my opinion, instead of allowing the water to enter the main tank as it does at present, it should be conveyed from the silt tank by means of a wooden flume sufficiently long enough to carry the water clear of the bottom of the batters. This would prevent a very large quantity of silt from finding its way into the main tank. I have inspected several large private tanks in the neighbourhood, and find that they are all supplied by this means, and I am told they all answer well. The fence round the main tank is in good order. I would strongly recommend that the drinking tank be also fenced and fitted with gates for the entrance and exit of stock, as half the caretaker's time is taken up in endeavouring to prevent stock, the property of lessees and others, from using the tank; but it is impossible for him to do so, for, though driven away in the day time, they return at night. It would also be desirable to erect a suitable hut for the caretaker, as it is a matter of great difficulty to get competent and trustworthy men as caretakers, unless provided with a weather-proof hut to live in.

It seems that this place was not in a very satisfactory condition at the time? I would like to deal with the fencing. Immediately after the survey was made by the Mines Department tenders were invited for the fencing, and as regards the inlet, which is a stone-pitched apron leading from the silt tank, a very heavy storm occurred there, and 3 inches of rain fell in about two hours and scoured the drain, sending the stone pitching down some distance. That I repaired by putting sheet piling in and then pitching behind, which, so far, made everything all right. As to the piping getting feeble that may or may not be so; I cannot say. At all events the piping needed no repairs to keep up a constant supply. The best proof of this is that the stock water there now, and without any further repairs on my part. That was seven years ago, and that is a very fair trial for a tank, which has never failed during that time.

4697. I see you made two reports explaining all these matters fully? Yes; but I have not seen them for years. I had to reply to Mr. Doyle, and did it very reluctantly.
4698. *Major Penrose.*] Has this supply piping never choked up during these seven years? The supply is just the same now to my knowledge as when it started. You will find water in the drinking tank now.
4699. *Chairman.*] You recommended that pumps and troughing should be substituted? Yes; that was done, and I have got all the material for troughing ready to be put up at the tanks. I invited tenders at once for the erection of them, but they were all too high. Then the floods set in, filling all the natural water holes, so that there has been no use for the tanks, practically, since.

4700. So that the tanks, as originally erected, were a sort of experiment? Yes; and not being found satisfactory, I have recommended that pumps and troughing be substituted. J. H. Adams.
4701. What is the nature of the soil? A light red soil. At Boro and Bunghill the soil is black. 20 April, 1888.
4702. On whose recommendation was this open drinking tank made? That I cannot say; but I was called on to give my opinion as to the relative merits of troughing and open drinking tanks, and I recommended in the first instance pumps and troughing.
4703. In fact it would be foolish to make an open tank in this black soil? I said if the drinking slopes would act they were simple and very much to be recommended; but I thought the only proper way to water stock was by pumping gear and troughing.
4704. Are these tanks now open to any reasonable complaint? I do not think so. The public do not not complain, and the works answer all purposes and have always done so. I may say that I was deeply interested in the works, as I had designed and constructed them; and it was my care that they should not fail. If I saw the slightest danger, I would have looked to it.
4705. Have any complaints been made with regard to the other tanks? No; I do not think so.
4706. Are the Baloola and Normanstone wells in your district? No.
4707. You have just finished a new work? Yes; at Glendon, No. 116. It was handed over to the Mines Department and filled at once.
4708. Has any complaint been made with regard to the sites on which your tanks are constructed? No; not to my knowledge.
4709. What was the pump which you put up at this Narn or Glendon tank? It was the type pump of the Department. It is a horse-gear pump of the Holman make.
4710. A great deal of fault has been found with your having made the batters of your tanks too steep. Do you consider the batters in the specifications too steep? They are $1\frac{1}{2}$ to 1 and 2 to 1. The Glendon tank is $1\frac{1}{2}$ to 1. It is in tough red soil—good stable ground; and, in my opinion, sufficient for that class of work.
4711. Do you think that a sufficient batter? For unprotected earth work in country like that, the more you lessen the surface area the better it will be, and the less wash there will be. Except for the matter of depositing silt, I do not see that there is any advantage at all in having gentler-sloped tanks.
4712. If you had found that the specification of the batter was too steep for the soil you were excavating it in, would you have any discretion to alter it? Yes; certainly. I always sink a trial shaft first. I generally put down four shafts within the site of the tank. The less top surface you have the less force the waves will have on the banks.
4713. Will you now state anything in connection with your duties which you think it desirable the Commission should know, particularly with regard to the friction between the two Departments? The only friction likely to arise is that which has been before referred to, by the caretakers neglecting their work, and so on.
4714. I suppose that these caretakers, being officers of the Mines Department, you have no control over them? No.
4715. And in the event of works under your supervision becoming deteriorated for want of care, all you can do is to send down a complaint to your chief? Yes; but I always reported it to Mr. Doyle, the inspector of stock; and I must say we always worked harmoniously together.
4716. Did he ever resent your interference? No; he always attended to anything that I reported. He discharged Regan and another caretaker whom I saw drunk, when I mentioned it to him.
4717. Has there been any hutting erected in your district? None. I only invited tenders for huts.
4718. Why were not the huts erected in accordance with the tenders? I never heard the reason.
4719. Were the tenders considered to be too high? I cannot say. £90 was the lowest tender.
4720. For what accommodation? Three rooms.
4721. Weatherboard? Yes, and iron roof and tank, piping and guttering, &c.
4722. You thought that very reasonable? Yes, and could not be done now for that money in my district.
4723. What kind of huts have been erected for your caretakers? Simple bark huts. The one at Boro is such as a carpenter could put up for himself. There is a bark hut at Lightning Ridge, and a very bad one indeed. The rest of them were made by the caretakers, and I believe something allowed for the construction by the Mines Department.
4724. If good huts were put up better men as caretakers might be more easily obtained? Yes; I think so.
4725. You cannot expect a good man to remain in a hut which is not fit for a man to live in? Quite so; and it is not right to ask people to live in such places.
4726. *Major Penrose.*] Do you consider the huts designed by the Works Department, for which you called tenders, were too good for the class of men? No.
4727. *Chairman.*] Are there many stock travelling through your district? Yes; a great deal.
4728. Is there any trouble occasionally with this stock on the roads through the action of the lessees? Sometimes. The 60-mile track between Collarendibri and Angledool, near the Queensland border, requires watering.
4729. Do the lessees of runs in any way lessen the usefulness of stock routes? Yes.
4730. In what way? By making the stock route a paddock. I speak advisedly, because I have seen that done myself.
4731. They cause the grass to be eaten off and so render the route useless? Yes.
4732. How could this best be remedied? By impounding the sheep, I think.
4733. But the lessees pay rent for these travelling stock routes, and it would not be just? Yes; I see it is a difficult matter.
4734. You think these travelling stock routes should be withdrawn from lease? Yes; decidedly so.
4735. Then you cannot prevent the lessee's stock from running over them without fencing them in? No.
4736. Do you think that it would be desirable to fence them off? Yes; the business of a squatter cannot be carried on unless facilities are given him to get his stock to market. I would like to see a broad drift-way right through the country for this purpose, where grass would have a chance to grow. In the block reserves drovers do not know where they are, as the routes are not fenced off. Besides, the grass is all eaten down by local stock. The reserves should be devoted entirely to their proper use and fenced off, and a penalty inflicted for any trespass.
4737. *Mr. Woore.*] Do you think that in the present financial condition of the country such an enormous expenditure would be justifiable as would be necessary for the fencing of stock routes? No; I do not think

J. H. Adams. think so, if we were empowered to impound any sheep found on the routes. I think if the penalty was inflicted, even without the fencing, it would serve a very useful purpose.
 20 April, 1888. 4738. *Chairman.*] Of course, where travelling stock routes touch water frontages fencing would be impossible, because it would deprive the lessee of the use of water? Just so; in my district, most of the squatters have fenced off and others send their men along to conduct the travelling stock through.
 4739. Fencing saves them a large amount of trouble, because they have to send a boundary rider to bring the stock through the run? Yes.

John Thomas Prichard Bassett called in and examined:—

J. T. F. Bassett.
 20 April, 1888. 4740. *Chairman.*] What are you? I am a civil engineer, residing at Narrabri.
 4741. We understand that you can give us some particulars as to the construction of tanks and wells in your district to guide us in considering the allegations that have been made against your Department? I have only been in charge of the Narrabri district for about 17 months, and know only the Galathera and Boggy Creek tanks. They are under the Mines Department; but I have looked at them all to see that everything was going on in a satisfactory way, and they appear to be in fair order. One or two little things require looking to, but they are not worth mentioning—merely maintenance work which I had done. I have had nothing to do with the sinking of Government tanks before. My knowledge of the subject is really very small.
 4742. *Major Penrose.*] Do you know the Baloola and Normanstone wells? No.
 4743. Is the old drinking tank still in use at Boggy Creek? Yes; and it is used occasionally.

William Christopher Bennett called in and further examined:—

W.C. Bennett.
 20 April, 1888. 4744. *Witness.*] I beg to present to the Board these papers to be attached to papers belonging to this Department, sent to supplement the Blue Book prepared for Parliament by the Mines officers, and to which Mr. Gilliat refers in his memo. I have already protested against this book as an *ex parte* statement presenting the Mines view of the matter, and calculated, whether designedly or not, to prejudice this Department before the Parliament, the Commission, and the public; but even that compilation will not bear out Mr. Gilliat's statement, that whatever the faults of the Mines Department, discourtesy is not one of them. The present papers afford strong evidence to the contrary. Mr. Gilliat, on the strength of a statement in a newspaper paragraph which is entirely baseless, takes occasion to express his opinion, that under judicious management, with properly constituted works, stock should not be allowed to go past unwatered, even if lifting appliances are incomplete. I pointed out that such reference is uncalled for and not calculated to diminish friction. Mr. Gilliat then writes memo. dated 26th March, in which he refers to the completed Blue Book as described, and states that his words express "a tenable general proposition that if, while in the hands of this Department works were judiciously managed and properly constructed, there would be no reason for stock going unwatered." He then goes on to say that the works have been in progress four years, the two latter of which have been the most favourable ever known in the Colony; the press and the public are justified in assuming that they were transferred, and that the duty devolved on Mr. Gilliat to correctly inform the Secretary for Mines. As it happens, the information given in this instance is incorrect. The delay in completion of these works is, first owing to the unprecedented drought the excavations were obliged to be suspended for want of feed and water. The iron tanks obtained from England were used elsewhere, and those ordered to replace them were delayed in construction and in transit from England, and in erection, by the exorbitant demands of contractors. Had we yielded to these demands and pushed on the work regardless of cost, the converse accusation of extravagance would have been made. I submit this correspondence to the Commission as a sample of the treatment which has been given to this Department by the Mines. There is nothing whatever to justify Mr. Gilliat's foregone conclusion, or as he calls it, "tenable general proposition," that the management of the Department was injudicious or the construction improper.
 4745. *Chairman.*] Are there any documents which apparently have been suppressed and which should have been put in the Blue Book presented to Parliament that might have thrown a somewhat different complexion on the case as it appears here? I cannot say that anything in the possession of the Mines Department has been suppressed, but there are letters and documents from the Roads Department which would throw more light on the subject, and such letters and documents I have given to the Secretary to the Commission. Some of the papers which I have given to the Secretary were in the possession of the Minister for Works and were only returned to me recently.
 4746. You think that this is an *ex parte* statement, and that rebutting papers might have been included in the book, and were at the command of the Mines Department? I cannot say what was or was not at their command.
 4747. But could not they have asked for the documents? Yes; and it is usual for one Department to ask another for any papers that are required by Parliament; and we received no such request.
 4748. Consequently this public statement is incomplete and might have borne a somewhat different complexion if these papers had been put with the others? Precisely.
 4749. Since your examination before the Commission have you read over the evidence, and do you wish to make any further statement to the Commission? I had undertaken to prepare a short statement on the evidence. I have not been able, owing to many causes, to complete that statement; but I will be able to do so if I can obtain an extension of time.
 4750. The Commission will not meet again until the 10th May? Then I will have it ready by that time.

[The Commission adjourned.]

THURSDAY, 14 JUNE, 1888.

The Commission met at 10 a.m.

Present:—

HON. G. H. COX, M.L.C., CHAIRMAN.

MAJOR PENROSE, R.E.

J. C. WOORE, Esq.

William Christopher Bennett called in and further examined:—

4751. *Chairman.*] Did you receive a letter from the Commission forwarding to you a statement made by W.C. Bennett the Mines Department of the 14th May, 1888, that in your evidence a certain statement appears to the following effect: "It is usual for one Department to ask another for any papers that are required by Parliament, and we received no such request." To this statement the Mines Department have taken exception, and to bear this out they enclose a letter dated 10th November, 1887, showing that a letter had been written to the Works Department requesting certain papers which were specified in that letter. And we have it here that as far as the request contained in that letter is concerned, it has been complied with by your giving all the papers in your possession? Yes. I would like to read this letter:—

Department of Public Works, Sydney, 28 May, 1888.

In reference to the papers from Mines forwarded to me by the Tanks and Wells Commission, asking an explanation of the evidence given by me,—That this Department was not asked for papers.

To comply with order that copies of all papers, minutes and reports, and all other correspondence between Works and Mines should be laid upon the table of the House.

The Mines letter herewith is not to that effect, but asks for certain specific papers, the Mines numbers of which apparently have been only given, as no such numbers could be found in the registers of this office; and as will be seen herewith a reply was sent forwarding such papers as could incidentally be traced, stating that if some idea of the subject matter of the others was intimated every endeavour would be made to trace them. No reply was received. Such an application giving the numbers of certain specific papers was never thought to refer to compliance with order (that all papers should be sent) and was regarded in this office as a request for papers in connection with some of the many annual or other Parliamentary returns made out by the Mines.

I send herewith an example from the Lands of usual form asking for papers;—no such paper was sent from the Mines.

The letter from the Mines of the 30th November, on the face of it, bears out the inference that even if the papers were required for this return the Mines only wanted such papers as supported their view of the case, or they would have asked for all papers of the character defined in order of the House, and not for specific numbers.

I still maintain that the usual application was not sent, or I would have seen that the papers referred to in my evidence were forwarded. I since gave them to the Secretary of the Commission. They were in the possession of the Minister for Works until date stamped in blue.

I now refer the Commission to those papers, and more particularly to Mr. Stilwell's report, which sums up a number of cases the original papers of which can be produced, and which I do not forward as only adding to the immense mass of documents already submitted.

I forward a copy of a memo. of mine, dated 8th February, protesting against the publication of the Blue Book in the way in which it was done, and in which I state that the compilation was without reference to this office. I think the original was sent to the Commission.

WILLIAM C. BENNETT.

To the Chairman, Tanks and Wells Commission.

8 February, 1888.

Order to lay Tanks and Wells papers on the table of the House.

YESTERDAY Mr. Mahon, Secretary of the Tanks and Wells Commission, handed me a copy of a printed document purporting to be copies of papers passing between the Departments. This included the case against this Department as stated by the officers of the Mines; also a most incoherent and untruthful letter of Mr. Earngey, a discharged officer of this Department; omitting several most important papers, amongst others my reply to the charges of the Mines office, and several papers by Mr. A. P. Wood—in defence of the Department. I think it is unnecessary for me to point out to the Hon. Secretary for Public Works that papers compiled in this way, introducing letters foreign to the subject of order and omitting important documents which tell against the Mines, should not be sent forth to the public as officially correct.

The papers were compiled by the Mines officers without any reference to this Department, and I think a request should be sent to the Speaker to have the papers withdrawn until corrected by this office, and the missing papers added.—W. C. BENNETT. Submitted, 8/2/88.

As these papers have been printed and commented on by the press, I do not think it advisable to take any steps for having them withdrawn as suggested, but if Mr. Bennett will furnish copies of the papers he refers to as omitted, I will lay them on the table of the House as a supplement to those prepared by the Mines Department.—J.S., 8/2/88. Mr. Bennett, B.C., 8/2/88.

I will, as soon as possible, collect the missing papers, but I would record my opinion that putting an *ex parte* statement of this sort before the public is unjust. With reference to the sweeping statements made by Mr. Earngey, I forward papers in his case, attached to which is a pamphlet by that gentleman which I have to apologise for submitting as an official paper, and only do so as it is the best evidence as to the state of his mind, as stated in my minute.—W.C.B., 9/2/88. Under Secretary.

4752. Then you think the exception taken with regard to your evidence has not been borne out by the letters sent in by the Mines Department? Certainly not. I should give the same evidence now.

4753. And you still assert that, to a certain extent, this Blue Book was *ex parte* and unfair to your Department? Yes; and I will quote one remarkable instance. In the case of Mr. Earngey, a discharged officer of the Roads Department, a letter was written by him and published in these papers, full of grave accusations. That letter was never submitted to me for report, but was published at once in these papers. I have since forwarded a mass of papers to the Commission proving how totally unreliable is any statement of Mr. Earngey's for any purpose. I never thought that any letters of this sort could have been required by the Mines, because they were matters of every day intercourse between the Departments—asking for certain papers.

4754. If you had known that these papers were about being published and you had papers in your possession that could have thrown some light on the allegations, would you have sent them in? It was my duty to know that the papers were about being published and that Parliament had called for them. But it was not for me to volunteer these papers, and I was awaiting the usual formal letter asking for them. I wish to hand in certain papers marked "Department of Roads and Bridges, consideration list," and I declare that the statements made in them are true to the best of my belief.

[The Commission adjourned.]

TUESDAY, 21 AUGUST, 1888.

The Commission met at the Holy Box Well.

Present:

HON. G. H. COX, M.L.C., CHAIRMAN.

MAJOR PENROSE, R.E.

Thomas Pollard called in and examined:—

- T. Pollard. 4755. *Chairman.*] Please state who you are, and how this watering place has been used by travelling stock during the time you have been caretaker? I have been caretaker at this watering place for three years. When I first took charge, travellers would not bring stock to water through the well bearing a bad name. It is very rare for a mob to pass now without watering when there is no natural water about. I induced one or two drovers to try the water, and they proved it to be excellent stock water. Now, I have plenty of custom. There is a tank close by belonging to Mossiel station, where many drovers and teamsters get water at night time for nothing. This is done without the consent of the lessee, otherwise I should have more custom. In April, 1886, rains began, so that the well was not required. In October, 1887, stock began again to water in fair numbers, and the demand for the water has been pretty regular since, except when there was water on the road. My takings were:—October, £8 6s. 2d.; November, 5s. 4d.; December, £4 8s. 8d. January, 1888 (rain fell). February, £16 9s. 8d.; March, —; April, £4 1s. 4d.; May — (rain in May); June —; July, £2 19s. 8d.; August 1-20, £5 1s. 6d. I am also watering 5,000 sheep from Canoble Station, since 14th August, which I understand pay 30s. per thousand per month.
4756. Has the water improved since you came? I am sure of it—through continued baling. I bale three or four times a week. If it remains stagnant in the tank it gets bad, both in smell and taste.
4757. Do you find incrustations of salt in the troughing? Not since the baling has been regular.
4758. Have you ever had any complaint of the water from drovers? No, not when they brought their stock to drink.
4759. What is the greatest number of stock you have watered at one time? 24,500, in two days. The well was only just-capable of giving the necessary supply in the time—although the service tank was full when they came—owing to a runner being displaced at bottom of well 25 feet under water 5 feet from bottom. If the runner was right I could water all the sheep in the country, but now I dare not let the buckets nearer than 10 feet from the bottom where the spring of water is.
4760. How much do you find sheep drink of this water? 12,000 odd sheep drank all the water in my service tank in one day.

[The Commission adjourned.]

THURSDAY, 23 AUGUST, 1888.

The Commission met at Clare Station.

Present:—

HON. G. H. COX, M.L.C., CHAIRMAN.

MAJOR PENROSE, R.E.

John Waugh called in and examined:—

- J. Waugh. 4761. *Chairman.*] You are one of the lessees of Clare station. Yes. I have had considerable experience in pastoral matters.
- 23 Aug., 1888. 4762. Clare station is dry country? Yes; we have had to go to great expense in making, first wells and then tanks, because we found the wells unsuitable for profitably keeping sheep to grow wool. I think tanks are better than wells in this part where the well water is brackish.
4763. Do you think the Government expenditure on the Ivanhoe-Balranald road, in connection with public watering places, has been judiciously spent? Yes, as regards the tanks. I have not seen enough of the wells to speak positively, but whether it is the fault of the caretaker not baling sufficiently or not, it is certain that the Dolmoreve well is not good stock water as supplied to the public. I think it probable that if baled regularly and the service tank and troughing are kept cleaned out often, it will keep it purer. I am a great advocate for constant baling and cleaning out of tanks and troughs in this country.
4764. Do you think the Government were fairly chargeable with extravagance in the construction of the tanks near here? I do not think that the tanks made near here—Clare and Gunaramby—could be executed under the conditions they were, under 1s. 6d. to 1s. 9d., the conditions were so unfavourable as regards grass and water. The contractors for Clare had to cart water from my tank, 7 miles for fresh water, and 6 miles for water for horses, and they had to cart their horse-feed from Hay and Balranald, 135 miles and 125 miles respectively. I also think the buckle-plate service tanks are admirable.
4765. Do you find any fault with the sites of Clare and Gunaramby? I think Gunaramby might have been a couple of miles further north, but I talked it over with Mr. Gordon, the engineer, when he was choosing the site, and pointed out the site referred to; but he objected that it would not divide the distance properly. I preferred this other site simply because I considered it had a better catchment. I think the Clare site is a very good one.
4766. Do you consider that one public watering place would be enough between Clare and Ivanhoe? No; I asked for three on this line. I think, if suitable sites can be obtained, watering places should be every 12 miles on main travelling stock routes; and I also think that in future the tanks should be made double, *i.e.*, with a bar in the centre, so that when the tank gets low the water can be pumped from one

one into the other to allow of the silt being cleaned out. I am adopting this principle on this run with John Waugh. great success. The water can be run back, half of it with a syphon. I use a centrifugal steam-pump to travel about for this purpose, and also for the purpose of pumping water from the swamps into the tanks. 23 Aug., 1888.

4767. Can you give any suggestions with regard to the management of the tanks? In the first place, I think that the caretakers' paddocks and tanks should be made rabbit-proof, if only to test the system, and also because it will be no use our wiring in our tanks so as to trap them if the Government tanks are left open. Also, the tanks should be leased. If not leased, the caretaker should be allowed to take in working stock in agistment, which would help to defray expenses.

4768. Do you think it desirable that every one using the stock routes should have to pay a watering rate when getting his permit? Yes, if the rates were reasonable, and about half of the present rates. I also think that all these matters could be far better managed by local boards, such as the Stock Boards.

4769. Do you think it advisable to have the travelling stock route fenced off from the leases? I do not think it would be advisable, except on short lines near railways such as Booligal to Hay, and Hillston to Carrathool, where large amounts of travelling stock congregate.

[The Commission adjourned.]

WEDNESDAY, 29 AUGUST, 1888.

The Commission met at Hay.

Present:—

HON. G. H. COX, M.L.C., CHAIRMAN.

MAJOR PENROSE, R.E.

John George Carew-Gibson called in and examined.

4770. *Chairman.*] What is your occupation? Roads overseer in the Hay district.

4771. Have you lately visited Tom's Lake tank? Yes; on the 9th of May.

4772. Did you take soundings of the tank? Yes; from south to north near the middle of the tank. I produce a diagram showing section of the tank as sounded by me. 29 Aug., 1888.

4773. What depth of water did you find? 14 feet 6 inches in the centre.

4774. How far was the water behind berm level? About 2 feet 6 inches. If the tank had been sunk 18 feet this would show one foot of silt.

4775. Did you examine the drains at Tom's Lake tank? Yes; on the 17th March.

4776. What state were they in? The east main drains wanted clearing badly. Apparently the east main drain had no connection with the tank; the drain was dammed up.

4777. *Major Penrose.*] Do you think that drain would bring water to the tank if allowed to? Yes; I think it would bring a large quantity. I have often noticed water standing in the drain.

4778. *Chairman.*] In what condition was the silt tank on the eastern side? It was full of silt and no water in it.

4779. Do you think it possible that all that silt could have been brought in to that tank unless this drain had run water into it at some time or other? I think it is very unlikely.

4780. *Major Penrose.*] Is there any other drain in connection with this silt tank? I think there is one in a south-east direction, but am not quite certain.

A. W. Stilwell called in and further examined.

4781. *Chairman.*] Has the flume at Hulong tank been lowered? Yes.

4782. How much? About 1 foot.

4783. Was this done after delivery to Mines Department? I think so.

4784. Why was this flume lowered? It was put in defectively by the contractor as regards level and jointing of the pipes. 29 Aug., 1888.

4785. Was the contractor paid for this work? No. The work was never passed as given over by the original contractor.

4786. What steps did you take as regards the finishing of the work as left by the first contractor? We re-let the completion of the excavation to another contractor, and the other incomplete works were finished by day labour—such as the drains and embankments.

4787. Was the work completed by day labour considered satisfactory? Yes; except in regard to the drains. These were left in a very bad state by the contractor; not properly graded through the uneven swamp ground. I purposed getting these gradually put right by a man I had in charge there. This man was so employed when the Mines took the work over.

4788. Were the Mines informed of the incomplete state of the works? I rather think they were with regard to the drains, but not as regards the inlet shoot, which I knew I should have to do myself by day labour.

4789. Did the Mines Department make any demur at taking the work over in its incomplete state? Not so far as I remember.

4790. Did the Mines clearly understand that the flume would require alteration? I do not think so. It was desirable to alter flume, otherwise we should have lost a lot of water in the swamp before it would have run into the main tank.

4791. By whom was the flume eventually lowered? By men working under me.

4792. How long after being handed over to Mines? About a month. The work was not quite completed at time of handing over. I handed over on 13th July, 1886, and the fluming alteration was completed on 17th August, 1886.

4793. Is it usual for the Mines to take over work incomplete? No; not usual, but sometimes done.

4794. *Major Penrose.*] Do the Mines Department in taking over make any tests as to the levels of drains, &c.? No, not to my knowledge.

4795. Then they practically acknowledge to receiving the work in good order? They give a receipt in which everything is specified in detail, stating that everything is in good order and condition. If any detail is still incomplete it is noted in this receipt. 4796.

J. G. O.
Gibson.

A. W.
Stilwell.

29 Aug., 1888.

A. W.
Stilwell.
29 Aug., 1888.

4796. Then it is open to the Mines Department to make any examination they think proper as to levels of flumes, silt tank, drains, &c., and to make objections under these heads at the time? I should think it was their duty to do so.

4797. What water is there now in Hulong tank? On the 27th July, 15½ feet of water.

4798. Is this drain through the centre of swamp now effective? No.

4799. Could it easily be made so? Yes, at no great cost. I think there is a misapprehension in regard to that drain on the part of the Mines Department officials. It was not intended to take water from the swamp, but as an aqueduct through the swamp conveying water from the higher ground the other side of the swamp. Also, the drains can never actually fill the tank to berm level until the swamp becomes full, when the valve can be closed and the water retained.

4800. *Chairman.*] Is not this an admission that the tank is placed on an injudicious site? No; the tank was properly placed on the edge of the swamp to obtain sound ground for the appliances and apparatus to them.

4801. *Major Penrose.*] To what level will the drains fill the tank without the swamp getting filled? Speaking roughly, to about a foot below berm level.

4802. *Chairman.*] It was not because you saw water lying in the drains that you altered the level of the flume? No, it was one of the defects left by the original contractor which had to be made good at his cost.

4803. *Major Penrose.*] Did you extend the drains after handing over, and why? Yes; the drains cut at first were not to the full extent intended. I always intended to extend them to their present extent.

4804. When was this done? On the 12th August, 1886, I set out 130 chains extension of then existing drains.

4805. *Chairman.*] Are you aware of the reason why the contractor threw up his original contract? He sent me word that his excavation was finished. On inspection I found it was not done according to specification, and of course refused to pass the work. I pointed out the defects, the chief of which was that the tank was not excavated to the full depth of 18 feet. He, having his roadways taken out then, said that he could not take out the remainder, and in fact elected to be dealt with as a defaulter rather than finish the work. On a subsequent visit, shortly after, I found that he had removed his plant, and as soon as possible afterwards the completion of the work was re-let to another man.

4806. Did you also point out to him the faulty setting of the flumes? Yes; and also the defective construction of the embankments and drains. When all was measured up and passed the retention money was more than sufficient to pay for the completion of the work.

4807. Having visited a number of public watering places in your district, we wish to ask you a few questions in regard to them. What is the cause of the water breaking out a new channel through the northern end of the embankment conducting the water into north drain at Tom's Lake tank? In my opinion it is owing to the drain being obstructed by the silt and vegetation—I have seen dead sheep in it amongst other things—preventing the flow, and causing the water to rise higher in the swamp or creek than was originally anticipated or provided for.

4808. Are you aware that at present there is no drain leading into the upper silt tank? Yes.

4809. Why does this drain not lead water into this silt tank? The drain has been dammed and the bank cut through, and the water led into the swamp instead of into upper silt tank.

4810. At whose instance was this done? I cannot say positively. It certainly was not at mine.

4811. No use can now be made of the embankments of tanks to conserve water above the berm to any great extent? No; not more than a foot or two if the swamp is full. Fully 6 feet could be conserved over the berm if the northern drain had been left and maintained as originally constructed.

4812. *Major Penrose.*] Did this damage to the upper drain occur while the tank was in charge of the Mines Department? Yes; most decidedly.

4813. Have you ever known water to run down this drain to the upper silt tank? I have not known water to flow right through from the creek or swamp, but there is a small catchment above the drain from which water has flowed into the silt tank during my supervision; but the drain has not acted for the purpose for which it was intended since I have known it, and that is owing to its being obstructed.

4814. Would this small catchment you speak of run water before the creek or swamp? Yes.

4815. *Chairman.*] We noticed an imperfect inlet flume at Box Creek tank whereby the water is allowed to run back again as the creek falls, owing to the valve being out of repair—whose business is it to repair it? The Mines Department profess to do small repairs of this nature. I think the caretaker should be competent to do what is wanted there.

4816. We also noticed a quantity of iron pipes and a screw-down valve lying there unused. What was this for? I presume it was intended for an inlet flume, but cannot state positively, as it was there many years before I came.

4817. *Major Penrose.*] The tank has had 19 feet 6 inches of water in it. The gauge now reads 12 feet 6 inches, and the water is 1 foot 6 inches below flume, so that it is 14 feet depth from bottom of flume. Owing, therefore, to this defective valve, 5 feet 6 inches of water has been lost owing to the fall of the creek outside. Do you not think, therefore, that a more perfect inlet with a better form of valve should be provided? Yes; if that step is necessary to prevent a similar loss of water in future.

4818. Is it your duty to initiate such a repair, or that of the Mines Department, in whose charge the tank is? That is a question which has never been settled.

4819. *Chairman.*] We visited the Willandra well and found one shaft filled up, and a new shaft a few yards off incomplete and apparently abandoned, and no water for travelling stock, with head works all completed. What reason have you to give for this apparent extravagant outlay without any satisfactory result? The amount paid to contractor on account of this first shaft, whim, tank and troughing, &c., was £900. The contractor failed to penetrate the drift, and got the shaft out of plumb near the bottom, and it was found impracticable to rectify it. This shaft was therefore abandoned and a new one sunk—somewhere about £200 retention money being forfeited. The second contractor on the original shaft also failed, and received no payment whatever; the third contractor, who sank the existing shaft, also drew the timbering from the old shaft, removed the whim to its present site, and failing to carry the shaft down through the drift received only £52, so that the cost of the works up to the present time has been considerably less than that of the original contract, and I consider it still possible that the work may be completed and a supply obtained at a cost exceeding by very little, or any, that of the original contract.

4820.

4820. What are the intentions of the Works Department under the circumstances? To put a bore down from the bottom of the present shaft, to tap a supply lower than that at the bottom of the new shaft. We propose to stanch the bottom of the shaft with concrete; say, if we find a good supply at a lower level by boring, such as has been found I believe in the adjoining station of Kilfera.

4821. We observed a fine dam in the Willandra Creek, within a few yards, containing a large though shallow supply of water. Could not a tank in connection with a dam have been made at this spot to give a permanent supply? I do not consider that site suitable for a tank because the supply would have to be obtained from the flowing of the creek, which occurs at rare intervals. The dam there was dry for several years before the last wet season. There is not sufficient local catchment for a tank in my opinion at that site.

4822. Would not your remarks apply in the same way to the Box Creek tank and dam? No; because that creek runs more frequently, and there is also a local catchment.

4823. Then you think the Works Department was justified at the time in placing a well at Willandra? Yes; bearing in mind the fact that wells are so much cheaper, as a rule, than tanks.

4824. With regard to expenditure, we noticed that a drain at Ivanhoe tank had not been properly completed or constructed. Which Department should be charged with carrying out that work? The construction of the drains, of course, pertains to the Works Department, but in this case the grading of this length was being done by the man employed by me as caretaker previous to the work being transferred to the Mines. I pointed this out to the Mines overseer when the transfer was being made, and I understood that he would let the man complete the work. He made no objection to it at the time. The work, however, has not been completed, and that extension of the drain is accordingly ineffective.

4825. We found in some instances the caretakers or lessees cleaning out the silt tank; in another case the caretaker professed he did not know who had to do it, and in yet another case the lessee objected that the silt tank was full when he took the lease, and that there was an understanding that it should be cleared out for him, which has not been done. We should like to know whose business it is to attend to this important duty? The caretaker's, in my opinion. I cannot say about the lessees, as I do not know the terms of their leases.

4826. Again, under the heading of expenditure, we were given to understand that you provide new buckets at wells when required. This being a small matter, how is it that you still retain control over such matters? We have always supplied new ropes and buckets at wells when required, the Mines Department applying for them. I have a stock of ropes and buckets in store for the purpose.

4827. In the event of machinery breaking would you also make it good? We have always done so.

4828. Then if maintenance is only carried out by the Mines Department, how comes it that you have occasionally cleaned out a silt tank without reference to the Mines Department? There is no definite arrangement or understanding between the two departments on these matters. I, of course, cannot instruct the Mines caretakers to clean out a silt tank; and I do not know that it is even included in his specified duties.

[The Commission adjourned.]

THURSDAY, 13 SEPTEMBER, 1888.

The Commission met at 10 a.m.

Present:—

HON. G. H. COX, M.L.C., CHAIRMAN.

MAJOR PENROSE, R.E.

J. C. WOORE, Esq.

William Christopher Bennett called in and further examined:—

4829. *Chairman.*] I believe there are certain papers you would like to put in evidence? Yes; I put certain vouchers in as a return of payments made in the office. (*See Appendix.*)

4830. I believe some other papers in your Department were too late for publication in the papers submitted to Parliament by the Mines Department? Yes.

4831. This is a statement of the cost of the tanks and wells and dams? This appears to be a copy prepared by the Mines Department. It may be a true copy from the original in my Department, but I cannot say. I will admit that it is correct.

4832. Then the return sent in from your Department, dated 3rd February, 1888, signed by John Rae, was a statement of the cost of tanks up to that period? Yes; up to that period. (*See Appendix.*)

4833. The return sent to the Commission on the 6th February requests us to compare the returns of 1888 with some previous returns of January, 1885, and that it would be seen there was a considerable discrepancy between the two returns; can you show how this occurred? That no doubt occurred in additions, alterations, maintenance, supplying machinery, fencing and carriage.

4834. Are these amounts likely to be increased by any future works? It is possible but not probable, because in February the works were much more complete than when the other returns were sent in.

4835. *Major Penrose.*] Then an account for particular works may remain open for some time? Yes; the carriage was one of the chief items. We could not get the accounts from the carrying firm and this caused a delay.

4836. *Chairman.*] Have you lately had to supplement the cost of any of your works by an expenditure for completing them? Yes; in Bevan's case for instance; but it can hardly be called supplementary cost, because it was a part of the original contract for fencing. The fencing had been ordered by the Mines Department long after the completion of the other works.

4837. *Major Penrose.*] Then in putting in a return of the cost of a work, this return would only show the actual cost up to the date and not the projected cost? No, not the projected cost. A great deal of additional expenditure has been incurred in works of maintenance. In my previous evidence I stated that the receipted vouchers showing the cost of excavation of certain watering places were available, but I now find that the vouchers are destroyed by the Audit Department at the end of seven years. I have our own copies of same with all the official brands on them. I will hand them in as the best evidence available as to the price paid; also the bonds. These are the final vouchers (duplicate copies) sent in to our office. (*See Appendix.*) I now put in the instructions referred to in my answer to question, which are

to

A. W.
Stilwell.

29 Aug., 1888.

W. C.
Bennett.

13 Sept., 1888.

W.C. Bennett. to the following effect:—"9. The tenders to be opened in the presence of the Police Magistrate or Clerk of Petty Sessions or of a Local Magistrate in their absence. All tenders to be numbered and initialled by the officers and the magistrates, and the schedule on the proper form to be filled in and signed by both. The officer will then without any reference to the magistrate, whose duty ceases with the opening of tenders, forward the tenders with recommendations, accompanied by plans and specifications, if any." I also put in a number of papers with regard to fencing. With reference to my statement at page 156 (*Question 3277*), I may say that Mr. Bruce's estimate for huts will be found at page 135 of the papers prepared for Parliament by the Mines Department. I also put in original bonds and agreements for the 12-Mile and 35-Mile tanks, the excavation of which was said to have cost 2s. 6d. per cubic yard. (*See Appendix*). I put in further some plans with respect to Hovell's dam.

David William Gregory called in and examined:—

D. W. Gregory. 4838. *Chairman.*] What is your position? I am inspector of accounts in the Department of Audit.
 13 Sept., 1888. 4839. What is done with vouchers received by you? They go to the examining branch if the rates and computation are checked. If a contract exists the contract rates would be checked.
 4840. What becomes of the vouchers ultimately? If there are any arrears, or any question arises, they are submitted to the Auditor General. The vouchers are then returned by the Department of Audit. I see the forms produced; similar vouchers may be in our office. Last year we destroyed all vouchers up to the end of 1879.
 4841. *Major Penrose.*] Can you produce the receipted vouchers corresponding to these? I do not think so, because they do not show the date of payment.
 4842. *Mr. Woore.*] Can you say that the receipted vouchers for the work shown therein have been destroyed? I cannot say; it depends on the date of payment whether they are destroyed or not. I can produce them if they are not destroyed.

(The witness was allowed possession of the vouchers in order to obtain the duplicates.)

Arthur Pepys Wood called in and further examined:—

A. P. Wood. 4843. *Mr. Woore.*] It was stated in evidence by Mr. Quin that there is a three or five chain road right
 13 Sept., 1888. down to the water at Menamurtee—was the road made there by your Department for the purpose of watering stock? I do not know of any such road.
 4844. When the site was determined on for the Ivanhoe tank, where you sunk the trial holes at the Box Swamps, were any steps taken to secure the land from selection? No.
 4845. Why not? It was an omission on our part, I presume.
 4846. *Chairman.*] Are not these tanks and wells sunk on the travelling stock routes? In this case the site was off the route, and we never dreamt of anyone selecting it; we adopted the usual practice, taking no exceptional steps. I produce a general type plan of tanks (marked A) detailed plan (marked B) showing appurtenances; and detailed plan (marked C).
 4847. Why was the Amos & Smith's substituted for the old Coleman pump? In the first place, the former gives a greater discharge; in the second place, it is self-contained on a rigid bed-plate, and there is not the same chance of extra friction arising from displacement of the parts. Besides it threw a greater volume of water and is more easily and more cheaply worked.

[The Commission adjourned.]

SATURDAY, 15 SEPTEMBER, 1888.

The Commission met at 10 a.m.

Present:—

MAJOR PENROSE, R.E. | J. C. WOORE, Esq.

In the absence of the President the Chair was taken by Mr. WOORE.

Arthur Pepys Wood called in and further examined:—

A. P. Wood 4818. *Witness.*] I now produce original minute by Mr. Abbott, of 3/7/84, referred to in my evidence of 16th
 15 Sept., 1888. March last, for the inspection of the Commission. I also produce for inspection original report *re* Roto well, dated 16/4/82, and Mr. Gilliat's minute thereon of 16/5/82, approving of the sites, and I now produce in reference to my evidence *re* Holy Box well, on 22nd March last, the original vouchers showing payments made on account of that work—showing that these payments, amounting to £1,088 18s. include cost of top works, in addition to sinking and slabbing—in fact everything in connection with the making of the well except the fencing of the special lease area.

[The Commission adjourned.]

9 June, 1887.

J. S. RAMSAY.

Department of Mines, Public Watering Places, Sydney, 27 June, 1888.

At the request of the Commission *re* Tanks and Wells, the annexed return has been prepared.

In submitting it for the consideration of the Honorable the Secretary for Mines, I may add that my remarks accompanying a similar return for the year 1886, apply with equal force to the one for 1887, viz. :—

“1st. That the year was an exceptionally favourable one, and that during the greater part of it water could be obtained by travelling stock almost everywhere without having to fall back upon the public watering places.

“2nd. That when the Department is enabled to gazette the works as public watering places no further obstacle will exist to their being leased, and the majority of these works will be producing revenue.”

To this I may now add, that the altered arrangements in dealing with notifications of travelling stock and camp reserves, and with the surveys through the district surveyors directly, has resulted in expediting their preliminary notification under the Land Board, and consequently their gazettal as public watering places. This result is, I think, shown by the fact that there are now sixty-three watering places either under lease or for which tenders have been called, and I have fair reason to anticipate that by the end of the year the great majority of the completed works will be gazetted, and under lease.

I have felt that neither the Secretary for Mines nor myself desire to withhold any particle of information that would assist the Commission to the fullest and most impartial discharge of their duties, whether it is within the actual scope of the inquiry or not.

At the same time, I feel it my duty to point out the injustice that may arise by the Commissioners embodying in their report the subject of *maintenance* without having fully investigated it. This, perhaps, they could not do under their commission; it must, therefore, be apparent, that any attempt to deal with the subject without a full inquiry might, perhaps, lead from imperfect knowledge to incorrect conclusions.

HARRY GILLIAT,

Chief Inspector of Public Watering Places.

The Under Secretary for Mines.

PUBLIC WATERING PLACES.

RETURN showing Wages paid and Revenue received for the year 1887.

ABSTRACT showing Prices paid per cubic yard for Excavating Tanks.

My Dear Sutherland, Department of Mines, 18 May, 1887.
 May I request you to have a return prepared for the Cabinet, showing the amount paid per cubic yard for excavation of the several tanks that have been constructed by the Roads Department, and oblige,
 Yours truly,
 F. ABIGAIL.

Mr. Bennett for report.—J.S., 19/5/87.

I would point out that at one time Mr. Bruce had absolutely promised seven tanks to Sloane & Co., at 1s. 4d. per cubic yard for a much easier specification. Further information, however.—Mr. Wood. Urgent.—W.C.B., 19/5/87.
 The prices paid for excavating 18 feet deep and removing to bank, range from 10½d. to 1s. 9d., as in the case of the Jindera and Boona tanks. I may add that in the latter case 2s. 2d. was asked for steam scoop excavation, so strongly advocated by the Mines. The average cost of 18 feet deep excavation, with sixty of the tanks constructed in the dry districts in the drought, has been 1s. 5d. per cubic yard. If further details are required, the cost per cubic yard of each tank can be given, but as this paper is marked "urgent," I have confined myself to information ready to hand.—A.P.W., 19/5/87.

My Dear Sutherland, Department of Mines, 31 May, 1887.
 Will you be good enough to inform me if the returns of the cost per cubic yard of the excavation of the tanks constructed in connection with your Department, are ready, my reason for asking being that I wish the Cabinet to settle the matter early; and this information is very necessary for that matter.

Faithfully yours,
F. ABIGAIL.

Mr. Bennett to say—J.S., 1/6/87.

Lists herewith; but this list should not be dealt with without referring to my paper of this day, with Mr. Wood's, both referring to application for transfer of charge to the Mines.—W.C.B., 1/6/87.

Department of Public Works, Tanks and Punts, Sydney, 4 February, 1888.

IN reply to the Commissioners' minute on attached note from the Secretary to the Tanks and Wells Commission, I have to submit the following cases in which prices in excess of 1s. 9d. per cubic yard have been paid for tank excavation:—

Nymagee Tank.—In this case the contractor, Henning, was allowed the sum of 10½d. per cubic yard over and above his contract price of 1s. 9d., for removing rock which had escaped detection in the trial shafts put down by the Department for the guidance of contractor. [4,362, at 10½d., £190 10s.; or, 1s. 11½d. per yard over the entire tank.]

Wicklow Tank.—This is a similar case to the above, where 1s. 9d. per cubic yard in excess of contract price of 1s. 9d., was paid for granite excavation. [£9 9s. extra, or, one-eighth of a penny extra, over the whole excavation.]

Nellie's Paddock.—In this case the contractor provided in his tender for rock excavation at 2s. 4d. per cubic yard, which was paid to him. [£157 10s. or, one half-penny per yard extra over the whole excavation.]

Mulga No. 5.—This work was abandoned by the contractor (Finn) when about five-sixths of the excavation was completed; the work was relet, and 3s. 10d. per cubic yard paid for the remaining one-sixth, which was a hard cemented gravel,—this price covered all trimming of slopes in cutting a bank. The contract price was 14½d., so that the average price in this case was under 1s. 9d.

I would again point out to the Commission that in no case has more than 1s. 9d. been paid for such excavation.

ARTHUR P. WOOD.

To illustrate the precautions taken in such matters, I forward the papers relating to the first-mentioned work. There has been some delay in looking the vouchers up at Audit Office, so that it is desirable a few days should be allowed to obtain any information of this sort which may be necessary for my defence.—W.C.B., 7/2/88.

Mr. Mahon, Secretary, Tanks and Wells Commission. B.C.

IV.

CONCERNING PROPOSED TRANSFER OF CONSTRUCTION OF PUBLIC WATERING PLACES TO MINES DEPARTMENT.

Department of Mines, 21 March, 1887.

THE administration of the Public Watering Places Act, 48 Vic. No. 16, which gives statutory authority for the construction, control, and maintenance of works for storing or providing water adjacent to any public road, is charged to the Department of Mines.

The administrative arrangements of 1880, which are still in force, also allot to that Department the charge of works for the storage of water in the pastoral districts. In addition to the control, maintenance, and leasing, the survey of the watering places and the construction of huts have more recently been undertaken, and it is now found necessary to assume the charge of fencing, and provision has been asked for that purpose on this year's Estimates.

The construction and repairs still remain with the Department of Public Works, but this division of authority is accompanied by drawbacks, such as much unnecessary correspondence, great loss of time, and a resulting want of economy, which it is thought will be obviated if the service is placed under one Department.

The Secretary for Public Works will perhaps agree with me that under the circumstances it might be desirable in the public interest that the whole of the business connected with these works, including construction and repair, be handed over to this Department.

FRANCIS ABIGAIL.

Memorandum.

Some causes, that may appear to indicate the advantage of reorganizing the respective duties of the Departments of Mines and of Public Works in connection with public watering places:—

1st. A divided control in construction and maintenance; weakening the administration, making it difficult, if not impossible, to apportion the responsibility; and failing in economy.

2nd. A divided control seems impossible without a considerable friction, waste of time in apparently unnecessary and sometimes intemperate correspondence, serious delays in the transfer of works, and an undesirable jealousy between officers.

(a) Hesitation may be shown in taking over a new work, upon a question whether the execution is good, or details sufficiently complete; the constructing Department, not unnaturally perhaps, objecting to such criticism, while the Department with whom the maintenance rests points out that it is responsible for the work taken over being in effective order.

(b) Repairs and alterations being necessary, the tendency of the constructing Department is to find fault with officers of the maintaining one, and to attribute the necessity to the carelessness of the officers; and a tendency on the other side to place the fault upon imperfect design or defective construction.

3rd. The Department administering the Act, dealing with the survey, measurement and leasing of the works, supervision of tenants and caretakers, will undoubtedly have to undertake the fencing; and it has been proposed to do so during the present year, and a sum for that purpose placed on the Estimates. The construction of huts has already been undertaken; if repairs and alterations are to follow, the construction alone will remain with the Works Department, and it may perhaps appear that the whole of the construction, maintenance, and administration would be more smoothly and economically dealt with if transferred to one or other of the Departments.

Memoranda as to Transfer of Tanks and Wells to Mines Department.

Department of Public Works, 18 April, 1887.

THE construction of the wells and tanks was commenced in 1869; a few sums of money were voted to make route from Booligal to the Darling passable; a party was sent out under Mr. Wood across this country, then almost unoccupied, to bore for water.

For some years those works were carried out as money was voted and to extend benefit as far as small sums admitted; it then became necessary to lease them, and the Crown Lands declining to delegate to this Office the power of leasing, the works were handed over to that Office as executed.

Failing to realize any revenue, the works without any supervision fell into a state of disrepair. Charge of repairs was resumed in 1881 by Roads Department, the leasing remaining in charge of the Crown Lands Department; in the interim the Mines took charge of the Crown Lands Occupation Branch and of these works.

The administrative arrangements of 1880, though described as works for the storage of water in the pastoral districts, were held at the time by the then Minister for Works to apply only to the letting of such works on lease and collection of tolls. Some time after the Mines assumed the right to select sites and determine what works should be carried out, and published in several printed reports in a conspicuous way—after the names of many of the works—"condemned"—in some instances without the slightest reason other than the injury by silting or otherwise, consequent on the neglect of that or the Lands Department, during the time the works were in their charge.

Much fault was found with the lifting and drinking apparatus which were on the inexpensive scale suited to the amounts of the grants with which we had to deal. No end of devices—syphons, double whips, &c.—were proposed by the officers of the Mines Department, and it was proposed to purchase expensive excavating machines by Fowler, of Leeds; those proposals were steadily resisted by this Department, and it was then sought to have an hydraulic engineer and staff for the Mines Department—this Mr. Abbott, the Minister, decided against.

The survey of the watering places, reserves, and of the leases, has, I believe, been carried out by the Mines. I presume this will revert to the Survey Department. The construction of huts was handed over to the Mines under the following circumstances:—They stated certain accommodation was required; tenders were invited by this office for permanent structures in accord with the views stated. The Mines officers, on receipt of tenders, stated that they could get the work done for one-half by their caretakers, and under the circumstances the vote was handed over to their charge.

I am not certain that the fencing has been transferred to them, as there has been no reference to the Minister for Works. There has been no delay or shortcoming by this Department in that respect. On the contrary, we have tenders accepted for almost the entire of the fencing; and are waiting in any cases where it has not been provided with, for the surveys by the officers of the Mines Department not yet completed. A re-vote is in this year's Estimates for this purpose. The only official transfer of this fencing to the charge of the Mines is the insertion of the word "fencing" in the long title of a vote; by what specific authority this was done I cannot say, but the vote is not yet passed.

The drawbacks accompanying the division of authority arise solely from the action of the officers of the Mines, and most certainly the unnecessary correspondence is entirely from these officers, and the want of economy is certainly not attributable to this office. On the contrary we have endeavoured on every occasion to simplify and cheapen the works, but in every case without avail. I may instance the cheap tanks put between Bourke and Cobar, which the Mines insisted should be supplied with expensive lifting and drinking apparatus. I have felt some reluctance so far in dealing with the minute signed by the Honorable the Minister of Mines, but I think if he were made fully aware of the facts he would perhaps alter his views.

I may now deal with the unsigned and undated memorandum accompanying minute which proposes to show some causes which may appear to indicate the advantages of reorganizing the respective duties of the Department of Mines and Public Works in connection with public watering places:—

1st. The divided control in construction and maintenance weakens the administration, making it difficult if not impossible to apportion the responsibility, and failing in economy.

These arguments are equally applicable to any other Department of the Service. As well might the Medical Board ask to be allowed the building of lunatic asylums and hospitals; or the Department of Justice the gaols, court-houses, and lock-ups; or the Military Department to build the Barracks; or the Postal Department to build roads and bridges because they were for their use. As well might they complain that want of such control weakens their administration.

As to the difficulty in apportioning responsibility, that is very simple to anyone reading over carefully the records; and I am confident that any impartial person conversant with the facts would have very little difficulty in attributing the entire responsibility for neglect and failures to the officers of the Mines Department. It would lengthen this paper too much to quote the countless instances of frivolous complaints put forward, the fault in most cases being that of the Mines officers themselves.

2nd. With all the reasons under this head I most cordially concur. First as to the friction—there is nothing so easy as to make an appearance of friction by groundless and frivolous complaints. There has been no friction introduced by the Roads officers, but simply to rebut the implied charges of inefficiency brought against them.

No

No waste of time has been caused by, and no intemperate correspondence has emanated from this office, though it has been exposed to exasperating and groundless criticism from unqualified persons.

(a) The hesitation in taking over works has arisen from the inability and disinclination of the Mines Office to decide whether work was complete or not, and has been avoided lately by a note being taken of the alleged defect. It is stated this Department naturally objects to criticism; on the contrary, it courts the fair criticism of qualified and impartial judges, and such has been pretty favourable.

(b) I have explained how (easy?) by the interpolation of the one word "fencing" in an estimate, it is to acquire that duty from this Department, without the approval or knowledge of the Minister. Similar action has gradually led to the transfer of all the other duties, and it is now intended to attain the end so long sought by the transfer of the construction, which I trust will not be allowed. Repairs and construction can best be attended to by the experienced officers of this Department, the best of whom are stationed in the districts where there are most tanks; and who in common with everyone else in the Department take a keen interest in the success of the works constructed by them, which they are anxious to preserve from the neglect experienced on previous occasions when the works were removed from charge of the Department. And I would point out, that whether we have the repair and construction of these tanks, &c., or not, the officers charged with such duty must be retained in their respective districts in order to provide for road and bridge necessities, so that though there can be no doubt the administration would be more smoothly dealt with, the economy of keeping two sets of professional officers—one for tanks, and one for roads and bridges, in the same district—is not so evident.

I have no doubt that when the officers of the Department of Mines understand that the settlement to be now made is final, and not to be disturbed, further friction will cease; and I am of opinion that the divided authority—the duties of both parties being clearly defined—will result in a public benefit, by the check which will be established on the officers of each Department in those out-of-the-way districts where effective and vigilant superintendence is so difficult.

WILLIAM C. BENNETT.

I append a memoranda of Mr. Wood, Assistant-Engineer.

General Control of Tanks and Wells.

Roads, Sydney, 18 April, 1887.

In reference to the accompanying minute, signed by the Honorable the Minister for Mines, and the attached memoranda forming the basis of that minute, I have to submit for your consideration the following remarks:—

The minute, after defining the duties of the "Mines," under arrangements made in 1880, such duties being confined to the charge of works, further states, that in addition that Department has undertaken: (1.) The survey of watering places; (2.) the construction of huts; and that it is now found necessary to (3.) assume charge of fencing.

1. The survey of watering places was never carried out by us, so there is no necessity for me to deal with it further than to state that, had the work been left with the Survey Department, there would have been less delay in obtaining the necessary delineation of boundaries on which we have fenced the areas in question; there would have been less call for alterations in existing fencing after plans had been submitted, and no necessity for sending surveyors three and four times over the same work.

2. The construction of huts was vested, with the rest of the construction work, in this Department—tenders were invited and received for three-room cottages, and were then forwarded to the "Mines" for their final decision as to whether, in the face of the heavy expenditure on tank works, it was still considered desirable to proceed with their erection. All these works were in the dry districts, many of them being in most out-of-the-way places where material would be difficult to procure, and the tenders averaged about £85 each, and were recommended as being reasonable by our local officers. The Chief Inspector of Public Watering Places thought otherwise, and as the "Mines" stated they could carry them out more reasonably than we were prepared to do, this Department, though doubtful of the fact, thought, that in the public interest, they should have the opportunity of proving their case and if possible reduce the expenditure. At the same time it was considered that certain conditions should be imposed, fixing the standard of work and providing for information as to the cost of same. The Mines, as was naturally expected, accepted the construction, but as was also naturally to be expected, declined being bound by any condition on which a comparison could be based. In this way was the work acquired, and then only as regarded the erection of these huts at existing tanks and wells, then unprovided with such accommodation; their erection on all subsequent works having been provided for in the main construction contract. So far, I believe, no huts have been completed by the Mines, and so far no direct proof is forthcoming as to the wisdom or otherwise of handing a large sum of money to that Department for this purpose.

3. The charge of the fencing has always been under this Department, and after much patient thought, I have been unable to imagine on what grounds it is considered necessary for the Mines to assume charge of this particular work, unless it is to confine the evils connected with errors of survey to their Department, and save ours from the disagreeable duty of going over work twice on account of mistakes for which it is not responsible. If this is not the reason, it may possibly be found in the fact that having gradually absorbed or abstracted bit by bit much of the work from other Departments, they can then find a better claim for the transfer of the balance. This latter view is probably correct, as it is practically advanced as a reason for the transfer; concealed, however, to a certain extent, by statements with which I shall presently have to deal. To do this the more effectively, and to preclude the possibility of being charged with "interference with the functions of the Honorable the Minister for Mines," I will now traverse the statements advanced in the unsigned memoranda:—

"1. A divided control in construction and maintenance weakening the administration, making it difficult, if not impossible, to apportion the responsibility, and failing in economy."

This clause can best be taken in conjunction with the next.

"2. A divided control seems impossible without a considerable friction, waste of time in apparently unnecessary, and sometimes intemperate correspondence, serious delays in the transfer of works, and an undesirable jealousy between officers."

I am well aware of, and have on many occasions had to point out the evils of a divided control—have endeavoured to show that the only connection originally obtained by the Mines with these works was that due to their being vested with the control of the stock routes and reserves on which the tanks and wells were constructed, a duty that necessitated these works being leased by that Department, and to this their connection with them should be limited—though even that connection could be avoided by a very slight alteration in the Act.

The connection with the Mines has been gradually extended, with the result that good works have been neglected and condemned, and obstacles thrown in the way of this Department carrying out necessary repairs, because routine was neglected, and some weeks' time lost in passing reports and instructions through the two Departments. On the other hand, constant and frivolous complaints are made in reference to repairs, necessary or imaginary, and our officers sent travelling scores of miles in a most annoying and unnecessary manner. On the one hand we are guilty of "interference with the Minister's functions" (as per minute herewith relating to coating of tanks) if we do the work at once without waiting instructions from the Mines; and on the other hand if we neglect the public interest and observe strictly the rules and regulations, innumerable complaints are formulated against us. "Friction" is then complained of,—the wonder would be if under such conditions it did not exist. Charges of that nature can be brought against the most perfect and smoothest running machinery when the man in charge is seized with the absurd idea that sand is a better lubricant than oil.

"Waste of time" can most certainly not be charged against this Department, while as regards the question of "jealousy" it is quite safe to say that no officers of ours have the slightest grounds for any jealous feeling in regard to any of the Mines officers with whom they have had the pleasure of being brought into contact.

(a) "Hesitation may be shown in taking over a new work, upon a question whether the execution is good or details sufficiently complete, the constructing department not unnaturally perhaps objecting to such criticism, while the department with whom the maintenance rests, points out that it is responsible for the works taken over being in effective order."

The framer of these memoranda is perfectly correct in this case when he states that the "constructing department not unnaturally objects to such criticism." Fair and competent criticism is always valuable, and even when unpleasant can be respected; but criticism from gentlemen who, however capable they may be as inspectors of stock, are quite ignorant of constructive or mechanical detail, can be of little value especially when assertive and incorrect.

This (a) clause assumes relations between the two departments that do not exist; it assumes that we are simply the constructors, without any responsibility for maintenance. We are responsible for all repairs, with a concession to the

Mines that where necessary to save time—not waste it—they can expend a sum of money not exceeding £10. Criticism on design or on character of construction, provided the water can be properly supplied, is therefore unnecessary; but it is to be regretted that this is not recognized, and of my own pastoral knowledge I can certainly say that such unnecessary criticism has, in addition, been in many cases incorrect and most unjust. At the same time, I am quite prepared to admit that there have been defects in some of the details of construction in some of the works—defects that have necessitated repairs in some cases; but it is a strange thing that this army of ready critics, with which we have to deal, have failed in these cases to prove their qualifications for this role, having given us receipts for the works in good order and condition.

(b) "Repairs and alterations being necessary, the tendency of the constructing department is to find fault with officers of the maintaining one, and to attribute the necessity to the carelessness of the officers, and a tendency on the other side to place the fault upon imperfect design or defective construction."

The maintenance here referred to is that carried out, or that should be carried out, by the caretakers of the Mines or by the lessees. Unfortunately, there is too much ground for complaint as to the way in which these duties are performed. We have numberless complaints as to these men being absent from their duty; of neglect of drains, fencing, pumping gear, and appurtenances; and, worse than all, notwithstanding this neglect, a strong objection on the part of the Mines to our officers, who are constantly travelling these districts, and seeing these works, giving any instructions to the men in charge. Such neglect with consequent damage must accumulate until it has been inspected by a stock officer, reported to head office, and instructions passed through us to our local officers. I can readily understand that it must be most exasperating to the gentlemen who have constructed these works—their professional reputation at stake—to see them neglected, and to know that the consequent injury to the works is brought before them in the form of a complaint from the offending party, and to have to make long, expensive, and unnecessary journeys to attend to repairs which they might have had done when present in the first instance.

In the third clause of these memoranda the framer twists the strands together—shows how the Mines are charged with the administration of the Public Watering Places Act; how, by a slow process of absorption, they have acquired the survey of the public watering places, the construction of huts, and the partial general maintenance; how, by some unknown process, the introduction of one word—whether by the actual consent of the Minister or not—it has been decided that they "will undoubtedly have to undertake the fencing,"—thus by a piece-meal process of quiet, patient abstracting, leaving this Department construction only. Then the final twist is given to these strands, and the result stands boldly out in the form of a suggestion that "the whole could be more smoothly and economically dealt with if transferred to one or the other of the Departments." The inference as to which is obvious. When an octopus stretches forth its arms and fastens them one by one round its victim's arms and legs, and then suggests a transfer, it can be safely predicated that the transfer must be into the octopus; and that nothing but the entire man is intended. Similarly, there is not much room for doubt but that it is the intention of the Mines to absorb the entire work connected with tanks and wells. If such a transfer can be proved to be in the public interest, then there should be no opposition to this course being adopted,—if it is not in the public interest, then the claims of a far older Department than that of the Mines—the claims of officers who have been connected with these works from their initiation—are surely worthy of consideration.

I have no hesitation in stating that I consider any such transfer as that proposed would not be in the public interest; and I will give reasons that should free me from any charge of having formed a prejudiced opinion.

These works were initiated by this Department in 1869, and the whole of the small amount then available was expended between Booligal and Wilcannia; the tanks and wells then constructed were satisfactory to the Department and to the general public, being highly spoken of at the time, and adjudged the best works of the kind in the western districts. Since then about 130 more works have been constructed on the stock routes, nearly the whole of which have been handed over to the Mines, and receipts obtained showing them to have been in good order. The major portion of these works was carried out under very great difficulties during an exceptionally prolonged and disastrous drought, and when handing some of these works over to the Chief Inspector of Public Watering Places, he expressed himself as much pleased with the general design and the arrangement of details; on this point, I have no doubt he will bear me out. As all our subsequent works have been constructed on a similar type, I fail to see where the grounds for complaint arise. That such complaints are numerous our records can prove; as also, that in the majority of cases, they are due to the neglect of their own caretakers or lessees, or have no foundation in fact. If the overseers of public watering places are unequal to the duty of carrying out an efficient maintenance, it follows, *a fortiori* that they will be also unequal to laying out, designing, and supervising the construction. It is a fair assumption that none of the inspectors of stock, who are also overseers of public watering places, can use a level, and as that instrument is greatly required in laying out these works, that consequently they would be placed at a great and unfair disadvantage. Their stock duties, too, would not allow of efficient supervision being bestowed on these works, as is the case now; therefore, to properly carry out the works it would be necessary for the Mines to employ special officers, create a new staff at considerable extra cost to the country;—this, too, without any reduction in the staff of this Department now supervising these works, for their presence would still be required in their respective districts to supervise the other work of the Department.

A transfer to the Mines would thus be a source of great extra expense; the work would not be carried out in a more satisfactory manner, as I am sure the Commissioner will agree with me that our staff in the dry districts is fully competent for more important and extensive works than these; and that the general character of the work done is satisfactory. There being nothing to gain by such a transfer it could not be looked on as being anything but an injustice to take it out of the hands of those who have faithfully striven to do their duty, and have done it well.

ARTHUR P. WOOD,
Assistant Engineer.

The Commissioner for Roads.

Fencing at Public Watering Places.

Department of Mines, Public Watering Places Branch, Sydney, 11 May, 1887.

THIS letter from Mr. Overseer Yeo, shows the prices given by Mr. Stilwell for the erection of fencing at the Ivanhoe tank:—

First and original contract to Bevan, £112 per mile.

Bevan sublet to R. Elliot; price not ascertained.

Elliot sublet again to Anderson, 30s. per 100 for getting posts; £18 per mile for erecting same; £5 per 100 for carting posts from Kajulijah to Ivanhoe;

Equal to about £52 per mile, to which may be added cost and carriage of wire from Hay, showing that from £35 to £40 per mile has been paid in the excessive price given over and above a fair estimate; and about £60 per mile above the current station rates, which should not, I submit, be exceeded by this Department. In submitting these particulars I may state that from what I understand the prices paid for fencing upon this road, and indeed at most of the public watering places fenced by Roads and Bridges Branch are greatly in excess of ordinary rates; but this is the only instance in which I have directed the overseer to endeavour to verify the statements.

I have, however, reports from Mr. Inspector Boulton and Mr. Overseer Keighran, and a declaration made by the late caretaker of the One-tree tank, of a very undesirable and I may say unfortunate concession to some fencing contractors, by allowing them to dispense with straining posts.

I append extracts that bear very forcibly upon the existing state of things, and show the necessity of the Government making a stand against the exorbitant prices, that the careless manner of accepting contracts have induced contractors now to stand out for.

The Under Secretary for Mines.

HARRY GILLIAT.

Sydney, 9 March, 1887.

I, George Young, late caretaker of the One-Tree tank, do hereby make the following declaration: That the fence enclosing the said tank is strained from corner post to corner post, a distance of 160 yards, and that there are no intermediate straining posts. The knots in the wire from the length of the strain are prevented from being drawn tight. The wire is slack and cannot be properly strained without the intermediate straining posts. It is not usual in fencing to have this length of strain; the fence was left in this condition by the contractors a few days before I took charge.

And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the Reign of Her present Majesty, intituled, "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various Departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

Taken and declared at Sydney aforesaid, }
this ninth day of March, A.D., 1887. }

GEORGE YOUNG.

ALEX. BRUCE, J.P.

Extract

Extract from letter from Mr. Overseer Tully, Wilcannia, *re* fencing in his district, 19th March, 1887.

"Wire delivered anywhere within 100 miles of Wilcannia £20 per mile. If a supply of the wire required was purchased privately it could be delivered here under £14 per ton. At least the stores offer to supply it at that price, and carriage is very low at present.

Ferguson, Wilcannia, quotes by wire on 11th inst. Best brands No. 8 steel wire, £13 5s. a ton.

"M. J. C. TULLY."

Extract from Mr. Overseer Yeo's letter of 5th May, 1887.

"Their (the contractors') tenders would be ridiculous, as they inform me the huts would cost from £90 to £120; in fact they are very reluctant in giving any information to assist me, as they are afraid if they do it will be the means of cutting down the very high prices they have previously received for Government works.

"J. YEO."

Administration of Public Watering Places.

Department of Mines, Public Watering Places, Sydney, 13 May, 1887.

It appears, to put it briefly, from Mr. Bennett's minute, that the difficulties connected with the maintenance and construction of public watering places are chiefly the fault of the officers of the Mines Department.

There are no doubt faults in this as in other Departments, but I submit that this is not a reply to the Ministerial minute, or to my memorandum prepared for the Secretary for Mines, and which I regret to see was forwarded to the Works Department unsigned, but which I desire to acknowledge and affirm as an impartial statement.

The papers now annexed are a few of the cases referred to by the Commissioner for Roads; they are not selected, but are some of the more recent ones, and do not, I respectfully submit, bear out the contention of Mr. Bennett; the character of the minutes written by the Mines and Works officers will speak for themselves.

With reference to economy in construction I must refer to the cost of hutting as quoted by the Works Department, and the rates now being paid by this Department. With respect to the fencing, I must refer to the Ivanhoe case; with respect to construction of tanks, reference may perhaps be allowed to the Dry Lake, Seavilles, Cobbham Lake, and Copago tanks; the first three new tanks, the latter an old one, but all four under water for the last fifteen months; to the Paroo tanks, three of which are sunk within easy distance of water more permanent than they afford.

Mere professional training in the construction of tanks is hardly, I contend, so much required as practical experience and absolute economy; pastoral tenants construct scores of tanks for one by the Government, comparing favourably in most respects, at cheaper rates per cubic yard; and I fail to see why Government work should be paid so much in excess of private, and I venture to submit the opinion that contractors would not ask it if they were properly supervised and promptly paid.

It will be neither necessary nor desirable in my opinion to maintain such a staff as employed by the Commissioner for Roads; half a dozen active practical men, similar to Mr. Inspector Boulton, with ample bush experience, who can use a level, will readily do all the work required—ensuring, I have every reason to believe, a marked reduction in prime outlay without interfering with efficiency. The result, as shown with the hutting, is in favour of this view.

The reflections upon the officers of this Department have been, I think, uncalled for, and unjust.

HARRY GILLIAT.

Mr. Bennett will please make a careful report on the difference between the items shown on the enclosed papers as soon as possible.—J.S., 17/5/87.

APPENDIX A.

COMPARATIVE Statement, showing prices of tenders recommended for acceptance by the Works Department, and the prices at which this Department is doing the work, namely, erection of cottage.

| District. | Works Tender. | | | Mines Tender. | | |
|---------------------|---------------|----|----|---------------|------|-----|
| | £ | s. | d. | £ | s. | d. |
| Bourke | 93 | 7 | 8 | 60 | 0 | 0 |
| Cobar | 82 | 6 | 0 | *55 | 0 | 0 |
| Corowa | 68 | 0 | 0 | *40 | 7 | 10 |
| Silverton | | | | Iron | *50 | 0 |
| Wilcannia | | | } | Iron | 52 | 13 |
| | | | | Wood | 69 | 0 |

| | | | | | Wood | 58 |
| Forbes | | | | | *26 | 1 |

NOTE.—The estimates are for wooden cottages, and those marked * have been let. Those not marked are still under consideration or have been approved.

APPENDIX B.

FENCING.

OVERSEERS have only been lately asked to furnish specifications and estimates for fencing, in their districts, and replies have not been received from all.

The following have replied, and the price quoted is per mile complete.

| | £ | s. | d. | |
|------------------|----|----|----|---|
| Narrandera | 59 | 11 | 0 | per mile. |
| Silverton | 75 | 0 | 0 | |
| Cobar | 38 | 0 | 0 | to 45 0 0 according to distance from Cobar. |
| Deniliquin | 69 | 0 | 0 | |
| Condobolin | 39 | 19 | 0 | |
| Wilcannia | 52 | 0 | 0 | |

Reply

Reply to Mines' Minutes of 13th May.

1 June, 1887.

IN reply to Mines paper of 13th May, I would first remark that Mr. Gilliat is incorrect in stating that my paper of the 10th May is not a reply to the Mines papers; it is not only a reply in full, but contains information necessary to the proper comprehension of the subject, and which also shows that Mr. Gilliat's statements are anything but impartial or correct.

Appendix F does not appear to have been sent on with the papers, but as it would appear, it alludes to cases stated to have been referred to by me. I herewith forward a book kept of the complaints from the Mines officers, which I think will be found to bear out my statement—that harassing and frivolous complaints were made by the officers of that Department. It is inferred that the character of the minutes from this office bear unfavourable comparison with those of the Mines, but when old public servants are accused of incompetence and maladministration, if not worse, it is excusable if they do write plainly.

With reference to economy in construction, it is inferred that tenders have been obtained on the plans and specifications of this office, as prepared to meet the peremptory requisition of the Mines office, and as will be seen by the papers, contrary to the advice of this office, which considered the cottages one of the unnecessary expenses, as the papers will show. Table appendix A to Mines paper states that a tender has been obtained for such cottages at £26 1s. 6d. This is simply impossible, and serves to throw doubt on all the statements.

The only building on list which has been seen by any officer of this Department is that at Silverton, which I am informed is a two-room corrugated iron building erected by the caretaker and stated to have cost £50. It is contrasted on list with the weatherboard three-room cottages for which tenders were received by this office at Deniliquin. List shows that a cottage has been let for £44 3s. 6d. I append the telegram from Mr. Cronin by which it appears that it is a two-room cottage without paint. As it is not yet built we cannot contrast it with those for which tenders were received by this Department, and it is not clear from Mr. Cronin's message that more than the supply of material has been let; it would also appear that the work is being carried out piecemeal with the help of caretaker.

The question of fencing has been dealt with at length in Mr. Woods' memo., attached. In the instance quoted—the Ivanhoe tank fencing—was an extension of a contract for which tenders had been three times invited, and it was with great difficulty anyone could be got to undertake it. Nearly all the fencing done by this Department under great pressure from the Mines (in order to lease the works) was let in dry weather; they now point out that because we paid the high prices then demanded, that we have been careless and extravagant, but now in this favourable season, tenders only just obtained by Department for work in this vicinity are but £12 a mile or 9 per cent. less. Fresh tenders have been invited.

With reference to the few tanks stated to be under water, two of the sites were supported by Mr. Gilliat, namely, Dry Lake and Cobham—at the former a house built on a slight elevation over the tank was submerged to the eaves. Scavilles and Copago tanks were sunk at sites concurred in by local officer of the Mines, and those on the Paroo were defined in vote to be on that river, and it matters little where they were sunk in that Valley, as all would have been submerged; that they were sunk within easy distance of permanent water is incorrect, as has been disproved before. This work was done more than ten years ago and by an officer not now in the service.

Professional training seems to be objected to, but where the practical experience, ability, and determination for absolute economy exist, I think professional knowledge is at least no drawback. Messrs. Cronin, Stilwell, Hanna, Smijth, Coleman, and Adam are as well able to properly supervise those works as any equal number of officers in the Mines. Fortunately the characters of many of those gentlemen are well-known, and the number is not greater than that proposed by Mr. Gilliat.

Why the squatters' tanks are let at cheaper rates per cubic yard is explained by Mr. Wood. The opinions that the contractors would not ask it if they were properly supervised and properly paid, are both equally baseless. As to the supervision, I have said sufficient; as to the prompt payment, an arrangement was made that 50 per cent. be paid by local officer's cheque, immediately on measuring, and remainder as soon as office routine permitted, in common with all other payments at this office.

I maintain that, all things equal, excavation cannot be done cheaper than by this Department. I believe that public competition is the safest and fairest way of letting work, and we have always understood that any other mode of letting work is illegal, and contrary to a resolution of Parliament.

With reference to the concluding paragraph of Mr. Gilliat's paper—that remarks on the Mines officers were uncalled for or unjust—surely it is not supposed that old and tried officers will permit their work of more than twenty years to be taken out of their hands in this way without some effort to prevent it; and as to those remarks being unjust, I have only stated what I believe to be true.

With reference to the concluding paragraph of Mr. Gilliat's memo. on fencing, as to the careless manner in which contracts have been accepted at exorbitant rates, the records will prove the manner in which this Department was driven to accept such tenders by those who now find fault.

I have obtained from the Railway Department the prices paid for such tanks along the Bourke line as varying from 2s. 6d. to 3s. 6d. Our prices vary from 10½d. to 1s. 9d., and as I have stated the Mines themselves proposed to let seven to one man at 1s. 4d.

W.C.B.

Extracts from Mr. Gilliat's Minutes of 11th and 13th May, 1887, and replies thereto, by Mr. A. P. Wood.

Mr. Gilliat's statements.

1. Estimate of fencing "showing that from £35 to £40 per mile has been paid in excessive price given over and above a fair estimate, and about £60 per mile above the current station rates which should not, I think, be exceeded by this Department. In submitting these particulars I may state that from what I understand the prices paid for fencing upon this road, and indeed at most of the public watering places fenced by the Roads and Bridges Branch, are greatly in excess of ordinary rates, but this is the only instance in which I have directed the overseer to endeavour to verify the statements."

Replies.

I would point out that this is an exceptional case; that in the majority of instances the fencing has not cost more than £80 per mile.

The detail prices quoted have been obtained since the breaking up of the drought; and when an officer, anxious, like Mr. Yeo, to prove a case against this Department, has private conferences with contractors,—they, knowing his object, would be quite prepared to give him information calculated to serve his views, though I have little doubt they would at the same time hesitate very much to accept the work, even under existing conditions, at the prices quoted by them; their object being, as can be readily inferred, to assist in a change that must be to their advantage. The work in question, like most of the fencing throughout the western districts was let during and exceptionally severe drought, when the prices would necessarily be considerably in excess of the average rates. Tenders were invited several times, and eventually, as we were constantly being urged by the Mines to have this particular class of work carried out without delay, the lowest received tender was accepted; and it is submitted that the results obtained from public tendering must be accepted as giving the best evidence of the then value of the work, and as being more reliable than the biased information on which Mr. Yeo's estimate was apparently based. A proof of the correctness of this view is afforded by the fact that in many of the contracts in question it has been difficult to get contractors to accept extensions of their works at the original rates.

The comparison between the prices paid by the Crown lessees and by the Government is most inequitable. Station fencing is of a totally different standard to that required for the public watering places, as the latter has to be cattle, sheep, goat, and pig-proof; whereas the station fencing has only to be sheep-proof. And though this Department is accused of extravagance, the fencing adopted is of a much cheaper type than that recommended by the Mines, when these works were initiated. The Crown lessees generally carry out these works in favourable seasons, and afford their contractors every facility in their execution—giving grass and water, very often rations at cost price, providing for repairs to plant, permitting ready and short access through paddocks for haulage of material, and frequently assisting with the loan of draught cattle. It must also be borne in mind that the stations only pay half the usual rates of freight for wire, as it is carried as back-loading during the wool season, and is also delivered to their contractors on the ground.

With

Mr. Gilliat's statements

Replies

With Government contractors the conditions are nearly reversed. Where the station contractor finds every facility afforded him, the other finds only obstruction. In dry seasons grass and water is absolutely refused, rations most difficult to obtain, and access by direct routes through paddocks for haulage of material is forbidden; consequently great detours have to be made, proportionally increasing the cost of carrying out the work, and in some cases, leading to the indefinite suspension of the works in hand.

Another point worth consideration as bearing on the increased cost of the fencing is that all these works are carried out on the stock routes, where the grass or herbage is sooner exhausted than it is in the station paddocks.

Again, if, as is alleged, station fencing equal to ours is erected at much lower rates, it would appear strange that station fencers seldom tender for our work, and that when they do, they demand equally as high or higher rates, the work being open to all desirous of tendering. The inference to be drawn from this is that the large profits assumed to be made by Government contractors have no existence, and that the lower-priced station work offers greater inducements to these men than the necessarily higher standard of work we have to adopt for the public watering places.

The papers alluded to as having been received from Messrs. Boulton and Keighran have not been attached to Mr. Gilliat's minute, but we are supplied with the declaration made by the late caretaker of the "One Tree" tank.

In this, the only case adduced, there is no ground for the assertion that an "undesirable," "unfortunate," or in fact any concession having been made to the contractor. None of the fencing enclosing tanks is provided with other than the corner straining posts, as has been done at the "One Tree," nor do the specifications provide for any beyond these. If the adoption of this course is now considered such an evil, it is strange that this is the first time since the Mines have dealt with these works that any complaint has been made. Had that Department expressed any particular desire for this unnecessary addition the extra posts could have been provided without any increase in the cost of construction.

The extracts submitted have not in any way proved that exorbitant prices have been paid for tank and well works, and I think it would have been wiser to have provided very strong proof before practically accusing this Department of maladministration in carrying out these works, as also of criminal negligence, if not worse, in dealing with the public funds. It is almost unnecessary for me to state that tenders for these works have to pass through the same routine as tenders for other works under the Department, and it is hardly to be expected that a system which has borne the test of time as this has, will be much damaged by the criticism of an officer having a very limited, if any, experience of these matters.

I submit on attached schedule the prices obtained by the "Mines" from their local officers for the erection of caretakers' cottages; when quoting these prices to the prejudice of this Department, it appears to have been forgotten that estimates had been obtained from the same officers during a similar season to that during which our tenders were obtained. These are given in the first column of schedule attached.

In the endeavour to make a strong case against this Department by comparing the Mines quoted prices with the tenders we submitted, it appears that several very important features have been neglected, which, had they received due consideration would have materially altered the relative rates.

In 1883, prior to taking a vote for the erection of caretakers' cottages, we were furnished with a report from the Mines, informing us that from estimates obtained by the local officers of that Department it was found that two-roomed weather-board cottages would cost from £56 to £100; and in October, 1885, an extra room was recommended, and by minute of the Minister for Mines, the addition was authorized.

Tenders were invited for these works in May of last year (1886), when the season was as bad or worse than that of 1883—when the information was obtained by the Mines on which the estimate of cost of these works was based.

The tenders for three-room cottages ranged from £68 to £117, or from £12 to £17 in excess of the Mines estimate for two-rooms, which reduces our tenders to a more reasonable amount than the Mines Department expected these works to cost.

These tenders were submitted to the Mines for an expression of opinion as to whether, considering the great expense that had been already incurred with the tank works, it was still considered advisable to carry out this particular work. The tenders were, generally speaking, reasonable; but the Mines reported that they could carry out the work at a lesser cost, ignoring the fact that the offers submitted by us were below their own estimate; but on the strength of their statement the work was transferred to them, as it was considered that in the public interest they should have a chance of proving it. It will thus be seen that this so called extravagant expenditure was never undertaken by this Department, as with some few exceptions, no caretakers' cottages have been erected by us.

A schedule is now produced in which the tenders received by us are compared unfavourably with those received by the Mines; but it does not give any information to prove that the comparisons are fair; no word as to the size and accommodation afforded by these huts, nor as to the character of the work required; no information as to whether these tenders were obtained publicly or privately; as to whether they were prepared on a regular plan and specification, or on a vague verbal description. No allowance is made for the difference that contractors would make in their tenders if the work was supervised by the Mines local officers, and it is needless to say that without such elements of comparison being given, no such conclusion as is arrived at can fairly be deduced.

It is patent that the character of the seasons has a very important bearing on the cost of work undertaken in the western districts, but no allusion is made to this, though the statement is said to be impartial.

This alleged impartiality would have been less open to suspicion if when the Mines officers considered we were paying too much for works in connection with tanks and wells, they had through their office drawn our attention to it at the time. The information that has been gathered, and that it is now attempted to use against us, has been available for a very considerable time and on as good grounds as now, should long since have been brought forward and a remedy pointed out.

2. "I have, however, reports from Mr. Boulton and Mr. Keighran, and a declaration made by the late caretaker of the One Tree tank of a very undesirable, and I may say, unfortunate, concession to some fencing contractors by allowing them to dispense with straining posts."

3. "I append extracts that bear very forcibly upon the existing state of things, and show the necessity of the Government making a stand against the exorbitant prices that the careless manner of accepting contracts have induced contractors now to stand out for."

4. "With reference to economy in construction, I must refer to the cost of hutting, as quoted by the Works Department, and the rates now being paid by this Department."

Mr Gilliat's statements.

5. "With respect to construction of tanks, reference may perhaps be allowed to the Dry Lake, Seavilles, Cobham Lake, and Copaga tanks; the first three new tanks, the latter an old one, but all four under water for the last fifteen months—to the Paroo tanks, three of which are sunk within easy distance of water, more permanent than they afford."

6. "Pastoral tenants construct scores of tanks for one to the Government, comparing favourably in most respects, at cheaper rates per cubic yard, and I fail to see why Government work should be paid so much in excess of private, and I venture to submit the opinion that contractors would not ask it if they were properly supervised and promptly paid."

7. "It will be neither necessary nor desirable, in my opinion, to maintain such a staff as employed by the Commissioner for Roads. Half a dozen active practical men, similar to Mr. Inspector Boulton, with ample bush experience, who can use a level, will readily do all the work required, ensuring, I have every reason to believe, a marked reduction in prime outlay."

Replies

The Dry Lake and Cobham Lake tanks are sunk on sites supported by Mr. Gilliat's own report on the watering of the road from Wilcannia to Mount Browne; Seavilles and Copaga I have not seen, but the very fact of the sites being flooded is a proof that they have been constructed in suitable places; and as the Department was instructed to sink such tanks along the Paroo, much greater fault would have been found if to avoid floods the higher ground had been kept off the reserve, and in places where tanks were not likely to receive any supply but from the heaviest rains. It is well known that the rainfall has been exceptional in these localities, and that the flooding of the Dry Lake has never happened before. It is also well known that there is an unprecedented depth of water in the Cobham Lake, which has quite upset the opinion given in the report I have alluded to. The Paroo tanks I have never seen, but from what I have heard there was water in these works when there was no natural water in the Paroo, to judge of their value at the present time, when there is abundance of water through the country, is barely fair.

The statement that most station or private tanks will compare favourably with the Government work, is incorrect; the latter being acknowledged as the most complete works of the kind in the Colony. The statement that they cost more per cubic yard of earth excavated is quite true, but I will presently prove that water is conserved in them under conditions reversing the difference in cost.

1. The average station tank is much shallower than ours, and is excavated with much flatter slopes, and this makes a great difference in the cost. A tank 18 feet deep, such as ours, and costing say 1s. 6d. per cubic yard, would be put down to a depth of 12 feet with 4 to 1 slopes for 1s. or 6d. per cubic yard less, but the advantage of the extra depth in dry seasons more than compensates for the extra cost. The Government tanks must, as far as possible, give a permanent supply, and very few of these works have failed; whereas in long-continued droughts a very large number of station tanks run dry. The loss due to the flat slopes adopted by the squatters is shown by the following analysis, giving the salient points of difference between two tanks of the same depth and nearly equal capacities, but with 1½ to 1 and 4 to 1 slopes respectively:—

| | Depth tanks, 1½ to 1. | Station tanks, 4 to 1. |
|------------------------|-----------------------|------------------------|
| Capacity..... | 21,226 cubic yards | 22,275 cubic yards. |
| Mean depth | 14.3 feet | 9.6 feet. |
| Evaporation area | 40,000 square feet | 62,500 square feet. |
| Soakage area..... | 45,536 ,, ,, | 64,636 ,, ,, |

These figures speak volumes for the advantages of steep slopes, which with increased depth as compared with station tanks, I have stated to be the chief cause of the increased cost. The steep slopes give an increase of 50 per cent. in the mean depth, a decrease of 30 per cent. in the evaporation area, and a decrease of 30 per cent. in the soakage area. These figures are in themselves sufficient to warrant the increased cost, but this increase is further covered by the lessened evaporation due to the formation of a high embankment round the tank with the excavated material; this tends to the increase of cost. This embankment is in many cases utilized for the conservation of water above the surface of the ground, and in these cases the extra cost is covered by this advantage, which as far as it operates by storing 2 yards of water for one of excavation, reduces the cost by one-half.

There are causes which necessarily make Government tanks more costly than station tanks, but as I have already drawn attention to them when dealing with the accusations in regard to fencing, there is no necessity for me to recapitulate them here.

The assumption that contractors would not ask more for Government work than they do for station work if they were "properly supervised and promptly paid," proves that an opinion is advanced without a knowledge of the facts. I have been under the impression that a keen supervision was more calculated to increase than to lessen the cost of carrying out work, and that a loose and inefficient supervision, such as that suggested, would be more calculated to induce that result, as the contractors would then be able to do pretty well what they chose.

The assertion as to the effect of prompt payments also proves ignorance of the real facts. In regard to these particular works, the usual rule of the Department has been departed from, and 50 per cent. of the amount due has been paid at the time of measurement, the balance in the usual course, and as a rule within a very reasonable time. With the large sums of money paid away in this Department a system must be followed or no proper check could be kept on the officers. The moneys are paid as promptly as possible, and as very few cases of dissatisfaction have been reported to the head office, it is a fair assumption they do not exist. Advices of payment are telegraphed, and not a moment is lost in putting the voucher through the due course, and as to the efficiency and promptness of mode of payment, &c., I think the Treasury and Audit Departments will bear favourable testimony.

This is the last paragraph I purpose traversing, and it is a fitting conclusion to this most unusual criticism by one Department of the management of another.

In the preceding paragraph we are practically condemned for an inefficient supervision and want of promptitude in making payments. I can only assume that as it is stated, if the works are transferred to the Mines Department, it "will not be desirable to maintain such a staff" as that now charged with their construction, the proposed appointment of an equal number of new officers is an indirect assertion that our men are not equal to this duty. The only inference to be drawn from this is that Mr. Inspector Boulton, with six other gentlemen like him, would have more bush experience, more practical knowledge, and more ability for carrying out these works than such officers as Messrs. Stilwell, Cronin, Hanna, Smijth, and Coleman, who, for zeal, energy, and integrity, are equal to any officers in the service. In order to avoid any painful personalities, it may be as well to make no further remarks on this proposal. But it should be noted that the character of the supervision exercised by the Mines over the maintenance of these works by the lessees and caretakers but poorly bears out the claim now made for the transfer of the construction works. It should also be noted that no case has been made out as to the inefficiency of our supervision, and that the proposed transfer means a series of new appointments, without any compensating reduction in salaries to meet the new expenditure, as the officers now charged with this work would still have to be retained in their respective districts to carry out the road works.

ARTHUR P. WOOD.

ABSTRACT

ABSTRACT showing prices for Caretakers' Huts quoted by Mines in 1883 and 1887, and tenders received by Roads in 1886.

| District. | Mines estimate. | Proportionate estimate for three rooms.—1883. | Tenders received. | Mines tenders.—1887. |
|------------------|----------------------|--|----------------------|----------------------|
| | Two rooms.—1883. | | Three rooms.—1886. | |

| Walgett | | | 79 0 0 | |
| Forbes | | | | 26 1 6 |
| Silverton | | | | 50 0 0 |

NOTE.—The type of building for which tenders were received was determined on information supplied by the Mines, and that Department also, in 1883, furnished an estimate of what two-room cottages would probably cost; but, as they desired, when practicable, to have three rooms, tenders were invited accordingly, and will be found to be under the Mines estimate.

We are now confronted with fresh estimates of value on which a charge of extravagance is founded, but no information as to the nature of the work that the Mines can do for the prices they quote is given. That the conditions are altered is certain from the price quoted for Forbes (£26 1s. 6d.), at which price it would be utterly impossible to erect a cottage under the conditions set forth.

Information has been furnished that, in the Deniliquin District, where the recent Mines estimate is £44 3s. 6d., the work is being done by day-labour; that the material, without carriage, has cost about £50, and that only two rooms are provided for. Under such conditions the comparison made is most unfair. The cottage at Silverton is of iron, contains two rooms, and is of a different type altogether to that submitted for the approval of the Mines. Any comparison on such a basis is not reliable.

V.

EARLIER SPECIFICATION UNDER WHICH TANKS WERE COMPLETED.

Specification of work required for the completion of a Tank at District, contract

Works.—The work for which tenders are to be made, and to which this specification refers, comprises the providing of all materials, tools, labour, scaffolding, implements, workmanship, and every other thing requisite for the full and proper execution of all the excavation, embankment, timber-work, and smith-work, together with the carting and fixing of all machinery, gear, hose, piping, and all appurtenances whatsoever required for the completion and efficient working condition of a tank at in accordance with the plans, specification, and general conditions hereto attached, and to the entire satisfaction of the Commissioner and Engineer for Roads.

Design.—The tank will be excavated in the , at the place specified, or at such other site as may be definitely fixed upon, as hereinafter provided; the excavated material to be placed . The high-level water will be drawn by gravitation; the low-level water will be pumped out. Troughs will be constructed for the purpose of watering stock outside the tank. Drains will be made for carrying water into the tank, and silt-tanks will be excavated where required.

Excavation.—As soon as possible after signing agreement, written instructions will be issued to the contractor, and immediately on receipt thereof he must proceed with main excavation on lines previously laid down by the superintendent. The excavation will be yards long by yards wide in the bottom, and feet deep; to have side slopes of to one. If a depth of should prove unavailable, or if from or for any other reason it may be deemed advisable or necessary, the Commissioner for Roads, or other authorized officer, may alter the design accordingly. Tenders must therefore state separate prices per cube yard for all material excavated under this contract for , and feet respectively. If any depth than those mentioned be finally adopted, a proportionate price must be agreed upon before commencement of main excavation, and at a schedule price per cube yard. The contractor must excavate all drains, silt-tanks, or other excavations whatsoever that may be required.

Embankment.—The base of the embankment shall first be ploughed with furrows not less than 5 inches deep. The excavated material is to be placed around the excavation as shown on plan. The inside toe of embankment to 10 yards distant from line of excavation. The embankment will be feet wide at base, with slopes of to one inside and to one outside. The superintendent may order, and the contractor must then use, any particular strata or quality of material obtainable in the main excavation for inside slope of embankment. The embankment to be commenced at the point nearest to where the material is drawn from the excavation, and worked away in such manner as may be satisfactory to the superintendent and as to ensure its being most firmly laid. The material to be spread in layers not more than 1 foot thick; all lumps that will not pass through a 6-inch gauge are to be broken smaller, and in event the sides are to be edged up to facilitate soakage and settling. The top of embankment will have a convexity of inches.

Silt-tanks.—Silt-tanks will be excavated as shown on plan to be feet square at the top feet deep, with side slopes of $1\frac{1}{2}$ to 1.

Drains.—Drains to be feet wide and inches deep, to have a curved cross-section, and to be excavated on lines and to levels laid out or instructed by the superintendent, the material being thrown on the lower or both sides, as may be directed. In graded drains the contractor must be careful that the levels are closely adhered to; any departure will be at his own risk, and the error must be remedied in any way the Commissioner may direct.

Inlet-pipe.—Cast-iron inlet-pipe 12 inches diameter, with valve and wind-bore, will be supplied by the Government, and delivered to the contractor at , from which place he must cart it to the works and fix it to the satisfaction of the officer in charge. The joints to be thoroughly caulked and leaded up.

Fluming.—Flume to be semi-circular in cross section, 4 feet wide, constructed of No. 20 plain galvanized iron supported on 9-inch x 6-inch joists, over which the iron is to lap 4 inches, and be secured there to with three rows of galvanized iron nails. All joints to be transverse, to have a 3-inch lap made perfectly watertight with white leaded felt, and secured with galvanized screw-bolts. The flume to be supported at intervals of 10 feet on timber trestles or on piles, as may be directed. The scantlings of all timbers to be the same as figured in drawings, but the lengths of trestle legs or piles for supporting fluming to be determined by the contractor on the ground. The inlet end of flume where leaving the silt-tank to be protected from scour by a row of sheet piling, as shown in drawings.

Inlet-shoots.—When the tank is fed through an inlet-pipe the shoot is to be 2 feet wide and 2 feet deep in the clear when lined; but when inlet-pipe is dispensed with and the tank is fed through a gap left in the embankment, or when supplied by fluming, then the shoots to carry the discharge are to be 5 feet wide by 2 feet deep, and in the latter case the upper end of the shoot is to be covered in for a distance of 10 feet, with 2-inch boards, as shown in drawings. The frame timbers are to be 6 feet apart and of the dimensions figured; the bottom and sides are to be sheathed with sawn planks 6 inches wide and 2 inches thick, close jointed and securely nailed to the frame timbers, and the shoot to be then lined with No. 20 plain galvanized iron, with transverse joints having a 3-inch overlap, and secured with three rows of galvanized nails with ruffs. In all cases a timber apron 12 feet long by 12 feet wide will have to be constructed as shown in drawings.

Pumping

Pumping Gear.—

Service tank.—This tank will be feet long, by feet wide by feet deep, measurements taken in the clear. To be built on sleepers bedded level and adzed on upper surfaces to give a true bearing for joists—sleepers to be not less than 12 inches diameter at small end. The tank will be built as shown in plan. All frame timbers must be of the full scantling shown, and all tenons and mortices must be clean cut and fit accurately. The timber lining will be of sawn planks 2 inches thick and 6 inches wide, to be close-jointed and securely nailed to the frame timbers. The inside of the tank is to be lined with No. 20 B.W.G. plain galvanized iron (Gospel Oak), having a lap of 3 inches at each joint, to be made watertight with a strip of felt 3 inches wide, white-leaded, and fastened with three rows of 1½-inch galvanized nails, with ruffs white-leaded. Each sheet of iron to receive one coat of coal tar on its under side. The contractor will supply and fix one 4-inch cast-iron cock for supplying troughing, and will make a watertight connection between outlet pipe and service tank.

Troughing.—100 lineal yards of troughing to be built as shown on plan. The iron to be of similar gauge and quality, as specified for service tank, to be secured to side timbers with three rows 1½-inch galvanized nails. Joints to be made perfectly watertight with white-leaded felt in all laps, and secured with galvanized screw-bolts.

Fencing.—Fencing to be erected round tank as shown on plan. Posts to be 7 feet long by 9 inches by 3 inches, sunk 10 feet apart to a depth of 2 feet 6 inches. Top rail 7 inches by 3 inches morticed into posts. Five No. 4 wires to be run through all posts.

Timber.—Where the kind of timber to be used in particular work is not hereinbefore specially mentioned, the contractor is to use gum, and the sizes and dimensions specified and shown on plan are for that timber. The timber throughout is to be of the best description, to be straight and sound, without wave, shake, gum veins, or sun cracks, and to be perfectly free from all other imperfections or defects. To ensure that it will be well seasoned, it must be cut as soon after acceptance of tender as possible, and no advance payment will be made until the whole of the sawn and squared timber is delivered on the ground, notwithstanding any progress with the works, or any clause in the general conditions to the contrary.

Tarring.—All timber throughout, except fencing, to receive three coats of tar and composition, the first coat to be all coal tar laid on hot, the second and third coats to be composed of seven parts coal tar and four parts of Stockholm tar and one part pitch, thoroughly melted together and applied hot. No tar to be applied during or immediately after wet weather, or while surface of timber is wet, and an interval of at least forty-eight hours must elapse between each application.

Time.—All the works specified to be completed within months from date of signing the bond, irrespective of bad weather or any other cause of delay, except a written order be given by the officers in charge not to proceed with the work, or to increase the same, when a proportionate extension of time must be allowed.

Tenders.—Tenders to state a bulk sum for the execution of all the works specified, and schedule of prices at which any deductions or additions shall be valued; such additions or deductions, no matter to what extent ordered, shall not vitiate or set aside the contract.

Conditions.—In all matters relating to this contract not herein specified, contractors shall be bound by the general conditions hereto attached.

VI.

LATER SPECIFICATION UNDER WHICH TANKS WERE COMPLETED.

SPECIFICATION of work required for the construction of a Tank and appurtenances at , on the road from to

Works.—The work for which tenders are to be made, and to which this specification refers, comprises the providing of all materials, except those hereafter specified as being provided by the Government, all tools, labour, implements, workmanship, and every other thing requisite for the full and proper execution of all the excavations, embankments, timber-work, smithwork, and stonework, together with the carting and fixing of all machinery, gear, piping, and all appurtenances whatever, required for the completion and efficient working conditions of a tank at , in accordance with this specification and the general conditions and drawings, and to the entire satisfaction of the Commissioner and Chief Engineer for Roads.

Preliminary.—Before commencing the excavation of main tank, the contractor must sink trial shafts to a depth of 18 feet on the site selected, and should the material passed through be considered unsuitable, the road superintendent shall have the power to order, and the contractor must then carry out, the necessary excavation at any other site that may be selected within 2 miles of the first-chosen site. The contractor will be paid 1s. 6d. per foot for all trial shafts put down on any site subsequently abandoned, but will receive no payment for such work where the site is adopted. When the site is finally approved, written instructions will be issued to contractor, and immediately on receipt thereof he must proceed with the works on the lines laid down by the road superintendent.

Clearing.—An area comprising that covered by the excavation, berm, and embankments, and extending 1 chain beyond the fencing enclosing tank, and extending 1 chain on each side of and beyond the line of troughing to be cleared, all trees, stumps, and brushwood to be grubbed and burnt, and holes filled with punned earth.

Excavation.—The excavation will be feet long by feet wide in the bottom and 18 feet deep, to have side slopes of 2 to 1. The bottom of tank to be left perfectly level, and the batters dressed to a regular surface. If a depth of 18 feet should prove unavailable, or if for any other reason it may be deemed advisable, the Commissioner for Roads, or other authorized officer, may alter the design accordingly. Tenders must, therefore, state separate prices per cubic yard for excavation 18 feet, 16 feet, and 14 feet deep, and if any depth other than these be finally adopted, a proportionate price will be fixed by the Commissioner, and contractor paid accordingly. Should the road superintendent consider that the surface, or any other stratum, passed through in the excavation is too porous, the contractor must adopt such steps to puddle the porous ground as the superintendent may direct; the cost of such work to be provided for by a price per cubic yard for puddle being quoted in schedule of prices. Silt-tank to be excavated in position shown on plan, or on such lines as the road superintendent may direct, to be 9 feet deep, 40 feet square in the bottom, with side slopes of 2 to 1. The bottom and sides to be neatly trimmed, as specified for main tank.

Embankment.—The excavated material from main and silt-tanks to be formed into an embankment round main tank, as shown on plans. The inner toe of embankment to be 30 feet distant from line of cutting. The embankment to be 10 feet high, with side slopes neatly and regularly dressed to batters of 2 to 1; the top width to be uniform, and regulated by the amount of material to be excavated. When the design provides for the storage of water above the natural surface of ground, the seat of the embankment must be ploughed, the furrows to be not less than 5 inches deep, and the material in embankment must be thoroughly grafted with the surface. The bank to be commenced at points nearest to where material is drawn from the excavation, and the earth deposited in such way as will ensure the most thorough consolidation by traffic. The earth to be spread in layers not more than 6 inches thick, all clods to be broken down, and, in the event of rain, the edges are to be raised to facilitate soakage and settlement. Should the features of the locality make such a course advisable, the road superintendent may alter the design by running the side embankments out to high ground adjoining excavation, and such alteration shall be carried out by the contractor without any claim for additional payment. When the embankment is trimmed up, the top surface to be neatly dished to the extent of 9 inches, the dishing to be graded so as to give a regular fall to such points as may be directed by the road superintendent, and at these points the contractor will be required to lay 3-inch diameter iron discharge pipes (provided by the Government) in the embankment to carry off all rain water that would lodge on the surface.

Drains.—Ordinary drains are to have a curved cross-section, to be 9 inches deep, and feet wide, and are to be excavated on lines laid out by the superintendent, the material being formed into an embankment on the lower side and 3 feet clear from edge of drain. In graded drains the contractor must closely adhere to the levels, and any departure from them must be at his own risk, and the error must be remedied in any way the Commissioner may direct.

Inlet pipes.—When the design provides for the storage of water above the surface, cast-iron inlet pipes 12 inches in diameter will be supplied by the Government, and delivered to the contractor at from which place he must cart them to the works, and fix them in such position and at such level as the Superintendent may direct. Joints of pipes and valves to be made with white hempen yarn, well caulked in so as to leave a vacancy of 2 inches for the lead, which must be poured in at one running, and caulked up with suitable tools to ⅜ inch within the sockets; great care must be taken to keep the spigots concentric with the sockets; great care must also be taken to have the earth thoroughly punned round the pipes.

Inlet shoot.—When the tank is fed through an inlet pipe the shoot is to be 2 feet wide and 2 feet deep in the clear when lined; but when the tank is only intended to contain water to the level of natural surface the inlet shoot is to be 5 feet

feet wide and 2 feet deep, and that portion of it extending under the dwarf embankment must be covered in with closely-fitting timbers 6 feet long and 6 inches thick. In both cases the shoot for 10 feet on its upper fall into tank is to be covered in with 2-inch thick sawn planking, spiked to side planks of sheathing, and further secured by a 4-inch x 2-inch bearing-plate, secured to frame timbers, as shown in drawings. Spaces $\frac{1}{2}$ inch wide to be left between these covering-boards. The frame timbers are to be 6 feet apart from centre to centre, and to be of the scantlings shown in drawings; the bottom and sides to be sheathed with sawn planks 6 inches wide and 2 inches thick, close-jointed, and secured to frame timbers with 5-inch nails; the sheathing boards to break joint on alternate frames. The sheathing to be lined with No. 20 gauge plain galvanized iron of approved brand, all joints to have a 3-inch overlap, and to be secured with three rows of galvanized nails with ruffs pitched 2 inches apart. The side timbers of frames are to be sunk in the ground and securely rammed, three sets in each shoot being cut with a 12-inch diameter butt, as shown in drawings. Spreaders 6 inches x 4 inches to be securely fixed at each set of frames, and after being notched down 2 inches on sheathing boards are to be secured to side timbers with $\frac{1}{2}$ -inch diameter bolts. The inlet end of shoots 5 feet wide to be splayed for a length of 10 feet, the width being increased to 10 feet, and the iron lining to be carried 18 inches into the bottom and sides of inlet trench to prevent scouring at the back of or under the timber-work. When the top of shoot is below the level of ground the excavation to be battered at $1\frac{1}{2}$ to 1, a berm of 1 foot between shoot and foot of slope. Where the shoot passes through gap in embankment a berm of at least 3 feet must be left between edge of shoot and toe of bank.

Apron.—A timber apron 12 feet long and 12 feet wide to be constructed at the bottom of shoot, as shown in drawings. Four sleepers 16 feet long and 9 inches square to be let 4 feet into the foot of slope, and to be sunk flush with bottom of tank; sheathing planks 12 feet long, 6 inches x 2 inches, to be close-jointed and secured to sleepers with 5-inch nails; side logs 9 inches square and 12 feet long to be secured to outer sleepers with three driving bolts 16 inches long and $\frac{3}{4}$ inch diameter. Posts 9 inches square and 5 feet long, exclusive of the 12-inch diameter butt, to be sunk in the ground and well rammed and secured to side logs with $\frac{3}{4}$ -inch diameter bolts as shown.

Pumping gear.—“Special” steam pump with boiler, suction and discharge piping, suction joint, foot valve, and all connections will be supplied by the Government and delivered to the contractor at _____ from which place he must cart them to, and erect them at the works. The foundation plate of boiler and pump to be securely bolted to a timber platform constructed of four sleepers 12 inches square and 10 feet long, firmly bedded in the ground, and covered with sawn slabs 10 feet long, 8 inches wide, and 4 inches thick, secured to sleepers by spikes 7 inches long and $\frac{3}{4}$ inches diameter, two at each intersection. The level of platform to be 6 inches above level of ground. The suction pipe to be laid under the embankment, and connected with the movable suction joint which is to be supported on timber frame, as shown in drawings, the movable length of suction pipe to be of sufficient length to reach to the bottom of tank, and to be supported by a buoy, as shown. The pipes to be thoroughly cleaned before being laid, and all joints to be white-leaded and screwed tight into the collars. All steam and water connections to be made steam and water tight; all glands to be packed; mud-hole and man-hole covers made steam-tight, and all machinery cleaned and lubricated. The outside of boiler and pump, &c., to be thoroughly scraped, cleaned, and painted; the boiler to receive three coats red lead and oil, the steam and water cylinders three coats green paint picked out in black; all connections three coats black paint. Brass and faced work to be left bright. The contractor will have to fill the boiler with water and get up steam for test trial, and no payment on account of erection will be made by the Road Superintendent until he is fully satisfied that everything is in working order. Amos and Smith’s horse-gear pump, with all connections, will be supplied by the Government and delivered to the contractor at _____ from which place he will cart them to and erect them at the site of the works. The bed-plate of horse-gear and pump to be securely bolted to 12 inches square timber sleepers, as shown in drawings. The suction-pipe and fittings to be laid and fixed, as specified for steam pump in *previous clause*, the movable suction-joint and pipe being supported on similar timber staging. The foundation logs for horse-gear and pump are to be firmly bedded flush with the surface of horse-walk, which is to be 30 feet in diameter, and formed in main embankment, as shown in drawings. The contractor to provide a horse-arm to fit in socket of horse gear, to be 12 feet long, planed and wrought, to receive three coats of red lead and oil. The horse-gear and pump to receive three coats of green paint picked out in black. All brass and faced work to be left bright.

Service tank and troughing.—The service tank to be of _____, as per specification attached; the troughing of _____, also as per specification attached. The contractor to fill whichever type of service tank is adopted with water after completion, and no final payment will be made on account of contract until the superintendent is satisfied that it is perfectly watertight.

Weather-shed for engines.—Weather-shed for engine to be framed in accordance with drawings. The walls, roof, and doors to be covered with No. 24 gauge corrugated galvanized iron. The shed to be 12 feet square outside, framing to be supported on eight blocks, 2 feet 6 inches long, sunk 2 feet in the ground and securely rammed. The bottom sills to be 8 inches x 4 inches, halved at the corners, and spiked down to the blocks with 7-inch spikes, $\frac{3}{4}$ -inch diameter; to be morticed to receive the tenons of uprights. Corner uprights to be 4 inches x 4 inches, and intermediate uprights 4 inches x 3 inches, braced, as shown in drawings, with 3 inches x 1 inch diagonals. Wall-plates to be 4 inches x 3 inches, halved at the corners, and morticed to receive the tenons of uprights. Horizontal bearers, 4 inches x 1 $\frac{1}{2}$ inch, to be let in flush with outer surface of uprights, to carry screws securing iron. Rafters to be 5 inches x 2 inches, secured to wall-plates and ridge-board with nails; ridge-board to be 6 inches x 1 inch; battens, three on each side, to be 3 inches x 1 inch, to be securely spiked to the rafters. Gable studs, 4 inches x 2 inches, to be tenoned into wall-plate and securely spiked to outer rafters. Doors to be 6 feet 6 inches x 3 feet in the clear, framed as shown in drawing, with 3-inch x 3-inch timber, and hung to door-posts with T hinges; the doorway to be opposite the furnace-door of boiler. The galvanized corrugated iron in walls, roof, and door, to be secured with galvanized screws to the entire satisfaction of the superintendent. Opening to be cut in roof for funnel of boiler, and the ridge covered with a galvanized iron ridge cap.

Tank fencing.—Fencing to be erected round tank as shown in drawings. Posts to be 7 feet long x 9 inches x 3 inches, sunk 2 feet 6 inches in the ground, and pitched 3 feet 3 inches apart. Top rail, 7 inches x 3 inches, to be accurately tenoned into mortices. Five No. 6 gauge wires to be run through each post, and strained to corner posts, 12-inch diameter, securely strutted with 8-inch diameter struts, notched into posts, sunk 2 feet in the ground, and footed against a dwarf post, 8 inches diameter, sunk 2 feet 6 inches.

Special lease fencing.—The fencing to be erected on lines laid out by the road superintendent or other authorized officer. The posts to be 7 feet long x 9 inches x 3 inches, sunk 10 feet apart from centre to centre, and to a depth of 2 feet 6 inches. Corner posts to be 12 inches diameter, securely strutted with 8-inch diameter struts, notched into posts, sunk 2 feet in the ground, and footed against a dwarf post, 8 inches diameter, sunk 2 feet 6 inches. Six wires to be run through each post, the top one No. 4 gauge, and all the rest No. 6 gauge, to be spaced as shown in drawings, and each wire to be strained to the nearest post to the end of coil; no wires to be spliced.

Gates.—Field gates to be 12 feet long, constructed in strict accordance with drawings, and of wrought and planed Kauri pine. Eight foot gates, either double or single, to be also constructed of wrought and planed Kauri pine. The iron-work of all gates to be of the best quality and of the full dimensions shown. Each gate to be hung on two double strap wrought-iron hinges, with eyes worked in the solid to take a wrought-iron crook 1-inch diameter, the crook to pass through post and to be secured with nut and 2-inch square washer $\frac{1}{2}$ -inch thick. The whole of the timber to receive three coats of white lead in oil, and all ironwork three coats of Brunswick black. The gates to be fixed where directed and hung on 12-inch square posts sunk and strutted as shown in drawings.

Caretaker’s cottage.—Caretaker’s cottage to be constructed in such position on the special lease area as the road superintendent may direct, and in accordance with the attached specification.

Timber.—Where the kind of timber to be used in any works on this contract is not hereinbefore specially mentioned, the contractor is to use _____, which is to be of the best description, straight and sound, without wanes, shakes, or sun cracks, and to be free from other imperfections and defects. To ensure that it will be well seasoned, it must be cut as soon after acceptance of tender as possible, and no advance will be made until the whole of the timber is delivered on the ground, notwithstanding any clause in the general conditions to the contrary.

Tarring.—All timber, except that specified for weather-sheds, caretakers’ cottages, gates, and fencing to receive three coats of composition, composed of three parts of coal tar to one part of pitch, thoroughly melted together and applied hot.

Time.—All the works specified to be completed within _____ months from date of signing the bond, irrespective of bad weather or any other cause of delay, except a written order be given by the officer in charge not to proceed with the work, or to increase the same, when a proportionate extension of time must be allowed.

Tenders.—Tenders to state a bulk sum for all the works specified.

Conditions.—In all things relating to this contract not herein contained, the contractor to be bound by the general conditions attached.

VII.

A.—DEPARTMENT OF ROADS AND BRIDGES—TANKS AND WELLS.

SPECIFICATION of work required to be done in the construction of a Caretaker's Cottage at the
on the road from to

General.—This contract is for the supply of all tools, labour, and material, necessary for the construction of a three-roomed cottage, in accordance with the drawings and this specification, and to the entire satisfaction of the Commissioner for Roads or other authorized officer.

Site.—The site to be determined by the local officer, who will mark out the lines for the foundations.

Design.—The cottage will contain three rooms of the dimensions shown on drawings, and will be founded on wooden blocks; the walls to be of weather-board, secured to timber studding, except the partitions, which will be of sawn slabs; the roof to be covered with galvanized iron, capped and guttered; the whole of the rooms to be floored.

Foundation.—The foundation to consist of twenty-three blocks, 12 inches in diameter and 3 feet long, the ends to be sawn square and the blocks sunk to an average depth of 2 feet 6 inches, the top surfaces to be accurately levelled, and the earth thoroughly rammed in round them.

Framework.—The bottom wall-plates to be 4 inches x 3 inches, all intersections to be halved, and all other joints square scarfed; the scarfs to be 9 inches long, and must be made over a foundation-block. The plates to be secured to each foundation-block by an iron spike 7 inches long and $\frac{3}{8}$ inch in diameter. The studs to be of the lengths shown in drawings, to be 4 inches square at all corners, and 4 inches x 3 inches in all other cases; tenons 3 inches x 2 inches x 3 inches, to be clean cut at each end, and accurately fitted into mortices cut in the bottom and top wall-plates. The top wall-plates to be 4 inches x 3 inches, halved at the intersections, and scarfed at the joints as already specified; the end and partition-plates to be the full width of the building. Lintels of windows and doors, and sills of windows, to be tenoned into the studs forming the jambs. The outer walls to be covered with weather-boards, securely nailed to the studding; all joints and cutting ends against jamb-linings, and against corner fillets, to be cut true and to fit close. The weather-boards to be not more than 9 inches wide, and to be $\frac{3}{4}$ inch thick. The fillets at corners of cottage to be 3 inches x 1 inch, securely nailed to the corner studs. The partition-walls to be filled in between studs with horizontal sawn planks 1 inch thick, secured in position by fillets, $1\frac{1}{2}$ inch square, as shown in drawings.

Floor.—The floor to consist of sawn pine boards 6 inches wide and 1 inch thick, close jointed and securely nailed to joists 6 inches x 3 inches, set 2 feet apart from centre to centre; the boards to be accurately fitted round and up to the face of the weather-boarding.

Roof.—The rafters to be 5 inches x 3 inches, framed as shown in drawings, to be 3 feet apart from centre to centre; collar-beams to be 4 inches x 3 inches, secured to rafters with $\frac{1}{2}$ -inch bolts; the ridge-board to be 8 inches x 1 inch; battens to be $2\frac{1}{2}$ inches x 1 inch, three rows on each face of roof. The whole to be covered with No. gauge corrugated galvanized iron, securely screwed to the battens; the ridge to be capped with galvanized iron, as shown. Galvanized iron guttering to be fixed on back and front of main building, and connected to one down-pipe; the roof at back of skillion to be guttered and provided with a down-pipe.

Chimney.—The chimney to be constructed as shown in drawings, the walls to be similar to those of the main building; the hips and flue to be of corrugated galvanized iron, fixed on a timber frame; the hearth to be brought up 6 inches above the level of floor with well-tempered clay, and the chimney-place lined 3 feet 6 inches above the same level with similar material. If stone is procurable within 3 miles of the site, rubble masonry, set in lime mortar, to be substituted for clay.

Doors.—Front door to be framed with four panels as shown, to be hung on 3-inch butt-hinges, and provided with 8-inch rim lock and usual furniture. The jamb-linings to be of 1-inch pine, planed and wrought. The remaining doors to be "proper ledged," hung on two 12-inch T-hinges, and provided with 8-inch rim locks and usual furniture.

Windows.—The front windows to be double sashed; the upper sash fixed, the lower sliding. The side window to have one sash hung on pivots, the whole to be provided with brass fastenings. The jambs to be lined with 1-inch pine, planed and wrought.

Timber.—Where the kind of timber to be used in particular work is not hereinbefore specially mentioned, the contractor is to use pine, and the sizes and dimensions specified are for that timber, which is to be of the best description, straight and sound, without waness, shakes, or sun-cracks, and to be free from all other imperfections or defects. To ensure that it will be well-seasoned, it must be cut as soon after acceptance of tender as possible, and no advance will be made until the whole of the sawn timber is delivered on the ground, notwithstanding any clause in the general conditions to the contrary.

Painting.—The outer face of weather-boarding to receive three coats of white lead, in oil; and the doors, window-sashes, and jamb-linings three coats of dark gray paint.

Time.—All the works specified to be completed within months from date of signing the bond, irrespective of bad weather or any other cause of delay, except a written order be given by the officer in charge not to proceed with the work, or to increase the same, when a proportionate extension of time must be allowed.

Tenders.—Tenders to state a bulk sum for all the works specified.

Conditions.—In all things relating to this contract not herein contained, the contractor to be bound by the general conditions attached.

B.—DEPARTMENT OF ROADS AND BRIDGES—TANKS AND WELLS.

SPECIFICATION of work required to be done in the construction of a Caretaker's Cottage at the
on the road from

General.—This contract is for the supply of all tools, labour, and material, necessary for the construction of a three-roomed cottage, in accordance with the drawings and this specification, and to the entire satisfaction of the Commissioner for Roads, or other authorized officer.

Site.—The site to be determined by the local officer, who will mark out the lines for the foundations.

Design.—The cottage will contain three rooms of the dimensions shown on drawings, and will be founded on wooden blocks; the walls to be of half-round timber, fixed in a timber framing, except the partitions, which will be of sawn slabs; the roof to be covered with galvanized iron, capped and guttered; the whole of the rooms to be floored.

Foundation.—The foundation to consist of twenty-three blocks, 12 inches in diameter and 3 feet long, the ends to be sawn square, and the blocks sunk to an average depth of 2 feet 6 inches, the top surfaces to be accurately levelled, and the earth thoroughly rammed in round them.

Framework.—The bottom wall-plates to be 6 inches x 4 inches, all inter-sections to be halved and all other joints square scarfed, the scarfs to be 9 inches long, and must be made over a foundation block. The plates to be secured to each foundation block by an iron spike 7 inches long and $\frac{3}{8}$ -inch in diameter. The studs to be of the lengths shown in drawings to be 6 inches square at all corners, and 6 inches x 3 inches in all other cases; tenons 3 inches x 2 inches x 3 inches, to be clean cut at each end, and accurately fitted into mortices cut in the bottom and top wall-plates. The top wall-plates to be 6 inches x 3 inches, halved and scarfed as already specified; the end and partition-plates to be the full width of the building. Fillets, 2 inches x 2 inches, to be securely nailed along the studs, one edge of each to be flush with the outer and inner faces of studs, leaving a groove 2 inches wide and 2 inches deep on each side to receive the wall slabs. Lintels of windows and doors, and sills of windows, to be tenoned into the studs. The spaces between the studs of outer walls to be filled with half-round sawn pine logs, not less than 4 inches nor more than 9 inches wide, to be adzed to a thickness of 2 inches at the ends, to fit into the grooves on the studs, the upper and lower edges to be dressed to give parallel bearing surfaces not less than $1\frac{1}{2}$ inches wide. The partition-walls to be filled in with sawn slabs 2 inches thick, the whole to be close jointed.

Floor.—The floor to consist of sawn pine boards 6 inches wide, and 1 inch thick, close jointed and securely nailed to joists 6 inches x 3 inches, set 2 feet apart from centre to centre; the boards to be accurately fitted round studs and up the face of the wall-slabs.

Roof.—

Roof.—The rafters to be 5 inches x 3 inches, framed as shown in drawings, to be 3 feet apart from centre to centre; collar-beams to be 4 inches x 3 inches, secured to rafters with $\frac{1}{2}$ -inch bolts; the ridge-board to be 8 inches x 1 inch; battens to be $2\frac{1}{2}$ inches x 1 inch, three rows on each face of roof. The whole to be covered with No. gauge corrugated galvanized iron, securely screwed to battens, and the ridges capped with galvanized iron as shown. Galvanized iron guttering to be fixed round main roof and back of skillion, and provided with two down-pipes.

Chimney.—The chimney to be constructed as shown in drawing, the walls to be similar to those in the main building; the hips and flue to be of corrugated galvanized iron, fixed on a timber frame; the earth to be brought up 6 inches above the level of floor with well-tempered clay, and the chimney-place lined 3 feet 6 inches above the same level with similar material. If stone is procurable within 3 miles of the site, rubble masonry, set in lime mortar, to be substituted for clay.

Doors.—Front door to be framed with four panels as shown, to be hung on 3-inch butt-hinges, and provided with an 8-inch rim lock and usual furniture. The jamb-linings to be of 1-inch pine, planed and wrought. The remaining doors to be proper ledged, hung on two 12-inch T hinges, and provided with 8-inch rim locks and usual furniture. The whole of the doors and jamb-linings to receive three coats of dark gray paint.

Windows.—The front windows to be double sashed; the upper sash fixed, the lower sliding. The side window to have one sash hung on pivots, the whole to be provided with brass fastenings. The jambs to be lined with 1-inch pine, planed and wrought, and with the sashes to receive three coats of dark gray paint.

Timber.—Where the kind of timber to be used in particular work is not hereinbefore specially mentioned, the contractor is to use, and the sizes and dimensions specified are for that timber, which is to be of the best description, straight and sound, without waness, shakes, or sun-cracks, and to be free from all other imperfections or defects. To ensure that it will be well-seasoned, it must be cut as soon after acceptance of tender as possible, and no advance will be made until the whole of the sawn timber is delivered on the ground, notwithstanding any clause in the general conditions to the contrary.

Time.—All the works specified to be completed within months from date of signing the bond, irrespective of bad weather or any other cause of delay, except a written order be given by the officer-in-charge not to proceed with the work, or to increase the same, when a proportionate extension of time must be allowed.

Tenders.—Tenders to state a bulk sum for all the works specified.

Conditions.—In all things relating to this contract not herein contained, the contractor to be bound by the general conditions attached.

VIII.

SPECIFICATION for Cottages to be erected under Department of Mines at the Public Watering Places, known as the Silverton well, the Rat Hole tank, Day Dream tank, Purnamoota tank, and Thackaringa tank; five in all.

Size.—Cottage to be 25 feet by 12 feet x 10 feet.

Materials.—To be built of timber and galvanized corrugated iron, 26 gauge.

Blocks.—Cottage to be built on gum or mulga blocks, twenty-seven in number, 2 feet long, 1 foot in ground and well rammed, the blocks to have not more than 3 feet 6 inches centres, and to be $3\frac{1}{2}$ inches at small end.

Plates.—To be $3\frac{1}{2}$ -inch by $1\frac{1}{2}$ -inch red deal, well nailed to blocks at bottom, and morticed top and bottom to receive studs.

Studs.—To be $3\frac{1}{2}$ -inch by $1\frac{1}{2}$ -inch red deal, properly tenoned to fit mortices in plates, and skew nailed to plates top and bottom. None of the studs to be more than 3 feet 6 inches apart, and to be twenty-seven in number.

Rafters.—To be nine pairs, and to be $3\frac{1}{2}$ -inch by $1\frac{1}{2}$ -inch red deal cut to shoulder against side plates and ridge board, and well nailed top and bottom with wire nails.

Ridge board.—To be 6-inch by $\frac{3}{4}$ -inch flooring boards, and to stand up $\frac{1}{2}$ inch above rafters, so that roof iron can butt up against it.

Iron on roof and sides.—The whole of the building to be covered with 26 gauge galvanized corrugated iron, Emu brand. The iron on end and sides to be horizontal, well nailed to studs with galvanized screws. The screws to be put in at ends and centres of each sheet at each lap; to be 2 inches by 12 inches, with galvanized washers. Roof iron to be nailed with 2-inch by 12-inch screws and washers to a purline at the top and centre, and to the top wall-plate at bottom, and to have 3 inches lap.

Ridge capping.—To be 12 inches, to have 3 inches lap at each joint.

Doors.—To be three in number; one at back, one in front, and one in partition. To be made of 6-inch by $\frac{3}{4}$ -inch T and G flooring boards, beaded and well nailed to three cross pieces, hung with 14-inch T hinges, and fastened with an American lock, No. 450 $\frac{1}{2}$.

Windows.—To be two pairs of 6-inch casement, 10 by 12, hung with butt hinges, and properly stopped and fastened.

Floor and joists.—To be thirteen in number, spaced 2 feet apart, and resting on the wall-plates at each side and on a bearer on blocks in centre, to be 6 inches by $\frac{3}{4}$ inch, well dogged up and double nailed.

Partition.—Studs to be 3 inches by $\frac{3}{4}$ inch, spaced 3 feet apart, and carried up to collar ties. To be covered by 6-inch by $\frac{1}{2}$ -inch matchboard, and door hung as described.

Angles.—The corners, windows, and doors to be stopped with 2-inch by $1\frac{1}{4}$ -inch battens nailed to studs.

Chimney.—To be galvanized iron, bricked up 3 feet inside, and of a pattern similar to those used about Silverton.

Collar ties.—One to each pair of rafters, to be 3 inches by $1\frac{1}{2}$ inch, nailed on 4 feet above wall-plates.

IX.

Specification of Gates for Watering Places—Recommended by Chief Inspector of Stock in a report dated 19th March, 1883.

1. The gates to be double of the shape shown in the accompanying sketch, each 10 feet wide, and 5 feet 6 inches high, with a post between, and stay at back.
2. The posts to be sound river gum or ironbark, 10 feet long, 1 foot diameter, 4 feet in the ground, and to rise 6 feet above ground.
3. A ground plate of river gum or ironbark, not less than 9 inches diameter, to be laid between and morticed into each pair of posts.
4. The back of the gate to be 6 x 4, river gum or ironbark, 8 feet long, and the front to be 4 x 3 of same material, 6 feet in length.
5. The whole of the rest of the gate to be made of 3 x $1\frac{1}{2}$ hardwood battens.
6. The rails to be five in number (battens) set at the following gauge:—The first, 9 inches from the ground; the second, 9 inches from the first; the third, the same from the second; the fourth, the same from the third; and the fifth, 12 inches from the fourth.
7. There will be three stays to each gate as shown, the long stay to be double battens, with the rails passing between—the others single crossing with the rails between.
8. All the joinings and intersections to be made with bolts well nutted up.
9. The hooks of the hinges to be made of $1\frac{1}{2}$ inch round iron, to be hung on the inside (not the front of the post as shown on the sketch) right through the post with shoulder in front, and fastened at the back with screws and nuts; and the eyes to have clamps extending 2 feet 6 inches along rails (which will be double for that length) fastened by four bolts and nuts to the rails.
10. The fastening on the gate to be by wooden latch, working on middle rail, falling into groove cut on the faces of the post.

X

Report of the Inspector of Public Tanks and Wells on Repairs and Alterations recommended as urgent.

Sir, Department of Mines, 16 October, 1883.
I beg to hand you my report with the annexed statement of repairs and alterations, recommended as urgent, for the consideration of the Honorable the Secretary for Mines.

I have considered it desirable to urge the application of machinery for lifting water into troughing at all the tanks. This plan it has been decided to adopt in the construction of future works, and from which great advantages may be anticipated in economising water and the protection to the tank.

I have to recommend that gauges, indicating the depth of the water, may be placed in all tanks where not already erected.

With reference to the fencing of the special leases, immediate action is recommended to secure the leasing of many of the works. I beg leave to submit the following recommendations :—

1. That the fencing should be of a substantial character, and sheep-proof posts not more than 8 feet 6 inches from centre to centre; five wires, and a top rail where timber is plentiful; seven wires, the top ones of No. 6 gauge, where timber is not obtainable.
2. That the fencing of the lease should include as much as possible within its limits of the surface water collecting in the neighbourhood.
3. That provision may be made for increasing the size of the special leases.
4. That the Surveyor-General may be informed of the importance attached by this Department to the early survey of these leases—both at Works,—now approved for construction by the Secretary for Mines, and at the completed works, where such survey has not yet been made.
5. That the Department of Public Works may be requested to furnish the Surveyor-General with the defined position of new works, as soon as convenient after the decision has been made.
6. That the Surveyor-General may be requested to furnish tracings of the surveys when completed, for the information of the Commissioner and Engineer for Roads and Bridges, as well as to this Department.

I have, &c.,

HARRY GILLIAT,

Inspector, Public Tanks and Wells.

Alex. Bruce, Esq., Chief Inspector of Stock.

The Chief Inspector of Stock.—I beg to recommend, as these repairs are urgent, that, on the approval of the Hon. the Secretary for Mines, they should be forwarded to the Works Department; also that a copy should be forwarded for the information of the Surveyor-General. Description of the approximate position of the leases, so as to include the greater portion of surface water in the neighbourhood, will be submitted in a day or two.—H.G., B.C., 31/10/83.

Instructions for the different officers connected with these works herewith.—A.P.W., 8/12/83.

XI.

Consideration of Repairs and Alterations for 1883, proposed by the Inspector of Public Tanks and Wells, 20th January, 1883; including appliances for raising water from Tanks and Dams; troughs, supply tanks, windmills, drawing-pipes, and syphons, enclosing the Works, and fencing in the 200 acres let to tenant.

Mr. GILLIAT here recommends that some £6,560 be laid out during the current year in alterations and repairs to the public tanks and wells under his supervision; and as there is a good deal of other work to be done besides that specified by him, I believe that his estimate is understated by at least £2,000, and that a sum of from £8,000 to £9,000 will be required to meet the cost of repairs and alterations during the current year.

As this is the case, and as it will take some time to prepare the necessary specifications and call for tenders, I would suggest that the subject be now fully considered, and the works to be carried out during the year decided upon; when instructions could be given to Mr. Gilliat to prepare the necessary plans and specifications, with a view to their completion with the least possible delay.

Taking then the estimate in the accompanying list of the alterations proposed at the One Tree tank, on the road from Hay to Wilcannia, as a fair sample of the rest, and dealing with the items in the order in which they stand, the first is :—

The Double Whip.—This mode of raising the water from the main tank into the supply tank, which was suggested by Mr. Gilliat, has been submitted to the Commissioner for Roads, and has, so far, met with his approval (see II, 82-402, 17/5/82 herewith), as the most efficient, least expensive, and most easily repaired horse-power for raising water in the interior at a distance from a foundry.

The Troughing.—Mr. Gilliat is in favour of iron or steel troughing, but the Commissioner for Roads prefers the sort now in use—wood—lined with galvanized iron. (See papers III, 82-410, herewith).

The troughs now in use answer well, but require a good deal of repairs; and, if made in this way, they have to be constructed in two sets—one placed low down for the sheep, and the other higher up for the cattle; for, if these troughs were set so as that both sheep and cattle could water at them, the cattle would very soon destroy them; whereas the one set, of either 2-inch red-gum, or of the steel or iron troughs, would be strong enough to water both cattle and sheep, and thus make the red-gum, or steel, or iron troughs, cheaper than the wood and galvanized iron. The former would also need fewer repairs than the latter.

Red-gum troughs, properly made, would cost about 10s. per foot in position; and iron and steel, if the cost of carriage is not very heavy, about the same; while the wood and galvanized iron, at present prices, could not be made for less.

The Supply Tanks.—The description of supply tank has been under consideration, and the papers. See IV, 83-388, herewith, which were sent on to Mr. Gilliat for his report, have now been returned.

It will be seen from these papers that he is in favour of puddle supply tanks for roads where the traffic is comparatively light, and not more than 10,000 gallons of water required to be stored; and of either steel or iron, or wood and galvanized iron, where the traffic is heavy, and 20,000 gallons required.

He was also asked to say whether it would not be safer, and in the end more economical to make the supply tanks of larger capacity than 7,000 gallons. The size he here proposes to make the puddle supply tanks, and his views on this point are also stated in the report referred to above :—

There should, I think, always be sufficient water in the supply tank to water the heaviest lot of sheep which travels; and there are at times as many as 15,000 in one lot. It is thought, therefore, that the capacity of the supply tanks on the main roads should not be less than (say) 20,000 gallons; for it is a bad thing to delay travelling sheep in watering, especially if they are in low condition, and there might be two different lots following so close on, or crossing each other, that there was not time to replenish the supply tank.

Windmills.—Since it was decided to lift the water from the main tanks and supply it in troughs, it has occurred to me that the most economical mode of doing so would be by the windmill. From

From the inquiries I have recently been making as to the cost and efficiency of these mills, I find that a good mill including stand, pump, piping and all complete, would cost in Sydney (where the whole could be put together with bolts and nuts taken down and packed ready for transmission and re-erection) about £75.

The construction of the mill is simple, the parts substantial, and all easily replaced from duplicates.

It is self-regulating and requires little or no attention, beyond oiling, and with a person living on the spot, cannot possibly get out of order, except through gross neglect; for it is so constructed as to throw itself out of gear in very high winds, and offer a minimum resistance to a storm.

A mill of the size mentioned—14 feet—will, it is said, with a good strong wind, raise some 1,800 gallons an hour, to a height of from 20 to 25 feet.

Mr. Russell, the astronomer, has no returns of the average duration and power of the wind in the different parts of the colony, but he thinks that an average of at least five or six hours a day might be counted upon on the salt bush plains, where windmills would mostly be required.

What I would suggest, therefore, with respect to these mills is,—that where the water is at present supplied to the stock from drinking tanks, instead of erecting there the double whip recommended by Mr. Gilliat (which he estimates will cost £130 each; considerably more than a windmill, stand, pump, and all complete), a 14 feet mill and pump be erected (the supply tank would be the same in either case) and should it ever happen, which it very seldom would, that the water in the supply tank ran short, the stock could, as they now do, water at the drinking tank.

This double arrangement would insure a constant available supply for travelling stock and travellers; and as it would only be on very rare occasions that the stock required to use the drinking tank, the water in it would not become polluted, nor would the entrance "get potched or boggy," or the connecting pipes silted up, as they now do, mainly through the watering of cattle.

With care, horses and cattle could always be supplied from the troughs; for when the water in the supply tank became low, it could be kept for the large stock, or a sufficient supply for them could be raised by a good hand-pump worked by two men, and the sheep could be watered at the drinking tank,—which they could of course be without cutting up the entrance or polluting the water, as large stock do.

It seems, therefore, if windmills are as serviceable as represented, that they should be used for raising the water into the supply tanks, and, that instead of doing away with the drinking tanks, the proper course will be to retain them; and in constructing tanks in future to do so with drinking tanks, as they will not only be a reliable stand-by, in case of failure in the wind or any accident to the mill or pump (which would very seldom occur), but they will also conserve a large additional quantity of water.

In this way a constant supply of good clean water can always be guaranteed at a minimum cost—that in fact this will be the solution of the vexed question how the water should be supplied to stock from public tanks.

Drawing Pipe and Syphon.—With the view to drawing from the surface of the water in main tanks and keeping the pipe which carries it from that to the pump from choking, or the pump from being clogged or stopped with mud or other foreign matter, I would suggest that the following plan be adopted:—

Let a cast-iron pipe of the right size be carried through the embankment from the main tank to the place where the mill and pump are to be erected—opposite, of course to, and at the proper height for, pumping the water into the supply tank; and let this pipe be carried out on a stage erected on the bank, and into the main tank until it is over the deep water. Then fit on to the end of the pipe a double V joint; attach to that a piece of pipe of the same size with a bend or knee near the joint, and a straight shank somewhat longer than would be sufficient to reach the bottom of the tank, and at the end of the straight shank fix a pine float, letting the end of the pipe (to which a rose would be attached to keep anything but the water from getting into it) protrude so far through the bottom of the float as to draw water from (say) 18 inches from the surface.

In this way the joint in the pipe will allow the float to rise or fall with the water in the tank without interfering in the least with the flow, and only clean surface water will be drawn, so that the pump will seldom or never choke, and will, of course, last very much longer. The joint is simple and substantial, and not at all likely to become deranged or leak.

This plan will also answer in using syphons, and get rid of the trouble and expense of knees and bends now required in carrying syphons up to and over the embankments, while the other end of the syphon, which delivers the water into the drinking tank, could be made a fixture, and be so fitted with three or four taps, so as that the discharge of the water into the drinking tank would be always above the level at which it was desired the water in the drinking tank should stand, and thus never get choked.

In fact, where a pump and drinking tank are to be used together, the one float and jointed piece of pipe will answer for both pump and syphon, as the pipe for the drinking tank can be made to branch off a short distance from the pump, and, with a cock on the syphon branch, and another on the pipe leading to the pump, either could be used as required, and would work efficiently.

Should the proposal here made with respect to the employment of windmills be entertained, Mr. Gilliat might perhaps be asked to report upon it, after which the papers might be forwarded for the opinion of the Commissioner for Roads on this and the other unsettled questions here brought under consideration.

Fencing in the Works.—It is very essential that the works should be properly enclosed with a secure and substantial fence, say a fence with six wires and a top rail; and it should, where practicable, include not only the tank or dam, but also the surface or back water, which lies for a long time after rain around the tank, or the back water from the dam, so as to prevent stock from watering without payment.

Watering lane or yard and gates.—It is also essential both for the sake of stock, and also for saving the works from damage, that there should be a wide lane or yard with wings and gates so constructed as that the stock can be admitted to the troughs or drinking tank by a gate at one side in such numbers as could be conveniently watered without crushing or crowding, and passed out after drinking at the opposite, and the gate then closed to prevent them from coming back—as shown on the accompanying sketch (VI)—of a main and drinking tank lane, gates, and wings.

The expense of this would not be great, and it is very necessary that such an arrangement should be made, for stock are at times (after a 15 or 20-mile stage without water) very thirsty, and apt to rush the water and knock themselves about, as well as damage the works, more particularly where the water is supplied from drinking tanks, it being impossible for the drover to have the control over his stock which he would have with lanes or yards and gates, as here suggested.

A plan of a double gate for the watering lane is submitted for approval, as being light, durable, and easily repaired (see plan and specification VII herewith).

Fencing in land let with the Works.—The Minister for Mines has decided that the 200 acres let to the tenant is to be enclosed, and this will no doubt be a great inducement to suitable tenants leasing the works and paying fair rental. The fence in this case, too, should be six wires, with top rail, unless where the timber is very scarce, in which case the top rail might be dispensed with and a double wire substituted.

The Under Secretary for Mines.

A. B., 19/3/83.

Inspector, Public Tanks and Wells.

XIII.

Abstract of Reports on Tanks and Wells in Hay District.

The Tank.—Report of 21st January, 1885 (85-118): That Mines caretaker was without a horse to work the McComas lifter, and without oil for bearings; that the public worked the pumps with own horses when requiring water, and it had thus sustained considerable damage. Report of 3rd April, 1885 (85-578): Found caretaker absent on leave, only a lad in charge; sheep and cattle had been admitted inside tank enclosure to water at silt tank, and the embankment was thus being damaged; fence rails were missing, apparently used for fuel by travellers. Report of 1st May, 1886 (86-643), as to pumps. Holman horse-power being reported by caretaker as out of repair and quite ineffective; that there was no defect except that bucket leathers required renewal, and this should have been done by caretaker instead of requiring mechanic to be sent from Hay, 100 miles; also that much negligence was evinced in keeping drains and fence in repair, and that sheep had been allowed inside tank fence, damaging the embankment. Mr. McLeod, Mines overseer reported in reply to this, that caretaker had been told by travelling mechanic never to open the pump for repairs, and that the sheep had been removed from tank enclosure soon as observed. Report of 6th August, 1886 (86-1,165): That statement of caretaker as to repair of pump was incorrect; had not been directed not to touch it by mechanic, but the mechanic had found that caretaker did not know how to overhaul the pump, and that there was no other defect than as to leathers being worn. That Mr. Nicholson reports that sheep had remained inside fence by caretaker's admission for some days until they were too weak to walk out.

Yoult Plains tank.—Report of 3rd April, 1885 (85-580): That on this as on previous visit in January, caretaker was absent rabbiting; no protection to the tank or appliances. The public helping themselves to water, or to fence rails for fuel as they require them. The drains choked with silt and vegetation.

Dolmoreve well.—Report of 8th August, 1887 (87-656): Travelling mechanic reports well-rope broken, and centring below the water level forced out by fall of bucket; great difficulty with assistance of men and horses in lowering water, effecting repairs and recovering buckets, new rope and bucket had been sent out; breakage of rope had apparently been occasioned by the end near bucket being injured by action of water in well, in which it had been left during the intervals of baling. Mechanic also reports that on first going to the well on this occasion he could obtain no assistance from caretaker, owing to his absence for several days at an inn 7 miles away where he was drinking, and that he finally returned in a state of intoxication.

Tom's Lake tank.—Reports of 29th March, 1887 (87-253): Pump housing damaged, pump-well contained a foot of water, rusting pump had been in this state some considerable time. The main drain remained as reported in October, 1886 (86-1,417), quite obstructed by silt and vegetation. The embankment across creek 1 mile to northward to divert water into drain still remained broken through, and all water escaping, and that any water the drain had brought down had escaped into the swamp before reaching the tank, through a gap which had not been repaired. Report of 29th July, 1887 (87-634), that the embankment is damaged by rain flow down batters and repair neglected, pump requires cleaning and silting, housing still out of repair, and main drain and bank across creek still remain in same state as reported above.

Dry Lake well.—Report of 13th November, 1886 (86-1,525). Service tank not half full, no baling done for some time, caretaker had no horse, said he had lent it to a man for a few days, when he returned it he would fill the tank. This neglect will probably lead to obstruction of bore in well. Report of 7th March, 1887 (87-303): Mines overseer having reported to me that the supply had failed, went out with him and tested it. After lowering water a few feet so as to bring pressure in the bore it freed itself, and two hours baling could not lower the water—1,300 gallons an hour being taken out. The temporary obstruction of the bore was caused by want of the most ordinary attention, the service tank being nearly empty, showing that no water had been raised for some weeks, and the man in charge is incapable from old age.

Lignum

Lignum Hut Well.—Report of 22nd October, 1886 (86-1,429): Connecting rod of pump broken, pump does not receive due attention from caretaker, having a ladder put in well so that caretaker should have no excuse as to want of access to pump. Report of 8th November, 1886 (86-1,499): Breakage of plunger rod. Report of 5th December, 1886 (86-1,593): Breakage of windmill connections. It is evident that there is much want of attention on part of caretaker. Report of 22nd December, 1886 (86-1,680): Windmill had not yet been painted, in very dirty state, water level in service tank too low, showing that pump had not been kept working. Report of 29th March, 1887 (87-255). Pump working badly, not throwing full stream. Caretaker absent, three days afterwards found pump in same state. Caretaker made absurd excuses as to not keeping pump packed, and leathers renewed, &c. Service tank liable to damage from getting dry; ladder had previous to this been fixed in the well. Windmill not yet painted. Report of 28th April, 1887 (87-343): Another breakage in connections; duplicate castings from Sydney required; frequent breakages owing to negligence on part of caretaker. Mines overseer informs me he will discharge him and get more diligent and competent man. Report of 29th July, 1887 (87-625): Caretaker (same man) absent; pump not at work, although plenty of wind; from what I could gather, pump has only worked about a week during the last three months; only about 2 feet of water (should be 6 feet) in service tank. Caretaker apparently keeps mill out of gear and pump idle to prevent necessity of packing and repairs, &c.

Boonoono tank.—Mr. Wood's report of 11th June, 1886 (86-917): Pump reported by Mines overseer and caretaker as quite inefficient; that it took two and a half days to fill the service tank, working the pump as fast as a horse could fairly walk. Tested accuracy of this, and the result was that pump was found to deliver at rate of nearly 3,000 gallons an hour, which would fill service tank in little over six hours. The caretaker was found to be working machinery with dry bearings and appeared to be surprised to hear they required oiling. My report of 29th October, 1886 (86-1,408): Found that pump had been taken apart to renew bucket leathers six weeks previously, and in the interim had been left so with some of the parts lying embedded in mud on the horse-walk. Caretaker said he had not proper tools for the job and could not manage it, or put pump together again, but with the tools found there I put all right within an hour, and the pumps worked well. The caretaker said he had been told by his overseer to leave the pump as I found it until I came or sent up, as he could not put it right. The Government had thus quite unnecessarily the discredit of insufficient works for this period, owing to incompetence of the Mines officials. Report of 31st July, (1887-87,644): That Mr. Yeo, Mines overseer, had recently caused 2 feet of water to be run out of tank, because he thought embankment was endangered. There was still from five to six feet in height of bank above water level, so that this was a most absurd waste of water.

Mount Manara tank.—Report of 20th October 1886 (86-1,409): That the steam pump is in a disgracefully dirty state. Caretaker admits he has not overhauled it since Mr. Wood did so, four months before, when it was found in a similar state; had again to take it apart and clean it. Report of 1st August, 1887 (87-643): Seven of the outer concrete piers of the tank have the edges and corners scaled off, the interior of the piers remaining quite sound, a slight defect easily repaired by the mechanic, and not all impairing stability of the tank. Mr. Yeo's report that tank was unsafe, and his action in running off the water, were equally absurd and uncalled for.

Ivanhoe tank.—Report of 29th March, 1887 (87-260): Drains a good deal silted up; this would, as I suspected at the time, account for the loss of water the Mines overseer attributed to inadequacy, and of the inlet on the lower or western side of the tank. Report of 30th July, 1887 (87-626): Drains show evidence of neglect; the alteration made in dwarf fence of troughing by Mines overseer apparently renders that side of troughing inaccessible for sheep, the rail being inclined over the trough; the steam-pump had not evidently, and by admission of the caretaker, been cleaned for some months; and the pump weathershed is used as a kitchen and store-room by caretaker, to judge from appearances.

One Tree tank.—Report of 25th November, 1885 (85-1,563): Fence wires around tank slack; caretaker might easily have remedied this, but appeared to think it no part of his duty; found him at the inn, instead of being in charge of the tank. Report of 25th November, 1886: Caretaker said he was quite ignorant of, and appeared to be equally indifferent as to, the working or the keeping in repair of the pumps; the plunger gland had been fractured through carelessness in screwing it down, but he said he knew nothing about it; the pump consequently disabled, service tank not half full, and the troughing contained only some liquid mud. The pump was, in addition, in a most dirty and neglected state, the bearings being almost dry; sent out the following day and put pump in repair. Mr. Nicholson's report of 2nd July, 1887 (87-519): In consequence of Mines reporting pump disabled, he was sent out to inspect; that nothing was amiss, except that the piston-rod had become disconnected, owing to the pin falling out; put it right in 5 minutes, and pump then worked well. Caretaker's incompetence had occasioned an unnecessary journey of 50 miles in wet weather.

Pulletop tank.—Report of 6th December, 1886 (86-1,601): Embankment in bad repair generally and damaged by scour at two corners, some 30 cubic yards of earth being displaced; wires in surrounding fence very slack; service tank not full; and the lessee in charge appeared to know little about, care, or working of the steam-pump. Memo. of 9th February, 1887 (87-119): In reply to statement by Mines overseer that I had forbidden their lessee to repair embankment in accordance with his instructions, and also to minute of Mr. Gilliat's, complaining of interference with officers of his Department; that the lessee's statement was not true, made to screen his gross negligence in performing a most urgent work, and apparently accepted by the Mines officers as a sufficient excuse for him, and also for throwing the onus on this Department. Report of 7th March, 1887 (87-199): Embankment still remained unrepaired, fence wires slack, troughing foul, drains neglected.

Mossiel tank.—Report of 30th July, 1887: Embankment batters scoured by rain flow; negligence in keeping in repair; horse has been admitted inside fence and on the embankment, destroying the vegetation which it is so desirable to protect; that caretaker had taken up the dwarf fence from troughing, leaving the post-holes open; had evidently been so for a long time, were full of rain-water, impairing stability of trough sleepers. The fence was being used to construct a rail laid on the posts, as bearers, along the middle of trough.

Jumping Sandhill well.—Mr. Wood's report of 5th June, 1886 (86-903): The buckets, one left at bottom, the other at top of well; the caretaker should be instructed to leave them midway out of reach of water, and save corrosion of the iron rope. Service tank only half full, in which state it has been for some time, no regular baling having been carried on. My report of 22nd October, 1886 (86-1,432): Caretaker's horse inside sheep trough enclosure; had put his foot through iron of troughings rendering it useless till repaired. No baling done for some time; regular baling very necessary to prevent destruction of bore. Report of 22nd December, 1886 (86-1,697): Hole made in sheep trough by caretaker's horse has now been repaired by our mechanic, after being left by caretaker nearly two months. Grass in paddock had been burnt off, no satisfactory account as to origination of it. Report of 24th February, 1887 (87-181): That Mr. Boulton, Mines inspector, reported: Whim spindle shrunk from drum carriers, &c., presumably the cage arms of whim referred to, the bolts of which, as in all cases, occasionally require tightening up. A spanner in hands of a competent and diligent caretaker would remedy this in a few minutes, and without the necessity for a visit from our mechanic, who has since overhauled this whim. Mr. Boulton also says: "The stays from the horse and balance arms are vertical, &c., and consequently useless." This is obscure. It is possibly the cage struts are here referred to, and it is not of any disrepair, but of a principle of construction or design that complaint is here made, as I think hardly called upon to discuss this with Mr. Boulton. He next reports that a gate in progress in the hands of a contractor under this Department, and not yet finally inspected by me, should be condemned. Would save me much trouble and responsibility if he would similarly say when work carried out by contractors with this Department should be passed. Report of 29th March, 1887 (87-263): Had visited on 17th and 20th instant. On first occasion caretaker said he was just about to start filling service tank, which was empty; on second occasion he said he had half filled it and run water out again to cleanse tank; on examination this proved to be false, no baling had been done.

Box Creek tank.—From Mr. Wood's report of 21st June, 1886 (86-964): Pump could not be tested as the caretaker, or rather his deputy, he being a publican living some distance from the work, had no horse in. The pump had not been worked for a month, and the service tank was nearly empty. This is most objectionable. Mr. Crummer's report of 28th July, 1886 (86-1,151): The new Mines caretaker, though he reached the inn, 2½ miles off, on the 23rd (five days ago) has not yet gone near the tank. My report of 24th February, 1887 (87-149): In reply to Inspector Boulton's complaint that foot-valve of pump was suspended from suction-joint, and should have staging out in tank for suspension and elevation; that Mr. Boulton has misapprehended the purpose with which these stages are provided at other places; here the foot-valve is suspended vertically in well of disused McComas lift; no stage is required, and the only alternative to be made will be to substitute an ordinary pipe-bend for the movable joint, which is in this case superfluous.

Uulong tank.—Report of 13th September, 1886 (86-1,293): When there on 8th instant, found caretaker at his camp reading his newspaper, although his drains were much in need of attention. Report of 8th November, 1886 (86-1,511): The drains, for want of attention during rainfall, had allowed a considerable quantity of water to escape into the swamp. Report of 9th December, 1886 (86-1,616): The drains require much more attention during wet weather than the old man stationed here as caretaker gives them; the wires in fence around tank were slack. Report of 7th March, 1887 (87-201): The tank batter had been damaged by caretaker discharging water from the berm down it. Report of 1st July, 1887 (87-530): Caretaker and family residing in pump watershed; use boiler fire for domestic purposes.

A. W. STILWELL,
20/8/87.

XIV.

Composition for Service Tank, &c., and General Control of Tanks and Wells.

Silverton, 28 March, 1887.

THE objections raised by the Mines officers to the use of the composition referred to in the enclosed papers, I am not in a position to traverse, as I have seen none of the service tanks or troughing that have been coated with it—but I may state that the receipt was given to me by Mr. M'Kinney as being one that produced a good coat for the purpose sought, and until further information is available I would, with all deference to Mr. Boulthbee's opinion, feel inclined to accept that of a gentleman of Mr. M'Kinney's engineering experience as being more reliable.

There can be no doubt that protecting the service tanks and troughing is one of the duties of the Mines caretakers, as stated, but the experience of our officers is that the men do not in all cases do their duty, and this being the case, I am decidedly of opinion that any necessary work so neglected should be done by us rather than the public interest should be prejudiced—on this account Mr. Stilwell has doubtless instructed the travelling mechanic to do such necessary work when visiting the tanks for the purpose of carrying out his more particular and immediate duties.

I still maintain, Mr. Gilliat's opinion to the contrary notwithstanding, that the Department is responsible for repairs, and this being the case I cannot understand exception being taken to such repairs being carried out as soon as they are found to be necessary by our officers, instead of waiting, with a chance of the necessity being overlooked, for the red-tape routine involved in sending notices from the Mines Department, a course which often causes dangerous delay and a great increase in the cost of repairs. I would have thought that the necessity of studying the public interest would have been equally recognised by the Mines as by this Department, and would have been considered to have a premier claim to that of red tape.

The effect of a divided control is decidedly objectionable—the entire control of the works should be vested in this Department, a course which would eliminate many of the evils which now exist. The experience of our officers has led them to form opinions adverse to the character of the maintenance under the Mines, and as the expenses connected with these works should be reduced as much as possible that end would be gained by the entire control being handed over to our local officers, who, whether charged with this duty or not, would have to be retained in their respective districts. Such a course involves no extra expense for supervision, as would be the case if the Mines employed a separate staff and created a number of new and quite unnecessary appointments, with a corresponding increase in the public expenditure. This course would also avoid any chance of "friction," as deprecated by Mr. Gilliat.

ARTHUR P. WOOD.

The Commissioner and Engineer for Roads, &c., &c.

All this correspondence relates to the use of a composition on the tanks, which is just referred to in report of Water Conservation Commission thus:—"It is found that the mixture applied assumes a glassy surface, and does not affect the taste of the water." This is a specimen of the friction complained of in minute asking that execution of works be handed over.—W.C.B., 21/4/87.

Hay District.—As to Composition used for Coating Service Tank and Troughing.

The Commissioner and Engineer for Roads,—

Sir,

Hay, 23 March, 1887.

In reply to your attached telegram, the composition used for protecting inside of troughing from action of water, &c., is a mixture of 2 lb. of pitch and 2 lb. of tallow to 1 gallon of tar.

It has been used at three tanks only, viz.:—Mount Manara, Boonoonna, and Gunnaramby. Doubtless—as almost any composition would—it affected the first water put into the troughing after it was applied, but this should have been run to waste by the caretaker instead of being supplied to the public to save them a little additional pumping.

At Gunnaramby, where it was first applied, it no longer injures the water. At the two other places there has been no demand for water owing to the rains, but if the water were run out of the tanks, and they were re-filled, there would be no valid grounds for complaint.

No composition is being used by the Mines Department in this district.

I have, &c.,

A. W. STILWELL.

Telegram from Sydney to Mr. Stilwell, Road Superintendent, Hay.—Objection taken by Mines to your coating tanks with tar and grease. Report very fully *re* this, and do not coat any more. Report on composition used by them.—W. C. BENNETT.

Telegram from Hay to Commissioner for Roads.—Will send in full report *re* composition used for service tanks and troughing after inspection next week.—A. W. STILWELL, Assistant Engineer.

Coating insides of Tanks and Troughing with a Composition.

Sir,

Public Watering Places, Mines Department, 24 February, 1887.

Referring to your blank cover communication of 10th instant, relative to the coating of the inside of service tanks and troughing with a composition, at several of the public watering places, and to the minute thereon, I now have the honor to forward for your information a copy of a minute dealing with the matter.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

The Under Secretary for Public Works.

Copy of this paper having been sent to me at G.P.O., Melbourne, the original should be sent to Mr. Stilwell for full report. I may state that the mixture that has been applied was recommended by the Engineer to the Water Commission, branch apparently of the Mines.—A.P.W., 28/2/87.

Tarring the inside of Troughing, &c.

Department of Mines, Public Watering Places, Sydney, 12 February, 1887.

MR. INSPECTOR BOULTBEE'S return from his last inspection, &c., reported an objectionable composition of pitch and tar and tallow was being used for coating a portion of the inside of service tank and troughing at some of the watering places by a man in the service of the Works Department, acting under instructions through the local road superintendent. Repairs of this nature are carried out by our own caretakers, who are paid for the service; the employment of a skilled mechanic for the purpose appears, therefore, unnecessary.

Mr. Inspector Boulton states:—"A composition of tallow, tar, and pitch, and the water was, after standing a short time most objectionable and undrinkable, bearing a greasy and prismatic scum on top."

Mr. Overseer Yeo states:—"It melts and forms a scum on top of the water which prevents stock from drinking. Boonoono and Mount Manara troughing had already been done. There have been several complaints about it."

Objection has been taken to the use of the composition referred to (*vide* Mr. Boulton's memo.), and I need hardly point out that it is apparently even more unsuitable when the water may at any time be required in considerable quantities for domestic purposes, as at the Ivanhoe tank.

Our own officers are instructed to use boiled coal tar and pitch for coating service tanks and joints of troughing when required. This forms a hard glaze, and has so far been found suitable.

I am in doubt whether Mr. Wood is correct in assuming that the Department of Public Works is responsible for repairs until they are authorized by the Hon. the Secretary for Mines; and I am equally in doubt whether it is desirable for that Department to take such steps as it may deem necessary to protect or render the works more efficient without reference to the Department responsible for their maintenance and control under the Act.

The effect of a divided control can only tend to confusion and lowering of the standard of efficiency, as well as to create friction between the Departments; and any steps taken, I would respectfully suggest for the consideration of the Honorable the Secretary for Mines, would preferably be in the direction of relieving the Works Department entirely of all repairs in future.

HARRY GILLIAT,

Chief Inspector, Public Watering Places.

If the use of the composition renders the water unfit for the purpose for which it is conserved, it is not clear how the use of it can be said to render the works more efficient. It is very desirable in the public interest that when the works have been taken over by this Department they should not be interfered with by the officers of another Department; and it is to be hoped the question of construction, control, &c., will be dealt with at an early date.—H.W., 16/2/87. Submitted. Approved.—F.A., 21/2/87.

Ivanhoe Tank.—Stilwell A. W., 29/1/87.

Mines overseer would not permit troughing to be tarred in accordance with Mr. Wood's instructions, as he had received instructions from Sydney not to have it done.—A.W.S.

Mr. Wood's Minute.—It appears to me that this Department is responsible for repairs and renewals; that no objections should be raised to such steps being taken as we consider necessary to protect the works or to make them more efficient.—A.P.W., 7/2/87.

Commissioner's Minute.—I think the instructions of this Department should be carried out for the protection of this iron. Mr. Wood gave these orders after consulting on the matter, and the work is absolutely necessary.—W.C.B., 7/2/87. Under Secretary, for transmission to Mines.

XV.

Letter from A. H. Doudney to F. A. Franklin, C.E.

Steam Scoop Camp, Government Tank Works,

29-mile Peg, via Nyngan, 15 February, 1885.

Dear Mr. Franklin,
I read with very great interest the *Herald's* reports of the meetings of the Water Conservation Commission, and it has often struck me, that perhaps a few lines occasionally on the subject of tanks might prove acceptable to you.

Outside my personal connection, I take the deepest interest in the matter of water conservation, and if any of my suggestions should in the slightest degree prove of use, I shall consider myself well repaid for the trouble taken in the matter.

I think I might be useful, because you, as a Commissioner, can only take evidence, examine, and see things from one point of view, whereas I as a contractor, and actually carrying out works for the conservation of water, observe matters from an entirely opposite, and, so to speak, more practical point of view.

I cannot lay before you any elaborate scheme for conserving water, not being a scientific man—no doubt you can get plenty to do that—but I can give you my practical experience, especially in the matter of details which possibly might prove of some value to you.

I should imagine one of the greatest difficulties the Commission have to contend with, is conflicting evidence. One witness for instance favours dams, another condemns them altogether—and both witnesses from the same district—and equally reliable men.

Now, with all that sort of thing, I wish to have nothing to do. What I propose is to point out a few existing evils, and to answer practically any questions you might consider me capable of answering, that may occur to you from time to time.

I should say the first principle to be applied in the matter of water conservation, is economy, and a judicious expenditure of the public money.

As the system is carried out at present, there is no economy observable, and the judiciousness of the expenditure is ver questionable.

To make the scheme self-supporting, the system should be worked on a strictly commercial basis, and many alterations must be effected before that can be established.

When a new road is opened, the Stock Inspector for that district, and the Chairman of the Local Land Board, or other reliable authority, should be asked to report on the road—what the traffic consists of chiefly, and what it is likely to consist of for (say) five years to come.

Many roads are used solely by teams, others again by teams and travelling stock, and according to the report the road should be classed as either A, B, C, or D. The size of the tanks, and the distance to be placed apart should be determined by the class under which the road is recorded as follows:—

Class A.—Heavy traffic of teams and stock requires 20,000 yard tanks every 15 miles, or as near the distance as the catchment will allow of.

Class B.—Heavy traffic of teams, and occasional heavy traffic of stock requires 15,000 yard tanks every 15 miles.

Class C.—Heavy traffic of teams, and light traffic of stock requires 10,000 yard tanks every 18 miles.

Class D.—Traffic of teams and vehicles only; requires 8,000 yard tanks every 18 miles.

To show the necessity for this classification of roads, and making the size of the tanks to suit the quantity of the traffic, I shall point out the Condobolin to Nyngan road, for example.

On the above mentioned road during the past two years the Government have had six tanks put down at an average cost of £2,400 each tank, making a total expenditure of £14,400.

Now the traffic does not amount to fifty teams per annum, and the travelling stock is absolutely nil.

The drought has not prevented the passage of stock on this road, and good seasons will make but little difference. The road is cut off for travelling stock by the Nyngan railway and will never be used again by stock.

Such a road as this, I would put under class D. 8,000 yard tanks, every 18 miles would amply meet the requirements.

Now, I will take another road, the Nyngan-Nymagee one. On this road I have already excavated a tank, 20,083 yards, and am about completing another of 16,800 yards. Ahead of me, again, a 15,000 yard tank has just been started.

The traffic on this road consists solely of teams and vehicles. I estimate an average of four teams per day and one vehicle.

This road I should also place under class D.

I am quite aware of the necessity in a new country, when making improvements, of looking well ahead—that in watering a new road the chief thing to consider is, how will a railway affect the traffic in time to come?

Trucking is so obviously preferable to driving the stock, that once a railway penetrates a district the roads are abandoned for the trucks, and the elaborate and expensive tanks are of use only to occasional mobs of cattle and flocks of sheep, vehicular traffic, and to the lessee of the run on which the tanks are sunk.

The present specifications for the 15,000 and 20,000 yard tanks, I would not alter to any great extent.

I should suggest, however, that in places where much wash is likely to be met with, two silt-tanks be put down instead of one, so that the water in passing through the two tanks would be altogether clear of deposit before entering the main excavation.

I know instances of silt-tanks filling right up after one heavy fall of rain. This happened to the tank I put down on Melrose, eighteen months ago.

And in every case, I would recommend that between the excavation and the embankment, a gutter, at least 9 feet wide, and from 2 to 3 feet deep, according to the soil, be made right around the tank, and filled in again with clay taken from the excavation.

My reason for making it 9 feet wide is so as to allow the drays to go into it when filling the gutter up and thereby consolidating the new material.

The stamping weight of a horse and loaded dray I calculate roughly at 2 tons. A contractor would do this work at the same price as the excavation.

This matter is of great importance, as the tank would, with the gutter, hold water right up to the surface.

As it is, the water in every tank I have done has soaked away for the first 2 or 3 feet, and I have noticed the same thing happen at every Government tank I have been to.

On a 20,000 yard tank, it would take 300 yards to put a gutter round the excavation, 3 feet deep and 9 feet wide. 800 yards at (say) 1s. 6d., equals £60.

And for this small outlay we save 440,836 gallons, allowing the soakage at 2 feet, and 661,168 gallons at 3 feet of soakage.

In many tanks the water soaks away considerably more than 3 feet.

Now, as regards the 10,000 and 8,000 yard tanks, I would construct them in a different manner.

The heavy expense in connection with the troughing, service tank, pumping machinery, &c, I would avoid by having none of those extras, and allowing the stock to drink out of the tank itself; and the shape I would alter, so that these small tanks would be excavated cheaply and expeditiously.

Three of the slopes, 2 to 1, and the remaining slope, 3 to 1, which would be the roadway, allowing ingress and egress to and from the water.

Embankment would be formed in the shape of a horse-shoe, or across as a dam, according to the nature of the surface.

At the edge of the excavation I would erect a strong three-railed fence around the three steep sides, and down to the water at each side of the roadway.

As watering the stock from the tank itself would tend to pollute the water, I would, to supply drinking water for human consumption, sink a well 4 feet by 2 feet 6 inches, about 3 feet away from edge of excavation, on one of the steep slopes, and to a depth 3 feet below that of the main tank. At the bottom level of the tank I would put a drive 3 feet x 3 feet 6 inches, through from the well to the tank, and then, after slabbing, fill the drive with sand firmly rammed.

This would act as a filter; the water would percolate through from the tank into the well, and rise to the level of the water in the excavation.

I estimate the cost of sinking the well, putting the drive, and timbering the lot at £40 bulk sum.

Planking would be fixed on the top of the well, and a small hand-pump would complete the concern.

In conclusion I would like to say a word or two with regard to the officials in charge of the construction of Government tanks.

In the selection of inspecting officers enough care has not been exercised by the Roads Department.

When a tank has to be put down, instructions are given to the road superintendent of the district in which the tank is situated, and visit the work monthly to report progress. When the tank is completed, the officer measures it, and the Government are got at for hundreds of yards. And, because the inspector knows little or nothing about what he is sent to do, and consequently the contractor gets the best of him at every turn.

I know of no other business where a contractor has so many opportunities of—to use a seafaring term—getting to windward of his employer.

F. A. Franklin, Esq., C.E.

I am, &c.,

A. H. DOUDNEY.

XVI.

An Act to regulate Public Watering Places and to protect certain Reserves from trespass. [Assented to, 21st October, 1884.]

Preamble.

WHEREAS it is expedient to provide public watering places and to regulate the management thereof and also to protect travelling stock and other reserves from trespass Be it therefore enacted by the Queen's Most Excellent Majesty by and with the advice and consent of the Legislative Council and Legislative Assembly of New South Wales in Parliament assembled and by the authority of the same as follows:—

Short title.

1. This Act may be cited as the "Public Watering Places Act of 1884" and shall come into force on the first day of January next.

Interpretation

2. In this Act if not inconsistent with the context—

"Governor" means the Governor with the advice of the Executive Council.

"Minister" means the Minister charged with the administration of this Act.

"Reserves" means all such places as shall be declared to be travelling stock and camping reserves.

"Public Watering Places" means all such reserves as shall be declared to be public watering places under this Act.

"Inspector" means any person who may be appointed an inspector under this Act.

"Stock" means any horse mare gelding colt filly ass mule bull cow ox heifer steer calf ram ewe wether or lamb goat or pig.

"Travelling Statement" means any statement required by the "Registration of Brands Act of 1886" and the "Diseases in Sheep Act Amendment Act of 1878" or any Act amending the same.

"Permit" means any permit required by the "Sheep Diseases Act of 1866" the "Diseases in Sheep Act Amendment Act of 1878" or any Act amending the same.

"Travelling Stock" means any stock the driver of which is required to be provided with a permit or travelling statement.

Power to proclaim reserves for public watering places.

3. The Governor may from time to time make and again revoke reserves for the purpose of establishing public watering places and for the accommodation and agistment of travelling stock. Such reserves shall be made by notification in the *Government Gazette* but shall not be withdrawn from pastoral lease except by a special notification to that effect.

Governor may appoint inspectors and overseers.

4. The Governor may from time to time appoint inspectors and overseers for the purpose of this Act and such inspectors and overseers may exercise the powers hereby conferred upon them in any part of the Colony and shall be *ex officio* inspectors of stock.

Power to construct tanks and dams.

5. It shall be lawful for the Ministers to construct tanks dams or other works for storing or for providing water adjacent to any roads or upon any reserves or public watering places.

Governor may lease tanks and dams for term of years.

6. The Governor may from time to time let by tender or otherwise for a term not exceeding five years any such tanks dams or other works for storing water and any such public watering places upon such terms and conditions as may be deemed expedient and the lessees thereof shall supply water to such persons and such stock at such rate as shall from time to time be fixed by regulations for that purpose.

The Minister may appoint caretakers of tanks and dams.

7. It shall be lawful for the Minister from time to time to place such tanks dams or other works for storing water and any public watering places in charge of caretakers who shall supply water to travelling stock at such rate as shall from time to time be fixed by regulations for that purpose.

8. The Governor may place any public watering place for any period not exceeding three years under the control of trustees who shall supply water to travelling stock and to all persons who may require the same upon such terms as shall be prescribed by regulations for that purpose.
9. It shall be lawful for any person duly authorized by the Minister to impound in the nearest pound any stock found trespassing upon any public watering place or upon any reserve and to charge thereon the damages mentioned in the first Schedule to this Act together with the driving and other fees imposed by the Impounding Acts. And the owner or person having charge of any stock who shall wilfully allow the same to trespass upon any such watering place or reserve may be prosecuted by any such person and upon conviction shall for the first offence be liable to a penalty not exceeding the sum of five pounds and for any subsequent offence to a penalty not exceeding twenty pounds. Provided that trespass a second time by stock belonging to the same owner shall be deemed to be a wilful trespass for the purposes of this Act.
10. If any person shall obstruct travelling stock in the lawful use of any public watering place or in the use of any pasture or water to which such stock are entitled under this Act or any regulation thereunder or under any other Act shall be liable to a penalty not exceeding twenty pounds.
11. Every owner or person in charge of stock shall produce and show to the lessee caretaker or person in charge of any dam tank or well or public watering places or reserves when he shall require to use the same his proper permit or travelling statement on demand and any person failing to do so shall be liable to a penalty not exceeding five pounds.
12. If any person shall wilfully destroy or injure any public dam tank or any structure or other work connected therewith in any public watering place or wilfully destroy or injure any part thereof or any machinery used in connection therewith or wilfully pollutes diverts or interferes with any water flowing into or in any such dam tank or well shall be liable to be fined by any two Justices any sum not exceeding one hundred pounds or to be imprisoned for any term not exceeding six months.
13. Any lessee caretaker or trustees who shall refuse or neglect to comply with the regulations to be framed under this Act shall be liable to a penalty not exceeding ten pounds for every such breach of such regulations.
14. The Governor may make regulations for the purpose of carrying out this Act and of regulating the management maintenance and control of such dams wells tanks public watering places and reserves as aforesaid and may impose any penalty not exceeding the sum of two pounds for the breach of any such regulations. And all such regulations shall on being published in the *Gazette* have the full force of law and copies thereof shall be laid before Parliament forthwith if then sitting and if not within one month after the commencement of the then next Session.
15. Any person who shall think himself aggrieved by any penalty under this Act imposed upon him or by decision of any Justices under or concerning the provisions of this Act may appeal against such penalty or decision to the Court of Quarter Sessions according to the law in force for the time being for the general regulation of appeals of such or the like nature.
16. All penalties for any breach of this Act or of any regulations made under the same and all charges expenses and sums due and payable thereunder may be recovered in a summary way before any two Justices of the Peace by any inspector overseer lessee caretaker or trustee or by any person authorized by the Minister to do so.

Watering places may be vested in trustees.

Power to impound stock found trespassing in watering places or reserves.

Obstruction of travelling stock in the use of reserves.

Owner of stock to produce permit or travelling statement.

Penalty for destroying or injuring dams tanks or other structures.

Penalty on lessee caretaker or trustee neglecting to comply with regulations.

Power to frame regulations.

Penalties.

SCHEDULE.

Rates of Damages to be charged for Trespass.

| Description of Animals trespassing. | Damages. |
|---|--------------------------|
| For every horse mare gelding colt filly ass mule bull cow ox heifer steer calf... | Threepence per head. |
| For every ram ewe sheep or lamb | One half-penny per head. |
| For every goat | Sixpence per head. |
| For every pig | Sixpence per head. |

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

TANKS AND WELLS.

A STATEMENT IN REPLY, TENDERED IN EVIDENCE, BUT REFUSED BY THE ROYAL COMMISSION OF INQUIRY ON THE CONSTRUCTION OF PUBLIC TANKS AND WELLS.

Ordered by the Legislative Assembly to be printed, 11 January, 1889.

The Chief Inspector of Public Watering-places to The Under Secretary for Mines.

In submitting for the information of the Honorable the Secretary for Mines a detailed reply to the finding of the Royal Commission on the Construction of Public Tanks and Wells, the character of the Report is such as to necessitate a brief recapitulation of some of the circumstances attending the inquiry, which are fully dealt with in their proper places in the subsequent papers.

1. The Blue Book on Public Tanks and Wells, prepared by the Department of Mines in compliance with the order of Parliament, contains the whole of the cases referred to the Commission for inquiry. These gentlemen, however, declined to receive it as evidence, although on page 1 of the volume they were proffered the original papers, and invited to call the writers to substantiate their statements. This, it appears by the evidence, they did not do, nor have they called for the original documents. I may point out further, that by their letter of the 21st January, 1888, P.W.P., 88-506, the Department of Mines was restricted to certain witnesses by the Commission directing who should be summoned, specifying Inspectors Low and Mackenzie, and an overseer from the north-west, the west, and the south-west districts.

Parliamentary Blue Book not accepted as evidence.

Restriction to certain witnesses.

2. The non-compliance of the Roads and Bridges with the Order of Parliament for a return of all their papers upon the subject has placed this Department in the position of having supplied full information to the other side while their papers have not been up to the present laid on the Table of the House.

3. The fitness of permitting a revision of questions and answers in evidence taken on oath, and the necessity of making *material corrections* claimed by the President in his letter of the 8th of June, 1888, has been dealt with subsequently, (*Vide* p. 51, 52.) But it may be briefly stated that from time to time, the evidence, amounting to four large volumes, was forwarded to the Department of Mines. On the 22nd June, this Department's reply was completed, and submitted to the Secretary for Mines. On the 12th September, or nearly three months later, a letter was received from the Commission forwarding *the evidence in part, with corrections taken before the Commission*, and inviting reply. And upon the 27th of September I was summoned to meet the Commission and give evidence in reply upon this corrected copy. A comparison of the two copies of evidence, that had now been furnished by the Commissioners revealed, not only *material corrections*, but such grave alterations and omissions in both questions and answers, that it became necessary to consider whether the Department was justified in appearing to assent to the course the Commissioners had taken by making any reply to the evidence in its remodelled form—the question was however settled by the Commissioners refusing to receive the Mines reply.*

4. From a perusal of the second paragraph on page 28 of the Commissioners' Report, it would probably be inferred that the Department of Mines had not been desirous of tendering evidence in reply, but the fact is that the reply was twice tendered, having been forwarded first in type-writing by messenger on the 14th September, and subsequently by myself, in person before the Commission, upon which occasion I offered to read it to the Commission upon oath; they however declined to receive any thing but oral testimony. (*Vide* p. 35.) The Commissioners have therefore not only framed their Report without hearing the rebutting testimony of the Mines Department, but apparently have allowed the report to convey the impression that no evidence was tendered.

5. In connection with the refusal of the Commission to receive the Mines evidence in reply, it will be observed these gentlemen afforded no opportunity for the cross-examination of witnesses; it was consequently necessary to submit the evidence supplied to a much more searching review than would otherwise have been required.

6.

6. The Commissioners have permitted themselves to touch upon certain subjects not included within their Commission, but one point which may be deemed as fairly within its scope has not been alluded to, that is, the tone and temper of the minutes and correspondence of the Department of Public Works, which needlessly—whatever differences of opinion may have honestly existed—first provoked a soreness, and subsequently maintained and embittered the unfortunate relations between the Departments.

7. Time has not allowed a complete comparison to be made between the two copies of the evidence, but a number of the revisions and alterations have been taken out, and appear in the Appendix. As the questions in the original copy were not numbered, reference can only be made to the page on which they appear, but the number of the revised question is in all cases given.

8. For convenience of comparison, the finding of the Commission and the evidence that would have been tendered in rebuttal upon that particular case are given in parallel columns.

Submitted.—H.W., 2/1/89.

Approved.—F.A., 2/1/89.

H.G., 1/1/89.

Extracts from Report of Commission.

Page 5.

“We have dealt with the allegations as nearly as possible in the order in which they are given in the Minute Paper by the Chief Inspector of Public Watering-places, covering the *précis* of cases submitted to us, under the following heads:—

1. Faults of judgment in the selection of sites for public tanks on stock routes.
2. Defective design and faulty construction; too steep batters in most cases without reference to the nature of the soil, and the adoption of a certain form of tank without reference to the formation of the ground.
3. Excessive cost of construction of public tanks on stock routes, and sub-letting of contracts for same.
4. Incapacity of officers of the Department of Public Works, and frauds by contractors in the construction and measurement of public tanks.
5. Defective construction of flumes and inlet pipes.
6. Carelessness in laying out drains, and excessive cost of construction.
7. Expensive forms of machinery for lifting water, necessitating greater cost of maintenance.
8. Excessive cost and faulty construction of fencing; sub-letting of a contract for fencing, and excessive cost of gates.
9. Interference with Mines caretakers and overseers by officers of the Department of Public Works.
10. “Greasing” of service tanks.
11. Faulty sites of wells.
12. Faulty construction of wells; sinking, timbering, and centering of shafts, and erection of head works—whim, service tank, and troughing—before testing for supply and quality of water.
13. Excessive cost of construction of wells, and supply and quality of water.
14. Costly hutting for caretakers.
15. Defective construction of troughing.
16. Unfortunate effects of dual control, and suggested remedies.”

Replies of Mines Department to Report of Commission.

The perusal of this paragraph of the report of the Commission would lead one to infer that the list of allegations given by the Commission, and numbered from 1 to 16, is the same as the summary of deductions given by the Chief Inspector, Public Watering-places, numbered 1 to 10. To correct this erroneous impression the two summaries are given:—

Minute Paper by The Chief Inspector of Public Watering-places.

Subject:—Summary of deductions based on cases submitted to Royal Commission on Tanks and Wells.

Department of Mines,
Public Watering-places,
Sydney, 10 January, 1888.

In the cases herewith submitted to the Royal Commission *re* tanks and wells, there appears to be evidence of—

1. Faults of judgment in the selection of sites for tanks.
2. Of defective design and faulty construction, with but little concern to take advantage of formation of ground or selection of catchment area, so as to avoid collection of silt; of too steep batters in most cases, and apparently the adoption of a certain form of tank, without reference to formation of ground or nature of soil; the defective construction of flumes and erection of inlet pipes, with carelessness in laying out drains, and excessive cost in construction.
3. Expensive forms of machinery for lifting water, necessitating greater cost of maintenance.
4. Faulty construction and excessive cost of fencing.
5. Interference with caretakers and overseers; greasing of service tanks.
6. Sub-letting of contracts.
7. Faulty construction of wells, sinking, timbering, and centering of shafts, erection of head works, whim, service tanks, and troughing before testing for supply and quality of water.
8. Excessive cost of construction.
9. Costly hutting for caretakers.
10. Defective construction of troughing.

And finally, the evidence throughout confirming the unfortunate effects of a divided control, under which each Department denies responsibility.

HARRY GILLIAT,
Chief Inspector of Public Watering-places.

The Under Secretary for Mines.

Report of Commission.

Page 7.

"The improvement of these natural waters at the public expense, with the object of making public watering-places of them, as suggested by Mr. Gilliat (see Q. 117), would have necessitated reservation from lease; and, at the time the sites were selected, reservation of these natural waters—especially those improved at the expense of the Crown tenants—would have been, in our opinion, an unjustifiable violation of vested rights, and a very serious obstruction to the improvement and profitable occupation of the adjacent waterless country."

Reply of Mines.

Reservation from lease would not have been necessary, either under the Crown Lands Act of 1861 or under the Public Watering-places Act of 1884. Nor would the pastoral lessee have suffered any hardship, as he had unrestricted access to the water of the springs, which was ample to supply the wants of his own stock and those travelling the Paroo Road. It is quite clear from the evidence of Mr. E. Quin (Q. 1869–1877) that the tenant, Mr. W. Hogarth, was quite willing that travelling stock should avail themselves of the water, but even had the pastoral lease been transferred to a tenant not so disposed, travelling stock could have been protected by declaring the area around the springs a Travelling Stock Reserve, in which event the pastoral tenant would still have had the free use of the water. Mr. Hogarth in his letter of January 27th, 1883, to the Chief Inspector of Public Watering-places, says (page 7 of evidence):— . . . "I think putting the tank down in the present site a great waste of public money. Had the Government and station-owners (M.P. Co.) combined, and spent (say) £300 on the springs, they would have watered all the stock that ever came down the Paroo, and all the station stock that the country would carry."

As the Commissioners did not call Mr. Hogarth as a witness, it may be assumed that they were willing to accept Mr. Quin's version of his views. (See Q. 96 to 114, and 3689 to 3691.)

The original version of the evidence on page 20, Mr. Woore states:—"I think it will be found that this is in a water reservation; I have a recollection of having recommended it myself." This has been cut out from the evidence as printed, but should have appeared after the ninety-seventh question and answer. In view of the finding of the Commission, attention is invited to the suppression of this statement.

Again, on page 27 of the original version, Major Penrose asks the witness, who has just read the above letter from Mr. Hogarth, "I presume we can examine Mr. Hogarth himself upon that letter?" Witness replies, "I think that Mr. Hogarth would be a most important witness." This has been cut out from the evidence as printed, but should have appeared between Q. 114 and 115. I may call attention to the fact that Mr. Hogarth does not appear to have been called.

"With regard to the statement that the catchment at Goomboolara Tank is defective, Mr. David Brown, of Kallara, a witness suggested by the Department of Mines, states in his evidence that if a tank was required there at all, he does not think that a better site could have been had within a reasonable distance from the road (Q. 951); that in 1875 and 1876 there was no water at all at Mungundie Lake within 4 miles of the tank (see Q. 946 and 949); that he has not seen the tank dry (Q. 960); that he leased it for about two years formerly, and had the general supervision of it for three or four years after that (Q. 961 and 962); and that it was not dry during the drought of 1884 (Q. 963). Mr. Gilliat, also, states in his evidence in reference to the tanks in question that there is no fault that he knows of as regards catchment (Q. 107).

"Considering these statements in connection with the evidence of Mr. Hanna (Q. 3767 to 3775), we find that the site of this tank, as regards catchment, is not open to any objection."

Mr. Brown also says that the site is particularly badly chosen (Q. 945); that, though the tank was not absolutely dry, it was useless, from which it may be inferred that its contents were mud, not water. Mr. W. Sly states (Q. 729) that the tank was dry in 1885. It is evident that the tank is practically useless, because when the lake is dry the tank is also destitute of water (Q. 945). It does not appear from question 107, or from the context, that Mr. Gilliat made any such admission, no allusion being made to Goomboolara Tank. (See also Q. 964.)

Q. 77 also shows the objection to all the Paroo Tanks was their close neighbourhood to natural water.

Report of Commission.

"We also find that sound judgment, a proper regard for the improvement of the public estate by Crown tenants, and a just appreciation of private rights and enterprise, were exercised in the selection of the sites for all the tanks in question; and that proximity to natural waters must have considerably facilitated and diminished the cost of their construction."

"*Dry Lake Tank.*—This tank is on the road from Wilcannia to Mount Brown, and has not yet been transferred to the Department of Mines. Notwithstanding that it has been submerged by an unprecedented rainfall, which could not have been foreseen, the site is admitted to be, and undoubtedly is, a very good one under ordinary circumstances, both as regards catchment and position on the road, and was reserved from sale specially for water supply many years ago by the local Commissioner of Crown lands. The Department of Mines did not recommend the site for a public watering place, which is alleged to be unnecessary on the ground that a Mr. Smith, a publican of Dry Lake, had made sufficient provision there for watering stock. The Department of Public Works on the other hand, recognizing the importance and urgency of providing public watering places on that road during the "rush" to Mount Brown, constructed the tank at Dry Lake, deeming it injudicious to leave the public entirely at the mercy of the publican Smith, who had the power, in seasons of drought, not only to demand excessive rates for water, but to refuse it altogether, if he thought fit.

We find that in this instance the Department of Public Works acted judiciously and in accordance with the best interests of the travelling public; and that the Department can scarcely be blamed for the tank being submerged, seeing that the lake was never known to have been flooded before. It may here be noted that this is not a parallel case to Cobham Lake, inasmuch as that lake is much more liable to be flooded, being supplied by two of the largest creeks in that part of the country, and was known to have been flooded two or three times before the tank was made there. It is also very much larger than Dry Lake, where the tank is more sheltered than that at Cobham, and consequently less liable to be damaged by wave action."

Page 8.

"*Seaville's Tank.*—This tank is on the road from Wilcannia to the Paroo; the site is objected to on the ground that it is only 7 miles from the River Darling.

We find that the tank is within about 7 miles of the nearest point of the river, which is about that distance off the Paroo stock route; that it is properly situated on the stock route about 12 miles from Wilcannia, and that there is no reasonable objection to the site."

Reply of Mines.

A careful study of the questions and answers quoted must show that the finding of the Commission is inconclusive. The Peri Springs Tank was sunk close to permanent natural water, and the Goomboolara Tank failed at the very time when it was required (the drying up of the lake.) This can hardly be said to display sound judgment in the selection of sites. As to "a just appreciation of private rights and enterprise" it does not appear that these were ever in danger, considering that the pastoral lessee was at any time in a position to protect his rights to any outlay incurred, and his stock were never debarred from water.

The publican Smith had provided three tanks and a well for the purpose of supplying water to the travelling stock, and as this provision was ample, and there was no disposition on his part to charge exorbitant rates, it seemed unnecessary that the Government should incur the expenditure necessary in sinking a public tank. In this case the Commissioners seem to be somewhat indifferent to that "just appreciation of private rights and enterprise" which excites their admiration in the case of the Peri Springs Tank. The statement that the Department of Works "constructed" the Dry Lake Tank to meet the necessities of the Mount Brown rush is somewhat inexact. As a matter of fact, the tank is still uncompleted, and the rush has been a thing of the past for years. (See Mines Return, *re* Tanks and Wells, pages 220 and 246; see also reply-in-chief, p. 56.)

An important fact which the Commissioners did not elicit in examining the witnesses is that this tank has been submerged since the flood of January, 1885 (Mines Return, p. 217.) No doubt a knowledge of this fact would have affected their statement that the site is unobjectionable. The site chosen by the Chief Inspector of Public Watering Places, and confirmed by local residents, 3 miles further along the road, is beyond the influence of floods; but although the Works Department were urged to adopt this site they appear to have preferred the one which was ultimately covered by flood water. The result of their choice has been that since January, 1885, until quite recently, only the embankments of the tank have been visible.

Report of Commission.

"*Tarella Tank*.—This tank is on the road from Wilcannia to Mount Brown, and is alleged to be unnecessary on the ground that it is situated between Koonawatta and White Cliff dams, about 8 miles apart, on Bunker or Tarella Creek. These dams were constructed at the expense of the Crown tenant on whose run they are situated; and we are of opinion that the water in them, conserved by his enterprise and the expenditure of his money, is as much his property during the currency of his lease as the grass upon his run; and that no person has a right to take the one or the other without his consent; and although Mr. Quin, the present occupant of the run, has generously allowed the public to use the water in his dams, there is no guarantee that he will always do so, or that his successor will be equally obliging, or that the dams will always be equal to all demands, especially as silting up is said to be inevitable (see Q. 1960 and 3691).

Therefore, to protect the public from inconvenience and possible disaster in seasons of drought, when the Crown tenant would probably require all his water, the Department of Public Works chose this site as a convenient stage on the road for a public watering place; and in doing so in this and other similar instances, prior and subsequent to this, acted upon a principle laid down in a Minute by Mr. J. P. Abbott when he was Minister for Mines, referring to J. K. Well, dated 3/7/84, the justice and expediency of which we have no reason to doubt.

We therefore find that, in this instance, the Department of Public Works did not commit any fault of judgment in the selection of the site, which we believe to be the best that could have been chosen, and that proximity to water must have considerably facilitated and diminished the cost of construction."

Page 9.

"As to the suggestions of the Mines Department for a tank 3 or 4 miles south-east of the lake [Cobham], (Q. 2439 and 2440) or a well a mile south of it (Q. 237), the former would be too near Murlippa Tank, and would make the distances between that and Cooilly still more unequal. As to the latter, the saline nature of the country and the proximity of a very large salt lake—divided from Cobham by a sand ridge only about a mile in width—is much against the probability of obtaining suitable water in an ordinary well, though artesian water of fair quality might perhaps be obtainable by boring."

Reply of Mines.

The banks of Bunker Creek were reserved. It is acknowledged that the pastoral lessee has a right to all water—either artificial or natural—upon a public road or T.S.R., and to the pasture; but this does not deprive travelling stock of the same right, and there is no reason to suppose that if the dams had not been constructed, travelling stock would have suffered any disability. The dams, as shewn in Mr. Quin, the pastoral lessee's evidence (Q. 1909 et seq.), were on a public road used largely by travelling stock for years, and that he, as lessee, never thought of preventing the use of either feed or water, even if he had the power. The subsequent proclamation of a T.S.R. 1 mile wide has placed it beyond the power of any lessee—even were he disposed to prevent the public from using the water in the dams—from doing so. A Crown lessee had the option of protecting his improvements by improvement purchases; but this alienation in no case comprised the whole or both sides of a water frontage, which was and is always accessible and used by the public (Q. 1927). When it occurs that these dams are dry, the want of feed must render the road equally as impassable as the want of water. It is also evident that Mr. Bennett was impressed with Mr. Quin's representations in regard to this tank (Q. 1909), and would have stayed the work, but it was found that compensation in excess of the amount required to complete the tank would have to be paid.

No such suggestion was made by the Mines Department. Mr. Overseer Tully in his evidence given before the Commissioners expressed an opinion in favour of the site south-east of the lake, but not only did the Mines Department never approve of it, but it never came under their notice. The comprehensive scheme for watering the whole road from Wilcannia to Mount Brown, proposed by Mr. Gilliat, on April 17, 1882 (Mines Return, p. 249), suggests a more economical means of supplying water with fewer works of a less costly nature. Mr. Gilliat reported:—"The lake cannot be regarded as a source of water supply, as it may remain for long periods unfilled, and when filled must become brackish after a short time, having no effluent. I have therefore to recommend that a well be sunk about 1 mile south from the public-house, and a reserve of 640 acres notified around it, at the same time reserving the northern and eastern shore of the lake, so that water will be available for stock, so long as they can drink it."

This is the suggestion of the Mines Department.

"*Ivanhoe Tank*.—This tank is on the village reserve at Ivanhoe, on the road from Booligal to Wilcannia. The allegations against the site are that, being in the centre of the township at Ivanhoe, it is inconveniently situated for watering stock; that the drainage from the township past stables and piggeries flows into the tank; that the townspeople cannot get near it; that it has never been used for supplying the town; and that it does not hold water well, the soil being very porous.

A reference to page 66 of the Mines Return will show that the information of the final site for the Ivanhoe Tank was conveyed by Mr. Wood's letter of 10th March, 1885, in which he says the "question of site was ultimately settled by constructing the tank on the village reserve, which pleases Kilfera, Ticehurst, and the residents of the township." Upon this my minute was written, stating that I thought the conditions were fully met with in the site Mr. Wood had selected.

It

Report of Commission

It appears that a site for this tank was first chosen on the Ivanhoe to Balranald road, about 1 mile west of the town; and a tender was accepted for construction; but it is stated pressure was brought to bear against this site by the lessees of Kilfera run and some of the townspeople. Consequently it was abandoned; and a site was then chosen at Box Swamp, about 1 mile east of the town on Ticehurst run.

Trial holes were put down and contract for construction was let, but between the time of sinking the trial holes and the arrival of the contractor on the ground, the lessees of Ticehurst run selected—*i.e.*, conditionally purchased—the site and ordered the contractor off it, no precaution having been taken to have the land reserved from sale, which Mr. A. P. Wood frankly admits was an omission on the part of his Department. (See Q. 4844, 4845, and 4846.) The Department of Public Works was then apparently forced to adopt the alternative of placing the tank in its present position on the village reserve.

This site was approved of by Mr. Gilliat in his minute of the 18th March, 1885, quoted by Mr. A. P. Wood (see Q. 3350), and appears to have been the only one then available free from the drainage of the town. Mr. Stillwell, under whose supervision the tank was constructed, states that he consulted the residents of the locality as to the suitability of the site, and did not hear anything against it until some time after the work had been in progress. (See Q. 4417.)

We find that although this tank is on the village reserve, it is a short distance (about 100 yards) apart from, and not in the centre of the town as alleged, which consists of only a few buildings.

That it is somewhat inconveniently situated for watering stock on account of being so near to the buildings.

That the drainage from the buildings does not flow into the tank by the drains, though it is *possible* that it might do so by an indirect course, and from the main road through the lower silt tank during heavy rains.

That the tank is accessible to the townspeople, and though there is no evidence showing whether it has been used for supplying the town or not, it could be used for that purpose, if the inhabitants wished to avail themselves of it, and were permitted to do so.

That the soil is porous and some of the water is now lost by absorption, but the deposition of silt will, no doubt, in time, render the tank sufficiently retentive, the holding powers of the tank having very much improved already.

That notwithstanding that the site is somewhat objectionable, mainly on account of its proximity to the buildings, the tank is a useful work and answers the purpose for which it was intended.

That the site chosen at Box Flat is, all things considered, preferable to that on the village reserve; and the Department of Public Works is responsible for omitting to have it reserved from sale."

Reply of Mines.

I naturally assumed that as Mr. Wood stated that the tank was on the village reserve, and the residents of the township were pleased, that no cause of complaint existed. But Mr. Wood's statements were not confirmed, the tank is placed upon the surveyed allotments of the township, and the townspeople are not pleased.

I submit an extract from a letter of George Williamson, Esq., J.P., of Ivanhoe, P. W.P., 88-3,237, dated 28th May, 1888:—

"The general opinion of the residents was never in favour of the present site, although I said—and dare say others said—that if it was absolutely necessary that the tank should be in the town, the present was the best available, but we were never in favour of the present site."

The Commissioners admit the possibility of a flow of drainage from the town into the tank, but do not appear to attach much importance to a matter which jeopardises the health and possibly the lives of the residents. The residents possibly regard the question in a different light. The Commissioners arrive at the conclusion that "the tank is a useful work, and answers the purpose for which it was intended." It will perhaps be admitted that it would have been equally useful and more wholesome had it been placed beyond the village drainage.

The tank is upon the village allotments, and opposite the main hotel (Elliot's), and separated from that building only by the width of the street. There are buildings above it on both sides of the street, and the piggery referred to was actually upon the very edge of the drain, in position where the drainage from it would not fail to reach the tank.

It has never been alleged by this Department that the tank was not accessible to the townspeople; they, in common with the rest of the public, have a perfect right to the use of the water, which has never been refused since its completion, which was in 1887. During the greater part of 1888, and at the time the Commissioners made their inspection, the townspeople were dependent upon it for domestic purposes.

Page 10.

"*Walla Walla Tank.*—This tank is on Petrie's Creek about 25 miles north of Albury. The site is objected to on the ground that it is in close proximity to natural water, and that the tank was therefore unnecessary.

On 9th October, 1882, Mr. Gilliat wrote the following minute:—"Bearing in mind the large expenditure required in the dry districts of the Colony, the comparatively good rainfall here, and the trifling expense at which water can be con-

We

Report of Commission.

We find that the site was suggested by the Stock Branch of the Mines Department; that the natural water near it is not permanent, and when it fails, the inhabitants of the locality are entirely dependent on the tank; and that the tank is not an unnecessary work, and the site is not in any way objectionable."

Reply of Mines.

served by the settlers themselves, and the fact that the construction of a tank here (Walla Walla) would be taken as a precedent, and be followed by numbers of applications for similar works which would be convenient, but not absolutely necessary for the well-being of the settlers, I am not prepared to grant this application."

On 24th October, 1882, the Chief Inspector of Stock, in a covering paper, wrote:—"I would suggest that it be considered in the same class as the other works asked for on the roads from the Murray to the Murrumbidgee—the construction of which should, I think with Mr. Gilliat, give place in the meantime to the more urgent works in the outlying waterless portions of the Colony where the rainfall is much more uncertain, and very much less. If this be approved, Mr. Day, M.P., might perhaps be informed, and the papers forwarded to the Department of Works.—A.B., Stock Branch, 24/10/82. The Under Secretary for Mines."

And upon that minute Mr. Bennett wrote as follows:—"I do not see that any action can be taken by this Department in this case. The Jindera papers which were given to the Mines some time ago are now required in this office.—W.C.B., 13/11/82.

The accompanying letter from C. H. Douglas, Esq., J.P., the owner of Walla Station, and chairman of the Albury Stock Board, and a resident of the district for over thirty years, and a lessee of the tank, confutes the statement of the Commission, that the natural water near the tank is not permanent:—

Dear Sir, Walla Walla, Albury, 23 May, 1888.

In reply to your letter of the 21st instant, I beg to bring before your notice the following facts regarding the Walla Swamp and Petrie's Creek which flows into same, and which also supplies the Government tank leased by myself and brother. The water now in swamp covers an area of nearly 700 acres, varying in depth up to 6 feet, and will, with the help of ordinary winter rain, last for at least two years before drying up, even should comparatively dry seasons set in; the swamp was so full that for three months during last spring it overflowed, and flooded a large area of country, and made the roads in its vicinity on north-west side quite impassable, and has remained full all summer. Petrie's Creek, which fills it, ran nearly constantly all last winter, and continued to do so up to end of last year. The bursting of a dam thereon in no way affected or caused its continual running, sixty dams bursting on a creek like it would not have been nearly sufficient to thoroughly soak the earth over even the half area of said swamp. Before the Walla Tank was made a spring existed, and still flows across main road from Jindera to Walla post office or township about 2½ miles south of same at which spring a large number of the farmers drew their water supply for stock and homesteads. The Billabong Creek also has never actually been dry for very many years. The farmers and residents always being able to obtain water at it in any quantity in the driest season known for twenty-five years. The distance from tank to Billabong being something under 3 miles. When the Walla Tank was proposed I recommended a dam, the earth forming it to be taken from bed of creek, in fact forming tank, say 15 feet deep, which would have thrown the water back at least a mile, and could have given a splendid permanent supply at the small cost of £100. A fence placed round the main tank, and dam 20 yards of troughing, and a little spouting fed by a common Douglas pump costing £4, would have been perfectly sufficient for all requirements. My proposal I believe was recommended by the then District Surveyor, Mr. Wood, of Albury. I may mention that as one of the lessees of Walla public watering place over which nearly £2,000 has been squandered, and for which a rental of £50 per annum is paid that from the commencement of lease until now a period of eighteen months not a penny has been taken or water supplied, neither do I expect during the currency of the lease (5 years), ¼d. will be taken as it is not likely that drovers and teamsters will pay for water when plenty can be had free a mile or so in any direction from said tank. From 4,000 to 5,000 yards is in this district considered a large tank, and quite sufficient to water 7,000 sheep daily through the driest year.

I am, &c.,

CHAS. H. DOUGLAS.

James W. Boulton, Esq., Public Watering Places,
Mines Department, Sydney.

Report of Commission.

"Gilgai Tank.—This tank is on the road from Nymagee to Nyngan. The site is objected to on the ground that there are some gilgai holes within half a mile of it which are not included in the tenants' lease.

We find that in this case the objection is of a frivolous nature, and that the site is not open to any objection whatever."

"Gunaramby Tank.—This tank is on the road from Ivanhoe to Balranald. The allegations with regard to the site are that it is in a swamp, in rotten copai ground; and that it would have been better if it had been situated about 300 yards away on red ground, where the catchment would have been much quicker.

We find that the tank is placed on the edge of a swamp; that it has a good catchment from the swamp and the adjacent high ground; that it is capable, with proper care and management, of conserving a large quantity of water above the berm; and that the site is in every way satisfactory."

"Clare Tank.—This tank is on the road from Ivanhoe to Balranald. The allegations with regard to the site are that it is on low ground, in a boggy black-soil swamp, and that the works are liable to damage from being surrounded by water when the tank is full.

We find that the tank was placed on low ground in the swamp with the object of commanding as large a catchment area as possible by tapping a neighbouring swamp; that during an exceptionally wet season the water from this swamp—added to that in which the tank is situated—caused an excessive supply, which surrounded the works and made the ground about them boggy; that this state of things was prolonged by the valve being left open, allowing the water to escape from above the berm level of the tank into the swamp; that very little damage was done to the works by the excess of water in the swamp, which could easily have been prevented by cutting off the supply from the upper swamp, and preventing the water above berm level from flowing back into the swamp by closing the valve; that the site probably is the best that could have been chosen in the locality; and that there is no reasonable objection to it."

Reply of Mines.

The only evidence taken by the Commission bearing upon the utility of this tank is comprised in questions 181 and 182. No evidence was tendered to controvert this, and yet the Commission find the objection is frivolous and the site open to no objection whatever. The Commissioners advance no proof that the tank could not have been placed close to the gilgai holes, which could have been utilized as natural silt pits. In confirmation of the view of the Mines Department it may be pointed out that since the Commissioners began their inquiry it has been found necessary to reduce the rent of the tank from £60 to £30 per annum. This was done in response to the earnest appeal of the tenant, who found himself unable to pay his rent in consequence of the loss of revenue sustained by stock watering at the gilgai holes and passing the tank. Thus not only is the Government losing £30 per annum, but at the expiration of the lease it may reasonably be supposed that, in consequence of the neighbourhood of the gilgai holes, it will be impossible to lease the watering place again, thus involving the employment of a caretaker at £130 per annum at least. In view of these facts the opinion that the objections raised by the Mines Department are frivolous will hardly be general.

It is difficult to understand how a consideration of the evidence submitted to the Commissioners could have led to the conclusion that "the site is in every way satisfactory." Even if the rest of their finding, which is hardly more than mere generalization, be admitted, the fact remains that the Commissioners do not deny that a better site could have been found; nor do they appear to consider the statement made by Inspector Boulton on page 37—that the batters, owing to the loose nature of the soil, have caved in excessively to a depth of 3 feet—as sufficient to modify their opinion that the site is in every way satisfactory.

No effort appears to have been made by them to test this statement, and no denial is given by the Works Department. The evidence shows that it is entirely due to the forethought of the Mines officers that the batters did not cave in bodily (see Q. 2637). At the date of the Commissioners' inspection along this road the tank had about 14.6 feet of water, and the damage must have been very apparent even to the most inexperienced eyes.

See reply, page 108.

The conclusion of the Commissioners that the tank was placed upon low ground in the swamp with the object of commanding as large a catchment area as possible by tapping a neighbouring swamp, appears to show that they have somewhat blindly adopted the statement (Q. 4421) made by the Works officer in exculpation of his action in placing the tank in a position where it was flooded, as one on which to base their finding. It is usual among practical men to place a tank in a position where it is not liable to be damaged by flood, and, by intercepting the flow of water at a higher level by contour drains, thus secure it before it can reach the lowest portion of the catchment. The rudiments of tank sinking appear only to have been reached in this effort of the Works Department at Clare. The embankments of this tank are copai soil and friable in the extreme, and to save them from damage the valve was, with the full concurrence of the Department, left open. Had the valve been closed the water would still have reached the level at which the service tank and trough were flooded. Had the drain from the neighbouring swamp been closed the water would still have reached the same level. This Department maintained that a sufficient catchment was available in the neighbourhood where there would

Report of Commission.

*“Box Creek Tank, and New Tank 16 miles from Balranald.—*These tanks are on the road from Ivanhoe to Balranald, at the junction of stock routes. The sites are objected to on the ground that better sites could have been obtained.

We find that the sites are in every way satisfactory.”

*“Tom’s Lake Tank.—*This tank is on the road from Booligal to Ivanhoe. The allegations with regard to the site are that it is in a rotten, boggy swamp; that there is much better holding ground three-quarters of a mile northerly; and that the tank is quite half silted up.

We find that the tank is partly in a swamp, in good holding ground, and where a larger catchment area is obtained than if it had been placed in any other position; that the troughs are on the edge of the swamp, clear of the bad ground; that there is only about 1 foot of silt in the tank; and that the site is satisfactory.”

Reply of Mines.

would have been no danger from flooding. (Q. 1107, 1108, 1109, 1112, 2629, 2633, 2635.) The Commission has not elicited any evidence to the contrary, but still has framed its finding so as to leave the impression that the best site was selected. The evidence of the flooding of troughing, of the boggy nature of the swamp, and that a better catchment was available, are surely grounds for a reasonable objection to the site.

The case of the Box Creek Tank is another instance in which there is a direct conflict of testimony between the officers of the Mines and the Works Departments, yet the Commissioners appear to experience no hesitation in discrediting the evidence of the Mines Inspector, a gentleman with a practical experience of many years in conserving water on western stations. It was brought before them that a larger body of water could have been stored at less cost by improving the natural water-holes less than a mile down the creek, but they quite ignore this information. The construction of a single embankment with the excavation in the bed of the creek, instead of a large tank with four embankments, would have met all requirements at much less cost. The water that may be conserved above the surface level of the present tank cannot certainly exceed a few inches. The error committed was in constructing a costly tank with embankments on four sides in the bed of a creek when three-quarters of a mile lower down natural water-holes existed, which, by being deepened, and the material used for a dam, would have conserved an ample supply of water, with a very great reduction in cost. The water-holes referred to last longer than any other natural water in the neighbourhood. Had they been excavated an additional 10 or 12 feet to obtain material for the dam it would have given a greater depth for a conserving area than the present tank.

As to the site of the new tank (Dowdican’s), it will be observed that the Commissioners omit to refer to question 4410, which has an important bearing on this point. Possibly a consideration of Mr. Stillwell’s admission that a better site might have been obtained would have affected their finding. Mr. Stillwell practically admits Mr. Low’s statement that a better site could have been procured, and if, as Mr. Low states, the distance was only half a mile, which would not have affected the position as regards the stock routes, it is to be regretted that Mr. Stillwell did not give some more conclusive reason why the better site was not adopted.

It is perhaps only necessary to reply to this statement briefly. It must be apparent that water flowing into a swamp can be intercepted before reaching it, consequently it is not necessary to put the tank in the swamp to obtain a catchment. I may add further that to do so where stock are to be continually watered in large numbers, is not such a judicious course as placing it upon sounder ground and intercepting the storm-water. The Commissioners appear to disagree with this conclusion, but it may be remarked it is not so regarded by practical bushmen and tank-sinkers. The Commissioners make no allusion to the statement of the Mines that one of the drains runs for some distance from the tank instead of towards it. Having lately visited this tank, the Commissioners have doubtless confirmed the truth of this charge, otherwise it can hardly be supposed they would have failed to contradict it. With regard to the statement made by Inspector Low, of the Mines Department, that the tank was quite half silted up, it should be explained, in fairness to that officer, that when he inspected the watering-place he had been only a few months in the service of the Department, and had had no opportunity of sounding the tanks. He merely expressed an opinion, which it is admitted has been found to be incorrect.

Report of Commission.

Reply of Mines.

Page 11.

"Kerrigundi and Mulya Tanks.—These tanks are on the road from Cobar to Louth. It appears to have been impossible to obtain good sites in suitable positions on the portion of the road on which they are situated; and we have no reason to doubt that the sites chosen are the best that could be obtained within the limits of the stock route, and with due regard to approximate equal division of distance.

According to the return of the Department of Mines for the week ending 10th January, 1888,—produced by the Department at the request of the Commission—the first-named tank contained 14 feet of water; and there is no evidence showing that it has not answered the purposes for which it was intended. Mulya Tank is said to have contained 12 feet of water at one time; and the catchment has been increased by extending the drains so as to make it fill more readily.

We find that any faultiness in the sites of these tanks is due to circumstances beyond the control of the Department of Public Works, and not to any want of judgment in their selection."

The objection to the site of the Kerrigundi Tank raised by this Department is shown in the Mines Return, pp. 220 and 226, and is that the tank has been placed in such a position that it is liable to great damage in flood-times. The troughs and supply tank have already in one flood been displaced from their position, and the engine completely submerged and embankments damaged, and this may occur again. These points the Commissioners have not investigated. The reply made by the Mines officer to Q. 1671 was undoubtedly made in error. It is known that he referred to the Booroondara Tank, the next one south of Kerrigundi, and had he not resigned his position in the Department he would have corrected his error. It was understood that he had done so, and had mentioned the matter to the Secretary of the Commission at the time, but no trace of the correction can be found. The Department contends that this is a site where the tank could have been excavated in close proximity to the present one, out of the direct flow of the stream; but this contention, which is embodied in the papers of the Mines Return, p. 220 et seq., the Commission did not deal with, and took no evidence upon. It is therefore difficult to understand upon what evidence they have arrived at their conclusion that the site was the best that could be obtained within the limits of the stock route.

The question as to the suitability of the Mulya Tank site may perhaps be brought into greater relief by a reference to the weekly returns showing the depth of water in the Government tanks, and which have been so freely referred to by the Commissioners as affording evidence as to the suitability of the various sites questioned. It will be observed that in this case no reference is made to the weekly return, while they content themselves with quoting a hearsay statement of the Works officer that at some time he was informed it held 12 ft. of water. The tank is now dry, and has been so for months, and a reference to the return here given will show that at no time since its transfer to this Department in December, 1887, has the depth exceeded 6 ft., and at that time 3 in. rain only contributed 2 ft. 6 in. of water. Mr. Cotton's evidence is that with 8 in. of rain the tank did not fill. The catchment has been increased by additional drains, but with as yet no apparent results. Stress is laid upon the Works officers' statements that the sites were the best obtainable, while the statements of the Mines officers that a better one could have been obtained are regarded as of no value.

Report of Commission.

"*Lowesdale Tank.*—This tank is on the road from Corowa to Urana. The site is objected to on account of the sandy and unretentive nature of the soil, which at first resulted in loss of water by absorption; but it is admitted that the tank has been made retentive, and holds well now; and from the weekly returns of the Department of Mines relating to public watering-places, it appears that the depth of water in this tank during nine months from the 1st January last has been from 16 to 18 feet.

We therefore find that there is now no objection to the site on the ground stated."

"*Thirty-five-mile Tank.*—This tank is on the road from Ivanhoe to Wilcannia. It is alleged that the site was badly selected, and that the tank never had any water in it to the knowledge of witness G. W. Townsend. On reference to the weekly returns of the Department of Mines relating to public watering-places—produced by the Department at the request of the Commission—it appears that the depth of water in this tank during nine months from the 1st January last has been from about 16 to 19 feet.

We therefore find that the site is satisfactory.

"*Booroorban Tank.*—This tank is on the road from Deniliquin to Hay. This is a case of alleged faulty site mentioned in the *précis* of cases submitted to us—p. 220. The objections advanced against the site are that it is in a swamp, and that it is near a waterhole which is admitted not to be permanent.

There is no evidence supporting these allegations; or showing that the tank is an unnecessary work; or that it has not fulfilled the purposes for which it was intended."

"*Youhl Plains Tank.*—This tank is on the road from Ivanhoe to Balranald. This, also, is a case of alleged faulty site, mentioned in the *précis* of cases submitted to us—p. 219. The objections advanced against the site are that the drains have had to be taken over porous ground, and that the watershed is very small.

There is no evidence supporting these allegations; and on reference to the weekly returns of the Department of Mines relating to public watering-places, it appears that the depth of water in this tank during nine months from the 1st January last has been from about 14 to 17 feet."

Page 12.

"In concluding this portion of our report, we desire to point out that there are 113 public tanks on stock routes in the Colony, including those in course of construction. With respect to twenty-two of these, it is alleged that the Department of Public Works has committed faults of judgment in selecting the sites. It will be seen from our report on the sites of these tanks that there is one

Reply of Mines.

It will be seen from the foregoing extract from the records that in December last 3 in. of rain only ran 2 ft. 6 in. of water into the tank, and the rainfall of January, February, and May, 1888, each exceeding 1 in., ran in no water.

The tank has been dry since 20th October, 1888.

A perusal of the Q's. 200 and 1430, in which the only reference is made to Lowesdale Tank, will show that no objection was taken to this tank. It was simply mentioned as an instance of a tank that upon completion would not hold water, and the successful steps that were taken by the Works Department to make it do so were detailed. It was never alleged that the tank does not now hold well, and although, as the Commissioners find, there is now no objection to the site on the ground stated, no effort was made by them to elucidate how the tank came to be placed in such a position where it was nearly dry three days after being filled (Q. 1430), or who was to blame for the expenditure necessary in filling in the tank with clay to render it retentive.

Mr. Townsend, Q. 2176, states the year during which he was at this tank was 1878 or 1879. I am able to confirm Mr. Townsend's statement that it had no water in it. It was dry in November, 1879, and from then until some time in 1881 or 1882, when the embankment was cut by my instructions, and the original 9-in. inlet pipe removed and replaced by a box flume of 12 by 24 inches at a much lower level. This tank did not, to my knowledge, previously collect more than a foot or two of water. Since that date it has filled readily.

The case of the Booroorban Tank is referred to on p. 120 of the Mines Return. The Commissioners did not apparently deem it worth while to investigate, neither did they call any evidence to test the allegations made with regard to it; yet they consider it of sufficient importance to include in their report with a verdict of not proven. It was understood to be one of the functions of the Commissioners to elicit the fullest evidence in every case. The Mines Department stood prepared to support their charges, and their objection to the tank was,—1st, its situation in a swamp; 2nd, its proximity to the dam constructed by the Works Department in the Pine Ridge Creek. This tank was constructed in the face of the recommendation made by the Mines Department that the dam referred to should be deepened and enlarged to 15,000 cubic yards.

See reply-in-chief, p. 57.

It is hardly correct to say there is no evidence in support of these allegations, as the Commissioners asked no questions and summoned no witnesses, nor asked for any papers from this Department, in short, made no apparent effort to investigate the case; but there is ample evidence submitted in the Mines Return in proof of the assertion made. It is remarkable that though the Commissioners have not investigated the value of this testimony, they do not hesitate to practically treat it as unworthy of credence.

It is worthy of remark that the Commissioners have not deemed it necessary to arrive at any conclusion with regard to the allegations made by the Mines Department, in connection with the following watering-places:—Dry Lake Well; Mount Manara Tank; Boro Tank; Bunghill Tank; Galathera Tank; Boggy Creek; Hovell's Dam; Muriel Tank; Shearlegs Tank.

Report of Commission.

case—namely, Old Copago—of total failure and loss of public money on account of injudicious selection of site; that there is one case—namely, Cobham—which may result in total failure and loss of public money on account of injudicious selection of site; and that there is one case—namely, Ivanhoe—in which the site, and the action of the Department of Public Works with respect to it, are, to a certain extent, unsatisfactory.

It is a well-known fact—and it is within the personal knowledge of two of your Commissioners—that in the selection of sites for the conservation of water the squatters themselves have made great mistakes, resulting in loss of money and disappointment; and Mr. Tully, of the Department of Mines, who has had considerable experience as a station manager, admits that in the early days “mistakes were made all round” (See Q. 2419.) Therefore, infallibility in this respect cannot reasonably be expected from a Government Department; and taking into consideration the restrictions previously mentioned,—by which the Department of Public Works was limited in selecting sites for public tanks, and the novel nature of the duty to the Department,—the result is somewhat remarkable; and cannot fail to be regarded as highly satisfactory to the public and creditable to the Department.”

“No. 2.—DEFECTIVE DESIGN AND FAULTY CONSTRUCTION; TOO STEEP BATTERS IN MOST CASES WITHOUT REFERENCE TO THE NATURE OF THE SOIL, AND THE ADOPTION OF A CERTAIN FORM OF TANK WITHOUT REFERENCE TO THE FORMATION OF THE GROUND.

A great deal of evidence was taken in reference to this comprehensive allegation, which may be resolved into the following more specific allegations.

- (a) That in most cases the batters are too steep, and will not stand.
- (b) That in some cases the tanks are too large.
- (c) That in many cases advantage has not been taken of the lie of the ground to conserve water over the natural surface by a proper disposition of the embankments.
- (d) That the steep batters have unnecessarily increased the cost of construction.

(a) The latest type of tank approved by the Department of Public Works and the specifications are shown in Appendices.

This type is the outcome of many years' experience of tank-construction in all parts of the Colony; and we are of opinion that it is admirably adapted to the requirements of a public watering-place on a large stock-route.

The form is square, the batters of the excavation 2 to 1, and the depth 18 feet. Assuming that experience has shown that this batter is the steepest advisable in most cases, this form of tank—putting aside one of circular plan—will conserve most water with the smallest evaporation and soakage areas; the mean depth will be greatest; the surface exposed to wind and sun will be least; and the probability of the tank holding water through a long drought will be a maximum.

In some of the earlier tanks batters of 1 to 1 and $1\frac{1}{2}$ to 1 were adopted, with a view of still further reducing the areas for soakage and evaporation in relation to the cubic contents. Much fault has been found with these earlier batters, and we think, much exaggeration indulged in as to the evil effects said to have been produced by the crumbling away of these slopes under wave-action. We inspected two of the tanks specially

Reply of Mines.

The allegations made were explicit, and seemed serious enough to demand investigation, but though the Commissioners have been pleased to deal with cases of apparently minor consequence, they have not pronounced any opinion on these. Of course it is possible that the Commissioners have satisfied themselves of the truth of the statements, but if so, one may be permitted to express regret that this does not appear in their report. However, the charges still stand as set forth in the Mines Return laid before Parliament, and they have not been refuted.

As to the difficulty in selecting suitable sites, it is still contended by the Mines, with all respect to the Commissioners, and making all allowance for the fallibility of even a Government Department, that fewer mistakes should have been made, and that with the constantly increasing experience being gained by the Works officers during twenty years, better results should have been obtained. Even the misadventures of the squatters “in the early days” might have served to indicate the mistakes to be avoided. And with respect to the restriction, which is said to have limited the Works Department in their choice of sites, it is strange that it should have been regarded as being so stringent as to compel the selection in some instances of inferior sites, when more suitable ones were to be had within a mile or two.

The terms of this allegation No. 2 are not those adopted in the *précis* in the Mines return, and the sub-headings (*a, b, c, d.*) into which the Commissioners have resolved the allegation convey impressions which the Mines Department did not intend. This is notably the case with regard to sub-heading *b*, which asserts that a portion of the Mines charge is “that in some cases the tanks are too large.” Not even by inference does the Mines allegation No. 2 imply this. The Commissioners imagine the charge, and then proceed to confute it. The Department is not responsible for the opinion of witnesses unconnected with it, nor even for the independent opinion of subordinate officers of the Department.

The specifications shown in the appendix would appear to somewhat bear out the construction that a standard form of tank is adopted, and that only the two forms of specifications have been found advisable during the past twenty years, and that even the two types do not appear equally applicable to all grounds and situations. A reference to the Mines Return, p. 105, will show that as early as May, 1884, the defective form of tank was strongly commented on by this Department, and representations have been made repeatedly since by this Department. (See Q. 193.) The Commissioners find the new type of tank to be the outcome of many years' experience of tank construction. They practically admit a new and individual type as having been adopted, and yet assert that every latitude is given to modify this new standard tank.

It is shown in evidence that the batters were as a rule from 1 to 1 to $1\frac{1}{2}$ to 1. In July, 1887, the amended specifications of the Works Department, as far as we can trace, were changed to 2 to 1. It has always been urged by the Department of Mines that any hard and fast rule is wrong. The batter should be adapted to the soil. The use of 2 to 1 in all soils is just as objectionable as 1 to 1. The Boro, Bunghill, and others besides those named by Mr. Wood, also the 35-Mile, Box Creek, Youhl Plain, and Til Til Tanks, are all from referred

Report of Commission.

referred to as instances of this falling-in of the batters, viz., Ivanhoe, a new tank, and Gunaramby. We are of opinion that the damage done by wave-action at these tanks is practically insignificant, and that it will probably cease as age and exposure consolidate the sides. In the older tanks, the growth of water-plants on the batters, which are undisturbed by stock, appeared to afford an excellent protection against wave-action.

(b) As regards the statements that tanks are in many cases too large, we are of opinion that the evidence does not bear out the allegation, and that the Department of Works has, as a general rule, constructed the tanks of the cubic capacity requested by the Department of Mines. Some witnesses have said that the tanks in the Cobar district are about twice as large as required, owing to the quick and good catchments generally available there; but Mr. A. P. Wood, of the Department of Public Works, shows (in Q. 3416 and Appendix XII), that the size of many of these tanks (20,000 yards) was fixed by the Department of Mines. He also proves that the *Walla Walla* Tank, the size of which is complained of by some of the Mines witnesses, was constructed of its present capacity in accordance with a minute by Mr. Bruce, Chief Inspector of Stock of the Department of Mines. (See Q. 3425 to 3431.)

(c) That in many cases advantage has not been taken of the lie of the ground to conserve water over the natural surface by a proper disposition of the embankments.

Although the formulated allegations of the Mines Department do not contain the above charge in so many words, yet the evidence given with regard to tanks generally—and those in the Cobar district especially—led us at first to suppose that much stupidity and ignorance had been displayed in the adaptation of the works to particular sites where natural advantages existed for conserving water over the surface of the ground.

We find, however, that such is not the case; and that the allegation has not been substantiated. We consider that considerable skill and judgment have been displayed in many instances in adapting the tanks to local circumstances, so as to catch

Reply of Mines.

1 to 1 or $1\frac{1}{2}$ to 1, and all in loose soil. The batters at the Gunaramby and Clare Tanks, two of the latest constructed ones, are reported much cut away.

Mr. Wood now states that no rule for batters is "slavishly adhered to;" how then is the destruction of the batters of so many tanks to be accounted for except by want of judgment of the character of the soil?

Mr. Wood again says that on the Mount Brown Road they have adopted 3 to 1 batters. I may state confidently that I have not yet seen a site for a tank where such a batter all round is required.

Mr. Wood also states that their officers are directed by circular not to adhere slavishly to specifications in regard to this matter. Mr. Road Superintendent Adam in his evidence, Q. 3841, states that any alterations he suggested had to be sent to the head office for approval, and that he never did anything without getting the sanction of the head office, and adds, Q. 3850, "I do not remember just now having received a copy of that circular."

[Mr. Adam also states that the plans showing the alterations in the batters were sent from the head office.] (Q. 3823.) (See also Mr Budd's evidence, Q. 2346.)

As before shown no such allegation has been made by the Mines. No objection has been taken by the responsible officer of that Department to the size of any of the tanks, with, perhaps, the exception of the *Walla Walla* Tank, which the Chief Inspector directly reported against as unnecessary. Mr. Wood puts in papers which he claims authorises the construction of this tank; all that I can trace is that Mr. Bruce, while wishing for a tank, agrees with me that it should give place until the more urgent works in the outlying districts have been constructed. (See my minute, p. 144, Mines Return). On page 141 of the Mines Return, Mr. Bruce distinctly states that this tank was undertaken without reference to the Mines, and further adds that the same course was taken with *Jindera*, *Black Swamp*, *Galathera* and *Nymagee* Tanks, and this minute is dated 28th October, 1884, or two years later than the paper put in by Mr. Wood as authorising the construction of the *Walla Walla* Tank.

The papers put in by Mr. Wood were not in our possession, and were not traced in our search, or they would have been laid before Parliament. There was nothing misleading or incomplete as far as our knowledge went, and had the Roads and Bridges complied with the order of Parliament the papers would have appeared. Some witnesses examined before the Commissioners considered that smaller tanks would have sufficed in certain places. The finding of the Commissioners therefore merely amounts to a difference of opinion between them and the witnesses, and may possess some interest for the latter.

The references to tanks are dealt with in their respective places. The objection to steep batters was not so much to the extra cost, but to the inevitable result of their washing down to their natural slope. Why then pay an extra price for a batter that would not stand against the action of water? A too steep batter taking its natural slope under water deposits just so much silt and earth at the bottom of the tank, and nothing has been gained by the extra cost, while so much depth of water has been lost. With respect to discretionary power, see Q. 3841, 3842, 3850.

Report of Commission.

water from different levels ; on one side up to— or nearly up to—berm level ; and on the other side above the natural surface—*e.g.*, *Tom's Lake*, *Mossqisl*, and *Gunaramby* Tanks,—which we personally inspected. At *Tom's Lake* and *Gunaramby* Tanks the embankments are run out to the high ground to impound the water above the natural surface, and we find from the evidence that this has been done wherever practicable.

We find, also, that the shape, depth, and ratio of batters have been left very much to the discretion of the local officers, subject to approval at headquarters, and that an admirable code of instructions was issued by the Commissioner for Roads to these officers to guide them in this particular branch of their work. (*See evidence, page 148.*)

At *Tom's Lake* Tank, which has been the subject of much adverse comment by officers of the Mines Department, there are two catchments as already explained, feeding the tank through silt-tanks at different levels. From the neighbourhood of the upper silt-tank a large deep drain has been led for about three-fourths of a mile to a shallow creek or swamp on a slightly higher level than the main tank ; this creek has been dammed by a low embankment which was constructed to throw the water down this drain to the upper silt-tank and raise the water in the main tank some feet above the natural surface. When we inspected this tank we found that the water in the upper creek had been allowed to scour a channel round the dam ; the intercepting drain choked up with vegetation and silt, and a cutting made through the lower side of the drain near the tank to prevent any water going into the upper silt-tank ; so that the object of this drain has been completely defeated. We have no doubt that this drain has at one time brought water down to the tank as intended from the creek, partly because the upper silt-tank was quite full of silt ; and from the evidence adduced, we believe the present state of the work to be due to want of proper maintenance and care on the part of those in charge of the tank. This appears to us a notable instance of the lamentable result of the divided control of these public works.

“(d) That the steep batters have unnecessarily increased the cost of construction.

There is no doubt that the steep batters have increased the cost of construction, but not, we think, to the extent supposed by some. To obtain any material reduction in the cost of excavation due to the batters alone (apart from depth and other conditions) would have involved very gentle slopes of 4 or 5 to 1 ; and we are of opinion that in view of the many undoubted advantages conferred by steep batters, the Department of Works have been wise in keeping them as steep as possible ; and that the consideration of the permanence of the water so conserved far outweighs the slightly increased cost of first construction. Taking the increased cost of construction due to steep batters at 2d. per yard in an 18,000 yard tank the increased cost of excavation is £150 ; and this is but a small fraction of the total cost of such a work.

We are of opinion that the holding qualities of the tanks have not suffered to any appreciable extent owing to the steepness of the batters, and that although at first a tank with steep slopes possibly may not hold as well as one with gentle slopes, yet the published records produced by the Department of Mines of the depths of water in the public tanks during the past dry year afford no indication of any undue leakage. Some of the tanks appear to have leaked when first filled ; but there is no evidence to show that any undue loss is now occurring from this cause.”

Reply of Mines.

Report of Commission.

"It has also been alleged under the head of 'faulty construction,' that in some instances the embankments have not been completed to the full height,—notably at *Pulletop* and *Rathole* Tanks,—and that as these tanks conserve water over the natural surface, the embankments have been in considerable danger in consequence. It has been explained by Messrs. Hanna and Stillwell, the Works officers in charge, that the contractors in each case failed to complete their embankments, and thereby forfeited some of their retention money; and that if any danger to the embankments has arisen, it has been the fault of the caretakers in not having diverted the water from the drains into the creeks and natural by-washes, and in not having made up the embankments themselves to the proper level. It is evident that unless care is observed in cutting off the supply of water to tanks conserving much above the natural surface, the best finished embankments are liable to be washed away in exceptionally heavy rains."

Reply of Mines.

Pulletop Tank has embankments on three sides only, and the water from the catchment is intercepted by two main drains converging at the silt-pit on the upper or open side. Mr. Stillwell admits in the original evidence that the water lifting appliances are on the lowest ground, but he contradicts this in the evidence as printed, Q. 4437. When the tank is full it must be apparent that the watering appliances are liable to be flooded by every successive rain, as pointed out by Mr. Inspector Low in his report read to the Commission page 58, Commissioners' Report. Our reports show there was a heavy fall of rain in December, 1887, which filled the tank and overflowed around its embankments, the flood-water submerging the troughs and scouring under the service tank, and completely filling the silt-tank with silt. The caretaker was directed to block the main inlet with sand bags so that he could clean out the silt-tank; before this could be done a further fall of rain occurred, and the tank again overflowed, being full to its utmost capacity. The caretaker did stop the main inlet; if he had not done so the flood water would have found its way around the embankments, injuring them as well as flooding the troughing. I am informed by the local officers that the creek in which the small dam stands and which Mr. Stillwell suggests should be used for a by-wash is distant about 20 chains from the tank, and that during the heavy rains referred to the overseer intercepted the flood-water collected in the creek above this dam and permitted it to escape by a cutting below. The course which Mr. Stillwell points out should have been adopted to prevent the main tank overflowing was done, but the tank still overflowed from the storm water over the remainder of the catchment area.

Attention is directed to the statutory declaration by Mr. Overseer Elworthy (p. 92 reply in chief.) It is therefore apparent that the Mines Department had pursued the very course which the Commissioners state to have been subsequently recommended by the Works officers.

With respect to the *Rathole* Tank the answer of Inspector Low to Q. 1137, shows exactly what was done by the caretaker, whose action appears to have saved the lower embankment. The Commissioners have clearly failed to comprehend the real bearing of the complaint made by the Mines Department, which was that works were handed over to them in an unfinished and possibly dangerous condition. And they have equally failed to observe that on page 170 of the Mines Return, the Works Department in protesting against the "absurd system (of the Mines Department) of refusing to take over works" in an incomplete state, fully admit their responsibility to keep the works in order. It is certainly somewhat extraordinary to expect that a caretaker who is fully occupied in attending to the machinery and watering appliances, supplying water and cleaning drains, &c., should be able and find the time to perform so large a piece of work as the completing of an embankment which the contractor has failed to finish. In each of the cases under reference a steam-pump is used for the supply of water. The caretaker has therefore no horse to assist him in the work of repairing the embankments. The whole of the work of seeking the spoil, picking and shovelling it into a wheelbarrow, wheeling it to the tank and on to the top of the embankment 13 feet high, spreading and levelling it, would devolve on the caretaker. His other duties of supplying water &c., are imperative, but if it be granted that he might be able to spare half of each day to the extra work, he would not be able to remove in that time more than 5 cubic yards of spoil on to the embankment. Taking the length of the lower embankment at the *Rathole* as 360 feet and the breadth at 15 feet, to raise it 2 feet would require 400 cubic yards of spoil. Bearing in mind that from the time of the transfer of this tank to the
Mines

No. 3.—EXCESSIVE COST OF CONSTRUCTION OF PUBLIC TANKS ON STOCK ROUTES AND SUB-LETTING OF CONTRACTS.

"It is alleged that the Department of Public Works has given very excessive prices for the construction of public tanks on stock routes, and that these prices are very much higher than those given by squatters for the construction of their tanks."

The principal reasons given for the alleged excessive cost of construction are,—

- (1.) That the design is unnecessarily expensive, especially in respect to steepness of batters and formation of embankments round and at a given distance from the excavations.
- (2.) That the specifications adopted by the Department of Public Works were framed for the purpose of consuming public money and contain a great many unnecessary provisions.
- (3.) That unnecessary, absurd, and ridiculous precision and nicety of finish of the works has been insisted upon.
- (4.) That delay in payment of contractors has induced them to tender at higher rates than they would have otherwise.
- (5.) That contracts have in some instances been let at excessively high rates and sublet at much lower rates.

A remarkable fact in connection with the allegation as to the excessive cost of public tanks—as compared with private tanks—is, that the witnesses of the Department of Mines on this question do not seem to have had any knowledge of the prices per cubic yard actually paid by the Department of Public Works for excavating tanks, excepting from hearsay statements, which do not appear to have any foundation in fact. Mr. Gilliat, for example, states that he has been unable to ascertain the cost of the public tanks, yet he says the cost is excessive, because it exceeds the prices given by squatters. (See Q. 245 and 246.)"

Page 17.

"That the cost of these works has ranged from 10½d. to 1s. 9d. per cubic yard, excepting in four instances mentioned in Appendix III, in which prices exceeding 1s. 9d. per cubic yard were given for the removal of rock and hard cemented gravel met with in the excavations."

Mines Department, the caretaker's time has been almost wholly employed in supplying water (and almost exclusively so during the past year), the task which Mr. Hanna would impose upon him as "healthful exercise" is clearly out of the question. Nor ought it to be expected that the Mines should undertake repairs which by the special arrangement with the Works Department already referred to devolved upon that Department, nor to complete unfinished contracts.

The whole tenor of the Mines statements with respect to this section 3 (*sub-section 1*) is that the work done has been unnecessarily expensive.

Sub-section 2.—With regard to the statement made by the Minister for Mines, that the specifications of the Department of Works were framed for the purpose of consuming public money, practical men on reading the 3rd clause of that specification, page 256 of Commissioners' Report under the head of "clearing," will probably admit that it is justified.

Sub-section 3.—The words "absurd and ridiculous" occur once in reply to Q. 462, and refer directly to the clause in the specifications insisting that the bottom of a tank should be perfectly level. Upon this solitary expression the Commissioners base their statement that the Department of Mines allege that unnecessary, absurd, and ridiculous precision and nicety of finish have been insisted upon. This is scarcely a just way of placing before the public a question involving the spending or saving of many thousands of pounds.

The return containing the Mines allegations was presented to Parliament on February 7, 1888, and was directly afterwards forwarded to the Commissioners. Mr. Gilliat was examined before the Commissioners on January 12 and 13, and he repeatedly pointed out the importance of the Commissioners having these papers before them during his examination. (*Vide* Q. 14, 38, 65, 69, 71, 73, 244.) With regard to the question of cost alluded to, it will be seen on p. 270 of the Mines Return that the memorandum of the cost of the public watering places was not supplied by the Department of Works until February 3, 1888, and appears as an addendum to the Mines Return.

With respect to the Commissioners' remarks upon hearsay statements, it must be observed in Q. 244 that the witness, Mr. Gilliat, was informed by the Chairman "that they wished to get all the evidence in connection with these charges, *not only what you know of your own knowledge, but also what you have heard from others, so that we may have grounds to go upon.*" That portion of the Chairman's remarks in italics appears in the original evidence, but has been excised from the printed copy. Again, after the Chairman's Q. 1325 Mr. Woore remarks, "*but this is only something that someone else told him.*" The Chairman states (Q. 1626), "It is sufficient evidence for us to go on." Mr. Woore's remarks in italics do not appear in the printed evidence.

With regard to the cost of these works, the Commissioners, who merely deal with it at so much per cubic yard, appear to have considered it unnecessary to make any investigation into the very remarkable return furnished by the Works Department, which appears on page 270 of the Mines Return, and to which their special attention was invited on February 6, 1888. Nor do they appear to have deemed it worth while to offer any comment on the

Report of Commission.

NO. 4.—INCAPACITY OF OFFICERS OF THE DEPARTMENT OF PUBLIC WORKS, AND FRAUDS BY CONTRACTORS IN THE CONSTRUCTION AND MEASUREMENT OF PUBLIC TANKS.

"It is alleged that Mr. A. P. Wood has been terribly embarrassed by the incapacity of the officers under him, and that these officers have been repeatedly misled by contractors making up the soil round the tanks so as to make the excavations appear deeper than they really are, in some instances by 2 or 3 feet; that they have been imposed upon by contractors in measuring the work; and that in one instance cement was represented to the Road Superintendent as gravel, in consequence of which he told the contractor not to go any deeper. (Q. 2259 to 2262; 3018 to 3020.)

Mr. A. P. Wood emphatically denies the incapacity of the officers under him (see Q. 3290); and from what we have seen of these gentlemen under examination before us, and learned from the evidence in defence, we are of the opinion that it is extremely improbable that they have been misled or imposed upon by such very simple and perceptible artifices as those described, or that frauds to any appreciable extent have been perpetrated."

NO. 5.—DEFECTIVE CONSTRUCTION OF FLUMES AND INLET PIPES.

"Very little evidence has been elicited in support of this allegation, and what has been given is comparatively trivial and unimportant.

We are of opinion that as a rule the flumes and inlet pipes are of good construction; and that, with ordinary attention from those in charge, will fulfil—and have fulfilled—the purpose for which they were designed. At Tom's Lake Tank, which has been constructed some years, we noticed an open flume failing for want of a little ordinary care on the part of those in charge of the tank.

Great exception has been taken by some of the Mines Department Officers to the method in which the water is led into Gunaramby Tank from one side. There are two silt-tanks at opposite sides of the main excavation; the water from the upper silt-tank is led round both sides of the excavation in drains cut in the berm to the flume on the further side. It is said that this will endanger the edge of the excavation and carry it away into the tank. We fail to see why this should happen with ordinary care and attention, and the explanation offered by the Department of Works, viz., that it was done to save a second flume and apron, costing £100, appears to us reasonable and satisfactory.

At Box Creek Tank we found a defective valve on the inlet shoot, which has probably been the cause of a great loss of water. The tank has had 19 feet 6 inches of water in it, which, if this non-return valve had been in repair, would have been impounded in the tank as the outside water fell. We cannot say whether this valve was out of repair before the water filled the tank; but we do know that it was out of repair at the time of our inspection, long after it might have been repaired by those in charge of the tank."

Reply of Mines.

the singular discrepancies that exist between that return and the one previously furnished by the Department of Works, on January 5, 1885. An examination of the prices paid by the Works Department for the construction of watering places will sufficiently prove the contention of the Mines that a great deal of unnecessary expense has been incurred.

It would appear from this section that these charges of incapacity were made by the Department of Mines. So far from this being the case, they proceed from an independent witness, Mr. A. H. Doudney, whose evidence on the whole is hostile to this Department.

The Commissioners' statement that very little evidence was elicited in support of this allegation is easily explained. Some fifteen cases, covering nine pages of the Mines Parliamentary Return, were submitted to them and inquiry invited. The evidence was not elicited because the Commissioners do not appear to have called the witnesses; or, if they were called, did not examine them on the subject. It must be remembered that witnesses were examined by the Commissioners only, no cross-examination having been granted.

With regard to Tom's Lake, until recently the defective flume has been under water. The tank being leased, no competent workman was on the spot, and the matter was held over, being not very urgent, until the Inspector could be withdrawn from Broken Hill, where he had been sent on special service.

With respect to Gunaramby, the preservation of this drain, which at the first rain cut so deeply as to cause alarm, is entirely due to the action of Mr. Yeo, the local officer of this Department, in having it pitched with copai stones. The stones were collected and the drains pitched by the caretaker with a great deal of labour. (See evidence given by Mr. Yeo, Q. 2637, and Mines Return, p. 145.) That it should have been necessary to take such precautionary measures immediately after the transfer of a new watering-place does not appear to have impressed the Commissioners as any proof of the alleged faulty construction.

With regard to the Box Creek valve, the Inspector has been absent as stated above on special service at Broken Hill, and has not had the opportunity of dealing with this. If the caretaker proves to have neglected any duty he could have performed he is aware that he will lose his appointment. Before Mr. Inspector Low left his district for Broken Hill, he reported the flume as under water, but prior to his return the flood fell.

Report of Commission.

No. 6.—CARELESSNESS IN LAYING OUT DRAINS AND EXCESSIVE COST OF CONSTRUCTION.

“A good deal of evidence has been received on this subject, chiefly in regard to tanks in the Hay District. Having carefully considered the evidence and visited many of the works complained of, we are of opinion that the Department of Public Works has successfully rebutted or explained away the allegations.

We consider it desirable to specify some cases—three of which came under our own notice:—

Tom's Lake Tank.—Mr. Low, Inspector of Public Watering Places, in a report read before the Commission (p. 59) states:—Drains.—These are badly constructed, especially one alongside of road, which for some distance from its commencement runs water from instead of to main tank, having a direct and sudden fall into same without the water, as is usual, passing through a silt tank. Owing to no silt tank being here, and the drain being much cut up by traffic and nature of ground, much silt must have been carried into main tank, which, I feel confident, is quite half silted up. This drain could easily and practically have been led to opposite end of tank when water could have run through swamp and silt tank, thus allowing silt to settle and not be carried into main tank.

These statements are further corroborated in his sworn evidence (Q. 1161.) Mr. Stillwell, the Works officer in charge, in Q. 4452, says:—That statement is directly at variance with the facts. There is a silt tank on this side of the creek through which all the flow must pass into the tank, &c.

Having carefully examined this watering place we found the upper silt tank full of silt, showing that the drain referred to by Mr. Low as running water away from the tank must at one period have run water into it. Moreover, had Mr. Low's proposal of running the water from this intercepting drain into the swamp been adopted, the whole object of the drain would have been defeated, as it was intended to run water in above the natural surface by means of this drain on the upper side, the embankments having been run out as wings for this express purpose. At the time of our inspection the lessee was clearing out the silt tank which Mr. Low says does not exist; but the drain referred to had been blocked, and the water diverted into the swamp, thus defeating the object of the original design.

In the same report, referring to *Dowdigans*, or the *new tank 16 miles from Balranald*, which had not, by the way, been transferred to the care of the Mines Department, Mr. Low states:—‘Drains.—There were 50 chains 6 ft. by 9 in. excavated here. Although there had been heavy rains shortly before my inspection, these had run no water into silt tank; in fact they never will, as both drains in some places were full of water, but quite dry near the tank, thus showing they would run water from instead of to main tank.’ In reply to this, Mr. Stillwell, the engineer in charge, states (see Q. 4467 to 4469), that the statement is at direct variance with the facts; that when he visited the place about November, 1887, he was unable to measure up the silt tank as it was overflowing with water brought down by these drains; that there was no water standing in the drains themselves; and that the water had to be dammed back from the main tank which was not quite completed.

We examined this tank at the end of August, 1888, and found the silt tank two-thirds full of

Reply of Mines.

The Commissioners have, of course, framed their report without being in possession of the rebutting testimony of the Mines on this subject. It appears a simple conflict of evidence between the officers of the two Departments. With respect to the upper main drain at Tom's Lake, the Commissioners are in error in the conclusions drawn from finding silt in the silt tank. The drain runs over into the swamp 100 yards at least before reaching the silt tank. (See diagram, Appendix I, Mines Return. See also Mr. Stillwell's evidence, reply-in-chief, p. 111.) The replies to the rest of the cases are too bulky for insertion here, but will be found in the reply-in-chief, as follows:—Dowdican's, p. 88; Ivanhoe, p. 89; Hulong, p. 92; Mount Elliott, p. 91.

*Report of Commission.**Reply of Mines.*

water after a long spell of dry weather. We are of opinion that Mr. Low's criticisms are not borne out by the evidence and the facts of the case.

Ivanhoe Tank.—The allegation in respect to these drains is that they have been carelessly laid out and badly graded; that one important drain (the northern drain) leading to the upper silt tank is ineffective for a good distance at the end furthest from the silt tank; and that another drain leading to the lower silt tank runs through the town and collects filth from stables and piggeries. The Road Superintendent in charge of the work, Mr. Stillwell, in his evidence states that after a portion of the northern drain referred to had been constructed, he found by levelling that an advantageous extension of this drain could be made by cutting through a small rise 3 feet 6 inches in height, and continuing the drain on the other side for some chains. This work he gave to the caretaker to do just before the tank was handed over; the cutting has never been continued or finished properly; and therefore that extension of the northern drain is still ineffective.

We see no reason to doubt that Mr. Stillwell's explanation is satisfactory as far as he is concerned. As regards the lower drain passing through the township allotments we found on inspection that this drain ran through the allotments above the stables and piggery referred to, and consequently did not carry the drainage from these places to the lower silt tank. We concur in the action taken by the authorities in closing this drain, which has been found unnecessary for the supply of water to the tank, as it cuts through many township allotments. We strongly recommend that the allotments near the tank should be resumed, and the catchment area of the tank be kept quite clear of human habitation.

From the ample supply of water in the tank at the time of our inspection after a long period of drought, we see no reason to doubt that the drains, with the exception referred to—which has never been completed—efficiently fulfil the purpose for which they were constructed.

Hulong Tank.—Exception is taken to the state of some drains at this tank, which are said to run water away from instead of to the tank; and it is further alleged that the Department of Public Works was obliged to lower the level of the flume to get the water to run into the tank owing to carelessness in levelling the drains. (Q. 533, 879, 1096. *Précis* pp. 185-186 Mines Return.)

The engineer in charge replies (see Q. 4445, 4781, 4806), that the drains were not completed by the contractor, who also left the tank excavation unfinished; and the flume set at the wrong level, that the retention money was more than enough to cover the cost of completing the work by day and contract labour; that he had the flume put right by his own men as soon as possible, and not in consequence of seeing water lying in the drains; that in order to save expense he left the completion of the drains to be done by the caretaker; and that the ineffective drains complained of could easily be put right at small expense and trouble.

We are of opinion that the Department of Public Works acted in this manner from a desire to save undue expense and hand over the work to the Department of Mines for use by the public as soon as possible; but that it was unwise to so hand over the work to another Department in an incomplete state."

Report of Commission.

Page 19

*“Excessive Cost of Construction of Drains.—*Mr. Low in his report read before the Commission (p. 59 and Q. 1166) states that the cost of the drains at Ivanhoe Tank was 15s. per chain—about three times what they should have cost—and this is corroborated by Mr. Yeo (Q. 2673). Mr. Stillwell, the engineer who constructed the tank, admits that the price paid for these drains was excessive. It would appear from his evidence (Q. 4508 to 4516) that the drains were offered for public tender, and that he was forced to let them at an excessive price to get the work done at once; and that by so doing he was able to catch the first fall of rain, which would otherwise have been lost.

It would appear that the drains were not included in the tank contract, and that had they been included they would probably have been done much cheaper.

We consider that under the circumstances the Department of Public Works acted judiciously and in the interests of the public in paying this excessive price, rather than run the risk of losing the first opportunity of filling the tank by leaving the drains unconstructed until more moderate tenders were obtained; but that an error of judgment was committed in not including the drains in the tank contract originally.

We have had no evidence to lead us to believe that drains as a rule have been constructed at excessive prices.”

Page 19.

No. 7.—EXPENSIVE FORMS OF MACHINERY FOR LIFTING WATER, NECESSITATING GREATER COST OF MAINTENANCE.

“The Mines Department, some years ago, strongly urged the adoption of watering appliances at public tanks; and we are of opinion that the recommendation was a wise and proper one. Objection is, however, strongly urged to the alleged expensive nature of the water-lifting appliances adopted by the Department of Works in accordance with this recommendation. The M’Comas horse-gear lift was first tried by the Works, found wanting, and condemned, as it involved expensive timbered wells and staging, and was very difficult to put in order if anything went wrong when the tank was full. The Mines Department strongly advocated a double whip to be worked by a horse, and sent in a sketch of proposal, which the Works Department found involved the same expensive and perishable timbering as the M’Comas horse-gear lift.

The Works Department then determined to adopt pumps, involving little or no woodwork in the tank itself, and selected some simple and effective forms of steam and horse-gear pumps for trial. The steam-pumps are placed at tanks where wood is easily obtained, and horse-gear pumps where wood is not easily obtained.

Many witnesses of the Mines Department now state that neither horse nor steam-power is required for these tanks in many instances, and that the hand-power M’Comas lifts would amply suffice in these cases. We can find, however, no evidence that the Department of Mines recommended the adoption of hand-power lifts at the time the question of watering appliances was first taken in hand; and we do not consider that hand-power lifts would have been adequately powerful for these works, taking into consideration the possible maximum demand for water, the depth of the tanks, the severity of the climate, and the uncertainty as to the physical powers of the caretakers or lessees.

Reply of Mines.

*Excessive Cost of Construction of Drains.—*The Commissioners state that it would appear from Mr. Stillwell’s evidence (Q. 4508 to 4516) that the drains were offered for public tender, and that he was forced to let them at an excessive price to get the work done at once. The Commissioners profess to base their conclusion on this portion of Mr. Stillwell’s evidence, and yet it is clear that, in the most precise language, Mr. Stillwell distinctly admits that the drains were not let by public tender, and that the price was excessive (Q. 4508.)

Mr. Overseer Yeo in his evidence (Q. 2680) points out that the same contractors who constructed these drains for Mr. Stillwell, constructed the same class of drains for the pastoral tenant in the same paddock in which the tank is situated, for 3s. 6d. per chain. Further, Mr. Hanna, another officer of the Works Department, was getting drains cut at 26-mile Tank, 60 miles north, in the same kind of soil for 4s. 6d. per chain. (Mines Return, p. 126.) Reference may also be made to Mr. Coleman’s evidence (another Works Officer) Q. 4047, stating that he pays from 10s. to 15s. per chain. These statements appear to sufficiently confirm the allegations of the Mines Department.

A reference to the return furnished by Department of Public Works, on February 3, 1888, p. 270, Mines Return, shows the average cost of the machinery for watering at eighty-one tanks, as £532 2s. 3d.

This is perhaps a sufficient admission of the allegation of the Mines Department, and further comment appears unnecessary.

The double whip advised by the Mines Department in 1883 could have been adopted at all new tanks with watering appliances for £250, allowing a liberal margin, and it was approved by Mr. Bennett (*vide* p. 261 Mines return). See also Mr. Leslie’s evidence, Q. 2892.

With regard to hand-power lifts, the evidence taken by the Commissioners does not confirm their statement that many witnesses of the Mines Department now state that these would be sufficient, &c. Four of the Mines witnesses gave evidence that in special cases, where there was but little traffic, they considered this class of lift would be sufficient, but the Department at no time endorsed this view, or made any recommendation to give effect to it.

No. 8.—EXCESSIVE COST AND FAULTY CONSTRUCTION OF FENCING; SUBLETTING OF A CONTRACT FOR FENCING; AND EXCESSIVE COST OF GATES.

“It is alleged that the cost of fencing at public watering places has been excessive as compared with the cost of squatters’ fencing; that in some instances the construction is faulty; that in one instance a contract for fencing was sublet with enormous profit to the original contractor; and that the cost of gates has been excessive.

We find that the prices paid by the Department of Public Works for fencing at public watering places, consisting of fencing inclosing the tanks and caretakers’ paddocks, have usually ranged from £58 15s. to £100 per mile; and that in one or two instances £112 and £120 have been paid.

The extent and description of fencing appears to have been decided upon by the Department of Mines (see Appendices X and XI) under departmental arrangements (see “Public Tanks and Wells—Departmental Arrangements;” Class A, No. 7; p. 175), no distinction having been made in the description of fencing for inclosing tanks, and that for lessees or caretakers’ paddocks. But the Department of Public Works, finding the description of fencing decided upon very expensive for these paddocks, substituted a No. 4 wire for the top rail, or two No. 6 wires, decided upon by the Department of Mines; and placed the posts 10 ft., instead of 8 ft. 6 in., apart.

Notwithstanding that the posts were sunk 2 ft. 6 in. in the ground (which we consider unnecessary and costly), this is a somewhat less expensive description of fencing than that decided upon by the Department of Mines, and quite as effective. And in Wilcannia district a still less expensive description of fencing has been constructed.

We find that the description of fencing decided upon, and that constructed is not too substantial or costly for inclosing the tanks, it being absolutely necessary that these valuable national works should be very substantially protected; but that the same description of fencing, and that constructed, is unnecessarily substantial and costly for tenants’ leases or caretakers’ paddocks; and that the Department of Mines, having, under departmental arrangements, decided upon a very expensive description of fencing for the purpose, is responsible for the somewhat extravagant expenditure that has taken place with respect to it.

The faulty construction complained of consists chiefly in erecting fences without straining posts, running the wire out to its full length, and straining and fastening to posts only 3 inches thick, which it is said will not stand the wiring plug being driven in, and are splitting and giving way, being unequal to the strain.

We find that this description of fencing has been erected in several instances, experimentally, to lessen the cost and to avoid splicing the wire; but it was discontinued on account of the objection raised by the Department of Mines.

We inspected some fencing of this description in the Hay district; it was in very good order, and seemed to be well and substantially constructed; and we did not observe any of the posts splitting or giving way; but we are of the opinion, nevertheless, that a fence constructed in the usual way with special straining posts is better.

With regard to subletting, Mr. Abigail states (see Q. 477).—“There was one case (Boonoono Tank) which cost more than £120 per mile. It was sublet by the contractor to another man, and the former pocketed about £40 per mile.” And

Without entering into any contention as to the relative merits of the fences recommended by the Mines Department in 1883, and that adopted by the Department of Public Works, the question appears to be whether the prices paid for the fencing are not greatly in excess of its actual value. This view of the case does not appear to have been noticed by the Commissioners, who point out, however, that the prices paid by the Works Department range from £58 15s. to £100 per mile, and in some cases to £112 to £120. This admission of the Commissioners appears practically to confirm the Mines allegation of excessive cost. With respect to the departmental arrangements of 1883, I may point out that from the date on which they were entered into there has apparently been no observance of them on the part of the Department of Works. No communication has ever been received from that Department upon the subject, and works have been repeatedly constructed without any recommendation from this Department. In confirmation of this, I may point out that under those arrangements Nos. 3, 4, and 6 were to be decided by the two Departments jointly. To take one of these alone, No. 6, which is to determine the sort of watering appliances to be used, in not one single instance has this Department ever been consulted. With respect to No. 3—deciding on the description of the work—no consultation has, to my knowledge, ever taken place between the Departments. And No. 4—to determine the dimensions and capacity—has been equally ignored. It must be apparent that arrangements that have been so completely set aside for four or five years can only have been revived in the present instance to escape the responsibility of an outlay that has been repeatedly objected to by the Mines Department. As a further instance that this Department recognize no such arrangement, fencing has been done by its officers for £44 per mile at Colombo Creek, and tenders have also been received to fence at the following rates:—

| | |
|-------------------------|---------------|
| P.W.P., Wagga district, | £35 per mile. |
| „ Walgett district, | £57 per mile. |
| „ Silverton district, | £75 per mile. |
| „ Cobar district, | £42 per mile. |
| „ Bourke district, | £38 per mile. |

The estimates received from the various overseers do not exceed an average cost of £52 per mile. (See Mines Return, page 122.)

Further evidence on this point appears in the reply to Mr. Hanna’s evidence (Reply-in-chief, page 79).

With regard to the subletting, the Commissioners state that no evidence has been tendered beyond hearsay. All the papers in this case were furnished to the Commissioners, with the request that they would call for the witnesses necessary to substantiate the allegations. Neither Elliott, Bevan, nor Anderson, who were the alleged sub-contractors, have been called before the Commissioners; so it must appear that no steps were taken to obtain the evidence, although the Commissioners visited Ivanhoe, where Elliott resides.

With regard to gates, it must be a matter of opinion as to whether £15 each is not an excessive price. Double gates, 6 ft. each, which we have every reason to believe are more durable, and are certainly less liable to breakage, while at the same time being much more convenient, have been erected by this Department at 50s. the pair. Another and chief objection raised was placing these gates at the tenants’ lease paddocks, where they could never be required. (*Vide* also reply to Mr. Wood—Reply-in-chief, page 72.) referring

Report of Commission.

referring to subletting fencing at Ivanhoe Tank, Mr. Yeo states (see Q. 2710):—"The first contractor must have made a profit of £60 per mile on the transaction;" and Mr. Low, referring to this case (see his report, last paragraph, p. 59), puts down the profit from first contract price at "at least £33 11s. per mile."

We find that no evidence excepting hearsay has been tendered in support of these statements.

With regard to excessive cost of gates constructed by the Department of Public Works at a cost of from £10 to £15 each (see Appendix XX), we are of the opinion that these gates are not too substantial for access of stock to public watering places, and that their cost is not excessive.

It is stated that at some of the paddocks to which travelling stock are not admitted these expensive gates are provided (we observed some of them at paddocks in the Hay district), but as no reason is given for this apparently extravagant expenditure, we have no alternative but to find that the Department of Public Works is responsible for it."

Page 22.**No. 9. — INTERFERENCE WITH MINES' CARETAKERS AND OVERSEERS BY OFFICERS OF THE DEPARTMENT OF PUBLIC WORKS.**

"It is alleged that caretakers and overseers of the Department of Mines, at public watering places, have been interfered with by officers of the Department of Public Works, and that the interference has taken place chiefly in the Hay district.

We find that with the exception of the interference admitted by Mr. Coleman, which appears to have been justified (see Q. 4100 to 4107), there is no admissible evidence of direct interference with the caretakers and overseers of the Department of Mines by officers of the Department of Public Works; but that Mr. A. W. Stillwell, Road Superintendent of Hay district, Mr. A. P. Wood, Mr. W. J. Hanna, and Mr. J. Coleman have, we believe, in the execution of their duty, and in the interests of the public, indirectly interfered by reporting to the head of their Department cases of negligence and incompetence of caretakers of the Department of Mines, that have come under their notice.

That such negligence and incompetence is amply proved by the evidence of Mr. Stillwell, Mr. Wood, and Mr. Adams (see Q. 4610 to 4614, Mr. Stillwell's reports, pp. 222 to 224, and Q. 4588, 3503 to 3505, 4716), and by the fact proved by the evidence of Mr. Abigail, Mr. Boulton, and Mr. Low, that several of the caretakers were reported and suspended for neglect of duty and dismissed on account of their unfitness for their positions. (See Q. 507, 876, 877, 1290, 1312, 1313.)

As far as we were able to observe, the caretakers on the Hay and Ivanhoe and Balranald roads were capable and attentive to their duties."

Reply of Mines.

This having been repeatedly done, the Commissioners state that they have no alternative but to hold the Department of Works responsible for it. It is difficult to imagine how they could have done otherwise.

For an experiment which any stationholder in the district would have condemned as impracticable, I may remark that five paddocks, or approximately 20 miles of fencing, appears to be on somewhat too large a scale, particularly when the contracts were let, by Mr. Stillwell's own admission, as high as £112 per mile.

The two following declarations from the caretakers at Mount Manara and Merri Merriwa Tanks are perhaps a sufficient reply in this place.

In each case the caretaker was ordered to clean out the silt tank, and in each case the Works officer interfered, countermanding the order saying he would have it done by contract.

I, John Murray, caretaker of the Government tank situated at Mount Manara, in the district of Ivanhoe, and on the road from Hay to Wilcannia, do solemnly and sincerely declare:—

1st. That Mr. Road Superintendent Stillwell did direct me not to clean out silt tank, and said that he would get it done.

2nd. I further declare that the silt tank has not been cleaned out by Mr. Stillwell's contractor.

3rd. And I also further declare that the silt tank has not been enlarged nor any alteration made to the intake of the shoot since my appointment here as caretaker in December, 1886.

Signed at Mount Manara Government Tank, on this ninth day of July, 1888.

JOHN MURRAY, Caretaker.

Witness,—E. W. PROCTOR,

Overseer, P. W. P., 9/7/88.

Declared before me, this 24th day of July, 1888, at Mount Manara Tank, Ivanhoe Road,—

GEO. H. GOWER, J.P.

P. W. P., 88—3,903.

I, William Mortimer, caretaker at the Government tank at Merri Merriwa, situated on the road from Hillston to Cobar, do solemnly and sincerely declare:—

1st. That Mr. Stillwell never visited this tank, nor ever directed me not to clean out the silt tank.

2nd. I further declare that a contract to clean out the silt tank was let and the work supervised by Mr. Adams, of Cobar.

3rd. And I further declare that the silt tank was not enlarged, further than that in cleaning it out it was made 6 inches deeper by the contractor, nor has any alteration been made to the intake of the shoot by anyone since my appointment here as caretaker.

Signed at Merri Merriwa Government Tank, this 14th day of July, 1888.

WILLIAM MORTIMER, Caretaker.

Witness,—E. W. PROCTOR,

Overseer, P. W. P., 14/7/88.

It

*Report of Commission.**Reply of Mines.*

It was also made distinctly clear to the Commission that the interference with caretakers was confined almost entirely to Mr. Stillwell's district (Q. 314, 937).

Additional cases of interference by Mr. Stillwell will be found in Caretaker Leighton's declaration (*vide* p. 92), Hulong; Kellick's declaration, p. 108, Boonoonoona; Inspector Boulbee's declaration, p. 95, Ivanhoe.

With respect to the alleged interference by Mr. Coleman, no notice of it ever came before the attention of the Mines Department, and the questions referred to by the Commissioners (4100 to 4107) are mere general statements referring to no particular instance.

With respect to the negligence and incompetence of caretakers, it must be evident that where such a large number of men are being employed, in many cases without previous knowledge of their character, instances of incompetence and neglect of duty must occur. The moment that such cases have been brought under notice of the Mines Department an inquiry has been made, and if the charge has been proved the offender has been dismissed. In a number of the cases brought forward by Messrs. Stillwell and Wood an investigation of the charges does not appear to confirm their conclusions; but the testimony borne by the Commissioners as to the character of the caretakers on the Hay, Ivanhoe, and Balranald roads should be sufficient evidence of the care displayed by the Mines Department in selecting men for the position of caretaker. It will not be out of place to remark that it is hardly fair to judge men in this position, who are not required to possess special qualifications in point of education, by an exceptional standard of honesty.

No. 10.—“GREASING” OF SERVICE TANKS.

“It is alleged that service tanks were ‘greased’ with a composition of tar, tallow, and pitch (Q. 907); that 7,000 sheep were lost on the borders of a tank because they would not drink the water owing to the mixture which the Department of Public Works has been in the habit of dressing the inside of service tanks with, causing a film to arise on the water and rendering it undrinkable by stock (See Q. 452 and 2769); that the Mines Department strongly objected to this being done, and has evidence to show that it was done after it was objected to. (See Q. 510.)

We find that a mixture, composed of tar, tallow, and pitch, was in three instances applied by the Department of Public Works to the inside of service tanks, a somewhat similar mixture having been reported by Mr. M’Kinney, C.E., of the Mines Department, to have been used with success in Victoria, and having been recommended by him to Mr. A. P. Wood.

That the statement that 7,000 sheep were lost on the borders of a tank because they would not drink the water owing to its being rendered undrinkable by the use of the mixture is not substantiated.

That the mixture at first produced a film upon the water, but its effects appear to have been only temporary.

That the Department of Mines objected to further use of the mixture on service tanks, and its use was at once discontinued by the Department of Works in deference to the objections of the Department of Mines.

That no evidence whatever has been offered showing that the mixture was used after it was objected to.”

The objections were made equally against the use of an unsuitable composition that was entirely unnecessary, and the employment of a skilled mechanic at a high rate of wages (£6 per week) to do what the caretaker was both able and instructed to carry out where required.

(*Vide* reply to Mr. A. P. Wood's evidence, page 73).

The Commissioners assert that the statement as to 7,000 sheep having been lost on the borders of a tank has not been substantiated. A perusal of the evidence fails to show that any effort has been made by them to elicit further testimony on this point. They did not even ask the witness to whom the sheep belonged, or at what tank they perished.

Report of Commission.

No. 11.—FAULTY SITES OF WELLS.

"*J. K. Well and Menamurtee Well.*—These wells are on the road from Wilcannia to Mount Brown. The objection advanced against them is that they are unnecessary, having been placed near permanent waterholes, which might have been used as public watering places. The waterholes referred to are named respectively 'J.K.' and 'Menamurtee.'

Though they are fine waterholes they certainly did not afford a permanent supply of water in their natural state; but the supply was largely increased by dams constructed at the cost of the first occupants of the runs on which they are situated.

The fourth, sixth, and ninth paragraphs of our report upon the sites of Peri, Yentabangee, Warramutty, and Goomboolara Tanks (see pages 6 and 7), and the second and third paragraphs on the site of Tarella Tank (see page 8), apply generally to these wells, rendering repetition here unnecessary.

It will be seen that the action of the Department of Public Works in these cases is covered by Mr. Abbott's minute."

"*Willandra Well.*—This well is on the road from Balranald to Ivanhoe. The site is objected to on the grounds that the Department of Mines did not ask for a well there; that one watering place, namely, a tank, would have been sufficient between Clare and Ivanhoe; that the Department of Public Works constructed two watering places there, namely, a tank and the well in question; and that the well is absolutely unnecessary on such a road. (See Q. 169 to 172; 3323, 3324; extract from Mr. Gilliat's report of 13th January, 1880, upon the road from Balranald to Ivanhoe, on page 27, Mines *précis* of cases; Q. 4766.)

We find that in constructing two public watering places between Clare Tank and Ivanhoe the Department of Public Works was guided by Mr. Gilliat's recommendations for 1884, for two works (see Appendix XII); and in our opinion one public watering place between Clare Tank and Ivanhoe would not be sufficient, and that a public watering place at this site is necessary."

Reply of Mines.

The cases of the Menamurtee, the J.K., and the Roto Wells are brought together by the contention of Mr. A. P. Wood, that they were constructed under a minute of the then Minister for Mines, Mr. J. P. Abbott.

The minute of Mr. Abbott referred directly to the construction of a well at the J.K. waterhole (*vide* p. 217 of Mines Return, under date 3/7/84.)

But Mr. Wood admits (Q. 3346) there was no distinct sanction for the Menamurtee Well, and it is difficult to conceive how Mr. Abbott's minute upon a special case can be taken as having a general application.

Mr. Wood has already stated (Q. 3307) that although Mr. Abbott's minute was regarded by him as having this general application, it was only applied in one other instance, namely, the Roto Well, yet he now claims that it was his justification for the site selected for the Menamurtee Well and the Tarella Tank.

But Mr. Wood continues: "The statement made by this Department that the dam near the Roto Well was dry at the date of the transfer of the well to the lessee, Mr. Evans, is here used as an argument that the water adjacent to the well is not permanent. My statement was made in error, inquiry showing that the dam was full at the time referred to and has seldom been dry. But in any case, with a creek filling at a two-thirds rise in the Lachlan, irrespective of local rains, it may be questioned if it was necessary to sink a well at a total cost of £1,181 4s., when a dam costing probably less than one-quarter of the sum could have been constructed." Page 205 of the Mines Return shows the receipts at this well, for 1886, to be 4d.; in 1887, stock watered by lessee, nil; in 1888, stock watered by lessee, nil.

Mr. Wood further states the sites were approved by the Mines Department, this site of Roto Well being one of them. The papers in connection with this matter were sent to the Secretary for Public Works on the 17th May, 1882,—Tanks and Wells, 82-401, the only record in this office being a press copy of a minute in which the Chief Inspector states:—

"The points marked for sites and reserves on the Run Map herewith, are very suitable in point of distance and well arranged for future subdivision when the traffic demand it."

This, it will be observed, carefully avoids giving any other approval of the sites selected beyond their being suitable in point of distance. The reason for this caution was that he had not at that time been over the road or inspected the sites.

In 1884 the Chief Inspector recommended two public watering places between Clare and Ivanhoe, one 9 miles north of Clare, and one 10 miles south of Kilfera. The Works Department have constructed three, in violation of the Departmental arrangements which they claim to have been in force.

The Commission, without eliciting any evidence upon the subject, confirm the action of the Works Department as being in accordance with the Mines recommendation. The merest reference to Appendix XII, p. 262, will show their error, and that instead of two watering places three have been constructed.

Report of Commission.

"*Normanstone Well*.—This well is on the road from Gunnedah to Coonabarabran. The site is objected to on the grounds that it is not identical with that fixed by Mr. Gilliat, and that it is in basalt country. (See Q. 179, 233; latter part of Q. 521; Q. 1739 to 1743; 1756 to 1758.)

It appears from the evidence of Mr. A. P. Wood that this well is in basalt, and was sunk within a few chains of the site fixed by Mr. Gilliat; that many wells sunk through basalt have proved very good water-yielding wells; and that wells sunk in the neighbourhood have given an abundant supply of water. (See Q. 3326 to 3340.)

We find that in this instance the arrangement between the Departments with respect to sites (see Q. 9) appears to have been adhered to by the Department of Public Works; that the fact of the site being in a basalt country is not sufficient to justify us in condemning it, and that there is no evidence showing that a supply of water would have been more readily obtained by sinking the well in the exact position defined by Mr. Gilliat."

Reply of Mines.

The case of the Baloola and Normanstone Wells cannot be separated, as in neither instance was the site recommended by the Mines Department adhered to. The site of Baloola, though generally approved of by Mr. Gilliat, was placed on the shoulder of the hill and not upon the black soil plain below, where, as he pointed out in his report, water could be obtained at about 100 feet sinking. With regard to Normanstone, the site selected by him was nowhere near where Mr. Dowe recommended a tank, and the present site is fully 4 miles from the one selected by him on Basin Plain. The Works Department on page 155 of the Mines Return states:—"The Road Superintendent was instructed to adhere as closely as possible to the sites marked out by the Stock Inspector, and which it was understood were approved of by Mr. Gilliat."

No reference is made to Mr. Gilliat's report and tracing. He states on page 153 of the Mines Return:—"For their third site Messrs. Mackie and Dowe suggest a point 10 miles from Mullaly and suggest a 4,000-yard tank. This point is very nearly the watershed between Cox's Creek and the Namoi. After careful examination I consider the point marked in red on the annexed tracing will prove the best site." The tracing showing the exact points selected by Mr. Gilliat was sent to the Works Department, and although repeatedly asked for has never been returned.

The Commissioners state (Q. 3328) that Mr. Wood "produces tracings of Baloola and Normanstone Wells to show that the actual sites adopted were within short distances of the sites pointed out by the Mines Department." The question may now be asked why the Commissioners did not call upon the officers of the Mines Department to verify the correctness of these tracings, which, as has before been pointed out, have been repeatedly asked for from the Works Department without being able to recover them (see p. 155 Mines Return). Finally, it may be added that the Works Department claim the right to fix the exact site of works in all cases, leaving to the Mines the power only of pointing out the approximate one. Under these circumstances I fail to see how they can with any consistency endeavour to throw the responsibility of these blunders upon the Mines Department.

Page 23.

No. 12—FAULTY CONSTRUCTION OF WELLS—SINKING, TIMBERING, AND CENTERING OF SHAFTS AND ERECTION OF HEAD-WORKS (TO LINE SERVICE TANK AND TROUGHING) BEFORE TESTING FOR SUPPLY AND QUALITY OF WATER.

"There are about thirty wells at public watering places, and the Department of Mines allege that many of these wells have been constructed, and great expense incurred, without a proper test being made of the supply and quality of the water.

Exception is taken to the sites of *Baloola* and *Normanstone* wells as not being in the exact sites prescribed by the Mines Department, and also that they have been sunk in basalt rock; that no water has been found; and that the whim and service tank were erected or commenced at one of these wells before any water was found.

No trial shafts were first put down in these cases, as the ground was basaltic and it was thought cheaper to sink the main shaft at once.

We are of opinion that it would have been wiser to have bored in these two cases; and that the Department of Works committed an error of judgment in not doing so, as admitted by Mr. Wood (see Q. 3549), although they appear to have had good grounds for their action, as wells in the same district through basalt are said to give a fair supply of good water.

Report of Commission.

We find that head-works were not put up at *Normanstone Well*, as stated, and that at *Baloola* the contractor was stopped constructing the service tank, the whim having been put up most probably to help in the sinking of the shaft. It would appear that these wells are not yet done with, and further boring and driving operations are either in progress or contemplation, so that water may yet be obtained."

"*Old Gunbar, Holy Box, and Dolmoreve Wells* are cited as cases where the Department of Works have completed the shafts and head-works without testing the quality of water, and that in each instance the money has been thrown away, owing to the water being quite unfit for stock.

In the case of *Old Gunbar Well* we find that the Department of Works received a sample of water which was good, which purported to come from the trial shaft; and that having sunk the main shaft some distance away from the trial shaft, bad water was obtained, and that the water has remained unfit for stock ever since.

We are of opinion that in this instance the Department of Works has not evinced enough care in testing the quality of water previous to erecting costly head-works and fencing.

In the case of the *Holy Box Well*, we are of opinion that the Department of Works were justified in proceeding with the erection of head-works; and that although the quality of the water is not so good as it might be, it has much improved, owing most probably to constant baling. We visited this work, and found that a large number of travelling and station stock were watering at it, and our own horses drank readily of the water. (Q. 4755 to 4760.)

Dolmoreve Well.—The water at this well is not at present fit for stock; and we find that in this instance also the Department of Works is responsible for having completed the head-works, &c., without properly testing the quality of the water. Seeing, however, that there is within a mile of this well a private well where the water is very good, and from which water is constantly being drawn, we recommend that the well should be leased, if possible, to the lessees of Til Til station for (say) two years, with a view of its being given a thorough trial, and of testing the value of constant baling in improving the water. We have reason to believe that the manager of Til Til station would be ready to take the well over for a time.

Willandra Well is cited as an instance of faulty construction and excessive cost, without any supply of water for stock having been obtained.

We find that this well has given great trouble to the Department of Works, which is still endeavouring to get the well completed and to obtain a supply of stock-water. It would appear that in sinking the main shaft the contractor failed to get the shaft to stand in soft drift at the bottom, and it had to be abandoned, and a new one sunk in close proximity, three contractors, failing to complete the well. It appears that the whim, service-tank and troughing have been erected, and two shafts partly sunk, the sums paid to contractors amounting to £752, or considerably less than the first contract. As the operations in connection with this well have not yet been concluded, we are of opinion that the time has not yet arrived for criticising this work, which may, after all the difficulties that have been encountered, prove a useful public watering-place. (Q. 4819 to 4821.)"

Reply of Mines.

Old Gunbar, Holy Box, and Dolmoreve Wells.—The Commissioners admit the allegations of the Mines with respect to the *Old Gunbar Well*. But in addition it may be pointed out that the Public Works Department fenced in the lease area, although cautioned by this Department that the well in its present condition was useless. (*Vide* p. 49 Mines Return.) With respect to the *Holy Box* the water, it is admitted, has greatly improved, although unfit for human consumption, a point of serious consideration at a public watering place. With regard to *Dolmoreve Well* the Commissioners confirm the contention of the Department of Mines that the water is useless for stock purposes.

If, as they state, the lessees of Til Til are willing to lease it, it may be remarked that they have not availed themselves of the three opportunities afforded when tenders have been publicly invited for its lease. Further, I may add that Mr. Waugh, of Clare station, has written to urge the construction of a tank, and that the Ivanhoe Pastures and Stock Protection Board have also made representations to the same effect. A petition has also been presented by Mr. Wilkinson, M.L.A., on behalf of the residents of the Balranald district, having the same object.

The Commissioners apparently accept the conclusion of Mr. A. P. Wood (Q. 3324), that, as the *Willandra Well* has not yet been completed or handed over, the Mines Department have no right to say anything about it. Objection may be taken to this view. It is admitted by Mr. Wood that these works are decided upon as necessary, and sites approximately fixed by the Mines Department. Mr. Wood's reply to Mr. Woore's question (3419) distinctly admits this:—

"*Mr. Woore*:—This point as to the necessity of the works has to be decided by the Mines Department?

Answer:—Yes; we simply construct."

The two shafts at *Willandra*, each of which has proved a failure, have been sunk in opposition to the recommendation of the Mines Department. (*Vide* Appendix XII to Commissioners' report and reply-in-chief, p. 262, with Mr. Webb's letter; also reply to Mr. Stillwell's evidence, p. 111.)

The Commissioners' statement that the sum of £752 paid for the whim, service-tank, troughing,

Report of Commission.

"*Wooloondool Well* is sited as an instance of faulty construction, in that the Works Department omitted to put a floor and pipe at the bottom of the well; and that in consequence of this omission the bore at the bottom of the well became choked with silt. The Department of Works affirm that no floor or pipe is necessary, and that baling or the occasional probing of the bore is all that is required to keep the well in order. We believe a floor and pipe, as suggested—and, we understand, constructed—by the Mines Department to be unnecessary; and fail to see how it will get over the silting up of the bore, unless constant baling is kept up.

It appears to us doubtful whether wells are satisfactory as public watering-places where brackish water is known to exist, seeing the uncertainty that seems to obtain as to whether the water when struck will be fit for stock or not, and as to where the line is to be drawn between good and bad stock-water. Seeing, however, that wells are so much cheaper than tanks, and afford a more permanent supply of water, we are of opinion that both the Departments of Works and Mines have evinced a proper regard for the public purse in making every effort to put down wells as often as possible, and that the Department of Works is by no means singular in its failure to provide good stock-water in every instance."

Page 25.**No. 13.—EXCESSIVE COST OF CONSTRUCTION OF WELLS.**

"It is alleged by the Department of Mines that the cost of construction of wells has been excessive.

We are of opinion that no comparison can be made between the wells constructed by the Department of Works at public watering-places and those constructed by squatters, as regards the material and workmanship. We find that the total cost of some of the wells has reached a sum of £1,000, but this includes the whim, service tank, and troughing, and frequently repairs and alterations. We believe the construction of these works to have been let by open tenders, and that the Department of Works has exercised due reluctance to accept high tenders. We do not consider the class of work at these wells unnecessarily good or expensive for such important national works. Our remarks as to the disadvantages under which tanks are often constructed, tending to raise the cost of construction, apply in some degree to wells."

No. 14.—COSTLY HUTTING FOR CARETAKERS.

"The Department of Mines allege that the caretakers' huts designed by the Department of Works were too expensive, and that by undertaking the construction of these huts themselves they have effected a saving of something like 50 per cent. Having compared carefully the drawings and specifications of the huts designed by the Works Department with those constructed by the Mines Department, some of which we have inspected on

Reply of Mines.

and two shafts sunk does not correspond with the return furnished by the Department of Works on February 3rd, 1888, where the progress payments upon the first shaft are given at £1,087 5s. 8d.

Again, Mr. Stillwell (Q. 4819) states that the amount paid to the contractors on account of the first shaft was £900. The Commissioners do not explain by what means they have arrived at a conclusion so entirely opposed to the statements of the Department of Works.

The Commissioners offer their opinion against the value of a floor and pipe, but do not appear to have taken any independent evidence upon the subject. The well is bottomed in drift below the clay, and the water is sub-artesian, and rises about 18 feet above the bottom of the shaft. I found when testing this well with Mr. A. P. Wood, on 18th December, 1884, that the water made rapidly, and that two hours steady baling only lowered it about 18 inches. Constant baling as recommended by Mr. Wood, to keep the bore free, necessitates a continual daily and, I think, entirely unnecessary labour of both man and horse, wear and tear of gear, and waste of water.

The choking of the bore is occasioned by the falling in of the clay through which it has been made, and by the drift held in suspense while the water is being baled, and subsequently deposited when the water is at rest.

A plan and section of the pipe and floor, which has been placed at the bottom of the well by this Department, was submitted for the information of the Commissioners, and our present reports show that the well has now a strong flow of water, and that no obstruction has occurred since the alteration was made in the early part of 1888.

The Commissioners' finding on this heading is, unfortunately, not in accordance with the return furnished by the Department of Works, and quoted in their Appendix I. The exact list of wells completed and unfinished is 27; of these the cost of 26 is given in the return referred to. In this return 8 wells, including 2 unfinished ones, have cost from £794 to £1,001. Four have cost between £1,000 and £1,100; 5, between £1,100 and £1,200; 5, between £1,200 and £1,300; 1, between £1,400 and £1,500; 2, between £1,500 and £1,600; and 1, between £1,700 and £1,800. The Silverton Well being grouped with two tanks the cost cannot be given.

The best proof, perhaps, of the efficiency of these huts is that they are found fully to answer their purpose, and at less than half the cost proposed by the Works Department; they are equal to most, if not all, of the station improvements in the district for similar purposes. The statement that they are unable to withstand a strong gale of wind,—or are scarcely fit habitations for human beings in the severe climate of the Western District,—must be regarded by any
the

Report of Commission.

the spot, we find that no comparison can fairly be instituted between the two classes of buildings. (See Appendices.) The designs of the Department of Works—which were estimated to cost about £100—provide for three rooms, with spouting, and a tank for rain water, while the constructive details are far stronger and better than those of the huts put up by the Department of Mines.

Having examined some of the huts erected by the Mines Department, we consider that they are of very inferior construction; that they will probably in their present condition, fail to withstand a strong gale of wind; and that they are scarcely fit habitations for human beings in the severe climate of the Western District. In these huts only two rooms are provided; the gauge of iron and scantling of timber are of the lightest description; there are no braces to walls or roofs; no painting of wood-work is done; and no guttering or drinking tank is provided—even at brackish wells, such as Holy Box, where we found the caretaker carting his drinking water from Mossgiel, distant 16 miles.

We believe that it would have been a truer economy to erect the more expensive huts designed by the Department of Public Works.”

Reply of Mines.

one accustomed to western life as a somewhat highly coloured description none have blown down, nor is it probable—from the specifications—that any will do so. The fact is dwelt upon that only two rooms are provided—what more is required, may be fairly asked.

The Commission comment upon no drinking-tank being provided. That such a convenience should be required at a public watering-place seems an anomaly; but as it is the intention of the Department of Mines to bore these wells for artesian water, it seemed an unnecessary expense to provide them. With reference to the specifications for huts, the Commission desired to be supplied with copies of those in use by the Mines Department, and the three kinds, viz.,—log, weatherboard, and iron were sent to them. Of these three, the latter alone—which is only used where round pine or weatherboard is too costly—appears in the Appendix, and it is to be feared the impression will be given that it is the only class of hut constructed by this Department.

No. 15.—DEFECTIVE CONSTRUCTION OF
TROUGHING.

“Exception is taken by the officers of the Mines Department to the original type of railing put round the watering troughs to prevent cattle and sheep from getting into them.

We find that this railing was at first experimental, and that the Department of Works submitted a sketch of the railing as used at some private troughing for the approval of the Department of Mines; that this form of railing was generally approved by the Inspector of Public Watering-places, but that it failed to give satisfaction to the public. We find that a superior design of troughing has been adopted by the Department of Works, and that a rail down the centre as proposed eventually by the Department of Mines, has also been adopted. We think the latest type of troughing and railing to be excellent. We find that the Department of Works adopted the form of railing which was the best they knew of at the time, and that the subsequent alterations are the outcome of experience. We noticed that the alterations now being carried out to existing troughing rails by the Mines Department are by no means uniform; and while those at Ivanhoe Tank appear to be excellent, those at Mossgiel Tank seem to us quite the reverse.

We do not find that the Department of Public Works has been to blame in this matter, which has been the subject of experiment for some years by the pastoral community.”

The troughing was found to be defective, and, as a matter of economy, the Mines Department gave instructions that the caretakers should remodel it upon the present form, making use only of the original material. This material was better adapted for the change in some places than at others, and the overseer specially reported that this was the case at the Mossgiel Tank, referred to by the Commissioner. The Department of Public Works followed the example set by the Mines in making this alteration.

Page 26.

No. 16.—UNFORTUNATE EFFECTS OF DUAL
CONTROL, AND SUGGESTED REMEDIES.

“We find that the evidence throughout discloses that the dual control exercised by the Department of Public Works and the Department of Mines over the public watering-places, and the laxity in adherence to arrangements between them—doubtless framed with the best intentions, but in which the seeds of discord are sown broadcast (see p. 175)—has, as a natural consequence, for some years past, been productive of frequent unseemly differences and recriminations, and much unnecessary and irritating correspondence between the Departments, the tedious details of which we have deemed it unnecessary and unprofitable to enter into in this report.

The case of the Department of Mines has now been stated: it may perhaps be added that its officers have been actuated throughout by an earnest wish to bring the public watering-places to the highest degree of efficiency under an organization that would ensure to the State a fair equivalent for the money expended.

This

Report of Commission.

This very objectionable state of things has no doubt for a corresponding length of time been highly prejudicial to public interests, and to the decorous and regular conduct of public business by the Departments in question. We therefore deem it incumbent upon us to suggest the adoption of the following remedies:—

- (1.) That the Department of Public Works, be charged with the construction of all public watering places, whether tanks, wells, or artesian borings, and with the entire supervision, maintenance, and control of them.
- (2.) That the necessity for constructing public watering places on any stock route, be in all cases reported to the Department of Public Works by the Stock Branch of the Department of Mines.
- (3.) That the sites for such watering places be fixed by the Department of Public Works, dividing the distances between them as equally as the circumstances may permit.
- (4.) That before entering upon the construction of such watering places a report be obtained by the Department of Public Works from the Government Geologist, or other competent authority, as to the advisability of sinking wells or boring for artesian water.

In concluding this portion of our report we desire to point out that for some time past three classes of officers have been employed in the supervision, control, and maintenance of public watering places, namely: Road Superintendents, under the Department of Public Works; Inspector of Public Watering Places, and Overseers of Public Watering Places (who are also Inspectors of Stock), under the Department of Mines. (Q. 647 to 649)."

Page 27.**SUBJECTS REFERRED TO AT PAGE 6.****(A.) COST OF MAINTENANCE OF PUBLIC WATERING-PLACES.**

"It appears that the revenue derived from public watering-places, provided at great cost for construction and maintenance, is so insignificant that the maintenance of them is a burden upon the community.

The principal reason for this appears to be that in good seasons, or after heavy rain, there is usually sufficient natural water along stock routes to enable stock to travel independent of public watering places, which, irrespective of such conditions, have to be continuously maintained up to the normal standard of efficiency, notwithstanding that they may sometimes remain unused for long periods.

We are of the opinion that these works should be at least self-supporting, and that they might with perfect justice be made so by making owners or drovers of travelling stock pay for the water along the particular stock route they wish to travel at the time they take out their travelling permit.

The revenue from public watering places would thus be collected by officers of higher responsibility than caretakers, over whom, under the present system, there does not appear to us to be any sufficient or satisfactory check.

The proposed mode of payment would not be applicable in the case of teamsters' stock, the collection of charges for which, being comparatively a minor matter, would probably have to be entrusted to the caretakers as at present, if no better arrangements could be made."

Reply of Mines.

Anticipating the action here taken by the Commission, the following remarks were submitted to the Secretary for Mines on the 22nd June, 1888:—

"Department of Mines, Public Watering Places,
"Sydney, June 22, 1888.

"I have the honor to submit herewith remarks which I think it is desirable should be put in evidence before the Royal Commission *re* Tanks and Wells.

"I may, perhaps, in connection with this call attention to the powers conferred upon the members of the Commission under the Great Seal of the Colony, by which they are directed 'to make a full and diligent inquiry into certain allegations which have been made respecting the construction of Public Tanks and Wells.'

"It is apparent on perusal of the evidence taken by the members of the Commission that their inquiries have greatly exceeded the scope of the authority extended to them, but confident that the Hon. the Secretary for Mines was not only willing but desirous that the fullest light should be thrown on both sides of the subject, and particularly on the working of this Department, which is at present responsible only to a certain extent for the maintenance of these works, I have not hitherto referred to this point, but both in my evidence-in-chief and in the remarks now submitted, have replied as fully as the questions admitted to matters pertaining both to the construction and the maintenance of tanks and wells. But that this has been done with a full knowledge of the position, and with the sole object of assisting them to obtain the fullest information should, I think, be clearly understood by the Commission.

"At the same time, it must be evident that any report upon the maintenance of these works, unless based

*Report of Commission.**Reply of Mines.*

based upon much fuller investigation than has been made, would possibly result in an incorrect conclusion.

"To this I may now add that no further investigation was made by the Commission.

"With respect to the Commissioners' suggestion that owners or drovers should be made to pay for water along the route they wish to travel, I may say the proposal was carefully considered by the Department of Mines some years ago, but the objections appeared to outweigh any possible advantages to be obtained. They may be shortly stated—

"1st. That it necessitates retaining the costly machinery of caretakers.

"2nd. That in case of rain after the drover has purchased his water permit he will not require water, equally so in case of selling his stock upon the road, or by his change of route from any cause.

"3rd. Refunds upon unused water permits would be troublesome and tedious.

"4th. But chiefly that the payment of caretakers constitutes an annual charge to write off against the revenue whether the season is wet or dry, while by the system of rentals the tenant takes the risk of the season, and the rental is clear revenue.

"Bearing in mind that from circumstances over which it had no control the Department has been in a position to offer only a certain number of the public watering places for lease during the past two years, the conclusion of the Commission does not appear justified. In 1887 thirty-eight watering places were leased at an average rental of £49 0s. 6d. In 1888 fifty-eight were leased at an average rental of £46 16s. 9d., and during the current year there are good grounds to anticipate that upwards of 90 per cent. of the watering places may be offered for lease."

(B.) CARETAKERS.

"Intimately connected with the question of cost of maintenance is that of caretakers, who, under present arrangements, are employed at most of the public watering places, and we think are indispensable for the protection of the works.

In some cases public watering places are leased, but lessees appear to us not to be so much under control, and in case of any default, such as negligence or incompetence, cannot be so readily and promptly dealt with as caretakers.

Leasing, moreover, appears to involve the expense of erecting several miles of fencing which, where steam water-lifting appliances are used, is unnecessary for the efficacy of the works; and even where horse-power appliances are used, less fencing would perhaps suffice for caretakers than for lessees.

For these reasons we believe caretakers to be preferable to lessees, and in the event of our suggestions as to payment for water by travelling stock being carried out, caretakers might be allowed the use of existing paddocks in part payment for their services."

Page 28.

"Understanding that the Department of Mines wished to reply to the evidence of the Department of Public Works, we expressed our willingness to receive oral evidence in reply, in denial of facts spoken to by the witnesses of that Department; but although ample opportunity was afforded, no such evidence was tendered."

The circumstances connected with the refusal of the Commissioners' to receive the reply of this Department to the evidence of the Department of Public Works has been previously dealt with.

HARRY GILLIAT,
Chief Inspector,
Public Watering Places.

APPENDIX.

APPENDIX.

ALTERATIONS IN THE EVIDENCE, AS SHOWN BY COMPARISON BETWEEN THE ORIGINAL AND PRINTED COPIES.

THE evidence is in reply to 4848 questions, and, in the time at our disposal, it has been impossible to compare the whole of the original version with that printed in the Report. What has been done will perhaps afford sufficient proof of the character of the revision.

Q. 20—

Original: "I should think this document ought to be put in evidence."

As printed by the Commission: "I should think the letter referred to ought to be produced."

Q. 32—

The word "mainly" altered to "really."

Q. 36—

A portion of witness' reply has been converted into Q. 37 and the answer.

Original: *Mr. Woore*.] "You are quoting now from the report? Yes; I am quoting roughly from it, but I cannot put it in because the papers were, as I have already said, destroyed in the Garden Palace fire. That is the substance of them, as far as I can recollect."

Statement of *Mr. Woore* cut out after Q. 37:—

Mr. Woore.] "What I wish to point out is that in case any document cannot be produced here notice should be taken of it."

Following the statement of the Chairman (Q. 39), after the words "information for ourselves," the remark, by *Mr. Woore*, "but we can receive papers in evidence, and they will help us in the putting of questions."

Q. 61—

The word "reported," in the original, is changed to "repaired."

Q. 67—

Portion of question altered. *Original*: "Were you obliged, or did you merely take them over because you wished to do so"?

Q. 73—

The following remarks of the Chairman after the word "next," and the reply of the witness have been cut out:—
"The third point is the excessive expense of machinery. We want to go into these things seriatim, and we have decided to press on this matter which has come upon us at a most inopportune time. We cannot, of course, go much into detail?"

Answer—As a matter of fact, you will find the papers so complex that it will be impossible not to do so."

Between Questions 97 and 98 the following remarks of *Mr. Woore* have been cut out:—

Mr. Woore.] "I think that it will be found that this is on a water reservation. I have a recollection of having recommended it myself."

Q. 98—

Between the question and the answer of the witness, the following statement of the Chairman has been cut out:—
Chairman.] "We can hardly ask that question now, because these tanks were not made as a rule by direction of the Mines Department. We already have evidence that this tank was made at the instance of the Works Department, but that other tanks were not."

Just before Q. 115 the following question and answer have been cut out:—

Major Penrose.] "I presume we can examine *Mr. Hogarth* himself upon that letter? I should think that *Mr. Hogarth* would be a most important witness, &c."

After the word "drought" in the second line, Q. 117, the following remark has been cut out:—

Mr. Woore.] "Before these reports went in, I could not get a drop of water in travelling from the Paroo to Peri Springs."

After "tanks and wells" in 5th line, Q. 117, the following statement is cut out:—

Mr. Woore.] "But this cannot be done at Warramurtee."

Q. 122—

This question "So that no idea of leasing could have been brought forward;" in the original, is a portion of the witness' reply to Q. 121. The word "No," which purports to be a portion of the answer to Q. 122, does not appear in the original at all. The remaining portion of the answer refers to an entirely different matter, and was made after some remarks from *Major Penrose* and *Mr. Woore*, which have been cut out.

Immediately preceding Q. 156, the following questions and answers have been cut out:—

Major Penrose.] "Practically, all these wells are under consideration? No, because they have not been transferred. We have never raised the question; but outside persons have come forward and made certain assertions, and I have been directed to detail the steps the Mines Department have taken in the matter. Officially, from the Works Department I have no information of these things; but we have information that some of them are under water, and others have never been taken over for various reasons—although the works were commenced in 1884."

Question—Are there any others that you wish to refer to now, *Mr. Gilliat*?"

Answer—"There are minor ones; however, from what your Chairman has said this morning, I should prefer to reserve for a future time what I have to say about them."

After the word "subject" on the last line, Q. 157, the following statements are cut out:—

Mr. Woore.] "I should think you have a right to put in evidence such papers as you wish, and which you think will support your case."

Answer—"We do, although this one contradicts."

Major Penrose.] "I think we ought only to take your evidence at the present time."

Answer—"I wish merely to show that there is a letter here from *Mr. Bennett*, in which he denies our statements."

Q. 202—

"Construction" has been replaced by the words "selection of site."

Q. 244—

After the word "charges" on the second line, the following words of the Chairman have been cut out—"not only what you know of your own knowledge, but also what you have heard from others, so that we may have grounds to go upon."

Q. 249—

The first word "perhaps" has been inserted.

After Q. 296—The following statements have been cut out:—

Mr. Woore.] "The flooding of this lake was a most unusual thing. Nobody ever saw water in it except a few inches after rain, but in the extraordinary flood which took place in 1882 the water ran through from another lake into this and filled it. Before that, to my knowledge, that lake was standing for nineteen years without water."

Chairman.] "Another strange thing is that the Paroo River never came to the Darling until this year."

Mr. Woore.] "The water of the Darling backed up to it and joined it."

At the end of Q. 317 the statement is made that no answer was given. The original evidence shows that before the witness replied to the Chairman's question *Major Penrose* interposed the remark, which has been here cut out—"That opens up the whole question. A man is generally very chary in giving advice or instructions which he has not power to carry out." The Chairman then proceeded with Q. 318, to which a full reply was given.

Q. 335—

The following words have been cut off this question, "For instance a squatter constructs a tank to suit his time and purpose, but the Government are obliged to put one down wherever it is required."

Q. 344—

- Q. 344—
In this question "letter of the contract" is altered to "spirit of the contract."
- Q. 409—
After the word take in the second line "these waters artificially conserved by lessees" have been substituted for "these places."
- Q. 469—
In the first line the word "human" does not appear in the original.
- After Q. 523, the following has been cut out—
Chairman.] "As a rule it is the case with squatters, wells are sometimes put down near tanks in view of the great droughts, and that these important places should not be without water, it is on this account that apparently double expense is incurred, but it is very necessary sometimes that wells should be placed near tanks."
Mr. Woore.] "I believe Menamurtee is sunk not far from permanent water."
- Q. 548—
After the word "expended" in line 8, the following remark of the Chairman has been cut out, "That is quite a satisfactory answer, in fact I do know that Mr. Bennett has taken a great deal of interest in water conservation, and was continually bringing it before the various Governments, and I can imagine although he is a friend of mine—"
- Q. 763—
After the word "Yes" the words "much the same as a windmill" has been cut out.
- Q. 770—
In the original no answer given, the reply "No" has been inserted.
- Q. 567—
After this question the following is cut out :—
Mr. Woore.] "There is not a permanent waterhole in the Albert district away from the river. The Depot Glen is the most permanent."
After Q. 575—The following has been cut out :—
Mr. Woore.] "Stone tanks are the best?"
Answer.—"Yes; but they are very expensive."
- After Q. 592.—The following has been cut out :—
Mr. Woore.] "Can you say that there was a drop of water in the place in 1869?"
Answer.—"I was not here then. I did not come out to the Colony till 1874."
Chairman.] "Are there any other places where the expenditure was unnecessary besides Menamurtee?"
Major Penrose.] "There is Peri Springs?"
Answer.—"There is a tank which I have never visited, and know nothing of it. Some of these places are not in my district, but still I have lived up there for some time, and have a personal knowledge of them."
- Q. 612—
Just before this question the following has been cut out :—
Witness.] "I desire to know whether the specifications which have been read to me, and which I understand were adopted by the Works Department during 1886 and 1887 are the same as those used during the earlier contracts."
Chairman.] "That is a very proper question, they are not the same."
At the end of Q. 674 the following has been cut out :—
Chairman.] "We have that in the evidence of Mr. Gilliat."
Mr. Woore.] "There seems to be bad management there to allow a tank to be put on private grounds."
Major Penrose.] "I believe the place had been selected only a week before."
- Q. 870—
The words "found living in the engine shed" have been substituted for "found out in the pump." The alteration makes the witness' reply to appear to refer to a different occurrence.
- Q. 949—
After this question the following has been cut out :—
"I do not remember anything like a lake during my time out there, and I can remember that in 1865 there was no water there at all."
Answer.—"Quite so; and in 1875 there was no water there at all."
- Q. 951—
The following has been cut out :—
Major Penrose.] "Was the lake in existence before the tank was made?"
Answer.—"Yes, it was."
- After Q. 970—
The following has been cut out :—
"Well, it was mine."
- Q. 999—
After the words "watering stock" on line 3, the following has been cut out :—
Question.—"Would not the cost be too great?"
Answer.—"No."
- Q. 1045—
Between this and the succeeding question the following has been cut out :—
Question.—"What ought to have been the cost of this Holy Box Well sinking and timbering?"
Answer.—"The sinking and timbering of the well could have been done for £1 per foot, and less than £1 per foot exclusive of material."
- Q. 1056—
At the end of this question the following has been cut out :—
Major Penrose.] "I suppose that in going through rock also a bore would be cheaper than a trial shaft?"
Answer.—"Probably; I think there is a great deal in the question as to what kind of machinery you have for boring."
- Q. 1091—
At the end of this question the following has been cut out :—
Chairman.] "Of course we can get the information from others, but we still have to find out all about that from the officers of the Works Department, and ascertain whether the system has not been altogether a wrong one."
- Q. 1113—
After the word "made" in the second line, the word "tanks" is altered to "swamps," and "seldom" to "never."
After Q. 1124 a question and reply have been cut out :—
Mr. Wood.] "Had you a long experience as a station manager?"
Answer.—"Yes."
- After Q. 1128 the following question and reply have been cut out :—
Major Penrose.] "You mentioned that well (Holy Box) as badly sited."
Answer.—"No; I did not mention that as badly sited, I condemned it altogether."
- Q. 1129—
After the words "so placed," the following has been cut out :—
"because if they were badly placed there must be some reason for it."
After Q. 1140 the following questions and replies have been cut out :—
Mr. Woore.] "Do you consider that the biggest tank that you have ever seen in the Albert district to be permanent water?"
Answer.—"Yes, I do."
Chairman.] "Has not the Albert district been subject to three years' drought?"

Answer

Answer—"Yes, I admit that, but the Walla Walla Tank is in the Albury District."

Mr. Woore.] "How far does your experience go back?"

Answer—"It goes back to 1879."

Q. 1184—

This question in the original reads as follows :—

Chairman.] "What I mean is this, with the perfect safety of carrying the by-wash through the rock, would that perfect safety warrant the department in making this by-wash where there is a chance of damming a new creek?"

After Q. 1217, the following questions and replies have been cut out :—

Mr. Woore.] "For wells and tanks alone?"

Answer—"Oh no, for tanks alone, I am in favour of raising it by hand power."

Mr. Woore.] "You said something about the feed of a horse in a dry time in such a district as the Albert, where would you get feed for a horse?"

Answer—"If the paddocks did not supply feed enough it must have been a very useless expense to have fenced them."

After Q. 1242, the following question and reply have been cut out :—

Chairman.] "In fact it was erected at that price?"

Answer—"I cannot say what the man was paid for the work, but I know what the contract was sublet for."

After Q. 1325 the following has been cut out :—

Mr. Woore.] "But this is only something that someone else told him."

After Q. 1361 the following question and reply have been cut out :—

Mr. Woore.] "And that the stock would water much more easily if there was no rail there at all?"

Answer—"Quite so."

After Q. 1426 the following remark by Mr. Woore has been cut out :—

"But as a matter of fact they get a great deal more."

After Q. 1520 the following questions and replies have been omitted :—

Mr. Woore.] "Where there is no whim at a tank to pump the water over the embankment, would not the difficulty be easily got over by having a surface outside the tank into which the water could run, and as it fills have it pumped over the embankment?"

Answer—"Yes; but you can run it in by natural means without going to that expense."

Question—"I mean that when the tank is filled up to the ordinary level of the ground to fill it to the top of the embankment?"

Answer—"Yes; but we can fill it in naturally on three sides as much as the drainage will give."

Question—"But there is no definite limit to the drainage, it depends upon the rainfall?"

Answer—"Oh yes, there is. In the Cobar district a fourth side is utterly useless because it is not possible to utilize it by pumping the water between the embankments, as there is no surplus water to be obtained."

Q. 1534—

The words "say 20 feet" have been added to this question.

In the original evidence Q. 1568 does not appear, but the answer which follows is given as part of the answer to Q. 1567.

After Q. 1599 the following question and reply have been cut out :—

Mr. Woore.] "But then, if a drover changes his mind and goes by another route he would have to pay for the water again?"

Answer—"A drover is already under a penalty for changing his route with travelling stock."

Q. 1684—

In the second line the words "to a great extent" have been altered to "completely."

After Q. 1723 the following question and reply have been omitted :—

Major Penrose.] "What do you call strainers?"

Answer—"The strainers are the posts that the wire is fastened to. Every twentieth post in the fences is a strainer, but it is not sunk any deeper on that account."

After Q. 3251 the following question and reply have been cut out :—

Mr. Woore.] "Casting what you might regard as slanders upon you and your officers which you resisted?"

Answer—"Yes; and if I had not resisted, it would have been taken as a tacit admission that their statements were correct."

Q. 3468—

After the word "year" in eleventh line the following question and portion of reply are cut out :—

Mr. Woore.] "With regard to the caretakers' time not being fully occupied, might not that argument be applied to the police, who are sometimes whole weeks without having anything to do?"

Answer—"Yes; I should think so."

Q. 3619—

In the original evidence this reads :—

Question—"Then let us distinctly know who it is that fixes the exact site of the works;—is it your Department?"

Answer—"Yes; in all cases. The Mines Department indicate the general position, and we choose the exact site."

In the evidence as printed the answer has been altered to, "Yes, in most cases, &c."

Q. 3630—

The reply in the originals reads :—

"Yes; I will give you a list of the tanks that have 3 to 1 batters. I have not a tank in the whole district that has a batter of 1½ to 1. The steepest sloped tank in my district is the 26-Mile Tank, which has a batter of 2 to 1."

This has been altered to :—

"I have only three tanks in the whole district, namely, the 12, 35, and 48-Mile, on the Booligal Road, that have a batter of 1½ to 1. The next steepest sloped tank in my district is the 26-Mile Tank which has a batter of 2 to 1."

Q. 3812—

Do you think that these huts erected by Mines Department are suitable for caretakers? No; I do not.

Next question in original, left out here, viz. :—

Mr. Woore.] Do you think that such buildings as they erected are suitable for human beings to live in in that country?

No; I do not think they are suitable at all.

Q. 3861—

The words "as we have been led to believe," have been left out.

Q. 4437—

The words "are in" have been altered to "are not on."

Q. 4484—

The original reads "our contractors occasionally, in fact almost invariably, have to use wild cattle belonging to the station owner, who is anxious to get them broken in by the contractors."

Q. 4501—

In the 4th line of the reply to this question the words to "cut these drains" has been altered to "to make this cutting."

Q. 4579—

The concluding words "I have his approval in writing," have been altered to "It was approved of by him verbally, not in writing."

After question 2854, the concluding one in Mr. Cotton's evidence, the following appears in the original :—

"James Budd, recalled at his own request, made a statement which the Chairman took down in writing."

The statement has not been submitted to this Department, and the foregoing is now omitted.

THE reply of the Mines Department to the evidence given by the officers of the Works Department to the Royal Commission *re* Tanks and Wells, and which they refused to receive, although it was proffered on two occasions and offered to be read before them, may now, perhaps, be printed in readiness to lay before Parliament.

It will be evident that this course will enable reference to be made to the pages of the printed reply, showing the rebuttals to the statements of the Works Department which the Commission have apparently accepted without reference to the papers contained in the Parliamentary Blue Book, furnished by the Department of Mines.

H. GILLIAT, 20/12/88.

Approved.—F.A., 21/12/88.

The Chief Inspector of Public Watering Places to The Under Secretary for Mines.

Sir, Department of Mines, Public Watering Places, Sydney, 22 June, 1888.

I have the honor to submit herewith remarks traversing portions of the evidence of Mr. Bennett and certain of his officers which I think it is desirable should be put in evidence before the Royal Commission *re* tanks and wells.

I may, perhaps, in connection with this, call attention to the powers conferred upon the members of the Commission under the Great Seal of the Colony, by which they are directed "To make a full and diligent inquiry into certain allegations which have been made respecting the construction of Public Tanks and Wells."

It is apparent, on perusal of the evidence taken by the Members of the Commission, that their inquiries have greatly exceeded the scope of the authority extended to them.

But confident that the Hon. the Secretary for Mines was not only willing but desirous that the fullest light should be thrown on both sides of the subject, and particularly on the working of this Department, which is at present responsible only to a certain extent for the maintenance of these works, I have not hitherto referred to this point, but both in my evidence in chief and in the remarks now submitted have replied as fully as the questions admitted to matters pertaining both to the construction and the maintenance of tanks and wells. But that this has been done with a full knowledge of the position, and with the sole object of assisting them to obtain the fullest information, should, I think, be clearly understood by the Commission.

At the same time it must be evident that any report upon the maintenance of these works, unless based upon much fuller investigation than has been made, would possibly result in an incorrect conclusion. The bulk of the independent evidence appears so substantially in favour of the views of this Department that I have not thought necessary to refer to it in these remarks, which deal chiefly with those statements of the officers of the Department of Public Works, which it seemed most important to refute. At the same time I have endeavoured to reduce the reply to the smallest limits. I may perhaps remark that with regard to Mr. Bennett's evidence it has been unnecessary for me to do more than submit corrections to some statements, since his knowledge of the cases before the Commission has been chiefly derived from Mr. A. P. Wood or the Road Superintendents, he himself not having, so far as I am aware, visited any of these works during the last ten years, the period within which the majority of them have been constructed. Evidence from Mr. Bennett, founded upon his personal knowledge, would be of undoubted importance, but this he is not in a position to give, and I am firmly convinced that he would upon personal inspection have condemned far more severely than has yet been done many of the cases brought before the Commission. With respect to Mr. A. P. Wood's and Mr. Stilwell's evidence, it can only be apparent that the former has made repeated allegations, without, it would seem, making any sufficient efforts to test their accuracy, as I have here shown, in numerous instances, while the tone and temper of the latter's evidence, both as it appears in his verbal and still more in his written statements to the Commission, are of such a nature as to afford a ready explanation of the fact that his district was the only one in which disputes were constantly arising between himself and the officers of this Department.

I have further to suggest that the Royal Commission may be asked to include all papers and correspondence from this Department in the appendix to their report, and I assume there can be no objection to this request being acceded to, as the President of the Commission, on page 614 of the evidence, suggests to Mr. Bennett that it should be done with the papers he had produced, and which I may here add, with the exception of those appearing in the text of the evidence, the officers of the Mines Department are ignorant of.

HARRY GILLIAT,

Chief Inspector of P. W. Places.

Submitted.—H.W., 2/7/88.

Approved.—F.A., 2/7/88.

The Secretary, Royal Commission on Tanks and Wells, to The Chief Inspector of Public Watering Places.

Sir,

Royal Commission on Tanks and Wells, Sydney, 12 September, 1888.

I have the honor to forward herewith the evidence (in part) with corrections, taken before the Commission.

The Commission invite your perusal of same, and, if necessary, will receive evidence in reply from your Department.

As the Commission have decided to close the evidence next week, it is desired that your immediate attention be given to this matter.

I have, &c.,
HUGH MAHON,
Secretary.

The Secretary, Royal Commission on Tanks and Wells, to The Chief Inspector of Public Watering Places.

Dear Sir,

Royal Commission on Tanks and Wells, Sydney, 17 September, 1888.

I beg to forward herewith pages 945-960 of corrected evidence.

Yours, &c.,
HUGH MAHON.

The Chief Inspector of Public Watering Places to The Under Secretary for Mines.

Public Watering Places, Mines Department, 14 September, 1888.

As I shall be for some days fully occupied in examining the revised evidence forwarded by the Royal Commission, it may, perhaps, meet the convenience of those gentlemen if the first portion of the reply be submitted for their perusal. This will comprise the rebuttals of Mr. Bennett's and Mr. Wood's evidence.

HARRY GILLIAT,
Chief Inspector, Public Watering-places.

Submitted.—H. W. Approved.—F. A. The Chairman, Royal Commission Tanks and Wells.
—H. W., B. C.

The President, Royal Commission on Tanks and Wells, to The Chief Inspector of Public Watering Places.

Sir,

Royal Commission on Tanks and Wells, Jamieson-street,
Sydney, 26 September, 1888.

The Commission has received your voluminous papers purporting to be replies to evidence given by various officers of the Department of Public Works.

The Commission cannot accept them as evidence, and invite your attendance at the above office on Thursday morning next, the 27th instant, at 10 a.m., when it will be prepared to hear you in reply.

Yours, &c.,
GEO. H. COX,
President.

The Chief Inspector of Public Watering Places to

Department of Mines, Public Watering Places, Sydney, 26 September, 1888.

THE Royal Commission on tanks and wells in the annexed letter of this date state that they "cannot accept the voluminous papers purporting to be replies to evidence given by officers of the Department of Public Works," and they invite my attendance to-morrow morning, when they will be prepared to hear me in reply.

I may point out that the papers refused by the Commission are a carefully considered reply to the evidence. Some later evidence received subsequently has not yet been submitted to the Commission, but will probably be ready to-morrow. That the papers are voluminous is owing to the fact that the Commission unfortunately omitted to number their questions, and I was obliged, for the sake of correct reference, to quote both question and answer in my review of the evidence.

If the Commission refuse to receive this reply, or to hear it read, I have practically nothing left to say, and I must submit that I am not allowed the same consideration that was extended to Mr. Bennett. In Questions 3027 and 3028, Mr. Bennett states:—

"I was preparing my statement in the form of a paper, but I was not able to complete it by the time of meeting of the Commission. The evidence is very voluminous, but I have gone through it and marked everything to which I wish to refer particularly. But I wished to have the views of the Commission before I present a document of that sort to them, because it would be equivalent to a speech of Counsel in evidence, and I thought the Commission might consider the position I was in, and allow me to justify myself by a formal defence in reference to the evidence.

The Chairman: I am quite prepared to admit such a statement, having already done so in the case of other witnesses.

Witness

Witness then said that he would hand in the Commission a written statement replying fully to the various allegations that have been made, with a view to lessen the labours of the Commission, and would give his views in defence."

It is evident that the witnesses of the Works Department have had the advantage of the Parliamentary Blue Book of this Department to assist them in their defence, while I am now apparently debarred from replying to evidence which was given by witnesses who had all the plaintiffs papers at their disposal.

I may point out further that, after having received from time to time the evidence taken by the Commission, amounting to four large volumes, on the 13th September four additional volumes were forwarded with a letter from the Commission stating that they forward herewith the evidence (in part) with corrections taken before the Commission, and my perusal was invited. I have not yet had time to complete the revisions and alterations made by the Commission, but some of them are, I think, so material that the serious question is raised whether such a course is in accordance with simple justice or the usage of Royal Commissions.

I may perhaps suggest that I should appear in person before the Commission and formally tender and offer to read the reply already submitted to them. Should they decline to accept it as the rejoinder of the Department, I should perhaps intimate that it is the only form in which the Department is prepared to make a reply.

HARRY GILLIAT,
Chief Inspector, Public Watering Places.

Approved.—F.A., 27/9/88.

Mr. J. Boulton to The Chief Inspector of Public Watering Places.

Public Watering Places, 28 September, 1888.

Notes of occurrences at the Royal Commission *re* Tanks and Wells this day.

Present:—Hon. G. H. Cox, Mr. Woore, Mr. Gilliat, Mr. Boulton and clerk.

THE meeting apparently opened without any reference to former meeting, or the confirmation of previous minutes. The question as to the legality of the meeting was raised by Mr. Woore pointing out that only two members of the Commission were present, and that notices to attend had not been forwarded to the members. This was set aside by the Hon. G. H. Cox stating that such notice was unnecessary, as the day (Thursday) was one of their usual days for meeting. A note, presumably to Major Penrose, calling for his attendance, was sent to him by the Chairman, who then addressed Mr. Gilliat, recapitulating the terms of the letter addressed by him to this Department, stating that the Commission had received voluminous papers purporting to be replies to the evidence given by the Department of Public Works, that they could not receive the reply furnished in evidence, and requesting Mr. Gilliat's attendance this morning to furnish any oral testimony he might wish to give. Mr. Gilliat, in reply, referred to the fact that the non-numbering of the questions necessitated their repetition in the reply, and that the bulk only of the reply was increased in consequence. Mr. Gilliat then read to the Commission his instructions from the Department on the matter, stating that the reply forwarded in type-writing was the only reply this Department was prepared to give, and that he was present to read the same to the Commission on oath if desired.

At this stage Major Penrose arrived, and referred to the fact that he had not been summoned to attend the meeting.

The Chairman then explained what had transpired, and Mr. Gilliat repeated what he had already said, and, upon his suggestion, he withdrew while the Commission deliberated.

Upon being recalled, the Chairman stated that the Commission were unable to receive the reply since it was simply a "running comment on the evidence." Mr. Gilliat again informed the Commission that it was the only reply this Department was prepared to give, and that he was present to read it on oath, and pointed out that, so far from being a "running comment," he considered it to be a complete rebuttal of the evidence given by the Department of Public Works, and invited their perusal of it. The Commission stated that they had looked into it in places, and were confirmed in their view, and that it was for them to comment on the evidence.

Mr. Woore then defined exactly the lines upon which a reply from this Department was admissible, namely, that it should consist purely and simply of oral testimony in proof of the incorrectness of any statements made in evidence. He admitted that, in his opinion, the Commission had in instances acted wrongly (though his views were not shared by his colleagues), more especially in admitting papers and documents in support of various statements, and also in making any corrections in the evidence.

Mr. Gilliat then read that portion of Mr. Bennett's evidence in which he expressed a wish to hand in a written statement, &c., commenting on the evidence and the remarks of the Commission promising to receive such statement, and stated that it appeared to him that the matter now under consideration was an identical one. The Chairman remarked "no doubt," but that Mr. Bennett had not availed himself of it. Mr. Gilliat observed that he might yet do so. He also pointed out that this Department had no opportunity of cross-examining witnesses, and that therefore his "comments" in reply appeared to be justified. He further added that no fresh matter was introduced, and that the reply was a comparison of evidence and documents, and the addition and reference to documents that, in his opinion, was a complete rebuttal of the evidence given by Mr. Bennett and his officers. Mr. Woore then remarked that possibly the decision of the Commission may have taken Mr. Gilliat by surprise, but he wished to express clearly again that the only reply that could be received from the Department must consist of oral testimony disproving any evidence given, and that they would not press Mr. Gilliat for it to-day.

Mr. Gilliat then desired that the determination of the Commission should be conveyed to the Department in writing. This the Commission declined to do. Mr. Gilliat then said that his duty was completed

completed, and he would lay the matter, as substantially correct as he could, before his Chief, and that a reply should be forwarded. Before withdrawing reference was made by the Chairman, who was hurriedly looking over the reply sent by this Department to a reply to certain evidence, which he characterized as a "running comment," and not a reply. Mr. Gilliat, however, pointed out how the revision nullified his reply. Mr. Woore retorted by calling attention to an alteration in Mr. Gilliat's evidence, page 34 (where "a" is altered to "no"), and which he characterized as the most material alteration in the whole evidence. This Mr. Gilliat combatted, and showed how the succeeding paragraph demonstrated that it was no more than a clerical error. Mr. Woore adhered to his opinion that the alteration was a most material one, observing that if it was not he did not know what a material alteration was. Mr. Gilliat pointed out that far more material alterations had been made by the Works officers and added that he thought the most material alterations had been made by the Commissioners themselves. Major Penrose observed that the alteration referred to did not appear to him to be material and referred to the revision by the Commissioners as simply the excision of irrelevant questions and conversational matter. Mr. Woore then remarked that he had been overruled by his colleagues and Mr. Gilliat's revision had been accepted. Mr. Gilliat further added that if the Commission considered the revision a material one opportunity should have been given him to correct it on oath. Mr. Gilliat then withdrew.

This is substantially, I think, a correct account of what transpired this morning.

JAMES W. BOULTBEE.

The Chief Inspector of Public Watering Places to the Under Secretary for Mines.

Department of Mines, Public Watering Places, Sydney, 28 September, 1888.

I SUBMIT herewith a minute of the proceedings at the meeting of the Royal Commission *re* Tanks and Wells yesterday, and beg briefly to recapitulate some of the points that appear to justify the course taken by this Department.

An examination of either copy of the evidence makes it apparent that the Commission has not adopted the practice of excluding everything that is not evidence. Comment upon the part of the witnesses for the defence has been fully permitted, and in not a few instances, I venture to think suggested and even invited by the Commission.

2. Two papers were read by Mr. Stilwell (pp. 222, 224) and accepted by the Commission, the larger portion of which are composed entirely of comments, allegations, and satirical remarks, upon the officers and caretakers of the Mines Department entirely unsubstantiated by evidence.

3. That the Commission when Mr. Bennett (Q. 3027, 3028) asked permission to "present a document" which "would be equivalent to a speech of counsel" to justify himself by a formal defence in reference to the evidence replied through the President, they were quite "prepared to admit such a statement having already done so in the cases of other witnesses."

4. That this Department not having had the opportunity of cross-examining witnesses on either side, has a fair justification to traverse their evidence now and to analyze it, within reasonable limits, which it is confidently maintained has not in the reply submitted, been exceeded, that the reply is a substantial rebuttal of a large portion of the evidence for the defence, that it contains but little comment as compared with other papers received, and finally that while Mr. Bennett was granted permission to read his "speech of counsel" before it had been submitted to the Commission, a similar paper submitted by this Department was refused after having been in their hands for some days.

5. A free revision of the evidence has been made by the Commission, excising questions and answers and parts of each. This action appears to raise a very grave issue, as to whether it is in accordance with the established custom of Royal Commissions, Select Committees, or Boards of Inquiry, or indeed with the simple principles of justice.

It is at least in direct opposition to the rule laid down by the Commission and forwarded to this Department, which states:—

"The object of course in obtaining a shorthand note of the proceedings of Royal Commissions is that the precise language used, both by witnesses and by the members of the Commission, shall as far as possible be reproduced."

Some of the questions cut out are of such a character that their presence must in my opinion have produced a very strong influence upon the mind of the witness, and would also upon any person reading the evidence—it is apparent therefore would have an important bearing that should not be lost sight of. It may perhaps become necessary to ask for the minutes containing the resolutions under which these alterations and excisions were authorized.

6. If any special consideration was due to either Department it apparently should have been towards the Mines, as in response to the order of Parliament all papers in their possession were printed in the Blue Book, and the Department of Public Works had the advantage of it to assist them in their defence, while of the "mass of papers" Mr. Bennett alludes to, which are to be placed before the Commission, this Department is still without any information.

Under these circumstances I think the Commission may be informed that after careful consideration of the evidence, and the custom followed by the Commission in other instances, the Department considers itself justified in expecting that its reply should have been accepted, but since this has been refused it is not considered necessary to do more.

Consideration of the further steps to be taken with respect to the points here indicated will await the report of the Commission.

The Commission may perhaps be requested to return the copy of the reply forwarded to them.

HARRY GILLIAT.

Submitted

Submitted, 29/9/88. There can be no doubt that this Commission has acted quite opposite to the system always acted upon by other Commissions and Select Committees in the mode of taking and correcting evidence, and without wishing to reflect upon their proceedings, it does appear opposed to the true principles of fair justice to refuse to one party what has been granted to the other. They however have the power to do this if they desire. It will be for the public to judge of the equity of such proceedings.—F.A., 1/10/88.

Letter sent to Commission, 1/10/88.

The Secretary to Royal Commission on Tanks and Wells, to The Under Secretary for Mines.

Royal Commission on Tanks and Wells, Bank Chambers, 34 Jamison-street,
Sydney, 5 October, 1888.

Sir,

In compliance with the request contained in your letter of the 1st instant, I beg to return herewith the papers submitted to this Commission by Mr. Gilliat referred to therein.

With respect to your remark about the "custom followed by the Commission in other instances," I am to say that the Commission is not aware of any custom having been followed which would commit it to the acceptance of the papers referred to.

I am further to inform you that as the Department of Mines decline to give evidence in reply, this Commission understands that its case is now closed.

I have, &c.,
HUGH MAHON,
Secretary.

Replies to the Evidence of the Commissioner and Engineer for Roads and Bridges.

Mr. Bennett's evidence before The Royal Commission *re* Tanks and Wells.

Q. 3022.

Question :—Of course, Mr. Bennett, you have read over these printed documents that have been printed and placed before Parliament containing various letters and complaints from the Mines Department as to works performed under your management?

Answer :—Yes.

REPLY.

I would point out that the Chairman in alluding to the Parliamentary papers refers to them as if they contained only various letters and complaints from the Mines Department. I must respectfully submit that the papers contain all the action taken by both the Department of Public Works and the Department of Mines that can be traced in our records. Many of them are Works papers originating with that Department, and most of them contain records of that Department's action.

Q. 3023.

Question :—And the various allegations that are made in these papers?

Answer :—Yes; I have written a letter protesting against the question being put before the House and the Commission in this one-sided way.

REPLY.

I contend there is nothing one-sided in the way the question has been put by this Department. Parliament ordered the papers upon the subject to be laid before it. The Mines Department forwarded all that were in its hands, and repeatedly but unsuccessfully endeavoured to obtain from the Department of Works others that were found from our records to be in the possession of that Department.

So far from this being a "one-sided" course, the Department of Works have been in possession of the cases as submitted by this Department from the beginning of the inquiry. While owing to Mr. Bennett's continued neglect to comply with the order of Parliament, this Department is still unaware of the papers produced by his Department except such as are contained in the text of the evidence taken before the Commission.

Q. 3027, 3028.

Question :—You think it would be preferable if you would give us your evidence without going through the form of asking questions. First of all you might speak in connection with the selection of sites of tanks and wells, referring in your statement to the most salient points—those cases which have been said to be the most glaring ones?

Answer :—I was preparing my statement in the form of a paper, but I was not able to complete it by the time of meeting of the Commission. The evidence is very voluminous, but I have gone through it and marked everything to which I wish to refer particularly. But I wished to have the views of the Commission before I present a document of that sort to
to

to them, because it would be equivalent to a speech of counsel on evidence, and I thought the Commission might consider the position I was in and allow me to justify myself by a formal defence in reference to the evidence.

Chairman :—I am quite prepared to admit such a statement, having already done so in the case of other witnesses.

Witness :—Witness then said he would hand to the Commission a written statement replying fully to the various allegations that had been made with a view to lessen the labours of the Commission, and would give his views in defence.

Q. 4749.

Question :—Since your examination before the Commission have you read over the evidence and do you wish to make any further statement to the Commission?

Answer :—I had undertaken to prepare a short statement on the evidence. I have not been able, owing to many causes, to complete that statement, but I will be able to do so if I obtain an extension of time.

Question :—The Commission will not meet again until 10th May.

Answer :—Then I will have it ready by that time.

REPLY.

The Commission here ask Mr. Bennett if he has read over the evidence, and whether he wishes to make any further statement, and in reply he states his wish and his intention to do so. As Mr. Bennett has throughout the whole of the examination had the advantage of being in possession not only of the evidence given by the Mine's officers but his own, and their papers laid before Parliament, I apprehend there can be no objection on the part of the Commission to receive any further evidence that we may desire to furnish.

I may, however, add that Mr. Bennett's statement has not to this date (15th September) been received by the Department, and consequently any reply to it must await its receipt.

Q. 3033.

Question :—Since when have complaints been made in regard to faults of construction, and with respect to badly chosen sites for tanks and wells.

Answer :—Ever since the Mines Department got charge.

REPLY.

That is in October, 1879, but it must be borne in mind that at that time, out of the 165 watering-places Mr. Bennett speaks of in the previous question, only some 20 or 25 were constructed, and that the cause of complaint continued as the new works were constructed. My letter on pages 104 and 105 of the Blue Book deals with the whole question, and Mr. A. P. Wood's minute upon page 101 of the Blue Book practically admits it was justified. Mr. Stilwell appears to differ from Mr. Bennett, and in question 4603 of the evidence will be found the following :—

Major Penrose :—It appears that you suddenly found that your works were subjected to elaborate criticism, when before you never heard anything against them?

Answer :—Yes."

Q. 3034.

Question :—Were no complaints made by private individuals prior to that time?

Answer :—I have no recollection of complaints having been made. There were criticisms and suggestions by private individuals, but no complaint.

REPLY.

That complaints were not made by private individuals previously was owing to the fact that the works were few in number, and did not form part of a comprehensive scheme to enable the movements of stock and traffic during dry season. This originated with the Mines Department, and is alluded to in my annual reports of 1881 and 1882.

Q. 3037.

Question :—About what time was this?

Answer :—It commenced in 1869 and went on to about 1872 or 1873. Then we were from time to time ordered to make repairs, which in some cases amounted to restoration, the works in the meantime falling into decay from want of superintendence and care, &c.

REPLY.

Mr. Bennett is in error. The transfer of the tanks and wells was not made until October, 1879, to the Crown Lands Occupation Branch. He is, however, quite correct that prior to that date the "works had fallen into decay from want of superintendence and care," but at that time they were in his own branch; I took delivery of them myself from his own officers.

Mr.

Mr. Bennett's evidence, Q. 3042.

Then from that day, for the last five or six years there has been nothing but a continual fire of letters and complaints.

Mr. Woore :—By whom?

Answer :—From the Mines people through their Minister to the Works Department. The complaints were in most cases about trivial things, but the restoration of these trivial things must have made an impression.

REPLY.

The Blue Book is sufficient to show whether the complaints were trivial or not; they involve the expenditure of large sums of money for what it is considered should have been done at much reduced rates.

Q. 3057.

Question :—Did you foresee any complications from this dual control of works?

Answer :—No, I did not; the whole thing was in a rather embryo state at the time, and had not assumed the very large proportions which it has assumed since. These works were merely made as aids to the travelling public without any idea of getting revenue from them. The matter of revenue was an after-thought altogether.

REPLY.

Hence by Mr. Bennett's own showing since the administration by the Mines Department and in spite of the disadvantage of a dual control, this question from a "rather embryo state" at the time it was handed over by him, has assumed very large proportions. The records of both departments will prove that these proportions have grown up under the control of the Mines Department, and that of the works Mr. Bennett alludes to as "his children" five-sixths at least have been called for by the Department of Mines.

Q. 3061.

* * * * I would wish to add something in regard to what I have said in reference to handing these works over to local bodies. There should be some control over the local bodies in order that they might not be allowed to stop a road, because a local body from motives of injudicious economy, or from some other reason, might neglect works which would inconvenience the travelling stock. That has to be considered, so that rather more supervision would be required over these tanks and wells than over the ordinary road and bridge works of the Colony which it is desirable to decentralize.

REPLY.

Mr. Bennett's statements contradict each other. He first strongly advocates the control of these works being handed over to local bodies, and then considers that more supervision would be required over these tanks and wells than over the ordinary roads and bridges work. From this I gather that he has not previously given the matter much consideration.

Q. 3066.

Question :—But what I want to know is, were not these waters, adjacent to which works were constructed, conserved by the lessees at their own expense?

Answer :—Yes; but the works were not put there at the time with my knowledge. Mr. Woods was sent up there owing to the great rush to Mount Brown.

REPLY.

Previously to Mr. Wood being sent up I had been over the road, and Mr. Bennett was furnished with the positions recommended by this Department for Works for supplying water some considerable time before Mr. Wood left for that purpose. *Vide* Blue Book, p. 250, where Mr. Bennett states:—

"Copies of Mr. Gilliat's report retained, as it is improbable all the works proposed to be carried out can be done before the end of the year. I think the works proposed on this line should be at once commenced by this Department; I have therefore instructed Mr. Cambridge to proceed at once to Wilcannia, and have forwarded him instructions, plans, &c., to that place, so that tenders may be at once invited.—W.C.B., 28/4/82."

Q. 3090 and 3091.

Question :—As a matter of fact, I suppose most of the early tanks were sunk with these very steep slopes?

Answer :—Yes; most of those on the Wilcannia Road.

Mr. Woore :—And do you and your Department know now, from experience, that that was a mistake;—of course, everything was new then, and experience had to be gained?

Answer :—We found that the droughts and rainfall, which were the principal causes in making us construct steep slopes, were not so great in their operation as we anticipated; and we found also that the slopes did not stand so well, and we modified them accordingly.

REPLY.

I venture to think half an hour's conversation with the nearest squatter would have ascertained that his experience was such that steep slopes could not stand; but it was surely not necessary to buy our experience here. It must be evident to any engineer that one soil will stand a much steeper slope than another.

Mr.

Mr. Bennett's evidence.

The chief complaint against them is that the stock cannot water in the tanks, on account of the steepness of the slopes.*

REPLY.

I think this is incorrect; it is not intended that stock should water in them. The complaint is that steep batters are made the excuse of a high rate of costs, and when the slopes fall in, and the extra money is wasted, a lower slope, as is asserted frequently through the evidence, would have been much cheaper and stood better. I may point out that the objection of this Department is to a hard and fast rule. There are circumstances in which 3 to 1 may be needed; others, where the sides may be nearly verticle, it is a question to be decided by the nature of the soil and by the natural features. I may be wrong, but it appears to me that the principle of insisting upon 2 to 1 slopes is as erroneous as 1 to 1. In the same way the embankment may be needed of a certain form in one place and a different form may prove altogether better in another.

Q. 3108.

* * * * *
Therefore there was no reason for modifying the batters in the ordinary tanks unless they could be done cheaper. We called for tenders in every possible way, giving the contractors the advantage of this alteration, but we got no alteration in price.

REPLY.

Mr. Bennett here states that although contractors were offered modified batters, they would not reduce the price. This should entirely correct the impression apparent throughout the enquiry that these steep batters were the principal cause of the excessive cost of these works. Mr. Bennett further states in Q. 3130 of the evidence:—

“A certain sum of money was voted for watering a particular road, and we wished that that money should go as far as possible, and that was another reason for having steep slopes. *Economy was more imperative then than now, &c., &c.*”

Q. 3119 and 3120.

Question:—Now we have also had it before us that the Government had gone to unnecessary expense in sinking wells in the neighbourhood of tanks?

Answer:—That is entirely a misapprehension. I do not know a single instance of it.

Question:—We have it in evidence here, you must have read it, of wells being sunk in close proximity to tanks in one or two instances?

Answer:—Wells have been sunk in close proximity to water-holes, but not to tanks.

REPLY.

Mr. Bennett is right, no such statement has been made to my knowledge.

Q. 3126.

Question:—We have also heard that drains have been carelessly constructed, and that in one instance the water instead of running into the tank runs away from it?

Answer:—That was explained to me by Mr. Stilwell. In one place the drain crossed a flat or depression in the ground where there was a tank made for confining the water. A big flood came and washed away the tank. It was not replaced, and consequently the water runs back from the tank solely through the neglect of the caretaker.

REPLY.

It does not appear to which tank this refers, consequently I am unable to reply here.

Q. 3130.

Question:—Is not this soil exceedingly friable?

Answer:—Yes, it melts away like sugar. There is one other thing that strikes me—in making the original tanks we were rather limited in the matter of money. A certain sum was voted for watering a particular road, and we wished that that money should go as far as possible, and that was another reason for having steep slopes. Economy was more imperative then than now, though whether that economy was judicious or not is open to question; but at that time it appeared to us that economy was imperative.

REPLY.

Mr. Bennett here again states that steep slopes were used on the score of economy. Throughout the whole of the evidence stress has been laid on the steepness of the slopes as one of the causes for the high prices paid.

Mr. Wood in his evidence, Q. 3384, states, alluding to cost:—“In the first place the very question that you have touched upon includes one reason—the steepness of the slopes.”

Q. 3142 and 3143.

Question:—Do you think that the estimate of 8d. per cubic yard, which is said to be the advantage gained by dealing with the squatters on account of their supplying grass, water, meat, and so forth, can be justified?

Answer:—I think these particular items should be taken *cum grano salis*, but there are other reasons besides those furnished by the contractors, which may account for the difference between the prices the Government pay and those the squatters pay.

Chairman:—Will you kindly state those reasons?

Answer:—One great reason is that these tanks have to be pushed on regardless of the nature of the season, while in all probability the squatter selects his own time. Mr.

* This statement by Mr. Bennett, which appears in the original evidence, has been cut out of the evidence as printed.

Mr. Bennett's evidence, Q. 3138.

REPLY.

Mr. Bennett just gives the amount of difference in the cost produced by the advantages a squatter can afford, amounting to 8d. per yard, and then admits it should be taken *cum grano salis*, but offers a further reason that his works must be pushed on regardless of the nature of the season. I would ask why this should be done. I am aware of no reason for it.

Q. 3150 and 3151.

Question :—And a contractor invariably asks a higher price from the Government—other things being equal—than he would ask from the squatters ?

Answer :—The condition of other things being equal is in this case almost an impossibility.

Question :—But I am only putting a suppositious case ;—do the contractors think that the Government is a fair game to be fleeced ?

Answer :—A contractor will get as much as he can from everybody, and he is only restrained from asking a high price because he fears that he will not get the job, and that if he did ask a very high price he would get no more work. I think it is all a matter of freetrade. There is a great deal more made of this than there should be. Contractors have a great desire to get the work.

REPLY.

On pages 270, 271 of the Blue Book the Department of Public Works have furnished a list of the prices of the various tanks and wells. It is evident from these prices that works have cost far more than would have been paid by private individuals, and it must be evident that if the lowest tender is accepted, where all tenders are in excess of the value of the work to be done, contractors are only encouraged to ask high prices. I venture to think that if all tenders exceeding the fair value of the work to be done were promptly rejected, that contractors would soon recognise the fact that the officers of the Works Department were as well informed of the value of the work to be done as they are themselves.

In regard to Mr. Bennett's concluding statement that "contractors have a great desire to get the work," it will be observed that Mr. Wood, in Q. 3402 of his evidence, says that "It is a very strange thing that as a general rule the contractors will take work from the squatter, where the work is available, when they will not take it from the Government."

Q. 3182.

Question :—Now you mention that in dry seasons it is difficult to get a horse-power to do the necessary work ;—would not the same thing apply to firewood for the steam-engine ?

Answer :—The caretakers ought to have a stock of firewood on hand to anticipate any such thing.

REPLY.

The objection to the storage of large stocks of firewood is evident in that dry country, where it is exposed to the danger of fires and of being stolen by travellers.

Q. 3191.

Question :—And are you not aware that since the railway has been opened traffic has to a certain extent ceased on certain stock routes ?

Answer :—That shows that our proposal to economise in the matter of pumping appliances on the Bourke to Cobar Road was correct. But it was overruled by the Mines Department, and we were peremptorily ordered to put down the tank appliances and pumps.

REPLY.

The recommended alterations and repairs on the Bourke to Cobar Road were made, and if peremptorily ordered can hardly be regarded as promptly carried out. In 1882 recommendations for lifting appliances were made, including the fencing of an area of 200 acres of special lease. These were not completed till February, 1886. The expenditure at each work recommended by this department for lifting appliances and fencing was to cost £475 ; the actual cost for lifting appliances as undertaken by the Works Department, not including fencing, is an average of £519. These recommendations appear in the printed Report issued by the Chief Inspector of Stock. (See Annual Report for 1882, pages 11 and 12.) See also reply to Q. 3223.

Q. 3194.

Mr. Bennett states :—But so long as the present traffic arrangements are in existence you will probably require caretakers. The question is whether the office of caretaker might not be amalgamated with some other office. I know it was a very objectionable thing, and Mr. Fosbery, the Inspector of Police, has objected to it very much, to have the maintenance men along the roads amalgamated with the Police Force as is done in Prussia. It might be possible to roll into one the duties of a stock inspector and policeman, and a number of offices of that sort, and those of a caretaker might be added to it. He would know when large flocks of sheep were coming to his tank, and he would be there to give them water. There is no doubt about it, it is a very great expense to the country to keep these men, and this expense ought to be reduced as much as possible.

REPLY.

With respect to the employment of caretakers the Commissioners have been informed that the purpose of the Mines Department is to lease these public watering places, and that as fast as the necessary surveys are completed, and notification by the Local Land Board made in the *Gazette*, tenders for leasing them are being called for.

Mr.

Mr. Bennett's evidence, Q. 3202 to 3207.

Question :—You have seen all the papers which have been printed and presented to Parliament by the Mines Department?

Answer :—Yes.

Question :—Do they contain all the evidence and correspondence in connection with the two Departments?

Answer :—No.

Question :—What letters are chiefly left out of the printed reports?

Answer :—Papers recorded in the Roads Department, which consist to a great extent of reports of our officers, bearing out the views of the Roads Department.

Question :—And to a large extent these would rebut many of the allegations contained in the published papers?

Answer :—Yes.

Mr. Woore :—Do I understand you to say that those papers which have been printed by the Mines Department are papers which have been carefully drafted out by them, presenting their own view of the question.

Answer :—I would not say that, but the papers in the Mines Department, and issued by them, contain a large number of papers conveying their own views.

Question :—These papers, according to your account, present in fact only one view of the question?

Answer :—Yes; one view.

REPLY.

1. Mr. Bennett's statement that all papers have not been presented by the Mines Department is largely answered by his following reply, that the omission consists of papers written by his own officers, and which were never submitted to this Department, and of which we have no record. The Parliamentary papers presented by the Mines Department contain numbers of Roads papers, in fact all that we had in our possession appearing to bear on the subject.

2. This statement that these papers are in Mr. Bennett's possession is an admission that he has not complied with the order of Parliament, and having failed to do that he now endeavors to make the non-publication of these papers a reflection upon the Mines Department, because it has done its best to carry out that order. The Commissioners have already been supplied with written statements from the two officers engaged in compiling these papers, that nothing bearing upon the subject has been left unpublished, and that the only papers not appearing that we could trace in our records were those that we were unable to get returned by Mr. Bennett's department.

Q. 3208.

Chairman :—Then hearing from you that a large amount of correspondence that has not been made public is contained in your Department, I will request you to produce it, and such portions of it as you may think relevant to be placed in the appendix to the Report of the Commission.

Answer :—Very well; I have the papers all here, but it might be injudicious of me to make a hurried selection.

REPLY.

The Mines Department, in compliance with the order of Parliament, supplied all the papers bearing on this subject in their possession, and Mr. Bennett has taken umbrage on more than one occasion to this having been done, and has gone so far as to assert before the Commission that he objects to the Parliamentary papers submitted by the Mines as an *ex parte* statement. The reply is obvious. Mr. Bennett was as much bound by the order of Parliament as the Mines Department was, and should have supplied such papers as were in his possession. The Blue Book supplied by the Mines Department is a sufficient refutation of his allegation that it is an *ex parte* statement; all that was done by the Works Department, so far as they informed this Department, appears in full.

With respect to Mr. Bennett's remarkable statement that it might be "injudicious for him to make a hurried selection," I venture to submit that, however injudicious it may appear to Mr. Bennett, he should be required to comply with the order of Parliament, and be called upon to furnish all the papers in the case.

Q. 3209.

Chairman :—Is it a fact that the Mines Department have at any time given approval to the new form of machinery for lifting water rather than the old and now disused forms?

Answer :—Yes; Mr. Gilliat in a letter on page 174 of the printed papers has done so. This is the paragraph:—"But as I have stated in my minute to Mr. Overseer Jones' report *re* fencing (minute and sketch herewith) I consider the present fencing a very good one if proper attention is paid to the height of the rails in proportion to the position of the troughing upon the ground, and I think a little energy, combined with a desire to make the best of what I think are substantially good, although not perfect improvements yet certainly far in advance of anything done for the convenience and comfort of travelling stock, as far as my experience goes, in any part of the world I have visited, would enable the overseer, with the labour of the caretaker, to remedy the defects that exist in the height of the rail. This depends to a great extent upon the formation of the ground and may not be the same along the length of the troughing. The sketch submitted will show the plan I think may preferably be adopted."

REPLY.

A perusal of the paragraph in question will show that it refers simply to the fencing of the troughing and in no way to the machinery. The approval of the fencing, however, is qualified by the statement that "I think a little energy, combined with the desire to make the best of what I think are substantially good, although, perhaps, not perfect improvements."

Mr.

Mr. Bennett's evidence.

Mr. Bennett states :—There is another opinion of Mr. Gilliat's, given before the Water Conservation Commission, in which he expresses unqualified approval of the tanks and everything else. He says at pages 137 and 139 of the first report of the Commission referred to :—

“*Chairman* :—The other form of batter could be given by the steam appliances in use? There I agree with Mr. Bennett so far as steam power has yet been used. We get very low slopes, and there is, consequently, an increased tendency for the water to splash up round the edges of the bank, especially in hot and windy weather.”

REPLY.

This has no reference—as will be seen by reading the context of the evidence—to steam pumps for lifting water, but refers merely to the employment of steam machinery for excavating :—

“3454. *Mr. M' Mordie* :—Do you think that finishing off the work is an expensive process? The embankments have to be trimmed and the slopes to be adapted to the exact batter.

3455. Is that an expensive process? Yes; it has to be done by handwork.

3456. *Chairman* :—The other form could be given by the steam appliances in use? There I agree with Mr. Bennett, so far as steam power has yet been used. We get very low slopes, and there is consequently an increased tendency for the water to splash up round the edges of the bank, and this especially in hot and windy weather.

3457. *Mr. Donkin* :—What are the slopes made by steam appliances? I think the Fowler slopes are 4 to 1. In a letter Mr. Doudney asked me whether I would consent to this if the Works Department did, in the event of his increasing the depth. I do not know what contract he entered into with the Works Department, but his view was to preserve slopes from $1\frac{1}{2}$ to one side batter, and to increase them at the end. I replied that I saw no objection to that, provided he increased the depth, and these concessions being granted he would reduce the price, but as Mr. Doudney asked as much as other contractors I did not see that much was gained, because we got a better finished work from the others.

There is nothing that can be read as ‘an unqualified of the tanks and everything else.’

Mr. Bennett also quotes from first report of Water Commission a further portion of Mr. Gilliat's evidence :—

“Is that pump (the Tangye pump) effective? Yes; it is an excellent pump, with occasional repacking it will stand very well, and is sufficiently strong to bear the rough treatment of the men we employ.”

REPLY.

This paragraph quoted by Mr. Bennett does not give the whole of the evidence, but leaves out a portion in which I state that my wish to employ a simpler form of lifting appliances has been put aside, and in reply to the question of the chairman of the Water Commission, if the pump was effective, I replied that it was an excellent pump, but in no way did I recommend it or approve the adoption of such a lifting appliance, that question not being asked. This is what was said :—

“My view was to get the simplest gear, which was the double whip, but that was disapproved of and the present Tangye pump was substituted.

3493. *Chairman* :—Is that pump effective? Yes, it is an excellent pump; with occasional repacking it will stand very well, and is sufficiently strong to bear the rough treatment of the men we employ.”

[See also my reply to Mr. Wood's evidence on this point, Q. 3475.]

Q. 3315 and 3216.

Question :—Have any such whips been erected?

Answer :—Not by our Department.

Question : Are you aware that any have been erected by the Mines Department?

Answer :—Not to my knowledge. It is simply an application of the ordinary gold-fields whip.

REPLY.

Mr. Bennett's statement in itself should be a sufficient reply as to the simplicity, suitability, and cheapness of this appliance. He also admits that for drawing water from a shallow well it is a good idea. (Q. 3217.)

3223.

Mr. Bennett states :—But our orders from the Mines Department were always of the most peremptory character, and whenever we suggested that there might be a saving, as in the case at Cobar to Bourke road, we were over-ruled.

REPLY.

See my recommendations with regard to this road in the appendix to the Annual Report issued by the Chief Inspector of Stock for 1882, pages 11 and 12.

There are no papers in the possession of this Department or in our records that I can ascertain of any over-ruling. Our recommendations to the Works Department were that watering appliances and fencing should be erected at an expenditure of £475, whereas the Works Department spent on an average on that road £519 for appliances alone without the fencing. (See also reply, Q. 3191.)

Mr.

Mr. Bennett's evidence, Q. 3229.

Mr. Bennett states :—Of course fencing is not a matter with which I am intimately acquainted, but it appears to me that the general fault-finding with the heaviness of our fences is caused by contrasting it with the fencing on sheep runs, which are only intended to keep sheep apart, while our fences are intended to resist wild cattle.

REPLY.

The fault-finding was not so much with the heaviness of the fence as with the cost and defective construction. I would point out that the horse-paddock fences erected by station owners answer all purposes and block wild cattle and horses. What more then is needed at a Government tank paddock, to which mobs of wild cattle are not admitted?

Q. 3238.

Question :—We have also had complaints that the fencing is unnecessarily expensive because the posts were put in the ground much too deep for the ordinary wire fence?

Answer :—Well that is a matter of detail that I can hardly speak of. It strikes me though that the posts of a road fence in that part of the country are not too deep at 2 feet 6 inches. However that is a matter of practice.

REPLY.

There is rarely ever more than one side of a paddock fronting a road. As a matter of practice, sinking posts to the depth stated is confined entirely to the Works Department. As far as I am aware station horse-paddocks have usually to stand quite as great strains as any tenant's lease, and the depth of sinking is, I think, I may say, invariably 22 inches. The copy of specifications of fencing, tenders for which are now being called for for the Silverton district by Mr. Bennett's officers, will show that they have adopted very closely the lighter form of fence we recommend. For copy of specifications see reply to Mr. Wood's-evidence. Q. 3482.

Q. 3251.

Mr. Bennett states :—And I would have been very happy at any time to have handed these works over to the Mines Department. I got no fee or reward for my work in connection with them, but when the Mines Department took charge it was evidently with the fixed determination to get all these works out of my hands, not merely because they wished to relieve me of the duty but because they wished to make it appear that we were unequal to the proper carrying out of the works.

Mr. Woore :—Casting what you might regard as slanders upon you and your officers, which you resisted?

Answer :—Yes; and if I had not resisted it it would have been taken as a tacit admission that their statements were correct.*

REPLY.

I submit that this is an assertion unsupported by a particle of evidence, and I venture to think that, with all the information that is contained in the papers in the Blue Book, it is absolutely unjustifiable. The statements that have been made by the Mines Department appear fully in the Blue Book, and cannot, I think, be characterised or regarded as "slanders."

Q. 3252.

Chairman :—It has been complained also that you have departed from the proper departmental rule not to write to the newspapers in justification of your conduct?

Answer :—Well, I have the approval not only of my own Minister, the Minister for Works, but of the Premier as well, to whom I showed the letter before it went into the paper. I think it is much less harmful to write in a paper over one's own name than to attack people in paragraphs which are evidently inspired.

REPLY.

From this imputation this Department is freed by the statement in the article of which he complains; it is there admitted that I, as head of the Branch, refused positively to give the writer any information.

Q. 3254.

Question :—Complaint has been made also that you have used improper composition for the coating of supply tanks, rendering the water undrinkable by stock?

Answer :—This composition was put on in three cases, in only one of which was any complaint made about it. The mixture is one not new to the Department, but it was suggested in a report by Mr. M'Kinney, Engineer to the Mines Department, as having been used with the greatest success in Victoria. This is what Mr. M'Kinney says :—

"While the works, as a rule, are of well known types, the flume shown in the accompanying plan presents some unusual features. This work consists of a trapezoidal flume of sheet iron of No. 12 gauge, that is of the thickness of less than one-ninth of an inch, supported in a framework of timber. It has been seven years in use, and has given entire satisfaction. It is laid with a fall of 8 ft. per mile or 1 in 660; its length is 920 ft. and its total cost was £1,500. The ironwork is cleaned annually and coated with a mixture prepared in proportion of 2 lb. tallow and 2 lb. resin to 1 gallon of tar. This is put on in hot weather and at a time when the channel is not in use. It is found that the mixture applied assumes a glassy surface, and does not affect the taste of the water."

Mr.

* This question and answer have been cut out of the evidence as printed.

Mr. Bennett's evidence.**REPLY.**

The cases were all reported and the objection taken was a general one. Ivanhoe was specially referred to as the water there was required for domestic use. Mr. M'Kinney's own statement is submitted, Q. 3511, where the matter is further dealt with in rebuttal of Mr. Wood's evidence.

The important difference to be observed is that the preparation as used in Victoria and described by Mr. M'Kinney is not the same as that used by the Works Department, and which Mr. Wood asserts was adopted on that gentleman's recommendation; and further, that as used in Victoria, it is put on in hot weather when the flume is not in use. The conditions are dissimilar as in hot weather the tank and troughs (not flume) are most in use.

Q. 3257.

Question :—Although it was recommended by their own officer?

Answer :—Yes; I do not say that it was used entirely on his recommendation, because the mixture was known to our Department long before.

REPLY.

1. Mr. M'Kinney was not an officer of the Mines Department at the time referred to. 2. Mr. Wood distinctly states in his evidence, Q. 3511, that it was on the strength of Mr. M'Kinney's recommendation that the composition was used, an evident contradiction of Mr. Bennett's statement. Mr. Wood also says, Q. 3511 :—

"I may state that the composition that we used was a mixture of tar, pitch, and tallow, in proportion of 1 gallon of tar, to 1 lb. of pitch, and 2 of tallow. This composition was recommended to me when I met Mr. M'Kinney, the engineer, to the "Water Conservation Commission," down at Hay sometime ago. He stated that the composition was a very serviceable one for the purpose, and on the strength of his recommendation we tried it.

Q. 3260.

Mr. Bennett states :—No contract for well sinking has ever been made without a prospecting shaft, where possible, having been put down, and in some instances boring. In two cases we had reason to doubt the genuineness of the sample (of water) produced.

REPLY.

It may be noted that bad water and unfit for human consumption exists at Old Gunbar, Holy Box, Willandra, and Dolmoreve, and no water obtained at Normanstone, Baloola, and JK Well. This should not have occurred if trial shafts had been sunk. I am also informed that there were no trial shafts at Mena Murtee, Mulga Valley, or Beefwood Wells.

Q. 3261.

Chairman :—Why go to the expense of putting this well (Normanstone) in basalt without knowing what the result would be. Whether good water could be had or any water at all?

Answer :—Mr. Gilliat himself selected the site, and yet he now states that the wells are not on the sites that he selected. But we have been assured by a gentleman who was with Mr. Gilliat at the time the sites were selected—Mr. Kelly, manager for Sir Patrick Jennings—that the wells are practically on the sites chosen by Mr. Gilliat.

REPLY.

Mr. Kelly could not possibly know anything about the selection of the site of Normanstone well; it is about 20 miles from his place, and he was not with me when the site was selected. I first drew attention to the sites as varying from the spots pointed out by me in June, 1884. (See Blue Book, page 154.) The site of Baloola, though generally approved of by me and by Mr. Kelly, was placed on the shoulder of the hill and not upon the black soil plain where, as I pointed out, water could be obtained at about 100 feet sinking. With regard to Normanstone, the site selected by me was nowhere near where Mr. Dowe recommended a tank, and the present site is fully 4 miles from the one selected by me on Basin Plain. The Works Department on page 155 of the Blue Book state :—

"The Road Superintendent was instructed to adhere as closely as possible to the sites marked out by the Stock Inspector, and which it was understood were approved of by Mr. Gilliat." No reference is made to Mr. Gilliat's report and tracing.

I state on page 153 of the Blue Book :—

"For their third site Messrs. Mackie and Dowe suggest a point 10 miles from Mullaly, and suggest a 4,000-yard tank. This point is very nearly the watershed between Cox's Creek and the Namoi. After careful examination I consider the point marked in red on the annexed tracing will prove the best site."

The tracing showing the exact points selected by me was sent to the Works Department, and although repeatedly asked for has never been returned.

I may further add that the Works Department claim the right to fix the exact site of works in all cases, leaving to the Mines the power only of pointing out the approximate one. Under these circumstances I fail to see how they can with any consistency endeavour to throw the responsibility of these blunders upon us.

Mr.

Mr. Bennett's evidence, Q. 3270 and 3271.

Question :—I would like you to turn to No. 17 of the *précis*, the case of the Holy Box Well, concerning which it is stated :—

“Holy Box Well.—This well was sunk, and a small supply of fresh water tapped, followed by a great flow of salt water, which, when twice analysed, was declared unfit for use. Evidence as to saltiness was submitted. Well was abandoned, and tank commenced. Works officer stopped work at tank when about 3 feet deep, declaring well-water good. Well again handed to Mines, and constant baling insisted upon to improve to improve quality of water; this done without result. Cost of well and price referred to—94 feet deep; cost over £1,000. Mines has to bear cost of maintenance, and employ caretaker to bale and protect head-works. There is no prospect of leasing salt wells. Caretaker has carted drinking water 17 miles. Whim, service tank, and troughs erected before quality of water decided suitable. Iron in troughs destroyed by action of salt. Well almost useless for stock, and quite unfit for travelling public.”

Do you see that the sinking of 94 feet cost over £1,000?

Answer :—Yes; that is possible.

Mr. Woore :—Does that include the cost of erecting head-works and troughing?

Answer :—Yes; it includes fencing and everything connected with the well. Besides, the well was sunk in dear times. It very likely includes also some additional repairs, but we can produce the original vouchers. I will reply to this in the evidence I am about to furnish.

REPLY.

Mr. Bennett is in error; the cost quoted, £1,088 18s., is that given in his return of cost of works in 1884 (Blue Book, page 215), two years previously to the erection of fencing, while in a second return of cost of works, dated 3rd February, 1888 (Blue Book, page 270), the price of this work is given at £1,064 9s. 9d.—the last date is subsequent to the erection of the fencing—being a less amount, after additional work has been done, than the well is stated to have cost in 1884. There is no explanation of the discrepancy in these figures, but it is peculiar that the price alleged to have been paid before the fencing was erected in 1884 should be £24 8s. 3d. more than the price given in 1888, after fencing 640 acres.

Q. 3272.

Mr. Bennett states :— * * * of late years I think most of the well sites have been decided on by the Mines officers. This is my impression.

REPLY.

In no instance has the exact site of a well been selected by the Mines officers except the Murray Hut Well, but in any case the Mines only select the approximate sites. The Works Department fix the actual one.

Q. 3277 and 3278.

Question :—Can you give us any information about this costly hutting for caretakers?

Answer :—We were told to provide huts for the caretakers, and I all along thought that the adjuncts to these works were too expensive. The first works were simply water-holes. Then we were urged from one thing to another. A sum of money was put on the Estimates at the instance of the Mines Department for cottages for caretakers, Mr. Bruce's estimate being £100 for each; Mr. Gilliat's figures were the same. We made out a drawing and called for tenders.

Question :—Will you state what the accommodation was?

Answer :—I have the specifications here, which I will hand in. One room was to be 8 ft. x 12 ft., and one 12 ft. x 12 ft., and one 8 ft. 6 in. x 8 ft.; to be built of timber, with galvanised iron roof, iron chimneys, and iron tank with pipes to provide for fresh water. We received tenders from £80 to £100. Our plans were suited to the amount which was voted by Parliament. Before we incurred such a large outlay I thought it was necessary to have the approval of the Mines Department before I accepted any tender. The papers were sent on to the Mines office, and the reply we got was that they could get the work done very much cheaper.

REPLY.

Mr. Bennett is again in error; my figures were not the same as Mr. Bruce's in August, 1883; at that date I gave no estimate at all. In August, 1886, I averaged the cost of these cottages at £50. Mr. Bruce states that the buildings would cost less than £100 each. (See Blue Book, page 135.) My minute (Blue Book, page 137) fully deals with the matter, and in which I point out that two rooms will be sufficient where there is a long or costly carriage, but where the material can be delivered at a moderate outlay I would suggest that three rooms be given.

The Blue Book, pages 135 to 141, under the head of hutting, contains all the correspondence that passed between the Departments.

Mr. A. P. Wood, in his evidence, Q. 3577, admits :—“They (the Mines Department) recommended at the time two-roomed cottages 24 ft. x 12 ft., &c.” This recommendation was not superseded.

Mr.

Mr. Bennett's evidence, Q. 3280.

Question :—Then the Mines Department stated that they could get caretakers' huts put up for one half the price without stating what the accommodation was?

Answer :—Yes; and I think this was calculated to mislead both the Minister and the public.

REPLY.

The class of hutting required was fully indicated in my minute (Blue Book, page 137); and in Mr. A. P. Wood's evidence, Q. 3577, the following appears:—

“We were instructed by the Mines to have these huts erected. They recommended at the time two-roomed cottages 24 ft. x 12 ft., with iron roof, windows, floors, chimneys, and so forth; the cost of which was estimated to range from £56 to £100. * * *”

This evidence contradicts Mr. Bennett's statement, and is confirmed by my minute above referred to, which goes fully into the subject.

Qs. 3281 and 3282.

Question :—No doubt a hut built altogether of iron would be very inexpensive?

Answer :—Very.

Question :—But would it be at all suitable for people to live in?

Answer :—It would be uninhabitable.

REPLY.

On page 135 of the Blue Book Mr. Stillwell recommends iron cottages, and upon this Mr. Bennett minutes that the purchase is approved of long ago and the house erected. And on page 136 of the Blue Book, Mr. Wood recommends as follows:—“And in the timberless Riverina District corrugated iron might be used and reduce the expense.”

This I think practically shows that iron cottages were recommended by two of Mr. Bennett's officers, and approved of by him. I state (Blue Book, page 137) that I “agree generally with Mr. Wood as to iron cottages in timberless country.” As to their being uninhabitable there is hardly a station between the Murrumbidgee and the Darling without them, and Cobb's grooms upon that road are similarly housed.

Further evidence of the Commissioner and Engineer for Roads and Bridges before the Royal Commission re Tanks and Wells.

Mr. Bennett's evidence, Q. 4744.

Mr. Bennett states:—I beg to present to the Board the attached papers belonging to this Department, sent to supplement the Blue Book prepared for Parliament by the Mines officers, and to which Mr. Gilliat refers in his memo. I have already protested against this book as an *ex parte* statement, presenting the Mines view of the matter, and calculated, whether designedly or not, to prejudice this Department before Parliament, the Commission, and the public; but even that compilation will not bear out Mr. Gilliat's statement that, whatever the faults of the Mines Department, discourtesy is not one of them. The present papers afford strong evidence to the contrary. Mr. Gilliat, on the strength of a statement in a newspaper paragraph, which is entirely baseless, takes occasion to express his opinion that under judicious management, with properly constituted works, stock should not be allowed to go past unwatered, even if lifting appliances are incomplete. I point out that such reference is uncalled for, and not calculated to diminish friction. Mr. Gilliat then writes memo. dated 26th March, in which he refers to the Blue Book, as described, and states that his words express a “tenable general proposition” that if, while in the hands of this Department, works were judiciously managed and properly constructed, there would be no reason for stock going unwatered. He then goes on to say that the works have been in progress four years, the two latter of which have been the most favourable ever known in the Colony; the press and the public are justified in assuming that they were transferred, and that the duty devolved on Mr. Gilliat to correctly inform the Secretary for Mines.

As it happens, the information given in this instance is incorrect. The delay in completion of these works is first owing to unprecedented drought; the excavations were obliged to be suspended for want of feed and water; the iron tanks obtained from England were used elsewhere, and those ordered to replace them were delayed in construction and in transit from England, and in erection by the exorbitant demands of contractors. Had we yielded to those demands, and pushed on the work regardless of cost, the converse accusation of extravagance would have been made.

I submit this correspondence to the Commission as a sample of the treatment which has been given to this Department by the Mines. There is nothing to justify Mr. Gilliat's foregone conclusion, or, as he calls it, “tenable general proposition,” that the management of the Department was injudicious or the construction improper.

REPLY.

I fail to see how Mr. Bennett construes the minute referred to as discourteous to his Department unless he admits that the works were not properly constructed, and were not judiciously managed; if this was the case my remarks require no justification.

With respect to the statement in the newspaper paragraph being entirely baseless, Mr. Bennett produces no evidence to that effect. The telegram appeared in the *Daily Telegraph* of 9th March last, and Mr. Hanna states in his letter that on the 6th March he gave instructions to the caretakers at these tanks to water travelling sheep. But Mr. Hanna does not deny the statement in the newspaper telegram, and it is at least suggestive that the drovers' complaints in the telegram and Mr. Hanna's instructions

to

Mr. Bennett's evidence.

to caretakers rescinding their previous orders not to admit stock to the tanks should so closely approximate in point of time, and this is made more apparent from the fact that Mr. Hanna refrains from contradicting what Mr. Bennett apparently, on the strength of Mr. Hanna's letter, calls "an entirely baseless newspaper paragraph."

With respect to my statement of the time the works in question have been in progress, I beg to refer the Commission to Mr. Bennett's minute of April, 1882 (Blue Book, page 250); stating that he has forwarded instructions for tenders to be invited at once, and to Mr. A. P. Wood's minute of December, 1882, on the same page, enumerating and stating that the works were let and in progress, and that the recent rains would enable them to be completed more rapidly than was anticipated. In October, 1885, more than two years and a half later, Mr. Overseer Tully reports (Blue Book, page 254) upon the progress of these works, and mentions that the Waratta and Maxwell's tanks, and the Milparinka and Mena Murtee wells should be completed very soon. These works, however, were not ready for transfer until the following dates:—Maxwell's tank, July, 1888; Waratta tank, June, 1888; Milparinka well, June, 1888; Mena Murtee well, December, 1886. The Peak and Tarella tanks were transferred also in June, 1888. Making every allowance for bad seasons, I must remind the Commission that 1885 was a good year in that district, 1886 a fair one, and 1887 the best ever known, and that three fair to good years out of six appears a fairly liberal allowance for the construction of a tank or well. I must therefore demur to Mr. Bennett's alleging that the information given by me is incorrect. With respect to the delay in the transit of the iron tanks from England, that appears to me a question of departmental foresight. With regard to Mr. Bennett's final paragraph, I beg leave to remind the Commission that I arrived at no foregone conclusion, as stated by Mr. Bennett, but that as he has chosen to submit these minutes of mine "as a sample of the treatment which has been given to this Department by the Mines," I beg to submit the following as proceeding from the Roads and Bridges, which in each case have been transmitted over the B.C. of Mr. Bennett. I may safely leave it to the Commission to institute a comparison:—

Brolgan Steam Pump. (Blue Book, page 227.)

It is a great pity that the officers engaged by the Mines to inspect these works and report on their maintenance, &c., do not know a little more of the very simple mechanical details of the pumps that have been provided. There is very little doubt that if the pump will not work it is due to carelessness in not keeping it in order and properly lubricated. Last trip I made the same complaints were made in regard to two of the steam pumps which I had to take to pieces and clean myself, the caretakers being incapable of giving any practical assistance. In both these cases gross carelessness was the cause. Mr. Dowling's idea that it is due to a settlement in the foundation plate is absurd. These pumps will work in almost any position if the steam connections are all right. Mr. Dowling's best plan is to take the pump to pieces and have it cleaned and oiled; but before doing so he should be certain that he will be able to put the parts together again. Before these works were handed over to the Mines such complaints were unknown, and should not be made now. It might be well for Mr. Morton to be wired to go out to the work and see that no damage is done to the pump by the overseer of Public Watering Places' efforts to repair.—A.P.W., 17/11/86.

Boonoona Pump. (Blue Book, page 229.)

The complaints in regard to the way in which the Mines caretakers neglect their work and prejudice our connection with these works are becoming so frequent that in self-defence some action must be taken. During my last trip to the district I had to find fault, and the attention of the Mines officers was directed to it, with the result that we were informed that the matter had been referred to their local officers, and the reports furnished by them—not sent on to us—were satisfactory. Matters are now getting worse, and we shall have a repetition of old evils, unless more care is paid to their duties by these caretakers. They receive good wages and have but little to do—that little should be done well.—A.P.W., 23/10/86.

The old evils mentioned refer to the ruinous condition these wells were allowed to fall into for want of proper control between their construction and being taken charge of by Mines, when the evils referred to were attributed to faults of construction or neglect of this Department.—W.C.B., 25/10/86.

Under Secretary for transmission to Mines. The Under Secretary for Mines.—J.R., B.C., 27/10/86. Mr. Yeo will report upon this at once.—H.G., B.C., 29/10/86. Copy of Public Watering Places, 86/5,107, B.C. to Mr. Inspector Boulton for report.—1/11/86.

One Tree. (Blue Book, page 232.)

If any disposition to work or to learn their duties were evinced on the part of these men some allowances, when new to the work, would cheerfully be made for them, but when they make it so very obvious that their ignorance is equalled by their indifference, and that their view of the position that they are not there to work, but merely to take charge, make complaints, and look in hope for improvement, is futile, and it is as well that the state of the case should be recognised and stated plainly at once, because a number of this class of men are being sent up from Sydney of late, and the resulting negligence and complaints will have to be met and provided against.

I have, &c.,

A. W. STILLWELL.

The Commissioner for Roads.

Byewash, Brolgan Tank. (Page 236.)

Mr. Dowling has not made out a case. The unusual storm is reported, but no damage to the embankments. Why then the surmise that some day the whole will be swept away? This paper should be sent to Mr. Morton for report. I do not think the Mines officer should have undertaken this work without conferring with the local officer. I think deepening the by-wash would be a mistake, as it would lower the level of water conserved. I question whether any alteration is necessary unless to find work for the caretaker.—A.W.P., 1/11/86. Mr. Morton or Mr. Adams, Forbes.—W.C.B., 1/11/86.

Mr. Bennett's evidence.

In company with Mr. Morton I made an inspection of this tank to deepen by-wash by 3 feet, as Mr. Dowling directs, would reduce the water conserved by about one-fifth of its total holding capacity. This I presume is not at all requisite, and again, to widen it according to Mr. Dowling's dimensions would be worse than useless as a means of escape for such storm-water as that referred to in his letter. In my opinion I do not think that any alterations or precautions are necessary for the safety of the tank. If the side slopes of embankments were kept dressed and in a better state of repair they would add considerably to its appearance, and also to the stability of the tank.—A.A., 13/11/86.

The Commissioner, B.C. Mr. Wood.—W.C.B., 15/11/86. Copy should be sent to Mines.—A.P.W., 15/11/86. Under Secretary for transmission to Mines.—P.W.O., 17/11/86. The Under Secretary for Mines.—J.R., B.C., 18/11/86.

Extract from Mr. Overseer Dowling's letter, 9 November, 1886.

* * * You will be pleased to hear that the by-wash which I have had widened by the caretaker acts well, and is equal to the overflow. The recent heavy rains proved it.

W. G. DOWLING,
The Chief Inspector of Public Watering Places.

Boro and Bunghill Tanks. (Page 101.)

I have nothing to add to what Mr. Wood has stated, except that the Mines Department first neglect the works, and then complain.—W.C.B., 17/4/84. Under Secretary, B.C. Forward to Mines.—F.A.W., 27/4/84. The Under Secretary for Mines.—J.R. Submitted.—A.B., 25/4/84. The Under Secretary for Mines. Do not the complaints of this Department refer to the construction of the works?—H.W., 28/4/84. Yes. Submitted.—H.W., 7/5/84. These papers may go to Mr. Doyle for his report.—J. P. ABBOTT, 8/5/84.

Appliances. (Page 263.)

Submitted.—A.B., 30/11/83. The Under Secretary for Mines. The Under Secretary for Public Works.—H.W., B.C., 3/12/83. The Commissioner for Roads.—J.R., 5/12/83. Mr. Woods, 6/12/83.

Mr. Gilliat says that without his being furnished with plan of the horse gear and steam pumps recommended by this Department, no comparison can be made by him as between them and his proposed double whip. The preparation of these plans will entail a very considerable loss both in time and money, and I would suggest as an alternative that Mr. Gilliat visit Messrs. Tangye Brothers' establishment in Bathurst-street, where he will see the pumps themselves. I would have made the suggestion before, but thought that when I named two well-known types of pump, as we recommended nobody having a sufficient knowledge of such machinery as to be competent to judge of the question could have required any further information.—A.P.W., 6/12/83. Commissioner for Roads.

Send Litho.—W.C.B., B.C. I attach engravings of "Special" and "Holman" pumps. They may, perhaps, answer Mr. Gilliat's purpose.—A.P.W. I now forward lithographs of the pumps proposed.—W.C.B., 12/12/83. The Under Secretary, B.C. Forwarded to my honorable colleague the Minister for Mines.—F.A.W., 14/12/83. The Under Secretary for Mines.—J.R., B.C., 14/12/83. Mr. Inspector Gilliat.—A.B., B.C., 19/12/83.

Ivanhoe Tank. (Page 172.)

Extract from Mr. A. W. Stillwell's Report on Ivanhoe Tank, dated 22 December, 1886.

"* * * The caretaker was lowering the dwarf fence rail of the troughing to 7 inches from bearer. This will prevent sheep watering on that side, practically curtailing the length of troughing one half for sheep. He said it was by the Mines overseer's instructions, and to facilitate watering of cattle, the rail having been found too high for them. It is of the same height as at the troughing in the district, and the raising of ground level along that side would have answered the purpose if there were any *bona fide* complaints—which I doubt."

Mr. Wood.—Should not alterations of this sort at the caprice of the overseer be prevented?—W.C.B., 24/12/86. Yes; I do not think, as we are responsible for these works, that this should have been done. The same levels suit in other places, and should do in this case.—A.P.W., 24/12/86. Under Secretary for transmission to Mines.—W.C.B., 30/12/86. Under Secretary for Mines.—J.R., B.C., 31/12/86.

Q. 4745, 4746, 4747, and 4748, and seq.

Chairman :—Are there any documents which apparently have been suppressed, and which should have been put in the Blue Book presented to Parliament, that might have thrown a somewhat different complexion on the case as it appears here?

Answer :—I cannot say that anything in the possession of the Mines Department has been suppressed; but there are letters and documents from the Roads Department which would throw more light on the subject, and such letters and documents I have given to the Secretary to the Commission. Some of the papers which I have given to the Secretary were in the possession of the Minister for Works and were only returned to me recently.

Question :—You think this is an *ex parte* statement and that rebutting papers might have been included in the book and were at the command of the Mines Department.

Answer :—I cannot say what was or was not at their command.

Question :—But could they not have asked for the documents.

Answer :—Yes, and it is usual for one Department to ask another for any papers that are required by Parliament and we received no such request.

Question :—Consequently this public statement is incomplete and might have borne a somewhat different complexion if these papers had been put with the others?

Answer :—Precisely.

Submitted

Mr. Bennett's evidence.

Submitted for the information of the Secretary for Mines; the annexed copy of a letter to the Works Department, initialled by Mr. Bennett, is I think a sufficient refutation of his statement.—H.G., 14/5/88. The Under Secretary. Submitted.—H.W., 14/3/88.

I think the mode in which these questions were put to Mr. Bennett is open to grave question, as they appear to come as from counsel for the Works Department, more than from a judge desiring to elicit the exact truth. But putting that aside I desire the Commission to read the accompanying papers which will show them beyond a doubt how wrong Mr. Bennett's replies were, and go to prove that the steps this Department took were of the proper character. I extremely regret the necessity of having to point out these things, but truth must be vindicated.—F.A., 14/5/88.

Department of Mines, Sydney, 30 November, 1887.

Sir, For return of old papers Tanks and Wells as specified.

I have the honor to request that you may be good enough to favour me with the return of the papers specified herein which are required in connection with the preparation of a Parliamentary return.

I have, &c.,
HARRIE WOOD,
Under Secretary.

The Under Secretary P.W., Sydney.

H.G. : J.R. See where the papers are.—W.F., 1/12/87. Roads.—J.R., B.C., 2/12/87. Mr. Wood.—W.C.B., B.C., 3/12/87. All papers in this office herewith; one has been previously sent on, and the balance as represented by the Mines numbers have no existence.—A.P.W., 12/12/87. The Under Secretary for transmission.—W.C.B., 15/12/87. P.W.O., 15/12/87. Under Secretary for Mines.—J.R., B.C., 16/12/87. Tanks and Wells.

The Chairman, Royal Commission *re* Tanks and Wells.—H.W., B.C., 15/5/88.

(P.W.P. 88-3,113.)

Royal Commission *re* Tanks and Wells,

Sir,

21, Queen's Chambers, Queen's Place, Sydney, 25 May, 1888.

Your communication, as per margin, has remained unacknowledged owing to the absence of the Secretary to the Commission.

The chairman desires to state that it must be manifestly unfair to take the evidence of the witnesses in an uncorrected state, until the witnesses have sent in their corrected evidence, and the Commission themselves have had an opportunity of reading and correcting their questions. The Commission cannot admit the propriety of making any comments upon the proof sheets as shown in the type-writing.

With respect to the mode in which the questions were put to the witnesses, the chairman objects to the Minister for Mines taking an isolated question without reference to what has gone before. As to the matter contained in the extracts quoted, Mr. Bennett had intimated to the Commission that the whole truth was not contained in the Blue Book presented to Parliament, and it was for the purpose of eliciting this information that the chairman asked the questions which appear to be so much objected to by the Minister for Mines.

Yours, &c.,
GEO. H. COX,
President.

The Under Secretary for Mines, Department of Mines.

Minute by The Honorable the Secretary for Mines.

(P.W.P., 88-3,257; 25 May, 1888, P.W.P., 88-3,113; 20 Jan., 1888, P.W.P., 88-3,256; 10 May, 1888, P.W.P., 88-2,788.)
5 June, 1888.

With respect to Mr. Cox's letter, it is generally understood that the corrections to be made in the questions and evidence by witnesses, and the members of a Royal Commission, are merely verbal. That the Commission are aware of this fact is, I think, evident from the attached letter from the Secretary of the Commission, received by Mr. Gilliat, with the first transcript of his evidence. The secretary says:—"I am instructed to state, at the same time, that in correcting the copy now forwarded you will be good enough to confine your supervision to the rectification of such clerical errors as may be observed. Nothing is to be eliminated, and nothing added, excepting where absolutely necessary to make your meaning more clear. The object, of course, in obtaining a shorthand note of the proceedings of Royal Commissions is, that the precise language used both by the witnesses and by the members of the Commission shall, as far as possible, be reproduced."

In view of this clear exposition I fail to see that any manifest unfairness has been committed by my minute since the meaning both of the questions of the Commissioners and the replies of the witness are abundantly clear, and the Commission have already laid down the rule that the precise language used both by the witness and by the members of the Commission shall, as far as possible, be reproduced.

With respect to the propriety of making comments upon the proof sheets, as shown in the type-writing, if they are not to be used for this purpose I am at a loss to conceive why they were supplied. More particularly as in the Commissioner's letter of 10th May, in reply to a minute of Mr. Gilliat's, requesting to know whether he should be allowed to reply to certain officers in the Department of Public Works, he is informed "that when he has had time to read the evidence of Mr. Stillwell and others the Commission will probably be prepared to accept evidence in reply."

It is I think only a fair inference from this statement to assume that the Commission did not at that time object to the propriety of making comments upon the proof sheets as shown in the type-writing. Mr. Cox further adds that, "the chairman objects to the Minister for Mines taking an isolated question without reference to what has gone before." I venture to think that, upon reference to the evidence, it will be very apparent that it was not upon an isolated question my minute was written, but upon a series of questions which led up to a distinct assertion by Mr. Bennett, that the Mines Department had not informed him of a certain fact, and which Mr. Gilliat replied by producing the letter in which this information was conveyed, which letter had been twice initialled by Mr. Bennett.

FRANCIS ABIGAIL.

To be forwarded to the President of the Commission. The Chairman Tanks and Wells Commission.—G.E.H.
(*pro* U.S.), B.C., 8/6/88.

[Enclosure No. 1.]

(P.W.P., 88-2,788.)

Royal Commission on Tanks and Wells,

Sir,

31 Queen's Chambers, Queen's Place, Sydney, 10 May, 1888.

I am instructed by the President of this Commission to acknowledge receipt of minute, dated 23rd April, from the Chief Inspector of Public Watering Places, calling attention to paragraph from the *Sydney Morning Herald*, and suggesting that a definite reply should be obtained from the Commission as to whether an opportunity will be given to submit a reply to the evidence of certain officers of the Department of Public Works. I have the honor to inform you that the Commission have yet to revise the evidence already received when that duty has been completed, and when you have had time to read the evidence of Mr. Stillwell and others, this Commission will probably be then prepared to accept evidence in reply.

I have, &c.,
HUGH MAHON,
Secretary and Shorthand-writer.

The Under Secretary for Mines, Sydney.

[Enclosure

Mr. Bennett's evidence.

[Enclosure No. 2.]

(P.W.P., 88-3,256.)

Dear Sir,

Public Works Office, 20 January, 1888.

I am directed by the Royal Commission *re* Tanks and Wells to forward to you a transcription of the note of a portion of your evidence taken recently before the Commission. I am instructed to state at the same time that in correcting the copy now forwarded you will be good enough to confine your supervision to the rectification of such clerical errors as may be observed. Nothing is to be eliminated and nothing added, excepting where absolutely necessary to make your meaning more clear. The object of course in obtaining a shorthand note of the proceedings of Royal Commissions is that the precise language used both by the witness and by the Members or the Commission shall, as far as possible, be reproduced. You will see that any elimination or addition excepting, as above-mentioned, would tend to defeat the object in view and might result in rendering the report anything but a faithful record of what had really transpired at the sittings of the Commission.

I have, &c.,

HUGH MAHON,

Secretary and Shorthand-writer.

H. Gilliat, Esq., Chief Inspector Public Watering Places, Mines Department, Sydney.

(P.W.P., 88-3,468 ; P.W.P., 88-3,256.)

Royal Commission on Tanks and Wells,

21 Queen's Chambers, Queen's Place, Sydney, 8 June, 1888.

Sir,

Referring to your letter of 5th instant, I have to point out that some misunderstanding appears to have been caused by the uncorrected evidence of the witnesses of the Works Department having been supplied to your Department without the sanction or knowledge of the Commission, which I omitted to mention in my letter of the 25th instant. The corrections made by the witnesses, and in the questions put to them, have necessarily been in some cases so material that it is apparent that conclusions should not be drawn from the evidence in its uncorrected state.

The corrected evidence will be reprinted and submitted to you for perusal, after which the Commission will receive any evidence you desire to tender in reply.

I have, &c.,

G. H. COX,

President.

The Under Secretary for Mines.

Minute by The Honorable The Secretary for Mines.

Department of Mines, Public Watering Places, 22 June, 1888.

(P.W.P., 88-3,673.)

THE President of the Commission states (P.W.P., 88-3,468), "the corrections made by the witnesses, and in the questions put to them, have necessarily been in some cases so material that it is apparent that conclusions should not be drawn from the evidence in its uncorrected state." On 20th January, 1888, P.W.P., 88-3,256, in a letter addressed to the Chief Inspector of Public Watering Places, the Commissioners instruct him as to the revision of his evidence in the following terms:—"You will be good enough to confine your supervision (? revision) to the rectification of such clerical errors as may be observed; nothing is to be eliminated and nothing added, excepting when absolutely necessary to making more clear. The object, of course, in obtaining a shorthand note of the proceedings of Royal Commissions is that the precise language used both by the witness and by the members of the Commission shall, as far as possible, be reproduced."

A copy of the notice, forwarded by the Clerk of Select Committees of the Legislative Assembly to each witness, with the draft of his evidence, headed transmitting evidence for verbal revision, is herewith attached. It directs that "in revising the answer a witness is only authorised to make corrections on the margin without in any way obliterating the original, and that in case you wished to make any material alterations or insertions in the substance or intentions of the evidence, you can only do so upon re-examination before the Committee."

It is usual I believe for Royal Commissions to follow the practice of Select Committees of the House, and that practice I think it will also be found does not countenance any material alterations of questions. The Commission may by a formal resolution expunge any of the questions and their answers, but the resolution to this effect must appear in their proceedings.

It is apparent that the Commission was aware of the importance of observing that the precise language used both by the witness and by the members of the Commission should be "reproduced" from the letter addressed to Mr. Gilliat and quoted above. But it is difficult to understand why a rule so exactly laid down with regard to one portion of the evidence should be so much relaxed when applied to the evidence of Mr. Bennett and his officers. It must further be evident that if the Commission make such material corrections in the questions the answers in the evidence will not be answers to the questions asked the witness, and the injustice of examining a witness upon oath sending him his answers to revise and for the Commission subsequently to revise their questions must be manifest.

In conclusion I may remark that as rebutting evidence on several points has already been forwarded to the Commission, if they decide to take the course indicated in this correspondence it will amount to an alteration in the evidence subsequent to the receipt of those rebuttals.

FRANCIS ABIGAIL.

Royal Commission on Tanks and Wells.

(P.W.P., 88-3,734.)

Sir,

21, Queen's Chambers, Queen's Place, 22 June, 1888.

With reference to your minute of 22 June, commenting on a statement made by the president of this Commission, to the effect that conclusions should not be drawn from evidence in an uncorrected state, I am directed to inform you that the Commission in revising the evidence discovered that many material alterations had been made by some of the witnesses, including officers of the Mines Department. The Commission desire to draw your attention to page 115 of the evidence where the word "knew" has been altered to "heard," and also to page 46 of the evidence where the words "good" and "yes" have been altered to "dry" and "not."

I am also directed to say that the Commission must decline to be dictated to by the Honorable the Secretary for Mines as to their method of conducting the inquiry, and repudiate the insinuation that they are actuated by any spirit of favouritism

I have, &c.,

HUGH MAHON,

Secretary.

The Honorable Francis Abigail, Secretary for Mines, Sydney.

Minute by The Honorable the Secretary for Mines.

Department of Mines, Sydney, 26 June, 1888.

(P.W.P., 88-3,735.)

THE objection made by me was to the statement of the chairman of the Commission that "the corrections made by the witnesses, and in questions put to them, have necessarily been in some cases so material." I have examined the revisions referred to in Mr. Gilliat's evidence, page 46, and certainly do not regard them as material, but clearly from the context a clerical correction. The alteration stated to have been made in my own evidence on page 115 is not to be found upon that page of the copy furnished by the Commission to this Department; the word "knew" does occur on page 116, but I fail to see that the alleged alteration would materially affect the evidence I gave. But if exception was taken by the Commission they should, I venture to say, have informed Mr. Gilliat and myself, to have enabled us to apply for a rehearing in case we desired it. I desire to assure the Commission that I had not the slightest intention of dictating to them; my object was to prevent them falling into an error that would have brought upon them public reprobation, and if they had acted as clearly intimated to this Department they intended to do with the evidence, it would have been so opposed to the general plan adopted in such cases that the public must have seen and would have required an explanation of it. I regret the Commission has not received my communication in the spirit it was made, but that will not prevent me doing my duty in connection with any communication coming from them to the Department of Mines.

FRANCIS ABIGAIL.

The Chairman Royal Commission Tanks and Wells.—H.W., B.C., 26/6/88.

Mr.

Mr. Bennett's evidence, Q. 4751.

Thursday, 14 June, 1888.

Present:—The Hon. G. H. Cox, M.L.C.; Major Penrose, R.E.; and J. C. Woore, Esq., P.M.

William Christopher Bennett recalled and further examined:—

Chairman:—Did you receive a letter from the Commission, forwarding to you a statement made by the Mines Department of the 14th May, 1888, that in your evidence a certain statement appears to the following effect: "It is unusual for one Department to ask another for any papers that are required by Parliament, and we received no such request"? To this statement the Mines Department have taken exception, and to bear this out they enclose a letter dated 10th November, 1887, showing that a letter had been written to the Works Department, requesting certain papers which were specified in that letter. And we have it here that, as far as the request contained in that letter is concerned, it has been complied with, by your giving all the papers in your possession:—

Answer:—Yes; I would like to read this letter:—

(353—29-5; 88—288).

Department of Public Works, Sydney, 28 May, 1888.

In reference to the papers from Mines, forwarded to me by the Tank and Well Commission asking an explanation of the evidence given by me—that this Department was not asked for papers.

To comply with order that copies of all papers, minutes, and reports, and all other correspondence between Works and Mines should be laid upon the Table of the House.

The Mines letter herewith is not to that effect, but asks for certain specific papers, the Mines numbers of which apparently have been only given, as no such numbers could be found in the registers of this office, and as will be seen herewith, a reply was sent forwarding such papers as could incidentally be traced, stating that if some idea of the subject matter of the others was intimated every endeavour would be made to trace them. No reply was received. Such an application giving the numbers of certain specific papers was never thought to refer to compliance with order that all papers should be sent, and was regarded in this office as a request for papers in connection with some of the many annual or other Parliamentary returns made out by the Mines.

I send herewith an example from the Lands Office of usual form asking for papers; no such paper was sent from the Mines.

The letter from the Mines, of 30th November, on the face of it bears out the inference that even if the papers were required for this return, the Mines only wanted such papers as supported their view of the case or they would have asked for all papers of the character defined in order of the House, and not for specific numbers.

I still maintain that the usual application was not sent, or I would have seen that the papers referred to in my evidence were forwarded. I since gave them to the Secretary of the Commission. They were in the possession of the Minister for Works until date stamped in blue, thus:—x

I now refer the Commission to those papers, and more particularly to Mr. Stillwell's report, which sums up a number of cases, the original papers of which can be produced, and which I do not forward, as only adding to the immense mass of documents already submitted.

I forward a copy of a memo. of mine, dated 8th February, protesting against the publication of the Blue Book in the way in which it was done, and in which I state that the compilation was without reference to this office; I think the original was sent to the Commission.

WILLIAM C. BENNETT.

To the Chairman, Tanks and Wells Commission.

Order to print tanks and wells papers on the Table of the House.

9 February, 1888.

Yesterday Mr. Mahon, Secretary of the Tank Commission, handed me a copy of a printed document purporting to be copies of papers passing between the Departments. This included the case against this Department, as stated by the officers of the Mines; also a most incoherent and untruthful letter of Mr. Earngey, a discharged officer of this Department, omitting several most important papers, amongst others my reply to the charges of the Mines Office and several papers by Mr. A. P. Wood in defence of the Department. I think it is unnecessary for me to point out to the Hon. Sec. for Public Works that papers compiled in this way, introducing letters foreign to the subject of the order, and omitting important documents which tell against the Mines, should not be sent forth to the public as officially correct.

The papers were compiled by the Mines officers without any reference to this Department, and I think a request should be sent to the Speaker to have the papers withdrawn until corrected by this office and the missing papers added.

W. C. BENNETT.

Submitted, 8/2/88.

As these papers have been printed and commented on by the Press, I do not think it advisable to take any steps for having them withdrawn as suggested, but if Mr. Bennett will furnish copies of the papers he refers to as omitted, I will lay them on the Table of the House as a supplement to those prepared by the Mines Department.—J.S., 8/2/88.

Mr. Bennett, B.C., 8/2/88.

I will, as soon as possible, collect the missing papers, but I would record my opinion that putting an *ex parte* statement of this sort before the public is unjust. With reference to the sweeping statements made by Mr. Earngey, I forward papers in his case, attached to which is a pamphlet by that gentleman, which I have to apologise for submitting as an official paper, and only do so as it is the best evidence as to the state of his mind as stated in my minute.—W.C.B., 9/2/88. Under Sec.

Q. 4752 and 4753.

Question:—Then you think the exception taken with regard to your evidence has not been borne out by the letters sent in by the Mines Department.

Answer:—Certainly not. I should give the same evidence now.

Question:—And you still assert that, to a certain extent, this Blue Book was *ex parte* and unfair to your Department.

Answer:—Yes, and I will quote one remarkable instance: In the case of Mr. Earngey, a discharged officer of the Roads Department, a letter was written by him and published in these papers full of grave accusations. This letter was never submitted to me for report, but was published at once in these papers. I have since forwarded a mass of papers to the Commission proving how totally unreliable is any statement of Mr. Earngey's for any purpose.

Question:—

Mr. Bennett's evidence, Q. 4754.

Question :—If you had known that these papers were about being published, and you had papers in your possession that would have thrown some light on the allegations, would you have sent them in?

Answer :—It was my duty to know that the papers were about being published, and that Parliament had called for them; but it was not for me to volunteer these papers, and I was awaiting the usual formal letter asking for them. I wish to hand in certain papers marked "Department of Roads and Bridges—consideration list," and I declare that the statements made in them are true to the best of my belief.

REPLY.

Mr. Bennett, when previously under examination, was asked the question (*see page 940 of his evidence*) "but would they not have asked for documents?" and he replied that "it was usual for one Department to ask another for any papers that are required by Parliament, and we received no such request."

In rebuttal of this statement a letter was submitted to the Commission in which Mr. Bennett was requested to return certain papers required for a Return to Parliament, giving our office numbers and the dates they had been forwarded to him, and bearing Mr. Bennett's initials on B.C. reply.

This statement he now qualifies by stating :—"That this Department (Works) was not asked for papers to comply with order that copies of all papers, minutes, and reports, and all other correspondence between the Works and Mines should be laid upon the Table of the House," adding that the "Mines letter is not to that effect." He, however, admits that he "knew the papers were about being published by the Mines but it was not his duty to volunteer these papers, and yet he states he regarded our request for papers for a Parliamentary Return as a request for papers in connection with some of the many annual or other Parliamentary returns made up by the Mines Department. From this it would appear that Mr. Bennett considers himself justified in disregarding an order of Parliament on account of the alleged neglect of another Department to furnish him with a formal intimation of what he acknowledges was his duty to know, and which as a matter of fact he admits he was fully aware of. With respect to the alleged neglect of this Department to inform Mr. Bennett officially I may point out it is the practice of the Principal Under Secretary to inform the various Departments of any order of Parliament; a letter to that effect was received by this Department, and as the Parliamentary order was for all correspondence between the Mines and Works it was supposed (perhaps incorrectly) that the Department of Public Works had received the same intimation. But in any case I venture to submit that a formal letter to this effect, which Mr. Bennett claims should have been addressed to him, proceeding from this Department, would have been unusual, and was not in accordance with the usual practice.

The order of Parliament applied equally to both Departments, and it was I think with perfect justice assumed that each Department would, through their respective Ministers, lay on the Table of the House their own papers. This Mr. Bennett however failed to do, although the opportunity was again offered him after the publication of the Blue Book by his own Minister. (*Vide evidence, Q. 4751.*) He again, Q. 4751, characterises our obedience to the order of the House as an *ex parte* statement, presenting only one view of the question. This is fully rebutted in my reply, page 614, to Mr. Bennett's previous evidence.

The other papers described by Mr. Bennett as missing are referred to in the last par., Blue Book, page 10; and Mr. Bennett's minute or reply, referred to in Mr. Gilliat's minute, page 11 of Blue Book, was with the same set of papers, and were supposed to have been handed to the Premier and mislaid. Every effort was made to trace them, as copies were unfortunately not retained in this office.

Mr. Bennett also states on Q. 4751 that such papers as could "be incidentally" traced were forwarded, and the Mines Department asked to furnish some idea of the subject matter of the others, and that no reply was received.

In stating that no reply was received Mr. Bennett is incorrect; the letter submitted by this Department to the Commission in which it was shown that the Department had asked for papers for a Parliamentary Return was dated 30th November, 1887; a reminder was sent to the Works Department on 10th of the following December, and on the 16th of that month a reply was received covering papers headed tanks and punts instead of tanks and wells, having no reference to the matter. These papers were returned, and attention drawn to the error, with a further letter written 28th December, 1887. To this a B.C. reply was received asking for a clue as to the subject matter of the papers, on 23rd January, 1888. It was then too late for these papers to be included in the Blue Book, and it was assumed they would appear with the papers submitted by Mr. Bennett in compliance with the Parliamentary order. The original papers, of course with all others mentioned, are at the disposal of the Commission.

Evidence of Thomas Pollard, Q. 4755 to 4760.**REPLY.**

Sufficient evidence has been received during the past week by this Department to show that Pollard's evidence as to the improvements of the water in the Holy Box Well is correct. In 1882 Messrs. Robertson, Wagner, and Co. were the lessees of this well, and early in that year informed me that they had no applications for water, and that their coach horses would not drink it. (*See Blue Book, page 76.*) At the expiry of their lease they declined to renew it. During last week the same firm have offered to lease the well at £72 per annum for five years. But while readily admitting the improvement in this water, I do not withdraw my expressed conviction that these brackish wells, where the caretaker has to cart his own drinking water, are not suitable for public watering-places, which are intended to meet the necessities of human beings as well as stock.

Mr.

Mr. Waugh's evidence, Q. 4762 and 4763.

Question :—Clare Station is dry country ?

Answer :—Yes ; we have had to go to great expense in making, first wells, and then tanks, because we found the wells unsuitable for profitably keeping sheep to grow wool. I think tanks are better than wells in this part where the well-water is brackish.

Question :—Do you think the Government expenditure on the Ivanhoe and Balranald Roads in connection with Public Watering Places has been judiciously spent ?

Answer :—Yes, as regards the tanks ; I have not seen enough of the wells to speak positively, but whether it is the fault of the caretaker not baling sufficiently or not, it is certain that the Dolmoreve well is not good stock water as supplied to the public. I think it probable that if baled regularly, and the service tank and troughing kept cleaned out often, it will keep it purer. I am a great advocate for constant baling and cleaning out of troughs and tanks in this country.

REPLY.

Mr. Waugh's letter, of 6th April, 1888, is given in full in reply to Mr. Wood's evidence (Q. 3322). In that letter Mr. Waugh says, amongst other things, "In my opinion the present spring of water will never in any way become fit for stock." He further urges that a tank may be made in substitution for the well. On 10th April Mr. Waugh called upon me personally and urged that this should be done ; but, upon my pointing out to him that a costly well and appliances having been constructed, I was disposed to obtain a contract for putting a deep bore at the bottom of this well, with the view of ascertaining if artesian water might not be obtained at a depth of 1,000 or 1,500 feet. This, I pointed out, if successful, would be an experiment of the greatest importance to the pastoral tenants in the district. In reference to this conversation Mr. Waugh addressed me a second letter, dated 11th April, withdrawing his former request for the construction of a tank. I may add that tenders for boring are now being called for, which will include within their operations this and the other brackish wells constructed by the Department of Public Works. My own opinion as to the suitability of these shallow wells in this district was given 13th January, 1880 (*vide* Blue Book, page 27).

Replies to evidence given by Mr. Assistant Engineer Wood, Roads and Bridges Department, before the Royal Commission re Tanks and Wells.

Mr. Wood's evidence, Q. 3295 and 3296.

Question :—It has been said of the Roto Well that * * *

Answer :—Perhaps it will be as well to take the most material case first, and Roto Well is first on the list. It has been said of the Roto Well that it is in close proximity to a waterhole in the Willandra Creek. In reference to that I may state that the site was selected by me when I made an inspection and a trip over the line. A report on the matter was submitted to the Commissioner, and by him forwarded to the Mines Department, and the sites mentioned by me in the report referred to was approved of by the Department, this site of Roto Well being one of them. It is now objected that this Roto Well has entailed a great waste of money on account of its proximity to permanent water in the creek ; in the statement made in this book over Mr. Gilliat's signature. I do not remember the fact of having seen the statement anywhere in Mr. Gilliat's handwriting.

Chairman :—Everything that comes from the Mines Office bears Mr. Gilliat's endorsement.

Answer :—At page 192 of the Mines papers we have Mr. Keighran, overseer of Public Watering Places, summoning a lessee for neglecting the condition of his lease, and Mr. Gilliat, in a minute upon Mr. Keighran's report, traverses the decision of the Bench in the case, and states—"The conditions were the same as when he executed his lease except that the Willandra Creek was then empty." I mention this as simply showing that there was no permanent water there at all, and that practically there is no permanent water in the creek, inasmuch as the water comes down there when the Lachlan is about two-thirds full, and would then run to waste if it were not for certain efforts made by the lessees ; but even by these efforts permanent water has not been made in the creek.

REPLY.

The statement made by this Department, that the dam near the Roto Well was dry at the date of the transfer of this well to the lessee, Mr. Evans, is here used as an argument that the water adjacent to the well is not permanent. My statement was made in error, inquiry showing that the dam was full at the time referred to, and has seldom been dry. But in any case, with a creek filling at a two-thirds rise in the Lachlan, irrespective of local rains, it may be questioned if it was necessary to sink a well at a total cost of £1,181 4s., when a dam costing probably less than one quarter of the sum could have been constructed. Page 205 of the Blue Book shows the receipts for 1886 to be 4d. ; in 1887, stock watered by the lessee, nil ; in 1888, stock watered by lessee, nil.

Mr. Wood further states the sites were approved by the Mines Department, "this site of Roto Well being one of them." The papers in connection with this matter were sent to the Secretary for Public Works on the 17th May, 1882—Tanks and Wells, 82-401, the only record in this office being a press copy of a minute of mine in which I state :—

"The points marked for sites and reserves on the run map herewith are very suitable in point of distance, and well arranged for future subdivision when the traffic demands it."

This it will be observed carefully avoids giving any other approval of the sites selected, beyond their being suitable in point of distance. My reason for this caution was that I had not at the time been over the road, or inspected the sites.

Mr.

Mr. Wood's evidence, Q. 3296, 3297, 3298, and 3299.

Mr. Wood states :—The next case is the Cobham Lake tank. It is objected to on account of the uncompleted works being submerged. Well, I consider the fact of these works being submerged as being rather an argument in favour of the selection which has been made of the sites, inasmuch as it proves the spot selected was the natural conserving ground, while the data that have been collected in regard to the falling of this lake proves that it is only at long intervals that the lake itself can be relied on for any comparatively permanent supply.

Question :—Are you aware that some of these lakes have been dry for many years after they have once become filled, that the water after resting for some time eventually becomes so salt that it cannot be used ?

Answer :—Yes.

Question :—Would not that apply to Cobham Lake ?

Answer :—No ; because the water would be prevented from resting to the extent which would allow it to become salt. The water in the body of the lake, when the lake is full, is quite fit for human consumption ; and the water is actually conserved within the boundaries of the embankments within the tank.

Question :—When the water rests, the last water which remained in the lake would go into the tank, and would become so impregnated with salt that it would not be fit for use ?

Answer :—I do not think so ; the conditions that existed at the time this tank was made do not exist now. The water is admitted into this tank by an inlet pipe, and the consequence is that we can shut it in if we find it necessary to do so. Consequently we can have the water in a state of greater purity in the tank than it would be if it were allowed outside in the bed of the lake, exposed and absorbing saline matter for a long time.

REPLY.

My report, dated 17th April, 1882, on page 248 of the Blue Book, states :—

“ The lake cannot be regarded as a source of water supply, as it may remain for long periods unfilled, and when filled must become brackish, after a short time, having no effluent. I have therefore to recommend that a well be sunk about 1 mile south from the public-house and a reserve of 640 acres notified around it, at the same time reserving the northern and eastern shore of the lake, so that water will be available for stock so long as they can drink it.”

The argument that the water conserved in a tank within the lake would not deteriorate, as the lake water does, will hardly hold good without further confirmation than Mr. Wood seems able to give. The inlet valve could not be turned off until the water was sufficiently low to reach the embankments, even if it is admitted that after a year or two's submergence the valve would be found in working order, and not choked with silt and drift. But why put a tank in a position where it must be submerged, and to a greater or less extent damaged.

Nor is it apparent why (although Mr. Wood asserts it will be so), the water should not become salt within the tank when it does so without.

Finally, if Mr. Wood's contention is correct, that the tank being submerged is rather to be regarded as an argument in favour of the selection of the site as proving that it is the natural conserving ground—why did he not place the tank in the deepest part of the lake at once.

Q. 3302.

Mr. Wood states :—As to the Dry Lake Tank, the same argument was advanced against it, that is, that it is submerged ; but that particular site, although not recommended by Mr. Gilliat for the immediate construction of a tank—of course, it is understood that Mr. Gilliat is an officer of the Mines Department—was named by him as being a place that would make a splendid site for a tank. One reason for constructing a tank there was that at the time of my visit special instructions were given to arrange for works along the road. The only watering place in the locality was in the hands of a private owner—a man by the name of Smith—and this man had the command of the water ; I thought it rather an injudicious thing that the public should be at the mercy of a man who, although he made professions that he would supply water at reasonable rates, still had the power in bad seasons to demand any rate that he thought fit, or to refuse water altogether. That tank, I may say, has been completely submerged, the embankments and everything else being out of sight, a state of things which according to the evidence of the residents of the district was never known before.

REPLY.

From an engineering point of view the site was never condemned. I say on page 247 of the Blue Book in reference to this place :—“ There is a water reserve of 3,200 acres, and a capital site for a tank *if it is ever required*.” But the fact of a site being so described is no explanation why the lowest part of the catch should have been selected. I further say on pages 246 and 247 of the Blue Book :—

“ There is a public-house here kept by T. G. Smith, who has three small tanks with a capacity of 7,670 cubic yards on his selection of 640 acres ; Smith has also sunk a well that yields, so he informs me, a good supply of fair stock water. * * * For the present Smith has gone to a good deal of expense to provide water for the supply of travellers, and I would suggest that so long as his charges are reasonable it appears unnecessary for the Department to incur the expense of a work here.”

Why should the Government compete with private enterprise ? The last paragraph of my report above quoted shows that I in no way advocated a tank here, and it does not appear that I approved of any special site in the lake as Mr. Wood infers ; the approval was a general one, and did not refer to the present site at all.

Mr.

Mr. Wood's evidence, Q. 3302.

Mr. Wood states:—Then there is the Booroorban tank on the road from Deniliquin to Hay. The objection to that is its proximity to a water-hole. That work was recommended by Mr. Gilliat in one of his annual returns and in his recommendation for works in 1882.

REPLY.

The objection to the Booroorban tank taken by Mr. Overseer Keighran was, first, its situation in a swamp, second, its proximity to the small dam constructed by the Works Department on the Pine Ridge Creek.

Mr. Wood is again in error. I did not recommend that work, *i.e.*, Booroorban tank, in one of my annual reports, and I have no recollection nor can I find any trace in the records of the Department of such a recommendation in 1882. On the 6th April, 1881, a recommendation was sent to Mr. Bennett that the excavation at the old Pine Ridge Dam should be deepened and enlarged to 15,000 cubic yards.

Q. 3305.

Question:—The next case is that of the Peri springs.

Answer:—I have never been up the road, so cannot say anything about that, but I have seen the Tarella tank since it was started, but the site of this I fixed myself. The objection to this tank is presumably that there is permanent water close by.

REPLY.

This site (Tarella tank) is admitted by Mr. Wood to have been selected by himself.

On 31st December, 1887, Mr. Overseer Tully reports:—

“This tank is situated in a water-course which, in heavy rains, carries an immense volume of water, and, as a consequence, the water has cut a deep byewash, and at present no water can enter the tank. This tank is not placed in a good position, as an excellent water-hole, known as the White Cliff Dam, is within 3 miles, rendering a public watering-place unnecessary here, as well as from its site rendering it liable to be washed away and silted up.”

Mr. Tully further states in evidence, Q. 2477:—

“In connection with the Tarella tank, when the contractor undertook the work, he found the opening would run the water down instead of up. He came to me and asked what he was to do. The Road Superintendent altered the inlet. The first flood that went by washed around the end of the tank. This is a foot deeper than inlet to tank.”

Mr. Quin also states in evidence in reference to this tank, Q. 1909:—

“My reason for objecting to the Tarella tank is that it is not required. When the excavation had proceeded some 7 or 8 feet I communicated with Mr. Bennett, personally, my opinion that the tank was being placed in an unsuitable position. I objected to it not because the catchment was not good, but because it was not necessary there at all. It was placed at a spot about 4 miles above Tarella station, and I had large dams near it, one of them being 3 miles beyond it. Both those dams were on the road side, and available to the public for ten years before * * * The two dams were only 8 miles apart, and the public had access to them at all times. I certainly did not deem it necessary for a tank to be put down there on account of these dams being within the boundaries of a stock route.”

Mr. Woore: Were the stock routes proclaimed then?

Answer: No, the stock routes were not proclaimed until quite recently, but a public road was there.

Chairman: Then the proximity of these dams to the public road made you think it was a waste of public money to proceed with the Tarella tank?

Answer: It did. When I went to see Mr. Bennett he told me in reply that the contract had proceeded so far that the compensation which would have to be paid the contractor would equal the cost of making the tank to the original depth.”

This evidence confirms what my memo. in Blue Book, page 256, states. From Mr. Quin's evidence it is apparent that Mr. Bennett himself did not appear satisfied with the necessity for the work, which was completed to avoid paying the contractor compensation.

That no necessity for this tank existed was fully brought before the Works Department in my report 17th April, 1882, yet they went to the further expense of erecting steam appliances.

Q. 3306.

Mr. Woore:—So that the Works officers were responsible for the actual spot chosen—where there was a good catchment?

Answer:—Yes. The Works officers were responsible for all constructive details, which includes the selection of the best and most efficient catchment within a reasonable distance from the point necessary to properly divide the stages of the stock route. The objection to the J.K. well is exactly the same, and it was placed in proximity to permanent water. At the time I selected the site I did not consider it was desirable to interfere with the water that had been conserved by the Crown lessee, more particularly in a district where water was more valuable than in any other part of Riverina. The lessees of the Wannaminta run offered to improve the works for the conservation of water at that particular spot, to allow travelling stock to water there on condition that he should be paid 6d. per yard for the earth-works involved in carrying out these improvements. It was decided or recommended by the Works Department that in the interests of the travelling public an independent watering place should be provided, and the decision was endorsed by the then Minister for Mines, Mr. J. P. Abbott, in the following minute, bearing date, 3/7/84:—“I think tenders should be accepted for a well, as by this means a more permanent water supply is likely to be had, and entirely independent of the lessee.”

Mr. Wood's evidence, Q. 3306 and 3307.

Mr. Woore :—Mr. Abbott was at that time Minister for Mines ?

Answer :—Yes. The same remark applies, as I have said, to the Tarella tank.

Question :—Does the minute of Mr. Abbott apply to that particular case, or does it apply generally ?

Answer :—It applies to that particular case, but the principle was applied generally. That principle has been a guide to the Department in all future cases. It covered our action. But there are no other cases except this at which it occurred at the time, with the exception of this Roto well. But I have proved, by Mr. Gilliat's own statement, that the creek was dry at the time the work was handed over to the lessees.

REPLY.

See my statement in regard to Roto well, Q. 3295.

My memo. in the Blue Book, page 217, upon which Mr. Abbott's minute was written, states the case fully, but I do not for one moment suppose that he intended to lay down a general instruction. Mr. Wood, however, states in his evidence, that the "principle has been a guide to the Department in all future cases. It covered our action; but there are no other cases except this at which it occurred at the time, with the exception of this Roto well." I venture to think that Mr. Wood is in error in taking this exception. Mr. Abbott's minute was written 3rd July, 1884. Mr. Wood, in his evidence, Q. 3295, states he "submitted a report to the Commissioner, who returned it to the Mines Department, by whom it was approved—this site of Roto well being one of them." My minute of so-called approval contained the following statement:—"The points marked for sites and reserves on run map herewith are very suitable in point of distance," and was dated on the 9th May, 1882, or two years and two months before Mr. Abbott's minute was written, under the sanction of which he now claims the site for Roto well was selected. And the papers, Tanks and Wells, 82-401, were forwarded to Mr. Bennett on the 17th May, 1882, with whom they still remain.

Q. 3310 and 3311.

Mr. Wood's Report on Road, Hillston to Carrathool.

Question :—Then Mr. Gilliat also came to the conclusion that the sites were proper ones, and that wells were suitable, and that water might be obtained at depths from 60 to 100 feet ?

Answer :—Yes; the local officer had a trial-shaft put down at the Burnt Stump, or Old Gunbar, and a sample of water was forwarded to the office. The trial-shaft was put down to a depth, I think, of 95 feet—I will not be certain as to the exact depth—and the water was approved of. It was never referred to the Mines Department, but the water was so good that I would not object to drink it myself, and on the strength of the sample the main shaft was sunk.

Question :—How far away was the main shaft from the trial-shaft ?

Answer :—Well, to the best of my recollection, I think it was about 100 feet, and the water we then obtained is, as we admitted, unfit for stock.

REPLY.

No objection was ever taken by this Department to any of the well sites on the road, Hillston to Carrathool, but simply to the quality of the water at Old Gunbar. Mr. Wood says the main shaft was put down 100 feet from the trial-shaft, from which a good sample of water had been obtained. It is remarkable that the trial-shaft was not utilized, as it is usually, and the main shaft sunk upon it. A contractor will enlarge a trial-shaft at a considerable reduction (say) at least 3s. to 4s. per foot. As upon the trial-shaft depends the letting of the contract, it is an ordinary practice most carefully inspected. The officer doing this should have baled out the water and sampled it, and obtained an approximate estimate of the supply. It does not appear that this course was adopted.

Q. 3317 and 3318.

Chairman :—In these other wells that have the reputation of being too salt even for stock, how were they sunk—does the same remark apply to them as to the Old Gunbar or Burnt Stump Well ?

Answer :—I do not admit the fact at all, Mr. Chairman. At the Holy Box well a trial-shaft was put down—I am now speaking from reports, I was not present, and cannot speak from my own direct knowledge—a trial-shaft was put down, and fair stock water obtained. The main shaft was then put down, and similar quality of water obtained. After transfer to the Mines Department, the well was condemned as being unfit for consumption by stock, and after the lapse of some time the Works Department started to put a tank down in the immediate vicinity to supply the public wants at that particular stage. After we started the work we applied to the Mines Department to be allowed to use material in top works to effect a saving in the construction of the works then in hand. When the well was handed back to the Works Department I instructed the contractor for the tank to have it thoroughly baled out in order to test the quality of the water. This was done; and on my reaching Wilcannia about a week afterwards I received a telegram from the contractor and the local Road Superintendent to the effect that the stock then passing had been successfully watered there. On the strength of this report the tank works were stopped, the well was further tested, further equally favourable reports were received, and ultimately the tank works were abandoned. Since then there has been a conflict of opinion between the two Departments as to whether the water is or is not fit for stock.

Question :—Of your own knowledge can you say that the water has since been used for stock purposes almost continuously ?

Answer :—No, not continuously; it has been used though.

Mr.

Mr. Wood's evidence.

REPLY.

Nothing more can be said perhaps than has been said by the oldest residents in the district. (See Blue Book, pages 84 and 85, where both sides of the case have been fully submitted.)

Mr. David Brown, at that time manager of the station upon which the well is sunk, says in evidence, Q. 1036:—

"I saw the water at the bottom of the shaft. * * I let down a billy or tin and brought up some of the water to try it. Although the water was said to be very good in the trial shaft, this water which was at the bottom of the shaft seemed not to be good stock water; * * the quality, as far as I could judge, was good enough for stock, but not good enough to take on a fair trial. My impression at the time was that the water was not good enough."

Baling has been insisted upon to improve the quality of the water. How is it that this well, after standing for so long a period in disuse—quite two years—was suddenly found to have drinkable water in it, and that now with constant baling it is so still unfit for human consumption?

Mr. Low, who is an experienced station manager, states in evidence, Q. 1096:—

"This water cannot be reckoned even good stock water, and it is perfectly useless for human consumption, thus unsuitable for the traffic. The troughing here has been renewed owing to being worn out or corroded by the water. Much salt can at any time be gathered about this troughing. Mr. Webb, at Kilfera, knows this public watering place well; he would not water stock at it. Owing to the quality of the water he considers it quite unsuitable for the requirements of the traffic. He has lost sheep at it, and has repeatedly advised drovers not to water their stock at this well, as they would certainly lose some."

See also Mr. Inspector Boulton's report upon this and the Dolmoreve well (Blue Book, page 93.)

It is urged that water unfit for human consumption is not suitable for a watering place, and that while sheep bred on saline water will drink it large stock will not.

Q. 3322.

Chairman:—What about the Dolmoreve and Willandra wells?

Answer:—I will take the Dolmoreve well by itself. I do not know where the line is to be drawn between what is good stock water and what is utterly bad stock water. I will simply instance the report made by one of the Overseers of Public Watering Places, who said:—

"I boiled some of the water and tasted it after it became cold, also made tea of it; in each of these cases it was quite undrinkable. With constant baling, however, I cannot understand why it should be unsuitable for stock. I gave this as my opinion to Mr. Lindsay, manager of Til Til station, who informed me that some of the wells that their sheep watered at were no better, if even as good as the Dolmoreve, and that if the Government would let him water his stock at it instead of baling and letting the water run to waste, he would gladly avail himself of it, and would not be afraid of his sheep being injured in any way from drinking the water. * * *

"In reference to the Dolmoreve Well, I would respectfully suggest that if the water as at present drawn is not considered by the general stock-travelling public sufficiently good for watering purposes, that the well should be constantly baled dry and boring rods used to deepen the present shaft on the chance of striking fresher water. * * * Of course I do not pretend to be an expert in regard to stock."

REPLY.

The report quoted by Mr. Wood is that of a temporary officer, who admits the water to be undrinkable, and thinks that with constant baling it might become suitable for stock, and he recommends boring, showing that he was not convinced of its suitability. Mr. John Waugh, of Clare station, in a recent letter, dated 16th April, 1888 (P.W.P., 88-2,126), says:—

"I have to invite your attention to the Public Watering Place on the stock route from Ivanhoe to Balranald, known as the Dolmoreve well, and especially to the fact that now the well is finished and the receiving tank and watering troughs complete it is found that the water is totally unsuitable for the purposes of watering sheep and cattle. I may say that this statement can be verified by a perusal of Mr. Lindsay's evidence given at the Balranald Land Board Inquiry in February last. It is my opinion that the present spring of water will never become in any way fit for stock. * * * If it were not for the kindness of the proprietors of Til Til station at many times in allowing stock and teams to water, this part of the road would be impracticable for want of water, and I sincerely hope you will give this matter your early attention in order that a ground tank may be made in substitution for the well."

Mr. Lindsay, of Til Til station, states in evidence before the Balranald Land Board in February last (P.W.P., 88-2,673):—

"The Dolmoreve Government well has only been finished about a twelvemonth; travelling stock have not required it and in its present state it is unfit for stock. Working might improve it. The caretaker gets his water from me for the use of his family and stock, and not from the well he takes care of. There could be a tank made on a fair catch."

After ten years experience it is surprising that Mr. Wood is not aware of where the line should be drawn between what is and what is not stock water. As chief executive officer for these works he should inform himself by testing with his horse. What a horse will drink is good stock water. And in view of what I think is generally admitted that these watering places are required for both human as well as stock consumption I fail to see how the report quoted by Mr. Wood in any way proves his case.

Mr.

Mr. Wood's evidence, Q. 3323 and 3324.

Question :—Then about the Willandra well ?

Answer :—Remarks have been made about this well before it has been finished. Objection is now taken to the site.

Question :—They state that this well was not asked for by the Mines Department ?

Answer :—This well has not yet been completed, nor handed over, and therefore the Mines Department have not any right to say anything about it. We have had a lot of trouble with this well on account of the drift, &c. As to the other charges in connection with this well, I think I can disprove them under another heading. It was stated by Mr. Gilliat in his evidence that only one work was recommended between Clare and Balranald (? Ivanhoe). He says :—“On the road from Balranald to Ivanhoe the water supply is required chiefly for carriers and their teams, and the works do not need to be on so large a scale or so close to each other as upon roads more frequently used by travelling stock. I am of opinion that if the proposed tank at Clare is completed, one other half way from Clare to Ivanhoe will be sufficient.” The statement is repeated at page 27 of the Blue Book before the Commission, yet in Mr. Gilliat's recommendation for works for 1884, which guided us in constructing these watering places, he recommends two works, both of 20,000 cubic yards capacity. One of these is 9 miles north of Clare, and another 10 miles south of Kilfera.

REPLY.

Mr. Wood's statement, that the Willandra well has not yet been completed or handed over, and therefore the Mines Department have no right to say anything about it, is somewhat remarkable. It is distinctly understood that these works are decided upon as necessary, and sites approximately fixed by the Mines Department. Mr. Wood's reply to Mr. Woore's question on Q. 3,419 distinctly admits this :—

Mr. Woore :—This point as to the necessity of the works has to be decided by the Mines Department ?

Answer :—Yes ; we simply construct.

The Willandra well was not recommended, nor the site selected, by the Mines Department.

I am quite aware of my recommendations as quoted by Mr. Wood, and these refer distinctly to two tanks between Clare and Ivanhoe, which were recommended by this Department. The Works Department, however, have constructed two tanks and one well between those places, or one more than was considered necessary.

With respect to the Willandra well, the first shaft and head-works, after costing £1,087, has now been abandoned, and a new shaft sunk alongside, the fate of which is described by Mr. Inspector Low in his telegram of 19th April, 1888 (P.W.P., 88-2,301) :—“Webb—Kilfera— informs me Willandra well again abandoned, owing to men being unable to get through drift.”

And since then a letter from Mr. Webb, dated 8th May, 1888, has been forwarded for the information of the Commissioners. He says as follows :—

(P.W.P. 88-3,229)

H. Gilliat, Esq.,—

Dear Sir,

Kilfera, May 8, 1888.

I was too hurried when replying to your query *re* the Ivanhoe tank to draw your attention to the Willandra well. I now wish to draw your attention to the following. This Willandra well was started somewhere about two years ago. The site chosen was within about 200 yards of the Willandra Creek, and alongside a station dam. The Government have now put down two shafts, timbered, centered, &c. The first well put down had whim, troughing, and tank complete. When the contractors got down 100 feet or so they struck drift sand. At their request I went down the shaft, and from the nature of the drift I told them it was impossible for them with the ordinary appliances to get down through it. They and two other parties tried it without success, and finally it became so undermined that the whole shaft shifted and was unsafe to work in. The Government, not content, called for tenders for another well to be sunk a few yards further away. The tenders are let, and contractor shifts whim, and sinks 100 feet, and is certain he can get down. The same result. He gets to the drift, and no further, works away until he destroys the bottom of shaft, and then leaves. This is at the present moment the state of the Willandra well. What I wish, with all deference to you, to point out, is, that the well should not be sunk at all. The water though good for stock that are broken in to it, is not suited for travelling stock, that the public would always water at our dam, that a good tank could have been sunk for half the money spent on the present works, on our boundary about 1½ miles south of the present well ; that there is a lot of valuable timber and iron now lying at the mercy of the travelling public. This timber I will either buy or draw to the home station and store for Government, if they pay expenses of drawing.

Trusting these few remarks may be of service.

I am, &c.,
R. C. WEBB.

Submitted for the information of the Secretary of Mines.—H. GILLIAT. The Under Secretary. Submitted.—H.W., 14/5/88. I understand that the members of the Commission *re* Tanks and Wells propose seeing for themselves some of the works. These papers might be sent them with the request that if at all possible they might inspect those mentioned in these letters.—F.A., 14/5/88. The Chairman of Commission.—B.C., H.W., 14/5/88.

Q. 3324.

Mr. Wood quotes :—The designs lately prepared for these works provide for a M'Comas water lift or chain pump. This is to be fixed in a timbered shaft, communicating by a timbered adit with the main reservoir. Tenders have been invited for some of the proposed works. It has been found that the cost of the timber work required ranges from £150 to £300.

REPLY.

Mr. Road-Superintendent Hanna's evidence on Q. 3715, where he states that he does not think a M'Comas lift could be erected under £20, shows a considerable discrepancy between his and Mr. Wood's estimates.

Mr.

Mr. Wood's evidence, Q. 3327 and 3328.

Mr. Wood states (Normanstone and Baloola Wells):—There is another point in connection with this. Mr. Gilliat states we did not put the wells on the sites recommended by him.

Question:—Of course there are places where you will not get water in basalt because the basalt overlies the dry country?

Answer:—Yes, and it did so in these two cases of Normanstone and Baloola. Mr. Gilliat says tanks were recommended here, yet here is his own report in which he recommends wells as against the recommendations of his officers for tanks.

REPLY.

Mr. Wood's recollection is at fault. Tanks were never recommended by me. I stated in evidence, Q. 179:—

Question:—What about the Normanstone and Baloola Wells?

Answer:—This is a case where three wells were recommended, and in each I defined on a tracing the exact points, &c."

The difference of opinion as to the sites would be at once settled if the Works Department would produce the large road tracing, which accompanied my report, with the sites for the wells marked on it.

The Baloola well has been sunk upon the shoulder of a hill when it should have been put on the alluvial. The formation of the ground would make it doubtful if the trap or basalt could be pierced.

This question has been more fully dealt with in my reply to Mr. Bennett's evidence, page 627.

Q. 3341.

Question:—The next case is the Milparinka well, which is said to have been put down in vertical slate formation?

Answer:—It is not alluvial, but it is not rock at all; but assuming that it has been put down in vertical slate formation, as we have obtained a good supply of water I do not think there is any reason to find fault, supposing that we agree to their first premise.

REPLY.

This well is not mentioned in the Blue Book, except upon page 6, where it was included by mistake in a list of watering places to which certain objections had been raised.

Q. 3346.

Chairman:—What about the Mena Murtee well?

Answer:—There was no distinct sanction obtained for this well, but I think it is fairly covered by the decision of the Minister for Mines in the case of the J. K. well. You will notice that on Q. 3307 of the Mines papers a minute from Mr. J. P. Abbott, then Minister for Mines, in these terms:—"I think tenders should be accepted for a well, as by this means a more permanent water supply is likely to be had and entirely independent of the lessee."

REPLY.

It is admitted there was no distinct sanction for this well, and it is difficult to conceive how Mr. Abbott's minute upon a special case can be taken as having a general application.

Mr. Wood has already stated, Q. 3307, p. 58, that although Mr. Abbott's minute was regarded by him as having this general application, it was only applied in one other instance, namely, the Roto well, yet he now claims that it was his justification for the site selected for the Mena Murtee well.

Q. 3348 and 3349.

Question:—Just give the facts in connection with the sinking of the well (? tank) (Ivanhoe).

Answer:—At the first outset the Department wished to put down a new well in the place of the abandoned well sunk in 1871. This course they proposed following on account of the known quality of the water in that well; but as the townspeople wished to use the water for drinking purposes, a good deal of pressure was brought to bear to have a tank sunk in lieu of the well. This desire was eventually acceded to, and a site chosen on the Ivanhoe to Balranald Road, about a mile west of the town. Then the townspeople in connection with the owners of the Kilfera pastoral holding, on which the site of the tank was situated, brought pressure to bear to have the site again altered.

Major Penrose:—After the work of sinking had been commenced?

Answer:—No; we had not commenced the work. Mr. Williamson, the leading townsman of Ivanhoe, was very anxious that we should have the site in his paddock, which he offered to part with to the Government on condition that he was allowed a much larger area—I forget the proportion—adjoining his ground to the northward, in addition to a certain sum to be fixed as the purchase money for 50 acres to be taken for the tank site. We then selected a site about one mile to the east of the town. Trial holes were put down, and the contract for the construction of the tank let. Between the time the trial holes were put down and * * *

Question:—

Mr. Wood's evidence, Q. 3350.

Question :—Without further reference to the Mines Department?

Answer :—Yes, I think so; but I am under the impression the papers would show that the Mines Department knew of it. Between the time of the sinking the trial holes and the arrival of the contractor on the ground, the lessees of Ticehurst run selected the site that we had chosen, and when the contractor arrived he was ordered off the place. After some little delay, and after further political pressure from the members of the district and local people, the site was fixed where the tank is now constructed. And in my letter on page 66 of the Mines papers which was referred to the Mines Department, this site was mentioned, and in a minute upon the same page, signed by Mr. Gilliat, it is stated :—

“The exception taken by this Department to a well at Ivanhoe has always been based on the ground that the subterranean water while good stock water, was too brackish for domestic purposes. 2nd. That any watering place constructed here would be required for the use of the township as well as for stock purposes. It was, therefore, submitted the watering place would be a tank, and within a convenient distance of the township. These conditions are, I think, fully met with in the site Mr. Wood has selected.”

I do not think there is anything else necessary.

REPLY.

A reference to page 66 of the Blue Book will show that the information of the final site for the Ivanhoe Tank was conveyed by Mr. Wood's letter of 10 March, 1885, in which he says the “question of site was ultimately settled by constructing the tank on the Village Reserve, which pleases Kilfera, Ticehurst, and the residents of the township.” Upon this my minute was written, stating that I thought the conditions were fully met with in the site Mr. Wood had selected.

I naturally assumed that as Mr. Wood stated that the tank was on Village Reserve, and the residents of the township were pleased, that no cause of complaint existed. But Mr. Wood's statements are not confirmed; the tank is placed upon the surveyed allotments of the township, and the townspeople are not pleased.

I submit an extract from a letter from George Williamson, Esq., J.P., of Ivanhoe, P.W.P. 88-3,237, dated 28 May, 1888 :—

“The general opinion of the residents was never in favour of the present site, although I said—and I daresay others said—that if it was absolutely necessary that the tank should be in the town, the present was the best available, but we were never in favour of the present site.”

Q. 3350.

Mr. Wood states :—“It has been stated by some witnesses who have been examined before the Commission that this particular site catches all the town drainage and renders the water unfit for human consumption.”

REPLY.

I would submit for the Commissioners' information that no such statement appears to have been made by the Department of Mines.

Q. 3362, 3365, and 3366.

Question :—There is another tank that is mentioned as having an injudiciously selected site—Gunnaramby—It is referred to in the evidence on page 60. “Gunnaramby Tank. This has been excavated in rotten copai ground which owing to the steepness of batters has fallen in to a very large extent?” * * *

Answer :—Copai is found in the best ground.

Question :—Are there any other tanks that we have omitted to ask you about and which you would like to refer to?

Answer :—In reference to this Gunnaramby Tank. It is fed from the swamp level through the inlet pipe with a valve and from the upper level, from the higher ground through the shoot. * * *

Question :—Is it not a fact that the soil of this swamp is very open and porous, full of cracks and that it is very difficult to collect water in it except after very heavy rains?

Answer :—In some swamps I will admit this is the case, but not others, it is just the reverse. The cane grass swamps form splendid catching ground.

REPLY.

Copai or gypsum is not considered the best, or even good ground for conserving water, its presence renders the water hard and bitter, and the water, as in the Gunnaramby Tank becomes a pale sea-green.

Mr. Wood is in error in stating that the water from the upper level is led through a shoot, it is carried by drains around the excavation to the shoot at the lower inlet pipe.

Mr. Yeo in his evidence, Q. 2637, states :—

“I would also wish to point out the great difficulty in the way the water is carried into the tank. It is by the silt tank on the one side and there is a lead from that silt tank around on top of the excavation to the other side to be carried into the flume. Consequently with the very loose open soil, the stuff is liable to be washed aside through the drain into the main tank. There was no protection to the sides and bottom till I had it made. I had a lot of gypsum stones collected and made a gypsum flume all the way. I pointed out this at the time I was taking delivery from Mr. Wood and Mr. Stillwell. Mr. Wood snubbed me and told me I was not there to criticise, but to take delivery of it in the condition in which it stood.”

See also Mr. Inspector Boulbee's evidence page 46 upon this tank.

It is a moot point whether cane grass swamps are good ground for catching water for conservation owing to the discolouration and the amount of clayey particles held in suspension. This swamp however, is not a cane grass swamp but one in copai soil, and in wet weather very boggy. Mr.

Mr. Wood's evidence, Q. 3368.

Mr. Wood states:—"Then there is the Polygonum Hut Well referred to at pages 277 and 279 of the Mines evidence. It is said, in the first place, that the water from that well is unfit for stock, if I remember aright. Well, the water in this well is not only fit for stock, but it is very fair water for human consumption."

REPLY.

On reference to Q. 1328 and 1340 of the evidence given by the Mines officers before the Commission, where Mr. Inspector Low is under examination upon the Polygonum Hut Well, it will be seen that he did not in any way refer to the quality of the water in this well, much less declare it unfit for stock. The fact, however, remains that it is not good stock water, and is unfit for human consumption. The caretaker and Cobb and Co.'s groom in charge of the mail change at this well, both cart water for their own use when the swamp is dry.

Mr. Low, on Q. 1096, states:—"Polygonum Hut Well: This water is quite unfit for human consumption."

Q. 3374.

Major Penrose:—Reference has also been made here to the Mulya (No. 5) Tank. It has been said that this tank has been constructed for about five years, and yet there is no water in it?

Answer:—I am not sure that that tank has yet been handed over to the Mines Department; if it has been handed over, it has occurred within the last month or two. I admit it is not a good site, but in that locality it is impossible to get a really good site. * * *

REPLY.

The evidence given by this Department is as follows. Mr. Inspector Mackenzie, on Q. 1645, 1649, 1651, of the evidence, states:—

"That tank has been put down over twelve months, and has never had more than 5 feet 2 inches or 5 feet 3 inches of water in it. There has been sufficient rain to fill it; it has been put on rising ground; the drains have been so formed that water will not run in; it is on considerably higher ground than that surrounding, and the drains are so constructed that the water runs back.

Question:—How does the water get in then?

Answer:—The water only flows in after backing some distance. There has been an alteration made lately in the drains for that purpose, and the water will, I believe, run into the tank, but we have had no rain since.

Mr. Woore:—Is there any other place that would have been a better site?

Answer:—Yes; within a quarter or half a mile of this place there is good hard red ground?"

Mr. Overseer Cotton, in his evidence, Q. 2779, states:—

"It has been constructed for over two years, and on one occasion there was a rainfall of 8 inches within a week over that portion of the country, and yet this tank did not fill. I am of opinion, therefore, that the catchment area of this tank is too small."

Q. 3375, 3376, 3377, 3378, 3379, 3380.

The Chairman:—Now with respect to faulty design and defective construction a great deal has been said here; in the first place we have been told that the batters of all these tanks are altogether too steep?

Answer:—There is a good deal of complicated evidence about that. I have read the evidence through, and there seems to be as many witnesses in favour of the steep batters as against them. The general opinion seems to favour the steepest batter consistent with the nature of the soil, and that is what we have endeavoured to carry out. I readily admit that in some of the older tanks, notably those in the Liverpool Plains, at Galathera and Boggy Creek, on the road between Moree and Narrabri, the batters, which are 1 to 1, were far too steep for the nature of the soil. But I am not aware of any other cases where tanks have suffered to any extent from the slopes that have been adopted.

Question:—That is a batter of 2 to 1?

Answer:—Well the batters vary from 2 to 1 to 1½ to 1, and on the Wilcannia and Mt. Brown Roads we adopted a 3 to 1 batter.

Question:—Then who has the discretion of fixing what the slopes shall be?

Answer:—The local officer. He is particularly instructed not to adhere slavishly to specifications in regard to this matter.

Question:—And after sinking the trial shaft has he the discretionary power to order a certain slope which from experience he believes to be desirable?

Answer:—Yes.

Question:—So that no hard and fast rule is carried out in regard to the batters to the tanks?

Answer:—No.

Question:—And never has been?

Answer:—No, never has been.

REPLY.

It is shown in evidence that the batters were as a rule from 1 to 1 to 1½ to 1. In July, 1887, the amended specifications, so far as we can trace, were changed to 2 to 1. It has always been urged by the Department of Mines that any hard and fast rule is wrong; the batters should be adapted to the soil; the use of 2 to 1 in all soil is just as objectionable as 1 to 1. The Boro, Bunghill, and others, besides those named by Mr. Wood, also the 35-mile, Box Creek, Youhl Plain, and Til Til Tanks, are all from 1 to 1 or 1½ to 1, and all in loose soil. The batters at the Gunnaramby and Clare Tanks, two of the latest constructed ones, are reported much cut away.

Mr.

Mr. Wood's evidence.

Mr. Wood now states that no rule for batters is slavishly adhered to, how then is the destruction of the batters of so many tanks to be accounted for except by want of judgment of the character of the soil.

Mr. Wood again says that on the Mt. Brown Road they have adopted 3 to 1 batters. I may state confidently that I have not yet seen a site for a tank where such a batter all round is required.

Mr. Wood also states that their officers are directed by circular not to adhere slavishly to specifications in regard to this matter.

Mr. Road-Superintendent Adams in his evidence, Q. 3841, 3842, states that any alteration he suggested had to be sent to the head office for approval, and that he never did anything without getting the sanction of the head office, and adds on Q. 3850, "I do not remember just now having received a copy of that circular." (See also Mr. Budd's evidence, Q. 2346.)

Q. 3399, 3400.

Question :—With regard to delay in payments, we have been given to understand that this is one of the reasons why contractors ask large prices from the Government?

Answer :—I am inclined to doubt that that can be any reason. There have been no delays in payments except in one or two trivial cases where final payments involving only small amounts have been concerned, and where there has been a hitch between the contractor and the local officer necessitating correspondence and a certain delay consequent thereon.

Question :—Well, we have it in evidence that one man was obliged to go through the insolvent court on account of the difficulty which he experienced in obtaining the balance of the money which was owing to him?

Answer :—I am very sorry to say that a great many of the contractors have become insolvent, but not from that cause. Neither can it be from the reason mentioned by the officers of the Mines Department that the contractors received too much money for the work which they performed for the Government.

REPLY.

Mr. Budd, a contractor under the Works Department, stated in evidence, Q. 2348 :—

"Yes; I was compelled by this delay to borrow money at very high rates, and on one occasion I was obliged by it to go insolvent. This was in the case of the Nullamut Tank; fully six months elapsed before I was able to get the balance of my money, and I was obliged to go insolvent; as soon as I got my money I paid all my creditors and following."

Mr. Wood admits with regret that many of the Works contractors became insolvent, but the evidence before the Commission and the returns given in the Blue Book, pages 213 and 270, by the Works Department of the cost of these works is perhaps sufficient to show that the insolvency is not occasioned by a too rigid economy on the part of the constructing department. It is, perhaps, unfortunate that Mr. Wood or the accountant of the Roads and Bridges were not invited to state precisely what delays do occur, and the longest periods contractors are kept waiting. This investigation, I think, would have been of great value.

Q. 3416.

Question :—We have had witnesses here who stated that in part of the Cobar district 10,000 yard tanks would be ample for all purposes. Mr. Cotton, an official of the Mines Department, said so, and I believe Mr. Chesney gave evidence to the same effect.

Answer :—These tanks were carried out under the Mines Department's recommendation that they should be 20,000 yard tanks.

REPLY.

This is distinctly incorrect as applying generally to the tanks in the Cobar district. Since the two waterholes Nullamut, Tindarie, Corella, Booroomugga, Muriel and Hermitage Tanks were all constructed without recommendations from this Department. Recommendations were made that the tanks between Cobar and Wilcannia should be 20,000 yards, as it was anticipated that this road would be largely used by stock and teams. Helman's and the Cuttygullyaroo Tanks on the Cobar-Bourke road, and the tanks on the Cobar-Louth road, were to the best of my recollection recommended at 15,000 yards. The papers are, however, with the Roads and Bridges.

Q. 3420.

Major Penrose :—Another allegation made with regard to these tanks is that square embankments have been put round when they might have been run out as wings to the hillside?

Answer :—Whenever such features were obtainable we ran out the embankments as wings to the high ground.

REPLY.

As instances where this has not been done I may mention in the Cobar district Shearlegs, Kerrigundi, and Booroodarra Tanks.

Q. 3421.

Chairman :—We find that instead of having tanks of 860,000 gallons capacity we have tanks of 3,000,000 gallons capacity?

Answer :—There would be no use in putting down tanks of 5,000 yards capacity. If you carried that down 18 feet it would be almost, practically speaking, an inverted pyramid. And without you go to 18 feet deep you cannot have permanent water.

REPLY.

Mr. Wood's evidence.

REPLY.

Numbers of tanks constructed by the Works Department are not 18 feet deep, amongst them the following:—

| Tank. | Depth. | Price paid per c. yd. | Tank. | Depth. | Price paid per c. yd. |
|-----------------|--------------|--------------------------|----------------|--------------|--------------------------|
| Girilambone ... | 15 ft. | | Beloura ... | 16 ft. | 1s. 6d. |
| Gilgai ... | 15 ft. | 1s. 4d. | Mulya ... | 16 ft. | |
| Shearlegs ... | 15 ft. | 1s. 9d. | Wicklow ... | 12 ft. 6 in. | 1s. 9d. |
| Priory ... | 15 ft. | 1s. 7d. | Boona ... | 17 ft. | 1s. 9d. |
| Keighrans ... | 16 ft. 6 in. | 1s. 7d. | Purnamoota ... | 10 ft. 2 in. | 1s. 6d. |
| Nymagee ... | 15 ft. | 1s. 9d. | Daydream ... | 10 ft. | 1s. 4d. |

The prices per cubic yard paid for these tanks are from a return made by the Works Department, and shown in the Blue Book, page 207. The depths of the tanks, therefore, would not appear to be such an important factor in increasing the prices as Mr. Wood argues. None of these tanks have hitherto been dry.

With reference to Mr. Wood's statement that a 5,000-yard tank is perfectly useless, Mr. Douglas, of Walla Walla Station, states (see a letter from him submitted at page 885 of Mr. Smythe's evidence):—"From 4,000 to 5,000 yards in this district (Albury) is considered a large tank, and quite sufficient to water 7,000 sheep daily through the driest year."

Mr. M'Kinney informs me that Mr. Horsfall, Widgiewa Station, on the Colombo Creek, one of the ablest business men in the district, is now putting down eleven tanks each of 5,000 yards capacity.*

These facts are mentioned as evidence of Mr. Wood's want of accurate knowledge, and in no way as showing that an excavation of that size would be sufficient in most cases as a Public Watering Place.

* Mr. Horsfall has since personally confirmed this to me.

Q. 3422.

Question:—That all depends upon the nature of the rainfall. In the Albury district they have a rainfall of 24 inches.

Answer:—To a certain extent it depends upon the rainfall, but it also depends upon the catchment. They suffered for two years down there from the drought, and there was not a drop of water to be had.

REPLY.

Mr. Douglas, of Walla Walla, states, in his letter (which is submitted), in reply to Mr. Smythe's evidence, page 87, that—

"Before the Walla Walla tank was made a spring existed and still flows across the main road from Jindera to Walla Post Office or township, about $2\frac{2}{3}$ miles south of same, at which spring a large number of the farmers drew their water supply for stock and homesteads. The Billabong Creek (within 3 miles of tank), also, has never actually been dry for very many years—the farmers and residents always being able to obtain water at it in any quantity during the driest season known for twenty-five years."

Q. 3424, 3425.

Major Penrose:—A 5,000-yard tank is a very small one in your opinion?

Answer:—Yes, very small, and perfectly useless.

Chairman:—As this Walla Walla tank was put there apparently for the use of the ordinary traffic, was it not sufficient, seeing that it was not on a stock route;—as this was not a very urgent work, and the rainfall much larger and less uncertain than at other places, I am inclined to think that the allegation, that unnecessary expense was incurred here, was somewhat borne out?

Answer:—Well, the tank we were recommended to construct was 15,000 yards. I should like to put these documents in evidence, as they show that the tank was not constructed at our instance:—

Public Tank at Walla Walla.

I was under the impression, from my knowledge of the district for which the tank is asked, that a considerable amount of both stock and ordinary traffic passes through the proposed site. I requested the local inspector, Mr. Mackay, to report as to this, and also to the places at which water is to be obtained on the road from Albury to Doodle Cooma (one of the cross country roads from the Murray to the Murrumbidgee) in the dry season of the year—Mr. Gilliat's report not having touched fully on these points.

Mr. Mackay reports that there is a large amount of general traffic on this road, but is unable (having only lately been appointed) to state the extent of the stock traffic; and he further says that there is no water in dry seasons available to the public except by sufferance on this stretch of the road, which is about 45 miles in length. It would seem, therefore, that the work applied for should be carried out, especially as it would also meet the requirements of the settlers who sign the memorial; and I would suggest that it be considered in the same class as the other works asked for on the roads from the Murray to the Murrumbidgee—the construction of which, however, should, I think, with Mr. Gilliat, give place in the meantime to the more urgent works in the outlying waterless portions of the Colony where the rainfall is much more uncertain and very much less.

If this be approved, Mr. Day, M.P., might perhaps be informed, and the papers forwarded to the Department of Works.

Stock Branch, 24/10/82.

A. B.

The Under Secretary for Mines.

I do not see that any action can be taken by this Department in this case. The Jindera papers which were given to the Mines some time ago are now required in this office.—W.C.B., 13/11/82.

Mr.

Mr. Wood's evidence, Q. 3425.

Alexander Bruce, Esq., Sydney,—

Sir,

Stock Office Albury, 12 June, 1882.

I have the honor to report that having visited Walla Walla, and inspected reserve No. 730, I would recommend that a tank of say, not less than 5,000 yards be excavated in the south bank of Petrie's Creek at one of two eligible sites between the Walla Walla road and the swamp, and that the earth taken from the tank be used to form two dams across the creek, one to throw the water into the tank, and the other to dam the water in the creek a few hundred yards lower down, where the bed of the creek is wider and deeper.

I would also recommend that the tank be enclosed with a secure sheep and cattle proof fence, and that pumps and troughing be fixed for watering stock, as if they are allowed access to the water, it would soon become unfit for household use.

Yours, &c.,

GEO. H. MACKAY.

I am unable to offer an opinion upon these papers before personally inspecting. I would recommend that the decision with regard to this application be suspended until my return from the west, when I could in three days visit the site proposed and ascertain the amount and character of the traffic to be supplied, and if it then appears desirable the work could be included in the Schedule of new works for 1883.—H.G., 16/6/82.

Alex. Bruce, Esq., Chief Inspector of Stock, Sydney,—

Sir,

Stock Office, Albury, 18 October, 1882.

I have the honor to acknowledge the receipt of your B.C., 12/10/82, attached to Mr. Gilliat's report on the application for a public tank at Walla Walla. I regret that I am quite unable to state what amount of stock travel by the route mentioned. But there is a large amount of ordinary traffic, and the Billabong Creek is the only point between Albury and Doodle Cooma where travellers can obtain water in summer time without being dependent on the owners of the adjoining freehold lands. And now the Billabong does not afford sufficient water for any considerable number of stock when accessible from the road in a ordinary dry season.

I am, &c.,

GEO. E. MACKAY.

Q. 3432.

Major Penrose :—Then is this published correspondence with reference to the Walla Walla Tank misleading and incomplete.

Answer :—Yes, in as much as Mr. Bruce's letter does not appear in it.

REPLY.

Mr. Wood puts in papers which he claims authorize the construction of this tank, all that I can trace is that Mr. Bruce while wishing for a tank agrees with me, that it should give place until the more urgent works in the outlying districts have been constructed (*see* my minute, page 144 Blue Book). On page 141 of the Blue Book, Mr. Bruce distinctly states that this tank was undertaken without reference to the Mines, and further adds that the same course was taken with Jindera, Black Swamp, Galathera, and Nymagee Tanks, and this minute is dated 28th October, 1884, or two years later than the paper put in by Mr. Wood, as authorizing the construction of the Walla Walla Tank.

The papers put in by Mr. Wood were not in our possession; were not traced in our search, or they would have been laid before Parliament. There was nothing misleading or incomplete, as far as our knowledge went; and had the Roads and Bridges complied with the order of Parliament, the papers would have appeared.

Q. 3431.

Chairman :—Referring to the published papers from the Mines Department, we see a letter here from Mr. Gilliat, stating that the Walla Walla Tank was unnecessary. He says in a report bearing date 9th October, 1882 :—

“ Bearing in mind the large expenditure required in the dry districts of the Colony, the comparatively good rainfall here and the trifling expense at which water can be conserved by the settlers themselves, and the fact that the construction of a tank here would be taken as a precedent and be followed by numbers of applications for similar works which would be convenient but not absolutely necessary for the well-being of the settlers, I am not prepared to grant this application.”

Answer :—I know that in a letter from Mr. Bruce, dated 24th October, 1882, Mr. Bruce recommends the Works Department to carry out this work on the same plan as others in the Murrumbidgee district.

REPLY.

Mr. Wood gives Mr. Bruce's minute on Q. 3425 of the evidence; but, as previously stated, I fail to see the recommendation it contains. It simply confirms my minute read by the Chairman, and quoted Q. 3431 of the evidence.

See also Mr. Bruce's letter in the Blue Book, page 141, in which he complains that this tank was constructed without reference to the Mines Department.

Q. 3438.

Question :—What is the relative cost of these pumps?

Answer :—The Holman pump, with horse-gear, is £49, delivered in Sydney. The cost of the special Tangye pump is £87 10s., with the boiler. The Amos & Smith pump, horse-gear, costs £52 or £53, and the steam pump £120. The cost of the Appleby pump is about £125.

REPLY.

If the cost of these horse and steam pumps is so small, what is the explanation of the cost of headworks given in the return made by the Works Department on pages 271 and 272 of the Blue Book, for “ machinery, troughing, and service tank,” where they range from £271. to £379, an average cost of £532, and this includes works where we are not aware if the final payments have been made.

Mr.

Mr. Wood's evidence, Q. 3443.

Mr. Woore :—Then there is the cost of harness, feed, and so forth for the horse?

Answer :—Yes; we have found that in the timbered districts, where we only erect steam-pumps, in regard to cost, these steam gear-pumps are cheaper than horse-pumps. The Mines Department are paying now (and we have had to do the same) their caretakers as much as 10s. per diem, while the men who take charge of the steam-pumps only receive from 7s. to 7s. 6d. per day.

REPLY.

Where horses are kept both horse and harness are found by the caretaker without expense to the Department, and where the paddocks are fenced no allowance for forage is granted.

Mr. Wood's statement with respect to the wages paid by the Mines Department to their caretakers is so misleading that I submit a list of the different rates and the number of men employed at each. Out of seventy-two caretakers it will be seen that five only receive over 8s. per diem, and two only 10s. per diem:—1 at £6 per annum, 2 at 3s. per day, 1 at 6s. per day, 6 at 6s. 6d. per day, 26 at 7s. per day, 3 at 7s. 6d. per day, 28 at 8s. per day, 3 at 9s. per day, 2 at 10s. per day; total, 72.

This rate of wages covers everything, no further allowance being made.

Q. 3462.

Question :—Then there is nothing for it but to allow the caretaker to retain his easy billet?

Answer :—No; nothing.

REPLY.

The intention of the Mines Department to lease these watering places appears to have been lost sight of; this is being done as fast as surveys are completed and notified, and fencing erected. The following memorandum gives a list of those leased and the rentals obtained, and a list is also given of those for which tenders are at present invited:—

Booororban, £85; Two Waterholes, £52; Boggy Creek, £78; Ledknapper, £110; 48-Mile, £50; Kerrigundi, £50; Booroomugga, £40; Crows Nest, £40; Berrigan, £20; Roto, £23; Gilgai, £30; Boorondarra, £50; Babinda, £40; Corella, £40; Yentabangee, £30; Goonery, £60; Pretty Pine, £40; Hovell's, £30; Girilambone, £10; 12-Mile, £57; Tom's Lake, £51; Shearlegs, £50; North Roto, £21; Dry Lake W., £35; Thorndale, £50; Lowesdale, £52; The Lake, £50; Claypan, £53; 18-Mile, £52; Muriel, £55; Youhl Plain, £40; Colombo, £50; Galathera, £126; Murray Hut, £20; Ford's Bridge, £80; Nullamut, £52 10s.; Walla, £50; Nevertire, £60.

The following are under offer:—Jindera, Peak, Brura, Keighran's, Cowrallic, Mount Elliot, Mowabla, Boona, Box Creek, Peri Springs, Cuttygullyaroo, Nymagee (let £100), Beloura, Pulletop (let £40), Wicklow, Glendon, 26-Mile, Priory, Tindarie, Curraweena, Ulong (let £40), Mombil, Tinda, Newell's Dam. Leased, 41; Under offer, 21.

Q. 3465 and 3466.

Chairman :—Is it not a fact that at all these public watering places paddocks are fenced in for the use of the caretakers?

Answer :—Yes; at most of the watering places paddocks are fenced in for the use of the caretaker or lessee.

Question :—Consequently if the caretaker or lessee chooses to allow horses and cattle in the owners must pay an agistment rate?

Answer :—Yes.

REPLY.

The fencing is not so much for the caretakers as to induce tenants to obtain better rentals, and as an inducement to rent. The caretakers, in cases where it is desired, are authorized to claim a rate for agistment, and the fees are paid to the Colonial Treasurer.

Q. 3467 and 3468.

Question :—Can you suggest any means of employing these men by which this army of caretakers can be made to earn their wages?

Answer :—Taking the average of the men, they are really earning their wages now.

Question :—In what way?

Answer :—Although a man may not have enough work to keep him constantly going during the whole time he is stationed at a tank, yet he has to be constantly on the watch. There is no necessity to employ young and active men. What these tanks want are men who are about half fit to go into the Benevolent Asylum; not men who are blind, but men who can go and dodge about like our maintenance men, patching up little things here and there. These are men who are past their prime, and are yet well able to do the work allotted to them. They could go about cleaning out drains, filling in ruts in the embankments, and fettling up the work done. Cleaning out the silt-tank is also a part of the caretaker's duty; and then in times of heavy rain they are on the spot, and if they are only watchful they can save perhaps in an hour or two what might be the value of their wages for the entire year.

REPLY.

Old men for caretakers.—These men are constantly liable to be called upon to perform exceptionally heavy work. As shown by the evidence given by the officers of the Works Department, they have to clean out silt-tanks, keep 5 or 6 miles of drains constantly clean from the effect of dust-storms or from silting after rain. The care of the fencing, embankments, and machinery; in addition to the service of the water, is quite sufficient to keep the most active man employed.

Mr.

Mr. Wood's evidence.

(*Mr. Woore* :—With regard to the caretakers' time not being fully occupied, might not that argument be applied to the police, who are sometimes whole weeks without having anything to do?

Answer :—Yes, I should think so.) I believe, although we are blamed for sticking to a hard and rule, if the Mines Department had not stuck to another hard and fast rule in regard to these lease areas, they could have done a great deal better with the fencing. Originally it was intended that only 200 acres should be fenced in, and stipulations were made out giving the caretakers certain rights. What I now understand is that the conditions have never been altered; and that although 640 acres have now been fenced in, there is no less inducement given to the caretaker or lessee than when the area was only 200 acres.

REPLY.

I do not understand to what this refers, but I am unaware of any stipulation giving caretakers certain rights. Caretakers are allowed to run a horse, and six sheep for rations, and in cases, if married men, a cow. The rights to tenants are fully shown in the Regulations, under which the lessee has no restrictions as to the use of his leasehold except to regulate the charges for water and to prevent overstocking.

Q. 3471 and 3472.

Question :—And the caretakers in most instances are able-bodied young men?

Answer :—Yes.

Question :—That being the case, how would the tanks fare when even able-bodied young men do not keep them in proper order; would they be kept in proper order by old men?

Answer :—Yes; because an able-bodied man is more independent than an old man. On the other hand, an old man will do work which would entitle him to be kept in his situation. These young men are rather fresh, and when they get a few pounds together it is a matter of perfect indifference to them whether they leave or remain on duty.

REPLY.

This is not our experience. We have very few resignations, and the registrar of applicants is far in excess of vacancies, fifteen resignations having occurred since January, 1886, and the majority of these were upon reduction of wages.

Q. 3475.

Question :—We have had various complaints from the Mines Department and from independent witnesses also that your fencing is excessively costly?

Answer :—You will excuse me for a moment before we drop the other subject. I have drawn your attention to Mr. Gilliat's approval to this very type of pump that we used. In his evidence before the Royal Commission for the Conservation of Water he states that the Tangye pump is one of the most simple and effective pumps he has ever seen, and that, with the few renewals in the shape of bucket leathers, it was such a pump as could be worked by any ordinary bush hand.

REPLY.

Unfortunately, Mr. Wood does not give the whole of my statement, which reads :—

“My view was to get the simplest gear, which was the double whip, but that was disapproved of, and the present Tangye pump substituted.

“Is that pump effective? Yes, it is an excellent pump; with occasional repacking it will stand very well, and is sufficiently strong to bear the rough treatment of the men we employ.” (See page 139 of the first report of the Water Conservation Commission.)

I also say on page 263 of the Blue Book, under date 1st February, 1884:—

“It appears that pumps are being supplied, and, the Department has been informed, are in some places already erected, so that before long practical evidence of their efficiency will be obtained. My own experience is so largely in favor of the simplest machinery that I have considered it my duty to urge the adoption of a form that can be easily repaired by the class of men usually obtained as caretakers.” (See also my reply to Mr. Bennett's evidence, Q. 3209.)

Q. 3477 and 3478.

Mr. Wood states:—Our instructions for these fences came originally from the Mines Department. Mr. Bruce, who was then in charge of this particular branch, recommended fences with six wires and a top rail for the tanks in the leasehold areas.

Question :—For the caretakers' paddocks as well as the tanks?

Answer :—Yes; for the lease area. Mr. Gilliat, in a letter of 16th October, 1883, recommends that the fences should be of a substantial character, and sheep proof; the posts to be not more than 8 feet 6 inches from centre to centre, and a top-rail where timber is plentiful.

REPLY.

This is so far correct; but the following important paragraph in my letter is not quoted, viz.:

“Seven wires, the two top ones of No. 6 gauge, where timber is not obtainable.”

Why does Mr. Wood defend the class of fence so warmly if the Mines Department is responsible, as Mr. Wood implies.

Mr.

Mr. Wood's evidence, Q. 3482.

Mr. Woore :—Was it the duty of the Public Works Department to decide what sort of fencing you were to put up, or did you act as in the case of the tanks merely to carry out the suggestions of the Mines Department?

Answer :—We acted to the best of our judgment on general lines. We were instructed to enclose certain areas of land. We had a certain type of fence recommended to us by the Mines Department, and finding that type too expensive, we adopted another that was less expensive and I think equally serviceable.

REPLY.

I maintain the type of fence even as now erected is more expensive than that recommended by this Department, and I fail to see where the expense has been lessened, bearing in mind the prices paid by the Works Department; and further, by his statement, Mr. Wood relieves the Mines Department of any responsibility in the cost of fencing by admitting that his Department had adopted another and a different type from economical motives. But perhaps the most conclusive reply to Mr. Wood is to quote the following specification for fencing, upon which I am informed he is now having tenders called* in the Silverton district, and which is a close approximation to the fencing we recommended.

Comparison is invited between the specifications submitted by the Works Department to the Commission as their standard specifications and the one herewith :—

“Amended Specification for fencing tenant's leases at Silverton, Daydream, Purnamoota, Rathole, and Thackeringa tanks.

“Posts to be 5 inches diameter smallest end (except Mulga, for which 4 inches diameter will be taken), 6 feet long, 20 inches in ground. Strainers every 25 panels 6½ feet long, 2 feet in ground. Corner posts 6 inches diameter, 7 feet long, sunk 2½ feet in ground, and securely strutted from top of post to foot of first post of each side, wires to be drawn through struts. Two posts for slip rails 8 inches diameter, 7 feet long, 12 feet apart, with 4-inch slip rails neatly fixed in mortices 3 inches deep, 3 inches by 4 inches. Posts 12 feet apart from centre to centre, seven wires, top wire No. 6, remaining six wires No. 8 steel. Two gate posts to be provided, 8 feet long 9 inches diameter, sunk 3 feet.

“Tenders to state a price per chain, also a bulk sum for the whole of the works.

“In all things not herein specified, contractors to be bound by the printed general conditions hereto attached.

“Time for completion of each work three months from date of agreement.

“Approximate length required at each tank, 400 chains.”

* The fencing has been let since the above was written.—J. W. B.

Q. 3485.

Question :—Mr. Low says in another place in his evidence that he would estimate the wire at £30 per mile and the posts and so forth at £26 per mile, which would make the cost just £56 per mile, and just exactly half what was given by the Works Department?

Answer :—It is a funny thing that Mr. Low—yes, he is the gentleman—in 1887 fared no better than we did. I think he called for tenders for a fence at Ivanhoe in connection with the lease area there, and for a similar style of fencing, which has now been erected, the tender he received was £100 per mile. He received another at £75 per mile, but that involved a modification of the design of the specification.

REPLY.

There can be no comparison such as Mr. Wood endeavours to institute. Mr. Low, at my direction, called for 22 chains or a ¼ of a mile of new fencing. No contractor would tender for so small a job at the price he would take for one ten or twenty times larger. But even by Mr. Wood's own showing the prices were below that given by the Works Department for the whole of their fencing at this place.

The tender of £100 per mile was for 4½ chains of the same specifications as used by the Works Department.

The tender of £75 per mile did not involve any modification and was for a fence of the same specification as used by the Works Department, except that the posts were only 2 feet in the ground. These tenders were excessive and were refused by the Mines Department, although £37 per mile less than that accepted by the Works Department. (See also Blue Book, page 129.)

Q. 3486.

Question :—Was the gauge of wire used suggested by Mr. Bruce?

Answer :—No; Mr. Bruce suggested a top-rail, but that was merely round the main works, the top-rail was also recommended by Mr. Gilliat.

REPLY.

Yes; but only where timber is plentiful. See my reply to evidence, Q. 3478.

Q. 3492.

Chairman :—Why did you use this exclusively heavy wire for caretaker's paddocks as well as for the tanks?

Answer :—Simply because the fence was required for cattle as well as for sheep; we thought a top wire would offer greater resistance and would be better safeguard. With a fine wire cattle would not be baulked in the same way as they would with a No. 4.

Question :—

Mr. Wood's evidence, Q. 3493.

Question :—Do squatters in fencing public stock routes use such heavy wire?

Answer :—No, I am aware they do not, but I think there is a great difference between the two cases. In one case you have a station paddock, supposing the stock route is fenced—and in a bad season station paddocks are little better than stock routes; in the other cases you have a special lease area where the caretaker is only allowed to put in a very limited number of stock, and where in all probability there is far better feed than on the stock route. Again, these fences are in close proximity to the watering places, and when cattle are being watered they rush about, perhaps being drafted, and consequently a stronger fence is required than would be needed under ordinary conditions.

REPLY.

Mr. Wood attempts to draw a distinction between public watering places paddocks and station paddocks. I think there can be no doubt, as a matter of fact, that station horse and cattle paddocks are liable to quite as rough usage as any T. L. paddock, and I have never heard of the use of No. 4 wire upon any station either in this Colony or Victoria, where No. 8 is looked upon as sufficient, but to be absolutely secure I recommended top wires of No. 6, two gauges heavier. See my letter partially quoted by Mr. Wood, evidence Q. 3478 and my reply.

The Works Department, however, without reference to the Mines, adopted the still heavier gauge of No. 4—and curiously Mr. Wood, in his answer to Mr. Woore's question, Q. 3482, says that "finding that type (recommended by the Mines) too expensive, we adopted another less expensive, and I think equally serviceable," or in other words Mr. Wood alleges that he adopted a heavier type of fence from motives of economy.

Q. 3493 and 3494.

Mr. Wood states :—There is one extraordinary thing that I would like to point out, that as far back as 1883, when I travelled with Mr. Gilliat to hand over some of these works to him, he expressed himself as perfectly satisfied with all the appliances and in fact with everything pertaining to the tanks, and in the presence of Mr. Cronin, the local officer at Deniliquin, he stated that nothing could be more perfect. Now we have to deal with an altered view altogether.

Question :—You think that Mr. Gilliat has grown wiser as he has grown older.

Answer :—It is possible.

REPLY.

The following extracts from my private journal will I think sufficiently traverse this extreme statement of Mr. Wood's. Mr. Wood is first in error in stating that he travelled with me in 1883. I met Mr. Wood by appointment in Deniliquin on 14th November, 1884. The first tank that was inspected by us in company with Mr. Overseer M'Cullough and Mr. Road Superintendent Cronin, was the Black Swamp tank. I quote from my journal :—

"I am very well pleased with it, Mr. Cronin, the constructing officer, deserves great credit; it is the best tank I have seen of the Works Department's construction."

On the 18th November, 1884, we inspected the Boooroorban tank. I quote from my journal :—
"Found on inspection the work at the tank connected with lifting machinery in a very slovenly state, and when we found this morning the water literally running out of the service tank, Wood said he would not ask me to take it over. We then started for the 16-mile Gums and found the pump there was jammed and would not work. Assistant Engineer Gordon at Hay, is in charge of these works, both at Pine Ridge (Boooroorban) and the Gums, and all the new work is of the most slovenly description. Even in the rails of troughing the tar has been put on over the bark. In one case the galvanised iron of the troughing has been nailed over the bark. The transfer of this withheld until put in working order."

On the 22nd November, 1884, I started to inspect Wooloondool well. I extract from my journal :—
"Found no horse to work the whim, although Gordon's assistant said he had arranged for one, consequently we were unable to test the supply and have to defer doing so until our return."

I then went on to the One Tree tank. I quote from my journal :—
"Found no horse waiting to work the pump. Service tank three quarters full and appears quite tight. The troughing and service tank are excellently finished, the pump well set, neatly covered in and worked readily with Wood and self at the arms. The wire of fencing has not been strained. No gate left for the admission of a horse to the pump (horse-power) and the old watering tank is left unfenced. Wood agreed at once to have these things remedied. The down pipe is buoyed with a cask, but the main tank is filled over the level, so that we could not examine suction joint or down pipe."

On 23rd November, 1884, I inspected the Quandongs. I extract from my journal :—
"Troughing good, and good height for stock to water at. Service tank about two-thirds full; groom reports it as leaking if filled higher. Wood is to arrange to have all service tanks filled on our way down. The wire of fence wants straining and two new wires rove, this is to be done also at One Tree. Gate for admission of horse to the pump. Fence to be carried clear of embankment of horse walk. The pump works easily, but the piston wants packing. The foot-valve is not on, pump not cased in, nor embankments graded around horse walk. The old watering tank is not fenced, the earth has been washed away from the posts of its wing fence. Altogether Mr. Gordon's work has been done in a very slovenly manner. Wood has promised to have all rectified at once."

On November 24th, 1884, I inspected Toms Lake tank. I quote from my journal :—
"We found this tank in an unfinished state, and Wood withdrew it from the transfer list."

I further extract from my journal :—
"From here (Toms Lake) on to the Lignum Hut with well and windmill not ready for delivery, then on to Mossiel tank. * * Inside drain too close to excavation, and earth piled far too near to edge. Service tank full and tight. Troughing full and tight, although badly nailed, having
no

Mr. Wood's evidence.

no lead washer under many nail heads; put in Keighran's horse, but he was awkward, and pump did not work well. Took provisional delivery. Wood engaging to see all things wanting made good, and to extend fencing to include silt tank to high level inlet, gates, &c."

Returning on 27th November, 1884, I quote from my journal:—

"Passing Quandongs, found nothing had been done towards filling service tank, and so we left it until Gordon arranges to have it ready for delivery. No foot-valve on."

28th November, 1884, I extract from my journal:—

"Found One-tree service tank filled, a little drip, the maintenance man reports it slow to fill. On reaching Wooloondool we found Gordon's man had one of the buckets jammed at the bottom of the well; after watching them trying to get it out we gave up and left it with the contractor and a man he brought out, and postponed transfer till it is in proper order."

On 3rd December, 1884, I left Jerilderie with Mr. Wood to inspect Berrigan and Murray Hut wells. I quote from my journal:—

"Murray Hut well, placed on site selected, depth of shaft 123 feet, depth of water 17 feet. The whim and all timber work of the best description. Horse walk well made. Capital shaft, double timbered, copper fastened all the way down. Head works excellent. Buckle plate iron service tank, 25 x 25 x 5 feet, on cement piers, painted grey outside, tarred inside. Troughing and fencing better than any I have seen yet—red gum and galvanized iron. Water first-class. Took delivery from to-day. Berrigan well is not quite completed, and is a sister work to the Murray Hut; these two works are most creditable to Cronin."

On the 5th December, 1884, I left Hay again to see if the 16-mile Gums tank pumping appliances were yet ready for transfer, with Mr. Wood and Mr. Gordon's assistant, Mr. Elkin. I quote from my diary:—

"After trying for two hours to get out the piston of the pump, Wood decided to send another to be fitted."

On 12th December, 1884, I went out with Mr. A. P. Wood to North Roto well. I quote from my journal:—

"We drove out 16 miles to inspect North Roto well, a very good piece of work, but the shaft has not been inspected, and the work is not ready for transfer."

On 13th December, 1884, I inspected the Roto well with Mr. Wood. I quote from my diary:—

"Workmanship, whim, and headworks strong, but of slovenly finish. Horse-arm badly fitted into spindle, and chamfered too much at bow end. Gudgeon cap too small on samson post or foot piece, giving too little bearing on samson post. Service tank-iron of lighter gauge than standard, nailed on without washers, and a good deal of timber unbarked. Wood-work fairly substantial, but not picked or neat. Troughing galvanized iron nailed without washers. Red gum timber side pieces very light, not more than half the usual dimensions. Sleepers 6 x 6 instead of 9 x 9. Joints not broken on sleepers, but loosely chocked with small blocks of pine. Several saw cuts in lengths filled up with slats fitted in and tarred over. The worst job I have seen. Fencing: sawn gum on the two-railed side; on the other, crooked round saplings fitted so low that sheep in many places cannot water. Shaft had not been examined by the inspecting officer; neither Wood nor myself will inspect with present wire ropes, and men refuse to work below with them. Wood has not asked me to take delivery, at which I am better pleased, as I should have been obliged to condemn the work."

On 14th December, 1884. I quote from my diary:—

"Left Hillston at 3.20 p.m. Inspected Crows Nest well. The work so bad Wood refused to ask me to take it over."

On 15th December, 1884. I quote from my journal:—

"I inspected and tested Old Gunbar well. I find whim and all headworks strong and substantial. Wire rope. Rope rides badly, with great friction on drum. One gin wheel requires raising."

"Service tank substantial, but leaking slightly on bottom, water very brackish; Keighran's horse refused to drink it. Troughing inferior. Light side timber indifferently levelled; good height for watering all stock; leaking slightly in places. Fencing strong, workmanship middling. Took delivery of Gunbar, subject to analysis."

On the same day I inspected the Dry Lake well. I quote from my diary:—

"Had a look at the Dry Lake well; buckets down the shaft (rope broken), and so withdrawn."

On 18th December, 1884, I again, and for the third time, inspected Wooloondool well with Mr. Wood, and tested the supply. I quote from my journal:—

"The timber work, drum, spindle and horse-arm poppet heads, &c., all good and substantial; bumpers want refitting, and alterations; the gin-wheels are on the same level, one requires raising; bucket valves, both defective and require replacing; buckets have only single lugs; battens require renailing in shaft. Service tank good and substantial; troughing ditto, but wants shoot from service tank. Water supply ample; with two hours bailing only lowered water about 18 inches; depth of shaft, 90 feet. Directed Keighran to put caretaker in charge with a horse."

The Commissioners will observe from these extracts that, of the fifteen works inspected, two in Mr. Cronin's district, the Black Swamp and Murray Hut, were taken over, and special credit given to Mr. Cronin. The Wooloondool well was also taken over, while the Mossgiel tank and Old Gunbar well were accepted provisionally. Thus, out of fifteen works inspected, five were taken over, the remainder were either condemned, or withdrawn by Mr. Wood, as not being in fit order for transfer. I am at a loss to conceive how Mr. Wood can reconcile his statement to the Commissioners with these notes from my diary, written at the time the works were inspected.

With reference to the Commissioners suggestion that "Mr. Gilliat has grown wiser as he has grown older," I beg to say that I trust I have, but that my judgment at the time was correct is proved by the fact that those works to which I gave special approval in Mr. Cronin's district, are the ones at which this Department has been put to no expense or trouble for repairs.

The extracts from my journal can be verified if desired by the Commission.

Mr.

Mr. Wood's evidence, Q. 3500 and 3504.

Mr. Woore :—Well, will you give us some information about this interference ?

Answer :—I know there has been a good deal of ill-feeling, particularly in the Hay district, in consequence of the reports that Mr. Stillwell, in the course of his duty, has been obliged to send in in regard to the neglect of the men employed under the Mines Department.

* * * * *

Question :—Is that all you have to say upon the subject ?

Answer :—Well, I think that that is the only district where this so-called friction with the field officer has been complained of.

REPLY.

Mr. Wood's admission that the Hay district is the only one where this friction is complained of, is at least suggestive that their officer is to a large extent responsible. While the tone and manner adopted by Mr. Stillwell in his written communications, and which is apparent in a very marked manner in the papers he read before the Commission containing allegations unsupported by a shadow of evidence, will perhaps afford the Commission a sufficient explanation of how the friction arose.

Q. 3505.

Question :—What did you find fault with ?

Answer :—With the utter neglect of public works. The drains were fouled and silted up, the pumping machinery was neglected, and worked without oil, and all the appurtenances neglected.

REPLY.

Mr. Wood's charges against the caretakers on his trip referred to, and the facts of each case after investigation will be found in the Blue Book, pages 240 and seq. He appears now to have added to them, as no complaints were made previously by him with respect to drains.

Q. 3506.

Question :—Was it the duty of a caretaker as a rule to clean out the silt tank, because there is a great deal of correspondence here about cleaning out the silt tank at Merri Merriwa ?

Answer :—Yes ; that is at page 167 of the Mines papers. Mr. Gilliat wrote a minute on a paper to this effect :—

“The cleaning out of these works will, I suppose, have to rest with the Works Department. No further action can be taken by this Department.”

This was in 1886 ; yet in 1887, when we cleaned out this silt tank, Mr. Gilliat states :—

“It is of course very probable, owing to the wet season, that the caretaker has been obliged to wait until the tank is dry enough to clean it out ; but it will be observed on S7-4648 that the contractor engaged by the Works Department is compelled to do the same. But the main point, which does not appear to occur to the officers of the Works Department, is that any proven neglect on the part of the caretaker can hardly be regarded as a justification for expending public money on a contract to do work that should properly be performed by a public servant ; and that a due regard for the Public Service would have led them to show to this Department that the caretakers duties were neglected.”

REPLY.

Here Mr. Wood endeavours to convert a minute of mine, on page 167 of the Blue Book, written upon the *cleaning out of the main tank at the 48 mile, reported to have 7 feet of silt in it*, into a contradiction of what I state in my minute on the Merri Merriwa silt tank. Merely reading the papers will show that they refer to entirely different matters. One is to the practical re-excavation of a main tank of some 18,000 cubic yards ; the other relates to the caretaker's job with a silt pit at the Merri Merriwa tank. So long as construction remains with the Works Department, the first is as clearly for them to undertake as the cleaning of a silt pit is for the caretaker. But I must express my surprise at Mr. Woods making such a statement in his evidence.

Q. 3495 and 3496.

Question :—There is another very grave charge made against your Department, and it is that you spend enormous sums of money in putting up gates that were utterly beyond the requirements, gates for instance to caretaker's paddocks in which there is neither ingress or egress except for the caretaker's own horse. Why was this done ?

Answer :—We have simply as I have said before acted under instructions. Some of the local officers will prove that Mr. Gilliat, on the very trip I am alluding to, referred to this very question, and recommended, I think at Cuttygullyaroo if I remember aright, that a gate should be put in. But there is nothing particularly expensive about this style of gate.

Question :—It cost £15.

Answer :—Yes, but these gates were not let singly, and you cannot pick them out of a tender.

REPLY.

Gates are always required, but not at £15 each. The question is why was it necessary to put up expensive 12 ft. gates and a double set of slip panels to paddocks which are intended chiefly for caretaker's or lessees stock. Or why erect 12 ft. gates for admission to the tank enclosure, as at Jindera, Daysdale, and Lowesdale (although Mr. Wood says it only occurred at one place in the Albury District), where no stock, except the caretaker's horse to work the pump is admitted.

It was frequently necessary for me to recommend that gates should be put in. In the extracts from my diary just previously quoted, Q. 3493, it will be found that at both Quandongs and One-tree tank that a gate was required to admit a horse to the pump. The

Mr. Wood's evidence.

The Assistant Engineer having made no provisions to enable a horse to enter without cutting the wires. The question of cost was never touched upon. As a matter of fact at that time I was quite unaware of what was being paid. With respect to the description of gates I have on more than one occasion pointed out to Mr. Wood, and different local road Superintendents that two 6 ft. gates instead of one 12 ft. would be both cheaper and more durable.

I am now informed that two 6 ft. gates are now being used at the new paddocks at Lowesdale and Daysdale.

Q. 3511.

Question :—There has been some complaint made about the greasing of service tanks, that a certain substance has been used which has so affected the water that stock will not drink it.

Answer :—I may state that the composition which we used was a mixture of tar, pitch, and tallow, in the proportion of one gallon of tar to one pound of pitch and two of tallow. This composition was recommended to me when I met Mr. M'Kinney, the Engineer to the Water Commission, down at Hay some time ago. He stated that the composition was a very serviceable one for the purpose, and on the strength of his recommendation we tried it. For the first few days it did produce a film upon the water, but the second water that ran into the tank has never been deteriorated in the slightest degree, as the composition became hard on the tank.

REPLY.

In reply to Mr. Wood's statement I beg to submit a letter from Mr. M'Kinney upon this subject :—

(P.W.P. 88-2599)

To H. A. Gilliat, Esq., Chief Inspector of P. W. Places, Mines Department, Sydney,—

Sir,

Mines Department, Sydney, 5th April, 1888.

I have the honor to bring to your notice that the Royal Commissioners who are investigating matters connected with public tanks and wells appear to be under a misapprehension regarding a report which I submitted to the late Royal Commission on the conservation of water. In the evidence of Mr. W. C. Bennett, Commissioner and Engineer-in-Chief for Roads, that gentleman pays me the compliment of mentioning that the idea of using a certain mixture for the preservation of iron was suggested by a report of mine on public works in Victoria. The words of my report were quoted by Mr. Bennett, and altogether no exception can be taken to the manner in which my name was introduced. Yet, judging from a subsequent question put by one of the Commissioners, it is clear that they obtained an entirely incorrect impression of my position in the matter. When Mr. Bennett mentioned that the use of the composition had been discontinued out of deference to the wishes of the Mines Department, one of the Commissioners added the remark, "Although it was recommended by their own officer." Now, in the first place, I wish to call attention to the fact that I did not recommend the composition referred to; I described it as having been used with success under certain conditions in Victoria. If I had had an opportunity of giving it a trial under similar circumstances I should have done so, but I have not had any such opportunity.

Again, the Commissioners stated not only that the composition had been recommended, but "by their own officer." As you are aware I did not enter the service of the Mines Department till more than a year after the report referred to was written; and since entering the Department, so far from recommending anything for use at Government tanks, I have not even seen one of them, and am therefore not in a position to state whether the circumstances under which the composition referred to in this Colony corresponded with the circumstances under which it was successfully used in Victoria.

I have, &c.,

H. G. M'KINNEY, M.I.C.E.

I may add to this statement that it will be seen, on the merest reference to the paragraph in the report of Mr. M'Kinney to the Water Commission, that the conditions under which the composition was reported as being used, are entirely different from those under which it was authorised by Mr. Bennett; in the one it was used in an open flume, and applied in hot weather, when the channel was not in use, the composition assuming a glassy surface, and not affecting the taste of the water. As employed by Mr. Bennett, it was applied to the interior of service tanks and troughing, being daily filled with water for stock, and in some cases for domestic use, and did, as repeatedly reported, affect the taste of the water.

Mr. A. P. Wood states in evidence, Q. 3511 :—

"This composition was recommended to me when I met Mr. M'Kinney, the engineer for the Water Commission, down at Hay some time ago. He stated that the composition was a very serviceable one, and on the strength of his recommendation we tried it."

He further states, in a minute dated 28th March, 1887 :—

"I may state the receipt was given me by Mr. M'Kinney as being one that produced a good coat for the purpose sought."

Mr. M'Kinney's letter does not appear to deal with these particular statements; he should, perhaps, be asked to reply to them.—J.W.B., 2/5/88. The Chief Inspector of Public Watering Places.

Forwarded to Mr. M'Kinney for any further remarks he may desire to make.—H.G., 3/5/88.

Mr. Wood's recollection of the facts in this case is certainly at fault. I met Mr. Wood at Hay a short time after the publication of the second report of the Water Commission, and lent him a copy of that report. I knew nothing whatever about the tanks on which the composition was used until I heard of them in connection with the present inquiry; and I certainly did not recommend its use under such circumstances. I have a tolerably accurate recollection of what took place when Mr. Wood borrowed the report from me, and I am almost certain that no conversation took place about the contents of it, and that the composition was not referred to.—H. G. M'KINNEY, 7/5/88. To the Chief Inspector of Public Watering Places.

It will be seen that Mr. Wood states distinctly that this composition was recommended to him by Mr. M'Kinney, in Hay, who informed him, "it was a very serviceable one for the purpose, and on the strength of his recommendation we tried it." This, however, is very different evidence from that of Mr. Bennett, on Q. 3257, who says, referring to the same composition, "I do not say it was used entirely upon his (Mr. M'Kinney's) recommendation, because the mixture was known to our Department long before."

The Commissioners will observe that in Mr. M'Kinney's postscript to the annexed letter, he states he is confident that he not only did not recommend the use of this composition, but also asserts that he is almost certain no conversation took place about the contents of the second Report of the Water Commission which had been borrowed from him by Mr. Wood, and where the composition and the way in which it was used

Mr. Wood's evidence.

used is reported, and finally the Commissioners will observe upon comparison of the ingredients that the composition which Mr. Wood asserts was recommended by Mr. M'Kinney is not the same either in the substances or in their proportions as that contained in Mr. M'Kinney's report to the Water Commission. Mr. M'Kinney's mixture was prepared in the following manner:—2 lb. tallow; 2 lb. resin; 1 gallon tar. Mr. Wood's mixture:—2 lb. tallow; 1 lb. pitch; 1 gallon tar.

Q. 3517 and 3519.

Question:—It was not a case of failure?

Answer:—No; they made a great deal here about our having paid a man £6 a week to do certain work. Well, this man makes periodical trips up the stock route, putting the horse-gear and other things into working order. He is a travelling mechanic employed by us, and as he was passing along he was instructed by the local officer to put this composition on the tank. There is no doubt that this man was paid £6 per week for his job, but considering it only took a day to do the work it was really much cheaper than sending a man a long distance to do it.

* * * * *

Major Penrose:—In this matter of putting composition on the tanks were the officers of your Department within their proper sphere?

Answer:—We considered we were within our proper sphere, because there had been a great many conflicting opinions expressed as to where the line of demarcation was drawn between the two Departments. We had been called in on so many occasions to effect trivial repairs that ought to have been carried out by the caretakers themselves, that we felt perfectly justified in adopting this course to protect public property.

REPLY.

The argument used by Mr. Wood to justify the employment of a man at £6 per week, namely, that it was cheaper to employ him than to send one a long distance to do this work, is not sound, as it was part of the duty of our caretaker to put on the coating adopted by this Department. Mr. Wood further says that his Department felt justified in taking this action to protect public property. He has, however, failed to show that there was any necessity for this protection, nor has any evidence been advanced by the Works to prove that it was necessary. (See Blue Book, pages 46-48.)

The Commissioners will observe that our objections were again equally against the use of an unsuitable composition that was entirely unnecessary and the employment of a skilled mechanic at a high rate of wages to do what the caretaker was both able and instructed to carry out where required.

Appendix 14.

Mr. A. P. Wood's minute upon the use of a composition for coating service tanks, &c., dated 28th March, 1887, was put in by him in evidence.

REPLY.

With reference to this minute of Mr. Wood's, the paper is now seen as given in evidence for the first time by this Department. By referring to the Blue Book, page 48, it appears that no reply was ever received from the Works Department to our letter of 24th February, 1887, protesting against the use of this composition.

Q. 3541.

Mr. A. P. Wood's evidence. Fencing T.L. areas, states:—But then if the matter had been left to the Lands Department, this extra mileage expense would not have been incurred, because the officers of the Lands Department would have the power to go beyond the stock route, and on to the Crown lands adjoining.

REPLY.

This practice was adopted at least a year ago, and I am under the impression the Works Department were informed of it officially.

Q. 3543.

Question:—It is stated that the head gear is all erected on the site of the well before anything else is done. Can you give us any information with regard to this?

Answer:—In the first place the contract is let in bulk as you have just stated. The contract includes the sinking of the well, and the erection of head gear, but the practise is not to allow the contractor to put up head works until the water is found, and its quality proved. Trial shafts are, as a rule, put down, and if they are not put down the head works have, except in one case, not been erected till the finding of the water. It is cheaper to let the whole work in a lump sum in this way, &c. * * *

REPLY.

I do not think it has been stated by this Department that "the head gear is all erected on the site of the well before anything else is done."

Our contention is stated in the following terms:—

"Faulty construction of wells, sinking, timbering, and centering of shafts, erection of head works, whims, service tank, and troughing before testing for supply and quality of water."

Nor have objections been raised to the letting of contracts in bulk for wells, but to the erection of the head works, &c., before the quality and supply of water has been tested. That this has been done is sufficiently shown by the head works at Old Gunbar, Holy Box, Willandra, Dolmoreve and Baloola, and J.K. Wells, at which there is either no supply or water unfit for human consumption, and in some cases quite unfit for stock.

Mr.

Mr. Wood's evidence, Q. 3544.

Question :—What instance is that you speak of where head works were allowed to be erected before the water was found ?

Answer :—I was referring to a case on the Mount Brown Road.

REPLY.

And yet Mr. Wood admits, Q. 3545 and 3549, this was done also at Baloola, and says that it would have been a decidedly preferable course to have adopted boring before sinking the main shaft.

Q. 3545.

Question :—That work has not been handed over yet ?

Answer :—No. It was stated by one witness that the Normanstone well was a case in point, but the Normanstone well had no head-works at all.

REPLY.

It does not appear that this Department has stated that headworks were erected at Normanstone. My evidence clearly referred to an individual case, and stated the well had been abandoned and headworks and skeleton of tank erected. I referred to Baloola. Normanstone is not yet abandoned.

Q. 3546.

Chairman :—But the whole question hinges on this,—is it desirable to sink wells until you have proved the water by putting down the trial shaft ?

Answer :—But we have sunk trial shafts. We did it at Gunbar.

REPLY.

At Gunbar it is stated to have been done 100 feet away from the present shaft by Mr. Wood's own evidence; but he does not say if trial shafts were put down at Dolmoreve, Baloola, Normanstone, Willandra, J.K., Mulga Valley, Beefwood Wells.

Q. 3550.

Question :—Now we have also had it in evidence that some of these wells have cost as much as £10 per foot ?

Answer :—I do not know where they are, except it be the wells which were put down at Tibboburra by the Mines Department, and which cost about £15 per foot.

REPLY.

The Tibboburra Well here referred to is not a public watering place. It was sunk by the warden for the goldfield by daily labour at the time of the rush, and long before the watering places recommended by this Department were undertaken by the Works Department—at a total cost of £8 Ss. per foot, through solid granite, including every expense for compensation, labour, tools, and camp.

Q. 3551.

Question :—Will you turn to the 2nd page of the *précis* of evidence. It is stated that a portion of the head-works of the Willandra Well were placed upon private property of the Kilfera run-holders ?

Answer :—That includes all the top works, whim, service tank, troughing, and so forth. It has been put in such a way as to lead to the conclusion that it is the same thing as the Holy Box. There was an encroachment on an old conditional purchase of Mr. Webb's, who did not actually know of the existence of this conditional purchase, according to his own statement.

REPLY.

Mr. Wood is again in error, what Mr. Webb did say in his letter to Mr. Stillwell is this (*See Blue Book, page 29*) :—

“I may here state that, until the surveyor surveyed the well reserve, I was unaware that the Government improvements encroached on our portion, otherwise I should have drawn your attention to the matter earlier.”

It is evident that Mr. Webb was perfectly aware of the existence of his own purchased property.

The revision of the word “existence” render this reply unnecessary.

Q. 3552.

Major Penrose :—Then it is said that the construction of this well was not asked for by the Mines Department ?

Answer :—I gave it in evidence on the first day that the Mines Department distinctly asked us for two works between Clare and Ivanhoe, but Mr. Gilliat now says that he only asked for one.

REPLY.

Mr. Wood is quite correct in stating that the Mines Department distinctly asked for two works between Clare and Ivanhoe, but unfortunately for Mr. Wood's consistency the Works Department have constructed three works—Willandra Well, Gunnaramby Tank, and Clare Tank. That the Works Department could not have been unaware of the wishes of the Mines Department is further shown on page 27 of the Blue Book, where I state, as far back as 1880, the reasons for my objections to wells :—

“On the road from Balranald to Ivanhoe the water supply is required chiefly for carriers and their teams, and the works do not need to be on so large a scale, or so close to each other, as upon roads more frequently used by travelling stock. I am of opinion that if the proposed tank at Clare is completed one other half-way from Clare to Ivanhoe will be sufficient. Remembering that the larger number of trial shafts sunk for wells throughout the district have resulted in obtaining water either salt or brackish, I consider the works best adapted at present for the water supply to be tanks, and judging by the numbers that have been constructed with private capital, my view appears to be confirmed by the pastoral tenant.”

See also my evidence on this matter, Q. 169.

See also previous evidence and reply to it on Q. 3324, of Mr Wood's evidence.

Mr.

Mr. Wood's evidence, Q. 3553.

Question :—Apparently they asked for tanks ?

Answer :—Yes, and we put down a trial shaft in the first place, where Mr. Gordon, the local officer, stated that good water had been obtained, and on the strength of that statement we put down a well, but we never bottomed it on account of having reached running sand or drift. Another well is now being sunk adjacent, and the head works utilised. The other shaft having been abandoned.

REPLY.

With respect to this new shaft referred to by Mr. Wood, I beg to quote the following telegram from Mr. Inspector Low, dated 19th April, 1888 (P.W.P. 88-2,301).

“Webb informs me Willandra Well again abandoned, owing to men being unable to get through drift.”

In addition to this I submit a copy of a letter from Mr. Webb, dated 8th May, 1888, upon this new shaft, the original of which has been already forwarded for the information of the Commission.

This letter is given in full in reply to evidence at page 27.

Mr. Wood's apology for this new shaft is based upon his allegation that the existence of good water had been proved. It is distinctly stated by Messrs. Webb, Low, and Yeo that the water is poor stock water, and unfit for human consumption.

See Blue Book, pages 30 and 31.

Q. 3555, 3556, and 3557.

Mr. Wood states in regard to the Wooloondool Well:—This well has been bottomed on good stiff clay. It was bored through that stiff clay and the bore-hole is now larger than it was originally, and is not choked by any closing ground. I admit that when the well is standing for any considerable time that the silt deposits will choke the bore. It is usually freed by putting a rod down it, which any man could do, but the putting down of a pipe would rather increase the evil because it would have a fixed and lesser diameter than that of the existing bore. In confining silt drift like that, I think it is almost impossible—indeed, I believe it is impossible—to keep the bore clear unless the well is in constant use and there is a current of water through the bore-hole.

Major Penrose :—As I understand you this bore has been sunk through stiff clay ?

Answer :—And the drift is above it. The water is artesian and rises above the level of the shaft.

Mr. Woore :—Is not this bore having been put through clay liable to get closed in ?

Answer :—Yes ; but it increases in size by the force of the water, &c., &c.

REPLY.

Mr. Wood's statement that the drift is above the clay is clearly an error, but perhaps occurred in transcription. The drift is below the clay and the water is sub-artesian and rises about 18 feet above the bottom of the shaft. I found when testing this well with Mr. A. P. Wood on 18th December, 1884, that the water made rapidly, and that two hours steady baling only lowered it about 18 inches. Constant baling, as recommended by Mr. Wood to keep the bore free, necessitates a continual daily and, I think entirely unnecessary labour of both man and horse, wear and tear of gear, and waste of water.

The choking of the bore is occasioned by the falling in of the clay through which it has been made and by the drift held in suspense while the water is being baled and subsequently deposited when the water is at rest.

Appendix A.

A plan and section of the pipe and floor that has been placed at the bottom of the well by this Department is herewith submitted for the information of the Commission, and our present reports show the well now has a strong flow of water.

Q. 3559.

(Précis of Mines Return).

Chairman :—I would ask you to look at page 4 where the Holy Box Well is referred to * * * * ?

Answer :—Perhaps I had better give you the whole history of this well. * * * * *

REPLY.

Mr. Wood's "whole history" is more correctly given in their own papers, Blue Book, page 74, and seq., when it will be seen that the well was commenced and nearly finished by their own officer, Mr. Higman, in 1878 ; the subsequent papers show the evidence furnished by the residents in the district, and Mr. David Brown, the manager of the station at that time, furnishes additional evidence before the Commission on q. 1037.

Q. 3560.

Mr. Wood states :—The Jumping Sandhill Well was said to be unfit for stock, but it has turned out to be the very best water in the district and the same may be said of the Lignum Hut Well.

REPLY.

Both the caretaker and Cobb & Co.'s groom residing at these wells are obliged to draw their drinking water some 7 or 8 miles.

Q. 3562.

Mr. Woore :—Might not the refusal of stock to water have occurred in this way, that the troughs and service tank were not kept clear of sediment. Then the water from the well would be affected by this sediment and the stock refuse the water. Do you not think that if the water were taken fresh from the well it would be more drinkable ?

Answer :—Yes ; Mr. Gordon says on page 86 of the Mines papers, that Parker informed him that Mr. Evans the manager of Canoble (station), said he would work the well during the summer months if allowed. Mr. Gordon adds that it might be well to let him do so in order that the efficiency of it might be established. And I know from hearsay evidence that Mr. Evans was anxious to get hold of this well himself. If the water were so bad I do not think Mr. Evans or any other station manager would be desirous of getting the well into his hands.

Question

Mr. Wood's evidence, Q. 3563.

Question :—What is being done with the well now?

Answer :—It is in charge of the Mines Department. When I visited it two years ago, I drank the water from the well and would not object to drink such water at any time on a pinch. It was brackish, but still drinkable. There is another statement that conveys a wrong impression that the well was over 90 feet deep and cost £1,000. That amount includes head works.

REPLY.

The remarkable part of this case is, that the water of the well should have improved in quality after a period of disuse extending over two years. Mr. Wood claims that constant baling should improve a brackish well, but in this case after the well was practically abandoned for two years by this Department it was found according to Mr. Wood to be good stock water and he could drink it, and that even now after constant baling it is so bad.

See also reply to Mr. Wood's evidence on this well, Q. 3317. No wrong impression as to cost was conveyed, in all cases where the cost of a well is given by the Works Department, it is assumed to cover head works, although the column for head works is left blank in the works return of cost given in the Blue Book, page 270.

The average cost of wells of this depth I venture to assert should not exceed, head works included, £700 to £750.

See also reply to Mr. Bennett's evidence on this well, Q. 3271.

Q. 3565.

Question :—Now about the Mount Manara Well, it has been said that the whim and head works were erected before the water had been tested?

Answer :—I can swear positively that that statement is not correct because the work was done under me in 1870, &c., &c.

REPLY.

This statement is made in the *précis*, and was an error on the part of the officer preparing it, the papers in the Blue Book, pages 94–96, will at once show this as the whole case is there given. The Works officer in the first paper confirms our views. The position chosen for this well would hardly have been selected by an expert. Mr. Wood states that the yield is, he thinks, 400 gallons per hour, on page 94 of the Blue Book is given Migman's and Mr. Cambridge's opinion, that the supply is very limited, and on page 95 the opinion of the Government Geologist. The supply was given to me by Mr. Cambridge and confirmed by Mr. Hay, at Mount Manara, at 2,800 gallons per diem instead of 9,600 as stated by Mr. Wood.

Q. 3570.

Question :—Now as to the Dolmoreve Well, does the same thing apply to that as to the Holy Box Well. It is said the caretaker here has to go 4 miles for fresh water?

Answer :—I have seen a report from one of their own officers, that the water is very fair stock water. It is stated by Mr. Gilman, acting overseer of Public Watering Places at page 111 of the Mines papers, &c., &c.

REPLY.

The question of the Dolmoreve has been fully dealt with in my reply to Mr. Wood's previous evidence on this case at page 26.

Q. 3577 and 3578.

Chairman :—As to this costly hutting for caretakers can you give us any information in regard to that?

Answer :—We were instructed by the Mines Department to have these huts erected. They recommended at the time two-roomed cottages, 24 x 12, with iron roof, floors, chimneys, and so forth, the cost of which was estimated by Mr. Bruce to range from £56 to £100, according to the part of the Colony in which they were erected. In the average, the cost of these works is considerable, but the Mines estimate does not embrace the three-roomed cottages, for which tenders were received, and plans and specifications issued by us.

Major Penrose :—Were your huts bigger than theirs?

Answer :—They were the same size, taking the front part of the main building, but there was a skillion room at the back of our huts which was not in the Mines. That being added on the recommendation of the Mines Department.

REPLY.

In the Blue Book, page 137, I state fully what seemed the proper course with respect to huts for caretakers. This was dated September, 1885, and was a final expression of our views :—

“I agree with Mr. Wood generally as to the use of iron in timberless country, and where carriage is dear, and in the use of half round pine in those neighbourhoods where it is to be procured. The two-roomed cottage will be sufficient, I consider, where there is long and costly carriage, but where the material can be delivered at a moderate outlay, I would suggest that three rooms may be given.”

See also my reply to Mr. Bennett's evidence on this matter, page 48.

Q. 3580.

Chairman :—With regard to the defective construction of troughing, which really means that the animals had a difficulty in getting to the troughs, can you give us any information about the original design as shown in your plan?

Answer :—The plan produced shows how the guard to the tank has been erected, and when the works were being handed over to the Mines Department, Mr. Gilliat expressed uniform approval of them. We, *i.e.*, the officers of the Works Department, do not pretend to have an intimate knowledge of stock, and we only acted on the opinions expressed by those whose speciality it was.

Maior

Mr. Wood's evidence, Q. 3581.

Major Penrose :—Was the design for the troughing submitted to the Mines Department in the first instance?

Answer :—Before we ever adopted it, I saw it on a station when travelling along the Hillston to Cobar road, I made a sketch of it on that occasion which I included in my report, as I thought it was a good idea. The report and sketch were sent on to Mr. Gilliat, and approved of by him, and when we handed over these works, which include this style of troughing, he expressed approval with a slight exception that the sharp edge of the rail which caught in the wool of the sheep should be trimmed. In these Mines papers, at pages 174 and 175, Mr. Gilliat expresses his approval of this troughing, and said that although it required a little alteration, the caretaker, if he was a man of energy, could do it.

REPLY.

My opinion on the troughing is clearly given, pages 174 and 175 of the Blue Book. The design was not objected to by me, but the faults of construction, by which stock were either prevented from drinking under or else over the rails. My expression of general approval is there contained, but I do not consider that any excuse for Mr. Wood's continuing to erect troughing with the same blunders for my caretakers to alter.

Q. 3593.

Question :—After these works were constructed, who would take care of them?

Answer :—The Constructing Department as I have said I would decidedly recommend that the revenue received from watering of stock should be collected, as was suggested some time back by the Stock Inspector at the time they were issuing travelling permits. That would free us entirely from any connection with the levying of tolls and rates.

REPLY.

Mr. Wood's scheme for collecting rates by the Inspector of Stock would compel the continued employment of caretakers at each work. The end the Mines Department is working for, is to have each watering place leased and returning at least some revenue.

See also reply to Mr. Cronin's evidence on this point, page 87, and to Mr. Stillwell's evidence, page 109.

Replies to Evidence given by Mr. Road-Superintendent Hanna before the Royal Commission re Tanks and Wells.

Q. 3608.

Question :—These allegations take the form of statements that the sites of tanks were improperly selected, that the construction was defective and costly, and so on?

Answer :—Yes; but some of the sites were selected by the officers of the Mines Department themselves.

REPLY.

I am not aware that the exact sites of any of the tanks were selected by the Mines officers. The Works Department claimed the right in all cases to define the exact site of both tanks and wells, and until July, 1883, the Mines had no voice in the selection of even approximate sites. See my minute (Blue Book), page 142. See also reply to Mr. Bennett's evidence, pages 46 and 47.

Mr. Hanna admits, Q. 3619, that "in all cases the Mines Department indicate the general position, and we choose the exact site."

Q. 3630.

Question :—Can you state what tanks are 3 x 1 in your district?

Answer :—Yes; I will give you a list of tanks that have 3 x 1 batters; I have not a tank in the whole district which has a batter of $1\frac{1}{2}$ to 1. The steepest sloped tank in my district is the 26-Mile, which has a batter of 2 to 1.

REPLY.

I have no hesitation in saying the 35-Mile and 12-Mile tanks had a steeper batter than 2 to 1. It was very difficult for me to stand upon the batters when the tanks were empty—they were at least $1\frac{1}{2}$ to 1. See my reply as to 2 x 1 batters to Mr. Wood's evidence, page 30.

Q. 3679.

Major Penrose :—Is the tank (Cobham Lake) in a place where it is required for stock?

Answer :—Yes; I only shifted the tank a few yards away from the point where it was placed by the Mines Department.

REPLY.

It has been clearly shown by the Mines Department that their recommendation (Blue Book, pages 248 and 249) was for a well 1 mile south of the public-house, and it would have been desirable for Mr. Hanna, in view of our distinct statements, to produce the evidence upon which he founds the statement that the site was selected by the Mines Department. I distinctly deny that any such site was selected by myself or any officer acting under me. Mr. Hanna, however, makes the admission, Q. 3672, that he is "responsible for that site, and is prepared to meet any objections raised against it." See also reply to Mr. Wood's evidence, page 23. This important revision supersedes the reply.

Mr.

Mr. Hanna's evidence, Q. 3689.

Question :—A number of these places are objected to on account of their being alongside permanent water. There is one place we have had a great deal of evidence about: the Peri Springs, where a tank was excavated within a short distance of what was thought to be permanent water, and your Department has been blamed for an expenditure of money where there is no occasion for it?

Answer :—I have just been past that place, the Peri Springs. If the springs would be sufficient to meet all requirements of course a tank might have been dispensed with. But whether the springs would be equal to the strain upon them or not I could not say. And then there is the right of the station owners who have conserved water to be considered.

REPLY.

Mr. Hogarth's letter (Blue Book, page 34), and the evidence given by Mr. Quin (Q. 1867 to 1908) is perhaps a sufficient answer to this and the foregoing question. Mr. Hogarth says:—

"Peri Sandhills Tank I do not think you will ever be able to let, simply because it is within $\frac{1}{2}$ of a mile of the Peri Springs; therefore I think putting a tank down in the present site a great waste of public money. Had the Government and station owners combined and spent, say, £300 on the springs they would have watered all the stock that ever came down the Paroo, and all the station stock the country would carry."

The great capabilities of these springs is, I think, fully proved, and that there is ample water for both travelling and station stock.

Q. 3707.

Question :—It has been objected that the construction of fluming where it enters the embankment is defective;—have you ever noticed any difficulty in this case?

Answer :—I have not experienced any difficulty. If I suspected a heavy rush of water from the tank in places that would be liable to a certain rush of water after a heavy thunderstorm, I would put a cover of 2 feet of earth to prevent the water from flowing over the chute, but it is very seldom that the water would go down so quickly as to overflow a 4 x 2 fluming.

REPLY.

No complaints were made in reference to fluming in Mr. Hanna's district, the chief complaints being in the Bourke and Cobar districts (see Blue Book, pages 145 to 152) where the flumes are 1 x 1 foot, and in cases defective in design.

Q. 3743.

Mr. Woore :—And public competition is invited in every possible way?

Answer :—Yes; and when tenders are considered high fresh tenders are invited, as was done in the case of the Day Dream and Purnamoota tanks according to specifications was £131 5s. per mile. It is our intention to invite fresh tenders, and to further modify the specifications in these cases.

REPLY.

The Mines Department received a tender from Messrs. Geddes, Prest, and Hocking, of Silverton, to erect all the fencing in the Silverton district in April, 1887, at £75 per mile. The specification was for Mulga posts 6 feet long, not less than 5 inches diameter at small end, 2 feet in ground, 10 feet apart, strainers every 100 yards; wires, top No. 6, others No. 8. This specification, with the exception of a modification by the Works Department in making the distance between posts 12 instead of 10 feet, and in sinking them 20 inches instead of 24, is identical with that now adopted by that Department, and which Mr. Hanna, on Q. 3755 estimates to cost from £100 to £110 per mile. (See papers herewith.)

(P.W.P., 883,424.)

Specification for fencing Tenant's leases at Silverton, Day Dream, Purnamoota, Rathole, and Thackaringa Tanks now adopted by Works Department.

Posts to be 5 inches diameter smallest end (except Mulga, for which 4 inches diameter will be taken), 6 feet long, 20 inches in ground; strainers every 25 panels 6 $\frac{1}{2}$ feet long, 2 feet in ground; corner-posts, 6 inches diameter, 7 feet long, sunk 2 $\frac{1}{2}$ feet in ground and securely strutted from top of post to foot of first post on each side; wires to be drawn through struts; two posts for slip-rails, 8 inches diameter 7 feet long, 12 feet apart, with 4-inch slip-rails neatly fixed in mortices 3 inches deep, 3 inches by 4 inches; posts 12 feet apart from centre to centre; 7 wires—top wire No. 6, remaining wires No. 8 steel; two gate-posts to be provided, 8 feet long, 9 inches diameter, sunk 3 feet.

Tenders to state a price per chain, also a bulk sum for the whole of the works.

In all things not herein specified contractors to be bound by the printed general conditions hereto attached.

Time for completion of each work, three months from date of agreement.

Approximate length required at each tank, 400 chains.

(P.W.P., 1,894, 2/5/87.)

Sir,

Department of Mines, Public Watering Places Branch,
Sydney, 2 April, 1887.

I have to request that you will be good enough to inform me of the amount of fencing required to complete each public watering place in your district.

Specifications should state number and brand of wire, dimensions of posts, distance from each other, centre to centre, and distance apart of strainers, and depth of each in the ground that you would recommend. Your estimate should state the cost of each item separately, with cost of carriage and erection added.

I have, &c.,

HARRY GILLIAT,

Chief Inspector, P.W. Places.

Mr. Overseer Crommelin, Silverton.

Mr.

Mr. Hanna's evidence, Q. 3743.

Mines Department specification for fencing at Thackaringa, Rathole, Silverton, Day Dream, and Purnamoota.

The size of the posts to be not less than 5 inches at the small end. To be 6 feet long and to be sunk 2 feet in the ground. The number of posts to be 528 to the mile, and to be placed 10 feet apart from centre to centre. One strainer to every 100 yards, and more if it be required. Strainers to be 7 feet long and 3 feet in the ground; stay to be used at every strainer. The number of wires to be six—five of No. 8, and one, or top wire, of No. 6. The brand of the wire to be White Cross.

| | Price. | Per mile. |
|--|--------|-----------|
| | | £ s. d. |
| Posts delivered on the ground at each place at 1s. 9d., or | | 46 4 0 |
| Digging holes and erecting posts, 4d. each, or | | 8 16 0 |
| Boring posts, 20s. per 100 | | 5 15 7 |
| Wiring-posts | | 2 10 0 |
| Wire No. 8 | | 16 17 6 |
| Wire No. 6 | | 4 6 0 |
| Carting wire to different places from Silverton | | 1 0 3 |
| Total... | | £85 9 4 |
| Reduced £10. (See public watering places, 87-1,879) | | £75 9 4 |

Telegram from Silverton Station, addressed to J. W. Boulton, Inspector of Public Watering Places.
REDUCE tender for fencing £10; total should be £75 9s. 4d. 28th April, 1887.

GEDDES, PREST, & HOCKINGS.

Q. 3749.

Question:—And in that country where there is a good deal of rock would not the sinking be pretty hard?

Answer:—Yes; the ground there is harder than usual. At the Day Dream they had rock and also at Purnamoota. Although the wire has only to be carted a short distance it has to come by road from Adelaide.

REPLY.

Mr. Hanna is evidently incorrect, since the rail has been open to Terowie ever since Silverton has been in existence, and for some time past the rail has been open to Broken Hill.
This reply is superseded by the revision of words.

Q. 3810 and 3811.

Question:—Is there a ground-plate upon blocks?

Answer:—Yes; the cottages rest upon little blocks about 4 inches in diameter. There is a light deal flooring, and one partition which goes up about half-way to the level of the wall. They have iron chimneys and iron doors, that is as far as I can remember.

Question:—What would you estimate would be the cost of a building like that.

Answer:—From £40 to £50 I should think.

Question:—Do you think that such buildings as they erected are suitable for human beings to live in in that country?

Answer:—No, I do not think they are suitable at all.

REPLY.

The blocks referred to by Mr. Hanna are Mulga blocks, not less than 3½ inches diameter at small end, which wood is practically imperishable. The diameter of blocks was lessened on account of the reported expense of larger sized ones.

It may be observed that iron is very largely used for houses in both Silverton and Broken Hill. Attention is also drawn to the fact that the use of iron was suggested by the officers of the Department of Works for the erection of cottages. (See Blue Book, pages 135 and 136.) The specifications and plan of the cottages in the Silverton District have already been furnished to the Commissioners, who will therefore be able to judge how far Mr. Hanna's description of them is correct.

Replies to evidence given by Mr. Road-Superintendent Adams, before the Royal Commission re Tanks and Wells.

Mr. Adams' evidence, Q. 3858.

Question :—Mulya Tank ;—do you know if this tank has been filled ?

Answer :—I was told by the caretaker that there were 12 feet of water in it at one time.

REPLY.

The record of the depth of water, since the date of transfer to this Department, is as follows :—

| 1887. | Depth. ft. in. | Rainfall. | 1888. | Depth. ft. in. | Rainfall. |
|------------------|-------------------|-----------------|--------------|-------------------|-----------------|
| December 17..... | 3 6 | } 3 in. | March 3..... | 4 0 | } 20 pts. |
| „ 24..... | 3 6 | | „ 10..... | 3 9 | |
| „ 31..... | 6 0 | | „ 17..... | 4 6 | |
| 1888. | | „ 24..... | 4 3 | | |
| January 7..... | 6 0 | „ 31..... | 4 0 | | |

It will be seen from the foregoing extract from the records that in December last 3 in. of rain only ran 2 ft. 6 in. of water into the tank, and the rainfall of January, February, and May, 1888, each which exceeding 1 in. ran in no water.

Q. 3861.

Mulya Tank.

Mr. Woore :—So that the tank is not at all a useless work, as we have been led to believe ?

Answer :—No, I think the tank is right enough ; it will readily fill with ordinary rain by making the proper drains.

REPLY.

Certainly, no evidence to the effect of this being a useless work appears to have been given by this Department.

See Mr. Inspector Mackenzie's evidence, Q. 1648, where he states : “The tank has been put on rising ground. The drains have been so formed that water will not run in. It is on considerably higher ground, and the drains are so constructed that the water runs back. The water only flows in after backing up some distance. There is a better site within a quarter or half a mile of this place. I am confident from the rainfall this tank would fill if the drains were properly made.”

Mr. Overseer Cotton stated in evidence, Q. 2779 to 2783 :—

Question :—What is the name of the tank ?

Answer :—The Mulya Tank. As a proof of what I say, I may mention that it has now only about 9 feet 3 inches of water in it, or it had that on my last inspection. It has been constructed for over two years, and on one occasion there was a rainfall of 8 inches within a week over that portion of the country, and yet this tank did not fill. I am of opinion, therefore, the catchment area of this tank is too small.

Question :—Is it not a fact that the Road Superintendent in fixing the sites for tanks has to act in conjunction with the overseers of P. W. Places.

Answer :—Well, this is what we are told by the Watering Places Branch, but as a rule the Road Superintendents do never consult us. * * *

Question :—Could that faulty catchment area have been observed, in your opinion, by a man of ordinary intelligence ?

Answer :—I think so, because it has been handed over now to another Road Superintendent, who has been to a great deal of trouble indeed in getting a mile or more of drains into the tank. He told me he had very great difficulty in getting ground and utilising the catchment area, and running his levels so very low that they would be able to run the water in.

Q. 3932, 3933, and 3936.

North Roto Well.

Question :—What was the cost of the well, do you remember ?

Answer :—I cannot say just now. I think the cost was somewhere about £1,000.

Question :—But what was the cost per foot ?

Answer :—I think it was about £2 15s. per foot as far as I can remember.

* * * * *

Question :—Does that price mentioned include everything about the well ?

Answer :—No, only the timbering and shaft.

REPLY.

The cost of the well, as given in the Works return on page 270 of Blue Book, was £1,266 16s. 3d. The well is 167 feet deep, and at £2 15s. per foot would cost £459 5s., leaving a balance of £806 for whim, tank, troughing, &c., or rather more than we estimate the whole outlay at the well should have cost.

Replies to Mr. Road-Superintendent Coleman's evidence before the Royal Commission re Tanks and Wells.

Mr. Coleman's evidence, Q. 4014 to 4022.

Mr. Coleman states:—Of course the Mines Department are very particular when taking over the works to have the embankments all square and level throughout. They insist, when the works are being handed over to them, there shall be this extreme nicety and finish in the work.

Question:—After it has been passed by the Inspector?

Answer:—Yes.

Mr. Woore:—Can you mention any particular case where this has occurred?

Answer:—Yes; it occurred in connection with Mulga No. 5 Tank, on the road from Byerock to Brewarrina. This particular tank had been completed, but had not been taken over from the contractor by the Works Department. Previous to our visit with Mr. M'Kenzie, an overseer of Public Watering Places, the rain storm occurred and scoured the embankments, also causing a settlement in the top, and Mr. M'Kenzie would not take the work over, although I promised to make everything good. This was some six months ago, and the tank remains in our hands now.

Question:—Did this scouring that you mentioned seriously affect the tank in any way, or did it merely affect its appearance?

Answer:—It merely affected its appearance. The tank itself was in no way affected by it.

Major Penrose:—I notice that Mr. Waddell mentions this tank as having been completed for some time, but that it was not in order;—is that the explanation?

Answer:—Yes; while we were there the engineer broke the feed-pipe of the boiler. Everything else was in proper order. We guaranteed to fix up everything if they would take the work over, but they would not do so. The consequence of all this is that the Mines Department have lost over six months' revenue from the tank. I went over to this tank to effect a transfer. I approved of the works as carried out by the contractor, but after this the Mines refused to take it over.

Question:—Then, in your opinion, this slight damage to the feed-pipe would not have affected the tank as a public watering place?

Answer:—No; besides we guaranteed to put everything in working order. In fact, we would have had to do so.

Mr. Woore:—And why has this delay of six months occurred?

Answer:—The Mines officer never visited the place since.

Question:—Have you reported the tank as complete and ready to be handed over to the Mines Department?

Answer:—Yes; several times.

Question:—And have you had any intimation from the Mines Department, or from your own that they declined to take over this tank?

Answer:—No; and I do not know what reason they may now have for not taking it over. I had a memorandum the other day from the Mines Department asking when the tank would be ready to be handed over, and I replied that it was ready six months ago.

REPLY.

With reference to Mr. Coleman's statement in evidence, on page 49, "that the Mines Department are very particular when taking over the works to have the embankments all square and level throughout. They insist when the works are being handed over to them, there shall be this extreme nicety and finish." I beg to quote, for the information of the Commission, an extract from the instructions to overseers or inspecting officers, printed on page 26 of the pamphlet containing the Act, regulations and instructions:—

"VIII.—Inspection and taking delivery of new works.

"21. When instructed to take over any new public watering place from the Department of Public Works, the overseer will be careful to ascertain, by personal inspection and actual trial, whether the works are in good repair and working order, suitable for the speedy and efficient supply of the public requirements; and he will forthwith submit, for the information of the Chief Inspector, a full and correct report on such works on form C; to this must be attached, on form D, a statement of all items, and a receipt signed by both officers party to the transfer."

The Commissioners will see that these instructions are specially addressed to overseers, but since the appointment of inspectors, have been made applicable to them, and these gentlemen are instructed to carry them out.

With regard to the Mulga No. 5 Tank, my minute dated 30th November, 1887 (Blue Book, page 163), contains a full statement of the case to that date.

Mr. Mackenzie was aware of the delay that had previously occurred in effecting some necessary alterations and repairs to other works in Mr. Coleman's district (see Blue Book, pages 163, 164), and was on that account perhaps more particular in seeing that all appliances were in perfect order before taking delivery; but when inspecting, on the 24th September, 1887, Inspector Mackenzie distinctly states in the concluding paragraph of his letter that this tank (Mulga No. 5), "was not ready to take over at the time of my visit, but Superintendent Coleman has promised to have everything ready in a month's time."

No further communication having been received from Mr. Coleman, or the Works officers, on the 16th March, 1888, this Department inquired from the Works Department when the tank would be ready to hand over. Mr. Coleman replied, on the 3rd April, that it had been ready since October, 1887, and further

Mr. Coleman's evidence.

further added that, owing to defects, the transfer was not made in September, 1887, the date of Inspector Mackenzie's visit. This reply was forwarded from the Works Department to us on 10th April, 1888. On 12th April Mr. Mackenzie was wired to take over this tank without delay, and put a temporary caretaker in charge. On 17th April Mr. Mackenzie wrote from Walgett that, though the tank had been ready to hand over before he left Bourke, he had received no communication from Mr. Coleman to that effect, and that he had been unable to take delivery at that time, having been called to Sydney to attend the Royal Commission *re* Tanks and Wells. Inspector Mackenzie then proceeded to Bourke to perform his duty, but before fulfilling it, was compelled from private reasons to resign his appointment.

Mr. Coleman's allegation that the Mines Department have lost over six months revenue from the tank, can, I think, only reflect upon his own Department. If water was required by the travelling public, the rates might, and should have been, collected by their caretaker, as it has been done in other instances, and handed to this Department for transmission to the Treasury.

Q. 4039, 4043, and 4044.

Major Penrose:—It has been said that the inlet from the silt tank to the main tank is in many instances defective in construction and design. You will see in his evidence Mr. Mackenzie says in his report:—"In conclusion I wish to bring under your notice the state of inlet from silt to main tank, at some of the tanks in my district, which in many cases is a narrow cutting through the earth-works of embankments, which in times of flood keeps cutting away and filling in, and consequently all loose earth is carried into the main tank. This could be remedied by having the sides of the embankments logged or stoned, to prevent cutting the tanks. Where this is most required are, Hilman's Tank, Booroodara, and Mulga No. 5"?

Answer:—A great deal depends upon caretaker or lessee. In many cases this shoot is impeded considerably after rain; when once you get rain scouring takes place, and unless it is properly attended to at once the thing will continue. In other cases the caretakers put stones to prevent scouring; they do this in their spare time. A little care on the part of the caretakers would prevent any danger whatever, and would keep the shoot in proper order.

* * * * *

Question:—In cases where the ground is liable to scour away much, do not the Works Department protect it in some way?

Answer:—Yes; we cut out the drain, and board it over after making provision to prevent scouring in inlet shoot. What Mr. Mackenzie means here, is actual scouring of open drains, and I think in these cases it is necessary to put stones.

Question:—Should not this be done before it becomes necessary to hand the works over to the Mines Department?

Answer:—No; I do not think so, because it would not take them much trouble to do it.

REPLY.

I venture to think this upholds my objection, viz., faulty construction. Why should not a provision against scouring be made by the constructing officer before handing over to a caretaker, whom he subsequently condemns for neglect, when the damage done is the result of his own want of foresight. Mr. Coleman further explains that Mr. Mackenzie meant quite a different thing to what is stated in his report.

In regard to the last reply quoted, this appears to me an extraordinary view for the constructing officer to take, and confirms the opinion that if we are to be asked to accept the responsibility of so much preliminary work we may as well accept the responsibility of the whole. With respect to Mr. Coleman's opinion, that it would not give us much trouble to protect the shoots, I may add that it would give us much less trouble to take the whole responsibility and construction.

I may further add that the objection raised by this Department is that the design of these shoots is bad.

Q. 4046 to 4049.

Question:—Now, as to the excessive cost of construction of drains?

Answer:—I have no information on that subject.

Major Penrose:—What price do you pay for construction of drains?

Answer:—From 14s. to 15s. per chain; the cost averages from 10s. to 15s. per chain.

Question:—What are the sections?

Answer:—From 12 to 15 feet wide and 9 inches deep.

Question:—And is that the usual price for these drains?

Answer:—Yes; that is the usual price.

REPLY.

I maintain the cost is excessive for each chain of drains, 15 feet wide, 9 inches deep (the maximum quoted by Mr. Coleman). About 13 cubic yards are removed, and for this 15s. is paid. I have, however, no recollection of ever having seen either a 12-foot or 15-foot drain in the Bourke district. I consider the price paid about double what it is worth.

(See also Mr. Hanna's evidence *re* price of drains, Q. 3705.)

Mr. Coleman's evidence, Q. 4108 to 4110.

Question :—Have you ever found repairs were carried out by the Mines Department which you considered were unnecessary or detrimental?

Answer :—The only repair that I noticed was this alteration to the troughing.

Question :—That, I understand, has to be carried out by the Mines Department?

Answer :—Yes; on the Tindarie Tank they have altered the rail by placing it down the centre.

Question :—And the Works Department are carrying that out now?

Answer :—Yes; it was done as an experiment by the Mines Department.

REPLY.

This "experiment" is now being carried out at all the tanks in the Cobar district by the Works Department. Or, in other words, they have adopted the alteration we decided our caretakers should carry out under the supervision of the overseers; and are adding a further expense by having this done by contract.

Q. 4126.

Question :—Will you now tell us when you lay out the site for a tank what course you adopt?

Answer :—I test the lay of the country as to the catchment, and then I take general opinion upon it; but I use my own judgment, combined with general opinion. The people who have travelled the country for years ought to know the chief catchments. I then peg out what I consider a reasonable site of a catchment to fill the excavation. You cannot well take a long time in getting information; but I get what information I can from outside and take my own.

REPLY.

It does not appear that Mr. Coleman considered the use of a level necessary in his selection, but relies upon his judgment (which, I suppose, means his eyes), and general opinion, the result is the selection of the site of the Mulya Tank.

Q. 4140.

This statement of Mr. Mackenzie's read by Major Penrose was misreported; he spoke of the Bocoondara Tank, no Kerrigundi; so that Mr. Coleman's remarks do not apply.

Q. 4143.

Chairman :—Supposing a scheme were devised making it compulsory on drovers to pay for watering of their stock at the time of getting their permit to travel, would such a scheme be a good one in your opinion?

Answer :—It has always been my opinion that such a scheme would be a good one. It would do away with the necessity for keeping books. By not having to attend to this bookkeeping, the caretaker could be made more responsible, and it would give him more time to attend to his work.

REPLY.

This proposal would entirely upset the leasing of tanks, and making them revenue producing, and it would necessitate the continued employment of caretakers.

The last paragraph of Mr. Coleman's is in direct antagonism to Mr. Bennett and Mr. Wood, who both state that the caretaker has not enough to do.

Replies to Evidence given by Mr. Road-Superintendent Cronin before the Royal Commission re Tanks and Wells.

Mr. Cronin's evidence, Q. 4167.

Question :—Have you noticed much wash away in these tanks owing to the steep batters?

Answer :—Of course it would be called so, but it is merely a frittering away of the top soil on account of the water getting between the soil and the clay at a lower level than the natural surface of the ground. This slides to the bottom, and the tank forms its own batters.

REPLY.

Would it not be a saving of labour and therefore of money to give the tank batters their natural slopes at first?

Q. 4182.

Major Penrose :—With regard to this washing down of the batters, is not the duty of the caretaker to keep the batters up if he can?

Answer :—Most undoubtedly it should be.

REPLY.

I venture to think that after the Commission have inspected the Government tanks, they will be convinced that it would be impossible for one caretaker to keep the batters up. What has been done at the Black Swamp Tank is purely preventative of further injury. Fascines could not have been put in till the batters had begun to wash away.

Mr.

Mr. Cronin's evidence, Q. 4234.

Mr. Woore :—In the evidence of the Mines witnesses, it is said that gates of a very expensive character, and altogether too good for the purpose, are put up in caretaker's paddocks?

Answer :—With regard to the charge of the Mines Department that the gates are too costly, I think the onus, to a certain extent, rests with the Mines officers themselves. Because when Mr. Gilliat accompanied Mr. Wood to Black Swamp Tank in 1883 for the express purpose of taking delivery of the works which were completed, Mr. Gilliat spoke in a most favourable manner of the works at the Black Swamp Tank. And he made a special request that a gate similar to the one already constructed at the north-west corner of the works should be fixed at another corner of the paddock.

REPLY.

It is curious that Mr. Cronin should have made the same error as Mr. Wood in regard to the date of my inspection with them of the Black Swamp Tank. Mr. Cronin however is quite correct in saying that, when taking over this tank (17th Nov., 1884), I spoke in a most favourable manner of the work. I quote from my diary at that date :—

“After carefully inspecting the tank, I am very well pleased with it, Mr. Cronin, the constructing officer, deserves great credit; it is the best I have seen of the Works Department's construction.”

No mention is made of a gate in my journal, and all that I can recollect is that I made a request that a second gate should be erected for convenience of access. But I fail to see that my request for a gate is any justification of the price that is paid for it by the officers of the Works Department, any more than the application for a tank or a well would make the Department responsible for the tender that might be accepted by the Road Superintendent.

See also my reply to Mr. Wood's evidence on page 37 on this point.

Q. 4246 to 4252.

Major Penrose :—You stated just now that the Mines Department had erected a fence at a dam;—were fences at that time being constructed by the Works Department?

Answer :—I think so. I must say that this fence was constructed by the homestead lessee. The water flows out of the Yanko into the Colombo Creek, and at a point on a branch of the creek a dam was made. The Mines Department took it over, used it, and made a public watering place of a big waterhole at the back of it.

Question :—Can you explain why it was the Mines Department fenced this place when the Works Department fenced all the others?

Answer :—I can only account for it in a certain light. They were laying charges of extravagance against the Roads officers, though at the same time their own Department had been guilty of paying a caretaker 8s. a day for over two years at this watering place, when the revenue from it was only a few pounds per year. And they did this while there were people in the locality who were only too anxious to give a decent rental for it.

Question :—All I wanted to know was why the Mines Department fenced this one watering place (Colombo Dam) when you fenced all the others?

Answer :—Well the reason for that I really do not know, but as I have said at this dam a caretaker was placed by the Mines Department and kept there for two years at about 8s. per day when the place could have easily been let. To my knowledge people were anxious to get a lease of it. I know that similar things have occurred at the Pretty Pine Well near Deniliquin and at the Wangonella Well, 30 miles north of Deniliquin.

Question :—You say that all these places might have been leased at a fair rental?

Answer :—Yes; and in support of this statement I wish to hand in a letter from Mr. H. J. Poynter, of Wangonella, showing that the Government could have derived a revenue from this well by leasing it.

Dear Sir,

Yours to hand *re* Mr. Laing; he was appointed caretaker Government well, Wangonella, in September, 1886, at a salary of 8s. per day. I tendered for the well on 11th May, 1886. *Re* charge by Mr. Laing for stock, he used to charge 1s. per head per night; what he used to charge by the week I do not know—2s. 6d. per head I believe, but am not certain. I could not say what number of stock he used to have. I would be willing to give 2s. per acre per annum for the paddock and to keep a man there as well to keep everything in good repair.

I am, &c.,

H. J. POYNTER,
Wangonella.

Edward Cronin, Esq.

Major Penrose :—Was the tenant's lease fenced off at that time?

Answer :—Yes. It was being fenced.

Question :—Were tenders called for by the Mines Department?

Answer :—Yes, and about £70 was the highest bid.

Question :—How, then, do you account for the watering place not having been let?

Answer :—The highest bidder was the manager of a station who afterwards refused to take it up, having himself found water close by; but I believe there were other tenders a few pounds under his. They could easily have obtained a revenue of about £40 a year for it.

REPLY.

(P.W.P. 88-3,378.)

Copy of P.W.P. 88-2,899—Minute by Mr. Gilliat, 16 May, 1888.

Road Superintendent's evidence before Royal Commission on Tanks and Wells *re* leasing Public Watering Places.

The Royal Commissioners here question Mr. Road-Superintendent Cronin upon the subject of leasing the public watering places—a matter upon which Mr. Cronin has no knowledge. His evidence, therefore, gives an entirely mistaken impression.

Any

Mr. Cronin's evidence.

Any delay in leasing these watering places has been occasioned by the following circumstances:—

Section 3 of the Public Watering Places Act 48 Victoria No. 16, gives power to make reserves for the purpose of establishing public watering places, but section 2 gives the interpretation of reserves as all such places as shall be declared travelling stock and camping reserves.

Of these reserves for the purpose of travelling stock and camping there were but few in existence, and the Land Act of 1884, 48 Victoria No. 18, section 109, provides that such routes and camping places should be declared by the Local Land Board. It is, therefore, necessary, owing to the insertion of the word "and" instead of "or" between the words travelling stock * * camping reserves in section 2 of the Public Watering Places Act, that before a public watering place can be notified by this Department it must go before the local Land Board and be Gazetted as a travelling stock and camping reserve by the Department of Lands.

Tenders have been called for watering places before they were notified as such. It was evident the leases would not be legal instruments, and the Department decided to discontinue the practice until after notification by the Land Board.

Mr. Cronin's statement with regard to the wages paid at Colombo Caeek is equally inaccurate. Ashcroft, the caretaker was employed at 9s. per diem, to find horse and dray to snag the creek from 1st February, 1886 to 1st September, 1886. On the 1st September, 1886, the wages were reduced to 6s. 6d. per diem, at which rate they were continued until the dam was leased, on 17th January, 1888. Caretaker Lang's wages at Wangonella well are 8s. per diem, but for this he has to find horse and harness.

HARRY GILLIAT,
Chief Inspector, Public Watering Places.

Q. 4283.

Question:—It has been stated that a perfectly good whim can be put up for £50?

Answer:—Well I daresay a Chinaman could put one up for £30. There is no doubt a station owner could put one up cheaper than Government, but I do not think the expense of our whims could be lessened with advantage, as the work required of them is such as to necessitate a very strong and permanent structure, and of a different class to those in use on stations. In some instances I passed square timber because it would be easier on account of the long distance it had to be carted. Mr. Gilliat specially approved of the Berrigan and Murray Hut wells, referring particularly to the top works.

REPLY.

With respect to Mr. Cronin's statement I again quote from my diary written on the date these wells were inspected, viz., 3rd December, 1884.

"Whim and all timber works of the best description. Horse walk well made. Capital shaft, double timbered and copper fastened all the way down. The head works are excellent. Troughing and fencing better than any I have yet seen. These two wells are most creditable to Mr. Cronin."

I spoke advisedly as to their being the best finished wells that I had seen, but in no way did I give any approval of the cost at which they were constructed; that was a matter upon which I had no information.

The information since received is given on page 270 of the Blue Book, where the cost of the Murray Hut and Berrigan well is lumped at a sum of £2,225 15s. 3d.

Q. 4294 & 4295.

Question:—Now about the hutting for caretakers. It has been stated here that the Works Department were about to construct caretaker's huts at an excessive price which the Mines Department objected to, and the huts have since been erected by the Mines at about half the price which the Works Department usually paid.

Answer:—Well, that is not borne out by any work they have done in my district. In fact I think the hut erected at Wangonella will carry with it a great waste of money.

Question:—What did it cost?

Answer:—I can only go by what I have heard, that this hut cost about £48 5s. It is built of two rooms, with galvanised iron roof, covered in with weatherboards. The huts are altogether and in every way inferior to the huts we have erected in the Deniliquin district. * * * Comparing the design adopted by the Works Department with the design carried out by the Mines, I should say the hut put up by the Works Department is certainly worth double the other. The amount stated by the Mines Department of the erection of this hut might I think be added to it, the value of the caretaker's time, and cost of bricks which were obtained gratis. And yet the building is of a rickety nature, for if you put your hand against it, you would knock everything off the shelves, and it is hardly able to withstand the force of the wind.

REPLY.

The Mines Department made no statement that they could erect huts at half the price usually paid by the Works Department. In the Blue Book, page 137, the Mines distinctly indicate the class of hut that appeared most suitable, and on page 139, after having been invited by Mr. Bennett they expressed the opinion that the tenders in the schedule furnished by the Works Department were too high for the services required. The Mines Department expressed the opinion that £50 would be a fair average price. An extract from a letter from Mr. Overseer M'Cullough, under whose supervision the cottage in question was erected, dated 30th May, 1887, (P.W.P., 87-2,309) states:—"The house is in every way as good as those at the Black Swamp and Pine Ridge, and Mr. Cronin considers exceedingly cheap." Papers showing specification, cost and certified vouchers have been submitted to the Commission previously, showing that the cottage was not erected by the caretaker. The prices quoted (in Mr. Cronin's district) in the Works Schedule, Blue Book, page 138, are from £69 to £87 10s. Mr. Cronin considers that the cottages intended to be put up by him were worth double the price paid by the Mines, but no reason appears for paying double for what is not required for the service.

Mr.

Mr. Cronin's evidence, Qs. 4301, 4303, 4304.

Question :—Now with regard to the necessity for caretakers. Is it not desirable that lessees should be substituted for caretakers, and that the latter should be done away with in the management of the works?

Answer :—Where the works can be leased they should be leased without delay. * * *

The Chairman :—And the matter has been broached. At present the caretakers must be men of some skill, because they have to keep rather intricate accounts, but there has been a method mooted by which this could be done away with. This is to compel the drovers before they leave, and when obtaining their permits, to pay a certain sum for using water in the districts through which they have to pass, whether they used the water or not.

Answer :—Yes; I believe the idea originated with Mr. A. P. Wood, and that he mentioned it to Mr. Gilliat when at Black Swamp.

Question :—From your knowledge of the country do you think this desirable?

Answer :—It is undoubtedly the best course to adopt.

REPLY.

The practice of collecting watering charges on application for permits would entirely do away with the system of leasing, which is the object for which this Department has been working. Mr. Cronin commits himself to the approval of both courses, that of leasing such Public Watering Places as could be leased, and compelling drovers to pay for the use of water when taking out their permits. It must be evident that both courses are not practicable at the same time. The lessee could certainly charge a drover for any water obtained, in spite of his having obtained a permit to water. The principal objection to the plan suggested is that it would necessitate the retention of caretakers, while the practice which is gradually being carried out by the Mines Department, will place very shortly the great proportion of these works in the hands of lessees, and relieve the Government of further expense.

Replies to evidence given by Mr. Road Superintendent Smyth before the Royal Commission re Tanks and Wells.

Walla Walla Tank.

Q. 4333 to 4336.

Question :—What is your opinion with regard to the capacity of this tank,—do you think it is altogether too large for the purpose?

Answer :—I do not think it is. There is no use in putting down a tank unless you put down one of a respectable size. The only water within 3 miles of this tank is the Billabong Creek, and that gives out sometimes. It is a great God-send to the people in the neighbourhood, and there is a small township close by. This is the only water that is permanent, and when the creek dries up there is simply no water in the neighbourhood, and the inhabitants are entirely dependent upon it. Therefore I do not think the tank is in any way too large. There is a large swamp near the tank which has been filled this season for the first time in many years. There is now no more than 4 feet of water in it, and in summer the depth would not be more than 6 inches.

Major Penrose :—I notice in Mr. Boulton's report it is said, "The tank is almost surrounded by water. The creek which flows down to the tank is now running a strong wide creek (30 feet) down the byewash into the Walla Swamp, in which the water is now backed up within a few feet of the end of the trough. In view of the fact that the takings for stock watering here since the tank was made are almost nil, and that the water in the swamp will, in my opinion, last for two years or more, it is a matter for consideration whether any additional expense should be incurred at this place." * * *

Question :—You do not agree with what is said there?

Answer :—No, I do not; there is only 4 feet of water in the place, and that would not last through a dry summer. The evaporation would be at least half an inch besides the soakage. Now, with respect to the statement made in Mr. Low's letter of 26th July, and in his report, that has only connection with water running round the tank after there has been a rainfall of about twenty-four hours, which occurred about eighteen months ago. The cause of this was the bursting of Petrie's Creek above the site of the dam, a thing which could not have been foreseen.

REPLY.

The accompanying letter from C. H. Douglas, Esq., J.P., the owner of Walla Walla Station and chairman of the Albury Stock Board, is submitted, and appears to corroborate the views of this Department:—

(P.W.P., 88-3,086.)

James W. Boulton, Esq., Public Watering Places, Mines Department, Sydney.

Dear Sir,

Walla Walla, Albury, 23 May, 1888.

In reply to your letter of the 21st instant, I beg to bring before your notice the following facts regarding the Walla Swamp and Petrie's Creek which flows into same, and which also supplies the Government tank leased by myself and brother. The water now in swamp covers an area of nearly 700 acres, varying in depth up to 6 feet, and will, with the help of ordinary winter rain, last for at least two years before drying up, even should comparatively dry seasons set in. The swamp was so full that for three months during last spring it overflowed and flooded a large area of country, and made the roads in its vicinity on north-west side quite impassable, and has remained full all summer. Petrie's Creek, which fills it, ran nearly constantly all last winter, and continued to do so up to the end of last year. The bursting of a dam thereon in no way affected or caused its continued running; sixty dams bursting on a creek like it would not have been nearly sufficient to thoroughly soak the earth over, even the half area of said swamp. Before the Walla tank was made a spring existed

Mr. Smyth's evidence.

existed, and still flows across main road from Jindera to Walla Post Office or township, about $2\frac{1}{2}$ miles south of same, at which spring a large number of the farmers drew their water supply for stock and homesteads. The Billabong Creek also has never actually been dry for very many years, the farmers and residents always being able to obtain water at it in any quantity in the driest season known for twenty-five years, the distance from tank to Billabong being something under 3 miles. When the Walla tank was proposed I recommended a dam, the earth forming it to be taken from bed of creek; in fact, forming tank (say) 15 feet deep, which would have thrown the water back at least a mile, and could have given a splendid permanent supply at the small cost of £100. A fence placed round main tank and dam, 20 yards of troughing, and a little spouting, fed by a common Douglas pump, costing £4, would have been perfectly sufficient for all requirements. My proposal, I believe, was recommended by the then District Surveyor, Mr. Wood, of Albury. I may mention that, as one of the lessees of Walla Public Watering Place, over which nearly £2,000 has been squandered, and for which a rental of £50 per annum is paid, that from the commencement of lease until now—a period of eighteen months,—not a penny has been taken or water supplied, neither do I expect during the currency of the lease (five years) one farthing will be taken, as it is not likely that drovers and teamsters will pay for water when plenty can be had free a mile or so in any direction from said tank. From 4,000 to 5,000 yards is in this district considered a large tank, and quite sufficient to water 7,000 sheep daily through the driest year.

I am, &c.,
CHAS. H. DOUGLAS.

Q. 4338.**Hovell's Dam.**

Question:—Now, with reference to Hovell's Dam, it has been said there has been a great waste of money here by cutting a bye-wash through the rock when the natural bye-wash would have sufficed?

Answer:—Well, there was a certain amount of material required to form an embankment, and I saw no reason why we should not take it from the hole, and by making this bye-wash through the solid rock to get it there rather than elsewhere, possibly some distance away. We thereby made a much safer bye-wash than by letting the water run round the other way. And for this reason, that supposing the natural bye-wash had scoured out, as would most certainly be the case, the level of water in the dam would be lowered to a corresponding extent; supposing the creek were to come down and scour out 3 or 4 ft. deep, that would lower the water to a corresponding extent.

REPLY.

If a certain amount of material was required for the embankment, which I presume is the dam, I venture to think that the usual practice of obtaining it from the bed of the creek, and thereby increasing the storage capacity would have been the preferable one rather than going to the heavy expense of cutting a bye-wash through solid rock.

With respect to the use of rock or shale for a dam, the practice is so completely in defiance of all rules of hydraulic engineering that I must confess I am surprised it should be suggested by Mr. Smyth. The only place where such material could have been used with safety would be as pitching for the clay surface of the dam, and, if so used, the fact would still be evident. I am further informed by Mr. Boulton that the spoil from the bye-wash is piled in irregular heaps below the dam and on each side of the creek.

See Mr. Low's evidence, Q. 1172 to 1200, and Mr. Boulton's evidence, Q. 593 to 598.

Replies to Evidence given by Mr. Road Superintendent Stillwell before the Royal Commission re Tanks and Wells.

Q. 4407 to 4410.

Question:—Have any sites selected by you been objected to by the Mines Department as unsuitable?

Answer:—No; there has been no objection made directly to me, but I see in evidence that Mr. Low stated that Dowdigan was not a good site.

Question:—Why was the site of this tank alleged to be a faulty one?

Answer:—The objection was to the catchment—that it was not sufficient, in his opinion. I think it was Mr. Low or Mr. Boulton who said that.

Question:—Is it a fact?

Answer:—No; it is not. In my opinion the site is a very good one; and I may say that it was approved of by Mr. Cronin, who gave evidence here yesterday.

Question:—Is it the best site to be had, all things considered?

Answer:—Yes; it is at the junction of the stock routes, and is the best site we could obtain there. Certainly a better one might have been obtained further on; but it is the best site, and that satisfied all requirements.

REPLY.

Mr. Low said in his report which he read to the Commission, Q. 1096:—

“The site is certainly not a good one. A much better one could have been procured within half a mile. The present excavation will require a large outlay for drains, even if it can be filled with a fair rain. *Drains*: There were 50 chains 6 feet x 9 inches. Although there had been heavy rain shortly before my visit, there had run no water into silt tank; in fact, they never will, as both drains in some places were full of water and quite dry near to tank.”

Mr. Stillwell, however, practically admits Mr. Low's statement that a better site could have been procured when he says, “Certainly a better one might have been obtained further on”; and if, as Mr. Low states, the distance was only half a mile, which would not have effected the position as regards the stock routes, it is to be regretted that Mr. Stillwell did not give some more conclusive reason why the better site was not adopted.

Mr.

Mr. Stillwell's evidence, Q. 4412 to 4417.

Question :—We will take the Ivanhoe tank first; strong complaints have been made with respect to Ivanhoe tank, complaints which I presume you have heard of, or read in evidence.

Answer :—Yes; I may state first concerning this Ivanhoe tank that another site was first chosen about $1\frac{1}{2}$ miles away from the township by Mr. Wood, in conjunction with Mr. Gordon. The land on which that site was situated was selected by the squatter who took it up as a conditional purchase. On account of this we were prevented from proceeding with the works. Another site had consequently to be chosen, and that in the township was adopted as the best alternative site.

Mr. Woore :—Was the township a surveyed township at that time?

Answer :—It was. At the time there was no objection on the part of the people. I spoke to Mr Williamson and others, and they concurred that it was a suitable site, and would be advantageous.

Question :—Was that the general opinion of the people in the locality?

Answer :—Yes; so far as I could ascertain it was. I heard nothing to the contrary until some time after the work had been in progress. The site in the township was the only one available without going below and getting the drainage of the town. At present we have no drainage from the town at all. It is on the stock route, at the junction of the roads Hay to Wilcannia and Balranald to Ivanhoe. It is also in a position where it affords a suitable supply for the township. In selecting the site I drove round and examined all the suitable places, and conferred with most of the residents. So far as I could ascertain all the residents concurred that it was the best site available. When the work was in progress I heard indirectly that the townspeople were raising objections to the tank on account of the obstruction it would cause in bringing stock through the township, and also because it occupied an area that might have been sold for business purposes. One of the drains to the tank was afterwards modified, so that the allotments in the township might be sold if necessary.

REPLY.

The Ivanhoe tank was selected and excavated upon the surveyed allotments of the township. Stock desiring to water have to pass along the main street to reach the troughing. The annexed statement, P.W.P. 88-3,237, from G. Williamson, Esq., J.P., of Ivanhoe, shows his impression of what was the general opinion of the residents in respect to that site:—

P.W.P. 88-3,237.

Comments on extract from Mr. Stillwell's evidence before the Royal Commission *re* Ivanhoe tank.

At the time of Mr. Stillwell's visit to Ivanhoe for the purpose of choosing site for tank the township was surveyed. Mr. Stillwell and Mr. R. C. Webb, Kilfera, came to me asking my opinion, and in response I went with them, showing what I considered a more suitable site than the proposed one in the township, namely, a flat situated about $1\frac{1}{2}$ mile from the town, but which was at once put out of the question by Mr. Stillwell as being too far away. We did not visit the spot originally chosen by Mr. Gordon, and which could not possibly have been better chosen, as Mr. Stillwell knew it perfectly well.

The general opinion of the residents was never in favour of the present site, although I said, and I daresay others said, that if it was absolutely necessary that the tank should be in the town the present was the best available; but we were never in favour of the present site.

Mr. Stillwell chose the site and engaged men to sink trial shafts, and returned in two days to inspect the result, which in all cases was known to be unsatisfactory, the sand brought up being of a kind never known to hold water without much extra trouble in puddling, &c.

Some of the drains constructed I consider quite unnecessary, as well as positively dangerous, in cutting across three roads in two places each; and I remonstrated with Mr. Stillwell on the subject, and he then said he would have the drains filled in with stones at the crossing places, which was done.

Some of the drains are totally unnecessary in my opinion. The drain referred to as being close to Cobb & Co.'s stables is not now used, I believe. At present no drainage from the township flows into the tank, but as the northern drain runs through a great many surveyed allotments, there is nothing to prevent these allotments being drained into the tank should they ever be built upon, as is of course very likely.

I never heard that levels were taken in making any of the drains, and the northern drain, I should say, was defective from a point at the back of the police barracks to its termination, as the land has a downward tendency all the way, and I should think a cutting 3 feet deep would only make matters worse.

I do not think any loss of water was ever occasioned by neglect of drains, but might have been caused by some difficulty with the valve, but cannot see that any water should be lost before the tank is filled, unless the tunnel leading from silt-tank into main tank is not large enough.

I may say in conclusion that I believe none of the residents ever regarded the present site of tank with approval, but as it seemed our only chance of getting one at all, no one cared to actively oppose it. Also on my speaking to Mr. Stillwell on the subject of the drains, telling him that I believed that should any accident happen in consequence of their dangerous state, the Government would be actionable, he gave me to understand that having the tank here simply reduced the town to the position of a public watering place for stock, doing away with any claims we might have to its being recognized as a town. If such be the case I consider that it was only Mr. Stillwell's duty to have informed the inhabitants of the town of the probable consequences of having the tank in the township, seeing that many of us have gone to great expense and trouble in erecting places of business and improvements generally.

Ivanhoe, 28th May, 1888.

GEORGE WILLIAMSON.

Mr. Williamson's memo. further confirms the evidence given before the Commission by this Department and the statements made in Blue Book, page 187, with reference to the drains. I may also add that the situation of Ivanhoe, at the junction of the main roads from Hay to Wilcannia, Balranald, and Paddington, will probably make it always the centre of a considerable population.

Q. 4418 and 4419.

The Chairman :—Is it a fact that the road crosses these drains at a number of places?

Answer :—It crosses the drains to the south once, but that is some half-mile from the tank.

Question :—Is it true that the drainage of Cobb & Co.'s stables will flow into this tank?

Answer :—No, the stables are below the drain; a piggery too has been spoken of, but that is also below the drain. There are no residences or buildings of any kind above the drain; I am positive of this.

Mr. Stillwell's evidence.

REPLY.

The following extract from Mr. Williamson's memo. will, I think, show that Mr. Stillwell is in error:—

“Some of the drains constructed I considered quite unnecessary, as well as positively dangerous, in cutting across three roads in two places each, and I remonstrated with Mr. Stillwell on the subject, and he then said he would have the drains filled in with stones at the crossing-places, which was done. Some of the drains are totally unnecessary in my opinion. The drain referred to as being close to Cobb & Co.'s stables is not now used, I believe. At present no drainage from the township flows into the tank, but as the northern drain runs through a great many surveyed allotments, there is nothing to prevent these allotments being drained into the tank should they ever be built on, as is of course very likely. I never heard that levels were taken in making any of the drains, and the northern drain, I should say, was defective from a point at the back of the Police Barracks to its termination, as the land has a downward tendency all the way, and I should think a cutting 3 feet deep would only make matters worse.”

Mr. Yeo also states in evidence, Q. 2684, “The road crosses the drains of this tank in four places, which have been stoned at a cost of £16 10s. or £17 each.” (See also Mr. Yeo's declaration, Q. 4501.)

Q. 4437 and 4438.

Chairman :—Now it is said here with regard to the same tank (Pulletop) that the water-lifting appliances are placed in the most unsuitable site, &c. ?

Answer :—The water-lifting appliances are in the lowest ground on one side of the tank, and there is no danger whatever of the water flowing under or around, so as to create a scour. There have been heavy rains since, but there has been no damage done to speak of. The drains were cut and the water diverted round, by the caretaker sending it down the service-tank and troughs, creating a slight scour round the service-tank piers. The caretaker should not have done this.

Question :—I see a serious complaint that this bye-wash is not excavated ?

Answer :—No. This is not a dam, and we do not excavate bye-washes round tanks. There would be no use in it; and if at any time the tank was full, and we found it necessary to prevent a further inflow, the water could be taken down the channel in the creek, which would be to all intents and purposes a bye-wash.

REPLY.

This tank has embankments on three sides only, and the water from the catchment is intercepted by two main drains converging at the silt pit on the upper or open side. Mr. Stillwell admits that the water-lifting appliances are on the lowest ground, and, when the tank is full, that they are liable to be flooded by every successive rain, as pointed out by Mr. Inspector Low, in his report read to the Commission, Q. 1096, must be apparent. Our reports show there was a heavy fall of rain in December last which filled the tank and overflowed around its embankments, the flood water submerging the troughs and scouring under the service-tank, and completely filling the silt-tank with silt. The caretaker was directed to block the main inlet with sand bags, so that he could clean out the silt-tank. Before this could be done a further fall of rain occurred, and the tank again overflowed, being full to its utmost capacity. The caretaker did stop the main inlet; if he had not done so the flood-water would have found its way around the embankment, injuring them, as well as flooding the troughing. There are instances, of which this is one, when even at tanks some provision in the shape of a bye-wash for waste storm-water is necessary, more especially where the drinking and lifting appliances have been wrongly placed on the lowest ground, and are liable, with heavy rains, to be flooded. I am informed by the local officers that the distance of the creek in which the small dam stands, and which Mr. Stillwell suggests should be used for a bye-wash, is about 20 chains from the tank, and that during the heavy rains referred to the overseer intercepted the flood-water collected in the creek above this dam, and permitted it to escape by a cutting below. The course which Mr. Stillwell points out should have been adopted to prevent the main tank overflowing. It was done, but the tank still overflowed from the storm-water over the remainder of the catchment area.

(P.W.P. 88-3,886.)

I, WILLIAM JAMES ELWORTHY, do declare, to the best of my knowledge and belief, that at Pulletop tank, after the rain in the latter part of 1886, the tank very soon overflowed, and it became necessary to cut a small dam about 20 chains away, in the channel of a small creek, which dam was directing all the water into tank.

The tank was then very much overflowed, and has been so ever since. Every shower puts some water in the tank, and, for the safety of the embankments, it is a matter how to provide an exit for rain water instead of means to conserve it.

This Pulletop tank requires constant care, and the man in charge has to be up and down on any night of heavy rain in case of accident.

At Mount Elliot tank the new drains made by the Works Department have proved almost useless, and, until some heavy rain in January last, no water ran in them. The centre drain runs out north-east from the tank and parallel with the fall; had it been cut eastward, then it would have answered the purpose as the original drain along road does, and which road drains have filled and kept the tank full.

When Mr. Inspector Low visited the tank, just a year ago, the new drains never had been useful, and the caretaker can certify to same.

At Pulletop tank the hose, I believe was not taken away by Mr. Stillwell till after shoots were put in corners, and it would have required three or four syphons to carry off what water fell on the embankments.

I was at Mount Elliot just after heavy rain, and saw what a long time the hose took to run water off, and how much attention it required.

Declared before me, at Narrandera, this }
3rd day of July, 1888,—

J. W. LEES, J.P.

W. J. ELWORTHY,
Overseer of Public Watering Places.

Mr.

Mr. Stillwell's evidence, Q. 4439 to 4443.

Pulletop Tank.

Question :—Another complaint is about these embankments. It being said that they have been "created" with no regard to being level; in fact, at the corner opposite, water-lifting appliances, lowest being 2 feet 7 inches lower than the middle of embankments thus further endangering water-lifting appliances. It seems that the embankments are said not to be level, and that they are lower where they ought to be higher?

Answer :—They are not quite level, but I do not think it is at all the case that they are lower where they ought to be higher. There are inequalities along them here and there, and the maximum would be 2 feet at the highest and lowest point. The work was not abandoned by the contractor. He left the embankments in an improper shape, and I had the matter rectified at his expense, but the embankments were cut thoroughly level on top. There is now no defect except as regards appearance.

Question :—The contractor was mulct in expenses through his neglect?

Answer :—Yes; the cost of the rectification of the embankments was deducted from his payment.

Mr. Woore :—Why were not they levelled up in the usual way?

Answer :—Well, I thought it would be putting the contractor to an unnecessarily heavy expense. We are generally taxed with being too strict with these embankments.

Mr. Woore :—If the contractor had gone on and finished the work as it now is, would you have passed it?

Answer :—Yes; I would.

REPLY.

The embankments at this tank, as previously stated, are upon three sides only, and it is at the S.W. end on the low land where the drinking appliances have been placed, as admitted by Mr. Stillwell on Q. 4434, that the embankment is complained of by Mr. Low as being 2 feet 7 inches lower than at the centre, a point where, from the formation of the ground, the water stands the deepest, and where the greatest strain is put upon the embankment. Mr. Stillwell's statements however appear to contradict each other. He states: "He had the matter rectified at the contractor's expense, but the embankments are cut thoroughly level on top," and that there is "no defect except as regards appearance." And yet he previously states that "there are inequalities along them here and there, the maximum would be 2 feet at the highest and lowest points," and he further strengthens this latter statement by saying, Q. 4442, "Well, I should have passed this, although the embankments were not quite level, &c." Mr. Stillwell admits the fact that the embankments are not level at this tank, and this I may point out is the cause of the great scour and of their washing away during heavy rains. Mr. Stillwell further admits the contractor was fined the cost of the rectification of the embankments, that amount being deducted from his payments, but at the same time it did not appear to occur to Mr. Stillwell that the maintenance of those embankments in proper order, and the additional expense in this direction caused by their defective construction was cast upon this Department.

Q. 4444.

Chairman :—Now, with regard to the Mount Elliot Tank drains, it is said they have been constructed evidently with little or no idea of what is required of a drain. These drains have been excavated down the face of a hill, and although my inspection was immediately after heavy rains I could discover no trace of water having run into these nor waterwash. Had one of these drains been extended about half-a-mile it would have caught the water in a good natural water-course, which in any ordinary season would be quite equal to filling this tank, thereby saving the outlay for what is and will remain useless.

Answer :—These drains have proved useful. They were cut in an oblique direction on the line of flow to prevent the interception of the water. The ground is very flat, and a lot of water is lost in slight depressions in the ground. The tank has been filled repeatedly, otherwise the drain spoken of would have been extended, but I found it unnecessary to do so. The tank is filled now, and has been since its construction. Therefore, a further extension of that drain would have been an unnecessary expense.

REPLY.

Mr. Low, in his report read before the Commission, asserts this drain is cut straight down a hill. He was not, however, examined upon the point. If the drain had been cut obliquely to the flow down hill, as Mr. Stillwell states, it would have intercepted the water caught and have been of value. (See also Mr. Elworthy's declaration in reply to evidence *re* Pulletop Tank, Q. 4438.)

Q. 4445 and 4446.

Question :—Now, with respect to the Hulong tank drain, Mr. Low says one is here so constructed as to run water from instead of to main tank. This showed plainly at the time of my inspection, owing to water lying in different parts of the drain, which had been banked up to prevent water running from the main tank. Were this drain opened up, and main tank full, I feel confident it would run quite one foot of water out. This means that the Hulong tank drains would run the water out of the tank instead of into it to the extent of one foot?

Answer :—The only reply to be given to that statement is to flatly contradict it. It is not the case at all. I took the levels for these drains myself. The swamp consists of Gilgai holes. The drains are cut through the hummocks and the embankments, and across the holes. The water remains in these depressions, and, owing to the negligence of the caretaker, the embankments at times practically break away, and the water escapes into the swamp that should have run into the tank, and would have done so in the ordinary course of things.

Mr. Woore :—Is it owing to the negligence of the caretaker?

Answer :—Yes, that the embankments give way is.

REPLY

Mr. Stillwell's evidence.

REPLY.

In reply to Mr. Stillwell's flat contradiction with respect to drains at this (the Hulong) Tank, I give here (P.W.P. 88-3,210 and 88-3,209) the declaration of the overseer and caretaker, which, I venture to think, taken in connection with the papers in the Blue Book, on pages 185, 186, will, perhaps, render it unnecessary for me to make any further remarks:—

Hulong Tank.

(P.W.P. 88-3,210).

I, WILLIAM JAMES ELWORTHY, overseer of Public Watering Places, Narrandera, do solemnly and sincerely declare that, on the 15th July, 1886, I took charge of the Hulong Tank from Mr. Stillwell, C.E., Hay (the representative of the Works Department). There was no water in the main tank at the time. The silt tank had a good deal of water in it, but not sufficient to put any depth in the main tank. The drains, 140 chains, are shown on accompanying plan marked red. After taking possession of the tank, and placing a caretaker in charge, it was found that the level of drains was most uneven, so much so that the caretaker had in several places to cut them much deeper in order to get a fall to the silt tank. There was some good rain soon after taking the tank over, and the caretaker told me the whole of this water was lost, it having a tendency to run to a small swamp at head of drain J to K. (See plan). The caretaker therefore had to block up this drain near its intersection with drains G to H, and by this means added to several days labour in cutting through uneven portions of other drains; the water when very high ran into main tank. Mr. Stillwell, some short time after, was at the tank during a storm, and the caretaker swears that, in consequence of what Mr. Stillwell saw, he at once put a man on to open up the embankment and lower the flume several inches, to try and feed the main tank. The tank is excavated on slightly higher ground than the swamp adjoining, and on Saturday last, 19th instant, I inspected the tank, and found the water in main tank level with the bottom of the flume, and therefore 2 feet below the ground surface. The water in the silt tank was 5 inches below this level, and, therefore, before the main tank could be filled up, it would require at least 2 feet 6 inches of water in the swamp. The caretaker's statement (sworn) is attached hereto, with reference to the defective levels, and this added to my statement, also my letter of 25th October, 1886, and the confirmation of same by Messrs. Low and Boulton (inspectors), should leave no doubt on the matter. I do not consider any negligence should be attributed to the caretaker. He did a great deal of work in connection with the drains; and the fact of the flume being lowered and a number of extra drains made, should be evidence that Mr. Stillwell desired to remedy some defect which he found existed, when, after a great deal of rain, so little water went into the main tank. The plan of drains will be found on next page. I make this declaration conscientiously, believing the same to be true. As witness my hand, this 30th day of May, 1888.

W. J. ELWORTHY,

Overseer of Public Watering Places, Narrandera.

Witness,—

J. W. LEES, J.P.

Appendix B.

The declaration of the overseer and caretaker with respect to Mr. Stillwell's evidence is submitted for the information of the Secretary for Mines.—HARRY GILLIAT, 31/5/88. The Under Secretary. Submitted.—G.H. (for U.S.), 5/6/88. Seen. They might be sent to the Commission, *re* Tanks and Wells.—F.A., 7/6/88.

Hulong Tank.

(P.W.P., 88-3,209, with P.W.P., 88-3,210.)

28 May, 1888.

I, SAMUEL LEIGHTON, caretaker of Hulong Tank, do solemnly and sincerely declare that at the time I took charge of the Hulong Tank on 15th July, 1886, I found it necessary after the rain to make several alterations in the levels of the drains, in order to get the water to run into the silt tank, and from thence to main tank.

In the diagram of drains sent to Mr. Gilliatt by Mr. Overseer Elworthy on 25th October, 1886, it will be seen that Mr. Stillwell had had several new drains made to try and secure the water.

It is a positive fact that the drains originally made caused the water to run from instead of to main tank, and as a proof of this, Mr. Stillwell on one occasion, when he was at the tank during a storm, saw the silt tank full and no water going into main tank; shortly after this Mr. Stillwell found it necessary to have the embankments opened, and the flume, which is 12-inch pipe, valve lowered 12 inches to run the water into main tank, which action on his part should be conclusive as to the defective level of drains.

The actual work I did at drains is as follows:—Drain A to B.—Started at head of drain and channelled it a distance of about 50 chains, and when within 3 chains of the silt tank I had to deepen the drain 3 feet to get the water to run into silt tank. Drain G to H.—I had to deepen this 3 feet near silt tank, and I had to close drains J to K at its intersection with G to H, as its original level was 13 inches below that of the main drain.

The statement that I showed negligence in allowing the banks of drain to fall in is untrue; the only drain that ever broke away is one of the last constructed, which, after being repaired by me, has not broken away since; this drain is P to Q. I further swear that Mr. Stillwell gave me orders on several occasions to do certain works; amongst which were, 1st, to paint the boiler red; 2nd, to paint the supply tank; 3rd, to throw up embankments in drains; 5th, and on one occasion when I found it necessary to temporarily block drain G to H, Mr. Stillwell came along and made me open it; the consequence was that the water receded from silt tank to swamp instead of going into main tank as it should have done, and it was at that particular time Mr. Stillwell gave his labourers orders to lower the flume.

And I make this solemn declaration, conscientiously believing the same to be true. As witness my hand this 28th day of May, 1888.

Made at Whitton, this 28th day of May, 1888, before me,—

L. H. W. CASPERSON, J.P.

SAMUEL LEIGHTON.

Q. 4448.

Tom's Lake Tank.

Question:—Then this tank is not in the swamp, but on the edge of it?

Answer:—Yes; it is in the swamp necessarily to obtain a catchment.

REPLY.

It is perhaps only necessary to reply to this statement briefly; it must be apparent that water flowing into a swamp can be intercepted before reaching it; consequently it is not necessary to put the tank in the swamp to obtain a catchment, and I may add further that to do so where stock are to be continually watered in large numbers is not such a judicious course as placing it upon sounder ground, and intercepting the storm water.

Mr.

Mr. Stillwell's evidence, Q. 4449.

Question :—How did you arrange that the troughing was not in the swamp?

Answer :—The troughs are on the edge of the swamp and clear of bad ground, and stock going to the troughing can go down on sound ground.

REPLY.

Mr. Stillwell's reply conveys a wrong impression in saying the troughs are on the edge of the swamp and clear of bad ground. Mr. Boulton reports that the troughs are for the most part placed on made ground on the edge of the swamp and this has been banked up to the level of the troughs so that in wet weather it backs the water blowing from the road; this when cattle and sheep are watered becomes very boggy. The swamp is in black soil.

Q. 4459 to 4465.

Chairman :—The next case mentioned is the Box Creek and dam—are these in your district?

Answer :—Yes.

Question :—This is what is said :—“ One embankment here forming a dam would have been quite sufficient for requirements, instead of the large outlay for tank and dam. In this opinion I am borne out by Mr. Lindsay, manager Til Til station.”

Answer :—There is no dam here at all. The tank is constructed in the shallow bed of Box Creek. It has embankments round on four sides. The embankments have the effect of damming the creek.

Question :—Is it desirable to have tanks put in the beds of creeks?

Answer :—No; but in this case the country is very flat.

Question :—Then it is further said about the matter :—“ The embankments around excavation are of no practical use and must have increased cost of tank considerably. The site would have been a more favourable one and more water conserved had a simple dam been constructed down creek about $\frac{1}{2}$ of a mile nearer to Thompson's Hotel.” I believe you have already explained about the embankments that they conserved water above the level surface?

Answer :—Yes; the water is thus conserved above the natural surface, if the valves are closed, when the tank is at its fullest and the water not allowed to go back again. These embankments also serve to protect the water from wind action.

Question :—What is the depth of this billabong?

Answer :—From a guess I should say from about 8 to 10 feet, and that would not be nearly sufficient.

Question :—So that a mere dam in this creek would not have been permanent?

Answer :—No, certainly not. It would not have provided permanent water.

Question :—Had it been selected $\frac{1}{2}$ of a mile down would that have made a permanent dam?

Answer :—I think the depth of the creek is the same all along. I think it would be about the same.

REPLY.

The construction of a single embankment with the excavation in the bed of the creek instead of a large tank with four embankments would have met all requirements at much less cost. The water that may be conserved above the surface-level of the present tank cannot certainly exceed a few inches. The error committed was in constructing a costly tank with embankments on four sides in the bed of a creek when $\frac{1}{2}$ of a mile lower down natural water-holes existed which by being deepened and the material used for a dam would have conserved an ample supply of water with a very great reduction in cost. The water-holes referred to last longer than any other natural water in the neighbourhood. Had they been excavated an additional 10 or 12 feet to obtain material for the dam it would have given a greater depth for a conserving area than the present tank. Mr. Stillwell in the same answer first denies that there is a dam here at all and in the next sentence says the embankments have the effect of damming the creek. I might ask what is a dam but an embankment that produces such an effect.

Q. 4484.

Chairman :—Can you give any other reason why the Government have paid more money for these works than the squatters?

Answer :—Yes; there are many other reasons, a contractor for a squatter has many advantages given him which we cannot offer. As a rule the squatter's contractor has grass and water free, but in our case it is quite the reverse. Our contractors occasionally in fact almost invariably have to use the wild cattle belonging to the station owners, who is anxious to get them broken in by the contractor. The squatter's contractor has every facility offered him for obtaining supplies at a low rate.

REPLY.

The assertion is so extraordinary that Government contractors have almost invariably to use the wild cattle belonging to station owners that I think it requires explanation. I fail to see what the Government contractor has to do with station owners or why he has to use their “wild cattle.” He may for his own convenience break in a few steers, but if the station owner is so anxious as Mr. Stillwell asserts to get them broken in, it is probable that he made satisfactory terms for doing so. It should be the duty one would think of the Road Superintendent to see that the contractor whose tender is accepted has a suitable plant when he undertakes the work. I am well aware that station owners very often make contracts by which they supply bullocks and plant, but in that case the work of excavation is done from 4d. to 6d. per cubic yard.

That station contractors obtain supplies at low rates is not in my experience at all the rule.

I never recollect having heard of a case where a squatter charged a Government contractor for grass, and they rarely and then only in severe droughts do so for water. I may perhaps question with the limited experience of Mr. Stillwell, admitted by him in Q. 4403, to be confined to seven tanks, his views on these points can be regarded as conclusive.

Mr.

Mr. Stillwel's evidence, Q. 4485.

Question :—Is that the case with the Government tanks ?

Answer :—Where we can do so we select a good season, but as a rule we cannot do so ; as a rule we have little discretion as regards that, because when a tank is ordered to be made it has to be made.

REPLY.

The facts are that the large proportion of tanks recommended for construction have not been completed within three or four years. The works on the Mount Brown Road were commenced in 1882, and out of nine only two are yet in the first six months of 1888 transferred to this Department, and this is not an isolated instance. Mr. Stillwel's statement, that " We have little discretion," can only apply to the pressure put on himself and similar officers by his own Department. Since it must be evident on a perusal of the Blue Book, that but little attention is paid to the wishes of the Mines Department.

Q. 4494.

Delay in payment to contractors.

Question :—Do you think this delay is worth taking into account by the contractor ?

Answer :—I think not, I think to a man of means, it does not stand in the way at all.

REPLY.

Mr. Stillwel's reply I think proves conclusively that the contracts issued by the Roads and Bridges, are available only to men with means. Equally good workmen, but who are dependent upon regular and prompt payments, are afraid to come forward. This throws out of the market all men who cannot afford to wait the delay for their money. This is the whole of our contention.

Q. 4498.

Question :—Is it a fact that these works have been taken by contractors, and sublet to others or subcontractors at a rate very much below the original rate ?

Answer :—I do not know that any tank works have been sublet, all was carried out by contractors themselves.

*Omitted
in printed
evidence.*

Question :—It has been said that many of the works have been sublet at a much lower rate than the work was taken for originally.

Answer :—No ; nothing of the kind has occurred in my district.

REPLY.

It does not appear in evidence that Mr. Stillwel has disproved what has been stated with respect to the subletting the fence at Ivanhoe, the following extract from a letter given in full in reply to evidence (P.W.P.) 88-4,335, Q. 4577, from Mr. John Hay, the owner of Mount Manara Station, affords additional information on this subject. And the following statement from John Hardie, Government contractor. Broken Hill, is also submitted.

Extract from Mr. Hay's letter.

I do not know the price of fence round the Mount Manara paddock, but Hardie, the contractor that excavated the tank offered to complete it for £80 per mile ; but Bevan, who got the contract from Government, said it was too much, and let it to another man for less.

Letter from Frank Hardie.

Sir,
In answer to your inquiry as to my offering to erect fence at Mount Manara Government Tank, I have to inform you that I offered to erect same in terms of the specification, and to the best of my recollection for about the sum of £80 per mile, which Bevan, the original contractor informed me by letter was too high a rate, consequently I did not get the work.

Yours, &c.,

FRANK HARDIE.

P.S.—I can recollect that I told Mr. J. Hay the price I offered to erect the fence for, and also told him of the reply I received from Bevan.—F.H.

Mr. Inspector Low, Public Watering Places, Silverton.

Q. 4500.

Question :—So that these so-called excessive prices have not at all events enriched the contractor ?

Answer :—I do not see how excessive prices can be obtained for works that are submitted to public competition.

REPLY.

And yet Mr. Stillwel accepts tenders for fencing and drains, which, he admits, are excessive.

In Q. 4508 of his evidence he states :—

" I am not quite sure the price paid was 15s. per chain for Ivanhoe drains, but I know that an excessive price was paid for the drains."

And in Q. 4558 :—

" *Question* :—You have not told us why you paid £112 per mile for fencing. Did you not think at the time the tender was received that the price was an excessive one ?

Answer :—Yes ; but tenders had been repeatedly invited, and we saw no prospect of our being able to get a lower tender, and the construction of the work was urged by the Mines Department, therefore we saw no alternative but to accept."

Mr.

Mr. Stillwel's evidence, Q. 4497.

Question :—I suppose that this was a season when a squatter would not have undertaken such a work ?

Answer :—Yes ; and we were compelled by the necessity of the case to do it.

REPLY.

Mr. Stillwel does not explain the necessities of the case which compelled him to construct a tank at Carowra in the midst of a drought.

Q. 4501.

Question :—Reverting again to the Ivanhoe Tank, it has been said that the drains leading into this tank were very faulty in construction as well as being excessively costly. I notice here, at page 187 of the Mines papers :—“The drains here have evidently been constructed with no respect as to what a drain is, for one drain for a good $\frac{1}{4}$ -mile running water from the tank another is brought along the road to Mossgiel, and cut up very badly both by stock and teams. The water from this drain overflows silt-tank, which is very small, and partly upon main road, and runs into Elliot Tank on opposite side of road, which water Elliot afterwards sells to the public ; another long drain runs through township allotments, which have been sold, and is now being blocked up.” Now as to defective level ?

Answer :—This applies to the northern drain. This drain had to be constructed about 30 chains and the scrub cleared. It was then found an advantageous extension might be made by making the cutting about 3 feet deep to a slight rise for 15 chains. Before the tank was handed over I set the caretaker to cut these drains, and when the tank was handed over the Mines officers discontinued this work, consequently that end or portion of the drain is ineffective. It was Mr. Yeo who did this.

REPLY.

Upon this statement I submit declarations from Mr. Inspector Boulton and Mr. Overseer Yeo, which, I think, will sufficiently traverse Mr. Stillwel's recollection. I may further call the Commissioners' attention to what Mr. A. P. Wood states in evidence, Q. 3357 :—

“*Major Penrose* :—Mr. Low, one of the Inspectors of Public Watering Places, says in his evidence about this tank :—*Drains*.—These are badly constructed, evidently with no intention of leading water to main tank, much of them running from instead of to the main tank. Two of these drain water from the tank ; the other runs parallel to the main road, overflows silt tank, and fills a private tank belonging to Elliot.”

[It will be observed that Mr. Low's evidence has been misquoted. He states that “two of these drain water from the township” (see his evidence, Q. 1096), and not, as quoted by Major Penrose, that “two of these drain water from the tank.” He, however, adds that much of the drains run water from the tank.]

“*Answer* :—As regards the state of the works at the time Mr. Yeo took charge of the tank, it is correct. But I am now giving evidence which it would be better for you to obtain from Mr. Stillwel, superintendent in that district. You will find, when you have examined him, it will be very easily accounted for.”

Mr. Wood here admits the statement is correct, but that Mr. Stillwel will easily account for it. This, I venture to submit, Mr. Stillwel has not done.

Mr. Williamson, J.P., of Ivanhoe, in his letter referring to Ivanhoe Tank, states :—

“I never heard that levels were taken in making any of the drains ; and the northern drain I should say was defective from a point at the back of the police barracks to its termination, as the land has a downward tendency all the way, and I should think a cutting 3 feet deep would only make matters worse.”

Declaration.

I INSPECTED the Ivanhoe Tank for the first time on 29th April, 1886, and on that date the drains to the tank were completed ; and no attempt had been then made by Mr. Stillwel to grade the northern drain by making the cutting 3 feet deep referred to. On the 16th October, 1886, the tank was transferred to this Department ; and on 23rd November, 1886, I again visited the tank, and on that occasion, when inspecting the drains, I saw the partially completed cutting, which was *not an extension*, but simply a deepening of the existing drain, about 10 chains, as nearly as I can remember, from its termination, and which Playford, the then caretaker, informed me had been commenced a short time before the transfer by Mr. Stillwel's man. Playford informed me that he had been directed by Mr. Stillwel to complete the cutting. Having in view the fact that some urgent work was required at the tank and machinery, I, and not Mr. Yeo, directed him not to touch it till he had everything else in good order.

This cutting, according to Mr. Stillwel's statement, will enable the water, from a depression or water-course beyond this rise, to be carried into the tank. This I think it will hardly do, as I am of opinion that the depression or water-course is of a lower level than the tank (see Blue Book, page 73).

I make this declaration conscientiously believing it to be true.

JAMES W. BOULTBEE,
Inspector of Public Watering Places.

Declared, before me, this 3rd day of }
July, 1888, at Sydney,— }
GERARD HERRING, J.P.

(P.W.P. 88-3764.)

Subject :—Drains at the Ivanhoe Tank.

Stock Office, Moss Vale, 25 June, 1888.

REFERRING to Mr. Stillwel's answer *re* the defective level of the northern drain, I desire to state that this drain was never extended beyond its original and present termination, and it was long after the first rain that put water in the tank that Mr. Stillwel deemed it necessary to cut the drain about 3 feet deeper for about 12 or 14 chains at the back of the police barracks. The caretaker then in charge for the Works Department was instructed by Mr. Stillwel to deepen it ; but, before it was half completed, the tanks, &c., were transferred to the Mines Department. Mr. Stillwel instructed the mines caretaker to continue this work, which he did until the arrival of Mr. Inspector Boulton, who instructed the caretaker to discontinue it, to effect some urgent repairs at tank, and not me, as stated by Mr. Stillwel, which can be seen from Mr. Boulton's report of 23/11/86 on the Ivanhoe Tank.

JAMES YEO,
Inspector of Stock, Moss Vale.

Declared, before me, at Moss Vale, }
this 27th June, 1888,— }
WILLIAM BRIDGE, J.P.

Mr.

Mr. Stillwell's evidence, Q. 4502.

Question :—Another statement is that the water overflows the silt tank and runs into Elliot's tank ?

Answer :—Well I visited the place shortly after that statement was made, and I found the loss of water was occasioned by the neglect of the upper drains; the water had overflowed them, and consequently overflowed the lower drains and escaped altogether. If proper attention had been given to the upper drains this would not have occurred.

REPLY.

Mr. Stillwell in no way disproves the statements given in the reports by the officers of this Department (Blue Book, page 150-151), which gives apparently a much more sufficient reason for the overflow of water into Elliot's tank. Mr. Stillwell explains that the water had overflowed the upper drains and these consequently had overflowed the lower drains. This, according to the accompanying letter from Mr. Yeo, the then resident overseer, is not the case :

(P.W.P., 88-3,671 ; S.B., 88-272.)

Sir, Stock Office, Moss Vale, 25 May, 1888.
Referring to your telegram of 23rd May, *re* water overflowing drains at Ivanhoe tank, I beg to state that at the time I reported the water backing up and overflowing into Elliot's tanks, it was solely owing to the smallness of the inlet pipe, which would not allow the water to get away as fast as the drains brought it into the silt tank. The upper drains overflowed on one occasion, when the water in the main tank rose to the level of the drains.

I have, &c.,
JAMES YEO,
Inspector of Stock.

J. W. Boulton, Inspector of P.W. Places, Sydney.

The water must have come with an extraordinary rush not to have been intercepted by the lower drains, and the overflow into Elliot's tank would appear to be more readily accounted for by the backing up of the water at the inlet pipe, as was stated to be the case.

The whole of this question is shown on pages 150-151 of the Blue Book.

Mr. Williamson, of Ivanhoe, states in his communication, which is given in full, in reply to evidence, at Q. 4417 :—

" I do not think any loss of water was ever occasioned by neglect of drains, but might have been caused by some difficulty with the valve ; but cannot see that any water should be lost before the tank is filled, unless the tunnel leading from the silt tank to the main tank is not large enough."

Q. 4508.

Chairman :—Now we have some very heavy charges made of the extreme and exorbitant prices paid for the drains at this tank. Here is what is said by Mr. Yeo :—

" The drain at the Ivanhoe tank was made by Messrs. Farrell and Gallagher, who received 15s. per chain, which was an exorbitant price, as stations in the district were only giving 3s. 6d. to 5s. per chain, and I might mention that a reliable person informed me at the time the contract was let that one of the contractors, while consulting his partner as to what price they should do the work for, said they should ask 7s. 6d. per chain, which he said would pay them well ; but this partner said as it is Government work let us ask 15s. per chain, which they did and got. I might also mention that the drain running from the north-east corner of main tank from a point about half a mile from the main tank should not have been passed by the Road Superintendent as it was never graded properly, and the water runs in the opposite direction of the tank. No tenders were called for the cutting of these drains."

Answer :—I am not quite sure that the price paid was 15s., but I know that an excessive price was paid for the drains. It is true that tenders were not publicly invited in the press, but on several occasions I endeavoured to obtain tenders locally. The newspaper published nearest to the place is 140 miles distant at Hay. I notified the matter at the post-office, Ivanhoe, and made it public, as well as I could, otherwise. I also endeavoured to obtain a tender from the contractor to the tank, and the lowest I could obtain from any one was from this man Gallagher. Lower prices might possibly have been obtained by waiting, but in that case we should have lost the first rainfall into the tank, and rather than entail the risk of this it was considered advisable to let the drains. Of course I cannot say anything as to what was said about the contractors first arranging to ask 7s. 6d.

REPLY.

Mr. Stillwell admits the drains were not let by public tender, and that the price was excessive. Mr. Yeo, in his evidence, on Q. 2676, confirms this statement. Mr. Hanna was getting drains done at 26-mile tank, 60 miles north, in the same kind of soil for 4s. 6d. per chain. (Blue Book, page 126.)

Q. 4516.

Mr. Stillwell states :—I think the man Farrell, one of the contractors, is now employed by the Mines Department as a caretaker. He is one of the men who, according to Mr. Yeo, conspired to get these exorbitant prices from the Government.

REPLY.

Mr. Stillwell has previously admitted that public tenders were not called for the construction of these drains, and therefore he can hardly be justified in accusing Farrell of conspiracy for asking a price which was accepted. Farrell was employed without any knowledge on the part of this Department, that he had been one of Mr. Stillwell's contractors, the fact having been ascertained subsequently, and since this inquiry has been instituted.

Mr.

Mr. Stillwell's evidence, Q. 4517 to 4519.

Chairman :—At page 184 of the Mines papers, in connection with Tom's Lake Tank, I notice the following statement:—"With reference to the main drain and the broken dam, the drain is, I should say, considerably over a mile long, from 12 to 14 feet wide, and from 3 to 5 feet deep."

Answer :—I daresay it is of these dimensions.

Question :—It starts from a watercourse and a wide low dam across this forces the water into the drain. The water will have, I think, to rise 3 feet in this dam before it enters the drain. From appearance, the water has been within an inch of flowing over the dam, the break which is a cutting in the solid earth, about 20 yards wide, evidently saving the dam, the bottom level of the drain being too high to carry the amount of water.

Answer :—That is owing to the drain being obstructed.

Altered in revised copy of evidence.

Question :—If this cutting or byewash is to be repaired I think the whole dam should be raised 2 feet for safety. The water will then flow down the drain to the place where the water has escaped into the swamp, and where I think the ground surface is lower than at the tank. The earth excavated from the drain is placed in irregular heaps without making a continuous bank, and it is between these heaps the water has made its way and cut down. The drain continues and ends abruptly about a chain from and parallel to the tank. A small dam throws the water by a small drain into the tank. I am informed the drain was originally an uniform size, but owing to the obstruction to the traffic was filled in. The main road, I must mention, passes between the drain and tank and follows the drain the whole way, and I am told that when the water comes through to the tank the space here was a perfect bog-hole. The original intention was, I suppose, to bring sufficient water down to fill up the embankments, and to do this I think it will be necessary to raise the dam and bank the earth along the low portion of the drain in a form that can be utilized as a roadway and to construct a culvert and open up the drain again. I found the drain scoured and cut, which, owing to the friable nature of the soil, is inevitable, but not so much silted. The caretaker informs me that he and a man were at work in the water, endeavouring to arrest the flow of water from the drain into the swamp, but were unsuccessful. The dam and drain also, I believe, are off the public watering-place, and the amount of water lodging in the dam militates against the tank, since the lessees cannot charge for water from it. Are these statements correct?

Answer :—I did not take the levels for the drains myself, but, to the best of my belief, the defect in the drain is not due to any fault of construction but to the want of proper maintenance. The drain is obstructed and silted up by vegetation.

REPLY.

Mr. Stillwell's reply is merely general; it does not attempt to refute any of the statements in Mr. Boulton's report, quoted by the chairman.

Q. 4525.

Question :—Does not the use of steam power necessitate a greater expense?

Answer :—No, I think not, because the cost of erection is less than the other.

REPLY.

A reference to the Blue Book, page 270, where the cost of machinery, service tank, and troughing is given by the Works Department, will show that upon calculation of the difference in the expense of the two types of machinery, the balance is in favour of horse gear by £26 10s. The following evidence, given by Mr. Wood, Q. 3443, appears to indicate also that horse gear is the cheaper type of machinery:

"The Holman pump, with horse gear, is £49, delivered in Sydney. The cost of the special Tangye steam pump is £87 10s., with boiler * * * The Amos and Smith horse gear costs £52 or £53, and the steam pump, £120. The cost of the Appleby pump is about £125."

Q. 4528.

Question :—But there would be no necessity for paddocks in case steam-pumps were used as horses would not be required?

Answer :—Certainly not.

REPLY.

Mr. Stillwell is apparently quite unaware of the object of these paddocks. They were decided upon with a view of inducing the leasing of the public watering places, and not merely for the convenience of caretakers' horses.

Q. 4538 to 4540.

Question :—Do you think that the specification for this fencing entails unnecessary expense on the Government?

Answer :—No; because I think that the fences required for these watering places should be more substantial than those used on stations. Our fences are virtually road fences, and the greater part of them are put up between the stock route and the paddocks, and are meant to keep out large stock as well as sheep * * * For instance, the fences round the paddocks require to be of a much more substantial character than station fences, because the fence round the paddock is practically a road fence.

Question :—But on one side only?

Answer :—But very often there are large stock in the paddocks, cattle as well as sheep; three sides of the paddock are on the stock route, and the other is leasehold land.

Mr. Stillwell's evidence.**REPLY.**

I do not at all admit Mr. Stillwell's contention that the T.L. paddocks have to resist so much more than a station horse paddock; but, as a matter of precaution, I recommended the adoption of No. 6 for a top wire in place of No. 8; but the Works Department not satisfied with this have used No. 4 for top wires and No. 6 for the remainder. (See also reply to Mr. Wood, page 37).

Q. 4541 and 4542.

Question:—What are the specifications of the fences put up by you, do they include a top rail?

Answer:—No. I will give full particulars if necessary. The posts are 9 inches x 3 inches, sunk 30 inches in the ground, 5 feet out; the panels are 10 feet long, with five No. 6 wires, and a top wire of No. 4 gauge. There are straining posts at intervals of twelve panels, and they are put 3 feet in the ground?

Question:—Do you not think it is quite unnecessary to have these posts 30 inches in the ground and that it increases the cost?

Answer:—I have had very little experience with fencing until I went down to that district, and I should say, judging from what I saw I did no more than was necessary for public requirements.

REPLY.

Mr. Stillwell is clearly incorrect in this reply, as one of the principal objections is that the fencing at the following works is without straining posts, viz., Gunnaramby, Clare, Boonoon, One Tree, Ivanhoe, &c. The specification quoted does not appear either to have been carried out with the Wooloondool fence, nor does he explain why in that instance six strains of barbed wire, were used to enclose the paddock; while Mr. Hanna, although approving of its use for a top wire, objects even to that on the score of expense. (See evidence, Q. 3739.)

Q. 4554 and 4555.

Question:—Was this omission of straining posts a concession to the contractor, or was it done by way of experiment?

Answer:—It was done as an experiment.

Question:—Has it tended to cheapen the cost of the work?

Answer:—In this case the contractor had straining posts provided, so that there was no alteration in the cost.

REPLY.

For an experiment, which any station holder in the district would have condemned as impracticable, I may remark that five paddocks, or approximately 20 miles of fencing, appears on somewhat too large a scale, particularly when the contracts were let by Mr. Stillwell's own admission as high at £112 per mile.

Q. 4558.

Chairman:—You have not told us why you paid £112 per mile for fencing; did you not think at the time the tender was received that the price was excessive?

Answer:—Yes; but tenders had been repeatedly invited, and we saw no prospect of our being able to get a lower tender, and the construction of the works was urged by the Mines Department; therefore we saw no alternative but to accept.

REPLY.

Mr. Stillwell produces no evidence of this having been urged by the Mines Department. The Department certainly asked, as a general rule, that the fencing should not be delayed longer than necessary; but I have no hesitation in saying that it would never have advised the acceptance of such a tender even with straining posts.

Q. 4562.

Mr. Woore:—From your own knowledge of the country, do you believe that the contractor's statements as to the distance which he had to draw timber?

Answer:—Well, not in all cases; but in these cases I do. Certainly in one case the contractor might have got the timber close at hand had he not been prevented by the lessee of the run. I mention this to show the conditions under which our fencing is done as compared with station fences.

REPLY.

The Commissioner for Roads has the power to enter upon any Crown lands to cut timber, and any person provided with a license to cut timber has also the right to enter upon any Crown lands or reserve for that purpose.

Q. 4567.

Mr. Woore:—Then he goes on to say: "This description of fencing is new to me, and I unhesitatingly condemn the same. In this opinion I am borne out by Mr. Brougham, of Ticehurst; Mr. Laird, of Mossiel; and Mr. Webb, of Kilfera, all of whom have had much experience in fencing and fencing timber in this particular district, neither of whom would erect fences without straining posts"?

Answer:—Well, I am not responsible for this, and as the work has not been handed over, they are criticising work which has not yet come into their hands.

REPLY.

Mr. Stillwell's evidence.**REPLY.**

All the tanks upon this road are in our hands ; the paddocks are surveyed by us for fencing. The Works Department, upon completion of fence, have no other course than to hand it over to this Department. Criticism under such circumstances does not appear to be misplaced. Application was made on 20th February, 1883, for the transfer of this fencing to the Mines Department. Upon the 27th Mr. Bennett replies that it was not considered necessary to formally transfer this fence. Prior, therefore, to Mr. Stillwell's statement in evidence, this fence was supposed by his own Department to be in charge of our caretaker. (See papers herewith.)

Copy Ivanhoe Tank transfer of fencing ; P.W.P. 83-1,181 ; P. Works, 88-1,307 ; P. W. Tanks and Punts, 88-111.

Sir,

Public Watering Places, Mines Department, 20 February, 1888.

I have the honor to request that you will be good enough to inform me upon what date the Department of Roads and Bridges will be prepared to hand over to this Department the fencing at the Ivanhoe Tank.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

The Under Secretary for Public Works.

Roads.—J.R., B.C., 22/2/88. Wire Stillwell.—W.C.B., 23/2/88. Wire sent. Resubmit when a telegram received.—A.P.W., 23/2/88. It was not thought necessary to formally transfer this fence. The Mines caretaker was on the spot.—W.C.B., B.C., 27/2/88. Under Secretary. Under Secretary for Mines.—J.R., B.C., 28/2/88.

In consequence of the reports upon the defective character of this fencing, I have urged that a formal transfer should be made. This, it appears, is not desired by the Department of Public Works. To save time, Mr. Low may perhaps be instructed to inspect and take charge of the fence, and notify to the local Roads officer that he has done so. Mr. Low should furnish a full report upon it. The Works Department may perhaps be asked what other fencing they have completed, when our officer can be instructed to take it in charge.—H.G., 9/3/88. The Under Secretary.

Submitted.—H.W., 12/3/88. Approved.—F.A., 13/3/88.

Q. 4576.

Question :—Statements have been made here by officers of the Mines Department to the effect that they would put up a sufficiently good fence for from £50 to £55 per mile, intending, no doubt, to show that the expenditure by the Works Department was excessive?

Answer :—I think these are merely unsupported statements. Mr. Low put it to the test once by calling for tenders, but he got no reply except one to do the work at £90 per mile.

REPLY.

Mr. Stillwell's statement is incorrect. Fencing has been done by this Department for £44 per mile at Colombo Creek. Tenders have also been received to fence at the following rates :—P.W.P., Wagga Wagga district, £35 per mile ; P.W.P., Walgett district, £57 per mile ; P.W.P., Silverton district, £75 per mile ; P.W.P., Cobar district, £42 per mile ; P.W.P., Bourke district, £38 per mile. The estimates received from the various overseers do not exceed an average cost of £52 per mile (see Blue Book, page 122). In regard to Mr. Low's calling for tenders, this question is fully dealt with in my rejoinder to Mr. Wood's evidence, page 36.

Q. 4577.

Question :—A statement has been made by one of the witnesses that the fence round Mount Manara paddock cost £120 per mile?

Answer :—It cost the same as the Ivanhoe fence, which was £112 per mile. I know the work was delayed for months, owing to the contractor being unable to get any timber at all. He could not get permission either to cross the paddock or to get water from the station tank, and the work was suspended on account of this.

REPLY.

The following letter, P.W.P., 88-4,335, from Mr. John Hay, the lessee of Mount Manara station, will perhaps correct any erroneous impression conveyed by Mr. Stillwell's evidence, as above quoted :—

Harry Gilliat, Esq.,

Dear Sir,

Re your letter of 25th May,—

Mount Manara, 12 July, 1888.

1. I do not know the price of fence round Mount Manara paddock, but Hardy, the contractor that excavated the tank, offered to complete it for £80 per mile, but Bevan, who got the contract from Government, said it was too much, and let it to another man for less.

2. The work was not delayed for want of water or timber, but was delayed because Bevan could not sublet the contract to his satisfaction. There was abundance of water, independent of station water ; in fact, he had no need to ask for water or permission to go through the run, because the tank is on the road-side and roads everywhere to Pine Ridges.

The posts were got on Marfield. It is possible Mr. Fartiere may have refused him permission to cart them at some particular time, when he was short of water. Mr. Fartiere told me he had refused some contractors permission to cart timber, but whether it was telegraph poles or posts I cannot say. Frank Hardy, who is excavating a tank for Government at or near Broken Hill, could give you the exact price he offered to do it for, as he was camped some months at the Mount Manara Tank, trying to get the contract to fence the paddock round the tank.

I should like to have been present when Mr. Stillwell was giving evidence. He ought to have named the station. In any case, I have stated the exact cause of delay in erecting fence.

Yours truly,
JOHN HAY.

(88-4,669, 4,835, 9/8/88).

Sir,

Department of Mines. Public Watering Places, Broken Hill, 4 August, 1888.

Referring to B.C. document 18/7/88 re Frank Hardy offering to erect fence at Mount Manara P. W. Place for Bevan, the original contractor, herewith returned, I have the honor to report that I have seen Hardy, who is somewhat in doubt as to the terms offered by him to Bevan, but Hardy is certain he stated correct terms of his offer and Bevan's reply at the time to Mr. Hay, Mount Manara station.

I enclose letter, 30/7/88, addressed by Hardy to me in answer to my inquiry as to terms of his offer.

Mr. Stillwell's evidence.

I have further to report that I have seen Mr. Fartiere, Marfield Station, upon whose property most of the posts for this fence were got. Mr. Fartiere distinctly asserts he never at any time put obstacles in the way of nor objected to contractor getting either posts or water, but, on the contrary, that he saw contractors and allowed them to get water at his private tanks. Mr. Fartiere has repeatedly promised to write me a letter to this effect, but has left here without doing so.

I have, &c.,
JOHN LOW,
Inspector P.W. Places.

The Chief Inspector, Public Watering Places, Sydney.

Sir,

Horse Lake, via Menindie, 30 July, 1888.

In answer to your inquiring as to my offering to erect fence at Mount Manara Government Tank, I have to inform you that I offered to erect same in terms of the specification, and to the best of my recollection, for about the sum of £80 per mile, which Bevan, the original contractor, informed me by letter was too high a rate; consequently, I did not get the work.

Yours, &c.,
FRANK HARDY.

P.S.—I can recollect that I told Mr. J. Hay the price I offered to erect the fence for, and also told him of the reply I received from Bevan.—F.H.

Mr. Inspector Low, Public Watering Places, Silverton.

The following letter from Mr. Fartiere, lessee of Marfield and Connulpie Downs is submitted:—

(P.W.P. 88-5,210.)

To the Chief Inspector, Public Watering Places, Sydney,—

Sir,

Connulpie Downs, Tibooburra, 15 August, 1888.

Your letter of the 2nd instant only reached me by last mail, *re* cutting posts on Marfield Run for Mount Manara Tank.

At time contractor started cutting posts there was no water on the run excepting my stock tanks, and they were not plentifully supplied, and the ridge where the posts were cut was close to a sheep tank that had just cost me nearly £300, having cleaned and batters cut down so that sheep could water at it without bogging, and I refused to allow bullocks to water, but gave permission if horses were used, they not doing the damage that cattle do on a sheep tank; and this was done, the posts were cut in the paddock both for Mount Manara Tank and the Banoona Tank, and I supplied water to them all the time the carting was going on, and the same for a very large quantity of telegraph poles that were also cut on the run; and, in connection with the posts, I was most annoyed to see the wilful waste of timber in a country where timber is so valuable. Owing to the size of the posts only the butts of the pines could be used and the tops left to perish, and what would have cut into some thousands of feet of useful sawn timber was rendered utterly useless.

As I will be returning shortly to Marfield, please address there, should further information be requested.

I remain, &c.,
CHARLES FARTIERE.

Q. 4579.

Mr. Woore:—At any rate this was the lowest you could possibly get the work done for after calling for tenders?

Answer:—Yes. With regard to the fence at Ivanhoe and the diverting of stock through the township which has been complained of, the plan was submitted to the Mines Overseer, Mr. Yeo, before the work was undertaken, and it was approved of by him. I have his approval in writing.

REPLY.

Mr. Yeo's reports appear in the Blue Book, page 126, and more particularly on page 129. Mr. Stillwell does not appear to have produced Mr. Yeo's written approval; but, in any case, his approval to have been of any value should have had the sanction of this Department. Mr. Yeo, however, denies that a plan was submitted to him or that he gave this written approval. (See accompanying papers.)

Extract from Mr. Stillwell's evidence before Royal Commission, *re* Tanks and Wells, Q. 4579.

“*Mr. Woore*:—At any rate, this was the lowest price that you could possibly get the work done for after calling for tenders?

Answer:—Yes. With regard to the fence at Ivanhoe and the diverting of the stock through the township which has been complained of, the plan was submitted to the Mines Overseer, Mr. Yeo, before the work was undertaken, and it was approved of by him. I have his approval in writing.”

Mr. Yeo. Please reply to this.—J.W.B., 17/5/88. Urgent. I beg to state that I never saw a plan of fencing at the Ivanhoe Tank, and I am positive that I never gave Mr. Stillwell my approval in writing.—J. YEO, 25/5/88.

Q. 4585.

Question:—Can you say anything about the other case, where you had been called on to remedy the most trivial matter which could have been undertaken by the caretaker, and which, it is said, showed utter ignorance or want of attention to his duties?

Answer:—Well, I want to read a report in reference to this case of the Box Creek Tank. There has been no co-operation whatever between the two Departments, and instead of co-operation we have had only conflict and collision. We have been trying to maintain the efficiency of the works in the interests of the public, but the Mines overseers and caretakers appear to be doing the reverse. That is my opinion and the inference which I draw from their actions. A joint control is perhaps in any case undesirable, but if there had been any co-operation on the part of the Mines officers, a *modus vivendi* might have been discovered, which would allow the works to be carried on to the public satisfaction. The object of these men appears to me to be to bring the works into disrepute, in order to get them out of our hands; and they have demoralised the contractors and many of the men by telling them they would have sole control of the works shortly. I would like to put in these documents in evidence:—

The Commissioner for Roads,—

Box Creek Tank.

Sir,

Hay, 16 November, 1887.

On visiting this tank on 9th instant, it was found to be full to berm level. The service tank, iron on concrete piers, was in good repair, but it contained little water. The pump, a Smith & Amos horse-power, was not in working order, and had been in this state upwards of two months. The caretaker not knowing what was the matter with it, and

Inspector

Mr. Stillwell's evidence.

Inspector Low, who had visited it in the interim, not being able to instruct him. No water had consequently been pumped, and the pumps were publicly reported as broken down, a failure, in fact. The Mines Overseer at Euston had, some time previous to my visit, reported to me that the pump would not act, and requested that I would send the travelling mechanic to repair it. As the mechanic was then employed at the other end, distant 200 miles away, I replied that he could not then go, but suggested that the caretaker be instructed to pack the pistons. On opening the cylinders I found the pistons were working loosely in them, failing to produce a vacuum, and consequently of course no water could be raised. I cleaned the cylinder and packed the pistons, and in half-an-hour from the time of my arrival, the pump was working in a perfectly satisfactory manner. There was no defect whatever in the pump, the failure in action being solely owing to want of attention in packing the pistons, the caretaker not knowing that this is occasionally necessary, as is the renewal of bucket leathers in other types of pumps.

The troughing at this tank is to be renewed, and the steel troughing, with timber for bearers, rail, &c., is on the ground, and its erection by the travelling mechanic will shortly be in hand.

The fencing of tenant's lease, 640 acres, is let. The wire is on the ground, and the posts out in the bush; hauling in will be started immediately.

With regard to what is above stated as to the pump, the case may, I think, be cited as fairly typical—not by any means as specially strong or exceptional—as showing the character of the supervision by the Mines officers. If the renewal of a bucket leather, or the repacking of a piston, is not the duty of a caretaker, what is? This man was willing enough to do it. I believe he was anxious to have his pump in working order. He assisted me with alacrity in doing so, but he did not know how to, and his overseer could not tell him. First, I am requested by the overseer to send my mechanic to do it, which would have been virtually wasting his time, and the £6 or £8 his trip would have cost. Next, the tank is visited by one of the newly appointed inspectors, supposed to represent the sum of the theoretical and practical knowledge of the Mines Department, who looks at the pump presumably as wisely as he can, shakes his head over it much as a doctor does when he fails to diagnose a case, and means the reverse to be inferred, says something indefinite as to the foot-valve, and departs, leaving his unfortunate caretaker as wise and as helpless as before. Lastly, on visiting the work, I have myself to do what an instructed caretaker would have done two months before in fifteen minutes, without any defect being heard of.

The Mines Department, at length apparently recognising what has been patent to everyone, viz., that their overseers or stock inspectors were incompetent, have latterly amended their supervision by the appointment of inspectors—officers, I believe, of a higher grade, and inferentially possessed of superior qualifications. It was one of these gentlemen who visited this tank, as stated above, and who has acquitted himself in a similar manner in other instances. It was another of them, now, I believe, stationed at Narrandera, who a few months ago went through the district in the happy confidence of youth and inexperience, with little or nothing in the shape of knowledge, either theoretical or practical, to give him pain,—criticising, amending, condemning. Amongst other suggestions he made, I remember a sapient one respecting the suction joint of this very Box Creek pump, but who failed apparently to discover, what was very obvious to most others, that it would have been conducive to better results, had his noviciate been passed previous to entering upon these duties, that at least a little rudimentary knowledge, which would have been acquired by a six months' apprenticeship as a caretaker, would have been a desirable preliminary.

A. W. STILLWELL.

REPLY.

Referring to the Mines officers, Mr. Stillwell states that the object of "these men" appears to him to be to bring the works into disrepute, in order to get them out of the hands of the Works Department; that they have demoralised the contractors and many of the men by telling them, they (I presume by "they" Mr. Stillwell means the Mines Department) would shortly have sole control of the works. Mr. Stillwell then continues that he wishes to put in documents in evidence; the paper put in by Mr. Stillwell has no charge or even reference to anything of the kind, but refers to repairs required at Box Creek. I venture to think that so grave an accusation against the overseers and caretakers of the Mines Department should not be allowed to pass without insisting upon Mr. Stillwell producing the evidence upon which he bases this statement, and naming the officers and men to whom he refers, that they may have an opportunity of proving it to be untrue.

With respect to the repairs required at Box Creek Tank, the caretaker informed Mr. Low, who was there upon his first tour of inspection, that the travelling mechanic of the Works Department had quite recently repacked the pump, acting under the impression that this had been properly done. Mr. Low thought he had traced the fault to the foot-valve, and as there were no means for lifting it at his command, he was obliged to leave it, giving instructions to caretaker to obtain ropes and complete repair. In this case I do not hesitate to admit that Mr. Low committed an error in not thoroughly overhauling the pump before he left it, and at the time I reprimanded him for leaving the tank before the appliances were in thorough working order. With reference to the concluding portion of Mr. Stillwell's paper I venture to think that it would be difficult for him to say or write anything that would more conclusively demonstrate his entire unfitness for the position he fills or would better illustrate the cause of the friction that has previously been shown existed only in his district.

Q. 4585.

Mr. Stillwell's letter, *re* foot-valve at Ivanhoe Tank is replied to fully in my rejoinder to the same subject on page 74.

Q. 4589.

Question :—An instance was mentioned in which a caretaker was ordered to clean out a silt tank, and it is said you came along and directed him to stop, saying you would get it done for him?

Answer :—I do not think such a thing occurred in my district. I do not remember anything about it.

Question :—The facts are referred to at page 57 of the Mines papers:—"It is of course very probable that owing to the wet season that the caretaker has been obliged to wait until the tank is dry enough to clean it, but it will be observed on 87-4,648, that the contractor engaged by the Works Department was compelled to do the same; but the main point, which does not appear to occur to the officers of the Works Department, is that any proven neglect on the part of the caretakers can hardly be regarded as a justification for expending public money in a contract to do work that should be properly performed by a public servant, and that a due regard for the public service would have led them to show this department that the caretaker's duties were neglected?"

Answer :—In this case the contract was let for enlarging the silt tank, and for making an alteration in the intake of the shoot. I told the caretaker that the contractor would be there in a few days to enlarge the silt tank, and that his cleaning it out would be needless. That was done, the contractor went out and enlarged the tank.

REPLY.

Mr. Stillwell's evidence.

REPLY.

The extract read from Blue Book, page 57, will, upon examination be found to refer to the silt pit at Merri Merriwa. A tank which is not in Mr. Stillwell's district, but in that of Mr. Adams' of Cobar:

As Murray, the caretaker at the Mount Manara Tank, has reported that he was stopped from cleaning out his silt pit by Mr. Stillwell's telling him that he intended sending a man to do so, and as Mr. Stillwell states in his evidence that he had let a contract for an alteration to the intake of the shoot and to enlarge the silt pit, it is probable that instead of the Merri Merriwa silt pit, he is referring to the Mount Manara silt pit, which was enlarged by Mr. Stillwell in October, 1886, two months before Murray was appointed caretaker, and ten months before Mr. Stillwell instructed Murray that he would have it cleaned out for him. The declaration of Murray attached, will show that Mr. Stillwell directed him not to clean out the silt tank, and that at no time during Murray's caretakership was any enlargement made to the silt pit, or was it cleaned out by Mr. Stillwell's contractor. The statement of the caretaker, Merri Merriwa Tank attached shows that Mr. Stillwell never visited that tank at all.

(P.W.P., 3,903, 4/7/88.)

Declaration by John Murray, caretaker, Mount Manara Tank.

I, JOHN MURRAY, caretaker of the Government tank, situated at Mount Manara, in the district of Ivanhoe, and on the road from Hay to Wilcannia, do solemnly and sincerely declare,—

1st. That Mr. Road-Superintendent Stillwell did direct me not to clean out silt tank and said that he would get it done.

2nd. I further declare that the silt tank has not been cleaned out by Mr. Stillwell's contractor.

3rd. And I also further declare that the silt tank has not been enlarged nor any alteration made to the intake of the shoot since my appointment here as caretaker in December, 1886.

Signed at Mount Manara Government Tank, on this 9th day of July, 1888,—

JOHN MURRAY,
Caretaker.

Witness—E. W. PROCTOR, Overseer, P.W.P., 9/7/88.

Declared before me, this 24th day of July, 1888, }
at Mount Manara Tank, Ivanhoe Road,— }

GEO. H. GOWER, J.P.

(P.W.P., 88-3,903.)

I, WILLIAM MORTIMER, caretaker at the Government tank at Merri Merriwa, situated on the road from Hillston to Cobar, do solemnly and sincerely declare :—

1st. That Mr. Stillwell never visited this tank, nor ever directed me not to clean out the silt tank.

2nd. I further declare that a contract to clean out the silt tank was let and the work supervised by Mr. Adam, of Cobar.

3rd. And I further declare that the silt tank was not enlarged further than that in cleaning it out it was made 6 inches deeper by the contractor, nor has any alteration been made to the intake of the shoot by anyone since my appointment here as caretaker.

Signed at Merri Merriwa Government Tank, this 14th day of July, 1888,—

WILLIAM MORTIMER,
Caretaker.

Witness—E. W. PROCTOR, Overseer, P.W.P., 14/7/88.

Q. 4593.

Mr. Woore :—What have you to say with reference to the charges in Mr. Boulton's letter referring to the Hulong Tank, dated 21st December, 1886, referred to at page 42 of the Mines papers :—

Sir,

Whitton, 21 December, 1886.

Referring to my instructions to visit Hulong Tank, I have now the honor to inform you that I did so and found that Mr. Road Superintendent Stillwell, after Mr. Overseer Elworthy had instructed the caretaker to coal, tar the boiler, &c., in accordance with your circular, 3rd September last, had issued fresh orders to the caretaker to paint it red and to apply to Mr. Elworthy for paint. Mr. Elworthy instructed the caretaker to prepare the newly dished top of the embankment for the reception of a shoot for carrying off the storm water and material for which Mr. Elworthy was supplying. These instructions were also countermanded, and a length of india-rubber hose, 2½ inch diameter, was supplied by Mr. Stillwell to carry off all the storm water from the four embankments. I need hardly say how totally inadequate this is, and must at the same time protest against such a useless waste of money and such a childish innovation that in the eyes of the travelling public so reflect upon the Public Watering Places' officer. I wish to bring this immediately and urgently before you, as I understand Mr. Stillwell is about supplying other tanks in his district with the same. A shoot of less than 1 foot across is perfectly useless, and is required at each angle. Actual experience, both at Hulong and Pulletop, has proved the folly of the 2½-inch hose, and caretakers have now definite instructions to proceed with shoots so soon as material arrives.

Answer :—I deny that I ever interfered with the instructions of the overseer.

REPLY.

The following is an extract from a declaration made by Leighton, caretaker of the tank in question, and already forwarded to the Commission in reply :—

I further swear that Mr. Stillwell gave me orders on several occasions to do certain works, amongst were : 1st, to paint the boiler red ; 2nd, to paint the supply tank ; 3rd, to throw up embankments alongside drains ; 4th, to level hummocks in drains ; 5th, and on one occasion, when I found it necessary to temporarily block drain G to H, Mr. Stillwell came along and made me open it. The consequence was that the water receded from silt tank to swamp instead of going into main tank as it should have done, and it was at that particular time that Mr. Stillwell gave his labourers orders to lower the flumes.

Mr

Mr. Stillwell's evidence, Q. 4594 to 4600.

Question :—What did you do ?

Answer :—I took out the rubber hose forming the syphon and gave it to the caretaker and instructed him how to use it ; but as he told me he had instructions from his overseer to put in the shoot I did not countermand these instructions, but took the hose away again.

Major Penrose :—Did you find this rubber hose effectual in that case ?

Answer :—I tried it at Mount Elliot and found it effectual there.

Question :—I believe there is a very small drainage area on the top of the embankment ?

Answer :—Yes, and you can make the drain to one or two points, as the top of the embankments are concave.

Question :—Do you think it necessary to have four shoots 1 foot across to carry off the water from the top of the embankment ?

Answer :—No.

Mr. Woore :—What is the width usually of the top of these embankments ?

Answer :—About 10 feet.

Question :—And that serves to drain off the water and prevent it from scouring down the sides.

Answer :—Yes ; this syphon that I used was quite sufficient for the purpose on a similar embankment.

Question :—And when the Mines officer complained of it, you took it away ?

Answer :—I did not interfere with the caretaker at all. The only inference I can draw from the action of the Mines officials with regard to neglect, and their reports as to the works being insufficient, is that they wish to bring the works into disrepute with the object of wresting control from the Works Department. That is the most simple explanation, and it is only a fair inference, though a very hard thing to say perhaps.

REPLY.

The top of the embankments are 10 feet wide, according to Mr. Stillwell. I am informed by my local officers that at Hulong, Mount Elliot, and Pulletop they are 30 feet wide, and are, on an average, about 150 yards long. This at Hulong gives 600 yards long and 30 feet wide, a catchment and lodgment area of 54,000 square feet ; and it was to take off the storm water from this area that a 2½-inch *perishable* india-rubber hose, misnamed a syphon, was brought by Mr. Stillwell. The objection taken by the Mines Department was that the hose was insufficient for the work. The following declaration made by Leighton, the caretaker of Hulong Tank, upon the matter is submitted :—

(P. W. P., 88-3,887.)

Hulong Tank, 30 June, 1888.

Sir,

I have the honor to inform you that the rubber hose in question was given to me by Mr. Stillwell some time before you came out, and I told you that it was of no use, as it was too small to carry off the water. You made answer and said, "We are going to send ridging to the tanks"; but before the ridging arrived Mr. Stillwell came to tank and inquired of me how the hose answered. I told him it did not carry the water off fast enough. It was then I told him my overseer was going to send ridging to flume the water off at corners. He did not take hose away for some time after, for you and Mr. Boulton saw the hose and the flume had been down some time before Mr. Stillwell took hose away.

Made and signed at Whitton, this 30th day }
of June, 1888, before me,—

SAMUEL LEIGHTON.

LEWIS H. W. CASPERSON, J.P.

The following extract from a declaration, which is given in full in my rejoinder to Mr. Stillwell's evidence on page 62, made by the local overseer, Mr. Elworthy, is also submitted :—

At Pulletop Tank, the hose, I believe, was not taken away by Mr. Stillwell till after the shoots were put in the corners, and it would have required three or four syphons to carry off the water that fell on the embankments. I was at Mount Elliot just after heavy rain, and saw what a long time the hose took to run water off and how much attention it required.

Mr. Stillwell's conclusion, that the wish of the Mines officials was to bring the works into disrepute and wrest their control from the Works Department, is entirely unsupported by evidence, and, I submit, manifestly unjust, unless corroborated. The character of Mr. Stillwell's correspondence is so clearly shown, both in the Blue Book and in the evidence, that it is hardly possible to expect the officers or men of the Mines Department to feel much cordiality towards him.

Q^s 4603.

Major Penrose :—It appears that you suddenly found your works were subjected to elaborate criticism, when before you never heard anything against them ?

Answer :—Yes.

REPLY.

Mr. Stillwell's statement does not appear to agree with that made by Mr. Bennett in evidence, Q. 3033, where it is stated :—

Question :—“Since when have complaints been made in regard to faults of construction and with respect to badly chosen sites for tanks and wells ?”

Answer :—“Ever since the Mines Department got charge.”

And he again states, Q. 3042 :—

“Then from that day, for the last five or six years, there has been nothing but a continual fire of letters and complaints.”

Mr. Woore :—“By whom ?”

Answer :—“From the Mines people, through their Minister, to the Works Department. * * *”

Mr. Stillwell's evidence, Q. 4606 and 4607.

Question :—Mr. Low stated here that he would not trust himself on a wire rope ?

Answer :—Yes ; but I think the wire ropes are the best that can be used.

Major Penrose :—What kind of rope was this ?

Answer :—Galvanized steel rope, and I think they are $1\frac{1}{2}$ inches in circumference. The breaking strain of such a rope is absurdly beyond anything that we ever put on them. As to a man stating that he would not trust himself on such a rope only shows his ignorance of the whole question.

REPLY.

Mr. Stillwell's statement as to the ignorance of a man who would not trust himself on a wire rope will, I think, on inquiry, reflect upon himself. I find in my diary that on 31st December, 1884, Mr. A. P. Wood and myself inspected the Roto well. I there state, "The shaft has not been examined by constructing officer ; neither Wood nor myself will inspect with the present wire rope, and the men refuse to work below with them. * * * I condemn all the wire ropes in use ; they have broken at the three Carrathool Wells and at Roto Well, while all the men refuse to work with them, and put on Manilla or hemp while in the shaft."

I have never known a well-sinker to put down a well with a wire rope ; Mr. Boulton informs me that he has never known of an instance. The ignorance, I venture to think, is on the part of Mr. Stillwell, whose experience in works of this nature, I gather from his evidence, dates only from the time of his appointment as Road Superintendent in the Hay District, three and a half years ago, during which time, unless I am very much misinformed, the only well-shaft that he has sunk are the ones at Willandra that have proved so singularly unsuccessful.

Q. 4605.

Question :—You know what the charges are with respect to the Dolmoreve Well ; and, if so, what have you to say to them ?

Answer :—Yes, I know them. I had a man there named Flynn. A bucket was lost in the well on 10th July. I cannot say whether the bucket was recovered or not, but on 8th August I reported that the travelling mechanic had stated that the well rope was broken, and that the centreing below the water level was forced out by a vessel or bucket. There was great difficulty, with the assistance of a man and horse, in lowering the water and effecting repairs and recovering the bucket. A new rope and bucket had been sent out. The breakage of the rope had apparently been occasioned by the end near the bucket being injured by the action of the water in the well, in which the bucket had been left suspended during intervals of baling. The bucket should have been raised out of the water. The mechanic also reported that on his first going to the well on this occasion he could obtain no assistance from the caretaker, owing to his absence at an inn 7 miles away, where he was drinking. The caretaker finally returned in a state of intoxication. The bucket had fallen full of water from the top of the well down to the bottom. The water in this well is pretty brackish, and the rope corroded. I told the caretaker this, and asked him to keep the bucket suspended out of the water.

REPLY.

A complete statement of this case is given in the Blue Book, pages 112 to 115. It will be seen that the caretaker was dismissed. A circular was addressed to all overseers (P.W.P. S6-3,623) on 21st July, 1886, by this Department, instructing them to see all buckets swung out of the water when in disuse.

Q. 4613 and 4614.

Mr. Woore :—Then it is in consequence of the incapacity of many of these caretakers that friction has arisen ?

Answer :—There is no doubt about it. The incompetence of the caretakers and of the Mines officials, who go away and leave things as they find them.

Question :—You wish us to infer then that some of the Mines officers are scarcely capable of putting things in proper order ?

Answer :—Yes, that is the only inference I can draw.

REPLY.

The whole of the correspondence published in the Blue Book in which Mr. Stillwell is concerned, and where the conduct of caretakers has been involved, will, I think, amply show that Mr. Stillwell's complaints have not been made with any attempt at conciliation, the want of which in the official intercourse he so deplures. The following cases may be referred to :—Woolondool Well, page 22 of Blue Book ; Dry Lake Well, page 23 of Blue Book ; Boonoona Well, page 229 of Blue Book ; One-tree Well, page 231 of Blue Book ; Mount Manara Well, page 236 of Blue Book ; Gunnaramby Well, page 246 of Blue Book. If Mr. Stillwell is correct, it is curious that in his district alone the caretakers and Mines officers are alleged to be incompetent and negligent. Mr. Stillwell's statements are general assertions unsupported by instances capable of proof or disproof, and I can only express my regret that he was not called upon to substantiate them. The cases quoted in the Blue Book appear to convict him of repeated errors, which he has not attempted to disprove.

Mr.

Mr. Stillwell's evidence, Q. 4615.

Extract from report read by Mr. Stillwell:—

"With few exceptions the men employed as caretakers are totally unfit for the post, ignorant of everything except the situation, and only alive to magnifying and advertising defects which, when they are not imaginary, are nearly always due to their own incompetence or negligence. Disreputable people have been put in charge."

REPLY.

It is not to be expected that all the men employed as caretakers will turn out competent and sober. The greatest care is taken as far as possible in their selection; when charged with incompetency or drunkenness a careful inquiry is at once made, and if the charge is sustained the man is dismissed.

Q. 4615.

Extract continued:—

"Disreputable people have been put in charge who, when such a small matter as the necessity for tightening the fence wires round a tank is pointed out, have said they were not sent from Sydney to work but merely to take charge, for a great part of the time have been absent drinking at the nearest inn, and from whom nothing but the most unblushing falsehood could be elicited. I have frequently found caretakers absent rabbiting."

REPLY.

As to the charge of not tightening the wires in the fence round the tank, it is presumed that the fence at the One-tree Tank is referred to. Mr. Boulton informs me that the fence was lifted and set back from the tank by Mr. Stillwell, and that he saw it a few days after the contractor left it in a disgraceful state; and Mr. Stillwell, who visited the tank later on, ordered the Mines' caretaker to strain up the wires which his contractor had neglected to do, and which Mr. Stillwell had failed to see done. The caretaker was then reported by Mr. Stillwell as negligent for having the wires slack. (See Mr. Boulton's minute, Blue Book, page 232, also Mr. Keighran's letter, page 233.)

Q. 4615.

Extract continued:—

"The man at the Lignum Hut Well, in addition to shamefully neglecting the wind-mill and pumps, thereby causing disrepair, keeps the mill idle to save the necessity of attending to it, allowing the service tank of embanked earth to be damaged by becoming empty and contracting. A travelling mechanic has to be employed by this Department to effect repairs that should properly devolve upon caretaker. He has sometimes to be sent as much as 100 miles merely to renew a pump bucket leather or some such trifling matter."

REPLY.

In regard to the Lignum Hut the appliances here were an experiment, and, I think, a failure. The whole thing has been a constant source of trouble, the bearings are worn and large, and will not hold grease. The pumping rods were made of American pine 2 in. × 2 in., and the caretaker had to exercise constant care in throwing the mill out of gear,—it not being a self-acting or self-regulating one,—lest a gust of wind should break the rods. This in spite of all his care constantly happened, until this Department supplied the hardwood rods, which the caretaker put in. The service tank was never to my knowledge empty or even half empty. The iron-work of the mill is all cast, and breakages occur, as must be expected. The mill is not self-reefing, and the type a poor one. Mr. Stillwell's charge is not, I think, supported by facts, and rests merely upon his own allegations.

Q. 4615.

Extract continued:—

"I have to send my assistant 50 miles, when the road was almost impassable, merely to put in a pin connecting the horse-works with the pump-rod, which took, I suppose, two minutes to do, and which the caretaker would not touch."

REPLY.

The caretaker's version of this matter has been already submitted for the information of the Commission, but copies are herewith:—

(P. W. P., 88-2,245.)

Sir,

I have been requested by Mr. Boulton to report to you the circumstances which brought Mr. Nicholson to repair pump at this place, and in compliance I now beg to state that the driving gear and piston-rod became disconnected by reason of the key that held them together working out, thereby letting the piston-rod fall down. I made several efforts to make the connection good again but failed, the wire I used in coupling them breaking at every effort. Seeing then that I could not do without assistance I wrote to Mr. Keighran on the matter. In a few days afterwards Mr. Nicholson came out here to see what was wrong. I told him what I did, at the same time telling him "if the machinery was my own I would repair it, but being cautioned so frequently about the danger of breaking it, I thought it best to let it alone," he replied and said "you have done perfectly right;" he applied the very same means which I did, that is, connecting them with wire, he remaining in the pump-hole to guide them fairly to their places, whilst I moved the power to raise the rod, in that way he succeeded in bringing them to their proper places, and putting the key in again, which he could not do unless he had some person to assist him; it took him altogether about three quarters of an hour. The above is exactly what occurred on the occasion.

The Chief Inspector of P. W. Places.

I have, &c.,
M. W. KELLY.

This is in reference to an allegation made by the Works Department handed in in writing to the Commission, *re* tanks and wells, and, upon which I was examined. See page 96, One-tree Tank, marked *.—JAMES W. BOULTON. Kelly is prepared to declare the truth of his statement.

This paper should perhaps be referred to the Chairman of the Tanks and Wells Commission in connection with previous papers on the subject.—H.G., 4/5/88. The Under Secretary. Submitted.—H.W., 8/5/88. Approved.—F.A., 8/5/88. The Chairman Tanks and Wells Commission.—H.W., B.C., 8/5/88. Read and returned.—G.H.C.

Mr. Stillwell's evidence

(4,341, 18/7/88.)

I, M. W. Kelly, do hereby solemnly and conscientiously declare that my statement made upon the accompanying paper, 88-2,245, is true, and I further declare that I was cautioned by the roads mechanic Jones not to interfere with the pump, but to leave it to him to do all repairs, such as repacking and screwing up, and at the same time informed me that my predecessor in endeavouring to repair the pump himself had broken a portion of it. I further declare that on several occasions I received orders from Mr. Stillwell, among them to empty out the service-tank at the Quandong, and clean it, also to break all the lumps on the embankments and level them. Mr. Nicholson directed me to clean away all the long grass and weeds from the troughing at the One-tree tank, which took me nearly two days. I further add that Mr. Stillwell was in the habit of giving me instructions when he visited the tank, but I am unable at this date to particularise them.

Sydney, 17 July, 1888.

Declared before me this 18th day of July, 1888, at Sydney;—

GERARD E. HERRING, J.P.

M. W. KELLY.

Q. 4615.

Extract continued:—

"I have known a pump to be partly taken apart and left so lying about the horse-walk for six weeks by the instructions of the Mines overseer, who gave out, as also did the caretaker that the pump was defective, and I heard it so spoken of by the public 50 miles away, and have myself put it to rights, so that it worked perfectly in half an hour."

REPLY.

The facts of the case are fully given on pages 229 and 230 of the Blue Book. (See Boonoona Tank.)

Q. 4615.

Extract continued:—

"Wells are frequently left without baling for weeks, causing the bore to become choked, when it is reported by the Mine's officials that the supply had failed."

REPLY.

The cases of the Woolloondool and Dry Lake wells are given fully in Blue Book, pages 21 to 26, and this statement is fully replied to in my rejoinder to Mr. Wood's evidence on page 43.

Q. 4615.

Extract continued:—

"Pumps have been reported repeatedly by overseers and caretakers ineffective, that they would not throw enough water to fill the service tank in less than two days, when a test has always shown they would do so in from six to eight hours, if fairly worked."

REPLY.

This it is presumed refers to Mr. Wood's complaint *re* the Boonoona tank. (See Blue Book, pages 245 and 246; also evidence given by Mr. Yeo, Q. 2732.)**Q. 4615.**

Extract continued:—

"Holy Box Well was abandoned by the Mine's officials, because as they gave out the water was unfit for stock. I found the appliances being destroyed by the public; put a man in charge, and made him draw water daily. When fairly tested the quality proved to be excellent. But the Mine's overseer at Ivanhoe still kept reporting it was bad, preventing the public from using it, and it was only after some persistence that this opposition was overcome, and they were induced to take charge of it. It is now one of the best wells in the district."

REPLY.

The case is fully stated in the Blue Book on pages 74 to 93. Mr. Stillwell's account is at variance with the records, and instead of being one of the best wells in the district, is, next to old Gunba, the worst.

Q. 4615.

Extract continued:—

"At Boonoona Tank some months ago, the Mines overseer had the valve opened and some 3 or 4 feet of water let out of the tank, because he said he thought the embankment was endangered."

REPLY.

The water was let out of the Boonoona tank after it had filled within a short distance of the top of the embankment, by the caretaker, and not by the instructions of any superior officer. The man acted to the best of his judgment in what he considered a case of extreme urgency. The loss of water in no way seriously affected the permanence of the supply or proved detrimental to the travelling public, and may have saved the tank embankment from destruction.

Q. 4615.

Extract continued:—

"And two days ago I found a similarly absurd waste of water, by direction of Inspector Low, at Clare tank, where the valve was left open so that the water might escape into the swamp. About 2 feet has been lost."

REPLY.

Mr. Low's action was upheld by this Department, the friable nature of the spoil in the embankment rendering them liable to crumble under water. No loss or detriment ensued to the public, nor was the permanence of the supply materially affected.

Mr.

Mr. Stillwell's evidence, Q. 4615.

Extract continued :—

" At Mt. Manara the overseer ordered all the water to be run out to waste out of the service tank, because a few of the foundation piers and the outer casing of cement scaled off at the edges. This was apparently done to substantiate a report that the foundations of the tank had failed and that it would have to be taken down, which I heard repeated all along the road. There was found to be no defect in the strength of the piers, and their appearance has been restored by the mechanic, about half a day's work."

REPLY.

Mr. Yeo, in reporting this matter and his action in regard to it, says :—

" State of supply tank in good order, except concrete piers, which are crumbling off, and I am of opinion they will give way altogether before long. I have instructed the caretaker to let off the water to reduce the weight."

A precaution until repairs were effected that any reasonable man would take. Had the work been faithfully done in the first instance there should have been no scaling off of the outer casing of cement as described by Mr. Stillwell. Mr. Stillwell also implies that reports were circulated by the Mines officers, but confines himself to assertion, and the Commission have apparently deemed it unnecessary to require him to substantiate it.

Q. 4615.

Extract continued :—

" Inspector Low has interfered with a contractor under this Department and ridiculed his work, fencing of lease areas, Whitton to Euabalong. The same gentleman has recently ordered my travelling mechanic to repair the service tank and well runners at Holy Box, &c."

REPLY.

The following extract from Mr. Inspector Low's declaration is, perhaps, sufficient reply to Mr. Stillwell's statement :—

" Mr. Stillwell does not inform the Commission what was the nature of the interference with the contractor, complained of at the Whitton tanks. With regard to the repairing the runners at Holy Box well, Mr. Low was notified by this Department, and effected the repairs himself with the assistance of the caretaker."

Sir,

Department of Mines, Public Watering Places, Broken Hill, 11 July, 1888.

Referring to Mr. Stillwell's evidence, *re* tanks and wells, page 906, I have the honor to state that I have upon no occasion interfered with contractors under Works Department, neither have I ridiculed the work of any contractor under that Department.

I have further to state that I have never interfered with, neither have I ordered Mr. Stillwell's travelling mechanic to repair service tank and well runners at Holy Box Well, and challenge Mr. Stillwell to prove that I have done so.

Mr. Stillwell in his evidence says, " On visiting them (Holy Box) to-day I find the tank holding well and runners in good repair "; but as I am unaware whether " to-day " refers to before or after I fixed runners, I am unable to answer him.

* * * * *

I am somewhat surprised Mr. Stillwell should admit runners did not reach the bottom of the shaft, thereby allowing, at any time water was scarce, an opportunity of buckets getting fixed. My experience in wells is perhaps equal to Mr. Stillwell's, at all events the finishing of wells, and it is somewhat new to discover in a well like Holy Box the runners should not reach the bottom. If any unnecessary expense was incurred, I fail to see how it can be attributed to any one but Mr. Stillwell himself, who from his evidence incurred that expense without his travelling mechanic inspecting same.

I have, &c.,

JOHN LOW,

Inspector Public Watering Places.

The Chief Inspector, Public Watering Places, Sydney.

I, John Low, Inspector Public Watering Places, do solemnly and sincerely declare that the before-written statements are true, and I make this declaration conscientiously believing the same to be true.

Made and signed before me at Broken Hill, }
this 11th day of July, 1888,— }
CHAS. CHAPPLE, J.P.

JOHN LOW,

Inspector Public Watering Places.

Q. 4615.

Extract continued :—

At Ivanhoe Tank this morning I also found the pump disabled ; Inspector Low, I was informed, being there at the time, although I did not see him. The foot valve of this pump had been sent quite needlessly to Sydney about a month ago. The pump the caretaker said worked well enough before, and it had during that time been idle, and stock, instead of watering at the tank, had to be taken to private tanks in the township. Now all that was required was a piece of ordinary fencing wire bent spirally for a spring for the valve ; any one could have put it in.

REPLY.

Mr. Stillwell is in error ; the foot valve was not sent to Sydney. The spring supplied with the machinery by the Works Department was made of the ordinary fencing wire, as described by him. This proved to be useless and failed to work, and it was forwarded to Sydney for the purpose of having a proper brass spring made. This Department has not had any notice until Mr. Stillwell's statement that stock were obliged to go elsewhere for water while the spring was being made, and there was no necessity that they should do so, as water could have been raised in the absence of the spring, as shown by Mr. Stillwell's own evidence.

Mr.

Mr. Stillwell's evidence, Q. 4615.

Extract continued :—

The overseer at Ivanhoe objected to the inlets at Gunnaramby Tank, and wished to insist upon an additional one; as this was not done, he gave out that the first heavy rain would burst over and destroy the tank batters. This has not proved to be the case.

REPLY.

That this has not proved to be the case is no fault of Mr. Stillwell's, since the preservation of this drain, which at the first rain cut so deeply as to cause alarm, is entirely due to the action of Mr. Yeo, the local officer of this Department, in having it pitched with copai stones. The stones were collected and the drain pitched by the caretaker with a great deal of labour.

See Blue Book, page 145, and evidence given by Mr. Yeo, Q. 2637.

Q. 4615.

Extract continued :—

The overseer at Euston objected to the inlet at Youhl Tank, and reported that an additional one was required. His caretaker was induced to pay a little attention to his drains, and the inlet asked for, which would have cost at least £100, was proved quite unnecessary.

REPLY.

The tank has filled during years of heavy rainfall, but in such dry country the object is to collect water from the lightest falls in any season, and to do this was the idea of Mr. M'Leod's report. Mr. Stillwell's estimate of the cost of an inlet is as liberal as the prices he paid for fencing and drains.

Q. 4615.

Extract continued :—

Inspector Low has interfered with a contractor under this Department and ridiculed his work, fencing the lease areas Whitton to Euabalong. The same gentleman has recently ordered my travelling mechanic to repair the service tank and well runners at Holy Box, &c.

REPLY.

Sir,

Department of Mines, Public Watering Places, Broken Hill, 11 July, 1888.

Referring to Mr. Stillwell's evidence *re* tanks and wells, Q. 4615, I have the honor to state that I have upon no occasion interfered with contractors under Works Department, neither have I ridiculed the work of any contractor under that Department.

I have further to state that I have never interfered with, neither have I ordered Mr. Stillwell's travelling mechanic to repair service tank and well runners at Holy Box Well, and challenge Mr. Stillwell to prove that I have done so.

Mr. Stillwell in his evidence says :—“On visiting them (Holy Box) to-day I find the tank holding well, and runners in good repair,” but as I am unaware of whether “to-day” refers to before or after I fixed runners, I am unable to answer him.

It would be information to know how Mr. Stillwell arrived at the conclusion “caretaker had let a bucket down lower than usual,” seeing the rope had not been altered; and if as he says it “was soon freed again,” the freeing might perhaps be attributed to a better knowledge of how to get a bucket unfastened than has previously been exhibited by employees of the Works Department.

I am somewhat surprised Mr. Stillwell should admit runners did not reach bottom of shaft, thereby allowing, at any time water was scarce, an opportunity of buckets getting fixed. My experience in wells is perhaps equal to Mr. Stillwell's, at all events the finishing of wells, and it is somewhat new to discover in a well like Holy Box the runners should not reach the bottom. If any unnecessary expense was incurred I fail to see how it can be attributed to any one but Mr. Stillwell himself, who from his evidence incurred that expense without his travelling mechanic inspecting same.

I have, &c.,

JOHN LOW,

Inspector Public Watering Places.

I, John Low, Inspector Public Watering Places, do solemnly and sincerely declare that the before-written statements are true. And I make this declaration conscientiously believing the same to be true.

Made and signed before me, at Broken Hill, this }
7th day of July, 1888,— }
CHAS. CHAPPLE, J.P.

JOHN LOW,
Inspector Public Watering Places.**Q. 4619.***Question* :—Were you in the habit of giving orders to the caretakers?

Answer :—No, not orders. I have pointed out omissions and neglect on their part and have offered them suggestions, but I never gave them what they could take as orders or definite instructions to do any work.

Mr. Inspector Low, in his report read before the Commission, states :—“That caretakers at Mossgiel, Boonoona, and Mt. Manara Tanks have reported to me, when asked why they had not performed certain duties, that Mr. Road Superintendent Stillwell had interfered with them in the performance of their duties as caretakers. In the former case ordering caretaker not to tar or interfere with slip-rails of T.L. fence; in the latter case, ordering caretakers not to clean out silt tank.”

The following declaration from the caretakers Mt. Manara, Boonoona, and One-tree Tanks are submitted in support of Mr. Low's statement.

Kelly's (caretaker, One-tree) declaration is given in reply to evidence on Q. 4615 in full.

Caretaker Murray's (Mt. Manara) declaration is given in full in reply to evidence on Q. 4589.

Caretaker Killick (Boonoona) overleaf. See also Inspector Boulton's declaration *re* drains Ivanhoe Tank, in reply to evidence, Q. 4501.

Copy of declaration made by F. Killick, caretaker, Boonoona Tank.

I, FRANK KILLICK, caretaker of the Boonoona Government tank, do solemnly and sincerely declare as follows, viz. :—

That about twelve or eighteen months since Mr. Road-Superintendent Stillwell visited the Boonoona Tank and instructed me not to clean out the silt tank as he intended to get some one to do it.

I further declare that the above is the reason that I allowed my silt tank to remain in the condition it was (viz., nearly full of silt) for such a length of time.

Taken and declared at Ivanhoe, this }
17th day of August, 1888,— }
GEO. WILLIAMSON, J.P.

FRANK KILLICK,
Caretaker.

Mr.

Mr. Stillwell's evidence, Q. 4630 to 4632.

Question :—Do you think it would be advisable for the Department that now has the maintenance to have also the construction of these works, or would not that create another Works Department and entail more expense?

Answer :—I should say that the work of construction had better remain with the Department whose officers are competent to construct as well as to maintain. It is doubtful whether the Mines Department have officers competent to construct the works.

Question :—But even supposing that they have, would it not as it were create another Department of Works and entail a great deal of expense to the country?

Answer :—As regards field work it might, but it would not as regards office work. The preparation of plans and specifications is all now in our hands.

Question :—It would mean another special Department?

Answer :—Yes.

REPLY.

The construction of tanks is not such a serious undertaking as Mr. Stillwell appears to consider. Each of the Inspectors in the service of this Department have probably constructed many more than Mr. Stillwell, who admits seven as the number he has been engaged upon; and by his own evidence affirms his want of knowledge of fencing, and his ignorance with respect to stock and their requirements.

Q. 4671.

Question :—It has been suggested that all drovers of travelling stock should at the time of getting their permit to travel pay for all the tanks they may pass getting to their destination, whether they use the water or not; of course in good seasons they do not go to the tanks, although the country has been to the expense of making them on their account. Now, do you think it would be a fair thing to make every drover who travels these routes contribute towards the expense of maintenance?

Answer :—Yes, most decidedly so; something of that sort would be a very desirable arrangement, and far preferable to the existing arrangements in every respect.

REPLY.

It may be pointed out that the suggestion that drovers should pay for water when they take out their permits is open to objections. It would necessitate the continued employment of caretakers, while the object of the Department is to lease the tanks. Further inconvenience would result when the drover, as is constantly the case, applied for permission to change his route, and in case of sheep travelling for sale claims would be made for a refund where the full journey was not completed, and great confusion would I think inevitably arise.

*Further Evidence of Mr. Road Superintendent Stillwell.***Q. 4786 and 4787.**

Question :—What steps did you take as regards the finishing of the work as left by the first contractor?

Answer :—We re-let the completion of the excavation to another contractor, and the then incomplete works were finished by day labour, such as the drains and embankments.

Question :—Was the work completed by day labour considered satisfactory?

Answer :—Yes; except in regard to the drains that were left in a very bad state by the contractor, not properly graded through the uneven swamp ground. I purposed getting them gradually put right by a man I had in charge there. This man was so employed when the Mines took the work over.

REPLY.

Mr. Stillwell gives no credit for the labour cast upon the Mines caretaker in grading the drains, what this amounted to (after we were officially informed by the Works Department that the tank was ready for transfer) will be seen on reference to caretaker Leighton's declaration given in full on page 864 in reply to Mr. Stillwell's previous evidence.

Q. 4788 to 4793.

Question :—Were the Mines informed of the incomplete state of the works?

Answer :—I rather think they were with regard to the drains, but not with regard to the inlet shoot, which I knew I should have to do myself by day labour.

Question :—Did the Mines Department make any demur at taking the work over in its incomplete state?

Answer :—Not so far as I can remember.

Question :—Did the Mines clearly understand that the flume would require alteration?

Answer :—I do not think so. It was desirable to alter flume, otherwise we should have lost a lot of water in the swamp before it would have run into the main tank.

Question :—By whom was the flume eventually lowered?

Answer :—By men working under me.

Question :—

Mr. Stillwell's evidence.

Question :—How long after being handed over to the Mines ?

Answer :—About a month. The work was not quite completed at the time of handing over. I handed over on the 13th July, 1886, and the fluming alteration was completed on 17th August, 1886.

Question :—Is it usual for the Mines to take over work incomplete ?

Answer :—Not usual, but sometimes done.

REPLY.

It is to be regretted that Mr. Stillwell did not produce the letter in which he thinks the Mines Department were informed of the incomplete state of this work at the date of its transfer. I am unable to trace any such paper in the records of the Department.

With reference to these Public Watering-places it was the practice of the officers of the Mines Department to decline to take delivery unless everything was in good order. This action was commented upon by Mr. Bennett (*vide* Blue Book, page 170) and the Minister for Mines at that time directed that the works when offered for transfer were to be taken over and defects made good by the Works Department. In practice this has not been found to be satisfactory, and that arrangement has since been superseded, but it was in force at the time of the transfer of this tank, and Mr. Stillwell should have been fully aware of the fact, as the arrangement was made in consequence of a difference of opinion between himself and an officer of this Department in connection with the transfer of another tank in his district.

Q. 4798 to 4802.

Question :—Is this drain through the centre of the swamp now effective ?

Answer :—No.

Question :—Could it easily be made so ?

Answer :—Yes, at no great cost. I think there is a misapprehension in regard to that drain on the part of the Mines Department officials. It is not intended to take water from the swamp, but as an aqueduct through the swamp conveying water from the higher ground the other side of the swamp. Also, the drain can never actually fill the tank to berm level until the swamp becomes full, when the valve can be closed and the water retained.

The Chairman :—Is this not an admission that the tank is placed on an improper site ?

Answer :—No ; the tank was properly placed on the edge of the swamp to obtain sound ground for the appliances and approaches to them.

Major Penrose :—To what level will the drains fill the tank without the swamp getting filled ?

Answer :—Roughly speaking, to about a foot below berm level.

The Chairman :—It was not because you saw water lying in the drains that you altered the level of the flume ?

Answer :—No ; it was one of the defects left by the original contractor, which had to be made good at his cost.

REPLY.

It is, perhaps, unnecessary to remark upon Mr. Stillwell's idea of an aqueduct through a swamp, but it must be apparent that contour drains intercepting the water from reaching the swamp would have been both cheaper and more effective. Mr. Stillwell is incorrect in assuming that the officers of the Mines Department were under any misapprehension as to his intention in constructing the drain which in his last evidence he calls an aqueduct, but they pointed out that this "aqueduct," instead of conducting water to the tank, as no doubt Mr. Stillwell had intended it should do, in reality ran the water away. The defective level of the inlet flume, which was subsequently lowered by Mr. Stillwell, but not—as the Commission will no doubt have observed—until after rain had fallen and made the true level of Mr. Stillwell's aqueduct apparent is, perhaps, the strongest evidence in confirmation of this. The tank in this instance is on higher ground than the body of the swamp through which Mr. Stillwell endeavoured to lead his aqueduct. It must, therefore, be evident that a large proportion of the water finding its way into the swamp cannot reach the tank, and must be lost by absorption and evaporation. The correct drainage for a tank in such a position was to have intercepted the water before reaching the lower ground by drains which would have conducted it direct to the receiving tank.

Q. 4807 to 4810.

Question :—Having visited a number of public watering-places in your district, we wish to ask you a few questions in regard to them. What is the cause of the water breaking out a new channel through the northern end of the embankment conducting the water into north drain at Tom's Lake Tank ?

Answer :—In my opinion it is owing to the drain being obstructed by the silt and vegetation. I have seen dead sheep in it, among other things, preventing the flow and causing the water to rise higher in the swamp or creek than was originally anticipated or provided for.

Question :—Are you aware that at present there is no drain leading into the upper silt tank ?

Answer :—Yes.

Question :—Why does this drain not lead water into the silt tank ?

Answer :—The drain has been dammed and the bank cut through, and the water led into the swamp instead of into the upper silt tank.

Question :—At whose instance was this done ?

Answer :—I cannot say positively ; it certainly was not at mine.

Mr.

Mr. Stillwell's evidence, Q. 4811 to 4814.

Question :—No use can now be made of the embankments of the tank to conserve water above to berm to any great extent?

Answer :—No; not more than a foot or two of the swamp is full. Fully 6 feet could be conserved over the berm if the northern drain had been left and maintained as originally constructed.

Question :—Did this damage occur to the upper drain while the tank was in charge of the Mines Department?

Answer :—Yes, most decidedly.

Question :—Have you ever known water to run down this drain to the upper silt tank?

Answer :—I have not known water to flow right through from the creek or swamp, but there is a small catchment above the drain from which water has flowed into the silt tank during my supervision, but the drain has not acted for the purpose for which it was intended since I have known it, and that is owing to its being obstructed.

Question :—Would this small catchment you speak of run water before the creek or swamp?

Answer :—Yes.

REPLY.

With reference to the large upper drain at Thom's Lake little more can perhaps be said than what appears in Mr. Boultree's report (*vide* Blue Book, page 184, with its accompanying sketch, Appendix I). Mr. Stillwell attributes the cause of the water breaking around the dam to the obstruction caused by silt and vegetation in the main drain. The much more probable explanation, and the one which is accepted by this Department, is that a riparian owner lower down cut a byewash to enable the water to reach its original destination, which scoured in the first heavy rain and formed a new channel. As a matter of fact, the dam was and is an illegal obstruction, and it must be apparent that the main drain would have to be filled up with more solid material than silt or vegetation before the water unaided would have cut its way through solid earth in the peculiar way it has done, and that is shown in sketch. The dam in the southern end of this drain was not made by the Mines Department. The offtake from the drain into the silt tank was filled in either by the Works Department or by teamsters during wet weather, the road crossing it, and the drain, when constructed by the Works Department, was left open, no culvert having been placed to enable traffic to get over.

Q. 4819 and 4820.

Chairman :—We visited the Willandra Well and found one shaft filled up and a new shaft a few yards off incomplete and apparently abandoned, and no water for travelling stock, with headworks all completed. What reason have you to give for this apparent extravagant outlay without any satisfactory result?

Answer :—The amount paid to contractor on account of this first shaft, whim, service tank, troughing, &c., was £900. The contractor failed to penetrate the drift, and got the shaft out of plumb near the bottom, and it was found impracticable to rectify it. This shaft was therefore abandoned and a new one sunk. Somewhere about £200 retention money was forfeited. The second contractor on the original shaft also failed, and received no payment whatever. The third contractor who sank the existing shaft also drew the timbering from the old shaft, removed the whim to the present site, and failing to carry the shaft down through the drift received only £52, so that the cost of the works up to the present time has been considerably less than that of the original contract, and I consider it still possible that the work may be completed and a supply obtained at a cost exceeding by very little, if any, that of the original contract.

Question :—What is the intention of the Works Department under the circumstances?

Answer :—To put a bore down from the bottom of the present shaft. We propose to stanch the bottom of the shaft with concrete, say, if we found a good supply at a lower level, such as has been found I believe in the adjoining station at Kilfera.

REPLY.

Mr. Stillwell's additional evidence with respect to this well throws a new light upon the relations between the Department of Public Works and their contractors, and tends to confirm Mr. Yeo's remarks on Blue Book, page 30. If the specifications are so drawn that the contractor receives nothing unless he bottoms a well, he is backing his luck or his opinion, and gets long odds in the form of a high price from the Government. The cost of these works is not surprising if this is the way in which they are let and tendered for. Such a practice will not I think be likely to terminate in pleasant relations between the Department and their contractors, and it is not surprising that Mr. A. P. Wood should find that contractors are not anxious to take up Government work. (See his evidence, Q. 3402.)

That Mr. Stillwell anticipates that he will be able to sink two shafts of 100 feet each, erect all the headworks of a well, whim, service tank, and troughing, take them down and erect again, and then bore for water to an uncertain depth and obtain a supply, and after all this complete the well "at a cost exceeding by very little, if any, that of the original contract," must, I think prove beyond all argument that Mr. Stillwell is a gentleman of great faith, or that the original contract must have been let upon terms of singular liberality. It is I think to be regretted that Mr. Stillwell did not state more clearly why a second shaft was sunk within a few yards of the first which had clearly demonstrated all that would be learnt of the character of the drift, nor is any explanation offered why, if the supply is hoped to be obtained from boring. The bore commenced at the bottom of the original shaft was not carried out without sinking a second, apparently at the expense of the contractor for the purpose.

The erection of headworks before a supply of suitable water was obtained is also left unexplained by Mr. Stillwell. Again, a slight discrepancy occurs in Mr. Stillwell's evidence upon the amount expended on

Mr. Stillwell's evidence, Q. 4819.

on the first shaft. He says (page 957):—The amount paid to contractor on account of this first shaft whim, tank, troughing, &c., was £900. On page 31 of the Blue Book it will be seen that Mr. Bennett in reply to our inquiry from the Secretary for Mines gives the cost of the original shaft up to date, *i.e.*, 24th October, 1887, as £1,087 5s. 8d. This is again corroborated in the return showing cost of tanks, wells, &c. (given in Blue Book, page 270), furnished by the Department of Public Works, 3rd February, 1888.

Memo.

DURING my examination before the Royal Commission, *re* tanks and wells, some portions of a report written by Mr. Stillwell, consisting of a series of allegations against the caretakers employed by this Department in his district was read to me by the President, and appear on Q. 860.

As I could not at the moment reply with any degree of certainty to the various charges, I said that I should like to have all the papers before me before replying, and I was under the impression that opportunity would be afforded me for that purpose. This, however, has not been done; I therefore beg to submit for your information written replies to these allegations of Mr. Stillwell's based upon my own knowledge, and on information received from the overseers and caretakers, and where papers are recorded in this office, bearing upon the questions at issue I attach them.

JAMES W. BOULTBEE,
Inspector P.W.P.

The Chief Inspector, P.W. Places.

I.

THE first case referred to me was Mr. Stillwell's allegation against caretaker Kelly, One-tree tank, that he had caused an unnecessary journey of 50 miles at a time the roads were almost impassable with water, to fix a key that had dropped out of the pump connections.

I personally had no knowledge of the case, but I interviewed Kelly and obtained a statement and declaration which has been submitted to the Commission, from which it will be seen that he first endeavoured to make the connection good before reporting it. The absence of any clearly defined instructions as to when the services of the Works Department should be called in to use is, I think, to blame. Caretakers have been instructed by the Works' officers not to meddle with the machinery, but to let them know. The condition of the roads at the time should be ample evidence that no necessity existed for the hurried journey of 50 miles so prominently mentioned. Kelly's record is a good one, and he has always endeavoured to do his work to the satisfaction of those concerned.

II.

THE next case read to me (see Q. 868), was a charge dated 25th November, 1887, against caretaker Young, One-tree tank, for having the wires in his fence round the tank slack, plunger stand fractured through carelessness in screwing it down, service tank not half full, and troughing containing liquid mud. This matter has been referred to in the Blue Book on page 231; I inspected the tank on 15th November, and I reported state of fencing, "Enclosing tank has been raised and moved out; is very badly strained (left so by contractor); wire is strained from corner to corner."

[This work had been lately completed by Mr. Stillwell's contractor, who had strained the wire from corner to corner (No. 4 gauge), with no intermediate strainers, a distance of about 160 yards.]

In my report of the same date I state that the machinery is "not satisfactory, and that the Works' mechanic is due on the Saturday following to put it in thorough order." The Works' mechanic did not keep his appointment which he made with the caretaker. A week after my visit the glands of the pump got broken, and the matter was referred to Mr. Stillwell. He, on 24th, sent in the complaint read to me, stating that he had specially sent out Mr. Nicholson, although his own mechanic was due at the place for repairs; and I would further draw attention to my minute on Mr. Stillwell's report, Q. 1036, and to Mr. Keighran, the local overseer's letter, and to Young's declaration. I may add that Mr. Young resigned his appointment in consequence of the treatment he received from the Roads' officers.

Minute by Mr. Inspector Boulton.

CARETAKER was desired by Works' mechanic Jones to leave troughs and tank alone, and not pump into them, as he would be down on the Saturday following to tar inside of tank and troughs and put pump, which had been some time out of order, right. Caretaker had key of housings on 17th November, 1886. The fencing round tank was only lately completed by contractors, and is in exactly the same state as left by them. Mr. Stillwell's assistants give orders, and Mr. Stillwell apparently reports our caretakers for carrying them out. I think his remarks on the ignorance and uselessness of caretakers employed by us quite uncalled for, and reflects upon the Mines' officers in a very undeserving manner; and I would again urge that all interference of Works' officers should cease when a work is transferred.

JAMES W. BOULTBEE,
Inspector of Public Watering Places.

Dear Mr. Boulton,

Hay, 22 January, 1887.

By same post as this I have forwarded to the Chief Inspector of Public Watering Places a statement from George Young, caretaker One-tree tank, *re* Mr. Stillwell's complaint, which statement was taken down by me just as the caretaker Young explained the matter. I certainly should have gone out and got you this explanation before the present date, but my eye (the good one) has been affected with swelling blight, so that I was pretty well handicapped, especially having a lot of official work to get through this month. I quite agree with you that we have just cause for complaint against Mr. Stillwell and his assistant, Mr. Nicholson's, interference.

You will observe in Young's statement, where Nicholson [came to him from the "One Tree Hotel," at 20 minutes past 5 a.m., and ordered him to get his horse and pump for one hour, he (Nicholson) giving no reason for the pumping, as the pump had been lately repaired and required nothing doing to it. I think if Mr. Stillwell looked after his own work it would become him better, as the fencing in of the tenant's lease will show (One-tree and Quandong fence), neither of which is completed. Besides, nothing has been done as regards the erection of cottages for caretakers now in Mr. Cronin's district. All these improvements have been completed long since. Then may I ask why or what is the cause of Mr. Stillwell not having done his likewise?

The wires in the fence at One-tree tank he (Mr. Stillwell) complains, are slack, and require tightening. I can tell Mr. Stillwell that they are now—fence and wire—in as good order as they were when he took over the work from the contractor. Besides, the wire being old, they would not stand straining; neither are there any posts left in the fence to strain them to. The old cask that floats the main pipe from the mud, that sunk on Wednesday last, and I suppose that he (Mr. Stillwell) will say that it is from carelessness of the caretaker. Now [if I recollect right, at the time of Mr. Gilliat taking this work over from Mr. A. P. Wood, he (Mr. Wood) promised to have these old casks replaced by proper buoys (painted). This promise has not been fulfilled at any of the tanks—Tom's Lake, Quandong, and One-tree.

While writing, a report has come in to me that the Dry Lake well has given out; so that I shall have to proceed there to-morrow, and get it in working order again by opening out the bore, which must have got choked. All this bother and trouble is caused by the shaft not having been sunk deep enough, but taken over from the contractor before the supply of water was obtained, and not leaving a pipe in the bore. Now I must conclude this rigmorole of a letter, as I am still unable to use both eyes.

Mr. Inspector Boulton.

I remain, &c.,
JOHN A. KEIGHRAN.

Mr.

Mr. Stillwell's evidence.

Statutory declaration made by caretaker George Young.

Sir,

One-tree Tank, 21 January, 1887.

Referring to Mr. Assistant Engineer Stillwell's report against me of the 26th November last, *re* the state of the One-tree tank and appliances at the time of his (Mr. Stillwell's) inspection, I have the honor to give a truthful statement which is as follows:—

On the 26th October last I took charge of the works here as caretaker. The pump was then in a disabled state, as can be proved by Mr. Overseer Keighran, who stated that he would report the matter to Mr. Stillwell, which he did, as a few days afterwards Mr. Nicholson (Mr. Stillwell's assistant) came out and partly repaired it, but could not put it in working order, as there was a leakage that he could not stop, and left it for the repairer Jones to put right, which he did shortly afterwards. The next visit I had from Mr. Nicholson was early one morning, twenty minutes past 5, rousing me out of bed, and calling me a lazy fellow, at the same time threatening to punch my head. He then tested the pump by having the horse worked for one hour, and found it working well, and made no complaint of the machinery being in a dirty state. The top gland was broken shortly afterwards through not being properly fitted on by the man who put it up, and not through any fault of mine.

The wires in the fence are considered slack. I think Mr. Stillwell should have seen to that part of the work before taking it over from the contractor, which was only a few days previous, and was in the same state as it was at the time of being handed over, and was in no way injured afterwards by getting slacker. One thing is, if the wires do get slack there is no straining-posts left to tighten them, the distance on one side from corner post to corner post being 100 yards.

The reason that the service tank was kept half empty was by orders from Mr. Jones, repairer, who said he wanted to pitch the inside, and wished to have no delay when he came to do it; in consequence of this the tank was not kept filled, otherwise it would have been. The key of the housing was not lost, but is still in my possession, therefore I cannot understand the reason, or why Mr. Stillwell makes these unfounded reports against me, as he appeared to be well satisfied with my work, not having drawn my attention to any part of the works that showed any signs of neglect.

The tank and all appliances are now in good working order, with the exception of the old cask that floats the main pipe and keeps it out of the mud. It has sunk in consequence of never having been painted.

Since my appointment here as caretaker I have found it a difficult matter to give satisfaction, on account of both Mr. Stillwell's and Mr. Nicholson's interference in the works.

Declared before me, at Hay, this }
3rd day of March, 1887,— }

I have, &c.,

GEORGE YOUNG,

Caretaker.

N. J. TREVINA, J.P.

The Chief Inspector of Public Watering Places.

III.

With regard to Mr. Stillwell's complaint, *re* the Pulletop Tank, I admitted in evidence that the lessee was an objectionable man, and that he had lost his lease. I would beg to point out that the construction of the bankment at Pulletop rendered them very difficult to preserve, and that the interference of Mr. Stillwell in supplying the 2½ inch perishable India rubber hose, to supersede the fluming provided by this Department, materially increased the difficulty and furnished a loop-hole for the tenant to endeavour to evade the conditions of his lease. Every endeavour was made by this Department to keep the man up to the mark. The whole case is fully shown—pages 42 to 46 of Blue Book. That Mr. Stillwell did interfere with Mr. Elworthy I have not the slightest doubt; his honesty and integrity are unimpeachable.

IV.

Re Hulong Tank.

Mr. Stillwell reports on 13th September, 1888, caretaker at his camp reading his newspaper, although his drains required attention. I made inquiry as to this and submit the papers in the case.

Extract from Mr. Assistant Engineer Stillwell's Report on Hulong Tank, dated 13/9/86:—

WHEN there on the 8th I found the caretaker absent, and have previously found him at his camp reading the paper while his drains needed attention.

A. W. STILLWELL.

Under Secretary for transmission to Mines.—W.C.B., 21/9/86. The Under Secretary for Mines.—J.R., B.C., 23/9/86. Mr. Overseer Elworthy.

Mr. Overseer Elworthy for report. Please to state what distance the caretaker's camp is from his tank, and carefully examine and report upon all the drains, machinery, and all appliances, and parts of the watering place. Ascertain and report the time of Mr. Assistant-Engineer Stillwell's visit.—H.G., B.C., 30/9/86.

Report attached.—J.W. Boulton, Whitton, 21/12/86.

Hulong Drains.

Sir,

Hulong Tank, Public Watering Places Office, Narrandera, 7 October, 1886.

When the first rain came after this tank was taken over it was found the drains were most uneven, and the water actually ran from instead of to the tanks. On my last inspection (15th September), I heard Mr. Stillwell had a few days previously inspected and had tested the machinery.

The caretaker had just finished painting the engine and pump and had given the service-tank one coat of paint, and it has subsequently had another coat.

When Mr. Stillwell found him absent the caretaker was on his way to Whitton to bring out some tools, &c., which I had sent him, and this trip was rendered necessary, as the agents refused to give up the goods until the carriage was paid (a rather sharp trick), so I told the caretaker to get them himself.

He has been levelling the drains, and got the water to run into tank, but advises me the new drains made by the Works Department are so low he will have to deepen the other drains for several chains to make them of service.

The caretaker's camp is 100 yards from tank.

I have, &c.,

W. J. ELWORTHY,

Overseer.

The Chief Inspector, Public Watering Places.

To H. Gilliat, Esq.,—

Hulong Tank, October.

Sir,

I am informed by my overseer I have been reported for being absent, for which I think I can explain to your satisfaction.

First, the tools which were lying at station had to be got to.

I sent in on the 5th of September for them, and had a cart; took cart back on the 8th of September. That accounts for my being absent on the 8th.

Mr. Stillwell passed the road from Whitton to tank, so could not find me at tank. As for attending to drains, you see by my returns that I was painting at that time.

Sir, hoping you will see that I was not absent on any other business but that of your Department,

I remain, &c.,

SAMUEL LEIGHTON,

Caretaker, Hulong Tank.

6th October, 1886.

332—P

Mr.

Mr. Stillwell's evidence.

Sir, Whitton, 21 December, 1886.
 Referring to the enclosed report, made by Mr. Road-Superintendent Stillwell, upon "the absence and neglect of duty on the part of Caretaker Leighton, I now have the honor to report, that from conversation with Mr. Overseer Elworthy and the caretaker, I find that Leighton was absent on the date specified, but was so under instructions from Mr. Elworthy, who directed him to go to Whitton, 9 miles away, for some tools that he had sent up. Mr. Stillwell met Leighton on his way in. In regard to the charge of reading the paper, Mr. Stillwell arrived there on a previous occasion at 1 o'clock, during Leighton's dinner hour. I inspected this tank on 21st December and found everything in excellent order, and that the caretaker has laboured hard to remedy the stupid errors of either Mr. Stillwell or his assistant in the levelling of these drains. Leighton has made the drain of some use. They were almost useless before. This is another of Mr. Stillwell's frivolous complaints, and they can only, I think, be avoided by the course pointed out in my other letter of this date. I do not consider Leighton's absence under his overseer's instructions, or the fact of his reading a paper at 1 p.m., any fault or neglect of duty whatever, and the very good order of all his works testify to his care and labour.

I have, &c.,

JAMES W. BOULTBEE,
 Inspector, Public Watering Places.

The Chief Inspector, Public Watering Places.

VI.

MR. STILLWELL'S report of 7th March was never submitted to this Department so far as can be traced. I have no knowledge of it and cannot reply to it.

VII.

REPORT (1st July) that caretaker was using shelter-shed for a house and boiler fire for domestic purposes.

The caretaker's statement and declaration has been already submitted to the Commission on 8th March, 1888. I can add nothing more to it except to state that I consider the man quite justified in using the shed as he did. It was kept scrupulously clean, as also was the machinery. No harm ensued or was ever likely to.

Mr. Stillwell's report of 9th November, that for want of attention by the caretaker the drains had allowed a considerable quantity of water to run in to swamp instead of to the tank. There is no record so far as I can trace of this complaint having been sent to this Department, and I distinctly affirm that it is entirely due to the work of this caretaker that the tank fills so well as it does. I should like to ask Mr. Stillwell if the drains were properly graded when he took off the men he employed by daily labour to lower the flumes and grade them? This work he ceased when the tank was transferred, and it is submitted that the declaration of the overseer and caretaker, given in reply to Mr. Stillwell's evidence on page 92, show that the work of grading the drains was entirely done by Leighton.

NEW SOUTH WALES.

PUBLIC WATERING PLACES ACT, 1884.

(REGULATIONS RESPECTING AGISTMENT OF STOCK.)

Presented to Parliament, pursuant to Act 48 Vic. No. 16.

[Laid upon the Table of the Honorable the Legislative Assembly of New South Wales by the Secretary for Mines, a copy of the Regulations under the Public Watering Places Act of 1884, re agistment of Stock—In accordance with the provisions of the abovementioned Act.]

Department of Mines, Public Watering Places,
Sydney, 31st May, 1887.

PUBLIC WATERING PLACES ACT, 1884.

HIS Excellency the Governor, with the advice of the Executive Council, has been pleased to cancel Nos. 3, 9, and 49 of the Regulations of the 1st December, 1885, issued under the abovenamed Act, and to substitute the following in lieu thereof:—

3. All stock upon prepayment of the following watering charges shall be supplied with water, all persons in charge of travelling stock being required to show their travelling statement or permits. Tenants may water and depasture within their lease not more than 35 head of large stock, or 200 sheep; where both sheep and large stock are kept five head of the former shall be reckoned as the equivalent of one head of the latter.

9. The charges for water which the tenant or caretaker shall collect are as follows:—

| | s. | d. |
|--|----|----|
| Horses, per head | 0 | 2 |
| Cattle, per head | 0 | 1 |
| Sheep, per hundred or portion of hundred | 1 | 0 |
| Goats and pigs, per head..... | 0 | 0½ |

When water is required for domestic purposes or in bulk, the same shall be supplied at the rate of one shilling per 100 gallons.

Any other animals according to agreement between tenant or caretaker and the owner or drover.

Water Trusts.

49. Any public watering place may be placed under Trustees, subject to these Regulations and the following conditions:—

1. The number of Trustees may be three or five, as the Minister shall decide.
2. The Trustees must engage, and may discharge, a caretaker, who will be under their immediate control and direction, but his remuneration will be fixed and paid by the Government.
3. The Trustees shall see that the works, appliances, and appurtenances are kept in a thoroughly efficient state, and will, as the necessity arises, make requisition to the Minister for repairs.
4. The following charges will be made for water supplied:—

| | s. | d. |
|---|----|----|
| Horses, per head | 0 | 0½ |
| Cattle, goats, and pigs, per head..... | 0 | 0½ |
| Sheep per hundred and portion of hundred | 0 | 6 |
| Water for domestic purposes or in bulk per 100 gallons..... | 1 | 0 |

Any other animals according to agreement with Trustees.

5. All travellers, teamsters, and drovers entitled to obtain water at a public watering place shall, on prepayment of the charges prescribed by Regulation No. 9, be equally entitled at public watering places under Trustees.
6. All watering charges collected at public watering places under the control of Trustees shall be paid into the Consolidated Revenue Fund.

FRANCIS ABIGAIL.

[In lieu of similar notice of the 6th instant.]

1888.

NEW SOUTH WALES.

PRICKLY PEAR DESTRUCTION ACT OF 1886.

(CANCELLATION OF REGULATION No. 2 AND ADOPTION OF AMENDED REGULATION.)

Presented to Parliament, pursuant to Act 50 Vic. No. 2, sec. 23.

Department of Lands,
Sydney, 24th August, 1888.

It is hereby notified, for general information, that His Excellency the Governor, with the advice of the Executive Council, has approved of the cancellation of Regulation No. 2, including the sub-sections thereunder, hitherto in force under the Prickly-Pear Destruction Act of 1836, and has approved of the following Regulation in lieu thereof.

HENRY PARKES.

CLEARING LEASES OF LAND INFESTED WITH PRICKLY-PEAR.

2. The Minister may, pursuant to the above-cited Act, fix a minimum rent, and offer leases at auction, or may invite tenders for leases, subject to the following conditions and covenants, that is to say:—

- (I.) That the rent shall be paid annually, in advance.
- (II.) That the lessee will not assign, sublet, or subdivide the land demised without the consent of the Minister, signified in writing.
- (III.) That the lessee shall, within such period as may be fixed by the Minister, eradicate from the land demised all Prickly-pear growing thereon, and keep the land free from Prickly-pear to the satisfaction of the Minister during the term of such lease: Provided that the Minister may at any time permit the lessee to suspend the work of clearing, or grant an extension of time for clearing, upon being satisfied that such suspension or extension is warranted.
- (IV.) That the lessee shall, at the expiration of the term for which his lease is granted or on any forfeiture of the lease, surrender the demised land, and give peaceable and quiet possession thereof to the Minister, or to any person authorized by him.

- (V.) That the lessee shall keep in good condition and repair, during the continuance of the term of his lease, all houses, fences, wells, reservoirs, tanks, dams, and all other improvements of a permanent character on the land demised, whether erected, constructed, or made by such lessee or otherwise; and on receipt of notice from the Minister to repair any damage done to any such improvements, the lessee shall forthwith repair the same.
- (VI.) That the lease shall be liable for forfeiture—to take effect thirty clear days after notice thereof in the Gazette—if, in the opinion of the Minister, the lessee shall have committed any breach of, or shall have failed to comply with any of, the conditions of the lease.
- (VII.) That the Minister may at any time cancel any lease if the demised land or any part thereof be required for any public purpose.
- (VIII.) That the lessee shall have the right of ingress, egress, and regress to and from the land comprised in his lease, through and over any land lying between the demised land and the nearest public road or track.
- (IX.) In any case in which it shall appear to the Minister proper so to do, special conditions, in addition to the foregoing, may be attached to any lease.

[M.L. 88-7,351]

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RABBIT SUBSIDIES.

(AMOUNTS PLACED ON THE ESTIMATES, 1887 AND 1888.)

Ordered by the Legislative Assembly to be printed, 5 December, 1888.

Minute by The Under Secretary for Lands.

THE Treasurer desires an explanation of the reason why the amount placed on the Loan Estimate for the rabbit subsidy was £201,000, and the amount now proposed on the Estimates for 1889 is only £88,000.

The Accountant.

See memo. attached.—V.C., 13/11/88.

S.F., 12/11/88.

RABBIT SUBSIDIES—1887 AND 1888.

THE amount placed on the Loan Estimates for 1888, to meet the Rabbit Subsidies was £201,000, which was made up as follows, viz. :—

| | | |
|-----------------------------|--------|----------|
| Subsidies, further sum—1887 | | £116,000 |
| Do do —1888 | | £85,000 |

For the year 1888 only £88,000 is wanted and that sum was included in the Draft Additional Estimates for 1888, but the amount now appears in the Estimates for 1889 under the heading of "Special Charges." The question naturally arises, how is it that this small sum, as compared with previous years is now required, more especially as the amount provided on the Loan Estimates was withdrawn?

The solution will be found in the following explanation: In June, 1888, the votes for 1887 were exhausted, and the vote for 1888, taken under the Temporary Supply Bills, was drawn upon to the extent of £49,997, leaving unpaid claims to the amount of £18,802. Of this sum, £7,495 was met from the Treasurer's Advance Account and the Special Account under the Rabbit Act. It was also estimated that claims were in the Rabbit Branch in course of examination, amounting to £47,552. These sums aggregate the total of £116,351.

At this time it was estimated that for 1888 the total claims would be approximately £135,000, but inasmuch as the vote for 1888 (£50,000) had been used for the services of 1887, it was but right that the vote for 1888 should be recouped, and that sum was added to the sum wanted for 1887, and the amount stated for 1888 was fixed at £85,000.

Since the estimate just alluded to was introduced, Mr. Garrett, then Minister for Lands, announced the determination of the Government to suspend the subsidy clauses of the Act, and such intention was given effect to on the 31st July last. As the estimate of £135,000 had been based on twelve months subsidy, it is now evident that with the altered circumstances it will not be required; but from the estimate supplied me by the officer in charge of the Rabbit Branch, I find that claims are in his hands to the extent of about £30,000, and that there were at the time of framing the estimate unpaid vouchers at the Treasury amounting to £58,000.

With respect to the sum of £30,000, it should be stated that possibly other claims may be sent in during the year, and probably reductions may be made in them as well as in those at present in the office.

Department of Lands,
13 November, 1888.

VICTOR COHEN,
Accountant.

1888-9.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CASUAL LABOUR BOARD.

(RETURN SHOWING THE WORKS CARRIED OUT UNDER THE CONTROL OF, &c.)

Ordered by the Legislative Assembly to be printed, 8 January, 1889.

RETURN showing the works carried out under the control of the Casual Labour Board, also the amount realized for Crown Lands, and the approximate value of the lands now available for sale, based upon prices recently realized at public auction.

RETURN showing the works carried out under the control of the Casual Labour Board, also the amount realized for Crown lands, and the approximate value of the lands now available for sale, based upon prices recently realized at public auction.

| | Acres cleared and under scrubbed. | Miles of Roads cleared. | Miles of Roads cleared and formed. | Miles of Roads cleared, formed, and made. | Bridges, Culverts, Drains, &c. | Remarks. |
|-----------------------------------|-----------------------------------|-------------------------|------------------------------------|---|---|--|
| Audley Road | | 2 | 2 | 2 | 3 culverts | This road leads from the end of Military Road, at Loftus Platform, to the dam across the Port Hacking River, and then leads on to the Lady Carrington Road, and is greatly used by "tourists," and also the military when they have their encampments at the Park. |
| Bankstown Common | 88 | | | | | This land when taken in hand by the Board was perfectly worthless as a Common, being covered with the very thickest of ti-tree scrub. The whole has now been properly cleared, and the Board recommend that 66 acres be sold, the balance being retained as a public park. This land will easily return £75 per acre. |
| Bankstown Park | 35 | | | | | This was a very rough piece of land when the Board commenced operations upon it, but they have succeeded in converting it into a fine park, to the great benefit of the surrounding people, the whole area was cleared, drives made, and a swamp turned into a fine artificial lake, making it now a very valuable property. |
| Berowra | 463 | 19 | 10 | | 12 culverts | 100 acres of this land, at public auction, realized £610, this being before the roads were completed. There are now 3,000 acres available for sale, which should readily realize £10 per acre. |
| Boulevard Road | | 1½ | | | | This road leads from Illawarra Railway at Sutherland to a Government reserve at Huntsman's Hill. |
| Blue-gum Road | | 1½ | 1 | 1 | | Opens up access through Crown lands from main Illawarra Road to Otford Railway Station. |
| Bulgo Road | | 4 | 3½ | | The metal for this road is now quarried and broken. | This road leads from the Otford Station to the junction of the Waterfalls Road, through Crown and private lands, opening up some of the finest timber country in the Colony; since the road has been started two saw-mills have been set to work; the road also throws open 200 acres of Crown lands which will return £100 per acre. |
| Camp Creek Road | | 5½ | 3 | | The metal for ballasting 3 miles of this road is now ready. | This leads from the main Illawarra Road to the coal mines at Helensburgh, and then through Crown lands, of which 3,840 acres are now available for sale, which should return £100 per acre, the price at which land is readily selling there. |
| Campbelltown-Eckersley Road | | 11 | 4 | 2 | | Connects on to the Liverpool-Eckersley Road, and also to the Illawarra Road to Liverpool, giving direct access to the coast district, and passing through 10,500 acres of Crown lands, which it makes available for sale, and should return £15 per acre. |
| Cook Park, Sandringham | 50 | | | | | This park is situated on the foreshore of Botany Bay, between Sandringham and Rockdale. It was originally comprised of sand hills of a very unprepossessing appearance, which the Board has had levelled down, entailing the removal of 200,000 cubic yards of sand; and now the place is one of the finest picnic grounds in the Colony, having a most beautiful sandy beach, with the level esplanade at the back. This resort is easily approached by tram from either Kogarah or Rockdale. |
| Coronulla Road | | 2½ | 2½ | | | This road leads from the Port Hacking Road, at the intersection of Woronora Road, to the Coronulla Beach, one of the finest pleasure resorts in Australia, and is also the direct highway to the noxious trades site at Kurnell. |
| Dobroyd | 80 | 2 | 2 | 1 | 6 stone-pitched drains, 2 crossings, 70 chains open drains cut in solid rock. | 30 acres of this land has been sold, bringing £4,500; the remaining unsold 50 acres will return £7,500. This land, when taken in hand by the Board to clear and subdivide, would not have realized £20 per acre. |
| Dural Road | | 5 | | | | This road opens up direct communication between Dural and Hornsby Railway Station, and will be of great service to the settlers and the railway, besides improving the adjacent Crown lands 50 per cent. in value. |
| Eastwood Road | | 1 | 1 | 1 | | Gives direct access to Eastwood Railway Station from Ryde, which proves of great service to the railway and the whole surrounding district. |
| Ervey Road | | 1 | 1 | | | Leads from the Port Hacking Road to the deep waters of Yowie Bay. |
| Flemington Road | | 2 | 1 | | | This road opens up communication between Flemington and Bankstown, coming out at the Liverpool Road, and is much used by travelling stock from the sale-yards. It joins Roberts' Road, which runs on to George's River. |

078

2

| | Acres cleared and under scrubbed. | Miles of Roads cleared. | Miles of Roads cleared and formed. | Miles of Roads cleared, formed, and-made. | Bridges, Culverts, Drains, &c. | Remarks. |
|---|-----------------------------------|-------------------------|------------------------------------|---|---|---|
| Elswick Creek, Leichhardt | | | | | 450 cubic yards removed in diversion of creek; 150 cubic yards of rock quarried in forming creek; 80 cubic yards of ballast broken for lining; 60 cubic yards of concrete mixed and spread on bottom of creek. | A most useful sanitary work, the old creek being converted into a fine concrete channel with a good grade that carries off all waters and drainage from the surrounding neighbourhood. |
| Fox Ground Road, Thornleigh | | 3 | 3 | | 1 culvert | Opens up direct communication to the railway for local residents who had to make a detour of 5 miles to get there, and is not only now of great public use, but a good feeder to the railway. |
| Field of Mars Common, Carlingford, and Beecroft. | 6,600 | 69 | 44 | | 3 bridges, 29 culverts, 6 crossings | 697 acres of this land has been sold, realizing £70,300. The remaining unsold 5,903 acres should easily return £75 per acre. |
| French's Forest Road | 283 | 12½ | 9 | 9 | 6 stone culverts; 20 pipe culverts; 6 miles side drains cut, 15,000 cubic yards of metal quarried, broken, and used upon road; 6,000 cubic yards gravel spread on road. | This road throws open 10,000 acres of Crown lands, which, on the basis of sales of adjoining properties, should easily realize £50 per acre, and the road also leads direct to thousands of unalienated Crown lands beyond the population boundary, which will always command a ready sale. |
| Gordon | 3,412 | 13 | | | | 430 acres of this was recently sold, returning £34,000. The remaining portions, by virtue of the improvements effected, and the proximity to the Pearce's Corner Railway, will no doubt easily realize £100 per acre, as it comprises some of the finest building views in the Colony, and some fine orchard land. |
| Heathcote | 430 | 6 | 6 | | | 203 acres of this land was sold, returning £8,235. The remaining unsold portion will easily bring £50 per acre. |
| Helsarmel Creek, Leichhardt | | | | | 600 cubic yards of rock excavated in the bottom of creek; 250 cubic yards of earth; 150 cubic yards of ballast broken for lining; 30 cubic yards of concrete mixed and spread on bottom of creek. | A most important sanitary work. The creek is now all concreted, and, by having a good grade, carries off all drainage and surplus waters, which is a great boon to the surrounding inhabitants. |
| Hornsby | 356 | 21 | 15 | 8 | 6 culverts, 4 bridges, 14 pipe-drains, 6 paved crossings, 2 miles of side-drains. | These improvements not only open up access to the Hornsby Station for the residents of the surrounding district, but open up direct access to Crown lands, of which 100 acres were recently sold by auction, realizing £4,000. The remaining unsold portion will, no doubt, by reason of the improvements, return £50 per acre. This land, before the Board gave access to it, was not worth £1 per acre. |
| Hunter's Hill..... | 109 | | | | | This land has been cleared, and left in order for a general cemetery for the parishes of Ryde and Hunter's Hill. |
| Johnstone's Creek, Leichhardt | | | | | Excavating race, 400 cubic yards; excavating dam, 1,100 cubic yards; diversion of creek, 3,000 cubic yards; 3,000 cubic yards of rock quarried from bed of creek; 92 superficial yards of gutter; 100 superficial yards of facing; 3,750 cubic yards of stone lining; 1,750 superficial yards of concrete, mixed and spread; 1,000 cubic yards of metal, broken for lining; 1,000 cubic yards of spalls laid in bed of creek. | This is a sanitary work carried out on the boundary of Camperdown and Leichhardt, by making the old channel, which was nothing more than a fever-bed, into a concreted sewer, which carries off all drainage. |
| Illawarra Road, from Government Punt to Sutherland. | | 4½ | 3½ | | 4 pipe culverts | This is the main Government road, which was originally only a bush track, but has now been made from the Government punt to Sutherland 99 feet wide, and is in thorough repair for all traffic. |
| Illawarra Road to Liverpool | | 14 | 14 | 6 | 19 chains of drains cut, 3 bridges, 4 culverts | Opens up direct communication from Liverpool to the Southern Coast District, throws open for sale 10,500 acres of Crown lands, which should realize £15 per acre. |
| Leichhardt Park | | | | | | The works carried out at this park consist of cutting down and forming roads and drives round the park, making a cricket oval, and otherwise generally improving the property. |
| Little Bay, Coast Hospital | 400 | ¾ | ¾ | ¾ | 80 chains open drains cut | The whole area has been cleared and matted, planted with grass and ornamental trees, wells sunk, roads made, dams cleaned out, and general improvements to the ground carried out. 100 tons of ironstone metal has been broken and stacked to keep the roads in repair. |

| | Acres cleared and under scrubbed. | Miles of Roads cleared. | Miles of Roads cleared and formed. | Miles of Roads cleared, formed, and made. | Bridges, Culverts, Drains, &c. | Remarks. |
|---------------------------------------|-----------------------------------|-------------------------|------------------------------------|---|--|---|
| Liverpool-Eckersley Road | | 4½ | 4½ | 2 | | Connects the Campbelltown Eckersley Road to the Illawarra Road, and throws open thousands of acres of Crown lands, which are now available for sale, and which should realize a high figure. |
| Malvern Road | | 2 | 2 | | | Opens up communication from Illawarra Road to Port Hacking Road, being at present the shortest route to Government Reserves, and also to the noxious trades site. |
| Military Road | | 1 | 1 | 1 | | This is a continuation of the Sutherland-Loftus Road, from the Loftus Junction platform to the military camping ground at National Park, and will stand all the heavy traffic that is likely to be put over, being one of the finest roads in the Colony. |
| Morrison's Road, Ryde..... | | 2 | | | | This road leads from the old road to Ryde on to the township, and will be of great service to the residents, as it shortens the distance by one mile between there and Sydney. |
| Narrabeen, parish of Manly Cove ... | 4,500 | 65 | 19 | 10 | 9 wooden culverts; 9 stone culverts; 14 pipe culverts; 8 miles of side drains cut; 18,552 cubic yards of metal broken on roads; 16,392 cubic yards of rock taken out of cuttings; 287 cubic yards of stone quarried and dressed for culverts. | These improvements throw open 10,000 acres of Crown lands. At a recent sale of one subdivision here, 1,313 acres were sold by auction, realizing £29,000; and the remaining unsold portion will no doubt, by virtue of the permanent improvements made upon the ground, readily realize £30 per acre; and if the proposed tramway to Pittwater is carried out it will greatly enhance the value of this property. |
| National Park | 13,800 | 20 | 20 | 10 | 1 large dam at Audley for military purposes; 3 large dams upon other parts of the park; 2,500 superficial yards sea-wall in Port Hacking River; large breakwater made in Port Hacking River to prevent the sand from silting up in the channel; 6,000 sleepers were cut for the Centennial Park. | 1,050 acres have been matted and planted with grass-seed; 427 acres planted with ornamental trees; 4,000 seedling ornamental trees, reared and transplanted in different parts of the park; 60 acres of land manured with bone-dust; 1,000 tons of ironstone metal broken to keep the roads in repair; and other general improvements to the park, such as laying out the military encampment site, &c. |
| Otford Road | | 1½ | 1½ | 1½ | | Leads from Otford Station to Main Illawarra Road, through Crown Lands, and opens up communication to the railway for the surrounding settlers. |
| Parramatta Roads, Ryde and Ermington. | | 10 | 10 | 10 | | This portion of the road was, when taken in hand by the Board, in a most unsafe condition for traffic; but now it can be numbered as a "first-class" road, having been metalled and thoroughly repaired with new culverts, bridges, &c. |
| Port Hacking Road | | 4 | 4 | | | Leads from Government punt to the Port Hacking River. Is an old Government road with very heavy traffic. |
| Park and Ferrier Roads, Bankstown | | 3 | 2 | | | These roads give access to and from Auburn Railway Station and the township of Bankstown, passing by Government reserves. |
| Peakhurst Road..... | | 7 | 7 | 7 | | Leads from Hurstville Railway Station to the Illawarra Road to Liverpool, and opens up communication to Government punt at George's River; also to Railway Station. Throws open 90 acres of Crown lands, which will readily return £55 per acre. |
| Prince Alfred Hospital..... | | | | | | General improvements in the grounds have been carried out here. |
| Rookwood | 1,100 | | | | | 300 acres of this land was fenced off for boys' reformatory; 42 acres held as Potts' Hill Water Reserve; 66 acres as a timber reserve; of the remaining 692 acres, 79 acres were sold by auction, returning £9,000; the balance should easily realize £150 per acre. |
| Roberts' Road, Bankstown | | 4 | 4 | | 2 culverts | This is a continuation of the Flemington Road, leading the Liverpool Road to George's River, and is greatly used by travelling stock. |
| Rushcutter's Bay Park..... | | | | | | Drives have been made and the property otherwise generally improved. |
| Sutherland, Loftus Road..... | | 2 | 2 | 2 | | Leads from Sutherland Station to Loftus and shortens the journey on the Illawarra Road by three-quarters of a mile, besides saving having to cross the railway twice. This road is the direct access to National Park. |
| Station-street, Sutherland..... | | ½ | ½ | ½ | | Leads from railway station gates to the Illawarra Road. The Sutherland Station yards were also gravelled and put into order. |
| Sylvania Road | | 3¼ | | | | Leads from part of Port Hacking Road to Port Hacking River. |
| Unwin's Bridge Road | | 2 | 1 | 1 | | Leads from Canterbury to Tempe Railway Station, being an old Government road, which has been remade for the benefit of the surrounding inhabitants. |

| | Acres cleared and under-scrubbed. | Miles of Roads cleared. | Miles of Roads cleared and formed. | Miles of Roads cleared, formed, and made. | Bridges, Culverts, Drains, &c. | Remarks. |
|--|-----------------------------------|-------------------------|------------------------------------|---|---|---|
| University | | | | | | General improvements in the grounds were carried out. |
| Waterloo Road, Bankstown | | 4 | 4 | | 1 culvert | Also a continuation from Flemington Road to George's River. |
| Waterfall, Garie Road | | 8 | 6 | 6 | 17 culverts, 14 bridges | From the Waterfall Station, through portion of the National Park, to the Lady Carrington Road, and then on to Crown lands at Garie, of which 200 acres are now available for sale, and will realize £50 per acre. |
| White's and Wentworth Creek, Leichhardt. | | | | | Cutting excavation in creeks, 9,350 cubic yards; 4,240 cubic yards of rock quarried; 2,100 and 1,500 cubic yards of earth filled into old creek; 1,750 superficial yards stone-lining; 1,500 cubic yards of metal broken for lining; 1,360 cubic yards of concrete mixed and spread; 1,790 superficial yards of stone wall. | This is a most useful sanitary work, and of great importance to the surrounding neighbourhood. |
| Woolwash Road, Campbelltown | | 1 | 1 | 1 | | This road leads from Campbelltown to George's River, and has already proved of the greatest benefit to the inhabitants during the past dry weather, as it gives access to the river, which was impassable before. |
| Woronora River Road | | 9 | 5 | 4 | | Is the connecting link that joins the other roads, to connect Liverpool, Minto, and Campbelltown with the Southern Coast District, and thereby throws open thousands of acres of Crown lands. |
| Woronora Road | | 3 | 1½ | | 2 bridges, 5 culverts | Is the direct communication from Sutherland Station to the noxious trades site, passing by Government Reserves. |

TOTALS.

JOHN DAVIES,
Chairman, Casual Labour Board.

Sydney, 12th December, 1888.

1081

1888.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

THE UNEMPLOYED.

(RETURN SHOWING ROADS CONSTRUCTED BY.)

Ordered by the Legislative Assembly to be printed, 1st November, 1888.

LEGISLATIVE ASSEMBLY, 1 NOVEMBER, 1888—QUESTIONS AND ANSWERS.

*Questions:—*6. MR. WALKER *to ask* THE COLONIAL SECRETARY,—

- (1.) Have the unemployed been at work on roads on the Holt-Sutherland Estate?
- (2.) What public roads have the unemployed been set to improve?
- (3.) Have any of the unemployed been used for the service of any Members of this House?
- (4.) Is it a fact that the unemployed have been engaged in constructing roads in and around the property owned by the Colonial Treasurer, Mr. R. B. Smith, and Mr. Withers?

Answers:—

- (1.) A number of men have been employed in clearing and forming public roads passing through a portion of the Holt-Sutherland Estate, viz., the great Illawarra Road, from the Railway Station at Sutherland to Government Ferry, at Tom Ugly's Point, Woronora, and Yowie Roads, from the Sutherland Railway Station to Government reserves.
- (2.) As per separate list attached.
- (3.) No.
- (4.) Public proclaimed roads have been formed and made through a portion of land owned by the Honorable the Colonial Treasurer and Messrs. R. B. Smith and Withers, Ms.P., for the purpose of giving access to Crown lands which were being cleared and roads formed, it being absolutely necessary to obtain roads through those gentlemen's property, which was the only means of securing direct communication from the Crown lands to Railway stations and main roads; the land for the necessary roads was given free by the property holders.

Main Illawarra Road, from Tom Ugly's Point to Waterfalls.
 Main Illawarra Road, from Sutherland to Liverpool.
 Eckersley Road, from Campbelltown to Liverpool.
 Bulgo Road, from Oxford Railway Station.
 Camp Creek Road to Helensburgh Railway Station.
 Waterfalls Road, from Waterfalls to Garie.
 Military Road, from Sutherland to Loftus.
 Woronora Road, from Sutherland to Government Reserve.
 Yowie Road, from Sutherland to Government Reserve.
 Peakhurst Road, from Hurstville to Government Punt on George's River.
 Waterloo Road, from Liverpool Road, Bankstown, to George's River.
 Roberts Road, from Liverpool Road, Bankstown, to George's River.
 Park Road, from Liverpool Road to Auburn Station.
 Road from Liverpool Road to Flemington Station.
 Kissing Point Road, Ermington.
 Parramatta Road, Ryde.
 Junction Road, Hornsby.
 Boundary Road, Hornsby.
 French's Forest Road, Manly.
 Greendall Road, Manly.
 Pittwater Road, Narrabeen.
 Wanganella Road, Dobroyd.
 Cowley Creek Road, from Station to Camp Creek Coal-mines.
 Pennant Hills Road, from Pennant Hills to Parramatta.
 Terry's Road, from North Ryde to Railway Station.

1888.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

THE UNEMPLOYED.

(RETURN SHOWING APPLICANTS FOR WORK, FROM MAY, 1887, TO JUNE, 1888.)

Ordered by the Legislative Assembly to be printed, 13 November, 1888.

RETURN showing the number of Men who have applied for work to the Casual Labour Board, where they came from, and how dealt with, from 2nd May, 1887, to 30th June, 1888.

| Total number of men who have applied for work. | Where they came from. | Trades and Callings. | | | | | | Number of men for which private employment has been found by the Board at current rates of wages. | | Number of men on the various Relief Works. | | Number of men who were employed on the Relief Works that have found work without informing the Board of their destination. |
|--|---|--|---|---|-------|-------|-------|---|--|--|------------------|--|
| | | | | | | | | 30th June, 1887. | 30th June, 1888. | 30th June, 1887. | 30th June, 1888. | |
| 7,916 | <i>Australian Colonies—</i> Victoria 813 Queensland 524 New Zealand 503 Tasmania 55 South Australia ... 184 Western Australia 21 Fiji 11 Total 2,111 <i>Outside the Colonies—</i> England 781 Ireland 73 Scotland 75 Other countries ... 71 Total 3,111 | Brewers 1 Blacksmiths 140 Boilermakers 63 Butchers 66 Brassfinishers 15 Bootmakers 48 Bakers 80 Brickmakers 90 Bricklayers 70 Bellhangers 2 Blindmakers 3 Boatbuilders 4 Basketmakers 5 Bookbinders 8 Carpenters 369 Cabinetmakers 39 Chemists 10 Coachbuilders 37 Cooks 94 Coopers 20 Clerks 110 Confectioners 19 Candlemakers 6 Coalminers 134 Dyers 5 Drapers 40 Engine-fitters 68 Engineers 141 | Engravers 7 Farmers 37 Farriers 7 Firemen 108 Galvanizers 16 Gardeners 47 Grocers 44 Grooms 15 Gunsmiths 6 Grinders 5 Glassblowers 5 Hatters 5 Ironmoulders 101 Ironmongers 15 Inkmakers 2 Jewellers 12 Locksmiths 3 Labourers 4,494 Miners 177 Machinists 12 Millers 5 Painters 71 Printers 22 Photographers 4 Plumbers 42 Plasterers 77 Potters 3 Pattern-makers 8 | Piano-tuners 4 Quarrymen 81 Ropemakers 3 Riveters 7 Shearers 34 Sawyers 50 Slaters 18 Spinners 3 Smelter 1 Shipwrights 37 Sailors 395 Surveyors 2 Stonemasons 96 Saddlers 17 Stationers 7 Tobacco twistlers ... 37 Tailors 12 Tinsmiths 2 Tutors 5 Tanners 11 Undertaker 1 Veterinary Surgeon 1 Waiters 12 Wool-sorters 4 Wood-turners 8 Wheelwrights 6 7,916 | 2,024 | 5,677 | 1,312 | 3,952 | About 9-10ths of these were engaged to go into the country. The balance of 628 men were discharged from the different works for drunkenness, laziness, and other charges. | | | |

* In addition to this number the Board have assisted over 1,000 men through the various Municipalities by paying one-half of the daily wage while engaged upon Local Relief Works.

JOHN DAVIES,
Chairman.

1888.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

THE UNEMPLOYED.
(WORK DONE BY—IN IMPROVING CROWN LANDS.)

Ordered by the Legislative Assembly to be printed, 13 November, 1888.

[Laid upon the Table in answer to Question No. 1 of 13 November, 1888.]

Questions.

MR. SEE asked THE COLONIAL SECRETARY,—

- (1.) The total sum spent upon the unemployed to date?
- (2.) The sum realised upon land cleared by the unemployed?
- (3.) The approximate value of land yet available for sale?
- (4.) How many men are there at present employed upon relief works?

Answers.

- (1.) £215,000.
- (2.) £162,000.
- (3.) RETURN of Crown Lands which will be available for sale upon completion of the roads to and through them, which are now being constructed by the Casual Labour Board, and the approximate amount they should realize, based upon the prices recently obtained for portions sold by public auction:—

| | | | | | |
|---|-----|-----|-----|------------------------------|------------|
| Rookwood | ... | ... | ... | 600 acres @ £150 per acre... | £90,000 |

1888-9.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

THE UNEMPLOYED.

(DISCONTINUANCE OF SERVICES OF.)

Ordered by the Legislative Assembly to be printed, 11 January, 1889.

The Principal Under Secretary to The Chairman of the Casual Labour Board.

Sir,

Colonial Secretary's Office, Sydney, 29 December, 1888.

I am directed by the Colonial Secretary to convey to you the views of the Government in respect to the heavy expenditures in support of that class of persons known as the "unemployed." These irregular expenditures have gone on far beyond what was contemplated at the beginning, and the amount to which they have reached is not only a serious drain upon the public revenue but is calculated to assist in creating an erroneous and a prejudicial impression abroad of the real condition of the country. It may be doubted whether at any time there has been in New South Wales relatively a larger number of persons who have found a temporary difficulty in obtaining employment than in other countries; but the Government of this Colony, from several mixed causes, has more readily than other Governments, afforded a forced means of employment which, however attempted to be directed to purposes of public utility, cannot be entirely divested of an eleemosynary character. The effect has been to draw a certain class from other countries, thus increasing the difficulty which it was sought to remove or diminish. Not only so, but in some cases the works opened by the Government appear to have induced men to desert the legitimate operations of private employers. This unhealthy state of things, so unnatural in a country where the most precious thing is trustworthy and well-directed human labour, if initiated mistakenly, cannot be continued by the perpetuation of fresh mistakes.

I am to say that, so far as Sir Henry Parkes can judge, the greater part of the work done by this class of men has been of solid value to the State, and he feels persuaded that the gentlemen forming the Casual Labour Board have done their best to direct this large body of labour to the best advantage of the public. Still he feels it to be his duty to give this positive instruction, that no public improvement, however undoubted, is to be undertaken where the effect would be to incidentally serve the interests of private proprietors, without the case being first specifically stated to him, and receiving his written approval on the part of the Government.

As already intimated, the system itself must be brought to an end. You will take the necessary steps to make known to the men that their services will be dispensed with in the following divisions:— One-third of their number on the last day of January next, one-third on the last day of February, and the remaining one-third on the last day of March. No fresh hands are to be taken on the works.

I have, &c.,

CRITCHETT WALKER,
Principal Under Secretary.

The Chairman of the Casual Labour Board to The Principal Under Secretary.

Sir,

Casual Labour Board, 82, Goulburn-street, Sydney, 31 December, 1888.

I have the honor, on behalf of the Casual Labour Board, to acknowledge receipt of your letter of 29th December, conveying the views of the Government with respect to the expenditure, &c., incurred in support of the "unemployed."

We will have much pleasure in giving prompt attention to the request of the Colonial Secretary in dispensing with the services of all men employed on the several works, so as to close them up by the 31st March.

This would have been realized at a much earlier period if public works had been authorized, as was contemplated when our Board was appointed, which would have been a natural means for absorbing the large amount of surplus labour which had been attracted here from other Colonies, and from all parts of the country, by an injudicious system, inaugurated by a previous administration, where unskilled labourers, whose rations, tents, tools, &c., were insured to them, and with wages not less than 6s. per day, were induced to leave private employ and flock to the city.

One

One of our first acts was to put a stop to this improper system, and to institute a system of piece-work and payment by results, and where day labour could not be dispensed with, the rate was reduced to 3s. 6d. per day; in consequence of such act the works ceased to be attractive, as they were prior to our appointment.

When we took over the charge of the "unemployed" there were on the several works 4,010 men, and during the period we have been in existence upwards of 8,000 men have passed through the books, and of this number about 2,400 were provided with private employment at the current rates of wages, and a large number, profiting by the temporary assistance afforded them, have been enabled to find employment in the ordinary channels of labor, and at the present time less than 1,000 men are now employed on the different works under the control of the Board.

Although a great expenditure has been incurred in directing this large body of labour, it will be seen that the work carried out in improving Crown lands subdivisions, the making of public roads, the beautifying of public parks, and other public works, that good and substantial value has been realized for the expenditure.

Your Board, since its appointment, has not undertaken the carrying out of any public works without first obtaining the reports from the Government officers and subsequently the approval of the Colonial Secretary (excepting those works initiated before their appointment).

We found it no easy task in directing so large a body of mixed labor, so that the best results might be obtained, and the prejudicial impression created abroad by the massing of large numbers of unemployed in the City, and the besieging of public offices, has been abolished by the action taken by us; this state of things will, in a measure, we think, revive on the closing of the several works under the control of the Board, in the absence of the authorization and opening up of public works which are urgently required as avenues for absorbing the large masses of unskilled labour at present only partially employed in the city and large centres of population. The Board is much pleased to find by tenor of your letter that their efforts have been appreciated by the Government.

I have, &c.,
JOHN DAVIES,
Chairman.

1888.

1888.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES No. 11. THURSDAY, 15 NOVEMBER, 1888 A.M.

12. WORK OF UNEMPLOYED ON ROADS AT HORNSBY AND HOLT-SUTHERLAND ESTATE:—Mr. Walker moved, pursuant to Notice,—
- (1.) That a Select Committee be appointed, with power to send for persons and papers and to visit the ground, to inquire into and report upon the work of the unemployed in clearing, forming, and making roads through the property near Hornsby owned by Messrs. Burns, Withers, and R. B. Smith, and also those made through the Holt-Sutherland estate and other private properties, with power to sit during any adjournment.
- (2.) That such Committee consist of Mr. O'Sullivan, Mr. Copeland, Mr. Henry Clarke, Mr. McMillan, Mr. Melville, Mr. Street, Mr. Bruncker, Mr. Carruthers, and the Mover.
- Debate ensued.
-

And the House continuing to sit till after midnight,—

THURSDAY, 15 NOVEMBER, 1888, A.M.

Question put and passed.

VOTES No. 12. THURSDAY, 15 NOVEMBER, 1888.

4. WORK OF UNEMPLOYED ON ROADS AT HORNSBY AND HOLT-SUTHERLAND ESTATE:—Mr. Walker (*by consent*) moved, without Notice, That the Returns respecting "Roads at Hornsby," laid upon the Table and ordered to be printed on the 8th, 13th, and 14th November, 1888, respectively, be referred to the Select Committee on "Work of Unemployed on Roads at Hornsby and Holt-Sutherland Estate."
- Question put and passed.
-

VOTES No. 28. WEDNESDAY, 19 DECEMBER, 1888.

7. WORK OF UNEMPLOYED ON ROADS AT HORNSBY AND HOLT-SUTHERLAND ESTATE:—Mr. Walker (*by consent*) moved, without Notice, That the Return respecting roads through Holt-Sutherland Estate, laid upon the Table on the 13th December, instant, be referred to the Select Committee now sitting on "Work of Unemployed on Roads at Hornsby and Holt-Sutherland Estate."
- Question put and passed.
-

VOTES No. 30. FRIDAY, 21 DECEMBER, 1888.

4. WORK OF UNEMPLOYED ON ROADS AT HORNSBY AND HOLT-SUTHERLAND ESTATE:—Mr. Walker, as Chairman, brought up a Progress Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee for whose consideration and Report this subject was referred on 15th November, 1888, a.m., together with Appendix.
- Mr. Walker then moved, "That" the documents be printed.
- Mr. McMillan moved, That the Question be amended, by the omission of all the words after the first word "That," with a view to the insertion in their place of the words, "the Report, with Evidence be referred back to the Select Committee for further consideration."
- Question proposed,—That the words proposed to be omitted stand part of the Question.
- Debate ensued.
- Privilege*:—Sir Henry Parkes, as a matter of *Privilege*, moved, That William Fitzwilliam Terry, 78, King-street, Sydney, whose name appears on the imprint of the *Australian Star*, be summoned to the Bar of this House to account for his possession of the Report of the Select Committee on the "Work of the Unemployed on the Roads at Hornsby and Holt-Sutherland Estate," which appears in the issue of that paper of this day.
- Debate ensued.
- Motion, by leave, withdrawn.
- Proposed amendment, by leave, withdrawn.
- Original Question,—That the documents be printed,—put and passed.

WORK OF UNEMPLOYED ON ROADS AT HORNSBY AND HOLT-SUTHERLAND
ESTATE.

PROGRESS REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 15th November, 1888, A.M., "*with power to send for persons and papers, and to visit the ground, to inquire into and report upon the work of the unemployed in clearing, forming, and making roads through the property near Hornsby owned by Messrs. Burns, Withers, and R. B. Smith, and also those made through the Holt-Sutherland Estate and other private properties, with power to sit during any adjournment,*" and to whom was referred on the 15th November, 1888, "*the Returns respecting roads at Hornsby, laid upon the Table and ordered to be printed on the 8th, 13th, and 14th November, 1888, respectively,*" and on the 19th December, 1888, "*The Return respecting roads through Holt-Sutherland Estate laid upon the Table on the 13th December,*" have agreed to the following Progress Report:—

Your Committee, taking into its consideration the possible early prorogation of Parliament, desire to present their report on the inquiry so far as it has been completed, such inquiry being chiefly confined to the roads made at Hornsby, and on, and in juxtaposition to, the Holt-Sutherland Estate.

2. The evidence discloses that at Hornsby a number of roads have been cleared and others formed by the unemployed, for which, in the interests of the public, there can be no sufficient justification, and roads have been formed and ballasted traversing private property, for which there was no precedent prior to the existence of the Casual Labour Board. Some of the roads and streets cleared and formed on the estate of Messrs. Burns, Withers, and Smith appear on their subdivision plan, and their construction had been commenced by the owners prior to the advent of the Casual Labour Board.

3. Two witnesses—Mr. Oliver, ex-Under Secretary for Lands, and Mr. Deering, Metropolitan and Coast District Surveyor—condemn both the excessive number of roads as being beyond public requirements, and also disapprove of the superior quality of the work on some of the roads, as being chiefly calculated to benefit private individuals. While they approve of a limited number of roads, they would have had such roads cleared only for the purposes of access to Crown lands.

4. The cost of the roads at Hornsby, including the Government subdivision, was nearly £7,000, whilst the Government subdivision realized only £4,300 at the recent sale. It is admitted by one of the proprietors of the estate of Messrs. Burns, Withers, and Smith, that their property has become enhanced in value to the extent of at least £10,000 by the construction of these roads. It was also admitted that the work of the unemployed on this estate was done with the knowledge and approval of such proprietors.

5.

5. On the Holt-Sutherland Estate there are over 43 miles of roads on which the unemployed labour has been expended. Twenty-two roads have been completed, and authority granted for fourteen additional ones. The evidence discloses that there are only about fifty families living in the vicinity, and whilst reasonable ground may exist for three or four of the roads, viz., the Port Hacking, the Illawarra, and the Woronora roads, the remainder were not required for public purposes, but certainly add to the value of the land, and had been provided for in the subdivision of the estate. The construction of these latter roads was initiated by the Manager of the Holt-Sutherland Estate Company, and granted without sufficient inquiry as to their necessity in the public interest, nearly the whole of them having been laid off by the private surveyor to the Company.

6. Whilst work of a superior description has been done on the private lands at Hornsby and Holt-Sutherland, the Crown lands in their vicinity have generally been altogether neglected, and in every instance where work has been effected on Crown lands it has not been of that expensive character which has been carried out on the private estates.

7. There is evidence to show that there was abundance of work available for the unemployed in clearing and forming roads on Crown lands subdivisions, without resorting to the expedient of road-making on private property in order to find employment. Thousands of pounds have been expended on the roads through private land which probably would have been made by the owners in subdividing their properties, and which in some instances had actually been commenced.

8. It is advanced in the evidence as a justification for a number of roads on the Holt-Sutherland Estate that they give access to the National Park. The evidence shows that without these roads there is a Railway, a Branch Railway, and the Audley Main Road and others, which afford sufficient access thereto.

9. Your Committee has to report that, according to the evidence, the Casual Labour Board, in initiating its works, has transacted its business in a loose and reprehensible manner, and has allowed altogether too much power and authority to its chairman. No minutes of meetings have been kept since the first month; no audit of its accounts has taken place; and the chairman has authorized a number of roads to be made of which the professional members of the Board were absolutely ignorant when they were called upon to give evidence before your Committee, and they are of opinion that ministerial authority has in many cases sanctioned the construction of roads by the unemployed without sufficient necessity for the same having been shown.

10. That in view of the evidence taken before your Committee, they recommend to the Government that the Casual Labour Board be informed that it is undesirable in the interest of the public that the labour of the unemployed should be further utilised, except in the improvement of the public estate.

THOMAS WALKER,
Chairman.

No. 3 Committee Room,
Sydney, 21 December, 1888.

PROCEEDINGS OF THE COMMITTEE.

FRIDAY, 16 NOVEMBER, 1888.

MEMBERS PRESENT :—

| | | |
|---------------|--|-----------------|
| Mr. Walker, | | Mr. Carruthers, |
| Mr. Street, | | Mr. O'Sullivan, |
| Mr. Copeland, | | Mr. M'Millan. |

Mr. Street called to the Chair *pro tem*.

Entries from Votes and Proceedings appointing the Committee and referring the papers respecting roads at Hornsby, *read* by the Clerk.

Copies of papers *referred* before the Committee.

Resolved,—That Mr. Walker be Chairman of this Committee.

Committee deliberated.

Ordered,—That the Chairman make the necessary arrangements for the Committee to make a visit of inspection to roads at Hornsby on Monday next, and that J. W. Deering and W. M. Gordon, Surveyors, be summoned to attend the Committee in such inspection, and that the Under Secretary for Lands, the Secretary to the Casual Labour Board, and Colonel Wells be summoned to attend and give evidence on Tuesday next.

[Adjourned to Monday next, at a quarter to Ten o'clock.]

MONDAY, 19 NOVEMBER, 1888.

MEMBERS PRESENT :—

Mr. Walker in the Chair.

| | | |
|---------------|--|-----------------|
| Mr. Street, | | Mr. O'Sullivan, |
| Mr. Copeland, | | Mr. M'Millan. |

Committee deliberated, and then proceeded to Hornsby on a visit of inspection to roads made there by the unemployed.

TUESDAY, 20 NOVEMBER, 1888.

MEMBERS PRESENT :—

Mr. Walker in the Chair.

| | | |
|-------------------|--|---------------|
| Mr. O'Sullivan, | | Mr. Brunner, |
| Mr. Street, | | Mr. Copeland, |
| Mr. Henry Clarke. | | |

Frederick Wells (*Member Casual Labour Board*) called in, sworn, and examined.

Witness *handed in* copy of letter appointing Members of the Board; ordered to be appended. [Appendix A.]

Committee deliberated.

Ordered,—That David Houison and T. C. Hinchcliffe be summoned, and the Hon. John Davies, C.M.G., M.L.C., be requested to give evidence next meeting.

[Adjourned till to-morrow, at half-past One o'clock.]

WEDNESDAY, 21 NOVEMBER, 1888.

MEMBERS PRESENT :—

Mr. Walker in the Chair.

| | | |
|-------------------|--|-----------------|
| Mr. Henry Clarke, | | Mr. O'Sullivan, |
| Mr. Brunner, | | Mr. Copeland, |
| Mr. Carruthers, | | Mr. Street, |
| M. McMillan, | | Mr. Melville. |

David Houison (*Member Casual Labour Board*) called in, sworn, and examined.

Witness withdrew.

Committee deliberated.

Witness recalled and further examined.

Witness withdrew.

Committee deliberated.

Ordered,—That the Hon. John Davies, C.M.G., M.L.C., be requested, and F. O'Donnell and T. C. Hinchcliffe be summoned, to give evidence on Tuesday next, and that Mr. Deering and Mr. O'Donnell be requested to attend with the Committee on a second visit of inspection of roads at Hornsby on Monday next.

[Adjourned till Monday next, at a quarter to Ten o'clock.]

MONDAY,

MONDAY, 26 NOVEMBER, 1888.

MEMBERS PRESENT :—

Mr. Walker in the Chair.
 Mr. Henry Clarke, | Mr. Copeland.

Committee deliberated, and Mr. Clarke and Mr. Copeland then proceeded to Hornsby, where they were joined by Mr. Brunker, and made a visit of inspection of roads made there by the unemployed.

TUESDAY, 27 NOVEMBER, 1888.

MEMBERS PRESENT :—

Mr. Walker in the Chair.
 Mr. O'Sullivan, | Mr. Henry Clarke,
 Mr. Copeland, | Mr. Street,
 Mr. Brunker.

Chairman read letter from Secretary of the Casual Labour Board, stating that the Hon. John Davies could not attend to be examined, he being absent in Melbourne.

Chairman read letter from Mr. J. W. Deering, intimating that he could not that day personally attend, but that he had sent one of his officers with the papers relating to subject of inquiry.

Charles John Lester called in, sworn, and examined.

Witness *handed in* papers, relating to roads at Hornsby, application for special purchase of about 10 acres at Hornsby, and dedication of sites for court-house, police station, and public school at Hornsby; also plan of part of reserve 47, parish of South Colah, plan showing roads formed, &c., and litho. showing sale prices of Government Hornsby Estate.

Room cleared.

Committee deliberated.

William Matheson Gordon (*Government Surveyor*) called in, sworn, and examined.

Room cleared.

Committee deliberated.

Ordered,—That F. O'Donnell be summoned to give evidence next meeting, and that the Hon. John Davies, C.M.G., M.L.C., be requested to attend and give evidence on Thursday next.

[Adjourned till to-morrow at *half-past One* o'clock.]

WEDNESDAY, 28 NOVEMBER, 1888.

MEMBERS PRESENT :—

Mr. Brunker, | Mr. Copeland.

In the absence of a quorum, the meeting called for this day lapsed.

THURSDAY, 29 NOVEMBER, 1888.

MEMBERS PRESENT :—

Mr. Walker in the Chair.
 Mr. O'Sullivan, | Mr. Henry Clarke,
 Mr. Street, | Mr. Brunker.

The Hon. John Davies, C.M.G., M.L.C. (*Chairman, Casual Labour Board*), called in, sworn, and examined.

Witness *produced* original letter of instructions from the Colonial Secretary to the Casual Labour Board.

Mr. Brunker objected to the course of examination of witness adopted by the Chairman.

Room cleared.

Committee deliberated.

Witness recalled and further examined.

Witness withdrew.

F. O'Donnell (*Overseer-in-charge of the Unemployed at Hornsby*), called in, sworn, and examined.

Room cleared.

Committee deliberated.

Ordered,—That J. W. Deering and T. C. Hinchcliffe be summoned to give evidence next meeting.

[Adjourned till to-morrow at *Two* o'clock.]

FRIDAY, 30 NOVEMBER, 1888.

MEMBERS PRESENT :—

Mr. Walker in the Chair.
 Mr. Brunker, | Mr. O'Sullivan.
 Mr. Carruthers.

T. C. Hinchcliffe (*Secretary, Casual Labour Board*), called in, sworn, and examined

Witness withdrew.

John W. Deering (*Metropolitan District and Coast Surveyor*), called in, sworn, and examined.

Witness withdrew.

Committee deliberated.

Ordered,—That Mr. Deering be summoned for further examination next meeting.

[Adjourned till Monday next at *half-past Ten* o'clock.]

MONDAY,

MONDAY, 3 DECEMBER, 1888.

MEMBERS PRESENT :—

Mr. Walker in the Chair.

| | | |
|-----------------|--|-------------------|
| Mr. O'Sullivan, | | Mr. Street, |
| Mr. Copeland, | | Mr. M'Millan, |
| Mr. Carruthers, | | Mr. Henry Clarke. |

Committee deliberated.

Chairman read letter from Hon. J. F. Burns, intimating that he wished to give evidence, and requesting that other witnesses should first be called.

Chairman read letter from P. Anderson, late of Hornsby, volunteering to give evidence.

Ordered,—That P. Anderson be summoned to attend on Wednesday next.

The Hon. J. F. Burns attended before the Committee, and requested that Mr. James M'Keown, Forest Ranger, county of Cumberland, Mr. Charles N. J. Oliver, late Under Secretary for Lands, and Mr. Henry Gorman be summoned to give evidence.

Room cleared.

Committee deliberated, and ordered that Mr. M'Keown, Mr. Oliver, and Mr. Gorman be summoned to attend next meeting.

Ordered,—That the papers and plans handed in by Mr. Lester be appended [*Appendix B, and Plans 1 to 6*].

J. W. Deering called in and further examined.

Witness withdrew.

Committee deliberated.

Ordered,—That Mr. C. B. Dawson, surveyor, be summoned to give evidence next meeting.

[Adjourned till to-morrow, at *half-past Ten* o'clock.]

TUESDAY, 4 DECEMBER, 1888.

MEMBERS PRESENT :—

Mr. Walker in the Chair.

| | | |
|---------------|--|-----------------|
| Mr. Brunker, | | Mr. O'Sullivan, |
| Mr. M'Millan, | | Mr. Street, |
| | | Mr. Copeland. |

Committee deliberated.

Ordered,—That a copy of the evidence, as printed, be supplied to the Honorable J. F. Burns.

C. B. Dawson called in, sworn, and examined.

Witness withdrew.

Henry Gorman called in, sworn, and examined.

Witness withdrew.

C. N. J. Oliver (*late Under Secretary for Lands*) called in, sworn, and examined.

Witness withdrew.

Committee deliberated.

Ordered,—That Mr. Oliver be summoned to attend for further examination to-morrow.

[Adjourned till to-morrow, at *Two* o'clock.]

WEDNESDAY, 5 DECEMBER, 1888.

MEMBERS PRESENT :—

Mr. Walker in the Chair.

| | | |
|-------------------|--|---------------|
| Mr. O'Sullivan, | | Mr. Brunker, |
| Mr. Henry Clarke, | | Mr. Copeland. |

C. N. J. Oliver called in and further examined.

Witness handed in plan showing Crown lands on western side of railway line at Hornsby station. *Ordered* to be appended. [*Appendix, plan 7.*]

James M'Keown (*Forest Ranger, County of Cumberland*), called in, sworn, and examined.

Witness withdrew.

Committee deliberated.

Ordered,—That John Whitton, Engineer-in-Chief for Railways, be summoned, and the Honorable J. F. Burns be requested to attend and give evidence next meeting, that the Chairman make the necessary arrangements for Committee to inspect roads made by unemployed through Holt-Sutherland estate on Monday next, and that Mr. E. M. Burrowes, superintendent of unemployed at Sutherland, be requested to accompany Committee on such inspection.

The Chairman was voted the sum of £15 Os. 6d. to meet expenses attending visits of inspection by Committee to Hornsby.

[Adjourned till to-morrow at *Ten* o'clock.]

THURSDAY, 6 DECEMBER, 1888.

MEMBERS PRESENT :—

| | | |
|-------------|--|-----------------|
| Mr. Walker, | | Mr. O'Sullivan. |
|-------------|--|-----------------|

In the absence of a quorum, the meeting called for this day lapsed.

FRIDAY,

FRIDAY, 7 DECEMBER, 1888.

MEMBERS PRESENT :—

Mr. Walker in the Chair.
 Mr. Copeland, | Mr. Henry Clarke,
 Mr. O'Sullivan.

T. C. Hinchcliffe (*Secretary Casual Labour Board*), called in, and further examined.

Witness produced pay sheets for work done by unemployed at Hornsby.

Witness withdrew.

John Whitton (*Engineer-in-Chief for Railways*), called in, sworn, and examined.

Witness withdrew.

Committee deliberated.

Chairman read letter from John W. Deering, requesting a perusal of the evidence of certain witnesses, in respect of which he desired to offer further evidence, and Committee declined to grant Mr. Deering's request.

George Withers, M.P., called in, sworn, and examined.

Witness withdrew.

Committee deliberated, and rescinded order for printing of papers, relating to application for special purchase of 10 acres at Hornsby, by Burns, Withers, and Smith; and the dedication of sites for Court House, Police Station, and a Public School, at Hornsby, and instructed the Clerk to return them to the Under Secretary for Lands.

Ordered,—That the Hon. J. F. Burns be requested to attend and give evidence on Tuesday next.

[Adjourned till Monday next, at half-past Nine o'clock.]

MONDAY, 10 DECEMBER, 1888.

MEMBERS PRESENT :—

Mr. Walker in the Chair.
 Mr. O'Sullivan, | Mr. Henry Clarke,
 Mr. Copeland.

Committee proceeded to Holt Sutherland Estate, and inspected roads made there by the unemployed.

TUESDAY, 11 DECEMBER, 1888.

MEMBERS PRESENT :—

Mr. Walker in the Chair.
 Mr. Henry Clarke, | Mr. O'Sullivan,
 Mr. Copeland.

Committee deliberated, and ordered that plan of roads at Hornsby, prepared by Mr. Deering, be appended. [*Appendix Plan 8.*]

By direction of the Chairman the Clerk read letter and enclosures from Engineer-in-Chief for Railways, respecting fixing of sites for stations on railway, Hornsby to St. Leonards. Ordered to be appended. [*Appendix C.*]

The Hon. J. F. Burns, M.P., called in, sworn, and examined.

Witness withdrew.

Committee deliberated.

[Adjourned till Two o'clock.]

[Committee resumed at Two o'clock.]

MEMBERS PRESENT :—

Mr. Walker in the Chair.
 Mr. O'Sullivan, | Mr. Copeland.

The Hon. J. F. Burns called in and further examined.

Witness handed in letter from Lands Department respecting certificate of title Bellamy's Grant, and copy of petition to Minister for Lands for Public Park at Hornsby. [*Appendices D and E.*]

Witness withdrew.

F. O'Donnell (*Overseer of Unemployed at Hornsby*), called in, and further examined.

Witness withdrew.

Committee deliberated.

Ordered,—That Henry Little, James Murphy, and E. M. Burrowes be summoned to give evidence next meeting.

[Adjourned till to-morrow at half-past One o'clock.]

WEDNESDAY, 12 DECEMBER, 1888.

MEMBERS PRESENT :—

Mr. Walker in the Chair.
 Mr. Copeland, | Mr. Henry Clarke,
 Mr. O'Sullivan.

Henry Little (*Surveyor, Casual Labour Board*), called in, sworn, and examined.

Witness withdrew.

James Murphy (*Manager, Holt-Sutherland Estate Company*) called in, sworn, and examined.

Witness handed in list of registered shareholders in the Company.

Ordered to be appended. [*Appendix F.*]

Witness withdrew.

E. M. Burrowes (*Superintendent of Unemployed, National Park District*) called in, sworn, and examined.

Witness *handed in* plan showing roads made through Holt-Sutherland Estate by unemployed, also tabulated statement respecting same.

Ordered to be appended. (*Appendix G and plan 9.*)

Witness withdrew.

Committee deliberated.

Chairman read letter from Principal Under Secretary, intimating that the Colonial Secretary had, in compliance with the request of the Committee, caused instructions to issue with a view to Mr. E. M. Burrowes inspecting and reporting on a road at Hornsby; and the Committee ordered that Mr. Burrowes be instructed by letter to inspect Boundary Road at Hornsby, and report on the practicability and probable cost of its being made suitable for traffic.

Chairman read letter from Honorable J. F. Burns respecting further examination of Colonel Wells and Mr. D. Houison, and examination of Mr. W. C. Bennett, Commissioner for Roads and Bridges.

Ordered,—That Colonel Wells and Mr. Houison be summoned to give further evidence next meeting.

[Adjourned till to-morrow at *half-past Ten* o'clock.]

THURSDAY, 13 DECEMBER, 1888.

MEMBERS PRESENT:—

Mr. Walker in the Chair.

| | | |
|-----------------|--|-------------------|
| Mr. O'Sullivan, | | Mr. Carruthers, |
| Mr. McMillan, | | Mr. Henry Clarke, |
| Mr. Copeland. | | |

D. Houison (*Member, Casual Labour Board*) called in and further examined.

Witness withdrew.

James Fletcher, M.P., called in, sworn, and examined.

Witness withdrew.

Henry Thellusson Sanderson, C.E., called in, sworn, and examined.

Witness withdrew.

Frederick Wells (*Member, Casual Labour Board*) called in and further examined.

Witness *handed in* Schedule of roads cleared or made under Casual Labour Board at Hornsby.

Ordered to be appended. (*Appendix H.*)

Room cleared.

Committee deliberated.

Witness called in and further examined.

Witness withdrew.

The Hon. John Davies, C.M.G., M.L.C. (*Chairman, Casual Labour Board*), called in and further examined.

Witness withdrew.

Committee deliberated.

Ordered,—That Mr. Davies be requested to attend for further examination next meeting.

[Adjourned till to-morrow at *half-past Ten* o'clock.]

FRIDAY, 14 DECEMBER, 1888.

MEMBERS PRESENT:—

| | | |
|-----------------|--|-----------------|
| Mr. O'Sullivan, | | Mr. Carruthers. |
|-----------------|--|-----------------|

In the absence of a quorum, the meeting called for this day lapsed.

TUESDAY, 18 DECEMBER, 1888.

MEMBERS PRESENT:—

Mr. Walker in the Chair.

| | | |
|-----------------|--|---------------|
| Mr. Carruthers, | | Mr. Copeland, |
| Mr. O'Sullivan. | | |

Chairman directed Committee's attention to note on revision by Mr. Burns to question 2276 in his evidence, and Committee ordered that the Chairman add a note of correction.

R. Burdett Smith, M.P., called in, sworn, and examined.

Witness withdrew.

Committee deliberated.

Chairman read letter from E. M. Burrowes reporting on probable cost of construction of Boundary Road at Hornsby.

Ordered to be appended. (*Appendix I.*)

The Honorable John Davies, C.M.G., M.L.C. (*Chairman, Casual Labour Board*), called in and further examined.

Witness *produced* plan of the National Park.

Witness withdrew.

Committee deliberated.

The Chairman voted the sum of £8 3s. to meet expenses attending visit of inspection by Committee to Holt-Sutherland Estate.

[Adjourned till Thursday next at *half-past Ten* o'clock.]

THURSDAY, 20 DECEMBER, 1888.

MEMBERS PRESENT:—

Mr. Walker in the Chair.

| | |
|-------------------|-----------------|
| Mr. O'Sullivan, | Mr. Carruthers, |
| Mr. Henry Clarke, | Mr. McMillan, |
| Mr. Street, | Mr. Melville, |
| Mr. Copeland, | Mr. Bruncker. |

Entry from Votes and Proceedings referring return respecting roads through Holt-Sutherland Estate, *read* by Clerk.

Printed copies of paper *referred* before Committee.

Committee deliberated.

Chairman read letter from Mr. Withers requesting to be re-examined in order to amend his evidence in certain particulars.

Ordered, on motion of Mr. Bruncker, that the letter be received.

Mr. McMillan moved,—That the request of Mr. Withers be complied with.

Amendment moved, Mr. O'Sullivan,—That Mr. Withers' letter be appended to the evidence.

Debate ensued.

Amendment by leave, withdrawn.

Original motion put.

| Ayes, 4. | Noes, 4. |
|-----------------|-------------------|
| Mr. Bruncker, | Mr. Copeland, |
| Mr. Street, | Mr. Melville, |
| Mr. McMillan, | Mr. O'Sullivan, |
| Mr. Carruthers, | Mr. Henry Clarke. |

The numbers being equal the Chairman gave his casting vote with the *noes*, and declared the question passed in the *negative*.

Ordered, on motion of Mr. O'Sullivan,—That Mr. Withers' letter be appended to the evidence.

[*Appendix J.*]

Chairman read letter from the Hon. J. F. Burns, submitting that Mr. Gregg, of Messrs. Richardson and Wrench, be examined respecting valuations of land at Hornsby, and that Mr. C. B. Dawson, be further examined.

Ordered on motion of Mr. Melville that Mr. Burns' letter be received.

Mr. Carruthers moved,—That Mr. Burns' request as regards the examination of Mr. Gregg be complied with.

Debate ensued.

Motion by leave withdrawn.

Mr. McMillan moved,—That no progress report be submitted by this Committee to Parliament until the whole of the printed evidence up to the present date be placed in the hands of the members of the Committee.

Debate ensued.

Question put.

| Ayes, 4. | Noes, 4. |
|-----------------|-----------------|
| Mr. Bruncker, | Mr. Copeland, |
| Mr. McMillan, | Mr. O'Sullivan, |
| Mr. Carruthers, | Mr. Clarke, |
| Mr. Street, | Mr. Melville. |

The numbers being equal, the Chairman gave his casting vote with the *ayes*, and declared the question as passed in the *affirmative*.

Ordered,—That the consideration of the Draft Progress Report be adjourned till to-morrow.

[Adjourned till To-morrow, at *half-past Ten* p.m.]

FRIDAY, 21 DECEMBER, 1888.

MEMBERS PRESENT:—

Mr. Walker in the Chair.

| | |
|-------------------|-----------------|
| Mr. Copeland, | Mr. O'Sullivan, |
| Mr. Henry Clarke, | Mr. Street, |
| Mr. Melville, | Mr. McMillan, |
| Mr. Carruthers, | Mr. Bruncker. |

By direction of the Chairman, the Clerk read the Minutes of Proceedings of yesterday's meeting. Committee deliberated.

Mr. McMillan moved,—“That no report, either progress or otherwise, should be submitted to Parliament until further time is given for due consideration of the very voluminous and contradictory evidence, the last portion of which has only just been placed in the hands of members of the Committee.”

Amendment moved, Mr. O'Sullivan,—“That in view of the reckless waste of public money now proceeding in connection with the operations of the Casual Labour Board, it is the duty of this Committee to at once present a progress report.”

Debate ensued.

Amendment put.

| Ayes, 4. | Noes, 4. |
|-------------------|-----------------|
| Mr. O'Sullivan, | Mr. Carruthers, |
| Mr. Henry Clarke, | Mr. McMillan, |
| Mr. Copeland, | Mr. Street, |
| Mr. Melville, | Mr. Bruncker. |

The numbers being equal, the Chairman gave his casting vote with the *ayes*, and declared the amendment passed in the *affirmative*. Chairman

Chairman submitted draft progress report which was read a first time as follows:—

"The Select Committee of the Legislative Assembly, appointed on the 15th November, 1888, a.m.,—*'with power to send for persons and papers, and to visit the ground, to inquire into and report upon the work of the unemployed in clearing, forming, and making roads through the property near Hornsby owned by Messrs. Burns, Withers, and R. B. Smith, and also those made through the Holt-Sutherland Estate and other private properties, with power to sit during any adjournment,'* and to whom was referred on the 15th November, 1888, *'the Returns respecting roads at Hornsby, laid upon the Table and ordered to be printed on the 8th, 13th, and 14th November, 1888, respectively,'* and on the 19th December, 1888, *'the Return respecting roads through Holt-Sutherland Estate, laid upon the Table on the 13th December,'*—have agreed to the following Progress Report:—

"Your Committee, taking into its consideration the possible early prorogation of Parliament, desire to present their report on the inquiry so far as it has been completed, such inquiry being chiefly confined to the roads made at Hornsby, and on, and in juxtaposition to, the Holt-Sutherland Estate.

"2. The evidence discloses that at Hornsby a number of roads have been cleared and others formed by the unemployed, for which, in the interests of the public, there can be no sufficient justification, and roads have been formed and ballasted traversing private property, for which there was no precedent prior to the existence of the Casual Labour Board. Some of the roads and streets cleared and formed on the estate of Messrs. Burns, Withers, and Smith appear on their subdivision plan, and their construction had been commenced by the owners prior to the advent of the Casual Labour Board.

"3. Two witnesses—Mr. Oliver, ex-Under Secretary for Lands, and Mr. Deering, Metropolitan and Coast District Surveyor—condemn both the excessive number of roads as being beyond public requirements, and also disapprove of the superior quality of the work on some of the roads, as being chiefly calculated to benefit private individuals. While they approve of a limited number of roads, they would have had such roads cleared only for the purposes of access to Crown lands.

"4. The cost of the roads at Hornsby, including the Government subdivision, was nearly £7,000, whilst the Government subdivision realized only £4,300 at the recent sale. It is admitted by one of the proprietors of the estate of Messrs. Burns, Withers, and Smith, that their property has become enhanced in value to the extent of at least £10,000 by the construction of these roads. It was also admitted that the work of the unemployed on this estate was done with the knowledge and approval of such proprietors.

"5. On the Holt-Sutherland Estate there are over 43 miles of roads on which the unemployed labour has been expended. Twenty-two roads have been completed, and authority granted for fourteen additional ones. The evidence discloses that there are only about fifty families living in the vicinity, and whilst reasonable ground may exist for three or four of the roads, viz., the Port Hacking, the Illawarra, and the Woronora Roads, the remainder were not required for public purposes, but certainly add to the value of the land, and had been provided for in the subdivision of the estate. The construction of these latter roads was initiated by the manager of the Holt-Sutherland Estate Company, and granted without sufficient inquiry as to their necessity in the public interest, nearly the whole of them having been laid off by the private surveyor to the Company.

"6. Whilst work of a superior description has been done on the private lands at Hornsby and Holt-Sutherland, the Crown lands in their vicinity have generally been altogether neglected, and in every instance where work has been effected on Crown lands it has not been of that expensive character which has been carried out on the private estates.

"7. There is evidence to show that there was abundance of work available for the unemployed in clearing and forming roads on Crown lands subdivisions, without resorting to the expedient of road-making on private property in order to find employment. Thousands of pounds have been expended on the roads through private land which probably would have been made by the owners in subdividing their properties, and which in some instances had actually been commenced.

"8. It is advanced in the evidence as a justification for a number of roads on the Holt-Sutherland Estate that they give access to the National Park. The evidence shows that without these roads there is a Railway, a Branch Railway, and the Audley Main Road and others, which afford sufficient access thereto.

"9. Your Committee has to report that, according to the evidence, the Casual Labour Board, in initiating its works, has transacted its business in a loose and reprehensible manner, and has allowed altogether too much power and authority to its Chairman. No minutes of meetings have been kept since the first month; no audit of its accounts has taken place; and the Chairman has authorized a number of roads to be made of which the professional members of the Board were absolutely ignorant when they were called upon to give evidence before your Committee, and they are of opinion that ministerial authority has in many cases sanctioned the construction of roads by the unemployed without sufficient necessity for the same having been shown.

Paragraph 1 read and agreed to.

Paragraph 2 read and considered.

Mr. McMillan moved,—That paragraphs 2 to 9 be omitted with a view to the insertion in their place of the following paragraph:—

"That in view of the evidence taken before your Committee they recommend to the Government that the Casual Labour Board be informed that it is undesirable in the interest of the public that the labour of the unemployed should be further utilised, except in the improvement of the public estate."

Question that the paragraphs proposed to be omitted stand paragraphs of the report,—put.

Ayes, 4.

Mr. Copeland,
Mr. Henry Clarke,
Mr. O'Sullivan,
Mr. Melville.

Noes, 4.

Mr. Carruthers,
Mr. McMillan,
Mr. Street,
Mr. Bruncker.

The numbers being equal the Chairman gave his casting vote with the *ayes*, and declared the question passed in the *affirmative*,

Motion

Motion made (*Mr. Copeland*) and Question,—That the following paragraph stand paragraph 10 of the Report,—put and passed.

“10. That in view of the evidence taken before your Committee they recommend to the Government that the Casual Labour Board be informed that it is undesirable in the interest of the public that the labour of the unemployed should be further utilised, except in the improvement of the public estate.

Motion made (*Mr. Melville*) and Question,—That the progress report as amended be the report of the Committee,—put and passed.

Chairman to report to the House.

1888.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

WORK OF UNEMPLOYED ON ROADS AT HORNSBY
AND HOLT-SUTHERLAND ESTATE.

TUESDAY, 20 NOVEMBER, 1888.

Present:—

| | | |
|------------------------------------|--|-----------------|
| MR. WALKER, | | MR. COPELAND, |
| MR. BRUNKER, | | MR. O'SULLIVAN, |
| MR. HENRY CLARKE, | | MR. STREET. |
| THOMAS WALKER, Esq., IN THE CHAIR. | | |

Frederick Wells called in, sworn, and examined:—

1. *Chairman.*] You are next to Mr. Bennett in the Department of Roads, and are, I believe, connected with the Labour Bureau? Yes; I am a member of the Board.
2. How long has the Board been in existence? Since the 2nd of May last year.
3. What are the functions of the Board in relation to the unemployed, so far as finding them work is concerned? Our first duty was to disseminate the unemployed. There were a large mass of them in Sydney, and our first duty was to get them out of town, the free feeding which they had hitherto been receiving being abolished. The first depôt to which we took them out of town was at the National Park. We were able to employ them there on work which was not immediately reproductive, but it was the only place where we could establish a depôt, and do something on the public estate until we could disperse them.
4. Had none of the unemployed been working at the National Park prior to that? Yes, but only in a desultory way, I believe.
5. Some of them were at the National Park before you joined the Board? Yes; but there was no large camp there such as there afterwards was.
6. Your first step was to concentrate them at the National Park? We wished to get them where we could place them at work under supervision, and where, if they did not work sufficiently to earn their rations, they would not receive them.
7. In carrying out this work, did you receive any instructions at all from the Government? Yes; we were instructed from the Colonial Secretary's Office.
8. What was the nature of these instructions? Well, there were our appointments, combined with the desirableness of making a depôt somewhere out of town, and the National Park was suggested.
9. Do I understand that the Government suggested the National Park as a depôt? Yes.
10. Did they issue any definite instructions as to the ultimate disposal of these men at the time you took office? No; it was understood that we were to dispose of them in the best way possible, in view of the public interest.
11. Then, from the time you took office, the whole management of the unemployed was in your hands? Yes, with the exception of receiving instructions and approval, and they came, in every case, from the Colonial Secretary.

F. Wells.

20 Nov., 1888.

F. Wells.
20 Nov., 1888.

12. In every instance then where you disposed of the unemployed in any special manner, had you to submit the matter to the Colonial Secretary? Yes; or the matter emanated from him—one or the other.
13. That is to say, you had no power to do anything without the Colonial Secretary knowing of it? Of course, in regard to the details of roads in connection with the subdivision of Crown lands, as at Gordon, Narrabeen, and Hornsby, for instance, we used our own discretion as to which roads we cleared, having the advice of the Government surveyor.
14. Do I understand, then, that in the case of the clearing of a road it was always necessary for you to submit the matter to the Colonial Secretary? Yes, if the road were a separate road, and away from the Crown lands subdivision upon which we were engaged.
15. But suppose the unemployed were working at a given point, clearing a road, you would then and there, without any further consultation with or notice from the Colonial Secretary, authorize another road to be made in the neighbourhood? Yes. We put them on to such roads as we considered best or necessary in the subdivision.
16. Will you give us an instance? Well, take Gordon, for instance. I have brought with me a map showing the design for the subdivision, and the works which have been carried out. I cannot speak of all the works, because I have not visited them all myself. Mr. Houison has dealt more particularly with that work. The design of which I speak is for a subdivision extending from the Hornsby railway station right through to the sea at Narrabeen. The alienated lands have the owner's name attached; all the other lands are Crown lands.
17. But will you speak more particularly with reference to the Hornsby District—will you give us particulars as to the work done there by the unemployed? Some of the unemployed were there, I think, when the Board came into existence.
18. Before you took office? Yes. I know that they were in the neighbourhood of Hornsby. I have prepared a statement which will be shortly added to the printed papers on the subject, which will explain the matter to some extent. It is a paper describing the way in which the Hornsby roads were cleared, that is, the roads which I understand form the subject of the inquiry.
19. Before you proceed to describe the paper further, I should like to have one point cleared up. When you took over the work of the management of the unemployed you found that there were a large number of them at Hornsby? Yes; in that neighbourhood.
20. Do you know if the lands upon which the unemployed were working at that time were private property or Crown lands? They were at work on the Crown lands.
21. Having them there at work on the Crown lands, had you authority, by virtue of your office, to authorize the making of roads by them on any private property there? Yes. I consider we were authorized to make any roads of access to the Crown lands which we thought advisable and advantageous.
22. You were limited to roads of access? Certainly.
23. You had no power to authorize the clearing of a road which was not distinctly a road of access? No; it would be contrary to all our instructions.
24. Then you were actually prohibited from making any roads beyond those which would give access to Crown lands? We prohibited it in our own office, and I am pretty certain that none were made.
25. Had you any instructions upon this point from the Colonial Secretary? We had no definite instructions of the kind; but we considered it our duty to expend the money only for the benefit of Crown lands.
26. Then, so far as I can understand, the matter was left entirely to your own discretion? I think in most cases—in fact, in nearly every case, all the roads cleared and the work done had been submitted for the approval of the Colonial Secretary.
27. I suppose you could, if you chose, have authorized the making of those roads without consultation with the Colonial Secretary? Well, if we were in a subdivision of Crown lands—take the reticulation of roads at the back of Narrabeen, for instance—we should not ask for authority in the case of every road. We should clear all the roads which we thought necessary in the subdivision. Of course the same would apply to the subdivisions at Gordon and Hornsby.
28. *Mr. Copeland*] In speaking of Hornsby, will you be good enough to let us understand whether you allude to the Government subdivisions or to the property of Messrs. Burns, Withers, and Smith? Of course when I referred to Hornsby I referred to the Crown lands.
29. *Mr. O'Sullivan*.] When the Casual Labour Board took over this work at Hornsby, how many roads had been made by the Government under the supervision of Mr. Deering? I cannot say how many. Mr. Houison will be better acquainted with that branch of the subject than I am. I know a good deal of the clearing had been done in the region of the main camp, which was on the Stony Creek road, when we first took charge.
30. That clearing was on the Crown lands? Yes; I am under the impression that a good deal of scrubbing and road-clearing had been done.
31. *Chairman*.] Had there been any clearing or forming of roads on property there belonging to private owners when you took charge? There was a short piece of road leading from the Stony Creek road. That we immediately stopped.
32. I notice that all these plans and tracings have been submitted to the Honorable John Davies? Yes; they were addressed to him because he was actually the working and business head of the Board.
33. Had he the power to alter those plans and to say where roads should or should not go? I think not. He interfered scarcely at all with the direction of the roads. That rested with Mr. Houison and myself.
34. But had he the power to do so had he chosen? I never heard of his doing so.
35. *Mr. O'Sullivan*.] You say that all these plans were addressed to the Honorable John Davies? He never interfered with the roads at all—not as to subdivisions.
36. I understood you to say just now that you constructed only roads of access to the Crown lands? That is all.
37. Let me draw your attention to the road marked HHH in the plan shown on Appendix E of the papers;—do you consider that that road is absolutely required as a road of access? It was considered by Mr. Gordon to be a desirable road of access, and at his instigation it was cleared.
38. He is responsible for the road, then? Yes, and also for the boundary road marked I. I do not know much about those roads, but I am perfectly conversant with the others from Junction Road northerly.

39. Does this plan on Appendix E show the whole of the roads authorized on the Burns-Withers property? Yes; I believe so. It shows all the work which I know to have been done by the unemployed.
40. Then if any roads have been carried out by the unemployed other than those shown upon the plan they have not been carried out with the authority of the Board? Certainly not, as far as I know.
41. Would you be astonished to hear that there are some such roads? I have not seen them.
42. *Chairman.*] A portion of the road leading up from the Lane Cove Road to the Vanceville Road is not coloured red—what does that mean? The road was constructed along that portion by the Roads Department for a certain distance, extending it in a northerly direction to meet the work done at Junction Road and the Crown lands.
43. Turn your attention to the east side of the Hornsby Station—to the land running up from the Junction Road to the road marked A? No road has been cleared by the Board there, or if it has been done it has been done without any authority.
44. Would you be astonished to hear that the unemployed are working on that road? They have no right whatever to be working there. This plan is supposed to show all the work we have had in hand.
45. Have you entire control of the unemployed? Yes—the Board have.
46. Would it be possible for the unemployed to be working anywhere without the cognisance of the Board? Certainly they should not be, because the superintending officers report regularly to the Board what the men are engaged upon.
47. *Mr. Copeland.*] Is Mr. Gordon the surveyor under your control? To a certain extent he is; he reports to the Chairman of the Board.
48. Of whom is the Board constituted? It is composed of the Honorable John Davies, Chairman, of Mr. Houison, and myself.
49. You and Mr. Houison are the two professional men? Yes.
50. Mr. Gordon is a surveyor in the Lands Department also? Yes.
51. At the present time he is subordinate to yourself? Yes; he is carrying out the work under our direction.
52. Then for any work which he has carried out, you, as his superior officer, of course would hold yourself responsible? Yes; we have taken his advice in regard to anything which he has suggested as to where the men could be profitably employed.
53. I think you said just now that Mr. Gordon considered that the road marked HHH was necessary to give access to the Crown lands? I think you will see that he mentions it in the papers.
54. What is your opinion as to the necessity for constructing this road? Well, I think it is a very desirable road of access.
55. Notwithstanding the fact that it passes right through private property? Yes. I do not see that the fact of its passing through private property renders it any less valuable as a road of access to certain Crown lands. In order to reach the Crown lands it is necessary to go through private property somewhere.
56. Would it not have been a better policy to run the roads through the Crown lands themselves, instead of taking them through private property? Roads in many directions through the Crown lands were quite impracticable.
57. For what reason? There are very deep gullies running into the Cowan Creek. The road marked "Boundary Road" on the plan is purely impracticable on that account.
58. Would you be surprised to hear that the Committee were driven over the Boundary Road yesterday in a buggy, and that we did not find it at all impracticable? I do not think the Committee can have been on the portion of the road to which I refer. It would entail very heavy work.
59. Since you consider that road impracticable, how does it come about that it is already constructed, and that a portion of it is metalled? I am not aware of its being constructed. There may be a road for some distance; but I do not think it extends any length.
60. *Chairman.*] Is it possible that a number of roads can be constructed without your knowing anything of it? Roads might have been constructed out there without my knowing anything of the matter; but it should not have been done without an order emanating from the Board.
61. Can any one of the members of the Board authorize the construction of a road? The Chairman might authorize the construction of a road if he had the authority of the Colonial Secretary.
62. But could the Chairman of his own motion, without consulting you as a colleague, authorize a new work? Yes; he would probably inform me afterwards that it was being done.
63. Then, as I understand matters, he could, without consulting you in the first instance, authorize works which he might think necessary? Yes.
64. Then, in short, you would have no voice in the matter, excepting the approval of it when it was done? I might be spoken to about the work after it had been started; but in such a case the Chairman would probably have received instructions from the Colonial Secretary. Of course he would not wait either for myself or for Mr. Houison to be there. I am frequently away for weeks at a time.
65. And is Mr. Houison, to your knowledge, away for a similar period? He is frequently away. He cannot now attend the Board very regularly. He attends only now and then as a practical expert.
66. *Mr. O'Sullivan.*] Do I understand that you sit merely as advisers? Well, we assist to control the expenditure. We fix the price of work done, we set out work, and we see that our officers are doing what is correct from an engineering point of view.
67. *Chairman.*] Is it possible for you to authorize a work upon your own authority? No; I should never do so on my own authority.
68. But have you the power? No; I do not think I have the power. I should probably say to the Chairman of the Board, "Such and such a work is desirable, and had better be done."
69. But you would do that as a matter of courtesy, apart from your knowledge as to your own powers in the matter? I think I have no power to originate a work in the first instance.
70. You do not appear to be quite sure as to the limits of your power? No. Of course, if men were at work upon a subdivision of Crown lands, I should naturally direct any roads to be made which I might think it desirable to clear and open, but I should not think of authorizing work outside of the limit of the Crown subdivision.
71. As a matter of fact, you have not authorized any work on your own responsibility? No, except as stated.

F. Wells.
20 Nov., 1888.

F. Wells.
20 Nov., 1888.

72. Of your own knowledge, has Mr. Houson done so? I do not think so. If it were the case of a Government subdivision, and I thought it necessary to alter a line from an engineering point of view, I might order it to be done.

73. Then you think you have power to alter a line of road without consultation with your colleagues? Within the Government subdivision, yes, after consulting the surveyor.

74. When the Board was appointed, how was the Chairman elected? He was elected by ourselves; neither Mr. Houson nor myself could give our time to it. It would be utterly impossible for either of us to undertake the duty.

75. You elected Mr. Davies Chairman of the Board? Yes.

76. You say that the Chairman has the power to authorize the construction of roads without consulting you? Yes. He has done so with the approval of the Colonial Secretary. I think that in every case in which he has acted he has had the approval of the Colonial Secretary.

77. How were your powers defined to you? I understood that I was to find employment for the unemployed, and to use them in the best manner possible. I will hand in a copy of my appointment, and you will then see for yourselves. (*Appendix A.*)

78. How did you arrive at the conclusion that you yourself had no power to authorize a new piece of work, while you felt sure the Chairman had that power? Because the Chairman is in constant communication with the Colonial Secretary; he receives his instructions from him.

79. The letters come to the Chairman? Yes.

80. But are not the letters and the instructions addressed equally to the Board? They are addressed generally to the "Chairman of the Casual Labour Board."

81. But Mr. Davies receives his instructions simply as Chairman of the Board? Yes.

82. Would not that of itself imply that he had no power to act of himself? No. It might be necessary at times to take action without waiting for the members.

83. Have you ever, at any time, by resolution or speech, given the Chairman to understand that in your opinion he has this power? No. The Chairman would inform us that he had received instructions for a certain piece of work to be done. I think in one or two instances I raised objections, and I subsequently found out that there were reasonable grounds for his action. I found out, moreover, that he was acting under direct instructions and in compliance with a petition which had been approved of by the Colonial Secretary. In every case I think he had this approval or instruction.

84. I want to make this matter perfectly clear. I understand from your answers that the Chairman has from the first had the power to initiate works without consulting you? If we were available he would probably consult us; but if we were not he would carry out the work and inform us after that a certain thing had been done.

85. If you were about you mean that he would have consulted you? Yes.

86. But if you were not present he would act without you? Yes; he would act, and inform us that the work had been started.

87. In what instance was it that you objected to a work which he had initiated? I forget now; it was in some trifling item. I suggested that it was perhaps not in his province to do it; but Mr. Davies was able to show me the Colonial Secretary's instructions, and I made no further objection. It was pointed out, I think, that the road was made under instructions to give access to Crown lands or for public convenience.

88. Had the Board any power to refuse to act upon the instructions of the Colonial Secretary? I do not think so.

89. You did whatever he ordered? If he instructed us to do a thing I considered that we were bound to carry it out. Our duty was to see that the labour was profitably employed, and that the money was not wasted.

90. I will put you a question, which you can answer or not, as you like: Supposing the Board thought that the instructions issued from the Colonial Secretary's Office were detrimental to the public interest, or involved a misapplication of public funds, would they have carried out those instructions? I do not think we would have done so without remonstrance; I feel pretty sure not.

91. You feel that they would have refused to carry them out? They would have remonstrated, and have pointed out that they did not consider the work advisable.

92. Would you, as a member of the Board, consider that you had no power beyond that remonstrance? I think I should have no further power.

93. Are you aware of any cases where, without a communication from the Colonial Secretary, work has been undertaken, and roads have been made? Only within Government subdivisions, where we have general instructions.

94. With reference to the roads at Hornsby which are not upon a Government subdivision, did the order issue in every case from the Colonial Secretary's Office? I believe the approval did, if not the order.

95. I am speaking now of the roads on the estate of Messrs. Burns, Withers, and Smith? The roads H and I, to which I have already referred, were carried out upon Mr. Gordon's representation, but I think I gave recommendations with reference to the Junction Road and the Vanceville Road as long ago as 1885 or 1886.

96. You recommended both of those roads some years ago? When I say I recommended them, I ought to add, perhaps, that they never came before me officially. I was in conversation with Mr. Burns with reference to the Northern Railway, and, speaking with regard to the access to the Hornsby station, Mr. Burns said that if the Government would clear and form a road he would give them the land right through his property. That was long before the time of the unemployed. I think I was travelling somewhere up in the Hunter District when this conversation occurred, and we were talking of the Northern Railway at the time. The Roads Department had already made the Vanceville Road a certain distance, and whether the road was to be taken across to the station diagonally or the other way was not, I think, mentioned at the time.

97. What I want to understand is this: Were the roads marked H, I, B, C, D, E, and F authorized from the Colonial Secretary's Office, or were they made at the instance of the Labour Board? I think they came from the Labour Board. H and I at Mr. Gordon's recommendation. The others were the result of Mr. Houson's examination more particularly than mine. I knew the locality sufficiently to know that the Boundary Road was a very expensive road to make—in fact, that it was almost impracticable; but Mr. Houson specially examined the locality in order to see the best way of giving access to the Crown lands.

98. Do you recollect having any of these roads brought before you for consideration—I refer more particularly to the roads that are marked? Yes; two or three times when we first went to the camp. No one brought them before us that I know of; but they were brought up by myself and Mr. Houison. F. Wells.
20 Nov., 1888
99. What roads are you referring to? The Junction Road and the roads B, C, D, E, and F.
100. Has there ever been a proposal that you are aware of, emanating from yourself or from Mr. Houison, to clear a road parallel with the railway line between the roads A and G? I am not aware of any.
101. Do you know whether such a work has ever been considered by the Board? No. I believe there was a proposal for a diagonal road made some years ago by Mr. Symonds, but it would not have gone to the station. I think it would have gone to the overbridge.
102. The road to which I refer is alongside the railway fence, parallel with the railway, between the Junction Road and road A? It may possibly have been made. I see it is not shown on the plan.
103. Has that been done without your knowledge? I am not aware of its having been done; it has not come before me.
104. It has not been considered by the Board, sitting as a Board? No. Our meetings are generally very short. We make a call at the office for an hour or two and talk over the work immediately before us, and then we separate.
105. Do you keep any minutes of your meetings? No.
106. In the absence of Mr. Davies, the Chairman, did you ever hold any meeting for consultation? Not in office; I have met outside on various subjects with Mr. Houison. We have gone together to different localities when we have had to take notes of the work being done.
107. Have you had meetings convened for the purpose of consultation in connection with any particular proposal? No. I think at first we had one or two appointed meetings, but afterwards the members of the Board would call in at the office and see Mr. Davies and see what business was proceeding.
108. Was no record of those meetings ever kept? There has been no record of those meetings that I know of.
109. There were no movers or seconders to anything done? No.
110. Look at the Boundary Road upon this plan. Has a proposal ever come before you to continue the Boundary Road to the railway line? I do not remember any.
111. Take a point about the centre of road B. Has any proposal ever come before you to make the road between the railway station and that road? Not that I am aware of.
112. Have you ever had a proposal brought before you for a street between the end of the road marked street B and street A? No; I never heard of any there. I do not believe any have been done by us there at all—in fact, I am nearly sure we have done none. If we have done any work there I should have been sure to hear of it.
113. Take the Junction Road between the railway station and G. There is a road running to the south. Have you ever had any consultation about a road there? I know of none there.
114. The road to which I refer runs north and south? I know nothing of it. The roads marked red on this plan are the only roads I know to have been constructed by the Board.
115. Look at the road, marked H, running out from the Lane Cove Road towards the north, and taking a turn into Burns Road. Has any proposal come before you to continue the road to the Lane Cove further to the north and into Burns Road? No; none that I know of.
116. Look at the road, marked H D, running right into the Boundary Road. Has any proposal ever come to you to make a road parallel with Burns Road some chains to the north? No; I know nothing of it.
117. Would it be possible for any member of the Board to have authorized roads of this kind to be made without your knowledge? It is possible, but not very likely.
118. Do you know Mr. O'Donnell? Yes.
119. Has he charge of the unemployed in that district? Yes.
120. If there are men working on any roads there they are under his charge? Yes.
121. Is he responsible to your Board? Yes; he takes his instructions from us. A certain amount of license is allowed him in Government subdivisions as to where he shall distribute the men for scrubbing and clearing; but that would apply only to Government subdivisions.
122. He himself can originate no roads? No.
123. He can employ his men only upon work which has been already decided upon? Exactly, on work authorized by the Board.
124. If there are men at work on portions of these roads, of which you appear to know nothing, under Mr. O'Donnell's supervision, from whom would he have received his instructions? I do not know. He has not received them from me. If Mr. O'Donnell has received them from any member of the Board, I think I should have been acquainted with them.
125. Does Mr. O'Donnell receive orders from any other source? No.
126. If he has received orders to employ men for clearing and forming these roads they must have come from the Board? Yes.
127. If such orders have come from the Board you know nothing about them? Nothing.
128. It must be the act of some member of the Board without consultation with you? The orders could have emanated only from the Chairman; but I cannot credit that they have been given.
129. Could they not have originated from Mr. Houison? No; he would not be likely to do that.
130. You are positively certain that the Board knows nothing about the roads I have mentioned? Quite, as far as I am concerned.
131. Would it not be possible for Mr. Davies to do these things while you were away? Well, he might have done so.
132. His taking the action would be equivalent to the Board taking the action, would it not? Yes, of course.
133. Then you are willing to admit that these works may have been authorized by the Board, in the person of its Chairman without your knowledge? It is possible, but I think we should have been informed of them—in fact, I feel certain of it.
134. *Mr. O'Sullivan.*] If there are any men working on these roads now they are not working there by the authority of the Board? Well, I suppose that if the men are there they must be there under instructions from Mr. O'Donnell, who may have received instructions of which I am not aware.

- F. Wells.* 135. Do you know of a road running from the Noumea Estate at Campbelltown towards Hurstville? I do not know that particular road, but I know that work has been done at Campbelltown by the unemployed.
- 20 Nov., 1888. 136. Can you tell us the character of the great portion of the Crown lands to which access is given by these roads at Hornsby? It is poor barren land.
137. When do you think that the land is likely to be sold? Some of it has been sold recently.
138. But I mean some distance at the back of the Boundary Road, where we saw yesterday so much rock and scrub;—do you think this land will be sold within thirty years? I think a great deal of it will be sold.
139. Do I understand that you have no responsibility whatever for road J? Oh, yes, responsible for road J.
140. But not for H and I? They were done without my knowing it. They were considered desirable by Mr. Gordon. I did not know that they were done until I went over the Junction Road and saw them. It was pointed out to me that they were desirable as roads of access from the Lane Cove Road, and I fell in with that view.
141. If these gullies and other obstacles in the Boundary Road were known to exist, why was that road laid out? That is a question which only the surveyors can answer. They lay out roads in all directions, and some of them are very impracticable. In this case there are gullies which it would take an enormous sum of money to bridge.
142. *Chairman.*] In a memorandum of yours, dated 13th September, you mention a conversation with Mr. Burns in reference to granting access to the railway, in view of the line being opened to Hornsby, and you say that Mr. Burns stated his willingness to give the land? Yes.
143. What was your intention at the time, as far as you can recollect, in carrying the road to the railway-station? There was an absolute necessity to give access to the station. There was no access except by going along the Boundary Road or through Mr. Burns's land to get to the road the Department had already made.
144. Having formed the conclusion that it was necessary to have an access to the station, did you think that the road since constructed would be the nearest cut? Of course there might have been a diagonal road, but I doubt if they would have given us the land. I think we should have had to pay for it.
145. But if the road had been necessary, it would have been the nearest and best? The existing line accommodates a number of people, but the other would probably have been shorter.
146. When the conversation to which you have referred took place, did you meet for the purpose? No. I believe I was travelling with Mr. Burns in a railway carriage in the Hunter District somewhere. There was an accidental conversation, which, I think, was introduced by the subject of the Northern Line. The matter never came before me afterwards.
147. *Mr. Copeland.*] What salary do you receive in your position in the Roads Department? £700 a year.
148. I presume that you do not receive anything extra for your duties in connection with the Labour Board? I have received nothing yet.
149. Do you think that you are entitled to anything? That depends upon whether the Colonial Secretary considers that I have done my duty satisfactorily. I have no understanding at all. All that I know in connection with the matter is, that the Colonial Secretary stated in the House that, if the members of the Board did their duties satisfactorily, and managed to disperse the unemployed, and get rid of the trouble, he considered that they would be entitled to some reward for their services.
150. *Chairman.*] Have you any land in the vicinity? I do not own a foot of land in the Colony.
151. *Mr. Copeland.*] Can you state whether, had this land, known as Burns, Withers, and Smith's land, belonged to yourself, you would, in your position as a public officer, paid by the public to see that public money was properly expended, have dared to employ the unemployed in making roads through the property? If I had been a member of the Casual Labour Board, I certainly should have felt some delicacy in doing anything of the kind; but if the matter came before me in the Roads Department, I should have been only too glad to accept the land required for road as a gift instead of having to pay for it.
152. Was the question of constructing these roads through this private property ever submitted to the Colonial Secretary? I think it must have been. I am pretty sure of it.
153. Do you not know that it was? I do not know for certain that it was. I only know that access was needful. The first time we went up to the camp Mr. Koebke was supervising the clearing being done for Mr. Deering. I suggested that the first thing to do was to connect the clearings with the railway-station. It was then mentioned that the Boundary Road was impracticable. I had some knowledge of it before. I knew that the country was very rough. Mr. Houison went out, I believe, and closely examined it.
154. From your knowledge of the country, you believe that the Boundary Road is too rough for a continuous road right through? Yes; and the road would be too expensive.
155. Are you aware that it is already metalled, and that they are making the bridges upon it at the present time? I was not aware of that.
156. Do you know that the Committee drove over the road in a buggy yesterday? I could not have thought it, but perhaps you did not go far down.
157. Are you aware of a culvert existing in the Boundary Road? I am not aware of it.
158. Are you aware that they are making a second culvert there? There may be a small culvert near road C, and one near road B, but I do not think you will find any more.
159. Have you yourself been along the Boundary Road? No. I have been along part of it. Mr. Houison went specially to examine it. I think he has been along the whole of the line. He made a close personal examination.
160. If these Crown lands, a portion of which is shown on the plan, are so broken up, how is it that you have sold a portion of them? I do not know which is sold and which is not.
161. Would it not have been as easy for you to construct a road on the Crown land as lower down? I have been given to understand that roads leading north from the Boundary Road are already extended into the Crown lands.
162. I mean the road running parallel with the Junction Road. Would it not have been possible to use the

F. Wells.
20 Nov., 1888.

the unemployed in making a road on the Crown land, instead of on the other side through private property? If the other road had been equally practicable that might have been done, but it was not an equally good road.

163. Do you say that of your own knowledge? I know that some parts of it were very much worse than the country lower down.

164. As an officer of the Department, would you consider the Boundary Road a bad road? Yes, certainly.

165. Is there any portion of it over which, without its being made, a buggy and pair of horses might not be driven? Yes; I am sure there is.

166. If the Boundary Road was so bad, would not that be a strong reason for the employment of these men in improving it? Heavy work of that description is very much out of their line. You can get them to do clearing and light forming with some advantage, but it is no use to put them on heavy road-work.

167. Your impression is that some of the roads on the Crown lands have been cleared? Yes.

168. Does it not appear reasonable that if the men had been able to make roads through the Crown lands they should also have been able to make this road at the junction of the Crown lands and private property? I do not see what advantage would attach to making this expensive road along the boundary, especially when we had the other road, that is, the Junction Road, given to us.

169. In making that Junction Road, would you not be very much enhancing the value of the land abutting on to it? I have no doubt we have done so.

170. If it had passed through this strip of Crown land, would it not have immensely enhanced its value? If we had adopted the Boundary Road we should still have enhanced the value of one of the frontages of the Burns-Withers estate and others.

171. But you would also have increased the value of one of the frontages of the Crown lands? Yes; but the cost of making the road would not have been worth it.

172. I understand you to say that the Crown land is so broken up that it is impossible to make roads? I do not say that it is impossible to make roads, but it is sufficiently rough to preclude us from making roads with the labour of the unemployed.

173. What is the use of making roads through this private property to bring people to country which is so impassable? The roads do not lead to wholly impassable country. There are tributary roads leading up from the Boundary Road on to the plateaux between the gullies.

174. Do you tell the Committee that you could not have given access to the railway by continuing the A road through the Crown lands? It would have been worse there; the gullies there are perfect precipices when you get more to the northward.

175. Would there have been no chance of continuing the street to the northward of Hornsby Junction? It would have been impossible.

176. Why? Because the gullies deepen so rapidly.

177. The Committee were unable to discover yesterday that this land was so exceedingly rough; but supposing that it is, what chance is there of the Government being able to sell it? That I do not know. As I have just pointed out, you can get access on to the plateaux between the gullies.

178. But there are no means of access through the Crown land? It would be very expensive to do it. In taking the Junction Road we came up to the head of the gullies as far as we could.

179. Are you not surprised to hear that the Committee had no trouble in driving along the Boundary Road? I do not think you can have driven along the road very far. You may go a short distance along from the railway-station end, but that is all.

180. Having regard to the road marked C and I, and connecting the Boundary Road with the Lane Cove Road, what necessity was there to construct road H? That I cannot tell. As I said before, I did not know that these two roads were cleared until I saw them. I found that they had been done upon the recommendation of Mr. Gordon.

181. Do you think there was any necessity to have four roads in this short distance between the Junction Road and road A, making five roads in all to the railway in a distance of less than three-quarters of a mile? I do not believe these roads had been constructed or cleared or even touched by the Board at all. I think that is a matter of private subdivision. I believe it has been done entirely by private people. I shall be very much surprised to learn that it has been done by the Board.

182. Are you aware that this road marked Burns Road, although not coloured on the map, has been metalled? Not by the Board.

183. Are you sure that it has not? No; but I do not believe that it has.

184. No authority was given by the Board, so far as you are aware? No.

185. Were you ever along that road? No; I have merely seen it from the end of the other road; then it was not ballasted.

186. Mr. Gordon is subordinate to the Board, not to the Roads Department; he is an officer of the Lands Department? Yes. Since the constitution of the Casual Labour Board he has been acting under the orders of the Board as far as our work is concerned.

187. Therefore he is subject to you? Yes. We took him over when Mr. Deering gave up charge. Mr. Gordon was managing for Mr. Deering.

188. Do you consider that Mr. Gordon's position warranted him in determining to construct any of the roads without the question being submitted to you as the professional officer of the Department? He would recommend roads to the Board as a matter of access. He would not undertake the works on his own responsibility.

189. *Chairman.*] Would he recommend it to the Board without recommending it to you, or without consulting you in the matter? I do not think he would have come to me. It was simply a matter of access—a matter of clearing. There was no engineering work in it. If there had been any work in it apart from the clearing it would have been left until Mr. Houison or myself had reported upon the matter.

190. *Mr. Copeland.*] You and Mr. Houison are professional gentlemen? Yes.

191. Whereas the Chairman of the Board is a non-professional man? Yes.

192. Do you not think it rather singular that the non-professional member of the Board should have decided upon these works without submitting them to the professional members of the Board? Whenever professional work has been required I think we have been consulted.

F. Wells.
20 Nov., 1888.

193. Would you not consider these roads work of a professional character? Hardly. The simple clearing could be done by the Superintendent on the field—that is, if the work were determined to be a right thing to do.
194. But would it not be a practical question for you to determine if the road were a right thing to construct or not? I think the surveyor would be as good a judge of that as myself. No professional work would be required. It was only a clearing. It was simply a question of the advisableness of making the road.
195. *Chairman.*] Who decides upon the advisableness? I presume the Chairman, on Mr. Gordon's recommendation.
196. *Mr. Copeland.*] I understood you to say that the first proposal in connection with these roads emanated from you in 1885 or 1886? I hardly know whether it was from Mr. Burns or myself. He told me that he was the proprietor of the land. I did not then know that Mr. Withers or Mr. Smith had any connection with it.
197. Which do you suppose was the first batch of these roads to be cleared? I should imagine the Junction Road, being the most essential, and the continuation of the Vanceville Road.
198. You know nothing about road A? No.
199. Is there any official correspondence as to the road emanating from your conversation with Mr. Burns in 1885 or 1886? No; we simply had a conversation. I had no official correspondence. If I had I should have recommended the matter at the time in the Roads Department. The first thing I remember is Mr. Ives' petition to get a road continued from the Vanceville Road to the Hornsby Station.
200. What is the date of that? I cannot say. It is since the establishment of the Board.
201. Is not the petition in the papers marked E the petition to which you refer? Yes.
202. What is the date? 11th November, 1887.
203. That is the first official communication you are aware of? Yes.
204. That is with reference to these roads through the property of Messrs. Burns, Withers, and Smith? Yes, that is the first I know of. I thought at one time that there was a petition before, but I have looked into the records and I cannot find it.
205. Do you know whether the signature of George Withers asking for this road through the property of Burns, Withers, and Smith is the signature of one of the owners of the property? That I cannot say. I should think that it very likely was.
206. *Chairman.*] Do you know whether those signatories are living in the neighbourhood? I cannot tell you. I looked very little at the petition to begin with. I know that such a petition came in. It was sent on to us by the Commissioner to deal with, and we dealt with it.
207. *Mr. Copeland.*] You say that the Crown lands to which these roads are to give access are very barren? Yes; it is barren rocky land.
208. Is it more barren than the private land adjoining? No; I should think it was very much the same kind of land. I think it is very poor land, the whole of it.
209. Of course it gets rougher as you go to the northward. Do I understand that you are the chief officer in the Roads Department next to Mr. Bennett? Yes.
210. Can you tell the Committee what the probable cost per chain for grubbing and clearing these roads would be? In some parts perhaps it would cost from £4 to £5 an acre. I do not think it would go as high as £10 an acre in any case. In some places it might cost £8, but it certainly would not go £8 all through. I can supply you with all the information you require as to cost at a subsequent date.
211. The estimate you have given would be for merely grubbing and clearing the roads? Yes.
212. What would be the cost of forming the roads? About 15s. a chain.
213. Would that include the cutting of the drain and the whole forming of the road? Yes; I do not think it would cost more than that.
214. *Chairman.*] You are not speaking as, I understand, from accurate knowledge? No; because we pay these men less rates than we should pay under ordinary circumstances. We do not want the work to be too attractive; we want it to be somewhat punitive.
215. *Mr. Copeland.*] With reference to metalling? None of the roads have been metalled. Some of them have been ballasted with sandstone.
216. You do not term that metalling? No; it is only rough ballasting.
217. What would be the cost per chain for ballasting? It would probably run into about from £1 to £1 2s. a chain.
218. What thickness of ballast would that provide for? There would be about 6 inches of ballast—perhaps scarcely as much. I know that the roads are only very lightly ballasted. I can tell you the exact cost later on from our own books.
219. Does your estimate of £1 or 22s. include the procuring and breaking of the metal? If you were to include that I suppose the cost would be about £2 a chain. If ironstone were used it would be more costly, but I do not think there is any used there. I am pretty certain that there is only sandstone ballasting.
220. If one officer of your Department has estimated the work at £9 a chain, and another at £15 a chain, both of them are very wide of the mark? Yes; it would cost about £2, besides forming and blinding, say £3.
221. At the next meeting of the Committee, will you supply information as to what has been the actual cost of the grubbing, clearing, forming, and ballasting of the roads? Yes; I think I can give you the whole of that information.
222. *Mr. O'Sullivan.*] Granting that the boundary road would be costly to construct, would it cost more than the Junction Road and all the tributary roads together? A long way more.
223. Can you explain why the H road takes such a peculiar shape? I cannot explain that road and the I road. As I have already said, they were adopted on Mr. Gordon's representation. I was not aware of their being cleared until I saw that all the work had been done.
224. *Chairman.*] Are you aware whether the Boundary Road, the Vanceville Road, Burns Road, and the road marked HD would cut that portion of the Burns and Withers estate into a square block? Well, yes, a rectangular block.
225. Do these roads bound the estate? I do not know where Burns and Withers's boundaries are. I should imagine, however, that Burns Road was the boundary to Burns's property.

226. Are you aware whether any bridges had been made by the unemployed on any of the roads? There are culverts, I believe, on the Junction Road and on the Boundary Road. I cannot think of any bridge, and I do not know whether the culverts were done by the unemployed. Mr. F. Wells,
20 Nov., 1889.
227. Do you know if there are any bridges on the Burns Road? I do not think we have done any work on that road.
228. If it came to your knowledge now that the unemployed were constructing and making passable the Boundary Road, would your opinion be that a mistake had been made in constructing the Junction Road at all? If they could make a good road there, decidedly, but I am certain they cannot.
229. *Mr. Brunker.*] You said, I think, that from the time of the establishment of the Board instructions have emanated from the Colonial Secretary? Yes.
230. Is the Committee to infer that the whole of the work has been carried out under the instructions of the Colonial Secretary? I cannot say whether that is so.
231. I mean generally? Not in matters of detail. These we generally deal with ourselves upon our own responsibility.
232. Not under instructions from the Colonial Secretary? No.
233. I suppose it would be impossible for the Colonial Secretary to give instructions unless certain propositions were made to him? That I cannot say. I believe that we have obtained Ministerial authority for all the roads which we have made through private property. Mr. Davies, however, will be able to give you better information on this point. I saw a number of approvals yesterday in our own office. I was under the impression that all the work undertaken outside of Crown lands had received Ministerial approval.
234. But it would be impossible for the Colonial Secretary to say that certain work was necessary, in the absence of a suggestion from the Casual Labour Board? Of course he would not be aware of what was necessary.
235. You say that the unemployed were at work at Hornsby before you commenced there? Yes, under Mr. Deering.
236. If the land between road A and the Junction Road has been cleared, and if roads have been formed there, that has been done apart from instructions from the Casual Labour Board and from the Colonial Secretary? Yes; all that has been done there must have been done, I think, by private owners. I am not aware of any authority for roads there. There is no authority for any work in that block at all. I thought that the road along the railway might have been cleared by Mr. Deering. It was not done by the Board.
237. I suppose that the first consideration of the Board in making these roads was to give better access to the Crown lands? That was the only thing we considered. Of course we took into consideration to some extent the desirability of access from the Lane Cove Road to the railway-station.
238. Do the members of the Board consider that the expenditure which has been incurred upon these roads has increased the value of the Crown lands adjoining? Most decidedly. They would be almost worthless without access.
239. Are you, as a member of the Casual Labour Board, able to say whether the Board have had any communication with Messrs. Burns, Withers, and Smith; and, if so, whether any of these roads have been constructed as the result of that communication? I am almost positive that there has been no such communication. I know, so far as I am concerned, that since I spoke to Mr. Burns on the subject in 1885 or 1886, I have had no communication with him whatever on the matter. I feel pretty certain that Mr. Houison, upon whose recommendation the Junction Road was made, has not had any. I am nearly certain that no member of the Board has had any such communication.
240. As a matter of fact, so far as you can tell as a member of the Board, these roads have been constructed upon the sole responsibility of the Board? I think so, decidedly.
241. And under their advice and control? Yes.
242. As to this Boundary Road, you say that the inequalities of the surface are so great that it would be almost impossible to construct a road in that direction? Well, it would be too costly.
243. But not too costly if you had skilled labour? I think so—even with skilled labour. Mr. Houison will be better able to answer that question, because he made a close examination of the road.
244. Is it not a fact that with these men under your control you are not able to carry out such works as you could carry out under other circumstances? It is.
245. *Mr. Copeland.*] As a professional man, and as second in command of the Roads Department of this Colony, you say that it would be impossible to make a road fit for traffic in the direction of the Boundary Road? I believe it would be impracticable; or, at all events, if it were not impracticable, it would be much too costly. We should have to make a deviation at each of the gullies. We could not cross the gullies on the line of the road. We should have to make side-cuts down the gullies. It is not so bad at the station end. I am referring more particularly to the gullies further along.
246. Do I understand that as soon as you get away from the Burns property on to the Crown lands they become impassable? Yes; the further north you go the more precipitous the gullies become.
247. *Mr. Brunker.*] Can you tell the Committee what action was taken after the receipt of the petition of Mr. Ives? It was referred to the Casual Labour Board by the Commissioner for Roads. It was sent on, I presume, and approved.
248. Mr. Burns was communicated with by the Casual Labour Board? Yes; he was asked to give his consent to the making of the road, and he agreed to it.
249. *Mr. Copeland.*] The minute of the Casual Labour Board on the subject is dated 18th October, 1887? Yes.
250. And was approved of by Mr. Burns on the 19th October? Yes.
251. *Mr. Brunker.*] Were the propositions of Mr. Davies, with reference to the construction of roads, objected to any time by any other member of the Board? I am in doubt as to whether there was not some little matter in which we had a difference of opinion.
252. What road was it about? I do not know now, but it was not one of the Hornsby roads. Mr. Davies showed me that he had the Colonial Secretary's authority for the work being done. I am nearly sure that it was one of the roads on the Holt-Sutherland Estate.
253. Do you know whether a large area of the Crown lands at Hornsby have been subdivided? Yes; and a portion of the land has been sold.
254. It has been subdivided and is ready for sale at any moment? A large portion of it is.

- Mr. F. Wells. 255. The bulk of the Crown lands in that locality, I suppose? Yes.
- 20 Nov., 1888. 256. Do you know anything of the extent and character of the population about Hornsby? There are a great many fruit-growers about the Vanceville Road, and there are some settlers at the back.
257. Are the roads which have been made by the Casual Labour Board likely to serve the public? Yes.
258. They will more especially convenience the people in the surrounding locality? Yes; I think the roads H and I would be of service to the people on the Lane Cove Road going to Hornsby.
259. If the Crown lands are as rough as you describe, the means of access would considerably improve their value, as they would also improve the value of the private lands? Yes. I ought to mention that roads H and I are merely cleared.
260. I understand that some roads on the Crown lands are cleared? Yes.
261. You were speaking about the unemployed doing some work at Campbelltown;—is it not a fact that they were sent to various localities on condition of the municipal councils offering subsidiary aid? Yes. I know that some were sent to Wallsend, Campbelltown, Parramatta, Leichhardt, &c. The municipalities paid one half of the wages, and the Government paid the other half, to employ local labour.
262. *Mr. Copeland.*] You were saying that roads H and I were merely cleared? Yes; when I saw them.
263. Are you not aware that road H is ballasted along its entire length? No; I was not aware of that. When I last saw it it was only cleared. The only ballasted road I remember seeing was the Junction Road.
264. If a great deal of this road has been ballasted, and if a number of culverts have been formed in it by the unemployed, it has been done without the instructions of the Board? Yes; so far as I am aware, no instructions have been given. Some culverts may have been put in, because Mr. O'Donnell had *carte blanche* to put in whatever he thought necessary for the crossing of the creeks.
265. Although you are a member of the Casual Labour Board, you are not aware that culverts have been constructed along the whole of this road? No; I was not.
266. *Mr. O'Sullivan.*] If Mr. O'Donnell has been authorized to construct culverts along this road, and if he has done so with the labour at his disposal, how is it that he is unable to carry out the work to which you have referred on the Boundary Road? Crossing the gullies on the Boundary Road is a very different thing from crossing the water-channels on a comparatively good road.
267. Have you seen some of these culverts? I have seen them on the Junction Road. They are not very big there.
268. Have you seen the culvert in the gully across Boundary Road near C road? I have not seen that.
269. *Mr. Bruncker.*] To whom was Mr. Gordon responsible for the work he carried out? He was answerable to us directly for the work. He would recommend and carry out certain work. He would advise as the surveyor engaged on the design for the subdivision of the land.
270. Was the Junction Road recommended by Mr. Gordon? Yes.
271. And approved by the Board? Yes.
272. Do you consider that a road constructed there is as beneficial to the Crown lands adjoining as a road constructed higher up would be? More so, on account of the nature of the ground. You get access by the tributary roads.
273. So far as giving increased value to the Crown land is concerned, you think that the construction of Junction Road is just as advantageous as the construction of Boundary Road would have been? Yes; I consider that the Boundary Road is an almost impracticable road.
274. Although the road gave increased value to the private land, the Board considered that they were acting in the public interest in carrying out the work as it appears on the plan? Yes, decidedly. If we could have got a diagonal road across the land it might have been shorter, but we should have had to pay for the land. If there had been no Crown lands to clear I should have recommended the Junction and J Roads.
275. *Mr. Copeland.*] Is it not rather a coincidence that the only points of access from the private lands to the Crown lands should be just on the division lines of this property? These lines of road were selected by Mr. Gordon to give access.
276. *Chairman.*] You can see no coincidence in it? No.
277. *Mr. Bruncker.*] Is it not true that these boundary lines are also the boundary lines of property belonging to Messrs. Brown, Harnett, Ebsworth, and others? Yes.
278. *Mr. Copeland.*] Was not that property included in the estate originally? Not that I am aware of.
279. Then how is it that the boundary, as shown on the plan, is all coloured yellow? I do not know. That is what puzzled me at first. Vanceville I know is an old subdivision. I do not know the boundaries of the Burns property. The plan also shows property belonging to Mr. Foster, Harnett (Edwards), and Want, I believe.
280. Would that be Mr. Justice Foster? Not that I know of.

WEDNESDAY, 21 NOVEMBER, 1888.

Present:—

| MR. HENRY CLARKE, | | MR. MELVILLE, |
| MR. COPELAND, | | MR. O'SULLIVAN, |
| | MR. STREET. | |

THOMAS WALKER, Esq., IN THE CHAIR.

David Houison, Esq., called in, sworn, and examined:—

281. *Chairman.*] Are you a member of the Board called the Labour Bureau? Yes; I am a member of the Casual Labour Board. D. Houison,
Esq.
21 Nov., 1888.
- 281½. Have you been a member of the Board since its origin? Yes.
282. How long ago is it since the Board was formed? Since May, 1887.
- 282½. Can you tell us how you became connected with the Board? I know nothing further than that I was appointed with Mr. Davies and Colonel Wells.
283. Were you consulted before the appointment was made as to whether you would accept it or not? I was asked to take Mr. Darley's place. He was originally appointed, but was unable to undertake the duties, and he asked me if I would accept the appointment.
284. Before you were asked to take the appointment? Yes.
285. Are you a civil servant? Yes; I am connected with the Harbours and Rivers Department.
286. Do you know whether you were appointed to this position because of your connection with the Harbours and Rivers Department? I have no knowledge.
287. How soon after its appointment did the Board meet? At once.
288. At the office of the Board? Yes.
289. Have you held regular meetings since? No. We did at first; but our duties would not permit of our constantly meeting.
290. At the first inception you held regular formal meetings? Well, you can hardly call them formal; there were no regular minutes taken. I was in constant attendance at the office for an hour every morning when I was in Sydney, before going to my regular duties.
291. Were you there by yourself at these times? No; Mr. Davies was always there, and Colonel Wells sometimes.
292. Then you have no record whatsoever of any of your meetings? The chief clerk has a record of everything that has been done.
293. But I mean of any consultation? No; there was no regular record kept.
294. What was the nature of the instructions given to you as a member of the Board? I received such short notice—I only got a telegram last night—that I had not time to bring any papers with me, and there was no one at the office to-day.
295. What were your instructions, as far as your memory can serve you? I could not give the precise wording, and I would prefer not to say without giving the precise wording.
296. Of course, you do not always carry your instructions about with you; but you know what you can do, and what you are expected to do. When you took office, what was your understanding as to your powers and the limits of those powers? To find employment for the unemployed.
297. There was a general power given to you? I could not describe it now.
298. You state that your instructions were to find work for the unemployed? Yes. We took over the unemployed from those who had charge of them at the time.
299. What I mean now is, when you took over the unemployed had you any instructions given you as to the way in which these unemployed should be utilized? There were general instructions given.
300. Can you remember any limitations to those instructions? No; I cannot at present.
301. So far as your memory serves you, had you any power to dispose of those men according to your own discretion? Yes, we had.
302. As far as you can recollect, what work were the unemployed engaged upon when you took them over? Clearing, as a rule, and also upon roads.
303. They were working upon roads? Yes, and clearing.
304. *Mr. Copeland.*] Clearing Crown lands? Crown lands.
305. *Chairman.*] They were not in any particular district? They were scattered about.
306. In large numbers? Yes; there were a great number of them when we took charge.
307. What was the first effect of your taking them over—to concentrate them? To concentrate them at National Park as a depôt, to distribute them from there as the men were selected.
308. Did you call in any of those who were at work on any of the roads of the Colony? No; I do not think there were any called in.
309. Then, in concentrating them, where did you get your largest supply from? From Sydney streets.
310. Was your first task then to take them to National Park, and to distribute them from there, or did you send them direct from Sydney? Some went from there, and some went direct from Sydney afterwards.
311. In considering where the men that you had at your disposal should go, did you receive any instructions of any kind from any of the Government officers? In what way?
312. Well you had so many men at your disposal; you were intending to send them where they were most needed;—did you get any representations as to where they might be required from any Government officers? We had notice from the Roads Department if men were required in a particular district.
313. How did you ascertain that men were required in these districts? They forwarded us returns from the road superintendents. Copies of the reports referring to the works were sent to us with regard to the special requests.
314. That is from places where men were already at work? No; where men were required. We always had a statement as to the state of the labour market in these districts furnished to us by the Roads Department. It came from the head of the Department.
315. Did you issue instructions for the Roads Department to furnish you with these? No; we had no power to do so.
316. Then you acted upon the reports sent to you by the road superintendent? Yes. If the contractors required any men they wrote for them.
317. How did you make it known? It was advertised in the daily papers. 318.

- D. Houston, Esq.
21 Nov., 1888.
318. An in the subsequent disposal of these men have you had any communication from any Government source? Not that I know of.
319. In sending your men to any locality, did you submit your proposals to the Colonial Secretary? His approval was invariably sought before any men were sent anywhere.
320. When you say invariably, are there any exceptions? There may be. I could not say positively, because I was not constantly in the office. Mr. Davies was our executive.
321. You say that Mr. Davies was your executive? Yes; he attends to all requirements of the office, sees to all the papers, and everything.
322. Has Mr. Davies the power to dispose of men without consulting you or your colleague, Colonel Wells? He does, as a rule, consult us.
323. Have there been instances where he has not consulted you? Yes.
324. And when he consults you, does he convene you for the purpose? No; I am generally in. I call at the office every time I am in Sydney.
325. When you speak of "consults," you mean that he has some conversation with you when you call in casually at the office? Yes.
326. Does he ever talk with you outside the office, in the streets, on these matters? No.
327. Have you any knowledge of the work of the unemployed upon an estate owned by Messrs. Burns, Withers, and Smith, at Hornsby? I could not localize the ground, but I know the roads at Hornsby; I have been over them all.
328. Have you been over the district shown on the map before you? Yes.
329. From whom issued the orders for the unemployed to clear and form these roads? I could not say positively about that.
330. Did they issue from you? From the Board altogether, I think.
331. Who has charge of the unemployed out there? Mr. O'Donnell.
332. What are the instructions from the Board to Mr. O'Donnell in the matter? He gets instructions as to what to go on with, what roads to clear; and after he has cleared these roads, as an expert and an engineer, I, or Colonel Wells, go on to the ground and point out any portion that may require slight ballasting to improve the roads or the grades.
333. What was the object of the Board in forming these roads? To get access to the Crown lands at the back.
334. Did you authorize any roads that are not simply to give access? No.
335. Does that map show all the roads constructed? That shows all the roads.
336. Is it possible that orders may have come from your Board that you are not aware of, and that roads may have been cleared of which you are not aware? I do not think so.
337. Look at the map before you. There is a road between the road marked A and the junction road, marked G, running parallel with the railway line, and bordering the railway line? I do not know of any road there.
338. You are not aware that that road exists? No, I have not been there for some months.
339. *Mr. Copeland.*] How long is it since you were there? Four or five months. It must be four months, at the least, since I was there.
340. *Chairman.*] If such a road has been formed, it has not been done by your instruction? I do not know anything about it.
341. If it has been done by the instructions of the Board, it is still unknown to you? I do not know anything of it.
342. Take the boundary road. Are you aware whether any instructions have been given to continue that road as far as the railway line? No, I do not know of any.
343. Have any instructions been given to construct a road to the north of that line, towards the railway? No.
344. Or to the south of it? No.
345. Or to construct a road running off Junction Road, between the first letter G and the railway line, to the south? No; I have not been out there for so many months that I cannot tell you.
346. If these roads were formed, you would consider them roads of access? Well, unless I personally inspected them, I could not say.
347. In making any of these roads what object had the Board? To get to the Crown lands, I suppose.
348. Would you consider the road H H D a road of access? Yes; that is one of the roads. There is a claim for compensation in respect to that road, I believe.
349. From whom? From Mr. Harnett, if I remember rightly.
350. Is that road necessary as a road of access when you have the road I C? Yes, certainly.
351. And the road J F? That goes to the boundary road; it is the principal road almost—the Vanceville Road.
352. Is the object of that road—the Vanceville Road—to give access alone? For purposes of access.
353. What was the object in laying out the Boundary Road? That road was almost inaccessible. When I went on to it at first I would not, as an engineer, go through with its construction because of the expense it would incur.
354. Are you aware that it is being formed as a road now? I think I put in a crossing on it at the first creek, but I would not go on any further with it.
355. Are you aware whether there are any unemployed working on it now? No, I could not say.
356. If there were any unemployed engaged on it, considering the existence of Junction Road, would you consider the work justifiable? I do not think they can make this road. I do not think it is possible to grade it so as to make it an accessible road for ordinary traffic. I have been over it. The other road beyond it again to the north is still worse; it is utterly impossible to make a road there. That is what they call the population boundary road, a short distance further north.
357. Are there any roads formed on the Crown lands? The Boundary Road is the only one I have been on yet.
358. What is the nature of the Crown land—is it good land; what is the character of it? It is not first-class land; there are portions of it pretty good, the rest of it is rather poor.
359. What do you think the comparative expense would be of making the roads B, C, D, E, and F, and the opening up of the Boundary Road—which work do you think would be the most costly? The Boundary Road would cost ten times more than the other. You cannot make a road there that would ever be used by traffic—the grades are too steep. It is right enough at the end near the Hornsby junction; but when you get more to the eastward it is almost impassable.

360. *Mr. M'Millan.*] What about the country further north? It gets worse and worse as you go north.
361. Then you could not make a road at all through the Crown lands? No. I stopped the Boundary Road.
362. *Chairman.*] Does it go as far as D? No; not as far as D—to the first creek, I think. There is a stone crossing there, which is the limit to which I went.
363. If the road goes as far as that, would you consider the road C a necessary road, considering that B opens into the Boundary Road? I think they are all necessary. They are all easy roads to make.
364. If the Crown lands are so poor, and it is impossible to make roads upon them? There is very good land at the back.
365. But it is impossible to reach the back portion? You can reach the whole of it through these roads. These are the roads to give access to it, between the creeks. You cannot cross the creeks from east to west; but you can go in between each creek, and that is the object of these roads. These roads would have to be taken up eventually to get access to the Crown land.
366. None of these roads are continued on Government lands? I could not say; but I have not been there for five months.
367. Would it not have been more to the improvement of the Crown lands to make roads on the Crown lands, instead of these other roads? You could not get to the Crown lands without these other roads.
368. *Mr. O'Sullivan.*] You say that you held some meetings of the Casual Labour Board? At the first.
369. Do you remember how many? No; I could not say.
370. How long ago is it since you had a meeting there? The last meeting was about a week ago.
371. How many meetings have you held altogether? I have been there every morning for the first twelve or fifteen months.
372. But how often have you held regular meetings? I could not say.
373. As a matter of fact, until last week, you had had no regular meetings? No; I have not been able to attend at the office.
374. No minutes of the business have been kept? Well, of course we have our minutes in the office; but they are not like the ordinary minutes of meetings, they would be simply the records of the office.
375. During the absence of yourself and Mr. Wells, Mr. Davies would act as a kind of dictator? He does nothing without consulting us or letting us know. When we come into the office we see all the back papers and everything.
376. You act more in the form of advisers than as members of the Board? We act as experts,—to give advice. There is no engineering work carried on without our advice, and we visit the work before it is paid for.*
377. The Board is almost a fiction, practically? I do not think so.
378. From your experience of Crown lands and of the laying out of roads, do you not think it possible that the private owners of this estate would have laid out these roads without the Government doing the work? The work would have had to be done eventually, and if not by the labour under our command it would cost six times as much.
379. But they would have subdivided the land and made roads? I could not say.
380. As a matter of fact, you know they began one road called Burns' Road,—they had begun the construction of Burns' Road? Well, it was cleared, I think.
381. And the probability is that in the ordinary way of subdividing estates, as all private owners do, roads would have been constructed across it, in order to make the land more saleable? I do not know, I am sure. They might not have been opened up in the same positions.
382. What has been your experience of the subdividing of private estates? I do not know anything about it at all.
383. You have been present at land sales? No.
384. You do not know the method they adopt in cutting up streets? Yes; I know that.
385. Probably the same plan would have been carried out by Burns, Withers, and Smith? They might have done so.
386. Do you know who authorized the roads I and H? I cannot say exactly; I have not had access to any of the papers.
387. You never authorized them? I cannot remember it.
388. You cannot remember authorizing these roads? I cannot remember having authorized them.
389. Then if you cannot remember having authorized them, and Mr. Wells did not authorize them, who was the party who would have authorized them? Mr. Davies, I suppose, if they were authorized without our knowledge.
390. Did Mr. Davies consult you about the roads I and H? I cannot say without seeing the papers.
391. Have you any recollection? No, I have not. We have our own work besides to attend to.
392. How long ago is it;—about twelve months ago? I cannot say positively.
393. You say you know most of the roads on the Hornsby Estate? Yes.
394. There may be some roads there of which you have no knowledge? Yes.
395. You say you have no knowledge of this road running parallel with the railway? No.
396. Are you aware that there are half-a-dozen other roads besides these shown on the plan? No; I am not aware of any. The roads on the plan are the roads I have seen when I have been out there.
397. If the roads running down to B, C, and H have been constructed by the unemployed, and have the unemployed working upon them, who has authorized these roads? I could not say. I do not say that the unemployed have made them.
398. Supposing that they are there, and that they admit that they are unemployed, working under Mr. O'Donnell, who has authorized the roads? Probably Mr. Davies.
399. You say that all plans were submitted to the Colonial Secretary—plans of roads? No. All requisitions and representations by the residents were forwarded as a rule to the Colonial Secretary for his approval.
400. Do you know if this request for the road on the Hornsby Estate was submitted to him? I could not tell you.

D. Houston,
Esq.
21 Nov., 1888.

401.

* NOTE (on revision) :—To explain this more fully, sections and cross-sections of roads that were very difficult to make were prepared by myself, and handed to the chairman for the guidance of the superintendents, and to enable them to let the work in small contracts and have correct measurements of the work. I may name specially Narrabeen, Dobroyd, and Unwin's Bridge Road.

- D. Houston,
Esq.
21 Nov., 1888.
401. In the ordinary way of business these requests would have been submitted? We generally do submit anything of the kind.
402. Then, probably, he would be the Minister who authorized the making of these roads? The Colonial Secretary is the only Minister they would come to.
403. *Chairman.*] In an answer given yesterday by Colonel Wells, he says that he was frequently away for two or three weeks at a time, and that you were away for a like period? There are times when I could not possibly attend to the duty.
404. Is the sole management of the Board, and the initiation and continuation of work, in that case left in the hands of Mr. Davies? During the time we are absent.
405. Whatever work is carried on you know nothing of? We are informed of it the moment we attend, and receive the whole of the papers.
406. *Mr. M. Millan.*] Everything in the way of roads, I suppose, has gone through your hands? Not the work of clearing or anything of that kind. I never interfere with that. Mr. Davies and the superintendent would look after that, and Colonel Wells or myself would probably look over the work after it was done.
407. Has the clearing of these roads on this estate not been brought under your notice as one of the experts on the Board? Yes. I think it was; at that time we were constantly meeting.
408. Speaking of the last six months, have these roads been brought under your notice as a Board during that period? Not for the last five or six months, I think.
409. I take it that a lot of work has been done there during the past six months? During the past five or six months I have had very little time to attend to the work of the Board.
410. But a great deal of expenditure for metalling and so forth has been incurred during that period, I suppose? No metalling has been done, only ballasting.
411. But a great deal of that kind of work has been done during the past six months? I do not think much has been done during the past six months. I think I saw pretty well the whole of it. I think I should be better able to give you the information you require after visiting the land with Colonel Wells, as I intended to do.
412. You disclaim any connection either with the initiation or the supervision of the laying out of these roads during the last six months? Well, at any time when I have called at the office I have spent an hour or two in looking over the back papers.
413. As far as the real management is concerned, except that it was in your power to see the papers, you have for all practical purposes had no direct connection with the work? Not during the last five months. I have been unable to attend to the work.
414. *Chairman.*] I suppose Mr. O'Donnell can show us what roads have been cleared, formed, and ballasted by the unemployed in addition to those shown on the plan? Yes; I think he would be able to give you all the information you require on that branch of the subject.
415. *Mr. Copeland.*] Do you keep no record whatever in the office of the Casual Labour Board? The secretary has a record of the correspondence and so forth. Everything is kept in just the same way as in other departments. As far as I have been able to see, this record is quite as accurate as that of any other department in which I have been.
416. In order to obtain information connected with this record it would be necessary to call Mr. Hincheliff? Yes; I should think so.
417. Do I understand you to say that the Boundary Road is quite impassable? Well, it is not exactly impassable, but it would cost a mint of money to make it; and when it was made the grades would be so steep that it would not be possible to work traffic over it.
418. Do you make that statement with due regard to the nature of the ordinary up-country roads? Yes. I myself examined this particular road in company with Mr. O'Donnell.
419. *Mr. M. Millan.*] As I understand you, the roads here must go north and south, it is not practicable to take them east and west? Exactly.
420. *Mr. Copeland.*] You said that this Boundary Road is impassable, and that the road further north, the Population Boundary Road, is utterly impracticable. Is this on account of the extreme roughness of the land? No; the depressions there are very deep, some of them fully 300 feet in depth. Running parallel to these gullies you get access to the whole of the country on the table-land.
421. If this land is so very rough, and irregular, and uneven, do you think it was worth while expending so much upon the outside land? The land at the top is good table-land, through between the creeks; but the gullies are precipitous and inaccessible.
422. You think there will be no approaches made across these particular creeks? Not from an engineering point of view. No one would ever sanction it.
423. Looking at the map, do you see a road marked A, which crosses the railway. Would not that road give you access to Crown lands? Not across the creeks. You cross the creeks directly you get on to the Crown lands.
424. So far as the land recently sold is concerned, would not the road A give access to it, and to the railway. Would not the road, in fact, give access to the land on both sides of the railway? Well, it would give access to a portion of the land.
425. And to the railway station? Yes; but it does not give any frontages.
426. Has it not been the practice in the Department to make their own frontages by subdividing the Crown lands, and making the roads on those Crown lands? I do not know. I have never belonged to the Survey Department.
427. Do you know of any instance, except what has occurred during the last few months, where the Government expended money in making the roads through private property instead of through their own Crown lands? I do not know of any case. I have been employed principally upon the main roads of the Colony when in the Roads Department; this is the first time that I have had any connection with work of this kind.
428. Supposing the Government had made roads through their Crown lands, do you think that the proprietors of this subdivision would not have made roads to connect with them? I do not know. They could not have made them so cheaply as we have made them.
429. You see this road marked A. Are you aware that between road A and the Junction Road it is all private property, belonging to Messrs. Burns, Withers, and Smith? I could not say.

430. Admitting it to be the case that that road was formed by the Government to give access from the Crown lands on one side of the railway to those on the other, making a bridge across the line, was it necessary, in your opinion, in the interests of the Crown, that other roads should be carried from the railway between A and G, making five roads in the space of (say) three-quarters of a mile? I have not seen any of those roads. D. Houston,
Esq.
21 Nov., 1888.
431. If these roads are made—and, as a matter of fact, they are—would you consider it necessary, in the interests of the Crown, that the public money should be expended in giving access to this piece of Crown land? I do not think that the unemployed have done it.
432. If they had done it? I think not.
433. If the whole control of this work was in your hands, and you were responsible for it would you be inclined to pay men wages for constructing these roads through private property? I think not.
434. When you were given in charge of these unemployed, were there no roads to be constructed on which you could employ this surplus of labour, on subdivisions belonging to the Crown that occupied the same position that this private subdivision did? We had numbers of men engaged at other places; at Narrabeen, for instance, we had an immense crowd.
435. We have a number of subdivisions here, perhaps you could give me some information about them; take Beecroft and the Field of Mars; there is a large amount of Crown land on these divisions still unsold;—have you ballasted or formed any of those roads? That is all clearing.
436. Some are still uncleared? Yes.
437. Have you ballasted or formed any road there? They are all formed.
438. *Chairman.*] And ballasted? They are ballasted where the roads are soft. Ballast is not used as a rule where there is a good foundation.
439. *Mr. Copeland.*] Have you ballasted any of these roads at Beecroft and the Field of Mars by the Casual Labour Board? I could not say about Beecroft and the Field of Mars.
440. There is a subdivision of Crown lands at Harbord, near Manly, where a large amount of land is still unsold there? Yes.
441. Have the Casual Labour Board made roads there or at Heathcote, on the Illawarra line? Yes. We are making roads at Heathcote now.
442. I understood you to say just now that this is not metalling, that it is only ballasting; is not this metalling, or ballasting, or whatever you call it, what is generally used on the country roads? No. The ballasting is put on the roads prior to the metalling. It is a sort of foundation for the metal. It is the kind of ballasting we generally put on in places where the road is soft or sandy.
443. Were you in the Roads Department? I was for eleven years a first class road superintendent.
444. Do you not know of hundreds of miles of country roads which have nothing but this ballasting, with blinding thrown on to it? No; I never met with any in my eleven years' experience as a superintendent.
445. Were you ever on the road going to Copeland? No.
446. Have you been on the road between Grafton and the table-land? I made the Newton-Boyd Road, and I know that there is no ballast on that; it is all blue-metal. There is no sandstone in the district.
447. You said that for the last five months you had taken no active part in these works? I have been unable to do so.
448. Are you sure that the period is only five months, or would it be more than that? No; it was about five months.
449. Prior to five months ago you took an active part in the works? Yes; I did all the engineering as a rule.
450. I suppose that during the last five months your professional duties have interfered with your work on the Casual Labour Board? Yes.
451. So that this work has been left to Mr. Davies, who is not a professional man? He has professional men under him.
452. Who are they? He has as assistant superintendent Mr. McPherson, an engineer. I look upon him as a very clever fellow.
453. *Mr. Henry Clarke.*] What would be the cost of this ballasting per chain? It varies very much.
454. *Mr. Carruthers.*] What would be the average cost? About 3s. a yard.
455. Where do you get the ballast? We bring it from the road-side.
456. From whose land? From whatever land we are passing through; we generally ask permission to take it.
457. I suppose that the ballasting in this case then would come off the land of Messrs. Burns, Withers, and Smith? Yes. As a rule we pay 1s. 6d. for getting and 1s. 6d. for breaking. I daresay it would cost from £2 to £3 per chain.
458. *Chairman.*] Do you think that would be a fair average? Yes. The ballasting is not continuous; it is only put in soft places; the road where it is good is left.
459. Is the material sandstone? Yes; different qualities of it. We generally use the hardest sandstone we can get.
460. *Mr. Street.*] When you first commenced work at Hornsby, were you informed to any extent as to what was the object of the forming of these roads? I understood that they were to give access to the Crown lands.
461. Was the Crown land there about to be brought into the market for sale? Yes. Mr. Gordon, the surveyor, recommended these roads. The land, I think, was all being prepared for sale.
462. Do you consider that the formation of these roads increased the value of the Crown lands? Most decidedly.
463. You think that the price of the Crown lands, to which these roads gave access, was increased? Yes. You could not get access without these roads. We should have had to take them eventually in order to give access to the land.
464. The nature of the Government land is too rugged to permit of your making a road from east to west? Yes.
465. Do the gullies increase in depth as you go northward from the boundary road? Yes, until they become quite inaccessible. What is known as the Population Boundary Road, is quite inaccessible from east to west. I doubt whether you could walk over it.
466. You have been asked some questions about roads in connection with land at Harbord, Beecroft, and the

- D. Houston, Esq.
21 Nov., 1888.
- the Field of Mars;—had you anything to do with the preparation of those properties for sale by the unemployed? I had nothing to do with it.
467. You are aware that they were prepared for sale by the unemployed? Yes.
468. Prior to their preparation for sale, was there not ample access to them by public roads? Yes. I think there was access to the whole of those lands.
469. Therefore it was not necessary to go through the adjoining lands of private owners to make roads of access? I am not aware of any being made in that way.
470. Therefore these lands cannot be compared in any way with the Crown lands at Hornsby? No.
471. *Mr. M. Millan.*] I suppose it was in view of the railway line principally that these roads were made—that is to say, the construction of the Pearce's Corner line brought about the idea of these approaches to the Crown lands? Yes.
472. That would be the direct line of communication with this part of the country? Yes.
473. *Mr. Brunker.*] I understood you to say just now that requisitions were made by the Colonial Secretary before any roads were made? As a rule.
474. What is the form of requisition? The papers are sent on for approval. The requisition would be from the inhabitants of the various districts.
475. Not from the Casual Labour Board to the Colonial Secretary? No. The papers which are sent to us are generally forwarded.
476. Is there no general form of requisition? Well, the communications which are received by the Chairman of the Board are forwarded to the Colonial Secretary for approval.
477. Was any such communication sent by Messrs. Burns, Withers, and Smith? Not to my knowledge.
478. The Colonial Secretary would not have any knowledge of the details of the work? No.
479. The fact of the matter is that the whole of the responsibility in connection with the construction of these roads rests with the Casual Labour Board? Yes. Our recommendations were generally adopted. Mr. Gordon, who had been with Mr. Deering, acted for us when we first took charge. He had been with the unemployed for some time previously, and he had a greater knowledge than any of us could possibly have.
480. I understood you to say that there had been a claim for compensation by Mr. Harnett in respect of a road at Hornsby? Yes.
481. *Chairman.*] When was that claim for compensation sent in? I could not say. I merely heard of it.
482. *Mr. Copeland.*] I suppose it is a mere rumour? I do not know the facts.
483. *Mr. Brunker.*] Do you know whether the whole of the land between the H and I road belongs to Mr. Harnett? I only know the owners from passing round the land with O'Donnell. He knew the whole of the owners, but I had no personal knowledge on the subject.
484. *Chairman.*] Had you ever a personal interview with any of the owners in that district? No; I never saw any of the owners there.
485. *Mr. Brunker.*] Have you at any time, as a member of the Board, been consulted by Messrs. Burns, Withers, or Smith, with reference to the construction or formation of any of these roads? I do not know Mr. Burns further than this, that I was once introduced to him by Mr. Davies. I do not know Mr. Smith at all. I knew Mr. Withers some years ago, but I have not spoken to him for years. I have not seen either of these gentlemen about the roads.
486. Have the men employed under the Casual Labour Board done any work except under the instructions of the Board? None; except the work under the municipalities. I think that some work has been done by them in nearly every municipality in the Colony.
487. *Mr. M. Millan.*] As far as you are concerned you know of no direct application from Messrs. Burns, Withers, or Smith to have roads made by the unemployed through their land? No.
488. *Mr. Brunker.*] Have any of the Crown lands in that neighbourhood been cleared? I know that some of the Crown lands have been cleared, but I do not know about the laying out of the roads.
489. What would be the cost of grubbing and clearing this land? About £7 per acre. That would be 10 chains. These roads are 1 chain wide. That would be £56 a mile.
490. What would be the cost of forming? About 12s. a chain.
491. Would that include the water tables? Yes.
492. What is the cost of the ballasting per mile? I do not think there is a mile of it on the land.
493. Is it ballasted from point to point or only in soft places? Only here and there.
494. In the worst places on the roads? Yes.
495. You could not say what would be the cost per mile for ballasting, because it is so unequal? Yes; just so. The ground is of a very rocky character, and in many places it would be cheaper to ballast over the rocks than to cut through.
496. What did you mean when you said that the approval of the Colonial Secretary was needed before the men were sent to any work? The papers are sent on, that is to say, if any requisition is received for a road it is sent on to the Colonial Secretary for his approval.
497. How is Mr. Davies the executive then? What I meant when I applied that term to him was that he did the whole of the office work for us. He is permanently there.
498. You are sure that the Boundary Road is impracticable? I do not think I used the word impracticable? I think it would never be utilized for a road even if it were made; because the grades are too steep.
499. You think in the interests of the public that the Junction Road should have been made, instead of the Boundary Road? Certainly, from an engineering point of view, because the Junction Road is always a good road.
500. *Mr. M. Millan.*] You think that the Junction Road should have been made in the interests of the future sale of the Crown lands? Yes.
501. *Mr. Henry Clarke.* How much of the Crown lands here do you consider good? Well, it is pretty good on the table-lands between the creeks.
502. If that is so, do you not think that a continuation of road A would have been sufficient to give access to the Crown lands? That would be quite impracticable for the reasons I have already pointed out.
503. *Chairman.*] Looking at the plan, do you consider that the roads coloured red are amply sufficient to give access to the Crown lands? I think so. The idea with regard to roads B, C, D, E, and F, is that a road should be taken up between each creek on to the better portions of the Crown lands.

504. If any other roads have been constructed, they are not, in your opinion, necessary to give access to the Crown lands? Any more than to give more frontages in opening up the land.
505. Take the bend in H road running from the Lane Cove Road—if a road were continued further to the northward, and if about 4 or 5 chains further on a road ran east and west intersecting, it would be a necessary road of access? I do not think so. These roads depend upon the surveyor laying out the roads. The roads shown give general access to the land.
506. And are amply sufficient? For opening up the land.
507. Have you any knowledge of the amount of clearing and road forming, which has been done by the Casual Labour Board upon this estate? I think there is about $2\frac{3}{4}$ miles, if I remember right.
508. If it has been stated that there have been only 24 chains of road forming, and 53 chains of road formed and ballasted, would that be a correct answer? The clearing, of course, is outside that. I think the answer you have read is about right. Mr. O'Donnell knows—he is the one who ought to know.
509. You would rely upon Mr. O'Donnell's statement? It can be easily verified in the office.
510. *Mr. Brunker.*] If Colonel Wells furnished and initialled the answer given by me in the House, and read just now by the Chairman, would it be likely to be correct? Yes.
511. *Mr. O'Sullivan.*] You say that there are only $2\frac{3}{4}$ miles of road formation and ballasting on this property? I am speaking from memory.
512. Do you know the length of road I? I do not.
513. Do you know the total length of the Junction Road? No.
514. When you say $2\frac{3}{4}$ miles, you refer to the whole of the property here—to the property belonging to Mr. Harnett and others, as well as to the property belonging to Mr. Burns? I daresay there would be a greater length than I have given on the whole of the property.
515. As a matter of fact, is there not nearly 7 miles? No.
516. What should you make the distance approximately? $2\frac{3}{4}$ miles.
517. *Mr. Copeland.*] Do I understand you to say that no petitions have been presented in connection with these roads? I could not say that from memory.
518. You will find a petition among the printed papers—can you tell us whether the signature of George Withers to that petition, is the signature of George Withers, one of the proprietors of the Hornsby Estate? I could not say.
519. You will find that this document is sent from one official to another, and that it eventually finds its way to Mr. Burns from the Casual Labour Board with the following intimation:—"Enclosed herewith you will please find tracing of roads recommended to the Board by their local officer at Hornsby, to give better access to the adjacent Crown lands. Should yourself and partners have no objections to the opening of these roads marked A, B, and C, instructions will be given to have them commenced forthwith;" which are the roads referred to as A, B, and C? I think you will find that they are shown upon the plan on Appendix B.
520. Can you tell the Committee how any of the other roads have originated? I could not say.
521. You cannot tell us who authorized them and who applied for them? I could not say from memory.
522. You remember about roads A, B, and C? Yes, I remember Mr. Gordon's letter.
523. How wide are these roads ballasted? Generally 18 feet, but sometimes only 15 feet.
524. The roads are cleared a chain wide? Yes; when I first took charge they were forming them 40 feet wide; I reduced it to 30 feet and sometimes to 27 feet; in some cases we have ballasted only 15 feet wide, allowing just room for a dray to pass.
525. What is the cost of clearing? £7 an acre.
526. And of forming? It varies. Sometimes it is as low as 8s. a chain. Generally it would be about 12s.
527. What did you pay for the metal? About 1s. 6d. for getting, and 1s. 6d. for breaking.
528. You mean by the cubic yard? Yes; it runs about a cubic yard to the yard lineal.
529. The yard lineal would be about 5 or 6 yards in width? Yes.
530. And the ballasting would be about 6 inches thick? Yes; we put it on as thin as we can. It is in reality only a skin.
531. How do you calculate the cost of the culverts? They are tendered for, and the lowest tenders accepted. In some cases we have put in causeways.
532. You say that you do not know Mr. Burns? I was introduced to him once, and seeing him the next day I did not know him.
533. Did he ever meet you on the ground? I never saw him or any member of the firm on the ground. Mr. O'Donnell, our own officer, is the only person I ever met on the ground.
534. You are not in the habit of going there frequently? I go only when there is heavy work to do.
535. *Chairman.*] Where were you when you were introduced to Mr. Burns? I was in the street somewhere. I was with Mr. Davies at the time.
536. And Mr. Burns came up? Yes; I was simply introduced. I do not think I spoke to him.
537. *Mr. O'Sullivan.*] Let me call your attention to road H. Can you tell us why it is made in this peculiar dog-legged fashion? Mr. Gordon is responsible for that.
538. You cannot tell us any reason for that? No. We relied upon him greatly at the start as the officer who had been in charge. He knew the unemployed, and he knew the whole of the roads in the district. We were to a great extent dependant upon him for information in regard to the laying out of the roads.
539. You implied in answer to Mr. M'Millan that roads H and I might have been made to touch the railway? As a matter of fact they cross the railway.
540. Are there any stations or platforms at the end of these roads? Not that I am aware of.
541. *Mr. Brunker.*] Are the platforms and stations defined yet? That, I could not say.

D. Houison,
Esq.
21 Nov., 1888.

TUESDAY, 27 NOVEMBER, 1888.

Present:—

| | |
|----------------|-----------------|
| MR. BRUNKER, | MR. COPELAND, |
| MR. H. CLARKE, | MR. O'SULLIVAN, |
| MR. STREET. | |

THOMAS WALKER, Esq., IN THE CHAIR.

Charles John Lester, called in, sworn, and examined:—

- C. J. Lester. 542. *Chairman.*] Are you an officer under Mr. Deering? Yes.
543. You bring some papers here? Yes, five sets of papers and three plans.
- 27 Nov., 1888. 544. All of them relating to the lands situated at Hornsby on which the unemployed have been working? Yes.
545. What does each set of papers refer to? The first paper is Mr. J. F. Burns' letter to the Department *re* road-clearing work being done by the Casual Labour Board. The next refers to the reserve at Hornsby.
546. That is the Government reserve? Yes. The third has reference to a road through Bellamy's grant; the next to a reserve for Court-house and Police Station at Hornsby; and the next to a site for a public school at Hornsby.
547. What are the plans? One is a plan of part of reserve 47, parish of South Colah; the second is a litho. of a tracing forwarded to the Hon. John Davies, C.M.G., signed by Mr. W. M. Gordon, Government Surveyor; and the third is a litho. of the Government Hornsby Estate, with sale prices.
548. You know nothing further of the matter beyond these papers? No.

William Matheson Gordon called in, sworn, and examined:—

- W. M. Gordon. 549. *Chairman.*] You are a Government surveyor? Yes.
550. Under whose instructions are you now working—under general Government instructions? Under Mr. Deering.
- 27 Nov., 1888. 551. Was it under Mr. Deering's instructions that you surveyed the roads that the unemployed have been working upon at Hornsby? I never surveyed any of them, except one, then merely laying out about 5 chains of it with a compass.
552. Which road on the map did you survey? I believe it is marked E here.
553. The road from the Junction Road to the Boundary Road? Yes, I believe that is the one; I am not positive.*
554. At all events it is one of these running north from Junction Road to Boundary Road? Yes. I merely put up a compass on Boundary Road, and gave 5 chains for a start.
555. Do you know anything further about the other roads marked on the tracing? Those marked in red? 556. Yes—do you know by whom they were surveyed, and when they were surveyed? I do not know. I do not know whether they were ever surveyed. I do not know whether they are marked.
557. Your name is appended to the plan? Yes. This plan was compiled by myself from an inspection of the ground, not from a survey at all. I never made a survey except that I designed the Crown lands at the north. From what information I could get from our own office and the Lands Titles Office, I compiled this tracing so that it is not of course thoroughly correct as regards scaling. I generally, when any of my sketches are not made accurately, mention that it is a sketch-tracing—it is good enough for purposes of illustration.
558. Do you know anything of the origin of these roads, with the exception of the one marked E, which you surveyed? I do not know by whom they were surveyed, with the exception of A, which was marked by the Government surveyor. Previously to the roads being marked by Mr. Perdriau I had the instructions.
559. You know nothing about Junction Road? Nothing whatever as regards the survey.
560. How long is it since you compiled this sketch-tracing? This is my report of the 28th January. It must have been between the 26th and 28th January. I do not know whether I prepared one before that.
561. Is this the latest you compiled? Yes. I would like to state that I am totally unprepared for any evidence. I only arrived from Melbourne on Friday. I was recalled before my leave was up, and I have not had an opportunity to get anything together. Yesterday I tried to get the papers, but I found that Mr. Deering had them, and that places me at a disadvantage.
562. If you had possession of these papers, would you be able to state anything further as to the origin of these roads;—does your memory serve you to say whether you have any knowledge of the origin of these roads? No; but as to any additional evidence you might require, it might not be possible for me to give it, on account of not having the information, and being taken at a disadvantage.
563. Could you tell us, in the event of any roads not being shown upon this plan, who would have surveyed them? I have not the slightest idea of anyone having surveyed any roads since I laid out road E.
564. Would you say that this is the latest plan that there is of the roads in existence there? It is the latest I compiled, and contained only the road then existing.
565. You are not aware that anyone has compiled any since? I am not.
566. Would it be possible? Mr. Davies, the Chairman of the Board, used generally to send to me when he wanted a tracing compiled on the latest information.
567. You have given Mr. Davies the latest information? Yes, at the time of my inspection.
568. *Mr. O'Sullivan.*] So far as I can gather from your replies, all that you are responsible for is the making of the tracing? As regards the plan.
569. But your name is attached to it? Yes; I made some recommendations in connection with the tracing.
570. Will you kindly state what roads you recommended? I recommended, if you will refer to Appendix A, that the roads marked A, B, and that part of Vanceville Road, which is marked C and F, should be cleared, and that the Junction Road, from the station through to Vanceville Road, should be ballasted. It was already cleared. The roads A, B, and C, were given by the owners of the land. 571.

* NOTE (on revision):—Having viewed the land since, I am positive about road E.

W. M.
Gordon.

27 Nov., 1888

571. You never made a recommendation about Junction Road, except that it should be ballasted? That is all.
572. Who recommended road E? Roads D and E* are mine also.
573. Will you kindly state why you recommended this road E on Appendix A in this dog-legged fashion? Only because it was the most practicable road laid down in the subdivision.
574. Road E is road H upon Appendix E; you recommended that road H should be laid out? I did not recommend that it should be laid out—it was already laid out. I merely recommended that it should be cleared.
575. Can you tell me who laid it out? I have not the slightest idea.
576. Did you have anything to do with road I? Yes, I recommended that also to be cleared.
577. Did you never recommend the laying of it out? No; I had nothing to do with it.
578. If neither you, nor Mr. Wells, nor Mr. Houson, recommended the laying out of these roads, have you any idea who did recommend them? I do not know who marked them out, and I have no idea who authorized them to be marked out.
579. You have no knowledge of the party who recommended the laying out of roads I and H? I am perfectly certain that I never heard of anybody recommending them.
580. Who first brought them under your notice? I was asked by Mr. Davies, Chairman of the Casual Labour Board, to proceed to Hornsby to see whether there were any other roads that could be cleared advantageously to the Crown lands, giving increased access.
581. And you think Mr. Davies laid out these roads? No; I do not think so.
582. Did he order the laying of them out? I could not say. I know nothing about the laying of them out.
583. We have a map here containing a number of roads that do not appear on your plan—will you kindly explain to the Committee how it is that your plan appears without these roads? The fact is easily seen. This plan of mine was prepared in January, 1888. Since that I have not been called upon to prepare any additional tracings or plans of the country. In fact, I have not been up there since 28th January, 1888.
584. At the time you drew up your plan it was correct? It was correct up to date.
585. Then the additional roads marked on Mr. Deering's plan have been constructed since you drew up your sketch in January, 1888? That has evidently been compiled from my tracing, from information since received.
586. If these roads are now existing there, they have been constructed since you drew up your plan, and that is the reason why they do not appear upon it? Yes.
587. You had nothing whatever to do with these additional roads? Nothing whatever.
588. *Chairman.*] Do you know anything at all about them? No.
589. Do you know that they exist? I have not been up there since. I went up once, up the Lane Cove Road and over the railway, to see Mr. O'Donnell. I did not see any of these roads until one Sunday, when I was asked to go up and pick out some allotments for some friends, and then I merely rode across the land diagonally.
590. Then you have not been up officially since January, 1888? No.
591. *Mr. O'Sullivan.*] Do you know who has been in charge of the men there? Mr. O'Donnell, I believe, has been in charge from the start of the works.
592. Have you any knowledge of Boundary Road? Yes, I know Boundary Road well.
593. Do you think that road is passable, or that it could be made passable at a moderate cost? No; I think it would be impossible to make Boundary Road; it would not be trafficable.
594. It would not pay for making? No, and it was a blind road leading from nowhere to nowhere.
595. You considered that, Boundary Road not being worth making, Junction Road was justifiable? Certainly at the time.
596. And the tributary roads from Junction Road, leading into the Crown lands, were justifiable? Most certainly.
597. Supposing the Government had not done this at all, and the proprietors of this estate had subdivided it and cut it up in the usual way, would not they have made these roads themselves? Well, I do not know, I am sure; that would rest entirely with their own surveyor. In designing the property they would design it to their best advantage.
598. Would not they lay it out with roads in such a way as to make it as saleable as possible? Most decidedly; but then, probably, they would not have given us the same access as we have now, because everyone of these roads are laid out to tap each spur between the gullies, and that is what we seek for in all our sub-divisions.
599. Bearing in mind the prospective population on the Crown lands would the owners of this estate not have laid their roads so as to serve the Crown property, and make their property more valuable? Well, private owners when they are subdividing their property do not give the Government the benefits we give them, as might be seen in the case of the late auction sales. At Gordon I recommended some roads two years ago, and offered to get them cleared, if the owners would give us the roads without compensation. Through some misunderstanding, however, in the Department, these roads were let slip, and the Government have had to purchase roads within 8 chains and 50 links† of each other. I may mention some of the roads in Archibald's block, where we gave access to the Gordon lands off the Lane Cove Road, to show that wherever we can get a chance of getting a road from a private owner previously to any auction sale, even though it be a couple or three years before one, we take it. I have had lots of this work at Narrabeen and Hornsby.
600. *Chairman.*] You are alluding to lands taken merely for the purpose of access to Crown lands? Yes; generally we get them through the Casual Labour Board. I ask the Casual Labour Board whether they will clear the roads before I ask the owners if they will give us the land without compensation.
601. *Mr. O'Sullivan.*] Allowing for all that, is it not probable that the owners of this estate would have laid out roads that must give access to the Crown lands? I do not know. The owners could have shut the roads against the Government. They could run them half-way, and debar us from all access, and the Government would then have to purchase or resume under the Parish Roads Act.
602. If they resorted to so extreme a step as that, would they not be injuring themselves by diverting the

* NOTE (on revision) :—E on Appendix "E" is similar to B on Appendix "A."

† NOTE (on revision) :—Speaking more correctly from scaling on plan, about 13 chains.

W. M.
Gordon.
27 Nov., 1888.

the traffic that would naturally make their property more valuable? I have no doubt they would; but when a private owner is subdividing he knows that the Crown have lands above him or on one side of him, and if he thinks he has a chance of getting £100 an acre for the land, it is not likely that he will hand it over for nothing, as has been exemplified at Gordon.

603. *Chairman.*] Perhaps it may be just as well if you tell us whether you know anything of the boundaries given on Mr. Deering's plan of the property of Burns and Company? Mr. Deering's plan is only a copy of my own.

604. Are the properties shaded with green lines those belonging to Burns and Company? I have not the slightest idea. I cannot tell you a block that Messrs. Burns, Withers, and Smith own.

605. But if that is a copy of your plan? That may be a copy of my plan; but, as I said before, that plan is not correct, and those blocks are not correct.

606. But as a sketch, without giving strict accuracy as to measurement, is that correct;—is it approximately correct? The only part I know anything about is that piece of land near the station. I cannot answer for the others; I do not know who the owners are. Half of the road marked H, I believe, was given by Mr. Harnett.

607. *Mr. H. Clarke.*] Who instructed you to survey these roads? I never surveyed them at all.

608. You never surveyed them? Except merely to give a start to road E.

609. This plan is signed by you? It is signed as a sketch-tracing attached to the report. We generally state on a plan that it was surveyed by so and so between such and such dates.

610. Can you say you gave instructions to clear and form any of these roads? I only know the one road.*

611. Which one is that? Junction Road. That was done as a leading road, from which the others would be tributaries.

612. Does Junction Road go entirely through private property? Yes.

613. The whole of it? Yes.

614. Was it possible to get the road, marked A, into the Crown lands? It was impossible.

615. How far is the road made along the Boundary Road? I do not know; I have not been along there.

616. Is it practicable to make a road from the Hornsby Station along Boundary Road to the road marked F? You could make a road, but it would never be trafficable. You could not drive along it, the grades would be too steep, especially over Spring Gully Creek and the next creek. There are four gullies before you come to Bobbin Rock Road.

617. But could not the road be made, if you went to a considerable expense in doing so? It would take all the money that the Crown lands would ever bring to make that Boundary Road. Even then I doubt if you could make it over Lovers' Jump Creek.

618. If these lands are so barren, and there is such a difficulty in making a road, can you say why it was necessary to give access to it by making roads through private property? It was only to improve these lands, which are no worse than lands which have been already sold. Some of the lands on the top of the ridges are very good.

619. Have you any idea of the expense of making the roads through private lands? I have not any idea. I never went into the question of the expense of making roads. It is not in my line at all.

620. It is usual to clear, ballast, and form roads on private property? We have done it in many instances. The Casual Labour Board have done it.

621. *Chairman.*] Has it been done outside the Casual Labour Board? I do not know that we have ever done it. The only other formation we did was under Mr. Deering; we did a little ballasting here and there on the Field of Mars.

622. *Mr. H. Clarke.*] Has it been done by the Lands Department on any other occasion that you remember? I do not know that we have ever done it. We did a little ballasting here and there on the Field of Mars.

623. *Chairman.*] But that was on Government land—the Field of Mars? Yes.

624. *Mr. Street.*] Is it customary, when roads are required through private lands to reach Crown lands, for the owners of those lands to make those roads a free gift to the Government? It is not customary at all. I do not know of an instance where it has been done, unless we have promised them something.

625. Do you know of any sums of money being paid for lands for roads? Yes.

626. Will you give an instance of one? The road leading from Munro's south-east corner, 40-acre grant, on the Lane Cove Road, along the north boundary of Archibald's, and across the railway line to the Lane Cove Road, for which, I believe, £100 an acre was paid.

627. What area was that? Two acres. There was also another road about 8 chains and 50 links* below that, parallel to the same road, given to the Government on the understanding that an overhead bridge would be erected over the railway line, and they would give so much, I think £200, to assist in the construction.

628. *Chairman.*] Were there any special features in that, that you should require a road in that vicinity;—were there any other roads on the same land? There was a road recommended by me further south, and a much better road, and it would have answered instead of the latter road I referred to, a dead level road. The road I laid out was not a very practicable road; it would require a considerable amount of money spent on it, and it is right up the centre of a subdivision, or of an intended subdivision belonging to a company, and was made without any report as to the practicability of the road.

629. *Mr. Street.*] Then, within your knowledge, for all roads taken through lands belonging to private owners by the Government, to lead to Government lands, the owners in every case receive some consideration? Yes, every one that I can bring to recollection at the present time.

630. Either in the way of purchase money, or by formation? Yes; or by clearing and making.

631. I think you said you recommended the formation of these roads, D, E, F, leading to the Crown lands? The clearing of them.

632. What was the object of them? If you have visited the ground you will see that each of these roads give access to the spurs leading between these gullies, branches of the Cowan Creek, leading to the population boundary.

633. Would it be possible to get access to the table-lands without those roads? I think it is impossible. E is a main road, I think, as far down as the salt water.

634. Junction Road was already formed? It was cleared.

635.

* See note to
Question 599.

* NOTE (on revision):—I never gave an instruction to carry out any of the roads; it was recommendations only, and that recommendation was to ballast Junction Road; clearing was already done.

635. Can you tell us if D, E, and F, are of the slightest advantage to the owners of that private land? I hardly think so, because they cannot very well subdivide those blocks and make frontages to them. Their frontage will be to Junction Road, which they could have done very easily without. As far as I can see, they only require the one frontage. Even if they cut up the land into three or five acre blocks, they have strips abutting on to the Crown lands. I do not see what necessity there is for them to have these side blocks, except to give access to people at the back.

W. M.
Gordon.

27 Nov., 1888.

636. Having got the frontages to Junction Road, the roads B, C, D, E, and F, are in your opinion not of the slightest value to the owners of this private land? I cannot say at the present time that there is any more value to them, because they have given them so close together. C and D, for instance, are pretty close together, but they lead, however, to different sides of a gully, if I remember rightly, but I am not positive whether these gullies are in their right places.

637. These roads having been cleared and formed, do you consider that they have given any increased value to the Crown lands? I should never have recommended them, had they not.

638. *Mr. Brunker.*] How did you first become associated with the business? With the unemployed?

639. Yes—with regard to this making of roads? I do not exactly remember the date.* I was working at Hornsby about the middle of October; I am not certain of the year. It was the October prior to when I went to Kurnell.

640. *Chairman.*] Was it prior to the coming into existence of the Labour Bureau? It was prior to that. Before I had anything to do with the unemployed at all I was marking and subdividing roads up here, and everything was left unfinished, in a state of chaos, when I was called away from there, without a moment's notice, by Mr. Deering, to go to Kurnell with 800 or 900 of the unemployed. From that date I have always been associated with the unemployed in some way.

641. *Mr. Brunker.*] You say you made no survey of any of these roads? None whatever.

642. That plan submitted is only a design you presented to the Casual Labour Board? Yes, a sketch tracing.

643. Made in the office? Not in our office—not in the Lands Office; in my own office.

644. You made no survey; you simply submitted a design? That is all.

645. Was that design acted upon? The recommendations I made were carried out.

646. Was any work carried out beyond your recommendations? I have not the slightest idea. I have not been up there for some considerable time. I have no idea about what has been done.

647. What was your object in preparing that design? I always forward a sketch of everything I do, to guide those who may be interested in what has been done, and I sent that tracing to Mr. Davies. I was requested to prepare the tracing for Mr. Davies.

648. You must have seen that these cross-roads were necessary? Most decidedly, or I could never have put them in.

649. I want to know what your object was? To give access from the road to the Crown lands.

650. And, knowing the locality, you believed that they would have that effect? I did most certainly.

651. You said that Boundary Road is not practicable; that you did not think it could be made available for traffic; if Boundary Road had been made and formed instead of Junction Road, is it not a fact that Burns, Withers, and Smith would have had the same frontage as they have now from the formation of Junction Road without having lost the land? Of course, they would have a frontage to Boundary Road.

652. If Boundary Road had been formed, would they not have had a frontage to it for their own land without the loss of the land taken for Junction Road? Most decidedly.

653. *Chairman.*] Do not they gain two frontages now? Yes; that is true.

654. *Mr. Brunker.*] Do you know what area is taken from Junction Road? I cannot tell.

655. Approximately? Roughly, I suppose there would be about 150 chains.

656. What is the width of the road? About a chain.

657. How much land would be there? About 15 acres.

658. What is it worth an acre? It is a very difficult matter to say. I suppose land up there is worth £120 an acre for orchard land.

659. You know the Vanceville Road? Yes.

660. Is that a public road? I do not know whether it is a public road in the meaning of the Act, although it was maintained by the Roads Department to a certain distance. It was cleared and formed to a certain distance, but I do not know whether that constitutes it a public road. I do not know whether it has ever been proclaimed.

661. Had you anything to do with the forming and metalling of these roads? Nothing, except as far as recommending that Junction Road be ballasted.

662. Did you recommend that any other roads should be metalled? Not to my recollection.

663. To whom did you make the recommendation? To Mr. Davies.

664. Have you seen the plan submitted by Mr. Deering this morning? Yes.

665. You see the roads that have been formed there? Yes.

666. From your knowledge of the locality, do you think that those roads which are shown are made essentially in the public interest? There is a lot of roads here I do not know anything about. Particularising them, I think I could manage to give a very good idea.

667. You know the locality as a Government surveyor, and having been over the land so frequently, you ought to understand the locality as well from the plan as if you were on the ground? Yes. Burns Road had evidently been made with the intention of connecting with the Bobbin Rock Road that comes across Pymble's grant. There are 30 chains marked cleared, running from H to E. Continued southerly, there is a road of 28 chains cleared, formed, and metalled, running from Junction Road to Peat's Ferry Road. That, I do not know anything of.

668. You do not know anything about the land adjoining? I do not know whom it belongs to. The roads running easterly from the Hornsby Station to the western extremity of Boundary Road, and also the roads between B and the Hornsby Station, I do not know anything of.

669. Is it probable that those roads were designed for the purpose of giving access to the Hornsby Railway Station? It would appear to me from this plan that they were.

670. From Pearce's Corner to North Shore do you know whether there are any platforms authorized? The only one I know of is a platform on the road marked H HH.

671.

* NOTE (on revision):—The date I since found out to be 1st November, 1886.

W. M.
Gordon.
27 Nov., 1888.

671. Above the Lane Cove Road? Yes. That is the only one I know of along the line.
672. You said you had nothing to do with the survey? Nothing.
673. How did you localize the roads when you first went on to the ground? In the first instance, I got a tracing from the Lands Office. I produce my original. These black lines on the plan are in the original subdivision and plan in the Titles Office.
674. *Mr. Copeland.*] I believe you have made a good many subdivisions for the Government? Yes.
675. That has been your principal duty for a long time past? Yes.
676. Did you ever make any subdivisions on Government lands without providing the necessary roads for access;—in other words, did you ever make a subdivision without cutting the land up into blocks by means of roads intersecting it in all directions? No.
677. In point of fact you could not make a subdivision unless you made roads? No.
678. Can you tell us of any instance where any private company have made a subdivision without making roads;—in other words, is it possible for a private company to subdivide land without making roads? No.
679. That being the case, what necessity was there for the Government to provide these roads in subdividing private owners' land;—would not the private owners themselves have been compelled to make these roads? I think some of these roads were provided before the unemployed went there at all.
680. What roads can you specify which were not previously provided for in the subdivision? D H H, the whole length of Junction Road, and all those pieces running northerly from Junction Road, B, C, D, E, and the short piece north of the Vanceville Road marked F.*
681. You obtained the whole of these roads from the syndicate? I obtained some of them. I did not get them all.
682. Who got the others? As far as I can understand the Casual Labour Board got the others.
683. Is the road D H H the only road you obtained? I obtained that and the E road further to the right.†
684. Those are all you obtained? Yes.
685. From your knowledge of subdividing do you suppose that the private owners would have made these roads if you had not done so? They might have made roads, but they might have been made in a way that would not have suited us. The roads run out on to the middle of the spurs, and if they had been put 23 or 30 chains, for instance, to the east or west they would have run us into sidelings. The access then would not have suited us at all.
686. Would they not have had the sense to lay out the land in such a way as to make the roads continue yours, as it were;—in subdividing land do you not take all these things into consideration? I do, and I have often been taken to task for taking roads along private boundaries instead of the private owners giving half. You will find that this is the case in many subdivisions with which I have been connected.
687. Who gave the Boundary Road? That was designed by me in my subdivision of the Crown lands some years ago.
688. The Crown gave the whole of the Boundary Road? Yes; I will tell you how it came to be laid out if you like. When I first went out there there was some dispute about that boundary——
689. What I want to know is whether the Government charged the owners of this private land anything for giving them this frontage? It is only a designed road at the present time.
690. It is surveyed up as far as Spring Gully Creek? Yes.
691. And on the Government providing the Boundary Road they gave the owners of the private land the benefit of the one frontage? Yes.
692. I thought you said just now that the property-owners got no frontage benefit so far as Junction Road was concerned? Oh no, because, of course, they got the advantage of the second frontage.
693. Did they not get the whole benefit of 4 miles of frontage along the Junction Road? Well, yes, I suppose so.
694. In subdividing land, would it not be one of the objects of the owners to get as much frontage as possible? Yes; they always endeavour to do so.
695. In making the subdivisions, is it not to their interest to make as many roads as possible, so that they may multiply their frontages? Yes.
696. And in the case of the roads to which you have been referring, you have provided the owners of the private land at the public expense with a double frontage? Yes; that is very true, but we have to do it in many instances. We cannot help ourselves.
697. Can you tell us of many instances in which the Government have made roads through private property? We have made a lot at Narrabeen.
698. Can you give us any instances before the Casual Labour Board were brought into existence? No; I cannot call to mind at the present time anything of that kind.
699. Take the subdivision of Harbord? Well, we did there. You will perhaps recollect, Mr. Copeland, that you were down there, and that you objected to our making roads from Pittwater through private land. I think you had the work stopped, and said that you would make inquiries into the matter. The road was pretty nearly complete, but I do not think they did anything more to it after that time.
700. In the subdivisions at Beecroft and at the Field of Mars, did the Government make any roads through private lands? I cannot call to mind anything of that kind being done.
701. Then I think you can safely say that up to the time of the Casual Labour Board coming into existence the Government had not resorted to the practice of improving private lands in this way? It certainly has never been done to my knowledge.
702. You estimate the value of the land taken to form the Junction Road at £120 an acre? Well, I cannot flatter myself that I am able to give you a very accurate idea.
703. Do you know at what price the Government land at Hornsby was sold? I could not say.
704. I have a map showing that the land fetched from £30 to £70, or £100 an acre. Will you tell me at what you value the Crown lands to the eastward of Spring Gully Creek? The level land at the top of the ridges might realize as high a price as £50, and the rougher land would perhaps go at as low as £15.

705.

* NOTE (on revision):—Southernmost H on Appendix "E" was provided for by the owners.

† NOTE (on revision):—I did not obtain H H, and from what I now recollect northernmost H was cleared prior to my recommendation to clear southernmost H and part of Burns-street.

W. M.
Gordon.

27 Nov., 1888.

705. If Mr. Deering estimated the value of the land at from £2 to £10 per acre, that would be too low? Yes; I should think so.
706. You said just now that the Boundary Road was impracticable;—where is it impracticable? Well, over the Spring Gully Creek, in the first instance. The next gully is very bad, and then there is another at the north-east corner which would be impassable almost.
707. Do you say that the Spring Gully Creek is impassable? Well, it would be possible to make a road there, but it would never be of use. As far as I can recollect, I have been on that road only once since it has been cleared.
708. You have had some experience of country roads, I suppose? Yes.
709. Have you had any experience in the making and laying out of roads there? No. I am not from my position called upon to give an estimate as to whether a road is or not a good one. All that I do is to lay out roads to the best of my ability.
710. What should you estimate would be the cost of cutting through the eastern slope of Stony Gully Creek? That is beyond my knowledge.
711. Would it be more expensive to make that cutting and to complete this bad piece of road than to clear, form, and metal the whole two miles of Junction Road? Yes. I do not think it would cost nearly as much to make the Junction Road—that is, as far as my knowledge goes. There is nothing difficult about the Junction Road. There is not a bad grade on it.
712. Where is there a bad grade on the Boundary Road except at Spring Gully Creek? Well, there is a good stiff grade from the eastern boundary of Bellamy's.
713. Is it not a good road from the railway to Spring Gully Creek? I have not been on the road myself for a long time. I was totally unprepared for this examination. I have not been there for nearly twelve months.
714. I understand that the Crown lands are too rough to permit of a road being continued through them from road A? Oh, yes.
715. If this land is so rough, where is the utility of the Government spending so much money in order to reach it? Well, we were endeavouring to improve the value of the Crown lands in just the same way that we did at Gordon.
716. To improve the private or the Crown lands? I have been from the first moved by a desire to improve the Crown lands.
717. Do you know of any other instance in which the Government have deliberately gone away from the Crown lands which it was desired to improve, and have spent the public money in the improvement of the private lands? Not on the north side of the harbour.
- 717½. You said just now that you were ordered to open up a road at Narrabeen belonging to private owners;—where was that road? It was through the property of Mr. James Wheeler and Miss Jenkind.
718. Did you submit your recommendation to Mr. Deering before carrying out the road? I do not quite recollect how it came about.
719. Were you ever authorized to take upon your own shoulders this responsibility in connection with the expenditure of public money? I certainly never did any work unless I had proper instructions. It is true they were verbal instructions, and I have nothing to show for them.*
720. Who gave them to you? Mr. Deering.
721. Did he tell you to make what roads you liked? When we gave up the unemployed he promised the Casual Labour Board every assistance in his power. He asked me whether I would do the same thing, and my willingness was expressed in just the same way. Colonel Wells and Mr. Houson were also told by Mr. Deering that if at any time they wanted me they could command my services, or words to that effect were used.
722. But is it the practice in the Department for gentlemen occupying the position you occupy to give orders on their own responsibility for the making of roads and the expenditure of large sums of public money without submitting the proposal to a superior officer? A lot of latitude was allowed me. When Mr. Deering first took charge of the unemployed he put me in charge of everything. I had charge of the men, and I used to give to Mr. Deering the cheques to sign, explaining to him what the expenditure was for. I used sometimes to order from £200 to £300 worth of tools. I did a great deal upon my own responsibility. When we gave up the unemployed Mr. Deering handed my services to a certain extent over to the Casual Labour Board for the carrying out of the rest of the work.
723. When you took upon yourself the responsibility of spending public money upon private lands, did you first submit the proposal to your superior officer? It was only recommendations which I made in the first instance. They had to be considered by the Board. Of course I did not submit the recommendations to Mr. Deering, because he was not in charge of the work. The Board asked me whether in the interests of the Crown lands such and such things were necessary, and as I had such a knowledge of the district I made recommendations.
724. You recommended to the Casual Labour Board that these roads should be opened up at the expense of the public? Yes, some of them.
725. *Mr. Brunker.*] And the Board confirmed your recommendations? Yes. The matters were known to Mr. Deering, of course. I had no interest in doing anything underhand or doing anything without Mr. Deering's knowledge. He is my superior officer.
726. I believe that a good many roads are now made of which you know nothing? Yes.
727. Therefore you cannot say who authorized them? I know nothing about them.
728. You were connected only with the Junction Road, with road HH, and with E road? Yes. E road will eventually be a main road through the Crown lands, past the population boundaries, to the water.
729. When you were expending this public money on roads, how is it that you did not expend it upon the Crown lands? That was already done—that is to say, roads were made through the subdivision.
730. Are these roads metalled and culverted? From what I can understand, the roads are made all through.
731. But are they metalled? I do not know.
732. It is your opinion, speaking as a Government officer, that it was better policy to spend the public money in improving the private estates than to spend it upon the Crown lands? That is not my opinion, and it is not what I have been led to do in anything I have done.
733. You thought it better policy to spend the money in making roads through the private property than
in

*NOTE (on revision):—It was never in my power to expend public money whilst in connection with the unemployed.

W. M.
Gordon.
27 Nov., 1888.

in making them through the Crown lands? I think it is a good thing, in some instances, to expend money upon roads through private estates. We know that the owners benefit, but we are seeking at the same time to benefit the Crown lands.

734. How will these particular Crown lands be benefited by the making of these roads more than a mile away? Well, if you were to close Bellamy's Road and these roads running northerly from the Junction Road it would be impossible to get in or out of the Crown lands.

735. No one proposes to close Bellamy's Road? I know, but I was just instancing it.

736. There was something intelligible in opening up road A? It would open up only a small section of the Crown lands.

737. Has the continuation of road A through the Crown land been metalled? Not that I am aware of. I have not been on the Crown lands since the roads have been cleared.

738. Was it necessary in making these roads not only to form and metal them, but to put culverts into them, in order to give the desired access to these Crown lands? I thought at the time that the Junction Road would be really a good back-bone road from which we could divert the traffic on to the Crown lands from the Lane Cove Road. The work on many of the other roads I do not hold myself responsible for in any way.

739. Then you take upon yourself no responsibility for the road down to the hotel, for instance? No.

740. In making these minor roads—the road along the railway from Junction Road to A road, and these other subdivision roads—do you think, as a Government officer, it was a proper thing to expend the public money in metalling them, with the object of opening up the Crown lands? Of course, as I said, I had nothing to do with them; but as far as I can see at present, from a glance at the plan, there does not appear to be much necessity for some of the work you mention.

741. Would you take upon yourself the responsibility of recommending the expenditure of public money upon these roads? No.

742. And, as a matter of fact, you did not recommend them? No.

743. You think that there is no necessity in the interests of the sale of Crown lands? Not as far as I know, unless it was thought necessary to continue the Boundary Road through to the station. That is all I can see.

744. Supposing you had employed twice as many men, and had made twice as many roads, would it not have been an additional improvement to the private estate? Yes. Of course the more you do, the better for the owner's land.

745. *Mr. Brunker.*] Have you had any experience outside the Government service as to subdivision? I have had some experience in Victoria.

746. Have any cases come to your knowledge where the adjoining owners have made a reserve of a foot or two of land, so that the adjoining parties should not have the advantage of the road? I do not know of any case where they have taken advantage of the Government in that way.

747. But you know that it has occurred in private subdivisions? Yes.

748. *Mr. O'Sullivan.*] Do I understand that the proprietors of the Burns, Withers, and Smith property have given fifteen acres of land? Yes.

749. Is that for the Junction Road alone? Yes.

750. And I suppose they gave other land for other roads? Yes.

751. The fifteen acres of land at £120 per acre would be worth nearly £1,800? Yes.

752. But would they not have had to give this land if they had been subdividing their own property and making their own roads? If they had made their roads prior to the subdivision of the Crown lands, and if a plan showing the Junction Road had been lodged in the Titles Office, it would have been to a certain extent a proclaimed road, although it would not have been dedicated to the public.

753. In point of fact they had a plan of the subdivision lodged in the Lands Titles Office? There is the original plan. It was put in there many years ago.

754. Did the original plan lodged in the Lands Titles Office show the roads now marked on your plan? No.

755. Can you tell us the inception of these roads. You say that they were laid out, and that you simply ordered them to be cleared and made? Yes.

756. How did they originate? That is more than I can tell you.

757. A number of them you did not find in the original plan? No.

758. *Mr. Brunker.*] I suppose there was no subdivision of the estate when you took action? No, except the old subdivision.

759. Does that apply to the whole of the land in this estate or to only a portion of it? It applies only to the south-eastern portion.

760. *Chairman.*] In answer to Mr. Brunker, you stated that you received a communication from the Labour Board asking your opinion whether such and such a work would be advisable? Yes.

761. You received a communication from the Board asking for your recommendation then? Yes, most certainly.

762. And your recommendations were made at the solicitation of the Board? Yes.

763. In whose name were those communications addressed to you? Mr. John Davies, the Chairman of the Casual Labour Board.

764. Are not the roads shown upon your plan the roads which have been carried out by the Casual Labour Board of most advantage to the owners of private property, that is to say, if they had had to make the roads would they have adopted a plan similar to that here shown, considering the way that Hastings-street, Smith-street, and Billyard-street run. You will see that Burns Road and Junction Road are parallel, and that the roads E, D, and C are parallel with the Vanceville Road. Would it not have been to the advantage of the owners of this property to cut up the land in this form? If I were a private surveyor, and were subdividing for the owners of this land, I doubt if I should put in B, C, D, E, and F. I do not see what benefit is to be derived by the owners of the property from these roads. There might be some benefit in B, but I cannot see any in C, D, and E.

765. *Mr. Copeland.*] But is there not a double frontage? It is not of much use, because they have the Boundary Road and the Junction Road. A road at the side of an allotment does not make it so much more valuable.

766. Would you get a connection between Boundary Road and Junction Road except by those streets? What I wished you to understand was that they would not be of much good to private owners who would have frontages to Boundary Road. A side frontage does not increase the value of a block materially.

W. M.
Gordon.

27 Nov., 1888.

767. *Mr. Brunker.*] I suppose the loss of the land in making these streets would not be counterbalanced by the increased return from the frontage, that is to say, it would pay the owners better to have one road instead of three? That is my idea.
768. *Chairman.*] These private lands of Messrs. Burns, Withers, & Smith, will improve in value as the alienation of the Crown lands proceeds? Yes.
769. Ultimately I suppose there will be settlement further to the eastward of the Boundary Road. Will the roads of access to this settlement from the Junction Road increase the value of the private property? I should imagine so; I think E will be a main road giving access to the water frontages.
770. Take the north-west portion of the Crown lands—it has been alienated—if settlement had taken place there, what would have been your roads of access if C and D had not been made? Of course you are referring now to only a small portion of the Crown lands, but I quite agree with you that these roads will indirectly benefit the private owners. The more traffic you bring through a man's property the better for him.
771. In subdividing do you ever make the blocks more than a quarter of a mile square? Not in town subdivisions.
772. You put roads round blocks at every quarter of a mile? Yes, as a rule—but we are guided a great deal by the nature of the country.
773. But take suburban divisions? I am taking Harbord for instance.
774. *Mr. Brunker.*] Is it not a fact that the roads are made to suit the character of the country? Yes.
775. *Mr. Copeland.*] How is it that you make these roads so frequently if there is nothing to be gained by having a certain quantity of frontage. Do you not think that these private owners would have made the roads to which I have been referring for the sake of the frontages? I suppose they would try to get as much frontage as possible. Of course, a great deal would depend upon the size of the blocks.
776. Do not private owners invariably create as much frontage as they can by making roads? Yes, I suppose so.
777. Would it not have paid the owners of this property to make the roads leading from Junction Road to Boundary Road in order to get the extra half-mile of frontage in each case? I admit that B, C, and D, are pretty close together. I don't quite see what necessity there was for the whole of those roads. If E, D, and B, had been left, there would, as far as I can see, have been an equal space between each of them.
778. Would it not have been to the interest of the owners to make C themselves in view of the extra half-mile of frontage which it would give them? Yes, I should think so.
779. You think that on account of the frontage alone they might have been induced to make the roads? It is possible that they might.
780. *Mr. Brunker.*] I suppose that the value of the frontage would depend upon the character of the adjoining land? Yes.
781. *Chairman.*] You say that the roads leading from the Junction Road are roads of access to the Crown lands? Yes.
782. Assuming that the Boundary Road is good as far as the first gully, is more than one road of access necessary into that road? If the road were thoroughly level perhaps B and C would not be necessary.

THURSDAY, 29 NOVEMBER, 1888.

Present:—

MR. BRUNKER,
MR. H. CLARKE,MR. O'SULLIVAN,
MR. STREET.

THOMAS WALKER, ESQ., IN THE CHAIR.

The Hon. John Davies, C.M.G., M.L.C., called in, sworn, and examined:—

783. *Chairman.*] You are the Chairman of the Casual Labour Board? Yes.
784. Could you briefly tell us the formation of that Board, its origin, and how you came to be connected with it? Perhaps the letter of instruction from Sir Henry Parkes will give you all the information you require in that respect.
785. This is the original of a copy sent in to the Committee by Colonel Wells? Yes.
786. Had you any conversation with Sir Henry Parkes, prior to the reception of this letter, with reference to the formation of this Bureau? Yes, merely as to whether I was prepared to undertake, in conjunction with two other gentlemen, the carrying out in detail the information contained in that letter of instruction.
787. Did he seek your services by letter, or personally? By note first. I personally waited upon him.
788. That was the first you heard of the matter? That was the first.
789. In entering upon these duties, what was your first work? We found that the work at that time was already in operation, under the control of Mr. Deering. There were about 4,010 on the several works at that time.
790. Have you any recollection as to how these 4,010 men were distributed? The different works at that time were at Dobroyd, Gordon, Hornsby, Beecroft, Carlingford, National Park, Heathcote, and Waterfalls.
791. Were all these men under Mr. Deering at that time? Yes.
792. And the Board took them over? We took them over from Mr. Deering—the men and the works that were then in progress.
793. And you continued the work? We continued the work on, and we established a different basis to that which had been in existence prior to our taking the control of the unemployed.
794. Did you have any formal meetings to consider the work that should be carried out? Yes.
795. Have you kept any minutes of those meetings? Minutes of the first meetings were recorded; but the professional members of the Board—Colonel Wells and Mr. Houson, are both employed in different departments of the public service, one in Roads, and the other in the Harbours and Rivers Department, and frequently the whole three of us could not meet. Perhaps Mr. Houson would come in, and he would acquiesce in what was done, and subsequently Colonel Wells would come in, and it would be reported to him, and he would approve of it. Nothing was done without the general concurrence of the whole Board.

Hon.
J. Davies,
C.M.G.,
M.L.C.

29 Nov., 1888.

Hon.
J. Davies,
C.M.G.,
M.L.C.

29 Nov., 1888.

796. When you say that nothing was done without the concurrence of the whole Board, do you mean that they concurred after any work was initiated, or that they were asked to concur before? They were asked to concur before.

797. Have there been any instances where they have not been present and you have initiated works on your own responsibility? Only very small works, where men have been employed, and it has been reported to us by the overseer or surveyor-in-charge that it would be well to continue a road in certain directions, or to make certain improvements on the road. That has been done because it was a matter of small moment; but in large works the whole Board has been consulted, and its approval obtained.

798. When you say large work, how would you define a large work from the work of laying out roads similar to these, B and H? If that was reported to us by our overseer or superintendent-in-charge, and if the surveyor, Mr. Gordon, who was a very intelligent officer, recommended it, we would approve of it.

799. But that is scarcely an answer to my question;—there is this road, D H, which might or might not be of some importance, I want to know what distinction you would make? A road like that would come under the control of the Board, but any small matters, such as clearing a road suggested by the Cumberland ranger prior to the sale to give access to the ground, we did without a general conference.

800. That is to say you did it? Yes.

801. Still your answer is scarcely clear as to what you would consider the difference to be between a work you should feel it necessary to consult with your colleagues upon, and one which you would feel yourself qualified to order to be done without consultation? Well, that would not be making, it would be clearing. I do not profess to have any knowledge about road making, that is a professional knowledge I do not profess to have; but the matter of clearing a road that has been already defined does not require any professional skill.

802. Do you lay the stress on the difference as to whether a road is really formed or only cleared? Yes, that is the distinction.

803. In the matter of clearing, you feel yourself entitled to order any road to be cleared? Not any, but small roads, and even then afterwards to consult my colleagues and inform them of what has been done.

804. Was it any good asking your colleagues approval after the instructions had been given? Well, it was so small a matter, and one which required immediate action. We had thousands of men seeking employment, the surplus labour of the city, and I was obliged to find employment for these men. The matter could not wait.

805. Do you not consider it a defect in the Board that you could not have colleagues who could co-operate with you? In a matter of this kind I do not think it was a defect. I had full power to act.

806. Who gave you that power? I had the general consent of my colleagues.

807. That is to say they authorized you to do as you did? Yes; in small matters of that kind.

808. How did they give you to understand that they intended a small matter like that to be undertaken? The only way that I can give you an illustration is, as I have already told you, that if a road had been already defined, and that road led into Crown lands, all that I could undertake would be that the roads might be widened or cleared.

809. Did they pass any formal resolution? No formal resolution; I had only their general concurrence.

810. Only general concurrence;—do you mean that you simply had a private conversation with each one in turn? No. We met in the office, and they gave me power in cases of that kind to exercise my discretion to a limited degree.

811. How many meetings have you had at which the three of you were present? I suppose a hundred meetings.

812. At which the three have been present? Yes.

813. Was it at a meeting at which the three were present that you were authorized? I think there were only two present, Mr. Houison and myself; but it was reported to Colonel Wells afterwards, and he concurred.

814. What you did then was to have a conversation with Mr. Houison, and you simply told Colonel Wells of what you had done? Everything was done in our office, so far as the Board is concerned.

815. Have you ever originated any works yourself, and then consulted Mr. Houison or Colonel Wells, whichever came to you first, and then the other afterwards? Certainly not.

816. State what was the course you adopted? The practice has been that papers or petitions are sent direct from the Lands Office, through the Colonial Secretary's Office, to our Board. We subsequently send the papers on that come through that way to our officers for report. If the report justifies us we recommend the work to be carried out for the approval of the Colonial Secretary.

817. You mean to say that you have originated no works without receiving a petition or instruction from the Colonial Secretary? And then upon the reports of our officers I will give you for illustration the Narrabeen subdivision. A paper comes from the Lands Department to the Colonial Secretary, recommending that the land should be subdivided, the roads cleared, &c.

818. *Mr. Bruncker.*] Was that since the establishment of the Board? Yes; since the establishment of the Board. That paper was sent on to us from the Colonial Secretary, the Board being under the Colonial Secretary. We then sent it on to our officers to report as to the advisability of carrying out the works suggested. If our officers report that it would be to the advantage of the public that the works should be carried out, we, as a Board, recommend that the works should be approved of by the Colonial Secretary in order that the Board may carry them out. That is the usual practice.

819. *Chairman.*] Then, in each particular instance, you have got the sanction of the Colonial Secretary? In every case, except in two or three cases where we took work over, initiated by Mr. Deering. We simply continued the works on that had been initiated by this gentleman, who had charge of the unemployed, prior to the formation of the Board.

820. What roads of those marked red on the plan before you, have been either continued or originated by your Board? You mean as to forming and clearing?

821. As to forming or anything;—you might briefly describe them to us? All these roads.

822. So far as your connection with them is concerned? Yes.

Hon.
J. Davies,
C.M.G.,
M.L.C.
29 Nov., 1888.

823. Whether in originating, clearing, forming, ballasting, or continuing? Yes; we have had to do with all these roads.
824. What roads have you originated of these? Well, we have originated most of these roads, as you will find on reference to the papers. We obtained reports from our officer, Mr. Gordon, recommending that these roads should be carried out in order to give access to the Crown lands, which were worthless without this access.
825. You have originated most of them? Very nearly the whole of them, with one or two exceptions. "A" road was done by Mr. Deering, I fancy. I am not sure, but I think that was the road Mr. Deering cleared, and he cleared Boundary Road, which was found to be impracticable.
826. What roads of these did you open or originate on petition? The Bobbing Rock Road, not shown on the plan, and the extension of the Vanceville Road. The lower portion of that road had been cleared and formed four or five years previously to that, and we continued it on a petition from the residents and property holders that it should be continued in the direction on the plan.
827. Have you got the petition asking for the continuation of Vanceville Road? I think it is amongst the papers.
828. What other roads were opened by petition? Another road was opened, road I, to join the Pennant Hills Road, and to avoid a long detour to get on to that road. It shortened the distance about half-a-mile.
829. That road was opened by petition? Yes.
830. Was there any petition for the road marked C? I do not think there was. That was opened on the recommendation and report of Mr. Gordon.
831. Was there any petition for the road D H H? No; I think not.
832. Was there any petition for Burns Road? A deputation, consisting of Mr. Noonan, who is a property holder, and several of the local people, waited upon the Board, and made representations that it would be of very great public utility and a great convenience to the farmers if the road were continued.
833. Were there any petitions for the roads B, C, D, E, F? No; these were done purely on the grounds that you will find contained in the report of Mr. Gordon, and they were borne out by the professional members of the Board, Mr. Houison and Colonel Wells.
834. On the tracing which you have before you are all the roads which the unemployed have cleared or formed shown? No; I think not.
835. Will you look at this sketch by Mr. Deering, showing all the roads, do you say that that is accurate? That is accurate, I think.
836. Accepting this map to be correct, had you any petition to continue road E to the south to Burns Road? I am not aware that we had; but there were frequent representations made by deputations from people residing in the district.
837. Did any deputation wait upon you in reference to that road? I could not say positively that they did.
838. About 5 chains from the junction of this road with Burns Road there is another road running between it and H, and parallel with Burns Road? Yes; but it does not run in that form. By a mistake the men started to clear that road, but it was only partly cleared. It runs in a zig-zag manner.
839. It was cleared by mistake? They started to clear it by mistake.
840. Was it continued by mistake? I think the overseer overtook them before it was very near done.
841. It is completed now? I think not.
842. So far as clearing is concerned? Only in a very partial way, and it does not run in a straight line.
843. Who laid that road out? It was not laid out at all, that is where the mistake was made. The men who started the work commenced at the wrong peg.
844. For what cause was this small road of about 5 chains, between the road we are now talking about and Burns Road, made? That was in the same way made by mistake. Instead of clearing along road H H H they continued straight on; but you will find that the overseer-in-charge will be able to give you more detailed information. It is impossible for me to give you detailed information about these mistakes. I could not live on the spot and control matters of that kind. I can only give you information as far as the general workings of the Board are concerned, what our operations have been, and the reasons which prompted the Board to carry out these roads.
845. What reason had you for carrying out the road running to the south from Junction Road, a little to the west of road B? That leads to a railway platform.
846. Was that its object? Yes.
847. Had you any petition for it? We had representations from the people in the district.
848. What originated the road parallel with the railway, between Junction Road and road A? We were simply adopting a system that had been in operation before we took office. At the Field of Mars, Beecroft, and Carlingford, roads were formed and cleared all along the line, and we merely continued the same practice here.
849. When you say "cleared along the line of railway," do you mean along the whole length of the line? Yes. The same principle has been adopted.
850. How is it that this road does not come further to the south then—that it happens to be just between road A and Junction Road? Because of private property intercepting it.
851. Where—to the south? Yes.
852. Is not that private property it goes through? A portion of it.
853. Does not the whole of it run through private property? Yes; but it has only been cleared.
854. Are they not putting culverts there? I think one or two pipe-drains have been put in to carry the water off; but there has been no ballasting or formation.
855. When you say "cleared," does not that imply something more than the cutting off of the timber and clearing it? It implies that we are going to put in pipe culverts.
856. Is not anything else going to be done? There may be a little formation; but no metal ballasting will be put on.
857. Then it is more than cleared if it goes so far as to be formed? Well, it is very trifling outside the clearing.
858. There is a road shown on the map continuing Boundary Road to the railway line;—is not that through private property? I am not aware; it may be. I may tell you that I know very little about the holders of the property. I did not know a man who owned an inch of land in this district. It was not my duty to inquire.

Hon.
J. Davies,
C.M.G.,
M.L.C.
29 Nov., 1888.

859. Did you get any petition for opening that road? Representations were made to us by property owners in that district; by a gentleman who was going to embark in a public business, and others, asking that the road might be constructed to Boundary Road.

860. To the south of this road, between it and Boundary Road, and parallel to them, there is another road;—did you receive any petitions or representations for that road? We got representations, I think, from the forest ranger for that.

861. What were his representations? That it would be an advantage to Crown lands.

862. How could those two parallel roads be advantageous to Crown lands? I do not see how it could be a direct advantage. They only led into roads leading into the Crown lands.

863. Was there any necessity to have these roads so close together? The Board thought that it was an advantage to have as many roads as possible leading into Crown lands.

864. Do they lead into the Crown lands? Indirectly.

865. In the same way any number of repeated roads would have the same arguments in their favour? Well, I suppose the whole of the roads in the Colony would. They have to go through somebody's land.

866. But if they had cut the whole of this land into small blocks the argument would have been equally good for any one of them? No, it would not.

867. What are the special advantages? The road comes out direct to the railway station.

868. Was not one sufficient? No; the greater the number the greater the advantage to the public.

869. How does this road give any better access to the railway station than the continuation of Boundary Road? You have got the advantage of another road. Two roads are better than one.

870. Does it in any way shorten the distance from any section? Yes.

871. Where from? From the Peat's Ferry Road.

872. Would it not be equally short to turn up Junction Road, and then along the road parallel with the line? Possibly; but it is far easier to go up this short road, and then along the road under discussion.

873. Do you consider that those roads in any way give access to Crown lands? Indirectly, yes.

874. Indirectly is very indefinite;—in what way? In the way I have described. They lead first to the railway station, and then to the Crown lands.

875. As a matter of fact, do they not lead the other way—from Crown lands? Well, it depends upon the way you are going. If you turn your face towards the Crown lands they lead that way, and so the reverse.

876. You say you know nothing about the owners of this land? Not any of them.

877. Do you not know that Messrs. Burns, Withers, and Smith own land up there? I knew it subsequently; I did not know it at that time.

878. Did you not know before you opened up a number of roads that they were the owners of that property? Only from official communication with them.

879. Before any of those roads had been opened out, did you not know that Burns, Withers, and Smith owned an estate there? I knew that they owned an estate in the locality; but I did not know that we were going through their land. If I had known, it would not have operated against our going through.

880. Did you not know that they owned the land through which these roads went? Not at that time.

881. Have you not been on the ground with Mr. Burns? Yes, with reference to the sale of the Crown lands.

882. Have you not been on the ground with him before the opening of these roads? No.

883. Before the clearing of the road from road A to Junction Road? No. I have been on the ground with Mr. Burns consulting him with reference to the sale of Crown lands. I suggested that the sale should be made on the ground. That is the only communication I have had with Mr. Burns.

884. *Mr. O'Sullivan.*] Were you on this property in company with Mr. Burns or any of the proprietors of this land? I have just stated that I was on the ground with Mr. Burns on one or two occasions prior to the sale.

885. Was this prior to the roads being laid out? No.

886. And it was after you received the official communication from this syndicate with regard to the roads? I received no official intimation from the syndicate.

887. I understood you to say just now that you had received only one official letter from them? We had only one communication from Mr. Burns. Mr. Gordon, the surveyor, recommended to the Board that application should be made to the private proprietors of the land through which roads had to go, for permission. In conformity with his recommendation the Board applied for permission, and we got a reply. That was the only communication we ever had from Mr. Burns on this matter—that they were willing to give us the land.

888. This visit you made to the land with Mr. Burns was subsequent to this letter from him? Yes; prior to the sale.

889. You said just now that the Casual Labour Board had held 100 meetings? Yes.

890. If any other officer has sworn that only a few meetings have been held and none recently, that officer is in error? It just depends upon what construction he put upon a meeting. If two members met I would call that a meeting. Two members formed a quorum.

891. Will you kindly explain how you met, and what you understood to be a meeting of the Board? If any one of my colleagues attended the office we regarded that as a meeting, because everything was then handed over to him, and his attention was directed to what had been done, or to what was about to be done.

892. Did you sit down and consult, and examine maps, and plans, and representations? Yes.

893. Did you keep any minutes? Only of the first few meetings. One minute will show you that I went the first month after our appointment, with Mr. Deering, on to the Hornsby lands, and conferred with him upon the works in progress.

894. Previous witnesses have sworn that there were only a few meetings held, you tell us 100;—I would like to know exactly what you mean by a meeting;—you said just now that minutes of only two or three meetings were kept? Yes; at the inception of the Board.

895. At your later meetings there was only a consultation with one of the members of the Board? Yes.

896. But in the ordinary sense of the word this was not a regular meeting? I call it a regular meeting. We met and performed the duties of the office.

897. Supposing we desired some evidence to show what had been done at the meetings, you would have no record? Only that Messrs. so and so were present on such dates. We can give you that in the diary; but it does not give you any minutes.

898. Then, as a matter of fact, we would have no evidence to appeal to show what business was transacted? No; it did not appear in the minutes. We simply met in that formal way, which I call a meeting, and in the diary the Board enter the names of those who are present.

899. Then the operation of this system seems to be that you meet these gentlemen as advisers? I performed the administrative part of the work, and they the professional part. I was simply the executive.

900. You were the executive of the institution, and these gentlemen only appeared now and then to give you advice? They appeared as often as their other duties would permit.

901. They appeared as advisers? They were equal with myself in every way.

902. What is the practical operation of the thing? I will give you one illustration. We had some sewerage works out at White's Creek and Johnson's Creek, and several works of that kind, which my colleagues, though they had authority to do these works, on the representation of the members for the district, and on a petition from the local residents, took exception to, and we sent in a remonstrance against having to carry them out. Still, the work was authorized, and we had to proceed with it.

903. Who authorized that work? It was authorized by the Colonial Secretary. I am only giving you that as an evidence that we have remonstrated against certain works my professional colleagues thought that it was not wise to undertake. We could not go astray in making roads or clearing lands; but a great undertaking such as the drainage of the whole of the Leichhardt district they thought was not to be attempted in piecemeal style, and a very strong remonstrance was sent in.

904. You told the Chairman that these roads on the plan originated by the representations of local residents? Yes; most of them, and, as I have said, also from our own officer (Mr. Gordon), and with the personal inspection of my colleagues, Mr. Houston and Colonel Wells.

905. You say that Mr. Gordon did originate some of these roads? Yes; they were done on his recommendation. I think the papers will show that. Of course, you could not expect myself to have a professional knowledge in a matter of that kind.

906. If Mr. Gordon has sworn that he did not originate, and only cleared these roads, and that he cannot tell how they did originate, he has made a mistake? I scarcely think he could make such a statement. I think his own reports to us will bear out what I have stated. There must be some misapprehension. I think the papers will disclose what I state.

907. Referring to the roads I and H, can you tell us who originated these roads? Road I was made on the representations of people who wished to save a detour of half a mile to get on to the Pennant Hills road to go to Parramatta. The representations were submitted to Mr. Gordon, and he reported on them. With reference to road H, there is a railway which goes right through this property, and this road is to give access to a platform and to the Lane Cove Road.

908. But is there a platform there? Yes, there is.

909. *Chairman.*] And the object of this road was to get to that platform? Yes.

910. *Mr. O'Sullivan.*] If this road H was required to give access to the Lane Cove Road, why was it not taken straight through to Boundary Road? Because there is a gully which prevented them from getting across—a very steep gully, about 1 in 2—almost perpendicular.

911. But you cross two creeks now? Yes; but only very slight ones. In that case we would have had a very large expenditure. You can drive along the Boundary Road to this gully, but you will find it very steep.

912. The reason you gave just now for constructing some of these roads was that you had a number of unemployed in your hands, and that, therefore, you were compelled to give them employment? Yes.

913. Was there any reason why these necessitous men should not be employed upon any other work? The best work the men can be employed upon is on the roads, which are the property of the people, and give facility of access to Crown lands and railways.

914. Admitting all that, why were the men sent specially to this district? We had so many men that I had to distribute them everywhere, and utilize their labours as best we could in the public interest. Prior to my taking charge the men were simply knocking about, doing scrub work—work of no utility—and tens of thousands were spent without any result at all. We placed the men on a different basis altogether. We put them on as contractors, so that it would not destroy the dignity of labour, nor in any way degrade the men, or affect any of their fixed principles. They formed their own gangs, and took their contracts.

915. With reference to this T-shaped road, between road H and the continuation of E, cleared by mistake, who would be responsible for that mistake? I think our superintendent, Mr. O'Donnell; but then the man had a very large area of land to traverse to get to these different places, and men anxious to get to work would get to work and make a start before he could overtake them.

916. If road E was continued to the south on the representation of the property owners, that representation must have been made by Messrs. Burns, Withers, and Smith, as they were the owners of the property? All this property to the east belongs to private owners, and there are no other means of getting to the station except by going through this property.

917. But how would they be served by Burns Road? That leads into Junction Road. To get to the station, they come along Burns Road, up the continuation of E, and along Junction Road.

918. Could they not go up H? They could have done that; but I do not think there could have been any objection to their having an additional road, because that gave us a direct line into the public estate.

919. Your object is that that road was laid out to serve the people in the east, to give them access to the station? Yes, and we wanted to continue it right through into the public estate. The Board thought that the more we had of these roads to tap the flat lands on top the better. They saw, and the officers recommended, that it would be a great advantage to have these additional roads.

920. Already having road J to give access to these people to Crown lands, and having road H to give access from the south, what was the necessity for constructing a road down the centre? That was the recommendation of Mr. Gordon. You will find the papers disclose that. There was a representation from the property owners in the district; but Burns, Withers, and Smith never waited upon us.

921. You say that Mr. Gordon authorized this southerly extension of road E? I think you will find it so in the papers.

Hon.
J. Davies,
C.M.G.,
M.L.C.

29 Nov., 1888

Hon.
J. Davies,
C.M.G.,
M.L.C.
29 Nov., 1888.

922. I am not talking about these tributary roads, which, for arguments sake we will admit were required; I am talking about the southerly extension of road E. As a matter of fact, Mr. Gordon knows nothing about these roads, and only holds himself responsible for the roads marked on his plan. He admits Junction Road, the roads B, C, D, and F, and the northerly part of road E, and he justifies it. What I want to know is why that road was continued to the south, to serve, as I can see, no one except the owners of the land? Burns' people had already cleared Burns Road, and on the representations of the people owning the land on the other side this road was continued in that direction.

923. But what was their object in asking for that? They said it was a nearer road for them to take their fruit and produce.

924. These men you say would come along Burns Road, and up the continuation of road E? Yes, the grade is better that way. They recommended that if that road was made it would be much easier for them to strike Junction Road at an earlier stage.

925. *Chairman.*] Would it not have been nearer for those fruit growers to go to North Shore? They did not so represent it.

926. *Mr. O'Sullivan.*] Directing your attention to the roads near the railway station, coloured a fainter red, none of these roads appear on the plan made by Mr. Gordon, and he appears to take no responsibility for them? They were done on the representation of Mr. O'Donnell.

927. What reason does Mr. O'Donnell give for constructing the road between the continuation of Boundary Road and Junction-street, and parallel to them? The representations made by local people.

928. What local people would be served by it;—what was the object in making it;—surely, as the head of the institution, you ought to have had some reason assigned? There is no road there, it is a clearing, and was partly done by the property owners before we touched it. You are asking me questions as though I was the overseer. I could not tell you these little details.

929. So far as you know, not being the overseer, you are not able to give a reason why these roads should be constructed? They have not been made at all. They were simply partly cleared by the owners before we took charge, and have been continued.

930. As a matter of fact, I may tell you that some members of the Committee have been over these roads, and there is no doubt that they have been cleared—whether they are metalled or not I am not prepared to say? They were cleared partly, about half-way, before we took charge, by the private owners.

931. Did you consider yourself justified in carrying out the work started by private owners without any object in view? We did it on representations we received.

932. *Chairman.*] But if the proprietors were already doing it, was there any necessity for you to take up the work? They were not doing it; it had been done. I am not so well-informed as the overseer is in the matter.

933. *Mr. O'Sullivan.*] Not being an overseer you cannot give an authoritative opinion? It is a very trifling matter. It is far better that the men should be employed in that work than in doing the work they were doing when we took office.

934. You have a pretty good knowledge, from what goes on around you, of the subdividing of property, the cutting up of estates; you have seen a good deal of it—the giving of fanciful names to streets, and all that kind of thing; you know that all this is done by the owners of the estates to make them saleable? Yes.

935. Burns, Withers, and Smith, having a private estate and being desirous of selling it, would they not naturally have carried out that plan of laying out the estate, if the Government had not done it for them? I cannot say. I am not responsible for what they might do.

936. Would it not be done in the ordinary way of business? I cannot tell. You and I might take certain courses, and Burns, Withers, and Smith, take quite an opposite one. I know what I would do with my own estate.

937. As a business man, if you owned this property, and desired to make it saleable in small lots, would you not have subdivided the estate, and laid out roads, and cleared them yourself? Yes; these people gave the land, which was of more value than the money spent on road-making.

938. *Chairman.*] But must not the roads always be given, even if the owners make them themselves? Quite so.

939. *Mr. H. Clarke.*] I think you stated that you got instructions to continue the work that had been originated by Mr. Deering? Yes; we got instructions to take up the management and the control of the unemployed.

940. From whom did you get your instructions? The Colonial Secretary. They referred to works in all directions, in about a dozen different places.

941. How much work was done by Mr. Deering previous to your taking charge of these people? Not a great deal. I think a portion of Boundry Road had been cleared, and some other roads.

942. Are you aware how many miles of roads are on the private property of Burns, Withers, and Smith and other owners? No; I have not had any calculation made of the mileage.

943. Nor of the cost? Yes; we have a knowledge of the cost.

944. What is the cost, roughly? I think the cost of the whole of the works through land we have since realized as the property of Burns, Withers and Smith, is a little over £2,000.

945. Is it usual, in making roads through Government property, to clear, form, and ballast? Yes. We have done it in almost all the estates. We have had to make better roads than we have made for Messrs. Burns, Withers, and Smith.

946. Are they on private lands, or on Government lands? On Government lands. If you go through the subdivisions we have cleared at French's Forest, Narrabeen, Gordon, and Dobroyd, you will find that we make as good roads as you can find out of Sydney, all through Crown lands, and a portion on private property.

947. Was it actually necessary to have all these roads marked red? Absolutely necessary.

948. For what purpose? To give access to the Crown lands. The Crown lands were bordered round with private properties.

949. Were there not some portions of these roads Crown lands;—take the road marked A? That road was cleared by Mr. Deering, and has an overhead bridge.

950. Would not that road give access to some portion of the Crown lands? Yes; but you would have these lands unoccupied which have realized splendid prices—£40, £50, and up to £70 and £80 an acre.

951. The Boundary Road goes at present as far as the first gully? Yes; you can go as far as that.
952. Why not continue this road on Government land, instead of on private property? It is impossible, because the gullies are almost perpendicular. Of course you could make a track, but not one for traction. The grade would be about 1 in 3, and it was represented by men who were competent to express an opinion—I do not profess to have any knowledge of road-making, or the construction of bridges, myself—
953. *Mr. O'Sullivan.*] You mean to say that the road would not pay the making? It would be impossible, without spending ten times the money that we have spent upon these roads.
954. *Mr. H. Clarke.*] I have seen roads made over worse places than that? Well, of course, I am not skilled to give a professional opinion.
955. Could not a deviation have been made round this rugged part? It was reported to us that nothing would warrant our taking the road in any other direction. Our officers reported that all the money in the Treasury could not make roads there. And, besides, you have got to take another thing into account, we have not skilled labour. We have to take shoemakers, blacksmiths, engine-fitters, and all kinds of men, and you could not expect them to be skilled in that work.
956. If the country is so rugged, what is the good of making access to it? To sell the land; and the Government have sold a lot of it at very high prices. It is beautiful land. Of course there is a lot of broken country, but the table-land is beautiful country for orchards or residences.
957. *Chairman.*] You mean the part sold? Yes; but there is some good land farther away from the station.
958. *Mr. Street.*] I think you said that at the time you took charge of the Casual Labour Board there were 4,010 men unemployed;—how many are there at the present time? About 930; but it is only fair to qualify that answer by saying that if this bad season continues we will have a large increase.
959. Was any considerable portion engaged at day wages? Yes, the great majority.
960. At what rate? From 6s. and upwards.
961. Have you any men working at day wages now? Thirty or forty.
962. What wages? Three shillings and sixpence. These are mostly men who are not able to do contract work—cripples.
963. Junction Road and Burns Road give frontages to the private property of Messrs. Burns, Withers, and Smith? Yes.
964. Can you tell us what advantage these gentlemen, having possession of the frontages to these two roads, can get from the roads B, C, D, E, and F, and the southern extension of road E? No advantage whatever.
965. Have they taken a large area out of their land? Yes, a very large area. There is from 12 to 15 acres of land in Junction Road, worth £120 an acre.
966. It was not necessary for their purposes to make the roads B, C, D, E, F, and the southern extension of E? Certainly not, not even for subdivision.
967. *Mr. Brunker.*] I suppose you have a knowledge of the value of property; at any rate, about Sydney? Yes.
968. Do you think that it is likely that a private individual, in subdividing his estate, would consider it to his interest to make a large number of roads when a smaller number would contribute to the same end? Certainly not.
969. A smaller number of roads would, of course, make the area given very much less, and increase the return from the sale very largely? Yes; it would leave a larger portion to sell.
970. As the number of roads increases, so the profits decrease? Yes.
971. So that in making a subdivision of this kind private owners would find it to their profit and advantage to have roads at equal points, taking a much smaller area from the whole? No doubt; and we would not have been justified in making these roads unless we got these concessions. What we wanted was to get into Crown lands.
972. The fact is that the owner of a private estate considers that he loses about one-fifth in roads for subdivision;—what is the proportion there? Very much larger. I could not tell you exactly without taking the scale and measuring; but it is very much larger.
973. So that the lost to the owners would be considerably greater by the course you have adopted? A great deal more. Junction Road contains from 12 to 15 acres, and would fetch at the lowest estimate £100 an acre.
974. In constructing these roads, what was the object you had in view;—I suppose you had one view for the whole of them? Our primary object was to get access to Crown lands; that was the whole of our object. We had no other object.
975. Have you any knowledge of the locality? I have been frequently there.
976. What is the extent of the population in and around this district? A very large population, because the district takes in a very large area—farmers, and people with orchards.
977. Would these roads give the population round access to Hornsby station? Yes.
978. And also to the Crown lands? Yes; there is a platform and a station on the Pearce's Corner railway to which they give access.
979. Had you any conversation, or were your operations influenced in any way by Messrs. Burns, Withers, and Smith, during the whole progress of these works? Certainly not. I have not spoken to Mr. Withers for six years.
980. Were they influenced by any member of the Government? Certainly not.
981. Did any Member of Parliament attempt to use any influence? No Member of Parliament used any influence. We were actuated by no other desire than to put men on to works of a productive character, works of utility, which would give an increased value to the public estate.
982. What works were in course of progress when Mr. Deering surrendered his supervision to the Casual Labour Board? I think I have already mentioned them, in answer to the Chairman's question. National Park, Heathcote, Waterfalls, a portion of Gordon, Dobroyd, Hornsby, Beccroft, and Carlingford.
983. These works were all under the control of Mr. Deering? Yes; and in full swing at the time we took charge.
984. They are now under the supervision of the Casual Labour Board? Yes; but many are completed.

Hon.
J. Davies,
C.M.G.,
M.L.C.

29 Nov., 1888.

Hon.
J. Davies,
C.M.G.,
M.L.C.

29 Nov., 1888.

985. Have the works which have been [carried out under the Casual Labour Board been of the same character as those which have been carried out on this ground? Yes; in fact, the work we have done in the Government lands, in the subdivisions we have had under our control, has been of a better character than this.

986. You were asked a question as to the character of the work that was undertaken without the authority of a full meeting of the Casual Labour Board, that is, that small works were authorized by individual members of the Board, and larger ones by the full Board. You have had some experience of municipal matters? Yes.

987. And is it not the general custom in all municipal matters to allow either one or two members of a Council to construct works up to a certain stipulated amount? Yes. Practically, in this case, I was the mayor, as it were, the executive head, and any small representation made by the superintendent of any of the works that I believed to be to the public interest in any way was attended to.

988. So that the custom adopted by you is the practice which governs municipalities generally? Yes; the uniform practice.

989. *Mr. H. Clarke.*] Do you say that the formation of these roads through the property of Messrs. Burns, Withers, and Smith does not increase its value? Incidentally it does.

990. Does it improve it to a greater extent than the actual land they have lost? Of course, it would be only a matter of opinion. I do not think it does. You take 25 or 30 acres from them at £100 an acre.

991. The formation of these roads surely would improve the property? Of course, in every way, incidentally; all roads do that.

992. *Mr. Brunker.*] I should like to have some information with regard to the action of Sir Henry Parkes with reference to the Casual Labour Board;—you say that none of the works were carried out until the propositions were confirmed? All works initiated after our appointment were approved of.

993. Sir Henry Parkes could have had no knowledge of the details? No. They approved on the reports of the proper officers.

994. So that you received in each case first a report from the Government Surveyor, Mr. Gordon? Either from Mr. Gordon or from Mr. Deering.

995. Mr. Deering had nothing to do with it? As the metropolitan surveyor, he had to do with it, in making report on the subdivisions of the Crown land, which were sent to the Lands Office, and the Minister for Lands sent them on for the approval of the Colonial Secretary.

996. That is for subdivision? Yes; on large estates which had been cleared and roads formed through them. These reports were sent to us, and our officers would then report again, so as to make doubly sure that it was work that would warrant us in undertaking it, and if satisfactory, we would recommend it as a Board for the approval of the Colonial Secretary, and then approved, so that all work initiated by us had Ministerial authority.

997. Notwithstanding that petitions were sent in from local residents, was it the custom of the Board to make full inquiry through Mr. Gordon before authorizing the work? Through Mr. Gordon and Mr. O'Donnell; nothing was done without a report and full inquiry.

998. You know something about the country. What is the general character of it? It is rugged. There is a good table-land, with soil very rich and fine for fruit-growing, very suitable for orchards and homesteads.

999. Although you say that you have no professional knowledge, is it your opinion that the roads are being formed so as to fall in with the formation of the country? Quite. These roads open up about 2,000 acres of Crown lands for sale, and there is any quantity of Crown lands besides—thousands of acres.

1000. In answer to a question you said that no works had been initiated except by a petition from the Lands? I said that no work had been initiated by us unless it came from the Lands Office or by petition. These subdivisions of lands came to us from the Lands Office to the Colonial Secretary. They were then sent on to us. Mr. Deering recommended that these subdivisions and the clearing should be done at Narrabeen, French's Forest, and Dobroyd.

1001. Before you came into power? No, since. They were recommended by Mr. Deering. Mr. Garrett sent them on to the Colonial Secretary, and the Colonial Secretary sent them on to us. We still got our own officer to report upon them, and if he concurred with Mr. Deering's recommendation we recommended that the works should be carried out for the approval of the Colonial Secretary.

1002. One road you said was commenced five years ago? The Vanceville Road.

1003. That is a public road? A public road under the Roads Department.

1004. As a practical man, is it your opinion that this expenditure is in the interests of the public generally? Certainly. This land would not have been worth a five-pound note if it had not been for the roads made through it, and it will realize £30,000.

1005. *Mr. O'Sullivan.*] Frontage blocks are more valuable than blocks of land not served by roads? Corner blocks are the most valuable.

1006. Frontage blocks are more valuable than blocks not served by road? Oh, most certainly.

1007. Then the owners of this estate, if they desired to make their land valuable and salable, would have been likely to carry out a certain number of roads? Of necessity they would have to form a number of roads; but not roads like B, C, D, E, and F.

1008. Do you consider that if these roads had not been constructed by the Government, they would have formed a lesser number of roads than on the plan? Yes; in a different direction altogether.

1009. But still, though in a different direction, they would have given access to the Crown lands? I cannot answer that; I do not know how they might have put their roads. The greater part of their estate has no roads provided.

1010. You refer to the Vanceville Estate; that is now owned by other people? I thought Mr. Burns owned it.

1011. You said just now that they had given 15 acres for the Junction Road, and so many acres for other roads, and that the land was worth £100 an acre? Yes.

1012. Would it be worth £100 an acre if those roads were not made there? Of course, without access it would not be worth anything.

1013. Then if they have given the Crown an advantage the Crown have increased the value of their lands? That is incidental.

Hon.
J. Davies,
C.M.G.,
M.L.C.

29 Nov., 1888.

1014. You said just now that it is usual for those who subdivide private estates to calculate on a loss of one-fifth? Yes; to give roads through.
1015. And you said that on this estate more than one-fifth had been given? Quite so.
1016. Do you mean to say that these roads represent more than one-fifth? Yes; a great deal more.
1017. Given 15 acres for Junction Road, and about 10 acres for each of the others, there would be 100 acres altogether in main roads that would represent a total amount of 1,500? I do not know what the area of the estate is. Unless I had the scale I could not tell.
1018. It is understood, I believe, that originally the estate was 1,600 acres, and they have sold the Vanceville Estate? I have been told there were 700 acres altogether.
1019. Do you think that more than 100 acres have been given for roads? I do not know what their land is, and I could not speak unless I knew whose land it was. Judging from this tracing here, I should come to the conclusion that more than one-fifth had been given by the proprietors for roads.
1020. And these roads do not include more than 100 acres? I do not know what the quantity is altogether. I am certain that if it was your land or mine we would not have cut it up in that form.
1021. But you admit that if someone had not done the work they would have had to do it? Not in that form.
1022. But in doing so, you would have to comply with Mr. Reid's law, and give away land to the public? Yes.
1023. In point of fact, if they had subdivided the estate, they would have had to give the land, as they have given it? They would have had to give the land for streets; they could not sell it otherwise.
1024. In an ordinary business way they would have laid out the land in rectangular blocks? Yes, so as to give them the best results.
1025. In doing that they must have given access to the Crown lands? I cannot answer that.
1026. You said just now that the Board always consulted Mr. Gordon about the roads? Mr. Gordon, Mr. O'Donnell, or one of the superintendents.
1027. Then you did not always consult Mr. Gordon? Mr. Gordon had not control over all the roads, only over a certain portion.
1028. Mr. Gordon has not been out there during the past twelve months? I think he has.
1029. If he swears that he has not been out there there must be some error? Yes.
1030. Mr. Houson swears that he has not been out there for five months, and Mr. Gordon for twelve months, and that therefore he knows nothing about the roads marked on the plan? I think if you look at his plan, you will see that at the latter part of the first month of the year he reported to us—and this is November—so that it cannot be twelve months since he was out there.
1031. At all events he said he had not been out on the land for that period? No; he drew it up from being on the land.
1032. *Mr. Brunker.*] You were asked just now whether land with a frontage was not more valuable than any other portion of land;—is it not a fact that everybody has a frontage in a subdivision? Of course.
1033. But of course there are some lands that have special value? Corner blocks, and those nearer the station, have greater value.
1034. That special value would apply in a case like this. Supposing that the road marked D ran along the top of a ridge, and that the allotments on each side ran into deep ravines, and that another road, say Junction Road, was on a plateau, would not the frontages to the latter road be worth double the value of those on road D? Three times as much.
1035. *Mr. O'Sullivan.*] If corner blocks are most valuable, the more corner blocks you have the more valuable the land? Yes.
1036. And the more roads you make the better? Yes.
1037. *Mr. Brunker.*] Although a large area of land may have been given by the proprietors, from your practical knowledge can you say that that is not the form in which the land would have been subdivided by private owners? Certainly; it is not done as one would do with his own property.
1038. *Chairman.*] Referring to your document of authorization, I see that the Colonial Secretary says that there would be work to do in making tanks, works of irrigation, deepening water-courses, &c.;—have the unemployed been put on works of that description? No such works have been authorized.
1039. But are not these general instructions here? Yes; but still we have not been able to embrace them because there has been no work of that character.
1040. Have any men been put on the railways? Some men at Pearce's Corner.
1041. Did you at any time get any petition from the inhabitants of this district for the erection of a platform on the Hornsby line? I have no recollection of any such petition; it would not come within our scope; we are concerned only with roads.
1042. You have received no representation from Government officers? Not for the construction or erection of a platform, to my knowledge.
1043. How many visits have you made to the ground at Hornsby? I suppose I have been there about sixteen or twenty times altogether within the last eighteen or nineteen months.
1044. Have you seen all the additional roads marked on this plan—those coloured in a fainter red? I think so.
1045. Do you think that all these roads are necessary for the simple purpose of access? Yes.
1046. They are all necessary? All necessary. As I have said before, the Crown lands would not be worth a five-pound note unless these roads of access had been given.
1047. Would it not have been better to have made fewer roads; because it is clear, on your own showing, that they could utilize fewer roads there, and to have made the roads on the Government property on the other side of Boundary Road? I do not think so; because the more roads of access you give to Crown lands, the more value you give to this estate.
1048. But if, according to your showing, the value of the land has improved from being worthless to £100 an acre on Burns, Withers, and Smith's estate, by the making of these roads, would not the value increase in equal proportions on the Government side, providing you had access? I do not mean to say that our making the roads on the land gave it that value, I only gave you the value of the land.
1049. Did you not state that the land would be worthless if the roads had not been made? As far as the public estate was concerned, not these people's property. You misunderstood me. I stated that the Government land would not be worth a five-pound note without the access.

Hon.^y
J. Davies,
C.M.G.,
M.L.C.
29 Nov., 1888.

1050. But prior to the Board, was it not the custom of the Government to form the roads on their own property, and then to make too many roads on private property? I never knew the Government to make any roads by unemployed labour other than public roads.

1051. In cutting land into subdivisions are you not obliged to make roads? The private owners of the land would have to do it.

1052. Have you made any roads on the Crown lands? Yes, they are all of them formed and made.

1053. Any of them metalled? Not metalled—no.

1054. Some of the roads to the south of the boundary-line are metalled? A little; but then I may say that all the material that came for the ballasting of these roads came out of the people's own property.

1055. You tell the Committee that those were not the roads that would have been made in the interests of private owners? I simply say that if it was my property I would not subdivide it in this way.

1056. As a matter of fact, have you not told us that some of these roads were commenced by private owners? The clearing of Burns Road was commenced before my time.

1057. And have not other roads you commenced been partly done? Yes.

1058. You have cleared roads already commenced to be cleared? Yes.

1059. Is not that an evidence that the owners would have made these roads? It is quite possible that they would have done so.

1060. But is it not an argument that they did intend to do it? Well, of course; it looked like it. It is an evidence that they had made a start.

1061. *Mr. Brunker.*] But you do not mean to say that the owners of private property subdivided the property in that form? No.

1062. *Chairman.*] But are not the roads B, C, D, E, and F, which are said to be not to the interest of private owners, absolutely necessary to give communication to their property from any population that may be settled to the north of Boundary Road? It is absolutely necessary to get to Crown lands.

1063. Supposing you were the owner of this estate, would you not, in laying out the roads to give access to the north, have in view the intersection of these gullies. For instance, you would not cut up a street leading into a gully; you would go further to the right? If it was my private property I would endeavour to form Boundary Road, and save the land.

1064. But that not being possible, would you not have gone to the east of the first gully—Spring Gully;—would you not have gone so the east of that? I would not be concerned about that, as long as I had roads to give me frontage.

1065. Would the roads be of use to sell the land if they did not continue to other roads? There are no roads there.

1066. But anyone cutting up land has a prospective population in view? They look to see what they can get in the market.

1067. But does not the prospective population increase the value in the market? It may do to some extent; but these roads you speak of were absolutely necessary.

1068. But are they not beneficial to the private owners? Incidentally. All roads you make will be that.

1069. Then the greater number of roads on private property the more value it will be to private property? The greater number of roads you have the greater advantage to the property. But if it was my property I would not have cut it up in that form. I would subdivide it in a form that would give me better frontages.

1070. But if you could get the roads made in that form without any expenditure of your own, you would consent to it? Yes; as these people did. But after all, one balances the other, the value of the land as against the work done on it. I would value the land more than the money spent.

1071. But then land must be given in any case, whether private owners make the roads or the Government make them, is not that a fact? Yes.

1072. And the more roads the greater the value of the property? The more roads the greater the convenience, of course.

1073. You tell us that you had your recommendation for these roads either from Mr. Deering or from Mr. Gordon? I think you will find that Mr. Gordon recommended about those roads. The papers will show it.

1074. Mr. Deering recommended none of them? Mr. Deering recommended one of them just at the time we took office.

1075. That was the road then being cleared—road A? Yes.

1076. Then Mr. Gordon has recommended all the rest? Yes; and the Board, that is Mr. Housion and Colonel Wells, have visited the locality and approved before anything was done.

1077. First of all came his recommendation? Yes.

1078. Then if Mr. Gordon said, in answer to this question:—"Can you say you gave instructions to clear and form any of these roads?" "I only know one road, that is Junction Road," and adds as a foot-note to make himself more correct, when revising this: "I never gave an instruction to carry out any of the roads; it was recommendations only, and that recommendation was to ballast Junction Road; clearing was already done";—that is not correct? No. You will find from his own reports that he recommended that all these works should be carried out, and we then got the recommendation of the Board, and the work was carried out.

1079. *Mr. Brunker.*] Is it not apparent to a business man that although these main roads—Burns Road, Junction Road, Vanceville Road, I road, and H road—might be beneficial to the owners of a private estate, these minor roads leading to the Hornsby Station are only beneficial to the Crown lands? Certainly.

1080. *Chairman.*] But is it not equally clear that the number of these roads—the road running parallel with the railway, the continuation of Boundary Road, and this T road, commenced in a mistake—is unnecessary for roads of access? I do not think so.

1081. Could we not have access to the Crown lands and dispense with a number of them? You could have had access with one road alone.

1082. But could we not have equal access without the T section? You would dispense with the whole of that. It is only cleared.

1083. And we could have equal access? The more roads you have there the better it is.

1084. For the people and the railway station? Yes; and for the public. The railways are the people's property, and the roads are the people's property, for all time. 1085.

1085. But you said just now that they are roads of access only? Access to the Crown lands.
1086. But considering the present state of population are these roads at all necessary? I think they are now; and taking your view of the prospective population, I think they are very wisely done.
1087. *Mr. Brunker.*] You know that the railway from Hornsby Station to Vanceville Road is in course of construction? Yes; and very nearly finished. It will be finished by the end of the year, I think.
1088. Is it not an advantage to the Crown lands that these roads—the Vanceville Road, the H road, the C I road, and the B road—will give access from the Crown lands to the Hornsby line at different points? No doubt. I have already stated that.
1089. And that being the fact, must it not naturally tend to increase the value of Crown lands? The greater the number of roads you have the more valuable they are.
1090. *Chairman.*] But instead of making so many roads leading to and giving access to Crown lands, when a fewer number would have done, would it not have been more conducive to the value of the public estate to have formed the roads on Crown property? No, it would not; because the Crown property is not worth anything without these roads of access.
1091. But is it worth anything without subdividing it, and forming the streets? So they are formed.
1092. But would it not have increased the value of these lands more by having the roads ballasted, as they are to the south? I have no doubt it would.
1093. From your experience, has not that been the course adopted by syndicates or by owners of property? I do not think they have ballasted the roads. They have generally only formed the roads. The roads are cleared to a chain wide, and formed to half a chain.
1094. Have you done that on the Crown lands? Yes.
1095. You have formed them? Yes; but not ballasted them.

Hon.
J. Davies,
C.M.G.,
M.L.C.
29 Nov., 1888.

Frederick O'Donnell called in, sworn, and examined:—

1096. *Chairman.*] Are you the overseer in charge of the unemployed at Hornsby? Yes.
1097. How long have you been in that position? I have been there since the Board was first initiated. I suppose it is something like fifteen or sixteen months since I went to Hornsby. Altogether, in connection with the Department, I have been about three years and a-half with the unemployed.
1098. You went to Hornsby at whose instructions? At the Casual Labour Board's, when they came into power. Previous to that we went out by Mr. Deering's instructions. Then we got the Casual Labour Board's instructions to form a camp and stay there.
1099. What you mean is that you were working on the ground before the Casual Labour Board came into existence, and that you continued there by the instructions of the Casual Labour Board? Just so.
1100. What instructions did you receive from the Casual Labour Board as to the limits of your powers—what powers had you? I do not think my powers were very clearly defined, whether with reference to the Casual Labour Board or the other departments that I have gone through.
1101. Had you the power of originating any roads? No; I have not the power to originate any road. I can suggest, or do something of that sort.
1102. That is to say, you could recommend to the Board? I could recommend to the Board.
1103. But did you ever, of your own authority, commence to form a road? I believe we started Junction Road on our own authority. Having the men there, we had to do something, and it was started. We got a line along Junction-street; that was partly started.
1104. When you say we—? I mean the Department—ourselves working there.
1105. Was that before the Labour Board came into existence? Yes.
1106. When you say we, do you mean yourself? No; I had some authority.
1107. What was the authority? I believe I got it from Mr. Davies.
1108. Did you commence any road without authority from Mr. Davies, or from your superiors? No; I never did things of that sort. I might answer that at once. I have never started a thing on my own authority.
1109. You must receive instructions before you proceed to do work? Yes.
1110. Can you tell us how that road to the north of Burns Road and parallel with it was formed? It is what was termed the Mistake Road. We call it among ourselves the Mistake Road; that is, in camp. We had started along the road H H H to a point where there was a large tree, and we had instructions—from whom at the present time it does not come to my recollection—to start from a point in the continuation of this road E, and meet it, and an old fellow named Noonan was to show us the way; but instead of squaring it up, we ran across diagonally, so that we have termed it the Mistake Road.
1111. Then is the plan incorrect? Yes, as it is here. I can show you better by a little sketch I have here. The road goes down and then up again. It was a mistake on our part.
1112. Then these roads, as shown on Mr. Deering's sketch-map, are inaccurate—road E does not run straight? No, the plan is not right; it is only a sketch.
1113. That was a mistake originating with yourselves? Yes.
1114. But have you any other mistakes of anything like that character? Not that I am aware of.
1115. From whom did you receive instructions to construct the road parallel with the railway? From Mr. Davies.
1116. And these roads in the form of a T and the continuation of the Boundary Road? From Mr. Davies.
1117. And the road from Junction Road, near road B, to the south, leading to the hotel and platform? You mean across the railway.
1118. To the hotel? They were got from the Casual Labour Board.
1119. From Mr. Davies? From Mr. Davies or one of them. I know that I had instructions to do it, and I did it.
1120. *Mr. Brunker.*] I suppose the instructions from Mr. Davies would be from the Casual Labour Board? Yes, and in some cases the orders have been verbal.
1121. But the orders would then come from the Casual Labour Board? Yes.
1122. *Chairman.*] In carrying out your orders as to forming or ballasting, were exact instructions given to you as to the quality of the road you were to make, or anything of that sort? I do not know that they were. I was supposed to do the best I could.
1123. Was it left to your discretion? Well, of course, they were there to examine it and see if it was satisfactory. They never said anything to the contrary, and I took it to be right enough.

F. O'Donnell.
29 Nov., 1888.

- F. O'Donnell. 1124. But had you discretionary power to say whether a road should be simply cleared, or whether it should be formed? I only had the power to clear; then I got instructions to form and metal afterwards. I would not undertake to do anything of that sort.
- 29 Nov., 1888. 1125. Is the road running parallel to the railway formed? Yes; we are now forming it. It was partly formed before this inquiry commenced.
1126. You are now forming it? We have knocked off within the last few days. Since the answer was given to a question about the matter in Parliament the other evening, I had instructions to knock off the men. I left instructions on Monday, and I repeated them yesterday to the overseer in charge, to knock the men off until this inquiry was finished.
1127. That is, not to continue forming the road? Not to continue any work.
1128. Are any roads formed there in close conjunction with the railway, such as the continuation of Boundary Road? We formed Boundary Road.
1129. Is that road to the south of it, parallel with it, formed? No; that is only cleared. Then you will understand that these roads were cleared half-way through before we did anything to them. I suppose there were about 11 chains on each side. We cleared the continuation of Boundary Road, and formed it, and tried to make a direct road of it because it leads to Crown lands.
1130. You found half done already? Previous to our going to it it was half cleared.
1131. And the small piece of road running up from Junction Road? We did not do that; that is private.
1132. Did not the unemployed work on that small bit? No.
1133. Are the unemployed working at all on Boundary Road now? There have been none working on Boundary Road for some time—that is, on the continuation of Boundary Road, not further along.
1134. Have you not been working there at all? Not recently.
1135. How far along Boundary Road have you got the road good and passable? It is pretty fair until you come to this street here, D.
1136. Is it not good up to the first gully? Not up to the first crossing. At this gully we came to an impracticable road.
1137. You can drive up to road D? Yes.
1138. Are you cognizant of how much land is owned by Burns, Withers, and Smith there? I have an idea now; but I had not at the time I gave the return to Mr. Brunker, which I am sorry for. I tried to get the information as best as I possibly could at the time, and of course sent the return on with it.
1139. Is the answer then that you gave to Mr. Brunker incorrect? It was incorrect.
1140. That is to say, the second answer? The second answer was also incorrect, from the information we got.
1141. *Mr. O'Sullivan.*] You say that you never carried out any work whatever without receiving instructions from Mr. Davies, or from the Casual Labour Board? No.
1142. Therefore, you could never originate any of these roads yourself? No.
1143. Could you tell us how much these roads have cost to make—the total cost? I can give it you approximately—£2,079 7s.; that is the total cost of the work round about; and the total cost of all the work done at Hornsby by the Board is £6,265.
1144. *Chairman.*] When you speak of £2,079 7s., you mean the work done on the Burns-Withers estate? From the information we have got since we would say it is round about and in close proximity to this property.
1145. *Mr. O'Sullivan.*] Have you any idea of the length of the roads made there, to the south of the Crown lands? Junction Road is about 2 miles, and the other road—Burns Road—about 1 mile 80 chains.
1146. Those two roads alone would come to 3 miles? Yes.
1147. Would 7 miles in length be too great for all the roads? All the roads together, so far as we have it approximately, are 8½ miles in length.
1148. Eight and a quarter miles represent all the roads constructed south of the Crown lands? All the roads; Government land is not included. That is private lands.
1149. Including road A, and south of it, what is the whole length? Eight and a quarter miles.
1150. I want to get the total length on the Burns-Withers property? About 3 miles—2 miles on Junction, and a mile on Burns Road.
1151. You say 8½ miles for all the properties. I want to know what is the total length of Burns' property? ———
1152. *Mr. Brunker.*] Have you got the length of each road; give us a rough idea? Burns Road is 1 mile; Junction Road, 2 miles; A road about 25 chains ———
1153. *Mr. O'Sullivan.*] But there are 8½ miles south of road A. Deduct from that the roads on property other than that owned by Burns, Withers, and Smith; what is the length of those? This road I, leading to Pearce's Corner, we call a Government road.
1154. What do you call the H road? That we would also call a Government road. We would call the other roads on the Hornsby Estate about 8½ miles.
1155. What would you call the other roads, to classify them? They are on private property, so far as we know it at the present time.
1156. *Chairman.*] The roads on private property are about 8½ miles? Yes.
1157. On Burns, Withers, and Smith's estate 3½ miles? Yes.
1158. *Mr. O'Sullivan.*] Touching this extension of road E, not including the tributary portion, do you know who authorized it? Mr. Davies gave me instructions to do that.
1159. Did he state the object of it? He did not state the object of it, and it was not my purpose to question him.
1160. You got the instructions to carry out that road? Yes.
1161. And the same remark applies to the road running parallel with the railway? Yes.
1162. This road was carried out by Mr. Davies? Yes.
1163. And the road from the Boundary Road to the station by Mr. Davies? Yes? Eleven chains were already cleared. But to qualify this, I may say that Mr. Davies told me to clear this road parallel, to throw it up, but I am making a good job of it.
1164. Finding that the owners of this Burns, Withers, and Smith Estate had started these roads near the

the station, was not that an evidence that they were going to make them themselves? Of course it is evidence that they were going to construct the road, but it is not my place at any time to question any authority I may receive. F. O'Donnell.
29 Nov., 1888.

1165. How many men have you working out there now? At Hornsby alone about fifteen, but altogether I may tell you that at Hornsby and other places we have about 140.

1166. In the neighbourhood you have 140? Not in that neighbourhood alone.

1167. *Chairman.*] But fifteen men are on the roads on Burns, Withers, and Smith's estate? That is what I would term it now.

1168. *Mr. O'Sullivan.*] Referring to Boundary Road, are you not now constructing a culvert down near the gully, near road C? We are doing nothing now.

1169. I mean last week;—you were constructing a culvert where they are cutting out stone? That is at the end of the road. We are putting in drain pipes there.

1170. Where you are making that culvert is at the continuation of the Boundary Road? Yes.

1171. In point of fact you are not working any men on Boundary Road at the present time? Not at the present time.

1172. Although the road has been cleared, you have not been working men there for some considerable time.

1173. *Mr. Brunker.*] You say that when you commenced work at Hornsby you were under Mr. Deering's instructions? Yes.

1174. Until the Casual Labour Board came into existence? Yes.

1175. When did you commence work under Mr. Deering's instructions? I have not got the date, but I can tell you the quantity of work.

1176. I would like to know when you commenced there; how long before the Casual Labour Board came into existence? I think about a fortnight before.

1177. You have never commenced any work without instructions? No, I never commenced any work unless I got instructions to do it.

1178. Had you at any time any communications verbal or otherwise with the owners of property in that locality? They have never said one word to me. Although I have asked Mr. Burns about the deviation he has never said one word to me about the constructing of the roads.

1179. Could you define to the Committee the work carried out by private owners before you commenced work there at all? They had a portion of Burns Road cleared, about 30 chains, then they had two culverts on Burns Road, and they had some work done near the station, and about 11 chains on the Railway Road.

1180. I think I understood you to say just now that whatever work has been done on the roads intersecting this portion near the station, has been done by the owners of the private property? I think we had about 11 chains to do on each of these roads. A fair part of it was done privately, and also on the road leading to the station.

1181. You were asked just now by Mr. O'Sullivan whether the fact that these roads had been opened up by the proprietors was not evidence that they were going to construct the road, or only that they were going to construct them? They were cleared.

1182. Can you swear that they were going to construct them, or that this was only to define the roads—there is a material difference? It was cleared and stumped.

1183. I want to know whether it was simply to define the roads, or to construct them? I do not know; that is not for me to say, of course.

1184. *Chairman.*] Was the character of the clearing of such a nature as to make you suppose that they intended to construct roads there? I cannot go into the suppositions of people.

1185. *Mr. Brunker.*] You know something about the locality? Yes.

1186. You know the Thornhill subdivision;—those roads were stumped and cleared, but never made? They have not been done to the present time.

1187. Did you not find the same to have been done on the Hornsby estate—that this clearing had been done simply to define the streets, and show buyers where they were;—I suppose you know that after the sale streets like these are left, and never constructed at all? Very true.

1188. *Mr. O'Sullivan.*] Still these roads being cleared in the way indicated by Mr. Brunker gave access to Crown lands; if they had only been cleared access would have been given to the Crown lands by them? If they had been cleared through.

1189. *Chairman.*] You carried them through? We commenced where they knocked off.

1190. *Mr. Brunker.*] You completed what they commenced? Yes; however, it is a benefit to Boundary Road, giving an outside opinion, because it now leads right through to Crown lands.

1191. Do you think the work you have done has assisted to improve the Crown lands? Most undoubtedly. It would only have brought £5 an acre. I would have had a lot of money myself to pay more than £5 an acre for it.

1192. *Mr. O'Sullivan.*] If this estate had been your property and you intended to sell it to the best advantage, would you not have laid out roads there, and cleared them in the way indicated by Mr. Brunker, in the usual way of subdividing estates? I do not think that is a fair question. I might put the roads different to what they are on the plan altogether.

1193. Granting that you would put them where you pleased, would you not have subdivided the estate and cleared the streets to give frontages and corner blocks? If I were going to submit it to public auction.

1194. You would have done so? I might have done so; but I am not to surmise what other people would do.

1195. *Mr. Brunker.*] Assuming that this estate was your own, would you have subdivided it in that form for sale? I am not sufficiently a surveyor to answer that question.

1196. Have you ever seen a property subdivided in that form for sale? No.

1197. *Chairman.*] Did you ever see property with gullies running through it in such a number, and requiring roads between the gullies like that before;—would not the peculiarity of that property, with those gullies running through Boundary Road, have a good deal to do with your decision in making your subdivision? That would have to be taken into consideration in dividing in every case; no doubt of that.

1198. *Mr. Brunker.*] Is the loss of that land, by way of roads, under this form of subdivision, much greater than it would be under an ordinary form of subdivision? ————

1199.

- F. O'Donnell, 1199. *Mr. O'Sullivan.*] These roads have been laid out in the best way possible to avoid expense in constructing them? That is true.
- 29 Nov., 1888. 1200. To avoid gullies and steep places? Yes.
1201. Then the owners of this estate if they had subdivided and cleared roads—if you had been the owner of this estate you would have proceeded on the same policy? I daresay I would.
1202. Then, pursuing that policy, your plan would have been very similar to this? I cannot see that it necessarily follows that way. I cannot see what you are driving at.
1203. You admit that these roads have been laid down to the best advantage, and to avoid running through the creeks and gullies, and to avoid unnecessary expense in construction, and you admit that if you had been the owner of a private estate you would have proceeded on exactly the same policy? I daresay I would.
1204. Then your plan must of necessity be very similar to this, because you admit these roads to be constructed on a sound plan? Yes.
1205. Have you been in sole charge of the men during the last twelve months? I have.
1206. Has Mr. Gordon been in connection with you in this work at all? No; from time to time we received sketch plans from him.
1207. He has not been on the ground? He has been on the ground several times; but I have not seen him. He has been there quite recently, I forget on what occasion; but I was not there.
1208. *Chairman.*] And how long before that was it since he was there? It must have been some months since he was there. He and I are not the best of friends.
1209. *Mr. O'Sullivan.*] And you do not throw yourselves in each other's way? No.
1210. Has Mr. Houison been up there within five months? He has been there once within the five months.
1211. Has Mr. Gordon been in command and in control of these works during the last twelve months? No.
1212. And Mr. Houison has not been in command or control of them during five months? No.
1213. *Mr. Brunker.*] You said just now that the object you had in view in making these roads was to give increased access to the Crown lands? Yes.
1214. Supposing you had not had that object in view? The Crown lands would have been no use at all.
1215. Would you have adopted the same form of subdivision. The land is very uneven on the surface, and you have formed the road so as to fall in with the inequalities of the surface? Yes; but I am giving you an opinion now. It is quite unnecessary to do so. I have got the instructions to do these things, and I have done them. When you come to ask me for a professional opinion—I am not a surveyor or could I give one.
4216. We only ask for a practical opinion with regard to the access. You say that £6,265 have been expended? Yes.
1217. And the cost of improving and making the roads on private property is £2,079, so that on the Crown land £4,186 have been expended? Yes.
1218. I think I have gleaned from your evidence that you have not an accurate knowledge of the owners of these properties? No, I have not an accurate knowledge of the owners.
1219. And you really do not know now whose properties you have intercepted? I would be sorry to take an oath and say whose properties they were.
1220. You really do not know? No, because we were never supplied with a district map.
1221. You have heard something of this property of Harnett's, but you really do not know to whom the land belongs? Now I have some knowledge. I thought at one time that Mr. Burns was interested about the land; but I could not say that authoritatively.
1222. Your want of knowledge of the private ownership of this land will account for the mistake you made in furnishing me with that report you sent to me the other day, and from which I furnished the House with a reply to a question? Yes; I think I have already acknowledged that.
1223. *Chairman.*] You say that £2,079 represents the amount spent on roads on private property? On what we consider round and about private property.
1224. Do you mean by private property the private property of Burns, Withers, and Smith? And other private owners.
1225. These roads running to the south of Junction Road are included in the £4,000 you mentioned? Yes.
1226. Do they not run through private property? Yes.
1227. Those roads running through private property are included in the £4,000? Yes.
1228. *Mr. O'Sullivan.*] If you only spent £2,079 7s. on private roads, without including these running to the south of Junction Road, that amount has been spent on roads on Burns, Withers, and Smith's property, where have you spent the other £4,000? On all the Crown lands on the other side of the railway, and to the north of Boundary Road.
1229. That work is not shown on the map? The work would be on the other side at Peat's Ferry Road, where there are Crown lands, and three-acre blocks formed.
1230. It has cost £4,000 for one side? It has cost £4,000 for all the Government lands outside the private estate.
1231. *Mr. H. Clarke.*] Are those roads on the Government estate cleared? Yes.
1232. And ballasted? No, not ballasted.
1233. They are not ballasted on the Crown lands? No, merely cleared and formed.
1234. I noticed the other day when I was out that you had taken away a lot of undergrowth on Crown lands? Yes.
1235. *Chairman.*] Mr. Brunker just asked you, in reference to the roads on private property, would not the value of the land given more than compensate for the roads that were made;—as a matter of fact, does not the number of roads on that property increase its value? I should imagine it does increase the value; but you have to get access.
1236. But did you recommend any of those roads? Not that I am aware of.

FRIDAY, 30 NOVEMBER, 1888.

Present:—

MR. WALKER,
MR. O'SULLIVAN,MR. BRUNKER,
MR. CARRUTHERS.

THOMAS WALKER, ESQ., IN THE CHAIR.

Thomas Cooper Hinchcliffe sworn and examined:—

1237. *Chairman.*] Are you the secretary of the Casual Labour Board? Yes.
- 1237½. How long have you occupied that position? Since the commencement of the Board. I think they started on the 2nd May, 1887.
1238. Are you in constant attendance? Yes.
1239. What are your duties in connection with the office? I have to look after all the correspondence, the records, pay all the accounts and wages, send the vouchers to the Audit Office, and all the incidental work connected with the office.
1240. What kind of records have been kept? The ordinary official records, the same as are kept in any other Government Department.
1241. Are there any minutes of any meetings that have been held by the Board? There are a few at the commencement. At the commencement of the Board we had only a small room, about 6 feet x 8 feet, at the Immigration Office, and the very scanty information here was put down by myself at the time or next day. The office was besieged by hundreds of men every day, and we had to answer all sorts of questions. After the end of May the Board said they did not want any minutes kept. They appointed Mr. Davies to do all the executive work, and the other two members of the Board being professional gentlemen were appointed to inspect and lay out the works and give professional advice.
1242. *Mr. Bruncker.*] Who were the other two gentlemen? Colonel Wells and Mr. D. Houison.
1243. *Chairman.*] After that you did not keep minutes? We recorded all the papers that came in and the work that was done.
1244. But as to the proceedings of the Board? No. Of course the papers would show what was done.
1245. You say Mr. Davies was appointed executive head;—was that at a general meeting of the Board? Yes; they were all present.
1246. Was it done by resolution? No; I do not think so. They seemed to talk matters over and agree among themselves.
1247. Did petitions or requests to have work done come to you as secretary? They were generally addressed to the Chairman. The Chairman opened all the correspondence, but in his absence I would open it. Then it would be entered in the record-book, and I would write any official communication that was required, and he would sign it, and it would be sent, perhaps, to the local surveyor for report, or to the nearest superintendent. When his report was received the Chairman would make a recommendation, favourable or otherwise, and send it on to the Colonial Secretary for his approval.
1248. Do you recollect how many full meetings of the Board there have been? I could not say.
1249. Have they been numerous or few? As I told you, after the first month Mr. Davies used to do the executive work. The other members would drop in occasionally, and ask me what was being done, and I would show them the papers. If the papers had gone out, I would show them the records. If they had any objection, I suppose they would communicate with Mr. Davies about it. They seemed to work very well together.
1250. Had you any petitions or requests for the making of roads on the lands near Hornsby? I could not tell that, because I did not take any more notice of that than of any of the others. I could only go by the report that is here. There are one or two petitions here.
1251. Are those one or two all that there are? All that I know of.
1252. Would you be likely to remember if there were more? I could not say. I would not try to recollect any particular paper; there were so many papers coming in; I suppose two or three thousand in the year.
1253. Have you any recollection when the formation of the roads commenced near Hornsby? No. Of course I had nothing to do with the executive management—only to do what I was told, principally office-work. I was paymaster as well as secretary, and that would take up all my time, being responsible for the money—as much as £5,000 on one pay-sheet.
1254. Had you anything to do with engaging the men? No.
1255. Do you know anything at all about the construction of roads at Hornsby? Nothing at all.
1256. You were never present at any meeting when these roads were discussed, to keep the records? No, not to keep any records. I might have been present when they were being talked of, but I do not recollect any particular meeting.
1257. Your attention was never called to them officially in any way? Only as it might appear here (in the papers). I see there is a letter in my name addressed to the Hon. J. F. Burns. That is the only one I see in connection with it.
1258. *Mr. O'Sullivan.*] You say you have kept no minutes or records of what was done since May last? We keep the records, but these minutes were in addition to the records, because the Board met at first as an ordinary Board would meet; but after the first month the other two members arranged with Mr. Davies that he was to do the executive work, and they, when he let them know, or they received information from me, would superintend the outside or professional work, such as the making of bridges, roads, or culverts, or anything of that sort.
1259. What record could we get to find out who proposed and seconded or authorized any particular work? You would only find it from the papers, the same as in any other Government office; they would be initialled by the Chairman on behalf of the Board.
1260. Would it be correct to say that you have held thirty meetings of the Board? There have been a great number of meetings; there was no particular record kept.
1261. Would it be correct to say that there have been thirty regular meetings of the Board? About twenty-four I see here; for the first month they were held pretty well daily, except on Sundays.

T. C.
Hinchcliffe.
30 Nov., 1888.

1262.

T. C.
Hinchcliffe.
30 Nov., 1888.

1262. There were no regular meetings after May? No; the business they did would be shown on the papers. The Chairman would act for the three, and put his initials on as the head of the department.
1263. Would it be correct to say that there had been one hundred meetings of the Board? Not formal meetings.
1264. What do you mean by the meetings after May;—when one of the others dropped in to consult with Mr. Davies? Yes; they would drop in perhaps daily, perhaps once in two days; or one of them might be away for four or five days at his departmental work; then when he came back, he would come in to see what had been done.
1265. How long would they remain consulting with Mr. Davies? Sometimes a couple of hours.
1266. Do you keep all the applications that have been made to the Casual Labour Board for the construction of works? Yes; all the official papers are registered and stamped with a number, the same as in the other departments.
1267. Is there any means by which we can arrive at the cost of the different works? Yes; we have the total cost of each work.
1268. Have you vouchers for all the expenditure? Yes; at the Auditor-General's.
1269. Have you ever had any complaints from the men of unfair treatment? Numerous; but when we have investigated them, as a rule nine out of ten were without foundation.
1270. Have you had any complaints about their being unfairly treated by the contractors who supplied the provisions? Very seldom. I think the provision contract was about one of the best the Board ever had—most liberal considering the large number of men that would have to be supplied at short notice.
1271. Have you had any complaints from the men about money being kept back from them? Sometimes; but there would be a reason for it. Perhaps they had not finished their work. When the Superintendent went round, perhaps, he would say, "That stump must be taken out before you are paid;" and then when I went out to pay he would tell me to hold the money till it was properly finished, and then he would give me a memo. to pay the money.
1272. Do you remember a man named O'Brien, a sort of ganger down near Waterfall? Yes.
1273. Why was he dismissed? I forget. I could not tell you exactly, because I did not post myself up in anything with regard to the office. I thought this was only an inquiry about certain roads, and I do not know anything about the roads.
1274. *Mr. O'Sullivan.*] The inquiry deals with the operations of the Casual Labour Board as well as the roads. Do you remember any complaints about sly-grog selling on the Holt-Sutherland estate? There was one complaint, I believe. Someone was convicted of sly-grog selling; but I fancy that was before the Casual Labour Board was appointed.
1275. You get all the petitions and letters? Yes; they are all kept and registered.
1276. Then if I were to ask you to produce the request for road H and road I on this plan, could you do it? All the petitions in reference to these roads they say are printed in these papers. I have been away; but these were handed to me as the papers in connection with it. Of course, without going personally through all the papers in the office, I would not know if there were any more.
1277. You say Mr. Davies was in the habit of opening all letters? Yes.
1278. And acting on the contents? He generally instructed me to write what we call a B.C. communication, and he initialled it.
1279. Mr. Davies appeared to be a kind of dictator of the establishment? No; what we would call the head of the department.
1280. He appeared to do things without regard to being kept in check by anybody else? I do not know; there was nobody there to keep him in check that I was aware of.
1281. He seemed to have the sole power? The other members appointed him to do that, they seemed to have thorough confidence in him. When they came and I told them what had been done, they said, "All right, Hinchcliffe." They always seemed quite content with what had been done.
1282. Was the effect of this understanding among them that Mr. Davies had sole charge of the Casual Labour Board, and called them in merely as advisers or experts? They would walk in any time they wished to. Of course they were professional men, and they attended to any work that required professional supervision outside. In the office they were not required, except occasionally they had to sign some documents to get money from the Treasury, or anything of that sort.
1283. These gentlemen were very often away for a week or a fortnight at a time? Colonel Wells had to go away visiting roads in the various districts.
1284. And Mr. Houison, too? Occasionally.
1285. During the absence of both of those gentlemen, would new works be gone on with by Mr. Davies without consulting them? No; I do not think they were both away at the same time.
1286. *Chairman.*] Has it ever happened? It might have happened; I could not say; I do not think so.
1287. *Mr. O'Sullivan.*] Did Mr. Davies give any reason for not wanting the minutes kept after May? No; they were no formal meetings. They met every day in May, and then the works got started, and Mr. Houison and Colonel Wells found they could not attend at any stated time daily.
1288. Did you keep a record of the consultations or meetings after May? Not after May.
1289. There is absolutely no guide whatever as to the number of times they met or consulted after you ceased to keep the record? Only by the papers.
1290. Which papers? The papers have to go through a certain routine that generally takes a few days, and they would be sure to come in before anything was actually done on the papers, and they would see what was being done.
1291. That would be no guide as to the number of meetings held? No.
1292. So that there is no guide whatever as to the number of meetings or consultations they held after May? No.
1293. I suppose vouchers for all the expenditure were forwarded to the Auditor-General's Office? Yes.
1294. And everything is kept in the proper manner? Yes.
1295. How would you settle these complaints about non-payment of wages and other liabilities? They would always be settled, either by the superintendent, or by the Board, if there was anything very particular. There was always a good reason for stopping any money, and it would only be stopped for a time.
1296. *Mr. Brunker.*] Who are the members of the Casual Labour Board? The Hon. John Davies, Mr. David Houison, and Colonel Wells.
1297. What is Mr. Brunner's business? I think he is an engineer in the Roads and Bridges Department.

T. C.
Hinchcliffe.
30 Nov., 1888.

1298. And Colonel Wells? I think he is an engineer in the Roads Department.
1299. They are both Civil Servants? Yes.
1300. You say no records of the proceedings were made after a month? Only the papers which would show what was done. There were no formal meetings.
1301. The minutes were not kept in the ordinary way? No; the papers were all registered, and the action of the Board would appear on them.
1302. I suppose Messrs. Wells and Houison were treated as professional guides in carrying out the works? Yes.
1303. Did Mr. Davies, as Chairman of the Board, to your knowledge, exercise any powers beyond those which seemed to be in accord with his position? No.
1304. Were you present at all the meetings of the Board that were held at the Casual Labour Office? Yes; unless I was away paying wages.
1305. Generally? Yes; generally I would be there.
1306. What action would be taken prior to works being undertaken by the Board;—what would induce them to have the work carried out;—how would they gain the information that it was necessary? By letters being sent to the Board or to the Colonial Secretary by various Members of Parliament or by the local residents. The papers would be sent to the Board; they would recommend that the works be undertaken or otherwise; and the Colonial Secretary would approve of it or otherwise, and send the papers back.
1307. These letters all passed through your hands? Yes; through the office.
1308. Can you say whether any of these letters came from Messrs. Burns, Withers, and Smith, asking that these roads should be constructed on their land at Hornsby? Not that I am aware of.
1309. Can you say;—you ought to be aware? The only letter with their name attached that I know anything about is the one giving the land to make the road. To the best of my memory and belief there was never any communication received from Messrs. Burns, Withers, and Smith as to making any road. A communication was made to them asking if they would give the land, and their answer is the only communication I am aware of.
1310. *Mr. O'Sullivan.*] Have you a list of the works carried out by the Casual Labour Board? I think it is in the office.
1311. Will you send it down? Yes.
1312. Have you a list of the applications made by Members of Parliament? I could get it from the records.
1313. Will you supply that, with special reference to the county of Cumberland? Yes; I think nearly all the works are in the county of Cumberland.
1314. *Mr. Brunker.*] The whole of the applications will be with the correspondence? Yes.
1315. You can produce them at any time? Yes; with a little time to search for them. Some of them might be in some of the other Departments.
1316. Then you will have the record of them? Yes.
1317. The papers are all numbered and stamped? Yes, in the usual way.
1318. *Chairman.*] Did ever Mr. Withers or Mr. Smith call at your office? Not that I am aware of.
1319. Were all the applications that reached your office forwarded on to the Colonial Secretary? Unless it was some very trivial matter.
1320. How would you define a trivial matter? Perhaps an application to increase a number of men from fifteen to twenty, or something small like that; when the Chairman would take the responsibility on himself.
1321. Would the clearing of a road be considered trivial? No.
1322. For every road that was cleared there was a consultation prior to its being cleared, either by letter or in some other way, with the Colonial Secretary? I think so.
1323. Are you sure? I am not exactly sure. Of course the Board has been in operation a year and eight months. I should think so myself.
1324. Were there any applications sent in for the clearing or formation of any roads that were not complied with? I believe so; I could not say for certain. I know there has been an application made to clear a common at Liverpool that has not been complied with. I believe several roads were applied for, but the applications were not complied with on account of being too expensive, or something of that sort.
1325. The common at Liverpool would be Crown property? Yes; public property.
1326. That has not been cleared? No. That is one of the cases I can recollect where an application has not been complied with. It has not been refused.
1327. Have you any record or accounts to show exactly how much has been expended on the property of Messrs. Burns, Withers, and Smith at Hornsby? No; the wages sheet for Hornsby would come in in a lump sum—£250 or £300 for the fortnight. It would only show that such and such a gang was entitled to so much money. It would only be headed Hornsby.
1328. Then there is nothing to show exactly how much has been spent on property belonging to private owners? The local Superintendent might have the details; they are not put on the wages sheet.
1329. Do the papers show by whom any work was originated? No; not in all cases.
1330. You said the papers would show what was done;—would they show how such and such a road came to be initiated or originated, by whom it was authorized, and why it was authorized? I should think so. There is just one little item referring to these roads at Hornsby which perhaps would not be on the papers. It is in this minute book:—"28th May, 1887.—Board met 426, Pitt-street. Present: Mr. John Davies, F. Wells, D. Houison. Mr. John Davies, visited Hornsby in company with Mr. Deering, and approved of certain roads being laid out and formed." That, of course, would show there had been a consultation over roads in the district, and the Metropolitan District Surveyor had been consulted and approved of them; but there are no particular roads mentioned.
1331. Do you recollect now what Members of Parliament have applied for work to be done in any particular district? There are about sixty on one application—clearing the railway track to Kurnell.
1332. I mean in the matter of roads? I could not say from memory.

John Williams Deering, Metropolitan and Coast District Surveyor, sworn and examined :—

- J. W. Deering. 1333. *Chairman.*] You have had something to do, I believe, with the management of the unemployed? I had the unemployed for about nine or ten months; I think from about September, 1886, to May, 1887.
- 30 Nov., 1888. 1334. Did you have entire control of the unemployed up to that time? Yes.
1335. What work did you put them on during that time? Kurnell.
1336. What did you give them at Kurnell? Clearing.
1337. What kind of land? Government land.
1338. Did you put them on any private property, or roads through private property? Certainly not.
1339. Then after Kurnell? Field of Mars.
1340. What property was that? Government property.
1341. Any private roads leading to it or from it? No. I hesitated because I thought there might be a short piece leading to a railway station or something.
1342. But there was not? No; I think not.
1343. The clearing was all on Government land? Entirely.
1344. What other place? There was no other place?
1345. Did you have any of the unemployed working at Hornsby? They commenced a road over the bridge. They commenced to clear it just as I gave up the charge of the unemployed.
1346. That is the road marked A? Yes; I distinctly remember telling O'Donnell he had better complete it.
1347. That is the only road in the vicinity of Hornsby you authorized? It is the only one I authorized, and it is the only one I saw till the other day—Monday week.
1348. *Mr. Carruthers.*] Is that the road where the bridge is? Yes.
1349. I thought it was a quarter of a mile more to the south? We were going to take the road here (*points to plan*). There was a piece of Crown land between what we stated was Bellamy's grant and the other grants. It was not a very good road, and we made an exchange with the owners of this grant for this road A. I do not know whether we had a good position with regard to this piece of Crown land. In order to settle the matter, the owners said, "Do not claim this, and we will give you a road over that bridge." It was manifestly to the advantage of the Crown to accept the offer.
1350. You had no acknowledged right to that? No; there was a little doubt about the matter, and we made a very good arrangement for the Crown with the owner of that property by getting that road. They gave it freely.
1351. *Chairman.*] Who were the owners of this? Burns, Withers, and Smith.
1352. Then for this road "A" you gave them a piece of doubtful Crown land? Yes; unproven Crown land. I do not know whether we should have gained our case. The moment the offer was made I recommended the Government to close; it was so manifestly to our advantage.
1353. Did you recommend any other roads in the vicinity of Hornsby? I did not.
1354. Did you survey any others? I did not, nor cause them to be surveyed.
1355. There is a minute here :—

28 May, 1887.—Board met at 426, Pitt-street.

Present :—Mr. John Davies, F. Wells, D. Housion.

Mr. John Davies visited Hornsby, in company with Mr. Deering, and approved of certain roads being laid out and formed;—

- is that minute correct? I do not know what Mr. Davies did. The minute states what Mr. Davies approved.
1356. Did you approve of any roads? I did not approve of any roads. Mr. Burns asked me to go up with him and Mr. Davies on that occasion. I do not think it was an official visit. Mr. Burns was a very old friend of mine.
1357. Was Mr. Burns with you? He was. I never went up with Mr. Davies alone.
1358. Who was with you each time you went up with Mr. Davies? I went with Mr. Burns the first time.
1359. And who was with Mr. Davies the second time? Mr. Burns and Mr. Oliver, the Under Secretary for Lands.
1360. I suppose this 28th May was the first time? I could not say the date; it was about that time.
1361. To assist your memory, I may say that the Casual Labour Board came into office on the 2nd of May, and on the 28th of May there is this record of your being present with Mr. Davies at Hornsby;—was that the time that Mr. Davies and Mr. Burns were with you without any others? It must have been, if that minute is right as to date. I was never there but with Mr. Davies and Mr. Burns.
1362. In this instance, when it implies that you approved of any roads, is that correct;—did you approve of any roads on that occasion? If I did it was the roads through the Crown lands; and I think that is what we looked at on this occasion and the clearing of the reserve.
1363. Did you recommend or approve of roads being laid out or formed on private land belonging to anybody? I did not.
1364. Are any of those roads on the plan recommended by you? None except A.
1365. Have any of them been surveyed by you? None; nor seen by me until I went with Select Committee last Monday week, nor had that part of the ground been seen by me until I went with the Committee.
1366. From what kind of property does the road A go, and to what kind of property does it lead? It leads from Peat's Ferry Road into Crown lands.
1367. Is it private land to the west? No.
1368. It leads from and to Government property? Yes; there is a reserve there.
1369. Where? That little piece at the western side; it is not quite correctly drawn. I had it surveyed.
1370. Is it a Government reserve? Yes.
1371. Are there any roads leading to that reserve? Yes; Peat's Ferry Road.
1372. Did you recommend that as a reserve whilst you were in charge of the unemployed? No.
1373. *Mr. Brunker.*] You could not make it a reserve unless it was Crown land? Of course it was Crown land.
1374. *Chairman.*] You recommended the dedication of it as a reserve? No; it was a reserve. I recommended subdivision.

1375. Now, all these other roads that you see, are they all, in your opinion as a surveyor, necessary as roads of access to Crown lands? No; I should not say they were all necessary. J.W. Deering,
1376. Those shown on the plan you gave in with your papers? No; of course they are not all necessary. Nobody could say that. 30 Nov., 1888.
1377. *Mr. Carruthers.*] Are they beneficial as roads of access? Every road is beneficial to a certain extent—everything has a certain amount of advantage; but if you ask me would I have made them—I suppose that is it—I say decidedly I would not have made those roads.
1378. *Chairman.*] As a surveyor? Yes; having charge of the subdivision of Crown lands.
1379. In the interests of the Crown, you would not have made them? No.
1380. About how many of those would you designate as necessary? If you ask me what I would have done myself, I would not have minded clearing Junction Road, the road north from the church into Boundary Road, Vanceville Road, and I would not have minded clearing B, C, D, and E.
1381. *Mr. Carruthers.*] Why would you have cleared them? They lead into Crown lands. I want to say something more: I would not have minded clearing them, provided the owners gave the land free.
1382. *Chairman.*] But you would not have gone any farther? No; I would not have formed them. I would not have metalled them.
1383. *Mr. Carruthers.*] They have not been metalled, I believe? Well, call it what you like—ballasted.
1384. *Chairman.*] Would you have recommended the formation of that road alongside the railway station? No; I would not.
1385. Do you know whether that road is being formed or not? I saw something was being done to it the other day. It is being culverted, and it has been cleared.
1386. And it is now being formed? Yes.
1387. Now, take the continuation of Boundary Road to the road bordering the railway;—would you have recommended that to be cleared or formed or metalled? Yes; cleared only, provided always the land was given.
1388. Take the one to the south of that—the road running from B into the one bordering the railway station? The middle one?—no, decidedly not.
1389. You would not have recommended even the clearing of that? No; I would not.
1390. Then the road running southward from that into Junction Road;—would you have recommended that? I would not.
1391. The road running from H, parallel with Burns Road, about 5 chains to the north of it;—would you have recommended the clearing or forming of that road? I would not.
1392. Would you have recommended the road from Burns Road into E? No.
1393. Would you have recommended the continuation of H H, running from Lane Cove Road up to the road I have just mentioned through this little section? No; I would not.
1394. Do you consider that there are too many roads on this section south of the Boundary Road for purposes of access to the Crown lands or to the railway station? Yes.
1395. What benefit (if any) would be likely to accrue to the owners of private property from the multiplication of these roads? Well, it simply makes the roads for them through their estate. I suppose the value to the owners is the expenditure upon the roads.
1396. Would you consider that the giving of the land would be ample consideration for the construction of these roads? No.
1397. The forming of these roads would give more value to the land than they would lose by giving the land? Yes, beyond a doubt. It would not compensate for the expenditure.
1398. Whilst you were in charge of the unemployed, you have stated that it has been your object to employ them in making roads through subdivisions on Crown lands;—is it your opinion that if that course had been adopted with reference to these Crown lands to the north of Boundary Road it would have been more beneficial to the country than to make so many roads south of Boundary Road? Of course, beyond a doubt.
1399. If this expenditure that has been made on private property had been made on public lands, the Crown lands would have profited to that extent? Yes. I would not say to that extent—not to the full extent—but they would have profited.
1400. Of course there must be some roads of access? Yes.
1401. But after the necessary roads of access, if the superfluous roads had been put on Government land it would have been of more benefit to the country? Beyond a doubt.
1402. *Mr. O'Sullivan.*] Have you been over these Crown lands marked here for subdivision. Partly.
1403. What is the character of the country? Bad land; broken rocky country.
1404. Do you think the greater portion of it will be sold during the next ten years? No.
1405. Have all the lands worth buying been bought there already? Not entirely; there is a little fair land, but it is patchy.
- 1405½. How long did you have the unemployed under your care? From September, 1886, to May, 1887.
1406. During that time, did you ever lay out roads across private estates to give access to Crown lands? No; I think not.
1407. Were you ever approached by anyone with the request to do so? No.
1408. If you had had the unemployed when it was suggested that these roads should be laid out across the Burns-Withers-Smith property, would you have carried them out to the extent to which you see them on this plan? I would not.
1409. Are you aware that there are a number of roads in existence on the property not marked on the plan at all? They are marked on my plan.
1410. Not marked on the plan submitted to Parliament? Yes; I am aware of that—numbers of roads. I suppose the plan shows the roads proposed by Mr. Gordon, and that they have made roads since Mr. Gordon's report.
1411. *Mr. Carruthers.*] Do you know anything about other roads besides those that are shown? Yes; I have been all over them. The Select Committee requested me to produce a plan showing the roads.
1412. *Mr. O'Sullivan.*] Now, take Burns Road;—can you tell where that road leads to off the property of Burns, Withers, and Smith? I do not know where it leads to.
1413. Would you regard Burns Road, running from west to east, as giving access to Crown lands lying to the north of that road? Certainly not; that is exactly the reason that I object to these roads parallel to Boundary-street.

- J.W. Deering. 1414. Then the construction or making or forming of Burns' Road was not justifiable on the ground of giving access to Crown lands? I do not think it was; I could not possibly say so.
- 30 Nov., 1888. 1415. Take road E, running southerly on to Burns' Road, do you regard that as necessary to give access to Crown lands? No.
1416. Referring to the road running south from near the western end of Junction Road, is that required to give access to Crown lands? No; but I think it is only fair to state that it is not on the land of Burns, Withers, and Smith.
1417. And you have already admitted that the T-shaped road opposite was not required to give access to Crown lands? Not at all.
1418. What was the object of constructing this road parallel to the railway, and not taking it across Junction Road on to Peat's Ferry Road? I do not know anything about it.
1419. You do not know who made that road or who authorized it? I asked the men who were making it, and they said the Casual Labour Board.
1420. You do not know who authorized it? No.
1421. Do you think it was wise to take this road between those two points to Junction Road and leave it there? I do not think it was.
1422. Do you think it was a useful expenditure of public money? I do not.
1423. With regard to Boundary Road, have you any knowledge of the character of the country along there? Yes.
1424. Would it pay to make a public road along Boundary Road? No, it would not; it would pay to clear it, not to make it.
1425. Do you think it would be preferable to make Junction Road and the tributary roads than to make Boundary Road? Yes; I would have cleared them, not made them.
1426. *Mr. Carruthers.*] You do not understand the question. Mr. O'Sullivan says would you sooner make Junction Road and these tributary roads than make Boundary Road? I would not make either; they are both wrong.
1427. Suppose you had to make one or the other? Then, as a public officer, I would make Boundary Road. I would not make the other.
1428. Then, Boundary Road not being made, do you think sufficient access was given to the Crown land by the Church Road (I) and the Vanceville Road? Yes, beyond a doubt, and the road A.
1429. *Mr. O'Sullivan.*] You consider the roads I, A, and J, justifiable roads to give access to Crown lands? Yes.
1430. In your opinion, all the other roads were unnecessary to give access to Crown lands? Well, I think it was right to clear Junction Road. I would not have minded seeing it cleared if they would give the land.
1431. Have you made any observations on the system of subdividing private estates? Yes; of course.
1432. Is it the practice of owners of private estates, when they want to make their land saleable, to cut the land up and clear the streets? Yes; clearing the streets pays, if it is a good estate.
1433. As a business man, if you had been the owner of this whole property and desired to sell it to advantage, would you have laid out and cleared a number of streets? Yes; I would have cleared the streets, but not have formed, metalled, or ballasted them.
1434. By forming and metalling the road, of course you increase the value of the property to that extent? I would not say to that extent exactly. Of course it would improve the value of the property considerably, and effect a sale.
1435. Then, do you consider that if the Casual Labour Board had not laid out and made these roads, Burns, Withers, and Smith, if they desired to sell their land to advantage, would have laid it out and cleared certain roads in the ordinary way of business? Yes; they would have done it without a doubt.
1436. And in doing that they must have given access to the Crown lands? No; because they need not take their roads right into Boundary Road; they could stop within 2 feet or a foot, put up a fence, and block us.
1437. Could not the Government resume those 2 feet and make a road? No; because you must resume for a certain purpose, and roads cannot be resumed under the Resumption Act, not being specified as a purpose thereunder.
1438. But you would not be resuming roads, you would be resuming vacant land that was an obstacle to the construction of a public road? Yes; but if it is for a purpose that is provided for by some other Act, you could not put the Lands Acquisition Act in force—not for roads or railways.
1439. *Mr. Brunker.*] Is there any other Act to give the power? No. The Parish Roads Act only applies where you go from a population to a population, or to a main road.
1440. *Mr. Carruthers.*] And it is only at the instance of the population you can open it? Quite so.
1441. *Mr. O'Sullivan.*] Is there no law on our Statute Book which would allow the Government to force a road through this 2 feet left there as a bar and an obstacle to the public? No.
1442. I mean, providing for compensation and everything else, provided the owners were treated fairly? No; we cannot do it.
1443. *Chairman.*] Would it not be to the advantage of the private owners to take it right through? Yes; quite so.
1444. In considering their own advantage they would have taken them right through? Yes.
1445. Did you never know of a case where the Government resumed private lands? Not for a road. They sometimes resume land for a public purpose, and then resume a road of access afterwards, and which the Lands for Public Purposes Acquisition Act allows.
1446. Then, if they saw that these proprietors were so unpatriotic as to leave an obstacle of 2 feet, would not they probably resume that land and put a road through it? I think it is likely enough that some steps would be taken.
1447. Apart from that altogether, do you think it is probable that owners of an estate like this would play so unpatriotic and selfish a part, and a part so detrimental to themselves, as to leave a narrow barrier between the end of their roads and the Boundary Road? Do you mean, provided they cleared their roads, and we would not clear ours?
1448. *Chairman.*] Under any circumstances? Yes; it is continually done.

1449. *Mr. O'Sullivan.*] Under these circumstances, considering that the effect of giving access to the Crown land would be to still further increase the value of their own land, do you think they would be likely to do it? Giving access to the Crown lands would, of course, improve their lands. J.W. Deering.
30 Nov., 1888.
1450. If the population were induced to settle on the Crown lands at the back of their property, would not the presence of that population give value to their land? Beyond a doubt.
1451. Would it not be an advantage in that case to have cleared roads of access to the Crown lands, in order that the population at the back would be able to cross the street? It would be an advantage to the population, and also an advantage to the owners of the estate.
1452. You admit that if the population were settled on the Crown land that would add value to the property of Messrs Burns, Withers, and Smith? Yes.
1453. Then, admitting that, and the probability that a little township would go up, with shops and stores fronting the street? Yes; but not there. The township would come here in their estate.
1454. Yes; but even so, the people settled on the Crown lands would naturally have to come there to trade; and with that probability before them, would it not be to the advantage of the owners of this property to give access to the Crown lands? Beyond a doubt, when the population is there.
1455. *Mr. Brunker.*] What population is settled round here, to the east? None at all.
1456. Is not that where we saw the orchards? No; it is a good deal further south. There is a population to the south, not a large population.
1457. Assuming that the population settles to the east and west of these lands, would not these roads of access give increased value to the Crown lands—increase the traffic to the railway? Yes; some of these roads—not all of them.
1458. *Mr. Carruthers.*] How could population settle on those Crown lands if you have no access to them? Of course it could not.
1459. Is it not a rule you recognize that, before you can induce people to purchase this land and settle on it, you must give fair access to your railway lines and main roads? Yes.
1460. You have had a great deal of experience in the sale of Crown lands in the metropolitan area? Yes; I have charge of it all.
1461. How far is Hornsby from Sydney by railway? About 12 miles from St. Leonards.
1462. What have been the best Crown land sales you have had during the last two years, within (say) 10 to 20 miles of Sydney? The Gordon sale, south-east from Hornsby.
1463. Was the sale at Narrabeen good? Yes, very good; but Gordon was better.
1464. Was the Narrabeen sale better than Harbord? Yes.
1465. Very much better? Yes.
1466. You sold a great deal of the Harbord land at the upset price? A good deal of it was left. We did not consider it a good sale.
1467. You considered Narrabeen a very good sale? Yes; a good sale.
1468. At Harbord you did not do very much in the way of clearing roads or land? We cleared the roads.
1469. Did you clear them to anything like the extent you did at Narrabeen? Yes; what there was of them.
1470. Is it not the fact that the unemployed were working for months at Narrabeen? They were making a road (the French's Forest Road) and metalling it a leading road right through—towards Pitt-water.
1471. They made other roads of access to that—cross roads? I do not think they metalled any.
1472. Ballasted them—gravelled them? No; I do not think they ballasted any. They cleared them and cut side trenches.
1473. Is not Harbord closer to Sydney and Manly Beach than Narrabeen? Yes; from 2 to 3 miles—it varies.
1474. Narrabeen was the better sale? Yes; on account of the proposed railway, projected since the Harbord sale, which will sell better than Narrabeen when next offered.
1475. You remember the sales that took place at Como? Yes.
1476. There is a water frontage there? The sale (on the ground) went too low. We can only account for it by the wet day. Still, every lot was sold, though the attendance was small.
1477. There were no roads made to that whatever? No.
1478. Do you know that after you sold at Como, the unemployed made roads there—from Como to the Woronora River, and to Sutherland Railway Station, and to Heathcote? That was not by my orders; I only cleared Como.
1479. But do you know it? I do know of the Heathcote and Hurstville Roads since made, now you mention it. I gave orders to have Como cleared, and only cleared.
1480. And after the sale, one or two roads of access were made? They might have been promised by the auctioneer, if it is so.
1481. Do you know that Sir George Innes, one of the purchasers, sold at a very considerable profit after the roads were made? Yes; I have heard so.
1482. Do you know that Mr. Myles M'Rae bought there and sold at a very considerable profit? Yes; I have heard so.
1483. Does not that enable you to form an opinion that the making of these roads increased the value very considerably, and that the Crown lost through not making them before the sale? Those roads you are speaking of are through Crown lands. The Como prices were too low for the reasons stated.
1484. Now what are the sales at Heathcote? Good.
1485. What was the average price? Some of the town allotments went very high; I cannot remember.
1486. Are you aware that a considerable portion of Heathcote was sold at £12 and £13 an acre? I cannot remember.
1487. Are you aware that contracts were let beforehand, and that the cost of clearing that land for sale was over £12 and £13 an acre? Yes; that is the more distant of the suburban lands. It was cleared by the Casual Labour Board, but should not have been done at all.
1488. Was the sale of Crown lands at Hornsby a good sale? Fair.
1489. What were the average prices realized? About £40 an acre, I think.
1490. You are sure it was not £78 an acre? That was the highest.
1491. Do you remember the best Como brought? I think about £30 an acre.

- J.W. Deering. 1492. Water frontage and all? Yes. It went too cheaply altogether, as already stated.
 30 Nov., 1888. 1493. About 11 miles from Sydney? About 13; but then you have to take a boat from the station to get to it.
1494. Supposing I were to offer to drive you on to it? Yes, now you could, by going a long way round through Peakhurst, since the Upper Punt across George's River has been re-established, and since the sale.
1495. You attribute the failure of the sale at Como to the fact that there were not the same facilities to get to the land that there are now? Partly; but then at Heathcoate we cleared the land, and we sold it in parts only for what it cost to clear.
1496. How many miles is that from Sydney? Twenty.
1497. And some of that went for £12 or £13 an acre? Yes; but we cannot account for land sales. Sometimes there is an excitement for land sales, and then again you may make your best endeavours and people will not buy.
1498. Is it not the fact that the sales at Narrabeen and Hornsby are the two best sales the Government have had? Yes, for outside lands.
1499. On the two occasions when you visited this locality with Mr. Burns, is it not a fact that you visited merely the Crown lands? Yes; the reserve near the public school site.
1500. Mr. Burns did not take you over his land? Not at all, except the land crossed by the road "A," at the railway bridge.
1501. You confined your attention solely to the Crown lands? Quite so. I do not know what we did exactly. We did nothing in particular.
1502. The object of your visit was to go to the Crown lands? That was on the second visit, beyond a doubt. I am speaking of the first visit. I went up with him as a friend, I understood, on the first occasion.
1503. Then you went officially? No; I do not think I did. I think I went up with him as a friend. He asked me to go with him, and I asked no questions. He asked me if I was disengaged on Saturday, and I went up.
1504. You spent that time inspecting the Crown lands? Yes. I certainly did not look at any of his private lands. We went and looked at the land where the bridge is. That is what we went to look at. We had very little time there. We went to look at this reserve on the first visit. I did not look on the first as an official visit, but the second was undoubtedly.
1505. You stated that, while you consider roads A, G, the Junction Road, I, and J, which of course include C and F—while you consider those justifiable, in your opinion, you would not have made the others? No; and I would only clear those mentioned.
1506. Now, suppose you had to purchase those roads, what was the price of land at the time? I think the land is worth about £40 an acre.
1507. You would have had to pay £40 an acre for those roads? Yes; I think we should have got it for that.
1508. Do you know what it has cost to clear those roads per acre? I know what it is worth.
1509. As it has been done, we are told it would cost £7 an acre? Yes; that is very reasonable if they took trees out 12 inches under the surface.
1510. If you did not go below the surface you could get it done for £2 or £3? For £4.
1511. As you have seen it done, is £7 an acre a fair price? Yes.
1512. *Mr. Brunker.*] Is not that a big price? It is quite enough. I thought about £6, but did not wish to be too critical.
1513. *Mr. Carruthers.*] You stated in your evidence that you would have cleared these roads if the owners gave these lands free? Yes.
1514. Now you say the value you would pay for the land is £40 an acre, and the equivalent you would give the owner is £7 an acre? Exactly; I expect to make something out of it for the Government. That is the way I work. Then we proclaim that road, and it gives a frontage to the estate.
1515. You would be doing justice to your employers? Exactly; I serve the Government exactly as if they were private individuals.
1516. And getting the best of the bargain? Exactly.
1517. Now, I know you speak as an officer looking at a normal state of affairs; but considering that the Government had a large number of men unemployed, for whom they had to find relief work, do you think they lost anything by the bargain in this case in getting roads G, I, F, J ballasted while they were on the spot, after getting the land given to them free—so getting perfect access to the Crown lands—considering the cheap labour, and the necessity to find employment for this labour? I think the Government lost by it, beyond a doubt.
1518. In what way? We did not get the money back that was expended on these roads, and never shall.
1519. You say that, despite the fact that it has been the best sale you have had? That has not been the best sale. I said the Gordon sale was the best. I was rather disappointed about this sale. I did not think it was a particularly good sale.
1520. You said before that the Narrabeen and this were the two best? So they were, as regards outside sales; but Gordon is a suburban subdivision virtually.
1521. What did this land fetch? About £40. Some we could not sell at all.
1522. £78 was the highest? Yes.
1523. What was the lowest? £25, I think. (*Refers to lithograph with selling prices marked.*)
1524. Where do these roads come in? (*Witness indicates approximate position of roads.*)
1525. Do you notice that where you have marked the road C coming in, the price obtained is the highest in that block? Yes; but it was not because of that exactly. The reason that fetched such a price was because it has such a long frontage to the Boundary Road.
1526. You do not give any credit to the fact of there being a good made road facing it? Not very much.
1527. If it is no benefit to the buyer of that lot, can you tell me what advantage it is to the people through whose land it goes? Of course it gives them double frontage all the way.
1528. There remains the fact that this land brought £65 per acre; the next block, facing the same road, £61 per acre, and the other blocks diminish in value down to £41? Yes; but there are different elements there.
1529. Now take the block where the next road, D, comes in;—do you notice that this block fetches £33 per

per acre; the next blocks to it, although they are closer to the station, drop to £25, £29, and £27? Yes; J.W. Deering. but that is not the reason why. The reason that fetched the money is that Boundary Road is made and King Road is not. 30 Nov., 1888.

1530. Nevertheless here is this road made to that limit, and yet this fetches £60? Yes; but the best of the land is on the top of the hill. Some of the other did not fetch so much because of the rocks. (*Refers to plan.*)

1531. Do you know that Burns and Withers sold some land on the other side of the railway line? Yes; in the Hornsby Junction estate, at 20s. per foot to £3 10s. per foot, near the railway station.

1532-3. Are you sure they did not sell some on the same side as the Government land? I do not know; I was not aware that they had.

MONDAY, 3 DECEMBER, 1888.

Present:—

|-------------------|-----------------|
| MR. WALKER, | MR. STREET, |
| MR. O'SULLIVAN, | MR. CARRUTHERS, |
| MR. M'MILLAN, | MR. COPELAND, |
| MR. HENRY CLARKE. | |

T. WALKER, ESQ., IN THE CHAIR.

John William Deering recalled and further examined:—

1534. *Mr. M'Millan.*] Mr. Gordon is your officer, is he not? Yes.

1535 He seems to have had a good deal to do with the initiation of these roads, if I understand aright? J.W. Deering. It seems so from the papers. 3 Dec., 1888.

1536. How was it that Mr. Gordon, being an officer in your Department, should do anything in the matter without its going directly or ultimately through you? He should not have done so; it was very wrong of him to do so.

1537. You are, I believe, in the position of head surveyor to the Metropolitan District? Yes.

1538. And every officer in that district is under you? Yes.

1539. For how long did the period extend during which Mr. Gordon was acting, or is acting, on his own account, instead of acting directly through you? I can judge only by the papers. I see his letters now for the first time.

1540. But 'speaking roughly? I see there are four of his letters in the papers at various dates, from October, 1887, to May, 1888.

1541. Are you not supposed to have a more or less accurate knowledge of the movements and works of your officers? Yes.

1542. You say you know nothing, except from reference to Mr. Gordon's letters, of what he has done in the matter; surely, during the eight months to which you have referred, you have some knowledge of the work occupying Mr. Gordon's time as your subordinate officer? You see he might easily have written any one of these letters without my having any knowledge of it.

1543. Mr. Gordon is an officer under your supervision; he is engaged on certain work, and, by the rules of the office, he should report to you, you being responsible for him;—how could he be so long employed on work of which you knew absolutely nothing? He was not employed exclusively on this work during the period I have named. All I say is that he wrote these four letters during this period. He was not employed by the Casual Labour Board from October, 1887.

1544. What I want to get at is this: Mr. Gordon did a certain amount of work as your officer in connection with this Hornsby Estate through the Casual Labour Board;—how is it that he did work of this kind without you having any knowledge of it. I take it for granted that you ignore, as far as you are concerned, and that you disclaim any responsibility for it? Yes.

1545. How can you ignore work done by an officer in your own Department for whose action you are directly responsible to the Minister? I can only say that these letters are unwarranted.

1546. Was Mr. Gordon not employed by the Casual Labour Board under Mr. John Davies? No; he was not. I protested against Mr. John Davies writing to Mr. Gordon. Mr. Davies wrote to him recently, and I protested officially against his letter.

1547. Did not Mr. Gordon do some work in his position as a Government officer in connection with these roads? You are rather emphasising what he did. Of course he knew the country intimately.

1548. You know now that Mr. Gordon was employed by the Board—that he had something to do with it? I did not know till I saw the papers.

1549. You know now? I know now.

1550. How could an officer under you be spending his time doing certain work without you having some knowledge as to how it came about? He was not spending much time at it. I know, as a matter of fact, that he could not have done so. He could not possibly have done so without my knowing it. He sends me a progress journal every month. You must bear in mind that it would not take a very long time to write any of these letters and to make these proposals.

1551. He had no right, without instructions from or without the letters going through you, to take the initiative in any work of this kind? He had not. I may say that I reprimanded him for writing this letter of 28 January, 1888.

1552. *Mr. Street.*] Had you at any time charge of the unemployed? Yes.

1553. When? From about September, 1886, to about May, 1887.

1554. Can you tell us how it was that you gave up charge of the unemployed? I found that I could not carry on my duties as district surveyor and carry on the "unemployed" work as well, and resigned the latter.

1555. Who succeeded you in your charge? The present Labour Board. Sir Henry Parkes asked me to be on the Board, but my official duties were too heavy.

1556. How were the unemployed paid during the time you had charge of them? By contract.

1557. All? Well, there were, of course, a few whom we could not pay by contract.

1558. Were any large number employed upon day labour? No; very few.

1559. On what description of work did they engage? Well, clerks, storemen, and making culverts. They were paid at day rates. 1560.

- J.W. Deering. 1560. What rate of wages were paid to them? I gave one of the men 6s. a day; he was a ship's carpenter, and a skilled labourer.
- 3 Dec., 1888. 1561. Do you know the position of the Boundary Road dividing private roads from Crown lands? Yes.
1562. It has been said that it is very difficult and expensive in its formation? In one place.
1563. The Boundary Road being difficult of formation, do you consider it necessary to form the Junction Road in order to get communication with the station? I would have cleared it, but I would have formed nothing.
1564. This would have enabled the private land to take advantage of the features of country? Yes.
1565. That being so, what advantage was it to the private owners that roads B, C, D, E, and F should be constructed? Well, it would give them cleared roads and additional frontages.
1566. But it seems to me that they did not want it? Of course they did.
1567. What for? For the subdivision of their property. You see that this land would be cut up into much smaller allotments than shown on lithograph, with roads running east and west.
1568. *Mr. Carruthers.*] Is it a fact, with regard to the Narrabeen land sale, a lot of roads leading to that estate were formed by the Government through private property—French's Road, for instance? French's Forest Road is a public road, that is the difference.
1569. What do you deem a public road? A road proclaimed under the Act.
1570. That is what you as a surveyor deem a public road? Yes.
1571. Are you aware that cross roads from French's Road have been formed to the Narrabeen Estate through private property;—Wheeler's, for instance? Yes; I know Wheeler's Estate.
1572. Are these cross roads formed to give access to the Narrabeen Estate? I would not have formed it.
1573. But are you aware whether it has been done? No.
1574. You have not observed it? No; the cross roads were not done by my suggestion.
1575. *Mr. M'Millan.*] Is it not a fact that the natural way of getting up on the Government land at Hornsby is north and south, the gullies rendering it impossible to take the roads east and west? Yes.
1576. I understand that the land is so full of gullies and creeks, that in opening up the property it is necessary to take roads from north and south? Yes; but not so many as have been made.
1577. But speaking generally? Yes.
1578. I take it that the Crown land is not so different to that of Messrs. Burns, Withers, and Smith, that it might ultimately get into small subdivisions? That is not so.
1579. There are great natural obstacles in the way of forming the Boundary Road? Yes.
1580. Taking for granted that Pearce's Corner line is constructed, would not the natural way to get to the Crown lands be from that direction instead of coming straight on from Hornsby? Yes, partly.
1581. It follows that it would be necessary by various means to open up communication on that line to various points of the Government land? Yes.
1582. Suppose you owned the Government land yourself, and you wanted to make a mutual arrangement and simultaneous settlement of both your land and the other land, would you not feel inclined to make arrangements for roads to be constructed pretty much as these roads have been constructed? No; I would not.
1583. Then how would you get the benefit of access from Pearce's Corner Railway? I would not offer to spend £5,000 in order to get £4,000, land included.
1584. But speaking generally, would you not try to arrive at some arrangement with your neighbours on an equitable basis for the opening up of the roads through yours? Without doubt.
1585. *Mr. O'Sullivan.*] But you would not spend £5,000 to get £4,000? No.
1586. Do you consider that the value which the Government have given to this property is greater than the value they have received? Yes.
1587. *Mr. M'Millan* has asked you whether you would not endeavour to come to some arrangement with your neighbour for the making of these roads; but suppose you saw that your neighbour was doing these roads himself, would you step in and relieve him of the work? No; I do not think so.
1588. Roads have been commenced upon the estate by Messrs. Burns, Withers, and Smith before the Government commenced constructing any? I believe so.
1589. *Mr. M'Millan.*] If I understand your evidence rightly, it is more against the number of roads made than the advisability of some? I admit the advisability of some being cleared.
1590. *Mr. O'Sullivan.*] Taking up that line of argument, and admitting that some roads should be cleared from the Pearce's Corner line to the Crown lands, do you admit that four roads running in that direction are absolutely necessary? Certainly not.
1591. You say that you did not authorize Mr. Gordon to work for the Casual Labour Board? I did not, and I objected to it the moment I knew of it.
1592. If Mr. Gordon undertook work under their instructions he did wrong, and should have received his instructions from you as Metropolitan Surveyor? Yes.
1593. Did you think it your duty to interfere with Mr. Gordon's work, knowing that he would be authorized to construct the roads by Mr. Davies, who represented the Colonial Secretary? I did not know that at all.
1594. You were not conscious that Mr. Gordon was doing this work? Not till I saw these printed papers.
1595. *Mr. Street.*] You say you do not consider all these roads necessary;—which would you have dispensed with? I would rather say the roads I would have cleared, for brevity. I think, in view of the convenience of persons coming from Sydney, the Vanceville Road should have been cleared, provided the owners would have given the land; I would clear a road to give access from the Pennant Hills; I would clear the Junction Road along its whole length, provided always that the owners would give the land; I would also clear the extension of Boundary Road westerly to the station; road A I think I cleared myself.
1596. If you would have cleared only those roads, by what means would you have given the purchasers of Crown Lands access to the good land between the gullies;—for instance, road B would lead up to a lot of good land according to the evidence we have taken? I would clear all the tributary roads from Junction Road. My great objection to the roads through this private estate consists in the formation, ballasting, the side drains, and the culverts.
1597. *Mr. M'Millan.*] But you do not object to the clearing? No.
1598. *Chairman.*] Are you now speaking of all the roads? I am speaking of those I have just enumerated.

J.W. Deering,
3 Dec., 1888.

1599. *Mr. Copeland.*] You object to the other roads altogether? Yes.
1600. Have you any reason to suppose that if the Government had not cleared the roads through this estate the owners themselves would have cleared them? I am sure they would.
1601. Is it not a fact that the laying off of the roads really forms the subdivision? It forms the back bone of the subdivision.
1602. In every case you know of, have not the owners of private estates laid out the roads and cleared them? Yes; so far as I know, in any valuable estate.
1603. Were not these roads through the Burns, Smith, and Withers' estate laid off and surveyed before any Government expenditure was made upon them? Yes.
1604. The whole of them? Yes; by Mr. Dawson I believe, the surveyor to the Burns' estate; I am not sure that all of them were laid off but some of them I am sure were.
1605. And your experience leads you to believe that the owners of these private lands would have cleared the roads at their own expense? There is no doubt about it.
1606. That applies to the roads on the whole estate? It does; still they might have done it in their own time.
1607. You did not survey any of these roads? No.
1608. You have no intention of recommending that the Crown lands to the eastward of the Government subdivision should be put on the market immediately? No.
1609. They are very rough? Yes; some of the Hornsby Government estate, near the railway, is not yet sold, we could not sell it at £10 an acre.
1610. Then there was no immediate prospective benefit to the Government resulting from the making of many of these roads? No; the making of the roads was wrong, there is no getting away from that.
1611. You have been out on these roads on several occasions? Yes.
1612. Did you go out officially or unofficially? I went out with this Select Committee, that was my first visit.
1613. But you have been out on to the land before? Yes; but not on to the roads, I was never over Burns' land before.
1614. What was your object in going out there? If I remember rightly I went out with Mr. John Davies in connection with the reserve.
1615. Did anyone else accompany you? Mr. Burns.
1616. Had you any roads through the portion of Crown lands on the western side of the railway now forming the reserve? No.
1617. That land was formerly Crown land subdivided with the object of sale? It was designed; I do not think it was subdivided; I do not think it got so far as that.
1618. Do you remember the area of the reserve? Twenty-seven acres.
1619. That was designed for a subdivision? It was.
1620. Did you make or form any of the roads? No.
1621. Or metal any? The land was never subdivided. The subdivision was stopped.
1622. Have any roads since been made on that side of the railway on what now forms the reserve? I think not.
1623. You recommended that that subdivision should be sold? I did.
1624. But it was afterwards not sold? It was not.
1625. But it was made into a reserve? It was.
1626. At what do you estimate the value of the land near the railway? £1,000 or £1,200 perhaps.
1627. How much is contained in the portion of the reserve near the railway? Twenty-seven acres. Some of it is very precipitous. There are 10 acres of good land, and those 10 acres would be worth £3,000. They adjoin the Public School and Court-house sites.
1628. Did not the Public School and Court-house sites form part of the reserve? They did.
1629. Before it was made a reserve? No; before it was subdivided.
1630. This 10 acres which you estimate to be worth £3,000 was, with other lands, subdivided by the Crown for sale? Yes; but not marked on the ground.
1631. But the sale never took place, and the land was reserved? Yes; that is so.
1632. Can you say when it was reserved? In 1887.
1633. While Mr. Garrett was Minister for Lands? I think so.
1634. Is it not a fact that I previously refused to make a reserve of it? By reference to the papers now before me, you refused to do so on the 7th December, 1886. Your minute is to this effect: "Mr. Burns, M.P., may be informed that sufficient provision has already been made for reserves in this neighbourhood; but should the public interest require further provision to be made at present, I see no reason for withdrawing the portion referred to from subdivision." I may say that I reported against Mr. Burns' application.
1635. For what purpose has the land been since reserved? For public recreation.
1636. I understand that 4 acres are taken out for a Court-house reserve, and that over 2 acres were taken out for Public School reserve? Yes.
1637. And the balance of the 10 acres has since been formed into a recreation reserve? Yes. I ought to explain that the Court-house site was on the other side of the road.
1638. But the Public School site was a portion of the 10 acres? No; I think you misunderstand; the 10 acres was beyond that.
1639. The 10 acres valued at £3,000 has been made into a recreation reserve, and, in addition to that, reserves of the areas I have named have been made for the Court-house and a Public School respectively? Yes; the Court-house is on the eastern side of the Peat's Ferry Road, not on the eastern side of the railway; I daresay it amounts to 4 acres.
1640. Have any roads been made through these reserves since they were proclaimed? Not that I am aware of.
1641. You are aware that the employment of these men in making roads was simply to take them off the labour market? I understood so.
1642. Had you no Crown lands subdivisions upon which this labour could have been judiciously expended in the making and forming of roads, take Harbord for instance? Oh, yes; and we had the whole of the Field of Mars.

- J.W. Deering. 1643. You would have had no difficulty in finding employment for any number of unemployed in making roads through Crown lands subdivisions? None whatever; there were 4,300 acres of land unsold at the Field of Mars. The Casual Labour Board might have used the unemployed out there.
- 3 Dec., 1888. 1644. It is said in the debate in Parliament that I had to do with the starting of the unemployed in making these roads; you have had charge of the papers I believe? They have come to me officially from time to time.
1645. As the Metropolitan District Surveyor you would know to what extent I, as the then Minister, had to do with the opening of these roads? You had to do with the A road only.
1646. What was the extent of my connection with the opening of that road? As Minister, you approved of the exchange of a strip of land to the north of the grant, for the road going over the bridge to Crown land.
1647. The road is from Crown land to Crown land? Yes.
1648. What is approximately the length of it? Half a mile.
1649. Had I anything to do with giving instructions for the opening of these other roads? No.
1650. Can you find the papers;—I myself cannot find the papers showing that I had to do even with the road A? I do not see the paper; but I know that it was so.
1651. You were asked whether the private owners would benefit by subdivision roads from Junction Road—how many acres would those allotments contain? The land would not be sold in those large-sized allotments, as shown on lithograph.
1652. Would it not be necessary to even further subdivide the land, and to have an additional number of roads? Yes.
1653. You were asked whether it was not a fact that roads had been made through private land at Narrabeen—do you consider it justifiable that these cross roads should have been made at the public expense? I do not approve of making these roads at all through private land. Clearing is a different thing.
1654. You do not object so much to the clearing of the land for the roads? No; provided the owners give us the land.
1655. But in cases where the owners of private land are going to subdivide, would it not be preferable to leave them to clear their own roads, while we employed the unemployed in clearing the Crown lands subdivisions? I should clear only one or two of the leading roads.
1656. But you would clear those roads if you knew that the owners of the land were going to clear and subdivide? Well, I don't know; they might not clear in time for our sale.
1657. And in a case of that kind you would consider it justifiable to clear the roads? Yes.
1658. Will you state the nature of the obstacle in the Boundary Road preventing it from being made a passable road? The moment you leave the present subdivision and cross the creek you come on to a wall of rock. It is between the roads D and E.
1659. But it is sandstone rock? Yes.
1660. Would there be any difficulty in cutting through that rock and filling up the gully? You could greatly improve the road by a large expenditure of money.
1661. Which would have been the largest expenditure, the making good of that one bad place in the Boundary Road, or the expenditure which has taken place upon the whole of these roads on private property? If the money expended on the making those roads had been expended on the Boundary Road, you could have made a very good road of it. I think it would have made it a very passable road for £2,000. You would have to cut off the top, and run it down into an embankment.
1662. What, roughly, has been the expenditure upon the whole of these roads on private property? They have cost £5,000 if they cost a shilling.
1663. Has not road A been extended through the Crown land subdivision? It has.
1664. In point of fact, Crown land to which access is given by the roads E and F is unfit for subdivision at the present time? It is not advisable to subdivide them at present.
1665. I suppose those lands are comparatively worthless at the present time? They are not worth £10 an acre.
1666. And you have no idea of recommending that those lands should be put upon the market at present? Not for some time to come.
1667. I presume we have plenty of land already subdivided of a superior character which could be put into the market to supply any demand? Oh, yes; we have much better land than that.
1668. Can you give us any information as to the area of Crown lands subdivisions available in the same neighbourhood? We have a lot of land further on than that. We have 5,000 acres subdivided to the east of it; it is a better quality of land. I left the worst to the last.
1669. This land you look upon as the worst? There cannot be any doubt about that.
1670. In addition to this, what area of land have you at Harbord unsold? 270 acres.
1671. What area have you at Beecroft and Field of Mars? 4,300 acres, and in addition to 4,300, Narrabeen and Gordon.
1672. Upon the whole of this land you could have employed the whole of the unemployed in metalling and forming roads? Yes; but I object to metalling even on Crown lands—it does not pay.
1673. At all events the men could have been employed in forming the roads there? Yes.
1674. The roads were surveyed? Yes.
1675. Your experience is that the expenditure of labour on these subdivisions would have enhanced the value of Crown lands, and the Government would have been recouped? Yes, I think so; if the roads were cleared and culverted only.
1676. You think the Government would have been recouped in the wages of the unemployed so engaged? I do not think they would have been recouped, but the increased receipts would have gone towards it, and effected a sale of the lands.
1677. Do you think that the Government would have been recouped in making these roads through the properties of Messrs. Burns, Withers, and Smith? No honest man can, I think, honestly say so.
1678. *Mr. McMillan.*] I understood you to say that the expenditure upon these roads through private property had been £5,000? I am sure of it.
1679. And you say that for an expenditure of £2,000 you can overcome certain difficulties on the Boundary Road? Yes.
1680. But I suppose that even with the expenditure of that £2,000 would not make the road a satisfactory road? No; there would be a very steep gradient, about 1 in 6, I should say, in one place. 1681.

J.W. Deering,
3 Dec., 1888.

1681. What would it cost to make the Boundary Road a satisfactory road for the purposes of traffic as a Junction Road? It would cost a lot of money; you would have a 50-foot cutting.
1682. But roughly, what would it cost to make the road a satisfactory road? £10,000, roughly.
1683. Then it would cost twice as much to make that one road satisfactory as it has cost to make the whole of these other roads? Yes.
1684. But even suppose the Boundary Road were made, that would not preclude the necessity for other roads leading up to it? No.
1685. So that even supposing there were certain roads which are not absolutely necessary at the present time for the purpose of the plan, they have been laid out as a mere matter of economy, for the purpose of giving access to this property? I approve of the four roads going out of the Junction Road.
1686. That is not my point, I do not wish your evidence to appear inconsistent; the inference to be derived from your reply to Mr. Copeland just now was that the Boundary Road could be made in a certain sort of way? My evidence will not be inconsistent. I know for £2,000 you can cut down a lot of stuff, run it down, and make an embankment of it.
1687. But you could not for that expenditure have made a satisfactory road of Boundary Road? Not altogether satisfactory; there would have been a steep gradient under any circumstances.
1688. You have said that you approved of that road? I approved of the clearing of the road.
1689. What I want to remove from your evidence, then, is this appearance of inconsistency;—it might appear from your evidence that the Boundary Road could have been substituted for this expenditure for the Government Road? It certainly could not; it is to the advantage of the Government to have the Junction Road cleared, but only cleared provided the owners gave us the land.
1690. You say that there has been no communication between you and the unemployed department? Not the slightest.
1691. Consequently your knowledge as to the value of this land would not be at the disposal of the Board? No application was made to me.
1692. Is it not a fact that at the sale of the Hornsby subdivision as much as £70 an acre was given? Yes.
1693. Do you not consider that a good price? Yes; the very best of the land was bought, some of the inferior land was left.
1694. This land that brought £70 an acre was all on one spot? Yes; only one allotment, I think, brought £70 an acre; the average was £35 or £40 an acre.
1695. As a Crown land sale was it a good sale? Taking it altogether it was a fair sale.
1696. Are we to infer that the prices obtained were a fair test of the value of the land generally? It was a fair test of the value.
1697. Consequently we can say that the roads about which we have been talking open out land which is as a whole of fair quality, excepting the test of this particular sale? No; the land was the pick of the land there.
1698. Was there, as far as you know, any evidence before the Casual Labour Board showing them that this land was not the fair average of the Crown lands in that neighbourhood. Do you know whether the Board were aware that this land was better than the remaining Crown land to be disposed of? I know that Mr. Davies himself is one of the best judges of land in the country, and he knew this particular land.
1699. Then you cannot tell us definitely whether there was any evidence in the possession of this temporary department to give an idea that they were making an entrance to land which was not of as good average value as the bulk of the Crown land in the vicinity? I think they had a tracing supplied to them.
1700. *Mr. Copeland.*] Was not the land visible to the Board; could they not have judged for themselves? Yes.
1701. The Board consisted of two professional men and Mr. John Davies? Yes; but the professional men were very much engaged otherwise; they had other duties to attend to.
1702. But any one of the members of the Board could have gone on the land and have judged of its value for himself? Yes.
1703. As a matter of fact, the further away you get from the railway the less valuable the land becomes? Yes, as a rule.
1704. What was the reason you stopped short with your subdivision at Hornsby? Because the other land was not worth subdividing at the present time. If it was, I would have it surveyed next week.
1705. Vanceville land is the land which the road E gives access to? Yes.
1706. You said just now that the land sold at Hornsby fetched an average of £40 an acre? About that.
1707. Was not that land cleared? Yes; the roads were cleared and grubbed.
1708. If you were to clear, grub, and form roads on the land further to the east you would still receive much less money for it? Yes; proportionately.
1709. *Mr. Carruthers.*] What was the full amount which you realized at this sale? £4,300
1710. Did you sell all that you put up? All that was of any good.
1711. What proportion to the land sold to the land unsold? I think we sold about two-thirds.
1712. *Mr. Copeland.*] How long were the men employed making these roads? Since May, 1887.
1713. Up to the present time? Yes. After they had cleared our land they put the men on to the other land.
1714. If a mistake had been made at the outset there was ample opportunity to rectify it by withdrawing the men? Yes; I suppose so.
1715. *Mr. Street.*] What was the total number of acres you put up for sale? 230 acres. We sold about two-thirds, it realized £4,644.
1716. *Mr. Copeland.*] It would be an average of about £33 an acre? About that.
1717. *Mr. Carruthers.*] Will you put in the sale plan which you are reading, as part of your evidence? Yes.
1718. *Mr. Copeland.*] You did not think that the clearing and forming of the roads in the Crown land to the eastward would pay? No, it would not pay.
1719. The Government would have lost by the transaction? Yes; the country is so bad.
1720. *Chairman.*] You said just now that you knew nothing of Mr. Gordon's action except from what you saw of the printed correspondence? Yes.
1721. He surveyed and authorized no roads with your knowledge? No; he surveyed no roads at all.
1722. If he states that he recommended road E and some other roads, is that correct? I know nothing about it, I know that he surveyed none, no amount of his time was taken up, I had a check upon him.

- J. W. Deering. 1723. He states in connection with the recommendations made by him to the Casual Labour Board that those matters were known to Mr. Deering;—if you read Mr. Gordon's evidence in reply to 723, and so on, you will see what I mean? He knows that it is untrue. You will see that he implies in the first part of his examination that the matter was unknown to me, which is evident. If it were known to me, I would have made the recommendation if proper, and not Mr. Gordon. That is a disapproval of his statement.
1724. He also states in his evidence that you wrote a letter to the Casual Labour Board that you would assist them to the full extent of your power, and that Mr. Gordon would do the same? That is likely enough, on transferring charge of the "unemployed." I think it was the case, but they never applied to me. We were seized of the whole of the operations desirable and necessary; we knew what should be done, and I think I simply wrote to say that I would aid them in any way in my power.
1725. What you meant to imply was that so far as the work upon which you had been engaged was concerned you would be glad to render your services available? Yes; I meant, of course, that they might have my official advice.
1726. Mr. Gordon says that Mr. Deering handed his services over to the Casual Labour Board to carry out the rest of the work;—would that be true? It might have been for a very short time correct, and referred to anything which was in hand at the time of transferring charge of the "unemployed," but I objected to any action between Mr. Gordon and the Casual Labour Board.
1727. You did not mean that Mr. Gordon could at any time communicate with the Labour Board and place his services at their disposal without your knowledge? No.
1728. If he did so without your knowledge, should you consider that he had exceeded his power? Yes.
1729. On examination by Mr. Carruthers the other day you were asked about the prices realised by the land at Narrabeen, Harboard, Gordon, &c. You were asked this question with a view to show, I think, that the lands to which most access had been made realised the best prices? In connection with the land for which we received the most money no roads at all were made.
1730. Do you consider that the value of the land sold at Hornsby was given to it by its juxtaposition to the railway, or by the roads which had been made through the property of Messrs. Burns, Withers, and Smith? The juxtaposition of the railway was the chief cause of what was realised. The land further away is not only poor, but also decreases in value, from its distance from the railway line.
1731. Can you give us anything like an idea of the proportion of money spent upon the Crown lands at Hornsby to that spent upon the private property there? They could not have spent more than £700 or £800 upon the whole of the Government subdivision; but on Messrs. Burns, Withers, and Smith's land I am confident they have spent not less than £6,000.

TUESDAY, 4 DECEMBER, 1888.

Present:—

MR. WALKER,
MR. BRUNKER,
MR. COPELAND,

MR. McMILLAN,
MR. O'SULLIVAN,
MR. STREET.

T. WALKER, ESQ., IN THE CHAIR.

Charles Burford Dawson called in, sworn, and examined:—

- C. B. Dawson. 1732. *Chairman.*] Are you, or have you been, private surveyor to Mr. Burns? I have.
1733. Did you survey the property at Hornsby? I did.
- 4 Dec., 1888. 1734. Have you got a plan of the survey you made? This is the outline of the survey of the property.
1735. Have you got a plan showing the subdivisions you made, and the roads and streets? No; I have no plan of that.
1736. Did you survey any roads or streets? I laid a few streets out for the clearers.
1737. Look at the tracing before you, by Mr. Deering;—are any of the streets there those you surveyed? The only street I laid out was Junction Road, from the road C to the Vanceville Road.
1738. Is that the only street you laid out? And this one—DH, from Boundary Road to Burns Road.
1739. Did you lay out that road further to the east, road E? No; I did not touch that.
1740. Look at those roads close to the railway station, T-shaped roads;—did you lay any of them out? Yes, the continuation of the Boundary Road to the railway. I laid out, years ago, the township subdivision, half-way between the railway and the road marked B.
1741. Then the roads as you see them there have been continued as you laid them out? They have been continued evidently.
1742. Are there any other roads there that you laid out;—did you lay out Burns Road? That was originally laid out by the surveyor who did the Vanceville township—Mr. Boyle. It was already marked out. I did not touch it. It was done years ago.
1743. Do you know on whose property it is? I fancy it is Government land, and not on any private property.
1744. Are you sure of that? I am not certain, but it is a road that was left for the use of this Vanceville township. The road is excluded from Burns' land.
1745. Is it not on Burns' land? No.
1746. Take the road running south from Burns Road, the continuation of road H;—did you lay that out? No.
1747. Then the road parallel with Burns Road, and about 5 chains to the north of it;—did you lay that out? No; I can explain why that was left there. When I went up to lay out this northern portion of road H, and to give the points to the clearers, they had reached the Mistake Road, and that road was then being cleared. They thought it was Burns Road.
1748. By whom was it being cleared? By the unemployed, or people working there.
1749. How long ago is that? I suppose it is twelve months ago.
1750. Then you were surveying for Mr. Burns and laying out roads whilst the unemployed were working there? Yes.

1751. *Mr. O'Sullivan.*] Can you identify Mr. Burns' property on this plan? Yes.
1752. Kindly point out which it is? It is bounded on the south by Burns Road, on the east by the Vanceville Road, on the north by Boundary Road up to the end of the Crown lands near the station; it then runs north of road A to Fiers' property, and then it is bounded on the west and north by Crown lands.
1753. Is the land between Boundary Road and Junction Road, from the railway towards road I, a part of the estate? Yes.
1754. Do you see the three little pieces marked green, to the south of Burns Road;—did you survey those? I surveyed the piece south of Burns Road.
1755. *Chairman.*] Are all the pieces marked green on that tracing Burns' property? I do not know about the little piece to the south of Burns Road, in the centre.
1756. *Mr. O'Sullivan.*] All the other portions except that you identify as the property of Burns, Withers, and Smith? Yes.
1757. *Chairman.*] And that may be for all you know? Yes.
1758. *Mr. O'Sullivan.*] You said just now that Burns Road was a public road;—does it not run between the properties of Messrs. Burns, Withers, and Smith? It does run between the properties.
1759. And you say that Burns Road is not included in the estate? Certainly not; it is dedicated to the public. The Vanceville estate has been a public estate for years.
1760. *Chairman.*] Was not part of the Vanceville estate formerly Mr. Burns' property? I believe it was.
1761. *Mr. O'Sullivan.*] Burns Road is marked on our plan as previously cleared by owners? Yes; it was cleared by somebody when I went to survey the land here some years ago.
1762. When you went to survey the land you found that it had been dedicated to the public? Yes; that we excluded, because we found that it had been dedicated.
1763. Beyond Junction Road, Road H.D, and portions of these T-shaped roads between the railway station and I road, you say you did not lay out any other roads whatever? No.
1764. *Chairman.*] You did not finish your account of the Mistake Road;—it was not quite clear how that road originated? It originated in the mistake of the person in charge of the clearers, who mistook it for Burns Road. I pointed that out to him when I went up there.
1765. *Mr. Copeland.*] The person who had charge of the unemployed? Yes.
1766. *Mr. Street.*] Did you lay out that continuation of the H road to the Lane Cove Road? No; I did not lay that out.
1767. Do you know whether or not that was laid out in the subdivision of the Vanceville property? It is not part of the Vanceville property at all.
1768. There are a number of small holders marked on the eastern side of the continuation of H? That road is evidently part of some subdivision here.
1769. Would that be evidence to you that that road had been in existence since these people owned that land? That road was in existence no doubt. I have it shown here on my own plan. It was laid out in the subdivision of what, I think it was called, the Big Island estate.
1770. It has no frontage whatever to the Burns-Withers' land? No; they do not front it at all.
1771. *Mr. Copeland.*] Were any of the roads when you were surveying cleared and formed? The only road done was this Boundary Road.
1772. Was that cleared? Yes.
1773. Not formed? No; just cleared.
1774. None of the other roads were cleared? None of these roads were cleared. I surveyed them for the purpose of having them cleared. Mr. Burns left it in my hands entirely to leave roads where I pleased. I was to meet the man in charge of the unemployed there, who wanted some roads left through the estate, and I was to leave them in the best places I could.
1775. Who wanted the roads made through the estate? Whoever was in charge—Mr. O'Donnell, I think. He met me on the ground each time, and he said that he wanted roads in certain portions.
1776. Then Mr. O'Donnell really designed what roads were to be laid out on the estate? Yes, he designed exactly what he wanted. If I thought they were practicable I surveyed them for him.
1777. What was his reason for taking the roads where he did take them? I think simply to produce the roads from the Crown lands. I did not give my consent to the roads E, C, and B.
1778. E, C, and B, you did not give your consent to? I objected to them. I told him I would not allow them to be laid out; but evidently he has cleared them, and I have heard no more about it.
1779. Were there roads at that time surveyed through the Crown lands in continuation of the roads you allude to? Yes; they were surveyed and laid out.
1780. On the Crown lands? On the Crown lands.
1781. So that these roads were made a continuation of the roads on the Crown lands? Evidently a continuation of those roads.
1782. None of these roads were cleared when you were there? No.
1783. Did Mr. O'Donnell give you any further reason why these roads should be made? No; he gave no reason. These cross roads were cleared after.
1784. In subdividing those lands for sale I suppose it would have been necessary to have these roads, or to have had other roads quite as near as those are to each other? Well I do not know. I do not think we required any running north from Junction Road.
1785. Is it not the custom, when you are making subdivisions, to have roads closer together than these roads are shown? The block east of road DH should have been cut up into orchard blocks, with very few streets.
1786. That block would be what length—a mile? A little more than a mile, a chain more than mile.
1787. Would you not consider it desirable to have a street intersecting that mile in length, somewhere in the position of E? I should say one should come about the centre. There should have been one somewhere in that position.
1788. You would have laid it out for orchard blocks—in how many acre blocks—what would you estimate a suitable area? About 10-acre blocks.
1789. What area do you estimate, roughly speaking, there is in the block between the streets C and D? About 40 acres, I suppose, in the whole block between the two roads.
1790. You say that you consider that the whole of this block, over a mile in length, and I suppose considerably over half a mile in depth, was more suitable to be cut up into orchard blocks? Yes. 1791.

- C. B. Dawson. 1791. And that these blocks would be about 10 acres in extent;—would it not have been necessary then, in subdividing for orchard blocks, to have had a good number of roads, to enable you to get to the various blocks? I should think not. My idea in cutting that up would simply be to give access to the railway station.
- 4 Dec., 1888. 1792. But how would you cut it up into 10-acre blocks without making roads through it? You could cut it up into 10-acre blocks and not leave more than one road. You could leave it through the centre.
1793. What frontage would you have? About 20 chains on each side. If you had a road on each side it would leave 10 chains square. With one road you could leave blocks 10 chains square.
1794. You perceive that this block is more than 40 chains in depth? Taking the road out would leave about 42 chains.
1795. How often would you have roads across down here (*pointing to map*)? I do not think it necessary; only one road in the centre perhaps. A man could get on to this road and go straight along to the station; it would be a more direct way. If you left a road in the centre you would have 20 chains on each side; 10 chains square would be 10 acres each. That would leave two rows of 10 acres each here, and two rows of 10 acres each there. You would not want more than one road in the centre. One road would give a frontage to either block.
1796. *Chairman.*] Was Junction Road left with a view to cutting up the land into orchard blocks? I thought it would come in afterwards if they wanted to subdivide. It was in a very good position, and a practicable road; but it would have been much better for subdivision purposes if it had been in the centre of the block. These roads at the south, the mistake roads, are useless.
1797. *Mr. Copeland.*] How is it that this land to the south of Burns Road is cut up into such small blocks;—what is the area of these blocks? About 7 or 8 acres each; about 10 chains wide, I think.
1798. You do not know anything at all about the forming and the metalling of these roads? Nothing. I only laid them out to be cleared, and I have not seen them since.
1799. The whole of the Vanceville estate originally belonged to Burns, Withers, and Smith? I believe it did.
1800. It was sold some time ago? Some years ago.
1801. *Mr. Brunker.*] If you had been instructed to subdivide this land on account of the private owners, would you have adopted this form of subdivision? Certainly not.
1802. Do you think that this form of subdivision, with so many roads intersecting the land, is prejudicial or favourable to the interests of the proprietors? I think it is prejudicial.
1803. *Mr. McMillan.*] That is the reason you dissented from it? Yes. Mr. Burns left the matter in my hands, and I objected to anything that would destroy the property in any way.
1804. *Mr. Brunker.*] I gather from the answer you gave just now that the roads leading north and south are of no further benefit than to give access from the Crown lands and the Hornsby railway line? That is all.
1805. *Mr. Copeland.*] Which roads do you object to; you say you would not have subdivided the land in that way? Roads E, and DH; but taking into consideration this railway station at Pearce's Corner, I daresay DII would be beneficial for the purpose of giving access. I did not know of that at the time.
1806. How would Mr. Burns get to the southern portion of his estate, south of Burns Road, to the east of Pearce's Corner railway, without the road marked E. Supposing these portions were sold in big blocks, and he wanted communication from these pieces to the south, how could he get it without having a road of access? I do not see how he could get down to them without a road was made. I do not see why he would want it.
1807. *Mr. Street.*] Could not he drive along Junction Road, and down Vanceville Road and Burns Road to it? This block has access. It has a frontage to Burns Road and an outlet to this road, which are two dedicated roads.
1808. You stated a little while ago, in answer to my question, that you would have put a road in the middle of the block? Yes; I believe I would have done so.
1809. Did you not state that you would have one road in the middle of this block, which is over a mile in length; now you say you object to it. Will you tell me how you could subdivide it without having a road there? It could be subdivided with one road in the centre only, parallel to Junction Road. As to the road being left in the centre, if I had thought it would have been any benefit to any orchard blocks I should have left it, but not otherwise.
1810. *Chairman.*] As a matter of fact, Junction Road is the road you did leave? Yes.
1811. *Mr. Copeland.*] Supposing you only left Junction Road in the centre of the block, and the people holding the portions to the north wanted to get to the railway station, how would they have got down without this road? Down HHH.
1812. Did you ever see the subdivision of a large block of land like that without its having cross roads through it? Yes; certainly.
1813. Have you ever made a subdivision yourself without having cross roads for over a mile in length? I never made a road unless it was needful. I cannot say about over a mile in length. I have done several subdivisions.
1814. This is over a mile in length, is it not? It is about a mile.
1815. Can you tell me any Government subdivisions that have ever been made without a cross road joining the parallel roads for over a mile in length? I cannot say I remember any. But I think I can quote one subdivision lately where there is no cross road for a mile, that is on the Moorbank estate, a subdivision of 7,000 acres in big blocks.
1816. In what size blocks? From 5 up to 30 acres.
1817. I understand you did not intend subdividing this into blocks like that? I did not think anything would be under 5 or 10 acres.
1818. What is the area of these small blocks to the south? On the average, 7 or 8 acres. Dobson's is 10 acres, and Brown's 8 or 9 acres.
1819. Supposing this piece was cut up into 10-acre blocks what frontage would they have, according to the depth? They would be 10 chains square.
1820. But the distance from Burns Road to Junction Road is 60 or 70 chains? It is only 25 chains between the two roads. From the Junction Road to the north boundary is 17 chains 86 links, and it is 26 chains at the very outside between Junction Road and Burns Road. It is only 43 wide between the two roads altogether.
- 1821.

1821. What frontage would a 10-acre block have between these two roads? Eight chains by $12\frac{1}{2}$, taking the road as it is. C. B. Dawson.
1822. Supposing you divided this block into 10-acre blocks what frontage would they have? I would have a road in the centre. There would be a dividing line. About $12\frac{1}{2}$ chains by 8 chains would be the size of the blocks. 4 Dec., 1888;
1823. *Mr. Brunker.*] I suppose your object in making these subdivisions generally is to conserve as much of the land as possible, in the interests of the owners? Yes.
1824. Whilst at the same time you afford the greatest convenience to those who are purchasers, without detracting from the value of the land? Certainly.
1825. *Mr. Copeland.*] You laid out none of these roads until the person in charge of the unemployed came to you and suggested the laying of them out? Mr. Burns wrote to me, and told me that the man in charge of the unemployed wanted to clear some roads, and that he had given the land, and left it to me to leave the roads where I thought proper. I went up there, and the man met me on the ground. He pointed out where he wanted roads. He wanted a road out to the Great Eastern Road, and I laid out the Junction Road as straight as I could.
1826. So that the laying out of these roads originated with the officer in charge of the unemployed, and not with you? Not with me, certainly.
1827. *Mr. O'Sullivan.*] When Mr. Burns told you to lay out the roads where you thought proper, did you take that as an instruction to lay them out for the best advantage of the estate, or to accommodate the public? In both ways. The man in charge wanted a road for the public, and he came to me to show him where he could leave a good road, and I took out Junction Road.
1828. *Chairman.*] Were you considering the interests of the proprietors of the estate when you laid out that road? Certainly; I was studying both interests.
1829. *Mr. O'Sullivan.*] If a road through the centre would have been better, why did you lay out Junction Road? I did not want to make any bend in the thing.
1830. You said just now that it would have been better if the road had been laid out in the centre? It would have been better as a subdivision. It would have been better for Mr. Burns if the Junction Road had been in the centre.
1831. Then why did you lay out the Junction Road where it is now—because the track was better? I fancied it was a very good road—a practicable road—and I left it in that position. The land gets a little rougher down here, and the road being there, I thought it as well to leave it there as well as anywhere else. Mr. Burns had not made up his mind as to how to subdivide the land.
1832. Referring to road E, will you kindly run that road down to Burns Road. Does not the fact of that road giving easier access to the railway and the Lane Cove Road add to the convenience and the accommodation of the intending settlers, and thus add to the value of the property? I think it would. If people bought land round here it would be handy.
1833. In making that road the public are really benefiting the estate? I do not know that they benefit the estate much.
1834. *Chairman.*] Would not land about there bring a higher value by virtue of that road? The land fronting the road certainly would.
1835. *Mr. McMillan.*] When you say these roads running north and south benefit the estate, do they not also reflect benefit on the Crown lands to which they directly lead? Most decidedly.
1836. Would you say that they benefited the Crown lands equally with the private lands? I consider they benefit the Crown lands. I think the Crown lands would have been valueless without these roads giving access.
1837. If the Crown lands were your lands just as the other lands are Burns' lands, would you like to negotiate on equitable terms for such roads to be made? I should. I would give a big price for a road to get through there, if I owned the land.
1838. You think it would be your business as the proprietor of those Crown lands to negotiate on equitable terms for such roads to be made? It would.
1839. And Burns' land being the nearest to the new line of railway, it would, under certain circumstances, be to his advantage to keep back the other lands? It would, most decidedly.
1840. Whereas those roads open up the land for the next competition in that vicinity? They do.
1841. *Mr. Copeland.*] If the Crown lands were private estates as well as this other, and the owner of this private estate proposed to you to make roads through your lands to benefit his land, would you as a matter of business consent to that, or would you lay out money on this estate, supposing you owned the other. Would you lay out your money on another estate to improve your own, or would you lay it out on your own estate? I should be very glad to do so.
1842. Can you give me any instance where it has ever been done—have you ever done it yourself—where the owner of one estate goes to his neighbours estate to expend money, instead of expending it on his own estate? I have met several such cases. I may speak of one now that I am interested in, where we have left sufficient land to make a road 100 feet wide along the boundary of the estate, and others who are benefited by it are spending money on our estate and forming the road. I am a director of the company which owns the land, and the adjoining owners and the Council are making the road as an access to Lady Robinson's Beach. We have a road 100 feet wide, but we go to no expense on the land given by us.
1843. Is it not of as much interest, supposing there is a population on the Crown lands, to have access to the people there as it would be for the people on the Crown lands to have access down here? The access we want is to the railway, not to the people. I consider that the Crown lands before were valueless. I would not have given £5 an acre for them. These roads have raised the price 100 per cent. I do not believe they could have sold the Crown lands without them. I consider that a man would be very foolish in buying a block of land if he had not access to the station.
1844. *Chairman.*] Do you know the quality of these Crown lands? Yes; very poor.
1845. *Mr. Copeland.*] You have been employed by Mr. Burns for some time in making this and other subdivisions? No; I have not had much work for Mr. Burns.
1846. Are you engaged by him at the present time in making subdivisions? Not at all. I have not had any work from him for the last twelve months; not since I did this.
1847. *Mr. O'Sullivan.*] If you had been the owner of the Crown lands, and had seen that Burns,

Withers,

C. B. Dawson. Withers, and Smith were prepared to construct these streets and had actually employed surveyors, would you have come along and said, "Allow me to relieve you of the necessity of doing these streets, I will do them for you"? Certainly not.

4 Dec., 1881.

1848. *Chairman.*] You say that Burns Road was a declared road when you went to survey it; was it cleared and formed? Not wholly. A bit at the end was not cleared.

1849. You gave instructions for the continuation of that road, for its being cleared to the end? No; I gave no instructions.

1850. Did you survey it to the end? It was surveyed originally. Of course, anything surveyed originally I had nothing to do with.

1851. *Mr. Street.*] Generally speaking, do you consider the continuation of these roads through private property of more interest to the owners of the property, or to the Crown lands—which have the greatest interest in their continuation? I should say the Crown lands.

1852. *Chairman.*] As a matter of fact, does not every road on that property, with the exception of Mistake Road, improve the value of Burns, Withers, and Smith's estate? To a certain extent, most decidedly.

1853. *Mr. O'Sullivan.*] It has been shown in evidence that £6,000 has been expended on these roads, and £4,000 were obtained from the sale of the Crown lands—do you consider that a profitable transaction to the Government? How much have they sold of the Crown lands?

1854. Did you not say that the Crown lands were valueless? I do not believe an acre could have been sold without these roads. I was very much surprised to see it sold as it was. It was very poor.

Charles Nicholson Jewel Oliver, called in, sworn, and examined:—

C. N. J.

Oliver.

4 Dec., 1888.

1855. *Chairman.*] You were until recently Under Secretary for Lands? I was.

1856. Whilst you were occupying this position, had you anything to do with the proclamation of roads, or the surveying of roads by any officer of your Department, on the land situated at Hornsby, owned by Burns, Withers, and Smith;—had you any connection with them as an officer of the Department at all? The only connection I remember having with the question of these roads was the opening of a road from the Crown lands to the Hornsby station, which crosses a bridge, and is marked on the map before me as road A.

1857. Do you remember who was Minister at that time—was Mr. Copeland the Minister for Lands then? I think he was.

1858. What was the object of that road? In order to give access from the Crown lands to the station, or to the vicinity of the station.

1859. Does it go from Crown lands to Crown lands, as a connecting-link between two portions of Crown lands. There are Crown lands to the west? It affords a means of communication across the bridge to the station, such as would not exist had that road not been made.

1860. Do you, as an officer of the Department, remember anything as to the origin or completion of any other roads? No; I know nothing about these road matters, other than what I have mentioned.

1861. Had your Department anything to do with any of these roads in any way? No.

1862. You would have known if it had? Yes. I am of course, aware of the object of the Committee in this inquiry; but I had nothing to do with the making of these roads.

1863. Had proposals for any of these roads to come before you? In a general way. There were a number of subdivisions of Crown lands being carried out at the time, and I was always strongly of opinion, which was shared, I think, by the Minister of the day and by officials in the Department, that it was a good thing to lay out the roads to a certain extent in these subdivisions, to clear them.

1864. *Mr. Copeland.*] On the Government subdivisions? On the Government subdivisions.

1865. *Chairman.*] You are not speaking of roads on private lands? No; there were no instructions given by me about such roads; I had nothing to do with them.

1866. Mr. Deering in his evidence yesterday spoke of you, Mr. Burns and himself being present at Hornsby;—do you remember any such occasion? Yes. Some question had been raised as to the upset price placed on Crown lands being excessive, not only the price placed on the Hornsby subdivision, but on some other lands, notably Manly Cove, and I had occasion to speak to Mr. Burns on the subject. He was at the time doing some portion of the work appertaining to the Minister for Lands. I was strongly of opinion that these upset prices were not excessive. They had, however, been recommended by me without my having seen the land, acting on the reports of the officers of the Department. In order to make myself satisfied as far as I could that the prices were fair and reasonable, I determined to visit the land, and on that occasion I was accompanied by Mr. Burns. The day turned out very wet, it was raining all the time, and I was simply able to make just a running inspection of the Crown lands. I then noticed that some roads had been made, I thought in a way that was unnecessary.

1867. *Mr. McMillan.*] Do you mean on the Crown lands? I am not prepared to say whether on the Crown lands or not. Some of the roads were metalled or metal was being put upon them.

1868. *Chairman.*] That is on the Burns, Withers, and Smith's property? I do not know. That can be determined by some one better acquainted with the locality.

1869. Do you think they were in the interest of the Department? I do not think that in subdivision of this kind roads need be made in such a substantial manner; but that is a matter of opinion. The upset prices, which were pronounced by Richardson and Wrench to be 50 per cent. above the value of the land, were exceeded by 100 per cent., and even to a greater extent; so it must be considered whether these roads, made in the way I thought unnecessary, did not materially enhance the value of the land, and bring about this satisfactory sale.

1870. Was Mr. John Davies with you on this occasion? Yes.

1871. Why was he with you? I do not know. He was not with me. He may have come up to make some inspection of the work done by the unemployed.

1872. Was there any mention made of roads on the Burns, Withers, and Smith's estate? It was suggested that some other roads should be cleared. I do not quite recognize the road I refer to on this plan, but it was a road which would have given more direct communication to the station than the road A. I looked at it, and I saw that it was not on the Crown lands. It ran along the railway line.

1873. Did it run parallel with the railway line? Yes; and fronted private lands. I could not see that there was any necessity to clear that, and I would not consent to its being cleared at the Government's expense. Whether it has been since cleared or not, of course, I cannot say. 1874.

C. N. J.
Oliver.
4 Dec., 1883.

1874. *Mr. O'Sullivan.*] You say that when you were inspecting the roads with Mr. Burns, Mr. John Davies standing near you, you were under the impression that the roads were on Crown lands;—you were not quite certain whether they were on Crown lands or not? I did not say that. When I was speaking of the roads being metalled or ballasted, I think the question was asked whether they were on Crown lands, and I said that that could be determined by others better informed. I made a very hurried inspection, and I was not in a position to particularise the roads on Crown lands or on private lands.

1875. Did you notice that on the Crown lands there were roads cleared? Several roads were cleared.

1876. Would you be surprised to hear that these metalled roads are on the lands of Burns, Withers, and Smith? Well, I cannot say that I should be surprised to hear it; but it is something new to me. I could understand Burns, Withers, and Smith's land being bounded by a macadamized road, forming a common boundary; but I cannot understand that there was any necessity to have metalled roads passing through private property. Of course there was no reason why road A should not be made properly. I believe that it was stipulated that the road should be properly made when the land was given.

1877. *Chairman.*] Were any other roads so stipulated for? No, not to my knowledge. This is the only road that formed the subject of correspondence. The papers would show that it was agreed that it should be made available for vehicular traffic.

1878. *Mr. O'Sullivan.*] Then, notwithstanding your refusal to agree to this road being made parallel with the railway line, from road "A" to the Junction Road, you find that it has been made? I am not aware whether it has been made or not. I have never been on the land since.

1879. But if it has been made, and if it has been metalled, ballasted, and culverted, you regard that as a work for which the public have no right to pay? I distinctly said at the time that it was not necessary.

1880. You were Under Secretary for Lands, and the superior officer of Mr. Deering. Do you know Mr. Gordon the surveyor? Yes.

1881. Was Mr. Gordon supposed to act under the orders of Mr. Deering—Mr. Gordon is a surveyor acting under Mr. Deering? Yes; he would be, in connection with this survey. I see that the plan is signed by Mr. Gordon, so that he would be acting under Mr. Deering's directions.

1882. Were the services of Mr. Gordon ever lent by you to the Casual Labour Board? For a time, I believe.

1883. *Chairman.*] Were his services placed at the absolute disposal of the Labour Board? For a time, I believe, Mr. Deering had something to do with the unemployed.

1884. *Mr. O'Sullivan.*] But after Mr. Deering gave up the control of the unemployed, were the services of Mr. Gordon supposed to be available by the Casual Labour Board? Yes; they were for a time. I could not say for how long, but for some time—perhaps two or three months.

1885. If Mr. Gordon recommended the making of certain roads, should that recommendation have gone through you or Mr. Deering;—should he have reported to his superior officer? I should think so.

1886. Did the fact that Mr. Gordon was working for the Casual Labour Board relieve him of the necessity of reporting through his superior officers? Not that I am aware of. He may have made reports in that way.

1887. During the time that he was working with the Casual Labour Board he was supposed to be an officer of your Department? Certainly; he was paid by the Department.

1888. Therefore, it was his duty to report through his superior officers? I should think so; I am not aware that he received any instructions to the contrary.

1889. Then if he has recommended that these roads should be made and metalled and ballasted, and has not reported so through you or through Mr. Deering, he has done so in violation of the rules of the Service? I should hardly like to say that he had so acted, for this reason, it was rather an unusual position to place an officer in. He was an officer of the Department of Lands, lent occasionally to assist the Casual Labour Board; because he was not wholly engaged in connection with the unemployed, and it might so happen that he would make a report of that character and send it direct to the person in charge of the unemployed, without sending it through his official head, and at the same time having no intent of committing any breach of the Regulations, though he would be actually guilty of doing so. I have a very good opinion of Mr. Gordon as an officer, and I should be loth to say anything that would prejudice him. I do not think he would do anything of the kind intentionally; that is to say, I do not think he would have any desire to withhold from his superior officer anything he might do, or any desire to do anything on his own responsibility, of which he might think that his superior officer would not approve.

1890. *Chairman.*] What you wish to imply is this—that having had his services placed at the disposal of the Casual Labour Board he felt in the position of a man with two masters? Yes; he would probably find himself in that position and might report directly to the Casual Labour authorities without any reference to his superior officer.

1891. *Mr. O'Sullivan.*] Still the proper course would have been to have sent his reports through you or Mr. Deering? Yes.

1892. And if he had taken the proper course and recommended these roads, which you say are unnecessary, the probability is that you would have vetoed them in the public interest? I do not think I said that any roads were unnecessary. I think I said that the roads were being made in a way that I thought unnecessary.

1893. Take the road running parallel with the railway line? I should not have approved of that.

1894. You would have vetoed that? Yes.

1895. Or any other road which you thought was not required in the public interest? Yes. I would like to make it perfectly clear. As a matter of fact, I did object to that road running parallel with the railway being made. The only roads in reference to which I was consulted were the A road, and the road running along the railway line. I think the papers will show that I recommended that the former should be made, and I am quite satisfied that it was the proper course to pursue, even if we had to buy the land; but for this road running parallel with the railway I could not see any business necessity for it, and I only had to deal with it as a matter of necessity in regard to the opening of that road when we had to sell the lands. Those are the only two roads upon which I was consulted.

1896. *Chairman.*] All the rest you know nothing about? No.

1897. *Mr. O'Sullivan.*] Kindly refer to road D and H, which is cleared, ballasted, and fitted with all the accommodations of civilisation—supposing all the other roads had been allowable, for arguments sake, if Mr. Gordon had recommended road D and H would you have endorsed that recommendation? No.

C. N. J.
Oliver.
4 Dec., 1888.

1898. Kindly look at road I;—would you have endorsed that road if Mr. Gordon had recommended it? I think not. I am speaking without a very accurate knowledge of the locality, so I must be guided by this plan. The road seems not to end at any particular locality. From the map, too, it appears to end at a church.
1899. During your term of office I believe there were a great many Crown lands cut up for subdivision, and roads made through them—at Heathcote and other places? Yes.
1900. When you subdivided these lands and laid out streets, did it ever enter your head to metal them and make channels and culverts? No; I think the very best subdivision the Department ever made was the Field of Mars.
1901. And the most expensive? Yes.
1902. And did the Department metal the streets there? In some portions; but that was a very extensive subdivision. The first sale realized £64,000.
1903. They ballasted the streets there? Ballasted some of them.
1904. And did they cut channels and make culverts? Yes.
1905. That was all upon Crown lands? Yes.
1906. And that is the only instance you can call to mind? I am under the impression that there was something special done at a place called Harbord at the back of Manly—to give some access there.
1907. *Mr. M. Millan.*] I suppose you find it rather difficult to reply to some of the questions, not knowing the whole character of the country? I tried to convey to the Committee that I really do not know the locality well. I do not think I was more than two and a half hours on the ground, and it was raining nearly all the time. I travelled from the railway station along the line to road A, and then crossed on to the Crown lands, returning to a point on the railway line, so that, as a matter of fact, I do not believe I was on the property of Burns, Withers, and Smith at all.
1908. You saw the Crown lands to a certain extent? Yes.
1909. You recognized here the principle of putting a road through private land for the purpose of opening communication with Crown lands? Yes.
1910. Suppose that your officer had reported to you that it would take £10,000 to make that Boundary Road, as against £2,000 or £3,000 for the Junction Road; suppose that he said that the only way to enable the people on the Crown lands to get at the railway station was to cut roads north and south, would it not alter your view of the position of affairs to a certain extent? I can tell you all about this Boundary Road now. I remember the circumstances. The question was raised as to whether it was possible to make this Boundary Road suitable for vehicular traffic at anything like a reasonable cost, and a report was made, I think by an officer of the Works Department, to the effect that it was not possible to make a road without going to very great expense, but that in another position, some short distance away, the natural formation of the land was such that a road could be made at a comparatively small expense. Whether or not the Junction Road is the road I am not prepared to say.
1911. Taking it for granted that the impassability of the Boundary Road is caused by gullies running north and south, which have to be crossed, would it not be clear to you that the occupants of the eastern portion of these lands would have to find their way to the Pearce's Corner railway by roads running north and south;—would it not be the policy of the Department, as far as your experience goes, to make an outlet under certain circumstances? We should endeavour to provide every reasonable means of access to Crown lands. If there was a railway station, for example, at both ends of the Crown lands, we should endeavour to provide access to both of those railway stations.
1912. Looking at this plan, you can see that one portion of these Crown lands has its natural outlet at the Hornsby railway station, and that another portion would probably have its natural outlet at the Pearce's Corner line. What I want to know is this: Taking this explanation I have given to you with regard to the configuration of the land, which is borne out by officers of the Department, would it be a very unusual thing to make roads to meet the convenience of the public land which you were proposing to sell? No; it would not be unusual. I know of instances where efforts have been made to purchase very considerable length of road through private property—not a question of only making the road, but of buying the land and making the road afterwards.
1913. So that practically you are in this position, that while you had to do with road A, and gave your opinion about the road running parallel with the railway, you are not in a position to give any general opinion as to what roads should be made for the purposes of communication at the present time? No; the question was never submitted to me. I think the papers in the Lands Department will show that, in connection with a subdivision known as the Gordon subdivision, it was proposed to make a very large purchase of land running through a private estate for the purpose of affording reasonable access.
1914. The principle is not a new one? No. It would follow, as a matter of course, that had that purchase been completed the road would have been made. I am not, however, aware whether the purchase has been completed.
1915. Then, judging from your previous remarks, it does not necessarily follow, from your condemning the metalling and ballasting of certain roads, that you would not have approved under some circumstances of other roads being ballasted; that is to say, you are not in a position to say that some of these roads might not be recommended for ballasting in other portions of the estate if they went through private property? It would have been an exceptional course to pursue.
1916. It is exceptional? Yes.
1917. When you speak of a road you mean a road simply formed so as to be available for ordinary traffic? Yes. I gave an instance where the Department did actually ballast the roads—at the Field of Mars.
1918. But that was all on your own ground? Yes.
1919. Then, taking the explanation I have given you as to the necessity for roads through the main block of the Burns, Withers, and Smith property, in order to give access to the Pearce's Corner railway, do you think that roads simply formed without any ballasting would be sufficient for the purpose? I think so.
1920. *Mr. Street.*] You have referred to a conversation which you said took place when you were on the ground with reference to this particular road? Yes.
1921. Was Mr. Burns present during that conversation? I think he was. I could not say positively whether he heard the conversation.
1922. *Chairman.*] With whom were you talking? Mr. John Davies.
1923. *Mr. Street.*] Do you remember whether Mr. Burns took part in the conversation? I am inclined to think he did not. If I remember rightly, I simply said, "I did not consider it necessary to clear a road

road along the railway land, and I continued to walk on towards the station, and the conversation terminated. It was not pursued any further. Whether Mr. Burns or Mr. Davies had any conversation afterwards about it or not I do not know. My conversation was with Mr. John Davies.

C. N. J.
Oliver.

1924. You have no recollection of Mr. Burns offering to you any reasons why the road should be formed? I do not think he did. I do not remember it. It was, I think, proposed by Mr. Davies. The question was raised by Mr. Davies as to whether this road running parallel with the railway should be cleared, in order to give more direct access to the railway station.

4 Dec., 1888.

1925. *Mr. Copeland.*] Access from where? From the Crown lands. The access afforded by road "A" is across the bridge; whereas the access that would have been afforded by this other road, had it been cleared, would have been more direct. You would not have had to cross the line. There is no doubt it would have been a better access; but I did not consider that, in the interests of the Crown, it was necessary for merely sale purposes to clear that road.

1926. You have no recollection then of Mr. Burns taking any part in the conversation about the clearing, and urging reasons why it should be done? No.

1927. *Mr. Copeland.*] With reference to the formation of that road "A," do you remember whether I took any Ministerial action in the matter? It was stated by Mr. Burns that these roads were originated by me during the time I was in office;—do you remember the question being dealt with? There was a general instruction given. You will probably remember that great interest was taken at the time you were in office in these subdivisions, with the view of making them as attractive as possible to the public; and there was a general direction given referring not only to these subdivisions but also to various other contemplated subdivisions as to the making and forming of roads. That was a general decision affecting the making of roads through subdivisions.

1928. Through our own subdivisions? Yes, I remember that minute; but I cannot find it in the papers before the Committee, which do not to me appear to be complete.

1929. Do you say that Mr. Burns was acting for the Minister for Lands at the time when he was out with you on these lands at Hornsby? No; I said that previously I had occasion to refer to Mr. Burns while he was acting for the Minister for Lands; but he was not acting for the Minister for Lands at the time he was out with me.

1930. Can you fix the time when he was acting for the Minister for Lands? There would be some difficulty, because he acted once or twice, or even more frequently.

1931. For what period, roughly speaking? It was in the early part of this year that he acted.

1932. That was during the time that Mr. Garrett was Minister? Yes; I think I went to inspect this land early in July this year.

1933. You then saw a number of roads which you deemed were unnecessary in the interests of the Crown? I did not say that the roads were unnecessary, but the way in which they had been ballasted.

1934. And culverted? Yes.

1935. Looking at this map, and bearing in mind that the Crown lands lie to the north of the Burns, Withers, and Smith property, if the work of the unemployed had been under your control would you have permitted the unemployed to make all the roads you see marked on this map at the Government expense, with the view of improving these Crown lands? Expressing an opinion from the information conveyed by this plan, I should have to state that I could not allow the work to be carried out.

1936. Would you not rather have expended the money in making roads through your own Crown lands? My endeavour would have been to make the Crown lands as attractive as possible.

1937. Exactly, not to make the private lands attractive? Not to make the private lands attractive.

1938. Can you remember any instance in any of the Government subdivisions where something like £5,000 or £6,000 has been expended in making roads through adjoining private property? Small sums have been expended.

1939. That is in obtaining a road of access? Yes.

1940. This road you refer to at Gordon, was that a road of access from Crown lands to Crown lands? Yes.

1941. Being in that respect somewhat similar to this road "A"? Yes; but much more extensive. I think the price asked for the land was something like £200 an acre.

1942. And was it the intention to purchase the whole block of land, or merely a small strip for a road? Merely a road. I am not in a position to state that that intention was carried out. I know it was proposed.

1943. But that was merely a road of access from valuable Crown land to ———? To the railway—Pearce's Corner railway.

1944. If it had been suggested to you while you were Under Secretary for Lands that all these roads through the Burns, Withers, and Smith estate were to be cleared and grubbed, the roads formed, and about 4 miles of them metalled, culverted, and drained, would you have given permission for the Government to expend money in making those roads? I should not have recommended such a course.

1945. Would you have permitted it? I would not have permitted it either. I should like to qualify my reply, in consequence of something Mr. M'Millan said in connection with his question that proved, from a business point of view, that it was desirable to give access to the railway at either one of two points. It would become a question for consideration, as a mere matter of business, whether or not a road should be made through private property.

1946. *Chairman.*] A "road," but would you say "a number of roads?" Certainly not. I only mention this to make myself clearly understood. I do not know anything about the land of Burns, Withers, and Smith.

1947. *Mr. Copeland.*] You are aware that to the north of the Burns' estate there is a vast area of Crown lands, none of which has been sold? I believe that is so.

1948. Bearing in mind that none of this land has been sold, and that it is described as exceedingly rough, and that it has not been even surveyed or designed, would you feel justified in expending money in making and metalling these roads to give access to Crown lands that have not even been designed for subdivision? No.

1949. You are aware that there was a subdivision of Crown lands at Hornsby;—do you think that the making and metalling of these roads, and the spending of money upon them, was likely to give very much increase to the value of this subdivision near Hornsby? No, except to the extent I have just stated; it might afford a better means of access to the railway.

1950.

C. N. J.
Oliver.
4 Dec., 1888.

1950. Would not these lands derive their value more particularly by reason of their close proximity to the railway? And ready access to it. For instance, the road to the railway station, which is a continuation of the Boundary Road, is one which might have been made.

1951. Would you also have approved of the roads to the south of that road—the T-shaped roads? I would have approved of a road being opened to give communication to the railway station, at the eastern end of the Crown lands.

1952. You would not have approved of roads parallel to it to the south? Certainly not.

1953. Are you aware whether any Government money was expended in forming and ballasting the roads through this Government subdivision at Hornsby? I was over a portion of that land, and the roads have been formed; but I could not say whether or not they have been ballasted, because I am not sufficiently acquainted with the locality to say positively whether a particular road was on Crown land or private land.

1954. Speaking in general terms, would you consider it judicious management if the bulk of these roads on the Burns-Withers property were cleared, formed, metalled, and culverted, and that as soon as you got on to the Crown lands adjoining no such work was done, but that the roads were merely cleared;—would you consider that a judicious expenditure of public money? No; I should consider that if roads of a superior quality were to be made, they should be made on the Crown lands.

1955. Do you remember Mr. Burns making an application to have some land alongside the railway on the western side declared a reserve? An application was made by Mr. Burns, under the 11th clause, to purchase a piece of land containing 10 acres, intervening between the freehold of the applicant and the existing road.

1956. What was done in connection with that matter? That application was made on 30th September, 1884.

1957. What was done with regard to it? After investigation, it was disposed of by Mr. Secretary Garrett, in a minute, dated 4th March, 1887, to the following effect:—"I decide that the portion adjoining the recreation ground be temporarily reserved for future public requirements, and that the subdivision of the other part of the design be proceeded with. I approve of the proposed reserve." That was a reserve for a Court-house.

1958. But the application to purchase the 10 acres was refused? Yes.

1959. The Government had a subdivision of Crown lands, consisting of this and other pieces of land adjoining the railway station at Hornsby;—do you see amongst the papers a letter from Mr. Burns, asking to have that subdivision withdrawn, and for the land to be declared a reserve? I find a letter from Mr. Burns, dated 19th November, 1886, in which he draws attention to the fact that there is a proposal to sell the reserve at Hornsby, situated on the western side of the Peat's Ferry Road, between the land of Burns, Withers, and Smith and the Hornsby Land Company, with an area of 20 acres, exclusive of an area set apart for a Public School; and he goes on to state that it will be impolitic to sell this reserve, as it is the only block of Government land near the junction fit for public recreation purposes.

1960. That block of land was subdivided, was it not? It was.

1961. And ready for sale;—do you see any minute there, or any estimate by Mr. Deering as to the value of the land per acre? Yes; he writes to this effect—"Nearly all the reserve is of a rocky and precipitous character, with the exception of a level area of about 10 acres beside the Hornsby railway station, and fronting the main road to Peat's Ferry. This frontage is worth not less than £2 per foot, and the total area of 10 acres is worth £3,000."

1962. What action did you, as Under Secretary for Lands, take on that application? I simply submitted it for the decision of the then Minister for Lands, Mr. Copeland, the facts being fully set out in the report.

1963. And my decision was that the application should be refused? Yes; and not to suspend the subdivision of land from sale.

1964. By looking at the papers you will see that Mr. Garrett subsequently dealt with the case, Mr. Burns having written to him after I left office. I wish to see what action you took in regard to this second application? Mr. Burns wrote, under date 15th December, 1886, acknowledging the receipt of a letter dated the 11th of the same month, inquiring where the reserves in question—that is, the reserves referred to in the letter of the 11th—were situated, as he felt sure they were unknown to the local residents.

1965. And making a further application, I suppose, to have the subdivision cancelled? Not in this letter.

1966. Will you read Mr. Copeland's minute dealing with Mr. Burns's proposal to have a reserve for public recreation made at Hornsby Junction? This is the minute:—"Mr. Burns, M.P., may be informed that sufficient provision has already been made for reserves in this neighbourhood; but should the public interest require it, further provision will be made. At present I see no reason for withdrawing the portion referred to from subdivision.—H.C., 7/12/86." The effect of that minute was communicated to Mr. Burns on the 11th. On the 15th he wrote a reply to the effect I have already quoted.

1967. What further action was taken? Mr. Burns's letter of the 15th was referred to Mr. District-Surveyor Deering for report, and Mr. Deering in his report explained the position of the land which he, in his former report, referred to as being available for recreation purposes, and upon that report Mr. Secretary Garrett gave his decision on the 4th March, 1887, which decision I have already read.

1968. Then Mr. Garrett, on the 4th March, reversed the decision which I had given in the previous December, refusing to withdraw the land from subdivision? He did not altogether reverse your decision. 1969. But, as a matter of fact, the 10 acres of land which Mr. Deering valued at £3,000 were applied for by Mr. Burns while I was in office to be reserved for recreation purposes? Yes.

1970. And I refused that application? Yes; on the ground that there was already sufficient reservation for the locality. The case came forward for further consideration, and it was decided by Mr. Garrett that these 10 acres of land should be temporarily reserved for future public requirements.

1971. But has it not been gazetted as a recreation reserve? The papers I have in my hand do not disclose the fact that the reservation was made, although Mr. Secretary Garrett approved of the temporary reservation of these 10 acres.

1972. Withdrawing them from sale? They were not advertised for sale.

1973. They were subdivided? No; it was proposed to subdivide them. The matter was in hand. Mr. Copeland's decision was in December, and before it was acted upon, Mr. Burns, four days afterwards, wrote

wrote a reply that brought the matter forward for review, and it was carried on then until the March following, when Mr. Secretary Garrett gave the decision which I have read to the Committee. That was on the 4th of March, 1887. I may say that the action I took in this matter as Under Secretary for Lands was purely of a formal character, and I notice scarcely a minute of mine throughout these papers.

C. N. J.
Oliver.
4 Dec., 1888.

1974. Do you think the papers are complete? I think not.

1975. *Mr. O'Sullivan.*] Are any of these missing papers pertinent to the present inquiry? I do not know. I cannot say that any papers are missing. Mr. Copeland stated that the reserve had been made. I say that if the reserve was made there are no papers here to show that it was so, and, therefore, to that extent the papers are incomplete. But the absence of these papers, even supposing that they are lost, would not be in any way material, because the *Gazette* notice is the authority as to the disposal of the land. The Executive minutes are simply something leading up to that action.

1976. If this reserve had been made, would it have had a tendency to increase the value of Burns, Withers, and Smith's land? It would have improved the locality generally, and I have no doubt would in that way have given additional value to their land.

1977. Would it have had the effect of removing from the market a piece of land that would otherwise have competed with theirs when their property was open for sale? Certainly. It would have had the effect of reducing the land available for the purposes of alienation.

1978. If the owners of this estate had laid out roads and started making them, would the Government have been justified in taking the work out of their hands and making the roads themselves? No.

Henry Gorman called in, sworn, and examined:—

1979. *Chairman.*] Have you seen, or do you know anything about, the land at Hornsby known as the Burns, Withers, and Smith's estate? Only one portion, which I sold.

H. Gorman.
4 Dec., 1888.

1980. Which portion was that? Just at the Hornsby station.

1981. *Mr. Copeland.*] Was it a Government subdivision? No; only a small portion of their land. It was some years ago.

1982. *Chairman.*] To the south of the Peat's Ferry railway? Yes.

1983. What value did you get for it? I really forget now. It is years ago since I sold it. I should think that I got from £25 to £200 per acre, speaking roughly, from memory. It was a small subdivision.

1984. Have you sold any other portions in subdivision of Burns, Withers, and Smith's estate? No.

1985. Do you consider the surrounding land of like value? I should think so.

1986. Do you know anything about the Crown land to the north of Boundary Road? No.

1987. You have never walked on to the Crown lands at all? No; nor yet on to any of theirs, with the exception of that just about the station.

1988. What should you say was the average value of the Burns, Withers, and Smith's estate, that portion marked green on the map before you? I would not like to express an opinion. Up there you get good land and bad land.

1989. *Mr. O'Sullivan.*] You say that you received from £25 to £200 per acre? Speaking from memory.

1990. Is not there a very wide discrepancy between those two blocks;—there must be a great difference in the land? Well, some would be back land and some would be front land.

1991. When was this sold? Years ago. It was anticipating the opening of the railway. I have not been on the land since.

1992. The land you refer to was really in the township adjacent to the railway station? Right opposite to it.

1993. Was the land you are speaking of to the western side of the railway line or the eastern? On the western side.

1994. Have you ever had any negotiations for sale of land in the eastern side, or given valuations of any land there? I think I sold one small piece of about 2 acres at £150 an acre.

1995. *Mr. Copeland.*] Do you remember what the piece of land on which the hotel is built realized? I could not tell you—50s. a foot, or something like that.

1996. *Mr. McMillan.*] Speaking generally, outside the small township sold some years ago, you have no detailed knowledge of the estate? None whatever.

WEDNESDAY, 5 DECEMBER, 1888.

Present:—

| | | |
|-----------------|--------------|-------------------|
| MR. WALKER, | | MR. HENRY CLARKE, |
| MR. O'SULLIVAN, | | MR. COPELAND, |
| | MR. BRUNKER. | |

T. WALKER, Esq., IN THE CHAIR.

Charles Nicholson Jewel Oliver recalled and further examined:—

1997. *Mr. Copeland.*] You have had an opportunity since you were last here of looking at the papers in this case? I tender a plan with the object of being able to reply to questions put by you to me yesterday. (*Appendix, Plan 7.*) It is a plan showing the Crown lands on the western side of the railway line at the Hornsby station. At the northern part of the plan there is a public school site of 2 acres, with a paddock of 3 acres 3 roods 31 perches. This public school site was dedicated on the 13th October, 1884. That action was taken as usual in cases of the nature at the instance of the Department of Public Instruction. Subsequently portion 234, more immediately in the vicinity of the Hornsby station, containing 2 acres, was also dedicated for a public school at the request of the same Department. There is a portion of land on this plan, between Bellamy's land and the Peat's Ferry Road, of irregular shape, containing about 10 acres. It was originally applied for by Messrs. Burns, Withers, and Smith, under the 11th section of the Crown Lands Alienation Act of 1861, as intervening between their property and the Peat's Ferry Road. This application was approved of. It was, however, subsequently refused, and it was proposed to subdivide the land and to sell it by auction.

C. N. J.
Oliver.
5 Dec., 1888.

1998.

- C. N. J. Oliver.
5 Dec., 1898.
1998. On what ground was the application of Messrs. Burns, Withers, and Smith refused? The 11th section. Application was refused upon the ground that the portion of land was such as should not be sold under that section—that is, having regard to its situation. It was, however, perfectly legitimate that an application under that section should be put forward. I think one portion of the section states specially that it applies to land intervening between the property of the person applying and a road—that is to say, the intention of the 11th section was to enable the person who, by some change in the direction of a particular road, had been severed from his proper frontage to recover it.
1999. Had this land ever been severed from the other property? I fancy that it had. I am not prepared to speak definitely upon the point. There are indications in the papers that the course of the Peat's Ferry Road has been diverted—that it was not originally in the position in which it now is. This application, however, under the 11th section, was, as I have already said, refused. Subsequently it was suggested by Mr. Burns that this land should be devoted to public recreation. That suggestion was not adopted, upon the ground that there were ample grounds in the locality. It was, I believe, represented that the land was worth £2 a foot, and that its total value was something like £3,000.
2000. That is for the 10 acres? Yes.
2001. By whom was the case dealt with? By Mr. Secretary Copeland, who decided to refuse the application for the reservation, and that the land should be subdivided and sent to auction. A further letter was received from Mr. Burns, as I think I explained yesterday, on the subject of the reservation of this land for recreation purposes, inquiring where ample provision for those purposes in the neighbourhood had been made, as he was not aware of their existence. That led up to the proposed subdivision of this area with some other land adjoining being reconsidered, and it was decided by Mr. Secretary Garrett that the portion of land shown upon this tracing as reserve 47 and that portion of land intervening between Bellamy's land and the Peat's Ferry Road should be reserved for future public requirements. A question was asked yesterday as to whether the reserve had been notified in the *Government Gazette*. I answered that the papers did not disclose it. That led to a question as to whether the papers were complete. They are complete, I find, because no such reserve has yet been made. There was simply an approval of the reservation.
2002. Then the reservation has not been gazetted although it has received Ministerial approval? That is so.
2003. What has become of the school site to the north? It still exists. It was, I presume, applied for before it was known where the Hornsby station would be; and the site of the station having been determined, it was natural that the Department of Instruction should apply for a site in the vicinity of the station and where population would be likely to settle. That is the explanation I should give of the existence of the two sites without knowing the exact circumstances.
2004. You say that the Department of Public Instruction applied for the second site? It applied for both of them.
2005. *Mr. Brunker.*] What is the distance between the two sites? They are about a quarter of a mile apart.
2006. *Mr. Copeland.*] You have a reserve made on the opposite side of the road for a court-house? Yes; it was made on the 7th January, 1888. It formed part of the 10 acres applied for—I mean the portion of land applied for by Messrs. Burns, Withers, & Smith—under the 11th section of the Crown Lands Alienation Act of 1861. It formed portion of the land which Mr. Burns afterwards suggested should be devoted to recreation purposes.
2007. This piece of land applied for as a reserve would give half a mile of frontage to the Peat's Ferry Road? Yes, about.
2008. The reserve for the police-station and court-house formed a portion of the reserve? Yes; a part of 47.
2009. What area is there in that reserve? Roughly, I should say 31 acres.
2010. Which was the land withdrawn from subdivision? A portion of land which I have described as part of the reserve 47, edged green, and a piece of land intervening between Bellamy's grant and the Peat's Ferry Road, not embraced in portion 233, dedicated as a site for a court-house and a police-station.
2011. The site dedicated for a court-house and police-station would give 1,000 feet of frontage to the Peat's Ferry Road? I would rather call it approximately 16 chains, as by this plan.
2012. But it would give you 1,056 feet? Yes, if exactly 16 chains.
2013. The land being valued at £2 a foot? That is Mr. Deering's valuation—not mine.
2014. I suppose that if any of the land were worth £2 a foot, portion 233 would be worth that amount? Yes.
2015. On account of its width and proximity to the railway station? Yes.
2016. Do you know what the piece of land for the hotel realized? I do not.
2017. This balance of 31 acres 3 roods 1 perch was withdrawn from subdivision at the instigation of Mr. Burns for a recreation reserve? I cannot say that. I know that Mr. Burns drew attention to the fact that necessity existed for reservation for recreation purposes, but the Lands Department reported against it.
2018. But the portion coloured green on your tracing has been subdivided for sale? Yes; and is now approved for reservation for future public requirements; subdivision was not proceeded with.
2019. Do you know whether Messrs. Burns, Withers, and Smith provided any reserves in their subdivision? I do not know anything about their land beyond the fact that it is in the locality.
2020. I suppose you do not know whether there has been any Government expenditure through the unemployed upon the roads upon the western side of the railway line? I do not know. I should like to make a slight explanation in connection with my evidence yesterday, which is strictly correct, although it may not be fully understood. It will be remembered that I said yesterday that I should like to see a plan of the Government subdivision. In order that I might fully understand the position of the land, I have consulted the plan which I have now before me. The plan handed to me yesterday, upon which I gave my evidence, showed a somewhat detailed subdivision of the land of Messrs. Burns, Withers, and Smith, but only showed the Crown lands known as the Hornsby subdivision in colour, without any subdivision at all. I was questioned as to having been on this land on a certain date. I had visited the land, as I had explained, for the purpose of satisfying myself as to the upset price. A question was then asked me as to my knowledge as to some roads made through the land of Messrs. Burns, Withers, and Smith.

C. N. J.
Oliver.
5 Dec., 1888.

Smith. I endeavoured to indicate from the plan then before me the direction in which I travelled over this land. I did so approximately, showing that I travelled in a northern direction. I can now fully explain the direction, and I think that it is material to my evidence as showing its value in regard to anything done upon the land of Messrs. Burns, Withers, and Smith. Coming across the bridge over the railway line from the road marked A, I travelled up what is known in the Hornsby subdivision as King's Road. I followed nearly the whole length of that road down through the subdivision on to what is known as the Boundary Road, and by that road I went back to the station, going very little if at all upon the land of Messrs. Burns, Withers, and Smith. I make this statement simply because I was examined as to the roads through their estate. My evidence as to the value of those roads can be taken only as an expression of opinion formed from the papers before me yesterday. I think that it is proper that I should make this explanation as any one inspecting these two plans will see that they convey quite a different impression to an observer who is not fully acquainted with both of the portions of land referred to.

2021-2. With reference to the road marked A, have you been able to detect any ministerial action taken with respect to exchanging a piece of land to the northward for that road? I have not been able to trace a ministerial decision, although there was evidence that one was given. The Committee can very well understand that I cannot give great personal attention to the matter, but I have done the best I could to trace this decision. I would suggest that one of the record clerks, or someone in the Lands Department, should be subpoenaed to produce the papers.

2023. Mr. Burns stated in Parliament that the making of these roads originated with me (Mr. Copeland); I had nothing to do with any of them except this one road marked A, and even that road does not appear on the papers to have ever come before me, but it was agreed by the Department while I was in office that this piece of land should be taken in exchange for a piece of land further to the northward in order to give access from one portion of Crown lands to the other. That seems to be all the action taken in connection with this estate during the time I was in office? I have no doubt that the arrangements made in regard to that road were approved of by you. The records, as far as I have inspected them, show that. It goes without saying that it was a desirable road to make. It was the best access we could obtain from the railway to the Crown lands; besides it immediately connected two blocks of Crown land. In fact, it would have been a desirable arrangement to make even if we had had to pay a large sum of money for the road.

2024. *Chairman.*] In saying to-day that you have been on only a small portion of Messrs. Burns, Withers, and Smith's property, do you wish us to understand that you desire to correct any of your evidence in regard to the road running parallel to the railway? Not at all; my evidence in regard to that road is quite in accord with what I have just stated. I wanted the Committee to understand that I knew nothing about the roads further to the south.

2025. *Mr. Brunker.*] Was any action taken by the Department of Lands in connection with the making of these roads? None except with regard to the road marked A. I think I said yesterday that the understanding when the road was given to the Government was, that it should be cleared for vehicular traffic, and formed—that is to say, that the road should be made.

2026. The Hornsby subdivision shown on the plan before you was done at the instance of the Department? Yes.

2027. Had the roads been cleared when you were there? Such of the roads as I went over were cleared. My visit to the land was early in July last. I have not the slightest idea of what has been done since. It was very nearly two months before the land was sold that I visited it.

2028. *Mr. Copeland.*] At the time of your visit, were the unemployed working upon the property of Messrs. Burns, Withers, and Smith? That I could not say; as I explained yesterday, I was only a short time on the ground; it rained heavily, and it was Saturday afternoon; I saw no persons at work.

2029. *Mr. Brunker.*] Has it not been the practice of the Department to clear these roads before offering the roads for sale? It has been of late.

2030. But not before the unemployed question cropped up? A general decision was given some time during Mr. Copeland's term of office that steps should be taken to make the land as attractive as possible, and that roads should be cleared. I think I am correct in stating that in the case of one subdivision the clearing was done by tender, but in other instances, after the unemployed question cropped up, the clearing was done by the unemployed.

2031. Before that, was it always done by tender? On one occasion only, and then on my own recommendation, we cleared some land at Liverpool. It was before the unemployed question cropped up. It was a special sale of land, and the land was in the immediate vicinity of the railway station.

2032. Does your experience enable you to say that this clearing of roads has had a beneficial effect? I am certain that it has.

2033. *Mr. Copeland.*] I suppose you know that we have large areas of Government subdivisions still uncleared and upon which roads have been neither formed nor metalled? I am aware that there are very large areas upon which roads have not been cleared.

2034. In no case have the roads upon these large areas been formed, even although they may have been cleared? In one or two exceptional cases roads have been metalled or ballasted, I believe, but it is not the practice.

2035. Have there not been, therefore, plenty of avenues of employment for the unemployed in improving our own Crown lands which have been subdivided for sale? I certainly think so.

2036. So that there was no need to employ the so-called unemployed upon private subdivisions merely with a view to find them employment? I think there was plenty of employment for the unemployed on our own lands. I may say that if my evidence has been taken as being favourable to this work being done by the unemployed, I should like to state as once that I think it is not at all desirable that work of this character should be done by the unemployed, if it is possible to avoid it. In my humble opinion such work would be better carried out if it were done by tender.

2037. *Mr. Brunker.*] You know the position of Mr. Burns's land relatively to the Crown land? Yes, from the plan.

2038. Do you think the construction of roads through the Burns, Withers, and Smith estate in any way assisted the sale of the Crown lands? Some of them may have done so to this extent—they would give the surroundings a better appearance. They must of necessity have made the land more attractive. I think I mentioned yesterday that the Hornsby sale was really a successful sale; but whether that success was brought about by the way in which these roads were made it is hard to say. I can scarcely

C. N. J.
Oliver.
5 Dec., 1888.

scarcely express an opinion upon that point, but I do know that the prices realized were high—that they were in excess of the prices put on the land on my recommendation, and far above the price which those experienced auctioneers Messrs. Richardson & Wrench said the land was worth and would realize.

2039. *Mr. Copeland.*] Don't you think that the metalling of roads upon our own subdivision would have made our own land more attractive than the metalling of roads on the land of other people? I think so, if that has occurred.

2040. *Mr. Brunker.*] Do you think these roads were necessary as roads of access? Not all of them. Without an inspection of the land, I am not prepared to say that some of the roads leading up from the railway in different directions are not desirable for access, but it does not require an inspection of the land to enable me to say that all of these roads are not necessary.

2041. Do you think that reserve 47 is necessary in the interests of future public requirements? My opinion is that that is a piece of land which should not be sold, and I will briefly give my reasons. Assuming that Hornsby will some day become a populous place, sites for the usual public buildings will be required, and if the Government were to sell this land they would afterwards have to resume a portion of it for these sites, probably paying very dearly for it. From a public point of view, therefore, I think it would be unwise to sell that land. I do not say that it will all be required hereafter for these public purposes, but we know from experience that fatal mistakes have been made in selling land surrounding railway stations and other places where public requirements necessitate areas being set apart for different purposes.

2042. *Mr. Copeland.*] Could not this reserve for a court-house have been taken out of a portion of reserve No. 47, instead of such a valuable portion of land as portion 233 being used for the purpose? I will not go into the question of the value of the land because I do not admit your valuation; but I do not think it is a desirably-shaped portion of land to set apart for a court-house and police-station.

2043. Would it not have been better to have taken a portion out of reserve 47? That might have been a better arrangement.

2044. *Mr. O'Sullivan.*] Were you present at the sale of Crown lands at Hornsby? No.

2045. But you have been over the Hornsby subdivision? Yes.

2046. What portion has been sold? Everything indicated on this plan except the portion tinted red.

2047. Can you tell me whether the better part of the land has been sold? That must be left to public competition. We offer the whole of the land, and it is fair to assume that when people buy they buy the best portion.

2048. Do you know the character of the country remaining unsold? I cannot speak of my own knowledge. If you look at this plan you will see that the unsold portion is somewhat hilly.

2049. Bearing that fact in mind, do you think that if the roads J, I, and A had been constructed sufficient access would have been given to the Crown lands? I stated a moment before that I was not in a position to say absolutely whether these roads were necessary; but if by the roads you mention access were given to the railway line, I should say that reasonable access to the Crown lands would be provided.

2050. The roads I have named, in addition to road H, you will observe, strike the railway line and a public road at four different points;—should you not consider that reasonable access? Yes.

2051. You consider the Crown land sale a satisfactory one? Yes.

2052. The total amount realized was £4,300? I am not sure about that. The reason I say the sale was satisfactory was this: That the upset prices placed upon the land upon my recommendation were pronounced by the well-known auctioneers Messrs. Richardson & Wrench to be from 25 to 50 per cent. in excess of the value of the land, while the land brought, as a matter of fact, from 50 to 100 per cent. more than the upset prices.

2053. Accepting the aggregate amount of the sale as £4,300, and bearing in mind that £6,000 had been expended to achieve that result, should you consider the result a satisfactory one? I should not; but I am not aware that £6,000 has been expended in connection with the formation of roads with the view of developing these Crown lands.

2054. Are you aware that it is the practice of the owners of private estates to subdivide land and to lay out roads prior to sale in order to give an increased value to the land? Yes.

2055. If you had been the owner of these Crown lands, and had seen that your neighbours to the south were laying out roads, would you have come in and relieved them of the expense of doing it in order to give access to your own land? I think not.

James M'Keown called in, sworn, and examined:—

J. M'Keown. 2056. *Chairman.*] What is your position? I am a Crown Lands Ranger for the county of Cumberland.

2057. Have you ever been located anywhere near Hornsby? I know the district.

2058. Do you know anything about the property there owned by Messrs. Burns, Withers, and Smith? Well, I know where it is located.

2059. Do you know its boundaries? I cannot say that I do. My duty is simply to know the boundaries of Crown land.

2060. Do you know the roads running through the properties of Messrs. Burns, Withers, and Smith? I have been over only two of them.

2061. Which are they? The Boundary Road and the road running direct from the station.

2062. Have you any evidence which you wish to tender to the Committee? No. I received a summons to attend; that is all I know.

2063. You have not seen any roads other than those you have specified? I have not gone over them. I should not be prepared to give any evidence about them.

2064. *Mr. Brunker.*] Have you been over the Crown lands? Yes.

2065. What sort of country is it to the east of the subdivision? A portion of it is fairly level, but the bulk of it is very rough.

2066. It is your duty to travel over Crown lands occasionally? Yes.

2067. Do you ever attend sales of Crown land? Yes.

2068. Do you know anything about the value of this land? Well, I know the price some of it brought at the sale.

2069. *Chairman.*] From your knowledge of Crown lands, what do you think is the value of the land sold at Hornsby relatively to the value of the land to the east? There is no comparison between them at all; the best of the land is purchased. The land at the back is very rough.
2070. Do you think that the unsold land which is put into the market at the present time would fetch a price that would warrant the Government in putting it up? Yes.
2071. Is it marketable land? Yes.
2072. *Mr. Copeland.*] Would any of the land be suitable for orchard purposes? The greater part of the unsold portions, I should say, would be suitable for orchards. I have seen the finest orange trees grown on land similar to that.
2073. Do you know the land of Messrs. Burns, Withers, and Smith? Yes.
2074. Which is the more valuable of the two—the Crown land or the other land? Their land, decidedly.
2075. *Mr. Brunker.*] Do you think it necessary, in the interests of the public, that roads of access to the Crown lands should be given through this private property? I think there can be no doubt that the roads added to the value of the Crown lands.
2076. *Mr. Copeland.*] Do you think it was necessary to make such a number of roads in order to increase the value of Crown lands? Well, in the absence of these roads, it seems to me that you would have no access to the Crown lands at all.
2077. But would you not have access by road A? That is only one point; but there is a station on the Pearce's Corner line below the lower portion of the property shown on this plan, and I should think it would be necessary to give access from that point; then there are other points of access on the public road to be considered.
2078. *Mr. Brunker.*] If in your position as Crown lands ranger you had been asked whether it was desirable that roads of access should be given to these Crown lands other than those obtainable without encroaching upon private property, what report would you have furnished? I should certainly consider access necessary from the Pearce's Corner line. It seems to me that it must enhance the value of Crown lands to give access to it from the Lane Cove Road.*
2079. *Mr. O'Sullivan.*] Supposing a road had been constructed along the eastern boundary of this private property up to the Boundary Road, and that road A were required to give access to the western portion of the Crown lands, admitting also that road H and road I were made from the Lane Cove Road, do you not think that the whole of these roads should be held to give reasonable access to the Crown lands? Not having been over the roads I am not in a position to say.
2080. You see the road upon the plan leading up from the hotel;—do you think that is likely to benefit anyone but the hotel-keeper? I think it will benefit a great many by-and-by.
2081. How many people on the Crown lands will use that road to get to the Lane Cove Road? The Crown lands are not yet occupied. The clearing of these roads induces people to settle; that is the way in which I look at the matter.
2082. You don't feel yourself competent at present to express a definite opinion with reference to the necessity for the whole of these roads? No.
2083. *Mr. Brunker.*] Is there any population to the east of the Vanceville Road? The land is thinly populated right through to Gordon and the North Shore.
2084. What population is there between Lane Cove and the river? Very little.
2085. *Mr. Copeland.*] Do you know of any inducement for the people living to the eastward of the Vanceville Road to go upon these barren Crown lands? Well, it would make very good poultry farms or orchards.
2086. On that rough country? Yes; you could bring nearly all of it into use.
2087. Have any poultry farms been established upon the land already sold there? The people have not yet had time.
2088. *Mr. Brunker.*] How long is it since the land was sold? It was sold, I think, at the end of October.
2089. *Chairman.*] Which is likely to be settled upon first, do you think—the private property or the Crown land? The Crown lands, I think, because the price is very much lower.
2090. You think the roads, then, have improved the Burns, Smith, and Withers' estate so much that they can get a considerably higher price for it? I did not say that. Of course roads improve the value of any property to some extent, but in the absence of some of the roads you have mentioned you would have had no access to the Crown lands.
2091. Were the prices obtained for the Crown lands fancy prices, or did they represent the true value of the land? Well, I think the land fetched a good price.

J. M'Keown.
5 Dec., 1888.

FRIDAY, 7 DECEMBER, 1888.

Present:—

MR. WALKER,
MR. COPELAND,

MR. O'SULLIVAN,
MR. H. CLARKE.

T. WALKER, ESQ., IN THE CHAIR.

Thomas Cooper Hinchcliffe recalled and further examined:—

2092. *Chairman.*] Have you been able to obtain any further information for the Committee? In reference to the pay-sheets you wanted, I went to the Audit Office, to which I told you the papers had been sent. The Inspector of Accounts told me that it would take some little time to get out all the pay-sheets, and that he could not give them to me; but that if the Committee were to send a subpoena to the office they would send up a clerk with them, if you gave them two days' notice. I produce the last three pay-sheets in the office, and they would be similar to all the others. One is being paid up at Hornsby to-day. They do not show any particular roads; they simply show that the work has been done at Hornsby. If you were to send for the clerk and storekeeper or for the superintendent, they would be able to give you details. I know that the work extended for miles beyond the Hornsby Station. 2093.

T. C.
Hinchcliffe.
7 Dec., 1888.

* NOTE (on revision):—I also consider that there should be access from Noonan's Platform and Vanceville Station on the Lane Cove Road.—J.M.K.

T. C.
Hinchcliffe.
7 Dec., 1888.

2093. What we want to know is the number of men who have been working upon the estate of Messrs Burns, Withers, and Smith, or in its vicinity? Mr. O'Donnell or Mr. Little would be the only gentlemen, who would be able to give you that information.
2094. It would be impossible for you to state how many men had been at work upon these roads? Totally impossible.
2095. Or how much money has been paid? I can only give you the gross total of the money paid for the whole of the work.
2096. When you say the gross total, that would include all the work in the Hornsby District? Yes.
2097. Does that include all the roads upon the tracing which you saw the other day? It would take in a great many other roads not shown upon the tracing. It would include also the clearing of the Crown lands.
2098. *Mr. Copeland.*] With roads on the western side of the railway line? Yes.
2099. Can you give us any idea of the number of men employed upon the land of Messrs. Burns, Withers, and Smith at the time of the appointment of this Select Committee? No; I see from the pay-sheets that from the 12th to the 26th October, eighty-four men, including officers, were employed altogether.
2100. That is upon the roads shown upon the tracing? No; that is upon the whole of the works at Hornsby. From the 26th October to the 9th November eighty-three men were employed, and from the 9th November to the 23rd November, 102 men.
2101. But you cannot say how many of these men were employed upon these particular roads? No; the superintendent or Mr. Little could tell you that.

John Whitton called in, sworn, and examined:—

J. Whitton.
7 Dec., 1888.

2102. *Chairman.*] What position do you occupy? I am the Engineer-in-Chief for Railways.
2103. You are acquainted with the Pearce's Corner railway? Yes.
2104. Do you know what platforms have been made, or what platforms it is intended to make on that line? I could not tell you exactly without looking through the papers. I think there are seven or eight stations or sidings on the Pearce's Corner line.
2105. At whose recommendation were they made? They were all decided on by the Minister.
2106. Do you know the portion of the line from the Hornsby Junction to the Vanceville Road? Yes.
2107. How many platforms are there in that distance? I could not say without looking at the plans.
2108. Will not the plans before you show that? No.
2109. And you cannot speak from memory? No.
2110. The plan in the Parliamentary papers is approximately correct;—it is on the scale of 20 chains to an inch, so that from the Hornsby Junction to the Vanceville Road there would be about 2 miles? We have a platform 1 mile and 40 chains from Hornsby, I see. The station is upon land which belongs to a Mr. Lucas. We had to take for the line a portion of land belonging to Mr. Joseph Dobson.
2111. That would be the platform at the bottom of the road on this plan marked H? I suppose so.
2112. Can you tell the Committee upon whose recommendation it was decided to put that platform down? I could not say without referring to the papers.
2113. Is it not rather near to the junction? Yes, it is. I can tell at once by referring to the papers who suggested it. I may say at once that it is a very convenient place for Pearce's Corner; it is also convenient to the Lane Cove Road.
2114. Is the position a good one for the platform? Tolerably good.
2115. This inquiry is confined more particularly to the roads, and our object in summoning you was to ascertain from you whether the platforms had been recommended with a view to fit in with the roads, or whether the roads had been made with a view to fit in with the platforms? I think you will find that this is an old road laid down on the original survey plans.
2116. But has it not been made by the unemployed? No; I should think not. I think you will find this road in the original survey. When we made the survey for the St. Leonards line this property belonged to William Gracie, but I believe it has since been purchased from him and cut up into allotments.
2117. We have evidence that this road was made by the unemployed? I do not think it could have been.
2118. I suppose the survey of the line through this property meets with your approval? Yes—that is to say, the direction of the line. I do not care whose property the line passes through. I take the best line independently of any person's property.
2119. You think this line takes the best direction? Yes; I think it does from the point of view of public accommodation.
2120. Has there been any change in the position of the platforms upon this line? Not that I am aware of.
2121. Has not the Hornsby station on the Northern line been changed? The name has been changed, but the position has not been; it was originally called the Pearce's Corner station.
2122. I understood that the public school site had been changed in consequence of a change in the position of the station? I do not know anything about school reserves.
2123. Was it ever intended to have a railway station further north than the present position of the Hornsby station? Thornleigh was originally called Hornsby, but we never intended to change the position of the present Hornsby station.
2124. Have you any personal knowledge of this district? I have seen it in passing through in the train, that is all.
2125. To whom did the property at Hornsby belong before the survey of the railway was made? I do not remember to whom it belonged originally, but I know that the compensation for the land was paid to Messrs. R. B. Smith and Company. I do not think they were the owners of the land at the time the survey was made. I believe they purchased the land afterwards.

George Withers called in, sworn, and examined:—

G. Withers.
7 Dec., 1888.

2126. *Chairman.*] You are a Member of the Legislative Assembly of this Colony? Yes.
2127. *Mr. Copeland.*] Are you a joint owner with Messrs. Burns and Smith of the property at Hornsby, shown on this tracing? I am a joint owner with Messrs. Burns and Smith of a good deal of property in that

G. Withers.
7 Dec., 1888.

that neighbourhood, the exact boundaries I am not thoroughly acquainted with. I know the land fairly well, and I should say that the portion marked green on this tracing would about represent its area. There are two other blocks disconnected with the property shown on this tracing.

2128. What is their position? They are both on the south side of the Lane Cove Road—one is a block of 84 acres, and another is a block of 60 acres.

2129. How long have you been an owner of this property? I could not give you the exact date, but I think it must be twelve or getting on for thirteen years.

2130. You were an owner before the making of the railway line? A considerable time before the line was made. I think it was about six or seven years after I had an interest in the property that I heard that the Government were about to take a portion of it for a railway station.

2131. Had you any part ownership in it before Messrs. Burns and Smith came in? No; we purchased together, at my suggestion.

2132. Did you have it surveyed at all? I think there has been a considerable sum expended in different ways in the matter of surveys. Mr. Dawson is the man we generally have employed. We had a subdivision of the property made after the railway was taken there. This was necessary in order to give access to the station. We also sold a piece of land on the other side of the Peat's Ferry Road. This necessitated the preparation of a subdivision plan. Part of the property near the railway station was subdivided into business allotments, and an hotel is now built on one of those allotments.

2133. Will you furnish the Committee with a copy of this subdivision plan? Yes.

2134. Have you subdivided any portion of the rectangular block between Burns Road and the Boundary Road? No.

2135. Who surveyed the Junction Road? That I could not say; I fancy it must have been done by the Government surveyor.

2136. Did you send out Mr. Dawson to confer with any of the Government officers as to the subdivision of this rectangular block? My memory would not serve me very accurately as to details in connection with this estate. I know that Mr. Dawson has been frequently applied to in conjunction with Mr. Burns, Smith, and myself; for instance, the hotel-keeper was begging me for some time to give him a piece of land near the railway station on which to build an hotel. I succeeded in getting my partners to consent to running a road from the station across to the Peat's Ferry Road, letting the man have a block upon which he could build an hotel. That is the only place at which people can find accommodation there at the present time. Mr. Dawson had to be employed in that case.

2137. But there are a number of roads on this plan marked upon your land;—did Mr. Dawson survey those roads? I am perfectly certain he must have surveyed some. I know that he has been employed in that way at different times.

2138. Was it with your approval that the whole of these roads were made? I have not the slightest doubt that in the case of every road running through our estate I concurred. It was the most natural thing in the world that I should have been consulted more or less about them.

2139. Do you consider that these roads improve your property? There is no question about that.

2140. Had you commenced any of them before the unemployed came on to the land? I am certain we had. We had a man named Kearney carrying out road-making there a year or two before the unemployed were placed upon the land.

2141. I suppose the unemployed completed the roads that were left unfinished? To tell you the truth, I do not know what roads had been completed. Perhaps I ought to say that, after the matter had been discussed in the House, as I had not been to the property for some time, I took a trip out there by way of Parramatta. I remember entering what I thought to be our property by the road marked A, but I cannot tell you from the plan what direction I took. Perhaps I am not as conversant with the estate as I ought to be.

2142. You have not been actively managing the estate? I am not the manager of the estate. Mr. Burns keeps the bank-book and draws the cheques, and if any man is to be recognized as manager in connection with the estate, I suppose Mr. Burns must be understood to be the financial manager.

2143. You did not frequently visit the property? I have not done so of late years.

2144. Have you been out there since the unemployed have been working there? Well, I went out on the occasion I have just mentioned. That was the last time. It was on the Saturday after the discussion in the House. Prior to that I do not think I had been out to the estate on my own account once within four months. I remember being out there at that time, and driving along the Junction Road.

2145. Were the unemployed then at work there? There was every appearance of it. I think my visit prior to that visit was at least six months before.

2146. But you knew that the unemployed were making these roads through your property? Undoubtedly; of course I heard of it from all sources.

2147. I see from the printed papers that a petition was presented on the 11th September, 1887, asking that a sum of money might be granted for the improvement of the Vanceville Road, from the Lane Cove Road to the new road recently cleared by the Government from the Hornsby railway bridge. Among the persons who signed that petition is Mr. George Withers. Is that yourself? I have very little doubt but that it is. I have a recollection of signing one petition, but I could not have told you now what it was for. I suppose the road to which you refer was in connection with the district in which I, as a local landowner, would be regarded as having an interest.

2148. Are you aware that Mr. Burns, on behalf of the firm, applied to make a special purchase of the piece of land on the western side of the railway line, under the 11th section of the Land Act of 1861? I am not aware; but I think I know the piece of land to which you refer. I know that the matter is one which has been under consideration—in fact, I think Mr. Ives spoke to me about it when I was out there on one occasion having a friendly drive. I know that there was a good deal of talk about cutting off our frontage on the main road.

2149. This tracing will show you the land which Mr. Burns tried to purchase? I see that my signature is attached to the application. I presume it would be a document presented to me by Mr. Burns as part of a *bonâ fide* transaction, but I had forgotten all about it myself. I am aware that there were a good many suggestions in regard to putting the Government land there intact, instead of having a small strip cut off from the main road—in fact, there was some question as to whether the Peat's Ferry Road had not been diverted. There was only a thin strip between our property and the Government land, and I know that the question of making the Government land intact was considered by us.

2150.

- G. Withers. 2150. Were you of opinion that the land belonged to you in consequence of the diversion of the road? I do not think we could set up any claim to the land, but I know that the question arose as to whether the road had not been diverted from our boundary line.
- 7 Dec., 1888.
2151. Do you know whether you surveyed any roads on the western side of the railway? Roads have been cleared there, I believe, but none have been constructed.
2152. Have the unemployed done any work upon those roads? I do not know. I have not been over that part of the estate for some time. I could not say what is going on there.
2153. There is a petition signed by Mr. Burns requesting that the Government would cause the reserve fronting the Peat's Ferry Road near the Hornsby Junction to be dedicated for a public park, for which it was said to be well adapted. It was represented that all the private lands near the junction were being sold in small lots for settlement, and that a park, in what promised to be a thickly-populated neighbourhood, would promote the public health. I notice that this petition is also signed by the firm of Withers & Callaghan;—is that the firm of which you are a member? Yes; I see that my own signature is also attached to the petition; that is the only signature of which I have any knowledge.
2154. Is your firm interested in this property? Not in the slightest. Of course if any petition was to be presented, you may be sure that I would be one of the first to whom it would be brought.
2155. You are sure that the firm of Withers & Callaghan are not interested in the land? Not in the slightest; they were the auctioneers for some of the blocks in connection with Hardie & Gorman. Withers & Callaghan have interests in the district, but not so far up.
2156. What was the value of the land which you wished to have dedicated for a public park? I could not say.
2157. There are 31 acres? I should say that it ought to be worth now £150 an acre. Some of the land, as far as my memory serves me, is very low at the back.
2158. Are you aware whether this piece of land was reserved? I could not say.
2159. You are aware also that a reserve for a Court-house of over 4 acres was made? I heard something about a Court-house, but I do not know how the matter stands. I do not know whether any definite steps have been taken.
2160. Can you give us any idea as to the value of the land? I witnessed the contract in regard to some land much further from the station, which was sold about three weeks ago. That land sold at £150 an acre. That was on the eastern side of the line. It was, of course, level land.
2161. What did the piece of land upon which the hotel is situated realize? £5 a foot.
2162. How long is it since it was sold? About nine months ago. You must remember that it is the nearest point to the station.
2163. Assuming that the piece of land which has been reserved for a Court-house occupies over 1,000 feet of frontage to the main road, and that you sold the hotel block at £5 a foot, can you not give us some idea as to its value? I do not think the whole block would bring £5,000, although some of the Peat's Ferry frontages brought £3 and £4 a foot.
2164. You know that this land is close to the railway station? Yes; but it has a very narrow depth in places.
2165. Would it be worth £3 a foot? I should think that would be about a fair average. Some of the land goes off to nothing. It is very shallow.
2166. Can you tell the Committee what compensation you received from the Government for the 27 odd acres they took for the railway? As far as my memory goes, we got about £50 10s. an acre. I think we took £1,400 odd—the amount offered by the Government.
2167. Did you receive any compensation for the land taken for Pearce's Corner railway? No; we gave that. I do not know how much was taken, but I know it was very little—about 2 or 3 acres.
2168. You do not know how much you gave? We gave whatever they required. I do not think it was a great deal. They took a piece off one of the lower corners of the property, and another piece higher up near the station.
2169. You gave the land to the Government under an agreement entered into generally among the land-owners—that if the Government would construct a railway you would give the land free? Yes.
2170. That was one of the inducements offered to the Government to construct the line? Yes; we could well afford to fall in with the suggestion. I do not think we made any claim for the first land we gave. We simply accepted the offer made by the Government.
2171. Were you aware before this inquiry commenced that a large number of men paid by the Government were improving these roads through your property? I had not the remotest idea as to the number of men employed on the job.
2172. But you knew that the unemployed were making these roads? Yes.
2173. Do you know the extent to which they were making them? No. I do not know yet what roads have been made. I am convinced that a great deal of work has been done; you cannot ride down the Junction Road and look at right angles without seeing that.
2174. You are not forced to answer this question, but as a public man, as a man sent to Parliament to represent and conserve the public interest, would you consider it a proper thing, apart from this particular instance, for the Government to employ labour in the improvement of private estates? I must of course admit that I have given the matter a good deal of consideration. I heard of it from all sources. I have treated the matter very lightly, as one giving me no concern so far as my position as a Member was concerned. Seeing that the railway station was right in the centre of the property, and that there was a lot of Crown land at the back of our property to which access must be given, it never occurred to me that anything was being done which would not have been done had I not been a Member of Parliament.
2175. But would you consider all the roads marked upon this plan necessary in order to enable people to get to the railway-station or to the Crown lands? I consider, as I stated in the House, that any short means of access given from the Lane Cove Road to the Crown lands, would certainly tend to put up the value of those lands, and I presume that the work was based upon that principle. I have not gone over the cross-roads.
2176. Would you consider it a wise policy to expend public money in making these roads on private lands rather than upon making roads upon the Crown lands, which were to be sold? I do not know what has been done upon the Crown lands.
2177. Supposing the Crown lands shown on this plan were yours, and that you intended to sell them, would you expend your money in making these lower roads, or would you expend it in opening up the land

land which you intended to sell? No doubt I should extend these cross roads right through on to the Crown lands. If I were dealing with the whole of the land as one whole private property, I should make roads where the features of the country justified that course.

G. Withers.
7 Dec., 1888.

2178. But would you take men away from making roads from the land that you intended to sell and employ them in making roads a mile or two away from that property? That is a matter of judgment. If the whole of the land belonged to me, and I were going to put up all the property in one estate, I would certainly carry roads through from the Lane Cove Road. I would make that the starting-point, and give access across the other land.

2179. *Chairman.*] But supposing the land on the south of the Boundary Road belonged to another owner, what would you do? Of course I would have to take all the features of the country and circumstances into consideration.

2180. Do you think Burns Road can be justified as a road of access? We made a portion of that road ourselves. I remember recommending the expenditure of £70 upon a culvert there. I see that the road has since been metalled.

2181. The unemployed took up and completed your work? No; I think we had left off previously. I know that we cleared the land, and made it practicable to get along.

2182. You did all that was necessary, according to your idea, to open up your own land? Well, of course, in all probability, as time went on, as we came to deal with the estate, we should have expended more money.

2183. But you thought what you had expended was sufficient for the time being? I presume we came to that decision because no work was going on there for some time.

2184. *Mr. Copeland.*] I suppose that if these roads, which are so close together, had not been made, you would have felt it to your interest to make the roads for the purpose of a subdivision? Yes; some of these roads were partially made. I could not tell you exactly how much was done. I know that some roads running eastward from the railway station were cleared at our expense. I see from the plan that some of them are now cleared and formed.

2185. *Mr. Henry Clarke.*] Is it usual in making roads through Government land to clear, form, and metal the road? I do not know.

2186. Is it the practice of private owners in making subdivisions to clear, form, and metal the roads? I never knew a case in which it was done. I know that the City Council force private owners in the city, who are dividing their property, to form, ballast, kerb, and gutter. Of course that would not apply to suburban lands.

2187. *Mr. Copeland.*] Do you know of any other case in which the Government have cleared, formed, and metalled roads through a private subdivision? I cannot call to mind any case. I think some work of the sort has been done since the unemployed started. I do not know what the rule is with regard to these subdivisions. As far as my memory serves, they are cleared simply to show up the property. I see that in this case the work has been done in private subdivisions, but I do not think it has been the rule before. Now I think of it, I can think of one case in which a road was formed and cleared by the private owner.

2188. But you do not know of other cases where the work had been done by the Government on private property? No.

2189. *Mr. O'Sullivan.*] What do you estimate is the increase given to the value of your lands by the construction of these roads? It would be impossible for me to say unless I were to go over the property. I am not thoroughly conversant with all the roads that have been constructed. Looking at the plan and going over a large estate like this are two very different things.

2190. Cannot you give us a rough idea? I should say that these roads would give the property a considerable advance, but I could not say to what extent.

2191. Do you think £20,000 would be too high an estimate? It is a difficult thing for me to say; you can probably form as good an opinion as I can. I do not think it would be at all unreasonable to suppose that the property had received that increase in value.

2192. You do not think it would be unreasonable to make that estimate then? Well, I do not know what the cost of the roads would be.

2193. We are told that the cost of the roads is from £5,000 to £6,000? I am not at all surprised at that.

2194. *Chairman.*] Knowing that that expenditure had been made on the roads, would you say that £20,000 was a fair estimate of the increase in value which they have given to the land? Perhaps it is rather a big estimate to say £20,000.

2195. *Mr. Copeland.*] But if you said £10,000 you would certainly be within the mark? There is no doubt at all about that.

2196. Possibly the increase in value would be greater? Possibly. You want to go on the property itself to form a good idea. If £5,000 or £6,000 had been expended on the property on roads, it would be reasonable to expect a difference of £10,000 in a sale.

2196½. Did you ever refuse any request for any road through your property? No.

2197. Did you ever make any request for a road? No; my knowledge of these roads is precisely what I stated in the House. About three or four years ago, seeing that the railway station was in the centre of the property, and that access would have to be given to it, a request was sent to the Government of the day asking for a road or roads. This I formally signed in conjunction with my partners and others. Whether the road was formed in the ordinary way as a Government road I do not know. I do not know whether it was initiated or whether it was left till the unemployed took the job in hand. When the unemployed put in an appearance a few years ago I spoke in the House of the folly of having them employed in grubbing the country lands, and represented that they ought to be put on to more permanent works in the shape of roads. It was shortly after that that I became acquainted with the fact that the unemployed were going to form this road which had been talked of for some time in connection with the railway station. The railway station being locked up in our property, I regarded the work as a most reasonable thing.

2197½. Was it on your recommendation that the unemployed were put on the land? No; I knew nothing whatever of it. They were there before I knew anything about it. No doubt they have done some very good work for the Government; of course they have improved property in which I am interested to some extent, but I do not see how, under the circumstances, that could be avoided.

TUESDAY,

TUESDAY, 11 DECEMBER, 1888.

Present:—

MR. WALKER,
MR. COPELAND,MR. HENRY CLARKE,
MR. O'SULLIVAN.

THOMAS WALKER, Esq., IN THE CHAIR.

The Hon. John Fitzgerald Burns called in, sworn, and examined:—

Hon.
J. F. Burns.
11 Dec., 1888.

2198. *Chairman.*] You are part proprietor, with Messrs. Burns, Withers, and Smith, of some lands situated at Hornsby? I have had the advantage of seeing the most of the evidence given before this Committee, and I am desirous of economizing both your time and mine. I have made some notes with reference to the subject, and I think if I am allowed to make a statement bearing upon the inquiry, I shall be able not only to give a full explanation of my knowledge of the matters referred to this Committee, but, as I said before, to economize time, I have made some notes here, which will enable me to make a general statement, and after I have made that, of course, I shall be open to examination by the Committee.

2199. If you wish to address the Committee in the matter, and give your information in the form of an address in reply to the rest of the evidence, the permission of the House is necessary. I think we cannot digress from the usual course in this matter. You are permitted to answer the questions in your own way? I submit that what I am proposing to you to do has been done constantly. I propose to make a statement, to be taken down in evidence, touching the facts dealt with in the evidence already before the Committee.

2200. That is virtually a reply? I am not proposing to make a reply. My only reason for making this suggestion is that I shall not have time wasted in an irregular examination.

2201. I do not think there will be anything irregular about the examination. I think the Committee is the best judge as to the course which will economize time? Of course, I must submit to the Committee in this matter. I am entirely in their hands. If the Committee think fit to take a course that seems to me likely to delay the inquiry, I am willing to answer any questions put to me. My only idea in trying to make a general statement at the outset was to save time.

2202. You are part proprietor, with Messrs. Withers and Smith, of some land situated at Hornsby? I am a part proprietor in, and managing partner of, the land firm of Burns, Withers, and Smith, which own land in the Lane Cove district and in other districts in the suburbs. The lands of Burns, Withers, and Smith to which you refer were purchased by them in the year 1876. It is material I should state one or two facts in connection with that, because I think there is a wrong impression abroad concerning the time of the purchase. For instance, I find that Mr. Whitton in giving his evidence had the impression that we bought these lands in the Lane Cove district after the railway passed through them, whereas we bought them in 1876, long previous to the construction of the Northern Railway, or to its being projected.

2203. Will you please identify the lands upon the tracing before you? The land marked on that tracing is only a portion of the estates of Burns, Withers, and Smith in the Lane Cove districts. There is an impression, and leading questions have been put by this Committee upon that impression, that we have in the lands shown on this plan something like 1,600 or 1,700 acres. I state, on the authority of my surveyor, Mr. Dawson, that the whole area of land we possess on the eastern side of the railway in connection with the roads lately made is only about 680 acres.

2204. Will you please identify the land on the plan? The plan before me shows the lands marked green as the lands of Burns, Withers, and Smith, and they consist, I am told by Mr. Dawson, of 680 acres, and not, as has been suggested here, and leading questions put upon that assumption, of 1,400, 1,500, or 1,600 acres.

2205. Did you formerly own any land to the south? Burns, Withers, and Smith also owned an estate called the Vanceville estate, which they sold a long time ago, and that estate adjoins the other estate, which we call among ourselves the Young estate.

2206. *Mr. Copeland.*] Is that the land within the yellow line? I believe it is within the yellow line; yes, it is so. The 680 acres I am speaking of include one or two remnants of the Vanceville estate.

2207. *Chairman.*] Those are the portions marked green? Yes; some small blocks, which were parts of the estate, still belong to the partners.

2208. On what terms was the Vanceville estate alienated; was it sold by auction? It was sold for the most part by auction on easy terms, and has been paid for for some years past. There is nothing owing to the partners on that estate.

2209. Nothing owing for any of it? Nothing owing for any of it.

2210. Have you been aware of the work of the unemployed on your estate at Hornsby? I have been aware of the work of the unemployed on our estate at Hornsby, and on that subject I desire not to make a statement, as you seem to object to that; but I desire to give evidence upon it. I was aware, long before the unemployed were engaged on any work in the Hornsby district that the attention of the Government while Mr. Copeland was in office had been directed to the large block of Crown lands to the eastward of the lands of Burns, Withers, and Smith, with a view to its being brought into the market for sale. I was aware that those Crown lands were excluded from any access to the station at Hornsby, or to the projected stations on the North Shore line, in consequence of the lands of Burns, Withers, and Smith intervening. As the proprietor of adjoining land I felt anxious that the Government should not sell their lands without means of access, because I felt that if that were done they would be sold at a sacrifice, and that in addition the sale would have the effect of lowering in public estimation the value of adjacent lands in which I was interested. It is quite true, as stated by Colonel Wells in his evidence, that I had a conversation with him in a railway carriage in the Hunter River district respecting those lands, and that I told him in answer to an inquiry that I would be disposed to let the Government have a road of access from the Hornsby railway station to the Crown lands, provided the road was properly cleared and formed for traffic. I became aware in 1886 that the Government of which Mr. Copeland was then Minister for Lands was pushing the sale of Crown lands in the metropolitan districts as much as they could, and that sales of land in the county of Cumberland had taken place at the Field of Mars, which is not far from Hornsby, at Harbord, and at Heathcote. On one occasion, on a visit to Hornsby, Mr.

Copeland

Copeland was a passenger by the same train with myself, and I dare say he will remember giving the passengers an interesting account of the origin of the name Beecroft, a name which he gave—(*Objection taken by Mr. Copeland that the answer was not relevant to the question of the Chairman. Objection sustained.*)

Hon.
J. F. Burns.
11 Dec., 1888.

2211. Are you aware of the work done by the unemployed at Hornsby, and have you been aware during the course of that work? I have been aware.

2212. Did you know every road they had made; were you aware of their making all of these roads? If you will allow me I will tell you as far as I know the origin of that work.

2213. Yes; but have you been aware from the commencement of this work of every road the unemployed were making? I was aware that the unemployed were making roads there; but I saw roads being made there at the time of my visits about which I knew nothing.

2214. That is to say the unemployed have made roads, if I understand your answer rightly, that you knew nothing about until they were made? I saw them making some roads about the origin of which by recommendation or otherwise I knew nothing.

2215. But were you aware of the majority of roads? You are speaking of the roads passing through property I was interested in. I was aware of those roads; but even in regard to them, I saw one or two roads of which I had no knowledge.

2216. Which were the roads being made of which you had no knowledge? There was a small road being made from the Crown lands across lands which I suppose, from looking at the map, and from what I saw on the ground, belong to a building society, with which I have no connection, to an inn on the Peat's Ferry Road. I saw the men making that road, which I understood was a road of access from the Peat's Ferry Road through the lands of various owners which connected the lands I am concerned in, to the Crown lands. About the origin of that I know nothing.

2217. That is not on your land? I think it touches one point of it, near Junction Road.

2218. None of it is on your land? Without consulting Mr. Dawson, I could not say. I do not know that it is not. You have asked me first about the roads of which I have no knowledge. Another road is the road marked A, down to a church at Pearce's Corner. That starts at Junction Road, and goes through lands in which I have no interest. I have no knowledge of the road. There is an opening from the Junction Road made across to the Boundary Road, and of that I have no knowledge. It may be through our lands.

2219. Is it not through your lands? I think it is through our lands; but I was never asked for my consent to that road. I had been away for some time, and when I came back I found that they had made an opening there. It is only a cleared road. There was no consent for the opening of that road. This road C seems to be a continuation through our land in order to make a connection between the Pearce's Corner Road and the Crown lands. It seems reasonable that there should be an opening; but I was never applied to for permission. I have observed that it has been cleared.

2220. Any others? With respect to the Vanceville Road, an application came to me from the Department of Lands for my assent to the extension of that road from the point up to which it has been made by, I believe, the Department of Public Works, along the boundary of Burns, Withers, and Smith's land, to the Crown lands at the back.

2221. *Mr. Copeland.*] What is the date of that application? I will produce it presently—along the boundary of Burns, Withers, and Smith's land to the Crown lands at the back. The application came to me from the Department of Lands on the 9th September, 1887, asking permission for the opening of that road, to which I replied on the 19th September, giving my assent to that road being extended to Boundary Road, which was the frontage to the Government lands.

2222. *Chairman.*] Do you put in that paper? I think it is amongst the printed papers.

2223. *Mr. Copeland.*] It has been given in evidence, Mr. Burns, that you were acting for the Minister for Lands at various times, did this take place during one of those periods? Certainly not. There has been no business in which I have been interested at any time dealt with while I have been acting as Minister for Lands.

2224. *Chairman.*] To continue; what other roads have you? I want to complete my evidence on this point. That letter came to me when I had no connection with the Department of Lands.

2225. From whom—from Mr. Garrett? From the Department of Lands—from Mr. Freeman, and I learnt afterwards—it has come out in evidence—that the opening of that road was recommended by Mr. Gordon, who was acting as the surveyor of the Casual Labour Board.

2226. All the roads you know that have been started without your knowledge are the road leading to the hotel, the road from the church through your property*, and the continuation of Vanceville Road? If I am to speak as to other roads of which I have no knowledge, there are two other roads here about the starting of which I think I have only a very imperfect knowledge. For instance, a clearing was made on what is called Burdett-street, on the subdivision near the station. That clearing took place, I gather from the evidence, a short time before the land sale came off on the Crown lands. In respect to this improvement, this clearing the Crown lands, Mr. Ranger McKeown, who takes an active interest in all matters relating to the sale of Crown lands, called upon me with reference to the sale at Hornsby, and he made a suggestion that that road should be improved in order to give an open view from the railway station to the Crown lands.

2227. That is the road between Junction Road and Boundary Road, the continuation of Boundary Road? In that case, as in all others, when I have been applied to make recommendations for the improvement of roads in which I might myself be interested, I declined to interfere. Mr. Davies since has given evidence that he and Mr. McKeown consulted, and that this road was made as the result of the consultation.

2228. Where is that in Mr. Davies evidence? It is in his evidence. He states that Mr. McKeown went to see him about this road besides other matters in connection with the sale, and that it was improved before the sale. I did not see the road as so improved until after the sale.

2229. Did you know it was being improved before the sale? I did not. That road had been in some measure opened by Messrs. Burns, Withers, and Smith, by a rough clearing, and left in that condition. I saw the auctioneer who conducted the sale a few days after it, and he told me that the road was of great advantage in giving a direct view from the station, and that he took the fence down opposite the railway station and went through that road, through good land on to the Crown lands.

2230.

NOTE (on revision):—The road from the church is not through any land in which I am interested.

Hon.
J. F. Burns.
11 Dec., 1888.

2230. You had already partially cleared this road you say? It had been partially cleared by the owners of the land, in view of their subdivision near the station.
2231. It was marked in the plan of the subdivision? It was marked in the plan of the subdivision.
2232. You had intended to clear it? We had no thought of clearing it, or of doing anything more than had been done to it at the present time.
2233. Are there any more roads you did not know anything about? I see a road here, 26. I do not know anything about that road. I only saw road 25 from a distance. I was at Hornsby, and I saw from the station that this road had been opened. Then, with respect to the clearing of the road facing the line. I had no knowledge of that work being done until on a visit with Mr. Oliver, Mr. Davies, and Mr. Deering to the Crown lands. I saw they had been doing something to that road in the way of opening it, and while I was present with them, on the road marked A, I heard Mr. Davies make some suggestion to do something more to it previous to the sale. I then walked away. I did not hear what decision was arrived at, if there were one.
2234. You say that when you visited the land in company with Mr. Oliver and Mr. Davies that that road adjoining the railway was already opened? It had had something done to it.
2235. What would you define the something; was it either cleared or formed? Some years ago we, that is Burns, Withers, and Smith, had a rough opening made ourselves. On the occasion of the visit I am speaking of now, I noticed that a greater clearing had been made. It could not have been made by us, because we had no persons employed there. It must have been made by the Casual Labour Board with a view to open up the line from the station. This road runs along the railway line from the road marked A to the end of the station. It would enable parties passing along road A to see that the station was accessible by this road parallel to the railway line.
2236. It is marked in your subdivisional plan? It is mark in our subdivisional plan.
2237. It would have been cleared for your subdivisional sale? We did not intend to sell for years to come, unless we sold as a whole.
2238. Had you not by rough clearing already intimated your intention to open the road? No; we had not. That was only an opening in order that visitors might see the land. There was no regular formation of streets or roads. There was some clearing made in order that people might go through the land and see it, the land being very rich.
2239. When you heard Mr. Davies suggesting to Mr. Oliver the doing of something more to that street, being interested in the matter, and knowing that it would improve your property, did you enter any protest? I took no part in the matter. I walked right away, and left them to decide as they themselves might think best. They could not have been influenced by my presence, because I was not there.
2240. It was Mr. Davies, then, who suggested to Mr. Oliver the doing of something more to this road? No; I do not say that. I heard Mr. Davies make some statements about rendering the sale attractive by doing some more clearing. He then was looking in the direction of this road, and made some reference to it. When I found that there was some suggestion, or that some discussion might take place, upon that subject, I made a point of walking right away from the gentlemen down the hill towards the Government land. Whatever they might have agreed upon I could not know.
2241. Have they done anything more than clearing? I do not know. I have not been there to see.
2242. Are you aware that they put in a culvert there? It may be so. I have not been to Hornsby for some time. I have been up once since the sale, and I could see from the station that they had cleared Burdett Road.
2243. Are you aware that they have formed that road alongside the station? I am not aware, except by report.
2244. Are you aware from report? Well, report is reputed to be a common liar. I know it is so very often.
2245. You ought to know from your own officers? I have been told that there has been spent upon that land about £67.
2246. By whom have you been told? I have ascertained it from the Casual Labour Board.
2247. On this particular road, between Junction Road and road A, running parallel with the railway? Yes. Mr. Davies, I recollect, states also in his evidence that what he has done on that road has only been to follow the practice at the Field of Mars, and other places, where all the roads along the railway line were cleared by the Government.
2248. Is it not more than cleared? I do not know. I have not been to see it.
2249. Mr. Davies, in his evidence, says (Question 848) :—"We were simply adopting a system that had been in operation before we took office. At the Field of Mars, Beecroft, and Carlingford, roads were formed and cleared all along the line, and we merely continued the same practice here." How does that agree with your statement just now, that that road was simply cleared with the object of giving a view of the Crown lands? I did not state so. I suggested that that might have been the object of Mr. Davies in having it cleared, to enable parties going along the road A to see the Crown lands with a view to purchase, to see that there was access to the station by a road facing the railway line. That would occur to me as a reason why, in the judgment of that gentleman, that road might be opened.
2250. Would it not occur to you that if that system had been followed the road should have been carried further along the line? I have not seen what has been done with regard to this particular road, and I have only seen the street known as Burdett-street when standing on the platform at the railway station.
2251. Do you not think it a strange coincidence that it should be continued only along the bounds of your property? No, for this reason: It is continued to Junction Road. That road bounds our property, and the land of the Company known as the Australian Mutual Building Society, of which Mr. Smith, the late Member for Newtown, is Chairman. It is the natural boundary line there. There is no coincidence in that.
2252. But if the scheme was to carry it alongside the railway line, would it not have been carried through other people's property? It could not go further. The North Shore line turns off from there towards North Shore, and you could not get past Junction Road.
2253. Did you know the origin of the other roads through this estate? I did of some of them.
2254. What roads did you know the origin of? I will speak first of the first road dealt with.
2255. Which road is that, the road A? The road A. I will tell the Committee what I know of the origin of that road. In September or October, or at any rate not later than November, 1886, because I wrote

wrote a letter on the subject which fixes the date, after certain negotiations about this road had been completed. A gentleman, who introduced himself to me as a surveyor in the employment of the Government, and whom I did not know at the time, called upon me at the office of Mr. Charles Burns, Elizabeth-street, solicitor, and inquired whether I was not the owner of what is known as the Bellamy's grant. He had been at my club looking for me, and was disappointed at not finding me there, and he had been at Mr. Charles Burns' office then for the second time in search of me with respect to the opening of a road through Bellamy's grant from the Peat's Ferry Road across the railway bridge near Hornsby through the lands of Burns, Withers, and Smith to the Crown lands. I learnt from my son, who was present when I came in, that the gentleman's name was Perdriau. He is still in the Government service, and I believe is at the present time in town. This gentleman, after I had told him that I was interested in the Bellamy's grant, told me in answer to my inquiries that the Government proposed to sell some of the Crown lands on the eastern side of the line in subdivision, and I think, from what he told me, that there was then a surveyor on the land preparing for that subdivision. The object of his visit to me was to ascertain whether I would be willing to allow the Government to make this road from the Peat's Ferry Road through the lands of Burns, Withers, and Smith, over the railway bridge, near Hornsby, again through the lands of Burns, Withers, and Smith to the Crown lands, and I have a clear recollection of what I told him on the occasion of his visit, because I had all along felt anxious that the Government should not attempt to sell those lands without roads of access. I told this gentleman, and it is very probable that he has put it in his report, that I was personally willing to give the Government this road of access.

Hon.
J. F. Burns.
11 Dec., 1888.

2256. That is road A? Road A, without compensation, provided that it was properly cleared and opened for traffic within a reasonable time; but that I would have to consult Mr. Withers and the nephew of Mr. Burdett Smith, who was acting for his uncle, then in England. I told Mr. Perdriau that Mr. Smith entertained strong opinions against giving any land to the Government without compensation, and that I thought Mr. Withers would leave the matter in my hands. I said that I would see him, and that I thought I could induce Mr. Charles Smith to adopt my opinion, that it would be right and liberal to let the Government have the road on the promise I have mentioned, and that he would hear further from me upon the matter. Mr. Perdriau admitted, and the papers show, that the right which the Government had to a road on the northern boundary of Bellamy's grant was of no use to them. That road was not likely to be made a good one, unless at a very large outlay, and it would come out at a point on the railway line where it could not well be utilized, and hence the desire of the Government to make a road as proposed over the railway bridge, and through the lands of Burns, Withers, and Smith, on the southern boundary. Some question has been raised in this Committee about the exchange of roads. There could be no question of that kind, for this reason, as the papers show, that Burns, Withers, and Smith had obtained, with the concurrence of the Government, a title under Torrens' Act for the lands they held, and no right to any road by the Government was reserved in the grant. The Government had a right to make a road on the northern boundary of Bellamy's grant, but not on the southern boundary. Prior to our obtaining —

2257. *Mr. Copeland.*] The Government had a right, you say, to make a road on the northern boundary? The Government had a right to make a road on the northern boundary, but not on the southern.

2258. *Chairman.*] You stated just now that the land, having come under Torrens' Act, the Crown was not entitled to claim any right on the northern portion? No; that was not my statement. I made a statement to the effect that the Crown had a right to make a road on the northern portion of Bellamy's grant.

2259. The Government had a right to make a road to the north of your grant? They had.

2260. Did they not in exchange give you the road to the north of your ground for the road marked A? No; in August, 1885, so far from that being correct —

2261. *Mr. Copeland.*] The papers show it? The papers do not show it. With all respect to Mr. Copeland, in August, 1885, there had been some contention between our surveyor and the surveyors of the Government about the boundaries, as a letter now before me shows, which I will hand in. The Government finally, through their officers, on one side, and Mr. Dawson on the other, acting for Burns, Withers, and Smith, agreed that there was no right on the part of the Government to any reservation for any road on the southern boundary of Bellamy's grant.

2262. The papers do not show that? They do, with all respect. It may be that the papers show a great deal which is not very pleasant.

2263. Will you point out where the papers show this? I will point out a letter which will settle the whole question without encumbering the inquiry with papers which do not concern the matter. I wish to continue the evidence which I was giving upon this point. I have a letter* before me which I will presently hand in to the Committee.

2264. Are you not supposed to have laid all the papers in connection with this inquiry upon the table of the House of Assembly? The matter is not in my Department. I have not interfered in any way with the papers. I am aware that at the instance of a member of this Committee all the papers in connection with the Hornsby land and the property of Messrs. Burns, Withers, and Smith had been ransacked in a Government Department; but I take no exception to that action. I had no papers to lay upon the Table.

2265. I take objection to your insulting the Committee by making such a charge as that. No member of the Committee, so far as I am aware, has ransacked any Government Department for these papers. The Committee have no such papers except those which have been laid before Parliament by your colleague, and yourself? The papers laid upon the Table did not come from my Department; they were sent to me by the Department of Lands, and were laid upon the Table.

2266. Did you not undertake to lay all the papers upon the table? Mr. Brunker, the Minister in whom all matters pertaining to Land lie, and Sir Henry Parkes so far as all matters in relation to the Casual Labour Board, with which I have no connection, are concerned, undertook to lay upon the Table any papers in connection with this inquiry. I may say here that witnesses have complained of leading questions being put to them by members of this Committee, and they have not been allowed to explain their answers, and to make the statements which they wish to make.

2267. *Chairman.*] I think the witness should confine his evidence to something like the limits of decency; the

* NOTE (on revision) :—This letter was my private property, and was searched for and found amongst my private papers on my finding that it had been alleged that road A had been given in exchange for the right to make a road on the northern boundary of Bellamy's grant.—J.F.B.

Hon.
J. F. Burns.
11 Dec., 1888.

the accusations which he is making against members of the Committee are perfectly unfounded; he states that a member of the Committee has ransacked a Government Department for papers? I did not say that. I said that a Department was ransacked at his instance; but for peace sake I am quite willing to withdraw the remark.

2268. I must ask you to refrain from making further imputations against members of the Committee. Every witness has been allowed the utmost latitude in the giving of his evidence; with the exception of yourself, it has been unnecessary to draw the attention of any witness to the irrelevancy of his answers? I am perfectly willing to withdraw what I just now said, but I must ask permission to make an explanation. I found a packet of papers in this room sent from the Lands Department, as far as I can discover, without the authority of any Minister or of any officer. I had reason to suppose that these papers were brought here at the instance of a member of the Committee. If I am informed that that supposition is incorrect I am quite satisfied.

2269. *Mr. Copeland.*] Not only is your supposition incorrect, but the papers to which you probably allude were brought here by the Under Secretary for Lands himself, and were left in the custody of Mr. Deering. The whole of the papers in this case were supposed to have been laid before Parliament, and I now ask you whether you did not promise me in Parliament to lay all the papers in connection with this inquiry before the House? I am bound to say this, that Mr. Copeland is suggesting something improper, and for this reason, that the paper I am referring to is a paper sent by me to the Department of Lands at a time when we were getting our title to the property at Hornsby.

2270. I asked a specific question. Did you not promise me to lay all the papers in connection with this inquiry on the Table of the House? I do not believe I made any statement of the kind, and for this reason, that the papers in this matter are not in my Department; I have no control over them.

2271. Do you not remember that I said I would move a resolution, and that I said that if you would promise to lay the papers upon the Table I would not move it? I think Mr. Brunner made you the promise you refer to. I think you are mistaken, but even assuming that your recollection is correct —

2272. I want to know how it is that you have possession of papers of which the Committee have not possession? I must be allowed to protest against an attempt being made to put me in an unfair position. I had no idea when this inquiry commenced that any question about the title of our land, which was settled in 1885, would be brought forward. I presume that the Minister for Lands gave directions to the officers of his Department that any papers in relation to this inquiry should be laid upon the Table; but how could the officers of the Department conceive that any question of our title under the Real Property Act would be inquired into by the Committee.

2273. Are you not aware that the Under Secretary for Lands furnished a set of papers assuming to be all the papers connected with the inquiry? I think the Committee ought to be fair to the officers of the Department and to the Government.

2274. The Committee have been more than fair with you;—you have been supplied with a copy of the evidence, and that has not been done before in any previous committees? I do not think I have been treated fairly. The Committee determined to exclude me from their meetings, and I think it is very doubtful whether they had the power to do so.

2275. I want to know whether the papers that Mr. Brunner laid upon the Table were not the papers that you charged a member of the Committee with ransacking a Government Department for? I do not think so.

2276. What papers do you refer to, then? I saw a packet of papers* on the table here which I had never seen before, and which I do not think the Minister laid on the Table, or were sent here by him. I asked for permission to look at them, and I had an intimation from the Chairman that I could only see them in the presence of the Committee.

2277. Are you not aware that those papers were brought here by the Under Secretary for Lands, and left in charge of Mr. Deering? I do not know.

2278. The District Surveyor and Mr. Deering were asked by the Under Secretary for Lands to give evidence here as he himself knew nothing whatever about the case? That may be true. If you say that, I accept it at once. I do not desire to prolong the discussion.

2279. *Chairman.*] The papers you allude to were amongst those left by Mr. Freeman? That may be. It struck me as very peculiar that I should be denied the right of seeing these papers when they were sent to the Committee.

2280. Are you aware, or are you not, that these papers were in the charge of the clerk? Yes.

2281. Are you aware that he has not authority, except by order of the Committee, to show these papers to any one outside the Committee? I am aware of that.

2282. Are you aware then that under the circumstances we could not digress from rules which have hitherto obtained? Allow me to say that there was no digression from rules. In reference to this Committee, you are putting me in some measure upon my trial, and it did seem to me very peculiar when you were doing that that I should not be allowed to read these papers.

2283. That was only done after consulting the clerk for the purpose of preserving the rule that had hitherto obtained in inquiries of this kind by Select Committees? I have never seen them since. I want to say this, that I observe in the papers Mr. Brunner laid on the Table in the House that the Under Secretary or Mr. Deering made a note across the papers that these were all the papers that he knew of that had relation to the inquiry. The paper I hold in my hand is the letter sent to me in August, 1885, in respect to our title when it was going through. I never could suppose that a paper of that kind would arise, but I have this statement now, and I hand it to the Committee. [*Appendix D*]. It shows with respect to the Bellamy's grant the Government admitted our right on the 29th August, 1885, by letter; it is headed "Department of Lands," and signed by Mr. Chas. Oliver, No. 85-615. It shows our right to obtain our title without any reservation on the southern side, and that we at the same time gave the Government a road on the northern side of Bellamy's grant, which they now say is of no use to them. That letter was sent to me prior to our obtaining a title for Bellamy's grant.

2284. Do you say you had a dispute with the Government about the northern side? Any dispute between the surveyors was settled by the right of the Government to a road on the northern side being admitted and the title passed.

2285.

* NOTE (on revision):—The papers I referred to were brought to the Committee by Mr. Lester, who said he was an officer under Mr. Deering. See Mr. Lester's evidence.—J.F.B. NOTE BY COMMITTEE:—This is not correct—the papers were brought to the Committee by Mr. Freeman, Under Secretary for Lands, and then left in charge of Mr. Deering.—T.W., Chairman.

2285. *Mr. Copeland.*] Being admitted by you? Being admitted by us.

2286. That is to say the Government had a right to a road on the northern side? We admitted that the Government had a right to a road on the northern side.

2287. And the Government gave up that right in consideration of your giving them the road A? No.

2288. *Chairman.*] Does not the letter imply the answer to Mr. Copeland's question? No. Mr. Copeland has got the impression that the road on the northern boundary was given up in exchange for a road on the southern boundary, which was not done.

2289. *Mr. Copeland.*] The papers show it was done? No.

2290. *Chairman.*] Does not the letter imply so? The letter shows the very opposite.

2291. The letter shows there is no objection to granting to you this title to land to the north? No.

2292. Is that not then in consideration of the road you granted to them to the south? No; that only refers to the north. The point Mr. Copeland has raised is this:—He has an impression that road A was given by Burns, Withers, and Smith, in consideration of the Government giving up the road on the northern side. Burns, Withers, and Smith did not want the road on the north.

2293. The point of Mr. Copeland, I believe, if I understand him right, is that you could not have the road to the north, but that you could include among your land land which would otherwise have been a road? That does not touch this question in the least.

2294. Is that correct? It is not material either way; it does not touch the point. Mr. Copeland has the impression that the Government had the right to make the road to the north, and that we got the Government to give up that right in consideration of a road to the south.

2295. Mr. Copeland does not hold that opinion and he forms the opinion which he holds from the printed papers. They show that the Government relinquished any claim to the road supposed to exist upon your northern boundary in consideration of your giving them a right of road in the position marked A? That is not so; that is only partly correct. If you will allow me I will direct attention to a letter among the printed papers dated 16th November, 1886. If you had allowed me to continue what I was saying about the correspondence it would have led up to this letter showing the conditions under which road A was given. If I am allowed to pursue the line of evidence I was giving it will leave no doubt as to the relations of Messrs. Burns, Withers, and Smith with the Government in respect to the road over the bridge. It took some time after Mr. Perdriau's visit for me to get the assent of Mr. Withers and of Mr. Smith's nephew to my granting this road. I think Mr. Withers was not in town, and I believe I wrote him a letter asking for his assent. When he returned he left it to me to do as I thought best. I also saw Mr. Chas. Smith who was aware of his uncle's feelings in regard to not giving to the Government any land which might be required for roads unless he was paid for it. He also allowed me to take the course which I thought was right, and the consequence was that on the 16th November, 1886, I wrote the letter which is among the printed papers to the Under Secretary for Lands. It is addressed from the office of my son, 75, Elizabeth-street. That letter clearly expresses the conditions and puts right the matter which Mr. Copeland raised with reference to the exchange of roads. If you refer to the papers you will see that besides giving the road upon the conditions mentioned I raised the question of the Government giving up the old road which was of no use to them. It was I who raised the question. They had no right to this road to the south, but on our giving that road I said they would have to relinquish their claim to the old road. The letter which I sent to the Under Secretary for Lands is in these terms:—

Sir,

With reference to my letter of the 8th July, 1885, addressed to the Surveyor-General, and to your communication to me of the 29th August following, numbered 85-1615, I beg now to state for your information that as it appears the Government would much prefer a direct road from Peat's Ferry Road across the railway bridge at Hornsby through the lands of Burns, Withers and Smith, to the Crown lands adjoining, in lieu of the road we first mutually agreed upon, Burns, Withers, and Smith are prepared to assent to the proposed change, provided that the new line is surveyed and cleared for traffic in a reasonable time and that the Government relinquish all claim in respect of the former line.

75, Elizabeth-street, Sydney, 16 November, 1886.

I am, &c.,

J. F. BURNS.

The Under Secretary for Lands.

Before we got to this stage of my getting the assent of Mr. Withers and Mr. Charles Smith to my giving the Government a road, I got a plan of the Hornsby estate, and took it down to the office of the Surveyor-General, where I saw Mr. Deering and other officers, and had a conversation about this road. I asked them to mark on the plan where they proposed to make the road. I also told them that I was disposed to give the required land. We had some little discussion about the matter, and I also asked them —

2296. *Chairman.*] I think this answer is scarcely relevant to the question Mr. Burns? With due respect to you sir, I think it has a very important bearing upon the matter.

2297. I do not see what all these conversations in your son's office and in other offices have to do with the question. All that their narration has brought out could I think have been brought out in a third of the time? I understand that you desire me to stop this part of my explanation.

2298. I simply desire you to be as brief and concise as possible in your answers? I am endeavouring to be so. What I desired to state was, that as the result of my visit to the office, I gave instructions to Mr. Dawson, acting on my behalf, to see that the road was made as nearly as possible at right angles. I also told him of the terms upon which the land was given to the Government, and which are stated in my letter of 16th November, which I have already read.

2299. But as a matter of fact you stipulated that the Government road to the north should be given to you in lieu of the road to the south marked A? That was a part of the conditions only.

2300. Are there any other of the roads as to the origin of which you know anything? I think it is right that I should state that I suggested to Mr. Perdriau that the Government should run a road right through the road known as the Boundary Road, so as to give that road a frontage to the projected line to the North Shore. That road was afterward cleared. I observe from the papers that Mr. Deering gave directions that that road should be cleared throughout, to what is known as the Eastern or Vanceville Road.

2301. It was at your suggestion that the Boundary Road was cleared? I do not say that it was at my suggestion, but I was always in favour of the Government making a road right through to give access to their land. I told Mr. Perdriau, when he came to discuss the matter with me, that, in my opinion, the Government ought to make the Boundary Road, in order to give them a road abreast of the North Shore line to the Vanceville Road.

2302. That road gave a frontage to your estate? It gave a frontage to the land of Messrs. Burns, Withers, and Smith.

2303.

Hon.
J. F. Burns.
11 Dec., 1888.

Hon.
J. F. Burns.
11 Dec., 1888.

2303. *Mr. Copeland.*] Was that road taken out of the Crown land, or did you contribute a part? I do not know. I had nothing to do with the survey. I do not remember whether a portion of Burns, Withers, and Smith's land was taken or not. I told Mr. Perdriau that, in my opinion, the road should be made between the two properties.

2304. But did you give any portion of the land? I was never asked to give any portion, and I do not think that any portion was given. If the Government had asked for a portion of the land for the purpose, I should have had no hesitation in giving it.

2305. But you were never asked? No.

2306. *Chairman.*] Are there any other roads of which you know the origin? I was aware after a time that the Government found that Boundary Road was not practicable—that it was too costly to construct. I did not know until I heard the evidence of Mr. Houston, a gentleman who was a stranger to me, and who was acting as engineer to the Casual Labour Board, that he first recommended that the idea of the road being continued should be abandoned, and that application should be made to the proprietors of the adjoining land for the continuance of Junction Road through to the Eastern Road. I also heard the evidence of Mr. Gordon, in which he stated that he also recommended that that road should be made, and that it should be cleared and ballasted.

2307. *Mr. Copeland.*] Were you in the habit of going out to this land pretty frequently? I went out sometimes every month, and sometimes not so often.

2308. Were you not there sometimes not much more frequently than once a month? Sometimes I was out there once a week for a drive.

2309. During those visits, did you not see the unemployed at work on these roads? I did.

2310. And you took no steps whatever to prevent them from working? I never interfered with them.

2311. You were aware at that time that they were making roads through your property? I was aware that they were making roads which were intended to give access to the Crown lands.

2312. But the roads were through your estate? Through the lands of Messrs. Burns, Withers, and Smith. With regard to the Junction Road, I should like to say that when the application came to me from the Casual Labour Board for the opening of the road, I referred the matter to Mr. Dawson, my surveyor. I got a message that Mr. O'Donnell was in charge, and that he would show what was wanted to be done. I understood that the surveyors had given instructions to Mr. O'Donnell as to the route they desired the road to take. I requested Mr. Dawson to attend to the matter. Mr. Dawson had not only to act for Messrs. Burns, Withers, and Smith, but in making that road it was necessary to pass through land belonging to Mrs. Edwards, who was in England. Her land, you will see, is in a line with road H. Mr. Harnett, who was acting as agent or trustee for the estate of Mrs. Edwards, agreed to let Mr. Dawson deal with the matter as far as it affected the estate of Mrs. Edwards. Mr. Dawson has given evidence that he went out and surveyed this road, and also that Mr. O'Donnell wished to have made some other roads, to which he declined to give his consent.

2313. *Chairman.*] He surveyed Junction Road however? Yes.

2314. You gave him permission to make that road? Yes. I may be allowed to add that so far as I was concerned I should have preferred the construction of what is known as the Boundary Road, because in that case we should have obtained all the frontage we required without the contribution of a large area of valuable land which at any time was worth £100 an acre.

2315. *Mr. Copeland.*] But do you not get the frontage on both sides of the Junction Road? Yes, but that does not compensate us. If you take a large area out of your land for roads and thus lessen the area you have to sell, it is questionable whether you get due compensation in the shape of increased frontage.

2316. Going back to road A,—have you not a frontage on both sides of that road? We have a frontage from Peat's Ferry Road through to the Crown lands which is of some advantage, but we had no particular reason for desiring the road.

2317. Still you have the frontage? Well, if the road passes through our land we must have the frontage.

2318. Would it not have been necessary to make roads here and there to subdivide your land? On that point I desire to say that we had no thought of any subdivision other than which has taken place already on the western side. We had a subdivision of 52 acres close to the station, on the eastern side, and that was the only subdivision we contemplated on that side.

2319. But were you not actually subdividing this land at the time road A was made? No, we were not.

2320. Then you had subdivided it? The subdivision of 52 acres had been marked by the surveyor and we have made some clearing in order that the public might get access to it but we were taking no steps towards pressing the sale of it. I may, while on this point say, that the statement made to this Committee that Messrs. Burns, Withers, and Smith had laid off the whole of the land on the eastern side consisting of 680 acres with a view to subdivision, is entirely without foundation. There has been no survey made for that purpose. Mr. Deering stated, in answer to a question put to him by Mr. Copeland, that Mr. Dawson had laid off the whole of these lands for subdivision. I do not know from whom Mr. Deering got his information, but it is certainly incorrect. There is not the least foundation for it. Not only were no roads provided; not only was nothing of the kind done with regard to the estate, but, I may say the intention of Messrs. Burns, Withers, and Smith was to sell the estate as it stood without any further subdivision.

2321. To what time are you now referring? We had no such intention for a long period. We had had no thought, as far as I can speak for myself and my partners, of making any roads in that district other than those which we have made, for instance, there was the work on Burns Road, that divides our property on the northern side from the Vanceville estate, and we desired to give a frontage. With this object we cleared Burns Road and put in some culverts and formed it roughly up to a certain point, there we left it, and there has been no further expenditure on that road by us or upon any other road in the district, with the exception of a little expenditure on the subdivision near the Railway Station. I am referring now to the period since 1885 or 1886. If Mr. Deering supposes that we had made any subdivision he has been misinformed. No subdivision has been made, and I was very much surprised when I saw the statement in his evidence.

2322. *Chairman.*] If Mr. Dawson said you intended to divide the land into 10-acre blocks, would that statement be correct? Mr. Dawson's statement is not to that effect; his statement was, that since the roads have been made, the land may possibly be sold in 10-acre blocks.

Hon.
J. F. Burnr.
11 Dec., 18'8.

2323. *Mr. Henry Clarke.*] Do you consider the making of these roads through your property has improved its value or otherwise? I may state that a great many roads of access to the Crown lands which have been made we did not want at all.

2324. But speaking generally, I suppose the making of the whole of these has improved your property? Yes.

2325. To what extent? We have given for these roads land which I suppose is worth £3,000—that is, taking the current price of land in that district for the last twelve months. I do not think the estate has been improved to the extent of more than 5 or 6 per cent. by these roads.

2326. If as much money as has been spent upon all these roads had been spent upon the continuation of the Boundary Road, from the big gully up to the Vanceville Road, do you consider that expenditure would have been of greater advantage to the public? Judging from the answers of the officers, who are more competent to speak upon the construction of roads than I am, judging from the answers of Mr. Houison, Mr. Gordon, Colonel Wells, and Mr. O'Donnell you could not construct boundary roads unless with a very large expenditure. Mr. Deering himself stated that it would cost £10,000.

2327. That was to make a good road of it? Yes.

2328. But he said that you could make a passable road of it for £2,000? I do not think myself that it is possible, and I have been over the country. According to Mr. Houison's evidence you have a depression in one place of 300 feet, and I do not see how with an expenditure of £2,000 you could make it a fair road. With reference to these cross roads, I might state that we gave any of them with a great deal of hesitation and unwillingness. The only cross road that seemed to me to be particularly called for was the extension of the Vanceville Road to the Boundary Road; that seemed a natural thing to be done.

2329. *Mr. O'Sullivan.*] I should like to ask what you mean by saying that these roads would increase the value of the property by only 5 or 6 per cent.;—what would that sum amount to? The 680 acres would be worth probably £70,000; take the percentage on that sum and you have the amount. The roads might possibly increase the desire of purchasers to build to the frontages, but I do not know that the price given for the land would be materially enhanced by their construction. You must remember that the area of land we had for sale was materially reduced by the roads.

2330. *Mr. Copeland.*] The percentage you name would give an increase in value of £4,000; do you think that would be a fair estimate? I should think £4,000 or £5,000 would represent the increase in value.

2331. *Chairman.*] Are you aware that Mr. Withers has informed us that the increase in value would be £10,000? You must allow me to state that Mr. Withers' estimate of any property he owns is very high. To use the common phrase, "All his geese are swans"; that will best describe my idea of his estimate. I may tell you that we had in July last, an application from Hardie and Gorman to purchase 200 acres of our land on the eastern side for £20,000. Messrs. Hardie and Gorman thought we might get a higher price, but they proposed that sum as the amount for negotiation. To show the difference between my estimate and that of Mr. Withers, I may say that Mr. Smith and myself were prepared to take £21,000, whereas Mr. Withers would not take less than £30,000, and he kept the matter open so long through his persistence in standing out for what was considered by us an extravagant price that the whole transaction fell through.

2332. *Mr. O'Sullivan.*] You admit that while you have given away £3,000 worth of land your property has received an increase in value of £4,000 or £5,000? Probably.

2333. So that the construction of these roads has been an absolute gain to the syndicate? Any roads opened in the district would be to a certain extent a gain to us.

2334. But incidentally these roads have benefited your estate? Yes.

2335. Suppose the Government had not been going to sell the Crown lands at all, and that you desired to sell your property, would you not, in the ordinary way of business, have subdivided the estate? I object to that statement as to subdivision. We had no intention of subdividing. Our intention all along has been to sell the estate to a public company, and we have had some negotiations with that object in view. Without making any roads whatever we expected to have the full area of land paid for.

2336. Then what was the meaning of the subdivision plan that you published? That plan is misleading to you. It refers to the subdivision of 52 acres or thereabouts near the railway station, and to no more.

2337. As far as that land near the railway station is concerned, you had subdivided it and have had a plan prepared? It was marked out by the surveyor.

2338. You intended to construct these roads yourselves? I may tell you that that portion of land would have formed part of the property which we intended to sell to the company who wanted to purchase 200 acres. We would have done nothing to the roads.

2339. Nothing? No.

2340. As a matter of fact had you not begun to construct some of the roads? No.

2341. Suppose Mr. Dawson has sworn that you had commenced to make some of the roads between the railway and the Crown lands? I know that Mr. Dawson did not make that statement. What he said in regard to the subdivision at the railway station, of which you have a plan, was, that he had marked roads to that property, and where those roads were marked he had got men to roughly clear streets in order that people might get access.

2342. You had begun the work then? We had begun and ended.

2343. You had commenced the work in a rough way. Mr. Dawson says precisely what I say, and to corroborate that statement we have the evidence of Mr. O'Donnell, who says that he found that some of these roads had been commenced. It is clear—as far as these 50 acres were concerned—you had subdivided, and were about to lay out streets and roads? I deny that statement *in toto*. We had some clearings made, and there we had left it. We were not about to do anything more,—we had no thought of further expenditure. We have a man at the present time cutting down the undergrowth about the place, and he has been at that work some time, but we had no intention of doing anything more.

2344. Then this plan is only a bogus plan? I think that is a very offensive word to use.

2345. I cannot help using it, because—according to your own evidence—you had no intention of doing this work, whereas, according to the plan that you submitted to the public, you did intend to make the roads? I think your question is put in a very offensive form; there is nothing misleading in the plan or in the evidence; it is a plan of a proposed subdivision; the surveyor's pegs are there now, but the land has not been offered to the public. All that we did was to clear the land for the convenience of those who wished to see it. We went to some expenditure in the way of getting the streets roughly cleared, and that was all we intended to do.

2346.

- Hon. J. F. Burns.
11 Dec., 1888.
2346. *Chairman.*] The Government have since completed the work that you began? The Government have not completed it; I do not think it is right to make that statement.
2347. The Government had cleared and in some instances formed the streets which you surveyed by your surveyor, and have only roughly cleared? As I understand all the Government have done in the matter.
2348. I want a "Yes" or "No" to my question? But the statement preceding your question involves matter which is in dispute. The Government have not done what you state; the Government, I admit, have done some clearing; I saw from the station a short time ago that they had cleared Burdett-street. I believe they have also cleared the land along the railway line, but I do not know that they have done any more.
2349. Have they not cleared the "T" shaped road shown upon the plan? I know nothing about that road. I have never been asked to give my consent to anything done there; it leads, as I understand, from Crown lands, on to private lands owned by various persons.
2350. I am referring now to roads lower down? I have not seen those roads; they may have been cleared prior to the land sale. I have been there once since the land sale, and then I did not go over the ground. I saw from the station that something had been done to the land on the opposite side, but what has been done I had no control over.
2351. You say that you saw the unemployed at work on these roads. Does it not seem extraordinary that you should see a number of men digging into your property without knowing what they were about? I have seen no men working upon any roads in that subdivision of Messrs. Burns, Withers, and Smith. I have seen men working on the Junction Road.
2352. You admit then that you have seen men working on your estate? I said I had seen men working on roads which were given as roads of access to the Crown lands.
2353. If you saw a number of men working there with horses and carts and appliances showing that they intended to remain there for some time, does it not seem an extraordinary thing that they should have been doing this work without your knowledge? I object to that statement. I saw no men working on roads without my consent. I saw men working on Junction Road for which I had given my consent, and also on some other roads, with reference to which I had been consulted, and I saw no reason to interfere with them.
2354. You say that you saw men working upon those roads that you did not inquire what they were doing, or as to who sent them there? The Government, through their officers upon the Casual Labour Board, made a selection of several roads that they wanted, and I afterwards saw the men working upon those roads. As I have said I did not interfere with them.
2355. Mr. Dawson has stated that he surveyed Junction Road, and that he had begun to make that road? I think Mr. Dawson's evidence will show that there were a number of unemployed in that locality, and that there was a difficulty in giving them work to do; the overseer took it for granted that there would be no objection on the part of the adjoining proprietors to the continuation of the Junction Road. I presume that the overseer had a difficulty in at once finding employment for the men, and he therefore placed them upon this road. Mr. Dawson went out and found that the superintendent in his eagerness to get the men work to do had commenced the lower portion of the Junction Road, which might properly be made because of its leading from the station through the lands of various owners. I may say that it passes through lands belonging to the Australian Mutual Provident Society, also through lands belonging to Edwards, Foster, and Harnett. All the land on the southern side of the road until you get to the end of Edwards' land, where road H has been made, belongs to various parties, and Burns, Withers, and Smith have no interest in any of it.
2356. But you have an interest in the land on some portion of the Junction Road? Yes; but that would be further on.
2357. But take the north side of the road? The land on that side, with the exception of the break at Edwards' land, belongs to Burns, Withers, and Smith.
2358. But on the south side, all the land from Harnett's land to the Vanceville Road belongs to Burns, Withers, and Smith? That is so.
2359. *Mr. O'Sullivan.*] Mr. Dawson has sworn that he surveyed the Junction Road and the roads D and H from the Boundary Road to Burns Road? That is correct.
2360. If Mr. Dawson did that, is it not evidence that he was proceeding with the work of laying out this estate with a view to its subdivision? No, it is not. Mr. Dawson's instructions were to deal with the opening of the Junction Road in the room of the Boundary Road.
2361. Upon whose instructions did he act then? When the application came to me from the Casual Labour Board for the opening of Junction Road, I wrote to Mr. Dawson, and asked him to attend to that business.
2362. Further on in his evidence Mr. Dawson swears that he intended to lay this land out in orchard blocks? I do not think he said that. He said that when he was on the ground the superintendent asked him for permission to make cross-roads, to which he objected. Mr. Dawson got general instructions from me to see that the road was made at right-angles, and not to injure the estate by any road which he might make. He considered that these cross-roads were not necessary in the interests of the estate.
2363. Mr. Dawson said that he would have laid the land out in orchard blocks of 10 acres? He was not called upon to lay the ground out in 10-acre blocks.
2364. But he says that he was about to do it? I think not. I think he was asked the question as to what he would do if he had the business of laying out the land, but he was never instructed to lay it out in 10-acre blocks.
2365. What were Mr. Dawson's instructions at the outset, before the unemployed interfered with his operations? The instructions given to him were with reference to Junction Road, as I have said. He had instructions with reference to the allotments near the station, but they did not concern these roads.
2366. What were the nature of those instructions? They had reference to any person purchasing land at the junction on the western side, where we had a subdivision.
2367. But, as a matter of fact, we find that he carried out other roads, such as the Junction Road and Road H? An application was made for the Casual Labour Board to extend Burns Road to the boundary of Burns, Withers, and Smith's land, and then to continue the road along our boundary into the Government land. The desire was to get a road through. I refused to give my consent to making any further road there unless I were assured that Mrs. Edwards' representative would give half of it. He agreed,
after

after some delay, to give half of the land. That delay led to the unemployed commencing to make a road there by mistake. Mr. Dawson was opposed to giving the land; but I finally agreed to give half, upon the condition I have named.

Hon.
J. F. Burns.
11 Dec., 1888.

2368. I think the way in which you cloud your answers to the questions will do your evidence more harm than good;—you admit that Mr. Dawson had instructions to clear the Junction Road? Not at that time.

2369. But at any time? As I explained before, when the application was made by the Casual Labour Board.

2370. He admits having surveyed Junction Road and roads D and H? That I do not know.

2371. Who gave instructions for the survey of road D running from the Boundary Road to Burns Road? Mr. Gordon, in his evidence, has stated that he recommended that road. I heard him state in his evidence that he required the road as a road of access for two objects. In the first place, as I understand, there is a great depression in the Boundary Road—

2372. Perhaps you will tell us whether you gave your permission in this case? An application made to me for this road down to Burns Road was assented to. I find from the evidence that it was applied for upon the recommendation of Mr. Gordon. I may be allowed to state also that Mr. Noonan, who owns property on the road leading down to the platform—

2373. What has this to do with the question I ask you? I thought you desired information about Burns Road.

2374. *Chairman.*] Did Mr. Dawson survey this E road? I do not know; I do not think he did.

2375. If he says that he did, is he correct? I do not think he could have surveyed it. I want to state that Mr. Noonan called upon me at the Treasury last week and told me that through his representation Burns Road was extended and improved, and that he would like to be examined by the Committee. I should like to make some explanation with reference to the questions asked by Mr. Copeland as to the land I applied to purchase near the Peat's Ferry Road. I should also like to make an explanation about the reserve at Hornsby. I wish particularly to say something with regard to the diversion of the old Peat's Ferry Road when the railway passed through. I observe that Mr. Copeland examined Mr. Oliver and another witness fully upon these points, and I think it only right that I should be allowed to give evidence. I was pleased to see that Mr. Whitton was called with reference to the sites for the railway stations, although I could not see how this question could arise in connection with this inquiry.

2376. *Mr. Copeland.*] I may say that we have not the papers before us to which you referred some time ago;—they have been sent back to the Lands Office to be printed. They were brought here by Mr. Freeman, and left in charge of Mr. Deering. When we wanted some of them printed they were sent back to the Lands Office, and they are there now? I understand that; but I think I might say a few words which will put this matter clear, both with regard to the reservation and the road. I should like to give the Committee some idea of how we proposed to purchase what appears from the evidence to be 10 acres of land at Hornsby, which does not correspond with information in my possession, first as to the area of land, and next as to the circumstances under which we applied for it. The Committee may not be aware that the Peat's Ferry Road divided the lands of Burns, Withers, and Smith where the railway now passes along between Homebush and Waratah, and that the railway has cut off a portion of that road. It then became a matter of necessity to make a new formation in order that the road might be resumed from the point where cut off to the other part of the road. In making this new formation it became necessary to complete the old road in place of the road which had been taken away. In doing that the new Peat's Ferry Road crossed the railway line and passed over on to the eastern side of the line; and in making the road, the surveyor who was engaged in the work—for what I believe were malicious reasons—left a piece of Government land intervening between the lands of Burns, Withers, and Smith, who had been deprived of a frontage by the railway to the road. I think the simplest way to explain this matter is to put in evidence the plan of this new road, showing the way in which it was formed. This plan I received from Mr. Ives, the member for St. Leonards, and it shows that the area of this block of land is 4 acres 1 rood 32 perches. Mr. King was the surveyor who made the plan. The whole of the land in this neighbourhood near the railway is pretty even.

2377. *Mr. Copeland.*] There is a plan here which Mr. Oliver has produced and which of course is more reliable, coming from the Department? Yes, this shows the same area. It is stated in the papers to be 10 acres.

2378. I may state that your own application states 10 acres? That may be so. The position of the matter is this. On observing some time after this new road had been so formed and made, I was advised that my easiest course was to apply for the purchase of the intervening land under the 11th section of the Act. I was advised while doing that that there was no favour, that the land would have to be appraised and that I would have to pay the appraisal price for the purchase.

2379. Were you informed that officially;—does the correspondence show that you received information that you would obtain no favour? No; but I state that there could be no favour shown to me.* When we found that this course had been taken of leaving a piece of land intervening between the Peat's Ferry Road and our land, I consulted parties who had been engaged in this business of looking after Crown lands. The Act itself bears out the impression of Mr. Oliver, that the 11th section is intended to meet such cases where through the change of direction of a road, land had been severed from its proper frontage, which was the case here. I made application under the Act, for permission to purchase that land whatever the area might be, and I sent in that application in the ordinary way. I was afterwards informed that it had been refused. I observe from the evidence of Mr. Oliver, who is familiar with all questions of this kind, that the application was perfectly legitimate and one which was properly made under the section to which I referred. I took no more interest in this matter when I found the application was refused, but some time after Mr. Ives sent me a note stating that his attention had been drawn to the peculiar formation of this road, and that it was a matter of observation among all the local residents. He had been in the locality and had observed the bend in this road, and on his own account had written to the Department of Roads suggesting that it should be straightened. He sent me a letter with this plan in the month of November, though the year is not stated. There was also a letter from Mr. Bennett, the Chief Commissioner for Roads, in reply to a letter from Mr. Ives, stating that there would be an objection to the straightening of the road as proposed, because portions of the

NOTE (on revision):—What I wished to convey was that under the law the value of the land would be determined by appraisalment, and that my application was not a request for a favour.—J.F.B.

Hon.
J. F. Burns.
11 Dec., 1888.

the reserve had been granted for a public school and police station, as shown in the accompanying tracing. I have taken no further action with regard to the application to purchase this land; I have allowed it to rest, and have submitted to the injustice of being deprived of the frontage to the Peat's Ferry Road. With regard to the reserve, I wrote to Mr. Copeland in his public capacity when I observed that the lands were being cleared on the western side of the Peat's Ferry Road, I was informed, for auction sale, suggesting for his consideration that, as this was the nearest block of ground near the station suitable for a reserve for recreation purposes, 20 acres of it might be reserved, and I received a reply, which is in the papers, to the effect that the Government considered that they had already reserved sufficient land in the Hornsby district for recreation purposes. I next wrote a letter asking where the reserves were situated, as I could not find from inquiries that any such land had been reserved for recreation purposes. That letter went to Mr. Copeland shortly before his retirement from office in the last Government.

2380. The papers do not show that it ever came before me? I think it was in your tenure of office. Do not the papers here show it.

2381. No. I dealt with the first letter only? That letter raised the whole question of these reserves, as I understand from the evidence of Mr. Oliver; and, finally, it appears from the papers that Mr. Garrett, in dealing with that letter, inquiring where these reserves were, came to the conclusion, taking the papers, I presume, altogether—I never saw him about it—that he would let the land be reserved for future public requirements. I took some interest, I think, in the school site being reserved, and also in the site for the police station, but took no further action with respect to any of the reserves. As I understand the position now, from the explanation of Mr. Oliver, while these lands have not been sold, there has been no dedication for the reserve, and it is still open to the Minister to sell the land if he thinks fit. I gather from the statement in evidence of the late Under Secretary for Lands that that is the position of these lands at the present time.

2382. That is not so? I do not know the exact position; I have made no further inquiries. I am also aware that a petition in favour of making a reserve at Hornsby was presented to the Minister for Lands by the late Member for Redfern, Mr. J. S. Farnell. He had formerly been a Member for St. Leonards, and was on very friendly terms with the people of that district. I recollect the petition being presented by him in favour of this land being reserved for public recreation. The people in the locality had the impression that this land was dedicated for this purpose. I have here a copy of the petition which I took from the *Sydney Morning Herald*. [Appendix E].

2383. It is all in the papers—everything you have been saying is in the papers? That disposes of everything about this matter at the present. I do not think I have anything more to say in regard to these matters, and if the Committee desire to examine me with regard to these statements, I am quite willing to be examined. There is, however, one matter about which I might be allowed to make some explanation. I was asked by Mr. O'Sullivan with respect to my seeing men at work on the roads in the Hornsby district, and I think it is only fair to state that, in consequence of comments in the Press about these roads, I made a special request to my colleagues early this year to send officers to report upon them, and state whether they were required in the public interest. In consequence of my representation on the subject, Mr. W. C. Bennett, the Chief Commissioner for Roads and Bridges, and Mr. Gordon, the surveyor, furnished reports, in which they stated that the roads were required as roads of access to the Crown lands in the public interest. I did not feel called upon to interfere in any way with the action of the Casual Labour Board in forming these roads.*

2384. *Chairman.*] You are aware that the paper you read from when this motion was passed in the House did not show all the roads made by the unemployed? That paper could not be supposed to show all the roads. A lot of discussion has taken place, which seems to me quite unnecessary, for this reason,—that the paper only shows the roads formed when these gentlemen went to examine the ground, for the purpose of determining whether the roads were wanted. One or two small roads have been made since, as I ascertain from the evidence. That report does not pretend to contain anything more than the roads then existing.

2385. *Mr. Copeland.*] You stated in Parliament words to the effect that it was I who originated the work in connection with these roads. I do not remember the exact expression without reference to *Hansard*, but you made use of it several times. In all the papers which you have seen, and I understand you have read each separate paper, do you find any paper with my signature attached authorizing any of these roads? My statement was this—

2386. Did you not state that? I do not choose to answer the question unless I am allowed to explain. If you bind me down to what I said in Parliament—

2387. Did you not, in Parliament, say this work was originated by me? That is not my statement. I think you will find in *Hansard* that the statement I made was this:—"That the first movement or application for the construction of roads through the lands of Burns, Withers, and Smith, to Crown lands, took place when the honorable member for New England was Minister for Lands." I do not want to be unjust to Mr. Copeland.

2388. Do you find among the papers any ministerial action of mine in respect to these roads? I find among the papers strong evidence that you were pressing the sale of Crown lands.

2389. What evidence do you find? In January, Mr. Copeland wrote a very long minute on the subject of the sale of Crown lands by auction, in which he directed his officers to bring all the lands in the metropolitan district available for sale under auction up to the limit within the coming year.

2390. What has that to do with your estate? It has to do with this,—that the application in October or November for the first road of access had relation to the desire of the Government to sell Crown lands for revenue purposes.

2391. Are you aware that your own colleague entirely approved of the action I took? I suppose you are aware of this minute by Mr. Garrett being added to my minute,—“Generally I concur with Mr. Copeland's minute. I desire, if action has not been taken, to carry it out already that such action may be taken with as least delay as possible under the circumstances.—T.G., 28/2/87”? That does not touch the question you first asked me. It seems to me that you are asking leading questions. What I stated in Parliament was—

2392. I asked you a question, and you have not answered it yet;—I asked this question, “Do you find amongst

* NOTE (on revision) :—See Mr. Gordon's report of the 28th Jan., 1888, and Mr. Bennett's report of the 8th Feb., 1888.

amongst the papers any ministerial action of mine in connection with any of these roads" ? I find that in the evidence of Mr. Oliver. If you put the question to me, it shows very clearly that you generally approve of what has been done.

Hon.
J. F. Burns.
11 Dec., 1883.

2393. Do the papers disclose, so far as you have seen, any ministerial action of mine? They disclose evidence confirming what I said in Parliament, that during the time you were in office this application was made to me for permission to make this first road across the railway bridge.

2394. Are you not aware that action is often taken by subordinate officers without it coming under the immediate cognizance of the Minister;—do you find any action of mine amongst the papers? I find no minute by you. My statement in Parliament, Mr. Chairman, was not that Mr. Copeland himself had done anything; but the first application for a road of access, to which I do not attach any importance, was made at that time. Any Government in office, in the public interest, would have done what Mr. Copeland did. That was before they sold these lands. They had to have roads of access, and my statement was to the effect that the first application came when Mr. Copeland was in office as the Minister for Lands.

Frederick O'Donnell recalled, and further examined:—

2395. *Mr. O'Sullivan.*] We wish to ascertain from you the total cost of the work which has been done upon the Crown lands? I could give you the amount approximately. I could not give you the exact calculation. The calculation I gave you the last time I was here was almost correct, as far as we knew. I suppose the whole cost of the work would be £6,500, or about that. It may come a little over that sum. That would cover the whole of the roads upon the Crown lands.

F. O'Donnell.
11 Dec., 1883.

2396. That would include the Hornsby Crown lands subdivision, and the whole of the lands embraced within the yellow margin, showing the private property of Messrs. Burns, Withers, and Smith, and other owners? Yes.

2397. But take the Hornsby subdivision, to which these roads give access. How much of the £7,000 has been spent upon that portion of Crown lands which was offered for sale? I should think about £4,500. We have spent at Hornsby altogether £6,000 odd. We reckon that the roads on the Burns, Withers, and Smith estate, would cost about £2,300.

2398. You say that out of £7,000 spent upon the work of the unemployed at Hornsby, £2,300 only has been spent upon private property? Yes.

2399. Then are we to understand that the remainder of the £7,000 has been spent entirely upon the Crown lands? Yes; on each side of the railway.

2400. What has been done to the Crown lands to cost an expenditure of £4,000? Well, I have given you the expenditure according to our books. Under-scrubbing cost us in the first place £3 an acre, that is the average price, I believe, and the roads have cost between £7 and £8 an acre.

2401. How many acres of roads are there? There are about 5 or 6 miles of roads.

2402. The figures you have now given for under-scrubbing and for making the roads would bring the total up to only £1,220? Well, all I can say, is, that the £4,000 has been spent upon the Crown lands in the Hornsby neighbourhood.

2403. How many miles of roads on the Crown lands have been metalled? In some places they had been cleared and formed, and in some places they had only been cleared. I think there would be about 2 miles of roads which are only cleared. The remaining 3 miles of roads would be cleared and formed, none of them metalled.

2404. The average price of the work is £8 an acre? Yes.

2405. Then where has the rest of the £4,000 gone to? I cannot give you a better idea than I have already given as to the expenditure.

2406. How are we to reconcile your statements as to the expenditure then? I cannot say exactly what roads have been made upon the Crown lands. Since this inquiry commenced we have been more particular in ascertaining the expenditure which has been made upon the lands of Burns, Withers, and Smith. We did not anticipate that the inquiry would extend to the Crown land. I think if my surveyor, Mr. Little, were summoned he would be able to give you the information you desire as to the Crown lands. The only thing that we have been doing latterly has been to get a correct estimate of the expenditure on Messrs. Burns, Withers, and Smith's land. We have had some difficulty in ascertaining to whom the private lands belong. Hitherto we have been in the dark all the way through as to the ownership, and I could not tell you now exactly the boundaries of the estate of Burns, Withers, and Smith.

2407. Is it not extraordinary that the forming of all these roads upon the estate of Messrs. Burns, Withers, and Smith should have cost only £2,300, while the roads which have been made upon the Government land, none of which have been metalled or culverted, should have cost £4,000? * Well, there are two bridges to be taken into consideration, one on the Boundary Road, and the other a little lower down.

2408. *Mr. Copeland.*] But the bridges on Boundary Road would not be included in the Crown lands expenditure? Yes; there are two bridges on the Crown lands upon which money has been expended.

2409. How many men had you employed upon these roads at the time the inquiry commenced? We had fifteen; but after the Committee paid their visit of inspection to the land these men were taken off the work.

2410. Do you remember informing Mr. Brunker and myself upon the ground that a fortnight previous to our visit you had as many as eighty men employed there? I cannot recollect saying so; but I may have said so. But that would include all of my men in the neighbourhood.

2411. That is what you told Mr. Brunker and myself upon the ground? I will not dispute it. I was only speaking roughly. I find that we never had eighty men there at any one time. If I said there were eighty men at work, it was meant to include the whole of the men on other works, besides the roads in question.

2412. You remember Mr. Brunker and myself asking you how many men you had employed there at that particular time, and you saying fifteen? Yes.

2413. I think Mr. Brunker then asked you how many men you had had employed there a fortnight previously, and you said eighty? I may have said so. I find that in May, 1887, when we first started there, :

* NOTE (on revision):—The £4,000 includes work of clearing and subdividing Crown lands, and other works in the neighbourhood of Hornsby.

F. O'Donnell. there, five men were sent to work. That was according to Mr. Deering's instructions. In June, 1887, we had only 8 men; in July, 8; in August, 12; in September, 19; in October, 16; in November, 20; in December, 16; in January, 1888, 48; in February, 39; in March, 55; in April, 55; in May, 44; in June, 43; in July, 42; in August, 65; in September, 32; in October, 27; and in November, 15.

11 Dec., 1888.

| MR. O'SULLIVAN. | |

T. WALKER, ESQ., IN THE CHAIR.

Henry Little called in, sworn, and examined:—

- H. Little. 2414. *Chairman.*] You are a surveyor in the employment of the Casual Labour Board? Yes.
- 12 Dec., 1888. 2415. Are you confined to the Casual Labour Board, or do you do other Government work besides that? I am confined to the Casual Labour Board.
2416. You have been at work at Hornsby? Yes.
2417. *Mr. Copeland.*] Are you on the staff, or are you a licensed surveyor? I am only connected with the Casual Labour Board.
2418. You are not in the Government service otherwise? No.
2419. How long have you been working under the Casual Labour Board? Since the Casual Board took the work over from the Lands Department.
2420. Did you survey the Government subdivision at Hornsby? No.
2421. I suppose you have merely been there surveying roads, or superintending the making of roads? Superintending the formation, making, clearing, and such like.
2422. Can you tell the Committee the length in chains of the roads cleared on the Government subdivision at Hornsby, on the eastern side of the line? 276 chains.
2423. Perhaps you could tell me how many roads there are there? I could not tell you that without having a plan of them before me.
2424. How many of those roads have been formed? 115 chains.
2425. Any metalled or ballasted? No; nothing to speak of.
2426. What number of culverts or bridges have been made? There are two bridges, six crossings, and one causeway.
2427. What do you call crossings? They are paved crossings.
2428. What has been the total expenditure on these roads and bridges? £1,629.
2429. I want you to distinguish between the roads on the Government subdivision on the eastern side of the line and those on Government land on the other side? Boundary Road is not included in this estimate I am giving you. There are cuttings and excavations which would come pretty close on to another £1,000.
2430. On the same subdivision? On the same subdivision. I have not had the time to take the quantity of yards out of the book; but I think it will come pretty close up to that; perhaps not quite £1,000.
2431. Those are the cuttings on the various roads? Those are the cuttings on the various roads. I could not distinguish any particular work without the books, and I had not the time to see them.
2432. Does that include underscrubbing on the whole of the land? That includes the underscrubbing.
2433. And clearing the land ready for sale? And clearing the land ready for sale—that is, all the work we have done upon it.
2434. Do you know the area of the Crown lands subdivision? 233 acres.
2435. What do you estimate the cost of the underscrubbing and clearing of the land, exclusive of the roads? £3 an acre.
2436. Then £699 has to come out of your former amount, leaving the balance to go for roads, bridges, and so forth? Yes.
2437. How many men had you at work on that subdivision? I could not say very well. We must have had when we started up there about forty.
2438. Has any labour been expended upon that subdivision since the Government sale? No.
2439. Has any work been done on the Boundary Road since the subdivision? No.
2440. Or on any of the other roads? Yes; there has been work done on the continuation of Boundary Road—three or four days' work.
2441. *Mr. O'Sullivan.*] How much was expended on the unemployed in the works on private lands, exclusive of the Crown lands? It must be close on £2,900.
2442. If you have had £2,900 spent on private lands, and £2,029 spent on Crown lands, for culverts, and causeways, and underscrubbing, and so forth, the whole amount comes to £4,929, does it not? That is right.
2443. *Mr. Copeland.*] Does that include the clearing? It includes it.
2444. *Mr. O'Sullivan.*] Can you tell us what other money has been spent—it has been given in evidence that over £6,000 has been spent at Hornsby? £1,000, I think, has been included that we spent for works at Berowra. When they were finishing the work at Berowra there were a few gangs left up there to complete the work, and they used to come down to Hornsby to be paid; but the sum cannot be more than £1,000, any way. The balance is in the cuttings and excavations and horse-hire.
2445. In addition to the £2,900 there must have been spent about £1,500 on the private lands? Yes. This estimate was made up at 15s. a chain, and there are a number of chains which could not be made for less than £4 or £5. We paid by the cubic yard, and put it into chains.
2446. What I want to get at is this: There is a discrepancy of at least £1,600 between the amount already given as the total expenditure on the unemployed at Hornsby and the expenditure you have accounted for now. You have accounted for £4,929, and it has been given in evidence that there has been nearly £7,000 spent on the unemployed at Hornsby. I ask you was this balance of at least £1,500 also spent on these roads? You can put down £800 on the private lands, and the balance on the other.
2447. That is £3,700 on the private lands altogether? Yes. 2448.

H. Little.
12 Dec., 1888.

2448. So far as you know, at least £3,700 has been spent on all the land south of Boundary Road and including that road? Yes; I think that will cover it.
2449. Will you kindly tell us where the other £700 has gone? On the Government lands on both sides of the line.
2450. *Mr. Copeland.*] Are there any roads on the Crown lands east of the subdivision at Hornsby? All the work done is included in the £6,000, and there was also a 3 $\frac{1}{4}$ acre reserve for a Court-house which was stumped.
2451. *Mr. O'Sullivan.*] Are you in a better position than Mr. O'Donnell is in to know what the amounts spent on the lands are? Not unless I took them out of the books. I could not fix upon any particular length of road; but I can tell you pretty well what has been spent upon the Crown lands, and outside of the Crown lands.
2452. Did you yourself keep the accounts of the expenditure on these roads? Yes, mostly all.
2453. Then we can accept your statements as approximately true? Yes. What I have told you has been the money paid away for work at Hornsby and neighbourhood, within £1,000.
2454. *Mr. Copeland.*] There have been no roads made on the Crown lands east of the subdivision? No; we have never done any.
2455. You know the bad creek on Boundary Road, what do you consider you could have made that passable for—what would be your estimate? It is formed as far as road D.
2456. Yes. Knowing the nature of the place, what amount would you estimate would cover the cost of making that place passable for traffic? About £1,200, I think.
2457. That is bearing in mind the soft nature of the sandstone? Yes.
2458. You think that for £1,200 you would be able to make a cutting through the hill, and tip the mullock and debris down into the gully, and so level the road to make it fit for ordinary traffic? Yes; but it would be a steep incline then.
2459. How steep? One in eight or one in nine.
2460. Could you not reduce it? Unless you cut through the hill altogether.
2461. The £1,200 would include a bridge, or culvert, or whatever you might term it*? Yes; there would have to be a bit of a bridge. The higher the bridge the better.
2462. With the stone you took out of the cutting you would be able to build the approaches to the bridge? Yes.
2463. Then for £1,200 you could make that place passable, and the Boundary Road would then be as serviceable as Junction Road? Yes†.
2464. For the whole length to Vanceville Road, if this £1,200 were spent in making this crossing at Spring Gully Creek, Boundary Road would be as serviceable as Junction Road? No.
2465. But still Boundary Road could be made a good serviceable road for traffic? It could be made; there would be no difficulty about it at all. You could do the work right enough if you liked to spend the money over it.
2466. Then you think £1,200 spent upon this road would make it serviceable for all kinds of traffic? Yes‡.
2467. *Chairman.*] Did you survey any of these roads? No, none of them.
2468. *Mr. Copeland.*] Have you noticed whether you could, by a slight deviation, reduce the expenditure upon this road? If I was going to make the road there I would follow the creek round to the top.
2469. In that case the expense would be reduced? By about £8 a chain.
2470. *Chairman.*] That is to say, with a slight deviation to the south? Yes.
2471. Would you have to make much of a deviation? No, I do not think so.
2472. Would it materially injure Burns, Withers, and Smith's estate if you did it? No, I do not think it would much. It would certainly injure it a little.
2473. *Mr. Copeland.*] They would have frontages to both sides of the street? Yes, but then it would leave land that would be of no value at all. If you had to follow the contour of the hill you would have to grade it right up.
2474. How many chains of road do you think would be necessary? About 15 or 16 chains, at a cost of £8 a chain.
2475. It would cost about £120? Yes.
2476. In that case the road would be just as serviceable, I suppose, as the Junction Road? No; it would not be as serviceable.
2477. I mean for traffic? Yes; but it would be very steep.
2478. What is the steepest grade of Junction Road? I think it might, in one or two pinches, be about 1 in 18, or something like that.
2479. Still, for all practical purposes, by making a deviation of 15 chains, which would cost at £8 a chain, or £120, Boundary Road could be made serviceable for traffic? No; but they could have gone round to the south and got on to the Crown lands on the top, but then there are some nasty creeks further along.

James Murphy called in, sworn, and examined:—

J. Murphy.
12 Dec., 1888.

2480. *Chairman.*] You are the registered manager of the Holt-Sutherland Company? Yes.
2481. Do you produce a list of the shareholders, as requested, and the number of shares held by each shareholder? Yes; I hand in a list. (*Vide Appendix.*)
2482. *Mr. Copeland.*] That includes the whole of the shareholders in the Company? Yes.
2483. What money has been called up upon these shares? £23 5s.
2484. That, then, represents the total amount of called-up capital? Yes.
2485. How many shares are there in the Company? 800.
2486. The list you have read makes up the number to 800? Yes.
2487. What is the value of the shares? £25. £1 15s. still remains to be called up.
2488. This list represents the shareholders at the present day? Yes.
2489. Have you had any transfers during the last six months? Yes.
2490. Have you had many? They are always being sold. Every board meeting nearly there are some.
2491. Can you tell us what transfers have taken place during the last six months? Not without a little time to prepare it. Every week there are some being sold. 2492.

*NOTE (on revision) :—No; the bridge would not be included.

†NOTE (on revision) :—Only as far as the first gully; and the amount does not include bridge.

‡NOTE (on revision) :—The £1,200 would simply form the road to the first gully.

- J. Murphy. 2492. Have any Members of Parliament transferred any shares during the last six months? I could tell you that from memory. Mr. John Want has transferred some shares within the last six months.
- 12 Dec., 1888. 2493. Any others? I think Sir Henry Parkes has; I think a transfer has come in from him within the last six months.
2494. Is Sir Henry Parkes' name amongst those in that list of shareholders you read just now? No; because he has not been a shareholder since the assignment of his estate. These shares float round like bank-notes, and do not come in until some time after they have really been parted with.
2495. Then, during the last six months, Sir Henry Parkes transferred his shares? Yes. Those are the shares Want, Johnson, Simpson, and Minter have now.
2496. How many shares? Eleven.
2497. Was Sir Henry Parkes a shareholder from the formation of the company? I can tell you that by turning up his name in the register. In January, 1882, he got ten shares, apparently purchased from Mr. John Want.
2498. And he held them until the assignment of his estate? Yes. As a matter of fact I know, from the dealings in them, because we have had several inquiries about them one way or another. I don't think they have really been his property during the last four years. They were held by Mr. Woodhouse, who had a lien on them. The firm of Want, Johnson, & Co. have them now. I think the amount borrowed on them was more than they could realize, and the trustees of the estate did not take them. The people who held the security could not get their money for them so he kept the shares.
2499. Have any Members of the Upper House held any shares in the company? No.
2500. They do not hold any at the present time? No.
2501. You are quite sure on that point? Except Sir John Robertson, I do not think we ever had Members of the Upper House in the company. Sir George Innes also had shares in the company. He was a Member of the Upper House, and has been in the company from the first.
2502. Mr. John Davies has never been a shareholder? No.
2503. You know the works that have been carried out on the Holt-Sutherland Estate by the Casual Labour Board by the unemployed? Yes.
2504. Can you tell us who initiated the making of those roads? I think I did.
2505. By petition, or how? By memorial. We got a memorial signed by a large number of persons. It arose this way: When we took possession of this estate the main Illawarra Road was in a very bad condition, and we said to the trustees—Mr. Fred. Want was one of them, and it was through him that it was done,—“This road ought to be made.” It was not then surveyed, and it is not shown on any map now. We said, “Supposing we make this road 2 chains wide instead of 1 chain, if we give another chain will you get it made?” They said that they had arranged with the Minister for Lands to do that. That was seven years ago, and it has never been done until now.
2506. Mr. Hoskins was Minister for Lands then? I cannot recollect who was in office then. This was in July, 1881. We had, with our own men, begun to make this road, and we have had a staff of men there all the time, and finding the unemployed at National Park I thought it would be a good opportunity to get the road made. I got up this memorial, and when we got that road made we asked for others to be made.
2507. Had you begun to make any other roads? Yes; we made the Malvern Road.
2508. You had begun to make it? We had made it, about a chain wide, not as it is now; but we had cleared it and put temporary culverts over it.
2509. I suppose you had begun to open up the estate by making roads in different directions? Yes.
2510. And then, these unemployed being available, you got them to complete the work you had begun? Yes.
2511. Can you give the Committee any idea as to the increased value of the estate by reason of the unemployed labour being expended upon it? We have not tested that in any way. We can only imagine what it was before, and what it is now. We have not sold any land since this work began. The market for land is very depressed, and we have not tried it.
2512. Supposing the market was fairly lively, what would be your idea of the increase in the price of the land. What would you propose to put on it by reason of these roads having been opened? It is an extraordinary thing. You would have thought that these roads would have improved the value; but we got higher prices at the first than we get now. There was a boom then. The railway was being opened to that place. In 1881 things were very lively, everybody had plenty of money, and that was then we sold most of our land. In fact generally land has not brought so much since.
2513. Have you been fully paid for the land you sold? We are selling it in leases.
2514. You still have an interest in it? We get an annual rent out of it.
2515. So that it is desirable to you that things should continue to look lively, so that you may recover your rent? Yes.
2516. Are there many giving up their leases? A certain proportion are always giving up their leases. The working people for the last two or three years, as I suppose you know, have had rather hard times. I suppose 5 per cent. do not pay? When the time is suitable we put up the land again.
2517. Is it your intention to have any more sales soon? We did intend to sell this month; but, seeing the way that other recent sales have gone off, we have abandoned that now. We think it is a bad time.
2518. You have a lease of these lands from Mr. Holt for ninety-nine years? Yes.
2519. Have you the right to work minerals? Yes; all minerals, except gold.
2520. Do you convey the same right to your tenants? No. We have a right to mine under any lands, at a depth of not less than 600 feet, and then we have to compensate them for any damage done. We have sublet the right to mine for coal to a syndicate.
2521. What royalty have they to pay you? We pay Mr. Holt 6d. a ton for large coal, and 3d. for small, and the syndicate—it is a limited liability company now—pay us 9d. and 4½d. There is supposed to be iron ore there, and if they get iron ore, or any other minerals except gold, it is the same.
2522. Have this syndicate to whom you have let the mining-right any intention of commencing work soon? They will if they can get capital. I am interested in that myself.
2523. I suppose the making of these roads will help them to get the money? I doubt that, because they would want a railway.

2524. The railway to Kurnell, the proposed site for noxious trades, has been surveyed through your land? *J. Murphy.*
Yes.
2525. But there has been no work done on the line of railway? No; except surveying it. *12 Dec., 1888.*
2526. I suppose there was no reason, as far as your company was concerned, why that railway route should not have been cleared—there was no hitch between you and the Government as to the clearing of that route? No; but the survey is not yet finished. Of course I do not know whether they would place the coal-mine near the route, or the route of this railway as it is surveyed now. It is not near where they have found the coal. The coal syndicate was formed to discover whether coal was there. Three bores were put down; one was put down by the coal syndicate, at a depth of 2,300 feet, and they found two seams of coal, and Dr. Robertson, who reported on it, speaks very favourably of it.
2527. That bore was put down before the formation of your present company? No, not this one; where they found the coal. There were two bores before our company was formed, that Mr. Wentworth and Mr. Coghlan put down, but they did not find the coal. This last one, Mr. Fletcher, Mr. McCulloch, and Mr. Coghlan put down, and they were successful.
2528. Has the cost of that come out of your capital? No; that is a separate fund, nothing whatever to do with us. If they find coal they pay us 9d. a ton, and we pay Mr. Holt 6d. a ton, so that we make 3d. a ton out of it. You spoke of the noxious trades railway serving them, but that railway, as surveyed, is a mile from the bore where the coal was found. Of course I do not know where they would place the mine.
2529. *Mr. Carruthers.*] Did you give the names of the members of the coal syndicate;—are there any Members of Parliament amongst them? You want to know who they are.
2530. Yes; who are they? There are Mr. Fletcher, Mr. Dibbs, and Mr. McCulloch in it. The lease was granted to Messrs. McCulloch, Fletcher, and Coghlan, and they have assigned it to the syndicate.
2531. With regard to the men you have had at work yourself, how long have you had them there? Seven years.
2532. Are they still at work? Yes.
2533. You have been pretty well acquainted with all the work that has been done in that neighbourhood, I presume? Yes.
2534. What roads have your men cleared—what work have they done on the roads? Our men started on nearly every road there is there. They had made a track of some sort.
2535. So that it is not safe for the Committee to assume that all the work we see there on inspection has been done by the unemployed? I do not think more than half the clearing was done by the unemployed.
2536. *Chairman.*] What roads do you say were done by your men? We have done the Malvern Road as far as the old farm. In fact, it was not made by us. It was really a road before we came there. The whole length of Malvern Road was really a road before we took possession of the estate.
2537. *Mr. Carruthers.*] Did any of the neighbouring settlers contribute to the cost of that work? Yes. There was a trouble about this road, which I will explain. We had a tenant to whom we let the grass right, and he closed this road, because it ran through a useful paddock to him. The neighbours chopped down his fences, and he came to us to protect him. We sought to do so, and we were then met with a memorial of the neighbours, saying that this had been a road for forty years, and was a road by right of user. After this we improved it, and recognized it as a road, and our tenant threw the lease up, and we have since had trouble with another tenant, who threw the lease up because we would not stand up and say that this was not a road. These people not only came to us with a memorial, but they addressed the Minister for Lands. I saw the petition, and I saw it was no use resisting, so we threw the road open. The whole length of this road had been made before the unemployed came there, and we improved it.
2538. *Mr. Copeland.*] Was the Malvern Road cleared to its present width? No; to only a chain, I think. We picked the best road we could get out of a width of 2 chains.
2539. Now it is cleared 2 chains wide? Yes; part of it is, and part of it is cleared to only 80 feet. Of course a large area of it was a farm, and was always cleared.
2540. *Mr. Carruthers.*] You did the bulk of the work? Supposing it to have been in its original state, more work would have been done to it before the unemployed came to the land than they have since done.
2541. *Mr. Copeland.*] Had you gravelled or metalled the road in any way? No, not that road. The only improvement we made was, that we put in some culverts, not so good as those which were afterwards put in.
2542. The new culverts you speak of have been put in by the Casual Labour Board? Yes.
2543. They have also gravelled that road? Yes.
2544. The whole length? No; only for a part at each end.
2545. *Mr. Carruthers.*] It is a main approach to the railway-station for the settlers of Port Hacking? Yes; and not only that, but it is used by people going eastward to Coronulla Beach and Kurnell. That road is the main outlet from Sutherland to the eastward.
2546. Did you do any work on the road to Yowie Bay? We made the road, and formed it, and left it a better road for driving on than it is now. I do not mean to say that the unemployed have done no valuable work on it, but they have broken up and disturbed the natural surface. It is not so hard as it was.
2547. *Mr. Copeland.*] How do you think the unemployed have made the road worse? They have formed it. They have dug up the sides on the road to make the water-tables, and they have thrown the earth into the centre. This has made the road soft and loose, whereas, before it was touched, the natural surface was hard, and you could drive on it better.
2548. Have they drained it or culverted it? No culverts are wanted.
2549. *Mr. Carruthers.*] Is there any bridge work upon the road? No.
2550. Are you acquainted with the work which had been done on the main Port Hacking Road before the unemployed came? Yes.
2551. What work had been done? The road had been made from the Illawarra Road.
2552. What do you mean by made? It was cleared and formed by subscription. Trustees were appointed for the purpose.
2553. Was any of it gravelled? Yes.
2554. In fact, it was almost as it is now? The greater part of it. It was made right down nearly to Simpson's Point. It was made certainly 5 miles in length before the unemployed came there at all.

- J. Murphy. 2555. Are you aware that £200 was subscribed for the work by the people? Yes; and I know that we spent some money there besides.
- 12 Dec., 1888. 2556. Was there not a vote from the Government to trustees? Yes. That money was also spent upon it.
2557. Was not the greater part of the work done upon the road by trustees with private subscription and with the usual road grants? The unemployed came and cleared the road a little wider I think. It was only cleared about half a chain or 50 feet, and we gave them 99 feet. That was another case in which a road was demanded. It was pointed out that a right of user had been established. We had subdivided the land down to a certain point, and for a certain distance; we could give them only a chain. Where we had not sold we gave them $1\frac{1}{2}$ chains. That was from Gawley Creek out to Port Hacking. I do not mean to say that the unemployed have done no good work on the road. They have improved it to a great extent.
2558. You had cleared the road before? Yes; but it was not so wide a road before.
2559. Have they done any gravelling? Yes; they gravelled it. A portion of it was not gravelled at first.
2660. Have they drained the road? Yes; they have put in culverts and a bridge.
2661. Can you say how many culverts? Most of them are small pipe drains, which you will hardly call culverts. There is one bridge over Rover's Hole Creek.
2662. *Mr. Carruthers.*] Did your company give the gravel? Yes; if they wanted any gravel they were free to take it where they chose. We did not say anything about it.
2663. You have to pay a royalty for the gravel? Yes; a royalty of 6d. a ton.
2664. You also pay a royalty on the timber? Yes.
2665. Who has been the prime mover in getting these roads formed on the estate? I myself have been.
2666. Have any of your shareholders, who have been members of Parliament, interfered to your knowledge? I do not think any member of Parliament has ever known anything about it. As far as I am concerned I can say that I made no request to them.
2667. With whom have your communications been? Mr. John Davies.
2668. How do you communicate with him? I have sent in memorials. I got the members for the district to sign them first. Mr. McCulloch, Mr. Frank Farnell, and Mr. Varney Parkes have all signed them. Then afterwards I would get the best signatures I could. I then took the memorial straight to Mr. Davies, and I generally had a plan with me, and explained what the roads were and where they were to be made to, leaving the matter with him.
2569. In what electorate is this estate? In Central Cumberland.
2570. Where have your communications with Mr. Davies been? At his office.
2571. Have you held any communications with any other persons respecting these roads? No.
2572. Do you know the Wotonga Road? Yes.
2573. Did you take any steps to get that road formed? No; I think Mr. Gannon got it done.
2574. Where does it lead to? To Mr. Gannon's house.
2575. Is that a road going over a steep hill with a very heavy cutting? Yes.
2576. *Mr. Carruthers.*] How many acres are there in your estate in this locality affected by these roads? Nearly all the estate is affected, and there are about 13,000 acres.
2577. *Mr. Copeland.*] You are not including the Government reserves in that estimate? No.
2578. Have you been asked at any time by the people to give roads other than the public roads? Yes.
2579. Have you given roads to suit the public convenience which have been antagonistic to the general design of your estate? Yes, we have; there are several cases in which we should not have given roads but for the result of the disputes which I have mentioned. We would not have allowed the Port Hacking Road to run its present course if we had consulted our own inclinations. We should have taken it a different way.
2580. Which way? We should have cut a lot off its length. We should have straightened it. We should have shortened it by half-a-mile. I ought to mention that Mr. Holt has kept as a private estate out of our lease of 700 acres. The present course of the road gives Mr. Frederick Holt about a mile-and-a-half of frontage; and if we had consulted our own interest, we should have taken both frontages ourselves, but the Port Hacking people wanted the road as you see it.
2581. *Mr. O'Sullivan.*] What population would be served by these roads? It is increasing every day.
2582. Where are they settled? They are spotted all over the place. I daresay there are altogether about fifty families.
2583. Does it take about forty roads to serve fifty families? Most of these roads are Government roads.
2584. You said just now that you had started making most of these roads. I presume that if the Government had not come along with this generous assistance, your syndicate would have gone on with the roads themselves? Some of them we might have made and formed, but many of them we should only have opened.
2585. The fact of your having started making the roads is an evidence that you intended to complete the work—that is to put roads across the estate? I would not say to complete it. We had completed most of the roads as far as we intended to do anything to them at the present time.
2586. Is it not a fact that you had laid out roads, and had commenced them, in accordance with the design of your subdivision? Ultimately these roads would have been made by some means I have no doubt.
2587. How much land have you rented? About 1,500 acres.
2588. That leaves 11,500 acres still to be disposed of? If you make allowance for Mr. Holt's private estate, we had only 12,200 acres originally. I suppose there are about 10,000 acres of the land, speaking roughly, left.
2589. Upon these 10,000 acres, which are undisposed of, these roads have been made? No.
2590. But the larger portion of them have? Perhaps.
2591. What is the object of taking Coronulla road to the beach—where is the population? This has been a great road for picnics for many years. It was a track before this road was made. It was used by fishermen and shell-getters largely. Besides there was the Government reserve of 300 acres close by.
2592. There is no fixed population there? No.
2593. If you were to describe it as a road to anywhere you would probably say to California? I do not think you can say that. Coronulla beach is a favourite fishing, camping, and picnicking ground.

2594. *Mr. Copeland.*] Are there any roads on Government reserves? No; but roads are surveyed through them. J. Murphy.
12 Dec., 1888.
2595. The improvements seem to stop short when you approach a Government reserve? We designed a road through one reserve. Our surveyor has marked a road 2 chains wide to the end of the reserve.
2596. Has the road ever been cleared? No.
2597. What length is it? About $1\frac{1}{2}$ miles.
2598. There has been no clearing on that reserve? No.
2599. You say that the fishermen use Coronulla beach—what is the width of the road? Eighty feet.
2600. Was it necessary for the fishermen and shell-getters to have a road 80 feet wide? No; but while we were having a road made we thought we might as well have a wide one. It would suit picnickers and pleasure-seekers driving vehicles to the beach.
2601. Especially when you get the road at no expense to yourself? Well, to some extent.
2602. *Mr. Carruthers.*] Is there any great traffic on it? I do not know whether you could say that there was any great traffic, but there are sometimes about twenty vehicles down on Saturdays and Sundays, and the number is increasing all the time.
2603. You spoke some time ago of a general design in cutting up the estate; have you a general design? No.
2604. *Mr. Copeland.*] Have you not had the ground surveyed? A portion of it. I think in every case I have suggested what roads we should have.
2605. These suggestions have always been adopted? Yes, generally.
2606. *Mr. Carruthers.*] How many of the roads are cleared and formed and gravelled? Three.
2607. *Mr. Copeland.*] Is that for the whole length? No; for instance the main Illawarra Road is now only being made, and the Port Hacking Road and the Coronulla Road are not yet finished.
2608. Take the Malvern Road, Port Hacking Road, and the Coronulla Road—did they form part of any plan of subdivision, or are they old public tracks? They are old tracks.
2609. Have you followed them? As nearly as possible.
2610. Are not there men working on the roads now finishing them? There are some men at work on the Coronulla Road and some on the Port Hacking Road; but those engaged on the Port Hacking Road do not form part of the unemployed.
2611. *Mr. Carruthers.*] How many coaches are there running on the Port Hacking Road? I know there is a coach each way every day, and I believe there are two on Saturday and Sunday. There is a mail as well.
2612. Where does that run to? From Kogarah to Tom Ugly's Point, and from the point to Port Hacking, down as far as Simpson's Crossing.
2613. Do you know whether the tender for the carriage of the mail specifies that that road shall be used? I know that it does.
2614. *Chairman.*] Were all the roads running north and south, from water to water, made at your suggestion? Yes; all except one, I think. I believe the trustees of the National Park wished us to give the land for a shorter road to Sydney. The tramway runs to Sans Souci, and we were asked to set apart land for a road which would save 3 miles between Sydney and the park. Mr. Holt joined us in fencing off this road; it is known as the Commons Point Road.
2615. Starting from the beach at Coronulla, there are seven roads running north and south? Yes.
2616. And those were all made at your suggestion? Yes; but they are old Government roads, shown on the map.
2617. *Mr. O'Sullivan.*] Were the persons who signed the memorials always the same? No; sometimes the same person had to sign two of them. In each case I got the names of the members.
2618. *Chairman.*] You took the memorials round? Yes.
2619. *Mr. O'Sullivan.*] What I want to get at is this: Would the persons living near Gunnamatta Bay sign for roads as far away as Gynea Bay? Well, I got any signatures which I thought would help.
2620. *Chairman.*] The fact is that whenever you thought a signature would be of help to you you took it? Yes.
2621. *Mr. O'Sullivan.*] Whenever you wanted a new road I suppose you scouted round to get signatures? No; I got as many roads as I thought the people would sign for. Sometimes a man might not care to sign for a road some distance away, in such cases as those I should of course have to get others to sign.
2622. Then to save yourself frequent journeys you got as many as five or six roads signed for at one time? Yes.
2623. Are there any unemployed on the noxious trades site now? No; the railway survey is not finished yet.
2624. But there were some? Yes.
2625. What do you think of the character of their work there? I should not like to make myself a judge of the quality of the work. It was done a long time ago.
2626. *Chairman.*] Did you get any of these roads without petition and simply by interview with Mr. Davies? No.
2627. In every instance you had papers? Yes; I do not think I ever spoke to Mr. Davies privately in my life.

Edward Matthew Burrowes called in, sworn, and examined:—

2628. *Chairman.*] You are stationed with the unemployed at the National Park? I am the Superintendent for that district. E. M.
Burrowes.
12 Dec., 1888.
2629. For how long have you held that position? For over two years.
2630. Prior to the existence of the Casual Labour Board? Yes; I was appointed by Mr. G. R. Dibbs in November, 1886.
2631. Had you sole charge? Yes; I had full power and control at that time.
2632. Had you full power at the time the Casual Labour Board came into existence? Yes; I think I may say that I had full power then.
2633. When they came into existence you ceased to have full power? Yes; it was then vested in the Chairman of the Board.
2634. What do you mean by that? Well, he would give instructions to me.

- E. M.
Burrowes.
12 Dec., 1888.
2635. From that time you initiated nothing? From that time I promulgated no new work.
2636. Everything came to you in the shape of orders? Exactly.
2637. Have you received any instructions from Mr. Davies to do any work on the Holt-Sutherland Estate?
Oh, yes.
2638. Carrying out his orders, will you show us on the plan you produce what roads you have cleared, formed, and ballasted? The roads coloured red on this plan are those to which you refer. I prepared this plan for you at your request.
2639. Can you give us a statement as to the total number of roads you have made together with the total length? I have here a tabulated statement, which I think will give you all the particulars you require as to these roads. (*Vide Appendix.*)
2640. That statement shows that you have made a total length of 43 miles 21 chains? Yes.
2641. *Mr. Copeland.*] The work contained in this statement represents the work done by the Casual Labour Board? Yes.
2642. It does not include any work done previously by the Holt-Sutherland Company? That is a matter which I must explain. The Holt-Sutherland Company had cleared some of the roads; take the main Illawarra Road, they had cleared and formed it in some places.
2643. You found that the work had been done? Yes; the road was cleared and culverts were made.
2644. This statement shows the additional work which you have done? Yes.
2645. Do you remember whether they had done any work on the Port Hacking Road? A good deal of work was done there. It was cleared and it was gravelled in places.
2646. How wide? From 21 to 28 feet.
2647. Does that apply to the whole of the present road? No; only a portion.
2648. Can you give the Committee any idea of the total expenditure on the whole of these roads? I can by referring to some notes which I have made. I find that up to the 1st of December last the total expenditure has been £8,413 4s. 7d.
2649. Does that include bridges? It includes everything, and it gives an average price of £2 8s. 7d. a chain.
2650. *Mr. Carruthers.*] Can you tell us how much money has been expended on the Port Hacking Road? No; I have not taken out the roads separately.
2651. On what roads has the largest amount of work been done? On the Port Hacking Road, on the main Illawarra Road, and on the Coronulla Road.
2652. They would give a total of about 800 chains? Yes.
2653. *Mr. O'Sullivan.*] You still have some men working on the ground? I have 180 men there.
2654. Working up to date? Yes; up to yesterday.
2655. What number of men have you generally had employed? For some little time I have not had so many men. When we started work down there we were very glad to find a loop-hole to get some of the men away from the park. In July, 1887, I had 4,700 men at the National Park; that was too many men to have there for unremunerative work, and I was glad to get them on to these main roads.
2656. *Chairman.*] But a number of roads shown on the plan are not main roads? A number of the roads are what you would consider main roads. The Port Hacking Road is a main road, the main Illawarra Road is a main road, and I should call the Worenora Road a main road when completed.
2657. That leads to Kurnell? Yes.
2658. How would you define the roads running north and south from water to water? I should call them accommodation roads—that would be the proper professional term.
2659. Have you any road upon which you had any cuttings to do with the unemployed? Yes; there is a cutting at Yowvie Creek on the Worenora Road.
2660. Had you any bridges to make there? Yes. There is one bridge 20 feet high.
2661. What would be the length of it? 196 feet.
2662. What cutting had you to do? There is a side cutting with a face of about 18 feet.
2663. Is it through solid stone? No; it is interlaced with mullock.
2664. What gradient would it be? From the levels I have taken now, unless some alteration is made I hope to get up at from 1 in 15 to 1 in 18.
2665. Was all that work done by the unemployed? Yes; under the Casual Labour Board.
2666. By the men you superintended? Yes.
2667. Did you see any difficulty in utilizing the men for work of that kind? None at all.
2668. What particular object is there in making the Worenora Road? It leads direct from the railway goods sheds at Sutherland to the Coronulla Beach Road, which would be the nearest line to the proposed noxious trades site.
2669. Did you survey that? I made no survey. I only took the levels of the sections of the road.
2670. You are by profession a surveyor and civil engineer? Yes.
2671. If you had been constructing this road would you have made this cutting or would you have deviated the road? I should have deviated the road.
2672. With the object of saving expense? Yes; certainly.
2673. By whose instructions did you carry the road through this part of the country where it was so difficult to make? I received instructions from the Chairman of the Casual Labour Board.
2674. Did you point out to him the difficulties of the work? I showed it to him before I commenced, but I was instructed to carry out the work as surveyed.
2675. Have you any knowledge as to who surveyed these roads? I have been told—I think perhaps it was the company's surveyor.
2676. I presume he surveyed the roads under instructions from the company? I presume so.
2677. *Mr. Copeland.*] Do you know the name of the company's surveyor? Mr. Curtis; I believe that Mr. Nibbs is the Government Surveyor.
2678. Mr. Curtis surveyed most of the roads? Most of them.
2679. *Chairman.*] Are any of the roads such as you would have recommended in the interests of the Crown? Some of them I might.
2680. Are there any of them which you would have objected to make, having regard to your public responsibility? Yes; some of them.
2681. *Mr. O'Sullivan.*] You can identify the Holt-Sutherland Estate on the plan before you? Yes.
2682. And you see that the great majority of the roads are on that estate? Yes. 2683.

2683. Out of the 43 miles and 21 chains referred to in your paper how many miles would not be on this estate? From 3 to 4 miles.
2684. *Mr. Copeland.*] Have you made any roads on the Government reserves? Yes.
2685. Which of them? Part of the main Illawarra Road passes through a reserve.
2686. How many chains of that road passes through Government land? A little over half-a-mile. Sylvania Road and Boulevard Road about on the reserve.
2687. Have you done any work upon this reserve out at Kurnell? Not yet.
2688. Have you done any work on the proposed railway from Sutherland to Kurnell? No, not yet; we are waiting for a railway survey to be made.
2689. *Chairman.*] Are there any Crown lands in this vicinity upon which you could have used the unemployed without putting them on the Holt-Sutherland Estate? We are employing men now between Liverpool and here, and between Campbelltown and here.
2690. *Mr. Carruthers.*] On what roads has the bulk of the money been expended? On the main roads.
2691. Which do you call those? On the Coronulla Road, the Port Hacking Road, the main Illawarra Road, and the Weronora Road.

E. M.
Burrowes.
12 Dec., 1888.

David Houison recalled and further examined:—

2692. *Chairman.*] You have been out again to inspect these roads at Hornsby? Yes; I have been out since I was here.
2693. Did you find the roads that were not marked on the tracing? There are roads there that I was not aware of when I was here before.
2694. You surveyed none of those roads? No; I have had nothing to do with surveying. Mr. Gordon pointed them out to us as a rule.
2695. The roads that were constructed or finished? I saw roads not cleared when I was up before.
2696. *Mr. McMillan.*] How long is it since you were up there before? Five months.
2697. *Chairman.*] Did you consider the roads you saw when you were up on this recent visit roads of access? They were all necessary as roads of access, everyone of them.
2698. Do you consider the roads near the station as roads of access? Unless they run straight against the fence, and cross direct into the railway premises. It gives greater access to follow the fence.
2699. Do you consider that No. 1 T shaped road necessary? Those roads I knew nothing of, or of the road running parallel with the railway line.
2700. Do you consider those roads necessary? These roads, from what I can learn, were all recommended by the Crown Lands Ranger. I do not know anything about them.
2701. Do you consider them roads of access? I cannot express an opinion about that. They were done on the recommendation of the Crown Lands Ranger. They were half finished before.
2702. Do you consider the lower road a road of access? No; I would not consider it so.
2703. Do you know that it was recommended by the Crown Lands Ranger? Yes; both roads were recommended by him, and by the auctioneer.

D. Houison.
12 Dec., 1888.

James Fletcher, M.P., called in, sworn, and examined:—

2704. *Chairman.*] Are you a shareholder in the Holt-Sutherland Estate? I am a shareholder in the minerals under the Holt-Sutherland Estate.
2705. By that do you mean that you are not a shareholder in the estate itself? I am not a shareholder in the surface rights of the Holt-Sutherland Estate, nor ever was.
2706. Are you a shareholder in the Holt-Sutherland Estate Company? I am not, nor ever was, a shareholder in the land of the Holt-Sutherland Estate Company.
2707. If your name appears on the share list? I had the register examined this morning, and no such name as James Fletcher appears on it—and if it does appear, I am not the James Fletcher.
2708. It was a mistake when it was stated yesterday that your name was on the list? Yes.

James
Fletcher, M.P.
12 Dec., 1888.

Henry Thelluson Sanderson called in, sworn, and examined:—

2709. *Chairman.*] You are a civil engineer? Yes.
2710. Have you had anything to do with the surveying, or constructing, or supervising of any roads on the Holt-Sutherland Estate? Yes.
2711. What has been your connection with that estate? I will give the Committee what information I have: On the 23rd September, 1887, I surveyed, for clearing, 43 chains 58 links of the Port Hacking Road—that is a Government road—from the junction of Malvern Road, going towards Port Hacking. This road is a chain wide. On the 29th September I surveyed 50 chains of the same road, from Little Tureel Point, at the end of the Port Hacking Road, going towards Doolan's Paddock. Then, on the 30th September, I surveyed a further portion of the Port Hacking Road, towards the township of Sylvania, 125 chains, to its junction with the Illawarra Road. That is a Government road. On the 1st October I surveyed 97 chains of the Malvern and Madeira Road, from the Illawarra to the Port Hacking Road. These, I believe, are private roads, 2 chains wide. At least, these are not Government roads; they are not dedicated or proclaimed. On the 2nd October I surveyed, for clearing and forming, 109 chains 30 links of the Port Hacking Road to the angle of the road at Doolan's fence. That is another portion of the Port Hacking Road. On the 8th October I resurveyed a portion of 50 chains of the Madeira Road, which is a private road, for clearing and formation. On the 12th October I made a survey of the Weronora Road, from Eton-street, Sutherland Township, to the Sylvania Road, 152 chains, for clearing, forming, and culverting purposes. That is a private road. On the 12th to 14th October, I surveyed a private road, called the Coronulla Beach Road to Coronulla Beach, and on the same date I surveyed a small private road called the Lilly Pilly Road to Ewey Bay. That is 136 chains. On the same date I surveyed another short road, called the Euronga Road, from the Lilly Pilly Road to Ewey Bay. It is 30 chains in length. On the 14th and 15th I surveyed the Boulevard Road, from the Illawarra Railway to the Sylvania Road. It is a road 137 chains in length, and 1 chain 50 links wide. On the 14th October I surveyed a small road called Eaton-street. I do not know whether that is a proclaimed road; it may be.

H. T.
Sanderson.
12 Dec., 1888.

H. T.
Sanderson.
12 Dec., 1888.

be. It is in the township of Sutherland, 36 chains. From the 9th January to the 9th April, 1888, I had instructions to superintend and take charge of the works carried on on the Holt-Sutherland Estate, to superintend the formation of the Malvern and the Madiera Roads, the metalling and blinding of the Port Hacking Road, and the works generally speaking.

2712. By whom were you employed? By order of Mr. Edward Matthew Burrowes, the Superintendent of the unemployed, and I presume under the instructions of the Casual Labour Board. He instructed me to make those surveys.

2713. What was the statement made to you in reference to the surveying of those roads you called private roads? There was no intimation given to me that they were private roads. I was simply ordered to make those surveys so that the roads might be cleared and the areas computed. They were simply pegged out by the surveyors of the Holt-Sutherland Estate, and in fact the scrub and timber were there when I made the survey for the purpose of enabling the men to clear and form the road.

2714. You state that these roads had already been pegged out—that is, they had been surveyed by the owners of the estate prior to your going over them again? Yes; they had been surveyed by the surveyor appointed by the manager of the Sutherland Estate. Mr. Murphy, the manager, knows the surveyors who made the survey; I do not know myself who they are.

2715. Did you survey any roads that had not been previously surveyed? No.

2716. In each instance there had already been a survey? Yes.

2717. These streets had been laid out in the subdivision of the Holt-Sutherland Estate? Yes. These roads were simply surveyed for the purpose of enabling people to have frontages to the property they bought.

2718. You were supplied with a plan of the subdivision of the estate, and you surveyed according to that plan? Yes, according to their plans; they were lithographed plans of portions of the Holt-Sutherland Estate.

2719. Then you carried out the subdivision they had already shown on the lithographed plan? Quite so.

2720. Those roads that you surveyed for ballasting were public roads, you state? No, not in all cases. I am not aware that they were public roads. I believe that with the exception of the Port Hacking Road and the Illawarra Road the others are private roads.

2721. You believe so? I am not aware, but I believe that they are merely roads designed by the manager of the Holt-Sutherland Estate for sale purposes.

2722. *Mr. McMillan.*] For purposes of subdivision? Yes.

2723. *Chairman.*] In fact, you know from your own knowledge that these roads were shown in the subdivision? I do know it.

2724. Was the road to Coronulla Beach on the subdivision? I do not think it was. I only saw the subdivision on the ground. I took notice of its junction with the Illawarra Road, and surveyed it, according to instructions, as far as the beach.

2725. You say that, although not shown on the subdivision, it was pegged out? It was pegged out, and the pegs were on the ground.

2726. Was it then pegged out by the private surveyor of the estate? I believe it was. Except the Port Hacking and Illawarra Roads, all the roads were, I think, made by private surveyors.

2727. *Mr. O'Sullivan.*] Do the majority of those roads you see marked on the map lead to Crown lands? I believe they do. They are all on private land—on the Holt-Sutherland Estate. There is, I believe, a small reserve there or two.

2728. Do you consider that these roads were laid out in the public interest, or in the interest of the proprietors of the Holt-Sutherland Estate? I should have thought in the interest of the latter. I cannot say anything else conscientiously.

2729. *Mr. McMillan.*] I take it that you simply know the individual that employed you? I do.

2730. You know nothing more? That is all.

2731. Excepting that you did the work professionally as a surveyor? Yes; I made no inquiries, and simply followed directions.

2732. *Mr. Copeland.*] You see this reserve to the south of the Coronulla Beach;—I suppose there are 400 acres in it? I presume there are about that.

2733. Can you say whether any roads have been surveyed through this reserve? Not at the time I was there.

2734. You surveyed no road? I surveyed no roads. I simply confined myself to the Coronulla Beach Road.

2735. You do not know whether any roads were surveyed through that reserve? No; there were no roads surveyed.

2736. Do you know whether the headland there is a good one? It is very fair; it is a good height above the sea.

2737. If you had been surveying for the Government, would you not have carried a road through that reserve? Yes; right through to the other reserve.

2738. You did not make any road? No; not to those Government Reserves.

2739. *Chairman.*] You simply followed your instructions? Yes.

2740. *Mr. Copeland.*] You have referred to some roads as Government roads;—can you tell me when those roads were made Government roads? The Port Hacking Road I remember for the last twenty years, and the Illawarra Road for the last ten years as the Wollongong Road *via* Tom Ugly's Point.

2741. In those cases they were old Government roads? They were old Government roads originally surveyed under Sir Thomas Mitchell.

Frederick Wells recalled and further examined:—

F. Wells.
12 Dec., 1888.

2742. *Chairman.*] Have you been out to the Hornsby District since you were examined previously? Yes.

2743. Have you discovered any roads not on the tracing at that time? Yes. I wish to hand in an Appendix of the roads I know now to be done, in contradistinction to the roads shown on the plan upon which I gave my evidence. The Appendix also shows the estimated cost, at the rates we pay. (*Vide Appendix II.*)

2744. Is the shape of the road cleared by mistake shown on the plan correct? I cannot say. As far as I know from Mr. O'Donnell, he started from road H across to the other road. 2745.

F. Wells.

12 Dec., 1888.

2745. Mr. O'Donnell's evidence is that that road does not take this shape? That may be.
2746. Mr. O'Donnell shows that he joined with the road running to the north? Yes.
2747. This tracing does not show that? I did not go down the road; I just drew it into the map to show its situation.
2748. What is this marking in pencil? That is a road that has nothing to do with us, if such a road exists. I do not believe that it does exist. I did not see it on the ground, and it was not done by us.
2749. You do not know that it is not there? No; but I do not believe it is there. I did not see it when going along Junction-street. It was not one of our works.
2750. You do not know that it does not exist? I am pretty certain that it could not. I said before that there was a lot of work that I was pretty sure could not have been done, because I was not informed of it, but I found that it had been done.
2751. Will you explain generally the roads that were not on the plan before? I was only cognisant at the time of my last being here of the Junction Road having been cleared, and of the Vanceville Road, and the roads H and I. Of course the roads B, C, D, E, and F were all cleared. I expected those to be cleared. When I was out on the 1st February I saw that the roads H and I had been cleared, but I was not aware of any other roads than those at that time.
2752. Will you kindly describe the roads you saw on your last visit? The roads I saw work done upon my last visit are the Western Road, that is, the western boundary of the Crown lands, the continuation of road B—that had been done since my visit in February—a portion of Boundary Road, which has been formed as far as road D, the continuation of road A, which has been formed, and the junction to road C on the Boundary Road. The Boundary Road has also been formed from the station.
2753. *Mr. McMillan.*] That is a road coming to Boundary Road from the station? Coming from the station as far along Boundary Road as practicable. From road D to the Junction Road had been cleared when I was there last, but it has been formed since I was there. The ballasting of these roads had been nearly altogether done since I was there. The ballasting is shown in colours on this map which I now hand in. The whole of the ballasting along Burns Road has been done since I was there; the clearing had been done previously by the owners. The clearing, forming, and ballasting of this road that I have marked here as K—that is, from the Junction Road down to the hotel, the short cut to Pennant Hills—that was all cleared and ballasted since I was there in February. This continuation of Road E across to Burns Road I was perfectly ignorant of. I did not go over it; but I saw it from the end of the road, and I was told that it was cleared and formed right through.
2754. *Mr. O'Sullivan.*] Do you consider that the whole of those roads you recently discovered were in the interests of the public? There is one road that I do not, and cannot account for. I think the others are useful roads in the interest of the public. The road I refer to is the continuation of Road E. I do not think that that road is essential in the interest of the public.
2755. Do you think that peculiarly shaped road at the end of Burns Road is required? That is absolutely necessary, only it is badly shown on map. It is not ballasted along there.
2756. *Mr. Copeland.*] Have you not been out to see for yourself? No. I saw it was ballasted from the start; but it is not ballasted all along. I have put it down as ballasted. It is to connect with the Bobbin Rock Road.
2757. *Mr. O'Sullivan.*] Why did they require a double connection? There are not two roads there. It is shown like that because the road goes round one way or the other; I do not know which.
2758. Why do you want to get a connection with the Bobbin Rock Road when you can meet the Peat's Ferry Road? That was a work recommended by one of our superintendents; it was a voluntary recommendation that it should be cleared.
2759. Have you made a reinspection of Boundary Road? As far as road D. I went down the road some little distance, and of course I saw sufficient to know that we should not have made it any further.
2760. Do you think it could have been made passable for a fair amount? No; it would cost a deal of money. I do not think £2,000 would make that road.
2761. If a surveyor who has laid out these roads has stated it could be made passable for about £1,200? It would be a very peculiar "passable." It could not be made a road at all or anything like for the money. If it had been the motive of the Board to do anything to benefit Burns, Withers, and Smith's property, it certainly would have been more advantageous to expend a large sum of money on this road along their property than merely to have made a road which Burns, Withers, and Smith could have cleared for £100; because it need not have been more than cleared by them. It would have been more to their advantage if we had made this impracticable road at a cost of £2,000 or £3,000.
2762. *Mr. Copeland.*] Are you not overlooking the fact that in one case they get only one frontage, and in the other they get a double frontage? I am not overlooking that.
2763. In Junction Road do they not get a double frontage? Yes; for over a mile—for 82 chains.
2764. Would they get a double frontage to Boundary Road? They have one frontage to Boundary Road, which is impracticable.
2765. Who provided the land for that road? I believe it was from the Government Estate. It was laid out by the Surveyor-General's Office.
2766. They not only get a road presented to them by the Government, but they get the road cleared by the Government, and they get a frontage without contributing anything? I believe it is an old Government road along the boundary of the Crown lands.
2767. The evidence shows the reverse? What I am guided by is the plan of distribution of Government lands in saying that it was left along there. It is essentially a Government road, and was left as one.
2768. You have supplied information here with reference to the expenditure? This table shows that there has been £2,365 10s. expended on these various Government roads? I think that is the total.
2769. And then you deduct from that a sum of £56 10s. for the labour of clearing done by the owners, leaving a net amount of £2,309;—have you arrived at that estimate as the actual expenditure, or merely as the estimated expenditure? I have arrived at that as the estimated expenditure.
2770. Being a member of the Board, why are you not in a position to give the Committee the actual expenditure? That it is impossible for me to do. The resident officers pay for all work at piece-work rates.
2771. On what scale have you paid them? You will see by the note in the margin.
2772. That is, clearing 15s. a chain? Yes; £7 an acre.
2773. That includes the grubbing of stumps, the burning off, and everything? Yes.

2774.

F. Wells.
12 Dec., 1888.

2774. For 15s. a chain? Yes, and those are very liberal estimates in comparison with what we have been paying.
- 2774½. Ballasting, three-quarters of a cubic yard at 1s. 4d.=1s. a lineal yard;—by that you mean a lineal yard the full width of the road? Yes; the ballasted portion.
2775. What is the average width of these streets? I do not think they will run above 15 or 16 feet—the ballasted portion. I stepped two or three of them, and they ran about 15 or 16 feet.
2776. What would be 48 square feet to the lineal yard? I have not run it out. I judged it by stepping it at three-quarters of a yard to the yard.
2777. How many inches would that require? For an 18-foot road it would require a solid 6 inches.
2778. What is the roadway? The road is formed wider, but it is ballasted 15 or 16 feet.
2779. You say that three-quarters of a cubic yard would cover a lineal yard, and allowing the road to be 15 or 16 feet wide, that would give 48 square feet? I am not in the habit of measuring that way. I can work it out for you.
2780. What thickness do you reckon this metalling is done? I do not think it would average 4 inches. I do not think it would average more all over.
2781. That is those parts ballasted? It is not very heavily and but roughly ballasted.
2782. Do you give this evidence from your own observation? From my own observation.
2783. And you state here you do not think it would average—? I do not think it would average more than three-quarters of a yard to a yard.
2784. Which would give a covering of what? A sure test would be to take up some yards and stack it and measure it. If you wish you can have it taken up.
2785. How many inches would that give? About 4 inches; I did not calculate particularly; but it is a single stone thick in some places. The stone is very crude, and the roads roughly ballasted. It is not such stone as we would accept anywhere else.
2786. Does that apply to every road? To Burns Road and the Vanceville Road as far as I travelled it.
2787. Did you not see in any parts such a thing as stone 8 or 9 inches thick? No; I do not think so. It is very crudely done; in some places it is a little thicker than in others; but I do not believe, and I am a pretty good judge, that if you take it up it will go more than three-quarters of a yard to a yard.
2788. You estimate it at from 3 to 4 inches? Not three. They are mostly big stones, and have not been properly broken up.
2789. They cannot be very big stones if they average 4 inches? They are not very thick. You could not measure stone like that on the road.
2790. If the average is 4 inches, in some places it would be 6 inches thick and in others 2 inches? Very possibly it is; but the only possible way to check the measurement is, as I have said, to take up some yards of the road, stack the stone, and measure it.
2791. Carting, spreading, and blinding, at 1s. a lineal yard;—in this estimate, have you included the draining? The draining is included in the forming.
2792. Have you included the culverts and bridges? I have not included the culverts and the bridges.
2793. Do you not know their cost? No; I should have had to take out every one of them.
2794. Do you not think that in preparing a statement like this you should have shown so many culverts and bridges? I could not spare the time to prepare a very full statement.
2795. You hand this paper in as an estimate of the total cost of the work done? Of the roads and ballasting.
2796. Is that a fair way of doing the thing? If you want further particulars, I can procure them for you.
2797. But we wanted it now? Well, someone will have to get it and take it out for you.
2798. But you, as an officer of the Government, went out to ascertain the total cost of the making of these roads? I did nothing of the kind. I went out as a member of the Labour Board, to see what had been done since I last saw it.
2799. Is not that under the Government? No.
2800. Who pays you your salary? I get no salary for it at all.
2801. *Chairman.*] Do you not expect it? If I do get some I shall be very thankful.
2802. *Mr. Copeland.*] At the time you went out there you were receiving a salary from the Government for your services? Yes; but to get that information I should have had to spend more time than I could afford to lose from the Department.
2803. Even if you had not time, could you not have stated that there were so many culverts and bridges that you had not estimated? There are one or two I have marked here on the map that I know to exist, but without considerable trouble I could not have arrived at their cost. They would not have made a very large item at any rate.
2804. I understand from this column that you estimate the total cost of the work done on the roads to which Burns, Withers, and Smith have one frontage only is £374 5s.? No, £563 17s. The other figures are after the deduction made by the Roads Department.
2805. The cost of the roads through Burns, Withers, and Smith's property where they have both frontages is £535 10s.? Yes.
2806. In this calculation you seem to have omitted several roads;—have not Burns, Withers, and Smith a double frontage to A road? Yes; but that is a Government road, and the only crossing of the railway.
2807. But have they not a frontage to both sides of this road? Yes; but I do not think we have a right to charge it to them.
2808. You have given in this estimate the cost of all the roads done in that neighbourhood, as I understand it; it assumes to be so;—why did you not include road A? I do not know; it was not done by us. The cost is put down in another column; but I do not think it would be right to charge it to them. You can put it down if you like.
2809. No; I am not going to do your work. This paper presumes to show the cost of the roads entirely through Burns, Withers, and Smith's property;—has not that road A been made by the Government? It was made by Mr. Deering before we took charge at all. Road A was not done by the unemployed under the control of the Board; I believe it was done by Mr. Deering when he had charge.
2810. You know it was done by the unemployed? I do not know by whom it was done; but it was not done by the Labour Board.
2811. *Mr. McMillan.*] I understand that this schedule is made out as to the work done since you were a body? Since we were a body.

F. Wells.
12 Dec., 1888.

2812. *Chairman.*] In your schedule you have omitted to mention road A as being upon the property of Messrs. Burns, Withers, and Smith—as a matter of fact the road does pass through their property? It does, and is shown on schedule, but not charged to Burns, Withers, and Smith.
2813. Then why have you omitted to include it in the roads in this schedule? It is included in the roads in the schedule, but it is not put against their estate because it is a Government road. I do not think it is in the same position as the other roads which I have charged against their estate.
2814. But the road passes through their property? Yes.
2815. Is there any other road passing through their land which you have not put against their property in this schedule? I will look through the schedule and see. I do not think there is any other—that is, any other in the same category. * * * * Well, I find that a portion of the Boundary Road, to which Messrs. Burns, Withers, and Smith have one frontage, is not charged against them. The clearing has not been charged against the estate of Messrs. Burns, Withers, and Smith, although it is along their frontage. You see it is a Government road.
2816. Although you have a column there showing charges on account of one frontage you have not included this road in that column? No; it is a Government road, cleared entirely at the instance of the Government.
2817. Have you included the cost of the culverts and bridges in your schedule? No.
2818. Or the drain-pipes? No. I do not see any other roads but these two which are in that position.
2819. *Mr. O'Sullivan.*] You have included in these columns only the roads which have been constructed since the unemployed have been in the charge of the Casual Labour Board? Yes.
2820. Have you any objection to add to the schedule the words "While under the charge of the Casual Labour Board?" No, I will add those words. I remember that road A was cleared and formed before our board was formed; but we have ballasted it since.
2821. *Chairman.*] Have not men under your board done work upon the Boundary Road? Yes; but I am doubtful whether they did any of the clearing. I think that was done by Mr. Deering before we took charge.
2822. They have not been upon the work under you? No; not in clearing, but they have done some forming between the railway station and the road marked D.
2823. Is that portion of Burns, Withers, and Smith's frontage under its proper heading in this schedule? One half of the clearing is charged there.
2824. *Mr. Copeland.*] Notwithstanding the fact that the work was done by the unemployed? The work had been done there under Mr. Deering.
2825. But Mr. Deering had charge of the unemployed? Yes.
2826. You are aware that this inquiry is as to the work done by the unemployed? Then I think the better way, if you are going to refer to the whole of the work done there, would be for Mr. Deering to prepare a schedule of his own. It is not at all likely that for the sake of a few pounds I would neglect to make these charges against the estate if I thought that the roads were properly chargeable against it. The charge for the road over the Railway Bridge would be £131, and the other item omitted would amount to £30 15s. The £161 15s. would not make very much difference in my estimate. It is scarcely worth considering. It certainly would not be worth my while to keep these amounts back for the purpose of misleading the Committee.
2827. *Mr. O'Sullivan.*] But you have admitted in your evidence that you have not included the culverts and bridges? I am not, as I have said, in a position to give you that information.
2828. Will you add a note to the schedule stating that that is the case? I will do so with pleasure.
2829. We have had it in evidence from the surveyor who laid out these roads, and who kept the books, that the total cost of the roads was nearly £4,000; you say now that the cost was only £2,309? May I ask who was the surveyor who said so.
2830. Mr. Little? He would probably be in a better position to give you definite information than I am, being on the ground; I can only give you the amount from my knowledge of the rates we pay, and having regard to the work which I saw had been done.
2831. Do you think the amount Mr. Little has given would be right? I can scarcely credit it.
2832. *Mr. Copeland.*] Are you aware that Mr. Little has given evidence that the total cost of this work on the private property has been nearly £4,000? I am not aware that he has given such evidence.
2833. If he has given such evidence would it be correct? I can scarcely credit that the roads have cost so much, unless the officers have been paying considerably more than the rates which they were authorized to pay.
2834. Which do you think is more likely to be more correct—Mr. Little's evidence from his books or your estimate? Of course I cannot answer for his books, but his answer should be the more correct. If he has been able to distinguish the roads the items of his estimate should be correct.
2835. You are a member of the Casual Labour Board? Yes.
2836. Is it not one of your duties to see that the public money is properly and judiciously expended? Yes, as far as it is possible for us to exercise any check.
2837. Would you not consider it part of your duty as a member of the Board to see that proper accounts of the expenditure were kept? Yes; we see that the sheets are kept, but it would be utterly impossible for us to exercise supervision over every detail.
2838. But this is not a question of detail? It is with us.
2839. Is not this a batch of work upon which you have a certain number of men employed? No; we have a lot of work all round that camp. The work paid from that camp extends to Berowra, and half way across to Narrabeen.
2840. If the superintendent keeps an account of the money paid to these men who are working on these roads is he not able to supply the Committee with accurate information? He should if he could distinguish the roads, but I very much doubt whether he would be able to do that, unless he has been to the Audit Office and obtained the sheets.
2841. You think the superintendent's information is not likely to be more reliable than your estimate? I should not give it more credence myself.
2842. On what do you base your rates? On what our officers are authorised to pay.
2843. That is so much per cubic yard for ballast, and so much for other work? Yes.
2844. When the men have natural difficulties to contend with are they paid at the same rate? Such an article

F. Wells.
12 Dec., 1888.

article as ballast would come to much the same price. You appear to think that I should exercise supervision over these things, but I have no chance of doing so. It would require a far larger number of men to exercise this supervision. We can only estimate what the cost of work is from the rates we authorise our officers to pay.

2845. Do you authorise your officers to pay the same rate over the whole of the work irrespective of the ease or difficulty of the work? The rates in some places would of course differ from the rates in others. For instance the clearing would differ. In my estimate I have taken that at an average of £7 per acre, and I think that would be a fair average for the clearing which has been done upon this ground. I have taken 14s. a chain, and I have added 1s. per chain, so that I may be within the margin.

2846. *Chairman.*] Have you ever had any audit of your accounts? No; never. The sheets are audited by the Auditor-General. They are passed directly on to him, I may say that I have asked the Treasury for an audit of our accounts.

2847. But you have never had a certified audit? Never. I have applied once or twice to the Treasury officers, but they have told me that the matter has not been one of revenue, and that as it was merely a matter of expenditure if the Auditor-General was satisfied with the vouchers which were sent in, it would be considered sufficient audit.

2848. *Mr. Carruthers.*] Is the estimate which you have handed in based upon any previous experience which you have had? Yes; of course.

2849. You have made roads before similar in character to these? Never similar in character, because they are roads of a character which I should never allow to be made under my own supervision.

2850. Are these prices higher or lower than those which you generally pay in your management of the Roads Department? Very much lower. We want the work to be somewhat punitive. For that reason we only sanctioned a rate which would give the men something like 6d. per hour. We want to get rid of the men. That is our primary object.

2851. Is it usual when you are making roads in the Department to pay for the ballast which you take off private property? We have to do so in many cases. In other cases we take the ballast.

2852. When you let the roads out by contract do the contractors have to pay for the ballast? That is their own look out. That depends upon the terms which the contractor can make with the adjoining landowner. We have a section in the Act empowering us to obtain the authority of the Surveyor-General to enter upon land and to take what we require, but we rarely ever force it. We allow the contractor to do the best he can for himself.

2853. Is this statement made regarding what you know from your connection with the Casual Labour Board only? Yes; it is made in accordance with the rates which we pay.

2854. You offer no opinion as to what has been done before by Mr. Deering, or any other person having charge of the unemployed? No.

2855. Although road A is included in your statement of work done under the Casual Labour Board—has any part of that work been done by the unemployed? Only the ballasting by the Board—the forming and clearing was done under Mr. Deering.

2856. *Mr. Copeland.*] By the unemployed? Yes.

2857. *Mr. Carruthers.*] Does this £131 5s. represent the cost of what was done under the Casual Labour Board? I put that down as being the total cost.

2858. That represents all that has been done on the road? Yes.

2859. By you or by any one before you? Yes.

2860. *Chairman.*] Excepting the culverting and the bridges? Yes.

2861. *Mr. Carruthers.*] Do these prices fairly represent the value of the work done? They do not represent its fair value, because it has been done by somewhat punitive labour; our men earn on the average only 3s. a day. Do not misunderstand me; the value does not represent the value of ordinary roads. If ordinary labour had been paid to do the work it would have cost much more. The work, of course, would have been much better done; but it would have cost double as much.

2862. *Mr. Copeland.*] Do you think 3s. a day is a fair wage to allow the unemployed to earn? I think 6d. an hour is as much as we ought to give them. Of course, some of them earn 4s. or 5s. a day, but 3s. is the average. The bulk of them are very poor hands.

2863. *Mr. Carruthers.*] You have a note here that the Junction Road and the Vanceville Road are not charged here as they would most probably have been made by the Roads Department? Yes. Vanceville Road had been made up to a certain point by the Department; it was necessary to get through the property of Messrs. Burns, Withers, and Smith somewhere in order to get to the station. I might have tried for a diagonal road, in the first instance, but I do not think the proprietors would have given it to us on account of the injury it would have done to their property.

2864. As an experienced officer of the Roads Department dealing with applications for making new roads would you have approved of an application for making these roads under all the circumstances? Yes; that is the Vanceville and the Junction Roads.

2865. And the cost of making them is as you have stated? Yes.

2866. Is that putting aside the unemployed? The work could not have been done at the price named here except with the assistance of the unemployed.

2867. *Chairman.*] In cases where the roads made only give one frontage you have put down only half the cost of making the road? Yes.

The Hon. John Davies, C.M.G., M.L.C., recalled and further examined:—

The Hon.
J. Davies.
12 Dec., 1888.

2868. *Chairman.*] You have had to do with the making of the roads through the Holt-Sutherland Estate shown on the plan before you? Yes; we have cleared, formed, and gravelled some of them.

2869. At whose instigation did the Board make these roads? Petitions were presented by numerous property owners in and around the district, and reports were obtained from our officer in favour of the works being carried out. Ministerial authority having been obtained, the works were proceeded with.

2870. Did you take any means to investigate the *bond fides* of any of the petitions? The names of many of the petitioners are those of well-known Members of Parliament and of persons of good positions in society, and I should regard it as an insult to them to make inquiries into their characters. I knew from their names and positions that there was no need to do that.

2871.

The Hon.
J. Davies:
12 Dec., 1888.

2871. How many Members of Parliament are property owners round this estate? I could not say that they are property owners, but they represent the district—Central Cumberland. I suppose the Members took an interest in the district in the ordinary way. I ought to add that when this work was initiated we had 5,000 men at the National Park wasting public money in grubbing and rooting about among a lot of rocks. This was a legacy left to us by the gentlemen who had charge of the unemployed before they were handed over to the Board. When we took charge of them we regarded the work which has been done as being of greater utility to the public than the expenditure which was taking place at the Park.
2872. How many men had you employed upon the Holt-Sutherland Estate proper? 160 or 170.
2873. There are some Government reserves in juxtaposition to the estate? Yes.
2874. Have you cleared, formed, and gravelled any roads on that estate? We have made roads to some of the reserves.
2875. To which reserves? Well, the main road to Coronulla Beach goes to a reserve; the beach is a reserve for recreation purposes. There is also a reserve at the point for fortifications, or something of that kind. At all events, so we were informed.
2876. Are there any roads in that reserve? Not that I know of; but there is a road leading to it.
2877. Does not the road you speak of lead to the beach? Yes, but it goes close to the reserve.
2878. There are no roads on that point on the beach to the Government reserve? There is no direct road to the reserve. The Hungry Point Road, which goes through the whole of the reserve, was laid out, but it is not yet cleared.
2879. Was that road laid out by you? No; we did not lay out any of these roads. They were all surveyed before we had anything to do with the work, so far as I know. We have had authority to clear many of these roads, but we have not done so yet.
2880. Has any road from Sutherland to Kurnell been cleared? No, only partly; we had authority to clear the line of railway. A petition was presented; it was signed by seventy or eighty Members of Parliament.
2881. You have not done that work? We are waiting for the survey to be finished.
- 2881½. The line has not been surveyed? There is no defined survey, we are waiting for it to be finished.
2882. To whom was the delay attributable? To the Survey Department. This is a work upon which we have been anxious to employ the labour we had at our disposal. The Board were quite in accord with the prayer of the petition, which as I have said was signed by a large number of Members of Parliament. We considered the work to be a public work and a work of great utility, because it would be a means of assisting a number of manufacturers to a site which it has been proposed to be used for noxious trades.
2883. Did you employ a surveyor in connection with any of these roads? No, but we have had overseers; some of these roads were surveyed as long as fifty years ago. Of course we have had to get surveyors to lay out the work for the men and to take the measurements of the work they did before they were paid.
2884. Did you employ Mr. Sanderson to survey any of these roads? Not in the sense of surveying.
2885. Was he employed to define the road? No, to piece off the work for the men. The road was easily defined because it was an old original survey. I am speaking now of the main roads.
2886. Do not the majority of roads which you have cleared appear on the subdivision of the Holt-Sutherland Estate? I know nothing about that company. I do not know any of the shareholders, and I have no interest in it directly or indirectly. I have never seen the subdivision to which you refer.
2887. Has it not come to your knowledge that the roads which were cleared were subdivisional roads of the Holt-Sutherland Company? I have never seen the subdivision.
2888. Would not the pegs be marked? I do not know that that would be so. The original history of that place would be found to be this—there were a number of Crown grants to old Mr. Laycock and others, and the property was afterwards acquired by purchase by the late Mr. Holt.
2889. Did you take any pains to ascertain whether the roads you were making were subdivisional roads? The only step I could take was the ordinary one of sending my superintendent to report upon the several petitions and applications we received. You could not expect me to go and report myself, seeing that I had no technical knowledge about road making or surveying.
2890. When you received so many petitions apart from the main roads, did it not strike you that it would be advisable to examine the original plan of subdivision? No; that is a matter entirely in the hands of the superintendent.
2891. Did you never receive any report showing that these roads were in existence upon the subdivision of the estate? These are Government roads, and the owners of the estate I believe have adopted them in their subdivision.
2892. You knew then that these roads were in the subdivision? I knew these roads were public roads, and adopted by the owners in their subdivision.
2893. *Mr. O'Sullivan.*] The clearing of the line of railway from Sutherland to the noxious trade site would have been a genuine public work? No doubt.
2894. It was a petition for that work which you say was signed by over sixty Members of Parliament? Quite so. As I have already explained, we have the authority for the work and are anxious to carry it out, but we could not do so, because the survey is not complete. It would be folly to attempt to form a line of our own. As soon as the survey is finished we are willing to proceed with the work. It is a work which I think ought to be proceeded with.
2895. As a matter of fact, the work petitioned for by these Members of Parliament has not yet been carried out? Just so, for the reason I assign.
2896. Knowing as you did from the papers supplied to you that these roads were already surveyed, and that some of them were half completed, how did you come to utilise the public funds for the benefit of the Holt-Sutherland Estate? I think the work would benefit the whole community. A public road is a public property for all time. Some of these roads are as old as the Colony itself.
2897. But knowing beforehand that the work was about being done by the owners of this estate, why did your Department accede this request for roads? I had no knowledge that any subdivision was to be carried out.
2898. I understand you to say that you knew from the papers that these roads were surveyed before, and that they were part of the subdivision of the estate. Knowing this, why did you construct, with the public money, roads which were in the process of being constructed by, or which would have been constructed, by

The Hon.
J. Davies.
12 Dec., 1888.

by private owners? How was I to know that. The great Illawarra Road, leading from Tom Ugly's Point to the Sutherland Railway Station, is an old road, and is the road to Wollongong and Kiama. Then there is the Sylvania Road, the Port Hacking Road, and two or three other old roads which were known to be public roads.

2899. Granting that there were four or five main roads which were said to be necessary for the public convenience, where was the necessity for the construction of the twenty-two roads as shown upon this plan? You are asking me now for a technical opinion as to whether these roads should or should not be made.

2900. I am asking you upon what principle you made these twenty-two roads? On the same principle that all roads in the Colony are made; they are public roads—dedicated to the public, and they were made upon the authority upon which all roads are made—namely, Ministerial authority. I have done nothing in connection with these roads, save by Ministerial authority.

2901. You are a medium between the Minister and the expenditure? That is all.

2902. Had you any knowledge that these twenty-two roads would serve any large number of people here? At the present time many of them would not.

2903. How many people are there residing about these roads who would be served by them at the present time? I could not say what the population of the district is, but I am told by people who visit the locality on Sundays and on holidays that there are thousands of people in the district.

2904. Residing there? No; visiting the district.

2905. But are there many persons residing there. Do you think there would be fifty families? I could not tell you how many. I have no doubt that you could get the information from the Holt-Sutherland people.

2906. I suppose that thousands of people who go out there pleasuring to whom you refer would use only the roads leading to the places of public resort? Yes.

2907. They are about four in number? Yes.

2908. Therefore the remaining eighteen roads would not be constructed for their especial benefit? No, not exactly; but all of the roads lead more or less to deep water—picnic places and so forth—to which people are in the habit of going.

2909. You said just now that there were formerly 5,000 persons at the National Park whose work you did not consider to be of public utility? Not as compared with this other work. As a member of the Casual Labour Board I may say that I consider roadmaking one of the most useful works in which you could be engaged. Whenever we saw that we could employ the surplus labour in roadmaking we did so, because we considered it to be a work of public utility—of far greater advantage to the public than the scrubbing and clearing of portions of the Park.

2910. But the Park is public property? Yes.

2911. But the roads you have constructed are constructed up through private estates? They are dedicated to the public and are public property.

2912. Have they been dedicated? Yes, most of them, I think.

2913. Most of them? I understand that most of them have been dedicated.

2914. You said just now that most of the roads shown on the plan were not made? That is so.

2915. Still it is your intention to make them? Of course it is, unless we are stopped.

2916. You propose to complete the original plan? We propose to continue the work as far as our authority will permit us to do so, provided the surplus labour lasts, and I am afraid that it will.

2917. How many miles of roads marked on the plan are not yet completed? Mr. Burrowes could tell you, but I could not. That is a matter entirely in the hands of the superintendent.

2918. Are you aware that over 43 miles of road have been completed? Between 30 and 40 miles of road have been cleared I believe, but they are not completed.

2919. You mean cleared and gravelled? Nothing of the kind. Some are gravelled, some are only cleared.

2920. Is it your intention to treat these other roads marked on the plan in the same way? Not some of them, nothing more will be done with some of the minor roads. Although we have had authority to do more to most of them, we do not recognise that there is any necessity for doing the work.

2921. By the time you have completed these roads, there will be about 60 miles of them in this locality? I do not know what the measurement is. I could not tell you exactly, but I do not think there could be that mileage.

2922. *Mr. Carruthers.*] You have heard Mr. O'Sullivan speak of twenty-two roads. On this plan I believe the roads marked red are cleared, while those coloured in sienna are not commenced? That is so.

2923. If you look at the plan, I think you will see that there are fourteen roads coloured in sienna, and therefore not yet commenced? I believe so, but Mr. Burrowes could satisfy you on that point.

2924. You believe that this plan is correct? I believe so. Mr. Burrowes name is attached to it.

2925. I see that fourteen roads have been cleared? I think you will find that there are sixteen.

2926. What would you say is the utility of the main Illawarra Road? As I have already stated, that is a road between Sydney and Wollongong and Kiama.

2927. Is there a fair traffic on it now? A good traffic.

2928. Is it in contemplation to use the road for military purposes? It is a Military Road joining on to what we call the Sutherland and Loftus Roads, which goes right through the Park.

2929. What is the length of that road which has been dealt with? I could not tell you, but I have no doubt that Mr. Burrowes could. I do not want to guess at these things. It is a road passing through the Government reserve, and it is a road which has been under the control of the Roads Department for many years.

2930. Has it been in receipt of the annual mileage allowance? I believe it has, I could not say.

2931. Are you aware that Mr. Frederick Want and other gentlemen are trustees for a considerable number of these roads? I was not aware who the trustees were, but I presume there would be a trust, because it is one of the oldest roads in the Colony.

2932. Is the Port Hacking Road also a trust road? I am not aware whether it is a trust road. I know it to be an old Government road.

2933. You know that the Coronulla Road has been a public road for a considerable time? Yes.

2934. Has the bulk of your work involving an expenditure of money been upon these three roads? Yes. The principal expenditure has been upon these roads, they being the principal ones.

2935.

2935. Assuming that the total expenditure is over £8,000 you think you are justified in stating that the larger proportion of that amount has been expended on these three roads? The larger portion of the money has been spent on these three roads.

The Hon.
J. Davies.

12 Dec., 1888.

2936. You state that when you took charge of the unemployed there were great complaints about the work of the men at the National Park Camp? Yes.

2937. Did you receive any instructions to scatter them from that camp—to get them away from the National Park? We received instructions to try and employ their labour to greater advantage than it was being employed in the Park.

2938. You spoke of a large petition signed by Members of Parliament, the Chairman of this Committee—Mr. O'Sullivan—and myself, among others? Yes.

2939. Could you not go on with the work prayed for in that petition until the line had been surveyed? No; I have already stated the reasons why I have been delayed.

2940. When was the line surveyed? The survey is not complete yet.

TUESDAY, 18 DECEMBER, 1888.

Present:—

MR. WALKER,

MR. CARRUTHERS,

MR. COPELAND,

MR. O'SULLIVAN.

T. WALKER, Esq., IN THE CHAIR.

Robert Burdett Smith, M.P., called in, sworn, and examined:—

2940½. *Chairman.*] You are one of the proprietors of the Hornsby Estate? I am one of the proprietors of the Hornsby Estate. I have an equal share with my other partners, Messrs. Burns and Withers. We share and share alike as tenants in common.

R. B. Smith.

18 Dec., 1888.

2941. Do you know anything about the work of the unemployed on your estate at Hornsby? I have seen the work since they commenced—a portion of it. I have not seen the whole of the work done there by the unemployed.

2942. Were you aware of the origin of the work of the unemployed—the commencement of it there? I was not aware of the origin of it, because I paid a visit to England and Europe, and it was on my return from England that I first saw the unemployed at work.

2943. It was done without your cognizance in the first instance? I saw the men at work when I went to visit the Hornsby Estate on my return from Europe.

2944. Was that the first time you knew of it? I think I was informed by my friend and partner, Mr. Burns, that the unemployed had been at work, but they had done very little work at that time, scarcely any.

2945. Have they done a great amount since? I cannot say a very great amount. They have done what was necessary, I believe, to make roads to give access to Crown lands, and to open up avenues of communication to the railway.

2946. Do you consider all the roads absolutely necessary. I consider that they are absolutely necessary as avenues of communication to the railway, and as giving access to the Government lands.

2947. Would not a less number have sufficed? Well, I do not think a less number would suffice, because there is a population about there which could not gain access to the railway station or to the Crown lands without those roads.

2948. Present or prospective? Almost immediate, because there is a large population about Bobbingrock and Vanceville Estates. Of course they will facilitate the movements of the people, and enable them to gain greater access to the railway, and also to the Crown lands by means of these roads. I may mention that when I saw these roads very little work was done, and I was opposed to land being given without compensation for the purpose of opening these roads.

2949. Have not the roads benefited your estate? I think there has been a *quid pro quo*, as it were, on our side and also on the part of the Government. I think that the land we have given would recoup the Government to a greater extent any expenditure they have incurred in making these roads.

2950. But is not your estate more valuable in consequence of the existence of these roads than it was prior to their formation? If we had been paid for them the estate would have been more valuable; but you must remember that we have given 28 or 30 acres of land.

2951. But is not the remaining portion rendered more valuable by these roads? There must be some misapprehension as to the expenditure upon these roads. It is not so great as is assumed. I have driven through them, and I fail to see the large expenditure which has been suggested. In my opinion it would not exceed £2,000, and we have given £3,000 worth of land.

2952. *Mr. Carruthers.*] What has been the amount suggested to you? I have heard it suggested that we have been benefited very largely by this expenditure; but we have given £3,000 worth of our best land, because these roads are made all through our best land. When I saw the roads being made, I protested against the land being given without compensation. We have about 680 acres on the eastern side of Hornsby, and it was in contemplation by myself to sell this land as a whole in one block. Well we have been deprived of about 30 acres of that area by the making of these roads. It may seem strange to the Committee, but I was altogether opposed to giving these roads without compensation. I knew, from the railway being contiguous to some of the Government roads—Bobbingrock Road and Vanceville Road and other roads—that they must of necessity apply to us for roads, and by so doing would have had to give us compensation, and I was prepared to wait until this time should have arrived, when the Government would have to make these roads to Hornsby Junction in order to give access to the other roads, and to open up an avenue of communication between them and the railway station. I therefore did my best to urge my partners to apply for compensation.

2953. Did you not subdivide a portion of 50 acres near the station, cutting it up into streets? Before I went to England that was done by Mr. Dawson, 50 or 52 acres were planned out by him.

2954. Laid out with streets? I did not take any notice as to whether they were laid out. I know there was some subdivision made, but it was not for the purpose of immediate sale.

2955. And you named the streets? My partners have named the streets. I may mention that my friend

R. B. Smith, M.P. and partner, Mr. Burns, had the management of the whole; I had the most implicit confidence in him, and I allowed him to have the management of everything. I desire also to say that I concur in everything that has been done, and I am quite prepared to share in any responsibility he has assumed in the matter.

18 Dec., 1888.

2956. Had you not commenced some work on some of the roads? No; that was while I was in England. Some work was done on Burns Road. I left a power of attorney behind, and my partners consulted my attorney.

2957. Had not some work been commenced on this subdivision? Not before I went to England. Not a particle of work was done until after I had left for England.

2958. Whilst you were away in England? Whilst I was away in England, I believe (as I have been informed), an expenditure of something like £200 was made on Burns Road.

2959. Was not some work done on the subdivision? I never heard of it.

2960. Might it not have been done without your knowledge? I think not. They might have marked out with a tomahawk a few streets.

2961. If it has been given in evidence that clearing had been commenced, and in some instances proceeded with half way through the streets? I think not. I think you are mistaken on that point. I am not aware of anything of that kind being done. I know that Burns Road was made while absent. It is quite possible that they may have taken a tomahawk and marked out some streets.

2962. But if it is stated by Mr. O'Donnell and Mr. Burns that real clearing had taken place? If Mr. Burns has stated it it must be correct. I am not aware that he has said so.

2963. But supposing your intention was to sell the land in one block, does not the existence of roads on the property increase its chances of sale and add to its value? Yes, it would, if we had received compensation.

2964. Without compensation? No, I think not, having regard to the fact that we have given about £3,000 worth of land, and that the Government have expended, we will say, £2,000 on our land. I do not believe that they have expended as much as that on our own private estate; though, of course, you are in a position to judge by calling the officers, and getting a statement of the actual expenditure. You cannot drive along Boundary Road owing to its precipitous nature, but I drove through Junction Road and Burns Road as far as the Vanceville Road, and I have also seen the cross-road to Noonan's, and I cannot see that there has been a greater expenditure than £2,000.

2965. When you say that you have given £3,000 worth of land, does that include Burns Road and the roads marked on your subdivisional plan? No; it is exclusive. I think we have given about 29 acres exclusive of Burns Road.

2966. But do you include that part on the subdivision plan? No; I think it is about 29 acres exclusive of that.

2967. What roads do you include? I include Boundary Road.

2968. Boundary Road is not on your land? Oh, yes; pardon me.

2969. No, it is not? With great respect I think you are mistaken.

2970. Boundary Road gives you a frontage, but it is all on Crown lands? I think you are mistaken. I do not want to contradict you; but I—

2971. We have the evidence of Mr. Burns that it is not so? I have always been led to believe that Boundary Road was on our estate.

2972. It is not on your estate; it is on Crown lands all the way through? I am surprised at that; this is the first time I have heard it. If you say so I suppose I am bound to believe it.

2973. I give you the evidence of Mr. Deering, district surveyor, and of Mr. Burns, that it has been all made on Crown lands? Well, I have always been led to believe that that road was on our land.

2974. You see now that it is not? You say so.

2975. Under those circumstances, do you still say that you have given £3,000 worth of land? Approximately £3,000 worth of land has been given.

2976. Exclusive of Boundary Road? We have given 29 acres.

2977. You have given £3,000 worth of land, exclusive of Boundary Road, the roads shown on the subdivision, and Burns Road? In my opinion, and from what I have learnt from Mr. Dawson, we have given about £3,000 worth of land. We have given about 29 acres, and I value that at at least £100 an acre. I value the land at £3,000.

2978. Did not Mr. Dawson, in stating that, include Burns Road? No; he included the whole of the land at East Hornsby.

2979. Did he include Burns Road? No.

2980. You are not sure? Well, he said nothing about Burns Road.

2981. Then you are not positive? I say that it is my conscientious belief, having regard to all the roads made there, that we have given £3,000 worth of land.

2982. *Mr. Copeland.*] At what rate are you valuing the land per acre? A little more than £100 per acre. I would not take a shilling less than £100 per acre.

2983. You say that you value the land at a little more than £100 per acre;—have you sold any of the land round about those roads? No; not yet.

2984. You have sold none? No.

2985. Did you not sell some land on the Vanceville Estate? That is long ago. I was the first purchaser of the Vanceville Estate. Some years ago I purchased nearly 400 acres.

2986. Excuse me; but I want to keep you to the evidence. How long ago is it since you sold the last land on the Vanceville Estate? Some years.

2987. Have you sold no land since? I suppose Mr. Watkin, the auctioneer, sold the last for us.

2988. Which land was that? Vanceville. That is a different estate to this altogether.

2989. What did that land realise per acre? I cannot remember. It was sold many years ago.

2990. Was it sold before the railway was surveyed? Long before the North Shore line was ever dreamt of.

2991. You have sold no land since then? I think not; but Mr. Watkin could tell you.

2992. There is some land on the map marked with the names of different people;—did you sell those portions of land? No; those lands were never ours. It was only this Vanceville Estate that belonged to us.

2993. Then, as a matter of fact, you do not know anything at all about the value of the land there? Oh, yes, I do.

2994. Not having sold any land there, you do not know whether it would bring £50 or £100 an acre? At any rate I would not sell it under £100 an acre.

2995.

R. B. Smith,
M.P.
18 Dec., 1888.

2995. I suppose you are aware that the average price of the land in the Government subdivision by the station was £34? I do not know anything at all about that. I would not allow the land to go under £100 an acre. As a matter of fact we were asked in July, last year, 1887, I think, to submit 200 acres on the basis of about £100 an acre, and my friend Mr. Burns and myself were willing, but our other partner thought the price too low. I think we could have received £20,000 for this 200 acres; but my partner, Mr. Withers thought it should not go under £30,000. Owing to his action the purchase fell through.

2996. Is it not a fact that in all cases where the owners of private estates intend placing their land on the market, they make roads for themselves through it? I suppose they do; but I had no desire to do so.

2997. Do not they provide roads of access to different portions of their land? In my opinion they do; but I knew the value of this land. I knew that the soil was splendid.

2998. Have you any knowledge of soil? Yes, I have knowledge of soil, and I believe that this is splendid land. I may mention that I have about 12 acres of my own there, facing Burns Road, and independently of my partners, and I would not sell it now for less than £150 per acre.

2999. Do you know this Crown lands subdivision of Hornsby the other side of Boundary Road? I have seen it. It is very bad land.

3000. And this is very good? Yes, this is very good. Some portions of the Crown land is in my opinion very bad. It is very rocky.

3001. The land to the north of Boundary Road is very bad and the land to the south of it is very good? Yes; I consider this excellent land—splendid land. I have 12 or 13 acres near Noonan's, independently of Messrs. Burns and Withers.

3002. Have you cultivated it? No.

3003. Have you cleared it? No; but I would not take less than £150 an acre for it.

3004. Has anyone offered you £150? No.

3005. Have they offered you £100? I have not attempted to sell it.

3006. Are you not aware that the custom is for people to subdivide their land and provide roads through their estate? They may do it.

3007. *Chairman.*] Is it not the invariable custom? It is the custom, but it is not my custom.

3008. *Mr. Carruthers.*] What do you mean by providing a road—do you mean that they make one for themselves? I believe that in many instances it is done to open up roads.

3009. *Mr. Copeland.*] Do you not know that the custom is when people are selling their private estates not only to provide the roads but to open them up, to clear them? I do not know that it is the custom. I have not taken the trouble to inquire or to see into anything of that kind.

3010. Have you not seen hundreds of maps of subdivisions about the city? Really I have not seen hundreds of maps. I have not taken the trouble to look.

3011. *Chairman.*] As a solicitor, do you not know that it is the custom? I have not taken the trouble to bother myself about whether it is the custom or not.

3012. As a matter of fact you do not know the custom? I know that it is done in many instances; but I cannot say altogether that it is the custom. I know that there are supposed to be roads through subdivisions on paper, but when you go to them you do not find that there are roads at all.

3013. *Mr. Copeland.*] Would you expect the Government to pay compensation to you for the road from H to the continuation of E, the Mistake Road? Yes. This is to give access to the railway.

3014. Do you consider that it is to give access to the railway? I suppose that that road was made for some particular purpose. I cannot say for what purpose it was made.

3015. Would you expect the Government to make you compensation for the continuation of road E, which goes entirely through your own land? That road has been made with some particular object. There is a railway station near Noonan's, and this road is to give access to it.

3016. What is road HHH for? That is also to give access to the railway station.

3017. Will you tell me who is to make use of that access? The people around there.

3018. Will you tell me what population there is there? There is a large population near Bobbingrock and Vanceville.

3019. Can you say how far it extends? I know that there is a very large population.

3020. What do you call a large population? You can see the place studded about with homesteads. I cannot tell you approximately the number of people about there.

3021. Can you tell me the population on Crown lands requiring access to the railway station? No, I cannot.

3022. Can you tell me whether there are fifty people on the Crown lands? No, I cannot.

3023. I suppose you do not know that there are ten or that there is one person on that subdivision? I really do not know; but I know that these are all necessary roads; and I believe that unless they had been made now they would ultimately have had to be made by the Roads Department, and then they would have had to pay us compensation for them.

3024. Would you not have had to make these roads yourself before you sold the land to get to the railway station? Certainly not; I should not have given assent to it.

3025. You must be aware that you would not get the same price for your land? I think that we could have sold this large block of 680 acres irrespective of any road. Then, again, we have given all the roads to the Government a chain wide; I never heard of such a thing.

3026. How wide have you generally heard of roads? Even if we had given roads of half a chain wide I think that that would have been very liberal.

3027. Did you give the Government any compensation for giving you access to the whole of Boundary Road? No; this is the first I heard of it.

3028. Did you give the Government any compensation for that? Certainly not.

3029. Then can you tell me on what principle you give compensation for Junction Road, while they give Boundary Road without compensation? Until to-day I always thought that we had Boundary Road—that the road which has been cleared was on land given by us; but you informed me that such was not the case.

3030. Did the Government press you very much to get these roads? The Government, I believe, pressed my partner.

3031. Can you tell me what particular Minister? I do not know whether they pressed him or not. I know that they applied to him.

- R. B. Smith, 3032. For every road? I do not know whether for every road. I believe they did.
M.P.
18 Dec., 1888. 3033. Did the Government initiate those roads, or were they initiated by certain persons interested signing petitions? I know nothing about any petition. I signed no petition.
3034. I suppose you are aware that Mr. Withers signed a petition? I have heard that Mr. Withers signed a petition.
3035. You say that the Government took these roads;—will you tell me whether the Government initiated the taking of these roads? I cannot say. I am quite sure that neither Mr. Burns nor myself initiated anything of the kind.
3036. *Chairman.*] Are you aware that Mr. Dawson, the surveyor, consented to these roads, and that it was by his consent that they were made where they are? I am not aware of anything of the kind. I am aware that instructions were given by the managing partner.
3037. Did you make any claim for compensation? No; I did not. I was persuaded not to.
3038. You made no claim? No. I objected to my partners.
3039. Did you send any objection to the Government in writing? No; I did not.
3040. Did you or your partners refuse the Government any road? No; I did not.
3041. Nor your partners either? I think not.
3042. You cannot say what section of the Government were desirous to obtain these roads? I think it was the Roads Department and the Lands Department.
3043. But you do not know how this work was initiated? No; I really do not.
3044. You do not know whether it was recommended in the first place by a Government Officer, or whether it was brought about by persons presenting petitions? I do not know anything of that kind; but I know that neither directly nor indirectly did I have anything to do with the initiation of the work, the carrying on of the work, or anything of that kind, and I believe that neither directly nor indirectly had my partners Mr. Burns and Mr. Withers anything to do with urging the Government, although Mr. Withers signed a petition.
3045. Do you know that Mr. Burns approved of those roads being taken? I believe he offered no objection.
3046. Do you know that he approved—that there is his minute approving? If you say he made a minute I take your word.
3047. I do say so. Do you know that Mr. Burns further instructed your private surveyor, Mr. Dawson, to go out and lay off the roads? I believe that that was done at the request of the Casual Labour Board.
3048. If it had been done at the request of the Casual Labour Board, which is a Government Sub-Department, would not the Government surveyors have laid off the roads? The Government surveyors I believe concurred in this laying out of the roads, as you suggest.
3049. There was no concurrence that I am aware of. I simply want you to say whether you are aware that Mr. Burns authorized your own private surveyor to go out and lay off those roads? Well, I know that from time to time he gave instructions to Mr. Dawson, and I concurred in any direction he gave. Personally I concurred in everything that was done, because I believe that Mr. Burns is a man of the pink of honour, and that he would not do any improper thing.
3050. *Mr. Carruthers.*] You said that the Crown land is inferior land to yours? Yes; I think so.
3051. Most of it is further from the station and further from the road? I think that this plan is incorrect.
3052. What is the nature of the land along Boundary Road, close to your land? Some of it, in my opinion, is very rocky.
3053. I want you to look at this sale plan. This is a plan put in by Mr. Deering, showing the prices realized at the sale—£50 per acre, £61, £65, £77, £29, £33—Is your land more valuable than that; do you think it would realize more? Most certainly.
3054. Is your land rocky? No; our land is more of a sandy nature, and better land.
3055. Have you any land as poor as the land which realized these prices? It is impossible for me to say. There may be some few dots of it; but as a whole this is splendid land. That is the reason why others say that you could easily get £100 an acre for it.
3056. Do you consider your land superior in regard to physical characteristics? Yes; much superior.
3057. You have been asked a great deal about the custom of proprietors in laying out roads. Are you aware that in many instances of subdivisions there is nothing done to the roads beyond laying them out on paper? Yes; I said so.
3058. You are aware that the custom is rather that way than to the contrary? Yes.
3059. *Chairman.*] But is not the land in such a case provided, although the roads are not made? On paper.
3060. *Mr. Copeland.*] You say those roads are provided on paper; but is not the land itself provided,—how could they sell a frontage without the road? I cannot say; they do strange things.
3061. *Mr. Carruthers.*] The provision on paper amounts to a legal dedication of the land. The exposure of a sale plan showing roads on paper amounts to a dedication? It does not amount to a legal dedication.
3062. It is an act of dedication to a certain extent? It is an act of dedication to a certain extent, but only to a certain extent.
3063. *Mr. Copeland.*] Can you take the land away after you have sold an allotment frontage to a certain road, without being subject to an action? It has been done.
3064. Could you do it legally. Could you sell a man a frontage to a certain road, and then take the road away? I have known it to be done.
3065. *Chairman.*] Could it be done legally? I have known it to be done, but it is improper to do it, highly improper. I could mention instances where it has been done.
3066. But in those instances it has been done illegally? In my opinion illegally.
3067. *Mr. Carruthers.*] It is a very risky thing to do? It is a very risky thing to do, though I could mention instances where it has been done.
3068. You said that you desired to sell this property, if you sold it at all, in a block? Yes; as a whole.
3069. Had you any intention whatever of subdividing it? None.
3070. Were you prepared to hold it for a lengthened period of time until your got your price? Yes.
3071. Were you prepared to hold it for twenty years? I do not say twenty years. I was prepared to hold it seven or eight years. I was prepared to hold it until the railway was finished to North Shore.
3072. Do you think that the holding of your blocks of land intact without roads through them would have affected

affected prejudicially the prices that the Government would get for their Crown land adjacent? Most certainly. I think that without these roads no access could be obtained to the Crown lands, and that they could not be sold. R. B. Smith,
M.P.
18 Dec., 1888.

3073. *Chairman.*] Would not the low prices of Crown lands if they were sold affect prejudicially the sale of your land? Not in my opinion. It could not affect it prejudicially at all.

3074. *Mr. Carruthers.*] Do you think that, sooner than have that sacrifice, the Government would have purchased roads from you? My conviction is that the Roads Department would of necessity have been compelled to open up roads through this portion of the estate in order to gain access to the railway, and also of necessity the Lands Department would have been compelled to open up and construct roads to gain access to the Crown lands.

3075. And if they had not the alternative would have been the sacrifice of Crown property? That is my opinion.

3076. You have had other land transactions, I suppose, and plenty of experience on these matters? Yes.

3077. Is it your experience that it prejudices or affects the sale of a block of land if a particular plan of subdivision is arranged for;—is it not the desire on the part of the people purchasing large blocks of land that they shall not be trammelled by any previous plan of subdivision? Yes.

3078. If you were buying a block of land would you care about being trammelled by the vendor having a plan of subdivision with the roads dedicated which would make you follow out his particular design? No; I should not.

3079. Is that one objection you had to putting roads through the block? That was my objection.

3080. I notice by the plan that you have one frontage to the road D H? I believe the property on the other side of the road is Harnett's.

3081. Is it not a usual thing in giving boundary roads between two properties for each people to give 33 feet, or half the road? Yes.

3082. In this case have you not given all the road? I am inclined to think that we have, but am not sure.

3083. *Chairman.*] Is it not so. Mr. Harnett gave half the road. The evidence shows it? I made some inquiry about it. I saw that this was Harnett's or Edwards' land, and I think in going through it Mr. Burns said that we had to provide the road, but I am not certain on this point. It is possible that Messrs. Harnett and Edwards gave half.

Hon. John Davies, C.M.G., M.L.C., recalled, and further examined:—

3084. *Mr. Carruthers.*] When we left off examining you last time you were speaking about the noxious trades site? I think you asked me how it was that we had not cleared the line for noxious trades, tramway or railway. Hon.
J. Davies,
C.M.G.,
M.L.C.
18 Dec., 1888.

3085. Are you aware of the noxious trades site as proposed by the Committee of the Upper House; have you seen the plan of it? I have already answered that question;—yes.

3086. Have you got a plan of that? No, I have not. This plan shows it.

3087. Are you aware that it was proposed by the Bill before Parliament some time ago and by the Select Committee to include all the land for the noxious trades site between Cape Solander and the Burrannear Road? That was proposed, but I do not know what became of it afterwards.

3088. Are you aware that a portion as far as Coronulla Beach was proposed as a neutral zone? Yes.

3089. To stop all habitation and industrial pursuits there? Yes.

3090. And from Coronulla Beach to the noxious trades site, marked green on the plan, as a residential area? Yes.

3091. And this for the noxious trades? Yes; quite so.

3092. *Chairman.*] You say that it was confined to the site marked on the plan? Yes.

3093. *Mr. Carruthers.*] This is a list of roads put in by Mr. Burrowes. Can you give me the lengths of the three main roads on that list? According to Mr. Burrowes, Port Hacking Road, 320 chains; the main Illawarra Road, 330 chains; the Coronulla Road, 180 chains.

3094. That makes 10 miles 30 chains? I suppose it would. I have not calculated.

3095. What has been the nature of the work done on the main Illawarra Road? It is an old public road, as I have stated before.

3096. What is the width of that road cleared? Two chains.

3097. Is there any formation done? Yes.

3098. What width is formed? Half a chain.

3099. What width is ballasted? There is no ballasting at all.

3100. You are sure there is not some of it being ballasted? Just perhaps at the punt end there is a little being done now; just at the entrance of the ferry.

3101. Are you gravelling any portion of it? Yes; a portion of it. It is the main road.

3102. *Mr. Copeland.*] I should think there must be a mile of it done? Not half a mile.

3103. *Mr. Carruthers.*] Are you making any culverts on the Illawarra Road? Yes; pipe culverts. The portion near the station has been gravelled. The other portion approaching the ferry had to be widened, and it has been ballasted.

3104. You had to make some deep cuttings there? Yes; so as to relieve the steep grade leading down to the ferry.

3105. Has the work you speak of on that road taken a large portion of the £8,000? Well a large portion has been expended on the three or four main roads.

3106. On the other two roads have you done any gravelling or any other work? Yes, the Port Hacking Road has been pretty well gravelled from one end to the other. The Coronulla Road is in progress. These three or four roads are the principal roads upon which expenditure has taken place, they being main roads.

3107. Have you gone to any expense for similar work on any of the other roads? No; we have simply done the clearing.

3108. I notice that here and there you have put in pipe culverts? Pipe culverts are the cheapest kind that can be put in. I see from a return which I held in my hand, furnished by the officer in charge of

Hon.
J. Davies,
C.M.G.,
M.L.C.

18 Dec., 1838.

the works, that 4 miles of the Port Hacking Road have been cleared, and that 4 miles of the road have been cleared and formed. I see also that $4\frac{1}{2}$ miles of the Illawarra Road have been cleared, and that $3\frac{1}{2}$ miles have been cleared and formed. Of the Coronulla Road, $2\frac{1}{4}$ miles have been cleared, and $2\frac{1}{4}$ miles have been cleared and formed.

3109. You said, I believe in your former evidence, that you did not know whether these roads have been dedicated? I think I said that they had been dedicated—that they were proclaimed public roads.

3110. You know that all these roads have been dedicated? Yes.

3111. Take the Wollooware Road;—is not that an old track used by fishermen and others? Yes; for years and years I know that they have used it to get to their fishing-grounds and to get their fish to market for years past.

3112. Is it not also used by the lime-getters? I could not say.

3113. Take the Tareen Point Road;—is there any special advantage to be gained from the clearing and forming of that road? Yes, of course; that road leads right to the deep waters.

3114. Are you aware that on the opposite shore, at Sandringham, there is a Government tramway? I know there is a tramway there, but I thought it belonged to a private company.

3115. By the construction of the Tareen Point Road, would there be any saving of distance to people travelling from Sydney to Port Hacking and to the people living at Port Hacking? There is a saving of at least 2 miles.

3116. Would it not save something like 5 miles? I have not been over the distance myself more than once or twice.

3117. Is not the distance from Tom Ugly's Point to the Kogorah Station 3 miles, and would not the whole of that distance be saved? Yes; there is no doubt about that.

3118. At any rate it would at least effect a saving of 2 miles? I should say so from my casual observation. I have been over the distance only twice, and that was some time ago. I know that the road would save a considerable distance, because the road is more direct.

3119. Does any portion of the Tareen Point Road go through any private property besides the Holt-Sutherland Estate? Yes.

3120. Whose property is it? I do not know.

3121. Have you a plan of the National Park with you? Yes—a tracing. The portion tinted green shows the National Park.

3122. I see that its area is 36,320 acres? Yes.

3123. What is the main approach by road? The main Illawarra Road.

3124. There is also an approach by branch railway? Yes.

3125. But the main approach for vehicular traffic is by the main Illawarra Road? Yes; I believe that the train goes up to a platform in the centre of the park twice a week.

3126. I notice from this plan that the southern shore of Port Hacking is to a large extent the foreshore of the National Park? Yes.

3127. Do the roads which you have cleared through the Holt-Sutherland Estate give access to the National Park? Yes; several of them. I have already stated that the roads leading down from the main roads go to the deep waters of Port Hacking and to the National Park.

3128. What was the general work of the unemployed in this locality when you took charge of them? When we took charge of the unemployed there was a system of free rations and free feeds. This the Board immediately stopped. The great majority of the men were upon day labour, and were receiving not less than 6s. a day, thus making the relief works very attractive, and causing the men to leave their private employ, and flooding the city with unemployed.*

3129. Where were the bulk of the men concentrated? At the National Park.

3130. Do you think that the work which they have been doing on the Holt-Sutherland Estate is an improvement in point of utility upon the work on which they were previously engaged? I have already said so. I do not see how the men could have been more profitably employed than upon the construction of roads which had been dedicated to the public. I think they were employed in a most useful work.

3131. Did you use some of the unemployed in making roads at Como and Heathcote? Yes, after the sale

3132. Do you know whether, as a result of the making of these roads, the Crown lands were improved in value? If the sale had been delayed until the roads had been made a much higher price would have been realized; but the sales had been arranged, and they took place prior to the roads being made and the appointment of the Board.

3133. The same thing occurred at Heathcote? Yes, precisely the same thing.

3134. That is, the improvements were made after the sale? Yes.

3135. Did the Crown lose? Yes; but it is only fair to say that the auctioneer who sold on behalf of the Crown said that the roads would be made. You will see from the papers that Sir George Innes called upon the Government to make a road in accordance with the promise made by the auctioneers.

3136. Did you also have charge of the work of the unemployed at Narrabeen? Yes.

3137. And at Harbord? We did not do much there. The sale took place before we took charge.

3138. You did not do much work at Harbord? We had to make some roads to give access to the Crown lands. These were made upon the recommendation of Mr. Surveyor Gordon. Certain roads were made to give access to the Crown lands.

3139. *Mr. Copeland.*] Do you mean that the roads were to give access to Crown lands which were not sold? To both. The Harbord subdivision was sold prior to the appointment of the Casual Labour Board, but subsequently, upon the recommendation of Mr. Surveyor Gordon, roads of access were made to the sold and unsold portions of Crown land. I think there are only about 2 miles of road, but there are some heavy cuttings in it.

3140. *Mr. Carruthers.*] Has any work been done at Narrabeen? Yes; about 65 miles of roads have been cleared, 19 miles have been formed, and 10 miles have been formed, metalled, and blinded.

3141. Have you any idea of the cost of that work? I know that it cost a considerable sum.

3142. Were any of these roads at Narrabeen through private property? Yes; there was the road through Miss Jenkins' and the road through Wheeler's.

3143. *Mr. Copeland.*] What was the length of these roads? One would be about half a mile long. I do not suppose that the length of all of them would exceed $1\frac{1}{2}$ mile to 2 miles. 3144.

* Note (*On revision*).—This system was abolished by the Board, and piece-work substituted instead of day labour.

3144. *Mr. Carruthers.*] Are there any cross roads from these roads? No; the subdivision of the Crown lands takes the cross roads. These roads were to give access from the Pittwater Road to the Crown lands subdivision at Narrabeen.

3145. *Mr. Copeland.*] With the exception of these 1½ mile of road, the whole of the rest of these 65 miles of road were through Government land? Yes, with the exception of a few chains belonging to Mr. Cousins of Manly Beach.

3146. Did these private owners contribute anything towards the making of these roads? No.

3147. Did they give the land? Yes; but in one instance we had a difficulty in getting the land, and that was the cause of some delay. We got the land eventually.

3148. Did the land on both sides of these roads belong to one owner? In one case it did; in the other it did not.

3149. What was the difficulty to which you have referred? Well, some of the people did not like to part with their land. They thought that the Government would be eventually compelled to take the land and to give them compensation. I assured them that the construction of the roads would be of great advantage to their property.

3150. Did you form these roads? Yes; we formed and ballasted them. One was a very difficult road to make. It passed through a swamp, and we had to make the foundation with bundles of faggots. Although it was a short bit of road it was very expensive, but it was absolutely necessary in the interests of the Crown that it should be made. There has been a sale which has been a great success. The first subdivision nearly all sold, and fetched a long price.

3151. You are referring now to the Crown lands subdivision at Narrabeen? Yes. I believe the first sale realized about £29,000.

3152. Was that a better sale than the Harbord sale? A much better sale.

3153. You did nothing like the work at Harbord that you did at Narrabeen? We did very little work at Harbord.

3154. How do you account for the sale at Narrabeen being so much better than the sale at Harbord? Simply because the roads were only cleared at Harbord, whereas in connection with the subdivision at Narrabeen they were cleared and formed also. That is a great advantage.

3155. Is not the Narrabeen land better land? A great deal of it is bad land; it is very rocky. The land at Harbord is much better. I think you will find that at the next sale at Harbord you will get double the price for the land—that is, having regard to the roads which have been made. Of course it would not have been worth our while to make the roads unless we were to get a better value.

3156. You stated just now that the bulk of the expenditure upon the Holt-Sutherland Estate had been made upon the Port Hacking Road, the main Illawarra Road, and the Coronulla Road? Yes; and also upon the Woronora Road. Those are the four principal roads.

3157. Are you aware that Mr. Burrowes has handed in a statement showing that a great deal of expenditure has taken place in connection with other roads? I am aware that a great deal of other work has been done, but I cannot speak as to the length and width of the clearing in every case.

3158. Are you aware that the Burrannear Road has been cleared for 144 chains for a width of a chain and a half? I know that a great many of these roads had been partially cleared before. As far as I know this road has been cleared, but I could not say for what length.

3159. I suppose you have no doubt that the length supplied by Mr. Burrowes would be correct? It may be.

3160. Are you aware that he has supplied us with the information which I have just read with regard to the Burrannear Road? I was not aware of it.

3161. Are you aware that three culverts and one bridge have been erected on the road? I was not aware of it.

3162. But you do not dispute it? No.

3163. Are you aware that 180 chains of the Wotonga Road has been cleared, that 45 chains have been gravelled, and that four culverts have been made on one section of the road? I was not aware of that. I think it is only fair to say that fully 20 miles of these roads had been cleared by the owners of the estate before we had anything to do with them. Mr. Burrowes does not subtract that work, I take it.

3164. He sends in a return showing a list of roads cleared, formed, and improved on or in connection with the Holt-Sutherland Estate by the unemployed? Yes; but we did not clear these roads. I do not mean to say that the old Illawarra Road, for instance, has not been widened, but it was partly cleared before, and had been so for the past fifty years. If you want to get a correct statement as to the amount of work done in the case of each road by the unemployed I do not think this return will show it to you. I know that we have not done as much work as that mentioned in this schedule.

3165. But this return is supplied to us as the amount of work which has been done by the unemployed? Then it is misleading. These old trust roads were cleared long before we had anything to do with the work.

3166. Now take the Malvern Road. Are you aware that Mr. Burrowes states that this road has been cleared for 165 chains by a width of a chain and a half? I am not aware.

3167. Are you aware that out of this quantity 93 chains have been gravelled, and that three culverts have been made? I am not aware of that. I cannot speak as to the distance.

3168. Then on the Station Road. Are you aware that half a mile by a chain and a half of that road has been cleared and that the whole of that half mile has been gravelled? Yes.

3169. It leads to the railway station? Yes, it leads to the railway station.

3170. Then there is the Lilli Pilli Road. 150 chains of that has been cleared? I am not aware of that.

3171. The Euronga Road, 30 chains, and the Orara Road, 64 chains? I was not aware of that.

3172. Are you aware of the work which has been done upon the Karimbela Road? I could not tell you what work has been done.

3173. I am merely mentioning these distances because they have been given to us by Mr. Burrowes the superintendent? I only know the distances from what you tell me. I have not seen the statement. I have no knowledge of it.

3174. Mr. Burrowes says that 67 chains of the Karimbela Road have been cleared to a width of a chain and a half and that 261 chains of the Sylvania Road have been cleared to the same width? I know that these roads are cleared, but I do not know to what length.

Hon.
J. Davies,
C.M.G.,
M.L.C.

18 Dec., 1888.

- Hon.
J. Davies,
C.M.G.,
M.L.C.
- 18 Dec., 1888.
3175. He also says that 110 chains by a chain and a half have been cleared on the Bath Road? I know that the road is cleared, that is all.
3176. He tells us that 319 chains on the Boulevard Road have been cleared by a chain and a half? I know that the road has been cleared, but I could not say to what length.
3177. That 92 chains by a chain and a half had been cleared on the Yowie Road, and that 250 chains on the Forest Road have been cleared, each by a chain and a half? I know the roads are cleared, that is all.
3178. He tells us that 175 chains by a chain and a half have been cleared on the Corea Road? I am not aware of that.
3179. And that 60 chains by a chain and a half have been cleared on the Eton Road? I am not aware of that.
3180. He also tells us that certain distances have been cleared on the Willarree and Camera Roads? I know that some clearing has been done, but I could not speak as to the length.
3181. If these statements have been made by Mr. Burrowes I suppose there was no doubt as to their being correct? I have great doubt.
3182. *Chairman.*] But have you not confidence in your own superintendent? Like you and me he is liable to make mistakes, and I think he has made a great mistake here.
3183. *Mr. Copeland.*] In that case would you not consider it necessary to inquire into the matter yourself? I think it would be better for this Committee to send out an independent surveyor to make inquiries for himself.
3184. Is not Mr. Burrowes a surveyor? Not a licensed surveyor.
3185. But he is a practical surveyor and a road engineer, is he not? Not that I know of. I have no knowledge of his engineering skill. With Mr. O'Donnell and a number of others he was appointed before the Casual Labour Board came into existence. We have had to get rid of a number of men, but we have not made one appointment since we took office.
3186. You know that Mr. Burrowes has held a responsible position in Queensland? From his own statement.
3187. Have you any reason to doubt his capability in measuring the width and length of roads? I have.
3188. How long is it since you first had such a doubt? Within the last month or six weeks.
3189. Since this Committee has been in existence? No, before that.
3190. Did you take any steps to dispense with his services, or to call him to account? No; I called him to account. I wrote him a letter. I had occasion to complain of what appeared to be want of skill and attention to his duties in connection with the Woronora Road.
3191. What is the date of that letter? It is dated sometime last month.
3192. Did he afterwards satisfy you in the matter? He gave an explanation which was deemed satisfactory.
3193. But you do not doubt his ability to measure a certain number of chains? No; certainly not.
3194. Do you doubt his honesty? No; but I think he is neglectful in his duty sometimes.
3195. Then in all probability the width and length of the roads given here is approximately accurate? No doubt; but I think it would be much more satisfactory to this Committee if they are in search of truth to get some gentleman from the Roads Department to take the measurements.
3196. *Chairman.*] Surely you can trust your own officer? I think he is out in his measurements here.
3197. *Mr. Copeland.*] You were appointed head of this Sub-Department by this present Premier? Yes.
3198. Are you considered to be on the Civil Service list? No; but the paid officers of the Department are—that is, the accountant and the paymaster.
3199. But you yourself? Certainly not. I have not received a shilling for the services I have rendered, up to the present moment.
3200. You have charge of the financial arrangements in connection with the unemployed? No; I have not.
3201. What is the *modus operandi* in obtaining money from the Treasurer? The three members of the Board have to sign the paper applying for an advance. We have to furnish the vouchers, in conformity with the "Audit Act," to the Auditor-General. We generally apply for £6,000.
3202. In each case have the three members of the Board signed? Yes; in all cases.
3203. Having obtained your £6,000, what becomes of it? It is placed to the credit of the Casual Labour Board.
3204. Who signs the cheques? One member of the Board and the accountant; precisely the same as in the Roads Department.
3205. I suppose that you as chairman sign the cheques? Yes; they look to me to do the executive part of the work.
3206. Are there any instances in which some other member of the Commission besides yourself has signed? No; but in case of my absence any one of my colleagues can sign.
3207. And the accountant? He has to countersign. All cheques have to be countersigned by him, no cheque is of any use without his signature.
3208. Who is the accountant? Mr. Hinchcliffe.
3209. Has he given any bond? Yes; a fidelity bond of £1,000.
3210. Have you given any? There is no occasion for me to do so; I never handle sixpence of the money.
3211. Is it not the custom in the Government Service for each head of a Department to give a guarantee? I am not aware.
3212. Are you aware that Mr. Bennett, the Commissioner for Roads, has entered into a bond for £1,000. That is quite a proper thing, he being a civil servant.
3213. And that Mr. Flynn, the Under Secretary, and other Under Secretaries have acted similarly? And rightly so, I think, they being civil servants.
3214. You have control over your own accountant? No, he is an independent officer put there by the Government.
3215. Is he subordinate to you? No; he is appointed by the Government and the Executive.
3216. Does he not work subordinately to you? He takes his instructions from us.
3217. Do you ever check his accounts? No; I do not.
3218. Do you know who does? They are checked by the Auditor-General's Department and the Treasury.

Hon.
J. Davies,
C.M.G.,
M.L.C.
18 Dec., 1888.

3219. Do these officers come to the offices of the Casual Labour Board? Yes; we had a Treasury official round a month ago. The accounts are furnished to the Auditor-General, and his staff go through them.
3220. What check is there to show that the men whose names are entered on the pay-sheets are actually there and have received the money? There is in the margin of the sheets the man's name and the quantity of work he has done at so much a yard, and it is carried forward. The man has to sign immediately opposite the money he receives, in my presence, in the presence of Mr. Hinchcliffe, and in the presence of the storekeeper. There are three names to witness the payment.
3221. The actual payment of the money? Yes; the men step up to the table, and the paymaster hands over the money with a pay-slip, so that the man knows exactly what amount of money he is receiving.
3222. How much money have you received from the Treasury altogether? Speaking from memory I should say that we had received up to date about £225,000; that would be in twenty months.
3223. Have you received any money from the Treasury direct for private disbursements? Not a shilling.
3224. What is the practice in regard to the stores;—do you supply the men with rations? Yes. When we took charge we found that the men were being charged 1s. 3d. per head for rations, and that there was no contract at all—nothing but a general order given by the Colonial Secretary of the day, Mr. Dibbs, that all the men were to be supplied with rations not exceeding 2s. a head per day. The contractor, Mr. Kidman, charged 1s. 3d. a head per day, and this amount was deducted from the men's earnings. The first month we were appointed we insisted in having public tenders invited, and that the Government should call for a contract for larger rations than the men had been accustomed to receive. For instance, the men were getting only a pound of beef, and we thought that they should receive a pound and a half, seeing that they were working hard. The Colonial Secretary consequently invited tenders, and some thirteen or fourteen persons tendered for the supply of the rations at prices varying from 1s. 1d. to 1s. 9d. per head. The tender at 1s. 1d. was accepted. It effected a saving of £30 a day at that time, or £1,000 a month. It was all in favour of the men, because they had larger rations and less money to pay.
3225. Do you know when you were appointed to the Casual Labour Board? On the 2nd May, 1887.
3226. You say that you have since received no salary or emolument of any kind? I have not.
3227. Do you expect to receive any? Most certainly I do.
3228. Can you tell the Committee what you expect? I expect to receive the ordinary fees given to members of Boards.
3229. I suppose you will make a claim for the amount? No doubt.
3230. Were you appointed to the Legislative Council before you were appointed to the position? I gave eight months service before I was appointed to the Legislative Council. I do not expect to be paid for a period since I have been a member of that Chamber, but I expect to be paid for my services prior to the date of my appointment.
3231. Can you give the Committee the date on which you commenced to use the unemployed upon the property of Messrs. Burns, Withers, and Smith, and upon the Holt-Sutherland Estate? The papers will give you the dates.
3232. Which papers? The papers laid upon the table.
3233. Could you not tell us the month? It would be impossible for me to say from memory. There are twenty or thirty different places where these men were working.
3234. You say that you took the men away from the clearing of the National Park and put them on to these roads on the Holt-Sutherland Estate and other places? Yes.
3235. You thought that was a judicious course in the public interest? Yes.
3236. Were you not aware that there were miles and miles of roads through Government subdivisions upon which you could have employed these men? I was not.
3237. You were not? No, I applied to the Lands Department. I applied for information in reference to the different Crown lands subdivisions with a view to their being improved by the Board. Our desire was to obtain some return to the Crown for the moneys we were expending.
3238. Were these applications of yours in writing? No, they were verbal applications to the Minister direct.
3239. They will not be shown on the printed papers? Some of them may be, but not all of them. I spoke to Mr. Garrett personally. I went to see him purposely.
3240. You are aware now that hundreds of miles of roads could have been cleared and formed, and if it were necessary to find employment, metalled, upon Government subdivisions at Harbord, the Field of Mars, and other places? I am not aware, as we have done so in all the places you refer to. We have carried out the same work as at Narrabeen, only perhaps not to so large an extent.
3241. Did you make any roads upon the Heathcote subdivision? We are making them there. The sale took place prior to the Board's appointment.
3242. But you have made roads since? We are making some now.
3243. When did you commence? The work has been in hand for some time past. For some six or eight months. It is only a small subdivision.
3244. What I want to get at is this: Are you not aware that there were any number of roads from Crown lands subdivisions upon which the so-called unemployed could have been employed instead of their being employed upon these private estates? No. Such places as you mention do not exist. No Crown lands subdivisions other than those through which we have made roads have existed during the time I have had charge of the unemployed.
3245. How many chains have you cleared and formed at Harbord? At least 2 miles. There is a good deal of cutting through hard rock.
3246. You can hardly be expected to know how many chains remain uncompleted? I could not say.
3247. Are there not any number of incomplete roads upon the Government subdivisions of Harbord, Gordon, Heathcote, and the Field of Mars? All the roads in the subdivision have been cleared and formed as far as the Field of Mars is concerned. There have been 69 miles of roads cleared on the Field of Mars Common by the Casual Labour Board.
3248. Is that since you took charge? Yes. 44 miles have been cleared and formed, and in addition to this three bridges, twenty-nine culverts, and six crossings have been made.
3249. How many chains have been metalled? I do not think any metalling has been done.
3250. Do you mean upon any of the subdivisions? There is some on some of them, but I could not say what quantity. As far as Harbord is concerned the roads made by the Casual Labour Board there are ballasted and metalled.

Hon.
J. Davies,
C.M.G.,
M.L.C.
18 Dec., 1888.

3251. Are there not miles and miles of roads through Government subdivisions which are not formed and ballasted? I am not aware of that. Wherever we have had a Crown lands subdivision we have thought it our duty in the public interest to form a road. I do not know of any subdivision upon which we have neglected to do this.
3252. Do you know whether all the roads on the Heathcote subdivision have been formed and metalled? No; because there was a sale prior to the appointment of the Board. The land was simply cleared.
3253. Are all the roads through the unsold portions cleared, formed, and metalled? The roads are in course of formation.
3254. I suppose the same answer would apply to all the Government subdivisions? Yes, much the same.
3255. These roads were there for you to go on with at the time you commenced on these private estates? Yes; but the unsold portions are very small.
3256. I suppose you know that there are over 4,000 acres at Gordon? Yes; but the subdivision roads have been cleared and formed.
3257. How many are there on the Liverpool Common? About 30 or 40 acres. We are waiting for ministerial authority for that work.
3258. *Mr. Copeland.*] Can you say when the petition for the clearing of the railway track to the noxious trades site was presented to you? I could not say.
3259. When was it dealt with by you? On the 2nd of June, 1887.
3260. What difficulty existed in the way of your putting the men on to clear that track? The survey of the line of railway was not completed.
3261. Did you take any steps to get the survey made? Yes.
3262. What steps did you take? I communicated with the Railway Department, asking them to hurry on the survey, as we had authority to clear the track.
3263. Is there any letter in the printed papers showing your request? The request was made to Mr. Sutherland direct.
3264. Not by letter? No.
3265. It was a personal application? Yes. I had to make a great many at that time. Having regard to the number of men who were flocking in at the time, I could not wait for the usual red-tape routine.
3266. Have you, since June, 1887, made any application to get this survey work completed? Yes. I have seen the Minister three or four times about it. He subsequently gave instructions to the surveyors, and they have been at work for about three months.
3267. Then I should think they have completed the survey? It is not quite complete, I think.
3268. Although they have been three months at the work? Yes, off and on.
3269. Have you employed any men upon the portion of the track which has already been surveyed? No; it would not be a prudent thing for me to attempt to clear the track until the survey had been approved. I think it is a national work, and that it ought to be pushed on with great speed. I am quite in sympathy with the petitioners.
3270. Have you formed any estimate as to the increased value of the Holt-Sutherland Estate by reason of the making of these roads? I have not. That is a question which would not arise so far as I am concerned.
3271. You have no opinion to express upon that point? No.
3272. You said as a reason why the Coronulla Beach Road should be made was that thousands of people visited the seaside? Yes.
3273. When you said thousands I suppose you did not mean thousands literally? What I said was that thousands of people visited the locality in holiday time; they come by rail, and drive out in private traps and in 'buses; I have myself seen 500 people upon the beach.
3274. On one day? Yes.
3275. *Chairman.*] Was it a picnic? There were a number of private picnics. The people came out in buggies or traps.
3276. It was not a public picnic? Not that I know of.
3277. *Mr. Copeland.*] What is the general traffic on that road? There is a good deal of traffic upon it. On a Sunday when I have been out there I have seen as many as forty or fifty buggies upon that road.
3278. Have you seen that number on this one road? Well, on the beach.
3279. And have you at the same time seen other buggies on other roads? There is a good deal of traffic of the ordinary kind on the Port Hacking Road.
3280. The whole of the traffic on that estate would have first of all to cross at Tom Ugly's Point? Well, those who came by rail would not need to do that.
3281. Have you any idea as to the amount of traffic crossing in the punt? No; I have seen it frequently loaded with traps coming across; I have been on it myself when there have been three or four vehicles.
3282. Would you be surprised to hear that the total number of coaches, carriages, and buggies, and so forth, that crossed at Tom Ugly's Point both ways amounted to only 109 for the whole of the month of November? I could not say whether that is so.
3283. Would you be surprised to hear that there were 279 carts and waggons, and that there were in addition to that 128 coaches, carriages, and buggies, making a total of 407 vehicles? I could not have any knowledge upon that point. I do not know what number of vehicles would be likely to cross.
3284. *Mr. O'Sullivan.*] Do you know a road leading from the Loftus platform right through the middle of the park called the Lady Carrington Road? I am not aware of any such road. The road leading from the Loftus platform is called the Audley Road.
3285. At all events there is a well-defined road in the centre of the park? Yes.
3286. It is also reached by the Illawarra railway? Yes; the railway goes right through the park.
3287. So that passengers to the park have ready access by the Illawarra railway, by a branch railway, and by the Audley Road? Yes.
3288. All of these give direct access to the park? Yes.

WORK OF UNEMPLOYED ON ROADS AT HOLT-SUTHERLAND ESTATE.

APPENDIX.

A.

[To Evidence of Frederick Wells.]

THE chief object I have in view, ultimately, is to draft the men off in parties of 400 to 600 to permanent works where their labour may be of value to the country, and from which they may be gradually absorbed (or, at least, a portion of them) by private employers.

In furtherance of this object, work will be provided in the Northern, Southern, and Western divisions of the Colony, in making tanks, works for irrigation purposes, deepening water-courses, and the like. Besides these works, commenced sooner than they might have been under other circumstances, but still of a legitimate character, there will be the construction of the North Shore Railway within a short time, and the conversion of the Lachlan Swamp into a public park, and some limited employment under municipal bodies.

By these various means it is hoped that employment may be found shortly for all industrious men, and that the difficulty will be practically removed.

In the meantime, I wish a kind of Labour Bureau opened in Sydney, where a proper register shall be placed in charge of a careful and trustworthy person. I assume that a suitable office may be obtained in Hyde Park Barracks, and one of the clerks there hitherto employed may be detailed off for this duty. In this register the name of every applicant must be entered, with the following particulars:—

Name in full.
Address.
Trade or calling.
Age.
Nationality.
Married or single. If married—number and ages of children.
Date of arrival in the Colony.
Where from.
How long unemployed.
Name of last employer.
Substance of any certificate of character.

In connection with this principal office in Sydney communication will be established with local authorities in the principal country districts, with a view to obtaining employment for individuals.

All temporary assistance must be given after due inquiry, and in view of the ultimate objects arrived at.

2nd May, 1887.

HENRY PARKES.

John Davies, Esq., C.M.G.; Col. F. Wells; D. Houison, Esq.

B.

Correspondence, Minutes, &c., respecting dedication of land for Road at Hornsby.

(No. 1.)

Sir,

Surveyor-General's Office, Sydney, 18 December, 1884.
In reference to recent communications connected herewith, I have to request that you will be so good as to cause the road passing along the south side of Messrs. W. and J. Fears and S. W. Gray's land, parish of South Colah, to be laid out 1 chain wide, sending a plan thereof which may be made available hereafter, for proclamation, should that course be adopted.

I am, &c.,

P. F. ADAMS,

Surveyor-General.

F. B. W. Woolrych, Esq., District Surveyor.

Transferred to Mr. Surveyor O. F. de Rozzoli.—F. B. W. WOOLRYCH, District Surveyor, 22 December, 1884. Received, Gordon, 27 December, 1884.—O.F.R. Returned to Mr. Woolrych in accordance with memorandum of 3 May, 1886. See my memo. of same date.—O. F. DE ROZZOLI, 6 May, 1886.

The necessary data for the immediate location of the road along the south boundary of Fears and Gray's lands, South Colah, were obtained by me in connection with general surveys along the Peat's Ferry Road, and are entered in my field-books Nos. 14 and 15.—O. FARIOLA DE ROZZOLI.

Received, 8 May, 1886. Transferred to Mr. Surveyor G. H. Knibbs.—F. B. W. WOOLRYCH, 15 May, 1886. Returned to Mr. District Surveyor F. B. W. Woolrych, 12 February, 1887.—G.H.K. Received, 14 February, 1887.

Returned to the Surveyor-General with my B.C. memo. of the 16th instant on Surveyor-General's letter to Mr. Fariola de Rozzoli of 8-11 February, No. 87-3, papers 87-950, Ml.—F. B. W. WOOLRYCH, 16 February, 1887. The Acting Surveyor-General.

This instruction was returned to me in connection with the papers, Ml. 2,003-87, B.C., Instructions 87-33, to Mr. Woolrych, dated 26 February, 1887. I am verbally informed by Surveyor Perdriau that he has recently marked another road in the same locality, under the directions of the District Surveyor of the Metropolitan District, as a substitute for the road referred to within. I am further informed that the substitution was made by some mutual arrangement between the Roads Branch, the Roads Department, and the owners of the land through which the new road passes, in accordance with which the road intended to be provided along the south boundary of Messrs. Fears and Gray's grants is to be included in Messrs. Burns, Smith, and Withers' property. I have been unable to see the papers in this case; the present instructions now returned was issued in consequence of my report of 29 September, 1884, No. 27, dealing with the north boundary of the Bellamy block, now Messrs. Burns, Smith, and Withers' property.—O. FARIOLA DE ROZZOLI, 7 May, 1884.

Received 9 May, 1887.—D. M. MAITLAND. Mr. Stopps,—Any further action required in this case?—E.J.J., 10/5/87.

Will Mr. Deering please state whether anything is being done by him for provision of a road which will render unnecessary the execution of the Surveyor-General's instructions hereon?—A. J. STOPPS (for Surveyor-General), 14 May, 1887. J. W. Deering, Esq.

A road has been surveyed in substitution of the one Mr. Surveyor Fariola de Rozzoli was instructed to mark; and as agreed to by the owners of the land correspondence thereon herewith. The case has been under investigation in connection with other matters, or the plan and report would have been transmitted sooner.—JOHN W. DEERING, 18 May, 1887. The Acting Surveyor-General.

(No. 2.)

Sir,

Sydney, 31 March, 1886.

You are perhaps aware that a new road has been surveyed by the Government in the Lane Cove District between the lands of Burns, Withers, and Smith on the one side, and the lands of Fears and other proprietors on the other, for the accommodation of the public, and in particular for an approach to the new Railway Station at Hornsby.

I

* Plan I

I enclose herewith a sketch of the plan* of the road and locality, and would suggest for your consideration that, as the line to Hornsby will be opened for traffic soon after the completion of the Railway Bridge now in course of construction over Parramatta River, and as the road will enhance the value of adjacent Crown lands, which, I understand, will be brought into the market some time this year, steps should be taken as early as may be practicable for clearing and forming the said road.

I am, &c.,
J. F. BURNS.

The Chief Commissioner for Roads

Acknowledge receipt. Mr. Logan, 5/4. Acknowledged, 5/4/86. Mr. Symonds for report. Could not the unemployed be put at work here?—W.C.B., 1/4/86. J. Symonds, B.C.

Having visited the locality, I find no road marked as indicated on sketch; nor would a road in this position be of any present use to the public, as there is not a person living on the back lands to make use of it. No provision is made for crossing the rail at this point, which, being here in embankment, would require a heavy embanked approach and an expensive culvert adjoining.—J.S., 15/5/86. The Commissioner for Roads.

Resubmit with plans and memo. left by Mr. Burns.—W.C.B., 17/5/86. Plan herewith, 17/5/86. Mr. Symonds,—See me when next in office.—W.C.B., 18/5/86. Memo. to Mr. Symonds, 19/5/86. Resubmit. Further report herewith on separate sheet.—J.S., 21/5/86. Commissioner for Roads.

(No. 3.)

Sir,

Roads Office, St. Leonards, 21 June, 1886.

Re paper 86-3,215 herewith, proposing the opening of a road to Crown lands in the parishes of Gordon and South Colah, from a point on Peat's Ferry Road, near the Hornsby Railway Station.

Having made inquiry on the above matter, I cannot ascertain that any road has actually been surveyed in the position mentioned; but having seen Mr. J. F. Burns on the matter, learn that he in company with others concerned are quite willing to give facility for a road to be surveyed through their property (before subdivision) on to Crown lands lying at the rear of same.

The road as first proposed by Mr. Burns I cannot recommend, but about a quarter of a mile south of that line there is a good position for a road. At this point is a bridge crossing the railway, and I can recommend this as the best position for a road giving access to the Crown lands in that locality, from a point on the Peat's Ferry Road near the proposed Junction Station at Hornsby.

On the accompanying sketch and plan*, I have approximately marked with red dotted line the course of a line of proposed road that would give the best access to the abovementioned Crown lands. This would run in a direct line nearly due east from Peat's Ferry Road over the Railway Bridge above mentioned, keeping the crest of the ridge as far as practicable, and then trending in a south-easterly direction on to the northern boundary of the Vanceville Estate (part of Hyndes' 2,000 acres) through which a road could be continued to join the road locally known as the Great Eastern Road, which has been improved by this Department.

* Plans II and III.

A road in this position would cross nearly at the head of several creeks running towards Cowan, but in one or two places it would be advisable, to get better grades and reduce cost of construction, to carry the road a little more to the south on to private land; in one place for instance the boundary line of Crown lands crosses a creek just below a jump, or fall, whereas a chain higher or more southerly is a good position for a road.

From a road in the abovementioned position, branch roads could easily be carried along the several ridges.

If it is intended to bring into the market shortly any of the abovementioned Crown land, I would recommend the marking of a road as above described, and it would facilitate access if the said proposed line of road was cleared, but I would not for the present recommend construction.

I am, &c.,

JAMES SYMONDS.

The Commissioner for Roads.

This paper might go on to the Surveyor-General with a view to the marking of this road, and Mr. J. F. Burns, M.P., be informed of nature of report and action taken.—W.C.B., 22/6/86. Under Secretary. Inform Mr. Burns, M.P., and forward to Mines. Under Secretary for Mines.—J.R., B.C., 25/6/86. The Surveyor-General.—G.E.H. (for Under Secretary), B.C., 28/6/86.

Mr. District Surveyor Deering is requested to cause the road, herein referred to, to be surveyed, provided that he considers it desirable in connection with the Crown Estate, which might be subdivided for sale at some future time.—A. J. STOPPS (pro Surveyor-General), 9 July, 1886. J. W. Deering, Esq., District Surveyor.

Mr. Surveyor W. M. Gordon to survey the road referred to with a view to opening under 4 William IV No. 11, where necessary. Attention is invited to the report of Mr. Road Superintendent Symonds (herewith) pointing out that better crossings of creeks may be obtained within Hyndes' 2,000 acres than within adjoining Crown lands. Attention is also invited to the streets already laid out in the private subdivision of Hornsby Junction Estate.* Litho. herewith.—JOHN W. DEERING, Metropolitan District Surveyor, 14 July, 1886.

* Plan IV.

Received, 15 July, 1886.—W. M. GORDON. Returned to Mr. Metropolitan District Surveyor J. W. Deering, in connection with my report on letter 86-28, of the 28 October, 1886.—W. M. GORDON, Surveyor. J. W. Deering, Esq. Transferred to Mr. Surveyor Perdriau, in connection with previous instructions in the locality.—JOHN W. DEERING, 26 November, 1886. No. 3,368. Transmitted to the Metropolitan District Surveyor with plan, field-notes, and my letter, dated 14 February, No. 87-14.—STEPHEN E. PERDRIAU, Government Surveyor.

(No. 4.)

No. 1,786.

District Survey Office, Department of Lands, Sydney, 14 July, 1886.

In connection with separate instructions, No. 1,785 of this day's date, having reference to survey of a proposed parish road, I beg to invite your attention to the Crown land* shown upon accompanying litho., near the Hornsby Junction, and to request that you will be good enough to submit a design for the subdivision of the Crown land referred to with a view to an early sale of the same at public auction.

J. W. DEERING,

Metropolitan District Surveyor.

To W. M. Gordon, Esq., Temporary Salaried Surveyor.

Received.—W. M. GORDON, 15/7/86. Returned to Mr. Metropolitan District Surveyor J. W. Deering, in connection with my report in letter 86-28 of 28 October, 1886.—W. M. GORDON, Surveyor. J. W. Deering, Esq. Transferred to Mr. Surveyor Perdriau, in connection with previous instructions in the locality, No. 3,367.—J. W. DEERING, 26 November, 1886. Instructions, No. 86-1,785 and 86-3,368 enclosed. Transferred to Metropolitan District Surveyor with plan, field-notes, and my letter, dated 14 February, 1887.—STEPHEN E. PERDRIAU, Government Surveyor.

(No. 5.)

Roads, Sydney, 17 September, 1886.

MR. BURNS, M.P., called to urge the clearing of roads, Peat's Ferry, near Hornsby Railway Station. The papers in the case have been sent by Survey Department to District Surveyor Deering, for survey of road.

P.J.O., 17/9/86.

Commissioner.

Mr. Smith,—To see me when next in office.—W.C.B., 18/9/86. Inform Mr. Burns,—That where the road is aligned by Survey Department, the clearing will be done.—W.C.B., 27/9/86. Mr. Logan, 27/9/86. J. F. Burns, Esq., M.P., 29/9/86. File, 29/9/86.

(No. 6.)

* Hatched blue on litho.—J.W.D.

(No. 6.)

Department of Public Works, Office of Commissioner and Engineer for Roads,

Sir,

Sydney, 29 September, 1886.

Referring to your representations respecting necessity of clearing road, Peat's Ferry, near Hornsby Railway Station, I have to inform you that the papers relating to the road in question have been sent by the Survey Department to Mr. Deering, District Surveyor, for survey of road. When road is aligned by Survey Department the clearing will be done.

I have, &c.,

WILLIAM C. BENNETT,

Commissioner and Engineer for Roads.

J. F. Burns, Esq., M.P.

(No. 7.)

Sir,

75, Elizabeth-street, Sydney, 27 October, 1886.

I have the honor to inquire when the road through Government land on the northern side of the land of Burns, Withers, and Smith, to Peat's Ferry Road, will be surveyed. I have already had a communication from your Department on the subject, numbered 86-236, Road, S.-G.O., but it does not appear, as far as I can learn, that any action has been taken in reference to the survey.

I am, &c.,

J. F. BURNS.

The Hon. The Minister for Mines.

Acknowledge.—G.E.H. (for Under Secretary). Acknowledged, 27/10/86. The Surveyor-General.—*Pro* G.E.H. (for the Under Secretary), B.C., 27/10/86. Will Mr. Deering please state what action has been taken towards survey of the road herein referred to, and when plan of same may be expected.—A. J. STOPPS (for Surveyor-General), 28 October, 1886. J. W. Deering, Esq., Metropolitan District Surveyor.

(No. 8.)

Sir,

75, Elizabeth-street, Sydney, 16 November, 1886.

With reference to my letter of the 8th July, 1885, addressed to the Surveyor-General, and to your communication to me of the 29th August following, numbered 85-1,615, I beg now to state, for your information, that as it appears the Government would much prefer a direct road from Peat's Ferry Road across the Railway Bridge at Hornsby, through the lands of Burns, Withers, and Smith, to the Crown lands adjoining, in lieu of the road we first mutually agreed upon, Burns, Withers, and Smith are prepared to assent to the proposed change provided that the new line is surveyed and cleared for traffic in a reasonable time, and that the Government relinquish all claim in respect of the former line.

I have, &c.,

J. F. BURNS.

The Under Secretary for Lands.

Mr. J. W. Deering, in connection with previous papers in the case, referring to instructions 86-57 and 86-100.—A. J. STOPPS (for Surveyor-General), 24 November, 1886. Mr. J. W. Deering, Metropolitan District Surveyor. *Vide* instructions on paper S.-G.O., 1886-236/1 herewith.—JOHN W. DEERING, 26 November, 1886.

(No. 9.)

Sir,

Sydney, 14 February, 1887.

In compliance with instructions No. 86-3,367 and 3,368 (on Rds. 86-236/4 and 86-236/1), dated 26th November, 1886, I have the honor to transmit herewith the plan* and field-notes of my survey of a road 1 chain wide crossing W. Bellamy's 100 acres (now the property of J. F. Burns, G. Withers, and R. B. Smith), parish of South Colah, county of Cumberland. * Plan V.

2. The road crosses the Bellamy block, in a direct line from the Peat's Ferry Road to Crown land crossing the Homebush-Waratah Railway at the first overhead bridge past Hornsby Junction towards Waratah. It is parallel to the north boundary of Hyndes' 2,000 acre grant, as recently marked by Mr. Licensed-Surveyor Dawson, and approved by the Department.

3. This road has been given to the Crown by Messrs. Burns, Withers, and Smith, in lieu of the road first proposed to be dedicated along the northern boundary of the Bellamy block, between it and Cody and Fears' grants, it having been pointed out by Mr. Road-Superintendent Symonds that the latter would be more expensive to make.

4. I have shown my plan of the road to Mr. J. F. Burns, and he approved of it on behalf of his company.

5. The eastern boundary of Bellamy's grant has not been redetermined by the Department since the original survey of the grant in 1854 by Licensed-Surveyor Raper. In the absence of very conclusive evidence to the contrary it will be a line parallel to the western boundary (which has been recently redetermined), and distant therefrom about 4,037 links (the distance depends upon old marking recently found and identified). But the present owners of the grant in their application for a title under the Real Property Act, adopting the western boundary above mentioned have applied for only 4,000 links in width. The eastern boundary being parallel to the western boundary.

6. On the sketch plan accompanying his letter No. 86-28 of 23th October, 1886, Mr. Surveyor Gordon shows "line surveyed by Dawson as east boundary of Bellamy's." This line has been marked by holes in rock and blazed trees by Mr. Gordon. I have proved by survey that this line where it is intersected by the road surveyed by me bears $188^{\circ} 49' 15''$ (Trig.), whereas the bearing of the approved western boundary adopted by Surveyor Dawson is $189^{\circ} 39' 30''$, a difference of $50'$.

7. I have consulted Mr. Dawson on this matter, though from the above evidence it was almost unnecessary, and I find that the statement on Mr. Gordon's sketch plan, "line surveyed by Dawson as east boundary of Bellamy's," is founded on supposition, and that Mr. Dawson marked no line for the eastern boundary of Bellamy's grant.

8. It is manifestly unfair of Mr. Gordon to make such a haphazard statement as this, when it jeopardizes the professional reputation of a private surveyor, Mr. Dawson, by representing that he had made an unpardonable mistake. Mr. Dawson has the name of being a reliable surveyor; his plan accompanying application for a title under the Real Property Act shows the eastern and western boundaries parallel and 4,000 links apart.

9. I have taken no steps towards the rectification of the boundary, but have merely marked the stake and cairn of stones, the intersections of both sides of the road, with the line marked by Mr. Gordon, as that line is east rather than west of its true position, the land to the east being Crown land.

I have, &c.,

STEPHEN E. PERDRIAU,

Government Surveyor.

The Metropolitan District Surveyor.

R. 3,210-1,603, large flat. Papers, S.-G.O., 86-236/1; instructions, Nos. 86-1,785, 1,786, 3,367, and 3,368; also plan and field-notes herewith.—S.E.P., 14/2/87. Transmitted. *Vide* my memo. of 18 May, 1887, on accompanying paper,—Roads 86-236/5.—JOHN W. DEERING, 18 May, 1887.

(No. 10.)

Road within Bellamy's 100 acres, parish of South Colah.

It is recommended that the accompanying tracing, and form of dedication of the road therein referred to be sent to the Honorable J. F. Burns, as representing Messrs. Burns, Withers, and Smith, the owners of the land, and he be asked to cause both to be signed and returned to the Department, that notification of dedication might be made in the *Government Gazette*.

ED. TWYMAN,

1 July, 1887.

Submitted for approval.—S.F., 22/7/87. Approved.—T.G., 23/7/87. Hon. J. F. Burns, M.P., with tracing, &c., 3/8/87.

[Enclosure.]

[Enclosure.]

Department of Lands, Sydney, 19 August, 1887.
 THE following notification of the dedication of a portion of land for a road in the parish of South Colah, county of Cumberland, is published for general information.
 [Roads 86-236/7.]

THOMAS GARRETT.

NOTICE is hereby given that we, the undersigned, being the present owners of a portion of land containing 100 acres, in the parish of South Colah, county of Cumberland, originally held by W. Bellamy, do hereby dedicate a part of that land 1 chain in width for the use of the public in the position as surveyed by Mr. Surveyor Perdriau, and shown on plan which is deposited in the Roads Branch of the Surveyor-General's Office, Sydney.

Witness to signature of J. F. Burns, George }
 Withers, and R. Burdett Smith,— }

J. F. BURNS.
 G. WITHERS.
 R. BURDETT SMITH.

ERN. GEO. HAYES.

(No. 11.)

Sir, Department of Lands, Sydney, 3 August, 1887.
 With reference to the road within Mr. Bellamy's 100 acres grant, parish of South Colah, county of Cumberland, I am directed by the Secretary for Lands to forward the accompanying tracing and form of dedication of the road therein referred to, and to request you to be good enough to cause both to be signed and returned to this Department, in order that notification of dedication may be made in the *Government Gazette*.

I have, &c.,
 STEPHEN FREEMAN,
 (For the Under Secretary.)

The Honorable J. F. Burns, Esq., M.P.

(No. 12.)

Sir, Sydney, 11 August, 1887.
 In sending you, as I do herewith, the within approval of Burns, Withers, and Smith, of the plan of the road through their land from Peat's Ferry Road *via* the Railway Bridge at Hornsby to adjoining Crown lands, I think right to remind you that it is obligatory on the part of the Government to extend the road to the Great Eastern or Vanceville Road, and to put it in fair passable condition for traffic.

I have, &c.,
 J. F. BURNS.

The Honorable the Minister for Lands.

Provision will be made for the extension of the road dedicated by Messrs. Burns, Withers, and Smith, in Bellamy's 100-acre grant, but there is nothing in the papers to show that there was any promise or undertaking by the Crown to make the road or its extension fit for traffic as desired by them.—A. J. STOPPS (for Surveyor-General), 26 August, 1887. The Commissioner and Engineer for Roads.

Mr. Symonds for report.—W.C.B., 31/8/87. J. Symonds, B.C. I inspected this line of road on the 12th instant, and find that the work of clearing, culverting, &c., has been undertaken by the Casual Labour Board, who have a number of men employed upon it.—J. SYMONDS, 14/9/87. Commissioner for Roads. Surveyor General.—W.C.B., B.C., 15/9/87. Mr. Bransby, for gazettal.—A.J.S., 18 Aug., 1887. Gazettal notified, 19 Aug., 1887.

(No. 13.)

Memorandum (dedication) by Messrs. Burns, Withers, and Smith.

NOTICE is hereby given that we, the undersigned, being the present owners of a portion of land containing 100 acres, in the parish of South Colah, county of Cumberland, originally held by W. Bellamy, do hereby dedicate a part of that land 1 chain in width for the use of the public, in the position as surveyed by Mr. Surveyor Perdriau, and shown on plan catalogued R. 3,210-1,603, which is deposited in the Roads Branch of the Surveyor-General's Office, Sydney.

(No. 14.)

[EXTRACT from *Sunday Times*, 8 January, 1888.]

HOW THE TREASURY IS LOOTED—BURNS' LITTLE GAME—TWO MILES AND A HALF OF ROAD AT THE PUBLIC EXPENSE—HOW TO IMPROVE A PROPERTY.

IT is a natural and just punishment of all forms of corruption that its gains are overstated by the sufferers. "If Becky Sharp," says Mr. Thackeray in *Vanity Fair*, "had really obtained all the money she was credited with having begged and borrowed, she might have capitalised and have been a rich woman; whereas—" So no doubt if Mr. Burns really had the 17,000 acres, worth £500 per acre, in the Hornsby District with which the local inhabitants credit him, and it really had been improved from an original value of £4 an acre to £500 an acre by the labour of the unemployed, he would necessarily have netted the princely fortune of about £3,000,000 sterling. As a matter of fact, of course, he has not 17,000 acres there nor anything approaching it, nor is the land worth or ever likely to be worth £500 an acre. On the contrary, some of the land nearer the station was recently sold at an upset price of about £40 per acre; and though it brought in many instances a great advance on that figure, yet it gave no warrant for the valuation Mr. Burns' neighbours put upon his land or upon the amount by which it has been improved. He has, however, only himself to blame for the exaggerated ideas which his neighbours have formed of the extent of his property and of his gains.

The truth of the case is that the "unemployed," as the poor hard-working, half-starved labourers on the relief works are oddly called, have been used for the purpose of making and forming a road marked Junction-street on the plan on page 5, to which the property of Mr. Burns has a frontage of 2 miles. Properly speaking, the main road should have been that which led through Government property, which is marked on the plan Boundary Road. That road, however, has only been cleared, and not formed; consequently it will remain useless, and Junction-street will become for all purposes the main road of the district. Thus Mr. Burns finds his property transformed from a piece of uncleared bush-land into a handsome block fronting for 2 miles a main road made at the public expense which ought to have been made elsewhere. The actual value of the labour thus misemployed is only a few hundred pounds, but the extra value given to his land by putting the road in the wrong place is enormous.

To secure that Junction-street shall be the main road for all time, and that the increase in the Burns' profits shall be permanent, another street has been cut half a mile in length along the end of this gentleman's property, for the site of which he gave 4 acres of land—that is to say, just sufficient to make a clear half a mile of road 1 chain wide. The "unemployed" did the work, and he thus gets another half a mile of frontage to a valuable road at the public expense. The labourers on the relief works were then employed in cutting a short section of the Burns Road to join a fourth Government road which crosses the Vanceville Estate and the new *North Shore Railway* into the Lane Cove Road. Thus for ever and ever the way from Lane Cove is led around the end of the Burns Estate into Junction-street, and the Burns interests are as secure as the sharpest dodger in Christendom can make them.

The

The North Shore Railway, it will be seen, skirts the land, and the roads made by Government on the border of this private estate give ready access to the railway. Now, these two works operating together will undoubtedly make the Burns property exceedingly valuable. It may not be worth £500 an acre, but its contiguity to the railway on one side, to the main road on the other, thus forced out of its way, and the Government roads with which it has been so artfully bordered, will give it a value far exceeding that which the Government land in the vicinity had at the time the last Crown lands sale was held in that district. The remarkable fact also must be remembered that the North Shore Railway was the only line of all those which the late Assembly had decided to build that the present Government adopted. Why was this? Was it because Mr. Burns had this magnificent property to be opened up? Was it because the Society with which Mr. Burns was connected had been very kind to the Premier in the matter of loans on the leased land which has been so often discussed by reason of the Macnamara case? Was it solely out of gratitude because the St. Leonards electors had placed Sir Henry Parkes at the head of the poll, and because he found himself unable to give them the bridge which he promised as the price of their suffrages?

Whichever way it was settled, and whatever the reasons were that controlled the settlement, there is no doubt of the ultimate and actual result. The Government roads have been made at the public expense to skirt Mr. Burns' property, and to give it a frontage which it would not have had in the natural order of things, and to open it up on all sides in a way which is enormously to his advantage, and in some degree to that of another Minister with whose case we shall deal later on. It must not be forgotten that the rapacity of certain landowners whose ground would have to be taken or crossed for the purposes of the North Shore Railway has for several years blocked the construction of the line. Those landowners are for the most part as obstructive and as rapacious as ever. But the rapacity of a landowner is no bar to the expenditure of public money by Sir Henry Parkes—quite the contrary. He is, as we all know, above pecuniary considerations, and wastes with equal nonchalance the money of his country or the money of his creditors. The only money with which he never was liberal was his own.

(No. 15.)

ROAD at Hornsby through W. Bellamy's, now Burns, Withers, and Smith's 100 acres, and through Crown lands for sale.—No. 125, 17th January, 1888.

1. In accordance with the request of the Under Secretary for Lands, the following *précis* report is submitted.
2. Tracing herewith in illustration.
3. In 1884 certain surveys of Old Grant boundaries disclosed strong evidence that a strip of Crown land existed along the north boundary of Bellamy's 100-acre grant (Aln. 84-4,045).
4. It was proposed to utilise this strip of land for the purpose of a road; but after further inspection by an officer of Public Works Department, a better road was found a quarter of a mile further to the south, and where a bridge over the railway had already been erected. This bridge was in the best possible position to connect the main Peat's Ferry Road and Hornsby Station with the Crown land to the eastward, about to be subdivided for sale at public auction (Roads, 86-236/1).
5. All that was required was that the owners of Bellamy's 100 acres should consent to the road being taken through that land. The owners did consent, upon the condition that "the new line is surveyed and cleared for traffic in a reasonable time, and that the Government relinquish all claim in respect of the former line of proposed road" (Roads, 1886-236/2).
6. The dedication of the road was soon afterwards signed by the owners without any proviso as to the clearing being inserted (Roads, 1886-236/7); and on 19th August, 1887, dedication was officially published in the *Government Gazette*.
7. Early in 1887 the Crown land, coloured green upon enclosed tracing, was subdivided for sale at public auction (Aln. 87-4,039), and upon receipt of the plan, lithos. were forwarded by me to the Under Secretary for Lands suggesting that the leading roads through the surveyed but unsold Crown lands should be cleared and grubbed, whilst a part of the unemployed were in the locality (5th May, 1887, Misc. 87-5,757).

This suggestion received Ministerial approval on the same date and paper; and the Casual Labour Board were requested to carry out the work, and to continue the clearing of the road bounding the Crown lands through to the Eastern Road (Misc. 87-5,757), in order to afford access to the Crown lands for sale, and in accordance with previous similar action at the Field of Mars, at Como, at Heathcote, at Dobroyd, at Gordon, and at Peakhurst, George's River. It also became necessary to clear and form the surveyed and proclaimed road through Bellamy's 100 acres in order to give good access to the Crown lands for sale, from the Hornsby Railway Station and as was done at the Field of Mars, in connection with adjoining roads. The only roads authorized or requested to be cleared, &c., by any officer of the Department of Lands, were those referred to, viz.:—The roads through the public estate, about to be sold including the road from the Hornsby Railway Station through and along Crown lands to the Eastern or Vanceville Road.

8. After perusing an article in a newspaper called the *Sunday Times* of 8th January, 1888, and which is both malicious and untrue, it is only just and right to state that whilst the clearing operations were under consideration or proceeding, not the slightest communication was received by me from Messrs. Burns, Withers, and Smith. The work was initiated solely by myself, and solely in the interests of the Crown who alone I serve; I neither knew of, nor cared about the lands of Burns, Withers, and Smith. At the present time I have no knowledge of any of the properties of that firm, beyond the Hornsby Junction Estate (in a different direction to those roads cleared) and Bellamy's 100 acres, and which I only learned was their property by reason of the negotiation for the survey and opening of the road first referred to.

My only aim was to improve the Crown lands for sale, and obtain a better return for the Public Revenue; and the properties of Messrs. Burns, Withers, and Smith are matters of indifference to me, and never for one moment became an element of consideration; nor would any consideration for any person, or persons existing, of any class or degree whatsoever, induce me to depart an iota from my public duty to the Crown.

JOHN W. DEERING,
Metropolitan District Surveyor.

(No. 16.)

Minute Paper.

Subject:—Roads cleared by the unemployed at Hornsby.

Roads, Sydney, 10 February, 1888.

I HAVE examined the locality of Hornsby, and the road works done by the Department and the unemployed.

The road from the Main or Junction Road to the Peat's Ferry Road has been cleared at private cost by the owners of land on either side.

The Boundary Road, which has been cleared to show more definitely the Crown lands, is impracticable, unless at a large outlay, and has no direct access to the station, as private property intervenes. This Boundary Road, crossing the gullies low down, has undulations which can only be made passable at great cost, and even then with very steep grades and expensive bridges over the gullies which intersect it.

To obviate this, on the representations of the officers of the Survey Department, Junction-street was made the main road to those back lands from the station, the owners of the lands, Messrs. Burns, Withers, and Smith, having given five roads, which have all been cleared so as to give access to eligible points for their extension along summits of ranges through the expanse of Crown lands to Cowan Creek. By this arrangement the public estate is decidedly benefited, as easy roads with practicable grades are obtained to the Crown land, and direct access given to the station without necessity of passing through other private property.

The Vanceville Road, joining this Junction Road, was made by the Department two years ago as far as Billyard Road or street, and was recently extended by the unemployed to afford direct access by one of the short branch roads to the Crown lands from the Lane Cove Road and the Gordon Railway Station. One of the other two cross roads recently cleared was to give direct access from the church and junction of the Lane Cove Road and Peat's Ferry Road, Pearce's Corner, to the Crown lands. The other intermediate road gives access from Lane Cove Road half way between Gordon and Hornsby to the land in question, all will be ultimately required, and will enhance the value of the Crown land beyond by rendering it easy of access, and have been located in the best positions, and are now defined by the clearing, instead of their selection in the future being hampered by sale of allotments through which it might be necessary to force the roads at considerable cost for compensation and fencing.

If

Plan VI.

If it had been possible to exercise this provision and precaution in other cases, miles of bad road, large outlay for works and compensation would have been saved, and larger revenue from land sales would have been secured.

Had this land been reserved Crown land, not to be sold, all the roads would have been desirable in the interests of the Crown land beyond, and I fail to see why the possession of the private property in question by private individuals should be a bar to necessary improvements because they incidentally enhanced its value.

C.

Hornsby to St. Leonards Railway—Fixing Sites for Stations.

Department of Public Works, Railway Branch,

Engineer-in-Chief's Office, Sydney, 10 December, 1888.

Sir,

I have the honor to forward herewith copies of the correspondence on the subject of fixing the station site at 1 mile 40 chains on the Hornsby to St. Leonards Railway, as requested.

I have, &c.,

JOHN WHITTON.

Thomas Walker, Esq., M.P., Chairman of Select Committee on Work of Unemployed, Hornsby and Holt-Sutherland Estate.

Minute Paper.

Subject :—Hornsby to St. Leonards Railway—Fixing Sites for Stations.

Department of Public Works, Railway Branch,

Engineer-in-Chief's Office, Sydney, 17 April, 1888.

I HAVE the honor to inform the Minister that my minutes of the 7th February and 7th March, requesting that the sites for the stations on the Hornsby-St. Leonards Railway should be fixed, and pointing out the urgency of the matter, still remain unanswered.

W. H. QUODLING,

(For the Engineer-in-Chief).

The Hon. the Minister for Works.

Proposed Stations on Hornsby to North Shore Line.

As directed by the Commissioner's minute of 13/1/88, I have gone through this line and inspected the places proposed for stations, numbered 1 to 9 on Commissioner's paper.

No. 1. (1 mile 40 chains)—Is in proper place.

No. 2. (2 miles 40 chains)—This is also in proper place so far as the grade is concerned, although I think it would be a little more central for inhabitants if it was few chains nearer Sydney, viz.:—At Great Eastern Road, but grade is not favourable for a good yard, being on a 1 in 80 grade.

No. 3. (3 miles 30 chains)—Near Cornell's,—This is most unsuitable place for platform or siding, the grade is steep and the place unapproachable, as it is on the side of a steep hill.

No. 4. (3 miles 65 chains)—This is on a 1 in 50 grade and most unsuitable for station yard, and the residents at or near this place will have only about a mile to cart their produce to a really good station yard at "Gordon"—a platform only might be erected at where line crosses the main road, but even this is objectionable, as it is on the long bank of 1 in 50 grade.

Nos. 5 & 6.—Are very suitable places for stations or platform—No. 5. Gordon—a large area of land has been taken for a station yard, and it is well suited for it.

No. 7. (7 miles 35 chains) Mr. Lord's land—A suitable place for a platform, being on main road and a very easy grade.

No. 8. (8 miles 35 chains) Chatswood—A suitable place for station and siding, being centre of large population, and an easy grade.

No. 9.—Crows' Nest. Not yet decided, I believe, where to have station.

Nos. 5 & 8.—Should be provided with loops for crossing trains, as well as sidings, &c., for goods traffic.

No. 2.—Should have a siding for receiving trucks of fruit, &c. At the other places only platforms and small stations, similar to Thornleigh.

Traffic Manager.

H. RICHARDSON, 16/2/88.

For the Minister's decision.—I am making inquiry on other papers about a platform at Lord's, No. 7 on plan, 7 miles 35 chains. I should make a platform at this place conditional upon the land being given free. I think the accommodation of the various kind recommended should be given at places Nos. 1 & 2, 5 & 6, 8 & 9, perhaps No. 7 on conditions stated.—CH.A.G., 18/2/88.

I approve of Commissioner's recommendation, but No. 6 should be a station instead of a platform.—J.S., 19/4/88.

Stations and Platforms for the North Shore Railway.

Engineer-in-Chief's Office, 20 July, 1887.

I SUGGEST that an officer of the Traffic Branch should be instructed to examine the country between Hornsby and St. Leonards, and report as to the number of stations and platforms which should be provided for this railway, and the amount of accommodation at each place.

In framing the Estimates provision has been made for four platforms and two stations, and the undermentioned sites are suitable positions for the accommodation suggested, if it is considered by the Traffic Branch to be necessary, viz. :—

| m. chs. | | grade. |
|---------|-----------------------------|-----------------------------------|
| 1 40 | Platform..... | $\frac{1}{100}$ — $\frac{1}{105}$ |
| 3 0 | " | $\frac{1}{60}$ |
| 5 0 | Station for Gordon | $\frac{1}{65}$ |
| 6 42 | Platform..... | $\frac{1}{132}$ |
| 8 20 | Station for Chatswood | $\frac{1}{200}$ |
| 9 66 | Platform | $\frac{1}{66}$ |

The site for the terminal station for St. Leonards is not yet determined on.

The Hon. the Minister for Works.

JOHN WHITTON.

New Platforms on Pearce's Corner to North Shore Railway.

[Extract from Report of Traffic Inspector H. Richardson, dated 17/8/87.]

I HAVE made a visit to this line, and travelled it through from Hornsby to North Shore. I scarcely see the necessity for two platforms within 3 miles of Hornsby; the one at 1 mile 40 chains I consider too close to the junction, and the one proposed at 3 miles is not on a suitable spot, as the grade is 1 in 60. What I would propose is one platform and siding only between Hornsby and Gordon, and I would place it at 2 miles 38 chains on a grade of 1 in 132; the station to be approached from main road by Cherry Road—a distance of only about 10 chains from main road. A station at 2 miles 38 chains would be the centre of large population, and the few residing midway between Hornsby and 2 miles 38 chains would have less than $\frac{1}{4}$ mile to travel to a station on either side of them. Only a small station, similar to Thornleigh on the Hawkesbury Line, is what is required with siding—say, for twelve or fourteen waggons.

[To Evidence of J. F. Burns.]

D.

Gentlemen,

Department of Lands, Sydney, 29 August, 1885.

With reference to your letter of the 8th ultimo, respecting an application to be made for a certificate of title under the Real Property Act, for certain lands in the Lane Cove District, parishes of Gordon and South Colah, I am directed to inform you that no objection will be raised on the part of the Crown to the issue of the required certificate of title, in virtue of Bellamy's grants, to the land extending about 59 chains southerly, as per deed lengths, from the south side of a road 1 chain wide running along the south boundary of Fears and Gray's grants.

Messrs. Burns, Withers, & Smith,
Care of J. F. Burns, Esq., M.P., Regent-street, Paddington.

I have, &c.,
CHARLES OLIVER,
Under Secretary.

[To Evidence of J. F. Burns.]

E.

PROPOSED PARK AT HORNSBY.

A NUMEROUSLY signed Petition, of which the following is a copy, has been presented by Mr. J. S. Farnell, M.L.A., to the Minister for Lands:—"Hornsby, July, 1887,—To the Hon. Thomas Garrett, M.P., Minister for Lands,—Sir,—We, the undersigned residents of the district of Hornsby, and others interested in its welfare, observing that the Government are having the Crown lands of the neighbourhood cleared, and in other respects improved, with a view, as we are informed, to their being sold by auction, have the honor to bring under your notice the great desirability of resuming for a public park the portion of Crown lands on the western side of the Peat's Ferry Road, between the lands of Messrs. Burns, Withers, & Smith, and those of the Hornsby Land Company, and extending at the rear to the lands of the late Mr. Thomas Higgins. The land referred to is situated within a short distance of the Hornsby Station, is well adapted for a park, and the only piece of Crown land in the immediate locality of sufficient area for such a purpose. We feel that it is the more desirable that this reservation should be made, as the proprietors of the adjacent lands are subdividing and selling their properties in small lots, and it will in a few years doubtless be difficult to obtain any land in a convenient position for public recreation in this district."

[To Evidence of James Murphy.]

This return is made up to the 1st December, 1888.

Hurstville, 12/12/88.

E. M. BURROWES,
Superintendent.

I.

Sir,

Hurstville, 13 December, 1888.

In reply to yours of yesterday's date, requesting me to proceed to Hornsby, to report upon a portion of Boundary Road, I have the honor to state that I made a minute inspection of the road in question, and am of the opinion that it could not be made a traffic road without an enormous amount of money was expended thereon, the grade being exceedingly steep, about 1 in 6.

As regards the probable cost for the first 15 chains beyond the gully, I estimate that it would cost not less than £200 per chain; to give it a grade of 1 in 10 it would have to be a block cutting, and a high level bridge across the gully.

I have, &c.,

E. M. BURROWES,

Superintendent, Southern District.

Thomas Walker, Esq., M.P.,

Chairman, &c., Select Committee, Legislative Assembly.

J.

Dear Sirs,

136, Pitt-street, 19 December, 1888.

When I was before your Committee I was informed or had been led to believe that £5,000 to £6,000 had been expended on roads through the lands of Burns, Withers, and Smith to the Crown lands, and I concluded that for such expenditure there should be an increase in the value of the property of Burns, Withers, and Smith to the extent of £10,000. I also stated that I myself knew very little about the roads.

Having now reason to believe that a very much smaller sum has been expended on roads through the lands of Burns, Withers, and Smith, and that the land held by them on this side of the Homebush and Waratah Line is under 700 acres, I think it right that I should be allowed to amend my evidence. I wish to be called again, but before again giving evidence, I intend going over the roads for my satisfaction in order that my evidence may be more decided.

Hoping that the Committee will accede to my request,

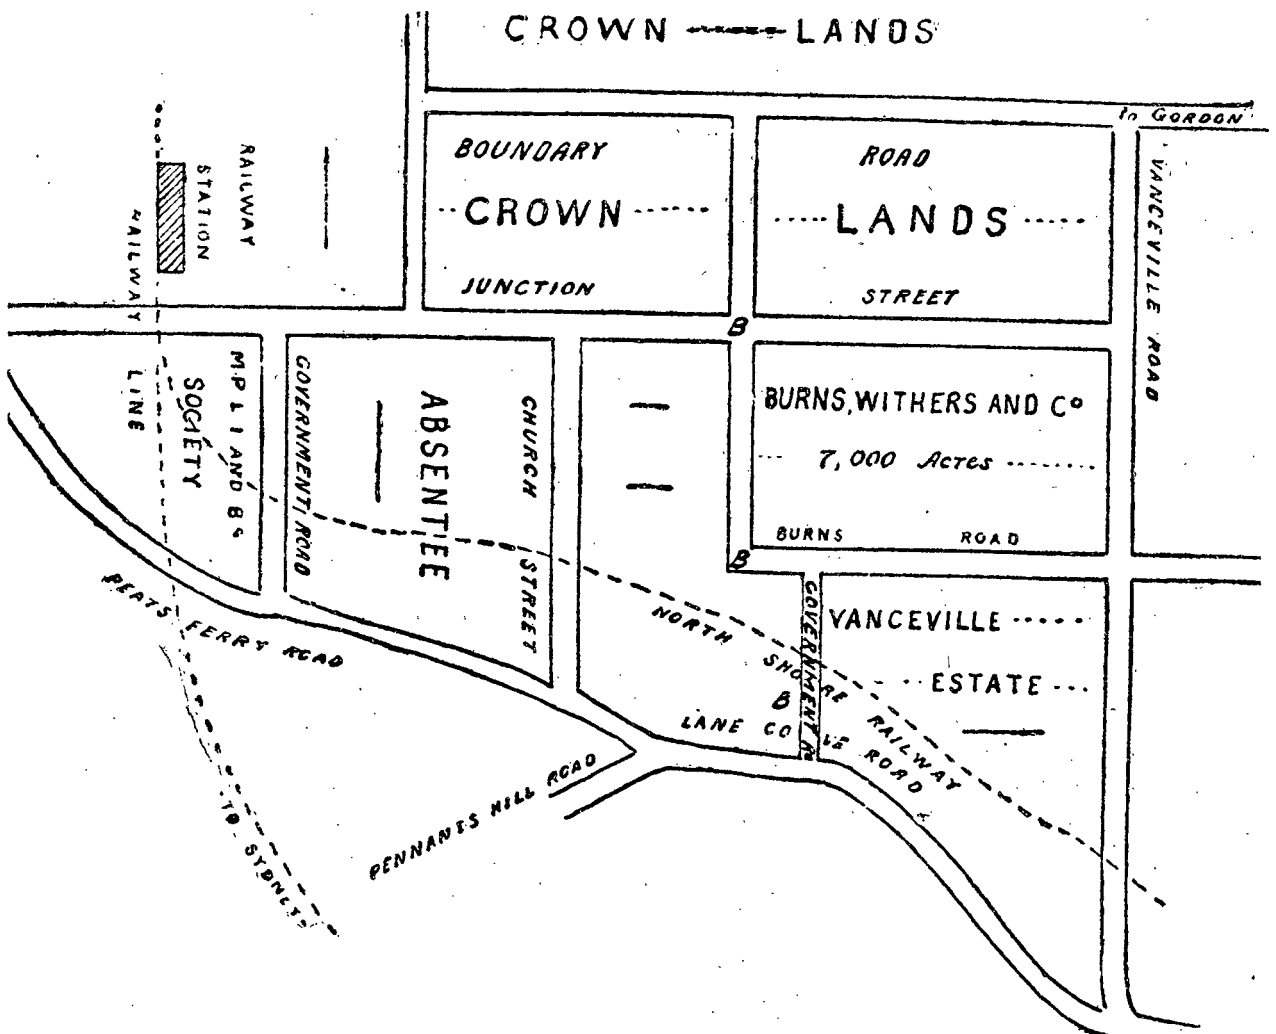

I am, &c.,

G. WITHERS.

The Chairman of the Select Committee on Roads at Hornsby and Holt-Sutherland.

[Nine plans.]

Enclosure to No. 13.
PLAN

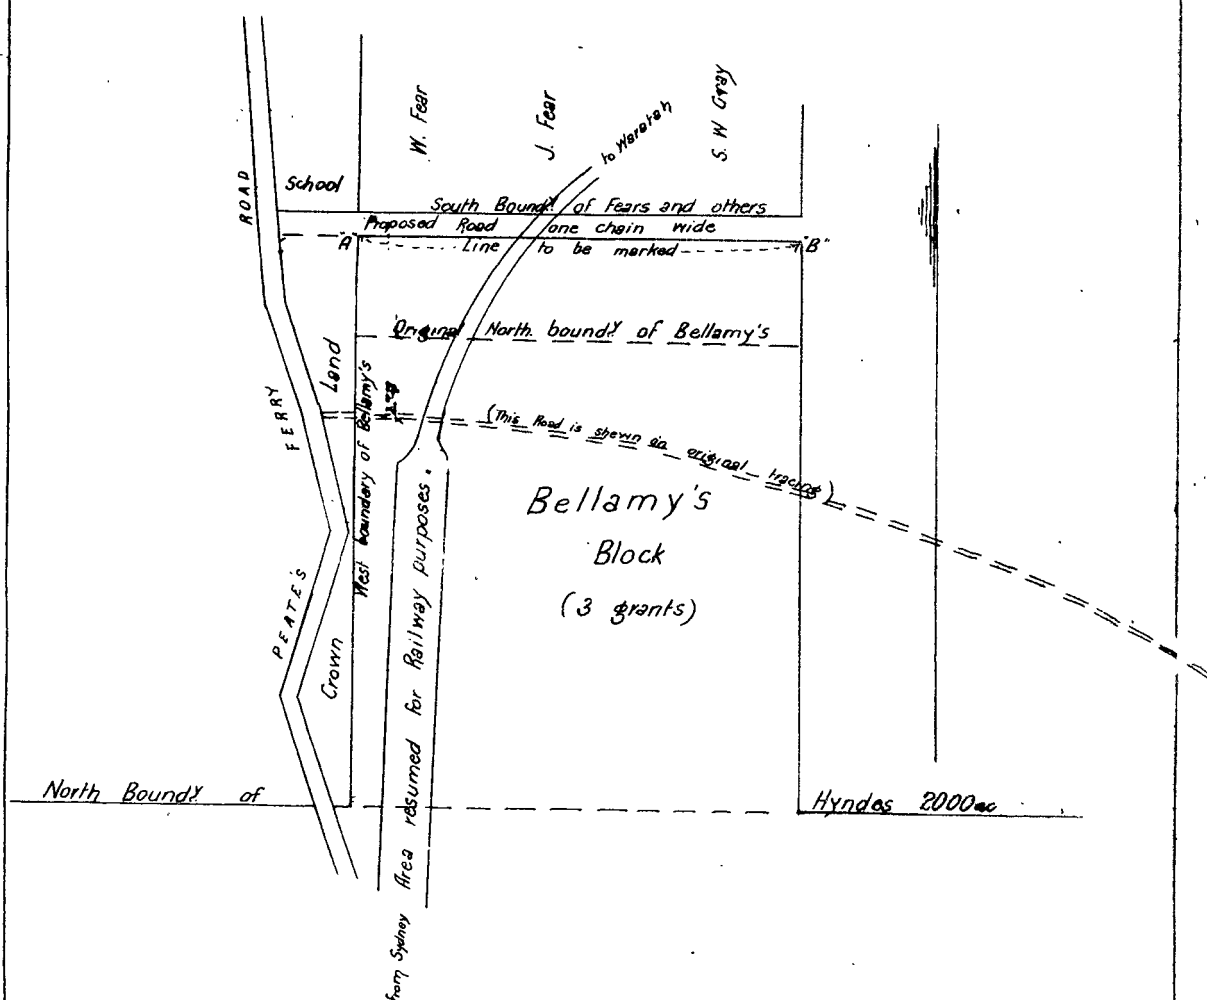

THE SCENE OF A BIG JOB.

This plan shows only the relative positions of the lands owned respectively by the Government, by the Burns Syndicate, by the Mutual Provident Land and Investment Association, and by the neighbouring owners. The property of the Burns Syndicate is in mistake marked 17,000 acres. The roads made at the public expense which give frontages to Mr. Burns' property are marked B. He gets two miles of frontage to Junction-street, gets a half-mile road running down at a right angle to it, and the short piece of Burns' road leading to the Government road, which opens a way to his property from the North Shore Railway and Lane Cove-road.

VOTES No. 11. THURSDAY, 15 NOVEMBER, 1888, A.M.

12. WORK OF UNEMPLOYED ON ROADS AT HORNSBY AND HOLT-SUTHERLAND ESTATE:—Mr. Walker moved, pursuant to Notice,—
- (1.) That a Select Committee be appointed, with power to send for persons and papers and to visit the ground, to inquire into and report upon the work of the unemployed in clearing, forming, and making roads through the property near Hornsby owned by Messrs. Burns, Withers, and R. B. Smith, and also those made through the Holt-Sutherland estate and other private properties, with power to sit during any adjournment.
- (2.) That such Committee consist of Mr. O'Sullivan, Mr. Copeland, Mr. Henry Clarke, Mr. McMillan, Mr. Melville, Mr. Street, Mr. Bruncker, Mr. Carruthers, and the Mover.
- Debate ensued.

And the House continuing to sit till after midnight,—

THURSDAY, 15 NOVEMBER, 1888, A.M.

Question put and passed.

VOTES No. 12. THURSDAY, 15 NOVEMBER, 1888.

4. WORK OF UNEMPLOYED ON ROADS AT HORNSBY AND HOLT-SUTHERLAND ESTATE:—Mr. Walker (*by consent*) moved, without Notice, That the Returns respecting "Roads at Hornsby," laid upon the Table and ordered to be printed on the 8th, 13th, and 14th November, 1888, respectively, be referred to the Select Committee on "Work of Unemployed on Roads at Hornsby and Holt-Sutherland Estate."
- Question put and passed.

VOTES No. 28. WEDNESDAY, 19 DECEMBER, 1888.

7. WORK OF UNEMPLOYED ON ROADS AT HORNSBY AND HOLT-SUTHERLAND ESTATE:—Mr. Walker (*by consent*) moved, without Notice, That the Return respecting roads through Holt-Sutherland Estate, laid upon the Table on the 13th December instant, be referred to the Select Committee now sitting on "Work of Unemployed on Roads at Hornsby and Holt-Sutherland Estate."
- Question put and passed.

VOTES No. 30. FRIDAY, 21 DECEMBER, 1888.

4. WORK OF UNEMPLOYED ON ROADS AT HORNSBY AND HOLT-SUTHERLAND ESTATE:—Mr. Walker, as Chairman, brought up a Progress Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee for whose consideration and Report this subject was referred on 15th November, 1888, a.m., together with Appendix.
- Mr. Walker then moved, "That" the documents be printed.
- Mr. McMillan moved, That the Question be amended, by the omission of all the words after the first word "That," with a view to the insertion in their place of the words, "the Report, with Evidence, be referred back to the Select Committee for further consideration."
- Question proposed,—That the words proposed to be omitted stand part of the Question.
- Debate ensued.
- Privilege*:—Sir Henry Parkes, as a matter of *Privilege*, moved, That William Fitzwilliam Terry, 78, King-street, Sydney, whose name appears on the imprint of the *Australian Star*, be summoned to the Bar of this House to account for his possession of the Report of the Select Committee on the "Work of the Unemployed on the Roads at Hornsby and Holt-Sutherland Estate," which appears in the issue of that paper of this day.
- Debate ensued.
- Motion, by leave, withdrawn.
- Original amendment, by leave, withdrawn.
- Original Question,—That the documents be printed,—put and passed.

WORK OF UNEMPLOYED ON ROADS AT HORNSBY AND HOLT-SUTHERLAND
ESTATE.

SECOND PROGRESS REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 15th November, 1888, A.M.,—“with power to send for persons and papers, and to visit the ground, to inquire into and report upon the work of the unemployed in clearing, forming, and making roads through the property near Hornsby owned by Messrs. Burns, Withers, and R. B. Smith, and also those made through the Holt-Sutherland Estate and other private properties, with power to sit during any adjournment,” and to whom was referred, on the 15th November, 1888, “the Returns respecting roads at Hornsby, laid upon the Table and ordered to be printed on the 8th, 13th, and 14th November, 1888, respectively,” on the 19th December, 1888, “The Return respecting roads through Holt-Sutherland Estate laid upon the Table on the 13th December,” and on the 8th January, 1889, “The Petition of the Honorable John Fitzgerald Burns,” and to whom was granted, on the 8th January, 1889, “leave to report its opinion or observations, accompanied with minutes of evidence, from time to time,”—have agreed to the following further Progress Report:—

Your Committee, having examined the witnesses named in the List,* have See List, page 7 to report that they have concluded the inquiry as to the work of the unemployed on the roads at Hornsby, and now beg to lay before your Honorable House the further evidence taken by them.

No. 3 Committee Room,
Sydney, 16 January, 1889.

THOMAS WALKER,
Chairman.

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 10 JANUARY, 1889.

MEMBERS PRESENT :—

Mr. Walker in the Chair.

| | |
|-----------------|-------------------|
| Mr. O'Sullivan, | Mr. Carruthers, |
| Mr. McMillan, | Mr. Henry Clarke, |

Mr. Brunker.

Clerk read entries from the Votes and Proceedings reporting presentation of Progress Report to the House, directing revival of the Committee, with leave to report from time to time; and referring the petition of the Hon. J. F. Burns

Copies of petition *referred* before the Committee.

Present :—The Hon. J. F. Burns, in person.

The Chairman read a letter from George Withers, stating his inability to attend as a witness that day, and requesting to be examined next week; also a letter from G. F. Want, requesting to be examined in respect to certain evidence given before the Committee by Mr. Murphy.

Ordered.—That the letters be received, and that Mr. Withers be requested to attend, and Mr. Want be summoned for Tuesday next.

Mr. Carruthers informed the Committee that a statement had been made to the effect that a road constructed by the unemployed at Arncliffe had benefited property of his there to the extent of £2,000, and as such statement might prejudice his sitting as a member of this Committee of Inquiry, he requested to be examined respecting same.

J. H. Carruthers, M.P. (*a member of the Committee*), sworn and examined in his place..

Mr. Carruthers withdrew.

Motion made (*Mr. O'Sullivan*), and Question,—“That Mr. Carruthers is a fit and proper person to sit on this Committee,”—put and passed.

Mr. Carruthers then resumed his place.

A. W. S. Gregg called in, sworn, and examined.

Witness withdrew.

Committee deliberated.

Ordered.—That C. B. Dawson be summoned to give evidence next meeting, and that W. G. Judd and Mr. Noonan be summoned for Tuesday next.

[Adjourned till To-morrow, at *half-past Ten* o'clock.]

FRIDAY, 11 JANUARY, 1889.

MEMBERS PRESENT :—

Mr. Walker in the Chair.

| | |
|-----------------|---------------|
| Mr. O'Sullivan, | Mr. McMillan. |
|-----------------|---------------|

Present :—The Hon. J. F. Burns, in person.

C. B. Dawson called in and further examined.

Mr. Burns objected to the course of examination of witness adopted by the Chairman.

Witness withdrew.

Committee deliberated.

Witness recalled and examination continued.

Witness withdrew.

Committee deliberated.

[Adjourned to Tuesday next, at *half-past Ten* o'clock.]

TUESDAY, 15 JANUARY, 1889.

MEMBERS PRESENT :—

Mr. Walker in the Chair.

Mr. Brunker.

Present :—The Hon. J. F. Burns, in person.

Critchett Walker (*Principal Under Secretary*), called in, sworn, and examined.

Witness withdrew.

George Withers, M.P., called in and further examined.

Witness withdrew.

Mr. Burns addressed the Committee.

Committee deliberated.

[Adjourned to a *quarter before Two* o'clock.]

Committee

[Committee resumed at a quarter before Two o'clock.]

MEMBERS PRESENT:—

Mr. Walker in the Chair.

| | | |
|-----------------|--|-------------------|
| Mr. O'Sullivan, | | Mr. Carruthers, |
| Mr. McMillan, | | Mr. Street, |
| Mr. Copeland, | | Mr. Brunker, |
| Mr. Melville, | | Mr. Henry Clarke. |

Committee deliberated.

[Adjourned to To-morrow, at half-past One o'clock.]

WEDNESDAY, 16 JANUARY, 1889.

MEMBERS PRESENT:—

Mr. Walker in the Chair.

| | | |
|-----------------|--------------|-------------------|
| Mr. O'Sullivan, | | Mr. McMillan, |
| Mr. Street, | | Mr. Henry Clarke, |
| Mr. Copeland, | | Mr. Carruthers, |
| | Mr. Brunker. | |

Committee deliberated.

On motion of Mr. Carruthers, the following further Progress Report was read and agreed to:—

The Select Committee of the Legislative Assembly, appointed on the 15th November, 1888, a.m.,—
“with power to send for persons and papers, and to visit the ground, to inquire into and report upon the work of the unemployed in clearing, forming, and making roads through the property near Hornsby owned by Messrs. Burns, Withers, and R. B. Smith, and also those made through the Holt-Sutherland Estate and other private properties, with power to sit during any adjournment,” and to whom was referred, on the 15th November, 1888, *“the Returns respecting roads at Hornsby, laid upon the Table and ordered to be printed on the 8th, 13th, and 14th November, 1888, respectively,”* on the 19th December, 1888, *“the Return respecting roads through Holt-Sutherland Estate, laid upon the Table on the 13th December,”*—and on the 8th January, 1889, *“the Petition from the Honorable John Fitzgerald Burns,”* and to whom was granted, on the 8th January, 1889, *“leave to report its opinion or observations, accompanied with minutes of evidence, from time to time,”*—have agreed to the following further Progress Report:—

Your Committee, having examined the witnesses named in the list, have to report that they have concluded the inquiry as to the work of the unemployed on the roads at Hornsby, and now beg to lay before your Honorable House the further evidence taken by them.

Chairman to report to the House.

[Adjourned.]

1888-9.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

WORK OF THE UNEMPLOYED.

THURSDAY, 10 JANUARY, 1889.

Present:—

| | |
|-----------------|-----------------|
| MR. WALKER, | MR. H. CLARKE, |
| MR. BRUNKER, | MR. McMILLAN, |
| MR. CARRUTHERS, | MR. O'SULLIVAN. |

T. WALKER, Esq., IN THE CHAIR.

The Honorable J. F. Burns, M.P., appeared in person.

Joseph Hector Carruthers, M.P., having been sworn, stated in his place:—

1. I am a Member for the Electoral District of Canterbury in the Legislative Assembly, and also a member of this Committee. In the Electoral District of Canterbury there is a municipality called Canterbury, within which there exists a road called Unwin's Road, which has a length of about 1 mile. It is the only road leading from the municipality to Tempe railway station, and is the only road leading to that station for an area of country which may be estimated at 6 square miles. It has been a main public road to my knowledge during the whole of my life and from tradition it has been a main public road of the Colony for something like seventy years. This road was the original main road from Sydney to Liverpool. It has been maintained by Government expenditure for all time past. During the past 15 years it was vested in three trustees—Mr. Campbell, of Wanstead, Cook's River, was one; Mr. Bradridge, the late city architect, was another. Trust votes were given to these gentlemen to be expended in the management and maintenance of the road. Mr. Campbell died, leaving Mr. Bradridge as the sole trustee. Mr. Bradridge fell into feeble health, and the management of the road remaining on his shoulders, seems to have been utterly neglected. The road in part runs through a steep cutting, and from neglect the water-tables at the side were choked up with *debris* of all descriptions, and heavy rains coming tore all the surface of the road away, leaving but the ballasting in a very rough shape. About five years ago the Government of the late Sir Alexander Stuart, at the request of the Members of the district for the time being, Mr. Stephen, Mr. Moses, Mr. Hammond, and Mr. Henson, agreed to place a sum of £3,000 on the Estimates to construct a bridge, called Unwin's Bridge, and thoroughly repair this road. From some cause or another, I think it was from the resignation of that Government, their estimates did not pass. A sum of money was afterwards offered by the succeeding Government to the Canterbury Council, to enable that council to repair the road. The Canterbury Council refused to take the money, inasmuch as the road was not a municipal road, being an old main road of the Colony, and a trust road exempted from their control by the Municipalities Act. On the 7th April, 1887, the then Mayor of Canterbury handed me a letter from the Department of Public Works, which I will read:

Sir,

Referring to your letter of the 8th ultimo, requesting that provision might be made on the Estimates for the repaid of Unwin's Bridge Road and construction of new bridge, I am directed to inform you that the sum of £2,000 has been suggested for the Draft Estimates for this work; but, in view of the present financial condition of the Colony it was decided that the work should stand over.

I have, &c.,
W. FORD.

J. H.
Carruthers,
M.P.
10 Jan., 1889.

J. H.
Carruthers.
M.P.
50 Jan., 1889.

That letter was brought to me, and the Mayor represented that there was great danger of serious accidents happening on the road and the bridge, as two or three carts had lately been capsized, loaded with wood, and the bridge was full of holes as large as this table. He did not use that illustration; but there were holes through which any horse and cart could fall; and he asked me to make representations to the Government on the subject. Shortly afterwards a petition was handed to me, signed by the Mayor and Aldermen of Canterbury, asking the Government to repair this road. I wrote in, on the strength of this representation, to the Government on the 3rd May, 1887, and I received a reply on the 19th May to this effect,—

Sir,

Referring to your letter of the 3rd instant respecting the state of the Unwin's Bridge and road, I am directed to inform you that provision for these works will be considered when the Estimates for next year are being prepared.

In the meantime the Secretary for Public Works has approved of £70 being handed over to the local Council for repair of the bridge and road on the distinct understanding that the Government are not to be held responsible for any accident which may occur.

I have, &c.,
JOHN RAE.

On receipt of this letter I forwarded a copy to the Canterbury Council. They refused to accept the money. They said they would have nothing to do with the road, as if they once touched it they would be responsible for any accidents that might occur on it, and it was a Government road. The maintenance of it had been for years past undertaken by the Government, and still remained an obligation on the Government. A conference was held between the St. Peter's and Canterbury Councils to consider the disgraceful state of the bridge, which ran between the two Municipalities, and also the road. It was decided to invite Mr. Carruthers, M.P., to impress upon the Government the necessity of erecting a new bridge as soon as possible, as the present one is in a fearfully dangerous state, and also to urge the Government, that as they had got a number of unemployed at work making road, to put some of these unemployed to work on the road." On the strength of this communication these resolutions and petitions, which were presented to me, I handed the petition in, so far as my recollection goes, without comment, or any letter from myself, to the Colonial Secretary's Office, and a little time afterwards a gang of men were put upon the road to effect the repairs. This cutting, which had been filled up and cut up by the rains, was renovated, and in course of renovation about 3 feet of stone was cut out, and was broken up into ballast and placed on the road at the foot of the cutting. The work that was done extended over a distance of, as far as my memory goes, about 300 yards. That was all the work done on the road. The road had already been ballasted, formed, and made years ago in every respect on all the other parts; but the making and formation in one part had been destroyed by the rains, and that was renovated. I own on that road a block of land having a frontage to the road of about 600 feet—nothing like 100 acres. My land fronting the road is, I should say, about 8 or 10 acres at the outside. I have some back lands which front Wollie Creek, and lands at Arncliffe, which I have underleased for ten years, to the extent of about 40 acres. These lands do not front the road, and have nothing to do with it. The remainder of the land is owned by a Mrs. Campbell, who owns about 250 acres; and a portion was owned by the City Permanent Building Society. The directors of that building society knew nothing whatever of the formation of this road, or of the work done upon it, so far as my knowledge goes. They never approached me as a Member in any way to get the road done. The first knowledge of them that I had in this matter was that an officer of the Government called upon me, and informed me that he wanted some gravel for the road, and that he had been told that there was some on my property—was I willing to give it to him? I said, "Yes; but I have very little property fronting the road. If there is any gravel there you are welcome to take it." A little while afterwards he came to me, and said that a man upon the ground had ordered him and his men off. I said I had no man there with authority to interfere with him or anybody in that respect. He asked me then if I would go out and see if he had made a mistake, and whether it was really my ground he was upon. I went out and saw that they had mistaken my ground. They thought I had more than I possessed, and were digging holes upon the neighbouring property of the building society. This building society refused to allow them to get any gravel. They did not know that the road was being made, and I think that the work was then stopped, so far as any further improvements were concerned. So far as I can judge, I am not a good judge of these things, I should say that the work done was under £200; it may have been under £100. There were about 300 yards touched, and since the work has been done there has been a very considerable traffic upon the road, which up to that time was absolutely impassable, owing to the condition of this one piece. The road itself would be one of the leading roads of the whole electorate, if it were not for the fact that at the present time there exists a bridge made at the gates of Tempe railway station, which has holes in it so large that a horse and any vehicle can pass through them. The bridge is in such a condition that no vehicle can possibly cross it. The consequence is, that traffic which would daily flow along that road in a very large stream is blocked by the existence of this bridge. Settlement is prevented in that neighbourhood to a similar extent, and that accounts for the fact that the road does not appear to be used by many, and that there does not appear to be much settlement along it. Behind that road there exist the suburbs of Kingsgrove, Moorfields, and part of Canterbury, and those people who use Tempe Railway Station leave their buggies across the bridge, and walk over on foot. Before the road was made they drove some 5 or 6 miles extra to get to Marrickville Station, a long round-about way. They travelled for less fare than

2. *Chairman.*] Is the road all through on private property? Private property fronts it like any other road, but it is a Government road.

3. *Mr. O'Sullivan.*] Is this road called Unwin's Bridge Road? Unwin's Road; then there is a bridge, Unwin's Bridge.

4. *Chairman.*] Is there another road called Unwin's Bridge Road? No.

5. The road is Unwin's Road, and you designate the bridge Unwin's Bridge? Exactly.

Alexander Walter Scott Gregg called in, sworn, and examined:—

A. W. S.
Gregg.

10 Jan., 1889.

6. *Mr. Burns.*] You are a member of the firm of Richardson & Wrench? I am.
7. I think you conducted for the Government a land sale at Hornsby? I did.
8. Did you on that occasion see much land other than that where the sale took place? Not specifically every part of the estate.
9. How did you proceed from the station to the land? Directly over a slip-rail that was taken down.
10. You went from the western to the eastern side through a slip-rail? I went from the western to the eastern, according to the compass.
11. How did you get to the Government land? By Boundary Road.
12. Was Boundary Road then extended up to the station? It was.
13. Was there an opening made? Yes; some rails were down, and the people got through or over the fence.
14. An opening was made through lands adjoining the station to connect with the Boundary Road? Quite so.
15. As the auctioneer, did you approve of that opening being made there? As a matter of opinion, I did. I had no choice in approving. I had to take it as I found it.
16. You saw what had been done by making an opening to the land for sale? I did.
17. Did people pass through that opening? They followed me. I was pretty well the leader, or thereabouts.
18. Have you been at Hornsby since the sale? I have.
19. Have you been over the Hornsby Estate? What estate is that?
20. The estate known as Burns Withers, and Smith's land? I have not been over it. I know of it, of course; not only recently, but for some time back.
21. Did you observe the roads made through that property? In part through it; not wholly, I think.
22. Were you along the principal roads? I was.
23. Junction Road? Yes.
24. Boundary Road, which is between the Government land and private land? I went along it to the end of subdivision offered for sale by the Government.
25. As far as you could? As far as I could comfortably.
26. Any other roads? Yes; and across the Boundary Road to Burns Road.
27. Were you along Burns Road? Yes; a little way; not the full length.
28. Did you go right through Burns Road, to what they call the Bobbing Rock Road? I do not know it by that name.
29. *Mr. McMillan.*] Did you go along the Vanceville Road? No; I did not.
30. *Mr. Burns.*] Did you pass along the Lane Cove Road? You mean the road out to Hornsby? No, I did not, because I know the road well. I saw the road that runs to meet it, by the hotel.
31. Did you observe the condition of the roads made there, the class of work done, and generally what had been done in the way of improvements recently in making roads? I did, as far as I traversed, which was most of the way.
32. Did you also make observations of the improvements upon Government lands? Yes.
33. Did you see any difference between the improvements on the Government land and the roads through the private lands? There was a difference. I think there was more stone thrown on the roads outside the Government land. It is not very well done, in my opinion.
34. You think the class of work done on the roads was not of a good character? Not as a quality of work.
35. But would that apply to one or both? Generally. The best road is one of these cross-roads. There are rough large stones; larger than the orthodox gauge, I should say.
36. *Mr. McMillan.*] What they call ballasting? On a large scale.
37. *Mr. Burns.*] Roughly ballasted? Very roughly.
38. I want to ask you this question. You have been over the property generally, and have seen the Government lands? Not the wide range of Government land—that dealt with by auction only.
39. Have you seen the Government lands where roads were made recently? Yes.
40. *Chairman.*] You are alluding now to the subdivision, to the part that was sold? Yes.
41. *Mr. Burns.*] Do you think that the roads made through the private lands have added any great increment to their value; if so, to what extent? Perhaps, to some extent, they may. I suppose all improvements of that kind and means of access would naturally give a better attraction.
42. First, with regard to the Crown lands;—have the Crown lands been improved by these roads? They were, at the time they were made, because there was no direct road. This Boundary Road was only opened a little before the auction.
44. Let us have a clear understanding. You desire to say that the Crown lands have been improved by these roads? I take it when it was projected to sell the Crown lands there was no direct road from the station, *via* Boundary Road, and this portion from the Government end to the station certainly improved the value of the Government land.
45. *Chairman.*] You are speaking now of the continuation of Boundary Road? Yes.
45. *Mr. Burns.*] Is it your opinion that the road over the bridge was an advantage to the Crown lands? It was, because it was one of two ways of entrance to the Crown lands.
46. Were you on the Lane Cove Road during your visit? No; I have traversed that road so often.
47. Did you ascertain whether there was a railway platform at a place called Dobson's? No; I did not.
48. With regard to the Vanceville Road—you were on that road? No; I was not.
49. You did not know anything about that road? I know the road where it comes in here. I was not on that road. I may say that when I went out on New Year's Day I was suffering from an accident to my knee, and found it a great difficulty to carry myself over the roads, otherwise I should have gone further.
50. If 29 acres have been taken from the owners of these private lands for roads, what do you suppose is the average value of land in that locality? I suppose private owners have different standards of asking. I suppose from £80 to £100 an acre might be looked upon as a general asking. Sometimes the question of severance comes in. If a road is taken in a certain direction it may hamper a man's intention with a block.
51. If you had that land for sale, would you subdivide the estate in the way the roads are laid out here? I think it looks a feasible mode of subdivision.

A. W. S.
Gregg.
10 Jan., 1889.

52. *Mr. Brunker.*] You do not mean to say that if that design was submitted to you by a principal you would accept it as the most profitable form of subdivision? I am not prepared to say, for I admitted at the beginning that I did not go over the whole of the land.
53. No. But looking over the plan, if that design were submitted to you by a principal would you accept it or suggest to him that it was the most profitable design of subdivision for his property. I suppose you have designs in that way? Yes; but I confess that I do not see anything objectionable in this.*
54. *Mr. Burns.*] The land that has been taken you average at from £80 to £100 an acre for your general land. What increment in value do you suppose will take effect from the expenditure on these roads in relation to these private estates? I do not think that it would be very marked. They were simply made a little before the time, some of them.
55. Do you think the land given will be worth the improvements? I do not know what the cost of the improvements is.
56. Supposing we assume that the improvements would not exceed £2,500. How many acres are concerned in the improvements? What is the holding?
57. Supposing we assume that the acreage is about 680? I daresay it would, although there is no great demand for present use for the land in that position. I do not know that speculators would give very much improved value, because the roads generally in this subdivision were made.
58. Then I gather from your evidence that you do not see that there is much advantage to this estate of 680 acres from the expenditure upon the land given without compensation? No; I think it would about equal it.
59. *Chairman.*] When you say that it would equal the amount of expenditure upon it, are you taking into consideration the fact that the unemployed work at a much lesser rate of wages than the ordinary road-makers? No; I am not supposed to know that; it did not enter into my calculations.
60. If £2,000 were spent on paying men at 3s. a day, would not that mean a greater amount of work than if £2,000 were spent at 8s. a day? But the cases might not be parallel.
61. But making allowances for the difference in the workmen? One working, and the other not supposed to be working?
62. No? I cannot presume to judge; my experience with labouring men has been so small.
63. Looking at the plan, you say you have seen the roads? I have in a large measure.
64. You have seen the roads on the Government subdivision? Yes.
65. Are any of the roads on the Government subdivision formed? One road is partly formed, and the rest are only cleared.
66. But on the private estates, did you find many roads formed? There are.
67. Did you find any ballasted? Yes, some.
68. Are the roads on the private lands superior to those on the Government subdivision? Well, there has been more labour expended.
69. The class of work is superior? There has been more labour. Whether that implied money, I would not like to say. The work is not well done, in my opinion. I do not think any gentleman would say that it was work that he could commend.
70. You say it is not well done on the Government subdivision? There has not been as much labour expended on one as on the other.
71. But to such a stage as the work has gone on the Government subdivision it is not well done? The roads are partly formed and cleared.
72. Are the roads on the private property better formed? I daresay they are, if you except that the metal is not put down as well as it ought to be.
73. There are some roads ballasted? I should not like to say that the formation is better than the other; but where the rough metal is put there is no doubt a visible amount of work that is not seen in the other case.
74. You say that you have not seen the character of the Crown lands with the exception of those you have mentioned? Not the land beyond the subdivision—not closely.
75. You can give no opinion as to the quality of the other? Well, their quality would not be good.
76. The remainder of the land is poor? Generally.
77. *Chairman.*] Do you say that all those roads that you see there are necessary as roads of access to the Crown lands? I would not like to say they were absolutely necessary. Of course, practically, my work for a long period tells me that the more means of access there are from one district to the other so much the better.
78. But is it not equally so much the better for the owners of the private estate? I suppose it would be.
79. Do you see that little part parallel with the railway station, between Junction-street and the A road. Are you aware that that was originally a subdivision of Burns, Withers, and Smith's property? I think, on going down that road, I saw some pegs put in.
80. Are the streets that you see there to your knowledge formed according to the plan of their original subdivision? I cannot speak of those interior ones. The road B is there, the extension of one of the boundaries of the Government land.
81. Can you see on the tracing before you any of the roads shown in the subdivision of the estate? Well, there is a junction street shown in the subdivision. I presume that is a continuation of Junction Road.
82. Is George street—the street parallel with the Great Northern Railway—shown upon the tracing? Yes.
83. Is Albert-street shown there? Yes, I should imagine so.
84. Is Burdett-street shown there? Yes, I suppose so. That would be the centre street.
85. Is a portion of Hunter-street shown there? Yes. Assuming that the roads are in the same position as on the plan.
86. Do you consider that all these roads are necessary as roads of access to the Crown land? I would not say that all of them were necessary.
87. *Mr. O'Sullivan.*] What was the date of your last visit to the estate? On New Year's Day—a few days ago.
88. Did you then walk over the roads? Yes—as far as the pain in my knee would permit. I know I walked a considerable distance; I suppose I must have travelled about 2 miles.

* NOTE (on revision) :—I certainly thought Mr. Brunker meant merely as to the direction of the road for any subdivision.

A. W. S.
Gregg.

10 Jan., 1889.

89. Are the roads in a state fit for the traffic of buggies and other vehicles? In dry weather the roads which are not ballasted would be a great deal more pleasant.
90. *Chairman.*] I understand that you have visited the estate since the sale. Did you find any new roads made on your second visit—that is roads which were not there when you were first on the land? I could not say. I had no means of comparing what was done on the occasion of my two visits.
91. *Mr. O'Sullivan.*] I understood you to say just now that there was nothing objectionable in the mode of design? Well, looking at this plan, I do not see any objection to the design. Whether the roads were made upon the owner's judgment or otherwise, I could not of course say.
92. But you think it would be a fair subdivision for selling purposes? I should apprehend so. I see no reason to say anything to the contrary. I thought of design as to roads.
93. Did you see any settlement there? There were no people in the immediate neighbourhood.
94. Did you notice any settlement around the place? Well there is a settlement on the Lane Cove Road, at Irishtown, and those places. There is also settlement on the other side of the railway where the town will form.
95. If you had owned this property and had desired to sell it to the best advantage would you not have followed out the usual practice of subdividing it and laying out roads? I think that would be the best way to make money out of it.
96. Is it the usual practice in estates of this kind to do that? Yes.
97. Then I suppose that if the proprietors of this estate desired to sell it to the best advantage they would follow out the usual practice of subdividing it and laying out roads? I think so unless they wanted to reserve it for a vast domain which might at some future time have a use. Any large area of land must necessarily have roads made through it.
98. *Mr. Carruthers.*] Is it not your experience as an auctioneer and land agent, that when persons desire to purchase a large block of land they prefer to have it free of subdivision? Yes; in certain cases. Of course it would be so in every case where they found their mode of treatment differing from that contemplated by the vendor.
99. As a rule persons prefer to purchase perfectly free of subdivision? Yes; in many cases.
100. We have had it stated in evidence that it has been the custom in this Colony for persons subdividing land to go to the expense of forming and making roads; is that your experience? I do not think it is the custom, accepting the word in its usual sense. There have been exceptional cases where treatment of that kind has been resorted to.
101. What is the rule? The custom is merely to cut a line for the pegs, in order that people may pass through the scrub. Sometimes all the scrub is taken away. It depends upon the cost of the work and inclination of the seller.
102. In case where the land to be subdivided is worth £100 an acre is it the custom of the proprietors to go to any great expense? No; not to any great expense.
103. What would be the rule in the case of the subdivision of land of the value I have named? It depends upon the cost. In some cases the work would not exceed £2 an acre, in other cases it would be more.
104. But at all events in the case of land of this value is it not the practice to go to the expense of forming the roads? Well, the practice is partly one way and partly another.
105. There is no rule? Well, no fixed rule, I think. It is simply a question of expenditure with each vendor or interest selling.
106. *Mr. McMillan.*] You say that you have been over the Government land? Yes.
107. Do you know the land right through? No; but I have taken the question to be referring to the subdivision.
108. You are aware that the land is naturally subdivided by gullies running north and south? Yes. There are some very deep gullies.
109. Are you aware that the Boundary Road is a very difficult road—that it is very precipitous? Yes; beyond a certain point.
110. Have you ever held land of your own? A few allotments.
111. Suppose that you had 680 acres situated as the land of Messrs. Burns, Withers, and Smith, is situated, and that the Government wished to gain access to their land through your property, would you feel inclined to give them the roads for nothing? I think he would be a very liberal man who would do so.
112. Suppose you said to the Government—I will give you these roads provided you put them into a little better condition than that in which roads are generally made upon subdivisions, would you consider that you were making a fair and liberal offer to the Government? You mean of course that the roads would serve an extent of territory beyond.
113. I am supposing that your land blocked the way to the Government land? Well, there can be no doubt that the opening of Boundary Road for instance, was a material aid to the Government in the sale of their land.
114. I am talking now of the roads that lead on to the Government land from Junction Road for instance? I think the offer you make would be a liberal one. I am assuming that the parties owning the land proposed to give the Government free use of, and control over the roads.
115. Not only that—but supposing they left the Government free to arrange the roads in order to suit the conditions of their own land—would you think that if you gave the land to the Government gratis under these circumstances, you would be making a fair and reasonable request if you asked them to make the roads a little superior to those ordinarily formed upon subdivisions? I think so, because there would be a consideration implied in the exchange. The interests of the Government being served, I think it would be right to ask them to give some reward—that is bearing in mind the great advantages they would derive. I may say that there is a lot of table-land on the Government land which as far as I can see cannot be served by the Boundary Road.
116. Junction Road, I take it, was made as a substitute for Boundary Road as a basis of connection? Yes, I believe so; but whether it was designed by the Government or not I do not know.
117. Do you not know as a matter of fact that when it was found that the Boundary Road would be so enormously expensive this other road, the Junction Road, was formed as a base for the cross road? I should imagine that the reason of his extension was to give access to the Crown lands. I presume that Junction Road was adopted as the more practicable road of the two.

A. W. S.
Gregg.
10 Jan., 1889.

118. Taking it for granted that it was a matter of good judgment to make the Junction Road as a basis of communication, do you see any roads there which are not absolutely necessary either to communicate with the main outlet at the Vanceville Road—the road leading to the new line—or with the Hornsby Junction;—what I want to get at is this, if the facts which I have put before you are correct, do you on that basis see any unnecessary roads—as a means of general communication with the Crown lands or as a means of communication elsewhere? As a general principle it is of course well to have various means of access. Having regard to the population, the Lane Cove road at Vanceville and at Hornsby Junction itself, I think that many of these roads are desirable. Hornsby will some day I presume be a junction of some importance, and I daresay that in time persons living at Vanceville and at Irishtown would prefer to go to Hornsby for the purpose of catching a train of an express character generally looked for at functions.

119. *Mr. Henry Clarke.*] I understood you to say that the Crown lands not included in the subdivision are not of a very valuable character? Yes; the unsold lot is not of so valuable a character as the sold land generally.

120. What do you think would be the value of that land? Well I have not been over the whole of it, and when you reach the table-land I do not know what you might find beyond. When I was there I really was not in a fit state, from my knee, to be going up and down the hills.

121. You say that this land is not as valuable as the land already sold? I should think not.

122. If the land is of so little value of what use was it to make roads through this private property to give access to it? It is probable that at the time the Junction Road was formed it was deemed wise to carry it to the full extent to which it has gone, for the purpose of reaching the lands at the back. Then I suppose there was the general principle that the district hereabout would open out on to a railway station or stations.

123. Have you been along the Boundary Road? I have been from the station down to the creek.

124. Do you think it possible at a reasonable expense to make Boundary Road passable? You would require an engineering feat something like that at the Zig-zag. Looking up from the hollow it would seem to require a series of slopes. Even then I do not think I should like to drive down. It would be like the Bulli Pass in some places.

125. *Mr. Bruncker.*] Are you aware that Messrs. Richardson and Wrench were asked to report upon the value of these Crown lands? Yes.

126. Do you know by whom the report was made? By Mr. Wrench.

127. Did he inspect the land? No, I think not.

128. Did you? No; but a good man—a thoroughly practical man—was sent.

129. The report was a reliable one? Yes; of course.

130. I believe you sold the land for Messrs. Richardson & Wrench? Yes.

131. Do you know whether the land was sold at the upset price? At more.

132. How much more? A good deal more in some cases.

133. It sold at 50 per cent. more? I will give you some of the prices:—Thirty-pound reserves brought £33; thirty brought £41; thirty brought par; some brought £61, and one lot as much as £77 per acre.

134. What was the upset price of the block which sold at £77? Twenty-five pounds per acre.

135. Then it fetched 300 per cent. above the upset price? Over 200 per cent.—that is, that lot. As I have already said the opening of the Boundary Road direct to the station gave to the Government a considerable advantage in the sale.

136. You think that the land obtained its increased value from the fact of the Boundary Road having been made? Not wholly; but the road undoubtedly assisted.

137. Before selling the Crown lands I suppose you traversed some portions of them? Yes.

138. Is the plan in the appendix No. 8 an accurate plan of the Crown lands? Do you mean of the whole of the Crown lands?

139. Does it show them in the state in which they were when you offered them for sale? Well, it shows no features whatever, with the exception of the gullies.

140. Then it is not a fair plan of the land as it was at the time you sold it? No; I could not say that it is. It is a mere skeleton boundary—if it be true—of the holding of the Crown.

141. It does not show the full area in accordance with the scale? What is the area of the Crown lands?

142. Say 4,000 acres? Taking the area shown to belong to Burns, Withers and Smith to 685 acres, the portion marked blue, if it is intended to show that area of Crown lands, should be six times the size of the other land according to scale.

143. The subdivision of the Crown land is not shown upon this plan in the appendix? No.

144. The plan does not show the land in the form in which it was when you offered it for sale? No.

145. Is the plan signed by Mr. Deering? It is represented to have been.

146. Are you aware that there is a large area of Crown lands to the eastward of the Vanceville Road? I am not aware of that.

147. In submitting land of this character in a similar position, what would be the usual area embodied in the lots? It would depend upon the use to which the land might be applied, I think that in this case the land near the railway station is likely to be thickly populated. Railway communication will make it a very attractive place. I presume that the railway will be taken down to the water at the North Shore and you will then be able to reach a considerable altitude above the sea within a comparatively short space of time.

148. Do you think that the construction of the line from the North Shore to Hornsby will increase the value of this land? I dare say it will.

149. The population is likely to be much more thick than it would be without the railway? I think so.

150. Would you consider the subdivision of this valuable block of land near the railway station a desirable form of subdivision—I refer to the piece of land between the Boundary Road and the continuation road over the bridge? No; I do not.

151. Take the subdivision of the block between road H and the continuation of road E;—do you consider that a desirable form of subdivision? No.

152. You have traversed the best portion of the Crown lands and the best portion of the land of Messrs. Burns, Withers, and Smith;—which do you consider the more valuable of the two? The land of Messrs. Burns, Withers, and Smith.

153. Dealing with the whole of the Crown lands offered in one block, what should you say would be the difference in the value between the two? I should think the private land would be fully double the value of the other.

154. *Chairman.*] Speaking of these subdivisions, you have been asked whether they are in a desirable form? I do not apprehend that that portion shown upon the plan near the railway station would be called a subdivision.

155. Are not some of the roads between Junction Road and road A shown upon the private subdivision? Yes.

156. Then they absolutely formed part of the subdivision? Apparently.

157. Then what you meant when you said just now that the form of subdivision was not desirable was that still further subdivision was required—that is all? Yes.

158. On the assumption that you owned a piece of property, if you could get roads made on it at somebody else's expense, of a better character than are usually made for subdivision purposes, would you get them made for you? I might or might not. There might be a question as to whether I should get them made or not.

159. But providing the roads were in a direction and position of which you approved? It would depend. It is a peculiar question.

160. Supposing it were your own case, and you could get a superior road in place of an inferior road, would you take it? If I were justified in having it done, I do not see why I should refuse. I think justification has been shown in this case.

161. Mr. Brunker has asked you if the map he showed you shows the Government subdivision? Yes; that does not show it in this form. That is clearly self-evident.

162. Do you wish us to understand that that map is incorrect, inasmuch as it does not show the subdivisions? Yes.

163. Do you see that this map purports to be a tracing forwarded to the Hon. John Davies, C.M.G., M.L.C., Chairman of the Casual Labour Board, to accompany my report of 28th January. That is a report showing the roads made by the unemployed in this neighbourhood through private lands. This is signed by Mr. Gordon, the surveyor. Mr. Deering only shows on this tracing additional roads, which were not shown by Mr. Gordon, and it does not profess to have anything to do with showing the Crown lands subdivision? Yes.

164. *Mr. O'Sullivan.*] When you sold this land were the roads on the private estate of Burns, Withers, and Smith made? I believe they were. I did not go over them then. As I have said, my first visit to them was on New Year's Day.

165. You say that there was no access at that time? No access direct from the station to the Government ground, *via* Boundary Road.

166. That only referred to one road? Yes.

167. Referring to subdivision plan 8, does that show the whole county of Cumberland? It does not.

168. Is it only intended to show the private estate of Burns, Withers, and Smith? I apprehend it chiefly show that.

169. *Mr. Burns.*] Is it the case that many landed proprietors decline to allow roads to be made through their land to give access to Government lands, when they propose to sell their land in block? Yes, I suppose they expect the same reward from the Government as they would get from private people. I do not suppose the Government have the power to take any person's land without compensation.

170. *Mr. Brunker.*] As to the assumption of your having roads of a better character made at somebody else's expense through your land, if the Government or somebody else wanted to make a macadamized road through your property, which you did not choose to subdivide, and which you could realize on better in one block, would you permit that road to be made without compensation? No; because the question implies that there would be a loss if I allowed the best road to be made.

Wm. Christopher Bennett called in, sworn, and examined:—

171. *Mr. Burns.*] Do you hold the office of Commissioner and Engineer for Roads? Yes.

172. Have you recently visited the Hornsby district? Yes; I went there at the request of the Committee last New Year's day.

173. Did you go over the roads made there by the unemployed? Yes.

174. Had you paid a previous visit to that district on the same business? Yes.

175. Do you recollect that early last year, 1888, the Government asked you to make an inspection of the proposed roads through private lands to the Crown lands in that district? Yes. It was in connection with that that I had made a previous visit.

176. Did you furnish the Government with a report on those roads, dated 8th February, 1888? Yes.

177. Did you report to the Government that, in your opinion, Boundary Road was not practicable? Not economically practicable.

178. Unless at a large outlay? Yes.

179. Did you also state that you thought that Junction Road was a proper road to make? Yes. I thought it was a better road than Boundary Road, and more suitable for ultimate requirements.

180. Did you also report that you thought there ought to be five roads of access made? I did not mention five roads, but I said I thought the roads then cleared were all necessary, and there were five.

181. Does the last part of your report point out that if this land was reserved Crown land not to be sold all the roads would have been desirable in the interests of the Crown lands beyond them? Yes, all the roads then made and shown in the sketch attached to the report.

182. Had you a plan with you when you visited the property recently? Yes.

183. Did you go over the principal roads? I think I went over nearly all of them.

184. Did you observe the work done by the unemployed, both on Crown lands and private lands? I did not observe much of the Crown lands. I chiefly went over the roads that were made for access to the Crown lands.

185. What was the character of the work done by the unemployed on those roads? When I first visited the land the character of the work done was reasonably good and necessary. On my second visit I formed the opinion that the work done which is called ballasting simply spoils the roads that were made before.

186. Then you think the roads are of an inferior kind? Yes; you cannot drive on them. 187.

A. W. S.
Gregg.
10 Jan., 1889.

W.C. Bennett.
10 Jan., 1889.

- W.C. Bennett. 187. Are you of opinion that the roads of access leading to the Crown lands are required in the public interests? All the main roads are.
- 10 Jan., 1889. 188. Have you a plan before you attached to the report? The plan which I have was attached to my first report, in which I stated that all the roads tinted red were necessary.
189. Has the Vanceville Road, which is marked on the plan as a new road, been open and maintained by the Works Department up to a certain point for years past? Yes.
190. Then the extension where they had to open the road to the Crown lands was only for a short distance? About three-quarters of a mile.
191. Taking Burns' Road,—does the plan show the extension through to Bobbing Road? This plan does not show it; but I know it exists, and it was made to connect with Bobbing Road.
192. Are you aware that there are two railway stations to be served on the North Shore Railway? I think there are two railway stations and a platform.
193. Do you see a small road marked as ballasted and formed on the plan? I do not think it is ballasted and formed.
194. Do you think that the road shown on the plan exists? Yes; it is cleared.
195. It is what is called Mistake Road? I do not know.
196. Have you seen the report of Colonel Wells as to the costs of making these roads? Yes.
197. You see that his estimate of the total amount expended on these roads to Crown lands is £2,309. From what you have seen, do you think that is a fair estimate of the expenditure? I do not know what was expended, but I know that I would not value the ballasting at the high price he has placed upon it. That ballasting is simply an obstruction. Anyone driving on the roads is obliged to drive on the old cleared margin at considerable inconvenience, and I regard the ballasting as of value to the road only as raw material to make the road.
198. Is it your opinion that £2,309 is in excess of the value of the work done? I think Colonel Wells's estimate is rather high.
199. Then when you see the statement that the cost of these roads through private lands, owned by various owners besides Burns, Withers, and Smith, is said to be £2,309, you do not think the estimate can be excessive? Certainly not.*
200. Do you think it is too much? I do not think the estimate is a correct one. I think he has over-estimated the ballasting from 12s. to 15s. a chain.
201. What reduction would you make upon that estimate of £2,309? I would take off about £280 for the ballasting.
202. Then in your judgment about £2,000 would represent the whole expenditure on roads through this land, having regard to Colonel Wells's estimate? Yes, in round numbers.
203. Colonel Wells also states that Junction Road and Vanceville Road would most probably have been made by the Roads Department at an estimated cost of over £800. Do you agree with that opinion? I do not think they could have been made for that amount. They both lead to railway stations from the Government lands, and as approaches to the railway stations they would have to be properly metalled ultimately, and that at the lowest would cost £1,000 a mile. There appears to be a least $2\frac{1}{2}$ miles of them, so that about £2,500 would have been the cost of those roads properly made.
204. Would your Department have felt called upon in the public interest to make Junction and Vanceville Roads to give access to the various railway stations if the unemployed had not done the work? Not immediately; but ultimately they would have to be made.
205. Have you formed any opinion as to any advantage that has accrued to Burns, Withers, and Smith, and other proprietors of land there, from the making of these roads? I do not think they have derived any other advantage than the exceptional position of the land absolutely rendered necessary to be conferred upon them, because you must give access to the Crown lands, no matter who owns the intervening land.
206. Have you had any difficulty in getting private proprietors to give you land for roads? I have had very great difficulty in carrying out works. Private proprietors are most grasping, and it is far more difficult to get possession of a bit of land here than it is in Ireland.
207. Is it your experience that private proprietors will not give land without a consideration? Yes; and they demand a consideration about ten times the real value of the land. The demands sometimes made upon the Government are disgraceful.
208. You do not think private proprietors of land are at all liberal to the Government? Quite the contrary.
209. Do they get all they possibly can? Yes.
210. From your experience do you think there is anything unreasonable in the request made by the owners of these private lands that if they gave the right to make roads through the land the Government should have the roads properly formed? No; I do not.
211. Do you think it is a fair thing? It is quite a fair equivalent.
212. Colonel Wells states here that if some of these roads had not been given, the Government would have been compelled to purchase land to make roads. Do you think that you would have had to do that? Not in the case of all the roads, but we would have had to do so in the case of the leading roads.
213. In the case of Junction and Vanceville Road? Yes.
214. Also the road to Dobson's platform? Yes; that would have to be given.
215. Do you get a vote every year for making approaches to railway stations? We used to; but it is now merged in the general vote for unclassified roads.
216. Do you get that money to make approaches to railway stations and platforms? Yes.
217. Out of that vote would you have given access to these railway stations? Yes; I would have recommended it.
218. In addition to which you would have had to obtain access through private lands to enable the public to get to the railway stations? Yes; otherwise it would have been no use of to make the railway.
219. *Chairman.*] Looking at the subdivision furnished by Mr. Deering, do you consider that all the roads shown there are roads of access? No; some of them might have been dispensed with. I think the small subdivision roads were not necessary.

220.

* NOTE (on revision) :—This answer, which is correctly reported, was given under a misapprehension, as the replies to the preceding and following questions will show. I understood the latter part of question to be: "You think the estimate correct."

220. Are the roads between Junction Road and A road bordering the station necessary? I think it has been usual to call those roads the T roads. I do not think they are necessary. W.C. Bennett.
221. Do you think that all those roads from Junction Road into the old Boundary Road are necessary? Yes; the peculiar nature of the country rendered them necessary. 10 Jan., 1889.
222. Was it necessary to bring them all south of Junction Road? No; I do not think that was necessary. The I road might be necessary to give access to the station. The continuation of E road to the south of Junction Road on plan 8 is not necessary.
223. Have you seen the roads on the Crown lands at all? Only just from the extremities of the other roads. I did not know that the Committee required any information from me about them.
224. Were you able to see whether the class of work on the Crown lands was inferior or superior to the work done on the roads you have been just enumerating? Taking it from my point of view the work was superior, because the roads on the Crown lands were not ballasted.
225. That is to say, there was not so much done on them? Yes.
226. You consider that Boundary Road is absolutely impracticable without an enormous expenditure of money? Yes, and even with a large expenditure the grades would not be so good as on Junction Road.
227. Are you aware of the character of the land through which these gullies run? Yes. It is pretty fair land on the ridges, and I have no doubt it is good land on the flat; but on the steep slopes the land is not of much value.
228. *Mr. O'Sullivan.*] You have said that Boundary Road could not be economically made? Yes.
229. Are you aware that, on the Holt-Sutherland Estate, on the Woniara Road they are cutting down a hill and making a road almost if not quite as difficult as Boundary Road? I do not know that country at all.
230. You are not aware that the unemployed are cutting down a hill with the intention of building a bridge on this road, by order of the Casual Labour Board. No.
231. You have also stated that you could not drive on those roads on the Hornsby Estate? You cannot drive on the ballast; you are obliged to drive on the margin of cleared road.
232. Is not that the case with all roads newly ballasted, and does not everyone try to shirk the ballast? Not to such an extent as in this case.
233. As a matter of fact, have not vehicles passed over these roads? Very few. At one place where there is a quarry the vehicles have carted stone over the road; but that is the only bit of consolidated road.
234. Are you aware that Colonel Wells has left out of his estimate the cost of all bridges and culverts? I see that they are not included, but they are very small. I happen to know that the outside estimate for the bridges would be about £450.
235. Is your estimate and Colonel Wells'—estimate theoretical—that is to say, do they show what the cost would have been if the work were properly done? I do not know what his estimate is, but the estimate I give you reduces his estimate to what the value of the material on the road is approximately.
236. What I want to know is whether your estimate is merely a theoretical estimate according to the scale upon which you generally get your work done? Yes.
237. *Chairman.*] Is yours an estimate of the value of the work after it has been done? Yes; I have no knowledge of the actual cost.
238. *Mr. O'Sullivan.*] With regard to the actual cost, Mr. O'Donnell and Mr. Little, the surveyors, ought to be better judges than you or Colonel Wells? Yes; because they know what the work cost.
239. *Mr. Carruthers.*] You have heard Mr. O'Sullivan speak of a cutting on the Holt-Sutherland Estate. I want to read to you, just for your opinion, a report from the superintendent of the Holt-Sutherland Estate on this Boundary Road, which is as follows:—

Sir,

Hurstville, 13 December, 1888.

In reply to yours of yesterday's date, requesting me to proceed to Hornsby, to report upon a portion of Boundary Road, I have the honor to state that I made a minute inspection of the road in question, and am of the opinion that it could not be made a traffic road without an enormous amount of money was expended thereon, the grade being exceedingly steep, about 1 in 6.

As regards the probable cost for the first 15 chains beyond the gully, I estimate that it would cost not less than £200 per chain; to give it a grade of 1 in 10 it would have to be a block cutting, and a high-level bridge across the gully.

I have, &c.,

E. M. BURROWES,

Superintendent, Southern District.

Thomas Walker, Esq., M.P.,
Chairman, &c., Select Committees, Legislative Assembly.

240. Do you coincide with the opinion expressed in that letter? Yes, generally. It would probably cost that amount.
241. Do you think that letter is fair? Yes.
242. You have read the schedule of roads and the statements made by Colonel Wells, and you observe a certificate under that by F. O'Donnell. Do you know this person O'Donnell? Yes; he was in a subordinate position in our own Department. I saw him over there.
243. Do you think that this certificate means to lead the Committee to believe that there is merely a theoretical estimate of the cost, seeing that it is made by the person who actually expended the money? I think Mr. O'Donnell will be better able to speak on that point than I am.
244. *Mr. McMillan.*] You stated to the Chairman that you thought some of the roads made on these private lands were unnecessary. Would it be safe to say that nine-tenths of the roads are absolutely necessary? I would say that a larger proportion are necessary. To give an exact answer I would require time to make a calculation; but I think that the roads that are unnecessary would hardly amount to one-tenth of the whole.
245. *Mr. Brunker.*] Have you had a great deal of experience in making roads and the cost of their construction? Yes; thirty-two years in this Colony.
246. What amount is placed at your disposal annually by the Government for expenditure on the roads of the Colony? Between loans and ordinary votes it amounts to something between three-quarters of a million and one million.
247. Have the estimates for the construction of roads and bridges to be approved by you before the money is expended? Yes.

248.

- W.C.Bennett. 248. Do you state that in your opinion the estimate of the cost of the roads on the estate of Burns, Withers and Smith, made by Colonel Wells, is excessive? Yes; we differ in the value of the so-called ballasting. I would not dignify it with the name of ballasting.
- 10 Jan., 1889. 249. Is the formation of the country such as to render it necessary to procure roads to give access to the Crown lands? Yes; and from Crown lands to the railway station. The railway stations are the great feature in the thing.
250. You think those roads were necessary? Yes; except the few short ones to which I have taken exception.
251. Are they necessary to give access to the railway stations from Crown lands? Yes.

FRIDAY, 11 JANUARY, 1889.

Present:—

MR. WALKER, | MR. O'SULLIVAN,
MR. M'MILLAN.

T. WALKER, Esq., IN THE CHAIR.

The Hon. F. J. Burns appeared in person.

Charles Burford Dawson called in and further examined:—

- C.B.Dawson. 252. *Mr. Burns.*] You are surveyor to the estate of Messrs. Burns, Withers, and Smith, in the Lane Cove District? I am.
- 11 Jan., 1889. 253. You have held that position I believe from the time of the estate being first purchased by them? I think so.
254. And any subdivisions which they may have made have been carried out by you? Yes.
255. You recollect my writing to you, I think in the early part of 1888, about an application from the Casual Labour Board, for permission to extend Junction Road, from near the station, through our land to the Vanceville Road? About twelve months ago I think—at the beginning of last year.
256. Did you in consequence of what I wrote to you proceed to Hornsby to survey the Junction Road and the cross roads leading into that road? I did.
257. Were you also acting for Mrs. Edwards, whose representative was in the Colony, she being at the time in England? I was.
258. Did I instruct you to survey this road at right angles as near as possible? Yes.
259. And also to survey what is known as the road leading down to Noonan's? Yes; along the boundary of Messrs. Burns, Withers, and Smith's land, and the land of Mrs. Edwards.
260. Did I make it a condition that the representative of Mrs. Edwards should give one half of the land for that road? Yes.
261. And you surveyed that cross road, taking half of the land from Mrs. Edwards and the other half from our property? Yes.
262. Had you any instructions to do any more than survey these roads for the unemployed? Nothing more.
263. Had you instructions at any time to make the subdivision of the area through which these roads are made? None at all.
264. Is there any subdivision on the eastern side of the railway except that adjoining the railway station? Not that I know of.
265. Of what does that subdivision consist? About 52 acres.
266. Have you at any time received instructions to make a subdivision of the land through which these roads have been made? Never.
267. Then if a statement has been made that these lands to the south of the Crown lands have been marked off by you in subdivision for Messrs. Burns, Withers, and Smith, that statement cannot be correct? It is incorrect.
268. Have I mentioned anything to you about our desire to sell this land in a block? You said something about selling the whole of the land in one block to a syndicate some time ago.
269. Without any thought of subdivision? Yes.
270. In your previous examination you made some statement about orchard blocks being made fitting in with the Junction Road? I think I was asked how I would subdivide the land, and that I said I would subdivide into 10-acre orchard blocks.
271. But you never received instructions to make such a subdivision? No, I was asked by a member of the Committee how I would subdivide the land. I think that was how the matter arose.
272. It was a mere speculation of your own? Yes. I gave my opinion as to the way in which I would cut up the land.
273. If it had been your own property? Yes.
274. Do you know how much land was given to the Government for roads by Messrs. Burns, Withers, and Smith? Judging from the plan, I should say from 29 to 30 acres.
275. Are you aware that Messrs. Burns, Withers, and Smith sold some land to Mr. Suliman, the architect, on the eastern side of the railway? Yes; there was a 4-acre block marked out there.
276. Do you recollect the price per acre paid? I think it was £100.
277. Did you not hear it was £125? I never heard that price mentioned. I understood that the price was £100.
278. Has there been any sale of land close to Noonan's lately? Not that I know of.
279. Have you heard of any land being sold in that district for less than £100 an acre within the last twelve months? No. I believe a piece of land was put under offer at Noonan's a short time ago at £200 an acre.
280. Not far from the platform, I presume? No. I think there was from 36 to 40 acres offered to a Company at £200 an acre I believe.

281. You have not heard of lands being sold in that district lately for less than £100 per acre? No.
282. What do you estimate to be the value of the lands which the Government have taken for these roads? I should think it would be at least £100 per acre.
283. Then there would be close upon £3,000 worth? Yes.
284. Have you been to Hornsby lately? Not lately; not since I laid out the roads.
285. Look at this statement of expenditure furnished by Colonel Wells, and countersigned by Mr. O'Donnell, the road overseer, purporting to give the expenditure upon the roads in the Hornsby district, upon the property of Burns, Withers, and Smith. I want first to call your attention to the road leading from Junction Road to Pearson's corner;—you know that road? Yes.
286. Have Messrs. Burns, Withers, and Smith any land along that road? Your land is on the north of it.
287. But have we any land adjacent to the road? No.
288. Then any expenditure upon that road would not come within the category of the expenditure in which we are concerned? No.
289. Do you know the road leading from the Junction Road over the railway crossing to the hotel? Yes.
290. Have Messrs. Burns, Withers, and Smith any land adjacent to that road? None.
291. In any estimate of expenditure upon the roads in which we are concerned the expenditure upon these roads would have to be omitted? Yes.
292. Are you aware that the boundary road has been extended through the subdivision at the station to the railway line? I have not seen it.
293. You will see in the list before you the continuation of Boundary Road to Burdett-street;—do you observe the charge for the continuation of that road? Yes, £27.
294. Then as to the road adjoining the railway station in the plan of the estate George-street, what is the expenditure there? £67 10s.
295. The land adjoining the railway line is the property of Messrs. Burns, Withers, and Smith? Yes.
296. And the extension of the Boundary Road to Burdett-street? That is on your land.
297. Messrs. Burns, Withers, and Smith had made a rough opening prior to the Government commencing to give work to the unemployed in that district;—this opening had been made through one or two streets in the subdivision? I think so, but I did not see them.
298. There had not been much expenditure there? There was an old man working there, but I do not know what he did there—very little, I should think.
299. If you look at the total of the expenditure shown in this list you will see that it is £2,309? To that there must be added something for culverts and some small bridges.
300. What proportion of the amount do you suppose would be chargeable to roads through the land of Messrs. Burns, Withers, and Smith, taking into consideration the fact that some portion of the expenditure is upon the old Vanceville Road? How much is expended upon the Vanceville Road?
301. Say about £262 10s.; that is partly for the opening of the new road to the back, and partly upon the old road. Both roads have been improved by this expenditure. Making the necessary exceptions what should you think would be the proportion of expenditure upon roads passing through our land? I should also have to deduct the expenditure upon Burns Road—that I think is outside of your land. That road was left a long time before you purchased the land. It was left in the Big Island Estate, about forty or fifty years ago.
302. I understand that Burns Road was laid out in the original sale of the property when it belonged to Mr. John Terry Hughes? Yes; it is just as old a road as the Vanceville Road.
303. I want you nevertheless to include that road in your estimate, because it has a frontage to our northern property. Including that what would be the proportion of expenditure in which we are concerned? About three-quarters of the expenditure, I should think.
304. That would be less than £2,000? It would be about £1,700, I suppose.
305. You have had large experience both as a surveyor and as a party concerned in properties;—do you think that Messrs. Burns, Withers, and Smith derive much benefit from the making of these roads through their property? I should say that the only benefit they would derive would consist of the amount expended in making the roads—that is, the amount actually spent. It must be borne in mind that they had given the land themselves. The expenditure upon the roads would be the actual value added to the estate.
306. Do you estimate that the lands given to these roads is worth more than the expenditure? Considerably more.
307. If it be a matter between the Government and Messrs. Burns, Withers, and Smith, do you estimate that Messrs. Burns, Withers, and Smith would gain any advantage as against the Government from this expenditure? I do not think so.
308. No advantage? No.
309. Do you think that the plan before you, No. 8 in the Appendix, signed by Mr. Deering, gives a fair conception of the proportion of Crown lands to private lands? Decidedly not.
310. Have you any idea of the area of Crown lands at the back of these private lands? Between 3 and 4,000 acres.
311. Yet by this plan the private lands are made to assume a proportion about as large as that of the Government lands? Yes; and there is another thing, the roads through the Crown lands are not shown. There are roads between the gullies continuations of the cross roads leading up from Junction Road.
312. Do you know anything about the Mistake Road? Yes, it was made in mistake for the Burns Road.
313. Do you know anything of the continuation of the Burns Road towards the Bobbing Rock Road? No.
315. You have not been there? No.
316. *Chairman.*] You wrote a letter, I think, a short time ago to the *Herald*, in which you stated that there was no subdivision of the Burns, Withers, and Smith estate to the eastward of the station? Other than that which I had already subdivided. I do not think I said that there was no subdivision to the eastward of the station.
317. Has not the subdivision left by you roads in it which have been made by the unemployed? Not that I am aware of.
318. You made the subdivision for Messrs. Burns, Withers, and Smith? Yes.
319. Look at the plan in front of you. You see that George-street runs parallel with the railway line;—is not that shown on your subdivision? Yes, George-street is shown.

C. B. Dawson,
11 Jan., 1889.

- C. B. Dawson. 320. You see from the plan that it is one of the roads which had been made by the unemployed? Yes.
- 11 Jan., 1889. 321. Is not Burdett-street also shown in your subdivision? Yes.
322. And Junction-street? Yes.
323. Is not a portion of Hunter-street also shown? Yes.
324. The whole of these streets which I have named which have been made by the unemployed are shown upon the subdivision which you made? Parts of them. Burdett-street I take it as a continuation of Boundary Road.
325. But it is shown in the subdivision which you made? Yes.
326. You say that Mr. Burns wrote to you some time ago instructing you to go up to the estate and to lay out some roads? Yes.
327. So that you had the direction which the road should take in your own hands? Mr. Burns told me to leave the roads in the best possible places.
328. And you obeyed that instruction in consideration of the interests of Messrs. Burns, Withers, and Smith? Yes.
329. I suppose that, having regard to those interests, you left the Junction Road where it is, and also road E? I did not lay out road E.
330. You say that there was a mistake in connection with the Estate Road? It is not what I surveyed. They cleared Mistake Road, thinking it was Burns Road.
331. Then evidently that portion Burns Road was not cleared at that time? Burns Road was not cleared at that end.
332. You have spoken upon the expenditure upon these roads; as a matter of fact do you know anything absolutely as to the expenditure which has taken place? Only from the Schedule which I see before me.
333. You know nothing as to the expenditure beyond that? Nothing at all. I have not seen the roads since they were cleared and made.
334. You are unable to form any actual conclusion? I am.
335. You said just now that it would be a loss for Messrs. Burns, Withers, and Smith to have made these roads themselves? I do not think I said that. At the same time I do not think that there would be any advantage to them in having the streets made like this if they were not going to sell in subdivisions.
336. But suppose they were going to sell would they be of any advantage? If they could make use of them in that position they would certainly be of advantage.
337. Have you not placed the roads in a good position for subdivisional purposes? Junction Road is the only one we could make use of.
338. If you were going to subdivide the block would you not have to have more roads than those shown upon the map? Not necessarily.
339. Would you not for instance have to have more roads between the roads H and G? Of course, if the land were to be cut up into small blocks you would have to have more roads, but I suggested that it should be cut up into larger blocks—the land is not suitable for little 50 feet blocks.
340. You said in your previous evidence that the roads had improved the estate—do you wish to withdraw that statement? I think I said that the roads had improved the estate to some extent, but that they were of very little advantage. I think that is what I said. I think I said that the roads had improved the estate to the extent of the amount which had been expended upon them.
341. Will you look at the answer you gave to question 1852.
1852. *Chairman.*] As a matter of fact, does not every road on that property, with the exception of Mistake Road, improve the value of Burns, Withers, and Smith's estate? To a certain extent, most decidedly.
- Do you wish to withdraw that statement or to adhere to it? No; I adhere to that statement.
342. What is the exact meaning which you wish to convey when you state that the improvements to the estate are represented exactly by the expenditure upon the roads. Do you mean to say that notwithstanding that the lands were given by the owners the estate has been improved to that value? If I owned the land and left the streets through it, and spent a certain amount upon those streets, the value by which the estate would be increased would be represented exactly by the amount of money which I expended. I do not think I could give you any better idea of what I mean.
343. Suppose this block of land were your own, that you desired to sell it, and that you subdivided it—if you cleared and made roads you would expect the property to increase in value to the extent of the amount which you had spent upon the roads? Yes.
344. Then this property has increased in value to the extent of the amount which the Government has expended upon these roads? I suppose it has.
345. If the Government had made better roads upon the estate than would be made by private owners in their subdivision would not the value of the property be enhanced proportionately? To the extent of the cost of the roads, but of course you could make a road too good.
346. But as a general rule the more valuable the road is the more the property is improved? I should not expend more than a certain amount upon roads in a locality like this; I should not put down kerbing and blue metal, for instance; that would not be necessary. These roads will be only roads of access for the next fifty years.
347. Still the roads have improved the selling capacity of the land? To a certain extent, of course.
348. Have you had any communication with anyone concerning this estate since you were last before the Committee? No.
349. You have not seen any member of the syndicate? Oh, yes; but I have had nothing to do with the estate.
350. Have you been up to see it since you were here? No.
351. *Mr. Burns.*] Do you consider that these cross roads from Junction Road are of any advantage to the estate? No, certainly not; not those short roads.
352. *Chairman.*] What do these black lines shown upon the plan indicate? They are the boundaries of the allotments in the old Big Island Estate.
353. That is an old subdivision? Yes; I should say it was fifty years old at least.
354. *Mr. McMillan.*] A good many of the questions you have been asked have been upon the basis of a certain supposititious subdivision. Now I want to bring you back to the original state of affairs. There

is a block of 680 acres owned by certain people; there are Government lands to the north of it. We will take it for granted—I believe it is in evidence—that there was no intention on the part of the private owners to subdivide immediately. Indeed, it is a question whether the owners would have subdivided at all. I want you to put yourself in the position of these proprietors. Would you, knowing the difficulties in which the Government were placed with regard to their property to the northward, have thought it to your interest to tell the Government that they could make any roads they liked in reason leading to their estate and that you would give them the ground you required for the roads? I should certainly make them resume. I would not give them any roads.

355. Suppose you were a little more patriotic than that, would you consider, taking these roads as a whole, which have been made by the Government, that they were roads which, in view of some future possible subdivision, were laid out in the best possible way? No; I think they are not.

356. I admit that there may be one or two unnecessary roads; but taking the bulk of them as necessary for access to the Crown lands, both from the junction at Hornsby and the Pearce's corner line, would you consider that you were compensated by the Government making these roads a little better than roads are generally made in such country—that is, would you regard them as a fair equivalent for the land which you had given? No; I do not think I should be sufficiently compensated; I do not think I should get the value of the land.

357. Your attention has been directed to the subdivision you made. Is it not a fact that when subdivisions are made in such country as this they are simply a sort of indication of roads made by trenches on each side marked by pegs, and in many instances scarcely cleared? They are very seldom cleared.

358. The roads are merely indicated? Yes.

359. Is it not a fact that all such roads and subdivisions are as a rule taken up ultimately by the municipalities or by the Government as settlement increases? Yes, in nearly all cases.

360. That is to say, whatever is done to the roads whether they are formed in an expensive or inexpensive manner the proprietors do not as a rule spend money in this way? I have never seen it.

361. *Chairman.*] But notwithstanding all that, you consider that these roads have benefited the private property of Messrs. Burns, Withers, and Smith? I adhere to the statement which I have already made.

362. *Mr. Burns.*] Which was that the property was improved to a certain extent? Exactly.

TUESDAY, 15 JANUARY, 1889.

Present:—

| MR. WALKER, | | MR. McMILLAN, |
| MR. O'SULLIVAN, | | MR. STREET, |
| MR. CARRUTHERS, | | MR. BRUNKER. |

T. WALKER, ESQ., IN THE CHAIR.

The Hon. J. F. Burns appeared in person.

Critchett Walker called in, sworn, and examined:—

363. *Chairman.*] You are the Principal Under Secretary? Yes.

364. Have any recommendations come through your office in regard to the work done upon roads by the unemployed under the Casual Labour Board? Yes; but not in respect of every road.

365. But in regard to such roads as are of importance, I suppose you would say? No, I cannot say that. The roads upon the Holt-Sutherland Estate have come through the Department—in fact, roads in various parts of the Colony.

366. Does that apply to any of the Hornsby Roads? No.

367. None of them? Not that I am aware of.

368. In the case of the Holt-Sutherland Estate, what was the routine through which the roads had to pass in your Department? The Board would recommend the roads, and they would come to me. I would submit them to the Colonial Secretary, believing them to be public roads.

369. Were any representations of any kind made to you as to the nature of the roads, at any personal interview, or in any other manner, by the Chairman of the Casual Labour Board? No; nothing beyond the circumstance of the roads being public roads, and the work being necessary for the public convenience.

370. It was stated to you by the Chairman of the Board, either by letter or by personal interview, that the roads were for the public convenience? As a rule; but in one or two instances, I think it is stated in the papers laid before Parliament that the roads were works of public necessity.

371. Did you ever at any time have any suspicion as to the public necessity for any of the roads so submitted? No; certainly not. I took it as a matter of course that they were to be public roads, especially when a number of Members of Parliament signed the requisition and urged the matter.

372. Did you ever object to approve of any of them? Yes. On one occasion I heard—I cannot tell you from memory when—that the road was a private road. I immediately stopped the work and telegraphed to the Colonial Secretary, who approved of my action until he returned. On his return, upon proper representations being made, it was discovered that the road in question was not a private road—that it was a public road. It was, to the best of my recollection, the Malvern Road, on the Holt-Sutherland Estate.

373. That is the only road about the approval for which you hesitated? Yes.

374. You objected to it upon your own authority? Upon my own authority I stopped it, and two members of the Holt-Sutherland Company came to me. I cannot remember now who they were, but I think Mr. Murphy was one and that Mr. Jamieson was another. They were angry that I had stopped the road. I have not yet obtained a copy of the telegram, but I telegraphed immediately to Sir Henry Parkes, and I had received a reply when they came. Unfortunately I have since destroyed the telegram, but I have tried to get a copy of it, and I daresay I shall succeed in the course of a day or two. I remember the words as clearly as possible,—“Approve of your action *re* Holt-Sutherland Roads.”

375

C. B. Dawson
11 Jan., 1889.

C. Walker.
15 Jan., 1889.

- C. Walker. 375. Is that the only instance in which you disapproved? That was the only instance in which I had cause to disapprove, as far as my knowledge would permit.
- 15 Jan., 1889. 376. In no instance had you any knowledge? None whatever.
377. That is beyond the representations of the Board? Just so.
378. In each instance it was represented to you that the roads sent for approval were actually public roads or were roads of such a nature as to be of public convenience? Yes. The papers will show that, I think.
379. Had the Colonial Secretary, from your knowledge, any means of ascertaining the character of any of these roads? I do not think so; that is no more than I had.
380. Did he do more than act upon the representation which you conveyed to him from the Casual Labour Board? No more than that.
381. You acted upon the *bonâ fides* of the representations made to you? Yes; by the Board and other persons concerned in the roads. What I mean by that is, Members of Parliament and those who came upon deputations urging the making of these roads.
382. You refer, I suppose, to Members of Parliament signing petitions for roads. Can you recollect any instance in which a Member of Parliament signed for what might be termed a private road? I do not think I can. The papers will show you the names.
383. Have you seen the Progress Report of this Committee? Yes.
384. The signatures of the Members of Parliament, I suppose, would be in reference to roads of which the Committee approve? Yes; I imagine so.
385. And not in reference to other roads? No.
386. Perhaps you have in your mind the clearing of the railway track to the noxious trades sites? Yes. That was approved of, I think, upon the representation of some seventy-eight Members.
387. *Mr. Carruthers.*] I suppose that in your private capacity you know that locality pretty well? I know it now but I did not know it when the roads were being made.
388. You have frequently been in the Park? Since the roads were made, but not before.
389. I suppose you have seen the plan which has been placed before the Committee? Yes.
390. You know the extent of the settlement at Como? Yes.
391. Are there many people living there? I should not say very many.
392. Are there more than fifty people there? That would be as many as there are, I should think. I doubt if there are fifty, but there may be.
393. Is there any settlement at Sutherland? Yes.
394. How many people are living there? I should say there are over 100 there.
395. There are a couple of hotels there? I believe so. I should say there were between 100 and 150 people there.
396. You know Sylvania, where the punt crosses? Yes.
397. Are there many people living there? About as many people as at Como, I should think.
398. You think there are fifty people there? I should say there would be about fifty there and at Ewey Bay, because I suppose you would take in Mr. Frederick Want's place.
399. I suppose you know the locality from Richardson's place up to Davis' and Burraneer Bay;—are there fifty people in that locality? I do not think there are. I do not know the locality very well. I have not been down at Mr. Gannon's place. I have been in a boat in the Bay, but that is all.
400. You say that you have seen the Progress Report submitted by the Committee? Yes.
401. Did you observe the statement in the Report that there were only fifty families living in the vicinity of these roads? There are a great many more than that.
402. Are you aware that the main Illawarra Road is a road which has been maintained by the Government for some time? Yes.
403. For how many years can you remember that road being maintained by the Government? I think I remember it for something like fifteen or sixteen years, if not more. I cannot tell you the exact time, but I have always known it as a public road.
404. Maintained by the Government? Yes.
405. You know what is called the Port Hacking Road? I have never been over it, but I know where it turns off from the other road. It may have been a road for years, but it is only newly made. It may have been on the map for a number of years, laid out as a permanent road, but I do not think it has been made or used for more than (say) three or four years—perhaps a little more.
406. *Mr. McMillan.*] When this Board was appointed, consisting of two public officers and Mr. Davies, your Department looked upon it, not merely as an Executive carrying out this work, but also as affording some proof of the *bonâ-fides* of all the work done? Certainly.
407. So that when their reports came before the Colonial Secretary's Department, with the initials of these gentlemen appended, it was taken for granted in the main that full inquiry had been made, and that everything was perfectly correct? Certainly.
408. I take it that it would be absolutely impossible for a Department like yours, with such multifarious duties, to in any way go into detail? Quite so.
409. Especially in a case where a special Board has been provided to take the responsibility, more or less;—it was understood that you would have to carry out their recommendations? Yes.
410. *Mr. O'Sullivan.*] Referring to the statement in the Progress Report, that there are only about fifty families resident in the vicinity of these roads, are you aware that that statement was made by Mr. Murphy, the Manager of the Holt-Sutherland Estate? No; I was not aware of that. I have not read the whole of the evidence.
411. Who would be more likely to have the best knowledge of this fact—you yourself, or Mr. Murphy, the Manager of the estate? I think that I know just as much about it as Mr. Murphy, although he is the Manager of the estate.
412. Considering that Mr. Murphy is the gentleman who got all the petitions signed for these roads, do you not think that he will be in a better position than you are to give an opinion as to the number of residents? I do not think I can answer that question.
413. *Chairman.*] We do not want to get at the population surrounding the roads which are approved of. It is admitted that some of the main roads—the Sylvania Road, for instance—would serve a large population, but there are other roads—subsidiary roads, running north and south;—what about the population in their vicinity? I saw them for the first time on the plan. I certainly was not aware that they were the roads alluded to in the recommendations.

414. Would you say that there were over fifty families served by these subsidiary roads? I should say there certainly were, as far as my memory serves me. C. Walker.
415. You say that that there are over fifty families? I am certain there are. 15 Jan., 1889.
416. Are you aware if any audit has been made of the accounts of the Casual Labour Board? I understand from the Auditor-General that a number of accounts have been audited,—in fact they are going through them now.
417. Since this inquiry started? No; I think they have always been audited from the commencement.
418. But you say that they are going through them now? Not more than formerly, as I understand.
419. There has been no general audit? There has been no special audit on account of the sitting of this Committee.
420. *Mr. O'Sullivan.*] What I want to arrive at is this—I do not want to know about the audit of detail payments;—has there been a general audit of the accounts of the Casual Labour Board? I do not quite understand you.
421. The Board has been in existence for twenty-two months;—has there been an audit of the accounts of the Board—that is, the whole of the accounts, for any specific time,—that is to say, a year or six months? I cannot say; the matter would not come through me.
422. *Mr. Burns.*] All payments in connection with the unemployed have been made upon the order of the Department of the Colonial Secretary? Yes; that is to say the Board would apply to us for a certain advance, ours being the office under which it is supervised. We approve, as a matter of form, and send the warrant back to the Treasury for payment.
423. Are you aware that these accounts of the Casual Labour Board have been regularly checked at the Treasury from time to time, and that a second advance would hardly be made unless the first account had been checked? That I believe is correct.
424. Are you aware also that the accounts, in the regular course, find their way into the hands of the Auditor-General? Yes.
425. There has been no special audit? No.
426. *Chairman.*] What is the form gone through in asking you for an advance? It is merely a formal request for a further advance of such and such an amount, as occasion may require. The last advance applied for I think was for about £6,000.
427. *Mr. Burns.*] Are you aware that there is an officer at the Treasury to examine all the accounts of this kind? Yes.
428. The accounts must pass through his hands? Yes.
429. *Mr. Carruthers.*] Do you remember when the unemployed were first banded together under the administration of Mr. G. F. Wise? I think, if my memory serves me right, that would be over three years ago.
430. Do you remember at that period what course was adopted for their relief? I think they were relieved principally by soup tickets.
431. And free feeding? Yes; they had orders upon Barnett's and some other eating-house. There was afterwards a special kitchen got up for them at the Hyde Park Barracks, where they used to be fed in grand style. They used afterwards to lie down in the park and enjoy their smoke.
432. Do you remember Mr. Wise complaining to the Government that some of these men were earning at the work upon which they were engaged as much as from 9s. to 15s. per day? Yes; I heard it, but I do not think it was correct.
433. At all events you remember Mr. Wise writing a letter to the Department? I could not say whether it was a letter or a memorandum, but I know there was some communication of the kind. I do not think the statement was correct—that is, it was not a fair way of putting it. Some of the men, it is true, used to work eighteen hours a day, and make sometimes 15s.; but you could not say that that was what they were making a day. Some of them would go to work grubbing trees by moonlight. They would work from a very early hour in the morning until late at night. These were a few honest hard working men who had got in among the unemployed.
434. Some of them at all events were doing very well? I should say that the greatest average from an ordinary day's work would be from 7s. to 8s.—anything beyond that would be overtime.
435. Are you not aware that a lot of the men were working overtime, and that it became a matter of current report that many of them were making these excessive wages? I know that that report got about; but the question is, whether it was true. I do not think it was.
436. Do you think it had any effect in attracting men to the body of the unemployed? Certainly it did. One object of spreading the report was to make more men throw up their billets. A lot of them I know did so.
437. How many of these feeding tickets as a rule were issued every day? A large number. It would not be safe for me to say how many.
438. Do you think the number went up to 1,000? I really could not say. If I said a 1,000, I might be making a mistake. I know that the number was very large.
439. Was any contract entered into with any person to supply these meals at a certain rate? Yes, with Mr. Kidman.
440. What was the rate? I do not know.
441. Was it 6d.? There were several people. I know that Mr. Barnett in Pitt-street did it for 6d., and there was another man higher up who also did it for 6d. The men used to come round twice and get several tickets; then they would dispose of them without going near the place at all. They would sell them to other men for 3d., and buy beer with the proceeds.
442. For how many months or weeks was this sort of thing going on? It would be hard for me to say; but I should think that it would be at least two or three months.
443. Was any work done in return for these tickets? No.
444. They were an absolute drag upon the State? Yes; the money was thrown away, so to speak.
445. I believe it was principally upon your recommendation that the men were sent to a depôt at the National Park? Yes.
446. From that time to this there has been no recurrence of the free feeding? No.
447. Has the work been rendered less attractive by lower wages? Yes.
448. And the anomalies to which I have referred have been removed? Yes; to a large extent.

- C. Walker.
15 Jan., 1889.
449. Has any report been made, showing that the unemployed have diminished in numbers? When they went out to the National Park, I think there was something like 2,500 or 3,000. They gradually increased until they reached about 5,500.
450. How long ago is it since the highest point was reached? About twelve months. When they found that it was not easy work they began to clear off. Now I believe there are not 1,000 left.
451. *Mr. O'Sullivan.*] When the men were enjoying free feeds, and living in this sumptuous easy style, was it not while they were waiting for Crown land work to be prepared for them? That certainly might be said of them; but I do not know that there was any work for them to do.
452. *Chairman.*] Had you not great difficulty at first in the Colonial Secretary's Office in determining how you should dispose of the men? Yes.
453. It was a new difficulty springing up then? It was very great indeed.
454. It was not until you had time to mature your plans that anything could be done;—meanwhile you could not do otherwise than feed them in this way? Certainly not. I wanted for a long while to have them shunted out to a depôt away from the stump orations, which attracted a large number of men. They would listen to the speeches, and then they would telegraph over to Adelaide, "There is a good champion here," and so on.

George Withers, M.P., recalled, and further examined:—

- G. Withers,
M.P.
15 Jan., 1889.
455. *Mr. Burns.*] Do you recollect giving evidence on a previous occasion touching the matter referred to this Committee? I remember giving evidence and I have read it several times since.
456. On the 19th December you wrote a letter to the Chairman of the Committee, stating that when you were before the Committee you were led to believe that £5,000 or £6,000 had been expended upon these roads through the land of Messrs. Burns, Withers, and Smith to the Crown lands in the Hornsby district? Yes.
457. You also stated in this letter that you had reason to believe that a much smaller sum had been expended upon these roads? Yes.
458. You also stated that you had discovered that the land on the eastern side of the Homebush and Waratah Railway belonging to Messrs. Burns, Withers, and Smith connected with these roads was under 700 acres in area? Yes.
459. And that you desired, in consequence, to be allowed to amend your evidence? Yes.
460. You stated in your letter that you wished to be recalled, and that before giving evidence you intended to go over the roads for your own satisfaction, in order that your evidence might be more decided? Yes.
461. Have you since then made a special visit to Hornsby to see these roads? Yes; on Saturday last.
462. Have you satisfied yourself approximately as to the amount expended upon these roads? Yes.
463. Have you also made inquiry with respect to the area held by Messrs. Burns, Withers, and Smith on this side of the line? Yes.
464. When you stated in your letter that you had ascertained that the area was under 700 acres, what did you mean by that? Of course that must be taken in conjunction with my previous statement. I based my estimate upon the increased area which I thought was there, and also upon the statement that £6,000 had been expended upon the property.
465. When you made that estimate, how much land did you suppose was held by Messrs. Burns, Withers, and Smith on that side of the railway? I always thought there were some 1,000 or 1,200 acres. I never knew the exact area until now.
466. What did you ascertain the area to be? 680 acres.
467. Then your estimate of £10,000 increment in value by reason of this expenditure is based upon the statement made by you to this Committee that £6,000 had been spent upon the roads, and also upon the supposition that the area of the land was 1,000 or 1,200 acres? Yes.
468. Was your application to be allowed to amend your evidence agreed to by the Committee? It was not at that time.
469. It was refused? Yes.
470. Have you observed a paragraph in the Progress Reports which states that a member of the firm of Messrs. Burns, Withers, and Smith had admitted that the property had been enhanced in value to the extent of at least £10,000 by the construction of these roads? Yes.
471. That statement is, I presume, based upon your evidence? I took it as such.
472. When you went to Hornsby to make an inspection of these roads, were you accompanied by any person who knew the roads and the locality? Yes; I accidentally picked up an old resident. I intended to go single-handed, but I was driven round by an old resident of the district.
473. Did you make a general inspection of the roads? Yes.
474. I think you said that previously you knew little about them? I never saw the roads until Saturday last, with the exception of the Junction Road, and what little might be seen by passing of the Cross Roads.
475. What member of the Committee led you to believe that £5,000 or £6,000 had been expended upon these roads? As far as my memory serves me, I think the question came from Mr. Copeland. I think I was asked whether I thought the estate had been increased in value by the roads to the extent of £20,000. The evidence shows how I dealt with that question. I was quite at sea as to what had been spent, and could give no estimate from my personal knowledge. I had no knowledge of the work. I think Mr. Copeland observed that the Chairman could inform me that between £5,000 and £6,000 had been expended upon the property.
476. As a matter of fact, three members of the Committee put questions to you about this expenditure;—do you recollect who they were? Mr. Copeland, Mr. O'Sullivan, and the Chairman.
477. On the occasion of your special visit to these roads, I suppose you saw most of them? Yes.
478. Did you see both the roads on the Government subdivision and the roads through the private land? I did not get down to what is known as the Great Eastern Road. I omitted what I had seen on previous occasions.
479. Will you tell the Committee your opinion as to the construction of these roads, and as to their formation;—will you say whether you think them good or bad—First, what is your opinion with regard to the roads passing through the private land? I took a plan with me and I made a few notes. I may say in passing that the plan is very inaccurate. With respect to the roads which are said to be ballasted, I think

G. Withers,
M.P.
15 Jan., 1889.

think it is the most inferior work I ever saw. I should imagine that about 13 or 14 feet in the centre of those roads, where the land is alluvial, is ballasted. That occurs in Junction Road and in Burns' Road, where it passes through land which is more alluvial than the other. The roads which are formed on the harder formation are the best roads—in other words, the roads which are not ballasted are the best. It would have been a mistake to ballast the roads formed on the ironstone gravel.

480. Which are they? I could not give you their names.

481. Are the best roads on the private land or on the Government land? The roads on the gravel formation are the best. They occur principally on the Government lands. The Government lands just about there are of a harder formation.

482. You have seen some of the roads in a casual way previous to this special visit? Yes.

483. Having seen the roads on this inspection, generally, your observation as to their inferiority applies to the roads made by the unemployed? I understood that all these roads had been made by the unemployed.

484. Are the roads which have been made by the unemployed of an inferior kind? They are all very inferior roads. As I said just now, the best roads are those which had required least formation.

485. I wish you to look at the account of the expenditure furnished by Colonel Wells and Mr. O'Donnell, the Road Overseer? I have seen that account.

486. You will see that they estimate that the total expenditure upon all roads through these private lands to the Crown lands is, approximately, £2,300? Yes.

487. You will see that the schedule includes the expenditure upon the road from Junction Road to Pearce's Corner to the church? Yes.

488. I presume you are aware that Messrs. Burns, Withers, and Smith have no land upon that road? Yes; I am aware of that.

489. Do you know the road from the Junction Road across the railway bridge to the "Junction Hotel"? Yes. I did not go over it the other day, but I know it well.

490. You are aware that Messrs. Burns, Withers, and Smith have no land along that road? That, I think, will be seen from the plan.

491. Are you aware whether a road has been made close to the "Junction Hotel," down in the direction of a line with the property of Mr. Higgins, by the unemployed, and that Messrs. Burns, Withers, and Smith have no interest in it, having no land there? Decidedly; I know that very well.

492. We have no land there? No.

493. There is among the papers a petition from a number of residents, in which your name is included, for the improvement of the old Vanceville Road? Yes.

494. That was an application simply to improve the old road? Yes.

495. There was no question of extension? No.

496. That petition was referred by the Department of Works, to whom it was addressed, to the Casual Labour Board? Yes.

497. You have observed that the Vanceville Road, as far as it was maintained by the Works Department, has been improved by the unemployed? Yes; I saw that on my previous visit.

498. Does not the evidence of Mr. Bennett show that that portion of the road has been maintained by the Department for some years past? Yes. I believe there is a good deal of settlement on either side.

499. Have you observed that Burns' Road is also shown by the evidence to have been an old road which has been improved by the unemployed? Yes.

500. It has been extended in the direction of Noonan's? Yes.

501. Have you any information as to how that road came to be improved by the unemployed? From inquiries I made, I find it has been improved in response to a deputation of the residents, of which I had no knowledge, through the Casual Labour Board.

502. Headed by Mr. Noonan? Yes.

503. Are you aware that Messrs. Burns, Withers, and Smith have no interest in the road leading from the road by Noonan's on to the Lane Cove Road? Decidedly.

504. We have no land fronting it? None whatever.

505. Are you aware that Mr. Noonan offered to give evidence that he was the most active agent in inducing the Casual Labour Board to improve these two roads? I learnt that from Mr. Noonan on Saturday last. He seemed anxious to give evidence.

506. Are you aware that Colonel Wells has stated that £800 out of the £2,300 said to have been expended in connection with the unemployed would have had to be expended by the Public Works Department themselves, in order to make approaches to the railway station? Yes; I understand so.

507. Perhaps you are also aware that Mr. Bennett, the Chief Commissioner for Roads, has said that by-and-bye the Department will have to expend at least £2,000 in making roads for the railway station? I did not know that.

508. Are you aware that a station or platform is now being built close to Noonan's and Dobson's, on the North Shore line? Yes; I saw it on Saturday for the first time.

509. A road leading from that station to the Lane Cove Road has been widened and improved by the unemployed? Yes—up past Noonan's.

510. Are you also aware that a station is being built at the corner of the Vanceville and Lane Cove Road's? Yes.

511. Are you aware that there is also a station close to "Porter's Hotel"? I have not been that way for years, but I have heard something of it.

512. Have you any idea of the extent of the Crown lands on the northern side of the property of Messrs. Burns, Withers, and Smith? I have not.

513. You do not know the area of the land? No, but they seem to have a large area. I think it goes pretty well down to Peat's Ferry.

514. Is it your opinion that these Crown lands have been improved in value by these roads of access through the private land? Undoubtedly.

515. Do you recollect the first application we received for permission to make a road through the land of Messrs. Burns, Withers, and Smith? Yes; but I do not recollect the date.

516. Do you remember my consulting you about it? Yes.

517. Do you know who was in office as Minister for Lands then? I was always under the impression that Mr. Copeland was Minister of Lands. I know that the Dibbs or Stuart Government sent the application.

518.

- G. Withers,
M.P.
15 Jan., 1889.
518. Did I write to you or see you as to whether you concurred in the application of the Government for this first road of access? You either wrote to me or saw me personally. I remember the three of us signing a letter.
519. Do you not recollect the first letter I wrote to you, stating that an application had been made to me by a surveyor on behalf of the Government for the road over the bridge near Hornsby? I cannot say whether you wrote a letter or whether you produced a letter and asked me to sign it; but I remember your communicating with me in some way with regard to an application by the Government of the day for land for a road or roads required to give access to the railway station.
520. Do you recollect if Mr. Smith was opposed to giving land for these roads? I know that he was always opposed to giving land for any purpose of that kind.
521. Are you aware that Mr. Bennett, after the applications came from the Casual Labour Board for some of these roads, furnished an independent report to the Government as to their necessity? I think I saw it in January last.
522. Having ascertained the expenditure upon these roads, as far as it can be ascertained, and also the area of land held by Messrs Burns, Withers, and Smith, can you tell the Committee whether, in your opinion, their estate has derived any great advantage from the construction of the roads? I see very little special benefit derived by the estate myself, after looking into the matter.
523. Do you know how much land has been given for these roads? I believe 29 acres has been given. I do not know whether it has been given or taken. I understand that some of the land has been taken, and that we have not given it.
524. What is your estimate of the value of this land? I put the land in that part of the estate at £125 per acre. A leading architect in the city secured, after very great trouble, a block of 4 acres at £125 per acre. We consider that we made a concession in allowing him to have the land at that price for the construction of what was considered a good residence. I also have regard to the fact that 40 acres near Noonan's was bought at £150 per acre within the last two months. Estimating our 29 acres to be worth £125 an acre, you have a sum of £3,625.
525. Do you know who purchased the land near Noonan's? Mr. Lyne, M.P., I believe, and some Melbourne friends.
526. What proportion of the £2,300, alleged by Colonel Wells to have been expended upon these roads, has been expended upon roads in which Messrs. Burns, Withers, and Smith are directly or indirectly interested? I should say the sum would be considerably less than that given in the Schedule. I could not say how much less.
527. Would it be £500 less? I think there is no doubt about that.
528. Then you estimate the land which has been taken as being worth £3,625, while there has been an expenditure upon the roads in which we are interested of about £1,800? Yes; about that, in round numbers.
529. You think that would be allowing a very full amount? Yes.
530. Do you think Messrs. Burns, Withers, and Smith obtained an increment in value by this expenditure outside what you now state? Decidedly not.
531. Then you wish to withdraw altogether the statement you made about this increase in value of £10,000? Decidedly.
532. *Mr. O'Sullivan.*] Let me refer you now to your previous evidence. Look at question 2191;—
2191. Do you think £20,000 would be too high an estimate? It is a difficult thing for me to say; you can probably form as good an opinion as I can. I do not think it would be at all unreasonable to suppose that the property had received that increase in value;—
Do you adhere to that? That is simply ridiculous.
533. I am about to ask you a question concerning the value of the roads;—up to that time not a word had been said about the money expended on them, yet in reply to this question you say that you do not think it would be at all unreasonable to suppose that the property had been increased in value by £20,000? That was based upon the representations made in the House by the Chairman when the matter was brought before it, and also upon general rumour.
534. Up to the time that question was put to you you had not been told by the Committee that £5,000 or £6,000 had been expended on the roads? That I think is correct.
535. Notwithstanding that, you said that the increment in value had been £20,000? I never said £20,000. A member of the Committee suggested that value.
536. Yet you admitted that it was not unreasonable? Yes. From the impression made upon me by the report of the proceedings in the House, and from the rumours as to what was going on up there.
537. Further on you were told that the cost of the roads, as the Committee were informed, was from £5,000 to £3,000; and you said, in reply to that, you were not at all surprised? Of course, if I assented to the suggestion that £20,000 was the increment in value I could not be surprised at hearing that £5,000 or £6,000 had been expended. Besides, I could not know whether the money had been judiciously or injudiciously expended.
538. Having discovered that a smaller sum than £5,000 or £6,000 had been expended upon the roads, do you still hold that one half of £20,000 would be too high an estimate? Decidedly.
539. In corroboration of the statement that the roads had cost £5,000 or £6,000, and that there was a reliable reason for the question put to you, let me refer you to the evidence of Mr. Deering. He is asked what, roughly, has been the expenditure upon the whole of these roads on private property; and he says, in reply, that they have cost £5,000 if they have cost a shilling. Further on he is asked by Mr. McMillan whether the expenditure is really £5,000, and he says that he is sure it is? Yes; I observe that evidence.
540. At the conclusion of his evidence he is asked whether he can give the Committee anything like an idea of the proportion of money spent upon Crown lands at Hornsby to that spent upon the private property there; and he says that they could not have spent more than £700 or £800 upon the whole of the Government subdivision, whereas he was confident that they had not spent less than £6,000 upon the property of Messrs. Burns, Withers, and Smith? Yes; I see he gives that evidence.
541. Had you been a member of this Committee, having that evidence before you, would you not have felt justified in putting the question which was put to you as to the amount of money spent upon these roads? Yes. I am pleased to find that you had some justification for putting it.

542. *Mr. Burns.*] Are you aware that Mr. Howison, Colonel Wells, Mr. O'Donnell; and Mr. Gordon, the surveyor, dissent from the evidence of Mr. Deering? I have not read all the evidence, but I have become aware of what you state. G. Withers,
M.P.
543. Are you aware that Mr. Deering stands alone in his statement about this large expenditure on these roads through private property? I understand that to be the case. 15 Jan., 1889.
544. Following up Mr. O'Sullivan's question, do you think that any member of the Committee is justified in making this statement to you upon the evidence of one witness only, that the roads had cost between £5,000 and £6,000? I do not think they were, unless they had the information officially. Decidedly not. Mr. Deering, I understand, was not the responsible officer.
545. Are you aware that the gentlemen I have named have all given evidence in opposition to Mr. Deering's statement? Yes; I am aware of that.
546. *Chairman.*] You said just now that when you said that £20,000 increment in value was not an unreasonable estimate, you based that statement upon some representations which I have made in the House. I have here the *Hansard* report of my speech. Will you point out in it the representations to which you refer? I do not think I can do that. I simply stated the impression made upon my mind. I could not refer to any particular portion of your speech. I thought, from the manner in which you had addressed the House on that question, and from general rumours which were abroad at that time, that there was a much greater expenditure going on than that which I have discovered to be made.
547. You cannot point to anything in my speech which warranted you in assuming that the increase in value to the estate would be £20,000? No.
548. Do you see that I state that £20,000 would be my estimate of the value? Very likely that part of the speech made the impression upon me to which I refer.
549. Are you aware that I was quoting what you had already communicated to a *Star* reporter? I do not think I can have said that.
550. Are you aware that your estimate was already in print when I made this statement? I know the interview to which you refer. I am not prepared to admit that I could be in a position to form an estimate even now, to say nothing of that time. I knew then even less than I know now.
551. Did you make your estimate before I made this statement in the House? I fail to see how it is possible for me to make any estimate, not having the slightest knowledge of the work which is going on. I had nothing but rumour to guide me.
552. Whatever rumours you heard was not your interview with the *Star* reporter prior to my speech in the House? Two days before. Does it state in that interview that I gave an estimate of £20,000?
553. Yes? Well it is absurd.
554. Mr. Burns asked you just now whether the Committee were justified in taking the estimate of Mr. Deering;—are you aware that when you gave your evidence the Committee had not before them the schedule of Colonel Wells? I was not aware of that.
555. Are you aware, from the evidence, that the schedule of Colonel Wells was put in subsequently? Yes, I see that is so; but I concluded when you put the question to me that the amount was authentic.
556. Are you aware that Mr. Little, the paymaster, estimates the expenditure upon the private land as £3,700? No; I have not read his evidence.
557. Let me refer you to question 2,447? Yes, I see that; but you will see that Mr. Little refers to the expenditure upon private lands altogether.
558. If you read the next question you will see that Mr. Little is asked whether £3,700 at least has not been spent on all the land south of Boundary Road and including that road, and that he says he thinks that amount will cover it? Yes; but there are a lot of private lands there besides ours.
559. Are you not aware that the estimate of Colonel Wells refers to the same roads? Yes. In that case a very expensive road on the other side of Pearce's Corner, which I understand has been constructed by the unemployed, would be included.
560. Assuming that Mr. Little is correct, would not that alter the estimate you have just given? Judging from the plan, a great deal of expenditure upon private land affects other peoples property.
561. But you said just now that you deducted £500 from the £2,300 in Colonel Wells' estimate. Suppose you deduct £500 from Mr. Little's estimate, which is £3,700, leaving £3,200? I do not think I could give you an answer as to value haphazard in that way.
562. You see the difference between the two estimates. One is the estimate of an officer who has had charge of the expenditure of the money, while the other is that of an officer who sees the work after it has been done? Yes, of course there is that difference.
563. Even if a less amount has been expended, is not the making of these roads of additional value to your property? They must give some value to the property, I presume; but I think that more than the full value is balanced by our allowing the Government to take the land free of charge.
564. But, as a matter of fact, the land is required for the roads in every case? We had no intention whatever of subdividing this property.
565. But would it not be rendered more valuable from the fact that it contains these roads. We subdivided what we considered sufficient for settlement near the railway station. It was our intention to deal with the rest of the property on this side in one lot. It was never our intention to subdivide any more.
566. But is it not more valuable subdivided in the form in which it now stands? I do not attach any importance whatever to that. I consider that the work is of much greater value to the Crown, especially as Junction Road is admitted by all to be a necessary one.
567. Do you consider that if you increased the number of roads on the property, running them all at right angles, and making them equi-distant, it would decrease the value of your land? I should object to any further cutting up of the property. I was very much annoyed about one of the existing roads. I did not know that it existed. I knew nothing about it until I saw it on Saturday.
568. Is that Mistake Road? I am referring to road HH. I think it is an outrageous thing. I do not know who consented to it. I certainly have not been a party to it.
569. Are you aware that its peculiar shape is owing to a mistake made by the unemployed? I am not.
570. When you say that we refused to further examine you, do you bear in mind that your letter, containing in substance your corrections of the increase in value, is appended to the evidence? I was informed by Mr. Copeland that that was the case when the Progress Report was submitted; but he did not give the particulars of the letter.

- G. Withers,
M.P.
15 Jan., 1889.
571. Is not the substance of the letter a correction of your estimate of the increase in value? Yes.
572. Mr. Burns asked you just now whether your statement as to the increase in value did not appear in the Progress Report;—you are aware, as a Member of Parliament, that when an amendment is moved in Committee omitting certain words, and is not carried, you cannot go back and alter any portion of the words which the amendment proposed to omit? I believe that is so.
573. Therefore it would have been impossible for the Committee, having dealt with this particular paragraph in that way, to make any alteration after the reception of your letter? Yes; I see that.
574. *Mr. Carruthers.*] At the time you were examined by Mr. O'Sullivan as to the cost of the roads, were you informed that one witness had given evidence to the effect that the cost was a little over £2,000? No.
575. If you refer to the evidence of Mr. Davies, you will find he says, at question 944, that the cost of the whole of the work through the property of Messrs. Burns, Withers, and Smith is a little over £2,000. If you refer to the evidence of Mr. O'Donnell, you will find he says that the cost of improving and making roads on private property is £2,079, and that £4,186 has been expended upon the Crown lands? Yes; I see that is so.
576. Having looked at these questions in the evidence, given prior to your examination, do you think it would have adduced more accurate evidence from you if you had been informed of the replies to these questions? If I had known that one gentleman represented the cost to be £6,000, while another represented it to be £2,000 or £3,000, I should not have offered any opinion at all by way of an estimate.
577. You are aware that Mr. O'Donnell gave this answer, having acted as Superintendent of the unemployed at Hornsby? I was not aware of his position. I do not know him.
578. If you had been informed that the gentleman in charge of the works had stated that the cost of the roads was only £2,079, would your answer have been different? Decidedly.

1888-9.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

WORK OF UNEMPLOYED ON ROADS AT HORNSBY AND
HOLT-SUTHERLAND ESTATE.

PETITION FROM HON. J. F. BURNS, PRAYING TO BE HEARD EITHER IN PERSON OR BY COUNSEL OR ATTORNEY BEFORE SELECT COMMITTEE SITTING ON.)

Ordered by the Legislative Assembly to be printed, 8 January, 1889.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in
Parliament assembled.

The humble Petition of the Honorable John Fitzgerald Burns, a Member of the Legislative
Assembly,—

HUMBLY SHOWETH:—

1. That on the fourteenth day of November last your Honorable House appointed a Select Committee, with power to send for persons and papers, and to visit the ground, to inquire into and report upon the work of the unemployed in clearing, forming, and making roads through the property near Hornsby owned by Messieurs Burns, Withers, and R. Burdett Smith, and also those made through the Holt-Sutherland Estate and other private properties, with power to sit during any adjournment.

2. That your Petitioner is deeply interested in the question of the inquiry relating to the roads at Hornsby, and is anxious to place before the said Committee all the facts within his knowledge relating to the same, as also all the evidence which he can in any way offer upon the subject of inquiry referred to your Committee.

3. That your Petitioner is anxious to appear before your said Committee by himself, counsel, or attorney.

Your Petitioner therefore humbly prays that your Honorable House will grant to him leave to appear before your said Committee, either personally or by counsel or attorney.

And your Petitioner, as in duty bound, will ever pray, &c.

J. F. BURNS.

1888.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

CROWN LANDS.

(ROAD AT HORNSBY.)

Ordered by the Legislative Assembly to be printed, 8 November, 1888.

Minute Paper.

Subject:—Road at Hornsby, through W. Bellamy's (now Burns, Withers, and Smith's) 100 acres, and through Crown Lands for sale.

(No. 125.)

Department of Lands, Sydney, 17 January, 1888.

1. IN accordance with the request of the Under Secretary for Lands, the following *Précis* Report is submitted.

Lands, 1886,
236-3.
Roads, Aln.
87-4,039

2. Tracing herewith in illustration.

3. In 1884 certain surveys of old grant boundaries disclosed strong evidence that a strip of Crown Land existed along the north boundary of Bellamy's 100-acre grant (Aln. 84-4,045).

4. It was proposed to utilize this strip of land for the purpose of a road; but after further inspection by an officer of Public Works Department, a better road was found a quarter of a mile further to the south, and where a bridge over the railway had already been erected. This bridge was in the best possible position to connect the main Peat's Ferry Road and Hornsby Station with the Crown Land to the eastward, about to be subdivided for sale at public auction (Roads 86-236-1).

5. All that was required was that the owners of Bellamy's 100 acres should consent to the road being taken through that land. The owners did consent upon the condition that "the new line is surveyed and cleared for traffic in a reasonable time, and that the Government relinquish all claim in respect of the former line" of proposed road. (Roads 1886-236-3).

6. The dedication of the road was soon afterwards signed by the owners without any proviso as to clearing being inserted (Roads 1886-236-7), and on 19th August, 1887, dedication was officially published in the *Government Gazette*.

7. Early in 1877 the Crown Land coloured green upon enclosed tracing, was subdivided for sale at public auction (Aln. 87-4,039), and upon receipt of the plan lithos. were forwarded by me to the Under Secretary for Lands, suggesting that the leading roads through the surveyed but not sold Crown Lands should be cleared and grubbed whilst a part of the unemployed were in the locality. (5th May, 1887; Misc. 87-5,757.) This suggestion received Ministerial approval on the same date and paper, and the Casual Labour Board were requested to carry out the work, and to continue the clearing of the road bounding the Crown Lands through to the Eastern Road (Misc. 87-5,757) in order to afford access to the Crown Lands for sale, and in accordance with previous similar action at the Field of Mars, at Como, at Heathcote, at Dobroyd, at Gordon, and at Peakhurst, George's River. It also became necessary to clear and form the surveyed and proclaimed road through Bellamy's 100 acres in order to give good access to the Crown Lands for sale, from the Hornsby Railway Station, and as was done at the Field of Mars, in connection with adjoining roads. The only roads authorized as requested, to be cleared, &c., by any officer of the Department of Lands, were those referred to, viz.:—The roads through the public estate about to be sold, including the road from the Hornsby Railway Station, through and along Crown Lands to the Eastern or Vanceville Road.

8. After perusing an article in a newspaper called the *Sunday Times*, of 8th January, 1888, and which is both malicious and untrue, it is only just and right to state that, whilst the clearing operations were under consideration or proceeding, not the slightest communication was received by me from Messrs. Burns, Withers, and Smith. The work was initiated solely by myself, and solely in the interest of the Crown, who alone I serve. I neither knew of, nor cared about, the lands of Burns, Withers, and Smith. At the present time I have no knowledge of any of the properties of that firm beyond the "Hornsby Junction Estate" (in a different direction to these roads cleared) and Bellamy's 100 acres, and which I only learned was their property by reason of the negotiation for the survey and opening of the road first referred to.

My only aim was to improve the Crown Lands for sale, and obtain a better return for the public revenue, and the properties of Messrs. Burns, Withers, and Smith are matters of indifference to me, and never for one moment became an element of consideration; nor would any consideration for any person or persons existing, of any class or degree whatsoever, induce me to depart an iota from my public duty to the Crown.

The Under Secretary for Lands.

JOHN W. DEERING,
Metropolitan and Coast District Surveyor.

Sir,

"Adace Villa," North Shore, 28 January, 1888.

Tracing here,
with Appendix
B.

Acting in accordance with your verbal request, I proceeded to Gordon and Hornsby and inspected roads cleared and formed by the "unemployed" and have the honor to report as follows:—

- 1st. The road marked A was recommended by the Roads Department some years ago, and the clearing of it was commenced by the unemployed, during Mr. Deering's *regimé*. This is the main road of access from the Peat's Ferry Road to the Crown Lands, easterly.
- 2nd. The road marked G, called Junction Road, runs from the railway line easterly to Vanceville Road, passing through slightly undulating country, and crosses the heads of creeks and gullies which present very precipitous banks after running to Boundary Road (Government).
- 3rd. The roads marked B, C, D, E, F, are all practicable and fairly level.
- 4th. The roads H and I are also good and practicable.
- 5th. The other roads in the Vanceville Estate were cleared some years ago.

Boundary Road, being intersected by several rough creeks and gullies, from which the banks rise precipitously on either side, it was considered advisable to clear and form Junction Road, as the main road of access from the Hornsby Station, both from a pecuniary as well as an engineering point of view. The owners of part of the property, Messrs. Burns, Withers, and Smith, then dedicated to the Crown the roads B, C, D, E, and F, as roads of access from the main road (Junction Road) to the Crown Lands between the various gullies.

The access to the Lane Cove Road was next completed by the clearing of roads H and I, and also a continuation of the Vanceville Road, southerly, to meet the part already cleared, and formed some years ago, from the Lane Cove Road to Billyard-street. The works carried out on roads coloured red on tracing are for the most part through private lands (various owners), but when it is pointed out that the Crown Lands, tinted blue, were totally inaccessible, the opening of the various roads will prove an invaluable boon in the alienation of the Crown Lands.

Previous to the unemployed works, some three years ago, I had the honor to recommend to the then Metropolitan District Surveyor, Mr. F. B. Woolrych, the opening of the roads from the various corners of the Vanceville Estate to the Boundary Road, which forms the boundary between the alienated and Crown Lands, and the recommendations would most certainly have been carried out had not the Casual Labour Board accepted the roads of access given by the various owners.

In conclusion, I may state that the road formation and clearing is of a reproductive and useful nature, taking into consideration the large area of Crown Lands on the north, and its proximity to both railway lines, as well as such main roads as the Lane Cove, Peat's Ferry, and Pennant Hills.

In summarising: The constructing Boundary-street being impossible, Junction Road made in lieu. B, C, D, E, F cleared to give access to Crown Lands. H, I, J, cleared and formed to give access from Crown Lands by way of B, C, D, E, F, to Lane Cove, Peat's Ferry, and Pennant Hills Roads.

I have, &c.,

W. M. GORDON,

Government Surveyor.

The Hon. John Davies, C.M.G., M.L.C.,
Chairman, Casual Labour Board, Sydney.

I HAVE examined the locality of Hornsby, and the roads works done by the Department and the unemployed.

The roads from the main or Junction Road to the Peat's Ferry Road have been cleared at private cost by the owners of land on either side.

The Boundary Road, which has been cleared to show more definitely the Crown Lands, is impracticable unless at a large outlay, and has no direct access to the station, as private property intervenes. This Boundary Road, crossing the gullies low down, has undulations which can only be made passable at great cost, and even then with very steep grades and extensive bridges over the gullies which intersect it.

To obviate this, on the representations of the officer of the Survey Department, Junction-street was made the main road to those back lands from the station; the owners of the lands, Messrs. Burns, Withers, and Smith, having given five roads of access, which have all been cleared so as to give access to eligible points for the continuation of roads at summits of ranges through the expanse of Crown Lands to Cowan Creek. By this arrangement the public estate is decidedly benefited, as easy roads with practicable grades are obtained to this Crown Land, and direct access given to the station without necessity for passing through other private property.

The Vanceville Road, joining this Junction Road, was made by the Department two years ago as far as Billyard Road or Street, and was recently extended by the unemployed to afford direct access by one of the short branch roads to the Crown Lands from the Lane Cove Road and the Gordon Railway Station. One of the other two cross roads recently cleared was to give direct access from the church and junction of the Lane Cove Road and Peat's Ferry Road, Pearce's Corner, to the Crown Lands. The other intermediate road gives access from Lane Cove Road, half-way between Gordon and Hornsby, to the land in question. All will be ultimately required, and will enhance the value of the Crown Land beyond by rendering it easy of access, and have been located in the best positions and defined by clearing, instead of their selection in the future being hampered by sale of allotments through which it might be necessary to force the roads at considerable cost for compensation and fencing.

If it had been possible to exercise this provision and precaution in other cases, miles of bad road, large outlay for works and compensation, would have been saved, and larger revenue from land sales would have been secured.

Had this land been reserved Crown Land not to be sold, all the roads would have been desirable in the interests of the Crown Lands beyond, and I fail to see why the possession of the property in question by private individuals should be a bar to necessary improvements because they incidentally enhance its value.

WILLIAM C. BENNETT.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ROADS AT HORNSBY.
(PETITIONS AND SURVEYORS' REPORTS RESPECTING.)

Ordered by the Legislative Assembly to be printed, 13 November, 1888.

SCHEDULE.

- A.—Metropolitan District-Surveyor Deering's memo. *re* Crown lands to be cleared for sale, adjoining Burns & Co.'s land, Hornsby.
- B.—Surveyor Perdriau's memo. to Mr. Deering *re* reserve at Hornsby.
- C.—Surveyor Gordon's letter to Casual Labour Board *re* roads from Hornsby to Crown lands.
- D.—Surveyor Gordon's letter to Chairman, Casual Labour Board, stating that he had surveyed and laid out these roads.
- E.—Petition from landowners at Hornsby to have the Vanceville or Great Eastern Road and Boundary Road formed, so as to give access to railway station. Superintendent O'Donnell's report thereon, with plan. Letter to Hon. J. F. Burns *re* land for road, and his consent.
- F.—Surveyor Gordon's letter to Chairman, Casual Labour Board, *re* road to Crown lands at Gordon; outlet from the said land to Hornsby Railway Station (and tracing).
- G.—Reports of Metropolitan District-Surveyor Deering, Government-Surveyor Gordon, and Mr. W. C. Bennett, Commissioner for Roads, *re* roads at Hornsby, with plans attached.

A.

Memo. from Mr. Metropolitan District-Surveyor Deering to Mr. Surveyor Palmer.

MR. PALMER,—Refer this firstly to Mr. O'Donnell. The Minister has decided that A is to be temporarily reserved for public requirements. (This land you are now clearing.) Also that allotments B are to be surveyed and sold. Clear this land, and let me know when done, so that Mr. Perdriau can make survey. Look at land "C," and, if not too rough for sale, clear that also; but if you think it would not sell—refer to Mr. O'Donnell—do not clear it. You have a good tracing.

9 April, 1887.

J.W.D.

B.

B.

Memo. from Government-Surveyor Perdriau to Mr. Metropolitan District-Surveyor Deering.

Re clearing portion of Reserve No. 48, near Hornsby Junction.

HEREWITH I forward tracing showing that portion of the reserve on both sides of the Peat's Ferry Road which should be cleared, about 40 acres. The tracing shows clearly the boundaries of the grants bounding the reserve, viz., on the west Higgins' 250 acres, and on the east Bellamy's grants (now Burns, Withers, and Smith).

Higgins, who lives on his farm, will point out his corners and his eastern boundary line, and the western boundary line of Burns, Withers, and Smith's land was cleared by me and chained, and should now be easily discernable; if not, I could send a man to point it out if you think it necessary.

STEPHEN E. PERDRIAU,
Government Surveyor.

The enclosed tracing has been prepared at my request for the Chairman of the Casual Labour Board, and upon tracing will be found a description of the corners of the land to be cleared and boundary lines thereof. I strongly recommend that the area of 40 acres, including reserve for public recreation, be cleared by unemployed labour.—JOHN W. DEERING, Metrop. D. Surveyor, 3 June, 1887. The Chairman Casual Labour Board.

C.

Mr. Government-Surveyor Gordon to The Chairman Casual Labour Board.

Re Roads to Crown lands, Parish of Gordon.

Sir,

"Adare Villa," North Shore, 17 October, 1887.

I have the honor to inform you that I visited the works now being carried out by the unemployed in the Parish of Gordon, with regard to the further clearing of roads giving access to the Crown lands.

To illustrate my report more clearly, I furnish herewith tracing showing, by a red colour, roads cleared and in course of completion.

I have the honor to propose that the roads coloured brown on tracing be cleared. It will be seen at once the necessity of clearing roads marked A, B, C, to give access from the Junction Road to Crown lands. The roads marked D and E will also tap the Lane Cove Road, *via* Vanceville Road, which is a first-class road from Billyard-street to the Lane Cove Road.

As Junction Road has been cleared throughout from the Hornsby Railway Station, and is a very good road as regards gradients and crossings at the gullies, I have the honor to recommend that it (Junction Road) be formed and ballasted throughout, and culverts erected in about the positions shown on tracing, over the gullies, and over a gully on Boundary Road.

W. M. GORDON,
Government Surveyor.

D.

Mr. Government-Surveyor Gordon to The Chairman Casual Labour Board.

Re Road at Hornsby.

Sir,

"Adare Villa," North Shore, 25 October, 1887.

I proceeded to-day to Hornsby, and laid out work on roads for O'Donnell, he was not there himself as he was away measuring some of the work, but I have pointed it out to Noonan, the ranger, who is thoroughly conversant with the line, and will point it out to Superintendent O'Donnell to-morrow. If O'Donnell wants any further information he may refer to me.

W. M. GORDON,
Government Surveyor.

E.

Mr. Superintendent O'Donnell to The Chairman Casual Labour Board.

Re enclosed petition, and Junction and Boundary Roads.

Sir,

Hornsby Junction, 1 December, 1887.

I have the honor to report *re* petition attached, and for Casual Labour Boards' information, that I am forming Junction-street and Vanceville Road, and when ballasted, I believe will answer the requirements of the district for some time.

By referring to the plan* you will see that Boundary Road is a parrallel road to Junction Road, it would take an immense amount of money to make it available for traffic.

Therefore, I will not do anything further to same until I hear from the Board.

F. O'DONNELL,
Superintendent.

[Presented by Mr. Ives, M.P., 11 November, 1887.]

Petition for Repairs to Road known as the Great Eastern or Vanceville Road.

To the Honorable John Sutherland, Minister for Works.

WE, the undersigned landowners and others, have the honor to request that you will be good enough to grant a sum of money for the repair and improvement of the road known as the Great Eastern or Vanceville Road, from the Lane Cove Road to the new road, recently cleared by the Government, from Hornsby Railway Bridge.

The

Appendix A.

* Appendix B.

The Great Eastern Road has to bear a large amount of traffic, which will be increased by the opening of the new road above referred to, and which is known as Boundary Road.

We are, Sir,

Yours obediently,

Works Department, 87-10,597, 11/11. Roads, B.C., 12/11/87. Public Works, 87-17,387, 15 November. Colonial Secretary, 87-12,830, 21 November.

This is a paper which should be sent to the Casual Labour Board, as work is being done by the unemployed in this vicinity.—W.C.B., 14/11/87. Under Secretary, B.C., 16/11/87. Refer to Casual Labour Board, 22/11/87.

The Casual Labour Board to The Honorable J. F. Burns, *re* land for Roads at Hornsby, with minute attached.

Sir, Casual Labour Board, 82, Goulburn-street, Sydney, 18 October, 1887.

Enclosed herewith you will please find tracing of roads recommended to the Board by their local officer at Hornsby to give better access to the adjacent Crown lands. Should yourself and co-partners have no objection to the opening of these roads marked A, B, C, instructions will be given to have them commenced forthwith.

I have, &c.,

THOMAS C. HINCHCLIFFE,
Secretary.

Copy minute attached:—19th October, 1887.

In reply to your letter of yesterday's date, I beg to say, on behalf of Burns, Withers, and Smith, that I have no objection to the roads shown on tracing therein enclosed being opened for the public use.

F.

Mr. Government-Surveyor Gordon to The Chairman, Casual Labour Board.

Re Road at Gordon—Outlet from Hornsby Station.

Sir,

"Adare Villa," North Shore, 19 May, 1888.

In compliance with your verbal request I do myself the honor to transmit herewith a tracing showing by a brown tint the Bobbin Rock Road, proposed to be cleared as access to Crown lands, from the length already cleared and maintained by the Roads Department. Appendix C.

It would also be a most desirable thing to clear the most accessible route along the roads I have shown in red, to give access past Richardson's orchard on to the Stoney Creek Road. Further it will give increased access to the Crown lands as well as the Government quarry now in use by the Roads Department.

Colonel Wells is well acquainted with this locality and will, no doubt, bear me out in the latter suggestion.

W. M. GORDON,
Government Surveyor.

G.

Minute by Mr. Metropolitan District-Surveyor Deering.

Subject:—Road at Hornsby, through W. Bellamy's (now Burns, Withers, and Smith's) 100 acres, and through Crown lands for sale.

(No. 125.)

Department of Lands, Sydney, 17 January, 1888.

1. In accordance with the request of the Under Secretary for Lands, the following *Précis* Report is submitted.

2. Tracing herewith in illustration.

3. In 1884 certain surveys of old grant boundaries disclosed strong evidence that a strip of Crown land existed along the north boundary of Bellamy's 100-acre grant (Aln. 84-4,045).

4. It was proposed to utilize this strip of land for the purpose of a road; but, after further inspection by an officer of Public Works Department, a better road was found a quarter of a mile further to the south, and where a bridge over the railway had already been erected. This bridge was in the best possible position to connect the main Peat's Ferry Road and Hornsby Station with the Crown land to the eastward, about to be subdivided for sale at public auction (Roads 86-236-1).

5. All that was required was that the owners of Bellamy's 100 acres should consent to the road being taken through that land. The owners did consent upon the condition that "the new line is surveyed and cleared for traffic in a reasonable time, and that the Government relinquish all claim in respect of the former line" of proposed road (Roads 1886-236-3).

6. The dedication of the road was soon afterwards signed by the owners without any proviso as to clearing being inserted (Roads 1886-236-7), and on 19th August, 1887, dedication was officially published in the *Government Gazette*.

7. Early in 1877 the Crown land coloured green upon enclosed tracing, was subdivided for sale at public auction (Aln. 87-4,039), and upon receipt of the plan lithos. were forwarded by me to the Under Secretary for Lands, suggesting that the leading roads through the surveyed, but not sold Crown lands, should be cleared and grubbed whilst a part of the unemployed were in the locality (5th May, 1887; Misc. 87-5,757). This suggestion received Ministerial approval on the same date and paper, and the Casual Labour Board were requested to carry out the work, and to continue the clearing of the road bounding the Crown lands through to the Eastern Road (Misc. 87-5,757), in order to afford access to the Crown lands for sale, and in accordance with previous similar action at the Field of Mars, at Como, at Heathcote, at Dobroyd, at Gordon, and at Peakhurst, George's River. It also became necessary to clear and form the surveyed and proclaimed road through Bellamy's 100 acres in order to give good access to the Crown lands for sale, from the Hornsby Railway Station, and as was done at the Field of Mars, in connection with adjoining roads. The only roads authorized as requested, to be cleared, &c., by any officer of the Department of Lands, were those referred to, viz. :—The roads through the public estate about to be sold, including the road from the Hornsby Railway Station, through and along Crown lands to the Eastern or Vanceville Road.

8. After perusing an article in a newspaper called the *Sunday Times*, of 8th January, 1888, and which is both malicious and untrue, it is only just and right to state that, whilst the clearing operations were under consideration or proceeding, not the slightest communication was received by me from Messrs. Burns, Withers, and Smith. The work was initiated solely by myself, and solely in the interest of the Crown, who alone I serve. I neither knew of, nor cared about, the lands of Burns, Withers, and Smith. At the present time I have no knowledge of any of the properties of that firm beyond the "Hornsby Junction Estate" (in a different direction to these roads cleared) and Bellamy's 100 acres, and which I only learned was their property by reason of the negotiation for the survey and opening of the road first referred to.

My only aim was to improve the Crown lands for sale, and obtain a better return for the public revenue, and the properties of Messrs. Burns, Withers, and Smith are matters of indifference to me, and never for one moment became an element of consideration; nor would any consideration for any person or persons existing, of any class or degree whatsoever, induce me to depart an iota from my public duty to the Crown.

JOHN W. DEERING,
Metropolitan and Coast District Surveyor.

The Under Secretary for Lands.

Sir,

"Adare Villa," North Shore, 28 January, 1888.

Acting in accordance with your verbal request, I proceeded to Gordon and Hornsby and inspected roads cleared and formed by the "unemployed," and have the honor to report as follows:—

- 1st. The road marked A was recommended by the Roads Department some years ago, and the clearing of it was commenced by the unemployed, during Mr. Deering's régime. This is the main road of access from the Peat's Ferry Road to the Crown lands, easterly.
- 2nd. The road marked G, called Junction Road, runs from the railway line easterly to Vanceville Road, passing through slightly undulating country, and crosses the heads of creeks and gullies which present very precipitous banks after running to Boundary Road (Government).
- 3rd. The roads marked B, C, D, E, F, are all practicable and fairly level.
- 4th. The roads H and I are also good and practicable.
- 5th. The other roads in the Vanceville Estate were cleared some years ago.

Boundary Road, being intersected by several rough creeks and gullies, from which the banks rise precipitously on either side, it was considered advisable to clear and form Junction Road, as the main road of access from the Hornsby Station, both from a pecuniary as well as an engineering point of view. The owners of part of the property, Messrs. Burns, Withers, and Smith, then dedicated to the Crown the roads B, C, D, E, and F, as roads of access from the main road (Junction Road) to the Crown lands between the various gullies.

The access to the Lane Cove Road was next completed by the clearing of roads H and I, and also a continuation of the Vanceville Road, southerly, to meet the part already cleared, and formed some years ago, from the Lane Cove Road to Billyard-street. The works carried out on roads coloured red on tracing are for the most part through private lands (various owners), but when it is pointed out that the Crown lands, tinted blue, were totally inaccessible, the opening of the various roads will prove an invaluable boon in the alienation of the Crown lands.

Previous to the unemployed works, some three years ago, I had the honor to recommend to the then Metropolitan District Surveyor, Mr. F. B. Woolrych, the opening of the roads from the various corners of the Vanceville Estate to the Boundary Road, which forms the boundary between the alienated and Crown lands, and the recommendations would most certainly have been carried out had not the Casual Labour Board accepted the roads of access given by the various owners.

In conclusion, I may state that the road formation and clearing is of a reproductive and useful nature, taking into consideration the large area of Crown lands on the north, and its proximity to both railway lines, as well as such main roads as the Lane Cove, Peat's Ferry, and Pennant Hills.

In summarising: The constructing Boundary-street being impossible, Junction Road made in lieu. B, C, D, E, F cleared to give access to Crown lands. H, I, J, cleared and formed to give access from Crown lands by way of B, C, D, E, F, to Lane Cove, Peat's Ferry, and Pennant Hills Roads.

I have, &c.,

W. M. GORDON,
Government Surveyor.

The Hon. John Davies, C.M.G., M.L.C.,
Chairman, Casual Labour Board, Sydney.

I HAVE examined the locality of Hornsby, and the roads works done by the Department and the unemployed.

The roads from the main or Junction Road to the Peat's Ferry Road have been cleared at private cost by the owners of land on either side.

The

The Boundary Road, which has been cleared to show more definitely the Crown lands, is impracticable unless at a large outlay, and has no direct access to the station, as private property intervenes. This Boundary Road, crossing the gullies low down, has undulations which can only be made passable at great cost, and even then with very steep grades and extensive bridges over the gullies which intersect it.

To obviate this, on the representations of the officer of the Survey Department, Junction-street was made the main road to those back lands from the station; the owners of the lands, Messrs. Burns, Withers, and Smith, having given five roads of access, which have all been cleared so as to give access to eligible points for the continuation of roads at summits of ranges through the expanse of Crown lands to Cowan Creek. By this arrangement the public estate is decidedly benefited, as easy roads with practicable grades are obtained to this Crown land, and direct access given to the station without necessity for passing through other private property.

The Vanceville Road, joining this Junction Road, was made by the Department two years ago as far as Billyard Road or Street, and was recently extended by the unemployed to afford direct access by one of the short branch roads to the Crown lands from the Lane Cove Road and the Gordon Railway Station. One of the other two cross roads recently cleared was to give direct access from the church and junction of the Lane Cove Road and Peat's Ferry Road, Pearce's Corner, to the Crown lands. The other intermediate road gives access from Lane Cove Road, half-way between Gordon and Hornsby, to the land in question. All will be ultimately required, and will enhance the value of the Crown land beyond by rendering it easy of access, and have been located in the best positions and defined by clearing, instead of their selection in the future being hampered by sale of allotments through which it might be necessary to force the roads at considerable cost for compensation and fencing.

If it had been possible to exercise this provision and precaution in other cases, miles of bad road, large outlay for works and compensation, would have been saved, and larger revenue from land sales would have been secured.

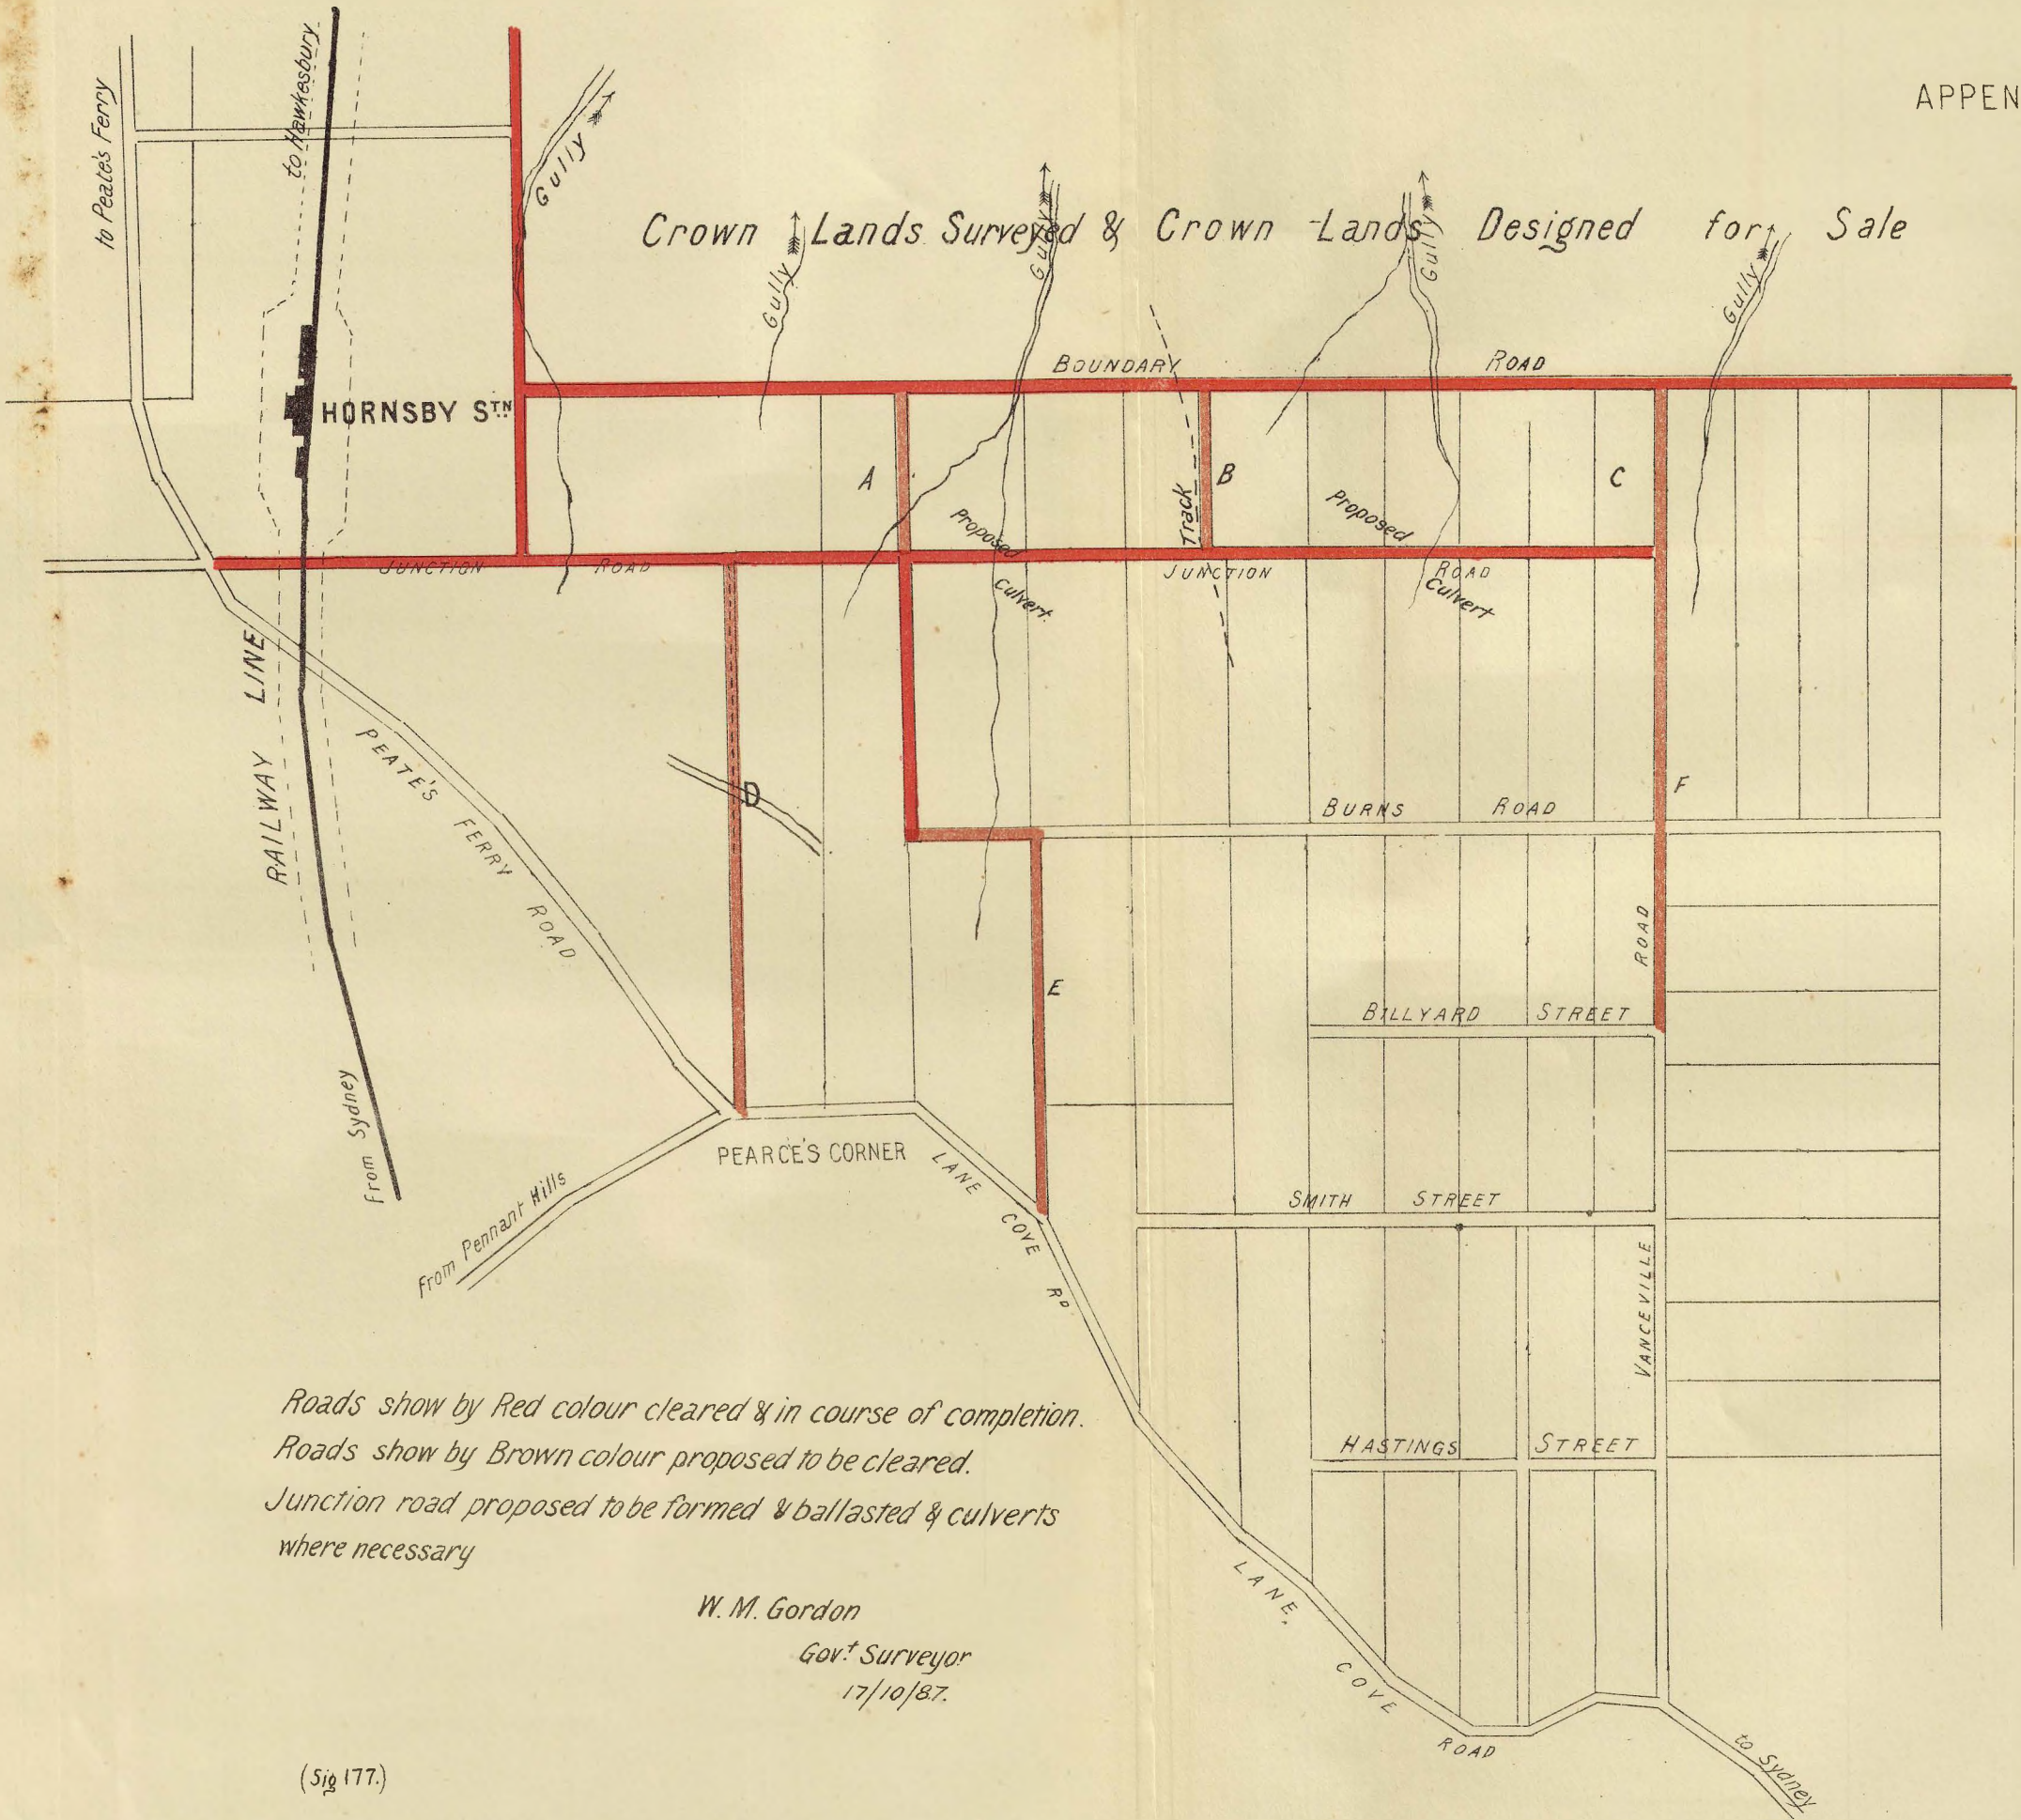

Had this land been reserved Crown land not to be sold, all the roads would have been desirable in the interests of the Crown lands beyond, and I fail to see why the possession of the property in question by private individuals should be a bar to necessary improvements because they incidentally enhance its value.

WILLIAM C. BENNETT.

LEGISLATIVE ASSEMBLY,
NEW SOUTH WALES.

CROWN LANDS.

(CORRESPONDENCE, &c., RESPECTING ROADS THROUGH—AT HORNSBY.)

Ordered by the Legislative Assembly to be printed, 14 November, 1888.

Minute by Mr. Metropolitan District-Surveyor Deering,

Subject:—Clearing, forming, and metalling of roads at Hornsby.

In reply to the personal inquiry of the Under Secretary for Lands, I beg to state that the only road I have any knowledge of, as having been cleared and formed, is that leading from the Peat's Ferry Road through Bellamy's grant, now Burns & Co.'s land, and across the bridge over the railway, into the Crown land recently sold in part, and marked "A" on lithograph herewith.

The roads to the south of the Crown land were cleared, formed, and metalled, by direction of the Casual Labour Board, I have been informed.

JOHN W. DEERING.

The Under Secretary for Lands.

Immediate.—The enclosed is all the information available in this Department as to the roads at Hornsby cleared by the unemployed.—S.F., B.C., 13/11/88. The Under Secretary for Finance and Trade.

Minute by Mr. Metropolitan District-Surveyor Deering.

Subject:—Road at Hornsby, through W. Bellamy's (now Burns, Withers, and Smith's) 100 acres, and through Crown lands for sale.

(No. 125.)

Department of Lands, Sydney, 17 January, 1888.

1. In accordance with the request of the Under Secretary for Lands, the following *Précis* Report is submitted.

2. Tracing herewith in illustration.*

3. In 1884 certain surveys of old grant boundaries disclosed strong evidence that a strip of Crown land existed along the north boundary of Bellamy's 100-acre grant (Aln. 84-4,045).

4. It was proposed to utilize this strip of land for the purpose of a road; but, after further inspection by an officer of Public Works Department, a better road was found a quarter of a mile further to the south, and where a bridge over the railway had already been erected. This bridge was in the best possible position to connect the main Peat's Ferry Road and Hornsby Station with the Crown land to the eastward, about to be subdivided for sale at public auction (Roads 86-236-1).

5. All that was required was that the owners of Bellamy's 100 acres should consent to the road being taken through that land. The owners did consent upon the condition that "the new line is surveyed and cleared for traffic in a reasonable time, and that the Government relinquish all claim in respect of the former line" of proposed road (Roads 1886-236-3).

6. The dedication of the road was soon afterwards signed by the owners without any proviso as to clearing being inserted (Roads 1886-236-7), and on 19th August, 1887, dedication was officially published in the *Government Gazette*.

7. Early in 1877 the Crown land coloured green upon enclosed tracing, was subdivided for sale at public auction (Aln. 87-4,039), and upon receipt of the plan, lithos. were forwarded by me to the Under Secretary for Lands, suggesting that the leading roads through the surveyed, but not sold Crown lands, should be cleared and grubbed whilst a part of the unemployed were in the locality (5th May, 1887; Misc. 87-5,757). This suggestion received Ministerial approval on the same date and paper, and the Casual Labour Board were requested to carry out the work, and to continue the clearing of the road bounding the Crown lands through to the Eastern Road (Misc. 87-5,757), in order to afford access to the Crown lands for sale, and in accordance with previous similar action at the Field of Mars, at Como, at Heathcote, at Dobroyd, at Gordon, and at Peakhurst, George's River. It also became necessary to clear and form the surveyed and proclaimed road through Bellamy's 100 acres in order to give good access to the Crown lands for sale, from the Hornsby Railway Station, and as was done at the Field of Mars, in connection

connection with adjoining roads. The only roads authorized as requested, to be cleared, &c., by any officer of the Department of Lands, were those referred to, viz. :—The roads through the public estate about to be sold, including the road from the Hornsby Railway Station, through and along Crown lands to the Eastern or Vanceville Road.

8. After perusing an article in a newspaper called the *Sunday Times*, of 8th January, 1888, and which is both malicious and untrue, it is only just and right to state that, whilst the clearing operations were under consideration or proceeding, not the slightest communication was received by me from Messrs. Burns, Withers, and Smith. The work was initiated solely by myself, and solely in the interest of the Crown, who alone I serve. I neither knew of, nor cared about, the lands of Burns, Withers, and Smith. At the present time I have no knowledge of any of the properties of that firm beyond the "Hornsby Junction Estate" (in a different direction to these roads cleared) and Bellamy's 100 acres, and which I only learned was their property by reason of the negotiation for the survey and opening of the road first referred to.

My only aim was to improve the Crown lands for sale, and obtain a better return for the public revenue, and the properties of Messrs. Burns, Withers, and Smith are matters of indifference to me, and never for one moment became an element of consideration; nor would any consideration for any person or persons existing, of any class or degree whatsoever, induce me to depart an iota from my public duty to the Crown.

JOHN W. DEERING,
Metropolitan and Coast District-Surveyor.

The Under Secretary for Lands.

Mr. Government-Surveyor Gordon to The Chairman, Casual Labour Board.

Sir,

"Adare Villa," North Shore, 28 January, 1888.

Acting in accordance with your verbal request, I proceeded to Gordon and Hornsby and inspected roads cleared and formed by the "unemployed," and have the honor to report as follows:—

- 1st. The road marked A was recommended by the Roads Department some years ago, and the clearing of it was commenced by the unemployed, during Mr. Deering's régime. This is the main road of access from the Peat's Ferry Road to the Crown lands, easterly.
- 2nd. The road marked G, called Junction Road, runs from the railway line easterly to Vanceville Road, passing through slightly undulating country, and crosses the heads of creeks and gullies which present very precipitous banks after running to Boundary Road (Government).
- 3rd. The roads marked B, C, D, E, F, are all practicable and fairly level.
- 4th. The roads H and I are also good and practicable.
- 5th. The other roads in the Vanceville Estate were cleared some years ago.

Boundary Road, being intersected by several rough creeks and gullies, from which the banks rise precipitously on either side, it was considered advisable to clear and form Junction Road, as the main road of access from the Hornsby Station, both from a pecuniary as well as an engineering point of view. The owners of part of the property, Messrs. Burns, Withers, and Smith, then dedicated to the Crown the roads B, C, D, E, and F, as roads of access from the main road (Junction Road) to the Crown lands between the various gullies.

The access to the Lane Cove Road was next completed by the clearing of roads H and I, and also a continuation of the Vanceville Road, southerly, to meet the part already cleared, and formed some years ago, from the Lane Cove Road to Billyard-street. The works carried out on roads coloured red on tracing are for the most part through private lands (various owners), but when it is pointed out that the Crown lands, tinted blue, were totally inaccessible, the opening of the various roads will prove an invaluable boon in the alienation of the Crown lands.

Previous to the unemployed works, some three years ago, I had the honor to recommend to the then Metropolitan District-Surveyor, Mr. F. B. Woolrych, the opening of the roads from the various corners of the Vanceville Estate to the Boundary Road, which forms the boundary between the alienated and Crown lands, and the recommendations would most certainly have been carried out had not the Casual Labour Board accepted the roads of access given by the various owners.

In conclusion, I may state that the road formation and clearing is of a reproductive and useful nature, taking into consideration the large area of Crown lands on the north, and its proximity to both railway lines, as well as such main roads as the Lane Cove, Peat's Ferry, and Pennant Hills.

In summarising: The constructing Boundary-street being impossible, Junction Road made in lieu. B, C, D, E, F cleared to give access to Crown lands. H, I, J, cleared and formed to give access from Crown lands by way of B, C, D, E, F, to Lane Cove, Peat's Ferry, and Pennant Hills Roads.

I have, &c.,

W. M. GORDON,
Government Surveyor.

Minute by The Engineer-in-Chief.

I HAVE examined the locality of Hornsby, and the roads works done by the Department and the unemployed.

The roads from the main or Junction Road to the Peat's Ferry Road have been cleared at private cost by the owners of land on either side.

The Boundary Road, which has been cleared to show more definitely the Crown lands, is impracticable unless at a large outlay, and has no direct access to the station, as private property intervenes. This Boundary Road, crossing the gullies low down, has undulations which can only be made passable at great cost, and even then with very steep grades and extensive bridges over the gullies which intersect it.

To obviate this, on the representations of the officer of the Survey Department, Junction-street was made the main road to those back lands from the station; the owners of the lands, Messrs. Burns, Withers, and Smith, having given five roads of access, which have all been cleared so as to give access to eligible points for the continuation of roads at summits of ranges through the expanse of Crown lands to Cowan Creek. By this arrangement the public estate is decidedly benefited, as easy roads with practicable grades are obtained to this Crown land, and direct access given to the station without necessity for passing through other private property.

The

The Vanceville Road, joining this Junction Road, was made by the Department two years ago as far as Billyard Road or Street, and was recently extended by the unemployed to afford direct access by one of the short branch roads to the Crown lands from the Lane Cove Road and the Gordon Railway Station. One of the other two cross roads recently cleared was to give direct access from the church and junction of the Lane Cove Road and Peat's Ferry Road, Pearce's Corner, to the Crown lands. The other intermediate road gives access from Lane Cove Road, half-way between Gordon and Hornsby, to the land in question. All will be ultimately required, and will enhance the value of the Crown land beyond by rendering it easy of access, and have been located in the best positions and defined by clearing, instead of their selection in the future being hampered by sale of allotments through which it might be necessary to force the roads at considerable cost for compensation and fencing.

If it had been possible to exercise this provision and precaution in other cases, miles of bad road, large outlay for works and compensation, would have been saved, and larger revenue from land sales would have been secured.

Had this land been reserved Crown land not to be sold, all the roads would have been desirable in the interests of the Crown lands beyond, and I fail to see why the possession of the property in question by private individuals should be a bar to necessary improvements because they incidentally enhance its value.

WILLIAM C. BENNETT.

8 February, 1888.

Minute by H. Copeland, Esq.

EXTRACT from a general minute of Mr. Secretary Copeland upon the subject of auction sales of Crown lands during 1887.

THE unsold portions at Harbord, Heathcote, and Field of Mars, also the subdivision near the Como Station, may be advertised for sale at some one of the auction rooms in the city, the particular auctioneer to be forthwith decided on.

Sales at Beecroft, Stockton, Wilberforce, Katoomba, parish of Gordon, and other places where the subdivisions are ready, should be brought forward as quickly as possible, to be sold on the ground. Auctioneers, in these cases, can be appointed later on. In many cases town and suburban lands have been offered at country towns; but it is thought the upset price, having been fixed too high, has precluded sales taking place. These lands should again be brought forward at a reduced upset.

3 January, 1887.

HENRY COPELAND.

Generally I concur with Mr. Copeland's minute. I desire, if action has not been taken to carry it out already, that such action may be taken with as least delay as possible under the circumstances.—T.G., 26/2/87.

Minute by Mr. Metropolitan District-Surveyor Deering.

14 June, 1887.

Clearing of Roads through Crown lands now being subdivided at Hornsby.

THE enclosed paper refers to the clearing of roads at Hornsby, as above; and concerning which Mr. Surveyor King has already received verbal instructions by me.

It is very desirable that advantage should be taken of the "unemployed" being in the locality to mark out the leading roads through the Crown land, so that the work of clearing and grubbing may be carried out by that class of labour, to the advantage of Government, as being reproductive work. The Casual Labour Board has promised me (by Mr. Davies) to do this work, if the various lines of road are marked upon the ground.

JOHN W. DEERING,

Mr. Surveyor W. L. King.

Metropolitan District-Surveyor.

J. W. Deering, Esq., Metropolitan District-Surveyor,—Plan transmitted with my letter No. 87-6 of 26th August. The whole of the roads to the south of the creek are either cleared or being cleared by the unemployed, who are now on the ground.—WILLIAM L. KING, Temporary Surveyor, 29 August, 1887.

Minute by The Secretary for Lands.

CONTINUATION of road through Crown lands at Hornsby of the road recently cleared through Burns and Withers' land at Hornsby. I should like to know whether it would be advisable to continue above road through the Crown lands adjoining, and to what point.

T.G., 5/5/87.

Mr. District-Surveyor Deering.—C.O., 5/5/87. Mr. O'Donnell, Field of Mars,—To continue clearing of road through to the Eastern Road. Mr. Palmer has already received verbal instructions.—J. W. DEERING, 10 May, 1887. To be returned on completion of work. Road named herein now completed.—F.O.D., 21/5/87. Transmitted to Mr. Surveyor King with my instructions 1451 of this date.—JOHN W. DEERING, 14 June, 1887. Returned to the Metropolitan District-Surveyor.—WILLIAM L. KING, Temporary Surveyor, 29 August, 1887.

Memo. by Mr. Metropolitan District-Surveyor Deering.

THE intention in clearing the Public Road through Bellamy's grant was to open up a main road to the Hornsby Station from the Crown lands. The road through the latter has not yet been laid out; but when such is done and the surrounding Crown lands are subdivided, it will be most advisable to have the continuation of the above road cleared; and, in fact, to have all the roads cleared prior to sale. The road was cleared, not because it was through Bellamy's land (which I have heard is the property of Burns, Withers, and Co.), but because it is the leading road to the Railway Station.

5 May, 1887.

J. W. DEERING.

Submitted.—C.O., 5/5/87. This matter must be kept in view when subdivision is being made if it would not be a better course to have the road marked out and cleared before subdivision.—T.G., 5/5/87.

Mr. District-Surveyor Deering.—C.O., 5/5/87.

Mr.

Mr. Temporary-Surveyor W. L. King to Mr. Metropolitan District-Surveyor Deering.

Minto, 26 August, 1887.

Transmitting plan of portions numbered 178 to 232, in the parish of South Colah, county of Cumberland, measured for sale.

Sir,

In accordance with your verbal instructions, I have the honor to transmit herewith plan of 55 portions numbered 178 to 232, in the parish of South Colah, county of Cumberland, measured for sale.

2. Portions 230, 231, and 232, should be withheld from sale until access is provided. The only practicable access is through S. W. Gray's grant, the property of the Hornsby Land Company.

3. The northern boundary of Hyndes' 2,000 acres has been marked in accordance with the decision on Aln. 86-4,128 returned with my letter No. 87-9 of this date.

4. The eastern boundary of Bellamy's grants I have made parallel to the western boundary in accordance with Mr. Surveyor S. E. Perdriau's reports, *vide* your instructions No. 87-1887 of 2nd August, returned with my letter 87-9 of this date.

5. I made a very careful search for the south-east and north-east corners of S. W. Gray's 57 acres 2 roods 16 perches, but was unsuccessful; they are shown on the original as broad-arrows. I found a peg at the north-east corner of W. B. Stokes' grant, and the north-western corner is well established. I have, therefore, made the east and south boundaries of Gray's and Stokes' grants equal and parallel to the north and west boundaries. I found several old marked trees very close to the lines as now marked.

I have, &c.,

WILLIAM L. KING,
Temporary Surveyor.

Plan herewith, C, 1,176-2,030, executed and chartered.—C. S. SPENCER, 12 January, 1888. Plan approved.—WILLIAM FREEMAN, for Metropolitan District-Surveyor, 13 March, 1888. J.W.D.

Memo. from Mr. District-Surveyor Deering to Mr. Government Surveyor King.

5 September, 1887.

Plan of portions 178 to 232, parish of South Colah, county Cumberland.

In Mr. King's plan of above surveyed lands for sale, it is to be regretted that he did not show the position of the Railway and the Hornsby Station.

All such advantageous conditions, as showing to the public the special value of the lands offered for sale, should be set forth upon the plan, as would be done in the case of a private estate for sale.

JOHN W. DEERING,
Metropolitan District-Surveyor.

When making this plan I contemplated extending the plan to show the Railway Station, &c., but on the large scale to which the plan is drawn it would have made the paper so much wider than was necessary that I concluded the case would be better met by a "local sketch," which could be made on the sale plan. I was under the impression that this was the usual course, unless a railway or road adjoined. In future I shall attend to this instruction.—WILLIAM L. KING, Temporary Surveyor, 10 September, 1887. J. W. Deering, Esq., Metropolitan District-Surveyor. It would very little have increased size of the plan to have shown the railway. However, a local sketch on sale plan now.—J.W.D., 15/9/87.

Memo. from Mr. District-Surveyor Deering to Mr. Taylor.

5 September, 1887.

WHEN plan of portions 178 to 232, parish of South Colah, county of Cumberland (which has this day been forwarded to the Government Printer) reaches you, will you be good enough to communicate with this office before drawing it on to stone, so that arrangements may be made for showing the railway line, which at present is not shown on plan.

H. SELKIRK,
(For the District Surveyor.)

Mr. Selkirk,—The best plan will be to make the additions on the proof copy now forwarded to the Metropolitan District-Surveyor, and it can be drawn on the stone at the same time, with any other necessary alterations or additions after the examination of the proof has been completed.—J. TAYLOR, 22 Sept., 1887.

The Chief Draftsman.—H.S., 22 Sept., 1887. I am afraid sufficient space has not been left to the west on the stone. It would have been better if Mr. Taylor had sent for you before transferring to the stone.—W.F., 22 Sept., 1887.

Memo. from Mr. District-Surveyor Deering to Mr. Surveyor King.

21 December, 1887.

Mr. KING is requested to forward his field notes of the survey of portions 178 to 232, parish of South Colah, county of Cumberland. Plan transmitted with letter, No. 87-6, of 26th August.

JOHN W. DEERING.

This book will be in constant use next week in connection with survey of roads through Gray's grant. I will transmit the book with plan of roads as soon as possible.—WILLIAM L. KING, Surveyor, 23 December, 1887.

Memo.

Memo. by Mr. Metropolitan District-Surveyor Deering to The Under Secretary for Lands.

Hornsby (Parramatta), 16 July, 1888.

Auction sale, portions 178 to 232, parish of South Colah, county of Cumberland.

THE portions of land above referred to, and situated about 1 mile easterly from Hornsby Railway Station, which is the junction of the Great Northern Railway line and the railway line from Pearce's Corner to St. Leonards, are distant about 21 miles from Sydney and about 10½ miles north-westerly from St. Leonards, have now been marked upon the ground, and it is proposed to submit them for sale by auction at the upset prices shown upon enclosed lithograph.

JOHN W. DEERING,
Metropolitan District Surveyor.

The area for sale is about 232 acres. On the 13th instant I again examined the whole of it. The land has been under-scrubbed and the roads cleared and formed. Culverts have been erected where necessary. The estate now presents an attractive appearance. On the north side of Hornsby Creek the land is rocky and steep, but on the south side the area mostly consists of a broad plateau of admirable orchard soil, and only lightly timbered. I do not recommend any higher upset prices than those given in red upon litho. herewith. At these upset prices the whole of the portions on south side of the creek should sell readily and at an advance. The land District is "Parramatta," but it is recommended that the estate should be sold upon the ground.—JOHN W. DEERING, 16th July, 1888. The Under Secretary for Lands.

The land may be offered for sale on the ground at the upset prices proposed. Terms, 25 per cent. cash, 25 per cent. in three months, 25 per cent. in nine months, 25 per cent. in twelve months.—C.O., 23/7/88.

Approved.—H.P., 25/7/88. Mr. District-Surveyor Deering.—E.C.M. (*pro* R.H.D.), 25/7/88. Sale on the ground, at Hornsby, on Saturday, 29th September, 1888, at 3 p.m. Country lots, portions 178 to 232. Sale litho. and papers herewith.—JOHN W. DEERING, Metropolitan District Surveyor. No. 2,142. The Under Secretary for Lands. Aln. 88-4,813.

Terms of sale:—25 per cent., cash deposit; 25 per cent., one year; 25 per cent., two years; 25 per cent., three years, *vide* Aln. 88-5,264.—E.C.M.

Minute by the Secretary for Lands.

Crown Lands, near Hornsby Railway Station, county of Cumberland—Report* of Messrs. Richardson and Wrench, 10 September, 1888.

So far as the Hornsby sale is concerned, the only objection stated in this report is that the upset prices are too high. I am of opinion that this question should be tested at auction.

The land should be fully advertised for a month previous to sale.

J.N.B., 13/9/88.

* Report not herewith; it was sent to the Colonial Secretary.—R.H.D., 14/9/88.

Sale of 29th September to be postponed till Saturday, 27th October, 1888.—By order, R.H. DELOW, 14 Sept., 1888. Notify postponement in Gazettes of Tuesday, 18th, and Friday, 21st. Same already notified in *Herald* and *Telegraph*.—R.H.D., 14/9/88; C.W.C. (*pro* R.H.D.), 14/9/88. Notices of postponement to Government Printer, and sale schedules noted, 15/9/88. Sale postponed to 27th October, 1888. Mr. Dis.-Sur. Deering.—R.H.D. (for the U.S.), 17/9/88. To note and for sale—note.

J. F. Burns, Esq., to The Under Secretary for Lands.

Sir,

75, Elizabeth-street, Sydney, 16 November, 1886.

With reference to my letter of 8th July, 1885, addressed to the Surveyor-General, and to your communication to me of the 29th August following, numbered 85-1,615, I beg now to state, for your information, that as it appears the Government would much prefer a direct road from Peat's Ferry Road across the railway bridge at Hornsby—through the lands of Burns, Withers, and Smith, to the Crown lands adjoining—in lieu of the road we first mutually agreed upon, Burns, Withers, and Smith are prepared to assent to the proposed change, provided that the new line is surveyed and cleared for traffic in a reasonable time, and that the Government relinquish all claim in respect of the former line.

I am, &c.,

J. F. BURNS.

Mr. J. W. Deering, in connection with previous papers in the case referring to instructions 86-57 and 86-100.—A.J. STOPPS (for Sur.-General), 24 Nov., 1886. J. W. Deering Esq., Metropolitan Dist. Surv. *Vide* instructions on paper S.-G.O., 1886, 236-1 herewith.—JOHN W. DEERING, 26 Nov., 1886.

Petition.

Re Noxious Trades Site and road thereto.

Sydney, June, 1887.

WE have the honor to respectfully request that a survey may be at once made for a Railway from the Illawarra line to proposed site for Noxious Trades, viz., the Government Reserve of 1,640 acres at Kurnell, recently cleared by the unemployed, and that as soon as the route is determined upon, some of the unemployed labour may be immediately utilized in clearing and stumping the track.

The subject of setting apart this site has for years been before Parliament and the public, as set forth in your Botany address, published in the *Herald* of 5th February last, which we read with great interest, as inspiring a hope that the completion of this important work would not be much longer delayed.

The "Noxious Trades Site Bill" was passed by the Legislative Assembly last Session, but nothing has been done beyond clearing the site.

The delay in utilizing this site has caused capital, energy, and enterprise to become idle, and numbers of men to be thrown into the already numerous numbers of the "unemployed."

The employers who continue working do so only at the risk of being prosecuted, imprisoned, and ruined, for creating nuisances in the eye of the law.

Under these conditions their appliances are imperfect, causing a great waste of valuable material, which is a national loss.

This has long been a question of pressing urgency, and delay only intensifies the necessity for settlement.

In the present depressed state of the labor market it is surely not wise to have more men in this way thrown out of work by the closing of these factories through having no place to remove to.

The utilization of this site, which has been chosen and approved by the manufacturers themselves, will cause the expenditure of large private capital in erecting and working the new and extensive factories, which manufacturers are only waiting to bring into existence as soon as the site is ready.

We respectfully submit that the present is a favourable opportunity for carrying on this highly reproductive work at an economical cost, and at the same time finding employment for the surplus labour of the community.

V. Parkes, Esq., M.P., to The Chairman, Casual Labour Board.

Re Petition for Roads off Illawarra Road.

Sir,

Will you kindly give attention to this Petition, because the work cannot be performed unless the sanction of your Board is obtained.

I wish you would give it all the consideration you can, and if possible recommend.

VARNEY PARKES.

6 July, 1887.

C.

Petition.

Re Illawarra Road.

Chairman, Casual Labour Board,

Sydney, 7 July, 1888.

We have the honor to call your attention to the fact that the main Illawarra Road, from the George's River Ferry to the National Park, is in a very unsatisfactory state. It was a good deal cut up by the traffic of the Easter encampment; the heavy rains following it have still further damaged it.

It is a Government road, 2 chains wide, but it is cleared only 12 feet or so in some places, and the running room is confined to that space, making it unsafe to travel on. This being the only drive to the park, and the main road to the south coast, it is much used.

We have to respectfully request that your Board may be good enough to have it aligned by the Government surveyors, and then allow some of the unemployed to clear and stump it for its full width of 2 chains, and to properly form the road for (say) $\frac{1}{2}$ chain.

This would be a great public convenience, and would be a most useful and permanent work on which to utilize some of the surplus labour.

D.

Petition.

Re Malvern and Sylvania Roads.

Chairman, Casual Labour Board,—

19 August, 1887.

We have the honor to request that your Board may have the goodness to grant the use of some of the men under your charge to clear, stump, and form Malvern Road from Illawarra Road, and also the road known as Sylvania Road, which leaves the main Illawarra Road at a point about a mile from the punt, and runs in a straight line southerly to the north-west arm of Port Hacking, viz., to Yowie Bay and to Yowie Head.

These are the nearest landing places for visitors returning from the park by water and thence by road to Sydney. His Excellency the Governor and party, the trustees, and many visitors return to Sydney this way.

They are public roads, but as they have not been properly cleared and formed, the greater part of them cannot be used, and a long detour between the punt and the park is thus necessitated.

We respectfully urge that the making of these additional highways to the Park would be a useful and permanent work and a great public convenience, and we earnestly hope your Board will see fit to have it carried out.

E.

J. H. Carruthers, Esq., M.P., to The Colonial Secretary.

Re Road, Sylvania to Port Hacking.

C.L. Bd.,
 87-944,
 10 September.

Sir,

16 September, 1887.

I beg to request that you will be pleased to give the necessary authority to the Casual Labor Board to put a number of men to work on the Sylvania Road, Port Hacking. This is the only road for the residents of Port Hacking, Kurnell, and the south shores of Botany to Sydney; it is about four (4) miles in length, and portion of it is uncleared and totally unmade.

There is a considerable traffic on it, and the persons using it complain bitterly of the present unformed state. The landowners and residents recently subscribed £100 towards its improvement, and the representative of the Hon. T. Holt gave the necessary land to make the road more convenient to the travellers. The clearing and formation of the road will be a very great boon to the residents, and will enable them to obtain their goods and convey their produce with more ease than before, whilst it will open up the locality to the Sydney public.

J. H. CARRUTHERS.

As, these are, I am informed, public roads, the Casual Labor Board might be instructed to place the men on them.—C.W., 6/9/87. Yes.—H.P., 6/9/87. Chairman, Casual Labor Board, 7 September, 1887. The Chairman, Casual Labor Board.—I have examined the road to Port Hacking mentioned by Mr. Carruthers, M.P., and think it most desirable to put men on at once to do the work. Men could be sent from the Main Illawarra Road to do the work as they complete what they are now at, besides sending a few from the Park.—E. W. BURROWES, Superintendent, 15/9/87.

E 2.

Sir Geo. Long Innes and Mr. Myles M'Rae to The Colonial Secretary.

Re Road Como.

Sir,

15 September, 1887.

At a Government land sale in March last we bought various allotments of Government land at Como, George's River. The auctioneer stated when putting the lots up that the Government reserve would be improved by the Government, and that the road leading to the punt would be made accessible. Nothing has yet been done in fulfilment of those promises.

May we suggest that some of the unemployed hands from the National Park may be put on to the reserve at Como and the Punt Road, to carry out the promise made by the Government auctioneer.

J. GEO. LONG INNES
 MYLES M'RAE.

Submitted

Submitted for approval.—C.W., 22/9/87. Approved.—H.P., 23/9/87.
 The Chairman Casual Labour Board,—Some little time ago I explored a road leading to the land referred to, passing through Crown lands, which I intended to ask your permission to clear; this can now be done, as the main road is cleared to the turning off point. It will materially enhance the value of property at Como, giving carriage by land access.—E. W. BURROWES, 2/11/87.

F. Petition.

Re roads branching from main Illawarra Road.

Chairman Casual Labour Board,— 22 September, 1887.

The plan adopted by your Board of employing the surplus labour in opening up new roads and thus making useful and permanent improvements is regarded by the public with general satisfaction and approval.

We have now the honor to respectfully request that your Board may be good enough to have the undermentioned roads cleared and stumped to their full width and properly formed with water-tables, &c., fit for vehicular traffic for (say) 33 feet wide on each road, viz.:—Eton-street, Woronora, Cronulla, Lilli Pilli and Eurunga Roads, and the Boulevard.

Eton-street runs from the Illawarra Road to the park, and would be the best carriage entrance to the park, avoiding the crossing of the railway line in two places, which is rendered necessary by the present road.

Woronora road runs from Eton-street to Sylvania road, and would be the nearest way from the Railway or the Park to the deep waters of Port Hacking. We ask that this may be cut down and graded where necessary.

Cronulla road runs from Tyreal public road to Cronulla Beach.

Lilli Pilli road runs from Tyreal road to east head of Yowie Bay.

Eurunga road runs from Lilli Pilli road to east side of Yowie Bay.

The Boulevard leads from a large tract of country to the Railway line, where a platform is to be erected, and it will open up the large Government reserve of which it is the boundary.

These are all public roads which will lead to the Park and bring a great increase of traffic to the Railways.

G. Petition.

87/1003.

Re Illawarra Road, from George's River to National Park.

To Casual Labour Board,—

We have to thank your Board for the very useful and permanent improvement which you have effected by the clearing of the Illawarra Road, between George's River and National Park.

In order, however, that the public may avail themselves of the full advantages of this grand highway to the Park, we have to respectfully request that your Board may have the road completed and made fit for carriages and light vehicle traffic to the Park by immediately carrying out the works suggested below:—

To burn off clean the whole of the logs, stumps, and parts of trees left within 10 ft. of the sides of the road.

To form ballast and blind the road, commencing at the end near the railway station, where the surface is clay, and the road very bad.

To put on fifty men used to stone-work at Kangaroo Hill, and fifty men at Sylvania Hill, on this road to cut down the former hill 10 feet and the latter 5 feet in the deepest part. The work in both cases to be first properly designed and graded.

The material from these cuttings to be used for ballasting the other portions of the road.

The junction of Venetia-street with the Illawarra Road, near Kangaroo Hill, to be suitably graded.

Venetia-street and Sylvania Road to be cut down where necessary and graded. On the short piece of road between the goods shed and the gate house at Sutherland a few stumps have been left. These should be taken out to the full width of the road, and the road blinded so that vehicles may be able to run on the metalled portions.

The adoption of these suggestions would render the road to the park one of the most attractive drives out of Sydney, and a credit to your Board. We therefore hope you may approve of the works being carried out.

H.

J. H. Carruthers, Esq., M.P., to The Chairman, Casual Labour Board.

Re Port Hacking Road.

Sir,

9 September, 1887.

I presume you have already received the necessary authority to proceed with the work of the Port Hacking Road. I enclose a plan showing the position of the road from A to B and C to D; Appendix B. it is 100 feet wide, and I will get a strip for the rest of the way from the Holt-Sutherland Estate Company to make it 100 feet wide—in fact, I have the manager's consent already. The road wants to be cleared the full 100 feet in width, and tabled and formed about 30 feet. There is plenty of ballast available, and good gravel.

I should recommend that the men be set to work (in sectional work) as follows:—

1. Where the road is already cleared 33 feet wide, piece-work—so much per chain for formation, ballasting, and gravel. The distance to be done is about $1\frac{1}{2}$ mile, and it is ready for working on at once.
2. Where the road is totally uncleared piece-work clearing and stumping 100 feet wide; formation, 30 feet in centre; distance, about 1 mile.
3. Clearing and stumping, 33 feet on either side where track is already cleared on E side only.
4. Gravel and ballast, according to grades, from C to D.
5. Large culvert near Holt's fence and small one about midway.

I will meet your overseer with a surveyor to go over the road, and I would recommend that Mr. Knibbs, of the Survey Department, who surveyed the road, be asked to accompany us.

J. H. CARRUTHERS.

For report.—J.D., Chairman, 14/9/87. See recommendation on letter 87/944 attached.—
E.W.B., 18/9/87.

I.

J. H. Carruthers, Esq., M.P., to The Chairman, Casual Labour Board.

Re Port Hacking Road.

Sir,

I hope that you will see that there is no undue delay in the work being carried out on the Port Hacking Road, inasmuch that it is perfectly impassable at present. I have heard from several gentlemen that some unauthorized person is interfering with Mr. Burrowes and the unemployed, and is ordering them not to work on roads as authorized. I trust you will see that no one is allowed to interfere with the men in these cases. I have not heard from you as to this road at all, and trust you will put the men on at once.

J. H. CARRUTHERS.

J.

Mr. J. Murphy to The Chairman, Casual Labour Board.

Road George's River to Port Hacking.

Sir,

5 October, 1887.

I address you at the instance of Mr. Carruthers, M.P., whose letter I herewith enclose. He has requested me to forward on his behalf, for your information, the following particulars on the subject:—

The road is 150 links wide from Gawley's Creek, eastward; but Mr. Knibbs, the Government surveyor, has marked it (from the Illawarra Road) 1 chain wide only. The extra half chain should in some parts be added to the south and west sides of Mr. Knibbs' pegs, and in others on the north and east sides of them. Hoping this information may be of some use to you.

J. MURPHY.

[Enclosure.]

Letter from Mr. Carruthers, M.P.

Sir,

I understand that the unemployed are clearing the Port Hacking Road 1 chain wide. I understood from you that it was to be 99 feet wide in the greater part. I think you should write to Mr. Davies, and inform him the road ought to be cleared the full length.

30 September, 1887. To J. Murphy, Esq.

J. H. CARRUTHERS.

For information. J.D., Chairman, 18/10/1887. B.C., Mr. Burrowes.

J. H. Carruthers, Esq., M.P., to The Chairman, Casual Labour Board.

Re Port Hacking Road.

Sir,

11 November, 1887.

I wish you would instruct Mr. Burrowes, or the chief man of the unemployed on the Port Hacking Road, to set some of the men to work on the very bad portion near Mr. Holt's fence. There will be great traffic there at Christmas, and the road is something terrible for about one mile, all sand and stumpholes; all that is required is the tabling and gravelling with one large culvert and a few side drains. I am sure if you ask Mr. Burrowes to set at it at once he can have it all nicely finished in about three weeks.

J. H. CARRUTHERS.

Mr. Burrowes,—To be done at once.—J.D., Chairman, B.C., 12 Nov., 1887. Mr. Frazer to lay out road at once and measure for culvert.—E.W.B., 16/11/87. To be done by Mr. Buller's men.—
E.W.B., 19/11/87.

K.

K.

W. L. Davis, Esq., M.P., to The Principal Under Secretary.

Re having Gannon's Road cleared and formed.

Sir,

Sydney, 23 January, 1888.

I have the honor to request that you will permit the gang of unemployed now at work on the road to Port Hacking from the Holt-Sutherland Estate to be put on to clear and form the Government Road, about 1 mile in length, running from aforesaid road to another point of the said river, as shown on plan forwarded in my letter* of 16th instant, before being removed from the locality.

I have, &c.,

W. LOVEL DAVIS.

Refer to Casual Labour Board.—C.W., B.C., 23/1/88. Recommended for approval, having a large number of men working in the vicinity.—J. DAVIES, Chairman, B.C., 9/2/88. Principal Under Secretary. For approval.—C.W., 20/2/88. Approved.—H.P., 20/2/88.

* The letter referred to cannot be traced as having been received at the Colonial Secretary's office.

L.

Petition

Re various roads branching from the Illawarra Road and Illawarra Railway Line.

The Chairman, Casual Labour Board,—

10 May, 1888.

We have the honor to respectfully request that your Board may be good enough to clear and stump, and gravel where necessary, the undermentioned roads in the County of Cumberland.

The opening of these roads would be a great public convenience; would provide useful and reproductive work for some of the men under your control; give access to the main roads and railway stations of the district; and would increase settlement, communication, and traffic, and become feeders which would greatly swell the earnings of the railway.

We understand that a quarry of superior road metal has been found on Government Reserve, Sutherland, and we respectfully suggest that profitable employment can be found for a large number of your men in breaking this stone for use on the railways and public roads.

The following are the roads referred to:—Kurrajong, Bittogi, Yanda, Yallaroi, Bath, Holt, Crystal, Box, the Boulevard, Yarra, Burrawong, Illeroo, Burraneer, Woolaware, Wotonga, Kanura, Willaree Cowarra, Orara, Karimbla, Canoona, Montrose, Glenwood Roads.

F. Farrell, M.P.,

G. Roberts.

Recommended for the approval of the Colonial Secretary.—J.D., Chairman. B.C., Principal Under Secretary, 15/5/88. Submitted for approval.—C.W., 18/5/88. Approved.—H.P., 21/5/88.

M.

Mr. Superintendent Burrowes to The Chairman, Casual Labour Board.

Report *re* public roads that pass through the Holt-Sutherland Estate.

Sir,

12 November, 1888.

In compliance with your request to report upon these various roads, cleared, formed, &c., under my immediate supervision, I have the honor to furnish you herewith, separate reports upon each road.

No. 1.—Main Illawarra or Military Road.

This road, before I received authority, was very heavily timbered and dangerous in places, having only a single dray track denoting the road, since which time I have cleared it the full width and have nearly completed the formation throughout, and have placed several culverts where necessary. I commenced operations at the railway gates near Sutherland, and am finishing up at George's River Steam Ferry; this road is the main artery to Wollongong and Kiama District, and is very much used for heavy traffic.

No. 2.—Malvern Road.

This being a very necessary road, being a connecting link between the main *Illawarra Road* and the main *Port Hacking Road*, it has been cleared, formed, and heavily gravelled throughout and forms the principal outlet from the *Sutherland Railway Station*, and until *Woronora Road* is finished is the only exit.

No. 3.—Woronora Road.

This road is in a direct line from the *Sutherland Station Goods-shed*; thence crosses the main *Port Hacking Road*, and junctions with the *Cromella Road* which leads to the *Noxious Trades Site*, and which will be the *principal road* in the district; it has been formed $2\frac{1}{2}$ miles. *Dent's Creek* is spanned by a bridge, and various culverts have been erected; a bridge across every creek is in course of construction, which upon completion will be greatly used.

No. 4.—

No. 4.—Main Port Hacking Road.

Being a *main public thoroughfare*, I was directed to clear this road to its full width, after which I formed, bridged, and culverted, where and now this road is admitted to be one of the best in the district and is very much used by the inhabitants and excursionists, and will give access to a large portion of the district, which only recently was almost unknown.

No. 5.—Boulevard Road.

This road runs from the Illawarra line crossing the main *Illawarra Road*, and joins the *Port Hacking Road*. This road is the only access to a *Government reserve*, the *northern side of the road being the boundary line of the reserve*, which if subdivided and sold would return a very high figure; this road is only cleared.

No. 6.—Ewey Road.

Is only a short road diverging from the Woronora Road, and leads to the first available deepwater at Port Hacking, which is a great boon to the residents in the district, as likewise to those who visit this neighbourhood for fishing; it has been formed and cleared.

No. 7.—Coronulla Road.

This in my opinion is one of the most important roads in the district, as it leads directly to the *Coronulla Beach* and also to a *large Government reserve* at the *northern entrance to Port Hacking, which is required for fortification purposes*, and will then make this road a great military one. It is likewise the direct road to the *Noxious Trades Site*. It has been cleared and formed, and is greatly used by the public in visiting one of the finest beaches on the eastern coast of Australia.

No. 8.—Station-street.

Extends from the main Illawarra Road to the railway station at Sutherland and the National Park eastern gates; is very much used in connection the railway goods-shed.

No. 9.—Sylvannia Road.

Extends from the main Illawarra Road to the north-west arm of Port Hacking; will be an important thoroughfare, as it opens up the Government reserve at Huntsman's Hill.

E. M. BURROWES,
Superintendent.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

THE COLONY OF AUSTRALIA.

(CORRESPONDENCE RESPECTING A BILL TO CONFER ON THE COLONY OF NEW SOUTH WALES
THE NAME OF AUSTRALIA.)

Ordered by the Legislative Assembly to be printed, 15 January, 1889.

Telegram from the Honorable Duncan Gillies, M.P., Victoria, to The Colonial
Secretary, New South Wales.

Melbourne, 30 November, 1887.

In the name of Australia. The Governments of Queensland, South Australia, and Victoria have observed from the public Press that it is proposed to change the name of New South Wales into that of "Australia." Although they have not received any communication from the Government of New South Wales upon the subject, they feel it due to that Colony to notify before it is formally committed to the proposal the strong public feeling of their respective Colonies on the question. The Governments associated in this memorandum fully recognise the right of New South Wales to adopt any designation which may be available without infringing existing rights. But the name proposed to be taken is the name of the entire Continent, and as such it is the common property of all the continental Colonies, and the Governments of those Colonies now beg to represent to that of New South Wales, in the most friendly spirit, that the appropriation of the name of "Australia" by any individual Colony is a measure to which the others cannot consent. First, the name is one which belongs to all Australia and all Australians. Second, whether the idea be to abandon the name of Australia as that of the continent, or to continue it as such, and to have two Australias, one within the other, either change would lead to very great confusion. If the former, a new name would be required to designate the continent, the name of which would be changed practically for the third time in a hundred years. If the latter, regrettable complications must ensue from the existence of two Australias. In postal and telegraph business, in commerce and in law, in social as well as public affairs in connection with statistics and public documents, innumerable complications and even losses may be easily foreseen. Third, the possession of one common name by these Colonies is certainly a very real bond of union. To interfere with that name runs counter to the federal spirit which all the Colonies profess to cherish, and tends directly against the cordial and friendly feeling between them. Fourth, there are historical considerations which all point to the same conclusion that the name "Australia" has never been applied either in legal documents or by popular usage to New South Wales. At the time when New South Wales was first colonised the continent was known, and is referred to in the Orders in Council and Imperial Statutes, as New Holland. New South Wales never possessed any jurisdiction over any part of the continent by whatever name was known beyond the 141st meridian of longitude. The name Australia has uniformly been applied in legal documents and by popular usage to the whole of the continent, and the name "Australian" to the different colonies that occupy it. A prospect of losing their national and historical name cannot be treated merely as a matter of sentiment by the Colonies interested. To conclude, it is observed from the newspaper reports that it was assumed by the Government of New South Wales that the other Colonies would not object. As, however, it is now officially announced to New South Wales that the sister Colonies do seriously and strongly deprecate the proposal, it is hoped that New South Wales will, in deference to their sentiments, frankly and promptly abandon all attempt to interfere with the name of Australia. For and on behalf of the Governments of Queensland, South Australia, and Victoria.

D. GILLIES.

Telegram from The Colonial Secretary, New South Wales, to The Honorable Duncan Gillies, M.P., Victoria.

Sydney, 1 December, 1887.

HAVE received telegram of three colonies respecting name "Australia." Owing to extreme pressure of business cannot possibly reply to-day.

Telegram from The Colonial Secretary to The Agent-General.

Sydney, 2 December, 1887.

A PRESS Telegram states that Sir Graham Berry has waited upon Secretary of State to protest, on behalf of Victoria, against the action of this Colony in change of name. You will be good enough to see Secretary of State, and represent that this Government regards this proceeding as premature, uncalled for, and calculated to disturb the cordial relations between the two Colonies.

The Colonial Secretary, New South Wales, to The Honorable Duncan Gillies, M.P., Victoria.

Sir,

Colonial Secretary's Office, Sydney, 5 December, 1887.

I have the honor to acknowledge the receipt, late on the evening of the 30th ultimo, of your telegraphic "Memorandum," transmitted in the names of the Governments of Queensland, South Australia, and Victoria, with reference to the Bill before Parliament to adopt the name of "Australia" as the name of this Colony. I am informed from other sources that before sending this "Memorandum" to me you had instructed your Agent-General to lodge with the Secretary of State what is called a "Protest" against our Parliamentary action; and I learn that your "Memorandum," now under notice, was hurriedly handed to the public press on the following day, without affording sufficient time for it to be considered by this Government. As your apparent object of immediate publicity was already secured, it did not appear to me that there was any necessity for an immediate reply to your message, in the presence of much more important matters requiring my attention.

2. Having pointed out these peculiar features of your mode of "friendly" intercourse, I will proceed to offer some comments on the substance of your extraordinary communication. In the first place I observe with a becoming sense of gratitude that you "recognise the right of this Colony to adopt any designation" so long as the new name does not interfere with your notions of existing rights. The Colony of New South Wales has under that name a noble record of services to the cause of English settlement in Australia, extending over a hundred years; and in the view of this Government it cannot from a sense of patriotism adopt any new name whatever, such as a young Colony, one of its offshoots, might with propriety adopt. Long before Victoria was ever dreamt of, the struggle for British liberty for ourselves and the later born Colonies was fought out here by a band of gifted men, all belonging to the parent Colony, with William Charles Wentworth and John Dunmore Lang at their head. But our services to the cause of colonization in your part of the Australian world have not been less conspicuous and valuable. For more than sixty years every acre of land of what is now known as Victoria was within the limits of New South Wales, and under the jurisdiction of this Government. You are in error in supposing that our jurisdiction was confined within the 141st meridian of longitude. By Governor Phillip's Commission, issued in 1787, the territory of this Colony is described as "extending from the Northern Cape, or the extremity of the coast called Cape York, in the latitude of 10 degrees 37 minutes south, to the southern extremity of the said territory of New South Wales, or South Cape, in the latitude of 43 degrees 39 minutes south, and of all the country inland to the westward as far as the 135th degree of east longitude, reckoning from the meridian of Greenwich, including all the islands adjacent in the Pacific Ocean within the latitudes aforesaid." The district where Melbourne now stands became known as Bear-Grass, Batmania, and by other rather uncouth names. About fifty years ago Governor Sir Richard Bourke caused it to be selected as a suitable site for a new town, and under the personal inspection of that Governor, aided by the Surveyor-General of the day, Sir Thomas Mitchell, your city was surveyed and laid out, receiving from our hands the name of the Prime Minister of England. So that Melbourne owes its site, its design, including its wide streets, and its very existence to the Government of New South Wales. In like manner the Government of this Colony, under the personal inspection of Sir George Gipps, aided by the Surveyor-General, Sir Thomas Mitchell, selected the site of, laid out, and named the present city of Brisbane: every acre of what is now known as Queensland was within the limits of this Colony, and both Melbourne and Brisbane were large and prosperous towns of New South Wales for many years before the two new Colonies were created. This Colony also contained the richest part of South Australia. The country west of the 135th degree of longitude was for many years designated New Holland, and was destitute of settlement. I attach hereto a map showing the authorised divisions of the country.

3. During the greater part of this long period the name of "Australia" was specially applied to the country which remains under the jurisdiction of this Government. In connection with his important surveys and explorations in 1801-1803, Captain Flinders, one of the early Australian benefactors, suggested the application of the name "Australia" to New South Wales. From that time forward the name has been interchangeably employed with the name of New South Wales, both in designating the territory and the inhabitants of this Colony. While the people of the new Colonies on the north and on the south have rejoiced in calling themselves "Queenslanders" and "Victorians," the people of the parent Colony have clung from the first with justifiable pride to the designation of "Australians." The name has been used with us in "social as well as public affairs," in "connection with statistics and public documents," and in "popular usage;" and men amongst us who have no superiors in experience, weight, and authority, maintain our historic right to the name.

4. You will observe that no question of a new name for this Colony is raised. We are proud, and may well be proud, of the name of New South Wales, under which we have done so much towards building up a free nation within our own limits, so much for the benefit of the young Colonies on the north and south of us, and so much for the civilized world. Even the condition of earliest settlement which was inflicted upon the embryo Australian commonwealth by the policy of the British Government afforded so many examples of heroic trial and sacrifice for the public good, so many brave and enlightened efforts to collect the means of implanting and supporting civilized life, where all around the struggling pioneers was wild and desolate, that the highest moral sense may find grounds for just pride in the retrospect. Certainly all the other Colonies owe some of their greatest advantages to the achievements of those early days. You will observe further that we do not seek to deprive the Continent of the name "Australia," but we merely propose to legally designate ourselves the Colony of Australia as the first in the group of Australian Colonies or States, and as the Colony which exclusively enjoyed that name in "popular usage" for many years. Any postal or telegraphic confusion that could arise, for which you express so much concern, could only affect ourselves, and with us it awakens but little apprehension. It could not affect the Colonies which have deliberately chosen the distinctive designations of "Queensland" and "Victoria."

5. You must permit me in conclusion to say that, with the sincerest desire to be on good terms with all our neighbours, this Government fails to appreciate the "friendly" attitude you have assumed in this matter. Considering the professed cordiality of your relations to this Colony, and the frank and ungrudging manner in which we at the present time are supporting you in your Exhibition, you might at least have done us the slight favour of communicating with us before resorting to outside assistance. We are not disposed to accept the substitution of pressure for courtesy. We can excuse your hastening to the Secretary of State for support when we recollect that on one occasion the Government of Victoria set so high a value upon its charter of self-government that it appealed to the Secretary of State for protection against the Constitutional action of one of its own Houses of Parliament. But we can see no occasion for your hasty, and, we think, unreasonable proceedings, however associated you may be with the other Colonies, in endeavouring to overbear the views of this Government of its duty to advance the interests of New South Wales.

I have, &c.,

HENRY PARKES.

Telegram from The Agent-General, London, to The Colonial Secretary,
New South Wales.

London, 5 December, 1887.

HAD an interview with Secretary of State for the Colonies, and delivered your message respecting name of Colony.

Telegram from the Honorable Duncan Gillies, M.P., Victoria, to The Colonial
Secretary, New South Wales.

Melbourne, 5 December, 1887.

Re the name "Australia," I have received a telegram from the Government of Western Australia expressing its concurrence in the views of the other Colonies respecting the name of Australia. I have also received a letter from the Government of Tasmania indicating that it also is in accordance with the Continental Colonies in the matter. A copy of this will be forwarded to you.

D. GILLIES.

Seen.—H.P., 6/12/87.

The Honorable Duncan Gillies, M.P., Victoria, to The Colonial Secretary,
New South Wales.

Sir,

Premier's Office, Melbourne, 6 December, 1887.

With reference to my telegram of yesterday's date, I have the honor to forward herewith a copy of the letter which I have received from the Honorable the Premier of Tasmania, on the subject of the proposed change of the name of New South Wales to "Australia." Dated 2 Dec

I have, &c.,

D. GILLIES,

Premier.

[Enclosure.]

Sir,

Premier's Office, Hobart, 2 December, 1887.

In reference to the action of the Government of New South Wales respecting the change of the name of that Colony to Australia, I have the honor to inform you that the proposal has been received with expressions of very grave disapprobation from all classes of the Tasmanian public.

This Government have not thought it necessary to communicate with Sir Henry Parkes on the subject, but should the Governments of the Colonies more immediately interested consider it advisable that a united protest from the Australian Colonies be addressed to Her Majesty's Government against the assumption of this collective title by any one Colony, I can assure you of the hearty support of the Government and people of Tasmania in urging that Imperial sanction be withheld from any measure which may be passed by the Legislature of New South Wales authorising the proposed change.

I have, &c.,

P. O. FYSH.

The Honorable the Premier, Victoria.

Telegram

Telegram from The Honorable Duncan Gillies, M.P., Victoria, to The Colonial Secretary, New South Wales.

Melbourne, 6 December, 1887.

Your letter of 5th *re* name of Australia received. I will immediately communicate it to the other Governments concerned.

D. GILLIES.

The Colonial Secretary, New South Wales, to The Agent-General, London.

Sir,

Colonial Secretary's Office, Sydney, 6 December, 1887.

I have the honor to enclose six copies of the Colony of Australia Bill now before the Parliament of this Colony, and also six copies of correspondence between the Premier of Victoria and this Government on the subject of that Bill.

You will be good enough on an early date after receipt to lay copies of this Bill and the correspondence relating to it before the Right Honourable the Secretary of State for the Colonies.

I have, &c.,

HENRY PARKES.

The Colonial Secretary, New South Wales, to The Colonial Secretary, Queensland.

Sir,

Colonial Secretary Office, Sydney, 7 December, 1887.

I have the honor to transmit, for the information of your Government, copies of a Bill that has recently been introduced into our Parliament for the purpose of conferring upon this Colony the name of "Australia," together with a copy of the correspondence on the subject, which has been laid before Parliament.

I have, &c.,

HENRY PARKES.

[Similar letters were addressed on same date to the Colonial Secretary, Western Australia, the Chief Secretary, South Australia, and the Honourable P. O. Fysh, M.L.C., Tasmania.]

The Honorable Duncan Gillies, M.P., Victoria, to The Colonial Secretary, New South Wales.

Sir,

Premier's Office, Melbourne, 10 December, 1887.

By my telegram of 6th December I acknowledged the receipt of your letter of the 5th instant, in which you replied to the joint communication of the other Australian Colonies on the subject of the proposed assumption by New South Wales of the name of Australia.

As there are some statements in your letter which have a personal reference to this Government, it appears to me desirable that I should very shortly refer to them, and but for the pressure of public business this would have been done earlier.

As to the statement that I instructed the Agent-General to lodge with the Secretary of State for the Colonies a protest against your Parliamentary action, it is quite a mistake.

When I became acquainted with your proposal, it brought to my recollection a similar one made by Sir Alfred Stephen in your Legislative Council in July last, which proposal was withdrawn, after a discussion in which every Member who spoke intimated his disapproval of the proposal, principally on the grounds that it would be strongly opposed by the other Colonies on this Continent. Under these circumstances I thought it not unlikely that, before submitting such a proposal to Parliament, you would have taken means to ascertain the views of the Imperial Government, whose ultimate sanction is necessary. I therefore requested the Agent-General to ascertain if this had been done. As this Government intended to act in concert with the other Colonies it would not have been consistent with that intention to have entered on its own account a protest at the Colonial Office.

Moreover, I had great faith that no such course would be necessary. I believed that, whatever little differences there may occasionally be amongst the Colonies, on questions such as this, there would be no serious difficulty in coming to an understanding amongst ourselves. It was wholly in that spirit that this Government took action.

There is evidently a misapprehension in your mind as to what you are pleased to call the hurried manner in which the memorandum was handed to the press. There was deep interest felt in all the Colonies on the subject, and frequent inquiries made as to what was being done. South Australia, therefore, asked me when it was proposed to publish the Memorandum, to which I replied that it could not be published until it reached your hands. It is difficult to keep from the public and from Parliament matters of deep public interest; and it certainly never suggested itself to me or others that the publication of the Memorandum—after it had reached your hands—would be considered by you an unfriendly act.

I very much regret that you should think that you have cause to complain of any unfriendly attitude assumed by this Government, or of any absence of real cordiality on our part. It has always been my desire and effort to cultivate the most friendly relations, and I have always been prepared to put aside any small or personal considerations I may have, to advance the common good.

It is true that we differ seriously as to this proposal you have submitted to your Parliament. We are of opinion that in a matter which we believe will seriously affect our interests we have a right to be consulted and to be heard. This was the view urged almost without exception by Members of your own Legislative Council not six months ago.

On ascertaining, therefore, that all the other Colonies held like views with us, it was thought the simplest and most effective course that united, instead of separate, representations should be made to you; and with every respect for your judgment, I fail to see how that course can be characterised as substituting pressure for courtesy.

I

I would fain hope that these explanations will remove from your mind any idea that, in the action of this Government, there was contemplated either dictation, or the slightest approach to discourtesy, and I can assure you that I should not for a moment hesitate to express my regrets did I think that you had just cause of complaint.

I have, &c.,

D. GILLIES,
Premier.

The Colonial Secretary, New South Wales, to The Honorable Duncan Gillies, M.P.,
Victoria.

Sir,

Colonial Secretary's Office, Sydney, 19 December, 1887.

I have the honor to acknowledge the receipt of your letter of the 10th inst., in reply to mine of the 5th, on the subject of the Bill introduced into Parliament to confer the name of "Australia" upon this Colony. I also have to acknowledge your letter of the 6th, covering copy of a letter from the Government of Tasmania, addressed to you on the same subject.

2. It affords me much gratification to acknowledge the frank and friendly spirit in which you explain the course you have felt it your duty to take in this matter, and I accept your explanations with a sincere desire to preserve the cordiality hitherto characterising the relations of the two Colonies. I fear, however, it will be hardly possible for me to sympathise with some of the views which you express on the larger questions brought under partial notice by this correspondence. It would never have occurred to me, with my interpretation of the spirit and letter of our constitution, to "take means to ascertain the views of the Imperial Government" on a matter which in no practical sense concerns Her Majesty's Imperial advisers. I cannot refrain from giving special notice to this point in our interchange of views in consequence of receiving from you a copy of the singular letter addressed to you by Mr. P. O. Fysh in the name of the Government of Tasmania. Mr. Fysh admits inferentially that Tasmania is *not* "immediately interested" in the matter on which, nevertheless, he virtually invites the other Australian Governments to enter into a hostile combination against this Colony by what he is pleased to call a "united protest to Her Majesty's Government." With every expression of loyalty, I must be permitted to intimate that the responsible Ministers in this Colony would be unable to recognize any justifiable ground for Her Majesty's Secretary of State to advise the withholding of the Royal Assent from any Act of the Parliament of New South Wales of the character of the one contemplated.

3. I must be permitted to express my extreme regret that a feeling should so readily exhibit itself among the other Colonies to join, without inquiry, or, as in the case of Tasmania, any sense of "immediate interest" in the particular question raised, to overbear the independent action of the Government and Parliament of New South Wales. Though I fully accept your present language as disclaiming any intention on your part to resort to "pressure," the conduct to which I call attention can hardly be characterized as anything other than an attempt at it. If this is to be understood as the manner in which we are to be invited to enter into federal relations, I fear this Colony must rest upon its own resources (which are ample for independent and progressive existence), and that the realization of any hope of concert with our sister Colonies is in the far future.

4. It will be best, for the sake of a clear understanding, that I should explain that the name of "Australia" has not arisen with this Government. We have merely yielded to urgent representations made to us by many men of long service and large influence to change the name of the Colony as one of the acts of centennial celebration, and by a less number of such men to select the name of "Australia." For the past ten years or more I have been appealed to many hundreds of times to change the name; but being myself content with the name of New South Wales, as I stated on the introduction of the present Bill, I have hitherto declined to take any step in the matter. Some months ago, before bringing the question before the Legislative Council himself, Sir Alfred Stephen urged me to take steps to assume the name of "Australia" for the Colony; and, in a letter addressed to me on the 29th ultimo, this eminent man maintains our title to the name in the following words:—"It never entered my head until the objection was started, that to adopt the name 'Australia,' simply and alone, would (or could reasonably) be regarded as an invasion of the right of any other portion of the Continent—or as an assumption in any way likely to offend our sister Colonies. And after hearing all that has subsequently been said on the subject, I am unable to think the objection a reasonable one. For admitting that Victoria and Queensland have always been included under the general geographical term of Australia, neither of those Colonies has ever been known by it—or has so called itself—any more than Tasmania has, although equally entitled. They have had specific names from their birth, and in manhood have adopted others equally removed from the original; New South Wales, on the contrary (including in common acceptation both those divisions, and legislatively in *fact* including them), has always been known as Australia, and you have asked only its perpetuation." In the cases of Victoria and Queensland, both, on their creation as separate Colonies, adopted names of purely Imperial significance derived from the same illustrious source, apparently without even a thought of any Australian interest or aspiration. But in the case of this Colony we have a goodly record of pioneer service, extending over a hundred years, and we cannot start afresh in the world with a new name. We must go on with one or other of the two names, "New South Wales" and "Australia," by which we have been familiarly known throughout our history. For myself I should resist to the utmost any attempt to attach a new name to the Colony.

5. When the present Bill was submitted I had never entertained a thought that it would be strongly opposed by a few persons. If I could have foreseen this opposition I should have declined to move, not on the merits of the question involved, but under a sense of obligation to devote the public time to other and more important business. The first reading of the Bill was, however, carried by 59 to 18 votes; in the presence of measures of much urgency demanding the attention of Parliament it is not likely to be further dealt with for some time to come.

6. You will observe from what I have said that the unexpected treatment this Bill has received outside the Colony has given birth to considerations which in our estimation far transcend in importance the character or objects of the measure itself.

I have, &c.,

HENRY PARKES.

1888.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

DIVORCE EXTENSION BILL.

(PETITION FROM W. M. COWPER, COMMISSARY FOR BISHOP OF SYDNEY, AGAINST.)

Received by the Legislative Assembly, 30 October, 1888.

To the Honorable the Legislative Assembly of the Colony of New South Wales in Parliament assembled. :

The Petition of the undersigned William Macquarie Cowper, M.A., Commissary of the Bishop of Sydney, with the advice of the Standing Committee of the Synod of the Church of England in the Diocese of Sydney, within the said Colony,—

HUMBLY SHOWETH :—

That your Petitioner is conscientiously opposed to the provisions of the Divorce Extension Bill now before your Honorable House :—

1. Because he believes that the proposed extension of the conditions of divorce is at variance with the Christian law as laid down in the New Testament.

2. Because he believes that it is likely to impair the sense of the sacredness of marriage and of the responsibility of entrance upon the married state, to introduce dangerous facilities for disruption of the marriage tie, and so to inflict a serious injury upon the domestic and social welfare of the whole community.

3. Because he considers that variation upon so important a matter from the law established in England and in other colonies of the British Empire is in itself undesirable, and is likely to introduce serious difficulties into family and social life.

Your Petitioner, therefore, earnestly prays that your Honorable House will be pleased to refuse your assent to the said Bill.

And your Petitioner, as in duty bound, will ever pray, &c.

WILLIAM M. COWPER,

With the advice and by the desire of the Standing Committee of the Synod.

1888.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

DIVORCE EXTENSION BILL.

(PETITION FROM CERTAIN MINISTERS OF RELIGION AGAINST.)

Received by the Legislative Assembly, 20 November, 1888.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The respectful Memorial of the undersigned Ministers of Religion of various religious denominations in this Colony,—

HUMBLY SHOWETH:—

That your Petitioners are much concerned to learn that the Bill intituled the “Divorce Extension Bill” has been again introduced into your Honorable House.

That your Petitioners strongly object to the provisions of the said Bill by which divorce is facilitated, and especially to that which provides for the remarriage of the persons divorced—the guilty as well as the innocent.

That your Petitioners feel the greatest repugnance to this provision, inasmuch as it gives to those who have been guilty of the greatest cruelty and sin opportunity to repeat their offences on fresh victims of their licentiousness.

That your Petitioners, accepting the solemn declaration of our Lord Jesus Christ, that “Whosoever marrieth her that is put away committeth adultery,” as the law of the Christian Church, are of opinion that any legislation which provides for the remarriage of one who is put away affords a direct sanction to sin, and is opposed to the Divine law in the Seventh Commandment.

Your Petitioners therefore pray your Honorable House to withhold your assent from the aforesaid Bill.

And your Petitioners, as in duty bound, will ever pray, &c.

[*Here follow 174 signatures.*]

1888.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

DIVORCE EXTENSION BILL.

(PETITION FROM MODERATOR OF SYNOD OF PRESBYTERIAN CHURCH AGAINST.)

Received by the Legislative Assembly, 20 November, 1888.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The respectful Memorial of the Synod of the Presbyterian Church of Eastern Australia, in this Colony,—

HUMBLY SHOWETH:—

That your Petitioners regard with much concern the reintroduction into your Honorable House of the Bill intituled the Divorce Extension Bill.

That your Petitioners believe that the facilities for obtaining divorce, already legalised, cannot be further increased or extended, save in direct opposition to the word and will of Christ, who, as "Governor among the Nations," claims the homage and allegiance of all rulers and legislators.

That your Petitioners believe that the inevitable tendency of affording increased facilities for dissolving the marriage tie will be as it has always been, to create and foster loose views and practice as to the sacredness of marriage vows and the purity of family life.

That your Petitioners regard the principles on which the passing of the said Bill is advocated as devoid of finality, and are of opinion that should the said Bill become law its adoption would pave the way for further demands in the direction of increasing the facilities for obtaining divorce.

That your Petitioners strongly object to the provision in the said Bill which allows the remarriage of persons divorced, the guilty as well as the innocent, as being in direct opposition to the explicit declaration of the Divine law-giver, that "whosoever marrieth her that is put away committeth adultery," and also to the spirit of the Seventh Commandment.

That your Petitioners therefore pray your Honorable House to withhold your assent from the aforesaid Bill.

And your Petitioners, as in duty bound, will ever pray, &c., &c.

Signed in name of and by authority of the Synod of the Presbyterian Church of Eastern Australia, in New South Wales.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ELECTRIC LIGHT APPARATUS PURCHASED BY GOVERNMENT.
(RETURN SHOWING.)

Ordered by the Legislative Assembly to be printed, 21 November, 1888.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 10th February, 1888, That there be laid upon the Table of this House,—

“ A Return of all electric light apparatus purchased by the Government
“ on the recommendation of the Superintendent of Telegraphs or any
“ other person, giving the dates on which purchased, the time of delivery,
“ the names of the makers of the dynamos and lamps and other plant
“ connected therewith, the names of the persons supplying the same, and
“ the authority under which each plant was purchased, the use to which it
“ was intended to be put when recommended, the use actually made of it,
“ its present condition and position, stating whether in actual use or
“ merely stored.”

(Mr. Wall.)

RETURN of all Electric Light Apparatus purchased by the Government.

| Apparatus purchased | On whose recommendation. | Date of purchase | Date of delivery. | Names of makers of dynamos, &c. | Names of persons supplying same. | Authority under which purchased. | Use to which intended to be put when recommended. | Use actually made of apparatus. | Present condition and position. | Whether in actual use, or merely stored. |
|--|--|------------------------|--|---------------------------------|---|-------------------------------------|---|--|---|---|
| 1 Wylde dynamo, with spare armature. 1 Foucault Dubovgs lamp | So many years have elapsed since this machine was purchased that it has not been possible to obtain all the information in regard to it without delaying the completion of the Return still further. In cases where no special use is now set down it may be generally stated that some of the uses for which the apparatus has been obtained has been for experiment, for testing, and as a means for keeping the officials in touch with the progress being made in other parts of the world in this field of electrical research. | | | | | | Lighting at Exhibition, Prince Alfred Park. | Good condition | In store. | |
| horizontal Siemens dynamos 7 Siemens arc lamps 3 do do 4 field reflectors 2 holophotes | Handed over to the Telegraph Dept. by the Government after the Exhibition, 1879. | | Three shipments—May and August, 1878, March, 1879. | Siemens Bros. | Siemens Bros, London. | | For lighting the Exhibition of 1879 during its erection. | Were used during the building of the Sydney International Exhibition, 1879; also for the Volunteer encampments to 1883 | As it has not been found necessary to use them since 1883, no tests have been made as to their condition; lamps and reflectors in good order | Stored in cases in electric light store since handed over after completion of Exhibition. |
| 1 6-light Brush dynamo 7 Brush lamps 300 yards cable 1,000 carbons | Supt of Telegraphs | Ordered, 23 July, 1881 | Delivered, 14 April, 1882 | Brush Manufacturing Co. | Anglo-American Electric Light Co, London. | Postmaster-General. | Not stated in recommendation | For temporary installations, encampments of military forces, Exhibition, Jubilee and Centennial celebrations, &c. | In good condition | Stored. |
| 1 Siemens compound dynamo 2 sets brushes 2 lubricators 2 Siemens alternators 2 small exciters 4 large do 3 holophotes and lamps complete 1 large holophote 2 Brush dynamo, 16 lights each 84 Brush lamps and cable | | Ordered, 30 Dec., 1882 | 14 May, 1883 | Siemens Bros & Co, Ld., London. | Siemens Bros. & Co., Ld., London | Colonial Secretary. | For military work at the encampments of the Forces, &c. | As stated in previous column. | Good condition | In store. |
| 1 Edison dynamo, 60 lights each Cable and fittings for 300 lights 260 incandescent lamps | Supt of Telegraphs | Ordered, Aug., 1883. | Handed over, Oct., 1883. | Edison Co. | Australasian Electric Light Power and Storage Co. | Colonial Treasurer | For lighting Circular Quay | For lighting Circular Quay | Fixed at Circular Quay; good order and condition. | In use. |
| 1 Edison dynamo, 60 lights 1 Weston dynamo, 5 lights 5 arc lamps 19 globes 1,000 carbons 60 incandescent lamps | do | Ordered, Aug., 1883. | Handed over, Oct., 1883. | Edison Co. | H. H. Kingsbury & Co. | The Cabinet, Sir A Stuart, Premier. | For lighting the Legislative Assembly and Council Chambers and offices. | As stated in previous column. | In good condition | do |
| 1 Edison dynamo, 60 lights 1 Weston dynamo, 5 lights 5 arc lamps 19 globes 1,000 carbons 60 incandescent lamps | Supt. of Telegraphs, 21 Jan., 1882. | 31 Jan., 1882 | 27 Feb., 1884 | Edison Co & Weston Co. | do do | Postmaster-General, 25 Jan., 1882 | For lighting front and side of General Post Office. | For internal lighting of General Post Office. | do | do |
| 1 Gulcher dynamo 8 lamps, 4 sets brushes 9 switches, 3 miles cable 500 Siemens cored carbons 250 Siemens solid do 5 large Gramme dynamos 5 small do 2 sets brushes for each 2 animeters 2 speedometers 12 Frye man arc lamps 1,000 feet cored carbons 1,000 solid carbons 3 miles cable | Supt. of Telegraphs | 4 July, 1884 | 22 July, 1884 | Gulcher Co. | New South Wales Electric Light Co., Geo. Hardie, Secretary. | Postmaster-General, 4 July, 1884. | For lighting the arcades of General Post Office. | For Centennial illuminations, military encampment at Middle Head, for working the Mangin projector (large search light). Portion of cable has been used for Jenolan Caves electric lights; also for electric light in George-street, near railway station. | In good condition with exception of animeters, which have been fused, and are useless Now being fixed for lighting new operating room, G.P.O | The dynamos, &c. with portion of cable are in store. |
| 1 Edison machine, 60 lights | | | 14 Sept., 1884 | Edison Co. | H. H. Kingsbury | | For lighting the railway station at Albury. | | Machine is in good condition, portion of it (the armature) is in use at Parliament House. | In store. |
| 1 Edison dynamo, 25 lights 100 lamps, 16-c p, cleats, blocks, and plugs 1 mile cable, 1 mile connecting wire 150 sockets for lamps | Supt. of Telegraphs | 16 Jan., 1885 | 19 June, 1885 | do | do do | Minister for Mines, 31 Dec., 1884 | For lighting the Jenolan Caves. | Lighting caves | Good condition | In use. |

RETURN of all Electric Light Apparatus—continued.

| Apparatus purchased | On whose recommendation | Date of purchase | Date of delivery | Names of makers of dynamos, &c | Names of persons supplying same | Authority under which purchased | Use to which intended to be put when recommended | Use actually made of apparatus | Present condition and position | Whether in actual use, or merely stored |
|---|---------------------------|-----------------------------|--|--|---|---------------------------------|--|---|--|---|
| 1 Victoria Brush dynamo 4 Cardew arc lamps 1 magnin projector 1 hand lamp 2 Volt meters 6 reflectors 1 drum cable 150 carbons 1 Elwell Parker dynamo and spare armature 104 E P storage cells 1 petroleum engine, Spiels patent | Supt of Telegraphs do | 23 Aug, 1886 1 May, 1885 | 15 July, 1885 18 to 20 May, 1887 | Brush Manufacturing Co Halleische Maschinenfabrik und Eisengieserei | Messrs Elwell Parker & Co, Ltd, Wolverhampton | Postmaster General do | For military search lighting, and incandescent lighting, has been used at encampments for both purposes also for charging accumulators for lighting magazines For extending the lighting of G P O the engine is to drive dynamo for charging the accumulators | As stated in previous column Charging cells at the General Post Office | In good condition, except globes for lamps, which were broken in transit from England Good condition engine and portion of cells is at the Melbourne Exhibition | In store Engine and portion of cells being at Exhibition, is not in actual use |
| 1 Edison dynamo, 60 lights | | | 31 Mar, 1886 | | H H Kingsbury | | For emergencies | For lighting Parliament Houses | Good condition | In use |
| 13 Brockie Pell arc lamps 12 globes 1,000 carbons | Supt of Telegraphs | | One lamp received, 9 June, 1886, balance of lamps, &c, 24 to 29 July, 1886 | Edison Co | Johnson & Phillips, London | Postmaster General, 9 Feb, 1886 | For lighting the arcade of General Post Office | The lamps were used for lighting the Engineering Association's Exhibition Jubilee and Centennial illuminations, State banquet Government House and grounds, and for several balls | In good condition, but can not be used for lighting G P O until the required motive power is provided | In store |
| 5,000 cored carbons 5,000 solid carbons 12 globes 1 Brush dynamo, No 7 11 Brush lamps, with necessary cable, &c | Supt of Telegraphs | Ordered, 16 July, 1886 | Handed over, 28 Oct, 1886 | Brush Manufacturing Co | Australasian Electric Light Power and Storage Co, Ltd, Sydney | Colonial Treasurer | For lighting Cowper Wharf, Woolloomooloo Bay | Lighting Cowper Wharf | In good order and fixed at Cowper Wharf | In use |
| 100 Electrical Power Storage Company's cells | | Ordered, 30 Dec, 1885 | Received, 25 Oct, 1885 | Electrical Power Storage Co, Ltd, London | Electrical Power Storage Co, Ltd, London | | For lighting Powder Magazines | As stated in previous column | Majority in good order at Middle Head Batteries | do |
| 1 Mackie Brockie arc lamp | Acting Supt of Telegraphs | 2 Oct, 1885 | 2 Oct, 1885 | Brockie Pell Co | Australasian Electric Light Power and Storage Co | Postmaster General | For lighting General Post Office | Has not been used | Good condition | In store |
| Electric light engine dynamo 3 lamps, carbons, &c | Inspector of Telegraphs | 16 Feb, 1888 | 16 Feb, 1888 | Excelsior Co | Anderson & Barr | Commissioner for Railways | For lighting the ferry boat "General Gordon" | As stated in the previous column | In good order | In use |
| 1 20 h p engine 1 Victoria Brush dynamo 350 lights 1 Brush dynamo, 6 lights 6 Brush lamps, incandescent lamps, &c | Acting Supt of Telegraphs | 2 and 3 June, 1885 | 2 and 3 June, 1885 | Rush & Proctor, Victoria Co, and Brush Manufacturing Co | Australasian Electric Light Power and Storage Co | Minister for Works | Lighting Randwick running sheds and yards | do do | In good condition | do |
| 2 250 light Edison dynamos 3 400 light do 1,500 Edison lamps | Commissioner for Railways | 1884 | 1885 | Edison Co | H H Kingsbury | do | For lighting the Eveleigh locomotive sheds | do do | 3 dynamos in good order, 2 fat order | In actual use |
| 4 50 light Weston arc machines 1 10 light do 30 single carbons, lamps, cable, &c | Supt of Telegraphs | 1883 | 1883 | Weston Electric Light Co | do | do | For lighting Redfern Station and yards | do do | Armature of 10 light machine and 11 lamps damaged, the remainder in good order | 4 machines and 19 lamps in use |
| 1 16 light Brush dynamo 17 double carbons lamps, with fittings complete 1 mile cable | Acting Supt of Telegraphs | April, 1885 | | Brush Manufacturing Co | Australasian Electric Light Power and Storage Co | do | For lighting Eveleigh yards | do do | Good order | In use |

NOTE—In addition to the apparatus above named, the Department has purchased cables, lamps, globes, carbons, &c, for use as required

E C CRACKNELL,
Superintendent of Telegraphs.

1888.

NEW SOUTH WALES.

EXEMPTION OF THE KINGDOM OF TONGA FROM THE
PROVISIONS OF THE "ARMS REGULATION OF 1884."

Presented to Parliament by Command.

The Treasury, New South Wales,
30th July, 1888.

His Excellency the Governor directs the publication for general information of the following letter, received from the High Commissioner, Western Pacific, enclosing a copy of a Regulation exempting the Kingdom of Tonga from the provisions of the "Arms Regulation of 1884."

J. F. BURNS.

High Commissioner's Office, Western Pacific,
Suva, Fiji, 20th June, 1888.

My Lord,

I have the honor to enclose herewith copies of a Regulation which I have passed exempting the Kingdom of Tonga from the provisions of the "Arms Regulation of 1884."

The object of the enclosed Regulation is to allow British subjects to share with persons of other nationalities the limited and legitimate trade permitted by a law recently enacted by the Tongan Government.

I have, &c.,

JOHN B. THURSTON.

His Excellency, The Right Honourable
Lord Carrington, G.C.M.G., &c., &c., &c.,
Governor of New South Wales.

No. 1 of 1888.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland Queen, Defender of the Faith, Empress of India, &c., &c.

A REGULATION

(Made in the name and on behalf of Her Britannic Majesty by Her Majesty's High Commissioner for the Western Pacific, under the provisions of the Western Pacific Order in Council of 1879)

TO AMEND REGULATION NO. 1 OF 1884, INTITULED "A REGULATION TO PROHIBIT THE SUPPLY OF ARMS AMMUNITION AND EXPLOSIVE SUBSTANCES TO NATIVES OF THE WESTERN PACIFIC ISLANDS."

[L.S.] JOHN B. THURSTON.

12th May, 1888.

WHEREAS by an Ordinance of His Majesty George Tubou, King of Tonga, dated the 28th day of May, 1887, provision is made for the restriction and regulation of the sale of Firearms and Ammunition in the Kingdom of Tonga; and whereas such Ordinance is sufficient to prevent any breach of the peace arising in Tonga from the sale of Arms and Ammunition; and whereas it is expedient to amend Regulation No. 1 of 1884 by exempting the Kingdom of Tonga from the operation of the said Regulation: Now, therefore, I, under the power and authority vested in me as Her Majesty's High Commissioner for the Western Pacific, revoke the said Regulation No. 1 of 1884 in so far as it extends to the said Kingdom of Tonga, and declare that the said Regulation shall be hereafter read as if the words "Friendly Islands" in the fourth subsection of section 1 did not appear therein.

This Regulation shall come into force on the first day of June, in the year of our Lord one thousand eight hundred and eighty-eight, and may be cited as "The Arms Regulation Amendment Regulation, 1888."

By Command,

WILFRED COLLET,
Secretary to the High Commissioner.

1888-9.

NEW SOUTH WALES.

FOREIGN DESERTERS ACT OF 1852.

(DESPATCHES RESPECTING.)

Presented to Parliament by Command.

The Treasury, New South Wales,
15th November, 1888.

His Excellency the Governor directs the publication, for general information, of the following Circular Despatch from the Secretary of State for the Colonies, transmitting a copy of an Order of Her Majesty in Council, dated the 29th day of December, 1887, extending the provisions of the "Foreign Deserters Act, 1852," to the Republic of Paraguay.

J. F. BURNS.

(Circular.)

Downing-street,
9th January, 1888.

Sir,

I have the honour to transmit to you, for publication in the Colony under your Government, a copy of an Order of Her Majesty in Council (29th December, 1887), extending the provisions of the "Foreign Deserters Act, 1852," to the Republic of Paraguay.

I have, &c.,
H. T. HOLLAND.

The Officer Administering the
Government of New South Wales.

At the Court at Osborne House, Isle of Wight, the 29th day
of December, 1837.

Present:

The Queen's Most Excellent Majesty in Council.

WHEREAS by the "Foreign Deserters Act, 1852," it is provided that whenever it is made to appear to Her Majesty that due facilities are or will be given for recovering and apprehending seamen who desert from British merchant ships in the territories of any foreign power, Her Majesty may, by Order in Council stating that such facilities are or will be given, declare that seamen, not being slaves, who desert from merchant ships belonging to a subject of such Power when within Her Majesty's dominions shall be liable to be apprehended and

carried on board their respective ships, and may limit the operation of such Order, and may render the operation thereof subject to such conditions and qualifications, if any, as may be deemed expedient:

And whereas it hath been made to appear to Her Majesty that due facilities for recovering and apprehending seamen who desert from British merchant ships in the territories of the Republic of Paraguay will be given under a Treaty between the Governments of Great Britain and Paraguay, signed at Assumption on the 16th October, 1884:

Now, therefore, Her Majesty, by virtue of the powers vested in Her by the said "Foreign Deserters Act, 1852," and by and with the advice of Her Privy Council, is pleased to order and declare, and it is hereby ordered and declared, that, from and after the publication hereof in the London Gazette, seamen, not being slaves and not being British subjects, who desert from merchant ships belonging to the Republic of Paraguay within Her Majesty's dominions shall be liable to be apprehended and carried on board their respective ships: Provided always, that if any such deserter has committed any crime in Her Majesty's dominions he may be detained until he has been tried by a competent Court, and until his sentence, if any, has been fully carried into effect.

And the Secretary of State for the Home Department, the Secretary of State for the Colonies, and the Secretary of State for India in Council are to give the necessary directions herein accordingly.

C. L. PEEL.

The Treasury, New South Wales,
15th November, 1888.

His Excellency the Governor directs the publication, for general information, of the following Circular Despatch from the Secretary of State for the Colonies, transmitting a copy of an Order of Her Majesty in Council, dated the 10th day of August last, extending the provisions of the "Foreign Deserters Act, 1852," to the Independent State of the Congo.

J. F. BURNS.

(Circular.)

Downing-street,
30th August, 1888.

Sir,

I have the honour to transmit to you, for publication in the Colony under your Government, a copy of an Order of Her Majesty in Council (10th August, 1888), extending the provisions of the "Foreign Deserters Act, 1852," to the Independent State of the Congo.

I have, &c.,
KNUTSFORD.

The Officer Administering the
Government of New South Wales.

At the Court at Osborne House, Isle of Wight, the 10th day of
August, 1888.

Present :

The Queen's Most Excellent Majesty in Council.

WHEREAS by the "Foreign Deserters Act, 1852," it is provided that whenever it is made to appear to Her Majesty that due facilities are or will be given for recovering and apprehending seamen who desert from British merchant ships in the territories of any foreign power, Her Majesty may, by Order in Council stating that such facilities are or will be given, declare that seamen, not being slaves, who desert from merchant ships belonging to a subject of such power when within Her Majesty's

dominions shall be liable to be apprehended and carried on board their respective ships, and may limit the operation of such Order, and may render the operation thereof subject to such conditions and qualifications, if any, as may be deemed expedient :

And whereas it has been made to appear to Her Majesty that due facilities will be given for recovering and apprehending seamen who desert from British merchant ships in the territories of the Independent State of the Congo :

Now, therefore, Her Majesty, by virtue of the power vested in Her by the said "Foreign Deserters Act, 1852," and by and with the advice of Her Privy Council, is pleased to order and declare, and it is hereby ordered and declared, that, from and after the publication hereof in the London Gazette, seamen, not being slaves and not being British subjects, who within Her Majesty's dominions desert from merchant ships belonging to citizens of the Independent State of the Congo shall be liable to be apprehended and carried on board their respective ships : Provided always, that if any such deserter has committed any crime in Her Majesty's dominions he may be detained till he has been tried by a competent Court, and until his sentence, if any, has been carried into effect.

And the Secretary of State for the Home Department, the Secretary of State for the Colonies, and the Secretary of State for India in Council are to give the necessary directions herein accordingly.

C. L. PEEL.

1888.

 NEW SOUTH WALES.

FRENCH LAW ON THE RETURN OF CONVICTS TO FRANCE.
(DESPATCH RESPECTING.)

 Presented to Parliament by Command.

Department of Justice,

Sydney, 10th September, 1888.

HIS Excellency the Governor directs the publication, for general information, of the following Despatch dated the 27th February, 1888, from the Secretary of State for the Colonies.

WILLIAM CLARKE.

[Circular.]

Downing-street,

27th February, 1888.

Sir,

I have the honour to transmit to you, for communication to your Government, a copy of a Memorandum (24th December, 1887) received at the Foreign Office from Her Majesty's Minister at Paris, respecting the conditions imposed by French Law on the return of Convicts to France.

I have, &c.,

KNUTSFORD.

The Officer Administering
the Government of New South Wales.

NOTE

On the conditions imposed by the French law upon the return to France of transported criminals, habitual offenders, and exiles.

The convicts who undergo their sentence in the Colonies may be divided into three classes:—

1. Those under sentence of hard labour or transported ones.
2. Habitual offenders.
3. Exiles, properly speaking.

The condition of those sentenced to hard labour, or the transported ones, is regulated by the law of May 30th, 1854, which says, that henceforth the sentence of hard labour shall be served at the establishments created by decree on the territory of one or more French possessions other than Algeria.

The return to France of an individual who has been under sentence is only authorized if this sentence has been one of less than eight years. Moreover it is necessary that the convict, before he can avail himself of this disposition of the law, should, after the expiration of his sentence, reside in the Colony for a period similar to that of his sentence. The Art. 6 of the law of May, 1854, runs thus:—

“Art. 6. Every individual sentenced to less than eight years hard labour shall be compelled, at the termination of his sentence, to reside in the Colony for a period equal to that of his sentence. If the sentence is one of eight years, he shall be compelled to reside there for the whole of his life.”

It is true, the Governor may grant to the discharged individual authority temporarily to leave the Colony; but in no case can he be authorized to return to France before the term stipulated by Art. 6.

The law of May 28th, 1855, regarding habitual offenders, which has organized deportation, decrees by its Art. 1 that this sentence shall be perpetual, at least in principle. The question of a possible return to France should therefore never occur, as far as convicts are concerned to whom this law refers, if Art. 1 were considered by itself. But the law itself modifies the principle laid down in its initial Article. The Art. 13 gives indeed to the Minister alone and under his responsibility the power to permit an exile's return to France, but for six months only. Lastly, Art. 16 of the same law enables the exiles to obtain a kind of partial rehabilitation for the purpose of relieving them from banishment, and to permit their return to France. Here is what Art. 16 says:—

“The exile may, from the sixth year after his discharge, present a petition to the local tribunal for the remission of his banishment, supporting it by his good conduct, of services rendered to the colonization, and means of living.”

The sentence of deportation is a perpetual one, whether pure and simple or undergone within a fortified place. (Art. 17 Penal Code.)

The character of perpetuity is absolute and admits of no exception. Consequently, those condemned to deportation can never hope to return to France unless by an amnesty or a pardon.

Deportation is at present carried out in New Caledonia.

The regulation of the deported one has been framed by the law of March 25th, 1873, which has nothing by way of statute relating to the return of deported ones by reason of the very perpetual character of the sentence.

Given in Paris, on the 24th December, 1887.

(Sd.) ED. CLUNET,
Advocate at the Court of Paris.

NOTE

Sur les conditions imposées par la loi française au retour en France des Transportés, des Rélégés et des Déportés.

Les condamnés qui subissent leur peine dans les Colonies peuvent se diviser en trois catégories:—

1. Les condamnés aux travaux forcés ou Transportés.
2. Les Rélégés ou récidivistes.
3. Les Déportés proprement dits.

La condition des condamnés aux travaux forcés ou transportés est réglée par la loi du 30 Mai 1854, qui a décidé qu'à l'avenir la peine des travaux forcés serait subie dans les établissements créés par décret sur le territoire d'une ou de plusieurs possessions françaises autre que l'Algérie.

Le retour en France du condamné après l'expiration de sa peine n'est autorisé que si cette peine est de moins de huit années; et encore faut-il que le condamné, avant de bénéficier de cette disposition de la loi, réside dans la Colonie, après l'expiration de sa peine, pendant un temps égal à la durée de sa condamnation. L'Art. 6 de la loi du 30 Mai 1854, étant ainsi conçu:—

“Art. 6. Tout individu condamné à moins de huit années de travaux forcés sera tenu, à l'expiration de sa peine, de résider dans la Colonie pendant un temps égal à la durée de sa condamnation. Si la peine est de huit années, il sera tenu d'y résider pendant toute sa vie. . . .”

Le Gouverneur peut, il est vrai, accorder au libéré l'autorisation de quitter momentanément la Colonie; mais en aucun cas il ne pourra être autorisé à rentrer en France avant l'expiration du délai fixé par l'Art. 6.

La loi du 28 Mai 1855, sur les récidivistes qui a organisé la Rélégation décide, dans son Art. 1, que cette peine doit être perpétuelle au moins en principe. La question d'un retour possible en France ne devrait donc pas se poser pour les condamnés auxquels s'applique cette loi, si l'on n'envisageait que l'Article 1. Mais la loi elle-même apporte un tempérament au principe posé dans son article initial. L'Article 13, en effet, donne au Ministre seul, et sous sa responsabilité, le pouvoir de permettre au rélégué le retour en France, mais pour six mois seulement. Enfin, l'Art. 16 de la même loi donne aux rélégués les moyens d'obtenir une sorte de réhabilitation partielle, qui a pour effet de les relever de la rélévation, et de leur permettre de rentrer en France. Voici comment s'exprime l'Art. 16:—

“Le rélégué pourra, à partir de la sixième année de sa libération, introduire devant le tribunal de la localité une demande tendant à se faire relever de la rélévation, en justifiant de sa bonne conduite, des services rendus à la Colonisation et de moyens d'existence. . . .”

La peine de la déportation est une peine perpétuelle, qu'elle soit pure et simple, qu'elle soit subie dans une enceinte fortifiée (Art. 17, Code pénal).

Le caractère de perpétuité est absolu et ne souffre aucune exception. Par conséquent, les condamnés à la déportation ne peuvent jamais espérer rentrer en France à moins d'une amnistie ou d'une grâce.

La déportation s'exerce actuellement dans la Nouvelle-Calédonie.

Le régime des déportés a été organisé par la loi du 25 Mars 1873, qui n'a rien statué relativement au retour des déportés en France, à raison même du caractère de perpétuité de la peine.

Fait à Paris le 24 Décembre, 1887.

Avocat à la Cour de Paris.

1888-9.

NEW SOUTH WALES.

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.

(RESUMPTION FOR EXTENSION OF PUBLIC CEMETERY, BALLINA.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16, sec. 6.

NOTIFICATION OF RESUMPTION OF LAND UNDER
44 VICTORIA No. 16.

NEW SOUTH WALES, } By His Excellency The Right Honourable
to wit. } CHARLES ROBERT, BARON CARRINGTON,
a Member of Her Majesty's Most
Honourable Privy Council, Knight
(L.S.) Grand Cross of the Most Distinguished
CARRINGTON, Order of Saint Michael and Saint
Governor. George, Governor and Commander-in-
Chief of the Colony of New South
Wales and its Dependencies.

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the extension of the Public Cemetery at Ballina, in the said Colony, for and towards the completion of which said works public funds are available; and whereas the lands hereinafter described are required for the construction of the said Works: Now I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do, by this notification published in the Gazette and in a newspaper, that is to say, in the "Ballina Pilot," circulated in the Police District wherein the said lands are situated, declare that the lands hereinafter described have been resumed for the public purpose hereinafter mentioned, that is to say, for and in connection with the establishment and construction of a Public Cemetery at Ballina, in the said Colony, to the intent that upon the publication of this notification in the Gazette, the legal estate in the said lands shall

forthwith be vested in the Minister for Public Works and his successors on behalf of Her Majesty for the purpose of the said last-mentioned Act, for an estate of inheritance in fee-simple in possession, freed and discharged from all trusts, obligations, estate, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever, and to the intent further that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a trustee with the powers stated in the said last-mentioned Act: And I declare that the following are the descriptions of the lands hereinbefore referred to, that is to say:—

All that piece or parcel of land situate in the town of Ballina, parish of Ballina, county of Ross, being allotment No. 1, section No. 12, town of Ballina, an area of 1 rood 32 perches: Commencing on the left bank of the Richmond River, at the south-western corner of allotment No. 2; thence on the east by the western boundary line of that allotment bearing north 4 chains and 25 links; on the north by Port-street bearing west 1 chain; on the west by a line bearing south 4 chains and 80 links to the left bank of the aforesaid river; thence by that river downwards, to the point of commencement,—as shown on plan catalogued B 1 (1,612), Surveyor General's Office.

In witness whereof I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this seventeenth day of December, in the year of our Lord one thousand eight hundred and eighty-eight, and in the fifty-second year of Her Majesty's Reign.

By His Excellency's Command,
JOHN SUTHERLAND.

GOD SAVE THE QUEEN!

1888.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PURCHASE OF LAND ADJOINING HOSPITAL FOR
INSANE, GLADESVILLE.

(CORRESPONDENCE RESPECTING.)

Ordered by the Legislative Assembly to be printed, 20 December, 1888.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 12th December, 1888, That there be laid upon the Table of this House,—

“Copies of all papers connected with the purchase of 22 acres of land at
“Gladesville, adjoining the Hospital for the Insane.”

(*Mr. Neild.*)

Mr. T. Salter to The Colonial Secretary.

Sir,

Longueville Chambers, Young-street, Sydney, 2 March, 1887.

I have the honor to inform you that being about to take my family to Europe I purpose selling or disposing of my house and about 22 acres of land at Gladesville.

I address you on the subject because the Medical Superintendent of the Hospital for the Insane at Gladesville spoke to me on the subject some time ago, on hearing that there was a probability of the property being for disposal.

Reference to a plan will show how my property cuts into the hospital grounds, separating portions of the land, and how the addition of my land will make available portion of the hospital reserve, at present useless. My house is of considerable size, and, I understand, could be rendered of service in connection with the Hospital. If the property were now sold, and the land subdivided, the Government could obtain the land in the future only upon payment of a sum far in advance of its present value.

I have no wish to extract from the Government a larger price for the property than the actual value, and am willing that such value be ascertained by the Government's own arbitrators, with whose valuation I should probably be satisfied, provided the matter be at once carried through and completed, as I want to do something with the place before leaving.

I have, &c.,

THOS. SALTER.

The Medical Superintendent of the Hospital for the Insane, Gladesville, to The
Principal Under Secretary.

Sir,

Lunacy Department, Hospital for the Insane, Gladesville, 10 March, 1887.

I have the honor to call your attention to the fact that Thomas Salter, Esq., who owns land adjoining this hospital, is leaving for England, and is offering his property for sale. The property consists of 30 acres of good arable land, a large house, two small cottages, and several outbuildings. The land is completely surrounded by the hospital reserve, and breaks the continuity of the reserve.

The hospital gasworks are built close to its boundary fence.

It is extremely desirable that this property should, if possible, be acquired by the Government. Mr. Salter wishes to sell it absolutely, and if it is cut up into allotments the presence of numerous holdings in our reserve, and close to the gasworks, and farm buildings will be a constant source of annoyance and expense. The land will be a valuable addition to the very limited area of good farm land we at present possess, and will materially reduce the maintenance rate, and at the same time give employment to the patients.

309—A

The

[830 copies—Approximate cost of Printing (labour and material), £12 10s. 10d.]

The house and cottages will accommodate the overflow of the hospital for some time without more alteration than our own carpenter can effect. It is situated within a few minutes walk of the main division of the hospital, and could be utilised without increase of staff.

I understand from Mr. Salter that he has offered the property to the Government by letter, and that he is so wishful to have it purchased for the use of the hospital that he will sell it at a lower price.

I have, &c.,

ERIC SINCLAIR,

Medical Superintendent.

The Principal Under Secretary,—Mr. Salter's property would form a valuable addition to the hospital grounds, and the house could be used instead of the one which is now rented at a cost of £72 per annum (£60 for rent and £12 for caretaker), and which accommodates only twelve patients, and they only sleep there. If the property is not purchased now it will probably be cut up into small allotments, which will greatly increase its price if it should hereafter seem desirable to annex it.—HERBERT BLAXLAND, Acting Inspector-General of the Insane, B.C., 10/3/87.

The Medical Superintendent of the Hospital for the Insane, Gladesville, to The Principal Under Secretary.

Sir,

Lunacy Department, Hospital for the Insane, Gladesville, 16 April, 1887.

Referring to the subject of the purchase of the property of Mr. Thomas Salter, adjoining this hospital, I do myself the honor to submit, for the consideration of the Colonial Secretary, a communication from that gentleman, enclosing a letter from Messrs. Richardson and Wrench valuing the land and buildings at £7,400, and I am authorised by Mr. Salter to say he will accept that sum; and in order to allow time for the further consideration of the matter he will let the property to the hospital for one year rent free, with the option of purchase at the end of that time, on condition that it is kept in order. This arrangement will, if approved by Sir Henry Parkes, give time for any further inspection of the property that may be deemed necessary, and, if the purchase is decided on, allow a vote to be taken to provide the funds.

I am particularly anxious that this land should not be cut up and sold in allotments, as I am sure that the settlement of a population on it in the centre of the reserve, and so close to the hospital buildings, will be a source of great trouble and annoyance in the working of the institution, and a hindrance to the employment of the patients in outdoor labour. Further, its purchase will provide accommodation for at least forty of the quieter male patients, and so relieve the Government from making other provision to meet the annual increase in the number of the insane for some time. For many years Dr. Manning has wished to start a farm and keep cows on the reserve, and so find greater scope for the employment of the patients, and reduce the cost by producing the milk used at the institution. This will involve some outlay for buildings; but the purchase of Mr. Salter's property would provide all that are required, and the keeping of cows could be commenced at once.

In 1886 we paid for milk £1,483 12s., and out of this alone I estimate that a saving of at least £500 per annum can be effected by starting a dairy and working it in conjunction with Mr. Salter's land and the reserve, and this without involving any addition to the present staff. As Mr. Salter leaves for England on the 23rd instant I am anxious that some decision may be come to at once.

I have, &c.,

ERIC SINCLAIR,

Medical Superintendent.

[Enclosure.]

Dear Sinclair,

To get an idea of the present saleable value of my Priory property, I got Richardson and Wrench to value it yesterday. I enclose their report. You will see they put the value if sold as a whole at £7,400. I expected their estimate to be considerably higher, but they are known to value lower than nearly every one else. It may be that the nuisances you have made round me have lowered their estimate. I expect to get at least £9,000 by cutting the place up; at same time, if the present market value of the place as a whole is offered to me, I should likely accept it, as, situate as I am just now I do not want any trouble or worry that I can avoid. You can make any use of this you think well. I am just starting for a drive up to Varroville.

Yours sincerely,

T. SALTER.

Eric Sinclair, Esq., M.D.

[Sub-Enclosure.]

Dear Sir,

98 Pitt-street, Sydney, 1 April, 1887.

Re "The Priory," this morning we inspected your residence and grounds of 22 acres fronting the Great North Road, two other roads, and Tarban Creek, at Gladesville.

The house is substantial, well finished, and in good order. The shape and position of the land would warrant a liberal subdivision of it.

Our opinion is that it would be advisable to offer the property in one or three lots, the latter to be as follows:—

1st. The house and all outbuildings with the ground to the east, and taking in part of the creek frontage.

2nd. The hill fronting the main road and extending to the man's residence.

3rd. The hill adjoining the hospital reserve, with entrance from a street off the main road.

As a whole we estimate the value at £7,400.

RICHARDSON & WRENCH.

In subdivision we cannot give an idea till areas be known.—R. & W.
Thos. Salter, Esq., Young-street.

The Principal Under Secretary,—The acquirement of this property would prove a most valuable addition to the hospital grounds, and afford work of a very beneficial character for the patients. I would strongly urge its purchase.—HERBERT BLAXLAND, Acting Inspector-General of the Insane, B.C., 18/4/87.

Mr. Salter leaves for England on Saturday, and is anxious to get a reply to this matter before he goes.—C.W., 19/4/87. I approve of entering into agreement to occupy land for twelve months, with option of purchase; and my present opinion is that the Government should purchase the land.—H.P., 20/4/87. Acting Inspector-General of the Insane.

The

The Principal Under Secretary to Mr. T. Salter.

Sir, Colonial Secretary's Office, Sydney, 20 April, 1887.
Referring to your letter of the 2nd ultimo, I am directed to inform you that the Colonial Secretary approves of the entering into an agreement to occupy the land owned by you adjoining the Hospital for the Insane, Gladesville, for twelve months, with the option of purchase.

I have, &c.,
CRITCHETT WALKER,
Principal Under Secretary.

The Principal Under Secretary to The Acting Inspector-General of the Insane.

Sir, Colonial Secretary's Office, Sydney, 20 April, 1887.
In reply to your blank cover communication of the 18th instant, I am directed to inform you that the Colonial Secretary approves of the entering into an agreement to occupy the land owned by Mr. Thomas Salter, adjoining the Hospital for the Insane at Gladesville, for twelve months, with the option of purchase, and that Mr. Salter has been apprised accordingly; and to state that Sir Henry Parkes is of opinion that the Government should purchase the land.

I have, &c.,
CRITCHETT WALKER,
Principal Under Secretary.

The Medical Superintendent of the Hospital for the Insane, Gladesville, to The Principal Under Secretary.

Sir, Lunacy Department, Hospital for the Insane, Gladesville, 26 April, 1887.
Referring to your letter of the 20th instant, on the subject of the purchase of the land adjoining this Institution, owned by Mr. Thomas Salter, I do myself the honor to report that I have arranged with Mr. Salter to occupy the property for one year from yesterday, rent free, with the option of purchase, on the understanding that the house and grounds are kept in good order and taken care of.

I have, &c.,
ERIC SINCLAIR,
Medical Superintendent.

Forwarded to the Principal Under Secretary.—HERBERT BLAXLAND, Acting Inspector-General of the Insane, B.C., 3/5/87.

The Inspector-General of the Insane to The Principal Under Secretary.

Sir, Lunacy Department, Inspector-General's Office,
Gladesville, 3 November, 1887.

I do myself the honor to suggest that the sum of £7,400 may be placed on the Miscellaneous Estimates for the Colonial Secretary's Department, for the purchase of the property belonging to Mr. Thomas Salter at Gladesville, consisting of 20 acres of land, with house and other buildings. In a letter dated 20th April, 1887, you informed me that "Sir Henry Parkes is of opinion that the Government should purchase the land," and the Government is, under your authority, now in possession of the property, free of rent for one year, on condition of keeping the house, &c., in repair and good order, with the option of purchase.

The desirability of purchasing this property has already been placed before the Colonial Secretary, but I would desire to point out,—

- 1st. That as will be seen from the plan herewith, Mr. Salter's land (which was alienated before the remainder of the land was set apart for Asylum purposes) is the very eye of the estate, and is surrounded on all sides by the Asylum Reserve. Appendix B.
- 2nd. That an opportunity is not likely to occur again of purchasing this property in one block.
- 3rd. That it would form a most desirable and, I believe, profitable addition to the asylum property, the land adding greatly to the quantity available for cultivation, and the house serving for the accommodation of patients and their better classification.
- 4th. That unless Mr. Salter had been an excellent and most considerate neighbour he might have objected to the hospital gas works, and to other more or less unavoidable nuisances in connection with the hospital; that any future proprietors are not likely to be so complaisant; and that if the land is cut up and sold to a number of proprietors the employment of the patients in out-door labour, and their general liberty, must be much restricted.

I have, &c.,
F. NORTON MANNING,
Inspector-General.

Approved.—H.P., 12/5/88.

Messrs. Salter and Barker to The Principal Under Secretary.

Sir, Longueville Chambers, Young-street, Sydney, 5 April, 1888.
We have the honor to call your attention to the fact that the term for which it was arranged the authorities for the Hospital for the Insane, Gladesville, should occupy the property of Mr. Thomas Salter, at Gladesville, will expire on the 24th instant, and to request that you will be good enough to inform us whether the Government intend to avail themselves of the option of purchase, and if not, whether they propose to give up possession on the 24th instant. We would also remind you that this property has been occupied for twelve months rent free, and that some definite arrangement must now be come to.

We have, &c.,
SALTER & BARKER.

The Inspector-General of the Insane to The Principal Under Secretary.

Sir, Lunacy Department, Inspector-General's Office, Gladesville, 7 May, 1888.

With reference to your letter of the 20th April, 1887, approving of the Medical Superintendent of the Hospital for the Insane, Gladesville, entering into an agreement to occupy the house and land owned by Mr. Thomas Salter, adjoining the hospital, for twelve months, with the option of purchase, and stating the opinion of Sir Henry Parkes that the Government should purchase the property, I do myself the honor to point out that the agreement entered into by Dr. Sinclair, and reported to you in his letter of the 26th April, 1887, to occupy the property for one year, rent free, from April 25, 1887, with the option of purchase, on the understanding that the house and grounds were kept in good order, and taken care of, has expired, and that it is necessary that some further arrangements should be made. The house has been throughout the past year occupied as dormitory accommodation by between thirty and forty patients and their attendants, and the overcrowded condition of the male wards at the hospital renders it very desirable that this relief should be continued. I would beg, therefore, to recommend that the property should either be purchased at once, or that an agreement should be made to rent it, with the option of purchase, for a further term of one or two years.

In many respects the purchase would be more advantageous than renting the property. Under the latter arrangement it is impossible to make alterations which are necessary to secure the safety and comfort of the patients occupying the buildings, or to make these accommodate the full number who could, with some alterations, be comfortably housed.

I have, &c.,
F. NORTON MANNING,
Inspector-General.

As the purchase of the property has been approved, the necessary steps may be taken for the conveyance of the same to the Crown, and Dr. Manning so informed.—C.W., 16/5/88. The Crown Solicitor, B.C., 26/5/88.—C.W., P.U.S.

Telegram from The Principal Under Secretary to The Inspector-General of the Insane.

Sydney, 17 May, 1888.

PURCHASE of Salter's property approved.

The Crown Solicitor to The Principal Under Secretary.

Sir, Crown Solicitor's Office, Sydney, 12 June, 1888.

I have the honor to return herewith the pages relating to the purchase of land at Gladesville from Mr. Thomas Salter, and also abstract of the title furnished me, and to request that you will be so good as to inform me whether the land described in the abstract is identical with that intended to be purchased.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

Refer to Dr. Manning.—C.W., 13/6/88. The Inspector-General of the Insane, B.C., 14 June, 1888.—C.W., P.U.S. Yes. The land described is identical with that intended to be purchased.—F. NORTON MANNING, 17/6/88. The Principal Under Secretary. The Crown Solicitor, B.C., 19/6/88.—C.W., P.U.S.

The Crown Solicitor to The Principal Under Secretary.

Crown Solicitor's Office, Sydney, 3 July, 1888.

Purchase of land at Gladesville—Thomas Salter to the Queen.

Sir,

I have the honor to inform you that this matter has been completed, and to return herewith the papers herein.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

The Crown Solicitor to The Principal Under Secretary.

Gladesville Asylum—Thomas Salter to the Queen.

Sir,

Crown Solicitor's Office, Sydney, 3 July, 1888.

I have the honor to inform you that this matter has been completed, and to forward herewith voucher for payment of the purchase money, the amount of which may be paid to Messrs. Salter and Barker or their order, as is therein authorized.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

Approved.—H.P., 6/7/88.

NEW SOUTH WALES.

Pay Voucher—Department of Colonial Secretary.

Claimant—Thomas Salter, Sydney.

| Date of Service. | | Amount. |
|------------------|---|---------|
| 1888. | | £ |
| June 23 | To amount of purchase money, 22 acres of land at Gladesville, adjoining the Hospital for the Insane | 7,400 |

THOMAS SALTER,
By his Attorneys,
W. MANDEVILLE BARKER,
JAMES C. TAYLOR.

I hereby authorize the amount of the above certificate in my favour to be paid on my behalf to Messrs. Salter & Barker.

By his Attorney,
W. MANDEVILLE BARKER,
JAMES C. TAYLOR.

The Principal Under Secretary to The Under Secretary for Finance and Trade.

Sir,

Colonial Secretary's Office, Sydney, 11 July, 1888.

In transmitting to you the accompanying account in favour of Mr. Thomas Salter for £7,400, the amount of purchase money for 22 acres of land at Gladesville, adjoining the Hospital for the Insane, I am directed to state that the Colonial Secretary approves of the payment of the amount in question, and to request that you will invite the Colonial Treasurer to have the goodness to cause the sum to be paid from the Advance Account, and provision to be made on the Supplementary Estimates.

I have, &c.,

CRITCHETT WALKER,
Principal Under Secretary.

The Principal Under Secretary to The Inspector-General of the Insane.

Sir,

Colonial Secretary's Office, Sydney, 12 July, 1888.

With reference to the purchase of certain land at Parramatta from Mr. Thomas Salter, I am directed to inform you that the Colonial Secretary has approved of the payment of the purchase money, £7,400, and that the Colonial Treasurer has been invited to cause the same to be met from the Advance Account, and provision made on the Supplementary Estimates.

I have, &c.,

CRITCHETT WALKER,
Principal Under Secretary.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

THEATRICAL LICENSES.

(AMENDED FORMS OF, AND REGULATIONS RESPECTING.)

Ordered by the Legislative Assembly to be printed, 15 January, 1889.

Minute for The Executive Council.

Colonial Secretary's Office, Sydney, 23 June, 1887.

License for Theatrical Performances in Buildings, &c.

I RECOMMEND to His Excellency the Governor and the Executive Council the approval of the minute submitted by me to a meeting of the Cabinet on the 20th June instant (herewith marked A), as prescribing the conditions for the issue of theatrical licenses, and also for orders of permission in certain cases for religious services and concerts to be held on Sundays in buildings so licensed. I also recommend, under the opinion of the Attorney-General, the form of license (herewith marked B) as the form of theatrical license to be issued in future. I further recommend the form of order of permission (herewith marked C) as the form of order of permission to be issued for religious services or concerts on Sundays in buildings licensed by the Colonial Secretary.

HENRY PARKES.

A.

Minute by The Colonial Secretary.

REFERRING to my course of action on the 11th instant in stopping certain entertainments and lectures in the theatres, I desire to submit to the Cabinet the following suggestions:—

1st.—That the license for theatrical representations in buildings issued by the Colonial Secretary should be strictly limited to the six working days of the week, exclusive of Sunday.

2nd.—That, on application from the proprietors or lessees of theatres or other buildings holding licenses, the Colonial Secretary may, under such conditions and restrictions as he shall think fit, grant permission for religious services in connection with Christian churches, or sacred concerts, or concerts not objectionable on moral grounds, to be held in licensed buildings on Sundays.

3rd.—That the Government is not called upon to authorize, by either its license or permission, the delivery of public lectures, and the persons interested in the delivery of any such lectures should be left to make their own arrangements, subject to the laws of the country.

HENRY PARKES,

20/6/87.

Cabinet approve.—H.P., 20/6/87.

B.

LICENSE FOR THEATRICAL PERFORMANCES IN BUILDINGS, &c.

WHEREAS by an Act of the Governor and Legislative Council of New South Wales, passed in the 14th year of the Reign of Her present Majesty Queen Victoria, intituled "*An Act to amend the Law for Regulating Places of Public Exhibition and Entertainment*," certain penalties and liabilities are imposed in respect of, and in relation to the Theatrical Entertainments and Exhibitions hereinafter particularly mentioned, to which admission shall or may be procured by payment of money, or by tickets, or by any other means, token, or consideration, as the price, hire, or rent of admission in case the Theatre, House, Room,

Room, Building, Garden, or place wherein the same shall be acted, represented, performed, or exhibited, shall be without the written authority or License of the Colonial Secretary; and whereas

of _____ has applied to me to grant to him a License and authority to give Public Exhibitions and Entertainments in the said Colony under and in pursuance of the provisions of the said Act: Now I, the Honorable

Colonial Secretary for the time being of the Colony of New South Wales, in virtue of the power and authority vested in me by the said Act, do hereby grant unto the said

a License to give Public Exhibitions and Entertainments under and in pursuance of the Provisions of the said Act, on the Premises known as

_____ situated in the _____ of _____ and wherein it shall be lawful for him to act, represent, or perform, or cause to be acted, represented, or performed, for hire, gain, or reward, on such day or days in every week as he may think proper, any Interlude, Tragedy, Opera, Comedy, Stage Play, Farce, Burletta, Melodrama, Pantomime, or any Stage Dancing, Tumbling, or Horsemanship, or any other Entertainment of the Stage whatsoever: Provided that such Theatre, House, Room, Building, Garden, or place used by the person so licensed shall not be used for any performance or purpose whatsoever on Sundays, Good Friday, or Christmas Day, without special permission being first obtained for the particular day and purpose fully specified in written application to the Colonial Secretary: And I declare and direct that this License shall continue in force for the period of _____ calendar months, unless the same shall be sooner revoked by the Colonial Secretary for the time being of the said Colony.

Given under my hand at the Colonial Secretary's Office, at Sydney, this _____ day of _____ in the year of our Lord one thousand eight hundred and eighty-

Colonial Secretary.

C.

PERMISSION TO USE LICENSED THEATRES AND BUILDINGS ON SUNDAYS.

SUBJECT to the Regulations passed by the Governor-in-Council so far as they apply in such case, I, the Colonial Secretary of New South Wales, do hereby authorize you to use the building known as _____ for the purpose of holding _____ on Sunday,

Colonial Secretary's Office,
Sydney, 188 .

Colonial Secretary.

Minute of The Executive Council.

THE Executive Council advise that the course herein recommended, with respect to issue of Licenses for Theatrical Performances, and orders of permission in certain cases for Religious Services and Concerts on Sundays, be approved.

2. The Council also advise that the form of Theatrical License and form of Order of Permission for Religious Services or Concerts on Sundays be approved.

ALEX. C. BUDGE,
Clerk of the Council.

Approved.—CARRINGTON, 24/6/87. Min. 87-38, 24/6/87. Confirmed—28/6/87.

Minute for The Executive Council.

Colonial Secretary's Office, Sydney, 23 June, 1887.

Regulations for Issue of Theatrical Licenses.

I RECOMMEND the accompanying Amended Regulations for the issue of Theatrical Licenses for the approval of the Governor-in-Council in substitution of those published in the Government Gazette of the 14th November, 1884.

HENRY PARKES.

[Enclosure.]

REGULATIONS FOR ISSUE OF THEATRICAL LICENSES.

1. Before a theatrical license is granted for any building, it shall be determined, after the report of the Colonial Architect, the number of persons that can be safely and conveniently seated in the building. The area for each individual not to be less than four square feet.

2. Every application for a license shall state the number of seats in each section of the auditorium, and such seats shall be marked with consecutive numbers.

3. Every such application shall be accompanied by plans giving the above particulars, also showing the position of exit doors, stairs, gangways, fireplugs, buckets, hose, and gascocks, with such other information as may be required.

4. Copies of the above-mentioned plans to be constantly exhibited in the vestibules, and in each section of the theatre, for the information of the public.

5. No deviation from these plans, or alteration in the buildings or arrangements as before referred to, to be permitted during the currency of the license, without sanction in writing from the Colonial Secretary.

6. All gas and other lights throughout the building and its precincts to be efficiently protected by approved fire-guards.

7. The lighting to be under the control of a properly qualified person, and gas-fittings and other lighting apparatus periodically examined. Separate stop-cocks shall be provided for the various divisions of the building, and also stop-cocks in the mains on the outside of the buildings, to admit of the gas being entirely shut off when necessary.

8. A sufficient number of lamps, burning animal or vegetable oil, to be provided within the building and precincts, to prevent panic which might arise from darkness consequent on the sudden extinction of the gas or other lights by accident or otherwise.

9. A sufficient number of buckets, painted red and labelled "Fire-buckets," to be always kept full of water and in such positions as would be most serviceable in cases of emergency, and maintained solely for such purpose.

10. Approved water-hose (with nozzles) to be attached to the water-service pipes ready for instant use, and the employees of the theatres instructed how to act in case of panic in the use of the hose and plugs, and drilled to the performance of firemen's duty, unless members of the Fire Brigade be constantly in attendance.

11. Whenever practicable, a water-tank, of adequate capacity, and with proper appliances, to be fixed at such a height as to command by gravitation the whole of the premises and precincts. Such tanks shall be kept constantly full of water solely for use in case of fire.

12. Intimation to be made by fire-alarm communication to the Fire Brigade Station, Police Office, or such other place as may be directed.

13. Gangways of sufficient width (not less than two feet six inches) to be reserved in convenient lines to facilitate the passage of persons to and from their seats, and such gangways shall not be occupied either by chairs or by persons standing.

14. All carpets or other floor or stair coverings to be kept in good condition, to prevent accident by persons tripping.

15. Strong hand-rails of approved construction to be securely fixed on each side of every stairway.

16. All doors to be constructed to open outwards, and the words "The way out" written upon and over the doors in conspicuous characters; and, in order to accustom the public to these doors, they should be opened for use at the close of every performance.

17. All seats to be securely fixed, and under no circumstances shall chairs or movable seats be placed in the gangways or elsewhere.

18. All holders of theatrical licenses shall maintain their respective theatres and precincts in good repair and in a constant state of cleanliness and ventilation.

19. All licenses for theatres shall be issued subject to such limitations as regards occupation on Sundays as the Colonial Secretary may think fit.

20. An inspector appointed by the Government to be permitted by the lessee to have access at all times to all parts of the building.

HENRY PARKES,
Colonial Secretary.

Minute of The Executive Council.

The Executive Council advise that the Regulations herewith submitted for the issue of theatrical licenses be approved, in lieu of those published on the 14th November, 1884.

ALEX. C. BUDGE,
Clerk of the Council.

Approved.—CARRINGTON, 24/6/87. Min. 87/38.—24/6/87. Confirmed.—28/6/87.

1888.

NEW SOUTH WALES.

TONNAGE ADMEASUREMENT OF NETHERLANDS VESSELS.

(DESPATCH RESPECTING.)

Presented to Parliament by Command.

The Treasury, New South Wales,
16th August, 1888.

His Excellency the Governor directs the publication of the following Circular Despatch from the Secretary of State for the Colonies respecting the Tonnage Admeasurement of Netherlands vessels.

J. F. BURNS.

(Circular.)

Downing-street,
28th May, 1888.

Sir,

With reference to Lord Carnarvon's Circular Despatch of the 19th of November, 1875, I have the honor to transmit to you, for publication in the Colony under your Government, a copy of an Order of the Queen in Council of the 3rd instant (Order in Council, 3rd May, 1888), revoking the Order in Council of the 26th October, 1875, respecting the tonnage admeasurement of Netherlands vessels, and substituting other provisions for the same.

I have, &c.,
KNUTSFORD.

The Officer administering the Government
of New South Wales.

At the Court at Windsor, the 3rd day of May, 1888.

Present:—

The Queen's Most Excellent Majesty in Council.

WHEREAS by the Merchant Shipping Act Amendment Act, 1862, it is enacted that whenever it is made to appear to Her Majesty that the Rules concerning the measurement of tonnage of merchant ships for the time being in force under the principal Act have been adopted by the Government of any foreign country, and are in force in that country, it shall be lawful for Her Majesty by Order in Council to direct that the ships of such foreign country shall be deemed to be of the tonnage denoted in their certificates of registry or other national papers, and thereupon it shall no longer be necessary for such ships to be remeasured in any port or place in Her Majesty's dominions, but such ships shall be deemed to be of the tonnage denoted in their certificates of registry or other papers in the same manner, to the same extent, and for the same purposes, in, to, and for which the tonnage denoted in the certificates of registry of British ships is to be deemed the tonnage of such ships:

And whereas by the Merchant Shipping Act, 1876, it is enacted that "where Her Majesty has power, under the Merchant Shipping Act, 1854," or any Act passed or hereafter to be passed amending the same, to make an Order in Council, it shall be lawful for Her Majesty from time to time to make such Order in Council, and by Order in Council to revoke, alter, or add to any Order so made."

And whereas it was made to appear to Her Majesty that the rules concerning the measurement of tonnage of merchant ships in force under the Merchant Shipping Act, 1854, had been adopted by the Government of His Majesty the King of the Netherlands, with the exception of a difference in the mode in certain steamers of estimating the allowance for engine-room, and such rules were in force in that country, and came into operation on the 1st day of January, 1876:

And whereas by Order in Council dated the 26th day of October, 1875, Her Majesty was pleased to direct as follows:—

1. As regards sailing ships, that merchant sailing ships of the said Kingdom of the Netherlands, the measurement whereof should, after the said 1st day of January, 1876, have been ascertained and denoted in the registers and other national papers of such sailing ships, testified by the date thereof, should be deemed to be of the tonnage denoted in such registers and other national papers in the same manner, and to the same extent, and for the same purpose, in, to, and for which the tonnage denoted in the certificate of registry of British sailing ships is deemed to be the tonnage of such ships.
2. As regards steam-ships, that merchant ships belonging to the said kingdom of the Netherlands which are propelled by steam or any other power requiring engine-room, the measurement whereof should, after the said 1st day of January, 1876, have been ascertained and denoted in the registers and other national papers of such steam-ships, testified by the dates thereof, should be deemed to be of the tonnage denoted on such registers or other national papers in the same manner, and to the same extent, and for the same purpose in, to, and for which the tonnage denoted in the certificate of registry of British ships is deemed to be the tonnage of such ships: Provided nevertheless, that should the owner or master of any such Dutch steam-ship desire the deduction for engine-room in his ship to be estimated under the rules for engine-room measurement and deduction applicable to British ships instead of under the Dutch rule, the engine-room should be measured and the deduction calculated according to the British rules.

And whereas it has been made to appear to Her Majesty that a new Royal Ordinance, which came into operation on the 6th day of January, 1888, stipulates that the owners of Dutch steam-ships may have the net tonnage of their vessels calculated according to British as well as according to Dutch rules,

and shall have issued to them a separate certificate to be used in foreign countries, showing the net tonnage calculated according to British rules :

And whereas it has been made to appear desirable to Her Majesty that the provisions of the said recited Order in Council of the 26th day of October, 1875, should be revoked, and a new Order in Council made and substituted in lieu thereof :

Now, therefore, Her Majesty, in virtue of the powers vested in Her by the said recited Acts, and by and with the advice of Her Privy Council, is pleased to direct that the said recited Order of the 26th day of October, 1875, shall be and the same is hereby revoked, and in lieu thereof, and in substitution therefor, Her Majesty is hereby pleased, by and with the advice of Her Privy Council, to direct as follows :—

1. As regards sailing ships, that merchant sailing ships of the said Kingdom of the Netherlands, the measurement whereof, after the said 1st day of January, 1876, has been ascertained and denoted in the registers and other national papers of such sailing ships, testified by the date thereof, shall be deemed to be of the tonnage denoted in such registers and other national papers in the same manner, and to the same extent, and for the same purpose, in, to, and for which the tonnage denoted in the certificate of registry of British sailing ships is deemed to be the tonnage of such ships.

2. As regards steam-ships, that merchant ships belonging to the said Kingdom of the Netherlands which are propelled by steam or any other power requiring engine-room, the measurement whereof shall, after the said 1st day of January, 1876, have been ascertained and denoted in the registers and other national papers of such steam-ships, testified by the dates thereof, shall be deemed to be of the tonnage denoted on such registers or other national papers in the same manner, and to the same extent, and for the same purpose, in, to, and for which the tonnage denoted in the certificate of registry of British ships is deemed to be the tonnage of such ships : Provided nevertheless, that if the owner or master of any such Dutch steam-ship desires the deduction for engine-room in his ship to be estimated under the rules for engine-room measurement and deduction applicable to British ships instead of under the Dutch rule, the engine-room shall be measured and the deduction calculated according to the British rules, and that in the event of any such steam-ship possessing a certificate of tonnage or other national paper issued as aforesaid on or after the 6th day of January, 1888, denoting the net registered tonnage of such ship under the British rules, the ship shall be deemed to be of the tonnage so denoted thereon.

C. L. PEEL.

1888.

NEW SOUTH WALES.

TRADE WITH THE MARSHALL ISLANDS.

(DESPATCH RESPECTING.)

Presented to Parliament by Command.

The Treasury, New South Wales, .
28th August, 1888.

His Excellency the Governor directs the publication for general information, of the following Despatch received from the Secretary of State for the Colonies, on the subject of Trade with the Marshall Islands.

J. F. BURNS.

(Circular.)

Downing-street,
30th June, 1888.

My Lord,

I have the honor to transmit to you, for communication to your Government, a copy of a Despatch from Her Majesty's Minister at Washington, forwarding one from Her Majesty's Consul at San Francisco, on the subject of trade with the Marshall Islands.

I have, &c.,
KNUTSFORD.

Governor, the Right Honourable
Lord Carrington, G.C.M.G.

No. 1.

Sir L. West to the Marquis of Salisbury—(Received May 28.)
(No. 150—Commercial.)
Washington, May 18, 1888.

My Lord,

I have the honor to enclose to your Lordship herewith copy of a Despatch, as well as copy of enclosure, which I have received from Her Majesty's Consul at San Francisco relative to trade with the Marshall Islands.

I have, &c.,
L. S. SACKVILLE WEST.

[Enclosure 1 in No. 1.]
Consul Donohoe to Sir L. West.

San Francisco, May 10, 1888.

Sir,

I have the honor to enclose copy of a letter which I received this morning from the Imperial German Consul relative to trade with the Marshall Islands.

There is some trade in schooners from San Francisco with these islands, but the vessels are under the American flag. Upon making inquiries here I find that the vessels under the British flag trading there usually hail from the Australian Colonies.

I have, &c.,
D. DONOHOE.

[Enclosure 2 in No. 1.]

M. Rosenthal to Consul Donohoe.

San Francisco, May 1, 1888.

Sir,

The Imperial German Government has declared the port of Yalint to be the only port of entry of the Marshall Islands.

The masters of those ships which come from any port outside of said islands have to enter the port of Yalint, and to report to the Imperial Commissioner at said last-mentioned port before touching any other one of the said islands.

Any violation of any of the foregoing provisions shall be punishable by fine not exceeding 6,000 marks. This fine may be enforced against the ship and cargo without regard to the owner of the same, and the forfeiture of the ship may be adjudged.

It being desirable that all parties concerned receive timely notice of the foregoing, I would most respectfully request you to have the masters of such ships as are under your official control and may go to the Marshall Islands informed of the above requirements.

I am, &c.,
A. ROSENTHAL,
Imperial German Consul.

C. C. C.
