NEW SOUTH WALES.

DEPARTMENT OF LANDS.

(REPORT FOR 1890.)

Printed in accordance with Resolutions of both Houses of Parliament.

The Under Secretary for Lands to The Secretary for Lands.

Sir, Department of Lands, Sydney, 1st May, 1891.

I have the honor to submit, for your information, the Eleventh Annual Report of the Department, reviewing the business of the year 1890.

Introductory.

The year under consideration was, in many respects, an important one. It witnessed the passing into law of the Crown Rents Bill, and the Rabbit Bill, while the Crown Lands Act of 1889, which did not come into operation until the 1st December of that year, was found to have greatly stimulated the demand for land under the new or altered provisions of the law.

The Crown Rents Act was rendered necessary by the judgment of the Privy Council in the case of Alison *v.* Burns. That judgment went to show that the rents of pastoral and other leases could be fixed only by the Minister and the Land Board mutually concurring as to rate; and it necessarily followed that in all instances where the Minister had exercised his judgment independently of the Board (a right which successive Ministers, in common with the Supreme Court of the Colony, held they possessed) the legal determination of the rents was in abeyance.

The judgment of the Privy Council, therefore, created a situation of extreme difficulty, inasmuch as large sums of money had been paid into the Treasury, by way of rents, in response to claims by the Crown thus shown to have been premature. The text of the judgment was received after the Crown Lands Act of 1889 had become law, and on framing a measure to meet the exigency, advantage was taken of the existence of the Land Court which had been created by that Act.

The Crown Rents Act provided that any lessee, dissatisfied with his rent as fixed by the Minister, and differing from that appraised by the Land Board, might, by making application, secure a determination of his rent by the Land Court; while the fact of his not applying would operate as a validation of the rent already charged. This provision extended, not only to leases then current, but to those which had expired, or might expire, before the advantages of the new enactment could be secured.

The Rabbit Act was a recognition of the necessity for legislation to deal with a pest which could not adequately be dealt with under the existing law, the expenses attending the administration of which were enormous, while the benefits derivable from it were not in any proper degree proportionate. It is too early to speak of the probabilities in connection with this new measure; but both the Crown and its tenants are equally affected by it, and look forward to the result of its operation with considerable interest.

With regard to the Crown Lands Act of 1889 much might be written, but, as will be seen from the chapters following, a considerable amount of activity in land matters has taken place since its inception. The aim of this Act (which has,

perhaps as many of the essentials of a new as of an Amending Act) was to remove patent disadvantages under which purchasers and lessees were found to labour; to simplify and liberalise the then existing law; to create some new methods of disposing of Crown lands; to offer privileges which the Act of 1884 withheld; and to establish for the final determination of rents, values, and disputed questions such an independent Court of Appeal as would be acceptable to the public. Facts are not wanting to justify the statement that the objects of the Amending Act have been secured; and proof, that the law in its present amended shape offers substantial encouragement to those desirous of coming under it, is afforded by the numerous applications which have been tendered under its various provisions.

One important provision of the Act of 1889 was that by which pastoral, conditional, and homestead leaseholders and occupation licensees were allowed the option of remaining under the conditions as to rent laid down by the Act of 1884, or of demanding a fresh appraisement for each of the successive periods into which their term of lease might be divided. Another was that affording the holders of expiring pastoral leaseholds in the Eastern Division the privilege of continuing to hold their land at a new rent under preferential occupation license.

These provisions were, as will be seen elsewhere, taken advantage of in a number of cases, and this fact necessitated the appointment of qualified inspectors to visit the land and collect data from which the Local Boards might (with other evidence) make their appraisements. The work of inspection was well advanced at the close of 1890, and is now practically completed. In view of the importance of the interests involved, arrangements were made for the representation of the Crown before the Boards by officers, whose skill, experience, and familiarity with the resources of their respective districts, were calculated to be of great assistance to the Boards and of very considerable advantage to the public.

Mention may appropriately be made here of the publication, under the Minister's direction, of "The Handbook," which, while not pretending to the character of a legal text-book, was compiled with as much care as possible, with a view to enable persons interested to have at command such a summary of the Land Acts and Regulations as would assist them in understanding the law, or, at least, enable them to refer more readily and conveniently to such of its provisions as they might be particularly concerned in. Judging from the circulation of the pamphlet, the publication is one which the public will probably look to be repeated should any important change in the law take place.

Although the Newcastle Pasturage Reserve Act was passed in 1889, the numerous transactions under it were a special and important item of the business of the year 1890. As its title implies, the Act has a purely local application. It deals with a reserve near Newcastle which had been occupied by unauthorised persons for many years. The number of original occupants was gradually increased by fresh trespassers, and ultimately a township or village grew up. The question of disturbing these persons thus developed into a serious one, accentuated as it was by the fact that they had effected improvements, and had bought and sold their assumed interests in the locality.

The Act in question legalised, under certain restrictions, the occupation of the trespassers, and afforded them an opportunity of securing a legal title by the purchase, at an appraised price, of such allotments as might be measured, under an approved design, to embrace their improvements. It is sufficient to state here that the Act has worked successfully, and that the persons concerned have benefited, while the public interest generally has suffered no disadvantage.

The large increase of work which marked the year 1890, and which will be found more particularly referred to elsewhere, was such as to tax the resources of the Department, both at head quarters and in the country, to a greater extent than has occurred since 1885; but it is very satisfactory for me to state that, although it was necessary to temporarily strengthen some of the local staffs, such zealous exertions were made in the interests of the Department and the public, that no stagnation of business occurred. It is recognised, of course, that in doing this the officers merely fulfilled such expectations as had been formed of them; but I am unwilling to allow the occasion to pass without expressing my appreciation of their cheerful and unremitting efforts.

Reorganization.

In previous reports reference has been made to the investigation in progress as to the working of the local offices with a view to retrenchment, the assimilation of practice, and the prevention of undue delays in the transaction of business. The reorganization of these offices was completed during 1890, on lines similar to those adopted in relation to the Head Office, as affording the most equitable and efficient basis for reconstruction, and the salaries of the several officers were adjusted to correspond, as far as possible, with specific duties assigned to them.

The inquiry necessitated visits to all the Local Land Board and District Survey Offices in the Colony. Nor were inquiries confined to these offices, inasmuch as in the elucidation of matters which came under notice, it became necessary to take subsidiary journeys and obtain evidence and information from other sources. It will thus be seen that the investigation was necessarily of a somewhat protracted character, if only to admit of the course of procedure adopted at the different centres being carefully investigated, and subsequently reviewed and adjusted as a whole.

During the progress of the inquiry, matters of a varied and important character, not confined to questions of administration (but too numerous to be explained here), were referred to the Board, and no fewer than 169 reports and recommendations were furnished in connection therewith; and the Board's recommendations on these, as well as on those matters which constituted the main subjects of their investigation, were, with some modifications or exceptions to meet altered circumstances, approved and carried into effect.

The important matter of the reconstruction of the Country Staffs (which was submitted to the Minister by Mr. Freeman, the late Under Secretary) involved the removal of some officers from one district to another, with a view to their taking up duties for which they had been adjudged by the Board to be qualified, and this, happening shortly before the expiration of the pastoral leases in the Eastern Division of the Colony, occasioned some amount of inconvenience, which, however, was reduced to the lowest possible point that circumstances would permit.

In carrying out these changes the course adopted in the distribution of the country staffs under the system of decentralization introduced by the Act of 1884 was pursued, the removal expenses of officers being defrayed by the Department.

The fluctuating nature of the business in the Local Land Board and District Survey Offices precluded any large increase in the number of permanent officers, and consequently the transference of temporary officers to the permanent staff was limited to officers of special merit and long service.

A re-arrangement of the coastal Land Board Districts was found desirable, and accordingly a re-adjustment was effected which will result in a considerable saving in expenditure. The Metropolitan Board District, which comprised the Land Districts of Berrima, Campbelltown, Gosford, Kiama, Lithgow, Liverpool, Metropolitan, Milton, Moruya, Nowra, Parramatta, Penrith, Picton, Windsor, and Wollongong, was found to be irregular and straggling in form, its physical characteristics peculiarly varied, and many of its outlying portions inconveniently situated in relation to the metropolis. The boundaries of that Board District were accordingly reduced by the excision of the Land Districts of Berrima, Gosford, Lithgow, Moruya, and Nowra,—Berrima and Nowra being attached to the Goulburn, Gosford to the Maitland, Lithgow to the Orange, and Moruya to the Cooma Board Districts respectively. The Land District of Port Macquarie was at the same time transferred from the Board District of Maitland to that of Grafton, and the Land District of Braidwood from the Board District of Goulburn to that of Cooma.

The report of the Board appointed to inquire into the working of the Detail Survey and Trigonometrical Branches of the Department came forward for investigation during 1890, and their recommendations were, on all essential points, approved and carried into effect.

The Detail Survey now in progress will, it is expected, continue for about two years longer, although revisional surveys will be required from time to time in localities to which the sewerage system may be extended, or for the purpose of illustrating such alterations and additions as may follow the natural expansion of the city and suburbs.

The

The operations of the Trigonometrical Branch had been for several years past practically confined to observations for the determination of the latitude and longitude in various parts of the Colony, extending from the coast line to the western boundary. The chief object of this work was to afford the necessary data for the compilation of an accurate map of the Colony—a work which has been in progress for some years.

After careful consideration of the Board's report, it was, however, decided to limit these observations to specially selected stations, and, with strict regard to economy and practical requirements, to revive the Triangulation Survey of the Colony, in connection with which a very large expenditure had already been incurred in certain preliminary essentials, notably the determination of base-lines of mathematical exactitude, while the Department had acquired, at considerable cost, all the necessary scientific instruments and appliances for carrying on the survey.

The objects of this important work may be briefly referred to. They include the means of producing absolutely correct local maps; of affording an effective check on the accuracy of contiguous surveys; of determining permanent points of reference, which will hereafter be found invaluable in reproducing the original position of survey marks which have become obliterated; besides offering a means of solving a number of important scientific questions.

It may be mentioned that the complete proposals submitted by the Boards of Inquiry in connection with the reorganization of local offices, the Detail Survey and Trigonometrical Branches, and cognate matters, represented a reduction in expenditure of about £32,500, including the necessary provision for the revival and extension of the Triangulation Survey. This amount was, however, reduced by some modifications of proposed salaries, and by its having been determined, after much consideration, to maintain, for a time at least, the Tamworth local office, the abolition of which had been proposed by the Board.

The total saving of revenue reached the sum of £23,900, but it ought to be pointed out that this saving extended over a period of rather more than three years, as during that time effect had been given to numerous interim reports and recommendations submitted by the Board. For example, in October, 1888, the retirement of a number of officers was effected, which, with the arrangements previously made by the Board to fill vacancies occurring through death or other causes, represented, up to the date mentioned, a saving of £9,444 per annum.

The retirement of the officers whose services were no longer required was effected under conditions similar to those granted to officers dealt with in the reorganization of the Head Office. In the case of officers on the Permanent Staff, the retirement was effected under the provisions of the Civil Service Act, and in the case of those on the Temporary Staff a bonus, calculated upon the scale of two weeks' pay for each year of service, was paid. The total cost of the retirements was £4,316 7s. 11d.

The new avenues of work opened up by the Amending Act of 1889 rendered some radical changes in the Head Office of the Department a matter of actual necessity, and, in pursuance of this, an alteration was made in the administrative arrangements by grouping the business under two main divisions, and by making other changes which have proved successful in attaining expedition and security in the dispatch of business.

Provision has been made for the inspection of local offices by responsible officers; experience having shown that by this means reasonable uniformity of action may be maintained, and a check placed upon extravagance, irregularity, or delay in the transaction of business.

The Land Court.

The Land Court, which was constituted under the Crown Lands Act of 1889, held its first sitting at the Court-house, Darlinghurst, on the 3rd of March, 1890, when 57 cases, comprising appeals and references remaining undealt with from the Ministerial Appeal Court, were set down for hearing. In addition there were 22 cases which were referred back to the respective Local Land Boards for rehearing

or

or further consideration. Arrangements were subsequently made for the Court to hold sittings at the various circuit towns as the quantity of business and the convenience of the appellants and other interested parties demanded. Sittings were accordingly held at Albury and Bathurst, each once, at Dubbo three times, and Goulburn, Hay, Tamworth, and Wagga Wagga, each twice.

During the year 294 appeals and references were heard and disposed of or referred back to the Local Land Boards for further inquiry, of which 186 were heard in Sydney and 108 in the country. Cases to the number of 92 were also ordered back to the Boards for rehearing, revision, or further consideration.

Auction Sales.

The sales of town lands during the year under review do not compare favourably with those of the previous year, as out of 2,479 lots, with an area of 1,019 acres and 19 perches, submitted, only 891, containing 360 acres 3 roods 5¾ perches, were sold, realizing £15,234 13s., as against 3,014 lots, comprising 1,312 acres 2 roods 12½ perches offered in 1889, of which 1,539, including 670 acres 1 rood 31¾ perches, were alienated for £29,474 14s. The average price per acre secured, however, approximates very closely to that obtained in 1889. Details are set out in Schedule XXXV.

With respect to sales of suburban land, details are given in Schedule XXXVI. An area of 7,045 acres 3 roods 11 perches, in 1,335 lots, was submitted to public competition, but only 461 lots, comprising 2,161 acres 3 roods 27½ perches, were disposed of for £12,674 7s. 6d., or an average of £5 17s. 3d. an acre. The subjoined table exhibits a comparison between the sales in 1889 and 1890, from which it will be observed that the results secured in 1890 in connection with suburban land fell short of those in 1889, and that the average price was about 8 per cent. below that of the latter year.

An area of 66,160 acres 1 rood 29½ perches, in 686 lots, of country lands, was alienated during 1890 for £113,768 2s. 2d., an average of £1 14s. 5d. an acre. The transactions in this respect show a considerable advance on those of the previous year. (*Vide* Schedule XXXVII.)

The aggregate area, including town, suburban, and country lands offered at auction during the year, was 160,844 acres 1 rood 12¾ perches.

In town lands 1 rood 19 perches at Wagga Wagga realized £1,313 5s.; 17 acres 15 perches at Brewarrina brought £1,314 11s.; and 344 acres and 24½ perches of suburban land at Forbes were disposed of for £2,405 2s.

	Year.	No. of lots offered.	Area offered.	No. of lots sold.	Area sold.	Amount realized.	Average price per acre.
			a. r. p.		a. r. p.	£ s. d.	£ s. d.
Town	1889	3,014	1,312 2 12½	1,539	670 1 31¾	29,474 14 0	43 19 3
	1890	2,479	1,019 0 19	891	360 3 5¾	15,234 13 0	42 5 0
Suburban ...	1889	1,509	7,420 3 13½	767	3,488 3 16	22,080 2 0	6 6 6¾
	1890	1,335	7,045 3 11	461	2,161 3 27½	12,674 7 6	5 17 3
Country	1889	1,122	44,020 2 3¾	482	18,429 2 30	42,626 12 7	2 6 3
	1890	1,878	152,779 1 22¾	686	66,160 1 29½	113,768 2 2	1 14 5

During the year sixty-one purchasers failed to complete their transactions, and thus 346 acres 2 roods 32¼ perches, and deposit money to the extent of £2,010 10s. 7d., were forfeited. The sum of £33 11s. 9d., paid as guarantee deposits in connection with lands submitted to auction, was returned to the applicants who became the purchasers of such lands, and a refund of £687 2s. 4d., being money and deed-fees paid in excess, was made to the parties concerned. The right to improvements effected on land sold during the year not having (in view of special circumstances) been insisted on by the Crown, their value, amounting to £828 13s. 5d., was refunded, the amount having been first secured by addition to the upset price. (*See* Schedules XXXIX, XL.)

Conditional

Conditional Purchases.

It was anticipated that the unlocking of a very large area by the determination of the pastoral leases in the Eastern Division, an event which commenced in July, 1890, would greatly stimulate the demand for land under conditional purchase, more especially in view of the increased liberality of the provisions affecting this class of purchase introduced by the Crown Lands Act of 1889. This expectation was more than fully realised. In some districts certain areas had been temporarily reserved from sale with a view to subdivision preceding application, and a few in order that an adequate price might (by the proclamation of special areas) be secured for such as were undoubtedly of a higher value than the price fixed by the Act for ordinary lands. These arrangements to some extent no doubt constituted a slight check on the intentions of some persons; but, notwithstanding this, the influx of applications was very considerable, as will presently be shown.

The transactions of the year may not unreasonably be placed in comparison with those of 1885, when the Act of 1884 took effect; seeing that during both years lands were, by the expiring leaseholds in the one case, and the postponement of the operation of the Act in the other, rendered for a term unavailable for conditional purchase, and during this term a special demand for the land thus locked up was in process of development. The result of this comparison shows that during 1885 5,377 applications were received for 1,165,351 acres, and during 1890 8,526 applications for an area of 1,713,577 acres, the year which has just closed thus showing the higher figures. The following table contains the figures for each year since 1885, inclusive, and, in a convenient shape, admits of a more complete review :—

Year.	Section 26.			Section 42.			Section 47.			Special Areas.			Total.		
	No.	Area.	Deposit.	No.	Area.	Deposit.	No.	Area.	Deposit.	No.	Area.	Deposit.	No.	Area.	Deposit.

1887	2300	529,628 2 14	52,962 17 5	2185	231,912 2 5	23,191 5 3	186	20,073 3 12	4,014 16 0	98	11,389 1 0	2,501 12 3	4769	793,004 0 31	82,670 10 11
1888	2474	560,109 3 23	56,010 19 11	2334	247,639 0 16	24,763 18 4	283	26,139 0 22	5,227 17 0	273	31,311 0 17	7,155 9 0	5364	865,199 0 38	93,158 4 3
1889	2722	533,213 0 0	53,321 3 0	2684	283,215 0 20	28,320 15 3	271	26,660 3 0	5,532 3 0	528	60,070 2 29	12,680 5 0	6205	903,159 2 9	99,854 6 3
1890	3252	879,058 3 3	87,907 18 8	4064	600,839 2 16	60,119 2 2	230	23,163 1 33	5,635 10 6	980	205,515 1 28	40,316 1 4	8526	1,713,577 1 0	193,978 12 8

In the subjoined schedule the year 1890 is compared with the year immediately preceding, and from this it will be seen that a difference of 2,321 applications and an area of 810,417 acres lies to the credit of the year under review, while it will further be noticed that of the 8,526 applications which came to hand, 3,797 were for 1,004,421 acres under original conditional purchase, 4,477 for 678,763 acres under additional purchase, and 252 for 30,392 acres under non-residential conditions. Included in these are 980 applications for 205,515 acres within special areas.

Schedule

Schedule VII contains particulars in connection with conditional purchases applied for during 1890.

Of the applications received during 1890, 1,699 were confirmed, comprising 381,010 acres 0 roods 13 perches, and 1,250 disallowed. Of those made previously to the 1st December, 1889, 2,179 were confirmed for an area of 210,589 acres 2 roods 21 perches, and 303 disallowed; while of those lodged during the period between the 1st December, 1889, and 1st January, 1890, 219 were confirmed for 40,578 acres 0 roods and 20 perches, and 124 disallowed, making an aggregate of 4,097 applications confirmed during the year for 632,177 acres 3 roods 14 perches, and 1,677 disallowed. (*Vide* Schedule VIII.)

At the close of 1890, 157,062 conditional purchases were in existence comprising an area of 20,404,540 acres 0 rood 30 perches. Included in these are applications made subsequently to the 1st December, 1889, on which action is proceeding, and some of which may be disallowed later on. These are included having regard to the fact, subsequently adverted to, that since the Act of 1889 a statutory right to the land follows as a consequence of any valid application, and the purchase thus practically commences from the date the application is lodged. (*Vide* Schedule XXIV.)

During 1890, 579 special areas were proclaimed, comprising 384,650 acres, averaging 665 acres to each special area. (*Vide* Schedule LXII.)

In connection with the general question of setting apart lands under special areas, upon which a good deal of comment has from time to time been made, it may be mentioned that during last year a return was prepared, a reference to which may not be without interest. (*Vide* Schedule CX.)

This return shows that of the whole quantity of land in Special Areas available for selection since the passing of the Crown Lands Act of 1884, the area selected throughout the whole of the Colony was 38¼ per cent., with an average value of a trifle over £2 per acre. In the Board District of Forbes the percentage of area selected to that available was highest with 87; Goulburn ranked next with 58¾; whilst Orange and Wagga Wagga followed closely with 54 each. In nine of the Land Districts the total area proclaimed had been selected; in two the percentage was between 90 and 99; in three, 80 to 89; in six, 70 to 79; in four, 60 to 69; in eight, 50 to 59; in thirteen, 30 to 49; and in fifteen Land Districts the percentage was from 15 to 29.

With the exception of Forbes, the remaining eight land districts in which the total area was selected, contained only a very small quantity of land open to special area, and the result, therefore, can, in those cases, be of no great weight. In the Forbes Land District the area available was over 6,300 acres, the whole of which was selected, a result which may be considered satisfactory.

In the four Land Districts of Wagga Wagga, Urana, Cootamundra, and Corowa, the areas available for special area, since the Crown Lands Act of 1884 was passed, up to the preparation of the Return were, in round numbers, 37,700, 29,500, 5,230, and 20,300 acres respectively, and the average areas selected up to that date were 49¾ per cent., 36⅓ per cent., 80½ per cent., and 83½ per cent. respectively. There is no reason to believe that the results have been less satisfactory since.

Omitting those Land Districts (eleven) in which no land in special areas had been selected, the Land Districts showing the least results are:—Armidale, 4 per cent.; Narrabri, 6 per cent.; Walgett, 8½ per cent.; Bourke, 9¾ per cent.; and Hay, 13 per cent. This is accounted for by the fact that prior to 1st December, 1889—the date the Crown Lands Act of 1889 took effect—the maximum area allowed in special areas was 160 acres—a quantity too small to induce selectors to take up the land in those districts.

Viewing the question of making these lands special areas, from a mere financial stand-point, the results of the information obtained show that the Public Treasury had benefited to an extent of £16,602 above the ordinary sum payable had the land been sold at £1 per acre; whilst the prospective increase to the revenue is £166,020, to which interest must be added.

In previous reports the difficulty of speedily placing applicants for conditional purchases in possession of the land applied for has been adverted to. This difficulty has been effectually removed by the Crown Lands Act of 1889 affording applicants

applicants the right of entering into immediate occupation without having to wait for the authority of the Land Boards, as was the case before the Crown Lands Act of 1884 received amendment.

During the year 689 cases were forwarded from the Head Office, to the Land Board Offices, 637 of which were for inquiry, and 52 for inspection of the land. The Chairmen of the Local Land Boards issued 7,181 cases to Inspectors of Conditional Purchases for inspection and report, and those officers supplied 6,452 reports relating to the manner in which the selectors concerned were fulfilling the conditions of their holdings. (*Vide* Schedules IX, X.)

Declarations to the number of 1,119, referring to the fulfilment of conditions imposed by law in respect to conditional purchases were received, and 3,342 certificates of conformity were issued in cases where it was found that the obligations had been carried out. (*Vide* Schedule XI.)

The failure to comply with the conditions of residence, fencing, &c., resulted in the forfeiture of 739 conditional purchases, containing an area of 109,472 acres and 31 perches during 1890; and, consequent on the non-payment of balance, interest, or instalment money, 52 conditional purchases, comprising 5,150 acres, were similarly dealt with. The forfeiture or lapsing of 14 conditional purchases, including an area of 1,501 acres 3 roods, was, however, reversed during the year. (*Vide* Schedules XIV, XV, XXIII.)

In the case of 18 conditional purchases, comprising an area of 2,055 acres and 4 perches, the provisions of the 138th section of the Crown Lands Act of 1884 were availed of to admit of their validation, and similar action under the powers conferred by Act 50 Vict., No. 21, was taken with respect to 16 mining conditional purchases, containing an area of 979 acres 3 roods. (*Vide* Schedules XXI, XXII.)

Schedule XII shows that 11,464 transfers were received during 1890, and that action on 9,439 was completed during that period. The transfers dealt with involved a no less number than 19,798 conditional purchases, and the revenue was benefited to the extent of £6,979 11s. by stamp duty paid thereon.

Voidance was declared in connection with 18 conditional purchases, containing 2,183½ acres, during 1890, and in the case of 3 conditional purchases, comprising 160 acres, voidance was reversed. An adjustment in area, by way of reduction or increase in acreage, was effected with respect to 266 conditional purchases during the year. (*Vide* Schedule XVIII.)

The several Local Land Boards sat for periods aggregating 1,323 days, and disposed of no fewer than 26,156 cases of all kinds during the year, the inquiry in respect to 1,757 having been adjourned. (*Vide* Schedule V.)

Conditional Leases.

The conditions which tended to increased alienation under conditional purchase necessarily had a corresponding influence on business under this head, inasmuch as the close association between conditional purchases and conditional leases naturally made the demand for one in some degree proportionate to the demand for the other. From the schedule below (in which a comparison is instituted since 1885, inclusive), it will be seen that 5,466 applications, representing an area of 3,056,774 acres 2 roods 26 perches, with deposits amounting to £25,489 7s. 2d., were received during 1890, as against 3,470 applications, for 1,569,949 acres 3 roods 30 perches, in 1889.

Year.	Number.	Area. a.	r.	p.	Deposits. £	s.	d.
1885	3,816	2,547,045	0	15*	21,225	7	6
1886	2,500	1,207,953	0	8	10,066	5	6
1887	2,228	1,242,380	0	0	10,353	3	4
1888	2,623	1,424,753	1	25	11,872	18	11
1889	3,470	1,569,949	3	30	13,082	18	4
1890	5,466	3,056,774	2	26	25,489	7	2

* This includes 1,994 applications; area, 1,198,617 acres 30 perches, made under the 54th clause of the Act of 1884.

Of the applications lodged during the year the Local Land Boards confirmed 664, for an area of 420,905 acres 1 rood 35 perches, and disallowed 847. Of the applications lodged prior to the 1st December, 1889, 1,364 were confirmed for

for 610,628 acres 2 roods, and 170 were disallowed, and of those received during the period between the 1st December, 1889, and the 1st January, 1890, 113 for 57,541 acres 3 roods 22 perches were confirmed and 52 disallowed. It will thus be seen that 2,141 applications, comprising 1,089,075 acres 3 roods 17 perches, were confirmed, and 1,069 disallowed during the year. One application under the provisions of the 52nd clause of the Crown Lands Act of 1884 was refused. (*Vide* Schedules XXVI and XXVII.)

In explanation of the large number of applications disallowed in 1890, it may be here stated that immediately after the leasehold areas in the Eastern Division became available many of the applications lodged were found to conflict, and upon being dealt with by the Land Boards all but the successful ones were disallowed.

During 1890, 3,476 conditional leases were gazetted, which, taken with the accumulated number gazetted under the 48th, 52nd, and 54th clauses of the Crown Lands Act of 1884, brought the number of leases arrived at this stage up to 13,230, with an area of 8,278,459 acres 1 rood 7 perches, and returning a rent of £100,112 13s. 7d. (*Vide* Schedules XXXII and XXXIII.)

In view of the fact that an immediate right to occupation from date of application is now conferred by the Act of 1889, it is necessary to add to these figures the number of applications made since that Act came into operation, which brings the area under conditional lease up to 9,903,949 acres 1 rood 14 perches, comprised in 15,891 conditional leases; some of these may, of course, be disallowed. Out of this large number only 927 leases were brought under the provisions of section 29 of the Crown Lands Act of 1889, and only 38 under the provisions of the Crown Rents Act, with a view to a re-appraisement of rent.

An area of 240,892 acres 3 roods, comprised in 470 conditional leases, and involving a rent of £2,792 2s. 3d., was gazetted as forfeited during the year, and the transfer of 1,291 conditional leases was also effected. (*Vide* Schedules XXVIII and XXIX.)

Improvement Purchases.

By virtue of occupation under the Mining Act, applications to the number of 1,220 were made during 1890 to purchase an area of 674 acres 2 roods 31 perches, on which the applicants had effected or acquired improvements. Of these, 217 were refused and 355 approved, 182 acres 1 rood 5¼ perches being disposed of at an appraised value of £9,908 17s. 6d. In addition to the foregoing, 343 applications, under the provisions of the 46th clause of the Crown Lands Act of 1884, lodged previously to the 1st January, 1890, were granted, representing an area of 173 acres 1 rood 4¾ perches, and purchase money to the amount of £8,873 10s. 7d. Added to these 43 outstanding applications, made under the 2nd clause of the Lands Acts Amendment Act of 1875, were approved of, with an area of 13,977 acres 3 roods, and at a price of £23,605 11s. 1d.

Schedules XLI, XLII, XLIII contain particulars with respect to these transactions, and show that a total of 741 portions, comprising an aggregate area of 14,333 acres 1 rood 10 perches, were alienated during 1890, at an appraised value of £42,387 19s. 2d.

Sales under the Newcastle Pasturage Reserve Act.

As already mentioned, the Department was for many years confronted with the continually-increasing difficulty of dealing with the large number of persons who had settled on the Pasturage Reserve near Newcastle, a difficulty successfully and equitably surmounted, with due regard both to the public and private interests involved, by the passing, on the 21st June, 1889, of the "Newcastle Pasturage Reserve Act, 53 Vic. No. 1," which provided for the immediate sale of parts of the land, and the control of the remainder of the reserve in the future.

Owing to the many interests involved, and their varied character, much time and care were devoted to investigating the claims tendered by the occupants to purchase portions on which they had effected improvements, and of which they had been in occupation for periods extending from six months to fifteen years; and when it is considered that in 1887 there were some 4,486 persons residing

on the reserve, without any authority for their occupation, it will be readily appreciated that the task of adjusting these claims in accordance with the Act was far removed from an easy one. It may be here mentioned that at first a disposition was manifested by some of those interested to oppose the Government appraisers' valuations; but this did not continue, and it is satisfactory to state that (with two or three exceptions) no departure was made from the estimate of the appraisers, who displayed considerable care and judgment in solving the somewhat difficult problem which the question of the value of the land represented. Schedule L shows that there were 1,169 applications tendered, and that during the year all, except fifteen, had been reported on by the Land Board, who occupied 41 days in dealing with the cases in open Court.

In 869 cases approval was given to purchase an area of 204 acres, representing £55,323, or over £271 per acre, but as this approval was notified only on the 30th December last, it is too early to say how many of these cases will be carried to completion by the parties concerned.

It may be remarked, in passing, that very shortly after the close of 1890 nearly the whole of the cases then outstanding were disposed of. Whilst, however, the claims of those who for years were trespassers on this valuable State property may be viewed as in a fair way to settlement, much remains to be done with other parts of the reserve, in the way of appropriations for public purposes and the disposal of the land by auction, &c., as legitimate demand arises.

Special Purchases.

Under the provisions of the 63rd, 64th, 66th, and 67th clauses of the Crown Lands Act of 1884, 182 applications were received during the year, of which 8 were for the rescission of water frontages, 41 for permission to reclaim land, 25 for the purchase of small areas unavailable for conditional purchase, and 108 for the purchase of unnecessary roads.

Inclusive of applications outstanding on the 31st December, 1889 (some of which were made under the provisions of the 69th clause of the Act mentioned), an area of 206 acres 3 roods 38½ perches was alienated under the Crown Lands Act of 1884 during the year. During the same period an area of 488 acres 2 roods 17½ perches was alienated in compliance with applications made under the Repealed Acts. Inclusive of penalties, the sum of £10,496 5s. 8d. was received as the result of these sales. The alienation of 3 acres 1 rood and 7½ perches in the County of Cumberland realised £5,017 12s. 9d. Schedules XLIV, XLV, XLVI contain the details with respect to this class of alienation.

Surrenders and Exchanges.

Seventy-eight applications to surrender land within resumed areas, in exchange for land within leasehold areas, were received, 21 of which were refused and 57 remained undisposed of on the 31st December, 1890. There were also 69 applications to surrender land within leasehold areas, in exchange for other land within leasehold areas, 21 of which were refused, leaving 48 outstanding at the close of the year. Thirty-four applications to surrender land, partly within leasehold and partly within resumed areas, in exchange for other land within leasehold areas, were received, 8 of which were refused; action on the remainder was incomplete at the end of the year. (See Schedules LXXVIII, LXXIX, LXXX.)

Volunteer Land Order Applications.

The transactions with respect to this class of alienation were an advance on those of the previous year, inasmuch as 51 applications, comprising 2,550 acres, were received for grants of land by virtue of certificates under the provisions of the Volunteer Regulation Act of 1867, of which 27, containing an area of 1,350 acres, were refused. During the year 17 applications, comprising 850 acres, were satisfied, 15 of which were outstanding on the 31st December, 1889, leaving 34 for an area of 1,700 acres undisposed of at the close of the year. Details are set forth in Schedules XLVII, XLVIII, XLIX.

Cost

Cost of Survey.

An important alteration, introduced by the Crown Lands Act of 1889, was that by which the Crown was relieved of at least a proportion of the cost incurred in the measurement of land applied for under conditional or improvement purchase, or conditional or special lease. The Act did not fix the amount of survey fee to be charged, but left it to be settled by regulation. Accordingly, when the Act came into operation, the matter received the most careful attention, and a sliding scale of fees was drawn up and approved. This scale, while recognising the fact that the actual cost of measurement, under equal conditions, is proportionately less per acre for a large than a small area, was based on the cost of survey, assuming that difficulties and corresponding expenses would not exist. As a matter of fact, however, the actual expense to the Crown varies considerably, and, in a large proportion of cases, is great; but the cost to the applicants is a constant quantity according to the area applied for, and they are thus relieved from the extra or special expenses which their applications occasion.

Surveys are conducted by two classes of surveyors, one paid by contract, the other by salary; the conditions of employment depending upon different sets of circumstances, which sometimes recommend one system and sometimes the other. Schedule CIX shows the work carried out under the respective systems, and the average cost per acre to the Crown, classified according to the several classes of purchases, leases, &c., in connection with which the surveys were conducted. The total average cost, although exhibited in the schedule, is of no statistical importance, inasmuch as it would fall or rise according as certain extensive and cheap surveys (such, for example, as those of homestead leases), did, or did not, accidentally enter into the calculation. The average cost under the respective headings is also liable to a somewhat similar fluctuation, as it would fall if the land were applied for in large blocks, while it would rise if the reverse were the case. It seems scarcely necessary to illustrate this matter further, but it will be understood, at a glance, that the cost of measuring one block of 2,560 acres must necessarily be cheaper than measuring the same area, say in eight separate blocks of 320 acres each. This serves to explain why the average cost of conditional lease surveys is lower than that of conditional purchases—the area of the lease being generally three times the area of the purchase itself. It may be added that any comparison between the ascertained cost of survey and the fees deposited with applications would be misleading, as a large proportion of the latter will be refunded, and, for the most part, they apply to surveys yet to be made, while the figures in the Schedule beforementioned refer to measurements already effected in connection with applications, a large proportion of which were received prior to 1890.

Annual Leases.

The area submitted for annual lease by auction during 1890, under the provisions of the 85th section of the Crown Lands Act of 1884, does not compare favorably with that of the previous year, only 65 lots, comprising an area of 40,625 acres 2 roods, having been submitted during the later as against 405 lots with 228,755 acres 1 rood in the earlier year. Of those submitted only 11 lots, containing 4,769 acres, and producing an annual rent of £48 18s. 9d., were sold. (*Vide* Schedule LII.)

The decrease thus exhibited is in some measure explained by the fact that the new method introduced by the Act of 1889, by means of which annual leases may be secured by application at an appraised rent, is in greater favour, and discourages the submission of lands to open competition. The number of such applications was 1,186, which, with 64 lodged in December, 1889, made 1,250 for consideration, representing an area of 1,063,635 acres 3 roods 27 perches. Of these 124 were disallowed, and 169, comprising an area of 135,672 acres 1 rood 12 perches, were granted, producing an annual rent of £789 5s. 5d., leaving 957 outstanding at the close of the year. Particulars are set forth in Schedule LVII.

An area of 591,918 acres, included in 1,068 lots, was submitted for tender under the provisions of the section before referred to, and resulted in the disposal of 446 lots, comprising 221,006 acres 2 roods, at an annual rent of £2,453 11s. 1d. (*Vide* Schedule LIII.)

The

The following table affords a comparison between the years 1889 and 1890 in connection with leases offered by auction or tender :—

Year.	No. of lots offered at auction.	Area.	No. sold.	Area.	Annual Rent.
		a. r. p.		a. r. p.	£ s. d.
1889	405	228,755 1 0	198	116,146 3 0	1,805 19 1
1890	65	40,625 2 0	11	4,769 0 0	48 18 9
	No. of lots offered to tender.				
1889	2,391	1,661,856 3 0	440	252,869 3 0	2,376 1 8
1890	1,068	591,918 0 0	443	221,006 2 0	2,453 11 1

The total number of annual leases current on the 31st December, 1890, was 5,348. These comprised an area of 3,575,975 acres 3 roods, producing an annual revenue of £23,875 7s. 1d. (*Vide* Schedule LIV.)

During the year an area of 349,798 acres, comprised in 552 annual leases, at a rent of £2,857 12s. 11d., was gazetted as forfeited, and 9 leases, containing 6,360 acres, were cancelled. (*Vide* Schedules LV, LVI.)

Artesian Well Leases.

To encourage the search for and conservation of water on lands in the Western Division, leases of lands surrounding artesian wells were provided for by the Crown Lands Act of 1889, to be issued to the holders of annual leases or occupation licenses who might be desirous of boring or searching for water. To preclude interference with bonâ fide efforts to discover water, provision was made for the temporary reservation of the land, such reservation not to exceed a specified area; while the discovery of water in sufficient quantity, &c., was to be followed by the granting of a lease.

During the year 39 applications, referring to an area of 789,600 acres, were received, of which 6 were withdrawn or refused, and an area of 313,940 acres was temporarily exempted from sale and lease for the protection of the applicants. No leases were issued during the year; the applications not having been finally dealt with. (*Vide* Schedule LXXXVIII.)

Homestead Leases.

Upon reference to the following Schedule it will be seen that since 1885 the demand for this class of lease has been increasing, that during 1890 being largely in excess of the four previous years. During 1890, 310 applications for an area of 2,620,959 acres, with deposits amounting to £10,920 13s. 3d., were received, as against 238 for 2,187,837 acres in 1889, the deposits being £9,113 19s. 9d. (See Schedule LXXXI.)

Year.	No. of Applications.	Area applied for.	Deposits.
		acres.	£ s. d.
1885	391	3,823,235	15,880 2 11
1886	121	1,141,963	4,758 3 7
1887	128	1,198,286	4,992 17 2
1888	141	1,332,691	5,511 15 7
1889	238	2,187,837	9,113 19 9
1890	310	2,620,959	10,920 13 3

Inclusive of applications outstanding on the 31st December, 1889, 208 were satisfied by the approval of leases, containing an area of 1,934,530 acres, and producing an annual rent of £11,393 5s. 9d., and 62 were refused or permitted to be withdrawn. Of the applications received during 1890, 71 were granted and 35 refused. At the close of the year 237 applications remained undisposed of. (See Schedules LXXXI, LXXXII, LXXXIII.)

From

From Schedule LXXXIV it will be seen that 842 homestead leases were current on the 31st December, 1890, comprising an area of 7,760,610 acres, and returning an annual revenue of £46,199 6s. 3d.

During the year 124 appplications were put forward for the refund of the value of improvements on land held under homestead lease, and taking into consideration outstanding applications on the 31st December, 1889, 122 were disposed of in 1890, leaving 38 outstanding at its close. (See Schedule LXXXV.)

The provisions of the 29th section of the Crown Lands Act of 1889 were taken advantage of in the case of 413 homestead leases (including 11 applications received in 1889), and thus a periodical appraisement of rent and a new term of twenty-one years secured, as in the case of pastoral leases in the Western Division. (See Schedule LXXXVI.)

Only 5 leases were brought under the provisions of the Crown Rents Act. Thirty-four leases were transferred during the year.

Inferior Lands Leases.

In consequence of their sterility, isolated position, or other disadvantages, it was found that certain lands in the several Divisions of the Colony could not, under the provisions of the Crown Lands Act of 1884, be suitably disposed of, the minimum rent prescribed by that Act being too high to induce occupation. Provision was, however, made in the Crown Lands Act of 1889 admitting of such lands being utilised and revenue obtained from them under leases of long tenure and liberal conditions.

Fourteen applications to have inferior lands submitted to lease by auction or tender were received, of which 4 were refused, after investigation by the Local Boards; the remainder being under consideration at the close of the year. (*Vide* Schedule XCIX.)

Pastoral Leases and Occupation Licenses.

The determination of 560 Pastoral Leases in the Eastern Division of the Colony during the year, representing an area of 8,618,727 acres, and an annual rental of £62,041 13s., necessarily affected the aggregate area held under pastoral lease. Some of these leases expired in July, 1890, and (with 11 exceptions, representing 240,187 acres, and a rental of £1,045 16s. 3d.), they all ceased to exist by the 31st of the following December. A proportion of the rental was thus paid for part of the year, but taking into account the whole of the leaseholds in the Colony at the close of the year, they stood as follows :—

1889.				1890.			
Division.	No.	Area.	Rent.	Division.	No.	Area.	Rent.
		acres.	£ s. d.			acres.	£ s. d.
Eastern	*570	8,619,793	61,749 18 11	Eastern	11	240,187	1,045 16 3
Central	*733	18,663,794	181,994 3 6	Central	736	18,854,452	185,288 11 0
Western	*316	39,649,034	167,282 3 0	Western	316	38,579,526	168,096 19 0
Total	1,622	66,932,621	411,026 5 5	Total	1,033	57,674,165	354,431 6 3

* These figures will be found to differ slightly from those in the Report for 1889.

With regard to Occupation Licenses, the year 1890 has to record an increase over 1889, as shown in the subjoined table. This is explained by the fact that lessees in the Eastern Division were by the Act of 1889 afforded the right (not provided by previous legislation) of holding, subject to preliminary application, their expired leaseholds under what is termed preferential occupation license, a right which was exercised in 420 cases, excluding 23 applications which were refused or permitted to be withdrawn.

1889.				On 31st December, 1890.				
Division.	No.	Area.	Rent.	Division.	No.	Area.	Rent.	Remarks.
		Acres.	£ s. d.			Acres.	£ s. d.	
Eastern.....	*518	6,951,261	33,688 12 11	Eastern	506	6,692,831	32,817 16 5

	1198	55,619,517	206,710 13 1	Western	265	32,909,510	83,732 10 2	
					1,903	60,301,654	217,608 3 8	

* These figures will be found to differ slightly from those in the Report for 1889.

The Crown Lands Act of 1889, and the Crown Rents Act of 1890, contained some important provisions in connection both with pastoral leases and occupation licenses. As mentioned in an earlier part of this Report, the necessity for the Crown Rents Act of 1890 arose from the judgment of the Privy Council in the case of Alison *versus* Burns. This Act offered all lessees and licensees (without reference to Divisions) the opportunity of having their rents (if fixed by the Minister above the rates recommended by the Board) determined by the Land Court.

The Crown Lands Act of 1889, among other things, offered pastoral lessees in the Western Division a new term of 21 years divided into 7-year periods—the rent for each period to be subject to separate appraisement. To lessees in the Central Division it offered an appraisement of rent for the residue of the then existing term in lieu of the statutory increase of rent of 25 per cent. on the rent already charged. To the holders of occupation licenses in the Central or Western Divisions it offered the right of re-appraisement of rent. So far, therefore, as the question of rent is concerned, the broad difference between the two Acts was that the Act of 1889 dealt with the rent to be paid in the future, while the Crown Rents Act of 1890 dealt with that charged in the past.

The subjoined schedule shows to what extent the advantages of the different Acts were availed of:—

Brought under the Crown Lands Act of 1889.			Brought under the Crown Rents Act of 1890.		
No. of Pastoral Leases.	No. of Occupation Licenses.	Division of Colony.	No. of Pastoral Leases.	No. of Occupation Licenses.	Division of Colony.
675	307	Central.	143	97	Eastern.
292	147	Western.	197	183	Central.
*17	*19	Central.	46	42	Western.
*18	*14	Western.	Total	708	

* Made during December, 1889.

Although in the preceding schedule the leases are distinguished from the licenses brought under the Crown Rents Act, it is proper to point out that 568 of the total 708 represented the leasehold and resumed areas of the same holding. Of the applications under that Act, twenty-nine referring to leases and an equal number referring to licenses were either withdrawn or found to be informal.

In view of the decision of the Supreme Court in the case of Edols *v.* Tearle, a large area comprised in forfeited conditional purchases and conditional and other leases, and situated within leasehold areas, was reserved from sale and lease pending legislation to determine how the land should be disposed of. The Crown Lands Act of 1889 provided for the disposal of these lands, and accordingly under the provisions of the 32nd clause of that Act the reservations were cancelled, and the land added to the leasehold areas within the ambit of which they were situated.

A total area of 83,508 acres was withdrawn during the year from 129 leasehold areas in the several Divisions of the Colony, involving refund of rent amounting to £2,570 9s., and during the same period 2,242,971 acres were withdrawn from occupation license within 619 resumed areas, resulting in a refund of £18,835 10s. 7d. The total area thus withdrawn was 2,326,479 acres, occasioning a refund of £21,405 19s. 7d. to the parties concerned. (See Schedule LXIV.)

Six applications were received for the subdivision of leasehold areas, 3 of which were completed, 1 was refused, and 2 were under consideration at the close of the year. (*Vide* Schedule LXX.)

The transfer of 192 pastoral leases and 180 occupation licenses was given effect to. (*Vide* Schedule LXXVII.)

Refund of rent, by way of compensation, consequent on withdrawals from pastoral lease under the Repealed Acts, was applied for and dealt with in 1 case. (See Schedule LXVIII.)

Residential Leases.

This is a tenure of a new character provided for by the Crown Lands Act of 1889, which admits of the holder of a miner's right or mineral license obtaining, within a gold or mineral field, a lease not exceeding 10 acres, subject to certain conditions as to residence, improvements, &c. During the year 141 applications were received for leases of this character, which, with 23 lodged in December, 1889, made 164, for an area of 1,505 acres 2 roods 30 perches requiring action. Of these 24 were disallowed or withdrawn, and 5, comprising 39 acres 0 roods 10 perches, at an annual rent of £9 10s. 4d. granted, leaving 135 outstanding at the close of the year. (*Vide* Schedule XCVII.)

Scrub Leases.

During the year 122 applications for scrub leases, comprising an area of 974,122 acres, were under consideration, 89 of which were outstanding on the 31st December, 1889. Eight leases, including an area of 71,357 acres, were granted, at an annual rent of £14 2s. 6d., and 67 applications were either disallowed or allowed to be withdrawn, leaving 47 outstanding at the close of the year. On the 31st December, 1890, 9 scrub leases were current, comprising 71,997 acres, with an annual rent of £14 11s. 7d. (See Schedules LXXXIX, XC, XCI.)

Snow Lands Leases.

No adequate means of dealing with the Snow Lands of the Colony (which from climatic conditions are available for profitable occupation during only a few months of the year) or of obtaining a revenue in any way commensurate with their value, was possible prior to the Crown Lands Act of 1889 passing into law. These facts led to a recognition of the necessity for legislation, providing for leases on a secure tenure, and for a definite term. During the limited portion of the year in which survey operations can be carried out in the more elevated parts of the Cooma and Wagga Wagga Land Board Districts, some of these lands were measured, under a cheap system, into suitable areas, and although no leases were actually sold during 1890, the necessary preliminary action had advanced so far that during that year a sale was advertised for the beginning of 1891. These leases were sold and realised satisfactory prices.

Seven applications to have snow lands submitted to auction were received, upon which action had not matured up to the close of the year. (*Vide* Schedule XCVIII.)

Special Leases.

Under the provisions of the 89th and 90th clauses of the Crown Lands Act of 1884 196 applications for Special Lease were lodged during the year, as against 220 in 1889. Inclusive of 85 outstanding on the 31stDecember, 1889, there were 281 applications under consideration, of which 68 were refused, withdrawn, or allowed to lapse, and 111 representing an area of 2,823 acres 2 roods 0½ perches were granted, at an annual rent of £2,324 10s., leaving 102 (for an area of 3,347 acres 2 roods 1½ perches) outstanding at the close of the year. (*Vide* Schedule XCVI.)

On

On the 31st December, 1890, 478 Special Leases were current, comprising an area of 9,303 acres 2 roods 31½ perches, and representing an annual rent of £10,560. The purposes for which the leases were granted are set forth in Schedule XCIV.

During the year 38 leases, containing 432 acres 1 rood 37¼ perches, and involving the payment of rent amounting to £539 5s., were declared forfeited, and 68 expired during the same period. (*Vide* Schedules XCII, XCIII.)

Rabbit Branch.

As explained in the report for 1889, in view of the suspension of the compulsory clauses of the Act, the discontinuance of the payment of subsidies, and the consequent abolition of the field-staff, no statement can be furnished as to the efforts made by owners of infested lands to destroy the pest.

The work devolving upon this branch gradually diminished until, upon the 31st July, 1890, the office staff was reduced to the Officer-in-charge and an assistant. At the commencement of the year, however, there were seven other officers attached to the branch, most of whom were engaged on work incidental to the destruction of rabbits, but as these various matters were brought to a conclusion the services of such of these officers as were not required were dispensed with, so that at the close of the year but one field officer remained, and his time was fully occupied in attending to the maintenance and repair of the rabbit-proof fence erected along the South Australian Border.

During the year the work of erecting a rabbit-proof fence along the entire western boundary of the Colony, a distance of 345½ miles, was completed. When it is considered that the scene of the operations is situated at distances so remote from settlement, and that the work in progress had to be conducted in country almost destitute of water, it must be regarded as a matter for congratulation that the undertaking, which it is apparent will be attended with good results, was brought to such a satisfactory conclusion. The fence was completed on the 15th August, 1890, and evidence is forthcoming that it is already being used as a base line from which other fences are being erected by private individuals with a view to still further limit the incursions of the pest. With the completion of this fence the number of miles of wire netting fencing erected at the cost of the Government is 632½, distributed as follows:—

Narromine to Bourke	...	203 miles.
Bourke to Barringun	...	84 ,,
South Australian boundary... ...	...	345½ ,,
		632½ miles.

The work of erecting and rendering the fence on the South Australian boundary rabbit-proof was divided into nine sections; the length and cost of each section is given in the subjoined table, which shows the total cost, exclusive of supervision, to have been £26,135 2s. 0¾d., or an average cost of £75 12s. 8¾d. per mile.

No. of Section.	Length of Section.	Cost of work at Schedule Rates.	Cost of extra work.	Cost of Material and charges thereon.	Total cost.
	m. c. l.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1	41 46 18	1,031 12 5¾	94 5 9	1,819 1 6½	2,944 19 9¼
2	24 28 0	890 8 3	7 0 0	1,022 7 2	1,919 15 5
3	21 72 0	582 5 8	15 11 0	891 8 3	1,489 4 11
4	43 0 78	1,136 16 8	181 10 0	1,729 8 10	3,047 15 6
5	48 62 0	843 10 9	132 0 0	1,941 10 2	2,917 0 11
6	3 20 0	180 17 6	6 10 0	132 1 11	319 9 5
7	75 31 70	2,496 8 11	27 6 0	3,160 12 5	5,684 7 4
8	31 48 30	1,557 13 2½	2 0 0	1,394 16 9	2,954 9 11½
9	55 53 60	2,374 15 3	71 0 0	2,412 3 7	4,857 18 10
	345 42 56	11,094 8 8¼	537 2 9	14,503 10 7½	26,135 2 0¾

The administration of the "Animals Infectious Diseases Act" also devolves upon this branch, and on the 31st December, 1890, there were but three licenses in force under the 6th section and four under section 7 of the Act.

Expenditure

Expenditure for the year 1890.

The votes for the expenses of the Department are as follows:—

Services.	Estimates-in-Chief.	Supplementary Estimates.	Total.
	£	£ s. d.	£ s. d.
Department of Lands	64,731	5,363 13 1	70,094 13 1
Rabbit Branch	9,530	.....	9,530 0 0
Minor Roads	1,600	.....	1,600 0 0
Land Agents, Appraisers, and others	78,080	394 0 0	78,474 0 0
Miscellaneous Services	22,158	1,013 18 3	23,171 18 3
	176,099	6,771 11 4	182,870 11 4
Survey of lands	219,037	4,185 0 0	223,222 0 0
*Triangulation and General Survey of the Colony	14,937	3,229 0 0	18,166 0 0
	233,974	7,414 0 0	241,388 0 0
Totals	410,073	14,185 11 4	.....
Grand total			424,258 11 4

* This includes an amount of £7,500 to form a charge against the Water and Sewerage Board under the Act 43 Vic. No. 32.

The expenditure during the year amounted to £411,624 12s. 2d., made up as follows, viz.:—For the services of 1888 and previous years, £1,324 4s. 1d.; for 1889, £28,905 3s. 11d.; and for 1890, £381,395 4s. 2d.

The amount of outstanding claims for the services of 1890 on the 31st December is estimated to be £46,267 15s. 10d., so that when all expenses have been discharged the expenditure will be approximately £427,663. Included in these figures is the sum of £12,189 8s. for postage and stamp duties, as well as £1,122 7s. 9d. for advertising accounts met from votes of the Treasury; also £633 0s. 11d. from Trust Fund under the 143rd clause of the Crown Lands Act of 1884, and from deposits lodged by various applicants. These items equal £13,944 16s. 8d., and it will therefore be seen that the expenditure out of the amount appropriated by Parliament for the service of the year will probably be £413,718 3s. 4d.

As before shown, the votes for the year amount to £424,258 11s. 4d., so that the estimated expenditure will total a sum of £10,540 8s. less than the amount voted. The excess of votes over expenditure occurs principally under the head of Land Agents, Appraisers, and others, and will ultimately, in terms of the Appropriation Act, be written off as a saving on votes.

As compared with the expenditure of 1889, which amounted to £399,496 14s. 2d., excluding refunds to pastoral lessees, it will be seen that the year 1890 shows an increase of £14,221 9s. 2d. This is, however, accounted for by provision having to be made to meet the expenses of inspection of Pastoral Holdings, for purposes of appraisement, and the expenses contingent on the establishment of the Land Court. The former involved an expenditure for fees and travelling expenses of £9,500, and the latter for salaries and other expenses of £5,698 7s. 4d., or, in all, £15,198 7s. 4d.

Reserves and Dedications.

During the year 1,856 reserves from sale, comprising 1,336,133 acres, were made. Of this area, however, 152,132 acres were reserved pending subdivision, to be subsequently rendered available for alienation. During the same period 3,440 reservations made at various periods were revoked, representing an area of 2,796,682 acres, much in excess of the area reserved during the year.

An area of 704,691 acres, comprised in 265 reserves, was excluded from lease during the year, and 1,676 reserves of this class, containing 697,428 acres, were revoked during the same period. In many cases the reservations from sale and lease referred to the same lands.

Particulars of reservations and revocations are shown in Schedules LVIII, LIX, LX, LXI.

An area of 1,565 acres 3 roods 20¼ perches was dedicated during the year for the purposes set forth in Schedule LXIII. *Deeds*

Deeds of Grant.

Schedule C sets forth in detail the number, area, and purpose for which these have been issued, on reference to which it will be observed that 4,930 deeds of grant were prepared during the year having reference to an area of 248,378 acres 1 rood 17¼ perches.

Applications for permission to Ringbark.

Permission to ringbark an area of 950,259½ acres, comprised in 163 applications, was applied for during 1890, and a sum of £1,271 paid as fees in connection therewith; of these 89 were complied with, containing 448,477 acres, and 21 were disallowed. Of those outstanding on the 31st December, 1889, 47 were granted, including 157,123¼ acres, and 2 were disallowed. It will thus be seen that during the year 136 applications were complied with, referring to an area of 605,600¼ acres. (*Vide* Schedule CII.)

Cases of Trespass on Crown Lands.

Particulars respecting trespasses on Crown Lands and the action taken are set out in Schedule CIII. The cases to be dealt with numbered 436, including 257 outstanding on the 31st December, 1889. Of these 290 were dealt with, leaving 146 undisposed of at the close of the year.

Correspondence.

On reference to Schedules CIV, and CV, it will be observed that 109,149 letters were received at the Head Office during the year, and 26,817 manuscript letters, 2,603 telegrams, 169 circulars, 91,889 printed letters, 1,063 schedules, and 13,386 parcels despatched therefrom. During the same period 127,137 letters and circulars were received in the several Local Land Board Offices, and 86,146 letters, parcels, &c., despatched. (*Vide* Schedule CVI.)

Appended hereto is the report of the Chief Surveyor.

WILLIAM HOUSTON,
Under Secretary.

SCHEDULE XX.

SUMMARY of Number and Area of Conditional Purchases applied for from the year 1862 to 1890 inclusive.

Years.	Applied for.		Years.	Applied for.	
	No.	Area.		No.	Area.
		a. r. p.			a. r. p.
1868 to 1869	28,139	2,161,390 2 2	1881	14,220	2,329,202 0 15
1870	4,471	329,318 1 2	1882	14,606	2,392,217 2 35
1871	4,751	358,682 2 8	1883	10,674	1,617,712 0 7
1872	8,281	749,586 3 0	1884	10,657	1,453,937 0 33
1873	13,417	1,391,719 0 0	1885	5,377	1,165,351 1 20
1874	14,352	1,586,282 0 0	1886	6,080	963,196 2 27
1875	14,517	1,756,678 0 0	1887	4,769	793,004 0 31
1876	12,654	1,984,212 0 0	1888	5,364	865,199 0 38
1877	12,009	1,699,816 0 0	1889	6,205	903,159 2 9
1878	12,602	1,588,247 3 18	1890	8,526	1,713,577 1 0
1879	7,540	924,136 1 0			
1880	8,583	1,147,001 2 39	Total	227,794	29,873,628 1 4

SCHEDULE XXI.

RETURN for the year 1890, showing the Number and Area of Conditional Purchases validated under the 138th section, Crown Lands Act of 1884.

District.	No.	Area.	District.	No.	Area.
		a. r. p.			a. r. p.
Balranald	1	80 0 0	Taree	1	40 0 0
Deniliquin	1	320 0 0	Wagga Wagga	1	60 0 0
Bingera	10	1,038 1 36	Young	1	259 0 0
Glen Innes	2	132 2 8			
Wagga Wagga (now Narrandera)	1	125 0 0	Total	18	2,055 0

Schedule XXII.

Return for the year 1890, showing the number and area of Mineral Conditional Purchases validated under 50 Vic. No. 21.

District.	Mineral Conditional Purchases validated under section 3 on account of being within a gold-field.		District.	Mineral Conditional Purchases validated under section 3 on account of being within a gold-field.	
	No. of C. P's.	Area.		No. of C. P's.	Area.
		a. r. p.			a. r. p.
Bathurst	2	119 3 0	Wellington	5	240 0 0
Condobolin	1	40 0 0	Wilcannia	2	80 0 0
Forbes	1	40 0 0	Willyama (late Wilcannia)	1	40 0 0
Hillston	3	240 0 0			
Tenterfield	1	180 0 0	Total	16	979 3 0

Schedule XXIII.

Return for the year 1890, showing the number and area of Conditional Purchases, lapsing of which has been reversed.

District.	No.	Area.	District.	No.	Area.
		a. r. p.			a. r. p.
Brewarrina	1	480 0 0	Gundagai	2	160 2 0

Report of the Chief Surveyor to The Under Secretary for Lands.

Sir, Department of Lands, Sydney, 14 March, 1891.

I have the honor to submit the Annual Report for this office for the year 1890.

The surveyors employed on the permanent staff have been classified as follows, viz., twelve district surveyors, two acting district surveyors, and thirty-seven salaried surveyors.

Messrs. W. H. O'M. Wood and J. L. Tritton, first-class surveyors, have been promoted to the positions of district surveyors at Moree and Hay respectively.

Messrs. F. W. Hawkins, W. H. Foster, D. H. Murray, S. R. Beatty, and W. M. Gordon, surveyors, who had been temporarily employed on salary for several years were promoted and appointed to the permanent staff of the Department.

Under the report of the Board of Inquiry the following surveyors were retired from the service, viz., Messrs. C. H. Wansbrough, C. J. Metcalfe, and G. L. Dowe.

Mr. G. H. Knibbs, second-class surveyor, was also allowed to retire from the service under the provisions of the "Civil Service Act."

Twenty-five licensed surveyors were employed temporarily on salary, viz., fifteen surveyors and ten assistant surveyors; three new appointments were made to this temporary staff, viz., Messrs. E. Ekenstedt, H. Welchman, and D. C. White. There were four resignations, viz., Messrs. P. Chambers, R. G. Glasson, W. L. King, and A. Peake.

One hundred and twenty licensed surveyors were employed, more or less continuously, under the usual Departmental contract.

Twelve new licenses and two hundred and twenty-six renewals of licenses under the Real Property Act have been issued to surveyors during the year.

A meeting of the Board for examination of candidates for license to survey Crown Lands was held in June, at which seventeen candidates presented themselves, of whom eight were found to be qualified and were recommended for appointment, viz.:—

G. A. Sweet,	T. M'Donnough,
R. W. B. Darke,	G. A. H. Rowney,
F. J. N. Harris,	R. Fitz Roy,
H. F. Halloran,	E. H. Lack.

The second Board meeting usually held in December was postponed for a few weeks on account of the pressure of more important business.

It may be here conveniently stated that several of the junior licensed surveyors have accepted employment temporarily on salary as assistant surveyors (attached to surveyors' parties); this is a new appointment, created at instance of the Board of Inquiry, which gives to qualified surveyors a better status than obtained heretofore under the designation of field assistants.

During the year a Board of Inquiry was appointed by the Minister to inquire into the General Survey and the Trigonometrical Survey Branches; the recommendations of the Board led to rearrangement of these, which was brought into effect on 1st September, viz., the greater part of the General Survey staff was converted into the Detail Survey Branch, under Mr. D. M. Maitland, surveyor, which is charged with city and environs detail survey for sewerage; and a trigonometrical branch was formed and its duties specifically defined.

The three surveyors who were appointed under the report of the Board for special service have been engaged during the last quarter of the year on surveys for alignment of streets under the Towns Police Act, viz., at Mittagong, Liverpool, Granville, Smithfield, and North Botany, of which the two first named were completed.

Action has been taken as far as possible to carry out the recommendations of the Board as approved and communicated to me by the Under Secretary.

Reports severally of the service performed in the detail survey branch and of the field operations of the trigonometrical survey branch are appended; and these for convenience sake cover the whole year.

A report affording particulars of work done in the Chief Computer's office, is also appended.

The further determination astronomically of stations for geodetic purposes has been discontinued, and the surveyor and field astronomer (Mr. Brooks) who conducted this important work has been placed in charge of field operations of the trigonometrical survey.

The stock and equipment appertaining to the former trigonometrical survey establishment has been disposed of in a satisfactory manner; a considerable part of it was valued and sold to surveyors, who availed themselves of the favourable terms of purchase conceded by the Minister, whilst the residue was sold by auction. In like manner the equipment and scientific instruments outstanding with surveyors were valued, and many of the surveyors willingly availed themselves of the opportunity afforded to purchase under similar conditions. There still remains a considerable stock of scientific instruments to be disposed of in the manner recommended by the Board; these have been properly arranged by the custodian and catalogued; but up to the present time, on account of duties of more pressing importance, it has been impossible to enter upon the examination, valuation, and disposal of them.

Field operations on the trigonometrical survey will be entered on shortly.

TRIGONOMETRICAL SURVEY BRANCH.

THE observations for the determination of astronomical latitudes and longitudes were continued during part of this year.

On the 9th January Mr. Brooks pitched camp near the south-west corner of the common at Balranald. On the 16th a junction was effected with the main telegraph line, and on the same evening preliminary observations for azimuth, latitude, and clock error were made. Owing, however, to the press of business on the lines, the longitude observations were not commenced until the 18th. The weather was rather unfavourable for observing (mainly at Sydney end), and it was not until the evening of the 5th of February that the longitude work was finally completed. At this station, owing to some difficulty at the Sydney Observatory, the "make circuit" system of exchanging clock signals was reverted to, and as the chronometers used in the field are so constructed as to "break circuit" every second, all longitudes on the "make circuit" system require a small unknown correction, due to the increased wave and armature time, consequent on the introduction of a special repeating instrument to convert the "break signals," so as to send "make signals" to the Sydney Observatory. Here it may be proper to remark that there is another correction which has not yet been applied to any of the longitude determinations, and that is the difference of personal equation between the respective observers. Balranald.

Wentworth was the next station. The site selected is near the south-west corner of the gaol, and is on or about the position which was occupied by Mr. Todd, the Government Astronomer at Adelaide, for observing the Transit of Venus in 1882, and advantage was taken of the proximity to the South Australian telegraph line to exchange clock signals with Mr. Todd, and thus to have a double check on the deduced longitude. Wentworth.

On the 22nd of March the preliminary observations were made, but the remainder of that month was persistently cloudy in Sydney, and it was only on the 1st of April that the first comparison was made for longitude. The interval, however, was occupied with latitude observations. The Observatory was taken down on the 18th of April, and camp started for Pooncaira on the 21st, where it arrived on the 26th. A site was selected on a slight rise, near the eastern side of the pound. The 27th and 28th were devoted to the preliminary observations, and on the 29th the longitude work was commenced. Cloudy and rainy weather both at Sydney and Pooncaira caused considerable delay, and it was the 24th of May before the last observations were made. Pooncaira.

Whilst at this station the new Fauth chronograph (ordered about September last year) was received. It was set up and adjusted on the 9th of May. The first sheet taken off showed that it is a very decided improvement on the double pendulum chronograph hitherto used. It has a contrivance by which the speed of rotation of the cylinder can instantly be doubled. Ordinarily for records of star transits a space of about ·36 of an inch represents each second of time, and during exchanges of clock signals the double speed is given to the cylinder, making about ·72 of an inch to one second. When properly adjusted (and it is easy to adjust) it will keep a perfectly straight line bringing each second so exactly under the same second of the preceding minute that the eye (even aided by a magnifying glass) cannot detect a variation.

Owing to the flooded state of the country the camp was shifted by steamer from Pooncaira to Menindee, where a site was selected on a small rise near northern end of the town. Preliminary observations were made on the 24th of June, a week's cloudy weather followed; but on the 30th of June a start was made with the longitude observations, which were completed on the 11th of July, the latitude having been observed on those nights when Sydney was unable to observe. Menindee.

On the 23rd of July the camp arrived at Burns, where the observatory was erected close to the boundary between South Australia and this Colony. Being again close to the South Australian telegraph line, Mr. Todd's co-operation was sought, and he very willingly agreed to exchange clock signals, so that the position of Burns (and the boundary of the Colony) might be determined from both Sydney and Adelaide. On the 25th day of July everything was ready and signals were exchanged with the Adelaide and Sydney observatories; and on the 12th of August the observations were completed. Burns.

It having been decided, on the recommendation of the Board of Inquiry, that the astronomical determinations of longitude and latitude should be discontinued, the camp now started on the return journey towards Sydney; and on the 18th of August Mr. Brooks returned to the office and completed all records of observations.

The station register was next taken in hand for preparation for press, as recommended by the Board of Inquiry. In order to make it as complete as possible the records of every station were examined, and a very large number of plans were got out to see if any additional information could be obtained from them. This resulted in finding that a number of stations had been connected to, in the ordinary course of survey, but that little or no use had been made of such information. In some cases the name of the station was not given and probably that was the reason why there was no record of the connection survey. The register was finally completed so far as could be done with the information at hand, and forwarded for transmission to the Government Printer on the 4th of December.

In the meantime Mr. Healy (who was appointed piling overseer on the 13th of October) was directed to proceed to the County of Camden, for the purpose of clearing and erecting additional stations necessary for triangulation, and to be immediately utilised in the compilation of a new map of that county. Full and detail instructions were issued, and plans, etc., supplied to him for his guidance. Up to the end of December he had completed seven secondary stations and recleared two primary stations, the details of clearing, etc., are shown on the accompanying tabulated statement.

Until the 10th of December Mr. Piling Overseer Taylor was engaged in forming stations for the extension of the triangulation northerly through Counties Gloucester, Hawes, Macquarie, and Parry. During the latter part of December he shifted camp from that locality to the County of Beresford, with a view to completing the piling, etc., of stations in connection with the extension of the triangulation from Lake George base to the Victorian boundary. Mr. Taylor has cleared and formed five primary stations and three secondary stations, besides reclearing and restoring sixteen of the stations piled prior to the end of 1884. The annexed statement shows details of Mr. Taylor's progress for the year.

At the latter end of December Messrs. Richmond and Gordon, surveyors, reported themselves for duty in connection with the triangulation, and were engaged getting instruments, plans, equipment, etc., together.

TABLE

Table of Differences of Longitude, New South Wales, 1890.

ANNUAL REPORT FOR THE YEAR 1889.—ERRATA.

On page 69, in descripns of the situations of Tumbarumba and Albury trigonometrical stations, for *inches* read *miles.*

On the same page, for probable error in longitude of Ivanhoe trigonometrical station, given as ± 0·09 read ± ·009

Trigonometrical Computers' Branch.

The operations of this Branch during the three months, October to December, 1890, have been as follows:—

Computation of the geographical position of station at Menindie has been made.

Co-ordinates of trigonometrical stations in the environs of Sydney have been verified and tabulated, as also have been the bearings of the triangle sides, and a copy has been forwarded to the Government Printer with a view to printing.

The reference maps and sketches relating to this survey have been inspected, in order to separate those no longer wanted. The special information on those to be retained would be more convenient if transferred to a few maps for general office use, which would tend to economise time in reference; and the assistance of a draftsman for a month would probably meet this requirement.

Printed copies of descriptions of stations in Sydney and suburbs, published several years ago, have been corrected to date for immediate use of surveyors.

Surveying instruments and apparatus not now required by the Department have been valued for sale from time to time.

Instruments which had been issued for service or lent have been returned; and it may be stated that almost the only instruments, &c., now outstanding are in actual use by officers of the Department.

General Survey Branch and Detail Survey Branch.

The General Survey Branch having been closed, and the Detail Survey Branch formed and placed under Mr. D. M. Maitland's supervision during 1890, in accordance with the scheme of reorganization recommended by the late Board of Inquiry, it will perhaps be convenient to give a *resumé* of the work carried out in the former branch up to the date of its abolition, as a report on the services performed:

1. Up to the date of reorganization (1st September) eighteen surveyors were employed, under Mr. D. M. Maitland's supervision, on detail surveys, alignments, roads, &c.; since that date twelve surveyors who were engaged solely on the detail survey for sewerage purposes.

2. During the portion of the year that alignment surveys were carried out 16 plans of that class of work were transmitted, showing the determination of 72 miles 67 chains of the building lines of 159 streets in various municipalities, the marking being rendered permanent by the erection of 1,548 posts; these surveys were carried out at an average cost of 3s. 10d. per chain of building line, which will be found a considerable reduction on past years.

3. The detail survey of the suburbs has been continued with satisfactory expedition, and considering the very scattered character of the work, as compared with former years, the cost maintains a fairly low rate, being 15s. 11d. per tenement, as compared with 15s. 8d. for 1889, 11s. 6d. in 1888, 17s. in 1887, and £1 3s. 8d. in 1886, while on an area basis the cost, as was to be expected, is steadily decreasing, the respective cost per acre being £1 4s. 1d. for 1890, £1 13s. 11d. in 1889, £3 1s. 6d. in 1888, £6 4s. 7d. in 1887, and £8 12s. 8d. in 1886. The areas surveyed during the years mentioned were 649 acres in 1886, 1,095 acres in 1887, 1,583 acres in 1888, 3,904 acres in 1889, and 6,574 acres in 1890.

The cost of survey has been somewhat lessened in 1890 in consequence of the altered arrangements coming into force on the 1st September, under which detail surveyors forward their field-notes, &c., for the plans to be drawn in the office. Of the new work done, 184 plans and the field-notes of 127 other sheets have been received, making a total of 311 sheets surveyed, showing the full detail of 9,929 separate tenements or holdings. Incidental to this survey has been the fixation of about 176 miles of streets and several miles of watercourses, tram-lines, &c., the exact particulars of which cannot be furnished, as all the plans of surveys made through the year are not yet plotted. In addition to the new work mentioned, a revision survey for the purpose of issuing a second edition of the lithographs has been made of two sheets in Paddington and one in Sydney, showing that in those areas 84 additional tenements have been erected since the date of the first survey. In order that the lithographs of the detail survey sheets should contain the latest possible information, all alterations made on the ground between the date of original survey and the final examination of the lithographs have been placed on the proofs, with the result that 380 holdings have been added to 44 sheets in several municipalities prior to the lithographs being printed. The total number of tenements, therefore, fixed during 1890, was 9,929 in the new work, 84 in the sheets for fresh editions of lithographs, and 380 on the final proofs for first editions, making a total of 10,393.

The distribution of the detail survey is shown in the following tabular statement:—

Municipalities.	No. of Sheets.	Area. Acres.
Alexandria...	1	26
Ashfield	58	1,180
Burwood	25	676
Canterbury	15	262
Concord	24	520
Enfield	12	267
Five Dock	19	380
Leichhardt	4	54
Macdonaldtown	10	136
Manly	16	325
Marrickville	38	1,011
North Sydney	51	970
Randwick	13	262
St. Peters	12	247
Strathfield	9	194
Sydney	2	14
Waverley	2	50
	311	6,574

The

The skeleton survey of Enfield, prior to the commencement of the detail survey was carried out simultaneously with, in fact, as part of the alignment survey of that borough, which was done on the application of the Municipal Council.

5. Five examinations of surveys for the purposes of the Real Property Act were made.

6. Of the services performed during the first eight months of the year in the General Survey Branch, now abolished, a portion of the duties of which are now continued in the Detail Survey Branch, 219 plans of detail survey, 3 of general survey work, 6 of rescissions and reclamations, and 1 skeleton survey, have been examined, checked, and compared with the Trigonometrical Survey. Also it should be stated that there was revision and completion of the photo-lithograph of the City of Sydney and environs map on scale of 8 chains to the inch, which was prepared for use of the Engineer-in-Chief for Sewerage.

7. The maps on a scale of 2 chains to an inch required by the Engineer-in-Chief for Sewerage, of the municipalities of Balmain and Glebe, which were commenced in 1889, were completed in 1890, in addition to which maps on the same scale of Leichhardt, Newtown, Marrickville, Camperdown, and St. Peters, were begun and completed.

8. The parish maps of Southend, Eckersley, Wedderburn, and Heathcote have been completed.

9. The compilation of the northern sheet of the map for military purposes was completed as far as practicable with the surveys in hand. This work has also been utilised as the basis for the compilation of two parish maps.

10. In connection with the office work of the detail survey proper (in addition to the examinations mentioned in paragraph 5) 30 plans have been plotted and drawn, and 25 plans of revision surveys charted up to date, 44 tracings of the revision surveys have been charted up, and 137 sheets of detail survey have been traced; of these 81 were forwarded to the lithographic branch, and 90 sheets were published, making a total of 395 sheets now published.

11. Herewith in Appendix A is a tabular statement showing the comparative amount and cost of alignment and detail surveys from 1886 to 1890 inclusive; and in Appendix B a list of surveyors employed in charge of parties under Mr. D. M. Maitland's direction, together with their respective salaries, and a statement of the duties carried out by them during 1890; and also a map is annexed hereto showing in blue tint the area surveyed for sewerage and water supply purposes during the year 1890, and in red the area surveyed up to the end of 1889.

APPENDIX A.

TABLE showing comparative amount and cost of Alignment and Detail Surveys from 1886 to 1890.

Alignments.	1886.	1887.	1888.	1889.	1890.
					To 31st August.
Number of plans transmitted	56	97	37	27	16
Number of streets surveyed	194	411	206	250	159
Length of building-lines determined	10, m. 41 ch.	230 m. 3 ch.	86 m. 66 ch.	123 m. 61 ch.	72 m. 67 ch.
Number of alignment-posts or cubes erected	2,340	5,277	2,204	2,920	1,548
Average cost per lineal chain of building-line (town)	19s. 3d.	14s. 6d.	9s. 10d.	5s. 2d.	3s. 10d.
Average cost per lineal chain of building-line (country).	7s. 3d.	5s. 2d.	5s. 10d.		

Detail Surveys.	1886.	1887.	1888.	1889.	1890.
Number of sheets surveyed and transmitted	49	91	104	178	311
Number of original sheets revised for second editions of lithographs.	.....	.....	.....	19	3
Number of sheets revised and brought up to date prior to first publication.	.....	.....	.....	.....	44
Area surveyed (ex surveys for second editions)	649 ac.	1,095 ac.	1,583 ac.	3,924 ac.	6,574
Area covered by surveys for second editions	.....	.....	.....	256 ac.	39
Length of streets fixed	28 m.	47 m.	57 m. 41 ch.	111 m. 30 ch.	176 m. 22 ch.
Number of tenements fixed (ex second edition and revision surveys).	5,094	8,309	8,125	8,464	9,929
Number of tenements fixed in surveys for second editions.	.....	.....	.....	511	84
Number of tenements fixed in revision surveys prior to first publication.	.....	.....	.....	.....	380
Average cost per tenement, in the suburbs	£1 3 8	17s.	11s. 6d.	15s. 8d.	15s. 11d.
Average cost per tenement, in the city	1 10 10	14s. 5d.	*	.....	.....
Average cost per tenement of revision and second edition surveys.	.....	.....	.....	11s. 11d.	7s. 11d.
Average cost per acre throughout	8 12 8	£6 4 7	£3 1 6	£1 13s. 11d.	£1 4s. 1d.

*The detail survey of the city was completed in 1887.

APPENDIX B.

SURVEYORS employed in charge of parties.

Surveyor.	Office or rank in Service.	Salary.	Duties on which engaged.	Remarks.
		£		
Wansbrough, C. H. ...	First Class...	425	Alignment survey of streets, Granville, and of Sherwood Road; 2 sheets transmitted, and a large amount of field work done.	Retired from the Service, 30 June, 1890.
Madsen, H. F.	Second Class	350	Detail survey—Macdonaldtown, 10 sheets transmitted; Alexandria, 1 sheet transmitted. Outline survey—Alexandria, sheets 1 to 14. Survey of additional detail—10 sheets, Leichhardt; 5 sheets, Newtown; 6 sheets, Camperdown. Refixing alignment of Wilson-street, Newtown. Resumption surveys, West Botany.	Transferred to detail staff, 1 September, 1890.
Wilson, T. G.	,, ...	350 to 31 Aug 325	Alignment of streets in North Sydney, and detail survey in North Sydney, of which 16 sheets have been transmitted.	do do
Knibbs, G. H.	,, ...	340	Alignment survey of the Municipality of Enfield; examination survey of Dove's subdivision of Enfield; permanently marking part of Main South Road; report upon Greenhills Drainage Union; survey of roads, Holsworthy; skeleton survey of Enfield for detail survey.	Retired from Service, 9 October, 1890.
Mills, W. W.	,, ...	340	Alignment surveys—Hurstville, Paddington, Camden, Bowral, Waverley, Botany, Alexandria; resumption survey, Botany; additional details, outfall sewer, Cook's River.	Services transferred to staff under Chief Surveyor, 1st September, 1890.
Mills, S.	,, ...	350 to 31 Aug. 325	Detail Ashfield, 16 sheets transmitted; detail Enfield, field-work completed; additional detail, city, 1 sheet and 2 sections; additional detail, Paddington, 1 sheet; additional detail, Woollahra, 9 sheets; detail survey of part of Waterloo, field-work commenced.	Transferred to detail staff, 1st September, 1890.
Roberts, R. J. A.	,, ...	340 to 31 Aug. 325	Detail survey, North Shore, 9 sheets transmitted; detail survey, Five Dock, 19 sheets transmitted; detail survey, Concord, 24 sheets transmitted, and field-work in hand of part of Burwood detail.	Transferred to detail staff, 1st September, 1890.
Thomas, W. M....	,, ...	340 to 31 Aug. 325	Detail survey of Burwood, 25 sheets transmitted; detail survey of Strathfield, 9 sheets transmitted; measurement of infected vineyards for Vine Disease Board.	Transferred to detail staff, 1st September, 1890.
Steane, S. A.	Temporary salaried.	300	Detail survey, Manly, 12 sheets transmitted; detail survey, Leichhardt, 4 sheets transmitted.	Transferred from detail staff to East Maitland district, 1st September, 1890.
Shute, H.	,, ...	300	Detail survey of Ashfield, 15 sheets transmitted; other field-work in hand.	Appointed to detail survey staff, 1st September, 1890.
Sloman, T. B. U.	,, ...	300	Detail survey—Manly, 2 sheets transmitted; Randwick, 19 sheets transmitted; Waverley, 4 sheets transmitted, and fieldwork in hand.	do do
Stephen, T. M.	,, ...	300	Detail survey—North Sydney, 6 sheets transmitted; St. Peters, 12 sheets transmitted, and field-work in hand.	do do
Truscott, J. F.	,, ...	300	Detail survey—Ashfield, 15 sheets transmitted ...	Transferred from Detail Survey Staff to General Establishment, 1 Sept., 1890.
Watkins, F.	,, ...	250 to 31 Aug., then 300.	Detail survey—Marrickville, 13 sheets transmitted; Canterbury, 13 sheets transmitted, and field-work in hand.	Appointed to Detail Survey Staff, 1 Sept., 1890.
Riddle, J. D. A.....	,, ...	250 to 31 Aug., then 300.	Detail survey—Marrickville, 14 sheets transmitted; Ashfield, 6 sheets transmitted; Canterbury, 2 sheets transmitted. Additional detail—Petersham, 12 sheets; Balmain, 1 sheet, and Leichhardt, 2 sheets.	do do
Legge, G. H.	,, ...	250 to 31 Aug., then 300.	Detail survey—North Sydney, 2 sheets transmitted; Ashfield, 10 sheets transmitted; Manly, 5 sheets transmitted, and fieldwork in hand. Traverse survey of part of coastline, Manly. Revision survey—City, 1 sheet; Paddington, 2 sheets.	do do
White, D. C.	,, ...	300	Detail survey, Marrickville, 3 sheets transmitted. Revision survey, Newtown, 4 sheets transmitted, and fieldwork in hand.	do do
Lucas, M.	,, ...	300	Detail survey, North Sydney, 5 sheets transmitted, and 1 sheet partly done.	Transferred to Goulburn District, 1 Sept., 1890.
Peake, A.	,, ...	300	Detail survey, North Sydney, 10 sheets transmitted. Additional detail, North Sydney, 4 sheets.	Resigned, 31 July, 1890.

CORRESPONDENCE AND RECORD BRANCH.

A statement of the duties performed in this Branch during the year is shown hereunder:—

Papers received from other Branches and recorded	9,822
Papers, plans, tracings, &c., received by post	12,739
Instructions entered in instruction books and despatched	1,650
Memoranda sent to surveyors	10,160
Letters written and despatched	580
Lithographs, tracings, and plans sent to surveyors	6,900
Minutes written and submitted to Under Secretary	860
Decisions by the Minister noted	740
Telegrams issued	245

A record was also kept of all leave of absence granted to the salaried staff of surveyors, and to the permanent and temporary officers in the Survey Branch, head office.

Four officers were employed in the Branch during the year.

DRAFTING BRANCHES.

The report by the Chief Draftsman upon the work done in the various drafting branches of this office which are under his supervision shows that satisfactory service has been performed, although the effectiveness of his staff has been somewhat reduced by occasional removals to meet the exigencies of business.

The current work of the Drafting Branches has been considerably affected during the year 1890 by the operation of the Crown Lands Act of 1889.

In consequence of the determination of the pastoral leaseholds in the Eastern Division, and the necessity of re-appraising the rentals of the pastoral, leasehold, and occupation licenses under the Act of 1889, a number of plans had to be prepared and certain information collected by the Occupation Branch in a limited period, to perform which that Branch had to be temporarily strengthened from the Compiling Branch.

Later in the year a further demand was made on the Compiling Branch for temporary assistance to certain country offices which had been found unable to cope with the abnormal amount of business appertaining to the location and measurement of the numerous selections and leases taken up under the provisions of the new Land Act.

An endeavour has been made not to interfere with the Charting Branch more than was absolutely necessary, most of the work requiring to be performed by it being of an urgent nature; but even that Branch has been worked for the greater part of the year with a staff one less than its proper number.

The Miscellaneous Contract Branch has been unusually busy, owing to the necessity of duplicating the maps and plans representing several land districts transferred from the Metropolitan Land Board district to adjoining districts, in furtherance of the recommendations of the Board of Inquiry.

An additional duty has been imposed on the Plan Record Branch during the year, in the registration of all requisitions from district offices, and the direct transmission of all plans required to those offices, an arrangement which has been found to effect a considerable saving of time and labour.

The receipt of new bins for the better storage of parish and town lithograghs has permitted of the thorough revision of a large portion of the stock of maps, and the removal of a quantity of obsolete and surplus publications.

The number of parish maps completed and published is considerably smaller than during last year, but this is explained by the introductory remarks, a careful analysis of the detailed returns supplied by the parish map division clearly showing that the average number of maps produced per man is, practically speaking, the same as last year.

The number of town maps published is less than last year, as anticipated in 1889 report.

Satisfactory progress has been made with the new Colony map compilation, a sketch map being annexed to this report illustrating the present condition of this important work.

Although a smaller number of publications has issued than in 1889, the total number of sheets printed is greater, including a number of very large size, which had to be printed by hand-press in a laborious and tedious fashion. A tender has been accepted for supplying a printing machine containing the best modern improvements and accessories, and capable of printing maps of the largest sizes required, which, it is expected, will shortly be erected and in working order.

The contract for lithographing the new map of Sydney and environs has been let to a first-class lithographic artist at a reasonable price, and one sheet has already been completed within contract time in a style which leaves nothing to be desired.

Three members of the staff died during the year—Mr. Nilson of the Roads Branch, Mr. T. Freeman of the Occupation Branch, and Mr. Inglis of the Litho-printing Branch—all meritorious officers. Mr. Keating, lately Officer-in-charge of the Charting Branch, has been promoted to the position of Registrar of the newly-constituted Land Court; Mr. R. D. Hay, also of the Charting Branch, to the position of Cumberland Ranger; and Mr. Reynolds, of the Compiling Branch, to a position in the Department of Agriculture. Two of our best junior clerks have been promoted to vacant positions in the Administrative Branches of the Department.

The Chief Draftsman was engaged for upwards of two months on a Board of Inquiry into the working of the Charting Branch of the Mines Department.

The staff has been reinforced by the appointment of three probationers and an assistant plan-mounter, and the transfer to the Drafting Staff of one clerk and a contract draftsman who had qualified as temporary draftsman.

During the year six candidates were examined in the subjects requiring to be known by temporary draftsmen, all of whom satisfied the examiners.

Further details will be found in the following Branch Reports:—

Miscellaneous Charting Branch.

As already stated, the strength of this Branch was reduced early in 1890 by the promotion of the Officer-in-charge to the position of Registrar of the Land Court.

The second officer, Mr. R. M'Lean, was appointed to the position of Draftsman-in-charge, but the Branch remained one short of its proper number throughout the year.

In addition to the ordinary duties of the Branch, a considerable amount of extra work has been involved in the preparation of lists for publication in the *Government Gazette* and certain weekly papers of measured portions throughout the Colony open to conditional purchase and lease.

The Minister having afterwards decided to publish in pamphlet form, from time to time, particulars of all measured lands open to selection, steps were taken to collect the necessary material from district offices; but although a large amount of information has been received, and is ready for setting up in type, this matter has been unavoidably delayed by the enormous amount of work cast upon certain district offices in connection with the Crown Lands Act of 1889.

A large number of exchange cases under section 46, Act of 1889, were received during the year, and subjected to careful investigation, with plans, maps, and papers, before being referred to the Local Land Boards.

Returns were also prepared showing information called for by Parliament, and supplying particulars required by examiners of public works proposals.

6,621 plans and tracings, comprising 8,315 portions, were charted by contract, at a cost of £310 18s.

Owing to the Branch being shorthanded several matters not of pressing urgency had to be set aside, with a view to being taken up again as soon as current work permits, among which may be mentioned the completion of confirmation noting, the recording and noting of resumptions for different public purposes effected by other Departments, and the adjustment and recompilation of reserve records under an improved and more convenient system.

The year 1890 opened with 755 cases in hand. In August the arrears had increased to 1,115; but at the end of December the number of cases of all kinds undealt with in the Branch had been reduced to 680.

The accompanying returns show the work dealt with in 1889 and 1890, a substantial increase being noticeable in all items except confirmations noted.—

	1889.	1890.
(1) Miscellaneous papers in Branch on 31st December ..	513	533
(2) Auction...	242	147
(3) Cases dealt with during year, inclusive of auction ..	9,600	10,652
(4) Cases dealt with during year, exclusive of auction ...	7,517	8,586
(5) Confirmations noted	18,103	7,491
(6) Plans and tracings charted	6,387	6,907
(7) Area gazetted for auction during the year	90,241 acres.	147,768 acres.

Return of Auction Work for year 1890, excluding Land within the Metropolitan Land Board District.

On hand, 1st of year.	Received during year	Dealt with during year	Cases on hand end of year.	Entered in Schedule during year				Cases under reference end of year.

COMPILING BRANCH.

Miscellaneous Division.—This division is charged with the compilation and drawing of town, county, colony, and miscellaneous maps. The staff was increased during the latter half-year by the transfer of one officer from the General Survey Branch and one from the Orange District Office, in accordance with recommendations of the Board of Inquiry; but this increase was more that neutralised by the transfer of two draftsmen to the Occupation Branch for a time to assist in special work, the transfer of another draftsman to Armidale District Office for three months, and the withdrawal of the second officer from his ordinary duties on several occasions to act as emergency Crown Lands Agent.

Twenty-three town maps have been compiled and drawn for photo-lithography, maps of two important towns, Newcastle and Willyama (Broken Hill), being now in progress.

Five county maps have been compiled and drawn, viz., Fitzgerald, Livingstone, Thoulcanna, Young, and Rous, one of which, Rous, proved exceptionally difficult and tedious. Two standard county maps have been charted to date for issue of new editions. Seven county maps are now in hand in different stages, two of which, Northumberland and Townsend, are approaching completion.

The sketch map attached to this report exhibits the satisfactory progress made during the year by the four draftsmen now employed on the Colony map, in connection with which it may be mentioned that the introduction of glass pens for use in the pentagraphs has effected a considerable saving in labour in making reductions with those instruments.

Two hundred and forty-six plans of feature surveys, comprising 1,284 miles of survey, have been charted.

The miscellaneous maps, compiled during the year, include a large railway map of the Colony, postal map, Land Board and Land District map, stock route map, map of Australasia for the Premier, and many others of minor importance.

Parish Map Division.—This Division has been engaged as heretofore upon the compilation of parish maps.

The reduced output of parish maps, which has already been alluded to in the general remarks, is primarily due to removals from the staff of this Division in order to meet emergencies in other Branches.

During the early part of the year several draftsmen were temporarily attached to the Occupation Branch assisting in the preparation of appraisement tracings.

The two draftsmen in Miscellaneous Contract Branch, who, in the year 1889, had been able to devote the greater part of their time to parish map compilation, were fully occupied in 1890 with the work of their own branch.

One officer resigned early in the year to accept an appointment in the Department of Agriculture, two draftsmen were temporarily attached to country offices for the last three months, and owing to increased activity in printing operations, the two heliographic operators were of less assistance as compilers than in previous years.

Other circumstances, such as the non-return of proofs by district offices, and the greater proportion of difficult maps disposed of, all combined to render the returns for 1890 much smaller than for 1889, although the cost per map is but slightly in excess of the rate for that year.

The numbers are as follows:—

	1889.	1890.
Parish maps compiled...	325	235
Parish maps prepared for new edition	80	48
Total	405	283

The standard parish maps have again been increased by about 300, the number now being 1,672.

The heliographic printing is greatly in excess of previous years, 2,544 maps having been reproduced, and 4,629 copies taken, as compared with 1,747 in 1889, the average cost per print being only about one-half of that for 1889.

Details of maps published during the year will be found under the head of Lithographic Branch.

LITHOGRAPHIC BRANCH.

The staff of this Branch consists of eighteen persons, viz., the draftsman in charge, three lithographic and zincographic draftsmen, two working overseers of printing, one clerk, eight printers, and three stone polishers and general assistants; these are supplemented by the employment of private persons or firms for drawing or printing by contract, which is either performed in this office or at their business premises outside the Department, as economy and efficiency may dictate.

Early in the year Mr. Inglis, the officer in charge of the Printing Branch, died, his place being filled by the promotion of the second officer, Mr. Ford.

The general business of the Branch for this year shows an increase in the number of copies printed above that completed in 1889; and the following returns, in tabular form, really exhibit the combined results of the map compilation at head-quarters, and the plans of surveys drawn in the field by surveyors, inasmuch as these maps and plans are either lithographed in the Branch, or after photo-lithographic transfers, are prepared at the Government Printing Office; they are here utilised by application to stone or zinc, and the copies printed for office use and for publication.

For convenience of official record lithographs are classified thus:—1. Counties; 2. Towns (comprising cities, towns, and villages); 3. Parishes; 4. Auction Sale Plans; 5. Miscellaneous; 6. Other Departments; and 7. Official Forms.

1. *Counties.*

County lithographs show measured areas, roads, reserves, features, and all other information which is capable of delineation on a scale of 2 miles to an inch—in addition to those printed on a scale of 8 miles to an inch, which are used for official purposes only. The standard price is 5s. per copy.

Twelve counties completed, comprising 2,250 printed copies:

Buller	Fitzgerald*	Thoulcanna*	Wentworth
Buller*	Murray*	Westmoreland	Young
Cook	Thoulcanna	Westmoreland*	Young*

O these maps, those indicated by the asterisk are to the scale of 8 miles to an inch.

2. *Towns.*

Town lithographs show the general design, measured lands, and names of purchasers, reserves, and dedications within town and suburban limits; they are usually photo-lithographed from compilations made at this office, or from the surveyor's original plans, to a scale of 4 or 8 chains to an inch, and sold at 1s. per copy.

Forty-four towns completed, comprising 5,927 printed copies.

Aberdeen	East Maitland	Liverpool	Repton
Alectown	Forster	Mingelo	Stannifer
Alma	Grafton	Moonbi	Sturt
Belford	Gunnedah	Mount Costigan	Termeil
Berrigan	Hay	Morrisset	Teven
Berrigan	Hillgrove	Murrumburrah	Tumbarumba
Brungle	Hillston North	Neranie	Wanaaring
Cargelligo	Huon	Oberon	Woodstock
Carcoar	Jerilderie	Overton	Warialda
Currathool	Katoomba	Paramellowa	Wattle Flat
Dungeree	Kyuga	Peakhill	West Kempsey

Names repeated show that two editions have been printed during the year.

3. *Parishes.*

Parish maps in the Eastern Division are compiled to a scale of 20 chains to an inch for office use, and reduced by photo-lithography to 40 chains scale for publication; maps in the Central Division are published to a scale of 40 chains to an inch.

259 parishes completed, comprising 19,025 printed copies.

4. *Auction Sale Plans.*

Lithographs of all lands measured for auction are printed for use at auction sales, and sold at 1s. per copy.

165 Auction sale plans completed, comprising 17,750 printed copies.

5. *Miscellaneous.*

In this class the principal maps printed during the year have been Sheets of the Detail Survey of City and Suburbs; General Map of New South Wales; Index Maps of the Land Board Districts of Goulburn, Orange, and Cooma; Index Map to the Sheets of the Detail Survey of City and Suburbs; Map of the Country between George's River and Broken Bay, showing Trigonometrical Stations; Plans showing Occupation Licenses; Map of Newcastle Pasturage Reserve; and Maps to illustrate Annual Report of Department of Lands.

113 Miscellaneous Maps completed, comprising 43,322 printed copies.

6. *Other Departments.*

Maps, Plans, and Diagrams have been printed for the Departments, of Mines, Railways, Government Statistician, Roads and Bridges, and Colonial Secretary, chiefly comprising:—Maps illustrating Railway Guide Books; Mineral Map of New South Wales; Suburban Maps for sewerage purposes; diagrams of bridges and culverts; Railway Maps of Australia and of New South Wales; Sydney and Suburbs, in 14 sheets, for sewerage purposes; plates of Orchid drawings; plate for *Agricultural Gazette*; diagrams showing river gauges; diagrams showing heights and discharges of Murray and Murrumbidgee Rivers; map showing Routes to the Caves of N.S.W.; and Electoral Map of N.S.W.

Thirty-five maps, plans, and drawings for other Departments completed, comprising 37,415 printed copies.

The approximate value of this work, including drawing, printing, paper, and supervision, amounted to £1,250.

7.

7. Official Forms.

These forms comprise—Circulars, decisions, forms, and memoranda required for use at head-quarters and at country offices.

169 official forms completed, comprising 93,470 printed copies.

COMPARATIVE SUMMARY for 1889 and 1890.

Map, Plan, or Document.	1889.		1890.	
	Number of separate maps.	Number of copies printed.	Number of separate maps.	Number of copies printed.
Counties	17	3,250	12	2,250
Towns	54	10,375	44	5,927
Parishes	378	37,400	259	19,025

Contractors for lithographic work received the sum of £1,208 0s. 11d., the drawing for this supplementary work costing £1,184 15s. 11d., and the printing £23 5s.

ROADS BRANCH.

This Branch receives and deals with all applications for roads, and takes action thereon under the Act 4 William 4 No. XI, and 42nd section of Act 53 Vic. No. 21; also examines and reports on all applications for the granting of roads in lieu of proclaimed roads under 42nd section of 53 Vic. No. 21, and for purchase of unnecessary roads under 67th section of Act 48 Vic. No. 18; and also it takes action with regard to the alignment of streets under 2 Vic. No. 2, and deals with applications for public gates under 39 Vic. No. 10, as well as various other matters having reference to roads.

335 applications for surveys and opening of roads and streets have been received; also 403 surveyors' reports (exclusive of the letters transmitting plans of surveys); 192 plans of road surveys, showing about 560 miles of road; 23 plans of street-alignment surveys, showing 236 streets; 52 application for public gates; and 200 objections and claims, besides various letters and applications asking for information and inquiring as to road matters, &c., have been dealt with.

The papers with reference to roads, streets, and public gates, in number about 5,370, have been registered, and are kept in the Record room of this Branch; also about 634 papers registered in other Branches have been received, so that a total of about 6,004 papers have been dealt with during the year.

OCCUPATION DRAFTING BRANCH.

This Branch worked throughout 1890 without the services of one of its most efficient officers—Mr. T. Freeman—who died in the latter part of the year.

During the pressure attending the preparation of tracings of pastoral holdings for appraisement purposes, temporary assistance had to be drawn from the Compiling Branch.

Later in the year, when the work had resumed its normal condition, one of the draftsmen was lent to Charting Branch for a time.

1,870 tracings of leasehold and resumed areas were examined and charted to date for appraisement purposes.

1,270 parish maps in the Eastern Division were corrected in respect to expired leaseholds.

Plans of 434 forfeited and vacant lots were charted-up, and forwarded to District Surveyors for revision and report.

Upwards of 1,000 refund schedules were revised and computed, and District Surveyors advised of any amendments made.

231¼ miles of pastoral holding boundaries were surveyed, at a total cost of £600, of which the sum of £228 was recovered from the lessees. A further sum of £145 was contributed by pastoral lessees towards the survey of leasehold boundaries common to homestead leases, and £43 was paid by pastoral lessees for the total cost of survey of 17¾ miles of boundaries, and £12 on account of surveys made by salaried surveyors.

The following schedule shows the principal items dealt with during the year:—

Cases under section 143, Act 1884, section 52, Act 1889	52
County maps charted with pastoral holdings	5
Parish maps charted with pastoral holdings	570
Holding boundaries corrected on office maps	50
Amended plans of holdings prepared	20
Homestead leases charted and noted	185
Surveys of pastoral holdings charted	44
Boundaries corrected on holding plans	392
Tracings and lithos. prepared	276
Annual refund Schedules examined and computed	1,136
Appraisement areas revised	121
Appraisement tracings revised	1,870
Questions as to leasehold or resumed areas	1,232
Questions from other Branches	119
Eastern Division—maps corrected and revised	1,270
Forfeited holdings and lots revised	434

MISCELLANEOUS

Miscellaneous Contract Branch.

At the close of the year 1890 only two cases remained in hand undealt with, which had been in the branch more than a fortnight, and these were not of an urgent nature.

The total number of drawings of all kinds completed during the year was 6,782, being an excess of 2,377 over the preceding year, this large increase being due to the necessity for duplicating all parish and town maps and original plans in the Land Board districts recently severed from the Metropolitan Board District.

A large number of tracings of plans of conditional leases were also required under the provisions of the 29th section Crown Lands Act of 1889.

The following Schedule supplies particulars of each class of work performed:—

Return for 1890—Miscellaneous Contract Branch.

	Tracings.	Charted-up Lithographs.	Helio-graphs.	Sundries.	Totals.
Tracings and charted-up lithographs supplied to District Surveyors, including 708 standard tracings prepared for heliography for the Orange District Office, and 242 town and parish maps for use in offices now dealing with the land districts recently excised from the Metropolitan Land Board District	1,086	261	.....	.....	1,347
Tracings made, and tracings noted to date for use in head office in lieu of original plans transferred to district offices now dealing with land districts excised from the Metropolitan Land Board District	619	.....	.....	.....	619

Tracings, charted-up lithographs, &c., prepared for sundry purposes	514	475	6	35	1,030
Totals	5,111	1,055	581	35	6,782
Total number of applications					1,079

Note.—The drawings enumerated above comprise copies of colony, county, parish, and town maps, plans of railway, alignment, road, and feature surveys, and ordinary small plans.

Plan Record Branch.

During the year 1890 the business of registering all applications for original plans from District Offices, which was formerly attached to the Correspondence Branch (Lands), was transferred to Plan Branch, which now receives all such applications direct from District Offices, and transmits through the post all plans applied for. A considerable saving of time is effected in dealing with these applications by this arrangement, the applications passing through fewer hands, and the greater part of the time of one clerk who previously attended to this matter being saved.

Special regulations have been framed governing the inspection and use of original plans, field-books, &c., by authorised surveyors and draftsmen.

Return herewith giving further particulars:

Approximate number of plans entered in the books at end of year	237,000
Approximate number issued to and returned from officers in Head Office, Metropolitan Survey Office, and Mines Department	164,500
Cancelled maps	600
Sent to plan-mounter	14,402
Issued to Inquiry Branch	1,700
Exhibited at counter	2,500
Despatched to District Survey Offices	18,943
Returned from District Survey Offices	13,464
Applications received from District Survey Offices for originals	3,417
Registered memoranda returning originals from District Survey Offices	1,160
Memoranda sent to District Survey Offices for plans	990
Certified copies received	6,571
Surveyors' field-books in branch	1,600
Auction sale lithographs in branch, about	2,330

From the 1st February, 1890, all applications for plans from District Offices have been registered, and since that date have been despatched direct from this branch.

Map Sales Branch.

During the year it was found necessary to transfer the officer in charge of this branch to Plan Record Branch, and the position of clerk in charge is now held by Mr. Stobo, formerly second officer of the branch.

The

The number of maps received during 1890 is less than in 1889, but the number issued is much greater. The proceeds of sales show a slight increase.

New presses have been received for the storage of parish and town maps, which are now kept flat on slides, instead of being rolled up in pigeon-holes. The maps are in consequence kept in better order, and can now be issued and revised in a much shorter time than previously.

Stocks of county lithographs have been revised and rearranged, and old editions cancelled.

Town maps are in process of revision in the same manner, and a large number of detail sheets were cancelled and disposed of in accordance with the recommendations of the Board of Inquiry.

Return herewith giving further particulars:—

Particulars of lithographs received and issued, and a comparison between the numbers for the years 1889 *and* 1890.

Plan-mounting Branch.

The return of this branch shows a grand total of 24,680 pieces of work performed during the year being an increase of 960 on 1889.

Large numbers of original plans, heliographs, certified copies of originals, and various lithographs, are included in the work performed.

The assistant plan-mounter has been transferred to Plan Record Branch, and a lad has been employed in his place at a much smaller salary.

In conclusion it may not be out of place to state that the demand for survey in the country districts, consequent upon settlement under the Crown Lands Act of 1889, will necessitate the withdrawal temporarily from head quarters of some of the salaried surveyors, which, however, may probably be arranged without inconvenience to public business in the Metropolitan District.

E. TWYNAM,
Chief Surveyor.

[Three Plans.]

NEW SOUTH WALES.

DEPARTMENT OF LANDS.

(TWELFTH ANNUAL REPORT, FOR 1891.)

Printed in accordance with Resolutions of both Houses of Parliament.

To The Hon. Henry Copeland, Esq., M.P., Secretary for Lands.

Sir, Department of Lands, Sydney, 30 March, 1892.

I have the honor to submit, for your information, the Twelfth Annual Report of the Department, dealing with the business transacted during the year 1891.

Introductory.

Among the more important events of the year was the operation of the Crown Rents' Act. This Act, as is sufficiently well known, owed its existence to the case of Alison *v.* Burns, in which the Privy Council—contrary to the judgment of the Supreme Court of the Colony—held that the policy and intention of the Act of 1884 were that the Local Land Boards and the Minister should concur in fixing a fair rent for the occupation of Crown lands. It followed from this, therefore, that where the Minister had fixed a rent at a rate different from that appraised by the Land Board, the rent could not be held to have been legally fixed at all. By the Act referred to it fell upon the Land Court to redetermine the rents upon the application of the lessee or licensee. With comparatively few exceptions the Land Court completed its task before the close of last year; and the next step was to give effect to its decisions either in the way of demanding additional rent or refunding, with interest, amounts paid in excess. This imposed upon the Department a much more difficult task than at first sight would appear; and before the work could be entered upon a series of questions of the greatest intricacy presented themselves, the solution of which required the most careful consideration. The Minister took the earliest opportunity of dealing with these questions, and directed the organisation of a special staff to dispose of the work. This staff was composed of Officers of the Department and two temporary clerks; and the arrangements have worked so admirably as to enable me to report the completion of all Pastoral Lease, Occupation License, and Homestead Lease cases, with the exception of seventeen, of which ten are still to be dealt with by the Land Court, and the remainder are delayed by the neglect of the parties to answer certain official correspondence. In carrying out the work the greatest care and accuracy were aimed at; and the adjustment of the accounts presented exceptional difficulties, inasmuch as the rents paid were not at uniform rates, even in connection with

 the

the same holding, and each year's account had to be separately considered in connection with the fact that the area of the lease, &c., had been, during the whole period of review, in a constant state of fluctuation. It is not to be forgotten, also, that the period of review extended back several years, so that each individual case represented a series of distinct calculations. Schedules have been prepared (more particularly referred to in other parts of the Report) from which may be seen in every case the rates appraised by the Board, fixed by the Minister, and determined by the Court, respectively. So far the result has been that in 412 cases the Minister's rate has been reduced; in 181 cases the Minister's rate has not been altered; and in 104 cases the Minister's rate has been increased. Refunds to the amount of £125,500 15s. 5d. (which represents £105,838 18s. 9d. as rent, and £19,661 16s. 8d. as interest) have been authorised, and £21,498 2s. 1d. has been called for as representing sums underpaid,—the difference as against the Crown being £104,002 13s. 4d. These figures will necessarily exhibit some slight alteration when the whole of the work has been completed—that is to say, when the accounts of the seventeen cases already referred to, and those of the Conditional Leases brought under the Act (of which there are only thirty-eight, and representing small amounts), have been adjusted.

The annual difference to the Crown between the rents charged by the Minister and fixed by the Land Court would have been an interesting addition to the preceding figures; but, as will be seen from the next paragraph, the effect of the Act of 1889 has been, in a very large proportion of cases, to limit the effect of the Crown Rents Act to the expired period of the holding, the rent under the Crown Rents Act being in fact superseded by the rent under the 1889 Act, so far as the future is concerned.

The operation of section 29 of the Act of 1889 which offered lessees (among other privileges as to extended tenure, &c.) the option of retaining their holdings subject to the rental provisions of the Act of 1884, or of having their rentals periodically reappraised, was a matter of even more importance than the operation of the Crown Rents Act. The combined effect of the two Acts has been a review and redetermination of the rent both of the past and the current period of the holdings brought within their provisions. Those brought under the Act of 1889 were 1,002 pastoral, 413 homestead, and 927 conditional leases, together with 487 occupation licenses which were in existence before the Act of 1889, and 420 preferential occupation licenses which came into existence on the expiration of the Eastern Division pastoral leases. The whole of these holdings required appraisement, and this fact necessitated the appointment of qualified persons to inspect the land in order to give evidence before the Board on behalf of the Crown when the Boards should hold their appraisements. At the close of 1891 the work of appraisement was almost complete. In a proportion of cases the parties interested have appealed to the Land Court against the Board's valuations; but in the very large number of cases where appeals have not been made, the Minister has had cast upon him (by the provisions of section 6 of the Act of 1889) the duty of deciding whether he would accept the Board's appraisements or refer them to the Land Court. This has been accomplished, and no illustration is needed of the amount of work which it has involved. Having regard, however, to the importance of the matter, so far as the result is concerned, Schedules have been prepared and placed with this report which show every case in which the rent has been finally settled and gazetted; the original rates as determined by the Minister or the Court respectively, the new rates under the Act of 1889; and, in connection with pastoral and homestead leases, the rate which would have been payable with the statutory increases imposed by section 78 of the Act of 1884 had the provisions of the Act of 1889 not been taken advantage of.

During the past year a number of Supreme Court judgments on questions arising under the Crown Land Acts were delivered, which were necessarily in themselves important, and especially valuable as settling doubtful or difficult points of law; and in view of these facts it has been thought that a brief reference to them would not be uninteresting. It is of the highest advantage, both to the public and to the Department, to have such authoritative decisions to guide them, and the only matter of regret is that the occasion for seeking a judicial interpretation of the law rarely presents itself as early as would be desirable.

As one instance of this, the case of O'Brien may be cited (N.S.W. L.R., Vol. XII, Part II, page 45), the judgment in which case necessitated, in part at least, the Crown Lands Act Amendment Act of 1891. The judgment, while throwing doubt on the efficacy of a provisional reversal of forfeiture, went to show that the Minister had no power to reverse absolutely or otherwise any forfeiture after it had been notified in the *Government Gazette*, and had taken legal effect in accordance with section 136 of the Crown Lands Act of 1884. Prior to this, Ministers had been in the habit of reversing forfeitures, provisionally and absolutely, with special regard to the merits of the cases, but without any special limit of time; and in view of this latter fact a validation of their action became, after the delivery of the judgment referred to, a pressing necessity in order to prevent the disturbance of titles which for years had remained unquestioned. Accordingly the Act referred to was introduced, which, in addition to effecting this object, made suitable provision for the Minister to deal in the future with cases in which the waiver or reversal of forfeiture might be warranted.

It is unnecessary here to refer further to the contents of the Act in this connection, except, perhaps, to say that the moral injustice which a forfeiture would sometimes involve has been so far recognised by the Land Court as to induce it (when dismissing appeals against forfeitures found to have been incurred) to sometimes recommend that the penalty should not be enforced.

Two important provisions of the Act, not related however to this subject, deserve some remark, viz., those contained in section 7 dealing with the matter of balloting for land. This section provides that a successful applicant shall not be entitled to withdraw his application, and that the fact of two or more applications being made by different applicants for one person shall be *prima facie* evidence that none has been made bona-fide for the applicant's sole use and benefit. These provisions were introduced to check abuse, it having been found that one person to increase his chances would sometimes arrange with others to apply also, with the understanding that they would withdraw, in succession, until the real applicant was reached and left in possession of the land. The system of balloting, even as modified by recent legislation, cannot, however, be regarded as satisfactory, and the substitution of some better method of disposing of simultaneous applications would be desirable.

In the case of the A. J. S. Bank (where the Bank appealed to the Supreme Court against the decision of the Land Court) it was sought to set two sections of the existing Acts in opposition to each other, with a view of showing that, contrary to the practice of the Department, a conditional lease could now be granted by virtue of a conditional purchase made under the repealed Acts; but, as was anticipated, the Bank did not succeed.

In the case of the E. S. & A. C. Bank (which was an appeal by the Bank to the Supreme Court against the Land Court) it was held, in support of the Land Court and Departmental action, that an exchange of land between the Crown and the holder of freeholds within a pastoral leasehold could not be approved by the Governor after the expiration of the pastoral lease, notwithstanding that the initiatory proceedings may have commenced before this event happened.

In Shearer's case, (which came before the Land Court and was referred to the higher Court at the instance of the Minister,) the question arose whether the Crown Lands Acts precluded the holder of a pastoral lease from holding a sub-lease of a homestead lease for grazing purposes. The Court decided in the negative. It was hoped that the law would have been found otherwise, merely because in transactions of this nature a certain amount of facility is offered for the defeat of the intentions of the law on account of the great difficulty in discriminating between cases in which the privileges of the Acts are taken advantage of bona-fide and those in which they are not. N.S.W.L.R., Vol. XII, Part I, page 24.

The case of the Attorney-General *v.* Milson (in which the Crown proceeded by writ of intrusion) had reference to land at Cremorne, granted by the Crown in 1833, with a reservation of 100 feet above high-water-mark. The land within this 100 feet was claimed under the plea of adverse possession against the Crown, in whose favour,

favour, however, judgment was delivered. The Nullum Tempus Act 9 George III, cap. 16, was referred to, and the Court held that to defeat the title of the Crown there must be 60 years continuous adverse possession. The effect of the reservation had been (in view of the authority Cooper *v.* Stuart (N.S.W.L.R., Vol. X, Part III, page 172), and Neild *v.* Davidson (N.S.W.L.R., Vol. XI, Part III, page 209) to exclude the land from the grant altogether. N.S.W.L.R., Vol. XII, Part III, page 121.

In the case Ricketson *v.* Barbour (in which Barbour succeeded in an appeal to the Land Court, and Ricketson appealed to the Supreme Court), the former had applied to purchase by virtue of improvements land which at the date of his application was comprised within a reserve from sale. The reserve was revoked, but under the Land Acts revocation would not mature until a certain term after notice in the *Government Gazette*. During this term the Governor in Council approved of Ricketson's application, and after the revocation had taken effect Barbour selected the land. The Court held that until revocation had matured the Crown could not approve of the sale, and the fact of Ricketson having applied during the existence of the reserve rendered his application nugatory. The conditional purchaser therefore succeeded. N.S.W.L.R., Vol. XII, Part III, page 128.

In Baldwin's case the conditional purchaser had, under the provisions of section 22 of the Crown Lands Alienation Act of 1861, acquired a certain area under conditional purchase by virtue of a freehold, and under the repealed Acts he was entitled to extend his holding to 640 acres, inclusive of the area of the freehold. Under the existing Acts he sought to exceed this area; and the Land Court having decided in his favour, the Minister asked for a reference to the Supreme Court of the question whether the first conditional purchase of a series made by virtue of a freehold was an original purchase within the meaning of section 42 of the Crown Lands Act of 1884. The Supreme Court held that it was not. N.S.W.L.R., Vol. XII, Part III, page 128.

In Fergusson *v.* Wilmott (in which the former unsuccessfully appealed from the decision of the Land Court) the parties made conflicting applications, and Willmott, at a ballot which was held to determine priority, was successful. He had tendered his deposit in bank-notes, while Fergusson had tendered his in gold coin. The latter claimed that Wilmott's tender was not a legal one; but the Supreme Court held it to have been sufficient. To applicants for land this decision is obviously most important, seeing that (as the Court pointed out) Government operations would be severely crippled, if not paralysed, if its agents were bound to accept only gold.

In Blomfield *v.* Jenkins another important and convenient ruling was laid down (contrary to the decision of the Land Court), viz., that if two or more persons ballot for land, the unsuccessful applicants are entitled to appear before the Local Land Board as parties to the case without having lodged caveats against the successful application.

In the case of Margaret Arthur, who applied for an additional conditional purchase as administratrix of her late father's estate, it was held (on appeal from, and contrary to, the decision of the Land Court) that she was entitled in that capacity so to apply.

The decision in Boyd's case (in which the Minister succeeded in an appeal from a decision of the Land Court), threw light upon the meaning of "adverse circumstances" as applying to a conditional purchaser desirous of obtaining a certificate from the Land Board, that in consequence of such circumstances he was compelled to abandon his land.

In Walsh's case Walsh made a conditional purchase under the repealed Acts, which he transferred to one Thompson on the 29th May, 1890. This was after issue to, but before the service on, Walsh of a notice that the Land Board intended to inquire into the question whether the conditional purchase had been made bona-fide. The Board decided against the conditional purchaser, but upon an appeal the Land Court held that Thompson was an assignee without notice, and in consequence was protected against the proposed forfeiture of the land by section 9 of the Act of 1875. The matter was, at the instance of the Minister, referred to the Supreme Court,

Court, which, passing by the question of fact whether Thompson had notice (as being beyond the scope of the reference), dealt specially with an argument urged on behalf of the Minister, that as the transfer was made after the repeal of the Act of 1861, section 9 did not apply. The Supreme Court, however, decided otherwise, holding that under section 2 of the Act of 1884 the vitality of section 9 was preserved, and that therefore Thompson was entitled to the benefit of its provisions. N.S.W.L.R. Vol. XII, Part III, Page 200.

In Black's case, (in which a motion to make absolute a rule calling upon the Picton Land Board to show cause why a writ of prohibition should not issue to restrain them from proceeding with an inquiry in the nature of a re-hearing as to the *bonâ fides* of applications for certain conditional purchases in accordance with an order of the Land Court,) the Supreme Court judgment explained the limitations of the jurisdictions of the Land Court and the Minister respectively in connection with matters to be brought before the Board under the provisions of section 20 of the Act of 1884. N.S.W.L.R. Vol. XII, Part II, Page 37.

In the case of Day *v.* Brunker, Day obtained in 1839 a grant of an allotment of land, of which he had for some time previously been in occupation. The land originally had frontage to Darling Harbour, and was so described in the grant. In consequence of the extension of Sussex-street through the water, in front of and a short distance from, the land, the water frontage was cut off, a strip being left between the street and the original frontage. In 1836, before the issue of the grant, Day had presented a memorial in which he referred to the contemplated extension of the street, and asked that access from his premises to the water might be preserved. The Government promised to accede to this by not allowing the erection of buildings on the west side of the street in the situation of the premises, and at the same time permission was given to Day (to be understood as quite distinct from the question of water frontage) to extend his wharf into deep water. In 1862 permission was given to erect a wharf on piles. This permission was to hold for one year, the Government stating that it could not negotiate for the sale of the land reclaimed. Day reclaimed land in front of the street; but an application made in 1883 by his representatives for permission to purchase the reclaimed land was refused, as the applicants did not own the strip of land on the opposite side of the street.

The case came before the Court on a motion for a decree to restrain the Minister from taking possession of the land. The plaintiffs set up a claim to the reclaimed land, or a grant of a right of access to the water, or for declaration that the Government could not dispossess them without compensation. The Court assumed that prior to the issue of the grant Day was in occupation as promisee of a grant, and held that as there was no evidence of any consideration for the promise or of any outlay on the faith of it, the promise conferred no estate at law or in equity, and that the issue of the grant was a mere act of grace on the part of the Crown, and, following from this, that Day had no right or claim to the land in 1836, and that the extension of Sussex-street did not deprive him of anything to which he had a legal or equitable claim. With regard to the alleged right of access the Court held that as the land had been reclaimed without permission the plaintiffs could not claim a right-of-way or easement, the necessity of which had been created solely by Day's own reclamation. Having on these two points decided in favour of the Crown no ground was left to support the claim for compensation. N.S.W.L.R., Vol. XII, Part III, page 157.

In Alley's case, Alley and Richards each applied for the same land, the former being the prior applicant. Alley's application was disallowed by the Land Board for vagueness of description. On appeal by Alley, the Land Court held that his description was such as to have warranted the Board in allowing the deficiencies to be corrected; and upon Richards appealing to the Supreme Court, the decision of the Land Court was upheld.

In Tooth *v.* Power, Tooth made under the Act of 1861 (upon a run held by him) a conditional purchase in the name of Power, when the latter was an infant 6 years of age. The deposit and interest moneys were paid by Tooth, by whom also the necessary improvements were made. The condition of residence was carried out by Power residing on the land with his parents, who were in Tooth's service. Power, after reaching maturity, declined to recognise Tooth, and sought to transfer the

the land to another. The case came before the Equity Court and the Full Court of this Colony, and ultimately before the Privy Council, who considered the question whether any right of conditional purchase had been constituted which could be the subject of a resulting trust for Tooth, and they held that there had not. They pointed out that it is quite consonant with legal principle that what has been done in the name and in the interest of an infant by one who stands in *loco parentis* should be held to have been done by the infant himself so as to constitute compliance with the Act sufficient to create a valid interest in him, but it does not follow that what has been done by a stranger in name of an infant for his own behoof and with no intention of benefiting the infant can be regarded as fulfilment by the latter of the statutory conditions. Upon the facts their Lordships came to the conclusion that the proceedings taken by Tooth, with the view of creating a right of conditional purchase in the infant Power as trustee for Tooth, were simply a colourable attempt to comply with the provisions of the Act. There did not appear to them to have been substantial compliance with any one of the conditions which the Act prescribed. N.S.W.L.R., Vol. XII, Part III, page 127.

The Land Court.

During the year 1891 the Land Court heard and disposed of 1,248 cases, comprising 291 appeals, 149 references, and 73 motions, and including 735 applications for determination of rentals or license fees, under the Crown Rents Act of 1890. Of these latter, 34 were allowed to be withdrawn with the consent of the Minister for Lands, on payment of costs, the rent or license fee being determined at the rate previously fixed by the Minister.

The Court held sittings at Sydney on seventeen different occasions, and in the country, as follows:—Armidale, Bathurst, Dubbo, and Wagga Wagga, each twice; and Hay and Tamworth, each once. At the Sydney sittings 773 cases were heard, whilst 475 were dealt with in the country.

On reference to Schedule CXIX the expenses attaching to the Court may be ascertained.

Auction Sales.

During the year under review 2,295 town lots, comprising an area of 936 acres and $6\frac{1}{4}$ perches, were submitted to auction, and 1,047 lots, containing 435 acres 1 rood $30\frac{1}{2}$ perches, were sold, realizing £30,844 18s., being an average price of £70 16s. 9d. per acre. The results secured are an advance on those of the previous year when 891 lots, representing an area of 360 acres 3 roods $5\frac{3}{4}$ perches, were sold for the sum of £15,234 13s., an average of £42 5s. an acre. (Schedule XXXIV.)

Of suburban lands 1,121 lots, containing 5,577 acres and 2 perches, were offered, and 603 lots, comprising 2,322 acres and $6\frac{1}{4}$ perches, sold for £18,345 17s., at an average price of £7 18s. per acre. The business transacted is also greater than that of 1890, when 461 lots, containing 2,161 acres 3 roods $27\frac{1}{2}$ perches, were sold for £1,2674 7s. 6d., at an average of £5 17s. 3d. an acre. (Schedule XXXV.)

An area of 98,744 acres 3 roods $1\frac{1}{4}$ perches of country lands, comprised in 1,432 lots, was submitted for public competition, and resulted in the sale of 703 lots, with an area of 44,347 acres 3 roods $33\frac{1}{2}$ perches, realizing £92,360 11s. 3d., being an average price of £2 1s. 8d. an acre, as against 66,160 acres 1 rood $29\frac{1}{2}$ perches disposed of for £113,768 2s. 2d. in 1890. (Schedule XXXVI.)

Taking town, suburban, and country lands together, an aggregate of 47,105 acres 1 rood $30\frac{1}{4}$ perches were sold out of 105,257 acres 3 roods $9\frac{1}{2}$ perches submitted. It is unnecessary to point out how far this area was below the maximum which the law allows to be sold (200,000 acres), and it is very satisfactory to notice that in connection with each class the average prices per acre for 1891 were higher than those of 1890. Moreover the results of the 1891 sales approximate very closely to those of the year preceding (being £141,677 2s. 8d. and £141,551 6s. 3d. respectively), notwithstanding the area sold in 1891 was 47,105 acres 1 rood $30\frac{1}{4}$ perches as against the greater area of 68,683 acres and $22\frac{3}{4}$ perches in 1890.

The

The subjoined table exhibits the transactions in the different classes of business under this heading for the years 1890 and 1891 :—

	Year.	No. of lots offered.	Area offered.	No. of lots sold.	Area sold.	Amount realized.	Average price per acre.
			a. r. p.		a. r. p.	£ s. d.	£ s. d.
Town	1890	2,479	1,019 0 19	891	360 3 5¾	15,234 13 0	42 5 0
	1891	2,295	936 0 6¼	1,047	435 1 30½	30,844 18 0	70 16 9
Suburban ...	1890	1,335	7,045 3 11	461	2,161 3 27½	12,674 7 6	5 17 3
	1891	1,121	5,577 0 2	603	2,322 0 6¼	18,345 17 0	7 18 0
Country	1890	1,878	152,779 1 22¾	686	66,160 1 29½	113,768 2 2	1 14 5
	1891	1,432	98,744 3 1¼	703	44,347 3 33½	92,360 11 3	2 1 8

As a consequence of the non-payment of the balance of purchase money within the required time an area of 50 acres 3 roods 19 perches, comprised in 23 lots, and involving deposits to the extent of £144 8s. 1d., was forfeited to the Crown. The sum of £836 4s., representing the value of improvements added to the upset price of certain portions, was refunded, the Crown having waived any claim to the improvements. Guarantee deposits by persons who applied to have land put up for sale, and moneys paid in connection with cancelled sales or paid in excess, to the amount of £182 11s. 7d., were also refunded. (Schedules XXXVIII and XXXIX.)

Conditional Purchases.

As with few exceptions the Eastern Division pastoral leaseholds were thrown open to selection in 1890, it was expected that the special stimulus thus given to the demand for land during that year would not be sustained during the year which followed; and although this expectation was realised, the figures for the two years being,—

	No. of applications.	Area.
1890	8,526	1,713,577 1 0
1891	6,154	1,303,414 1 2

the fact deserves notice that (excluding the year 1890) a larger area was applied for in 1891 than in any year since the Act of 1884 came into operation. The following Schedule shows the relation in which the years since 1885 inclusive, stand to each other, and it will be observed that the last three years (1889, 1890, and 1891) show a higher number of applications than any other three years since the law now existing came into force :—

Year.	Section 26.			Section 42.			Section 47.			Special Areas.			Total.

1889	2722	533,213 0 0	53,321 3 0	2684	283,215 0 20	28,320 15 3	271	26,660 3 0	5,532 3 0	528	60,070 2 29	12,680 5 0	6205	903,159 2 9	99,854 6 3
1890	3252	879,058 3 3	87,907 18 8	4064	600,839 2 16	60,119 2 2	230	28,163 1 33	5,635 10 6	980	205,515 1 28	40,316 1 4	8526	1,713,577 1 0	193,978 12 8
1891	2243	586,570 1 30	58,656 19 5	2541	430,069 3 38	43,007 11 5	127	12,887 0 13	2,571 9 11	1243	273,886 3 1	54,948 17 9	6154	1,303,414 1 2	159,184 18 6

Taking into consideration the whole of the applications lodged in 1891; 3,068, representing an area of 778,348 acres 2 roods 18 perches, were for original purchases, to which was attached the obligation of residence,—2,921 for 506,353 acres 3 roods 11 perches were for additional purchases,—and 165 for 18,711 acres 3 roods 13 perches were for non-residential purchases. These figures include 1,243 applications for 273,886 acres 3 roods 1 perch within special areas, the applications for land within which show an increase over those of 1890. This comparison is clearly shown in the following table:

Year	Section 26.			Section 42.			Section 47.			Total, Special Areas.			Grand Total.		
	No.	Area.	Deposit.	No.	Area.	Deposit.	No.	Area.	Deposit.	No.	Area.	Deposit.	No.	Area.	Deposit.

Details in reference to applications for conditional purchases received during 1891 are set forth in Schedule VII.

Of the applications lodged during the year, 2,035 were confirmed, representing an area of 411,270 acres 2 roods 16 perches, and 876 disallowed. Of those received between the 1st December, 1889, and the 1st January, 1891, 4,179 were confirmed, comprising an area of 832,142 acres 3 roods 37 perches, and 815 were disallowed, while of those applied for prior to the 1st December, 1889, 231 were confirmed for an area of 36,677 acres 1 rood 19 perches, and 46 disallowed. It will thus be seen that 6,445 applications were confirmed during 1891 for an area of 1,280,900 acres 3 roods 32 perches, and 1,737 disallowed, making a total of 8,182 disposed of. (Schedule VIII.)

The conditional purchases current on the 31st December, 1891, numbered 161,008, representing an area of 21,320,188 acres. These, however, include purchases applied for subsequently to the 1st December, 1889, when the Crown Lands Act of 1889 came into force, inasmuch as under that statute the purchase may be said to commence from the date of application. It should, however, be pointed out that some of these applications will no doubt be refused. (Schedule XXIV.)

Schedule IX shows that during the year 11,794 instructions, relating to the inspection of conditional purchases, were issued by the Chairmen of the Land Boards to Inspectors, who furnished 8,691 reports as to the compliance or otherwise with the conditions attached to the selections concerned.

The cases referred to the Local Land Boards from the Head Office during 1891 numbered 1,036, of which 14 were for inspection and 1,022 for inquiry, and 1,596 certificates of conformity were issued in connection with conditional purchases under the repealed Acts where it was found that the conditions had been carried out as by law required. (Schedules X, XI.)

Four hundred and seventy-one conditional purchases, representing an area of 50,039 acres 1 rood 21 perches, were notified as forfeited during the year consequent on non-compliance with the conditions imposed by law, as against 739 conditional purchases containing an area of 109,472 acres 31 perches, forfeited in 1890. Against these, however, should be set 10 conditional purchases comprising an area of 1,180 acres, the forfeiture of which was reversed, the transactions in this respect during 1890 being 14 conditional purchases, with an area of 979 acres 3 roods. (Schedules XIV, XXIII.)

From Schedule XXI it will be seen that 5 conditional purchases of an aggregate area of 1,055 acres were validated under the provisions of the 138th section of the

the Crown Lands Act of 1884, while from Schedule XXII it will be observed that one mining conditional purchase, representing an area of 40 acres, was similarly dealt with under Act 50 Vic. No. 21.

Particulars as to the number of transfers received during 1891 are set forth in Schedule XII, on reference to which it will be noted that 10,240 were received, while 11,494 (some of which were received previously) were finally dealt with, as against 11,464 transfers received during 1890, action on 9,439 being completed during that period. Those received during 1891 related to 24,536 conditional purchases, and represented revenue to the amount of £6,256 in the shape of stamp duty.

During the year 9 conditional purchases, comprising 1,350 acres 2 roods, were declared void, while voidance was reversed in connection with 2 conditional purchases containing 338 acres. Adjustment in area, consequent on reduction or increase in acreage, was carried out in connection with 333 conditional purchases during the same period. (Schedule XVIII.)

Special Areas.

An area comprising 265,553 acres, contained in 310 special areas, was proclaimed during the year. (Schedule LXI.) An interesting reference was made in the Annual Report of the Department for 1890 to the matter of special areas. The information then supplied was, however, somewhat restricted, but the opportunity has since been afforded of collecting fuller materials in connection with special areas from the passing of the Crown Lands Act of 1884 up to the 31st December, 1891.

On reference to Schedule CXVII it will be seen that an area of 962,288 acres 2 roods 8 perches has been proclaimed under the special area clause from the passing of the Crown Lands Act of 1884 to the 31st December, 1891; but as of this area 149,394 acres 2 roods 20 perches were rendered unavailable for alienation by reason of their inclusion in reserves or from other causes, the land actually available for selection comprised 812,893 acres 3 roods 28 perches. The area conditionally purchased during the period was 488,085 acres 3 roods 33 perches, representing a total price of £993,789 17s. 1d., the amount received as deposits being £98,846 11s. 2d. Of the land available for alienation, therefore, no less than 60 per cent. has been conditionally purchased, at an average price of a little over £2 an acre, leaving an area of 324,807 acres 3 roods 35 perches undisposed of on the 31st December last, some of which is included within Special Areas proclaimed with the maximum area of 160 acres under the Act of 1884, and which are still in course of revision.

An analysis of the Schedules shows that the percentage of area selected was highest in the Forbes Land Board District, where 92 per cent. of that available was taken up, Goulburn being next with 85 per cent. and Orange, 81 per cent.; Cooma, 73 per cent.; Wagga Wagga, 70 per cent.; and Moree, 65 per cent., following. The whole of the land available was selected in 11 Land Districts; 90 to 99 per cent. in 8; 80 to 89 per cent. in 7; 70 to 79 per cent. in 9; 60 to 69 per cent. in 9; 50 to 59 per cent. in 7; 40 to 49 per cent. in 7; 30 to 39 per cent. in 7; and in 18 Land Districts the percentage was under 29.

The largest area available was that within the Wagga Wagga Land Board District, where an area of 280,521 acres 2 roods 14 perches was submitted for selection, out of which 196,932 acres 1 rood 21 perches, or 70 per cent., were conditionally purchased, representing a total price of £410,711 15s. 7d., which may be deemed satisfactory.

Conditional Leases.

The references in the preceding chapter to conditional purchases have also application to conditional leases, as these two tenures are so related to each other that such causes as would stimulate or check the demand for the one necessarily have a corresponding influence upon the other; and it has accordingly happened that the year 1891 has fewer conditional lease applications to show than 1890. In

In the subjoined summary are shown the number of applications made, and the area applied for during each year since 1885, inclusive, from which it will be seen that during 1891, 3,952 applications were received for 2,177,810 acres 15 perches as against 5,466 in 1890 for 3,056,774 acres 2 roods 26 perches. Although the earlier of the two years has the advantage in this comparison, it will be observed that when 1891 is compared with any other year, so far as the number of applications is concerned, it possesses the highest record, and, excepting 1885 and 1890, the highest area.

Year.	Number.	Area.	Deposits.
		a. r. p.	£ s. d.
1885	3,816	2,547,045 0 15*	21,225 7 6
1886	2,500	1,207,953 0 8	10,066 5 6
1887	2,228	1,242,380 0 0	10,353 3 4
1888	2,623	1,424,753 1 25	11,872 18 11
1889	3,470	1,569,949 3 30	13,082 18 4
1890	5,466	3,056,774 2 26	25,489 7 2
1891	3,952	2,177,810 0 15	18,140 17 10

* This includes 1,994 applications; area, 1,198,617 acres 30 perches, made under the 54th clause of the Act of 1884.

During the year, in the aggregate 3,973 applications, representing 2,133,381 acres 5 perches, were confirmed, and 1,233 disallowed, making a total of 5,206 applications disposed of. An analysis of the returns shows that of the applications thus disposed of 1,542 were applied for during the year, 896 of which, representing an area of 485,023 acres 2 roods 20 perches, were confirmed, and 646 disallowed. Of the applications lodged between the 1st December, 1889, the date the Crown Lands Act of 1889 came into force, and the 1st January, 1891, 2,933 for an area of 1,576,429 acres 1 rood 25 perches were confirmed, and 560 disallowed, and of those received prior to the 1st December, 1889, 144, comprising 71,928 acres, were confirmed, and 27 were disallowed. (Schedule XXVI.)

The number of conditional leases gazetted during the year was 2,372. The aggregate number gazetted to the 31st December, 1891, under the 48th, 52nd, and 54th clauses of the Principal Act, and in existence, was 14,623, comprising an area of 9,094,977 acres 17 perches, and producing an annual revenue of £111,559 9s. 8d. (Schedules XXXI and XXXII.) To these may be added leases applied for since the 1st December, 1889, but not gazetted, inasmuch as the Crown Lands Act of 1889 confers the right of occupation from the date of application. Taking these into consideration, the number of leases actually in existence will be brought up to 18,039, and the area to 11,234,131 acres. Some of these applications will, however, in all probability be disallowed.

It has already been pointed out in the report for last year that 927 conditional leases were brought under the provisions of the Crown Lands Act of 1889, and 38 under the Crown Rents' Act—to secure, in the one case, a reappraisement of the future, and in the other a reappraisement of the past rent. The cases under the Crown Rents' Act have been settled by the Land Court, but the accounts have not yet been adjusted. It has been found, however, that in 8 cases the Minister's rate has been upheld by the Court; in 1 case the Minister's rate has been increased; and in 29 cases the Minister's rate has been reduced. Details will be found in Schedule LXXVIId.

With regard to the 927 leases brought under the provisions of the Act of 1889, 488 were reappraised and regazetted during 1891, and these represent 167 cases in which the new rent is below the previous rent, and the lessees have consequently secured an advantage; and 236 cases in which the new rent is above the previous rent, and the advantage therefore lies with the Crown. In the balance of the cases (85) the rent is the same as that previously determined. (Schedule LXXVIIi.)

The forfeiture of 571 conditional leases, containing 213,643 acres, and representing an annual rent of £2,665 14s. 11d., was gazetted during the year, and in the same period 1,666 conditional leases were transferred. (Schedules XXVII and XXVIII.)

The

The appraisements of 3,203 conditional leases were submitted to the Minister for the determination of rent, and were dealt with by him in accordance with the provisions of section 6 of the Crown Lands Act of 1889. (Schedule XXX.)

Improvement Purchases.

One thousand and sixty-two applications to purchase, by virtue of improvements, land occupied under the Mining Act, were received during 1891, representing an area of 653 acres 1 rood 27 perches. This represents a slight decrease since 1890, when 1,220 applications were lodged for 674 acres 2 roods 31 perches.

Of the applications received, 102 were refused and 268 granted, an area of 174 acres 14 perches being thus alienated, at an appraised value of £6,994 12s. The area disposed of in satisfaction of applications made prior to the 1st January, 1891, under the provisions of the 46th clause of the Crown Lands Act of 1884, was 274 acres 3 roods 9¼ perches, represented by 495 applications, and realising the sum of £12,195 9s. 1d. In addition to the foregoing 13 portions, comprising an area of 2,821 acres 1 rood 26½ perches, were alienated under the provisions of the 2nd clause of the Lands Acts Amendment Act of 1875, and purchase moneys to the amount of £4,282 19s. 2d. paid thereon.

The details of the business under this head are set forth in Schedules XL, XLI, and XLII, showing that a total area of 3,270 acres 1 rood 9¾ perches, in 776 portions, was alienated, realizing £23,473 0s. 3d.

Sales under the Newcastle Pasturage Reserve Act.

As mentioned in the Report for last year, 1,169 applications to purchase land on the Newcastle Pasturage Reserve, under the special Act dealing with the Reserve, were received in 1890, of which 1,154 were reported on by the Local Land Board during 1890, leaving 15 over for 1891. In addition to the 869 applications gazetted as approved during 1890, 94, representing an area of 226 acres 21 perches, were gazetted in 1891. In connection with these the purchase money amounted to £61,268 6s., or an average of slightly over £271 per acre, a price similar to that secured in 1890.

Of the claims put forward under the Act only one was outstanding on the 31st December, 1891, the deposit money having been paid in respect of 906 applications, and 213 were disallowed. Forfeiture consequent on non-payment of deposit has not been declared in respect of any of the approved claims gazetted to the 31st December, 1891.

It will be observed that the number of applications approved and disallowed, according to the return, total 1,176, whereas only 1,169 were received. The apparent discrepancy is, however, explained by the fact that one application sometimes represented more than one portion, and the disposal of each portion was accounted for in the *Gazette*. (Schedule XLIX.)

Special Purchases.

During the year 127 applications were received for the purchase of land under the provisions of the 63rd, 64th, 66th, and 67th sections of the Act of 1884, 10 being for the rescission of reservation of water frontage, 22 for permission to reclaim, 22 for the purchase of small areas unavailable for selection, and 73 for the purchase of unnecessary roads.

The aggregate area alienated during the year under the sections mentioned, and the 42nd section of the Crown Lands Act of 1889, was 535 acres and 26 perches, the price realised being £2,720 16s. 10d. An area of 8 perches was also alienated during the same period in satisfaction of applications made under the Repealed Acts. The total amount, inclusive of penalties, secured for these sales, was £2,757 5s. 6d. The sale of 10 acres 1 rood 22¼ perches in the county of Cumberland brought the sum of £1,246 14s. 8d. Particulars in respect to the business transacted under this head are set forth in Schedules XLIII, XLIV, XLV.

Surrenders

Surrenders and Exchanges.

Although applications by lessees under section 46 of the Act of 1889 to exchange land with the Crown have the common feature that the land sought for must be within their leaseholds, it has been thought desirable to divide the cases into three classes according to the situation of the land offered to the Crown, which may be either within the leasehold or the resumed area or partly in one and partly in the other.

Applications to the number of 40 were received during the year to surrender lands situated within resumed areas in exchange for lands within leasehold areas, 2 of which were refused, leaving 38 outstanding at the close of the year. Of the applications lodged during 1890, and remaining undisposed of at the close of that that year, 33 were refused or withdrawn during 1891, leaving 24 on which action is proceeding.

Sixteen applications were lodged to surrender lands within leasehold areas in exchange for other lands within leasehold areas, 2 of which were refused or withdrawn during the year. During the same period 21 applications of a similar character, lodged prior to the 31st December, 1890, but undisposed of on that date, were either refused or withdrawn, leaving 26 still outstanding on the 31st December, 1891.

During the year 20 applications to surrender lands situated within leasehold and resumed areas in exchange for other lands within leasehold areas were received, 1 being refused. Action on similar applications outstanding on the 31st December, 1890, during the year resulted in the refusal or withdrawal of 8, leaving 18 undisposed of at the close of the year. (Schedules LXXXI, LXXXII, LXXXIII, LXXXIV, LXXXV, LXXXVI.)

Volunteer Land Order Applications.

On reference to Schedule XLVI it will be observed that during the year 9 applications for an area of 450 acres were received for grants of land by virtue of Volunteer Certificates. In conjunction with those outstanding on the 31st December, 1890, 21, comprising 1,050 acres, were satisfied, while 11, representing an area of 550 acres, were refused, leaving 11 for 550 acres undisposed of at the close of the year. The reasons for the refusal of the 11 applications are set forth in Schedule XLVIII.

A refund of £22 18s. 9d. was also made in connection with survey and subdivision fees, and for value of improvements in connection with, and amounts paid in excess as stamp duty, on Volunteer land order selections. (Schedule XXXIX.)

Cost of Survey.

A somewhat full reference to this subject was made in the Report for 1890, when it was mentioned that since the 1st December, 1889, applicants for conditional purchases and conditional leases have been required to pay a survey fee computed according to a sliding scale on the area applied for. The fee as pointed out was uniform for all similar areas and represented merely the minimum cost to the Crown, which consequently had to bear all special or extra expenses beyond the amount which the fee happened to cover. It will, therefore be recognised that under this arrangement the Crown did not ask any applicant to defray the actual cost of measurement in his own particular case, but merely asked for a contribution towards the general cost of survey. Even thus far the arrangement rested on a basis more liberal to the applicant than might have been insisted upon in terms of the law; and towards the end of 1891 a further concession was made by the Minister reducing the survey fee for an additional conditional purchase or conditional lease to a rate about 25 per cent. below that charged for an original conditional purchase.

In order to give force to these statements, the subjoined return has been compiled of the areas surveyed, payments made, and expenses incurred during the past year under the three great classes of measurement in the various Land Board Districts of the Colony. This shows that 823,232 acres were measured in satisfaction of applications for conditional purchase at a cost to the Crown of

£37,510 1s. 5d., while the survey fees paid thereon amounted to £26,439 0s. 4d. An area of 1,846,550 acres was surveyed for conditional leases, the actual cost incurred being £41,430 9s. 1d., and the survey fees paid, £29,317 0s. 9d. The area measured in satisfaction of homestead lease applications was 960,033 acres, the survey fees paid being £2,019 8s. 3d., while those paid for the measurements amounted to £3,350 7s. 11d. It will thus be seen that the Crown incurred an expense of £82,290 18s. 5d., of which the share borne by the applicants amounted to only £57,775 9s. 4d.

A comparison of the particulars of the return shows that the average cost of measurement varies in the different Board Districts. This is due to a variety of causes, among which are the following:—Where the country is fairly level, the acreage applied for large, and the measurements principally of a regular form, the cost is much less than where the conditions are different, and such as operate against expeditious survey. In some districts, notably those on the coast, the areas applied for are, as a rule, small, and, to a certain extent, survey is hampered by the fact that in many cases the land sought to be acquired impinges on old measurements, in the determination of which great difficulty is experienced, and the cost of marking enhanced.

A return of measurements, for which accounts were rendered during 1891, will be found in Schedule CXVIII; but it has to be borne in mind that the surveys were not necessarily made during 1891, several having been effected previously.

Annual Leases.

During the year 58 lots, comprising an area of 22,002 acres 3 roods, were submitted to lease by auction, under the provisions of the 85th clause of the Crown Lands Act of 1884, and of these, 34, containing 10,809 acres 2 roods, were disposed of at a rental of £227 12s. 3d. As compared with 1890, this shows a falling off in the number and area of lots submitted, but on the other hand the sales for 1891 show a marked improvement on those of 1890 in respect of the number of sold lots, the area leased, and the results of the sales. The particulars of areas submitted during 1891 are set forth in Schedule LI.

The

The area submitted to tender under the same section was 579,534 acres, comprised in 580 lots. This compares favorably in point of area with the transactions of 1890, when 1,068 lots, containing 591,918 acres, were offered, but the results secured are less favourable for 1891 than for the year preceding, seeing that 95 lots, comprising an area of 83,314 acres, were let at an annual rent of £777 16s. 4d. in 1891, as against 446 lots, of an area of 221,006 acres 2 roods, at a rental of £2,453 11s. 1d. in 1890. (Schedule LII.)

The following schedule exhibits these comparisons clearly :—

Year.	No. of lots offered at auction.	Area.	No. sold.	Area.	Annual Rent.
		a. r. p.		a. r. p.	£ s. d.
1890	65	40,625 2 0	11	4,769 0 0	48 18 9
1891	58	22,002 3 0	34	10,809 2 0	227 12 3
	No. of lots offered to tender.				
1890	1,068	591,918 0 0	446	221,006 2 0	2,453 11 1
1891	580	579,534 0 0	95	83,314 0 0	777 16 4

While the business dealt with under the provisions of the 85th section of the Crown Lands Act of 1884 has shown a decline of late years, it is amply compensated for by transactions under the 33rd clause of the Crown Lands Act of 1889. As stated in an earlier report it is apparent that the method introduced by that clause of acquiring land by application, meets with public favor, by reason of the fact that an opportunity is presented to secure a lease at an appraised rent, without submitting to the risk of public competition or tender. During 1891, applications to the number of 2,083 were made for an area of 1,517,795 acres, as against 1,186 applications for 955,467 acres 3 roods 27 perches in 1890. The number of applications under consideration during 1891 numbered 3,033, referring to 2,264,618 acres 2 roods. Of these, 688 were disallowed or withdrawn, and 1,145, representing an area of 756,640 acres and 28 perches, were approved, at an annual rent of £5,877 4s. 7d., leaving 1,201 applications outstanding at the close of the year. (Schedule LVI.)

The annual leases current on the 31st December, 1891, numbered 6,016, comprising a nominal area of 4,018,745 acres 3 roods, and returning an annual rent of £28,212 19s. 4d. (*Vide* Schedule LIII.)

Sixteen annual leases, containing an area of 9,250 acres, were cancelled during the year, and in the same period 366,453 acres 2 roods, comprised in 580 annual leases, were gazetted as forfeited, resulting in the loss of £2,274 8s. 2d. per annum to the revenue. (Schedule LIV, LV.)

Artesian Wells Leases.

Holders of annual lease or occupation licenses desirous of searching for and conserving water on lands held under lease or license by them in the Western Division, are permitted, under the provisions of the Crown Lands Act of 1889, to make applications for leases of land surrounding the situation of proposed operations. The issue of the lease is, however, dependent on the discovery of water in sufficient quantity, but to ensure to the applicant protection for the interim expenditure the temporary reservation of the land, not exceeding a specified area, is provided for.

Six applications, representing an area of 61,440 acres, were tendered during 1891 for permission to bore and search for water, and in connection therewith 61,440 acres were temporarily exempted from sale and lease. No leases were issued, the applications being undisposed of at the close of the year. (Schedule XCIV.)

Homestead Leases.

On reference to the subjoined table, which affords a comparison between the business transacted under this head since 1885, it will be seen that the transactions of 1891 show a decline since 1890; applications to the number of 191, comprising an

an area of 1,515,629 acres, with deposits aggregating £6,278 2s. 1d., having been lodged, as against 310 for 2,620,959 acres, and deposits to the extent of £10,920 13s. 3d. in 1890.

Year.	No. of Applications.	Area applied for.	Deposits.
		Acres.	£ s. d.
1885	391	3,823,235	15,880 2 11
1886	121	1,141,963	4,758 3 7
1887	128	1,198,286	4,992 17 2
1888	141	1,332,691	5,511 15 7
1889	238	2,187,837	9,113 19 9
1890	310	2,620,959	10,920 13 3
1891	191	1,515,629	6,278 2 1

Taking into account the applications undisposed of on the 31st December, 1890, 176 were finally dealt with, of which 41 were refused or withdrawn, and 127, representing an area of 1,085,213 acres approved at an annual rent of £4,521 8s. 6d. Of those lodged during 1891, 7 were approved and 19 declined, 260 remaining undisposed of on the 31st December, 1891. (Schedules LXXXVII, LXXXVIII, LXXXIX.)

The number of homestead leases current on the 31st December, 1891 was 983, with an area of 8,665,035 acres, producing an annual rent of £54,226 1s. 6d. (Schedule XC.)

The transfer of 119 homestead leases was given effect to, leaving 58 outstanding at the close of the year. Applications to the number of 65 were received for refunds of value of improvements situated within homestead leases, and taking into consideration those outstanding on the 31st December, 1890, 99 were dealt with, leaving 4 undisposed of at the close of 1891. (Schedule XCI and XCII.)

As set forth in the Annual Report 1890 advantage was taken, in the case of 413 homestead leases, of the provisions of the Crown Lands Act of 1889, the lessees thus securing (apart from an extension of term) a reappraisement and a periodical revision of rent. Of these 180 were appraised and the new rental gazetted during 1891. (Schedule LXXVIIh.)

With a view to its being understood how far the new rentals have resulted in favour of or against the lessees, a schedule has been prepared showing the details of each of the 180 cases referred to, from which it may be gathered that 114 in cases the lessees have benefited by a reduction of rent; in 64 cases the benefit has been to the Crown by an increase of rent; and in 2 cases rent remains as if the Act of 1889 had not been passed.

With regard to the Crown Rents Act only 5 applications were made in connection with homestead leases, and of these 4 were informal, so that only 1 lease came under that Act. In that instance, however, the rate of rent as determined by the Land Court was below that previously charged by the Minister.

Inferior Lands Leases.

The character of the lands dealt with under this head is such as to render their profitable occupation under the ordinary tenures and at the minimum rents prescribed for those tenures impracticable.

The desirableness of utilising and rendering such lands rent producing is recognised, and leases of lengthened tenure and liberal conditions are provided for by the Crown Lands Act of 1889.

Fifteen applications for leases of inferior lands were under consideration during the year, of which 7 were refused, and 1 lease comprising an area of 4,000 acres was approved to be offered by tender, leaving 7 undisposed of at the close of the year. (Schedule CVIII.)

Pastoral

Pastoral Leases and Occupation Licenses.

The number of pastoral leases existing on the 31st December, 1891, was 1,049 representing an area of 58,416,794 acres, and an annual revenue of £369,727 1s. 7d. The following schedule, which furnishes a comparison between 1890 and 1891, and exhibits the figures for each of the three Divisions, shows 1891 at a slight disadvantage with regard to the number of leases, and, on the other hand, at a slight advantage so far as regards area and rent. This latter fact is explained for the most part by the circumstance that the areas of leaseholds are constantly fluctuating by the reversion to them of forfeited lands, &c., which, of course, carry their proportion of rent.

1890.				1891.			
Division.	No.	Area.	Rent.	Division.	No.	Area.	Rent.
		Acres.	£ s. d.			Acres.	£ s. d.
Eastern	11	240,187	1,045 16 3	Eastern	12	240,957	1,049 2 11
Central	736	18,854,452	185,288 11 0	Central	721	18,641,876	196,212 12 6
Western	316	38,579,526	168,096 19 0	Western	316	39,533,931	172,465 6 2
Total	1,033	57,674,165	354 431 6 3	Total	1,049	58,416,794	369,727 1 7

The difference between the occupation licenses current on the 31st December, 1890, and 31st December, 1891, respectively, would appear from the following schedule to be somewhat great, but the comparison does not apply strictly as between 1890 and 1891. The explanation of this lies in the fact that, until recently, licenses on which the rent was in arrear were treated as nominally current until forfeiture was notified in the *Gazette*, and during 1891 a large number of licenses were so notified, although they had, as a matter of fact, lapsed for non-payment of rent not only for the year 1890, but for previous years. Strictly speaking, therefore, the licenses gazetted as forfeited in 1891 should, for the purposes of comparison, be distributed among the years for which the rent had not been paid.

It is unnecessary to explain that, apart from this, the area of land under license must be regarded as a constantly decreasing quantity, seeing that it is liable to absorption throughout each year by conditional purchase, conditional and homestead lease, &c.

On 31st December, 1890.				On 31st December, 1891.			
Division.	No.	Area.	Rent.	Division.	No.	Area.	Rent.
		Acres.	£ s. d.			Acres.	£ s. d.
Eastern (preferential licenses).	420	6,791,326	21,222 18 0	Eastern (preferential licenses).	424	6,469,847	43,259 2 0
Eastern (ordinary licenses).	506	6,692,831	32,317 16 5	Eastern (ordinary licenses).	333	4,070,090	16,877 10 0
Central	712	13,907,987	79,834 19 1	Central	627	10,094,174	54,635 13 0
Western	265	32,909,510	83,732 10 2	Western	242	29,004,638	63,675 10 0
Total	1,903	60,301,654	217,608 3 8	Total	1,626	49,638,749	178,447 15 0

During the year refunds to the amount of £32,519 19s. 9d. were made to pastoral lessees and occupation licensees on account of the withdrawal of 4,280,590 acres from their holdings. A reference to Schedule LXIII shows that of this area 189,576 acres were withdrawn from 168 leasehold areas, and 4,091,014 acres from 804 resumed areas, the refunds in connection with the former being £5,108 9s. 4d., and in connection with the latter £27,411 10s. 5d.

Two applications were lodged for the subdivision of leasehold areas, one of which was approved and the other refused. During the year 121 pastoral leases and 187 occupation licenses (of which 48 preferential occupation licenses), were transferred. (Schedules LXIX, LXXII.)

Two applications were tendered under section 33 for the preferential occupation license of expired Eastern Division leaseholds, one of which was granted, representing an area of 5,893 acres, and an estimated rent of £49 2s. 2d., and the other withdrawn. (Schedules LXX, LXXI.)

Reversal

Reversal of forfeiture ensued in respect to 1 pastoral lease and 8 occupation licenses during 1891, and similar action in reference to 1 occupation license was cancelled. Two preferential occupation licenses and 13 occupation licenses were surrendered, and the forfeiture of 14 pastoral leases, 1 preferential occupation license, and 282 occupation licenses was declared during the year. In the same period 6 pastoral leases, 6 preferential occupation licenses, and 29 occupation licenses were sold by auction. (Schedules LXXIII, LXXIV, LXXV, LXXVI, LXXVII.)

During the year 193 preferential occupation licenses in the Eastern Division, containing 1,993,400 acres, were notified in the *Government Gazette*, at an appraised rental of £14,337 0s. 5d. (Schedule LXXIX.)

In the opening chapter of this Report so full a reference has been made to the operation of the Crown Rents Act and the Act of 1889 in connection with the subject of redetermination of rent that little remains to be said here.

With regard to the Crown Rents Act, 388 pastoral leases and 319 occupation licenses were brought under its provisions; and of these all, but 7 leases and 3 licenses, have been dealt with by the Land Court. The 381 leases and 316 licenses, the rents of which have been determined by the Court, are shown in Schedule LXXVII a, from which it will be seen that in 99 lease and 82 license cases the Land Court's rate agrees with that of the Minister; in 57 lease and 47 license cases the Minister's rate has been exceeded, and in 225 lease and 187 license cases the Minister's rate has been reduced.

With regard to the Crown Lands Act of 1889, 1,002 pastoral leases and 487 occupation licenses were brought under its provisions; but of these only such are shown as have been disposed of by the notification in the *Gazette* of the New Rents.

From Schedules LXXVII e, f, and g, it will be seen that of the 841 cases therein enumerated the rents of 361 pastoral leases and 166 licenses have been determined at a lower rate than would have been payable under the Act of 1884; in 162 lease and 69 license cases the reverse is the case; while in 30 lease and 50 license cases neither the parties nor the Crown secured any advantage.

Residential Leases.

The provisions of the Mining Act admit of the occupation of Crown lands within gold-fields by virtue of a miner's right, &c., and under the Crown Lands Act of 1884 the area occupied may be purchased by virtue of improvements. The Crown Lands Act of 1889 has extended further by conceding to the holders of a miner's right or a mineral license, a new form of tenure in the shape of a residential lease, which, subject to the approval of the Governor, and on the recommendation of the warden, may be granted of an area of not exceeding 10 acres, for any period not exceeding fifteen years, for the purpose of bona-fide residence, and upon such conditions as are deemed desirable in the public interest.

The provisions of the 48th clause of the Crown Lands Act of 1889 were taken advantage of during the year, resulting in 93 applications being received for residential leases. Inclusive of 139 outstanding on the 31st December, 1890, there were 232 applications under consideration referring to an area of 2,082 acres and 24 perches, of which 117 were disallowed or withdrawn, and 32, containing 308 acres and 34 perches, and returning an annual revenue of £70 12s., granted, leaving 83 that had not matured at the close of the year. (Schedule CIII.)

On the 31st December, 1891, there were 33 residential leases current, comprising 307 acres 1 rood 4 perches, and an annual rent of £69 7s. 4d. (Schedule CIV.)

During the year 4 residential leases, containing 40 acres, and involving the payment of rent amounting to £10 15s., were declared forfeited. (Schedule CV.)

Scrub Leases.

The occupation of a large area of land in the several divisions of the Colony is hampered by the existence of scrub, and the cost of clearing and eradicating such under a tenure of an ordinary character would not be profitable to the lessee. To secure these lands for settlement, provision has been made for the issue of improving leases for a lengthened period at an appraised rent. An

An area of 60,480 acres, comprised in 10 applications, was applied for during 1891 under the 35th section of the Crown Lands Act of 1889 as scrub leases, added to which there were 47 for an area of 389,941 acres outstanding on the 31st December, 1890, making a total of 57 applications for 450,421 acres for consideration. Of these 39 were disallowed or withdrawn, and 4, containing an area of 14,400 acres at an annual rent of £67 5s., granted, leaving 14 undisposed of at the close of the year. There were 13 scrub leases, comprising an area of 86,397 acres, and returning an annual revenue of £81 16s. 7d., current on the 31st December, 1891. (Schedules XCV, XCVI, XCVII.)

Snow Lands Leases.

The leases under this head are restricted to a small portion of the Cooma and Wagga Wagga Land Board Districts, and comprise lands that can only be utilised during the summer season. Having regard to the climatic conditions their occupation cannot be profitably carried on under any other tenure than that provided under the Crown Lands Act of 1889.

During the year 42 lots, comprising an area of 153,010 acres, were submitted to auction as snow land leases; of these 19, containing 64,550 acres, were sold, producing an annual rent of £893 6s. 4d. Ten applications were received during 1891 for the submission of snow land leases to auction, of which 3 were dealt with, leaving 7 outstanding at the close of the year. (Schedules CVI, CVII.)

Special Leases.

There were 354 applications for special leases under the provisions of the Principal Act received during the year, as against 196 lodged in 1890. The applications under consideration during 1891 numbered 456, of which 102 were outstanding at the beginning of the year. An area of 3,390 acres and 29 perches, represented by 136 applications, and returning an annual revenue of £2,236 13s. 6d., was granted, while 94 applications, referring to an area of 7,509 acres 1 rood 27½ perches, were either refused or permitted to be withdrawn, leaving 226 (comprising 10,379 acres 2 roods and 36¾ perches) outstanding at the close of the year. (Schedule CII.)

The special leases current on the 31st December, 1891, were 516, representing an area of 11,287 acres 1 rood 2 perches, and returning an annual revenue of £10,863 8s. 6d. The purposes for which the leases were granted are set out in Schedule C.

The number of special leases forfeited during the year was 21, comprising 782 acres 2 roods 1¼ perches, at an annual rent of £441 10s.; and 47 representing an annual rent of £975, and containing an area of 141 acres 1 rood 10¼ perches, expired during the same period. (Schedules XCVIII, XCIX.)

Rabbit Branch.

The Rabbit Act of 1890 was assented to on the 20th of December of that year, and the work of administration, so far as was permissible, may be said to have taken effect from the commencement of the year 1891.

The first action necessary was the preparation of the Regulations, and these having been assented to by His Excellency the Governor and the Executive Council were published in the *Government Gazette* of the 10th of February, 1891, and in other ways brought under the notice of persons interested.

The 31st section of the Act makes provision for the protection of what are known to be natural enemies of the rabbit, and the imposition of penalties for killing, &c., any such animals. In view of this provision a proclamation was issued on the 13th of March last, prohibiting the wounding, killing or capturing, selling or disposing of the iguana, the native cat, the tiger cat, the ferret, the mongoose, and the stoat, within certain land districts specified; and although up to the present time little, if anything, has been done towards the introduction of well-known natural enemies, it is thought that the action of the Department has tended to the preservation of the iguana, an animal alleged to be very active in destroying rabbits in the summer months, but the utility of which is limited owing to the fact of its hybernating during at least one-half of the year.

One of the principal objects of the Act is to facilitate and encourage the erection of rabbit-proof fencing, and to impose certain liabilities on the owners of lands in connection with such fences. Steps were taken to obtain from the Chairmen of Land Boards, district surveyors, inspectors of conditional purchases, rabbit inspectors, and others, accurate information regarding the prevalence of the pest in various parts of the colony, with the result that on the 20th of March last that part of the Western and Central Divisions of the colony, including the Land Districts of Balranald, Cobar, Hay North, Hillston North, Wentworth, Wilcannia, Willyama, and portions of the Land Districts of Balranald South, Bourke, Cobar East, Condobolin, Deniliquin, Dubbo, Hay, Hillston, Narrandera, Parkes, Urana, and Wagga Wagga, were declared to be "rabbit-infested," and the fencing provisions of the Act became applicable to these districts; action was also taken with a view to extending the infested area still further to the eastward, and into more lightly infested country. However, the final action in this direction had not been completed when the year 1891 came to a close. From information which has come to hand from the reports of the Rabbit Inspectors, it is known that no less than 6,032½ miles of rabbit-proof fencing have been erected (including 632½ miles erected at the sole expense of the Government), and this total is being added to every day; so that a large number of what may be termed barrier fences traverse the infested districts, which tend to confine or localize the pest in such a manner that the work of destruction should be rendered more easy of accomplishment should the compulsory clauses of the Act be resorted to, and the destruction of rabbits made continuous.

Under subsection 2 of section 20 of the Act the Minister is relieved of the liability to contribute to the cost of erecting a rabbit-proof fence along boundaries which are common to "public" and "private" lands, unless particulars of the proposed fence shall have been given to him, and he shall have approved of the erection of the same. The mode of procedure is prescribed in No. 10 of the regulations, and it may be mentioned that during the year under review the approval of the Minister was sought in 64 cases, while 3 applications were lodged with a view to having public lands included within a group, and surrounded by what is known as a ring fence. In the majority of instances the wire-netting used in the erection of fences has been No. 17 gauge, 1⅝ inch mesh, and 36 inches in width, but examples are not wanting where the mesh adopted has been not only 1½ inch, but as small as 1¼ inch. The use of this superior class of netting (which of course has had the effect of materially increasing the total cost) has probably arisen from the many complaints made that netting with a mesh of 1⅝ inch was ineffectual as a rabbit barrier. On this point the Report of the Royal Commission affords some valuable information, which it may not be out of place to reproduce. In page 32 of the Progress Report the following remarks are made :—"The Commission, realising that the cost of netting fencing was a great difficulty, made careful inquiry concerning the minimum height and the maximum mesh that would prove effective. Abundant evidence will be found in the proceedings in favour of the decision of the Commission that netting fencing 3 feet high, with 1⅝ inch mesh, is for all practical purposes an effective barrier. Such was the almost unvarying testimony of those witnesses who had practical experience with netting of this width and mesh. Rabbits die of starvation when their warrens are encircled with this netting; gardens protected by it are free from invasion, though the infested country around is dry and bare. Little weight can be attached to the opinions of witnesses who never used such netting, and still less to experiments in which rabbits are chased in small enclosures."

From information supplied to the Department from time to time it would appear that the deductions of the Commission are in the main correct, and that the fault found with wire-netting of a maximum mesh of 1⅝ inch is due in a great measure to the fact that purchasers have in some instances been supplied with wire-netting, the mesh of which is in excess of that stipulated. This is to some extent caused by the netting being put through compressors in order to reduce the bulk, and thereby lessen the cost of freight, and perhaps also to the want of care exercised in the manufacture owing to the excessive output that has occurred during the past few years. Not many months since one of the Inspectors while examining a rabbit-proof fence, found that out of 200 test measurements

of

of the mesh, more than one half of them were in excess of the proper dimensions ($1\frac{5}{8}$), and in some places in excess of 2 inches. This is by no means a solitary case, as many instances are known where the same defect exists in other fences, the wire-netting used for which has been that of different manufactories.

However, it appears that all these precautions in the way of rabbit-proof fencing will be of little use unless followed up by the active and continuous destruction of rabbits. Evidence is not wanting of the fact that the good effects brought about by the hard work of some of the Crown tenants has been to a great extent neutralised by the apathy or neglect of others, and this state of affairs will probably continue until the destruction of the pest is made compulsory.

During the past year work in the way of rabbit destruction by those lessees who have resorted to it has been confined principally to the summer months, when feed was dry and water scarce. The methods chiefly relied upon were tank traps, poisoned water, and branches and twigs from indigenous shrubs, which are known to be attractive to rabbits, being dipped in a poisonous preparation and distributed in localities where the pest is abundant. Particular success has, at the proper time of the year, attended the use of the traps surrounding tanks and water-holes, and as this method of destruction is not only cheap, easy of application, and wholesale in its results, it is probable that its more universal use at the proper periods would be attended with beneficial results. However, many other methods have been adopted and with varying success. Among these may be mentioned phosphorised grain, bi-sulphide of carbon, sulphur, drives, &c., but in all cases the work has been of a desultory character, and so far the evil appears to be as rampant in the Colony as ever.

The field officers in the employ of the Department number but four, and these officers have been occupied in travelling over very large areas of country inspecting rabbit-proof fences, reporting on the various methods adopted for the destruction of the pest, and in other ways placing the Department in possession of information that will no doubt be of value in the near future. In addition to the officers just referred to, there are twenty-two other Rabbit Inspectors, but as ten of these are Inspectors of Conditional Purchases, and the balance Stock Inspectors, their services are of little value at present.

During the past year the fences erected along the South Australian boundary, and from Bourke to Barringun, have been the subject of careful examination, and where repairs were found to be necessary the owners of the adjoining lands have been called upon to effect the same. The wire-netting attached to the railway fence, extending from Narromine to Bourke, has also undergone a careful inspection, with the result that certain repairs of a trifling nature were found to be requisite; and particulars thereof having been furnished to the Railway Commissioners, the fettlers have been instructed to make all repairs necessary, and to keep the fence rabbit proof.

The Rabbit Act makes provision for the use of permits to persons to keep live rabbits under certain conditions, and in 1891 four licenses of this description were issued, of which, however, but two are in force at the present time.

It may here be remarked that notwithstanding the withdrawal of the offer of the reward of £25,000 for making known a scheme that would result in the extermination of the rabbit-pest so far back as the 30th of September, 1889, fresh competitors for the reward, or a portion of it, are continually submitting their schemes for consideration, no less than 88 of such proposals having been received and dealt with during the past year, none of which, however, possessed sufficient novelty to warrant the Department in incurring any expense in putting its efficacy to the test.

"*Animals Infectious Diseases Act.*"

Among the numerous Acts administered by this Department is the "Animals Infectious Diseases Act," under which during the year no less than 20 licenses were issued to introduce, receive, and keep certain noxious and infectious microbes or substances impregnated therewith, the nature of which is fully described in such licenses, while seven licenses permitting qualified persons to inoculate certain animals with

with such noxious and infectious microbes were issued in conformity with the 7th section of the Act. Every possible precaution is observed in the issue of licenses, and I take this opportunity of acknowledging the prompt and very valuable assistance afforded this Department by the Board of Health in considering the applications for these licenses.

SCHEDULE of Licenses under the 6th section of the "Animals Infectious Diseases Act" issued during the year 1891.

Name.	Nature of License.	Period.	
		From	To
T. P. Anderson-Stuart ...	To introduce and keep at the Laboratory, Sydney University, the substance known as "Dr. Koch's lymph" or "Tuberculine."	24 April, 1891	24 April, 1892
Dr. F. Norton Manning..	To introduce, receive, and keep at the office of the Board of Health "Dr. Koch's lymph" or "Tuberculine," and to distribute the same.	23 ,, 1891	23 ,, 1892
Dr. D. Collingwood	To introduce, receive, and keep at Airedale, Smith-street, Summer Hill, and distribute, "Dr. Koch's lymph" or "Tuberculine."	23 ,, 1891	23 ,, 1892
A. Loir	To rear, propagate, and keep at Rodd Island, microbes known as "Pasteur's vaccine de Paris."	8 Jan., 1891	8 July, 1891
H. N. MacLaurin	To introduce, receive, and keep at No. 155, Macquarie-street, and to distribute "Dr. Koch's lymph" or "Tuberculine."	7 May, 1891	7 May, 1892
Dr. W. H. Coutie	To introduce, receive, and keep at Warminster, Petersham, "Tuberculine."	23 ,, 1891	23 ,, 1892
L. Bruck	To introduce, receive, and distribute six small phials of "Dr. Koch's lymph."	27 ,, 1891	27 Nov., 1891
A. Loir	To propagate and keep at Rodd Island the virus of tuberculosis and pleuro-pneumonia.	23 Jan., 1891	23 July, 1891
Do	To introduce, receive, and keep at Rodd Island, "Tuberculine."	8 July, 1891	8 ,, 1892
George Charles Elliott ...	To introduce, receive, and keep in O'Conneli-street, Sydney, and distribute, "Tuberculine."	8 ,, 1891	8 ,, 1892
Dr. G. W. Watt.....	To introduce, receive, and keep at Bank-street, Hay, and to distribute, "Tuberculine."	14 Aug., 1891	14 Aug., 1892
A. Loir	To propagate and keep at Rodd Island, the virus of pleuro-pneumonia.	21 ,, 1891	21 Feb., 1892
Dr. Jas. Mitchell.	To introduce, receive, and keep at Narrandera, and to use and distribute, "Tuberculine."	26 ,, 1891	26 Aug., 1892
J. A. Gunn .....a.....	To introduce and keep at Yalgogrin Station, "Pasteur's vaccine de Paris."	27 ,, 1891	27 Feb., 1892
Cecil Purser.....	To introduce, receive, and keep at Prince Alfred Hospital, Sydney, and to use and distribute, "Tuberculine."	29 ,, 1891	29 Aug., 1892
C. B. Clubbe..... ...	To introduce, receive, and keep at Catfoss, Belmore Road, Randwick, and to use and distribute, "Tuberculine."	29 ,, 1891	29 ,, 1892
Dr. Reginald Bowman ...	To introduce, receive, and keep at Parramatta, and to use and distribute, "Tuberculine."	1 Sept., 1891	1 Sept., 1892
Edw. Stanley	To inoculate rabbits at Rodd Island with the noxious microbes obtained from swine.	30 April, 1891	30 April, 1892
Adrien Loir	Do do do ..	30 ,, 1891	30 ,, 1892
J. M'G. Smith.....	To inoculate rabbits with micro-organisms of typhoid fever, anthrax, and tuberculosis at Denison-street, Woollahra.	2 June, 1891	2 June, 1892
A. Loir .....a.....	To inoculate cattle, sheep, guinea-pigs, domestic fowls, pigeons, kangaroos, dogs, pigs, cats, and goats at Rodd Island with the virus of tuberculosis and pleuro-pneumonia.	23 Jan., 1891	23 July, 1891
Do	To inoculate certain animals on Rodd Island with "Tuberculine."	8 July, 1891	8 ,, 1892
Do	To inoculate certain animals on Rodd Island with the virus of pleuro-pneumonia.	21 Aug., 1891	21 Feb., 1892
J. A. Gunn	To inoculate sheep on Yalgogrin Station with "Pasteur's vaccine de Paris."	27 ,, 1891	27 ,, 1892

Schedule of Licenses to keep Rabbits issued during year 1891:—

Name.	Place.	Period.		Particulars of license.
		From	To	
Ed. Stanley	Rodd Island.....	24/3/91	24/9/91	Number of rabbits kept at one time shall not exceed thirty.
A. Loir	Do	30/4/91	30/4/92	Do. do
J. M. Smith	Denison-street, Woollahra	3/6/91	3/6/92	Twenty rabbits.
G. S. Samuelson..	Mitchell-street, Bourke	22/10/91	22/10/92	Thirty rabbits.

Expenditure

Expenditure for the year 1891.

The votes for the expenses of the Department are as follows:—

Head of Service.	Estimates-in-Chief.	Proposed in the Supplementary Estimates.	Total.
Department of Lands.	£ s. d.	£ s. d.	£ s. d.
Department of Lands	70,459 0 0	2,412 16 0	72,871 16 0
Minor Roads	1,400 0 0	.....	1,400 0 0

* Including £18,000 to meet interest on overpaid rents and license fees under Crown Rents Act of 1890.

The expenditure during the year amounts to £435,156 2s. 9d., made up as follows, viz.:—For the services of 1889 and previous years, £630 9s. 11d.; for 1890, £38,396 5s. 3d., and for 1891, £396,129 7s. 7d.

The amount of outstanding claims for the services of 1891 on the 31st December is estimated at £40,000, so that when all expenses have been discharged the expenditure will be approximately £436,129 7s. 7d. Included in these figures is the sum of £12,613 15s. 9d. for postages and stamp duties, as well as £1,133 6s. 7d for advertising accounts met from the votes of the Treasury; also £419 6s. 7d. from Trust Fund under the 143rd clause of the Crown Lands Act of 1884, and from deposits lodged to the credit of Suspense account at the Treasury by various applicants. These items amount to £14,166 8s. 11d., and it will therefore be seen that the expenditure for the services of 1891 payable from the Department appropriations will be about £421,962 18s. 8d.

As before shown the votes passed and proposed for the year amount to £446,856 19s. 10d. This, however, includes a sum of £18,000 for interest on overpaid rents and license fees under the Crown Rents Act of 1890, which is not properly chargeable against the administration of the Department, and being deducted from the total of £446,856 19s. 10d., leaves the Departmental appropriations at £428,856 19s. 10d. The difference between this and the estimated expenditure from the votes of the Department, viz., £421,962 18s. 8d., is £6,894 1s. 2d., representing various balances of votes for salaries, &c., which will not be required.

Compared with the actual total expenditure for 1890, which amounts to £421,242 14s. 9d., the estimated total expenditure for 1891 of £436,129 7s. 7d. shows an increase amounting to £14,886 12s. 10d. This is accounted for by the fact that the cost of surveys paid for by fees in 1891 exceeded that in 1890 by £18,091 16s. 11d., the difference being a decrease under all other heads of expenditure.

The

The following table shows the strength of the staff, and the annual salaries paid on the 31st December, 1890 and 1891, respectively. The table includes all those temporarily employed, as well as salaried messengers and office cleaners.

	Numbers.		Salaries.	
	31 Dec., 1890.	31 Dec., 1891.	31 Dec., 1890.	31 Dec., 1891.
			£	£
Administrative Branch (Head Office)	161	165	34,680	36,704
Survey Branch (Head Office)	155	160	33,649	34,118
Triangulation Branch	9	10	2,655	2,791
Detail Survey Branch	25	27	7,019	7,371

Land Agents, Appraisers, and Assistants	66	70	11,846	12,023
*District Survey Offices	208	213	57,129	57,612
Rabbit Branch	3	6	880	1,480
Land Appeal Court	7	7	5,030	5,030
	745	779	185,009	191,626

* Excluding messengers who render vouchers for their wages which are charged to the general expenses of the various offices.

The number of vouchers passed through the Account Branch during the year is 19,268, representing payments to the number of 28,500.

With regard to the salaries of Crown Land Agents and Assistant Land Agents it will be seen by the foregoing table that those paid wholly or in part from the funds of this Department numbered 70 on the 31st December. The total number of persons acting as Crown Land Agents, &c., on that date was 91, of which 21 were paid by the Department of Justice.

Reserves and Dedications.

Reserves from sale to the number of 1,188, and representing an area of 1,245,240 acres, were notified during the year, while 757 reserves from sale, comprising 1,026,006 acres, were revoked.

A total area of 161,707 acres, comprised in 207 reserves, was excluded from lease and license, and 148 reserves from lease and license, containing 146,546 acres, were cancelled during 1891. (Schedules LVII, LVIII, LIX, LX.)

Schedule LXII shows that during the year an area of 916 acres $29\frac{1}{20}$ perches was dedicated for the purposes enumerated, and that 111 grants were issued.

Deeds of Grant.

An explanation of the number, area, and purpose for which deeds of grant were prepared during the year is set out in Schedule CIX. On reference thereto it will be observed that the area thus dealt with was 223,532 acres $15\frac{1}{2}$ perches relating to 3,967 deeds.

Applications for permission to Ringbark.

Applications to the number of 119 were made for permission to ringbark over 601,076 acres held under lease, the fees paid thereon amounting to £809. Of the applications thus put forward, 49 were granted for an area of $242,158\frac{1}{2}$ acres, and 11 were disallowed. Taking into account applications made during previous years, the total number disposed of during 1891 was 107, of which 16 were refused and 91 granted, in connection with an area of $400,889\frac{1}{2}$ acres. (Schedule CXI.)

Cases of Trespass on Crown Lands.

The number of trespasses on Crown lands and the particulars relating thereto are set out in Schedule CXII, and inclusive of 146 outstanding on the 31st December, 1890, numbered 320. During the year 200 were dealt with, leaving 120 undisposed of on the 31st December, 1891.

Cases

Cases dealt with by Land Boards.

The Local Land Boards had under consideration 41,778 cases, of which 3,020 were adjourned, the days occupied in the determination of the business aggregating 1,935, as against 26,156 cases disposed of during 1890, the inquiry in respect of 1,757 having been adjourned, the several Local Land Boards having sat for periods totalling 1,323 days. (Schedule V.)

Correspondence.

During the year 109,705 letters were received at the Head Office, and 22,791 manuscript letters, 1,866 telegrams, 225 circulars, 102,397 printed letters, 1,235 schedules, and 13,223 parcels were despatched, the particulars in respect thereto being set forth in Schedules CXIII, CXIV.

On reference to Schedule CXV it will be observed that 148,645 letters were received, and 130,270 letters, parcels, &c., despatched from the several Local Land Board Offices during 1891.

Appended hereto is the report of the Chief Surveyor and Director of Trigonometrical Survey.

W. HOUSTON,
Under Secretary for Lands.

Schedule XLV.

Return of Lands alienated during the year 1891 in satisfaction of Special Purchase Applications made under the Crown Lands Alienation Act of 1861.

County.	Area alienated.				Purchase money paid.	Penalties.	Land Board District.
	Clause 9.	Clause 10.	Clause 11.	Clause 12.			
	a. r. p.	a. r. p.	a. r. p.	a. r. p.	£ s. d.	£ s. d.	
Cumberland	0 0 8	.....	.....	.....	18 8 0	.....	Sydney.

Schedule XLVI.

Return showing the number of Volunteer Land Order Applications received, and the number refused, during 1891.

Land District.	County.	Number of applications received.	Area applied for.	Number of applications refused.	Area refused.
			a. r. p.		a. r. p.
Corowa	Denison	.....	.....	2	100 0 0
Coonamble	Leichhardt	1	50 0 0	.....	.....
Deniliquin	Townsend	1	50 0 0	1	50 0 0
Gundagai	Wynyard	.....	.....	2	100 0 0
Inverell	Murchison	1	50 0 0	.....	.....
Kempsey	Dudley	2	100 0 0	2	100 0 0
Scone	Brisbane	2	100 0 0	1	50 0 0
Tamworth	Buckland	1	50 0 0	1	50 0 0
Wagga Wagga	Wynyard	1	50 0 0	2	100 0 0
	Total	9	450 0 0	11	550 0 0

Schedule XLVII.

Return showing the number of applications in virtue of Volunteer Land Orders refused in 1891, the number satisfied in 1891, and the number remaining undisposed of or unsatisfied on 31st December, 1891.

Refused		Satisfied.		Unsatisfied or undisposed of.		Remarks.
Number	Area	Number.	Area.	Number.	Area	
11	550 acres	21	1,050 acres	11	550 acres	One application made during 1891 and satisfied during 1891.

Schedule XLVIII.

Return showing reason of refusal of Volunteer Land Order Applications during the year 1891.

No of Applications refused	Reason of refusal
2	Application allowed to be withdrawn.
4	The land not being available at the date of application.
1	The applicant according to the transfer recorded on the back of the certificate not being entitled to same.
2	For vagueness of description.
1	Application lodged prior to the disposal of a former application made in virtue of same certificate.
1	The land being applied for in an illegal form.
11	Total refused.

Schedule XLIX.

Newcastle Pasturage Reserve Act, 53 Vic. No. 1.

Return up to 31st December, 1891, showing state of applications to purchase by pre-emption.

Total number of applications received.	Number of applications reported on by the Board.		Number of applications in which sale has been gazetted.		Area.	Amount of purchase money	Number of applications upon which deposit money has been paid.	Number of applications disallowed.	Number of cases undisposed of
	1890	1891.	1890.	1891.					
1,169	1,154	15	869	94	a. r. p. 226 0 21	£ s. d. 61,268 6 0	906	213	1

Note—As several applications for more than one portion were gazetted "approved" for one portion, and again gazetted "disallowed" for the other portions those applications appear in both columns three and seven and thus apparently show a larger number of applications dealt with than were actually received

Schedule L.

Return of Lands resumed under the 105th section of the Crown Lands Act of 1884, and the 41st section of the Crown Lands Act of 1889, during 1891.

Originally reserved or dedicated for	Place.	County	Parish.	Area	Portion	Allotment	Section	Why resumed.

Cases	972
Area withdrawn	4,280,590 acres.
Amount refunded	£32.519 19s. 9d.

Schedule

SCHEDULE LXIV.

SHOWING Pastoral Leases current during 1891:—

No. of Leases.	Division of Colony.	Area.	Annual Rent.
		Acres.	£ s. d.
12	Eastern	240,987	1,049 2 11
721	Central	18,641,876	196,212 12 6
316	Western	39,533,931	172,465 6 2
		58,416,794	369,727 1 7

SCHEDULE LXV.

RETURN showing the number of Pastoral Leases in Eastern Division existing on 1st January, 1892; area and rent represented.

Leases.	Area.	Rent.
5	99,737	£382 17s. 8d.

SCHEDULE LXVI.

NUMBER of Pastoral Leases in Eastern Division which expired during 1891, and area and rent represented by them.

No. of Leases.	Area.	Rent.
7	141,250 acres	£666 5s. 3d.

SCHEDULE LXVII.

RETURN showing Occupation Licenses current during 1891.

No. of Licenses.	Division of Colony.	Area.	Annual License Fee.
		Acres.	£ s. d.
333	Eastern	4,070,090	16,877 10 0
627	Central	10,094,174	54,635 13 0
242	Western	29,004,638	63,675 10 0
	Total	43,168,902	135,188 13 0

SCHEDULE LXVIII.

RETURN showing Preferential Occupation Licenses current during 1891.

Eastern Division.

Number.	Area.	Annual License Fee.
424	6,469,847 acres	£13,259 2s. 0d.

SCHEDULE LXIX.

RETURN showing the number of transfers of Pastoral Leases, Preferential Occupation Licenses, Occupation Licenses, completed from the 1st January, 1891, to the 31st December, 1891, under the Crown Lands Acts of 1884 and 1889.

Division.	Pastoral Leases.	Preferential Occupation Licenses.	Occupation Licenses.
Eastern	3	48	36
Central	94	.....	84
Western	24	.....	19

SCHEDULE LXX.

RETURN showing the number of applications tendered (during the year 1891), under section 33, and refused and withdrawn, for Preferential Occupation Licenses of the Eastern Division, the area and amount represented.

REFUSED.			WITHDRAWN.		
No. of Applications.	Area.	Estimated Annual Rent.	No. of Applications.	Area.	Estimated Annual Rent.
	Acres.	£ s. d.		Acres.	£ s. d.
Nil.	Nil.	Nil.	1	7,260	22 13 9

	No.	Area.	Rent.
Refused	Nil.	Nil.	Nil.
Withdrawn	1	7,260	£22 13s. 9d.

SCHEDULE

Schedule LXXI.

Return showing the number of applications tendered (during the year 1891), under section 33, and accepted, for Preferential Occupation License of the former Leasehold Areas in the Eastern Division, the area and amount represented.

No of Applications	Area	Estimated amount of Annual Rental
1	5,893 acres.	£49 2s. 2d.

Schedule LXXII.

Return showing the number of applications for the subdivisions of Pastoral Leases received during the year ending December, 1891.

Number received	Number and Name of Holding	Division.	Action taken
1	564, Cunderang	Eastern	Completed.
1	465, Demiliquin	Central	Refused.

Schedule LXXIII.

Return showing the number of Pastoral Leases, Preferential Occupation Licenses and Occupation Licenses declared forfeited during the year 1891.

Pastoral Leases		Preferential Occupation Licenses		Occupation Licenses	
Central	11	Eastern	1	Eastern	183
Western	3			Central	79
				Western	20

Schedule LXXIV.

Return showing the number of Pastoral Leases and Occupation Licenses, the forfeitures of which were reversed during the year 1891.

Pastoral Leases		Occupation Licenses.	
Central Division	1	Eastern Division	7
		Western Division	1

Schedule LXXV.

Return showing the number of Preferential Occupation Licenses and Occupation Licenses surrendered during the year 1891.

Preferential Occupation Licenses		Occupation Licenses	
Eastern Division	2	Eastern Division	3
		Central Division	8
		Western Division	2

Schedule LXXVI

Number of Pastoral Leases and Occupation Licenses sold by Auction during the year ending 31 December, 1891.

Pastoral Leases		Occupation Licenses	
Western Division	6	Eastern Division	16
		Western Division	6
		New Occupation Licenses sold	7
		Preferential Occupation Licenses sold	6

Schedule LXXVII.

Return showing the number of Occupation Licenses, the reversal of forfeitures of which was cancelled.

106, Tapalin, Western Division.

Schedule LXXVIIa.

	£7,016 19 7

Report of The Chief Surveyor to The Under Secretary for Lands.

Sir, Department of Lands, Survey Office, Sydney, 19 February, 1892.

I do myself the honor to submit the Annual Report for this office for the year 1891.

Staff. The permanent field staff consisted of fifty-two officers, who were classified as follows, viz., fourteen district surveyors, and thirty-one other salaried surveyors.

Promotions. Mr. A. Sharp, of the first class, was promoted to the position of District Surveyor at Forbes, which became vacant through the removal of Mr. G. H. Sheaffe to be District Surveyor at Cooma, *vice* Mr. A. C. Betts, who was appointed Chairman of the Local Land Board at Cooma.

Mr. A. W. Chapman, of the second class, was promoted to the position of first-class surveyor; Mr. C. R. Scrivener, of the third class, was promoted to the second class; and Mr. W. H. Foster, of the fourth class, was promoted to the third class.

Resignation of office. Mr. W. M. Gordon resigned his appointment as a staff surveyor, and Mr. R N. Somerville, who was employed temporarily on salary, was promoted to the position thus vacant on the permanent staff.

Surveyors temporarily on salary. Thirteen licensed surveyors were employed temporarily on salary, four of whom were engaged on the detail survey of Sydney environs for sewerage purposes.

Assistant surveyors. On the recommendation of the late Board of Inquiry a new grade in temporary salaried service was created, viz., that of assistant surveyors, to which junior licensed surveyors should be eligible, who would acquire further experience under direction of salaried surveyors; and thus the grade would constitute a trained reserve, from which surveyors might be selected for salaried employment. During the year ten junior licensed surveyors were appointed to this grade, and there were six resignations.

License to survey under the Real Property Act. Licenses under the Real Property Act were issued to 228 surveyors during the year.

Acting on a suggestion of the Board of Inquiry a fee was recommended to be charged for future issue of this license; this course was authorised by the Minister, and during the last month of the year sixty-seven licenses were granted for 1892, in respect of which a fee of 21s. was paid. Many surveyors who had held this license objected to renewal under this condition, and obtained permission to represent their objections at an interview, and a deputation was received by the Minister, who, however, declined to alter his decision in the matter.

Investigation of survey. On application of the Registrar-General there have been three investigations of subdivisions of grants which had been brought under operation of the Real Property Act.

There have been three inspections and reports upon surveys effected by applicants desiring to obtain license to survey under the Real Property Act.

Proceedings of the Board of Examiners for license to survey Crown lands There were two examinations held by the Board during the year. At the first examination, which took place in January, twelve candidates presented themselves, of whom four were found to be qualified, and were recommended to be licensed as surveyors, namely:—

J. M. Conroy,	A. J. Peisley,
A. E. Crossman,	N. Ford.

At this meeting of the Board, the regulations under which the examinations are conducted were considered, and desirable amendments were submitted for the approval of the Honorable the Secretary for Lands. The approval sought has not, however, yet been given.

At the meeting held in July, fifteen candidates were examined, of whom five were found to be qualified, and were recommended to be licensed as surveyors, namely:—

S. Archer,	H. Roche,
H. P. Hannify,	A. E. Roberts,
A. J. Ryan.	

The Surveyor-General of Queensland being about to hold a similar examination at the same time in Brisbane, copies of the examination papers were at his request supplied to him, in order that the examinations in the two places with the same papers might be held simultaneously.

The question of reciprocal recognition by the several Australian Colonies of certificates of qualification issued under authority in any Colony of the group, which had been before considered by the Board, was further discussed, and it was recommended to the Honorable the Secretary for Lands that a conference of representatives of the various Survey Departments of these Colonies be held to consider the following subjects:—

1. The best means of establishing a uniform system of examination—this being thought to form the only basis for reciprocity.
2. The constitution of Boards of Examiners.
3. The practice to be followed in respect of certificates of competency already issued.
4. The best means of dealing with surveyors who are shown in their professional practice to be unworthy of confidence.
5. The best means of securing the efficiency as surveyors of those engaged on mining, railway, road, municipal, and other surveys.
6. The qualifications requisite for license to practice under the Real Property, Land Transfer, or other similar Acts.
7. And any other matters relating to surveying which, in the opinion of the Conference, should be discussed.

TRIGONOMETRICAL SURVEY OF THE COLONY.

In furtherance of the recommendation of the late Board of Inquiry, which was approved by Mr. Secretary Brunker, the trigonometrical survey was again taken in hand, and early in the month of January of this year field operations were commenced; Mr. J. Brooks, F.R.A.S., F.R.G.S., lately acting in the position of Field Astronomer, having been appointed Surveyor-in-charge of field operations, with Mr. J. Richmond and Mr. R. C. Gordon as Observing Surveyors. Field Staff.

Mr. Brooks, using the 18-inch Alt-azimuth, proceeded with measurement of the main series of triangles southerly from Lake George, beginning at Purrorumba, and thence successively observing from Ainslie, Yarrow Pic, Tennent, Tinderry, and Townsend. The total number of horizontal angles at first-class stations being 2,782, and of vertical angles 301; in addition to which, using the 8-inch Bamberg theodolite, he observed from second-class stations Rob Roy and Campbell; and besides, he carried out several connection surveys.

Mr. J. Richmond, using a 10-inch theodolite, entered on the work at Heaton, thence proceeding northerly and westerly through the counties Northumberland, Durham, and Gloucester; and he completed the requisite observations at five stations, viz.: Eaton, Tomalpur, Red Hill, Wareng, and Wambo West, measuring 2,034 horizontal and 1,044 vertical angles. In connection with this work there was about 11¼ miles of traverse.

Mr. R. C. Gordon was directed to continue the minor triangulation trough the counties Bathurst, Georgiana, and King, and, using a 10-inch theodolite, measured angles from twenty-two stations, viz.: Stromlo, Bathurst, Rockley, Lawson, Cullen, Dogrocks, Fulton, Clyde, Sulphur, Ryan, Copperhannia, Bell, Howard, Rothery, Trap, Wells, Wattman, Narrawa, Hume, Midgee, Buffalo, and Canemumbola, comprising 3,581 horizontal angles and 1,654 vertical angles; in addition to which there was about 35 miles of traverse for connections.

The two piling overseers, viz., E. H. Taylor and J. Healy, have been employed in clearing and forming new stations in the counties Beresford, Wallace, Wellesley, Camden, and St. Vincent; and during the year sixty-one stations have been completed ready for observing. The aggregate area cleared of timber for this purpose amounts to about 300 acres. It is fitting for me here to direct attention to the need for a third piling party, in order to utilise the services of the surveyors to the best advantage. This has been the subject of a separate recommendation.

I may also point out that the observing surveyors are instructed to make the requisite connection to a trigonometrical station before removal, instead of leaving the connections between the trigonometrical survey and the alienation surveys to be effected after triangulation by other surveyors. This alteration of the former practice will be economical.

Attention is invited to the quarterly reports from the Surveyor-in-charge, which contain further detail particulars.

COMPUTING BRANCH.

The field-books of angle observations at the following stations have been received during the year, viz.:—Purrorumba, Ainslie, Yarrow, Tennent, Rob Roy, Campbell, Tindery, and Townsend on the south meridian series; Heaton, Tomalpin, Red Hill, Wareng, and Wambo West in the Hunter River District; and stations Stromlo, Bathurst, Rockley, Lawson, Ryan, Copperhannia, Bells, Howard, Rothery, Trap, Wells, Wattman, Narrawa, Hume, Midgee, Buffalo, and Canemumbola, which are situated in the Western District. The observations have been examined and the results entered in the record books. The final positions of many of the stations observed to and from have not yet been reduced, as they depend upon observations yet to be made at other stations of the same series—as for example, at stations Sugarloaf and Brokenback. With regard to observations from other stations, final reduction is delayed pending explanation by the observer. Provisional computations, however, have been made of the positions of a number of the stations in anticipation of demand for them for the purposes of map-compiling. Provisional co-ordinates have also been computed of a number of stations, data for reduction of which were obtained, partly from the trigonometrical survey, and partly from observations made by the surveyor who connected the stations in question with the alienation or other surveys in the locality.

The co-ordinates of twenty-five stations which had been computed from stations E and Towrang as points of origin were reduced to the station Jellore as origin, the values so reduced being utilised in the compilation of a map of the County of Camden. The co-ordinates of stations in that county and in the County of Cumberland were supplied to the Compiling Branch, general information as to the co-ordinates and bearings of the survey being also supplied for information of surveyors and others.

The register of co-ordinates of stations, Sydney and environs, which at the end of 1889 was forwarded to be printed and revised and published during this year, and the information is now available for the use of surveyors and others.

The register of descriptions of stations, Sydney and environs, which was published in 1884, was revised, as far as could be done, without an inspection of the stations, and a new edition of this work is now being printed. A new edition of the reference map showing the stations has also been prepared.

Information as to stations in the northern part of the Colony, fixed by astronomical observations, was supplied to the Surveyor-General of Queensland.

The particulars of astronomical stations determined during previous years, have been collected and revised, and published with an index map in the form of a pamphlet, which will be found very useful for general geographical information.

The general map, in six sheets, of trigonometrical stations, which had been plotted by the assistant computer under direction of Mr. Brooks, prior to the report of the Board of Inquiry in 1890, was in accordance with the recommendation of that Board, completed by a draftsman under contract, and reproduced to half-scale by photo-lithography, and is now available for use.

Tables

Tables for conical projection of county maps have been prepared for printing, the elements being computed for five cones tangent at latitudes 29°, 31°, 33°, 35°, and 37°.

Among the miscellaneous duties of the year may be mentioned registration of descriptions of stations, reports of the formation of which have been received from the piling overseers and observing surveyors, registration of reserves for trigonometrical purposes, examination of reference bearings given in the general register of stations, and partial preparation, just at end of the year, of a programme of stars for observation to determine latitude of and azimuth at station Rhinefalls.

Of the instruments in stock, sales of some of those not required for departmental use have been effected. General repairs have been made to all except the surplus stock, which it has been proposed shall be sold as opportunity offers, and all instruments likely to be required may be reported as now in good working order.

Correspondence and Record Branch.

The duties performed in this branch during the year are shown hereunder :—

Papers received from other branches	15,338
Papers, plans, tracings, &c., received by post	8,022
Instructions issued to Surveyors	1,473
Memoranda sent to Surveyors	10,300
Letters written and despatched	690
Lithos., tracings, and Plans sent to Surveyors	3,053
Minutes written to the Under Secretary	940
Decisions by the Minister noted	640
Telegrams despatched...	64

A general record of all leaves granted during the year to the Survey Staff (field and office) has been kept.

Detail Survey Branch.

Throughout the year 1891, the detail survey of the city and suburbs has been carried out by Mr. D. M. Maitland, under the altered arrangements entered upon in accordance with the recommendations of the late Board of Inquiry, and consequently comprises surveys required in connection with the extension of the Sewerage and Water Supply Schemes, together with such other work as could be carried out more economically in conjunction therewith. In the beginning of the year, twelve surveyors were engaged, but four of these have been, at different times, temporarily transferred to other duties, so that, since the 17th March, eight only have been engaged on the work.

2. The only alignment survey completed in connection with this branch was that of fifteen streets in the town of Parramatta, carried out under authority simultaneously with the standard or skeleton survey of that town, prior to the detail survey being commenced. This method of performing the required service proved economical; as, although there were several practical difficulties in carrying out the alignment itself, the average cost of the whole 13 miles and 60 chains of building lines was only a little over 3s. per chain, the cost of the part actually required for the detail survey being only 2s. 7d. per chain, inclusive of the cost of supervising the erection of the 284 alignment posts which permanently mark the survey. The field work of an alignment survey of several streets in Redfern, carried out in connection with a revisional detail survey of the locality was also completed. Although the report, &c., has not yet been received, and consequently the work cannot be recorded for the year 1891, it has been ascertained that the combination of the two classes of survey is an extremely economical arrangement.

3. As the detail survey becomes more advanced from year to year, and its operations are consequently carried out at ever increasing distances from the centre of population, the labour necessary for determining the position of each separate tenement is also increased with a corresponding rise in the expense of survey when estimated on the basis of so much per tenement. Calculated on an area basis the cost, of course, steadily decreases. During 1891 the plans have been plotted and prepared in the office, so that the cost of survey has been reduced to a minimum, the rate for new surveys for 1891 having been 15s. 6½d. per tenement, as compared with 15s. 11d. for 1890, 15s. 8d. for 1889, 11s. 6d. in 1888, 17s. in 1887, and £1 3s. 8d. in 1886. The detail survey has cost 14s. 3d. per acre in 1891, £1 4s. 1d. in 1890, £1 13s. 11d. in 1889, £3 1s. 6d. in 1888, £6 4s. 7d. in 1887, and £8 12s. 8d. in 1886.

In consequence of the reduced staff the actual area covered by new surveys has been somewhat less than in the two preceding years, being 3,772 acres, as against 6,574 acres in 1891, and 3,904 in 1890; but in localities where the original surveys had become out of date, consequent upon alterations in old and erection of new buildings, the area resurveyed for second editions has been 777 acres in 1891, while in 1890 it was but 39 acres, and in 1889, 256 acres. 172 sheets of new work, showing the full details of 3,454 tenements, have been received during the year, in addition to which resurveys for second editions of 48 sheets, showing 1,930 tenements, erected since the date of original survey, have been completed. In order that the first editions of the lithographs may contain the latest information, revisions are made of each sheet immediately before publication; 87 of these sheets were so revised during the year, with the result that 810 fresh tenements were added. The total number of tenements surveyed through the year have therefore been—New work, 3,454; in surveys for second edition, 1,930; and in revision prior to publication, 810; making a total of 6,194. The enumeration of the new tenements fixed in the course of the second edition and revision surveys does not, however, fairly indicate the amount of work necessary for carrying out those surveys, as in addition to the new tenements fixed, the alterations and additions effected to old buildings since the date of the original survey amount to 3,294.

Incidental to the survey of new work has been the fixation of about 77½ miles of streets, 7½ miles of shore line, 7¼ miles of water-courses, and 5 miles of tram-lines.

The

The distribution of the detail survey is shown in the following tabular statement:—

New Surveys.			Surveys for 2nd Edition.		
Municipalities.	No. of Sheets.	Area—Acres.	Municipalities.	No. of Sheets.	Area—Acres.
Alexandria	10	205	Alexandria	2	36
Ashfield	16	298	Paddington	3	45
Burwood	9	264	Redfern and Darlington	15	219
Canterbury	18	355	Sydney	13	191
Enfield	30	633	Waterloo	1	25
Manly	16	360	Waverley	11	218
Marrickville	10	258	Woollahra	3	43
North Sydney	16	291			
Parramatta	7	124			
Randwick	11	364			
St. Peters	3	67			
Strathfield	6	126			
Waterloo	11	199			
Woollahra	9	228			
	172	3,772		48	777

4. The standard, or skeleton survey, of Parramatta, preparatory to the detail, with a traversed length of 12 miles 24 chains, was carried out during the year at an extremely low cost; and in order that a map of that town on a scale of 2 chains to the inch might be prepared, a subsidiary survey was made in connection therewith.

5. Several minor surveys, together with inspections and reports on matters within the area of which the detail surveys are being made, were also carried out; amongst them were the following:—Inspection of and report on proposed road through Parramatta Park; connection of old grant corners with the trigonometrical survey; survey of Police-station site; proposed site for Friendly Societies' Hall; proposed extension of Post and Telegraph Office; report on boundaries of Industrial School ground, Parramatta, &c.

6. One examination survey for the Real Property Act has been made.

7. Since the 19th November the branch has been deprived of the services of one draftsman, who was granted extended leave on account of ill-health, but on the other hand the office staff has been augmented by the temporary employment of two additional draftsmen.

8. The office work, consequent upon the detail survey field work has been proceeding at a satisfactory rate, 76 plans or sheets having been plotted and drawn during the year, in addition to which, the extra details have been placed on 20 sheets for 2nd editions, 11 sheets of recent detail surveys have been plotted on general survey plans, and 77 sheets have been revised and brought up to date prior to publication.

9. Sixty-four sheets of detail were completely traced, and 126 more, of which the bare outlines had been drawn by contract, were completed; 97 tracings were also altered and added to in consequence of 2nd edition and revision surveys; 26 detail tracings have been forwarded to the Lithographic Branch for zincography, and 44 sheets were published, making a total of 439 now published.

10. Maps on a scale of 2 chains to an inch of the Municipalities of North Sydney and Parramatta, the former in 5 sheets and the latter in 4 sheets, which were required by the Sewerage Construction Branch of the Public Works Department, were commenced and completed during the year, and the tracings forwarded to the Lithographic Branch.

11. As an indication of the increasing use made of the information in the Detail Survey Branch, it should be mentioned that during the last five months of the year, surveyors under the Real Property Act and others outside this department have made reference to 473 plans and 155 field-books.

12. Herewith, in Appendix A, is a tabular statement showing the comparative amount and cost of detail surveys from 1886 to 1891, inclusive, and in Appendix B a list of surveyors employed in 1891, giving also their respective salaries, and a statement of the duties performed by them during the year. Two maps are also annexed, showing in blue tint the area surveyed for sewerage and water supply purposes during 1891, and in red the area surveyed up to the end of 1890.

Drafting Branches.

During the year 1891, the drafting staff was gradually restored to its normal strength by the return of officers from country branches to which they had been lent, the transfer of several members of country staffs to head-quarters, and the appointment of juniors to fill vacancies caused by promotion of members of the staff.

The pamphlet showing measured lands open to selection was completed and published early in the year and its existence made known as widely as possible; but although it has proved of some service in the direction anticipated, it is doubtful whether the demand has been sufficient to justify the publication of a further edition.

The large printing machine contracted for was duly received and erected, and lithographs of the largest size can now be printed in an expeditious and economical manner.

Although the number of parish maps completed and published is in excess of last year's return, the total is not nearly so large as should be reached when standard maps are all prepared.

A less number of town maps have been published, as anticipated, but a considerable number yet remain drawn upon stone in course of revision and alteration of design, &c.

About the same number of county maps was completed as during the previous year; and it has at last been found practicable to commence the much needed compilation of the metropolitan county of Cumberland.

The

The progress made on the new Colony map is exhibited on the annexed sketch-map, and during the coming year it is intended to institute inquiries among the leading map publishers of Great Britain and the United States, as to the best methods of reproducing this map.

The lithography of the city and environs map is proceeding satisfactorily. Two sheets have been completed, two others drawn and now in course of revision to date, and the remaining two are in the contractor's hands in a forward condition.

Arrangements are being made for bringing this map under the notice of the public, and it is hoped that by the time it is completed and printed, a fair number of orders for its purchase will have been received.

Late in the year a special branch was organised, consisting of six officers borrowed from Drafting Branches, two from Clerical Branch, and two temporary assistants recommended by the Treasury, for the purpose of computing the refunds due to Crown lessees under the provisions of the Crown Rents Act; and it is expected that this important work will be completed in the first quarter of 1892, when the branch will be disbanded and the departmental officers returned to their proper duties.

Eight candidates were examined with a view to qualification as temporary draftsmen. All these satisfied the examiners except in one instance, in which a better plan will require to be drawn before the candidate can be regarded as having passed satisfactorily.

Detail statements of the work performed in the different branches follow.

Miscellaneous Charting Branch.

The staff of this branch was not restored to its usual strength until October.

During the year one officer was transferred to Compiling Branch, another was promoted to a position in the Department of Agriculture, and another was appointed to a Crown Lands Agency.

Three draftsmen were transferred to the Charting Branch from country offices, and two juniors were appointed, thus completing the usual staff.

The pamphlet showing measured lands open to selection in the Eastern and Central Division was completed and published on the 24th February.

All the applications for exchange of land received during the year for preliminary investigation were disposed of by the close of the year.

The reserve notifications for 1891 were posted in accordance with the new system, and it is proposed to adapt that system to back years, commencing with 1861 to 1865, as opportunity offers.

The confirmation noting has received some attention during 1891, a substantial increase being exhibited, as compared with the quantity of noting disposed of in 1890. This work can be regarded as practically up to date, and it now only remains to complete the noting of consecutive numbers of conditional leases in order to place the whole matter upon a satisfactory basis.

The number of new surveys charted shows a substantial increase on that of 1890. This work, which is carried out by contract, embraced 11,300 plans, representing 13,546 portions, the cost being £536, as against 6,621 plans and 8,315 portions in 1890.

A considerable part of the time of one officer was occupied in comparing certified copies of certain plans with the originals, which latter had been forwarded to head office under a misapprehension.

The preparation of Parliamentary returns at different periods during the year involved an appreciable amount of work. On the 1st of January there were 680 cases in the hands of draftsmen. This number increased to 963 in February, but declined to 430 in September, and at the close of the year stood at 679.

The following statement sets forth the classification and quantity of service performed during this and the previous year:—

	1890.	1891.
Miscellaneous papers in Branch on 31st December	533	679
Auction	147	180
Cases dealt with during year, inclusive of auction	10,652	9,087
Cases dealt with during year, exclusive of auction	8,586	7,462
Confirmations noted	7,491	10,644
Consecutive numbers of conditional leases noted	...	2,767
Plans and tracings charted	6,907	11,300
Area gazetted for auction during the year	147,768 acres.	125,030 acres.

Compiling Branch.

Miscellaneous Division.—This division is charged with the compilation and drawing of town, county, Colony, and miscellaneous maps, and the charting of plans of feature surveys and connections and new railway lines proclaimed. Several members of the branch were temporarily attached to country offices during the year; and one was permanently transferred to the country, his place being filled by a competent draftsman from the Charting Branch.

Twenty-two town maps have been completed, including Willyama (Broken Hill) and Newcastle.

Four county maps have been compiled and drawn, viz., Northumberland, Townsend, Kennedy, and Clyde; and one, St. Vincent, charted up for new edition. The compilations of counties of Argyle, Camden, Fitzroy, Raleigh, Vernon, Hawes, Clarke, and Cumberland are in different stages towards completion.

The progress made on the new Colony map compilation is shown on the appended sketch map.

One hundred and eighty-six plans of feature surveys and connections, comprising 1,025 miles of survey, have been charted during the year.

Seven proclaimed railway lines have been charted upon office maps and original plans.

Maps of the Land Board Districts of Dubbo and Cooma have been completed, and that of Armidale taken in hand.

A number of miscellaneous maps have also been prepared, including a new edition of small Land District map, postal map, a large outline map of Australia, measuring 12 ft. by 13 ft. 6 in., for Sir Henry Parkes in connection with the Federation proposals, population maps for the Railway Commissioners, and others of minor importance.

Parish Map Division.—This division, as the name indicates, is exclusively engaged upon the compilation and charting up of parish maps for publication.

One draftsman belonging to the division retired from the service, another was appointed to a Local Board office, and two others were transferred to other branches. One officer was attached to a country office for half the year, and another was absent for some months through a serious illness. The vacancies were ultimately filled by the appointment of juniors, who, however, until they had acquired the necessary experience of the routine of the branch, did not render so effective assistance as some of the experienced men whom they replaced.

The total number of maps completed during the year is in excess of the previous year's return, the numbers being—

	1890.	1891.
Parish maps compiled...	235	192
Parish maps prepared for new edition	48	121
Totals	283	313

The standard maps have now reached 1,900.

The heliographic printing performed is considerably less in quantity than during 1890, owing principally to there being less demand by country offices and for office parish maps. The majority of the prints were, however, of large size, in view of which the average cost of 1s. 6d. each cannot be regarded as excessive.

Inquiries were instituted as to the possibility of obtaining a tougher description of heliographic paper, and, after testing different samples, arrangements were finally made to draw part of our supplies from a London firm, the cost being quite one-third less than had hitherto been paid. It has been proved, however, that the best helio. paper obtainable is not substantial enough for maps required for everyday use, and we have been compelled to abandon heliographs for office maps in favour of the lithographs on drawing-paper, to scale of 40 chains to an inch.

The names of maps actually printed during the year will be found under the head of Lithographic Branch.

Lithographic Branch.

The business of this branch shows an increase in the number of maps, plans, or documents printed above that of 1890. The following returns in tabular form show the results of map compilation at the head office, and printing of work for other Departments, printing of official forms for Departmental use, and printing of plans drawn by surveyors for reproduction. These maps and plans are either lithographed in the branch, or, after photo-lithography at the Government Printing Office, are completed here by transfer to stone or zinc.

By the acquisition, in the early part of the year, of the largest printing machine yet imported to this continent, maps of unusual dimensions have been produced with increased speed at a greatly reduced cost; and the numerous maps of suburbs and sheets of the detail survey, which are in process of survey and publication for the Department of Public Works in connection with sewerage operations, have been completed more rapidly than heretofore.

For convenience of official record, lithographs are classified thus:—1. Counties; 2. Towns; 3 Parishes; 4. Auction Sale Plans; 5. Miscellaneous; 6. Other Departments; and 7. Official Forms.

1. *Counties.*

County lithographs show measured areas, roads, reserves, features, and all other information which is capable of delineation on a scale of 2 miles to an inch. They are published at 5s. per copy. Copies are also printed on a reduced scale of 8 miles to an inch, which are used for office purposes only.

Fifteen counties were completed during the year, comprising 2,650 printed copies:—

Brisbane	Fitzgerald	Rous	Townsend
Brisbane*	Livingstone	Rous*	Townsend
Camden	Livingstone*	St. Vincent	Wentworth
Cook	Northumberland	St. Vincent*	

Of these maps, those indicated by the asterisk are on the scale of 8 miles to an inch.

2. *Towns.*

Town lithographs show the general design, measured lands and names of purchasers, reserves, and dedications within town and suburban limits; they are usually photo-lithographed from compilations made at this office or from the surveyor's original plans, to the scales of 4 or 8 chains to an inch, and sold at 1s. per copy.

Thirty-nine towns were completed during the year, comprising 4,430 printed copies:—

Arthur	Dungog	Lewis Ponds	Tumut
Baan Baa	Ford's Bridge	Moree	Walbundry
Barmedman	Glenbrook	Mount McDonald	Wallendbeen
Barooga	Glenrouth	Neville	Willyama
Berowra	Gooloongong	Numby	Wollar
Bundarra	Gundagai	Obley	Wollongong
Carinda	Hargraves	Raleigh	Wyee
Cunningar	Keramingly	Sofala	Wyee
Currabubula	Kiama	Somerton	Yamba
Double Bay	Kramback	Swamp Oak	

Names repeated show that two editions have been printed during the year.

3. *Parishes.*

Parish maps are compiled to a scale of 20 chains to an inch, for office use, and then, with few exceptions, reduced to 40 chains scale for publication and sale, at 1s. per copy.

Two hundred and seventy-seven parishes were completed during the year, comprising 21,615 printed copies.

4. *Auction Sale Plans.*

Lithographs of all lands measured for auction are printed for use at auction sales, and sold at 1s. per copy.

One hundred and eighty-nine auction sale plans were completed during the year, comprising 13,940 printed copies.

5. *Miscellaneous.*

In this class, during the year, the principal maps printed have been:—New edition of 4-sheet general map of New South Wales, 16 miles to an inch scale; new edition of map of New South Wales, showing all divisions for the purposes of the Crown Lands Acts; map of New South Wales, showing stock routes, &c.; plans showing occupation licenses; map of Newcastle Pasturage Reserve; Land Board District maps of Dubbo and Cooma; military map of country between George's River and Broken Bay; map of City of Sydney, southward of Port Jackson and Parramatta; map of Rookwood Necropolis Extension; and maps to illustrate Annual Report of Department of Lands for 1890.

Eighty-one miscellaneous maps, &c., were completed during the year, comprising 24,000 printed copies.

6. *Other Departments.*

Maps, plans, and diagrams have been printed for the departments of Colonial Secretary, Treasurer, Mines, Public Works, Water Supply and Sewerage, and Government Statistician, embracing Electoral map of New South Wales; map of Australasia; sheets of orchid drawings; map showing progress of sewerage survey; South Polar chart; 23 sheets of the detail survey of suburbs of Sydney for sewerage purposes, on 2 chains scale; maps illustrating Railway Guide Books; diagrams of bridges; diagrams showing on separate sheets heights and discharges of the Murray, Murrumbidgee, Macquarie, and Darling Rivers; section of bores in connection with conservation of water; and map of New South Wales, showing localities of principal minerals.

Sixty-one maps, plans, and diagrams completed for other Departments during the year, comprising 36,190 printed copies.

The approximate value of the work, including drawing, printing, paper, and supervision, amounted to £830 4s. 10d.

7. *Official Forms.*

These forms comprise circulars, decisions, forms, and memoranda required for use at head-quarters and at country offices.

One hundred and ninety-six official forms were completed during the year, comprising 107,365 printed copies.

COMPARATIVE SUMMARY FOR 1890 AND 1891.

Map, Plan, or Document.	1890		1891.	
	Number of separate Maps.	Number of Copies printed.	Number of separate Maps.	Number of Copies printed.
Counties	12	2,250	15	2,650
Towns	44	5,927	39	4,430
Parishes	259	19,025	277	21,615
Auction Sale Plans	165	17,750	189	13,940
Miscellaneous	113	43,332	81	24,000
Other Departments	35	37,415	61	36,190
Official Forms	169	93,470	196	107,365
Totals	797	219,159	858	210,190

Contractors for lithographic work received the sum of £1,010 14s. 2d.; the drawing for this supplementary work costing £957 10s. 2d., including an advance of 5 per cent. on part of contract for the new city and environs map, and the printing £53 4s.

ROADS BRANCH.

The Roads Branch deals with all applications for survey and opening of roads under the Act 4 William IV. No. 11, and 42nd section of Act 53 Vic. No. 21, and takes action towards the establishment of roads under those Acts, and the consideration of objections and settlement of claims which arise out of such proceedings. It deals also with applications for land in lieu of the land taken for roads; with applications for the purchase of unnecessary roads, under 67th section of Act 48 Vic. No. 18; with applications for the survey and alignment of streets under Act 2 Vic. No. 2, and takes steps to effect alignment and to investigate objections set up by dissatisfied land-owners. It also deals with applications made for permission to erect public gates upon roads under Act 39 Vic. No. 10, and with several other matters having reference to roads.

During the year 312 applications were received for surveys of roads and streets; 524 surveyors' reports (exclusive of reports transmitting plans) were dealt with; 226 road plans, showing about 523 miles of road survey, and 35 alignment plans, showing 341 streets as aligned for carriage and footways; 70 applications for public gates, and 250 objections and claims have been received; besides various letters and applications asking for information and inquiring as to road and street matters, &c.

Papers having reference to roads, streets, and gates, in number about 5,974, have been registered and dealt with in this branch, as well as about 489 papers registered in other branches, so that about 6,463 papers and 261 plans of road and street surveys have been dealt with during the year.

One member of this branch (Mr. Fawns) died during the year.

OCCUPATION DRAFTING BRANCH.

The general work of this branch has been similar to that of previous years, with the addition of charting rabbit-proof fencing, and supplying information required to deal with about 200 applications in connection with the erection of same.

One draftsman was lent to Charting Branch for a considerable part of the year.

Upwards of 1,300 refund calculations were revised, and as the schedules were not in some cases received until late in the year, it was found necessary to obtain assistance from other branches for a few weeks, in order that this business might be all disposed of before the close of the year.

324 miles of pastoral holding boundaries were surveyed, at a total cost of £666, of which the sum of £287 was recouped from the lessees. Also a sum of £142 was recovered from pastoral lessees for the survey of pastoral holding boundaries common to homestead leases, &c., and a sum of £192 was paid by pastoral lessees for the total cost of survey of 65½ miles of boundaries, and £20 on account of a survey made by a salaried surveyor.

Plans of 307 abandoned resumed and leasehold areas have been prepared, with a view to their being offered for lease at auction.

In addition to the above, a set of maps has been kept charted for the Minister showing appraised rents of pastoral holdings and homestead leases. Preliminary calculations were made in connection with the computation of refunds to lessees under the Crown Rents Act, and a number of miscellaneous matters were dealt with.

The following schedule shows the principal items of business dealt with during the year:—

Cases under section 143, Act of 1884, and section 52, Act 1889	55
County maps charted with pastoral holdings	3
Parish " " "	629
Homestead leases charted and noted	192
Surveys of pastoral holdings charted	31
Tracings and lithos prepared	226
Refund schedules dealt with	1,328
Questions as to leasehold and resumed areas replied to	1,874
Abandoned holdings prepared for auction	307

MISCELLANEOUS CONTRACT BRANCH.

The number of drawings issued from the branch in 1891 is not so large as in the preceding year. The total for 1890 was largely increased by tracings, &c., required by inspectors in carrying out the provisions of the 29th section of the Crown Lands Act of 1889, no tracings of this character being made in 1891.

There has been a decrease in the total number of drawings forwarded to district offices, owing chiefly to the practice having been discontinued of preparing in the head office standard tracings for use in the Orange District Office. A decrease is also observable in the number of tracings prepared for auction sale purposes, and in the number prepared for surveyors in the field. About the same number of applications were dealt with in 1891 as in 1890.

RETURN OF SERVICE PERFORMED.

	Tracings.	Lithos.	Plans.	Sundries.	Totals.
Tracings and charted-up lithographs supplied to district surveyors, including 264 standard tracings prepared for heliography for Orange, Armidale, and other district offices	663	22	.....	.....	685

Tracings and charted-up lithographs supplied to surveyors in the field	217	28	.....	.....	245
Tracings of plans of roads and alignments of streets, supplied to municipalities	61	.....	.....	.....	61
Tracings of alignment and road plans, prepared for exhibition at Police Office and at Crown Lands Offices	111	.....	.....	.....	111
Tracings prepared for auction sale purposes	745	.....	.....	.....	745
Tracings and charted-up lithographs prepared for Parliamentary Returns	11	1	.....	.....	12
Tracings and chartered-up lithographs prepared for other Departments	175	247	.....	.....	422
Standard tracings of parish maps	45	.....	.....	.....	45
Tracings and lithographs showing special and residential leases prepared for lessees, Chairmen of Land Boards, Land Agents, and Cumberland ranger	273	2	.....	.....	275
Tracings of plans of detailed survey of city and suburbs prepared in connection with publication of city and suburban maps	176	.....	.....	.....	176
Original plans showing connections to trigonometical stations and section place, prepared to supersede the original large plan of town of Willyama (Broken Hill)	.....	.....	91	.....	91
County maps in office use charted to date	.....	17	.....	.....	17
Tracings, charted-up lithographs, &c., prepared for sundry purposes	589	277	.....	155	1,021
Totals	3,845	594	91	155	4,685
Total number of applications					1,075

NOTE.—The drawings enumerated above comprise copies of colony, county, parish, and town maps, plans of railway, alignment, road, and feature surveys, and ordinary small plans.

PLAN RECORD BRANCH.

Return of Service performed.

Approximate number of plans entered in books at end of year	249,000
Approximate, issued and returned to and from officers in Head Office, Metropolitan Office, and Mines Department	176,240
Cancelled maps	630
Sent to plan-mounter	2,858
Issued to Inquiry Branch	1,900
Exhibited at counter	2,600
Despatched to District Survey Offices	20,959
Returned from do do	21,190
Applications received for original plans and registered	3,722
Memo. returning original do do	1,378
Memoranda sent to D.S.O.'s for plans	1,408
Certified copies received	10,601
Surveyors' field books in branch	2,270
Auction sale lithographs	169

MAP SALES BRANCH.

Fewer maps were received in this branch than during 1890; but the number issued is much larger, and the cash sales show an advance of upwards of 25 per cent.

The stock books are now in a more satisfactory condition than under previous management.

An examination of the stock during the year disclosed the fact that in some cases more copies were being printed than were actually required. The numbers were accordingly reduced, and the balance sheet now shows that the maps issued and sold in 1891 were 2,000 in excess of those received, instead of being 14,000 less than receipts as in 1890.

RETURN of Lithographs received for the years 1890 and 1891.

Lithographs received from the Lithographic Branch.

PLAN-MOUNTING BRANCH.

The return of this branch shows that 15,876 pieces of work were performed during the year, being a considerable decrease as compared with 1890; but this is accounted for by the plan-mounter having a lad to assist in place of an efficient workman.

All current work has been disposed of, although it has not been found possible to mount so many original plans as usual.

E. TWYNAM,
Chief Surveyor,
23 February, 1892.

APPENDIX A.

TABLE showing comparative amount and cost of Detail Surveys from 1886 to 1891.

	1886.	1887.	1888.	1889.	1890.	1891.

(SECOND SESSION.)

NEW SOUTH WALES.

CROWN LANDS ACT OF 1889.

(REGULATION NO. 56, SUBSTITUTED FOR SAME NUMBER, NOW IN FORCE.)

Presented to Parliament, pursuant to Act 53 Vic. No. 21.

Department of Lands,
Sydney, 18th December, 1891.

His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the following Regulation No. 56, under the Crown Lands Acts, being substituted for that at present in force bearing the same number.

[Ml. 91-13,475] HENRY COPELAND.

56. The survey fee to be paid with every application shall be charged on the aggregate area applied for, irrespective of whether the land is measured or unmeasured, or a subdivision of measured land is involved, according to the following scales, that is to say:—

For an Original Conditional Purchase.

	£	s.	d.
For any area not exceeding 4 acres	1	0	0
For every additional acre or fraction of an acre up to 10 acres, 3s. 4d.			
For 10 acres	2	0	0
For every additional acre or fraction of an acre up to 20 acres, 2s.			
For 20 acres	3	0	0
For every additional acre or fraction of an acre up to 40 acres, 1s.			
For 40 acres	4	0	0
For every additional 5 acres or fraction of 5 acres up to 80 acres, 2s. 6d.			
For 80 acres	5	0	0
For every additional 10 acres or fraction of 10 acres up to 320 acres, 2s. 6d.			
For 320 acres	8	0	0
For every additional 15 acres or fraction of 15 acres up to 640 acres, 2s. 6d.			
For 640 acres	10	15	0
For every additional 20 acres or fraction of 20 acres up to 1,280 acres, 2s. 6d.			
For 1,280 acres	14	15	0
For every additional 40 acres or fraction of 40 acres up to 2,560 acres, 2s. 6d.			
For 2,560 acres	18	15	0

For an Additional Conditional Purchase or for a Conditional Lease.

	£	s.	d.
For any area not exceeding 4 acres	0	15	0
For every additional acre or fraction of an acre up to 10 acres, 2s. 6d.			
For 10 acres	1	10	0
For every additional acre or fraction of an acre up to 20 acres, 1s. 6d.			
For 20 acres	2	5	0
For every additional acre or fraction of an acre up to 40 acres, 9d.			
For 40 acres	3	0	0
For every additional 5 acres or fraction of 5 acres up to 80 acres, 1s. 10½d.			
For 80 acres	3	15	0
For every additional 10 acres or fraction of 10 acres up to 320 acres, 1s. 10½d.			
For 320 acres	6	0	0
For every additional 15 acres or fraction of 15 acres up to 640 acres, 1s. 10½d.			
For 640 acres	8	1	3
For every additional 20 acres or fraction of 20 acres up to 1,280 acres, 1s. 10½d.			
For 1,280 acres	11	1	3
For every additional 40 acres or fraction of 40 acres up to 2,560 acres, 1s. 10½d.			
For 2,560 acres	14	1	3

1891–2.

NEW SOUTH WALES.

CROWN LANDS ACT OF 1889.

(REGULATION NO. 273 UNDER THE CROWN LANDS ACTS, SUBSTITUTED FOR SAME NUMBER NOW IN FORCE, AND ADDITIONAL FORMS NOS. 74 AND 75.)

Presented to Parliament, pursuant to Act 53 Vic. No. 21.

Department of Lands,
Sydney, 25th March, 1892.

HIS Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the following Regulation No. 273 under the "Crown Lands Acts," being substituted for that at present in force bearing the same number, and of additional Forms Nos. 74 and 75 hereunder set out.

[Ml. 92-3,819]

HENRY COPELAND.

REGULATION No. 273.

WHEN a homestead lease is, before the expiration of the prescribed term of residence, transferred, by way of mortgage or security, a statutory declaration in Form 73, shall be made by the proposed transferee and lodged with the transfer, and such transfer shall be made in Form 74. Any such transferee as aforesaid desiring, before the expiration of the prescribed term of residence, to transfer his mortgage over the homestead lease may do so by executing a transfer in Form 75, and with such transfer of the mortgage shall be lodged a statutory declaration by the transferor of the mortgage, setting forth that the said transfer is *bona fide*, and giving particulars of the advances which have already been made under the mortgage, and of the sums which still remain due thereunder; and the Minister may also require the proposed transferee of the mortgage to make and lodge a statutory declaration, giving such particulars in connection with the transfer as he may see fit to require. It shall be in the discretion of the Minister whether he will allow the transfer of any such mortgage to be registered, and any registration obtained by the fraud of either the transferor or transferee may be cancelled after notice has been given to the parties concerned.

Form 74.

CROWN LANDS ACTS—REGULATION 273.

Transfer by way of Mortgage of Homestead Lease before expiration of the prescribed term of residence.

I [*Name in full*], of [*residence and occupation or designation*] hereby transfer, by way of mortgage, to , of [*residence and occupation or designation*], all my right, title, and interest in and to the homestead lease from the Crown, known as No. in the land district of , county of , parish of , and containing acres roods perches, to secure the repayment of the sum of £ s. d.

Signed this day of , 189 .

(*Signature of Transferor.*)

Witness to signature of Transferor—

(*A Justice of the Peace, &c.*)

I accept this transfer [and declare that I am above the age of 21 years]. (*The words in brackets are to be struck out if the transferee is a Corporation.*)

(*Signature of Transferee.*)

Witness to signature of Transferee—

(*A Justice of the Peace, &c.*)

The sum of £ for transfer fee has been duly paid hereon.

NOTE.—This transfer is to be lodged with the Land Agent.

Form 75.

CROWN LANDS ACTS—REGULATION 273.

Transfer of Mortgage of Homestead Lease before expiration of the prescribed term of residence.

I [*Name in full*] of [*residence and occupation or designation* being the transferee, by way of mortgage, of the homestead lease from the Crown, known as No. , in the land district of , county of , parish of , and containing acres roods perches do hereby transfer to , of [*residence and occupation or designation*] all my right, title, and interest as such mortgagee as aforesaid, in and to the said homestead lease.

Signed this day of 189 .

(*Signature of Transferor*).

Witness to signature of Transferor,—

(*A Justice of the Peace, &c.*)

I accept this transfer [and declare that I am above the age of 21 years]. (*The words in brackets are to be struck out if the transferee is a Corporation.*)

(*Signature of Transferee.*)

Witness to signature of Transferee,—

(*A Justice of the Peace, &c.*)

The sum of £ for transfer has been duly paid hereon.

NOTE.—This transfer is to be lodged with the Land Agent.

Sydney: George Stephen Chapman, Acting Government Printer.—1891

1891.
(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CLAIM OF ISAAC BARCLAY.

(FOR COMPENSATION.)

Ordered by the Legislative Assembly to be printed, 14 *December*, 1891.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 3rd December, 1891, That there be laid upon the Table of this House,—

"A copy of the Crown Solicitor's opinion relating to the claim of Isaac "Barclay for compensation."

(*Mr. Morton.*)

The Crown Solicitor to The Under Secretary for Lands.

Re claim of Isaac Barclay.

Sir, Crown Solicitor's Office, Sydney, 4 September, 1891.

I have the honor to return herewith the Departmental papers submitted to me in connection with Isaac Barclay's claim for compensation, numbered as in margin, and to state that I have, as carefully as the time at my disposal would permit, perused and considered the whole of these voluminous papers, commencing with the original selections made in 1863, and passing through all the various years that have elapsed between that time and the present. 91-3,878 Cor.

It is greatly to be regretted that two Select Committees of a former Legislative Assembly should have furnished the reports which they have.

These Committees ignored the really material fact in the case, namely, that before Isaac Barclay attempted to acquire or select the three allotments referred to in the first paragraph of each of the Committees reports, William Emery had previously applied for and had lawfully acquired, and was in possession of 72 acres of land, portion 137, taken up on 25th June, 1863, which land embraced portion of the land afterwards sought to be selected by Barclay.

It was this selection of 72 acres, and not the later selection of 96 acres, referred to by the Select Committee, which was subsequently and very properly upheld by the Supreme Court as a good selection.

The two Select Committees state that Isaac Barclay "*acquired*," by conditional purchase, three allotments, ignoring the fact that he could only lawfully acquire land by conditional purchase so far as there were Crown lands available for that purpose.

A second point ignored by the two Select Committees is that the whole claim of Barclay upon the Government had been already years before submitted to and considered by Parliament, who, having all the matters freshly and properly brought before them, agreed to vote to Barclay £467, in compensation for his imaginary claims upon the Crown, and that this sum, thus considered by Parliament as adequate compensation, was offered to and ultimately accepted by Barclay.

The fact is not only distinctly proved by the Appropriation Act on the statute books of the Colony, and appears over and over again in the Departmental papers submitted to me, but was distinctly brought under the notice of the Select Committees in the *précis* prepared by Mr. Freeman and put in with the evidence of Mr. Capper.

The

[870 copies—Approximate Cost of Printing (labour and material), £1 12s. 7d.]

The Select Committees did not inform themselves of the terms or facts connected with the Supreme Court action of trespass brought by Emery against Barclay, nor had they any evidence before them respecting the result of the second trial, in which Emery recovered nominal damages against Barclay for trespass, not upon the 96 acres, or upon Barclay's selections, but on the 72 acres of land which Emery had taken up on 25th June, 1863, prior to any of Barclay's selections, and which thereupon became vested in him in fee as a conditional purchase under the 13th clause of the Crown Lands Act of 1861.

When Barclay, on the 16th July, 1863, attempted to jump part of this selection by taking up 54 acres of land by a very vague description, so as to encroach upon Emery's previous selection, he committed an illegality, for all the consequences of which he should be held responsible.

Barclay subsequently took up other selections, on the 6th and 20th August, but all these selections were necessarily confined by the Act to available Crown lands, and by no circumstances could he or the Government take away from Emery what an Act of Parliament had given him.

The whole of the losses and expenses that Barclay has been put to have thus resulted from his own illegal act, in endeavouring unlawfully to acquire from the Crown lands which were not Crown lands at the time of his application, and with respect to which the Crown grants when issued were invalid, and are now liable to be set aside by writ of *sci. fa.*, so far, at least, as they include lands already sold to Emery, and for which he had acquired a prior Parliamentary title.

So far from Barclay having had any claim whatever upon the Government, the tables should be turned, as the Government have a claim upon him to cancel or correct the grants already issued to him under what in law has been decided to be an erroneous representation and misdescription by him.

Unfortunately for the public it happened that the counsel for Barclay, the present claimant, was the Attorney-General in those days, and that, acting on the one hand as the adviser of the Crown and on the other as the counsel for Barclay, he advised the Government that Barclay had a strong claim upon them for protection. It was manifest, of course, at the time, that the facts were entirely the other way. That so far from Barclay ever having had any claim upon the Government for protection, Emery, whose lawful possession and rights had been interfered with, was the person who had the claim, and was certainly the person entitled to consideration.

Be this, however, as it may, Parliament, the masters of the situation, having the matter brough before them, ultimately agreed to vote to Barclay a sum of £467, in compensation, and this money he received years ago, as appears by the evidence put before, but ignored by, the Select Committees.

How, under these circumstances, he can pretend to have any further legal claim upon the Government I am utterly at a loss to conceive.

It appears to me from first to last that the Crown has been misled in this matter, and a false sympathy apparently created for Isaac Barclay, whereas the true person to be sympathised with was rather the selector, Emery, whose prior and lawful selection had been, it appears to me, attempted unlawfully to be interfered with at the instance of Barclay, and it further appears to me that the Legislature have already treated Barclay with a liberality not at all justified, if the true facts of the case had been understood and explained.

I have, &c.,
For JOHN WILLIAMS,
Crown Solicitor,

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CLAIM FOR COMPENSATION BY JAMES AND PATRICK GUIHAN.

(CORRESPONDENCE RELATING TO THE.)

Ordered by the Legislative Assembly to be printed, 14 *December*, 1891.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 19th November, 1891, That there be laid upon the Table of this House,—

"Copies of all papers and correspondence relating to the claim for compensation by James and Patrick Guihan, in respect of certain land in the parish of Cambewarra, county of Camden, at Broger's Creek."

(Mr. Morton.)

SCHEDULE.

557—A
[870 copies—Approximate Cost of Printing (labour and material), £9 11s. 1d.]

CLAIM FOR COMPENSATION BY JAMES AND PATRICK GUIHAN.

No. 1.

Mr. W. Lovegrove to The Secretary for Lands.

Sir, 109, Pitt-street, 4 June, 1890.

Referring to the correspondence and various action of the Government in the case of Messrs. J. and P. Guihan, terminating with the Under Secretary's letter of 24th March, 90-2,187 Misc., I have the honor to recapitulate the facts, and to point out that the action of the Government has been such as to entitle the Messrs. Guihan to a considerable claim for compensation. This arises in the following way:—

About the commencement of 1887, Mr. Irwin, their neighbour, was informed that a certain piece of land belonging to Guihan did not so belong, but was, in fact, Crown lands. He says he got his information at the Crown Lands Office, Sydney, *i.e.*, your Department.

He was thereby encouraged to trespass upon said lands, and from that time until last March my clients had no peaceable possession, a period of three years.

Passing over minor matters, I find that I applied to see the original survey of the land, and found that it belonged to Guihan, and that the western boundary was 13 chains, whilst in the deed it had been altered (without intimation to the owners) to 9 chains 35 links, in order to deprive them of this land.

I endeavoured, but in vain, to impress upon the Department, in my letter, 13th October, 1887, that the land belonged to Messrs. Guihan. I received a reply dated 13th January, 1888, to the effect that Guihan must buy half of his own land from the Crown by special purchase, or it would go to auction. I was also favoured with a letter (88-535 Misc.), dated 2nd February, stating that the deed agreed with the plan, and generally traversing my statement. I replied to this on the 3rd February, 1888, but was informed, 15th March, 1888, that the decision "cannot be disturbed." I also endeavoured to get the land measured to see how much Guihans would be short of their quantity, but in vain.

I pointed out that certain maps in the Department had Guihan's name on the land; those maps were at once altered, and the name struck out.

After two years and a half of vain endeavour to get the Department to do justice to my clients, I was obliged to enter caveat against the application of Irwin, published by the Government in the *Gazette*.

The case came on for hearing by the Land Board in November, and was decided in Guihan's favour.

Then it was brought before the Departmental Board of Inquiry, and they decided that the acts of the officers were strictly in accordance with a Ministerial decision, but that the decision was erroneous, as the land belonged to Guihan. This was followed by the recall of the deed, in order that it may be issued in accordance with the facts, and that brings the matter up to date.

There is no doubt on my mind that, looking to the indefensible opposition of the Government to a claim about which there could not be the slightest doubt, and yet concerning which they threw open Guihan's land to all trespassers, deprived them of the profits, kept them in perpetual anxiety, and put them to great expense at law and otherwise, a jury would give very substantial damages; or that if it were brought before Parliament the result would be equally damaging; but so far, it has been kept within the Department, and I should be prepared, without prejudice, and with a view to prevent further waste of time, to recommend them to accept a moderate sum, which at present I should consider £300 or thereabouts.

I may add that rent (apparently for twenty-five years) was claimed, in one letter of the Department, from Guihans for this land.

Trusting that you will treat this matter as urgent.

I have, &c.,
W. LOVEGROVE.

No. 2.

Office Memorandum.

Claim for £300 for compensation; Island at Broger's Creek, parish of Cambewarra, county of Camden—J. and P. Guihan. Aln. 90-4,430.

In 1835, G. Irwin applied to purchase an island situated in Broger's Creek (*vide* Miscellaneous 84-25,127), but as the land adjoining was held under conditional purchase the application was refused (Miscellaneous 85-1,564).

As the ownership of this land was questioned, a report was called for as to whether the land was Crown land.

On 87-14,059 the Metropolitan District Surveyor reported that the land applied for was shown on the maps as an island, and outside the deed description of M'Ilwraith's (now Guihan's) land, and recommended that both parties be invited to apply to purchase the area fronting their respective portions.

This was approved by Mr. Secretary Garrett, 87-14,059, 15,971, and 88-6,792 herein, and Irwin having made the necessary application, survey of the land was made, with a view of sale 88-5,193 (89-5,888).

A vast amount of correspondence passed between this Department and Mr. Lovegrove (for Guihan), the latter contending that the island in question was the property of Guihan, while the Department, on reports furnished by the District Surveyor's Office, held that it was Crown land.

On Erwin's case being gazetted for objections, a caveat was lodged against such application being allowed, 88-9,846.

The matter was heard before the Land Board, Nowra, and in view of the Board's report on 89-17,037 herein, it was decided the matter should be investigated by the Board of Inquiry, certain charges of alleged alteration of plans having been made against the Department by Lovegrove.

The

The Board of Inquiry, after a very careful and searching investigation, reported in favour of Guihan's claims, opinion being expressed as follows:—"The Board are of opinion that the facts presented are incontrovertible, and would respectfully advise that the Crown grant be recalled, with a view to the issue of a new deed, including the island, in accordance with the original survey; also that the recent survey of the island be cancelled, the marks obliterated, and the notations referred to as having been cancelled on the plan restored." (89–18,534 Miscellaneous.)

The deed of grant was recalled accordingly, with a view of including the island in the proposed new deed (90–12,687 Miscellaneous).

Irwin's application was, in view of this decision, refused on 90–4,473 Alienation. Irwin again asks for a reconsideration of the matter.

Lovegrove (for Guihan) now asks (90–4,430) for compensation to the amount of £300, as he states that Irwin was encouraged by the Department to trespass on Guihan's property (the land in dispute), and for three years Guihan had no peaceable possession; he has also, he alleges, been put to considerable expense and inconvenience in having to attend the Land Board, &c.

With reference to the statement made in paragraph 5 of Lovegrove's letter, he has already been informed that the alteration complained of was not made; please see paragraph 5 of the report of Board of Inquiry (89–18,534).

No. 3.

Office Memorandum.

Claim for £300 as compensation by Messrs. Guihan—Aln. 90–4,430.

A *precis* of the facts in this case is enclosed.

30 June, 1890.

THE grounds upon which the claim for compensation is based are stated in paragraph No. 7 of Mr. Lovegrove's letter—Alienation 90–4,430. With regard to these it may be remarked:—

1. That the actions of the Department were, in pursuance of the decisions given by Mr. Secretary Garrett, based on the reports of an experienced professional officer, and although some of the opinions expressed in those reports have since been held to be incorrect, it can scarcely be held that the action of the Department is indefensible, as stated, or that the claim was one about which there could be no doubt, and the fact that Messrs. Guihan made no attempt to assert their rights in a civil Court shows that they did not so consider it.
2. That while it is a fact, as stated in the third paragraph of Mr. Lovegrove's letter, that both Irwin and Guihan were informed that the land in dispute was Crown land, the former was never placed in possession of any of it. The fact that an application for a part of it was received from Irwin, and dealt with in the usual manner up to a certain stage, did not give him any right to occupy the land, and if he did trespass upon it this Department is not responsible for his actions in that respect. As a matter of fact there appears to be no evidence in these papers that Irwin did occupy the land applied for by him, and from Miscellaneous 87–8,962, and Land Board 88–5,281, it would seem as if Messrs. Guihan retained possession, though such cannot be stated with certainty.

(3.) The strongest argument in support of the claim appears to be the fact that the applicants have been put to considerable expense in connection with the matter, though it is pointed out that as a set-off against this the result of the dispute has been to put them in legal possession of land which, though embraced by the original survey, was not described in their deed.

With regard to Irwin's letter, Alienation 90–4,473, he should perhaps be informed that the matter has been very fully considered, and the decision already arrived at will not be departed from.

E.A.B.

It would appear that there is some ground for compensation in this case, but before any sum is approved the items making up the amount claimed, viz., £300, by Mr. Lovegrove should be shown.—W.H.C., 17/9/90.

Mr. Lovegrove may be asked, without prejudice, to specify the various items making up the total amount of claim, £300.—F.H.W., 18/9/90. For approval.—W.H., 18/9/90. No claim for compensation can be recognised until the particulars are furnished.—J.N.B., 19/9/90. Correspondence Branch.—E.A.B., 19/9/90. Mr. Lovegrove, 25/9/90.

No. 4.

Mr. W. Lovegrove to The Under Secretary for Lands.

Sir,

109, Pitt-street, 26 September, 1890.

I have the honor to acknowledge receipt of your letter of yesterday, No. 90–8,601 Alienation, which requests me to furnish items of Messrs. J. and P. Guihan's claim for compensation. As my suggestion, at their instance, of £300 has not been accepted, it must be held to be without prejudice to their further claims, as the amount was given without close calculation, and, indeed, some of the damages can only be assessed theoretically, but my impression is that the amounts will be more than fully supported, and the course adopted by the Government will lead to additional expense and journeys on the part of these industrious but unfortunate men.

I have, &c.,

W. LOVEGROVE.

Mr. M'Kern,—While the request for compensation is in abeyance, perhaps you can proceed with your action.—E.A.B., 29/9/90. Mr. Neill.—Please prepare a description of portion 11/11, parish of Cambewarra, county Camden, in accordance with application of 7/2/90 on Miscellaneous 89–18,534 herewith.—F.M'K., 14/10/90. Urgent. Description prepared.—W.J.N., 3/11/90. Mr. M'Kern.

Mr.

4

Mr. Shaw,—Please furnish a tracing of portion 11/11, parish Cambewarra, county Camden, plan C 175-1,521. (See description herewith.)—F. M'K., 3/11/90. Urgent. Tracing herewith.—M.S., 7/11/90. Mr. M'Kern.

Mr. Davis,—Please forward copy description and tracing of portion 11/11, parish Cambewarra, county Camden, and certificate of title, vol. 588, folio 132, to Registrar-General. Inform fully of facts in the case, and ask that the diagram on the certificate of title be amended in accordance with the description and tracing.—F.M'K., 19/11/90. Registrar-General, with certificate of title, description, and tracing.—20/11/90.

No. 5.

Mr. W. Lovegrove to The Under Secretary for Lands.

Sir, 109, Pitt-street, 7 October, 1890.

I have now the honor to enclose the details asked for in your letter of 25th September, No. 90-8,601 Alienation, concerning Messrs. J. and P. Guihan's claim against the Government for expenses and losses sustained by them in defending the possession of their land, and I trust it will be dealt with so speedily as to afford some hope that the justice of the claim will be recognised, if not the amount.

I should be prepared to advise my clients to accept the amount first mentioned, £300, if no further delay occurs, but I have not their authority to say so.

I have, &c.,
W. LOVEGROVE.

How does Alienation 90-8,601 stand ?—E.A.B., 10/10/90. Mr. Lander. Deeds.—29/9/90., A.J.L., 15/10/90. Mr. Brunsden. Mr. M'Kern,—Can the issue of the deed be expedited, and the previous papers returned to me, please ?—E.A.B., 16/10/91. Mr. Neill,—The case referred to is with you for preparation of amended description.—F.M'K., 18/10/91. Urgent.

[*Enclosure.*]

Items of claim by Messrs. James and Patrick Guihan against the Government for losses and expenses sustained by the wrongful acts of said Government of New South Wales.

		£ s. d.
In 1886	Mr. Irwin, owner of the opposite frontage at Kangaroo River, stated that he was informed by the Government Surveyor that we did not own the land now admitted to be ours. From that time it has been impossible to have quiet possession of the land, or to use it for profit. Say three and a half years want of quiet possession of 20 acres of best quality land, cleared and grassed.	200 0 0
1886-7.....	Three journeys to Nowra to Crown Lands Office to get information, each 32 miles, and loss of time.	*6 0 0

Office Memorandum.

Extract from Paper Alienation 90-11,109.

29 December, 1890.

It is submitted that the claim to compensation now increased to £569 4s. from £300 be investigated by the Local Land Board.

W.H.C.

F.H.W., 29/12/90. For approval.—W.H., 3/1/91. Approved.—J.N.B., 5/1/91. Has receipt of certificate been acknowledged?—E.A.B., 6/1/91. Mr. Legg,—Receipt acknowledged (*vide* 90-11,745 Alienation).—F.B.S., 9/1/91. The Chairman, Local Land Board, Goulburn, in accordance with Ministerial decision of 5th instant.—E.A.B. (for the Under Secretary), Lands Department, B.C., 8/1/91. Mr. Lovegrove informed, 9/1/91.

Mr. Lovegrove addressed the Board, and gave his own evidence, and called James Guihan. After considering the evidence the Chairman stated his opinion that the claim was wholly inadmissible, the action of the late Minister, Mr. Garrett, having been in pursuance of his function as Minister determining a question between parties which came before him in the regular course, and having been in accordance with the deed of grant held by the present claimant. The items connected with the late inquiries before the Land Board should have been, if properly chargeable, claimed as costs against the other parties to the proceedings before the Board, who was the proper authority to settle the question of costs. As no such were asked for or allowed, clearly they cannot now be included as a claim against the Government. It appears that the land in question was (whether correctly or incorrectly, as for that question immaterial) not included in his deed of grant. The owner cannot claim to be compensated for not having consulted his deed, which would have shown him that the land was not included, and enabled him to take the proper steps to have the error corrected at the time of the occurrence, and protect himself against disturbance of possession. The majority of the Board, Messrs. Bice and M'Intyre, decided to recommend the claim for the items indicated by them, amounting in all to the sum of £167 4s., inclusive of £41 4s., costs of inquiry before the Board on 13th November, 1889.—A. O. Moriarty, Chairman, Z. G. Bice, L. M'Intyre.

No. 7.

Mr. W. Lovegrove to The Under Secretary for Lands.

Sir, 109, Pitt-street, 9 January, 1891.

I have the honor to acknowledge receipt of your letter of yesterday, No. Alienation 90-11,745, stating that the claim of Messrs. James and Patrick Guihan for compensation for injuries sustained by the actions of a former Government has been referred to the Local Land Board.

I must confess that I do not see the necessity for such a course, but it may be that a Board not meant to assess damages may be competent to do so.

At all events, a further Court sitting means further delay and expense for my clients, unless they choose to avoid the expense by simply resting their case on the facts already decided in their favour.

I have, &c.,
W. LOVEGROVE.

No. 8.

Mr. W. Lovegrove to The Under Secretary for Lands.

Sir, 109, Pitt-street, 2 February, 1891.

Referring to your letter, Alienation 90-11,745, 8th January, and to my answer of 9th January, also to an announcement in the *Gazette* that a Land Court will be held at Nowra on the 27th instant, I shall feel obliged by the information whether the Government has referred Guihan's compensation to that Board for private discussion, or whether it is contemplated that the Messrs. Guihan should again appear in Court.

I have, &c.,
WM. LOVEGROVE.

This has reference to a claim by Messrs. Guihan for compensation. The claim was on 8th ultimo forwarded to the Local Land Board at Goulburn for investigation and report, and will, of course, be dealt with in open Court. Perhaps the Chairman may be asked by wire whether the case is set down for hearing on 27th instant?—E.A.B., 3/2/91.

For approval.—W.H.C., 3/2/91. Approved.—F.H.W., 5/2/91. Mr. Swete, 5/2/91. Chairman, Goulburn, by wire, 5/2/91.

I SHALL be at Nowra on Friday to oppose Lovegrove's claim.

District Surveyor.

What is this?—W.H., 25/2/91. Claim, Guihan.

No. 12.

Caption to Deposition of Witnesses.

Crown Lands Act of 1884—Part II, section 14, sub-section 1.

New South Wales, }
to wit. }

THE examination of William Lovegrove, of Sydney, in the Colony of New South Wales—James Guihan, of Kangaroo Valley, in the said Colony.

In the matter of a claim by James and Patrick Guihan for compensation against the Government for £569 4s., before the Local Land Board at Nowra, on the 27th February, 1891, and it hath been found necessary to investigate the said matter on oath, the depositions of the several witnesses are appended hereto.

William Lovegrove, of 109, Pitt-street, Sydney, being duly sworn, saith:—My letter to the Under Secretary for Lands dated 7th October, 1890, with its enclosure headed items of claim by Messrs. James and Patrick Guihan, &c., is the claim which I make on behalf of my clients; the first item in it, £200, should have been £210, being calculated by me at the rate of £3 per acre per annum for three and a half years; the journeys to the Crown Lands Office, which form the next item, I am aware were taken by the claimant whilst I was Crown Lands Agent; passing over the two next items, I find certain attendances in Sydney which I know took place; I also know that the two attendances on the Honorable Thomas Garrett took place, and that the attendance on the Honorable J. N. Brunker took place; the first item of the expenses of the trial in this district being the subpœnaing of witness for which I paid 4s.; I know that the local solicitor, Mr. Whitell, attended, and that I also attended, and the witnesses Mr. George Tate, J.P., Messrs. J. and D. M'Ilwraith, and the two caveators, Messrs. Guihan; I know that I was paid altogether during those three and a half years a sum of £50, which included cost out of pocket.

By Chairman: I lodged the caveat, and appeared for him before the Board, with great inconvenience; I lodged the usual deposit of £10 with my caveat, which the Board investigated; I did not ask the Board for costs, because I thought it was not the proper time; I think this is.

W. LOVEGROVE.

Recalled,—I have seen the deed; the island was in the deed, but was excluded by colour.

W. LOVEGROVE.

Sworn by William Lovegrove, at Nowra, this }
27th February, 1891, before us,— }

A. O. MORIARTY, Chairman.
Z. G. BICE, }
LEWIS M. M'INTYRE, } Members.

James Guihan, of Kangaroo Valley, being duly sworn, saith:—I am one of the owners of 199½ acres in the Kangaroo Valley; I have been troubled in the possession of it; since I got possession of it I recollect getting a letter from the Department of Lands through Mr. Frazer Martin, about three and a half years ago (*letter produced, marked "A"*) to the effect that the land did not belong to me, but that I might apply for it; I never applied to be allowed to purchase the land; I came to the Land Agent to see him about this land; I went to the Commercial Bank to see the deeds in Berry; the distance between Kangaroo Valley and Nowra is 16 miles, and I would lose the whole day; I have attended about twelve times in Sydney on this business; I saw Mr. Thomas Garrett in Sydney; he told me if I did not apply for half of the land he would sell it inside of a month; I went twice to Sydney in consequence of receiving notice that my land would be sold; at the inquiry here Mr. Tate, J.P., came from Moss Vale, Mr. J. M'Ilwraith came from Sydney, Mr. D. M'Ilwraith came from here, Mr. Lovegrove from Sydney, and I and my brother from Kangaroo Valley; I was interfered with in possession of the land, and lost the profit off it for three years and a half; Irwin has been trespassing on it for ten years; a sergeant of police came there and made a report; I remember Mr. Riley going there and sending Mr. Lovegrove a telegram to that effect; I suffered anxiety of mind, and often did not sleep; I do not think that item of £200 is an extravagant

extravagant one; it is three months since I was advised that the new deed was prepared; since then I have taken steps to divide the land; I am employing Mr. Cook, of Berry, licensed surveyor and engineer.

By Mr. Deeriny: I was always sure that the land was mine; my anxiety was caused by the action of the Government; I purchased the land about nine or ten years ago; I got a conveyance of the land; the transaction was arranged between Mr. M'Ilwraith and me by a solicitor.

To the Bench: Mr. M'Ilwraith paid the balance of the purchase money; he paid it before I bought it; the transaction was delayed owing to the deed not having been issued; I knew when I bought that the deed was being prepared; the agreement was that the deed was to be produced; I never saw the deed at all; it was left at the bank by Mr. M'Ilwraith.

Sworn by James Guihan, at Nowra, this 27th February, 1891, before us,— JAMES GUIHAN.

No. 13.

Decision of Local Land Board.

Crown Lands Act of 1884—(Part II, section 14, sub-section 4.)

New South Wales, to wit.

WHEREAS on the 27th February, 1891, it became a matter for investigation before us as to a claim for compensation by James and Patrick Guihan in respect of certain land in the parish of Cambewarra, county Camden, Broger's Creek.

Mr. Lovegrove, appearing for the claimants, addressed the Board, and gave his own evidence, and called James Guihan, and having taken evidence, and inquired into the said matter,—

1. After considering the evidence the Chairman stated his opinion that the claim was wholly inadmissible, the action of the late Minister, Mr. Garrett, having been in pursuance of his function as Minister determining a question between parties which came before him in the regular course, and having been in accordance with the deed of grant held by the present claimant.
2. The item connected with the late inquiry before the Land Board should have been, if properly chargeable, claimed as costs against the other party to the proceedings before the Board, who were the proper authority to settle the question of costs; as no such were applied for or allowed, clearly they cannot now be included in a claim against the Government.
3. It appears that the land in question was (whether correctly or incorrectly is for this question immaterial) not included in the deed of grant. The owner cannot claim to be compensated for not having consulted his deed, which would have shown him that the land was not included, and enabled him to take the proper steps to have the error corrected at the time of the occurrence, and protect himself from disturbance of his possession.
4. The majority of the Board, Messrs. Bice and M'Intyre, decided to recommend the claim for the items indicated by them, amounting to in all £167 4s., inclusive of £41 4s., costs of inquiry before the Board on the 13th November, 1889.

Given under our hands, at Nowra, this 27th day of February, 1891,—

A. O. MORIARTY, Chairman.
Z. G. BICE,
LEWIS M. M'INTYRE, } Members.

No. 14.

Mr. W. Lovegrove to The Clerk-in-Charge, Local Land Board Office, Goulburn.

Sir, Sydney, 109, Pitt-street, 4 March, 1891.

Will you be good enough to send me certified copy of the proceedings and verdict for £167 4s., given in favour of Messrs. J. and P. Guihan, at the Local Land Court, holden at Nowra, on Friday, 27th February. I will forward any fees by P.O. order.

I am, &c.,
W. LOVEGROVE.

Inform that the decision of the Board was as announced in Court. The papers will be forwarded to the U.S. in due course, to whom application may be made. The time for appeal to the Land Court will expire on 25th instant.—A.O.M., 9/3/91.

Informed, 9/3/91.

No. 15.

No. 15.

Mr. W. Lovegrove to The Clerk-in-charge, Local Land Board Office, Goulburn.

Sir, 109, Pitt-street, 10 March, 1891.

I have the honor to acknowledge receipt of your letter of the 9th March, refusing my application for copies of the proceedings and judgment of the Local Land Court at Nowra, in the matter of compensation for injury sustained, from the Crown, by Messrs. J. and P. Guihan.

The ground you assign is that the decision of the Board was announced in Court.

You thus admit that the proceedings were conducted in open Court, and it is a rule of English Law Courts that the parties to the proceedings are entitled to copies of those proceedings from the officers in whose charge they happen to be (see also section 14, sub-section 1, of Act, 1875).

You also state that they will be forwarded to the Secretary for Lands in due course. The words of the Act are "immediately after adjudication."

I give you notice that I cannot state grounds of appeal from a decision of which I have no record.

I have, &c.,

W. LOVEGROVE.

Mr. Fisher may make copies in his own time, and charge for them at 4d. per folio of seventy-two words, as authorised by circular.—J.E.B. Mr. Lovegrove informed, 17/3/91.

No. 16.

The Chairman, Local Land Board, to The Under Secretary for Lands.

(L.B. 91-1,318.)

Sir, Land Board Office, Goulburn, 17 March, 1891.

Under separate cover.

I have the honor to forward the case of compensation claimed by James and Patrick Guihan, together with the minute of the Board, and proceedings at their sitting at Nowra, on the 27th ultimo. All papers are enclosed.

I have, &c.,

JNO. G. BLAXLAND

(For the Chairman).

No. 17.

Mr. W. Lovegrove to The Clerk-in-Charge, Local Land Board Office, Goulburn.

Sir, 109, Pitt-street, Sydney, 19 March, 1891.

Referring to your letter of 17th instant, 91-1,318, Land Board, I have the honor to say that the copies therein alluded to have not reached me.

I enclose a post-office order made payable to the gentleman named in your letter.

I trust that the copies will reach me with as little delay as possible, duly certified to as correct by yourself.

I have, &c.,

W. LOVEGROVE.

No. 18.

Mr. W. Lovegrove to The Clerk-in-Charge, Local Land Board Office, Goulburn.

Sir, 109, Pitt-street, 19 March, 1891.

This is the second letter written by me to-day, and is written for the purpose of acknowledging receipt of the copies of evidence, &c., by which I learn for the first time the items allowed by the majority of the Board.

I am sorry to find that no allowance has been made for costs of the trial in February. As my clients were summoned there, and as the proceedings are to be on the model of the District Court, I presume the costs shall follow the event and be recovered by the successful party.

Moreover, I stated the claim to be for the items set out, and the costs of this trial, when the Chairman said, "This is not the time to apply for costs." Mr. Moriarty will probably recollect this, and, at all events, no order was made to deprive the successful party of costs.

I shall also apply to the Minister for my costs as agent; it would interfere with justice if the claimants, usually illiterate men, could not employ skilled advice, or had to lose by so doing.

I have, &c.,

W. LOVEGROVE.

I referred to the previous trial in this remark, and the decision was read from the minutes. The matter is not in the hands of this Board, and I cannot correspond with the writer on the subject. He had already been referred to the Under Secretary.—A.O.M., 23/3/91.

Forwarded in connection with Guihan's compensation case, 91–1,318, Land Board, sent with letter 17th instant.—JNO. G. BLAXLAND (*pro* Chairman), Land Board Office, Goulburn, 23/3/91. The Under Secretary for Lands.

No. 19.

Mr. W. Lovegrove to The Secretary for Lands.

James and Patrick Guihan *v.* The Government.

Sir, Pitt-street, Sydney, 19 March, 1891.

Presuming that you are now in possession of the evidence and judgment of the Local Land Board in the case remitted to them by you in the usual way, as set forth in the Departmental letter, 8th January last, Aln. 90–11,745, and tried by them on 27th February, I have the honor to make the following remarks :—

The verdict for £167 4s. comprises certain items, disallows others, and does not include the costs of the trial, 27th February.

1. The members of the Board have disallowed or omitted the costs of my assistance to the Messrs. Guihan for the four years.

2.

2. It disallows some of their necessary journeys to Sydney.
3. Nothing is allowed for their and my attendance at Court on 27th February.
4. Nor for their disturbance and sense of injustice and uncertainty during the four years. The verdict is only for the grass and the costs of the first trial.

I respectfully submit that the verdict should be increased to £300, the sum first asked for, and should be placed on the Estimates for this year.

I have, &c.,
W. LOVEGROVE.

No. 20.

Office Memorandum.

Claim for compensation by J. and P. Guihan.—Amount of Claim, £569 4s.—Aln. 91–2,564.

26 March, 1891.

In accordance with the decision of 5th January, 1891, on Aln. 91–11,100, this case was referred to the Local Land Board for investigation and report.

The Board, by majority (the Chairman dissenting), have recommended that £167 4s. should be allowed, having apparently disallowed the items ruled through in blue pencil on Mr. Lovegrove's schedule.

The first item claimed was £200 for want of quiet possession of the 20 acres for a period of 3½ years. In his evidence Mr. Lovegrove states that this item should have been £210, viz., at the rate of £3 per acre.

Under this heading the Board recommend £105, but there is nothing to show how they arrived at this amount.

The evidence in support of this item is very meagre, being merely Mr. Guihan's statement that Irwin has been trespassing on the land. When the land was claimed as belonging to the Crown it was proposed to sell 8 acres to Irwin and 12 acres to Guihan, so that it seems improbable that he has been deprived of the possession of more than 8 acres, if any at all.

It is also noticed that the letter informing Guihan and Irwin that the 20 acres were Crown land was sent on 13th January, 1888, and the letter abandoning the claim was sent 12th February, 1890, the interval being only two years and one month.

The other items recommended by the Board are £21 for four journeys to Sydney by Messrs. Guihan, and £41 4s. the costs of witnesses and solicitor in connection with the inquiry of 13th November, 1889.

The Chairman dissents from the decision of the Board for the reasons given in paragraphs 1 to 3 of their report (91–2,564).

Mr. Lovegrove, on the other hand, in his letter of 19th instant, protests against the disallowance of certain items, especially the charge of £50 for his services.

In view of the fact that the Chairman dissents from the recommendation of the Board, and also the fact that the evidence in support of the claim is anything but conclusive, it is submitted whether the case should not be referred to the Land Court under section 7 of the Act of 1889.

E.A.B.

Under all the circumstances in this case it is submitted that the decision of the Nowra Land Board (by majority) be now carried out.—W.H.C., 20/4/91. F.H.W., 21/4/91.

It appears to me that this is a case which can be dealt with by the Minister in his Ministerial capacity without regard to the 7th section of the Act of 1889. That being the case, it is submitted that the claims made in the document attached to 90–9,255 Aln. are simply preposterous, and that if it be determined compensation should be granted at all, the amount set down by a majority of the Board should be materially reduced. I may point out more particularly the nature of the claim put forward as item No. 1 in the document referred to. It may further be pointed out that under the 66th section there can be no occupation by virtue of a special purchase until the application is actually granted, which did not take place in this instance. Compensation, if granted at all, should, I venture to think, be limited to the actual expenses incurred by Guihan in defending his title to the land.—W.H., 21/4/91.

I would like to have the advice of the Crown Solicitor on this case.—J.N.B., 22/4/91. Crown Solicitor, with papers, 22/4/91.

No. 21.

The Under Secretary for Lands to The Crown Solicitor.

Sir, Department of Lands, Sydney, 22 April, 1891.

I have the honor, by direction of the Secretary for Lands, to forward herewith the papers in connection with a certain claim for compensation made by Patrick and James Guihan, in respect of land at Brogher's Creek, in the parish of Cambewarra, county of Camden, and to request that you will be good enough to furnish the Minister with an opinion thereon.

I have, &c.,
WM. HOUSTON,
Under Secretary,
(*Per* W.H.C.)

No. 22.

The Crown Solicitor to The Under Secretary for Lands.

Sir, Crown Solicitor's Office, Sydney, 4 May, 1891.

I have the honor to return herewith the papers noted in the margin, on the subject of Patrick and James Guihan's claim for compensation. Aln. 91-3,610.

It appears to me that claims for compensation of this character are not in any way matters for decision by a Local Land Board. The submission of the claim to investigation by the Local Land Board

 was

was submitted on paper No. 11,109, of 3rd December, 1890, as follows:—"It is submitted that the claim be investigated by the Local Land Board." This was approved by the Minister, 5/1/91.

It will be seen it was not referred to the Local Land Board to decide anything, but only to investigate the claim.

The Local Land Board appear also to have taken the same view of the matter, their decision being upon an investigation of the claim, by majority, as follows:—"Decided to recommend the claim for the items indicated by them, amounting to £167 4s., inclusive of £41 4s., costs of inquiry before the Board on 13th November, 1889.

It accordingly appears that it was not intended by the Minister to leave the Land Board to decide, and that the Land Board has not decided anything.

It would further appear that Mr. Lovegrove, as agent for the parties, has taken the same view of the matter, because in his subsequent letters he submits that what he is pleased to call the verdict—that is, the amounts recommended by the Land Board—should be increased, showing his dissatisfaction with it. I mention these points because it might be open to doubt whether, if the matter had been referred by the Minister to the Land Board for decision, and if both parties concurred in giving them jurisdiction (which by statute they do not possess), the fact of the decision of the Land Board—as the tribunal mutually approved of and assented to by both parties—would, if not appealed against to the Land Court, have been final and conclusive, both on the Minister and the parties.

These difficulties, for the reasons already pointed out, have not arisen in the present case.

It is, therefore, quite open to the Minister to deal with the recommendation of the Land Board in exactly the sense in which it was asked, namely, as a report, and either to confirm and adopt the report, or to act otherwise in the matter, as he may see fit.

On further considering the whole matter, it appears to me that there is no case whatever of any claim against the Government arising out of the items of claim set out by Mr. Lovegrove, on behalf of Messrs. Guihan. The Government in no way whatever contested the title of Messrs. Guihan to the land, and if it did, would not be obliged to pay any expenses or costs if so doing, unless such costs and expenses were properly awarded in the suit; nor will any action lie against the Government for slander of title, nor could that claim arise. It cannot in any way be pretended, or is it alleged, that there was any malice on the part of the Crown, and without allegation of and proof of malice no action of slander of title will lie.

I have, &c.,
For JOHN WILLIAMS,
Crown Solicitor,
R.S.

No. 23.

Office Memorandum.

Claim for compensation by Messrs. Guihan.

In accordance with the request contained in the Secretary for Lands' minute of 22nd ultimo, on Aln. 91-3,610, the Crown Solicitor has reported on this case, and advises that the claim for compensation is not a valid one. It is presumed, however, that this report is only intended to deal with the legal aspect of the case.

In view of the report, the claim, in so far as it relates to compensation for want of peaceable possession, &c., need not, perhaps, be further considered; but it seems still to be a question for consideration whether, as an act of grace, some compensation should not be made for the expenses in which the Messrs. Guihan have been involved in connection with the matter, in view of the fact that the difficulty has arisen through what is now admitted to have been an error on the part of the Crown. As against this it must, however, be admitted that the result of the contest has been to put those gentlemen in legal possession of land to which they had a moral claim, though apparently not a legal one, as the land was not embraced by the metes and bounds of the grant.

If it is thought that any concession should be made, perhaps £25 would be a sufficient sum to allow.

E.A.B., 7/5/91.

In view of the Crown Solicitor's advice, embodied in his communication of the 4th instant, given in pursuance of the Minister's request of the 22nd ultimo, the case is resubmitted.—W.H.C., 29/5/91. F.H.W., 1/6/91.

The question is apparently narrowed down to that submitted in my minute of the 21st April last.—W.H., 2/6/91.

The advice given by the Crown Solicitor clearly shows that the Messrs. Guihan have no legal claim for compensation against the Crown. Notwithstanding such advice, I am of opinion that they have suffered slight loss and inconvenience, and although this is attributable to an omission on their part, I am disposed to give the case favourable consideration, and to direct, after carefully reviewing all the circumstances, that the parties directly interested may be allowed the sum of £50.—J.N.B., 4/6/91.

Mr. Conoley to inform.—E.B., 5/6/91. W. Lovegrove informed, 6/6/91.

No. 24.

Mr. W. Lovegrove to The Secretary for Lands.

Sir,

109, Pitt-street, 23 May, 1891.

I have the honor to ask attention to my letter of the 19th March, which concerned the claim of Messrs. J. and P. Guihan, and the verdict thereon of the Local Land Board at Nowra, on your reference of the matter to them. I have not been able to obtain an interview thereon.

I have, &c.,
W. LOVEGROVE.

No. 25.

No. 25.

The Under Secretary for Lands to Mr. W. Lovegrove.

Sir, Department of Lands, Sydney, 6 June, 1891.

In reply to your letter of the 23rd ultimo, as to a claim for compensation by Patrick and James Guihan, in respect of certain land in the parish of Cambewarra, county Camden, at Broger's Creek, I have the honor to inform you, by direction of the Secretary for Lands, that, although advised by the Acting Crown Solicitor your clients have no legal claim for compensation, he is nevertheless disposed to give the case favourable consideration to the extent of causing the sum of £50 to be paid to them on the understanding that such payment is accepted in full satisfaction of their claim against the Government.

I have, &c.,
WM. HOUSTON,
Under Secretary,
(*Per* W.H.C.)

No. 26.

Mr. W. Lovegrove to The Under Secretary for Lands.

Sir, 109, Pitt-street, 8 June, 1891.

I have the honor to acknowledge receipt of your letter of the 6th instant, offering £50 to the Messrs. Guihan in full satisfaction of the verdict against the Crown by the Local Land Board, at Nowra, for £167 4s.

I submit that the Government, having themselves referred the matter to the Local Land Board, and not having chosen to appeal therefrom, are estopped from taking any other step than satisfying the judgment of their Court, and that the only further steps are regulated by the 15th clause of the 48 Victoria No. 18.

I therefore trust that a cheque for the amount of verdict will be placed at the disposal of my clients, and have the honor to be,

Yours, &c.,
W. LOVEGROVE.

Mr. Lovegrove may, perhaps, be informed that this case was not referred to the Land Board for decision, but merely for investigation and report, with a view to enabling the Secretary for Lands to come to a decision, and that the Board did not make any award, but merely a recommendation to the Minister, and that therefore the case is not governed by clause 15 of the Land Act of 1884, which fact was recognised by him in his letter of 19th March, 1891, in which he asked an amount greater than that recommended by the Board should be allowed his client. He may perhaps be informed also that the case has received the fullest consideration, and that the decision already conveyed to him is final.—E.A.B., 18/6/91.

For approval.—W.H.C., 1/7/91. F.H.W., 2/7/91. W.H., 2/7/91. Approved.—J.N.B., 2/7/91. Mr. Swete, 3/7/91. W. Lovegrove informed, 3/7/91.

No. 27.

The Under Secretary for Lands to Mr. W. Lovegrove.

Sir, Department of Lands, Sydney, 3 July, 1891.

I have the honor to acknowledge receipt of your letter of 8th ultimo, regarding the claim of the Messrs. Guihan, and to inform you that the case was not referred to the Land Board for decision, but merely for investigation and report, with the view of enabling the Secretary for Lands to come to a decision.

The Board did not make any award, but merely a recommendation to the Minister.

The case is therefore not governed by clause 15 of the Land Act of 1884, and this fact was evidently recognised by you in your letter of 19th March, in which you asked that an amount greater than that recommended by the Board should be allowed your clients.

I am to add that the case has received the fullest consideration, and that the decision already conveyed to you is final.

I have, &c.,
WM. HOUSTON,
Under Secretary,
(*Per* W.H.C.)

No. 28.

Mr. W. Lovegrove to The Under Secretary for Lands.

Sir, 109, Pitt-street, 9 July, 1891.

I have the honor to acknowledge receipt of Mr. Capper's letter Aln. 91–5,075, in which I am informed that the reference to the Land Board in Nowra was only intended for the information of the Minister, and that he does not intend to act upon their award or assessment.

My clients regard the offer of £50 as an insult added to the injuries they have sustained at the hands of the Department and their neighbours for the last four years, and the only defence set up, viz., that it was their business to examine the deed when it was issued, does not apply to that period, when the Department, in face of the clearest proof on their own records, resisted the correction of the blunder; and what might have been in the commencement an unintentional mistake became a direct denial of rights, a persistent persecution causing daily pecuniary loss, and a defamation of their character by imputing that they had seized what was not lawfully theirs.

I have, &c.,
W. LOVEGROVE.

Messrs.

Messrs. Guihan's claim for compensation.—On 3rd instant Mr. Lovegrove was informed that this matter had received the fullest consideration, and that the decision already conveyed to him, viz., that while admitting no liability the Secretary for Lands was prepared to allow the Messrs. Guihan £50 as compensation, if they would accept that sum in full satisfaction of their claims, was final. So far the offer has not been accepted, and Mr. Lovegrove should perhaps be informed that if his clients do not accept the offer within one month it will be withdrawn. Submitted.—E.A.B., 13/7/91.

It is submitted that Mr. Lovegrove be communicated with as suggested.—W.H.C., 12/8/91. W.H., 13/8/91. Approved.—J.N.B., 13/8/91. Mr. Swete, 14/8/91. W. Lovegrove informed, 14/8/91. To be resubmitted in a month.—E.A.B., 14/8/91. End of August. Mr. Swete,—Any reply from Mr. Lovegrove or Guihan Brothers.—F.B.S., 14/9/91. Mr. Legg,—Nothing to date.—R.L., 18/9/91.

Mr. Lovegrove was, on the 14th August, informed that if the sum of £50 in full satisfaction of all claims that the Messrs. Guihan might deem themselves to have was not accepted within one month from that date such offer would be withdrawn. No reply has been received to that communication. Submitted Mr. Lovegrove be now informed that the offer is accordingly withdrawn.—E.A.B., 18/9/91.

For approval.—W.H.C., 18/9/91. F.H.W., 19/9/91. W.H., 21/9/91. Approved.—J.N.B., 23/9/91. Inform.—E.A.B., 23/9/91. W. Lovegrove informed, 24/9/91.

No. 29.

The Under Secretary for Lands to Mr. W. Lovegrove.

Sir, Department of Lands, Sydney, 14 August, 1891.

In reply to your letter of 9th ultimo, regarding Messrs. Guihan's claim, I am directed by the Secretary for Lands to inform you that so far the offer of 3rd ultimo has not been accepted, and that unless your clients accept the said offer of £50 as compensation within one month from this date the same will be withdrawn.

I have, &c.,
WM. HOUSTON,
Under Secretary,
(*Per* W.H.C.)

(SECOND SESSION.)

CONDITIONAL PURCHASES OF NEIL GALLAGHER, ORANGE.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 15th September, 1891, "*with power to send for persons and papers, to inquire into and report upon the conditional purchases of Neil Gallagher, Orange, conditional purchase* 84–166 *of* 96 *acres, and* 84–169 *of* 84 *acres, made at Orange in* 1884,"—have agreed to the following Report :—

Your Committee having examined the witnesses named in the list* (whose evidence will be found appended hereto), find as follows :— * See list, page 4.

1. That the conditional purchases, the subject of this inquiry, were made by Neil Gallagher on the 23rd and 30th days of October, 1884, and contain an aggregate area of 180 acres, and the evidence of Gallagher is to the effect that when he made the applications he was told by the Crown Lands Agent, at Molong, that the land was available for conditional purchase, but (Question 339) the Surveyor-General makes the following minute—"It is recommended that these conditional purchases be declared void, as the land described is situated within the population reserve of Cargo, census 1881 ;" this was approved by Mr. Secretary Farnell, 29/1/85.
2. That sometime thereafter (Question 347), Mr. Secretary Garrett made the following minute :—"Approved that the C.P's. may be included for next Validation Bill, no further action to be taken in the meantime"—28th May, 1885. Subsequently, about 15th July, 1889, Mr. Garrett's minute was suspended, and the case sent to the Land Board, to inquire if Gallagher had resided on the subject C.P's., but as the residence had previously been performed upon the original C.P. years before, and as no residence was required on the A.C.P's. under consideration, your Committee cannot see why this inquiry was necessary.
3. That the population area of Cargo was gazetted 20th March, 1885, (Question 334) which is nearly five months after Gallagher had taken up the land, and that previous to this the Department had not published in the *Gazette* the population area, but had relied upon the census returns.
4. That at clause 20, Land Act 1880—being the Act under which the selections now under inquiry were made—that "the then last census shall mean the then last census published by authority of the Government," which your Committee takes to mean publication in the *Gazette ;* and as this was not done until nearly five months after Gallagher made his applications, such proclamation cannot apply to Gallagher's conditional purchases.

Your Committee therefore recommend that the conditional purchases, the subject of this inquiry, should be confirmed or legalised.

ROBT. BARBOUR,
Chairman.

No. 1 *Committee Room,*
Sydney, 25 *November,* 1891

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 6 *OCTOBER*, 1891.

MEMBERS PRESENT:—

Mr. Barbour, | Dr. Ross,
Mr. Hugh Taylor, | Mr. Torpy.

Mr. Barbour called to the Chair.
Entry from Votes and Proceedings appointing the Committee *read* by the Clerk.
[Adjourned till To-morrow at half-past *Ten* o'clock.]

WEDNESDAY, 7 *OCTOBER*, 1891.

MEMBERS PRESENT:—

Mr. Barbour in the Chair.
Dr. Ross, | Mr. Torpy,
Mr. York.

Neil Gallagher called in, sworn, and examined.
Witness withdrew.
James Powers called in, sworn, and examined.
Witness withdrew.
Alfred Salwey (*Clerk, Lands Department*) called in, sworn, and examined.
Witness withdrew.
[Adjourned till To-morrow at half-past *Ten* o'clock, sharp.]

THURSDAY, 8 *OCTOBER*, 1891.

MEMBERS PRESENT:—

Mr. Barbour in the Chair.
Mr. Brunker, | Dr. Ross,
Mr. Torpy.

Alfred Salwey (*Head of Conditional Sales Branch, Department of Lands*) called in, sworn, and examined.
Witness *handed in copy of Depositions taken before the Land Court at Cudal in the matter of the forfeited C.P. of Neil Gallagher.*
Witness withdrew.
Ordered,—That C. J. Saunders (*Chief Draftsman, Lands Department*) be summoned to give evidence next meeting.
[Adjourned till Thursday next at half-past *Ten* o'clock, sharp.]

THURSDAY, 15 *OCTOBER*, 1891.

MEMBERS PRESENT:—

Mr. Barbour in the Chair.
Mr. McFarlane, | Mr. Torpy.

Charles James Saunders (*Chief Draftsman, Lands Department*) called in, sworn, and examined.
Witness withdrew.
Committee deliberated.
[Adjourned till Wednesday next at *Two* o'clock.]

WEDNESDAY, 21 *OCTOBER*, 1891.

MEMBERS PRESENT:—

None.

[In the absence of a quorum the meeting called for this day lapsed.]

WEDNESDAY, 25 *NOVEMBER*, 1891.

MEMBERS PRESENT:—

Mr. Barbour in the Chair.
Dr. Ross, | Mr. Torpy.

Chairman submitted Draft Report.
Same read and agreed to.
Chairman to Report to the House.

LIST OF WITNESSES.

5

1891.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

CONDITIONAL PURCHASES OF NEIL GALLAGHER, ORANGE.

WEDNESDAY, 7 OCTOBER, 1891.

Present:—

MR. BARBOUR, DR. ROSS, | MR. TORPY, MR. YORK.

ROBERT BARBOUR, ESQ., IN THE CHAIR.

Mr. Neil Gallagher sworn and examined:—

1. *Chairman.*] You are a selector in the Orange Land District? No; in the Molong District; Orange was a mistake.
2. When you went there, did you buy out another selector? Yes.
3. What was his name? Martin Credland.
4. He was an original selector? Yes.
5. Those two selections that you have taken up were additional conditional purchases? Yes.
6. In virtue of the original which you bought from Credland? Yes.
7. When did you take up the first of these additionals? I believe in October, 1884.
8. What was the area of that selection? 96 acres.
9. Then you took up a second? Yes; on the following Thursday, October 31.
10. What was the extent of that? 84 acres.
11. That makes 180 acres altogether? Yes.
12. How much do you hold altogether, including the one you bought from Credland; how much is the total area of your holding? About 320 acres.
13. Is that all the land that you have? Yes.
14. How long is it since you bought the selection from Credland? I should say about nine or ten years.
15. Could you tell us what occurred when you went to the Lands Office to take up the first of these additional selections? I wanted to take up another piece of land in another part of the country and the Land Agent said that it was not available.
16. You applied to the Land Agent at Molong on a Lands Office day? Yes.
17. And you told him that you wanted to take up another piece of land? Yes.
18. Did you tell him where it was? Yes.
19. Was it away from your present holding? Yes, a good distance away.
20. What did he say? He said that the land I wanted was not available.
21. What more did he say? Then he said, "Here is land that is available."
22. Did he not say something about your not requiring to live upon it? I asked him if there was any occasion for me to reside on the land. He said "No."
23. And that you could take it up as an additional? Yes, an additional conditional.
24. He it was who told you that the land was open to selection? Yes.

Mr. N. Gallagher. 7 Oct., 1891.

25.

Mr. N. Gallagher. 7 Oct., 1891.

25. In consequence of his having told you that, did you take up the land? Yes; on the strength of that I took up the land.
26. On the following Thursday you took up another piece? Yes.
27. So far as you knew at that time the selections were good selections? Yes.
28. When was it that you first heard from the Department that there was some mistake about the land being open,—how long after your having taken up the selections? I could not exactly tell you the date, but it was a good while afterwards.
29. Well, about? I should say about four months afterwards.
30. You knew nothing about anything being wrong until about four months after that? No, I did not.
31. What then? I believe they said that a portion of the 96 acres was on the population reserve.
32. If that was bad, then the other would fall with it—the other was beyond the population area? Yes.
33. So that was equal to their both being bad selections according to their account to you? Yes.
34. What did you do after that? I wrote a letter to the Department about the matter. I was always encouraged in the belief that I would get the land. I went on with improvements, and I put about £400 worth of improvements on the land the last four years.
35. On these two pieces? Not on the two. The land agent told me there was no occasion for it.
36. You mean altogether? There was about £800 altogether on the lot.
37. What made you think the selections were good? I reckoned that by the justice of the law they were good.
38. You have remained in possession of the land ever since? Yes, and have never had any refund of the money that I paid at Molong to the land agent.
39. When did you first know that the Department found out that it was part of the population area? I never knew anything about it till the letter came.
40. You are positive that the land agent told you that the land was open to selection? Yes, I am positive of that.
41. Would you have taken up the land if you had had any doubts about it? No, I would not. If I had known that I would have been put to this trouble about it I would not have taken it up, for I reckon that it has already cost me the full value of the land.
42. Ever since that time, off and on, you have been corresponding with the Department with reference to it? Yes.
43. Some time after that you applied to Dr. Ross to represent the matter to the Minister? Yes.
44. I believe that the Minister at that time was Mr. Garrett? I believe so.
45. Did you ever see the Minister yourself upon the matter? No, I did not.
46. What did the Minister do about your selection? Sometimes I was encouraged about the land, and at other times I was not.
47. Did Mr. Garrett agree to validate your selection? I think so; it was measured for me by the Government.
48. Coming a little farther on, you have been continually in correspondence with the Lands Department about it? Yes.
49. Do you know anything about Mr. Garrett having consented to place this conditional purchase in a Validating Bill making it legal? Yes.
50. Do you know that Mr. Garrett, when he was Minister for Lands, agreed with Dr. Ross that your selection should be made valid by being put in the first Validating Bill that was to be brought before Parliament? Yes.
51. That was agreed upon? I believe so.
52. Was it validated? I could not say.
53. Did you get some letters from the Department about your representations not being correct, or something of that sort? Yes.
54. Was it represented by them that you were not residing on the land? Yes.
55. Do you remember that it was in consequence of that that the Department said it could not be validated? I cannot tell you.
56. Have you resided on the land from the time you took it up until now, and have you had it in your possession? I have had it in my possession ever since.
57. It is part of your farm? Yes.
58. You have been living on the original selection ever since you took up this land? No, I have not.
59. Were you away part of the time? I resided there about 4½ years.
60. The last 4½ years? Yes; but there was a tenant on it all the rest of the time. I let it then, but the other part of the time I resided on it myself.
61. At the time you took up the additional selection were you not living on the land then? No; I was not.
62. You had it, then, rented to somebody else? Yes.
63. You went to reside on it yourself some time afterwards? Yes.
64. You have been there about 4½ years? Yes.
65. That would be—you were about two years away from it? More than that. It is about ten years since I bought the land.
66. I mean the land you took up last? Yes; about two years.
67. All the conditions had been fulfilled on the original before you bought it from Credland? Yes.
68. Then the residence condition was completed on the original before you took up the additional? Yes; the conditions were fulfilled about three years before.
69. Have you considered yourself that it was legitimately your own land—that you were holding it legally all the time? Yes; legally all the time.
70. That was your belief? Yes.
71. In consequence of that you have expended nearly £800 on this land and on the original? Yes.
72. I understand that you have a large family? Yes.
73. How many children? Ten.
74. And if this land were taken from you, what would be the effect? I believe the Government would have to keep some of the youngsters.
75. It would have the effect of ruining you if the land were taken from you? Yes, it would, because I am not able to work now the same as I used to be.

Mr. N. Gallagher. 7 Oct., 1891.

76. Have you done everything in your power to fulfil the conditions of the law ever since you took up the land? I have.
77. If there was any error in connection with your taking up the land, was the error the fault of the land agent, or was it your own fault? It was not my fault.
78. If the land agent made you believe that that land was open to selection—if that was a fault it was his fault, and not yours? It was his fault, not mine.
79. *Mr. Torpy.*] What was the name of the land agent? Jefferies.
80. Where does he live? I don't know, but he then lived at Molong.
81. Is this land in the very centre of the Cargo gold-field? No; it is on the outside.
82. Has there been any gold found on the land? No; I do not believe there is as much gold as would blind a man.
83. Has any gold been struck on the edges of your boundaries? No. There is no appearance of it—no holes sunk there.
84. You know what I mean of course;—has any gold been traced into your ground? No.
85. From any point? No; not from any point.
86. *Mr. York.*] Do you know if the land agent had had much experience;—was he an old man? He ought to have experience, for he has been pretty nearly all over the world.
87. I mean in this particular business of land agent? I think so, by the appearance of the man. He appears to be a very sharp, keen man.
88. *Chairman.*] What I understand you to say is this: that you went to the land office to take up some land? Yes.
89. That you told the land agent what land you wanted? Yes.
90. And the land agent replied to you, what? That the land which I wanted was not open to selection; that it was cut up in blocks.
91. Did he point out to you something that was open? Yes; he said, "here is land open to selection."
92. Is that the land which you took up? Yes, the very land.
93. It was his having drawn your attention to that which made you select that very land? Yes; and I thought it would answer my purpose best too, as it was an addition to my original.
94. *Mr. York.*] Where did you intend to select prior to this;—what position was that other land in, in reference to this land? It was a good distance away from it.
95. Did it affect this land at all? No.
96. *Chairman.*] There has been a good deal of bother with other people about this population reserve, and about this gold-field reserve, as well as with you? Yes; and to my knowledge they all got their land.
97. Tell us the names of the parties whose land has been validated or made good? Robert Mackay got his.
98. Do you know how much land he has? No; I cannot tell you.
99. Was his in trouble too? Yes; I know it was in trouble.
100. Was it the same trouble as with yours—that it was on the population reserve or the gold-field reserve? I cannot say that.
101. Was Mackay's land on the reserve? Yes it was. There is only the road between it and my land.
102. Was it on the same reserve? Yes.
103. Was it in consequence of its being on the same reserve that it was in trouble? That is so, I believe.
104. Was Mackay's selection validated? I cannot tell you.
105. Was it made correct? Yes.
106. Made legal? Yes.
107. Is there anybody else besides Mackay? There is Michael Teefy.
108. *Dr. Ross.*] Teefy has got his land? Yes.
109. *Chairman.*] Was Michael Teefy's trouble similar to yours—that the selection was on the reserve? Just the same as mine.
110. Has that been put right? Yes.
111. Was there anybody else besides those two? Yes, Wetherall, or his wife.
112. That was a selection of 160 acres? Yes.
113. Do you know his wife's name? No, I cannot tell you.
114. Was that in trouble the same as yours—was it on the reserve the same as yours? Yes, but whether it was the gold-field reserve or population reserve I cannot tell you.
115. Either the one or the other? Yes.
116. Has that been made legal? Yes.
117. It has been corrected, and they have possession of the land? Yes.
118. Was there anybody else? There was John Livermore.
119. Where was he;—on the goldfield reserve or on the population area? I cannot say which.
120. Was that land in trouble? Yes.
121. Has that been corrected? Yes.
122. Is it your opinion that, because those have been corrected, yours, being in the same category, should also be corrected? I reckon that I was more entitled to get the land than any of them.
123. Do you know anything about any of those four parties having made a second selection of their land, taken it over again? Yes; I believe Teefy has done so.
124. Do you know anything about the others? No; I do not.
125. *Mr. York.*] This portion here [*pointing to the plan*] is still a gold-field reserve—it has not been cancelled yet? No; it has not been cancelled.
126. I mean the portion in yellow;—has that been cancelled? Not to my knowledge.
127. You must have received, I suppose, from the Department some intimation that your applications were not valid—that you were within the population area? I do not remember that.
128. What intimation did you get from the Department that your applications would not stand good, or in plain terms that you could not get the selections? I received one letter saying that the land was on the population area—that was all.
129. *Chairman.*] Did you receive a refund voucher in the February after you had taken up the land? I know that a paper came, but I do not know what it was.
130. Did you ever use it;—did you lift the money that it was a voucher for? No.

Mr. N. Gallagher. 7 Oct., 1891.

131. Then the money which you lodged when you took up the land is still in the Treasury? Yes.
132. *Mr. Torpy.*] Did they ever offer to refund the money which you had paid? Not to my knowledge.
133. Did you ever receive a letter saying that you could have your money refunded to you? I never saw such a letter.
134. Did the letter which you received contain an order for you to get your money back? I believe there was something to that effect in it, but I did not read it.
135. *Mr. York.*] What induced you then to go on in the face of that;—did you not make any further inquiries about it after you had received that? No.
136. Why did you not;—did you not know that they had greater power than the land agent who told you that you could go on this land? It was my opinion that there was someone else interfering with the land besides the Government.
137. *Mr. Torpy.*] What is the distance from the edge of your land to the town of Cargo? About 3 miles.
138. *Mr. York.*] Did you ever hold selections prior to this? Yes.
139. *Dr. Ross.*] The whole of the two selections to which you refer—the additional—are not actually situated on the population area? No.
140. Only part of them? Yes.
141. Do you know how much? I cannot tell you the quantity.
142. Have you any approximate idea? I was given to understand about 34 acres out of the whole lot.
143. *Mr York.*] You say that you put about £400 worth of improvements on this land—how do you reckon the £400? In fencing and clearing.
144. On each portion? On the whole lot of it—I improved it all.
145. Have you any improvements on those portions in dispute—portions 63 and 64? No there were not.
146. *Chairman.*] Were not these two last selections which you made, fenced in? Yes, they are fenced in.
147. Do you not call fencing improvements? Yes, I do now.
148. I understood you to answer Mr. York that you had no improvements on the land? I thought that he meant years back.
149. *Mr. York.*] You say you have expended £400,—I want to locate where it has been spent; has it been spent on the latter selection or does it include the whole area? On the 96 and 84 acres. There are about £100 worth of improvements at the present day.
150. Besides fencing? No, including fencing.
151. *Chairman.*] Can you tell us when that fencing was erected? I cannot tell you, but it is a good while ago.
152. Was there not a land board inquiry? Yes; it is about two or three years since I put the fencing on the land.
153. When was the inquiry that you speak of? About eighteen months ago.
154. Was there any inquiry before that? No.
155. Up to that inquiry did the Department ever interfere with you in the holding of this land—did they send you any letters? Yes; I received a letter from the Department.
156. You think that in the February after you selected there was a voucher in a letter which came? Yes.
157. From that time until the inquiry did they try to put you out of the land? Not that I know of.
158. Was it between those two times that Mr. Garrett agreed to validate your land? I believe it was.
159. Do you remember how long it was ago that Mr. Garrett agreed to do that? I should say it must be three years ago—about that.
160. *Dr. Ross.*] How much money in the shape of instalments and interest have you paid? I have paid three instalments.
161. How much? £9 each time.
162. *Chairman.*] On these two pieces? Yes.
163. *Dr. Ross.*] There is nothing in the shape of arrears on the land? No.
164. *Chairman.*] You have paid everything up to this date? All but one instalment, which I did not pay.
165. *Mr. York.*] Is the land valuable; what is it valuable for—farming or grazing? Only for grazing.
166. *Chairman.*] Ordinary grazing land, is it? Yes.
167. There is nothing very valuable about it? No.
168. *Mr. York.*] How does it compare with the adjoining land—Hurkett's, I think it is? Yes.
169. What sort of land is Hurkett's? It is about the same sort of land—some good and some rough.
170. Is there any water on this land of yours? No; only the water in the tanks I have made on it.
171. *Chairman.*] Have you made any tank upon it? Yes.
172. Is it a big tank? No, about 250 yards.
173. Is there always water in it? Not always; in a dry year there would not be.
174. *Mr York.*] In an ordinary season would it be full enough for your stock? Yes, it is full now.
175. *Dr. Ross.*] What did the tank cost to construct? I think about £18.
176. *Chairman.*] Is the tank on a portion of these selections? Yes, on the 84 acres.
177. When was it put there? I had a great portion of it made when the land inspector was there about eighteen months ago.
178. Had it been begun a good while before then? No.
179. When was it finished? About six months ago.
180. *Dr. Ross.*] You are quite certain that it was in consequence of what the land agent told you about the non-residence on the land that you took it up? Not at all, He told me there were no improvements required to be put on it. I said I would enclose it for the use of the cattle and horses.
181. That is not the question—you know you bought a piece of ground from Credland? Yes.
182. And when you went to the land agent to take up another piece of ground, not in that locality, he told you that you could take up this additional? Yes.
183. And at the same time he told you that it was not necessary to reside on these two portions which you added to the original belonging to Credland? Yes.
184. You are quite sure of that? I am positive of that.
185. *Mr. York.*] Are you still holding some other selections that you spoke of—you said that you had selected before; are you still holding those selections? No; I am not.
186. *Chairman.*] How long is it since you parted with your previous selections? About eleven or twelve years ago.

Mr. N. Gallagher. 7 Oct., 1891.

187. Was it after that that you bought this land from Credland—after you parted with your former selections, or before you did so? I bought this land before I parted with the selections.
188. How long afterwards did you part with the selections? About twelve months.
189. But you had parted with your original selections before you took up these two additional ones? Yes.
190. *Mr. York.*] Did you ever reside at all on this land—on the original or any portion of it? Yes; I lived about four and a half years on the original,
191. You are a married man and you made it your *bonâ fide* home? Yes.
192. You lived here I suppose (*pointing to the plan*), where it is marked "hut," up in that corner? I lived somewhere on the corner here.
193. *Chairman.*] How old is your youngest child? About eighteen months.
194. And the eldest? About twenty years.
195. *Dr. Ross.*] Are you living on any portion of this land now? I am living on the original now.
196. Is the original, together with the two additionals, all enclosed within one outer fence? Yes; it goes right round them, and the land is divided into six paddocks.
197. *Chairman.*] What do you do with the land? I cultivate about 100 acres.
198. And graze the remainder? Yes.
199. Do you cultivate any part of the two last selections which you took up? No; none at all.
200. You only use that for grazing? Yes, on account of its being rough; it is too mountainous.
201. Is there anything else which you would like to tell us? I do not think I have anything further to say.

Mr. James Powers sworn and examined:—

Mr. J. Powers. 7 Oct., 1891.

202. *Chairman.*] What are you? A storekeeper.
203. At Cargo? Yes.
204. Do you know Gallagher? Yes.
205. Do you know his land? Yes.
206. How long has he lived in that neighbourhood? He has been living in and around there for the last seventeen or eighteen years—that is as long as I can remember. It might be longer, for all I know.
207. Do you remember when he bought the land from Credland? No, I do not.
208. Do you know anything about his taking up the two selections this inquiry is about? No; I do not remember his taking them up.
209. You have done some correspondence for him in connection with his land? A little.
210. It is through that that you have acquired any knowledge which you possess about the matter? Yes.
211. Do you know him to be a *bonâ fide* selector? Yes.
212. He is living on the land with his family? Yes. He is not living on the land the inquiry is about.
213. You mean the piece—they are all connected together? Yes; they are all connected together.
214. They are all in a ring fence? The land the inquiry is about is fenced in with five and six wires and a split fence.
215. And adjoins his other land? Yes; that has a dog-leg fence—part of it—and some two rails.
216. What does he do with the land? He uses it for grazing purposes, I think.
217. Any part of it for other purposes? I think he has about 100 acres cleared.
218. Can you tell us anything more about Gallagher;—do you know that he has put improvements on the land? Yes.
219. What is your estimate of the total value of the improvements which he has put on the land? I should say that if a man were properly paid for his labour the value of those improvements would be £700 or £800.
220. Altogether? Yes.
221. Are you aware that there is some trouble about the two last selections—about there being on a population area? Yes.
222. You heard about that? Yes.
223. Do you know that there were others in similar circumstances? Yes; I know two or three around Cargo.
224. Have they had their selections put all right? Yes.
225. Can you give us their names? Sharkey, Teefy, and Weatherall.
226. Was there not a Livermore? I heard something about that, but I cannot say positively.
227. Those selections were all in trouble, something like Gallagher's? Yes.
228. Do you know if they are exactly the same? I know Teefy took up his on the reserve. He sent his money to the Department, and they offered to refund it several times, but they have never refunded Gallagher's money.
229. So far as you know? Yes.
230. At all events, it is the case with Teefy that the money has often been sent to him, and his selection has at last been legalised? Yes.
231. Do you know whether it was on the population area or on the gold-fields reserve? I think part of it was a water reserve.
232. Was Weatherall's selection taken up in his own name, or in the name of his wife? I am not quite sure, but I fancy it was in the wife's name.
233. Do you know her maiden name? No, I do not; I think her christian name was Maria.
234. Is not Weatherall her husband? Yes; he went back to India and left her there.
235. Can you tell us anything more about Weatherall's selection? No, I cannot.
236. Can you tell us anything more about those that have been legalised? No, only that I know they were legalised.
237. Is the opinion in that neighbourhood in favour of this poor man's selection being also legalised? Yes.
238. The general opinion is that his should be legalised by the Minister as the others have been? Yes. The only objector, I think, was Mr. Sherwin, but he is not in the district now; he has sold out. I was talking to the manager of the station of Mr. Sherwin's successors, and he said that he would have no objection.
239. *Mr. York.*] Who are Sherwin's successors? The Atkinson's.
240. What have they to do with the matter? Their station adjoins Gallagher's property. 241.

Mr. J. Powers. 7 Oct., 1891.

241. *Chairman.*] What is the name of the squatter there? Atkinson.
242. Is it in consequence of his obstruction? No; it was in consequence of his predecessor's obstruction.
243. That Gallagher got into trouble? Yes.
244. Did he make a complaint to the Department about it? I understood that he did.
245. You wrote some letters about it? Not to the Department.
246. To whom did you write? All the correspondence that I have had in the matter has been with Dr. Ross.
247. Did it make any reference to the Crown lessee's obstruction of Gallagher? No.
248. *Mr. York.*] How long have you been living at Cargo? Eighteen years.
249. *Chairman.*] Your father was in business there before? Yes.
250. And you have succeeded your father? Yes.
251. *Mr. York.*] Was the trouble that has taken place with regard to other selections, prior or subsequent to Gallagher's application? Before Gallagher's application.
252. *Chairman.*] Do you know whether these other properties, which have been legalised, were in occupation—do you know anything about the state of matters? No; I cannot say.
253. You do not know how long they lived on the land? No.
254. *Dr. Ross.*] You have stated that there were 100 acres cleared? About that.
255. On what portion is the land cleared? On the original.
256. That is Credland's? Yes.
257. There is no clearing done on the two pieces now in dispute? Well, there is a lot of timber cut down there and cut up. I could not say how many acres of timber Gallagher has cut down. He has put a dam on the land as well, which I should say would measure about 250 yards.
258. What would be the cost of constructing the dam? About 18d. a yard.
259. *Mr. York.*] You reckon the whole of the improvements, as distributed over the whole area, to be worth about £700? Judging roughly I should say between £700 and £800.
260. In what way would you make that up? If you clear 100 acres of land.
261. Is that fit for cultivation? Yes; I noticed only two trees on it.
262. Is that all cultivated? Pretty nearly all.
263. *Dr. Ross.*] Is any portion of the disputed land ring-barked? I think part of it is ring-barked—a few acres here and there—perhaps 10 or 12 acres in one piece.
264. *Mr. York.*] What sort of residence is there on Credland's? Just the old residence.
265. I mean what kind? Gallagher has, I understand, a large family living with him? Yes.
266. Do they alway live with him? Yes.
267. *Dr. Ross.*] What would you estimate is the value of the improvements on the two portions now in dispute—that is, the dams, the ring-barking, the clearing, and the outer fence? I should say about £150.
268. On the two lots? Yes.
269. *Chairman.*] Do you know who erected the fencing on the two portions in dispute? I understood that Gallagher did, but I could not say positively whether he did or did not. I know that he put up all the new fence that is there now—the fence that I went round.
270. When was that put up? The last couple of years, I think. I could not say exactly, because I do not know.
271. *Dr. Ross.*] Does this land adjoin any other selection? Yes, Hurkett's selection.
272. In regard to the fencing—If he put up some fencing, would the adjoining selector not have to pay half the cost of it? I do not know the regulations about that.
273. *Chairman.*] Does Gallagher claim the whole of the fencing, the dam and the other things that you speak of? I do not know whether he claims the whole of the fencing or not, but I know that he claims the dam and the clearing which he has done.
274. You know part of the fencing that has been put up? Yes.
275. The new fence that you spoke of? Yes. That is very nearly two miles I think.
276. Do you know that Gallagher is a very industrious colonist? Yes. I can say that.
277. A hard-working man? Yes.
278. Has he a very large family? I think he has ten children.
279. The greater part of them helpless? Yes, all young.
280. Do you believe that Gallagher has been holding on to this land in the belief that he held it legitimately? I could not say. He has always been holding on I think in the hope of getting a title to it on the ground of what the land agent at Molong told him.
281. Would it be a very great misfortune if it were taken from him? It would. It would mean ruination to him.
282. There are about 180 acres in these two pieces? Yes.
283. With the improvements on them, what would you think that the two pieces in dispute would be worth—what would be the value of the land to Gallagher now? I should say £400.
284. In its natural state what would it be worth? I should say about a pound an acre.
285. Would a loss of £400 be a pretty considerable blow to a man in the same circumstances as Gallagher? Yes.
286. Do you know about his other land being mortgaged? I could not say.
287. Do you know that a bank has a mortgage over it? I believe that he has had money from the bank.
288. You conclude that if the bank took the original, and if the Crown took the additionals from him, he and his ten children would be homeless? Yes, I do.
289. If this misfortune comes upon him, do you think it is really any fault of his own? No, I do not.
290. If he has committed any fault at all do you think it is an error of judgment—it is not intentional? No.
291. No wickedness about it? No.
292. It is innocence entirely, if any fault has been committed? Yes.
293. Can you tell us anything about the impression that was in the locality at the time he made the selection—did you know anything about the population area? No.
294. You do not know whether the people knew of this population area or whether it was a subsequent discovery? I could not say.
295. *Mr. York*] Did you know that the land in question was in a gold-field? I think there is a small part of it in the gold-field.
296. I mean at that time? Yes.

Mr. J. Powers. 7 Oct., 1891.

297. Do you think there are any leads of gold running through this land? There have never been any leads worked into it.
298. Or round it—or round Hurkett's—any of the farms? Yes: there has been a run of gold on this gum flat [*pointing to the plan*] three or four yards away from his house, but not near this property.
299. So far as your local knowledge goes, it is simply valuable as grazing land, and poor at that? There are parts of it which could be put under cultivation with little trouble.
300. But ordinarily you call it grazing land? Yes.
301. *Dr. Ross.*] You say that Gallagher has ten children? Yes.
302. Are any of them able to assist him on the farm? He has one boy, but I do not think he is able to do much. He is a delicate looking boy.
303. No member of the family is able to assist him in any way? No.
304. The eldest child is rather delicate? Yes.
305. Those two portions you refer to as used for grazing purposes are rather mountainous? Yes.
306. Barren? Not exactly barren, but pretty hilly.
307. He could not well cultivate it? No. He might get little patches to cultivate, perhaps 5 or 10 acres in one spot, and 5 or 10 acres in another.
308. Amongst the inhabitants of the locality is there any dissatisfaction in regard to Gallagher getting the land? Not that I am aware of.
309. You never heard of any? No.
310. *Chairman.*] The party that was said to be opposed to it has left the district? Yes.
311. Are the present lessees opposing him in any way? No.
312. *Mr. York.*] On what grounds were the original lessees objecting? I think they used the land for a sheep run.
313. They were objecting to it in their own interest, and not in the interest of the public? Yes, in their own interest.
314. Has there been any public agitation against this man getting the land? No.
315. Amongst the diggers or any people of that sort? No.
316. Do you know anything about this land before Gallagher took it up? No, I do not.

Mr. Alfred Salwey sworn and examined:—

Mr. A. Salwey. 7 Oct., 1891.

317. *Chairman.*] What are you? Head of Conditional Sales Branch, Department of Lands.
318. As you know, this is an inquiry into Neil Gallagher's additional conditional purchases, made at Molong in the year 1884? Yes.
319. Will you tell us the date on which he made the first additional conditional purchase? On the 23rd October, 1884.
320. What is the number of that? Portion 63.
321. And the number of the conditional purchase of 1884? One hundred and sixty-six.
322. And the acreage? Ninety-six acres.
323. The second? Additional conditional purchase, made on the 30th October, 1884, portion 64.
324. The number of the conditional purchase? 84–169.
325. And the acreage? Eighty-four acres.
326. Can you tell us from the records whether at the time that additional conditional purchase was made the population census of 1881 had been proclaimed in the *Gazette*;—in other words, when was the population census of Cargo proclaimed? It was long before that; but I have not got the date here.
327. Can you tell us when the population area or the town reserve was proclaimed? I know it is not with these papers.
328. Have you any reason to doubt what Gallagher said, namely, that at the time he took up these two additional conditional purchases it was not known that the land was in the population area? I have reason to doubt it.
329. Have you anything among the papers to show that it was a population area at the time he made the selection? I can show that other people applied for land in the locality, and were refused, it being in the population area.
330. Before he made these applications? Long before—in the year 1882.
331. You believe that the township reserve was made prior to 1882? Yes.
332. And if he was under the belief that what he selected was Crown lands, open to conditional purchase, he was under a mistake? Yes.
333. You have nothing amongst the papers to show that the population area was gazetted at the time he made the selection? No, I have not.
334. Do either your plans or the parish plans show the date of the gazetting of the population area? The parish plan in the Department of Lands shows that the population area of Cargo was proclaimed on the 20th March, 1885.
335. I suppose that the land agent would only be made aware of the population area by the proclamation;—he would not be aware that it was a population area before the proclamation, would he? I could not answer that question.
336. Can you tell us what is the objection of the department to confirming this selection? One great objection is that the adjoining holders who have applied would come into the same position. They have already been refused even for the very same land.
337. *Mr. York.*] Who where those? There is one application by Miss Sherwin, I believe.
338. *Dr. Ross.*] They have left the district? Yes.
339. *Chairman.*] At the time you disallowed these two additional conditional purchases, what were your reasons for disallowing them? This is the minute by the Surveyor-General, approved by Mr. Secretary Farnell:—"It is recommended that this conditional purchase be declared void, as the land described is situated within the population reserve of Cargo, Census 1881." Approved by Mr. Farnell on the 29th January, 1885, and a refund voucher issued to Callagher on the 17th February, 1885, that is, both prior to the proclamation of the reserve according to the maps.
340. Then I take it from that date that the department was aware at that time that the population area was fixed by the census of 1881 prior to that? Yes, prior to that.

341.

Mr. A. Salwey. 7 Oct., 1891.

341. Was there anything to let the public be aware that such was the case until the proclamation of March, 1885? I could not answer that question; there may have been.
342. Do you know of anything that gave a notice to the public what the population area was in consequence of the Census of 1881? No; I do not know of anything.
343. So far as you know, the first public notice is the proclamation in the *Gazette*, which you have referred to, dated March, 1885? That is all I know of.
344. The whole of the first of these additional conditional purchases would be covered by population area? Yes.
345. If that was rendered void, the other would fall with it? Must fall with it, because it would separate it from the original.
346. There is no fault with the last additional conditional purchase except in its connection with that? It is also within the boundaries of the population area as proclaimed in 1886, and also within a gold-field reserve—part of it, nearly all of it.
347. Can you give us the date from the papers of the approval of the Minister, Mr. Garrett, to the putting of these two additional conditional purchases in the Validating Bill? Yes. "Approved that the conditional purchase may be included for next Validation Bill, no further action to be taken in the meantime." That was approved by Mr. Garrett on the 28th May, 1888.
348. Some time after that was a complaint lodged by someone which caused the Department to reconsider the matter? Two letters from Sherwin.
349. Was Sherwin the Crown lessee? I could not tell that.
350. Was there anything in the letters that would lead you to believe that he was the Crown lessee? Perhaps I had better read his letters.

THURSDAY, 8 *OCTOBER*, 1891.

Present:—

MR. BRUNKER, | DR. ROSS,
MR. TORPY.

ROBERT BARBOUR, ESQ., in the Chair.

Alfred Salwey recalled and further examined,—

Mr. A. Salwey. 8 Oct., 1891.

351. *Chairman.*] Shortly before we left off taking your evidence, yesterday, you said that Mr. Garrett had made a minute on the papers stating that Gallagher's land was to be included in the Validating Bill? Yes.
352. The next question I put to you was—Why was that not carried out; but you preferred to look over your papers before answering the question; I now put the question to you again? There are two long letters from Mr. Sherwin.
353. Do you know who he is? No, I do not.
354. He dates his letters from Cargo? I believe he is the Crown lessee.
355. Why was Mr. Garrett's minute, that the land was to be included in the Validating Bill. not carried out? On account of protests from G. D. Sherwin and Henry Hurkett.
356. What is the foundation of these protests? The foundation of both of them is that the land has been applied for previously by other people and refused by the Lands Department.
357. Does he give the reasons why they were refused? Yes; being within the population boundary.
358. And in consequence of these letters being received by the Lands Department did they take some further action with regard to it? Yes.
359. What was that action? The Minister referred the case to the Land Board to hold an inquiry.
360. Was the inquiry held? The inquiry was held.
361. What is the tenor of the Board's report; in the first place, however, I should like to ask you was the Board instructed as to what was to be the bent of the inquiry; let us know what the minute is, instructing the Board?

The statements made by Mr. Sherwin directly contradict those of Dr. Ross, M.P., on which it was determined the conditional purchases should be validated. It is a question whether before proceeding further in the matter it would not be advisable to cause an inquiry to be made by the Local Land Board as to the circumstances of Gallagher's alleged residence and improvements.

That was approved by the Minister on the 15th July, 1889.
362. Was the Lands Department satisfied that Sherwin's objection about Gallagher's non-residence was a substantial objection? I cannot tell you that.
363. Supposing that the additional conditional purchases, the subject of this inquiry, were additional conditional purchases in virtue of an original conditional purchase, and supposing that the residence condition had been fulfilled on the original conditional purchase, was any residence required on the additionals? No.
364. *Mr. Brunker.*] That is if the ground was available? Yes.
365. *Chairman.*] The only question now is—the Lands Department has remitted for inquiry the question of residence and improvements—is that not what you have read? The Lands Department referred the case to the Land Board on account of the statement of Dr. Ross as to the improvements being on this land, and as to Gallagher residing on this land. They referred that to the Board because Sherwin and Hurkett said that Gallagher never resided on the land, and that the land itself was not improved.
366. *Mr. Brunker.*] In fact the Minister meant to inquire whether Gallagher had complied with the conditions generally? Yes.
367. *Chairman.*] Is that the minute you have read? That is the minute I have read.
368. Then I think we should not go beyond the minute, because the words in the minute are the instructions to the Board; do you see anything in those instructions referring in any way to whether the land was available; No; there is nothing in the minute as to whether the land was available.
369. The case went to the Board? Yes.
370. What is their report on that minute? The Board on the 15th October, 1889, reported:—"We have to report that the statements upon which it was decided to place this case in the schedule to a proposed

posed Validating Bill are not borne out by the evidence taken. That evidence shows that Gallagher has not resided on the said additional conditional purchases and that the only improvements thereon are fencing of the value of £59 12s. 6d. erected recently, part by the holder of adjoining properties. Gallagher has, during the past two and a half years, been residing on the original conditional purchase, portion 37, or prior additional conditional purchase, portion 38, on which there are substantial improvements."

371. If that land was fenced in, and if sufficient improvements were on the original conditional purchase and the additional conditional purchases, was that fulfilling the law? If the conditional purchases stood good.

372. Have you some doubt in your mind as to whether they stood good? I know, from the papers, that they were voided.

373. They were declared to be void by the Department? Yes.

374. On what grounds? On the ground that the land was situated within the Cargo population area.

375. In the evidence yesterday we got the dates when the additional conditional purchases were made—in October, 1884, both of them? Yes.

376. And in the answer which you made to the question yesterday, when you were asked to look at the office plan and to tell the Committee what was the date of the proclamation of the population area, what did you give us yesterday as the date? The first boundary was proclaimed on the 20th March, 1885.

377. That was the proclamation of the population boundary which blocked these additional conditional purchases? Yes.

378. Was there anything else to block these additional conditional purchases before that proclamation? Yes.

379. What was it? There was a gold-field reserve.

380. Was that a reservation from conditional purchase? Yes.

381. You told us yesterday that the Department gave way on that question? No, the Department did not give way on anything.

382. You said that the only objection to the conditional purchase was the population area? That point was raised, and the Minister said that, as he had decided to validate the man in the population area, he would not let the gold-fields reserve interfere.

383. *Mr. Brunker.*] Do I understand you to say that at the time the population area was proclaimed, the land was within a gold-field reserve? Yes; reserved from conditional purchase.

384. So it was a gold-field at the time the proclamation was made of the population area? Yes.

385. And the fact of that being a gold-field reserved it from conditional purchase? Yes; it is a reservation from conditional purchase.

386. *Chairman.*] Was the whole or only part of these conditional purchases within that gold-fields reserve? The whole of the first one and part of the second one, I think.

387. Can you tell us distinctly—of course your map will show whether it is so or not—was it only part of the conditional purchases which was included in the gold-fields reserve? It forms part of a reserve from conditional purchase in each case.

388. Have you any doubt as to that being the correct date of the proclamation in the *Gazette* of the population area? No. There seems to be two proclamations—one on the 20th March, 1885, and an amendment on the 20th December, 1885.

389. But they were both after the conditional purchases were made? Yes.

390. Would you look at the *Gazette* and see whether it is gazetted, and whether that is the date of the *Gazette*. You will find it on folio 1,866—is that the proclamation in the *Gazette*? Yes.

391. What is the date of the *Gazette*? The date of the *Gazette* is 20th March, 1885.

392. That is the proclamation by His Excellency the Governor of the Cargo population area which is supposed to block these two conditional purchases? Yes. There is another proclamation altering the boundaries slightly.

393. That is a subsequent one? Yes.

394. So that if the first one blocked, the second one must block? Yes.

395. *Mr. Brunker.*] You have said that the proclaimed gold-field precluded this land from selection? Yes; but I am only speaking now so far as the population area is concerned.

396. Notwithstanding that this proclamation appears to mark out the population area, the land previously to that was reserved by proclamation of a gold-field from conditional purchase? Only a portion.

397. *Chairman.*] Did not the Committee understand from your evidence yesterday that the Department had only opposed this selection on the ground of its being within the population area? No. I read the minute, I believe, which was written on that,—that, in view of the Minister having decided to validate the selection, he would not question that.

398. Did not the Department resolve to abide entirely by the objection to Gallagher's selections on the ground that the land was within the population area? I cannot say that.

399. Well, give us the minute? I shall have to read you the minute from the Charting Branch:—"As survey has not yet taken place in satisfaction of conditional purchases, 84–166 and 169, the validation of which has been approved, instructions have this day been issued to the District Surveyor to have measurement carried into effect. In dealing with these claims in connection with the Validating Bill it should not be overlooked that a second objection, apparently not previously brought forward, lies against both applications, namely, that the land described in each case forms part of a reserve from conditional purchase proclaimed 4th September, 1877, within the southerly extension of the Cargo Gold-field." The minute written on that is:—"It is presumed that Mr. Secretary Garrett's decision on 23rd May last will still hold good. Submitted.—W.H.C. For approval. The inquiry must be made in respect of the gold-field.—W.H., Under Secretary. Submitted. Approved.—J.H.C., 18/4/89." The initials, "J.H.C.," are the initials of Mr. Carruthers.

400. As the head of the Conditional Purchase Branch—practical administrator of the conditional purchases as you are—can you tell me whether you consider that the proclamation in the *Gazette* is the date from which all population areas are to date? No.

401. You do not do so? No.

402. And although this occurred in March you would go further back still, would you? We know that certain conditional purchases in the same locality were declared void years before that, on account of the population reserve.

403. What would be your action; would you recommend them for forfeiture; would you even go behind a proclamation? Go to the original date.

404.

Mr. A. Salwey. 8 Oct., 1891.

404. But is not the original date, upon which it is your duty to act, in the proclamation in the *Gazette?* I do not think so.
405. Are you entitled to go beyond that? I could not answer that question.
406. In your practice do you go beyond that? I could not say.
407. Has your attention ever been directed to the 20th section of the Act of 1880, which is in these words:—"The words contained in section 13 of the Crown Lands Alienation Act of 1861 'the then last census' shall mean the then last census published by the authority of the Goverument"? Yes.
408. *Mr. Brunker.*] Was not that repealed by the Act of 1884? Yes.
409. *Chairman.*[Does the Act of 1884 apply to these additional conditional purchases; were these additional conditional purchases not taken up before the Act of 1884 came into existence? Yes.
410. Will you look at the Act of 1880 in order to satisfy yourself that the words which I have quoted are exactly the words of the 20th section? Yes.
411. What does that say? The words contained in Section 13 of the Crown Lands Alienation Act of 1861 "the then last census" shall mean the then last census published by the authority of the Government.
412. You would not go beyond that authority—that would not authorise you to go beyond that authority; and the publication in the *Gazette* would be the date from which you must date that population area? I do no think so.
413. *Mr. Brunker.*] So far as the population area is concerned, the proclamation that appeared notifying it would be based on the Census of 1881? Yes.
414. And would be in accordance with the provisions of this section? Yes. This section says: the words contained in section 13 of the Crown Lands Alienation Act of 1861 "the then last census" shall mean the then last census published by the authority of the Government.
415. So that if the census of 1861 or any subsequent census was exhibited in 1880 as the "last census published by the authority of the Government," can you say whether that is the basis upon which this population area was fixed by the proclamation? You mean that there may have been another census. There was one before that, and the Cargo population area was under that in existence. There is nothing to show it here. That would be a matter for the Survey Branch. If the Committee want to go into that point it would be better to write to Mr. Saunders.
416. *Chairman.*] The population area that blocks the additional conditional purchases now in question is the population area published in March, 1885—is it not? I will see what the application says. "It is recommended that the conditional purchase be declared void as the land described is situated within the population reserve of Cargo, census of 1881." That was approved by the Minister on the 29th January, 1885. There must, I presume, be a prior general notification. I think there was a general proclamation of 1881 when the census came out. I believe it was proclaimed in connection with the census of 1881, that lands within a radius of 3 miles of a township with a population of, I think, 1,000, were reserved for population.
417. *Mr. Brunker.*] Was that the last census taken within the meaning of the law? Yes; the census of 1881.
418. *Chairman.*] How do you know? That is the last which the papers show.
419. You say that the only census shown, to your knowledge, is the census of 1881;—is that not what you say? Yes.
420. Is that the census proclaimed in March, 1885? Yes, I believe that is the census.
421. I think the 13th section of the Act of 1861 defines the census;—does it not? Yes.
422. And then the 20th section of the Act of 1880 explains what that is; they began to publish them after that? Yes, but it did not require publication at all. It was under the 13th section that the census was taken, within a radius of 3 miles, without any proclamation of population reserve.
423. If it were a small population it would only be 2 miles? Yes.
424. One of the minutes refers to survey;—tell us when the survey of these two additional conditional purchases was made? The survey was made on the 22nd June, 1889, and approved by the district surveyor on the 17th September, 1889.
425. Would you read the minute authorising that survey to be made? With regard to the instructions to survey, that will come under another branch.
246. But you read a minute saying that the surveys had not been made up to the date of Mr. Secretary Garrett's approval of validation; it must have been after that, and in consequence of that, that the surveys were altered? You had better leave that to the Survey Branch to be answered.
427. *Mr. Brunker.*] Do the papers show any other conditional purchases applied for in the locality of Gallagher's declared void for the reason that they were situated within the population reserve or gold-field, and which have not been validated? Yes, the following:—There is additional conditional purchase 84–61 of 80 acres, portion 120, by Robert Mackey; additional conditional purchase 82–362 of 160 acres, by R. M. Sherwin (that is on the opposite side of the road to Gallagher's); and additional conditional purchase 78–232 by Henry Hurkett. That is actually part of the land applied for by Gallagher as additional conditional purchase 84–166.
428. Can you trace the conditional purchases by Mackey, Teefey, Livermore, Wetherill, and Sharkey, stated to have been validated? I can only trace Mackey's at present. The particulars in the other cases are not sufficient to identify them.
429. Were Mackey's conditional purchases specially validated? No; they were validated on the 7th January, 1887, under the 138th section of the Act of 1884, which provides for validation in cases where the land applied for was not open to conditional purchase, but the applicant shall have resided upon and made improvements on such land, without question by any authorised person, for not less than one year after his conditional purchase.
430. Are there any other cases similar to Mackey's that you can trace? Yes; George Plue's conditional purchase, 83–34, and John Small's conditional purchase, 83–201, were validated under 138th section on 30th May, 1888.
431. Did Gallagher's case come within the meaning of that section? No. Gallagher's additional conditional purchase was declared void and a refund of the deposit authorised on 15 February, 1885, or within four months of the date of his application.
432. Have you any proof that Gallagher received an intimation of voidance? Yes. On 23 March, 1885,

1885, Gallagher wrote to the Department protesting against the voidance, and in his evidence before the Land Board he also admits his knowledge of the voidance. Mr. A. Salwey.

433. At the date of voidance of Gallagher's additional conditional purchases had he improved the land? No. According to his own evidence before the Land Board on the 15th October, 1889, he admits that the land was not improved. He says "I fenced the two additionals in about six months ago." 8 Oct., 1891.

434. Have you a letter from Dr. Ross, M.P., on which Mr. Secretary Garrett decided to include Gallagher's additional conditional purchase in a schedule to the Special Validating Bill? Yes, it is as follows:—

The Hon. Minister for Lands, Sydney. Molong, 5 March, 1888.

Dear Sir,

I have the honor to submit for your earliest consideration the following most extraordinary case of hardship, unequalled, I believe, in land administration in New South Wales.

One Neil Gallagher selected 96 acres at Molong, in the county of Ashburnham, on 23th October, 1884 (conditional purchase 84,166) and an additional conditional purchase 84,169 of 84 acres on 30th October, 1884—in all, 180 acres. Since the selection was made the selector, who has a big family of nine children, has made it his *bonâ fide* residence and home, and has expended on improvements the large sum of six hundred pounds (£600) as follows: 120 acres cleared and fenced in, under cultivation, valued at £500 to £600; house, two rooms and kitchen, £60.

It appears that out of the area of 180 acres about 50 acres are within the population reserve of Cargo, and on this account it seems that his conditional purchase and additional conditional purchase have been declared void. I have to inform you that the selector has paid interest and instalment, and in every sense has fully complied with the Act. The selector is willing to accept that portion of the land—namely, 130 acres—which is outside the population reserve, but he would much rather, if possible, be allowed to retain the full area as originally selected, seeing that when the land was taken up the common or population reserve was not surveyed or recognised. The case is one of extreme hardship, and I hope you will be able to see your way to allow the unfortunate selector to retain the full area of the land, but if not, at least 130 acres. Hoping this matter will receive your best attention, and should any difficulty arise, that the land may be validated, seeing that it is a just and honest case in the interest of settlement of a *bonâ fide* character.

Awaiting an early reply so that I may know what further steps to take in the case, now that the discussion on the new Land Bill is before Parliament.

Yours respectfully,

DR. A. ROSS.

435. Do you know why the question of validation was re-opened? Yes, on account of protests from G. D. Sherwin and Henry Hurkett. Hurkett was one of the original selectors—the man who selected the piece of land itself.

436. When did the case come before the Board? 15th October, 1889.

437. Is there anything in the evidence taken before the Board which you think would give the Committee any valuable information? I think the evidence had better go in as an exhibit. The evidence shows that the improvements were not on the land—that Gallagher had not improved the land when the conditional purchase was declared void.

438. Who gave evidence? Only the selector Gallagher and Inspector Griffin.

439. Gallagher's own evidence is there? Yes.

440. *Chairman.*] The Minister asked you if there were conditional purchases that had been voided which were in a similar position to Gallagher's, and you mentioned three? Yes.

441. If this population area was not published until after those selections were made, and if it is necessary that the proclamation should take place before you establish a population area, these would be illegally forfeited, would they not? No; the gold-field stops them the same as this does, I believe.

442. But supposing it were on the ground of a population area, they would be illegally forfeited, would they not? They were not forfeited—they were declared void.

443. Well, they would be wrongly voided? If the proclamation is the date on which we must go for the establishment of a population area.

444. *Dr. Ross.*] Was the money refunded to Hurkett and Mackey? I believe Hurkett took back his money.

445. *Mr. Brunker.*] If these selections you refer to were good and the gold-fields proclamation stood good you would be prepared to say that the voidance was legal, and not illegal? The voidance was legal if there was a gold-field reserve.

446. *Dr. Ross.*] How do you account for the difficulty in regard to Livermore's case and Sharkey's case? I think it must be transfers or something else. I cannot see them on the map. I think they must be validations, like those which I quoted, under Section 138 of the Act of 1884.

447. Were those that were validated not in the same position as this case. No, they were in occupation of the land for twelve months, and resided on it, without knowing that it was a reserve. In this case Gallagher was aware within four months that the conditional purchase was void, and therefore could not come within the provisions of section 138 of the Act of 1884.

448. *Mr. Brunker.*] In answer to my question, when I asked you if you had any proof that Gallagher received an intimation of voidance, did you not read a letter from him? Yes.

449. You had better put in that letter; it shows that he knew the voidance had taken place? I will put it in.

THURSDAY, 15 *OCTOBER*, 1891.

Present:—

MR. BARBOUR, | MR. TORPY,
MR. McFARLANE.

ROBERT BARBOUR, ESQ., IN THE CHAIR.

Charles James Saunders called in, sworn, and examined:—

450. *Chairman.*] What are you? Chief Draftsman in the Department of Lands. Mr. C. J. Saunders.

451. Do you know the village of Cargo and the population area connected with it? Yes.

452. What is the date of the first proclamation in the *Gazette* of the population area of Cargo? The population area was first proclaimed under the Crown Lands Act of 1884. 15 Oct., 1891.

453. That was the first population area proclaimed? Previously to the Act of 1884 they were not known as "population areas." They were called "population reserves." The population area, as now called, was proclaimed in the *Gazette* of the 20th March, 1885, but there was a pre-existing proclaimed reserve by virtue of the census of 1881 which came into effect on the 30th August, 1882. Under the Land Act in existence previously to 1884 population areas were not proclaimed.

454.

Mr. C. J. Saunders. 15 Oct., 1891.

454. But they were fixed on your map? Yes, by virtue of the census.
455. What was the population area fixed on your map prior to that proclamation? It was fixed by the census of 1881, which was published on the 30th August, 1882.
456. What were the boundaries of it? Two miles from the outside limits of the village.
457. Did that include those two additional conditional purchases that were made by Neil Gallagher? No; it included only the northern additional conditional purchase—the first one—and perhaps a very small portion of the bottom one, but practically speaking it only included the northern one.
458. Had the Crown Lands Agent at Molong, where these selections were taken up, plans showing him that population area which you speak of as having been made in 1882;—had he any knowledge of that from plans in his possession? I assume that he must have had a knowledge of it, because this reserve was charted on all our maps, and maps were regularly supplied to the Crown Lands Agent from the head office, so that any maps copied from head office maps and supplied to the Crown Lands Agent in the ordinary course must have shown this population reserve.
459. But you cannot say positively? No, because I have not seen his maps that were in use at that date. I know it was charted on the head office maps.
460. Then the population area that was gazetted on the 20th March was gazetted in consequence of the Land Act of 1884? Yes.
461. Did that include one of the additional conditional purchases made by Gallagher? That included the whole of the northern one, and the greater part of the southern one.
462. But as that was gazetted after his additional conditional purchases were made, it did not of itself affect his selections? No; the proclamation of 1885 could not affect his selections in any way, because they were of prior date.
463. The selections having been made in the preceding October? Yes.
464. *Mr. Torpy.*] That proclamation would not affect them? That proclamation would not affect them; but there was a pre-existing population reserve by virtue of the census of 1881.
465. *Chairman.*] You are acquainted with the Act of 1880? Yes.
466. Would you look at the 20th section? Yes, I know that section. That is an Act that was in existence when the additional conditional purchase was taken up.
467. Would you read what the 20th section of the Act of 1880 says? It is as follows:—

The words contained in section 13 of the Crown Lands Alienation Act of 1861, "The then last census," shall mean the then last census published by the authority of the Government.

468. Does that mean published in the *Gazette*? I could not say that.
469. Which was the "then last census" published that affected these additional conditional purchases;—where was it published? It was published in the shape of this census return, which was printed by the Government Printer in 1882, and presented to Parliament in that year. That constituted the publication which was recognised by the Department as the publication of the census.
470. Would you turn up Cargo? Yes. I find it under the heading of towns and villages, which either did not exist when the census was taken in 1871, or whose population did not then number 100 persons. It quotes Cargo as in the Molong electorate, having a population of 286 persons.
471. That would fix a boundary of—what? Two miles.
472. From? From the outside limits of the village. By taking 2 miles from the southernmost extremity of the village it brings you down to the southern boundary of additional conditional purchase, portion No. 63 of 96 acres, taken up by Neil Gallagher.
473. Then you say that that is the publication that was recognised by the Lands Department, previous to the passing of the 1884 Act. Yes.
474. And was in existence at the time of the selections being taken up? Yes.
475. *Mr. McFarlane.*] That was when the population was 286 persons? Yes. There would want to be 1,000 people to give it a 3 miles reserve.
476. *Chairman.*] Can you tell us on what date the village of Cargo was proclaimed? I could not say that without referring to the records.
477. *Mr. McFarlane.*] Was it set apart when it was being surveyed as a Government village? It was first surveyed, and afterwards put before the Executive Council, and proclaimed in the *Gazette*, with certain defined boundaries.
478. What I mean is that it is not a private village? No; a Government village, proclaimed before the Government sold it.
479. *Mr. Torpy.*] This was not published. It simply says, "Presented to Parliament pursuant to Act 44 Victoria No. 2"? The census return was printed and presented to both Houses of Parliament, and that was considered sufficient publication.
480. Was it published in any other way, so far as you know? Not so far as I know.
481. It never appeared in any *Gazette*? Not that I know of.
482. Would you call "publication" the fact of this census of New South Wales of 1881 being presented to Parliament? I should consider it a publication, printed in that form and presented to both Houses of Parliament.
483. Do you not think that this is extremely unlikely—that the public generally would know of the fact of this being presented to Parliament? Well, you might say the public generally take very little notice of the *Gazette*, which is the official publication.
484. But you know this is not exhibited to them? But we make the thing public, to a certain extent, by charting it on all our maps, which are exhibited by the land agents.
485. You would not call that either publication or proclamation of the census, would you? That is what we consider publication of the census. You know there was a great difficulty over the 1881 census. A number of the papers were destroyed in the Garden Palace fire. These, I think, were the only papers saved.
486. It says "Presented to Parliament"—you would not consider that equivalent to either publication or proclamation, would you? Well, I think that at the time the Department set it itself as right as it could, by asking the Attorney-General's opinion about it, and I think he satisfied the Department that it was a sufficient publication.
487. *Chairman.*] But does not the fact that it was subsequently made plain in the Act of 1884 that it must be published by notice in the *Gazette* show there was some doubts about it? I think not. You will

Mr. C. J. Saunders. 15 Oct., 1891.

will find that every population reserve was re-proclaimed under the Act of 1884, by reason that one section of that Act in referring to exemptions from conditional purchase says "Population areas proclaimed under section four of this Act," or words to that effect.

488. That is what I mean—that the Act of 1884 made it imperative that the population boundaries should be proclaimed in the *Gazette*? Yes. The necessity for re-proclamation arose through subsection 7, of section 21 of the Crown Lands Act of 1884, which says that among other lands exempt from conditional purchase shall be lands within population areas as defined in section 4. Section 4 of the Act of 1884 says:—

> Population boundaries include lands within areas bounded by lines bearing north, east, south, and west, as defined by proclamation in the *Gazette*, and distant not more than 10 miles from the nearest boundary of any city, town, or village.

Previously, the Government could not either make or unmake a population reserve—the whole thing was bound by the census. If a reserve came into existence under the census of 1881 it could not cease to exist until the census of 1891, but under this section the Government could proclaim an area at any new centre that sprang up and had a large population, although under the old Act it could not make a population reserve until a new census came into effect. In the same way, all cities, towns, and villages had to be re-proclaimed under the Act of 1884. That was, I know, what led to the re-proclamation.

489. *Mr. Torpy.*] Do you not think it improbable that a document of that kind would ever have come under the notice of an intending selector? I do not know. I should think that most country papers would reproduce the particulars of the census, to make public the population of certain places.

490. Still you could not call that equivalent to a proclamation;—would you consider that as effective? We did not regard it as a proclamation at all. We thought it came under the terms of the section which says, "publication," not proclamation. If it had said "proclamation," there would have been great doubt about it, as proclamation is made under the hand of the Governor.

491. Are any copies of this distributed throughout the country? I could not say that. Perhaps some officer of the House could tell you.

492. Will you read section 11 of the Census Act, 44 Victoria No. 2? Section 11 says:—

> The Colonial Secretary shall, with all convenient speed, prepare or cause to be prepared abstracts of the said returns, and such abstracts shall be printed and laid before both Houses of Parliament.

493. *Chairman.*] Is the abstract of the census which you now show to the Committee in accordance with that section—that is, as printed and laid before Parliament? Yes; because it is notified on the outside, "Presented to Parliament pursuant to Act 44 Vic. No. 2, section 11."

494. *Mr. Torpy.*] That simply says, "Presented to Parliament"? Yes; but it has the Government Printer's imprint, "Thomas Richards, Government Printer, 1882."

495. That section does not direct that the thing shall be published in any newspaper, does it? No.

496. Nor in any *Gazette*? No. There is no method of publication prescribed in the Act of 1880.

497. *Chairman.*] Still it says it is to be published? Yes.

498. In the early part of the investigation into this case some allusion was made to a part of the land being within a gold-field;—do you know anything about that? Yes; the yellow edging shows a gold-field reserved from conditional purchase, which also includes the greater part of these two additional conditional purchases.

499. Are you aware that the Minister gave up the question of the gold-field reserve interfering with these selections? Not that I know of. I do not know how he could give it up.

500. Does the gold-field reserve still exist? Yes.

501. Within these yellow lines? Within that yellow edging.

502. And that takes away nearly one-half? Fully one-half of both additional conditional purchases. The date of the gold-field reserve is 4th September, 1877, reserved from conditional purchase within the Cargo gold-field.

CONDITIONAL PURCHASES OF NEIL GALLAGHER, ORANGE.

APPENDIX.

[*To Evidence of A. Salwey*, 8 *October*, 1891.]

DEPOSITIONS taken before the Land Court at Cudal in the matter of the forfeited conditional purchase of Neil Gallagher.

NEIL GALLAGHER, farmer, residing near Gum Flat, near Cargo, on oath, states :—I am the owner of conditional purchase 77-26 of 100 acres, which now is held under mortgage by the Commercial Banking Company ; I purchased it in the year 1881 ; I, in virtue of that purchase, applied for the two A.C.P.'s now under inquiry, on the 23rd and 30th October, 1884, and on the 31st day of the same month I transferred the original purchase to the Commercial Bank ; afterwards—I do not know how long after—I heard that my additional purchase was void ; I also heard through the Commercial Bank ; I wrote the letter dated 23rd March, 1885, objecting to the voidance of the purchase ; I wrote several letters to the same effect ; I did not take my money back ; at the date of the letter mentioned there were no improvements on the land applied for as additional conditional purchases, but since that I have fenced the land in ; Harbutt erected some of the boundary fence which is on the boundary of this land ; I have not made any other improvement on this land ; I did not take my deposit money back, as I considered the land had been correctly given to me at Molong ; afterwards I paid interest on the land ; the Land Agent said the purchase was correct ; I understand the population boundary was not proclaimed till 1885 ; I was aware that there was a population area (which came into force in 1881) in existence when I took up this land, but I do not think it embraced this land ; since I took up these selections I have been residing for the past two and a half years on the Cargo Road, not on these selections, but on the original selection (Gridland's) ; at the time I selected the additional conditional purchases, and previous to two and a half years ago, I was residing on the road between Cargo and Orange ; the improvements on the 10 acres are—Clearing nearly the whole area, £500 ; buildings, £30 ; dam, £18—about 360 yards ; fencing, about 2 miles, worth at least £80 ; these improvements are partly on the 40 acres I purchased from Gridland ; I have been improving the land ever since I bought from Gridland ; I did most of the clearing since I went to live on the land ; I fenced the two additional purchases in about six months ago ; I am aware that Hercourt applied for some of this land, but got his money back again ; I only knew of this lately ; I did not know before I applied for the land that it had been refused to anyone else ; I have commenced a dam on the A.C.P.'s under inquiry ; I was not prepared to fence the A.C.P.'s in earlier ; the improvements on the original were sufficient for the full area.

NEIL GALLAGHER.

Taken and sworn before us, at Cudal, this 15th day of October, 1889,—

CHAS. E. FINCH, Chairman.
JOHN J. LANE, } Members.
THOMAS S. PEARCE, }

James Harris Griffin, Inspector of Conditional Purchases, of Molong, on oath, states :—I inspected the selections under inquiry on the 23rd August last ; Gallagher, Sherwin, and Hurkett were present ; I found improvements on portions 63 and 64 were—15 chains of 4-wire fencing at 6s., £4 10s. ; 67 chains of 5-wire fencing at 7s. 6d., £25 2s. 6d. ; 10 chains 6-wire fencing, being half of fence on Hurkett's line, 10s., £5 ; 40 chains of 2-rail and 2-wire, half of Hurkett's by-fence, 12s. 6d., £25 ; small dam commenced, nil ; total, £59 12s. 6d. ; I visited the 10-acre and 40-acre, formerly Cridland's, where I found improvements—Building (two huts), £20 ; small dam, £8 ; stockyard (small), £2 ; 80 acres clearing, cost £3 per acre, £240 ; 120 chains of mixed fencing-wire, log and split fencing, £45 ; total, £315 ; I did not measure the dam nor the stockyard ; I do not know when the improvements were effected.

J. H. GRIFFIN.

Taken and sworn before us, at Cudal, this 15th day of October, 1889,—

CHAS. E. FINCH, Chairman.
JOHN J. LANE, } Members.
THOMAS S. PEARCE, }

Sir, Halfway House, Cargo Road, 23 March, 1885.

I have received notice from the Commercial Bank stating that they have received notice from your Department that a conditional purchase of mine, 96 acres, has been declared void, owing to its being partly within the Cargo population boundary reserve.

I humbly beg to submit that when I took up my original selection there was no such reserve, and it appears hard that the boundary line has been so placed so as to surround my conditional purchase on all sides ; however, you will perceive that there is only a narrow strip, about 3 chains of this reserve, separating me from the land open for selection, and I trust that you will see fit to have this small portion of the reserve revoked, so as to enable me to get the adjoining land as an additional conditional purchase to the original selection. No doubt my further additional conditional purchase of 84 acres will also be declared void for a like reason. I shall therefore instruct the Bank not to accept the refund until I hear from you, when I hope you will be able to advise me that I can again select the land.

I may mention that my neighbour, Mr. J. M. M'Kay, got land on the west side of the Cargo Road under similar circumstances.

I have, &c.,
NEIL GALLAGHER.

The Under Secretary for Lands, Sydney.

Sydney : George Stephen Chapman, Acting Government Printer.– 1891.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE LEGISLATIVE ASSEMBLY.

VOTES No. 36. TUESDAY, 29 SEPTEMBER, 1891.

5. FORFEITURE OF J. J. RAY'S SELECTION IN THE LAND DISTRICT OF WAGGA WAGGA:—Mr. Gormly moved, pursuant to Notice,—
(1.) That a Select Committee be appointed, with power to send for persons and papers, to inquire into and report upon the forfeiture of J. J. Ray's selection in the land district of Wagga Wagga.
(2.) That such Committee consist of Mr. Brunker, Mr. McCourt, Mr. Kidd, Mr. Perry, Mr. Bowes, Mr. Stevenson, Mr. E. G. Brown, and the Mover.
Debate ensued.
Question put and passed.

VOTES No. 62. THURSDAY, 10 DECEMBER, 1891.

3. FORFEITURE OF J. J. RAY'S SELECTION IN THE LAND DISTRICT OF WAGGA WAGGA:—Mr. Gormly, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee for whose consideration and report this subject was referred on 29th September, 1891; together with Appendices.
Ordered to be printed.

(SECOND SESSION.)

FORFEITURE OF J. J. RAY'S SELECTION IN THE LAND DISTRICT OF WAGGA WAGGA.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 29th September, 1891,—*with power to send for persons and papers to inquire into and report upon the forfeiture of J. J. Ray's selection in the Land District of Wagga Wagga*, —have agreed to the following Report :—

Your Committee, having examined the witnesses named in the list* (whose evidence will be found appended hereto), find,— * See list page 4.

(1.) That John Jonathan Ray applied for O.C.P. 85–70, of 559½ acres, portion 18, made at Wagga Wagga on 6th August, 1885, and confirmed on 15th September, 1886; A.C.P. 86-125, of 228½ acres, portion 20, parish of Biragambil, county of Bourke, made on 16th September, 1886, and confirmed 29th November, 1886.

(2.) That at an inquiry held before a meeting of the Local Board at Wagga Wagga, on 17th June, 1889, as to the fulfilment of residence by John Jonathan Ray on his O.C.P. 85–70, the Board decided that the C.P. should be declared forfeited; that an appeal was made against this decision, and that the appeal was dismissed, and land forfeited. *(See* Appendices A and B.)

(3.) That J. J. Ray went to reside on the land he had applied for before his application had been confirmed, and that he continued to reside on the land continuously and bona fide for five years after the date on which his application for the original conditional purchases had been confirmed.

(4.) Your Committee are of opinion that had the selector brought before the Local Land Board the witnesses whom your Committee have examined, forfeiture of his C.P. would not have taken place.

2. Your Committee therefore recommend the case to the favourable consideration of the Government.

JAMES GORMLY,
Chairman.

No. 2 *Committee Room,*
Sydney, 9th December, 1891.

PROCEEDINGS OF THE COMMITTEE

TUESDAY, 6 *OCTOBER*, 1891.

MEMBERS PRESENT:—

Mr. Gormly, | Mr. Kidd,

Mr. Stevenson.

Mr. Gormly called to the Chair.

Entry from Votes and Proceedings appointing the Committee *read* by the Clerk.

[Adjourned till Thursday next at *Two* o'clock.]

THURSDAY, 8 *OCTOBER*, 1891.

MEMBERS PRESENT:—

Mr. Gormly in the Chair.

Mr. Kidd, | Mr. McCourt,

Mr. Perry, | Mr. Stevenson.

Alfred Salwey (*Head of the Conditional Sales Branch, Department of Lands*) called in, sworn, and examined.

Witness *handed in* copy of the evidence taken before the Local Land Board in the case of J. J. Ray's forfeited selection in the Land District of Wagga Wagga. [*Appendix* A.]

Witness withdrew.

Committee deliberated.

[Adjourned till Tuesday next at *Two* o'clock]

TUESDAY, 13 *OCTOBER*, 1891.

MEMBERS PRESENT:—

Mr. Gormly in the Chair.

Mr. Kidd, | Mr. McCourt,

Mr. Perry, | Mr. Stevenson.

John Jonathan Ray called in, sworn, and examined.

Witness withdrew.

John Ray called in, sworn, and examined.

Witness withdrew.

Barnett Basil Bennett called in, sworn, and examined.

Witness withdrew.

Thomas Henry Hart called in, sworn, and examined.

Witness withdrew.

Arthur Ray called in, sworn, and examined.

Witness withdrew.

John Ray recalled and further examined.

Witness withdrew.

Barnett Basil Bennett recalled and further examined.

Room cleared.

Committee deliberated.

Ordered, that the Under Secretary for Lands be summoned to give evidence next meeting.

[Adjourned till to-morrow at *Two* o'clock.]

WEDNESDAY, 14 *OCTOBER*, 1891.

MEMBERS PRESENT:—

Mr. Gormly in the Chair.

Mr. Bowes, | Mr. Stevenson.

Alfred Salwey (*Head of Conditional Sales Branch, Department of Lands*), called in, sworn, and examined.

Witness *handed in* copy of the decision of the Local Land Board, in the case of Ray's forfeited selection, in the Land District of Wagga Wagga. [See *Appendix* B.]

Witness withdrew.

Committee deliberated as to their Report.

[Reassembling of the Committee to be arranged by the Chairman.]

WEDNESDAY, 8 *DECEMBER*, 1891.

MEMBERS PRESENT:—

Mr. Gormly in the Chair.

Mr. E. G. Brown, | Mr. Perry.

Chairman submitted Draft Report.

Same read and agreed to.

Chairman to Report to the House.

LIST OF WITNESSES.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

FORFEITURE OF J. J. RAY'S SELECTION IN THE LAND DISTRICT OF WAGGA WAGGA.

THURSDAY, 8 *OCTOBER*, 1891.

Present:—

MR. GORMLY, | MR. STEVENSON,
MR. McCOURT.

J. GORMLY, ESQ., IN THE CHAIR.

Mr. Alfred Salwey called in, sworn, and examined:—

Mr. A. Salwey. 8 Oct., 1891.

1. *Chairman.*] Do you produce from the Lands Department the papers in reference to the forfeiture of J. J. Ray's conditional purchase? Yes.
2. Are there amongst them minutes of evidence given before the Local Land Board? Yes; there are the depositions.
3. Will you hand in a copy of the evidence taken before the Land Board? Yes. [*See Appendix A.*]
4. Are there any other documents in reference to the appeal in the case—the appeal to the Minister? The Minister, in giving his judgment in the Appeal Court, said that after careful examination of the evidence, and especially of Ray's own testimony, it appeared to him that the residence was only a pretence, and that he also had grave doubts as to the selector's *bona fides*.
5. *Mr. McCourt.*] What Minister was that? Mr. Brunker.
6. *Chairman.*] Are there any minutes among the papers in reference to the *Gazette* notice of forfeiture being sent;—have you got a copy of the notice? I do not think I have; but I can hand in a copy.
7. For a particular reason I want to have a copy of the *Gazette* notice declaring the forfeiture? I will hand that in. [*See Appendix B.*]
8. If you see any memo. of the Minister since the dismissal of the appeal, will you kindly put it before the Committee? Yes.
9. I believe the reason stated was that the land was reserved? Yes—"reserved from sale for access." That was notified on the 29th October, 1890.
10. Of course, the forfeiture has to be sanctioned by the Executive Council? Yes.
11. Is there any memo.? That will appear in the notice that I shall hand in. It is the usual form, "Governor, with the advice of the Executive Council."
12. You do not see any memo. on the papers made since the dismissal of the appeal? No; there is nothing since.
13. Can you find out the date on which the forfeiture was approved of by the Executive Council? No. That will be the date on which it appears in the *Gazette* which I shall hand in.
14. But does not what you read show it "reserved from sale for access"? That is not the *Gazette* notice of forfeiture—it is only the reservation.

TUESDAY,

TUESDAY, 13 *OCTOBER*, 1891.

Present: —

Mr. McCOURT,	Mr. PERRY,
Mr. STEVENSON,	Mr. KIDD.

J. GORMLY, Esq., IN THE CHAIR.

Mr. John Jonathan Ray called in, sworn, and examined:—

Mr. J. J. Ray. 13 Oct., 1891.

15. *Chairman.*] Were you the holder of a selection which was the subject of an inquiry before the Local Land Board at Wagga Wagga? Yes.
16. You gave certain evidence before the Local Land Board? Yes.
17. The Local Land Board recommended the forfeiture of the selection? They did.
18. Did you appeal against the decision? Yes.
19. Was the appeal dismissed? It was.
20. Are you aware for what reason the Local Land Board recommended the forfeiture of the selection? For non-residence.
21. The Committee have a copy of the evidence which you gave before the Local Board at Wagga Wagga, and they now wish you to make any statement you like in regard to how you fulfilled the condition of residence? I resided continuously on the land, occasionally going away for a few days. I made the place my home.
22. Had you any other place of residence besides your selection from the time that you went on the land? No; I resided on the land.
23. Did you go to reside on it when your application was confirmed or before? I went to reside on the land before my application was confirmed.
24. And made it your continuous residence? Yes.
25. Had you any other residence during that time? No.
26. Were you absent from the land any lengthened period during the five years? No; I never was. used to go to my father's sometimes to do him a little turn.
27. *Mr. Stevenson.*] How long would you be away? Not more than two or three days.
28. *Mr. Kidd.*] How far was your father's place from your selection? Six or 7 miles.
29. Did your father's family all live there? Yes.
30. *Mr. McCourt.*] How many times did the inspectors visit the selection to your knowledge? Only twice.
31. Were you there? I was there when the first inspector, Mr. Batty, came.
32. Were you there when the other inspector came? No; I had gone to town, but I met him as I was coming back.
33. *Mr. Stevenson.*] Did you speak to him? Yes; I asked him if he had been to my place, and he said, "Yes," and he said he was satisfied with the residence, and that he was sorry that I was not there.
34. *Mr. McCourt.*] Did you hear his evidence before the Land Board? Yes.
35. Did he say that there? I could not say for certain.
36. Would you consider two visits of the inspector sufficient to prove non-residence in five years? I should not think so.
37. *Mr. Kidd.*] How often do they visit to your knowledge. Have they visited other selections oftener than twice? Yes.
38. Was your place very much out of the way? It is a good way from the road.
39. *Mr. Stevenson.*] How far from the main road? About 3 miles from one main road.
40. Is it easy to find your place for a man who has not a good knowledge of the district? It would not be easy for a stranger to find it.
41. *Mr. Kidd.*] What town is the nearest to your selection? Coolamon is the nearest town.
42. And at the time when you met the inspector leaving your place, were you going back to your home? Yes.
43. How did you leave your place—did you lock it up? I did.
44. *Mr. Stevenson.*] Do you follow any other occupation? No; none whatever.
45. You do not go away shearing? No.
46. The only time when you were away was when you went to assist your father? That was the only time.
47. You made the selection your home? Yes.
48. Were you a month or two at any time away from it? No; I was three weeks away at one time. That was during a drought. I had no water, and had to leave.
49. You did not go and leave your selection for months? No.
50. Did you make any improvements? Yes.
51. Did you work on it? Yes.
52. Did you put up fences? Yes.
53. Did you do scrubbing or grubbing? Yes; and tank-sinking.
54. Had you anyone to assist you in making the improvements? Yes; my brothers.
55. Did your father assist you to make any improvements? Yes.
56. What quantity of land have you? 787 acres.
57. And you did scrubbing? Yes.
58. Would that entail a considerable amount of work? Yes.
59. Was there pine scrub on the land? A little pine scrub, and suckers.
60. *Mr. Stevenson.*] When you were absent three weeks, did the inspector come at that time? He did not to my knowledge.

Mr. John Ray called in, sworn and examined:—

Mr. J. Ray. 13 Oct., 1891.

61. *Chairman.*] Are you the father of John Jonathan Ray, the selector whose case we are now inquiring into? Yes.
62. Can you give the Committee any evidence in regard to how your son fulfilled the condition of residence on his selection? Yes.

63.

Mr. J. Ray. 13 Oct., 1891.

63. Did you assist your son to do any work on his selection? Yes.
64. And when assisting him to do his work, did you reside with him on the selection? I did.
65. Had you an opportunity of seeing how he did perform the residence? Certainly.
66. Would you tell the Committee how he fulfilled the residence condition;—was he continuously on the land? He was, except that he would come at any time I was busy to help me to do a bit of ploughing.
67. You would help him, and he would come and help you? Yes; I had 600 sheep, and he used to help me to shear them.
68. Did he reside any considerable time at your residence? No.
69. He was usually residing on his own selection? Yes, on his own land.
70. Had you an opportunity of seeing him on his land on any occasion? Certainly, I had some stock on the land.
71. On his land? Yes, and I used to go and kill sheep there for my own use.
72. Did you help him to fence? Yes, I split the wood, and brought it in with my own team.
73. Your home was about 8 miles from his? It was between 7 and 8 miles.
74. And were you constantly going backward and forward between your own home and your son's selection? Yes, except when I was on the road.
75. Could you give the Committee a rough idea of how often during the five years you saw your son on his selection? I have seen him on it hundreds of times—sometimes I should be out there two or three times a week helping him.
76. Have you any reason to believe that he resided any length of time away from the selection? He never did, to my knowledge.
77. Could he have resided away from the selection, without your knowledge? It is not possible.
78. *Mr. Stevenson.*] You said "except when you were on the road?" Yes, I am a carrier.
79. But you never used to go away for any length of time? No; I went to Narrandera once, and was there about five weeks.
80. *Mr. Kidd.*] Were you very frequently away? No; I gave my second eldest son a team, and gave my youngest son one, and I went to Narrandera, and was drawing gum logs to a saw-mill.
81. You were almost continuously at your own home? Yes.
82. Except when you went to assist your son? Yes; I went to help him to put in a dam.
83. How often did the inspectors visit your son's selection to your knowledge, during the five years? I think that Mr. Batty was there first, and I think he had his dinner with my son. Mr. Mulligan visited the selection afterwards when my son was in Wagga Wagga.
84. Did the inspectors only visit your son's selection twice during the five years? Only twice that I am aware of.
85. *Mr. McCourt.*] Do you know on what ground the Local Land Board recommended the forfeiture? I could not distinctly state.
86. Was it for non-residence solely? I could not say.
87. Was there not some suspicion that he was in league with a squatter? Yes.
88. Was that brought out in evidence? It never was cleared up.
89. Was it brought out in evidence before the Land Board? They asked him where he got his money, and he said that he got it from Mr. Bennett.
90. You heard him say that? I was not in the Court.
91. Did he get his money from Bennett? I sold some land to Mr. Bennett. I had a selection at Brucedale, North Wagga Wagga.
92. You sold that to Mr. Bennett? Yes; and there were 40 acres that I could not sell because that 40 acres belonged to my son, and he was not of age, but Mr. Bennett bound me over to transfer the land when my son became of age, and when the boy became of age he did transfer it.
93. It was with the proceeds of the sale of that selection then that he selected the other land? Yes; we got £2 an acre for it.
94. Mr. Bennett did not give him the money? No.
95. *Chairman.*] Brucedale is within 3 or 4 miles of Wagga Wagga? Yes.
96. And the selection in dispute would be 40 or 50 miles from Wagga Wagga? Yes.
97. *Mr. Perry.*] What is your son's age? He is 21.
98. Then he was about 16 when he selected the land? Yes.
99. Did he live at home or at your place after he had taken up the selection? He lived on the land.
100. *Mr. Kidd.*] Do you live on a selection? Yes.
101. Do you remember how often when you were fulfilling the residence condition the inspectors visited your place? Twice.
102. Only twice in five years? Only twice.

Mr. Barnett Basil Bennett called in, sworn, and examined:—

Mr. B. B. Bennett. 13 Oct., 1891.

103. *Chairman.*] You have a conditional purchase adjoining that of John Jonathan Ray? Yes.
104. Have you resided there a number of years? Yes, some five years.
105. Have you had an opportunity of seeing whether or not Ray resided on his land? Yes, I have.
106. Did you see him on his land on any occasion? Yes, a great many times.
107. You found him usually residing on his selection adjoining your land? Yes. If I wanted to find him I should have gone to his land to look for him.
108. There was a fence dividing your land from his? Yes. It was not more than 150 yards from his house.
109. Were you in the habit of riding round your place? Yes, after cattle.
110. Could you see whether he was at home pretty often? Yes.
111. *Mr. McCourt.*] Were you in Court when the Land Board gave their decision? I was not.
112. Do you know why the land was forfeited? I have heard it rumoured.
113. Were you acquainted with the matter by rumour—explain your position in the matter? I am glad of an opportunity of explaining it, because I felt rather grieved about it. I heard it rumoured after the Court was over that the Wagga Wagga Land Board in reality cancelled the selection because they considered

Mr. B. B. Bennett. 13 Oct., 1891.

considered that Ray was dummying for me. This arose out of something the young man said about having got money from me, and about my stock being on the land. I can give a very clear explanation of the whole matter.

114. *Chairman.*] Your stock have been running on this young man's land? Yes.

115. Did you make any arrangement with Ray on the subject? I made an arrangement with his father. I rented the land from his father for about two years to put my stock on, for which I payed £60 a year. The young man was a minor.

116. Of course a selector is allowed to enter into such agreements? Yes.

117. You rented the land for £60 a year from his father? Yes.

118. Therefore you were continually going on the land when your stock was on it? Yes.

119. And you had opportunities of seeing Ray on his land? Yes.

120. Have you heard any rumours stating that you had supplied this young man with money to take up the land? Yes.

121. Did you supply him with money? No, I did not, unless paying his father for some land which I bought years ago can be called supplying him with money.

122. Did you purchase land from his father? Yes, some years ago, a property at Brucedale, Wagga Wagga, which I own now.

123. About 40 miles from this selection? Yes.

124. *Mr. McCourt.*] During that two years was Ray residing on his selection? I did not hold the land for two years.

125. Did he reside on the land during the time that you rented it? He did.

126. How long did you rent the land? I think only about six months, because when the selection was cancelled I gave it up.

127. Although you took it for two years? I did not have anything more to do with it—I abandoned it.

128. When Ray selected did you give him any money? No.

129. Nor any money near that time? I did not.

130. You purchased land from his father a long time before that? Yes, years before, and the money, about £80, was paid to his father, who entered into a bond of £160 that when the young man became of age he would obtain a transfer of the land for me.

131. That £80 was paid before? Yes, some years ago to his father.

132. *Chairman.*] Was this selection taken up in your interest? Not at all.

133. It is adjoining your land? Yes.

134. *Mr. Perry*] Would it be to your interest to have it forfeited? Yes.

135. You have had to select? I have had to select one of Mr. Brunker's special areas within the last two or three months, as I was some 400 acres short of my proper area.

136. *Mr. Kidd.*] I suppose it is in the Central Division? Yes.

137. You did not give evidence before the Land Board at all? No.

138. They never asked you? No.

139. You stated in answer to Mr. McCourt that you rented the selection for about six months? Yes, about that time.

140. During the time that you rented the land it was occupied by the selector Ray? Yes.

141. His father also put stock on the land? Up to the time that I rented the land there was stock there. I believe they belonged to his father.

142. How far is your residence from Ray's residence on the selection? About a mile.

143. Did you see Ray from time to time making improvements on his selection? Yes, fencing.

144. And clearing? No, I never saw him clearing. I saw him fencing and making a dam on several occasions.

145. To the best of your knowledge he resided continuously on the selection? As far as I know he did.

146. *Chairman.*] You are his next neighbour? Yes.

147. And you were always at home? Yes, generally attending to my own business. I went round the paddocks occasionally.

148. And your fence was what distance from his residence? When I went round the boundary of the paddock I should go within a couple of hundred yards of his house.

149. *Mr. Kidd.*] During the drought you used to supply him with water did you not? I may have done.

150. Had you an abundance of water? I had.

151. You did not object to a neighbour taking a supply? Decidedly not. I have a spring on my place, and that spring is 200 or 300 yards from his house. I think Ray used to get his supply there.

152. *Mr. Perry.*] You are a conditional purchaser yourself? Yes.

153. Do you think that this young man fulfilled the conditions of residence in accordance with the requirements of the Act? I do indeed. I think he did as good residence as nineteen out of every twenty young men would do.

154. At any time you went to the selection you found him there? I cannot say that I always did, but I found him there a great number of times.

155. When you say you rented the place, I suppose you mean that you agreed to pay him so much for the right to graze? Yes.

156. He put a hut on the land I suppose—had you anything to do with that? Nothing whatever.

157. That was during the latter portion of his five years of residence on the land? Yes.

158. How long had he been there when you leased the land? Two or three years.

159. *Mr. Stevenson.*] When he leased it to you he did not give up possession? No.

160. He resided and worked on it? Yes.

161. *Mr. Kidd.*] I suppose it is usual for young men who select a few miles away from their own homes to go home on a Saturday night and stay until Monday? Yes, they would be very strange young men if they did not.

162. *Chairman.*] You are in the habit of dealing in stock? Yes.

163. And you have more stock than your land will carry? I have.

164. You often rent paddocks from other persons? Yes.

165. You have been a resident of Wagga Wagga for a good while? Yes, over fifty years.

166. And you are a magistrate? Yes.

Mr. Thomas Henry Hart called in, sworn, and examined:—

Mr. T. H. Hart. 13 Oct., 1891.

167. *Chairman.*] You know John Jonathan Ray, the selector in this case? Yes.
168. What occupation do you carry on? At present I am a contractor.
169. Have you been in the habit of shooting kangaroos in the neighbourhood of Ray's selection? Yes. I was contracting at that time in the vicinity.
170. You were tank sinking? No; I was fencing.
171. Were you often on Ray's selection during 1887, 1888, and 1889? During part of 1887, in 1888, and in part of 1889.
172. You have been in the habit of visiting Ray's selection? Yes; frequently.
173. And were you in the habit of stopping at Ray's house at night? Yes; occasionally.
174. During those years when you went on Ray's selection, did you find him at home? Nearly always.
175. Did you buy ration sheep from Ray when you were a contractor? Yes.
176. And you had to go to the selection to get them? Yes. My camp was within about 2 miles of the selection.
177. And you bought sheep for rations? Yes; on three or four occasions.
178. And you went to the selection for those sheep? Yes.
179. Did you find Ray at the selection? Yes; he was fencing and making a gate the first time I visited him.
180. Were you often in the company of Ray? We were shooting kangaroos together for several months.
181. Was that in the neighbourhood of the selection? On the selection and within 4 or 5 miles of it. We were never more than 4 miles from it.
182. Was Ray in the habit of borrowing tools from you? Yes; he borrowed some tools to make some gates for his selection.
183. Then he was in the habit of going to your camp, and you were in the habit of going to his hut? Yes; very often. Occasionally he used to stop at my camp, and I used to stay with him.
184. You saw him and his selection a good many times during those five years? Yes; a good many times.
185. *Mr. McCourt.*] Did you give evidence before the Land Board? No.
186. What sort of a residence had he on the land? A two-roomed cottage.
187. Had he a bed and cooking utensils? Yes.
188. Do you remember when Mulligan the inspector came to inspect the selection? I remember Mr. Mulligan being in the vicinity. I think I have met him when he was inspecting Ray's sisters selection.
189. If Mr. Mulligan said that the hut had not a sign of having been recently used, would that be true? It would be untrue, I think, from what I saw.
190. *Mr. Kidd.*] I suppose you know the hut very well? Yes.
191. Could any one tell from looking in at the window what was inside in the cupboards or safe? I do not think so, because a single man as a rule puts his things together when he leaves.
192. *Mr Stevenson.*] Sometimes he has a big box to put his things in, has he not? Yes.
193. *Mr. Perry.*] To keep his things from the sundowners? Yes. And to keep off the flies.
194. *Chairman.*] Did you consider that Ray was continually residing on his selection, that is, making the selection his home during the years that you knew him there? I always understood from him that it was his home, and that he had no other.
195. If you went to look for him, he being a companion of yours, where would you have gone to? To his selection. During the period that I was in this vicinity we exchanged rations frequently.
196. If he were short you gave him some, and if you were short he gave you some? Yes.
197. *Mr. Stevenson.*] How long did you know Ray when he was on the selection? I knew him before he took up a selection.
198. But in connection with the selection? In 1887, 1888, and 1889 I lived on the adjoining run.
199. And you saw him repeatedly on the selection? Every time I went to his selection he was there.
200. And those visits extended over three years? Not more than about two years—part of 1887, 1888, and part of 1889.
201. Whenever you went there you found him on the selection? Yes.
202. *Chairman.*] I suppose the selection is a good distance from the town? Yes, 24 or 25 miles.
203. You could not run to a store when you wanted anything? No, only to the station.
204. *Mr. Stevenson.*] Was the hut furnished? There was just what a single man would require.
205. Had he any bedding there? Yes, I slept in it occasionally.
206. Had he any cooking utensils? Yes; everything that was required for a camp.

Mr. Arthur Ray called in, sworn, and examined:—

Mr. A. Ray. 13 Oct., 1891.

207. *Chairman.*] You are brother of the selector whose selection we are making inquiries about? Yes.
208. Were you in the habit of occasionally residing with your brother on the selection? Yes.
209. Did you help him to work on it? Yes.
210. Did you help him with fencing? Yes.
211. And tank-making? Yes.
212. And to knock down suckers and to cut down scrub? Yes.
213. Did you make other improvements on the selection? Yes.
214. Were you often on the selection? Yes.
215. And did you occasionally stay there a few weeks? I did. I was constantly with him for two and a half years.
216. Continuously residing with him on his selection? Yes.
217. He had a house? Yes.
218. How many rooms were there in it? Two rooms.
219. Of course if you were continuously there you must have had cooking utensils? We had.
220. And did you occasionally reside with him after that two and a half years? Yes.
221. Did you find him usually residing on the selection? Yes.
222. Are you aware that he was ever any long time away from the selection during the five years? The only time that he was away was for three weeks during a drought? He had no water.

Mr. A. Ray. 13 Oct., 1891.

223. It is a very dry country there? Yes, it is a terrible dry place.
224. No creeks or streams? Only for a short time in winter when the weather is wet.
225. You reside with your father? No; I had a bullock team, and when out of work I used to take my bullocks to my brother's place and live with him.
226. You did this for how many years? I have done it continuously up to the present time.
227. *Mr. Kidd.*] Is he still using the selection? Yes.
228. *Mr. Stevenson.*] Of course when you were residing there your brother was there? Yes.
229. Was he working on the selection? Yes, I helped him with his work.
230. What was the nature of the work? Fencing, scrubbing, tank-sinking, and other work.
231. *Mr. Kidd.*] And killing kangaroos? Yes, I helped him to kill kangaroos.
232. *Chairman.*] Are kangaroos very numerous there? Yes.
233. *Mr Perry.*] Is your brother related to Mr. Bennett? Not at all.
234. *Mr. Stevenson.*] Is Mr. Bennett related to or connected with you by marriage or in any other way? No, not at all.

Mr. John Ray recalled and further examined:—

Mr. J. Ray. 13 Oct., 1891.

235. *Chairman.*] Did you supply your son with the money to take up the selection. Was it your money? It was my money.
236. Did you go with you son to the Court? I did.
237. And you took the money with you? Yes.
238. *Chairman.*] You stated that your son, J. J. Ray, held a piece of land before that? Yes.
239. You sold that when he was a minor? I did.
240. And that was why you supplied him with money to take up another selection? Yes.
241. It was his own money that you supplied him with? Yes.
242. *Mr. McCourt.*] Was there not a question before the Land Board as to where he got the money? They asked him where he got the money, and he said from Mr. Bennett. He meant by my selling land to Mr. Bennett.
243. *Chairman.*] The reason why the Committee ask the question is, that in dismissing the appeal the Minister made a note on the papers to the effect that he considered that the *bona fides* of this selector were doubtful. You supplied your son with the money to select the land, and that money was the proceeds of land belonging to your son which you had previously sold? Yes.

Mr. Barnett Basil Bennett recalled and further examined:—

Mr. B. B. Bennett. 13 Oct., 1891.

244. *Chairman.*] The Committee wish to ask whether you supplied the selector, J. J. Ray, with the money to take up this land? I did not.
245. *Mr. Stevenson.*] You bought some land from his father? Yes; some years ago, and I paid the money to his father.
246. *Mr. Kidd.*] You are not connected in any way with the Rays? No.

WEDNESDAY, 14 OCTOBER, 1891.

Present:—

MR. GORMLY, | MR. STEVENSON,
MR. BOWES.

J. GORMLY, ESQ., IN THE CHAIR.

Mr. Alfred Salwey recalled and further examined:—

Mr. A. Salwey. 14 Oct., 1891.

247. *Chairman.*] Have you got the date of the notice of the forfeiture of J. J. Ray's conditional purchase? Yes; it was forfeited on the 24th September, 1890.
248. Have you got a copy of the recommendation of the forfeiture by the Local Land Board at Wagga Wagga? Yes; I have a copy of the decision of the Local Land Board recommending the forfeiture.
249. Will you hand that in? Yes; I hand in a copy of the decision of the Board. [*See Appendix B.*]

FORFEITURE OF J. J. RAY'S SELECTION IN THE LAND DISTRICT OF WAGGA WAGGA.

APPENDIX.

[*To evidence of Mr. A. Salwey*, 8 *October*, 1891.]

A.

COPY OF EVIDENCE TAKEN BEFORE THE LOCAL LAND BOARD AT WAGGA WAGGA IN THE CASE OF J. J. RAY'S FORFEITED SELECTION.

Francis Benedict Mulligan, sworn, saith:—I am the Inspector of Conditional Purchases for the Land District of Wagga Wagga; on the 22nd May, 1889, I visited John Jonathan Ray's conditional purchase 85/70 of 559½ acres, Parish of Biragambil, county of Bourke; I found on the additional conditional purchase, portion 20, a hut of sawn boards, 18 by 10 feet, of two rooms and verandah; the rooms were floored, and the building had an iron roof and was worth I thought £20; no one was resident upon the land at that time, and the hut of the selector was locked up, and, as far as could be judged from outside appearance, it had not the trace of recent use; the front room, as seen through the window, contained table, small cupboard, dresser, and crockery; the bed-room door was closed; I could not see any provisions; I was only able to get a partial view of the contents of the front room; as far as I was enabled to see inside the hut, and from outside appearance, no trace of occupation; was decidedly poor; there was a little partial grubbing and some burning off near the hut; the whole of the selector's land was fenced in with a six-wire fence, and a little chock and log across the stony parts.

By Mr. Fosbery: I only got a partial view of the contents of the front room; there could have been other things there without my seeing them; I called at the selection late in the evening; before the day I inspected it there had been rain; the day before I inspected the land the whole country showed signs of recent rain; the rain would have obliterated recent tracks about the hut and on the land; I met selector on 1st June between Wagga Wagga and Coolamon; when I was returning to Wagga Wagga; he told me that on the occasion of my visit he was away assisting his father with the ploughing.

F. B. MULLIGAN.

Sworn at Wagga Wagga, this 17th day of June, 1889, before us,—

T. W. WATT, J.P., Chairman, Local Land Board.
MATTHEW N. CALLAGHAN, J.P., Member Local Land Board.

John Jonathan Ray, sworn, saith:—I am the holder of conditional purchase 85-70, of 559½ acres, parish of Biragambil, county of Bourke, confirmed 15th September, 1886; I went into occupation of land within three months of the date of confirmation, in the house described by Mr. Inspector Mulligan; I first commenced to fence, scrubbing, and tank-sinking after I went into occupation; I improved my land; I had some assistance; the longest time I was absent from my selection was three weeks, in March last, during the drought; my water failed and I was forced to go; at the end of the three weeks rain fell sufficient to put water on my selection; I returned to the selection then; I remember the occasion of Mr. Mulligan's visit, it was on a Tuesday; I had left the selection the Saturday before; I went to my father's place to assist him to plough; very heavy rain had fallen on the Monday night and we could not go on with the ploughing; I returned to my selection on the Wednesday; I had been to Wagga Wagga with my mother, and when returning to my selection, on 1st June instant, I met Mr. Mulligan; I informed him where I was at the time he inspected the selection; the hut contained table, dresser, bed, bedding, chair, cooking utensils, crockery; I had everything necessary for occupation by a single man; I am a single man; I had provisions, consisting of bread, tea, sugar, and flour; I have ploughed, sheared, and harvested for my father, and during the time I was engaged at that work I stayed at my father's place, but three weeks was the longest time I was away from the selection, except at the times I was away assisting my father, and when away for the three weeks during the drought, I have resided continuously on the land; the selection is my own property, no person but myself has any interest in the land; I had previously held a farm at Brucedale, which I sold to Mr. Bennett, and with the proceeds from that sale I made the selection under inquiry; I was at Conabbie attending a sheep muster when the summons to appear at the Land Court was served on me; it was served on me on Monday; I had left the selection on Saturday night previous.

By Mr. Mulligan: I remember Mr. Inspector Battye visiting the land last May twelve months; I was resident at the time he visited it; I was in occupation the day before his visit, and the day before that; I had been there a length of time; I had been there continuously except Sundays, or when I went away cricketing; for a month at the time of Mr. Battye's visit my hut was provided with provisions and other things already spoken of; I commenced to fence the land about a month after it was confirmed; it was not completed right off; I personally, with the assistance of others, erected the fencing, which was completed in July, 1888; this would be on the additional conditional purchase, as well as on the original; the land was ringbarked when I applied for it; I only suckered and scrubbed part of it; I have not cultivated any part of it; I have scrubbed about 80 acres; the suckers were very thick; I may have been about two months suckering and scrubbing the 80 acres; besides this I employed my time in kangaroo shooting for a day and a night at a time, and in knocking about; my father's place is about 7 miles from my selection; my father has a large family; I am the oldest boy; my father and sister hold selections only separated by one chain road; I used to assist them at ploughing at harvest times, and occasionally at other times; when assisting my father and sister I generally returned to my selection on the Saturday and Sunday; I have stayed on the land for two months at a time without going away, that would be the longest time I have remained at one time on the selection; I have a small paddock in the lane between my land and Mr. Bennett's land in which to put my horse; my father had his sheep grazing on the land; up to the date of your visit my father was the only person besides myself who made use of the land; I had no vegetable garden, any vegetables I wanted I would get from my father; Mr. Bennett has not had the use of the land until within the last two or three weeks; the first time I had water on the land was in April, 1888; previous to this I used to get water from a well on Mr. Bennett's land about 200 yards away.

By the Board: Mr. Bennett has now leased the land from me for two years; he leased it from me on the 1st of this month, and up to the expiry of my residence term; I have been partly making a living by kangaroo shooting since I have been living on the selection; my father gave me the summons; he obtained it at my place, and brought it to me when I was sheep mustering at Coonabbie; up to last January Mr. Bennett had not run any sheep on the land; no person but my father had run sheep there.

By Mr. Fosbery: I got permission from Mr. Bennett to use the water from his well when I had no water; I did not pay him for it; kangaroo shooting is a means of livelihood for a good many; I used to send the skins I obtained to Sydney to Mr. Bridge; the land is all fenced in; there is also a tank on the land; it would take twelve months consecutively to effect the improvements on the original and additional conditional purchases with the assistance I had; I used to make as much as £20 per month by kangaroo shooting; the heavy skins are sold singly, the lighter ones by the pound (lb.); some skins are sometimes quoted at 105s. per dozen and the light ones at 1s. 6d. per lb.

By the Board: I have no idea of the contents of the tank; I put it down myself by plough and scoops with bullocks; I did not measure it; I obtained £20 per month for about six months shooting kangaroos; I must have obtained between 200 and 300 skins during that time; I have made nothing out of the land up to this time; 50 kangaroo skins would make up £20.

By Mr. Fosbery: It depends upon the size and weight of the skins as to how many would make up to £20 in value.

JOHN JONATHAN RAY.

Sworn at Wagga Wagga, 17th day of June, 1889, before us,—

T. W. WATT, J.P., Chairman, Local Land Board.
MATTHEW N. CALLAGHAN, J.P., Member Local Land Board.

John Wright, contractor for bush work, sworn, saith:—I know the land held by John Jonathan Ray now under inquiry, I have known it ever since he commenced to build his house; I am working on the adjoining selection of Mr. Bennett's; I am at present suckering and scrubbing for Mr. Bennett; I have seen Ray frequently on his land early in the morning and late in the evening; I cannot say how many times, but being such near neighbours often when I want a tool I go to his place for it and when he requires one he comes to me; I have been inside Ray's house; it is well furnished and is a very nice clean comfortable place; he has been away occasionally from the land during the three years I have been there; I may have missed him about two or three weeks at a time but not longer; I have seen selector building, fencing, and tank-sinking on the land; I have not the slightest doubt that the selection is selector's *bona fide* and continuous residence; before selector had water on his land he obtained water from a spring on Mr. Bennett's land, but the spring went dry during the drought; I have seen selector hunting kangaroos; he keeps springs set for wild dogs; it is a very scrubby place about there; there are a good many wild dogs and kangaroos out there.

By Mr. Mulligan: When I first went on to Mr. Bennett's land in January, 1887, the hut on Ray's land was being built; I was there about six months before I went to his hut for the first time, but I heard them working at the hut; I cannot tell who built the hut; I saw Ray and his brother erecting some of the fencing; I believe in the same year part of the fence was erected later; I have been over to the selector's hut five or six times a night during the time I have been there; Ray was there on every occasion I was there; I was never there when he was not there; I can always tell when he is there; I can see his light from my place; selector would be away from the selection at times; he went away the Saturday before your visit; he would not be away very often; I never missed him from the land for more than two or three weeks at a time; I cannot say if he was away on more than one occasion for that length of time; I cannot say if he was on the land six months without leaving it; I know that he has been there one month without leaving it; I cannot say how selector earns his living; I have not known him to do contract work for persons in the locality; I have seen him scrubbing the land; I cannot say how many acres have been scrubbed; I cannot say what his occupation was; he does not cultivate the land; I have seen stock, which I believe belonged to his father, grazing on the land; Mr. Bennett's cattle have been depasturing on the land for the last three or four weeks; the sheep which I believe belonged to selector's father had been removed some time previously; I do not know that selector is a relation of Mr. Bennett's.

Sworn at Wagga Wagga, this 17th day of June, 1889, before us,— JOHN his + mark WRIGHT.
T. W. WATT, J.P., Chairman, Local Land Board.
MATTHEW N. CALLAGHAN, J.P., Member Local Land Board.

William James Dennis, farmer and grazier, of Houlaghan's Creek, sworn, saith:—I know the land selected by John Jonathan Ray ever since it was selected, about three years ago last August; I had opportunities of seeing selector on several occasions on the land; he was living in a two-roomed weatherboard house, sufficiently furnished for a bachelor; it was comfortable; I have had meals with him whenever I was there; it showed signs of constant use and occupation; I showed Mr. Inspector Battye over the land; at the time he inspected selector was residing at that time; I did not find selector residing there on every occasion I was there, but the hut had the appearance of being recently used, and bore signs of constant occupation.

By Mr. Mulligan: I first saw the hut, to the best of my belief, in the middle of 1887; it was completed at that time; I was at the hut about a dozen times altogether, not more; I was never there of a night; I have been there early in the morning, about 8 o'clock in summer time, and during the day, but never late at night; I saw selector on the land six or seven times altogether out of a dozen times I have been there; I believe selector earns money by kangaroo shooting; I have seen him taking skins in; I left the locality in November, 1888; I had been living there from January, 1886; I was living about 3 miles away; I never saw anybody but selector's brother living there with him.

By the Board: At the time I went over the selection with Mr. Inspector Battye selector was at his house getting his dinner ready; Mr. Battye had been visiting my selection; I had to pass selector's house on my way to Coolamon, it being the direct way.

Sworn at Wagga Wagga, this 17th day of June, 1889, before us,— WILLIAM JAMES DENNIS.
T. W. WATT, J.P., Chairman, Local Land Board.
MATTHEW N. CALLAGHAN, J.P., Member Local Land Board.

Michael Mooney, farmer, of Walleroobie, sworn, saith:—I know John Jonathan Ray, also the land held by him, now subject of inquiry, for about three years; I have been to Ray's house on several occasions, had my meals there, and stayed of a night with him; the house was of pine sawn boards, built horizontally like weatherboards; it is a comfortable cottage of two rooms; it was furnished; it contained bed, bedding, cooking utensils, chair, table, cupboard, and everything necessary for a single man; it bore signs of constant use and occupation; I have stayed eight or ten nights with him on different occasions right through; I live about 6 miles away; I never saw selector working on the land when I took to going there of a night; scrubbing, fencing, and ringing had been completed; I believe selector gothis water from a spring in Mr. Bennett's land; selector had a tank on his land, in which there was water at the time I was there, but it was further away than the spring on Mr. Bennett's land; the spring goes dry at times; the longest time I have known selector to be away from his selection was for two or three weeks.

By Mr. Mulligan: I was at the selection about fifteen times altogether; I was there first about the middle of 1887; it is about six months ago since I was there last; I have stayed there eight or ten times of a night; I have been out kangarooing with him on these occasions; I was never at the hut or by there without seeing him; it would be my custom to go kangaroo shooting with him; I was at the hut sometimes without staying of a night; I never saw selector working on the land; the improvements were completed when I went there; there had been scrubbing on the land; I only know from what I have been told that selector had not been away from the selection for more than two or three weeks at a time; his brother and Mr. Toland, the uncle of selector, told me; selector did not tell me; when I said the place showed signs of constant use and occupation I meant to say that it looked as if someone was always there; there was no garden about there, but there was debris and an old heap of ashes at the back of the house which appeared to have been taken from inside; I have seen applicant taking ashes from inside and placing them there; I did not see any horse paddock; there is a lane between selector's land and Mr. Bennett's, fenced on both sides; I was never at the hut without seeing him; I generally met him at the hut, but not by appointment; he has on one or two occasions started with me from my hut; the hunting would last two or three days at a time; we used to take the skins to selector's hut.

Sworn at Wagga Wagga, this 17th day of June, 1889, before us,— MICHAEL MOONEY.
T. W. WATT, J.P., Chairman.
MATTHEW N. CALLAGHAN, J.P., Member.

B.

Decision of Local Land Board in the case of J. J. Ray's forfeited selection at Wagga Wagga.

O.C.P. 85-70.
A.C.P. 86-125.
Wagga Wagga.
Minute Book, vol. 4, folio 99.
Depositions, 12 sheets.

WHEREAS on the 17th day of June, 1889, it became a matter for investigation before us under the provisions of section 20, Crown Lands Act of 1884, as to the fulfilment of condition of residence by John Jonathan Ray upon occupation conditional purchase 85,170, of 559½ acres, portion 18, made at Wagga Wagga on 6th August, 1885, and confirmed on 15th September, 1886, additional conditional purchase 86-125, of 228½ acres, portion 20, parish of Birragambil, county of Bourke, made 16th September, 1886, and confirmed 29th November, 1886.

And having taken evidence and inquired into the said matter we are of opinion that nothing further than a pretence of residence has been carried out in this case. Applicant has never made anything out of the land and has now leased it for the remainder of his term. It is quite clear that *bona fide* and continuous residence has not been carried out in this case. We therefore decide that the conditional purchase should be declared forfeited.

Given under our hands at the Court-house at Wagga Wagga, in the Colony of New South Wales, this 17th day of June, 1889,—

T. W. WATT, J.P., Chairman.
MATTHEW N. CALLAGHAN, J.P., Member.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE LEGISLATIVE ASSEMBLY.

VOTES No. 67. MONDAY, 21 DECEMBER, 1891.

12. CONDITIONAL PURCHASE BY JAMES YOUNG, AT GOSFORD:—Mr. Stevenson moved, pursuant to Notice,—
(1.) That a Select Committee be appointed, with power to send for persons and papers, to inquire into and report upon the conditional purchase of 160 acres taken up by James Young, at Gosford, on the 31st December, 1885.
(2.) That such Committee consist of Mr. Brunker, Mr. Dale, Mr. Copeland, Mr. Gormly, Mr. Colls, Mr. Ewing, Mr. Rose, Mr. Frank Farnell, and the Mover.
Question put and passed.

VOTES No. 80. THURSDAY, 4 FEBRUARY, 1892.

7. CONDITIONAL PURCHASE BY JAMES YOUNG, AT GOSFORD:—Mr. Stevenson, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee, for whose consideration and report this subject was referred on 21st December, 1891.
Ordered to be printed.

CONTENTS.

1891-2.

CONDITIONAL PURCHASE BY JAMES YOUNG, AT GOSFORD.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 21st December, 1891, "*with power to send for persons and papers, to inquire into and report upon the Conditional Purchase of* 160 *acres taken up by James Young, at Gosford, on the* 31*st December*, 1885,"—have agreed to the following report :—

Your Committee having examined the witnesses named in the List* (whose evidence will be found appended hereto), find :— * S List, p. 4

1. That James Young applied at the Gosford Land Court, on the 31st December, 1885, for an area of 160 acres, parish of Narara, as a non-residential selection.

2. That some three weeks after, and prior to confirmation, he (Young) wished to change his application to a conditional purchase, as the original area applied for could not be granted. The applicant had the power to refuse the lesser area, but he decided upon accepting it, believing that the Minister had the power to afterwards make the alteration to a conditional purchase.

2. Your Committee are of opinion that the Land Act does not give any such power, and that therefore the Minister could not comply with Young's request; and your Committee, after hearing the evidence, regret that it does not disclose any legal grounds upon which they could make a recommendation in favour of the selector, who no doubt has resided continuously upon the land, and who, through ignorance of the Land Act and of his own action, has been a sufferer.

R. STEVENSON,
Chairman.

No. 2 *Committee Room*,
Sydney, 2*nd February*, 1892.

PROCEEDINGS OF THE COMMITTEE.

WEDNESDAY, 13 *JANUARY*, 1892.

MEMBERS PRESENT:—

Mr. Stevenson, | Mr. Gormly,
Mr. Rose.

Mr. Stevenson called to the Chair.
Entry from Votes and Proceedings appointing the Committee *read* by the Clerk.
Committee deliberated.
Ordered,—That Mr. J. Young, Mr. H. Blackett, Mr. Harriott, and Mr. W. H. Capper be summoned to give evidence at next meeting.
[Adjourned till Tuesday next, at *Two* o'clock.]

TUESDAY, 19 *JANUARY*, 1892.

MEMBERS PRESENT:—

Mr. Stevenson in the Chair.

Chairman submitted draft report.
Same read, amended, and agreed to.
Chairman to report to the House.

LIST OF WITNESSES.

1891–2.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

CONDITIONAL PURCHASE BY JAMES YOUNG, AT GOSFORD.

TUESDAY, 19 *JANUARY*, 1892.

Present:—

MR. COLLS, MR. GORMLY, MR. STEVENSON, MR. EWING, MR. FARNELL.

RICHARD STEVENSON, ESQ., IN THE CHAIR.

Mr. James Young called in, sworn, and examined:—

1. *Chairman.*] Where do you reside? At Larbroy, Narara.
2. Can you state your case? I could. I have a statement in writing which I could submit.
3. On the 31st December, 1885, did you apply at the Land Office, Gosford, for a conditional purchase? Yes.
4. Do you recollect the area? 160 acres.
5. You applied for it as what? As a non-residential conditional purchase.
6. Was the application granted? Yes, they accepted the application, but they did not grant the 160 acres.
7. After making the application did you wish to change it? Yes, about three weeks afterwards I wished to change it to an application for a residential conditional purchase.
8. What steps did you take? I went to the land agent, Mr. Kingsmill, about three weeks afterwards, and he said that he had not power to change the application. I said "Do you think it can be done?" and he replied "Well, I think so—anyhow I hope so, but I have not the power. Your best plan is to see the Minister for Lands."
9. Did you take any action on that statement? I went to see the Minister for Lands. I tried two or three times but failed to see him.
10. What did you ultimately do? One of the messengers in the Lands Office seeing that I was rather persistent in attempting to see the Minister took me over to the old Lands Office, and pointed out a man there to me, and I explained my case to him. He said "You need not trouble about it, they will change it willingly." I said I wanted to change it from a non-residential to a residential conditional purchase, and he said "the object is to settle people on the land and they will gladly change it."
11. You do not know the name of that gentleman? No, I did not think of the name. I was twice at the Lands Office, and the first time I was told that nothing could be done until the Land Court met.
12. *Mr. Gormly.*] Do you mean the Land Court or the Land Board? I do not know the difference. I thought the Land Board and the Land Court were both the same.
13. Do you recollect when that was? About the time that I saw him would be April, 1886.
14. How long was that after your first attempt to reach the Minister? It was not very long.
15. Was it a month? It was more than a month. I tried to reach the Minister a week or two after I saw Mr. Kingsmill.
16. When you had seen that gentleman in the old Survey office, what did you do? I was expecting to hear about the application being changed.

Mr. J. Young. 19 Jan., 1892.

Mr. J. Young. 19 Jan., 1892.

17. Did you communicate with the chairman at Gosford? Yes. A friend of mine said, "Do not trust those fellows, but write to the chairman; they will say anything to get rid of you." I then wrote to the chairman.
18. To whom did you write? To Mr. Harriott.
19. What did you write? I told him I wished to change my application from an application for a non-residential to one for a residential conditional purchase.
20. You did that on the understanding that nothing could be done until the Land Court met? I did that because I was told that nothing could be done until the Land Board or the Land Court met.
21. Was that in October, 1886? I wrote to him before that.
22. Did you get any reply? I did not.
23. *Chairman.*] Did you attend the Court at Gosford? I did.
24. What did you do then? On the 28th October, 1886, I attended the Court.
25. What took place? The chairman, first of all, said it was rather a difficult case, as Mr. Hunter and I had applied for the same ground, and Mr. Hunter had applied for a conditional lease, and he said, "The decision of the Board is that you can only get 120 acres instead of 160.
26. What did he say in answer to the letter which you wrote, asking for your application to be changed? The first letter he never replied to. He said he only received it the morning of the confirmation of the application, and that it had been lying in the Lands Office or elsewhere for the last four or five months.
27. Had your application been confirmed at that time? No; he received it four or five months before that.
28. You say it was before it was confirmed;—did he tell you that you could only obtain 121 acres instead of 160? He told me that on the 20th October. He said, "Will you accept it?" and I said that I would not take it unless I could get it as a residential selection. He said, "you must answer now; but I will see the Minister for Lands about it." That induced me to take the land. I told him at another meeting that I went away with that impression as distinctly as I was then under the impression that he said the contrary.
29. If he had told you that you could take a smaller area and get a refund, would you have accepted it? No, I believed that the application would be changed.
30. You believe that the Minister had power to change it? Yes.
31. After that the Land Court would be held;—did you expect to receive a notice of your application being granted? I expected to hear something about what transpired between him and the Minister for Lands. I missed one Land Court, then I thought I would not miss the next, and I wrote a letter first, and I stated in the letter that I would attend the Court.
32. What took place then? I attended the Court, and I gave the chairman the letter, and after some cases had been disposed of they went to dinner. I attended the Court in the afternoon, and when the business was over I still remained. There were only myself, the Board, the clerk, the inspector, and another gentleman present.
33. What did he say? He said, "James Young here?" and I said "Yes." Then he said, "Mr. Young, when you write a letter be careful to put in nothing but the truth." I said, "What is there in the letter that is not true?" and he replied, "You said I would see the Minister for Lands about your selection—it is absurd. I said no such thing. I may have said that I would submit it to the Minister for Lands." I was rather excited at the time. I felt that I was not being fairly dealt with, and I did not know what to do.
34. When he denied it, what did you say? When he said that he would not see the Minister I said that I had gone away with the impression that he said he would see the Minister as clear as is my impression that he now said the contrary.
35. Were you very excited at the time? I was a little excited.
36. Did you consider that the chairman treated you discourteously? I think he did. I wrote a complaint about it.
37. *Mr. Farnell.*] Do you think that you gave him sufficient reason to be discourteous? I do not think so—I did not intend to do so.
38. *Mr. Gormly.*] Do you say that, before the conversation with the chairman, the chairman stated that the business before the Local Land Board had terminated? Yes.
39. And the Board was not sitting then? The chairman said that that was all the business, and dismissed the meeting.
40. *Chairman.*] Did the members of the Land Board remain? Yes; and the clerk and the Inspector of Selections, Mr. Brown.
41. *Mr. Gormly.*] Was your case before the Board for adjudication at that time? No; I only gave them the letter that day.
42. *Mr. Colls.*] Did you get any notice that your case would be heard that day? No.
43. What brought you there? I went to hear the result of his interview with the Minister for Lands concerning the case. He had said that he would see the Minister about it, and I had never heard what had transpired between them.
44. *Chairman.*] After accepting the 121 acres did you go on the land? I went on the land before that. I cleared the land for survey.
45. And have you lived on it ever since? Yes.
46. And you have been compelled to pay for it as a non-residential conditional purchase? Yes; I wrote a letter to say that I would pay the money to secure it. I thought I might lose the land if I did not.
47. Your object was to change it from one clause to another? Yes; it would only cost half the money if taken up under the residential clause.
48. *Mr. Ewing.*] You would save £6 a year? I should save £120 on the whole lot.
49. *Chairman.*] Being compelled to retain it as a non-residential purchase you have been very much pressed I believe? Yes.
50. *Mr. Colls.*] What improvements have you made? I have fenced in the land, built a house, and planted fruit-trees.
51. How many acres have you cleared? About 5 acres, and I have 6 or 8 acres partially cleared.
52. Have you made it your home? Yes.
53. *Chairman.*] Was there any one present when Mr. Harriott the chairman promised that he would submit your communication to the Minister? There were several. Mr. Blackett was present. 54.

Mr. J. Young. 9 Jan., 1892.

54. *Mr. Ewing.*] What do you think the land is worth? I do not place much value on the land, but I consider that the place is worth over £1,000. I value the house at £450.
55. What sort of a house is it? A six-roomed house of weather-board and lath and plaster.
56. Is it good land? There are good patches for fruit-trees, but the land has to be cleared and scrubbed—it is swampy scrubby land.
57. *Mr. Gormly.*] Are you aware that it is necessary to make a written application for a conditional purchase? No; I am not aware of that. I forget now how I applied for the land.
58. *Chairman.*] Did you not write out an application when you applied? I forget now. I went to the Land Office.
59. Did you sign a paper? I think so.
60. *Mr. Gormly.*] Are you aware that a conditional purchase can only be obtained by the applicant making a written application? I may have been aware of that, but I forget now.
61. You must have understood the difference between a residential and a non-residential conditional purchase? I intended it for a non-residential conditional purchase at first; at that time I intended to go home. I looked at the situation of the land; it was well watered, and I liked the place. I thought I would go home and then return and live there altogether. I intended to go home to see my sister, but shortly after that I got a letter to say that my sister was coming out. That was why I wished to change the application. If I had known as much as I do now, I should have taken up the land as a residential selection, gone home and got back again before the survey. I was induced to believe that my application could be readily changed.
62. Are you aware that it could not be changed—that the law will not admit of it? I was not. None of the officers could tell me that.
63. Are you aware of that now? I am not even aware of it now.
64. *Chairman.*] You have been told of it? I have been told of it, but Mr. Harriott never told me that it could not be changed, or I would not have accepted it.
65. *Mr. Farnell.*] Amongst the papers I see an application form signed "James Young," is that your signature? Yes; I recollect this now. The form was filled in in Mr. Hunter's house; he had several of these forms, and he showed me how to fill it up.
66. You appear to have filled in a certain portion of the form and some one else the rest;—who did it? I do not know.
67. Did you agree to the conditions laid down in taking up the selection? I took it up on those conditions.

Mr. Horace Blackett called in, sworn, and examined:—

Mr. H. Blackett. 19 Jan., 1892.

68. *Chairman.*] Were you present at any time when a conversation took place about changing Mr. Young's selection from a non-residential to a residential selection? Yes; I was there when his application was confirmed.
69. *Mr. Gormly.*] At the meeting of the Local Land Board at Gosford? Yes.
70. *Chairman.*] Can you tell us what took place? Mr. Young was called up, and the chairman told him he had received a letter from him, but only that morning, although it had been in the Lands Office for some time, and that he would see the Minister about it. Mr. Young said that he did not want the land unless he could take it as a residential selection, and he would not take it at all as a non-residential selection. But he seemed confused, and I think he took the paper without saying whether he would accept it or not.
71. Do you remember whether he got the area that he applied for? I am not sure. I think he did not.
72. Did you hear the chairman point out that the area was 121 acres instead of 160 acres? I heard the chairman point out that he could not receive the land as he asked for it.
73. He did not point out that Mr. Young need not take it unless he liked? No.
74. Did he insist upon having an answer then? Yes; it took some time to decide it. Young said he would not take the land unless he could change it to a residential conditional purchase, and the chairman insisted upon having an answer at once.
75. *Mr. Gormly.*] Did Mr. Young state that he had any objection to taking the land because there was a less area than he had applied for? I do not remember that he did.
76. He did not assign that as a reason for not taking the land? I do not think so.
77. *Chairman.*] At the confirmation he distinctly stated that he would not have the land if he was compelled to take it as a non-residential selection? Distinctly.
78. *Mr. Colls.*] What is the name of the chairman? Mr. Harriott.
79. Do you know him? Yes, I have been before the Board several times, and he was always the chairman.
80. *Chairman.*] Is he very courteous to selectors as a rule? I never heard him courteous to any one; he confuses most of us.
81. Did you think Mr. Young became confused by the chairman's remarks to him? I think he was very much confused. I think he took the papers without knowing what he was doing. The chairman told him that he was wasting the time of the Court, and that he must decide at once.
82. *Mr. Ewing.*] You say that the chairman definitely told him that he must agree to take the land as either one thing or the other? No; but that he must agree to either take it or refuse it.
83. And he took it? Yes.
84. But you believe he was so confused that he was not responsible for his actions? Yes.
85. Do you think he was misled by the chairman as to his real position in regard to it? I think he was. I saw him on his land a short time afterwards, and he then told me that he must live on his land, because it was going to be changed into a residential purchase.
86. *Chairman.*] Do you know whether he has resided on the land continuously? Yes; he has.
87. *Mr. Colls.*] And made improvements? Yes.
88. Good improvements? Yes; substantial ones.
89. He has never let the land? No; he and his wife have always been there.

Mr. Thomas Werre Harriott called in, sworn, and examined:—

Mr. T. W. Harriott, 19 Jan., 1892.

90. *Chairman.*] You were chairman of the Land Board at Gosford in 1886, were you not? Yes.
91. Do you recollect James Young applying for a selection at that time? No, I cannot say that I recollect any particular selection. There was an application by James Young, no doubt.
92. Do you recollect having a conversation at any time with Young in reference to his selection? I do not. I know this much, that I did not sit upon that case when it first came before the Board; I was laid up from inflammation of the lungs. Mr. Houston was the acting chairman.
93. You were chairman when the application was confirmed? Yes.
94. Can you recall the conversation that took place on that occasion in reference to it? I cannot trust my memory as to that at all.
95. Can you refresh it by the papers? No; there is nothing in the papers bearing on it.
96. Do you recollect whether Mr. Young made an application for a certain area, and did not get that area? I really cannot say from memory, but no doubt the papers will show.
97. Did you ever receive a letter from Mr. Young as a member of the Board? Possibly, but I cannot possibly recollect seeing the number of cases that came before me. If I received a letter no doubt it was dealt with, and it will be amongst the papers.
98. Young says that he wrote to the chairman of the Board asking him to change his application. He was told to attend the Land Court on the 10th October, 1886, which he did, and you said you had received a letter from him asking him to make it a residential instead of a non-residential;—have you any recollection of that? If he states that it was so it would most likely be true.
99. This matter was several times before you and you must recollect something about it? Indeed I cannot; possibly I might recollect something when I look at the papers; I recollect some of the circumstances which you have mentioned, but I could not say that they related to Young's case.
100. Looking at the papers, could you not say it was Young's case? I see the letter here, and I recollect the circumstances in connection with some man wishing to have an application under the 26th section changed to one under the 47th section.
101. Was that man James Young? According to this letter it was. I recollect his statement that he wished to go to Scotland, but then changed his mind.
102. When an applicant cannot get the area which he has applied for, is it not usual to point out that he is not compelled to take the smaller area? Yes, I generally do so, but in this case the first application did not come through me.
103. But you were present and were chairman when the application was confirmed, were you not? Yes.
104. He applied for 160 acres, but got only 121 acres? Yes.
105. Did you point out as chairman as he had written about changing his application, that it was not necessary for him to take a smaller area unless he wished? I should not do that. The Board had settled that before hand. That was settled when the applicant was there, and that was the time for him to object to the application.
106. *Mr. Farnell.*] He had accepted the lesser area before he intimated that he wished to change the section? It was first brought before the Board on the 30th April, 1886. It was then accepted, and sent out for survey of a certain kind of area.
107. It was after that that he wanted to change it to a residential selection? Yes.
108. *Chairman.*] When he found that he could not get the larger area, did he state that he would not take the smaller area unless it was granted under the residential clause? Not that I know of.
109. Will you swear that he did not? I certainly cannot recollect his ever saying anything of the sort. It is possible that he might have said it. I should have thought that it was his business to have appealed against the decision if that were the position of the matter.
110. Did you insist, as chairman, that he should decide whether he would take it or not? I could not have done that. He confirmed it apparently. There does not seem to have been any evidence taken. It was confirmed, and the land having been measured in the form in which it should be decided it should be measured, and that I presume was shown him as a tracing. In those days I used to give tracings.
111. Did you promise him at any time that you would represent his case to the Minister with reference to changing the selection from a non-residential to a residential selection? For all that I know I may have referred it to the Minister on the possibility of his doing what I did not consider it in the power of the Board to do.
112. The witness swore that the chairman never pointed out that he need not take the smaller area, but said "I have not the power to change the application; you must decide now and I will see the Minister." Do you recollect that conversation? I do not indeed.
113. You ought to answer to the Committee? I answered to the best of my ability, but I cannot possibly recollect it.
114. Then you cannot deny it of course? I cannot recollect saying it.
115. If that statement is corroborated by another witness do you think it is not probable that you are mistaken as to your recollection? No; I say I cannot recollect saying it. It is possible that I may have said something, but not that. Very often there are misapprehensions as to what people say.
116. Still if the selector has sworn this, and his statement has been corroborated by another witness, would you still believe that the statement is not correct? I think it quite possible that I said he would have to decide then.
117. Do you give the opportunity of refusing a smaller area than that applied for? I do not see what we had to do but to confirm it.
118. He states that you said to him "You must decide now, and I will then see the Minister"? I could not have said that I would see the Minister. I may have referred it to the Minister because I felt sure the Board had not the power to do it.
119. Did you ever refer a case to the Minister? Possibly.
120. Did you ever refer this case? Not that I know of.
121. *Mr. Farnell.*] If you made a promise would it not be shown on the papers? I should think so.
122. *Chairman.*] If you made a promise of that kind would you not have made some representation of the case? It is possible. There may have been some other reference that might have been decided. It is absolutely decided, not by the Board, but by the Appeal Court that such an application could not be changed.

Mr.

Mr. Alfred Salwey called in, sworn, and examined:—

123. *Chairman.*] What are you? An officer of the Lands Department.

124. Can you give the Committee any information as to this case? An application was made by Mr. Young for a non-residential conditional purchase. This came before the Local Land Board on the 30th April, 1886, the applicant being present. It was then pointed out that part of the land was in the population area, and the Board ordered a survey of that part not in the population area, the applicant being present and not objecting to a reduction in the area. That is when he should have withdrawn his application if he was not satisfied with the area. The land was then surveyed and confirmed by the Local Land Board on the 29th October, 1886, the area being 121¼ acres. The selector was present and there was no evidence that he objected to the confirmation at all. On the 6th July, 1886, Mr. Young wrote to the members of the Board desiring to know whether he could have his selection changed from a non-residential to a residential conditional purchase., and gave as a reason for the request that at the time when he made the selection he was about to visit Scotland, but he had since changed his mind, and wished to reside on the land. He also wrote to the same effect to the Minister, Mr. Copeland, and in that letter he stated that through unfortunate circumstances he would have great difficulty in fulfilling the conditions of the non-residence clause. He was however informed on the 2nd November, 1886, that no relief could be afforded to him as there was no provision in the Act for transferring an application from one section to another. Then later on Mr. Young by letter on 5th October, 1888, revived the question of changing the section which he has been repeatedly informed could not be allowed. He alleges that the trouble has been brought about through some wrong information having been supplied to him by the officers of the Department. In his letter of the 6th July, 1886, the reason he gave for making his application under the non-residential clause was that he was thinking of visiting Scotland, but having afterwards made up his mind not to leave the Colony he desired to have it changed to a residential conditional purchase. In his letter, however, of the 1st November, 1886, he gave a totally different reason for having the selection under the 47th clause, namely, that he owned an orchard at Ryde, and whilst it was not disposed of he might be considered to have two homes, but having sold the orchard since he was free to settle on the selection, and make it his home. These are all the facts of the case.

Mr. A. Salwey. 19 Jan., 1892.

125. He has made repeated applications not only to Mr. Copeland, but also to Mr. Brunker? Yes.

126. From 1886 up to the present time? Yes.

127. And in every instance he has been told that the Board has no power? Yes; that it cannot be done. The Land Board has held that it is impossible to make such a change.

128. *Mr. Gormly.*] Whilst his former application was in existence another application could not be made for the same land? No.

129. The land must become Crown land again before he could make another application? Yes. He admitted it was not an error that he had taken up the land under the 47th section. If it had been an error he could have gone into Court and said that he had made a mistake. Then the Minister could have referred the case to the Land Board, to get a re-hearing of it. Mr. Young having admitted that he intentionally applied for the land under the 47th section, the Land Court could not say that this was a wrong application, so there is no relief.

1891-2.

CONDITIONAL PURCHASE BY MRS. ANN ROUSE, IN THE PARISH OF KAHIBAH.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 1st February, 1892, "*with power to send for persons and papers to inquire into and report upon all the circumstances attending the Conditional Purchase of Mrs. Ann Rouse, of* 80 *acres, situate in the parish of Kahibah, and the forfeiture of the same,*"—and to whom was referred on 1st February, 1892, the Report of Select Committee of Session 1887-8 to such Committee, have agreed to the following Report:—

Your Committee having examined the witnesses named in the List* (whose evidence will be found appended hereto) find:— See List p. 5.

(1.) That, on 20th July, 1871, Ann Rouse conditionally purchased 80 acres of land, portion No. 221, in the parish of Kahibah, county of Northumberland, and which had been surveyed for alienation, in pursuance of the provisions of the Crown Lands Alienation Act of 1861, by Surveyor Maitland.

(2.) In 1874 the Government sent Mr. Surveyor Stuart to again measure the land, and he reported the survey on the 26th January, 1875, which was approved on 20th September, 1875, four years after the land was selected.

(3.) On the 29th January, 1875, the conditional purchase was declared lapsed owing to Mrs. Rouse's inability to make a declaration of residence.

(4.) On the 4th February, 1875, the said Ann Rouse reselected the land by virtue of her freehold, on which she then resided, and on the 6th February, 1879, her second selection was declared void as being on a water reserve.

(5.) Formal protests were made by the said Ann Rouse to the Lands Department against such voidance, and Mr. Secretary Copeland, after considering the case, wrote a minute on the 9th December, 1886, to the effect that he considered the case was one which should be validated under section 138 of the Crown Lands Act of 1884. This minute was written some nine years after the first selection, and over four after the second.

(6.) On 31st July, 1886, Messrs. Houghton and Palmer made application for a permit to mine *inter alia* under the portion No. 221 selected by Mrs. Ann Rouse under section 28 of the Mining Act of 1874.

(7.) That on 14th December, 1886, a permit, in pursuance of the application in the last paragraph mentioned, was issued to Messrs. Houghton and Palmer, but the permit does not in fact include the portion No. 221 selected by Mrs. Ann Rouse.

(8.) On 17th January, 1887, Messrs. Houghton and Palmer applied for a lease of portion 221, under 48 Victoria No. 10, section 3, upon the basis of the permit granted to them on 14th December, 1886. Section 3 of 48 Victoria No. 10 says:—"Any permit or authority granted under the twenty-seventh or twenty-eighth section of the principal Act, and now in force may, upon application of the holder in the prescribed manner, be converted into a lease by the Governor with the same effect, and subject to the same conditions and provisions to those contained in leases made by virtue of the last preceding section."

(9.) On the 28th March, 1887, a lease was wrongfully obtained by Messrs. Houghton and Palmer, for portion No. 221, parish of Kahibah, it having been selected by Mrs. Ann Rouse.

(10.) No further steps appear to have been taken by the Lands Department until 30th September, 1887, when it was discovered that a lease of portion 221 had been issued to Messrs. Houghton and Palmer, and the Department then wrote to Mr. Henry Rouse, as representing Mrs. Ann Rouse, advising him that conflicting interests had arisen, which prevented Mr. Secretary Copeland's minute from being carried into effect.

Your Committee having carefully considered all the circumstances of the case respectfully submit that whereas the permit, in virtue of which the lease of the portion 221 was granted, in terms of 48 Victoria No. 10, section 3, and under which it is issued, does not include the said portion and inasmuch as it has been conclusively proved to your Committee that Messrs. Houghton and Palmer wrongfully obtained the said lease from the Mines Department, and that the evidence proves the present lessees were cognisant of the fact, the said lease, therefore, in whatsoever form it may now be, is bad in law and in fact, and consequently there should be no existing conflicting interests to the validating of the conditional purchase, and in view of the improvements effected on the land—the extraordinary delay of the Lands Department in declaring the voidance of the selections—and that the said Ann Rouse and her representatives have been in undisturbed possession since 1871, and have paid all the deposits and instalments required of them, your Committee strongly recommend the case to the favourable consideration of the Government.

WILLIAM GRAHAME,
Chairman.

No. 2 *Committee Room,*
Sydney, 25 *February,* 1892.

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 4 *FEBRUARY*, 1892.

MEMBERS PRESENT:—

None.

In the absence of a quorum the meeting called for this day lapsed.

THURSDAY, 11 *FEBRUARY*, 1892.

MEMBERS PRESENT:—

Mr. Grahame, | Mr. O'Sullivan,
Mr. Hart, | Mr. Scott,
Mr. Ewing.

Mr. Grahame called to the Chair.

Entry from Votes and Proceedings appointing the Committee, and referring the Report of Session 1887–8, to such Committee, *read* by the Clerk.

[Adjourned till Tuesday next, at *Two* o'clock.]

TUESDAY, 16 *FEBRUARY*, 1892.

MEMBERS PRESENT:—

None.

In the absence of a quorum the meeting called for this day lapsed.

WEDNESDAY, 17 *FEBRUARY*, 1892.

MEMBERS PRESENT:—

Mr. Grahame in the Chair.

[Adjourned till Tuesday, next at *Half-past Two* o'clock.]

TUESDAY, 23 *FEBRUARY*, 1892.

MEMBERS PRESENT:—

Mr. Grahame in the Chair.

Mr. Hart, | Mr. Scott,

Committee deliberated as to their report.

[Reassembling of the Committee to be arranged by the Chairman.]

THURSDAY, 25 *FEBRUARY*, 1892.

MEMBERS PRESENT:—

Mr. Grahame in the Chair.

Mr. Ewing, | Mr. Hart,
Mr. Davis, | Mr. Scott.

Chairman submitted draft report.
Same read, amended, and *agreed to*.
Chairman to report to the House.

LIST OF WITNESSES.

1891–2.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

MRS. ANN ROUSE'S CONDITIONAL PURCHASE, PARISH OF KAHIBAH.

WEDNESDAY, 17 *FEBRUARY*, 1892.

Present:—

MR. EWING, MR. HART, | MR. LEES, MR. SCOTT.

WM. GRAHAME, ESQ., IN THE CHAIR.

William Gillies called in, sworn and examined :—

Mr. W. Gillies. 17 Feb., 1892.

1. *Chairman.*] Were you resident in Newcastle in 1870 and 1871? Yes.
2. Do you recollect measuring a piece of land marked portion 221 with Mr. Surveyor Maitland? Yes; Mr. Maitland was a Government surveyor.
3. Do you recollect seeing the papers in connection with the purchase? Yes.
4. Did you hear conversations between Mr. Maitland and Mr. White, his assistant? Yes.
5. Were you employed by Mr. Maitland to take out his implements with a horse and cart to carry on the survey? Yes.
6. Did Mr. Maitland say that this land was not within a water reserve? Yes.
7. Did he say that it was open for selection? Yes.
8. Did you confer with Mrs. Ann Rouse? Yes. Previous to this I advised her to take up this piece of land; and I pegged it out for her under her instructions, and I acted as agent for her.
9. Did you attend at the land agent's office, and put in an application as agent for Mrs. Rouse? Yes.
10. Who filled in the application? Mr. George Scott, who was assistant to Mr. Baker, the land agent.
11. Did you explain to him under what section you wanted the land taken up? Yes.
12. Did you explain that Mrs. Rouse was living on the adjoining piece of land, and that she wanted to take up this land as an additional conditional purchase? Yes.
13. Did he understand that? Yes; it was filled in in that way.
14. Did you ever give evidence before on this subject? No. Two years ago Mr. Rouse advertised for me, when I was at Sofala. I did not know anything about it until then.
15. Did you know any mistakes that were made through the land agent at Newcastle in connection with applications for land? Yes. There was a mistake with reference to a block of land which I took up nearly alongside this one. I lost that land entirely through a mistake made by the land agent.

Henry Rouse called in, sworn, and examined:—

Mr. H. Rouse. 17 Feb., 1892.

16. *Chairman.*] Do you recollect this portion 221, Parish of Kahibah, taken up for you by Mr. Gillies? Yes.
17. When did he apply for it? July 20, 1871.
18. At that time where there any discussions between Gillies and Mrs. Rouse as to the section of the Act under which it should be taken up? I recollect Gillies saying, "Mrs. Rouse, I would advise you to take up 80 acres of land alongside your freehold, and take it up as an additional purchase, and I will make out the application for you." She paid him for his trouble, and he put in an application at the court-house.
19. Did any communication take place between Mrs. Rouse and the Lands Department, between 1871 and 1874? A surveyor was sent from Sydney specially, Mr. Clarendon Stewart, and he surveyed the land in the beginning of 1874 or 1875.
20. Do you recollect that on the 29th July, 1874, you wrote this letter:—

Sydney, 29 July, 1874.

Sir,

On the 20th day of July, 1871, my mother, Mrs. Ann Rouse, of Red Head, near Newcastle, selected a piece of land, adjoining her own freehold property, of 80 acres, under (as she thought) the 22nd section of the Crown Lands Alienation Act, and has made improvements thereon to the value of not less than £100. She now finds that the said land was applied for under another section of the Act.

She now therefore and hereby requests permission to amend her application for the said land, so as to fulfil the requirements under the aforesaid 22nd section of the said Act.

I have, &c.,
H. ROUSE,
Agent for the said Ann Rouse.

The Minister for Lands decided this morning that the purchase should be declared lapsed, as Mrs. Rouse cannot make the declaration required by the Act in consequence of her not having resided on the land.—30/7/74. A. Rouse, 5 August, 1874.

and did you receive the following reply from the Lands Department, on 5th August, 1874?:—

No. 3.

The Under Secretary for Lands to Mrs. A. Rouse.

Department of Lands, Sydney, 5 August, 1874.

Madam,

With reference to your letter of the 29th ultimo, respecting the conditional purchase noted in the margin, and requesting that the section thereof may be altered from the 13th to the 22nd, I am directed to inform you that the Minister for Lands has decided that the purchase in question must be declared lapsed, as Mrs. Rouse cannot make the declaration required by the Crown Lands Alienation Act, in consequence of her not having resided on the land.

I have, &c.,
W. W. STEPHEN.

Yes. I saw the Secretary for Lands personally on the matter.
21. Do you recollect writing on the 24th November, 1874, asking that the land should be declared forfeited as soon as convenient? Yes, and it was forfeited in February, 1875.
22. Why did you ask to have it declared forfeited? Mr. Farnell, the Minister, advised me to do so in order to secure the property again.
23. Did you understand, so far back as 1874, that there was coal under your mother's land? I knew it, because we had the seam on the beach and it took the prize at the Exhibtion.
24. Did you know that there was coal under portion 221? The place where we found the seam of coal on the sea-beach was only a quarter of a mile away from it.
25. Was that one of the reasons why you were so anxious to get this piece of land? Yes.
26. Was the balance of the purchase money paid for this piece of land ever given back to you? We never received a shilling from the Government as compensation.
27. Did you make a second application in 1875? Yes; I think it was on the 6th February, 1875. I saw it declared forfeited in the Lands Office at Newcastle, and I went in immediately and secured it under the clause which Mr. Farnell had pointed out to me, and I paid the £20 deposit.
28. Did you afterwards see Mr. Copeland? Yes, on the 9th December, 1876. I saw Mr. Freeman first, and he went with me to Mr. Copeland, and the whole of the facts of the case were laid before the Minister.
29. What did Mr. Copeland say? That he did not see any reason why we should not have the land under a certain section of the Act.
30. Do you know a man named Palmer? Yes.
31. Do you recollect his going to Newcastle? Yes, on several occasions. He was living at Newcastle.
32. What was he doing when you went there first? He leased Mr. Merewether's paddocks. He took up a coal-mine within about 2 miles from my land.
33. Do you recollect his going about prospecting and taking up land? Yes, because my son put down pegs for him. He brought him into my paddock. Palmer paid my son to put him on the hill.
34. Did Palmer speak to you about this application of yours? Yes.
35. Did he ever say anything to you about the coal under it? Yes; he applied for the coal under it. I met him in Phillip-street, Sydney, in October or November, 1886. I had just come out of the Mines Department. He said, "I see you have applied for your 80 acres of land." I said, "How do you know that?" but he could not tell me. I said, "I have, because if I do not look after it somebody else is looking after it; but I think it is properly secured. I have a promise that I shall have it." He said, "If you should get it, I wish you would give us the first chance of it, because we represent a very rich company." I said, "As far as I am concerned I shall be only too happy to do so, with the consent of my trustees, and I will not only sell you that, but also the homestead on which I am residing." He said, "That will do us first rate; that is what we want."
36. *Mr. Scott.*] When was this? In October, 1886. Palmer is part owner of the *Newcastle Herald.* I said, "Have you any money in your pockets, Sam?" He said, "Yes," and I said, "Give me a pound, for I have no money," and he gave me a pound. After that he came out and got my son to put the pegs in for him on the south boundary of the reserve at Redhead.
37. *Chairman.*] Did he ever measure this portion of yours? He sent a surveyor out to measure it in November, 1886. The surveyor came there, he was Harry Grey. He told me he was sent expressly by Palmer. He said he could not find the pegs.
38. How long were you in possession of the land? I have kept possession since 1871, up to the time it was fenced, about eighteen months ago.
39. Do you recollect Palmer ever serving you with a notice that he was going to apply for a permit for this land? He never gave me notice.

Mr. H. Rouse. 17 Feb., 1892.

40. Did he ever tell you? Only in October, 1886, he told me, "If you get it we can buy it from you."
41. Did he ever serve you with any notice, as required by the Mines Act? No.
42. Did he ever serve any of your people with a notice? No, he could only serve me or the trustees.
43. Was the land fenced in? Part of it. I commenced fencing in 1871 to make the improvements required by law.
44. Were Mr. Palmer's horses ever put into that paddock? I could not say that, but he had ridden by it hundreds of times—he knew it as well as I did.
45. Did you always believe that the land which was taken by Mrs. Rouse, and applied for by yourself, was within the water reserve? I never knew a word about the water reserve until 1879, when I had been in possession eight years.
46. How long were you living with your mother on the 40-acre block? She went to reside there at the end of 1873 or 1874.
47. Have you been living in Newcastle pretty well all your life? Yes.
48. Had it ever been hinted to you that this piece of land was within the reserve? I never heard a word about it until 1879.
49. Was it the general impression in Newcastle that it was not within the reserve? Yes.
50. Did any one ever tell you that it was within the reserve? No, never.
51. When people knew that this trouble had occurred in connection with the land, did they tell you that it was within the reserve? Never. No one knew that it was within the reserve. If they did, we would not have put improvements upon it.
52. Do you recollect how much money had been expended on the land, in improvements, up to 1886? 50 acres were fenced in with a substantial two-rail fence. Taking it altogether I had spent about £250 upon it up to 1879. Since then I have only spent money in repairing the fences.
53. Was there any clearing? No, there was only one clearing.
54. Is there a letter of Mr. Brown in 1879 mentioning that over £200 had been spent on it? Yes.
55. *Mr. Scott.*] When did you make the second application? On the 4th February, 1875.
56. What deposit money was paid? £20 on each occasion.
57. *Mr. Lees.*] It appears that Mr. Copeland made a minute nine years after the first selection and over four years after the second selection. How was it that that time elapsed between the applications? I cannot say. In 1879 we received a reply to say that the Government required the land then for water purposes and that any improvements we had made on the land should be claimed for, and we would be paid for them; I gave the letter to my trustees and Mr. Brown, one of them, said, "No we will make no application for compensation. The land is our freehold property and they must buy it out-and-out."
58. Did the delay occur through any fault of yours? No, the instalments were paid up to date. We kept up all the payments.

Thomas Gervase Alcock called in sworn, and examined:—

Mr. T. G. Alcock 17 Feb., 1892.

59. *Chairman.*] Were you a resident of Newcastle about the year 1870? Yes; I resided there for about eight or nine years after that.
60. Do you know the locality pretty well? Yes.
61. Do you recollect Mrs. Rouse's original freehold, in the parish of Kahibah? Yes; I frequently visited her there.
62. Do you recollect Mrs. Rouse making application for a piece of land about 80 acres alongside of her original purchase? Yes. She told me that she had applied for it and paid the deposit.
63. Did she tell you in 1874 that it had been declared forfeited? No.
64. Did Mr. Rouse tell you that? I do not recollect.
65. Do you know anything about the water reserve in that neighbourhood? Yes.
66. To the best of your knowledge, was this portion which Mrs. Rouse applied for within the water reserve? Not at that time.
67. Outside the lower boundary there was a water reserve? Yes; everybody knew that. My property is bounded by it.
68. Did you know a man named Palmer? Yes.
69. Did you ever talk about Mrs. Rouse's property with him? Yes.
70. Did he know that Mrs. Rouse was in occupation of that property? Yes.
71. Can you recollect any conversation? Yes, it was with reference to land I had taken up. I had taken up two acres before he had pegged it out. I said to him, "Are you applying for this man's freehold"? and he said "Yes."
72. Then he admitted it? Yes.
73. Meaning the freehold of 80 acres? Yes.
74. Was there a general impression that it was Mrs. Rouse's freehold? Yes. I always understood it to be so.
75. Did you always understand that Mr. Rouse was in occupation, and that he put up fences, and that you knew of this application? Yes.
76. Dou you know the manager of the Lambton colliery? Yes.
77. What is his name? Thomas Croudace.
78. Have you ever had any conversation with him about this portion 221 of 80 acres? Yes.
79. Before he bought from Mr. Palmer? I cannot say. I never recognised Palmer. I recognised the company.
80. Are you aware that Palmer sold to them? Nominally, no doubt he sold to them.
81. *Mr. Scott.*] Do you mean that he was buying for the company? That was always what I understood.
82. Did Mr. Croudace know that this land was in the occupation of Mr. Rouse? Yes.
83. Was it common repute that it was Rouse's land? I drew attention to it as we passed along the fence. That was about three or four years ago. He had not got it at that time. Mr. Croudace was in company with Mr. Short, the underground manager of the company at the time, and I was riding with them. We were going down to the pit which was then being sunk.
84. *Mr. Lees.*] Are you next door to this freehold of Rouse's? Yes, I have been living there eleven years—his land is 40 acres bearing north and south.

Mr. T. G. Alcock. 17 Feb., 1892.

85. Had you any reason to suppose at any time that this land of Mrs. Rouse's was a water reserve? No, not until lately.
86. Was it ever hinted that you were on the water reserve? I knew I was, because ours was proclaimed many years ago. That was after our selection.
87. Is yours actually an encroachment on the reserve? No, because the reserve was made afterwards.

Alexander Belford called in, sworn, and examined:—

Mr. A. Belford. 17 Feb., 1892.

88. *Chairman.*] Were you a resident of Newcastle in the year 1870? Yes.
89 What was your occupation? I was a free selector.
90. Do you recollect going out to take up a piece of land in the parish of Kahibah? Yes.
91. Do you recollect a portion belonging to Mrs. Rouse, consisting of 40 acres freehold? Yes.
92. Do you recollect a measured portion of 80 acres besides that on the western side? When I went out first it was not measured—it was measured subsequently.
93. Do you know that that portion unmeasured was a portion of the water reserve? I did not know of any reserve there then.
94. Did you have any intention of taking up that land? Yes, but I did not take it up because I thought the land was not so good as the land which I took up for agriculture. I wanted it for orchard purposes.
95. Who did you sell your land to? Hudson.
96. How long were you in occupation of your land before anything was said to you? It was eight or ten years before I received a notification that there was a reserve or anything of that sort about there.
97. What did they say to you then? They told me that I was 20 links on the east side of the water reserve and they wanted it resurveyed, and I think they did so. They marked two posts at a distance of 20 links, but my fence and house was up, and I did not pay any attention to it.
98. *Mr. Lees.*] Had you any idea that that piece of land on your eastern side was a water reserve? No.
99. Can you give any reason why all this area was unselected although it was not known to be a water reserve? I have no idea.
100. What is the character of the land? It is barren land. There was only the little gully which I got suitable for orchard work.
101. Was that the reason why the land was not taken up? Yes.
102. Would you have taken up Mrs. Rouse's land? Yes, if it had been suitable for my purpose. I did not know that it was in the reserve.
103. About what date was it when they told you that you were on a part of the reserve? It was about the year 1879.

Mr. Walter Thompson called in, sworn, and examined:—

Mr. W. Thompson. 17 Feb., 1892.

104. *Chairman.*] What is your occupation? I am managing clerk for Cope and King, Solicitors, Sydney and as such I have had charge of this case.
105. Are these papers which you produce correct copies of documents received from the Mines Department? I swear that they are the originals of the documents which I have received from the Mines Department. The answers to the questions on these papers are the answers given to me on my applications.
106. *Mr. Lees.*] Ultimately did you correspond with them by letter? Yes, ultimately asking them to have the lease cancelled.
107. Is this permit No. 8, issued to Houghton and Palmer under Section 28 of the Mines Act 1874, a correct copy of the permit? Quite so. I saw the Assistant Under Secretary for Mines and asked whether it was a true copy of the original permit and he told me yes. A few days afterwards I put an inquiry in the usual way asking the same question and they replied that they understood that the Assistant Under Secretary had already answered this. I again put him the same question and they answered yes.

MRS. ANN ROUSE'S CONDITIONAL PURCHASE, PARISH OF KAHIBAH.

APPENDIX.

[*To the Evidence of Mr. Walter Thompson, 17th February*, 1892.]

Department of Mines.—Inquiry Branch.

Cope and King.

Is the copy permit set out on pages 4 and 5 of printed papers 443—A (printer's number) ordered to be printed by the Legislative Assembly, 7 February, 1888, in connection with the application of Messrs. Houghton and Palmer a true copy of the permit No. 352 granted to them?—Yes.

Department of Mines.—Inquiry Branch.

Cope and King.

Is the copy permit set out on pages 4 and 5 of printed papers 443—A (printer's number) ordered to be printed by the Legislative Assembly, 7 February, 1888, in connection with the applications of Messrs. Houghton and Palmer a copy of the permit No. 352 granted to them?

The Assistant Under-Secretary, it is understood, gave the information required verbally.—24/1/90.

Department of Mines.—Inquiry Branch.

Does M.P. 177, parish Kahibah, county Northumberland, comprise portion 221, same parish and county?—No.

Sir, Department of Mines, Sydney, 28 February, 1890.

I am directed to inform you that your application for permission, under section 28 of the Mining Act, 1874, to mine for coal within portion No. 221, water reserve No. 4, in the county of Northumberland, parish of Kahibah, has been refused. *Vide Government Gazette* of the 18th instant.

I have, &c.,
GERARD E. HERRING,
Assistant Under Secretary.

Mr. Henry Rouse, care of Messrs. Cope and King, 139, Pitt-street.

P.S.—Refund voucher £1 10s., balance of deposit lodged with your application, is forwarded herewith for your signature and return.

Gentlemen, Department of Mines, Sydney, 3 April, 1890.

Referring to your letter of the 19th ultimo, requesting the cancellation of mineral lease 216 (48 Vic.) of portion 221, parish of Kahibah, with a view to your client, Mr. Henry Rouse, obtaining a lease of the land, I have the honor to inform you that your complaint has been disallowed, as the lease in question is amalgamated with others on which the requisite labour may be employed.

I have, &c.,
HARRIE WOOD,
Under Secretary.

Messrs. Cope and King, 139, Pitt-street, Sydney.

Statutory Declaration.

I, WILLIAM AUSTRALIA STEEL, of Newcastle, in the Colony of New South Wales, colliery proprietor, do hereby solemnly and sincerely declare as follows:—

1. I have been resident in Newcastle for the last fifty-eight years, and have known Henry Rouse of that place for the last fifty-eight years.
2. I know that the said Henry Rouse improved to a large extent and was occupying that piece of land known as portion 221, in the parish of Kahibah, county of Northumberland, up to the present time.
3. It was generally known in Newcastle that the said Henry Rouse was interested in, and was occupying the land aforesaid at the time in the last paragraph mentioned.

And I make this solemn declaration conscientiously believing the same to be true and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled, "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

W. A. STEEL.

Subscribed and declared at Newcastle this twentieth day of January, one thousand eight hundred and ninety, before me,—

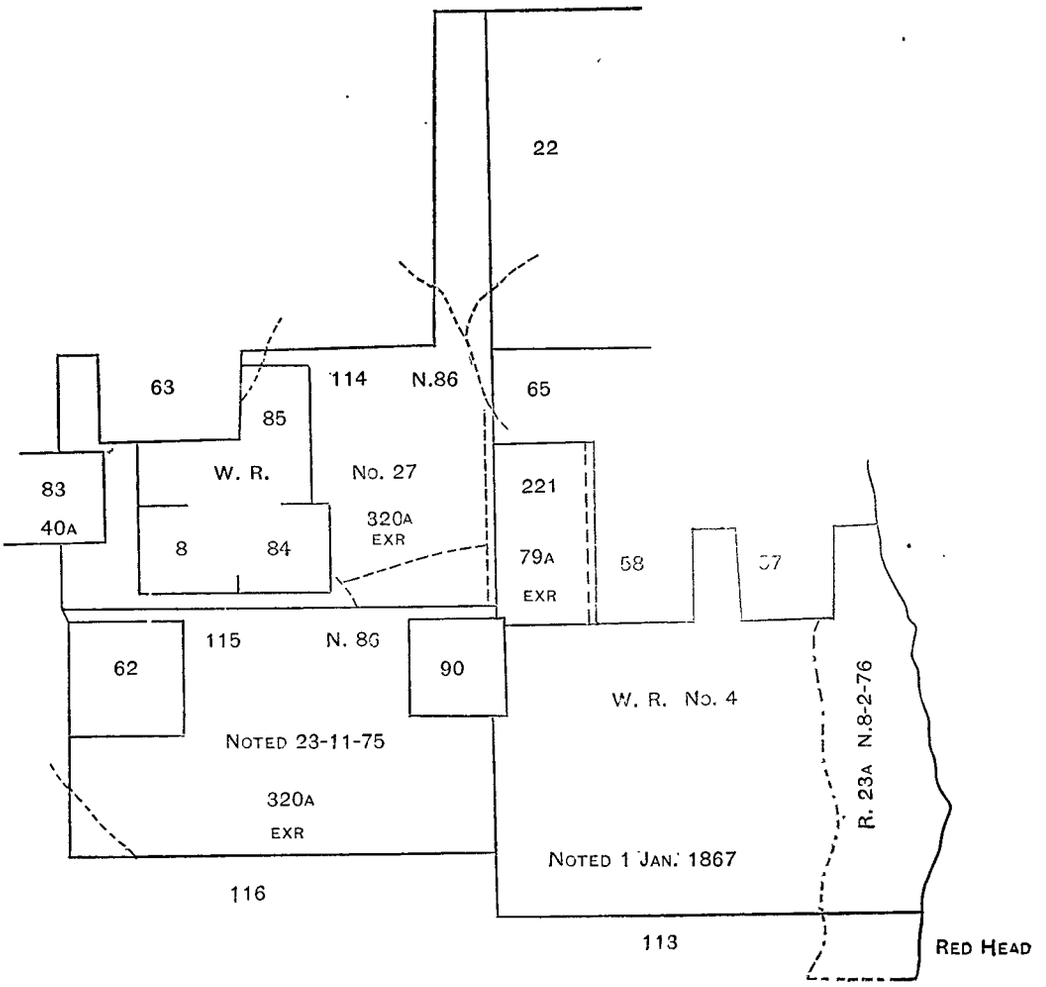
W. H. SHAW, J.P.

No. 8.—

No. 8.—Copy of Permit issued to Messrs. Houghton and Palmer.

Schedule A.—Authority to mine—issued under section 28, Mining Act, 1874.

VICTOR THOMAS SHERBROOKE HOUGHTON and Samuel Palmer, each being the holder of a mineral license, having applied to me in writing, in accordance with section 28 of the Mining Act, 1874, and I having inquired into the case and decided that the same can be effected without injury to adjoining property, or injury or obstruction to water reserve 4, part of water reserve 27, and part of reserve 23a, county of Northumberland, parish of Kahibah, I, James Fletcher, the Secretary for Mines for the Colony of New South Wales, in pursuance of the power to me given in this behalf by the said Act, do, by this order, authorise, empower, and permit the said Victor Thomas Sherbrooke Houghton and Samuel Palmer, hereinafter called lessees, to mine for coal under all those parts of the reserves aforesaid, being portions Nos. 115 and M.P. 177, and part of portion No. 114, delineated in the diagram, and containing, exclusive of all reserved roads, except that shown from A to B on diagram,



1,263 acres, upon condition that the said lessee shall not mine under this authority in any place other than that hereinbefore described, and on the terms and conditions set out on the back hereof, so far as they are applicable to this authority, and on the further special terms and conditions, and subject to the restrictions following, that is to say :—

First.—That the said lessees, during their occupancy under this authority, shall each be the holder of one mineral license in force, which shall be produced at the Department of Mines on the 12th and 31st days of July in each year, and failure therein shall render this authority void, and shall on delivery of this authority pay the sum of £6 10s. 5d., as rent for the quarter ending 31st December, 1886, and thereafter shall pay the sum of £31 11s. 6d.. on the first day of January, April, July, and October in each year, and shall on the 1st day of January, April, July, and October respectively, in each year, pay to the Colonial Treasurer, by way of royalty, a sum equal to 6d. for every ton of coal raised from under the said reserves during the three months next preceding the day on which such payment should be made as aforesaid. Provided that if the royalty for any quarter shall exceed the sum of £31 11s. 6d., no rent shall be payable for such quarter; but if during any quarter the royalty at the rate aforesaid does not amount to the said sum of £31 11s. 6d., such sum shall be paid as rent for that quarter in lieu of royalty.

Second.—That plans and sections of the mine, and books and vouchers showing the quantity of coal raised, shall be kept by the lessees, and shall, together with the mine works, be open at all times to the inspection of the Examiner of Coal-fields or such officer as the Secretary for Mines shall authorise to inspect the same.

Third.—That no excavation shall be made or carried under any public railway line, or any building or erection, or within 30 feet thereof, or of any site upon which any building is about to be erected, or under any road or street within the portions, except the road aforesaid, and that the said lessees shall in no way interfere with the surface of such reserves without the express sanction in writing of the Secretary for Mines aforesaid, who may, and if necessary shall, before giving such sanction, require the said lessees to deposit in the hands of the Colonial Treasurer a sum of money sufficient to cover the cost of repairing any damage that may be done to any such building or erection by reason of such excavation, and may impose such conditions as he shall deem advisable.

Fourth.—The Secretary for Mines may, at any time, by an order in writing, or by a notice in the *Government Gazette*, prohibiting the construction of mine works under such portion of the reserve as shall or may be required for any public purpose, until such Secretary shall be satisfied that such works may be carried on without interfering with such purpose.

Fifth.—That all mine works within the portion of the reserves hereby permitted to be mined under shall be commenced on or before the 14th day of June, 1887, by six miners, workmen, or others, and shall thereafter be carried on by such number of miners, workmen, or other persons, and shall be constructed in such a manner as shall be satisfactory to the Secretary for Mines.

Sixth.—Such works shall at all times be open to inspection by the Examiner of Coal-fields or such officer as the Secretary for Mines shall authorise to inspect the same; and if it shall appear to the Secretary for Mines that the work has not been commenced, or is not being carried on as aforesaid, or that any excavation or mine work is being, or has been, so made or constructed as to endanger or injure any adjoining property, or to interfere with the use or enjoyment of the said reserves aforesaid, or any public railway line, or any building or erection, or if for any other reason it shall appear to the Secretary for Mines expedient so to do, he may cancel this authority, and thereupon the right to mine under the said reserves shall cease and determine absolutely. Seventh.—

Seventh.—And if the said lessees shall continue to mine under the said reserves after notice of cancellation of this authority shall have been served upon them or published in the *Government Gazette*, they shall be liable to be prosecuted for unlawfully mining under reserved land, in terms of the Mining Act, 1874, section 123.

And if the said reserves shall at any time during the existence of this authority be cancelled, or if the said lessees shall fail to observe, perform, and keep all and every the terms and conditions upon which this order or permission is granted as aforesaid, or shall mine in any way contrary to the restrictions hereinbefore stated, then, and in any such case, the permission and authority hereby given shall immediately cease and determine. And the occupation of such reserves under this authority, and the making of improvements or construction of works thereunder, shall confer no right to purchase the land in virtue of improvements or otherwise, or entitle the said lessees to any compensation upon the cancellation of the reserves or of this authority.

In witness whereof, I have hereunto set my hand, at Sydney, in the said Colony, this 14th day of December, in the year of our Lord 1886.

JAMES FLETCHER,
Secretary for Mines.

We hereby accept the within permit upon the terms herein stated,—
V. T. SHERBROOKE HOUGHTON.
SAMUEL PALMER
(By his Agent,—V. T. S. HOUGHTON.)

Witness,—
W. LLOYD, 14/12/86.

Application by Messrs. Houghton and Palmer.

Mineral Lease Regulations.—Schedule 2—Form of Application under 48 Vic. No. 10, section 3.

To the Honorable the Secretary for Mines, Sydney.

Sir,

Newcastle, 17 January, 1887.

We hereby make application for a mineral lease of that piece or parcel of land situated parish of Kahibah, county of Northumberland, portion No. 221, containing 79 acres, of which we took possession on the 17th day of January, 1887, at the hour of 6 o'clock in the forenoon, for the purpose of mining thereon and therein for coal, for a period of twenty years, by placing 3-foot stakes and 6-foot trenches at each angle thereof. The datum point is the south-west corner of portion 221, of 79 acres.

Notice of our having made this application will be given in accordance with the regulations in that behalf, and we hand herewith the sum of £7 18s., being the first year's rent in advance of the said land.

We hereby acknowledge that this application is made upon the distinct understanding and condition that if we shall abandon or fail to proceed with it, or if it is refused, the Secretary for Mines for the time being may deduct from the sum of £7 18s., deposited as aforesaid any cost to which in his opinion the Crown may have been put in or about or in respect of this application: and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted, we shall and will commence mining operations upon or in connection with the demised land within six months from and after the granting thereof, and shall and will employ upon such land not less than two men during the first three years of the term thereby created, and not less than four men during the remainder of such term. And shall and will at any time when called upon in terms of the regulations relating to mineral leases to do so, execute and take delivery of such lease, or failing therein for a period of fourteen days, after being so called upon, we shall and will forfeit the said sum of £7 18s., and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

We have, &c.,
VICTOR THOMAS SHERBROOKE HOUGHTON,
of Sydney.
SAMUEL PALMER,
Newcastle.

Description.

Measured portion No. 221, of 79 acres, in the parish of Kahibah, county of Northumberland, being part of water reserve No. 4, notified 1st of January, 1867.

THIS application was received by me this 17th day of January, 1887, at the hour of 10·30 o'clock in the forenoon, and is numbered 87-2.

17th January, 1887.

ALEX. LUMSDAINE,
Crown Lands Agent, Newcastle.

Questions to be answered by Applicants for Mineral Lease.

WHEN receiving an application to lease land for mining purposes, the Warden, Warden's Clerk, or Land Agent, as the case may be, shall hand to the applicant or applicants, or his or their agent, to answer to the following questions, and shall take down such answers in writing. The statement, when complete, to be read over to, and signed by, the person furnishing the answers:—

1. Were you, or each of you (applicants), the holder of a miner's right in force at the date of taking possession of the land referred to in application No. 87-2? Not within a gold-field.
2. Do you produce them (mineral license, 31st July, 1886)? In favour of S. Palmer, stated to be in Sydney.
3. What was the date and hour of the day when you took possession of the land referred to in application No. 87-2? 17th January, 1887, at 6 a.m.
4. Did you take possession by erecting posts and cutting trenches at each angle of the land? Yes. (If No. 4 be replied to in the affirmative, then 5, 6, and 7.)
5. What was the diameter of the posts? Three inches.
6. How high did they project above the surface when fixed in the ground? Three feet.
7. What was the length of each arm of each trench, and what was the depth of each trench? Six feet 9 inches.
8. If a substitue for post or trench was used, describe it.
9. At which angle of the land is the datum post fixed? South-west corner.
10. Did you affix a board or metal plate to the datum post? Board.
11. What was written or painted on such board or plate? Mineral lease applied for 17th January, 1887, by V. T. S. Houghton and S. Palmer.
12. Where did you post the notices, Schedule 1? At Crown Lands Office, Newcastle, and Post Office, Charlestown.
13. When did you post such notices? 17th January, 1887.
14. Did anybody claim or appear to be in possession of the land applied for, or any portion of it? No.
15. Did you serve notice in the form Schedule 1 upon every such person, and when? (*See* answer to question 14.)
16. Have you obtained the consent of every such person to the granting of the lease for which you apply? (*See* answers to questions 14 and 15.)

I, Samuel Palmer, on behalf of Victor Thomas Sherbrooke Houghton and myself, declare that the foregoing questions have been answered by me truthfully in every particular, and the answers thereto have been read over to me, and are correctly taken down in writing.

SAMUEL PALMER.

Witness to signature,—
ALEX. LUMSDAINE, Crown Lands Agent, Newcastle.

Mining District, Hunter and Macleay; applicant's locality, Redhead.

Application No. 87-2, at Newcastle.

Description.

82 acres 2 roods 14 perches, county of Northumberland, parish of Kahibah.

Portions 221: Commencing at the south-east corner of portion 65, and bounded thence on the north by the south boundary of that portion bearing south 88° 40′ west 20 chains and 87½ links; on the west by part of the east boundary of portion 114, and part of the east boundary of portion 90, bearing respectively south 1° 44′ east 37 chains and 6½ links and south 2° 30′ east 3 chains and 44 links; on the south by a north boundary of portion M.P. 177 bearing north 87° 45′ east 20 chains and 1 link; and on the east by a west boundary of that portion, the west boundary of portion 58, and part of the west boundary of portion 55, in all bearing north 35′ west 40 chains and 21½ links, to the point of commencement.

Copy of Lease issued to Messrs. Houghton and another.

THIS indenture, made the 26th day of March, in the year of our Lord 1887, between Her Most Gracious Majesty Queen Victoria, of the one part, and Victor Thomas Sherbrooke Houghton, of Sydney, in the Colony of New South Wales, and Samuel Palmer, of Newcastle, in the Colony aforesaid (hereinafter called the lessees), of the other part witnesseth:—That in consideration of the sum of £61 2s. paid by the said lessee on the 17th day of January, 1887, and of the rents and royalties hereinafter reserved, and of the covenants and provisos hereinafter contained, Her Majesty doth by these presents grant and demise unto the lessees, their executors, administrators, and transferees, all that piece or parcel of land, containing by admeasurement 610 acres 3 roods 25 perches, and more particularly described and delineated in the Schedule hereto or in the plan hereunto annexed, and numbered M.P. 177, and all those mines, veins, seams, or deposits of coal, in, on, and under the said land (hereinafter called the said mine), together with all and singular the shafts, levels, drifts, works, ways, fixtures, erections, liberties, easements, advantages, and appurtenances which are now or at any time during the term hereby granted may be held, occupied, or enjoyed therewith, for the purpose of mining upon and under the said land for coal, and also with full power for the said lessees, their executors, administrators, and transferees, and his and their agents and workmen (including contractors, tributors, and so forth), to dig, sink, drive, make, and use excavations, pits, shafts, levels, tunnels, watercourses, and other works necessary for winning and raising the coal in, on, or under the said land, and to take and appropriate the same during the term hereby granted, and to make and construct, on that portion of the surface of the said land, races, drains, dams, reservoirs, roads, and tramways, and also to erect, on that portion of the surface of the said land, all buildings, engines, furnaces, pumps, machinery, and appliances necessary for the purpose of winning and obtaining the coal in, on, or under the said land, and for effectually carrying on the works of the said mine, and also to erect, on that portion of the surface not excepted as aforesaid of the said land, such offices, cottages, and dwelling-houses, for the use of the agents, workmen, and persons employed in the said mine and works, as the said lessees, their executors, administrators, and transferees shall think proper, to hold the said land, mine, and premises, with the appurtenances (subject nevertheless to such rights and interests as may be lawfully subsisting therein at the date of these presents), unto the said lessees, their executors, administrators, and transferees, from the date hereof, for the term of twenty years, for the purpose of mining therein or thereon, for working or winning the said coal, and for no other purpose,—Yielding and paying therefor unto Her Majesty, her heirs and successors, yearly and every year during the said term, the yearly rent of £61 2s. in advance, or in lieu thereof a royalty equal to 6d. for every ton of coal raised during the year, the first year's rent having been paid as aforesaid on the 17th day of January, 1887, the next payment being the rent of the said land at the rate of 2s. per acre per annum to the 25th day of March, 1889, shall be made to the Colonial Treasurer, in Sydney, on or before the 26th day of March, 1888, and thereafter on or before the 26th day of March in each and every year the yearly rent aforesaid shall be paid to the Colonial Treasurer aforesaid, clear of all rates, taxes, and assessments to which the said land, mine, and premises are now, or at any time during the said term may be, subject or liable: Provided that if the royalty upon the coal raised during any year of the said term, computed at the rate aforesaid, shall exceed the rent paid for such year, such royalty, after deducting therefrom the rent paid for such year, shall be paid to the Colonial Treasurer at the expiration of the year or within one month thereafter; but if such royalty in any year amount to less than the rent paid for such year no royalty shall be demanded in respect of the coal raised during that year: Provided always, and it is hereby agreed, that if the said yearly rent or royalty shall be in arrear for thirty days after the same shall have become payable, whether such rent or royalty shall have been legally demanded or not, any officer appointed or authorised thereto by the Secretary for Mines may, by himself, or his agent, enter upon the said land, and seize and distrain all minerals, metals, and ores actually got and raised from the said mine; and all machinery, apparatus, tools, waggons, carts, carriages, engines, plant, and all other goods, chattels, and effects whatsoever, in, upon, and about the said land and premises; and in every distress thus made may take away, sell, and dispose of as in cases of distress for rent reserved in common leases, and out of the moneys arising thereby retain so much as shall be sufficient to satisfy the said arrears, and which shall at the time of such sale be unpaid; and all expenses incurred by him or them in or in respect of such seizure, distraint, removal, and sale; and if there be any surplus such officer shall pay the same to the said lessees, their executors, administrators, or transferees; and the acceptance or receipt of rent or royalty by or on behalf of Her Majesty, after breach of any covenant hereinafter contained, shall not be or be deemed a waiver of the right of Her Majesty, or of the Secretary for Mines, or other officer on behalf of Her Majesty, to enforce observance of such covenant. And if the said lessees, their executors, administrators, or transferees, shall mine for or win from the said land, mine, and premises, any gold, or any earth, rock, stone, quartz, clay, sand, gravel, or soil containing gold, or any mineral or metal with which gold is associated or combined, without the express sanction first had and obtained of the Secretary for Mines for the time being, the Governor, with the advice of the Executive Council, may declare these presents void, and thereupon all the right, title, and interest of the lessees, their executors, administrators, and transferees, under these presents shall cease and determine both at law and in equity. And the said lessees do hereby for themselves, their heirs, executors, administrators and transferees, covenant with Her Majesty, her heirs and successors, in the manner following, that is to say:—

1. That the said lessees, their executors, administrators, and transferees, shall and will during the said term pay unto Her Majesty, her heirs and successors, the rent or royalty hereby reserved, at the times and places hereinbefore appointed for payment thereof, clear of all deductions.

2. And shall and will, after the expiration of six months from the date of delivery hereof, upon and during all lawful working days, except when prevented by inevitable accident or during the execution of repairs, work the said land, mine, and premises, or the land, mine, and premises adjoining thereto and proposed to be worked in connection therewith, in the best and most effectual manner, and to the best advantage, without interruption, and shall and will with reasonable expedition make and construct all necessary works with a view to diligently explore and search for coal in, on, and under the said land, mine, or premises, by employing thereon not less than three men for the first three years of the term.

3. And shall and will, after the expiration of the said three years, or after the underground works shall have reached the said land, employ in the construction of the works, or in mining operations on or under the said land, during the first of the said term, and during the usual hours of labour, six able and competent workmen and miners at the least; unless prevented by inevitable accident or during the execution of repairs: Provided that the lessee, or if there be more than one lessee, each lessee who shall work as aforesaid, shall count as and be deemed for the purposes of these presents to be a workman or miner employed as aforesaid.

4. And shall and will during the said term effectually drain the said mine, and pump all water likely to cause injury thereto, or which would prevent or interfere with the working thereof; and if the said mine shall be affected, or be liable to be affected, by the same flow or body of water as any other mine or mines contiguous thereto shall and will, if and whenever requested so to do, contribute with the lessee or lessees or owner or owners of such other mines, a reasonable proportion of the machinery and labour necessary to free and keep such mine or mines free from water to a workable extent; or if the said mine shall be kept free from water to a workable extent either wholly or partially by means of the machinery and labour of a contiguous mine or mines, or by reason of any works constructed or money expended by the lessee or lessees, owner or owners, of such contiguous mine or mines—then shall and will pay to such lessee or lessees, owner or owners, as aforesaid, a reasonable proportion of the cost of such machinery, labour, or works, or a reasonable proportion of the money so expended; and the Secretary for Mines for the time being may, if and whenever he shall think fit, depute some efficient person, who shall have access to and inspection of all such mines, to determine when the said mine is so freed or kept wholly or partially free from water, and what are the reasonable proportions of such expenses aforesaid, and to whom and when the same are to be paid,—such decision to be final and conclusive on all parties.

5.

5. And shall and will make such provision for the disposal of the detritus, dirt, waste, or refuse of the said mine that the same shall not be an inconvenience, nuisance, or obstruction to any roadway, river, creek, or private or Crown lands, or shall not in any manner occasion any public or private damage or inconvenience.

6. And shall and will erect, and keep erected, during the said term, a post painted white at each angle of the said land, and at such points along the boundary-lines as shall be necessary, so as plainly and accurately to define the boundary-lines and angles of the said land; and each such post shall be fixed firmly in the ground, and shall project above the surface thereof not less than 3 feet.

7. And shall and will keep proper books, or a book, in which shall be entered the quantity of coal raised each day from the land hereby demised, and shall enter therein as soon as known the value of such coal, and permit any officer of the Department of Mines at all times to inspect the same, and as often as required so to do during the term make and deliver to the Secretary for Mines for the time being, or any officer appointed or instructed to collect, obtain, or receive the same, all such true and proper plans, sections, returns, statements, and statistics of the workings and operations of the said mine, made up to the last day of the preceding month (the truth and accuracy of which shall be verified by the statutory declaration of the lessee for the time being, or the manager or other officer having the charge control, and direction of the works of the said mine), as the Secretary for Mines shall from time to time direct, or as shall be required by any regulation, and shall and will, whenever required by the Secretary for Mines so to do, deliver to any officer appointed or instructed as aforesaid samples of the minerals, metals, and ores, or any of them, found in or upon such mine and lands.

8. And shall and will, during the said term, make proper and reasonable compensation to the occupier or occupiers, lessee or lessees from the Crown of any adjoining land in respect of any damage which may be sustained by him or them, by reason of the working of the said mine, or the carrying on of the works thereof or connected therewith, such compensation to be determined by the Secretary for Mines, or by some person authorised by him so to do.

9. And shall and will permit any mining surveyor, or other person duly authorised in that behalf, with all proper or necessary assistants, at all reasonable times, during the said term, quietly to enter into and upon the said land, mine, and premises, to survey and examine the state and condition thereof, and for the purposes aforesaid, to descend all pits and shafts, and to enter into and use all adits, levels, galleries, drives, and excavations, and to use all roads, ways, engines, ropes, machinery, gear, appliances, materials, labour, and other things in or on the said land and mine, which shall be by him deemed necessary, without making any compensation for the same, so nevertheless that in so doing no unnecessary interference is caused with the carrying on of the said mining works.

10. And further, shall and will at all times during the said term keep and preserve the said mine and premises from all avoidable injury or damage, and also the levels, drifts, shafts, water-courses, roads, ways, works, erections, and fixtures therein and thereon, in good repair and condition, except such of the matters and things last aforesaid as shall from time to time be considered by a mining surveyor or other proper officer authorised by the Secretary for Mines to inspect and report upon such matters and things to be unnecessary for the proper working of the said mine or any contiguous mine, and in such state and condition shall and will at the end or sooner determination of the said term deliver peaceable possession thereof, and of all and singular the premises hereby demised to Her Majesty, her heirs and successors, or to the Warden or other officer authorised to receive possession thereof. Nevertheless the Secretary for Mines may, if he think fit, permit the lessees, their executors, administrators, and transferees, within six months after possession shall have been received as aforesaid, to enter upon the said land, and to remove therefrom such machinery, plant, and apparatus as shall have been erected and fixed upon such land, and such earth, rock, ore, mineral, or metal as shall have been won from and raised to the surface of such mine.

11. And shall not nor will use or occupy, or permit to be used or occupied, the said land, or any part thereof, for other than mining purposes, or for pasturage, or as sites for dwellings, or garden ground for the persons employed in, on, or about the said mine.

12. And shall not nor will mine in or upon the said mine, land, and premises, for any mineral, metal, or ore other than coal, without the express sanction of the Secretary for Mines.

13. And shall not nor will transfer, underlet, or part with possession of the said land, mine, and premises, or any part thereof, or mortgage, charge, or encumber the same, without the license first had and obtained of the Secretary for Mines for the time being: Provided always that no such license shall be necessary in cases where, by operation of law or otherwise, a sale of the said land, mine, and premises, or any part or parts thereof, is made by any person or persons entitled to sell the same for the benefit of the creditors or a creditor of the lessees or their transferees, or in cases where the lessees or their transferees desire to let the said mine and premises, or any part thereof, to be worked on tribute.

14. And shall not nor will close up or obstruct any adit or adits to or from any contiguous mine or mines whereby fresh air is admitted or ventilation promoted.

15. And shall not nor will plead acceptance of rent or royalty by or on behalf of Her Majesty as a waiver of the right of Her Majesty, or of the Secretary for Mines, or other officer on behalf of Her Majesty, to enforce observance of the covenants herein contained, or of the right of the Governor, with the advice of the Executive Council, to declare these presents void for breach of any such covenant: Provided always and it is hereby agreed and declared in manner following:—

16. That it shall be lawful for Her Majesty, her heirs, successors, and assigns to make and use in, on, or under the said land, any levels, drifts, leads, shafts, water-courses, adits, roads, ways, and passages for freeing and keeping free any other lands or mines from water, or for conveying water to any other lands or mines for mining purposes, or for supplying any other mines with fresh air, or for effectually working any other mines, or for any public purpose whatsoever, causing as little damage, obstruction, or interference as possible to or with the said mine and the works thereof. And if, at any time during the term hereby created, any part or parts of the land hereby demised, or any part or parts of the surface thereof, shall be required for the purpose of any township, village, railway, road, canal, water-course, reservoir, or for any other public purpose, it shall be lawful for the Governor for the time being, with the advice of the Executive Council, on giving three months' notice of his intention so to do, to cause to be set out the part or parts of the said land, or of the surface thereof, which shall be so required; and as soon as the same shall be so set out, such part or parts of the said land, or of the surface thereof, shall cease to be included in the land hereby demised, and the lessees, their executors, administrators, or transferees shall not be entitled to any abatement of rent or royalty, or any compensation whatever in respect thereof.

17. And if the said lessees, their executors, administrators, or transferees, shall prove to the satisfaction of the Secretary for Mines for the time being that the said mine is unworkable, or cannot be profitably worked, from any cause whatsoever, or that the lessees, their executors, administrators, or transferees, is or are unable, by reason of sickness or other sufficient cause, to work in such land or mine, or that the supply of water is insufficient to allow the working of the said land, mine, and premises to be profitably carried on, the said Secretary for Mines may grant permission to suspend work therein or thereon, for any period not exceeding six months, without the lessees, their executors, administrators, or transferees incurring in respect thereto any forfeiture or penalty for breach of any covenant herein contained.

18. And, lastly, that if the lessees, their executors, administrators, or transferees, shall at any time during the said term fail to use such land *bona fide* for the purpose for which it has been demised, or if and whenever the said rent or royalty shall be in arrear for thirty days after the time appointed for payment thereof, whether the same shall have been legally demanded or not, or if and whenever there shall be a breach of or non-compliance with the covenants and provisos herein contained by the lessees, their executors, administrators, or transferees, and the lessees, their executors, administrators, or transferees shall not have obtained from the Secretary for Mines for the time being permission to suspend work as aforesaid, in case the breach shall have been for non-compliance with the covenants for the employment of workmen or miners, or for the working of the mine, the Governor, with the advice of the Executive Council, who alone and finally shall judge and determine the matter upon the evidence or reports submitted by the Secretary for Mines for the time being, may declare these presents void, and upon publication in the *Government Gazette* of notice of such declaration, all the right, title, and interest of the lessees, their executors, administrators, and transferees under these presents shall cease and determine both at law and in equity; and the production of a copy of the *Government Gazette* containing a notice, purporting to be signed by the Secretary for Mines, declaring the lease void, shall be conclusive evidence in all Courts whatsoever, in the Colony of New South Wales of a breach of or non-compliance with the covenants and provisos herein contained sufficient to authorise and sustain such declaration having been lawfully made, and that the interest created hereunder has been lawfully determined; and thereupon it shall be lawful for Her Majesty, her heirs and successors, or her or their agents or officers, or for any bailiff, or other person duly authorised thereto, or for any holder of a mineral license who has the permission of the Secretary for Mines for the time being, without any previous demand whatsoever, to enter forthwith into and upon the said land and

premises

premises hereby granted, and the same to repossess and enjoy as fully and effectually to all intents and purposes as if these premises had not been made, and the said lessees, their executors, administrators and transferees to expel and remove without any legal process, and as effectually as the Sheriff might do in case judgment in ejectment had been obtained and a writ of *habere facias possessionem* had been issued on such judgment; and in case of such entry, and any legal proceeding taken in respect thereof, the defendant or defendants in any such proceeding may plead leave and license in bar thereof; and these presents shall be conclusive evidence of such leave and license by the lessees, their executors, administrators, and transferees, or other the person or persons, plaintiff or plaintiffs in such proceedings, for such entry or other matters complained of in such proceedings.

In witness whereof, His Excellency the Right Honorable Charles Robert, Baron Carrington, a Member of Her Majesty's Most Honorable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies, hath, on behalf of Her Majesty the Queen, caused the Seal of the said Colony to be affixed to this grant, and also set his hand, at Government House, Sydney, in the said Colony, the day and year first above written, and the lessees have also set their hands and seals the 28th day of March, 1887.

CARRINGTON.

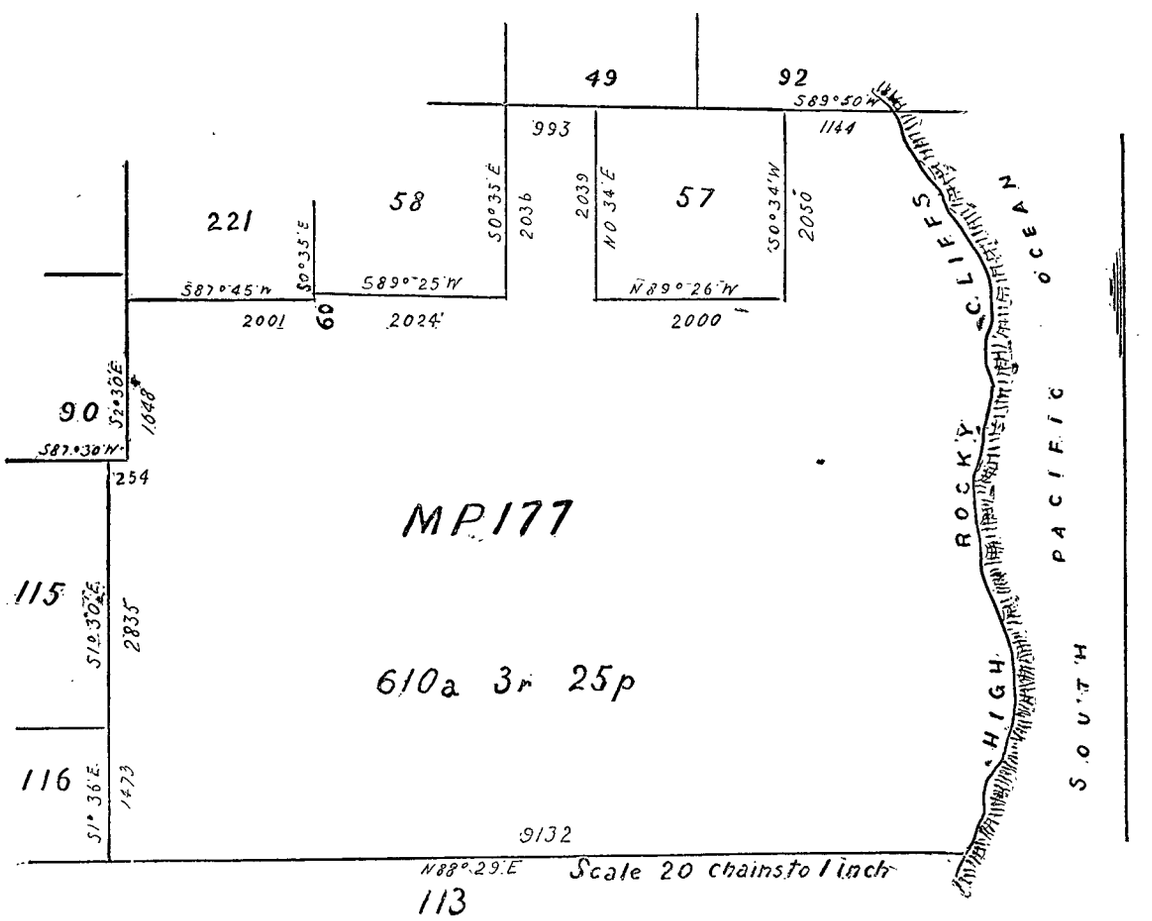
Signed, sealed, and delivered by the within-named Victor Thomas Sherbrooke Houghton and Samuel Palmer, in the presence of,—
STEPHEN T. BURCHER.

VICTOR THOMAS SHERBROOKE HOUGHTON.
SAMUEL PALMER.
FRANCIS ABIGAIL.

Schedule.

610 acres 3 roods 25 perches. County of Northumberland, parish of Kahibah, portion M.P. 177: Commencing at the south-east corner of portion 92; and bounded thence on part of the north by part of the south boundary of that portion bearing south 87 degrees 50 minutes west 11 chains 44 links; on part of the west by the east boundary of portion 57 bearing south 34 minutes west 20 chains 50 links; again on the north by the south boundary of that portion bearing north 89 degrees 26 minutes west 20 chains; on part of the east by the west boundary of that portion bearing north 34 minutes east 20 chains 39 links; again on the north by part of the south boundary of portion 49 bearing west 9 chains 93 links; again on the west by the east boundary of portion 58 bearing south 35 minutes east 20 chains 36 links; again on the north by the south boundary of that portion bearing south 89 degrees 25 minutes west 20 chains 24 links; again on the west by part of the east boundary of portion 221 bearing south 35 minutes east 60 links; again on the north by the south boundary of that portion bearing south 87 degrees 45 minutes west 20 chains 1 link; again on the west by part of the east boundary of portion 90 bearing south 2 degrees 30 minutes east 16 chains 48 links; on the remainder of the north by part of the south boundary of that portion bearing south 87 degrees 30 minutes west 2 chains 54 links; on the remainder of the west by part of the east boundaries of portions 115 and 116 bearing respectively south 1 degree 30 minutes east 28 chains 35 links, and south 1 degree 36 minutes east 14 chains 73 links; on the south by part of the north boundary of portion 113 bearing north 88 degrees 29 minutes east 91 chains 32 links, to the edge of the high cliffs fronting the South Pacific Ocean; and on the remainder of the east by the edge of the cliffs northwardly, to point of commencement.

Plan.



Registered in the Department of Mines, at Sydney, this 28th day of March, A.D. 1887, at the hour of 12 o'clock noon, and numbered in the Register 215.

EDWARD FARR
(For the Registrar).

Transfer from V. T. Sherbrooke Houghton and Samuel Palmer of their interests in mineral lease No. 215 to the Scottish Australian Mining Co. (Limited). Registered by me, in the Department of Mines, Sydney, this 2nd day of June, 1887, at the hour of 2 o'clock in the afternoon.

EDWARD FARR
(For the Registrar).

Copy

Copy of Lease issued to Messrs. Houghton and Palmer.

THIS indenture, made the 26th day of March, in the year of our Lord 1887, between Her Most Gracious Majesty Queen Victoria, of the one part, and Victor Thomas Sherbrooke Houghton, of Sydney, in the Colony of New South Wales, and Samuel Palmer, of Newcastle, in the Colony aforesaid (hereinafter called the lessees), of the other part, witnesseth:—That in consideration of the sum of £8 6s., paid by the said lessees on the 17th day of January, 1887, and of the rents and royalties hereinafter reserved, and of the covenants and provisos hereinafter contained, Her Majesty doth by these presents grant and demise unto the lessees, their executors, administrators, and transferees, all that piece or parcel of land containing by admeasurement 82 acres 2 roods 14 perches, and more particularly described and delineated in the Schedule hereto or in the plan hereunto annexed, and numbered 221, and all those mines, veins, seams, or deposits of coal, in, on, and under the said land (hereinafter called the said mine), together with all and singular the shafts, levels, drifts, works, ways, fixtures, erections, liberties, easements, advantages, and appurtenances which are now or at any time during the term hereby granted may be held, occupied, or enjoyed therewith, for the purpose of mining upon or under the said land for coal, and also with full power for the said lessees, their executors, administrators, and transferees, and his and their agents and workmen (including contractors, tributors and so forth), to dig, sink, drive, make, and use excavations, pits, shafts, levels, tunnels, water-courses, and other work necessary for winning and raising the coal in, on, or under the said land, and to take and appropriate the same during the term hereby granted, and to make and construct, on that portion of the surface of the said land, races, drains, dams, reservoirs, roads, and tramways, and also to erect, on that portion of the surface of the said land, all buildings, engines, furnaces, pumps, machinery, and appliances necessary for the purpose of winning and obtaining the coal in, on, or under the said land, and for effectually carrying on the works of the said mine, and also to erect, on that portion of the surface of the said land, such offices, cottages, and dwelling-houses, for the use of the agents, workmen, and persons employed in the said mine and works, as the said lessees, their executors, administrators, and transferees shall think proper; to hold the said land, mine, and premises, with the appurtenances (subject nevertheless to such rights and interests as may be lawfully subsisting therein at the date of these presents), unto the said lessees, their executors, administrators, and transferees, from the date hereof, for the term of twenty years, for the purpose of mining therein or thereon, for working or winning the said coal, and for no other purpose,—Yielding and paying therefor unto Her Majesty, her heirs and successors, yearly and every year during the said term, the yearly rent of £8 6s., in advance, or in lieu thereof a royalty equal to 6d. for every ton of coal raised during the year, the first year's rent having been paid as aforesaid on the 17th day of January, 1887, the next payment being the rent of the said land at the rate of 2s. per acre per annum to the 25th day of March, 1889, shall be made to the Colonial Treasurer in Sydney, on or before the 26th day of March, 1888, and thereafter on or before the 26th day of March, in each and every year, the yearly rent aforesaid shall be paid to the Colonial Treasurer aforesaid, clear of all rates, taxes, and assessments to which the said land, mine, and premises are now, or at any time during the said term may be, subject or liable: Provided that if the royalty upon the coal raised during any year of the said term, computed at the rate aforesaid, shall exceed the rent paid for such year, such royalty, after deducting therefrom the rent paid for such year, shall be paid to the Colonial Treasurer at the expiration of the year or within one month thereafter; but if such royalty in any year amount to less than the rent paid for such year no royalty shall be demanded in respect of the coal raised during that year: Provided always, and it is hereby agreed, that if the said yearly rent or royalty shall be in arrear for thirty days after the same shall have become payable, whether such rent or royalty shall have been legally demanded or not, any officer appointed or authorised thereto by the Secretary for Mines may, by himself or his agent, enter upon the said land, and seize and distrain all minerals, metals, and ores actually got and raised from the said mine; and all machinery, apparatus, tools, waggons, carts, carriages, engines, plant, and all other goods, chattels, and effects whatsoever in, upon, and about the said land and premises; and on every distress thus made may take away, sell, and dispose of as in cases of distress for rent reserved in common leases, and out of the moneys arising thereby retain so much as shall be sufficient to satisfy the said arrears, and which shall at the time of such sale be unpaid; and all expenses incurred by him or them in or in respect of such seizure, distraint, removal, and sale; and if there be any surplus such officer shall pay the same to the said lessees, their executors, administrators, or transferees; and the acceptance or receipt of rent or royalty by or on behalf of Her Majesty, after breach of any covenant hereinafter contained, shall not be or be deemed a waiver of the right of Her Majesty, or of the Secretary for Mines, or other officer on behalf of Her Majesty, to enforce observance of such covenant. And if the said lessees, their executors, administrators, or transferees, shall mine for and win from the said land, mine, and premises, any gold, or any earth, rock, stone, quartz, clay, sand, gravel, or soil containing gold, or any mineral or metal with which gold is associated or combined, without the express sanction first had and obtained of the Secretary for Mines for the time being, the Governor, with the advice of the Executive Council, may declare these presents void, and thereupon all the right, title, and interest of the lessees, their executors, administrators, and transferees under these presents shall cease and determine both at law and in equity. And the said lessees do hereby, for themselves, their heirs, executors, administrators, and transferees, covenant with Her Majesty, her heirs and successors, in the manner following, that is to say:—

1. That the said lessees, their executors, administrators, and transferees, shall and will during the said term pay unto Her Majesty, her heirs and successors, the rent or royalty hereby reserved, at the times and places hereinbefore appointed for payment thereof, clear of all deductions.

2. And shall and will, after the expiration of six months from the date of delivery hereof, upon and during all lawful working days, except when prevented by inevitable accident or during the execution of repairs, work the said land, mine, and premises, or the land, mine, and premises adjoining thereto and proposed to be worked in connection therewith, in the best and most effectual manner, and to the best advantage, without interruption, and shall and will with reasonable expedition make and construct all necessary works with a view to diligently explore and search for coal in, on, and under the said land, mine, or premises, by employing thereon not less than two men for the first three years of the term.

3. And shall and will, after the expiration of the said three years, or after the underground works shall have reached the said land, employ in the construction of the works, or in mining operations on or under the said land, during the said term, and during the usual hours of labour, four able and competent workmen and miners at the least; unless prevented by inevitable accident or during the execution of repairs: Provided that the lessee, or if there be more than one lessee, each lessee who shall work as aforesaid, shall count as and be deemed for the purposes of these presents to be a workman or miner employed as aforesaid.

4. And shall and will during the said term effectually drain the said mine, and pump all water likely to cause injury thereto, or which would prevent or interfere with the working thereof; and if the said mine shall be affected, or be liable to be affected, by the same flow or body of water as any other mine or mines contiguous thereto, shall and will, if and whenever requested so to do, contribute with the lessee or lessees or owner or owners of such other mines, a reasonable proportion of the machinery and labour necessary to free and keep such mine or mines free from water to a workable extent: or if the said mine shall be kept free from water to a workable extent either wholly or partially by means of the machinery and labour of a contiguous mine or mines, or by reason of any works constructed or money expended by the lessee or lessees, owner or owners, of such contiguous mine or mines,—then shall and will pay to such lessee or lessees, owner or owners, as aforesaid, a reasonable proportion of the cost of such machinery, labour or works, or a reasonable proportion of the money so expended; and the Secretary for Mines for the time being may, if and whenever he shall think fit, depute some efficient person, who shall have access to and inspection of all such mines, to determine when the said mine is so freed or kept wholly or partially free from water, and what are the reasonable proportions of such expenses aforesaid, and to whom and when the same are to be paid,—such decision to be final and conclusive on all parties.

5. And shall and will make such provision for the disposal of the detritus, dirt, waste, or refuse of the said mine that the same shall not be an inconvenience, nuisance, or obstruction to any roadway, river, creek, or private or Crown lands, or shall not in any manner occasion any public or private damage or inconvenience.

6. And shall and will erect, and keep erected, during the said term, a post, painted white, at each angle of the said land, and at such points along the boundary lines as shall be necessary, so as plainly and accurately to define the boundary lines and angles of the said land; and each such post shall be fixed firmly in the ground, and shall project above the surface thereof not less than 3 feet.

7. And shall and will keep proper books, or a book, in which shall be entered the quantity of coal raised each day from the land hereby demised, and shall enter therein as soon as known the value of such coal, and permit any officer of the Department of Mines at all times to inspect the same, and as often as required so to do during the term make and deliver to the Secretary for Mines for the time being, or any officer appointed or instructed to collect, obtain, or receive the same, all such true and proper plans, sections, returns, statements, and statistics of the workings and operations of the said mine, made up to the last day of the preceding month (the truth and accuracy of which shall be verified by the statutory declaration of the lessee for the time being, or the manager or other officer having the charge, control, and direction of the works of the said mine), as the Secretary for Mines shall from time to time direct, or as shall be required by any regulation, and shall and will, whenever required by the Secretary for Mines so to do, deliver to any officer appointed or instructed as aforesaid samples of the minerals, metals, and ores, or any of them, found in or upon such mine and lands.

8. And shall and will during the said term make proper and reasonable compensation to the occupier or occupiers, lessee or lessees, from the Crown of any adjoining land in respect of any damage which may be sustained by him or them, by reason of the working of the said mine, or the carrying on of the works thereof or connected therewith, such compensation to be determined by the Secretary for Mines, or by some person authorised by him so to do.

9. And shall and will permit any mining surveyor, or other person duly authorised in that behalf, with all proper or necessary assistants, at all reasonable times, during the said term, quietly to enter into and upon the said land, mine, and premises, to survey and examine the state and condition thereof, and for the purposes aforesaid, to descend all pits and shafts, and to enter into and use all adits, levels, galleries, drives, and excavations, and to use all roads, ways, engines, ropes, machinery, gear, appliances, materials, labour, and other things in or on the said land and mine, which shall be by him deemed necessary, without making any compensation for the same, so nevertheless that in so doing no unnecessary interference is caused with the carrying on of the said mining works.

10. And further, shall and will at all times during the said term keep and preserve the said mine and premises from all avoidable injury or damage, and also the levels, drifts, shafts, water-courses, roads, ways, works, erections and fixtures therein and thereon, in good repair and condition, except such of the matters and things last aforesaid as shall from time to time be considered by a mining surveyor or other proper officer authorised by the Secretary for Mines to inspect and report upon such matters and things to be unnecessary for the proper working of the said mine or any contiguous mine, and in such state and condition shall and will at the end or sooner determination of the said term deliver peaceable possession thereof, and of all and singular the premises hereby demised to Her Majesty, her heirs and successors, or to the Warden or other officer authorised to receive possession thereof. Nevertheless, the Secretary for Mines may, if he think fit, permit the lessees, their executors, administrators, and transferees, within six months after possession shall have been received as aforesaid, to enter upon the said land, and to remove therefrom such machinery, plant, and apparatus as shall have been erected and fixed upon such land, and such earth, rock, ore, mineral, or metal as shall have been won from and raised to the surface of such mine.

11. And shall not nor will use or occupy, or permit to be used or occupied, the said land, or any part thereof, for other than mining purposes, or for pasturage, or as sites for dwellings, or garden ground for the persons employed in, on, or about the said mine.

12. And shall not nor will mine in or upon the said mine, land, and premises, for any mineral, metal, or ore other than coal, without the express sanction of the Secretary for Mines.

13. And shall not nor will transfer, underlet, or part with possession of the said land, mine, and premises, or any part thereof, or mortgage, charge, or encumber the same, without the license first had and obtained of the Secretary for Mines for the time being: Provided always that no such license shall be necessary in cases where, by operation of law or otherwise, a sale of the said land, mine, and premises, or any part or parts thereof, is made by any person or persons entitled to sell the same for the benefit of the creditors or a creditor of the lessees or their transferees, or in cases where the lessees or their transferees desire to let the said mine and premises, or any part thereof, to be worked on tribute.

14. And shall not nor will close up or obstruct any adit or adits to or from any contiguous mine or mines whereby fresh air is admitted or ventilation promoted.

15. And shall not nor will plead acceptance of rent or royalty by or on behalf of Her Majesty as a waiver of the right of Her Majesty, or of the Secretary for Mines, or other officer on behalf of Her Majesty, to enforce observance of the covenants herein contained, or of the right of the Governor, with the advice of the Executive Council, to declare these presents void for breach of any such covenant: Provided always, and it is hereby agreed and declared in manner following:—

16. That it shall be lawful for Her Majesty, her heirs, successors, and assigns, to make and use in, on, or under the said land, any levels, drifts, leads, shafts, water-courses, adits, roads, ways, and passages for freeing and keeping free any other lands or mines from water, or for conveying water to any other lands or mines for mining purposes, or for supplying any other mines with fresh air, or for effectually working any other mines, or for any public purpose whatsoever, causing as little damage, obstruction, or interference as possible to or with the said mine and the works thereof. And if, at any time during the term hereby created, any part or parts of the land hereby demised, or any part or parts of the surface thereof, shall be required for the purpose of any township, village, railway, road, canal, water-course, reservoir, or for any other public purpose, it shall be lawful for the Governor for the time being, with the advice of the Executive Council, on giving three months' notice of his intention so to do, to cause to be set out the part or parts of the said land or of the surface thereof which shall be so required; and as soon as the same shall be so set out such part or parts of the said land, or of the surface thereof, shall cease to be included in the land hereby demised, and the lessees, their executors, administrators, or transferees shall not be entitled to any abatement of rent or royalty, or any compensation whatever in respect thereof.

17. And if the said lessees, their executors, administrators, or transferees shall prove to the satisfaction of the Secretary for Mines for the time being that the said mine is unworkable, or cannot be profitably worked, from any cause whatsoever, or that the lessees, their executors, administrators, or transferees is or are unable, by reason of sickness or other sufficient cause, to work in such land or mine, or that the supply of water is insufficient to allow the working of the said land, mine, and premises to be profitably carried on, the said Secretary for Mines may grant permission to suspend work therein or thereon, for any period not exceeding six months, without the lessees, their executors, administrators, or transferees incurring in respect thereto any forfeiture or penalty for breach of any covenant herein contained.

18. And, lastly, that if the lessees, their executors, administrators, or transferees shall at any time during the said term fail to use such land *bona fide* for the purpose for which it has been demised, or if and whenever the said rent or royalty shall be in arrear for thirty days after the time appointed for payment thereof, whether the same shall have been legally demanded or not, or if and whenever there shall be a breach of or non-compliance with the covenants and provisos herein contained by the lessees, their executors, administrators, or transferees, and the lessees, their executors, administrators, or transferees shall not have obtained from the Secretary for Mines for the time being permission to suspend work as aforesaid, in case the breach shall have been for non-compliance with the covenants for the employment of workmen or miners, or for the working of the mine, the Governor, with the advice of the Executive Council, who alone shall finally judge and determine the matter upon the evidence or reports submitted by the Secretary for Mines for the time being, may declare these presents void, and upon publication in the *Government Gazette* of notice of such declaration, all the right, title, and interest of the lessees, their executors, administrators, and transferees under these presents shall cease and determine both at law and in equity; and the production of a copy of the *Government Gazette*, containing a notice purporting to be signed by the Secretary for Mines, declaring the lease void, shall be conclusive evidence in all courts whatsoever in the Colony of New South Wales of a breach of or non-compliance with the covenants and provisos herein contained sufficient to authorise and sustain such declaration having been lawfully made, and that the interest created hereunder has been lawfully determined; and thereupon it shall be lawful for Her Majesty, her heirs and successors, or her or their agents or officers, or for any bailiff or other person duly authorised thereto, or for any holder of a mineral license who has the permission of the Secretary for Mines for the time being, without any previous demand whatsoever, to enter forthwith into and upon the said land and premises hereby granted, and the same to repossess and enjoy as fully and effectually to all intents and purposes as if these premises had not been made, and the said lessees, their executors, administrators, and transferees to expel and remove, without any legal process, and as effectually as the Sheriff might do in case judgment in ejectment had been obtained and a writ of *habere facias possessionem* had been issued on such judgment; and in case of such entry and any legal proceeding taken in respect thereof

thereof, the defendant or defendants in any such proceeding may plead leave and license in bar thereof; and these presents shall be conclusive evidence of such leave and license by the lessees, their executors, administrators, and transferees, or other the person or persons, plaintiff or plaintiffs, in such proceedings, for such entry or other matters complained of in such proceedings.

In witness whereof, His Excellency the Right Honorable Charles Robert, Baron Carrington, a Member of Her Majesty's Most Honorable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies, hath, on behalf of Her Majesty the Queen, caused the Seal of the said Colony to be affixed to this grant, and also set his hand, at Government House, Sydney, in the said Colony, the day and year first above written, and the lessees have also set their hands and seals, the 28th day of March, 1887.

CARRINGTON.

1891-2.

CONDITIONAL PURCHASE BY ZACHARY BENN, RICHMOND RIVER DISTRICT.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 1st February, 1892, "*with power to send for persons and papers, to inquire into and report upon the Conditional Purchase of Zachary Benn, in the district of the Richmond River, recommended for forfeiture by the Casino Land Board,*" and to whom was referred, on 1st February, 1892, "*the Report from the Select Committee on the same subject during the Session of* 1889, *together with the Minutes of Proceedings, and Evidence,*"—have agreed to the following Report:—

Your Committee having carefully considered the evidence referred to them, taken before the Select Committee on 26th and 30th July, 1889, and also reviewed the correspondence, which is voluminous, in connection with the case, find as follows:—

That on 24th July, 1884, Zachary Benn conditionally purchased 202½ acres of land in the county of Richmond, parish of Shannon, which land was subsequently forfeited on the ground of non-residence by the conditional purchaser.

That such forfeiture appears to your Committee to be against the weight of evidence.

That the evidence before your Committee, together with statutory declarations contained in the papers referred to them by your Honorable House, prove that the said Zachary Benn did reside upon his land.

Your Committee are, therefore, of opinion that the said conditional purchase should not have been recommended for forfeiture, and recommend the case to the favourable consideration of the Government.

1891-2.

CONDITIONAL PURCHASE MADE BY ANNE NASH O'BRIEN, AT COROWA.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 16th September, 1891, a.m.—"*with power to send for persons and papers to inquire into and report upon the conditional purchase and additional conditional purchase of Anne Nash O'Brien, Corowa, made August*, 1885,"—have agreed to the following report :—

Your Committee, having examined the witnesses named in the list,* whose evidence will be found appended hereto, find as follows :— * See list, page 5.

1. That the selector, Anne Nash O'Brien, at the time of making her conditional purchase was of the tender age of sixteen years ; that the land selected was apparently intended as a family selection, and was taken up with the object of working it in conjunction with the holding of her father (now deceased). Although it is shown by the evidence that the land in question is situated some distance from her father's original selection, it is also clear that it was the nearest portion available at the time it was purchased.

2. Your Committee are of opinion, notwithstanding the occasional absence of the selector from her selection, that the conditions of residence were, to all intents and purposes, virtually fulfilled, and if any apparent failure existed it is covered by the provisions of the Act of 1889; and the circumstance of the tender age of the selector explains fully the more frequent visits to the home of her parents without evincing any desire to commit a breach of the conditions.

3. That, having carefully considered the evidence and all the surroundings of the case, your Committee strongly recommend it to the Minister for Lands for his most favourable consideration, and respectfully suggest that, as there are no conflicting interests, the conditional purchases might be either reinstated or validated.

ROBT. BARBOUR,
Chairman.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

CONDITIONAL PURCHASE MADE BY ANNE NASH O'BRIEN AT COROWA.

MONDAY, 22 *FEBRUARY*, 1892.

Present:—

MR. BARBOUR, | MR. McFARLANE,
MR. GORMLY.

R. BARBOUR, ESQ., IN THE CHAIR.

Patrick O'Keefe called in, sworn, and examined:—

P. O'Keefe.
22 Feb., 1892.

1. *Chairman.*] Where do you reside? At Prairie, Narrow Plains, near Corowa.
2. What are you? Selector and farmer.
3. How long have you been there? I selected in 1885.
4. How much land have you got? Just about 1,000 acres.
5. You keep a lot of sheep? Yes; and I am renting a lot of country.
6. How many sheep have you? About 1,500, and a good few cattle and horses.
7. Do you know Anne Nash O'Brien? Yes.
8. Did she select some land in your neighbourhood? Yes, within three-quarters of a mile of my property where I reside.
9. Do you know her father? Yes, I did know him; he is dead.
10. He died a few months ago? Yes.
11. How far is Miss O'Brien's selection from her father's residence? Between 16 and 17 miles.
12. At the time when she selected this land, was there any land available for selection near her father's place? There was not.
13. This was the nearest to her father's place? Yes. She selected the same day as I did.
14. Being neighbours, then, you have often seen her and her selection? Yes, very often.
15. Is she a bona-fide selector? She is as much a bona-fide selector as any man I ever knew.
16. She is as much a bona-fide a selector as she can be? Yes, as much as she can be.
17. Were you often in the habit of seeing her at her selection? Yes; I was renting land on both sides of her.
18. Are you a carrier? Yes.
19. And your horses often used to stray into the neighbourhood of her land? Yes. My property is on one side of her selection, and the rented ground on the other.
20. On such occasions, did you see her there? Yes.
21. That was when you were going to look for your horses? Yes. I saw her on the ground sometimes, and I used to go and speak with the girls and boys that were with her.
22. She had companions? Yes.
23. Who were they? Her sisters and brothers.
24. Had she a regular home on the selection? I reckon that it was.
25 Did you ever have a drink of tea with them at the selection? I have had meals with them there.
26. You and her family used to visit each other? Yes; she has been at my place often, and members of my family have been at her place.
27. Generally speaking, she made that place her home? Yes; I reckon that she did.
28. Occasionally, I suppose, she would be absent visiting her parents? No doubt.
29. Would she be away any length of time? I do not think she ever was.
30. How long might she be away at one time? A fortnight or three weeks.

P. O'Keefe
22 Feb., 1892.

31. But not more than that? Not more than that.
32. Then if the Inspector happened to come at that time—when Miss O'Brien happened to be on a visit to her parents—he would not of course find her on the selection? No, certainly not.
33. Did she keep stock on the ground? Yes; there were sheep, horses, and cattle on the ground.
34. And she often had her brothers helping her? Yes.
35. You are a selector, and have been there since in 1885;—do you think that Miss O'Brien honestly performed the condition of residence on that selection? I reckon that she fulfilled the condition of residence as well as any minor in Australia ever did.
36. She was a minor? Yes.
37. And she could not be expected to be too long away from her parents? No.
38. And she was occasionally absent on that account? Yes.
39. How many times a year did you see her on her selection? I may have seen her ten or twenty times.
40. You have no doubt that she was a bona-fide selector? I am sure that she was.
41. *Mr. Gormly.*] You state that you were almost constantly in the habit of passing the selection of this young woman? Yes, I have been in the habit of passing the selection. It was on the road to Corowa, and I went that way to buy stock.
42. And you usually found the place occupied? Yes.
43. By the selector? Yes.
44. Then she had her brothers and sisters at times residing with her? Yes; she was never by herself.
45. *Mr. McFarlane.*] You say that it was in 1885 that you selected there? Yes.
46. And Miss O'Brien selected at the same time? Yes, we both selected on the same day.
47. How far was her selection from yours? About three-quarters of a mile.
48. You say that you frequently saw her on her selection? Yes.
49. Are we to understand that that was during the five years when she was supposed to be residing on the land? Yes.
50. That was the time when you saw her on the selection? Yes.
51. You stated that you were a carrier? I was not carrying then. I was a carrier when I first went there, but I have not been carrying since 1885.
52. Have you been most of your time on your selection? Yes, since 1885.
53. At the time you visited the selector's residence, did you notice whether the house was furnished—whether there were cooking-utensils there, and the ordinary articles used in the home of a selector? Yes, I saw cooking-utensils and other articles of domestic use.
54. Have you at any time been to the selection without seeing the selector? Yes.
55. That would be when she would be with her parents? Yes.
56. How far was her father's house from the selection? Between 16 and 17 miles.
57. *Mr. Gormly.*] You stated that you had seen Miss O'Brien ten or twenty times a year? It may have been twenty—I never used to notice how often I saw her.
58. Did that extend over the five years when she was performing the residence? Yes.
59. You stated in answer to a question asked by Mr. Barbour that you did not think the selector had been absent for more than three weeks at a time? I do not think she was.
60. You do not know that she had been absent from the selection during the five years more than two or three weeks at a time? ——
61. *Chairman.*] Being neighbours, Miss O'Brien used to come to your house, and you used to go to her house? Yes.
62. You have no doubt in you own mind that she honestly fulfilled the residence condition as much as it was possible for a minor to do? I consider that she fulfilled the condition of residence as well as any girl in Australia could do it.
63. *Mr. Gormly.*] I suppose the Inspector of Conditional Purchases did not very often visit that neighbourhood—how many times did he visit your place during the five years? I have seen him only once myself.
64. *Chairman.*] At the most not more than twice? He has been there twice, but I only saw him once.
65. *Mr. McFarlane.*] Was it possible for him to be there oftener without your seeing him? He did not come to the house.
66. In your opinion, someone would have been sure to see him if he had gone there more than twice? Yes.
67. *Mr. Gormly.*] You would have better opportunities of seeing whether Miss O'Brien had fulfilled the conditions than the Inspector had? Yes.
68. Do you remember whether the Inspector called on Miss O'Brien at the time he called upon you? I do not know.
69. You did not hear anything about it? No, I did not.
70. And I suppose it is quite likely that if he called and did not find her on the selection she would be on a visit to her mother? Yes; there is no doubt about it.

William Cahill called in, sworn, and examined:—

W. Cahill.
22 Feb., 1892.

71. *Chairman.*] Where do you reside? My place is Loughmore Farm, Narrow Plains, near Corowa.
72. How long have you been in that neighbourhood? I settled there in August, 1881.
73. You were farming? Yes.
74. Have you a quantity of sheep and cattle? Yes.
75. What is the total acreage of your holding? I have 2,008 acres, and my son has 200 acres.
76. Do you know Anne Nash O'Brien? Yes.
77. She is a young unmarried woman? Yes.
78. At the time she took up the selection, how old would she be? Nineteen or twenty, I think.
79. When did she make the selection? About 1885.
80. Has she, in your opinion, fulfilled all the conditions the law imposed upon a selector? She has.
81. Has she made the place a home? Yes, she has, to a great extent. I have been there several times, and always found her on the selection.
82. Were you often there? I was pretty often there. The road lay between her selection and my land.
83. A simple road? A 5-chain road.
84. Have you often seen her on her selection? I have.
85. Do you consider that she is a bona-fide selector? I am certain that she is a bona-fide selector.
86. And except visiting her people, has she had any other home than that? She has not. 87.

W. Cahill. 22 Feb., 1892.

87. And, in your opinon, how often was she absent in a year? That I could not say.
88. How long at a time do you think she would be absent? She would go away on a Saturday and come back on a Sunday evening.
89. You know that of your own knowledge? Yes.
90. Would she sometimes be two or three weeks away? She would go home on a Saturday evening, and when she came back she would bring her brothers and sisters with her.
91. She generally had someone living with her? Yes, her brothers and sisters.
92. So far as you had an opportunity of seeing her, she was there as a bona-fide selector? She was.
93. Did she keep any stock on the land? Yes. The place was always stocked with sheep, horses, and cattle.
94. Were they managed by her father? Yes.
95. Had she a comfortable house? She had a nice comfortable place. It contained two rooms, and a bedroom for herself, and another place outside where her brother slept on a sofa.
96. She had a bedroom for her sisters and herself, and the boy had a sofa which he slept on in the kitchen? Yes; and they had half an acre of land outside to catch a horse in.
97. Did she cook and have all the things necessary for living there? Yes; she always had bacon hanging up in the place.
98. Had she plenty of potatoes and bread and flour? Yes.
99. And cooking-utensils? Yes.
100. How far was her father's place from her selection? 12 or 14 miles.
101. That being the case, that was too far for her to go for food to her parents' selection? Yes.
102. Then all the food was cooked in the house on the selection? Yes, except that on returning from her father's she would often bring some supplies with her.
103. Do you think that she was a bona-fide selector? I do, indeed.
104. And that she resided on the selection as much as any young girl could be expected to do? She did.
105. Of course you know that she had to do that for five years? Yes.
106. Did she do it for the whole of the five years? Yes.
107. From August, 1885, down to 1890? Yes, and her father often used to be there, and I used to go down and have a yarn with him there.
108. Did you see her there? She was always there when I went.
109. Did she do the cooking for you? Yes, always.
110. Have you any reason to know that she was ever absent from the selection for any length of time continuously? She was not to my knowledge.
111. Except when she went for a week or two to visit her mother, she was always on the selection? Yes, and my daughter used to go and visit her.
112. Your daughter would often see her when you would not. Did your children always speak of having seen her on the selection? Yes; it was about three-quarters of a mile from our place.
113. Her father is now dead? Yes.
114. There is a pretty large family, is there not? Yes, ten children.
115. Do you know the age of the youngest? The youngest is about 12 or 15 months old.
116. I suppose they have no great means left—no more than is necessary for their requirements? Indeed they have not.
117. They are not very well provided for? They are not—as far as I know, they are very badly provided for.
118. *Mr. Gormly.*] You had frequent opportunities, I suppose, of judging whether this young woman was residing on her selection? Yes; I lived near the selection. I would sometimes go to see Mr. O'Brien, and if he was not there she would tell me when he would be there.
119. Did you go many times to her residence and find her out? I never found her out once.
120. You were in the habit during the whole of the time of visiting her selection? Yes. I used to visit at Mr. O'Keefe's place, and Miss O'Brien's selection was on the road.
121. And as you constantly resided on your own land you were not for any lengthened time absent from that neighbourhood? No.
122. During the five years that this young woman was performing the condition of residence, did the Inspector of Conditional Purchases often visit your neighbourhood? No, not often.
123. About how many times. Only on one occasion did he visit the place to my knowledge. He was there on another occasion, but I did not see him.
124. You had a better opportunity of judging whether she was performing the residence condition than the Inspector had? Yes, of course.
125. *Chairman.*] You know of the Conditional Purchase Inspector being there once? I never knew him to be there more than once during the five years. It appears that he was there a second time, but none of us knew it.
126. When he called, did he see you? Yes.
127. But you say that he had been there at other times? Before the Land Board he stated that he had been there three times, but I saw him there only once.
128. At the time when he called on you, had he called on Miss O'Brien? I think not, but I could not say for certain.
129. *Mr. Gormly.*] He was not in the habit of constantly visiting the neighbourhood? Yes, he was.
130. What do you call constantly—several times a year? He often used to be at the station near Momolong—I have seen him there.
131. How far away is that? 2½ or 3 miles from the selections.
132. But he only once visited you in his capacity of Conditional Purchase Inspector? I saw him only once.
133. Was he in the habit of constantly visiting the selections to see if the selectors were residing on them? I saw him only once.
134. Did you ever see the Inspector at Miss O'Brien's selection? No, I never did.
135. *Mr. McFarlane.*] You say that there is a 5-chain road between Miss O'Brien's selection and your property? Yes.
136. How far is your house from Miss O'Brien's residence on the selection? I should think about three-quarters of a mile.
137. Could you see the residence on the selection from your house? We could.
138. Then you could tell whether the selector was away or not? Not unless we went near to the road.
139. What use was made of Miss O'Brien's land—was any of it under cultivation? No; it was all grazing-land—they had horses and cattle

W. Cahill. 22 Feb., 1892.

140. Was it fenced-in paddocks? It was all in one paddock.
141. *Mr. Gormly.*] Except a small paddock which was kept for a horse? Yes.
142. If you went to see her, did you go to find her at the selection, or at her father's place? I should go to the selection.
143. You regarded that as her bona-fide residence? Yes.
144. You would go to her residence before anywhere else? Yes.
145. Was Miss O'Brien's the nearest residence to yours? She was the nearest to mine.
146. She was your nearest neighbour? Yes.
147. Then you would be able to judge better than anyone else as to her residence conditions being fulfilled? Yes.
148. Were you on good terms? Always.
149. Did you visit Miss O'Brien, and did Miss O'Brien visit you? Sometimes her mother used to come to our place.
150. You used to be on visiting terms? Yes.
151. Have you any doubt whatever that this girl fulfilled the usual conditions? I have no doubt whatever.
152. She was not continuously in her hut, but occasionally went to visit her family? Yes; she went to visit her father and mother.
153. She would go on a Saturday night, and return on Sunday evening or Monday morning? Yes.
154. The selection was her bona-fide home? Yes. She used to have her brothers and sisters with her, and my son used to visit her brother. My son is a boy 12 or 13 years of age, and Miss O'Brien's brother is about the same age.

Alfred Salwey called in, sworn, and examined:—

A. Salwey. 22 Feb., 1892.

155. *Chairman.*] You are in the Lands Department? Yes.
156. What is your position there? I am head of the Conditional Sales Branch.
157. Did Anne Nash O'Brien make a conditional purchase about August, 1885, at Corowa? Yes; on the 6th August, 1885, C.P. No. 85–14, Corowa.
158. What was the area? The area was 715½ acres.
159. Then there was an additional C.P. attached? Yes.
160. Will you tell us when that was made? The conditional purchase of 142¾ acres was made on the 19th November, 1885.—No. 85/60.
161. Were the conditions of the original C.P., so far as you know, fulfilled—do you know anything about the fulfilment of the conditions? I have the evidence that was taken before the Board and the report.
162. I believe there was a subsequent inquiry as to residence? I believe there were no improvements. It was a question of fencing, I think. I have no evidence as to that—that has not been touched.
163. Then the question that has engaged the attention of the Lands Department has been the question of residence. Yes.
164. As far as you know, the conditions of fencing have been fulfilled? I have no evidence on that. I cannot say anything about it.
165. Some steps were taken by the Department in reference to the selection? An inquiry was instituted by the Land Board on the 19th December, 1889, and it was found that the condition of residence had not been complied with, and there was a considerable amount of evidence taken, a copy of which I will supply to the Committee. [*Appendix A.*]
166. Evidence was taken, a copy of which you will hand in, to be attached to the Report? Yes.
167. Did the Minister act upon the recommendation of the Board? No; an appeal was made to the Land Court, but the appeal was dismissed. I will hand in another document which has some bearing on the case—an affidavit made by Edward Beazley
168. Who is he? He was groom for Mr. M'Phillamy, the Conditional Purchase Inspector.
169. What is the document—a statutory declaration? Yes, made before a Justice of the Peace.
170. *Mr. Gormly.*] I should like to know under what circumstances that document came to be amongst the papers? It was sent to the Under Secretary for Lands.
171. By Mr. M'Phillamy? I do not know.
172. This affidavit was not taken before the Court? No.
173. Beazley is not an officer of your Department? No, he is not.
174. *Mr. McFarlane.*] How did the affidavit come to be made? In the interests of justice. He says, "I have the honor to enclose herewith a sworn declaration as to what I know concerniug the residence of Anne Nash O'Brien on her conditional purchase."
175. *Chairman.*] Is there anything you would like to add to what you have stated? Nothing further. I will hand in the evidence taken before the Land Board.
176. And will you consult the Under Secretary as to whether he would like to have the person examined who made that affidavit? Yes.
177. *Mr. Gormly.*] Are there any reasons given for dismissing the appeal? No; they simply dismissed it.
178. No fresh evidence was taken? No; no application was made for fresh evidence to be taken.
179. Is there anything in the documents relating to the dismissal of the appeal that would give information to the Committee? The Registrar of the Land Court wrote to the Under Secretary to say that the appeal had been dismissed, and the Court had ordered the deposit to be refunded.

TUESDAY, 1 *MARCH*, 1892.

Present:—

Mr. BARBOUR,	Mr. GORMLY,
Mr. McFARLANE,	Mr. BRUNKER.

ROBERT BARBOUR, Esq., IN THE CHAIR.

John Sydney M'Phillamy called in, sworn, and examined:—

J. S. M'Phillamy. 1 Mar., 1892.

180. *Chairman.*] You are a Conditional Purchase Inspector? Yes, in the districts of Albury, Corowa, and Tumut.
181. Did one Anne Nash O'Brien make a selection in the Corowa district? Yes.

182.

J. S. M'Phillamy. 1 Mar., 1892.

182. Do you know the number of it? The selection was taken up in 1885, and confirmed the following year. It was No. 85–14.
183. And there was subsequently an additional conditional purchase? Yes. On the 4th November, 1886, the original conditional purchase was confirmed.
184. Have you in the course of your duties visited that selection? Yes.
185. Can you tell us when? I visited it about eight times in two years.
186. Do you recollect the first time you visited it? The first time was on the 7th October, 1887.
187. What did you find when you visited it? I met the selector and her brother on the road coming from the direction of her father's place. They were going to the selection on horseback. They rode in front of me, and I drove after them to the house on the selection.
188. The selector is a young unmarried woman? Yes. I think she was just turned 16 at the time she took up her selection.
189. Did she say she had been on a visit to her mother? She did not.
190. Did you ask her anything? I do not recollect.
191. Did it appear to you that the residence on the selection was permanently occupied? On that occasion it had a bedstead, bedding, and cooking-utensils in it, but it did not appear to be habitually occupied.
192. What was the size of the hut—did it contain one or two apartments? Two appartments, the dimensions of which were 21 feet by 12 feet.
193. Was there a sleeping-place in the kitchen? There was a bunk in the kitchen.
194. Was there a bed in the other room? Yes, and a double bedstead.
195. You say you saw cooking-utensils and everything necessary for a person residing there? Yes.
196. What was the cause of the doubt—was it as to whether the residence was permanently occupied? From my general knowledge of such matters, I thought so.
197. This was your first visit? Yes.
198. Did you see anything suspicious about the place? The selection was confirmed in November, 1886, and the selector need not have resided for three months afterwards. I visited the selection in October, but there could not then, if she lived there, have been much sign of residence in so short a time.
199. Do you think there was sufficient for the time? Yes, on my first visit. I gave her the benefit of any doubt, and reported favourably, with the view of revisiting the place and ascertaining if residence was being done.
200. Did you inspect the improvements at that time? Yes. The selection was fenced all round.
201. On your first visit? Yes, all except the additional conditional purchase. There was a road measured through that, and it cut through Miss O'Brien's fence.
202. As far as the improvements were concerned, they had been performed? Yes, with the exception of that road being enclosed.
203. Did you find stock on the land? Yes; there were sheep on it.
204. Did they belong to the selector or her father? I believe they belonged to her father.
205. They were not the sheep of the station? Oh, no. The selection was fenced in before it was confirmed.
206. And her father put sheep on it? Yes.
207. On your second visit, what occurred? On the second visit—that was on the 14th of May, 1888—no person was resident on the selection.
208. No person was then in the hut? No.
209. Had the hut any signs of being occupied as it was when you visited it in the first instance? It contained the same things, but did not appear to have been occupied for a length of time by anyone.
210. Did you see anybody at all on the selection? No, no one.
211. Who looked after the sheep and stock? I do not know of my own knowledge. I have heard that Mr. O'Brien used to come up occasionally. There was a good wire fence round the selection, and the gate had a lock on it.
212. Have you any idea where the selector was at that time? No.
213. You did not meet her on the road on that occasion? No.
214. Was it your impression that she only lived in the hut occasionally? That was my impression.
215. I suppose it would be quite natural for this young girl to visit her mother occasionally? Certainly.
216. How far was this hut from her mother's house? I should say 14 or 15 miles.
217. I think you said you did not see anyone at all on the selection? I saw no one.
218. When was your next visit? On the 26th of May I again visited the selection, and found it in the same state as when I first visited it.
219. Did you go there on purpose to visit it? No; I called there as I was returning home.
220. You visited the place as you were passing? Yes.
221. Did you form any opinion as to whether she had been there in the meantime? I do not think she had been.
222. Was the house locked up? Yes.
223. And you could only see through the windows? There were two windows, and there was a pane of glass out of each window, and I could put my head through.
224. When was your next visit? On the 21st of July following. No person was at the hut at that date.
225. Did anything strike you on that occasion? There was a kerosene-tin under the drip of the spout which had been removed. There had evidently been somebody there. The quilt on the bed was in a dusty state. There was a plague of mice at Riverina at that time, and the mice had attacked the bed, the contents of which were strewn on the floor.
226. Did you find anyone upon the selection at that time? No one.
227. But your impression was that someone had been there, whether lately or some time before you could not say? I think they had been there before my last visit.
228. Did you go again? Yes, on the 26th of October, 1888.
229. Did you find the selector there at that time? There were signs of someone having been there in the meantime. There were some chips off the woodwork of the building, and some had been taken to light the fire, as I thought. The hut was in the same state, as far as the furniture and cooking-utensils were concerned. The bed had been slept in, and it had not been made up. Some person had slept in the hut shortly before my visit, as far as I could see.
230. Did you visit the selection any more after that? I visited it on the 15th January, 1889, and I noticed at the front gate traces of a buggy having been up to the hut.

J. S. M'Phillamy. 1 Mar., 1892.

231. Did you find anyone on the selection then? No.
232. Did you see any further traces than the marks of the buggy wheels? The bed was made up on that occasion, but I think that everything else was in the same state as before.
233. Were the sheep still in the paddocks? I could not say for certain. There was some stock in the paddocks.
234. Did you make any further visits? On the 11th March, 1889, I again visited the conditional purchase. The gate was locked, and there were no signs of recent traffic through it. The hut was locked, and appeared to be in the same state as on the last visit, except that I noticed some candles and a bottle of limejuice in the bedroom, and also a new bucket. I noticed a coil of wire outside which I did not see on my previous visit.
235. Did you visit the selection any more? Yes; on the 18th September I again visited the conditional purchase, and the gate was locked, and there were no fresh tracks.
236. Did you go there any more after that? That was my last visit.
237. Did you find anyone on the selection? There was no one on the selection at that time.
238. Did you find indications of persons having been there since you were there before? There was a small ash-heap outside which had been made since my previous visit.
239. Was it an accumulation, or was it a place where a fire had been lit? A small heap of ashes had been thrown there, and some thistles were growing up through it.
240. I suppose that would have occurred quickly if there had been rain? Yes.
241. Then, how many days' ashes would there be there? There would be a bucketful or two there.
242. Then, on that occasion, did you see any person there? No, no one.
243. The selector is a very young girl, is she not? Yes; she was 16 in 1885.
244. What was your impression—had she gone to her mother's? I believed her to be living with her parents.
245. Your impression is that she was only there occasionally? Yes; she used to visit the selection occasionally.
246. I suppose you have no fault to find with the other conditions? No, except as to the fence enclosing the road. The Minister, however, has waived forfeiture in cases of that sort.
247. Did you ever see any of the neighbours about when you visited that place? Mr. Cahill is the nearest neighbour.
248. Did you ever speak to him about the thing? I think I told him that I was not satisfied with the residence.
249. Did he say that you might be satisfied? No; he seemed to agree with me. He said that O'Brien was foolish to run the risk of losing the land through not having the residence condition complied with.
250. You seem to have shown more than ordinary attention to this selection? No, I did not.
251. You paid eight visits—do you pay eight visits to every selection? I do to some, when they are conveniently situated—when they are on the roads on which I travel. I used to go to the end of my district, and return by the road passing Miss O'Brien's selection. It is on the main road between Jerilderie and Corowa.
252. You were in the habit of passing that selection? Yes.
253. *Mr. McFarlane.*] Did you notice that there were several selections adjoining O'Brien's? Mr. Cahill's is the nearest, and his residence is 1½ mile from it, but his selection is on the other side of the 3-chain road.
253½. There is no other selection adjoining? The nearest one except Cahill's is O'Keefe's.
254. How far away is his place? To go across the country it is not much further than Cahill's, but to come round the distance would be 2½ or 3 miles.
255. Would not those neighbours have a fair opportunity of knowing whether this selector lived on her selection? I do not think they would see her very often. I do not think they would have gone to the selection to find Miss O'Brien.
256. If they have stated that they went there to see her, would that be untrue? I would not care to say that, but I do not think they would have gone to the selection to find her.
257. You say that you saw the selector one day with her brother coming from the direction of her father's place? Yes.
258. What day of the week was that? I could not tell.
259. Was it on a Sunday? No; I think it was on a Monday, because on the previous Saturday I asked her brother if Miss O'Brien was at home, and he said she was at Victoria Park, her father's place.
260. A number of selectors are in the habit of staying the whole week at their selections and going away on Saturday and returning on Monday? Yes; it is a common thing.
261. Possibly that was her case? If that were the case the hut would have shown more signs of occupation. I do not report persons non-resident because they do not happen to be at the selection when I visit it. I have had sufficient experience to know that if a person resides on a selection sufficiently to comply with the Act there must be signs of residence.
262. In this case the selector and her brother, who is a small boy, would not leave much trace of residence on the selection if they did reside, would they? Well, they would have a place to catch water in, they would have a wood-heap, and nearly every selector has domestic animals.
263. Even some of those who do not reside on their selections at all? Yes.
264. You say that there was a plague of mice, and that you found the mattress destroyed? Yes.
265. How long would it take for that to happen—would it take some weeks for the mice to do that damage? They were so numerous at that time that they could do it in a week or two. In some places they killed the mice at the rate of 4,000 a night.
266. Perhaps the whole of this damage was done in a day or two? Yes, very likely.
267. In that case it would not be very good evidence that the selector had been a considerable time away from the selection? No; I do not know how long it took.
268. You did not see the selector at all on any of your visits to the selection? Only on the first visit.
269. What was your opinion, judging by the traces of residence that you saw;—does it come up to a fair average of the selections that you have visited? No.
270. *Mr. Brunker.*] How long have you been Inspector of Conditional Purchases? Fifteen years.
271. Do you know the selections of this selector's father? Yes.
272. What area has he selected? He took up 640 acres, and his mother-in-law, I think, took up 500 acres. He has 1,100 acres at Victoria Park.

273.

J. S. M'Phillamy. 1 Mar., 1892.

273. Just under the maximum? Yes.
274. Is the selection of Anne Nash O'Brien adjoining? No; it is 14 or 15 miles away.
275. It would not have been competent for O'Brien himself to have taken up a large selection under the law? No.
276. Can you say from your experience whether the conditions of residence as required by law were complied with in this case? I should say that they were not.
277. Did you find the place locked when you went there? The hut was always locked, but I could see into it through the window.
278. When you visited the selection you were sometimes accompanied by a man named Beazley? Yes, I was. He left my employment three years ago.
279. Do you know of your own knowledge that any offer was made to this man Beazley in regard to this selection? No.
280. With regard to improvements—were there any improvements on the selection other than the small building and the fences? There was a small paddock round the house, with a wire fence round it called the house-paddock, and there was a little ring-barking round the house.
281. Your impression was that there had been no habitual residence at the selection. I want to know whether from the surroundings you thought that it was a continuous home? No, it was not. There were no buildings of any kind on the land except the hut.
282. *Chairman.*] Is this girl's father now dead? He died in Sydney, I believe.
283. Lately? Within six months, I think. I believe he died since this Committee was moved for. He died in the hospital.
284. What are the circumstances of the widow and family? I believe there are in poor circumstances.
285. Have the people in the neighbourhood got up a petition to the Minister? Yes; there is great sympathy for the widow and children in the district.
286. Do you know what the prayer of the petition is? I believe it is to ask the Minister to waive forfeiture.
287. Was the pastoral tenant adverse to this selection at first? Only as to the improvements, there being a dispute as to the value of them.
288. What is his attitude towards it now? I believe he went round with a petition to get it signed.
289. On behalf of the widow and family? Yes.
290. Do you know if his name appears as the first on the petition? No; I have not seen the petition.
291. But you know that he has exerted himself in the matter? He went round the district with the petition to get it signed.
292. And the object of the petition is to ask the Minister to waive forfeiture? That is the object, as far as I can learn.
293. And is there a general sympathy with the widow and the family? Yes, there is a very general sympathy with them in the district.
294. Is there a feeling that the selection ought to be forfeited? During Mr. O'Brien's lifetime there was.
295. What is the feeling now? The feeling is that the widow was left very poorly off. I did not know until Mr. O'Brien's death that they were so poorly off.
296. Had the selection been lying alongside the father's land, is there not provision in the Act of 1889 under which she might have been spared the necessity of residing on the land away from her parents? Yes, if it adjoined.
297. Had there been any Crown lands adjoining her father's selection available for selection for a great many years? No, none. There was a reserve, but he lost it at the ballot. There was no Crown lands near.
298. And none at the time she took up the selection? No, none.
299. The probability is that she would have selected alongside her father's selection had she been able to do so? Yes.
300. And then, under the law, she need not have resided on the selection? Not under the Act of 1889.
301. *Mr. Brunker.*] Can you say from what you know that although this selection was separate from the home of the O'Briens it really formed part of the home of the family? Yes.
302. *Mr. Gormly.*] I suppose that the lessee of Narrow Plains took the petition round out of sympathy for the family? Yes.
303. Not from any interest that he had in the selection? No.
304. *Mr. Brunker.*] When I asked if the selection was part of the home of the family, I meant to ask if any other person had any interest in it? No one else had any interest in it whatever.
305. *Chairman.*] Have you anything else that you would like to tell the Committee affecting this selection? No. I should like you to compare the evidence of the two witnesses with the evidence given before the Land Board.
306. *Mr. Brunker.*] There are no conflicting interests? No. It is simply a matter between the Crown and Miss O'Brien.

Edward Beazley called in, sworn, and examined:—

E. Beazley. 1 Mar., 1892.

307. *Chairman.*] What are you? A cab-driver at Albury.
308. Were you at one time coachman for Mr. M'Phillamy? I was for seven years.
309. Did you ever go with him to the selection of Anne Nash O'Brien? Yes, seven times.
310. Did you see the selector there? I saw her on one occasion. One out of the seven.
311. Who was with her at that time? She and her brother passed us on the road as we were going to the selection.
312. And you followed them to the selection? Yes.
313. Was there any conversation between M'Phillamy and the boy and girl? Not till they got to the selection.
314. Then what occurred? Mr. M'Phillamy went inside.
315. Did he say anything to the selector? I do not know. I was holding the horse outside.
316. Any conversation that took place was not in your hearing? No.
317. Did you remain long on the selection? I suppose we remained nearly half an hour.

E. Beazley. 1 Mar., 1892.

318. Did they make you a cup or tea? No.
319. Were there any cooking-utensils in the hut? Yes; I saw them on the second visit. When we made the first visit I never left the buggy.
320. The second visit was when you were returning? I think it was.
321. Did you see anybody at the selection then? No.
322. It was then that you saw the cooking utensils and other necessary articles at the house? Yes.
323. Were there beds there? Yes, there was a double bed in the bedroom.
324. Was there anything of the kind in the kitchen? There was a sofa in the front room.
325. Did you hear anything about who slept in the back place? No.
326. Did you think anybody slept there? It did not seem as if it had been occupied.
327. When you left the hut after your first visit, did you leave the selector and her brother there? Yes.
328. When you went there twelve days afterwards they were not there? They were not.
329. Had they been sleeping there at any time when you saw them on the first occasion? I do not think so.
330. On what occasion when you passed, except the first, did you see the girl residing there? I never did.
331. Where did you understand she was living? At Victoria Park.
332. Was that where her father lived? Yes.
333. Was the selector a young girl? Yes, 18 or 19 years of age.
334. Do you know whether the selection is part of the family property—are they all interested in it? I could not say.
335. Did you not hear that they were? No.
336. When the selector stayed at the selection, did she stay by herself, or were her brothers or sisters with her? I could not say.
337. Do you know anything else about this matter? Nothing more.
338. You passed the place in company with Mr. M'Phillamy seven times, and on one of those seven occasions the selector was living on the land? On six occasions she was not there.
339. Did you see any ashes in the yard? None at all on any of my visits.
340. I suppose that if Mr. M'Phillamy said that there were ashes there there would be ashes there? Yes.
341. *Mr. Brunker.*] Did you ever have a conservation with Mr. O'Brien about this selection? Yes.
342. What was it? He wanted me to go against Mr. M'Phillamy.
343. What do you mean by that? I mean his saying that we had been at the selection often and what we saw. He wanted me to say that every time Mr. M'Phillamy visited the selection we saw his daughter there.
344. How did he put it to you—what did he say? I forget now how he put it to me.
345. *Chairman.*] Give us his words as near as you can recollect? I do not recollect.
346. *Mr. Brunker.*] You drove him to the train? Yes.
347. And you had a conversation with him? Yes.
348. You said at one time that he cornered you off Yes.
349. What did Mr. O'Brien say to you? He told me I could get him out of this scrape, but I said I did not know how I could get him out of it.
350. Did he suggest any way of getting out of it? No.
351. Did he say anything about paying you anything? He said he would make it worth my while if I could do him any good in the matter. I told him that I really could not do anything at all in the matter.
352. *Mr. Gormly.*] There was no court of inquiry about that time, was there? No. Mr. O'Brien was coming to Sydney.
353. *Chairman.*] Did he ever ask you to tell a lie about the matter? Not to my recollection.
354. He did not say he would give you money if you would tell a lie to get him out of it? He said he would make it worth my while if I would try to do anything in his favour. He did not say anything about money.
355. If you could do anything to help him out of it? Yes.
356. *Mr. McFarlane.*] What did you understand from that? I do not know.
357. Surely you would take some meaning out of it? No, I could not.
358. *Mr. Gormly.*] There was no court of inquiry that he wished you to go before and make a false statement? No.
359. You say in your declaration: "On Sunday, 12th April, 1891, John O'Brien called at the 'Albury Hotel,' where I stay, and asked for me. I was out, and he waited with some other man till I returned. He then accosted me, saying, 'You are just the man I want.' He then commenced talking about his daughter's selection. He said he wanted me to help him, and he would pay me well. He said, 'You know what I want. The case is coming before a Committee of the House, and you are the man that can pull me through.' I tried to shake him off, but he persisted in his endeavour to get me to say something. He then commenced to bounce me, and said he would have me as a witness, and would make me speak the truth."—Is that true? Yes, that is true.
360. *Chairman.*] Is Mr. O'Brien still living? No; I have heard that he is dead.
361. Has he died lately? I could not say.
362. Do you know anything of the the circumstances of the family? No; I have not been down there since I left the service of Mr. M'Phillamy three years ago.
363. *Mr. Brunker.*] I suppose it is possible that there may have been ashes about the house without you seeing them? There might be.
364. They could have been there in a small quantity without you seeing them? They would have to be a good way off. I walked round the house.
365. I suppose you walked round with Mr. M'Phillamy? I did.
366. *Chairman.*] Do you know whether this was a family selection? I could not say.
367. *Mr. Brunker.*] Having had some experience in travelling with Mr. M'Phillamy, do you think that the residence on the selection was continuous? I do not think so.
368. *Chairman.*] Your main duty was to attend to the horses? Yes.
369. A heap of ashes might have been there and you might not have seen them? There might have been some, but I did not see them.

CONDITIONAL PURCHASE MADE BY ANNE NASH O'BRIEN, AT COROWA.

APPENDIX.

[*To Evidence of Alfred Salwey, 22 February*, 1892.]

A

Enclosure C.S. 90, 1,611 Departmental; Land Board District No. 9,890, 23 Dec., 1889, Head Office, Wagga Wagga.

John Sydney M'Phillamy, Inspector of Conditional Purchases, sworn, saith:—On 7th October, 1877, I visited Anne Nash O'Brien's conditional purchase, 85-14 of 715½ acres, portions 102, 103, 56, and 60, parish Narrow Plains, County Denison, confirmed 4th November, 1886; I was on the road leading from Bull Plain to Momolong; I met the selector, with her brother, riding towards the selection; I drove to the residence on the selection, and found the selector and her brother there; on the previous day, the 6th of October, 1887, I was inspecting selector's uncle's selection or lease, adjoining her father's selection, and met one of her brothers; I visited the hut, which contains two rooms, and was furnished in bush style; on 14th May, 1888, I again visited the selection; no person was residing there; the entrance-gate to the selection from the main Jerilderie road had a chain and lock to it; there was no defined track from the gate to the house; the house was a weatherboard and iron building, 21 x 12 feet, containing two rooms; the chimney was made of weatherboards, and soldered up inside; the door of the house was locked with chain and padlock; these were in a rusty state; there were two glass windows to the house; the bed-room contained a double bedstead, bedding, washstand fixture in the corner of the room, and shelf-table a fixture in the corner; the bed did not appear to have been disturbed; there was an old skirt and jacket hanging up; towel, tin dish, soap and brush dish empty; the table had on it an old brush and comb, part of a looking-glass—the glass, not the frame; one pane of the glass looking into the bed-room was out; the other room of the hut contained table, two chairs, bunk bed, food-bag, two cups and saucers, three plates, a candlestick, and two tin billies; there were signs of fire in the fireplace; I could see no food in the house; outside and around the house there were the chips from the material used in the building lying; a kerosene-tin, used as a bucket, with water in, evidently filled from the drip from the roof; there was also a ladder, tin can, and fruit and fish tins, empty, outside; there was no tank at the house; the house was fenced round into a small paddock about 22 panels square; this paddock was entered by slip-rails, and showed no signs of traffic; grass was growing up pretty well outside the place; there was no ash-heap or wood-heap, no fowls or other domestic animals about the place; on 26th May, 1888, I again visited the selection; the house appeared then to be in exactly the same state as on my previous visit, on 14th May, 1888; on 21st July, 1888, I again visited the selection; the slip-panels at the house paddock were in the same state as on my previous visits, and no visible signs of traffic through them; outside the building everything appeared to be in the same state; the door of the dwelling was locked, and no person was residing there; the bed-room appeared to be in about the same state as on my last visit except that it was in a very dusty and untidy state, the mattresses had been attacked by mice, and the straw was strewn about on the floor; in the other room the only difference I found was another bag hanging in it, and one of the billies was on the wire at the fireplace; there was no ash-heap or wood-heap outside; on the 26th October, 1888, I again visited the conditional purchase; the front entrance-gate to the selection showed signs of one buggy-track to and from, also the slip-panel of house paddock; there was no beaten track from this gate to the dwelling; I noticed the kerosene-tin bucket had been removed since my last visit, on 21st July, 1888, but recently some of the chips in front of the house appeared to have been used for firewood; there were two straw bottle letters, a ladder, and some timber also outside; the house was locked up, and no person was residing there; the bed in the bed-room had been used and not made up; this was the only alteration I noticed in the room since my previous visit; in the other room I noticed a frying-pan and kettle; these were not there on my previous visit; the fireplace showed signs of a recent fire having been there; grass was growing up and around the place; there was no ash-heap outside; on 15th January, 1889, I again visited the conditional purchase; the front gate to it was locked; there were tracks of a buggy to and from; the slip-panels at the house paddock also showed were a buggy had been through; everything outside the house was in the same state as on my previous visit; the door of the house was locked, and no person was residing there; the only difference since my previous visit in the bed-room was that the bed had been made up; the other room appeared to be in the same state as when I last saw it; on 11th March, 1889, I again visited the conditional purchase; the track through the main entrance showed no sign of recent traffic, nor did the slip-panels at the house paddock; the house was locked, and no person was residing there; the only difference I noticed since my last visit in the bed-room was that there were candles there and a bottle labelled limejuice, and in the other room a new bucket; there was no ash-heap outside; on 18th September, 1889, I again visited the conditional purchase; the entrance-gate was locked, and there was no sign of traffic through; the slip-panels were in the same state; outside the house everything appeared to be in the same state, with the exception that there appeared to be a small ash-heap, which had evidently not been there very long, as the grass and thistles which it covered were springing up through it; the house was locked, and no person was residing there; the bed-room appeared to be in the same state; in the other room I noticed a bag containing flour hanging up; there was also a piece of very dry bacon and a leg of mutton bone hanging up; there were no outbuildings of any kind whatever; there was, about eight chains away from the house, on the A.C.P., a tank, but there was no beaten track from the house to that tank; the house is fully 1½ to 2 miles from any other habitation; the father of selector lives about 14 or 15 miles away from the selection under inquiry; selector has no brother or other members of the family living in the locality.

By Mr. Bamber: It might take me about half an hour each time to inspect the place; on all the occasions I inspected the selection it was between 9 o'clock in the morning and 5 o'clock in the evening; if I were starting from Momolong in the morning it would be about 9 o'clock or thereabouts; if I started for Momolong in the afternoon it would be in the evening that I visited there; on each of my visits I found the house locked; I could see through the window, one of the panes of which was out; the table was pretty well in the centre of the room; I noticed a sofa under the window; this is what I called a bunk; there might have been a few articles there that I could not see through the window; on one occasion I saw a bag containing what I believed to be flour; there was white stuff outside the bag which looked like flour; I noticed ashes in the fireplace, but not large quantities; it was only on my last visit I discovered the ash-heap; it could not have been there long; I knocked some of the ashes over, and the grass underneath was not rotten; I know that it had not been there long; I looked all round the place and did not notice any other ash-heaps; people do not usually carry the ashes a distance away from the house; I saw empty fruit and fish tins each time I was there; there was about half a dozen on my visit on 14th May, 1888; I did not notice any increase in the numbers of the empty tins on my other visits; I know that the selector is a spinster; the place did not appear to have been habitually used by any person; it may have been occupied at times; I looked carefully, and on two occasions I only noticed buggy-tracks; I did not notice the tracks of horses; the track appeared to be that of a buggy, and not a dray-wheel; it was a small wheel track; I noticed a frying-pan and kettle on one occasion; on the other occasions I visited there they were not visible to me; on the occasion of my visit, on 26th October, 1888, I noticed that the kerosene-tin bucket had been recently removed; I could tell from the traces where it stood that it had been only recently removed; there was no beaten track to the dwelling; it is a very rare occasion when there is not a beaten track from the main road to a selector's house; it is not absolutely necessary that there should be a beaten track to the house to prove that a person is residing; the mattress on my visit on 21st July, 1888, had been attacked by mice; on my next visit the place had been cleared up; at that particular time there was a great mice plague throughout the district; I noticed that the bed was very dusty and the room untidy on one of my visits; the floor was boarded; it looked very dusty; I did not turn the bed down; I was only looking through the window; on 26th May, 1888, as far as I could see everything in and around about the place appeared to be in the same state as on my previous visit; I could not see any difference in the place; I did not notice a kettle on that occasion; I never saw any fowls, cats, or other domestic animals about the place; I always look upon any of these animals about a place as a sign of residence; the kerosene-

tin

tin bucket appeared to have caught the water dripping from the roof; on 14th May, 1888, the bed looked as if it had not been disturbed; it looked very solid; I cannot swear that it had not been made that day; the padlock and chains did not appear to have been constantly used; on 7th October, 1887, I found selector on her selection; this was the only occasion of all my visits I found her there.

Taken and sworn before us, at Mulwala, the 19th December, 1889,— J. S. M'PHILLAMY.

F. W. WATT, J.P., Chairman.
J. H. WOOD, J.P., Member Local Land Board.

John O'Brien, farmer, of Victoria Park, Bull Plain, sworn, saith:—I am the father of Anne Nash O'Brien, the selector of the land under inquiry; I know the selection; I know when it was confirmed; up to the date of confirmation she was residing occasionally with me; she was residing on the land prior to its being confirmed; since the date of confirmation occasionally resided with me; on one occasion, in consequence of one of her brothers having lost one of his arms, and when her mother was away, she kept house for me for about one month; this was, I think, early in 1887; I swear that she has made the selection her continuous and bona-fide residence since the date of confirmation, and up to the present she has no other home; she has left my home to go to her selection; I base my opinion of that the selection is her bona-fide residence in view of my living a distance of 12 miles away; by the fact that I am her father, I supply her with rations; I have visited her from two to four days a week; this would not be for every week; some member of the family has always been there with her in my absence; on some of my visits I have found her absent from the selection visiting some of her neighbours; I know that she slept in the house of a night; she frequently visits her mother, and there being a large family she frequently takes sewing for her mother to the selection; I have supplied her with rations and everything necessary for her living there; I have also supplied her with books; there are several ash-heaps about the place; my daughter has a buggy and pair of ponies, which are kept wherever she is, principally at her own place, and the places where she goes visiting; she has been a good deal away in Melbourne visiting; when she goes away on long visits she leaves the ponies at my place; she has also a riding-horse and saddle of her own; there is a fairly-defined track between her selection and my place; in wet weather different tracks have to be taken; my place is about 12 miles away from my daughter's selection; it takes about 1½ hours to ride or drive between my place and her selection; this last winter it used to take about three hours to go between the places; she used to visit my place once a week to get rations and change of clothing, sewing, and to see her mother; there is a double iron bedstead value about £8 in her house on the selection, with curtains and hangings, two chairs, sofa, ordinary dining-table, cooking-utensils, and a fair library of books.

By Mr. M'Phillamy: I have a comfortable homestead at Victoria Park; it is up to my requirements; up to the time of my daughter's application, my daughter resided with me at my homestead; she was over 16 years of age at the time she made application; she had finished her education at the time of confirmation of her application; I have not kept a governess or tutor since the date of confirmation of her application; she used to visit my homestead about once a week since date of confirmation; on those occasions she would stay at my place sometimes one day and sometimes two days; within the last two years she has not visited my place so frequently and stayed; on an average from the date of confirmation, and up to the present time, she has visited my place once a week; frequently she goes away from my place the same day; she went to Melbourne with me on one occasion and stayed there about a month or six weeks; I visited her selection on an average once a week since date of confirmation, and I have frequently stayed a week with her on the selection; I have stayed with her on the selection altogether six or nine months; a great portion of my time was lost in visiting her selection; during my absence at the selection I had to pay men to do work at my own place; while on the selection I was repairing fences and doing odd jobs there; selector's brothers and sisters have been in the habit of living on the selection with her, and occasionally her mother and aunt; my daughter has a buggy and pair of ponies, and wherever she went she took the buggy and ponies with her; I have two buggies; I sometimes use the buggy myself; I have six or eight pairs of ponies like the two my daughter uses; her ponies are a cream and a bay; she has had the buggy and ponies with her on the selection; she has a tarpaulin to cover over the buggy; I cannot say that she always kept the buggy and ponies on the selection with her, as she would sometimes be away visiting her neighbours about the locality and at Murray Hut; I have sometimes used her ponies when they have become too fresh for her to use; there is a yard around the house; my daughter or her sisters used to cook on the selection; when I was with her on the selection either her or myself used to do the cooking; all her supplies were obtained from my place at Victoria Park; the house on the selection has an iron roof; it is not ceiled; it being well covered no ceiling is required; the bedstead was a full-tester, and had the ordinary bed-hangings; it was a two-roomed house, with no verandah, and no out-buildings of any kind; there was water kept inside the hut in a bucket; there was also water kept outside in the kerosene-tin bucket; the water inside was kept in an ordinary iron bucket; there have been several buckets there; it is not usual to remove any of the utensils from there to my place; no milking-cow was kept at the selection; my daughter does not drink tea; she only drinks water; she is not a delicate girl; potatoes and other articles were kept under the sofa that was under the window, and which you could not see; the window of the bed-room had a pane of glass broken out—this has not been repaired; I broke the pane for your special use; this glass remained out during the winter months; there was a pane of glass in that opening once; my daughter's clothes were not all kept at the house on the selection—some of her clothes were kept in boxes under the bed, and some in boxes under the sofa, and some under the mattresses; the sofa is an ordinary bush-sofa; I made it myself; I made use of it to sleep on when I was there; the boys also made use of it to sleep on when they were there; there was chaff kept on the selection sometimes; it was kept sometimes in the yard over near the tank, and at the time the mice were so bad it was hung in trees; I saw several ash-heaps about the place; I cleared the fireplace out at times myself; in the summer-time I cautioned them not to throw out any hot ashes.

By the Board: John, who is 16 years of age, stayed with my daughter on the selection off and on up to the time he went to Melbourne to school; George, aged 10, also stayed off and on; these are the only two brothers who stayed with her; her sisters, Margaret at the present time aged 18, and Harriett aged 12, stayed with her off and on also; when I stayed on the selection with my daughter I slept on the sofa in the front room; I sometimes drove over and sometimes rode to the selection from my place; the iron bedstead was in the house before the date of confirmation, and other things were put there as they were required, but everything necessary was there from the start; the place was stocked with sheep, and if a thousand sheep crossed a buggy-track there would be no sign of it five minutes afterwards, as the wind sweeps the ground on the plain as clean as possible; this would account for there being only the trace of buggy-wheels, as found by Mr. Inspector M'Phillamy on his visits; I have frequently at harvest-times rode over to the selection of a night after my day's work was done to see that the children were all right—and that they were—and then return to my own place in the morning.

J. O'BRIEN.

Sworn by the deponent, J. O'Brien, this 19th day of December, 1889, before us, at Mulwala,—

J. W. WATT, J.P., Chairman,
J. H. WOOD, J.P., Member Local Land Board.

Anne Nash O'Brien, selector, of Jubilee Downs, sworn, saith:—I remember about the time of confirmation of my conditional purchase 85–14, the subject of inquiry; I went to reside on the land before it was confirmed, and have been residing there ever since; I have never been residing away from the selection for any length of time since date of confirmation; I was once away on a visit to Melbourne for about five weeks in November, 1887; I was away about a month when my little brother was hurt; I was at my father's place; this was before my trip to Melbourne; these are the two longest times I have been away; I used to go to my father's place about once a week; I have no fixed day of the week for going to my father's place; I went there for rations and for anything else I wanted; my father, two brothers, and two sisters have been residing on the selection with me on and off at different times, my brothers were named John and George, and sisters Margaret and Harriett; I cooked my meals on the selection; I have a pet iguana about the place; I have a cat, but no dog; I have a buggy and ponies and saddle-horse; in going about I ride a good deal; in going to my father's place, riding or driving, I usually go through the front gate; no other road can be taken but through that gate; the buggy is kept in the shade of trees, but not always in the one place, covered with a tarpaulin; it has never been kept a hundred yards from the house; different tracks are used in going from the gate to the house; there is a well-defined track there now; previously we did not always use the one track; the ground being swampy we always took the best track; I kept my clothes some under the table and some under the beds; the place was dusty, and good clothes would spoil being hung up; I kept my best clothes in the boxes under the table and under the bed; I only saw Mr. Inspector M'Phillamy once on the selection; at other times when he visited my land

land I might have been out riding; I did not always stay on the selection through the day; I had no usual time for getting my breakfast; sometimes I had my breakfast at 8 o'clock and sometimes at 9 o'clock; I am frequently riding in the paddocks and visiting; my nearest neighbours are Mr. O'Keeffe, about 2 miles away, and Mr. Cahill, about 1½ mile away; I often go to see Mrs. O'Keeffe; I also go to Mr. Sandraal's place about 5 miles away; I only used to stay a few hours at any of these places; when Mr. M'Phillamy called I was probably riding about the paddocks or visiting the neighbours I have named; I have a fenced-in enclosure; it is around the house; it is wire; there is a tank close by; I have a fire in the house every day; I throw the ashes out; for a long time the ashes were kept in the fire-place; I had no way of taking them out; there was a large pile of them; they were then taken out and thrown about; the ashes are always strewn about outside; I have visitors frequently; they ride and drive; I do not think, on an average, there would be one buggy there a week, but anyone coming there could find the track leading from the gate to the house; my mother used to send me rations from her place; sometimes I went for them myself, and sometimes they were brought to me; in the bed-room there is a four-post bedstead, a washstand and table in the corner, a looking-glass without the frame on the table, soap-dishes and basin, chair, and toilet soap; in the other room there is a table, in the centre of the room two chairs, sofa, tub, and bucket, two saucepans, fryingpan, a cupboard, and safe hung up; all these things have been in the house over a year; most of them have been there from the start; it took me until about a year after confirmation to furnish the house with the articles I have mentioned; I used the kerosene-tin for a bucket before I got a proper bucket; my residence on the selection has been continuous and bona-fide from the first.

By Mr. M'Phillamy: The front gate of the selection was always locked; I kept the key of the lock myself; persons coming there would have to find me before they could get through; I kept the key with me mostly; my father stayed a few days with me on the selection now and again since date of confirmation; I cannot say how long he stayed with me altogether since that date; he did not come and stay weekly, but he used to visit me frequently; my sister Margaret stayed with me for most of the time; my aunt has stayed with me; it is sometime ago; she used to visit me; she was staying with my father; she only visited me once and stayed all night; my brother John, before he went to school, lived with me most of the time; he went to school about a year and nine months ago to a boarding-school; my brother George also stayed with me at times; my father's stock ran on the land; the safe, hanging up, is a three-bushel bag, with a piece of a board in the bottom; the new bucket, mentioned by you, I have had a good while; up to the time I got that bucket I used the kerosene-tin for a bucket; I used to catch my ponies in the corner of the paddock; only the paddock around the house has been used as a yard; the house is a comfortable one; I employ my time in darning and sewing (I do all the sewing for my mother) and reading; I cook for myself; I was not taking lessons from a governess in my father's employ since date of confirmation; when absent in Melbourne, and during the time I was keeping house for my father, when my brother was hurt, none of the things were removed from the house on the selection; the house was simply locked up; the only reason I can give for there being so little signs of residence is that there were only two of us at a time there, and we did not go much outside the place; I did not keep all my things at the selection; I used to visit my father's place once a week when I went about rations or to go to Corowa; I would go from my father's place to Corowa, and return from Corowa to his place, and then on to my selection; I used to stay a night at my father's place; when visiting Mrs. O'Keeffe, Mr. Cahill, Mr. Sandraal, at Momolong, my mother, father, brothers, and sisters have gone with me at different times; my mother only went two or three times with me; I was not in the habit of only visiting these places once a month; I cannot say how long my father has stayed with me on the selection during the last two or three years, but he was often with me; I used to keep the harness in the house, as also the saddle; I used to get my mails once a week from Bull Plain.

By the Board: Whenever I went to my father's place my sisters used to go with me; I sometimes rode and sometimes drove; when I rode my sister used also to ride with me; when going from my father's place, and riding to the selection, we would ride taking the saddles from his place, and keep them at the selection until we rode in again; I was 16 years of age when I took up the selection; my sister Margaret is 18 years of age at the present time, and my sister Harriett 13 years; we were never afraid of living there by ourselves.

Taken and sworn before us, at Mulwala, this 19th day of December, 1889,— ANNE N. O'BRIEN.

F. W. WATT, J.P., Chairman.
J. H. WOOD, J.P., Member Local Land Board.

John Joseph Curley, Roman Catholic clergyman, of Cootamundra, sworn, saith:—I was at one time located in the Corowa district; part of my duties consisted of visiting different selectors through the district; I knew Miss Anne Nash O'Brien; I remember calling at her house in December, 1888; this was the only occasion on which I was there; it was on the selection under inquiry; I saw Miss O'Brien there; I had been holding service at Miss O'Brien's father's place, and at its termination, having to go on to Myall Plain to hold service there, Miss O'Brien and her brothers accompanied me and called at the selection.

Taken and sworn before us, at Mulwala, this 19th December, 1889, JOHN J. CURLEY.

F. W. WATT, J.P., Chairman.
J. H. WOOD, J.P., Member Local Land Board.

Margaret O'Brien, sworn, saith:—I am a sister of Anne Nash O'Brien; I live at Jubilee Downs with her; I have been living there about twelve months; during that time I have lived continuously on the land with my sister; we have visited my father's place occasionally, sometimes once a week, sometimes we would not go there for a month at a time; we have visited our neighbours Mr. O'Keeffe, Mr. Sandraal, Mr. Cahill, and a good many others whose names I cannot remember at present; we employ our time in going out riding, reading, and sewing; we would always be back before 5 o'clock; I do not remember ever sleeping at any other place but the selection and at our father's place; I think we slept one night at Mr. Sandraal's place.

By Mr. M'Phillamy: I have a selection of my own on Bull Plain; I have resided with my sister during the last twelve months and up to date; I cannot remember how long my father stayed with us, but he very often visited us; he used to come and go away again; he had stock on the land; we used to catch the horses by running them into a corner on foot; up to within the last two or three months a great part of the selection was under water; we used to take off our boots and socks and go through it to catch the horses; the main entrance-gate was under water; we visited a good deal during the wet season; my sister always taught me at the selection while I was there; my father had no governess then; during the time we only visited my father's place once a month; we always had sufficient supplies there; we had flour and mutton; it was salted and brought up to us; my clothes were kept at the selection; they were kept under the matresses and in the boxes under the table and bed; this was during the mice plague; some of our clothes were destroyed; I have not been taking music lessons off anybody during the last twelve months.

By the Board: When we went to my father's place we sometimes rode and drove, we had two side-saddles; they were always kept under the sofa in the house; they were there from the first; I rode the buggy ponies; they would both carry a lady.

Sworn at Mulwala, this 19th day of December, 1889,— MARGARET O'BRIEN.

F. W. WATT, J.P., Chairman.
J. H. WOOD, J.P., Member Local Land Board.

John O'Brien, junior, sworn, saith:—I live with my father at Victoria Park; I have been a year and nine months at a boarding-school in Melbourne; before I went to school I was living at Victoria Park; my sister, Anne Nash O'Brien, was then living at Jubilee Downs; I was living with her there; I was living with her nearly the whole of 1887 and part of 1888; my brother George would come there whenever I went to my father's place; if he did not come one of my sisters would come; I was living with my sister nearly fifteen months; during that time my sister Anne was constantly residing on her selection; I used mostly drive backwards and forwards to my father's place; I used sometimes drive; we used to get rations from my father's place.

By Mr. M'Phillamy: I am 16 years of age; during the fifteen months I lived with my sister I was not attending any school; I used to take my books out to my sister's place; my father had not a governess at that time; I can swear that my father had

had not a governess during that fifteen months; a young lady who boards with my father teaches some of my brothers and sisters, together with other people's children, in a house belonging to my father, about ½ mile away from my father's place; whenever I was away from the selection during the fifteen months my father would come and stay with my sister; he would stay there sometimes a week; I was staying with my sister on the selection on an average four days out of the week during the fifteen months; when I was not there at other times my brothers George, aged 10, and William, aged 8 at the present time, and my sisters used to come and stay there.

By the Board: There are two rooms in the house, one of which I call the kitchen; my brothers and myself slept on a stretcher in the kitchen, and my sisters in the other room called a bedroom.

Sworn at Mulwala, this 19th day of December, 1889, before us,— J. C. O'BRIEN.

F. W. WATT, J.P., Chairman.
J. H. WOOD, J.P., Member Local Land Board.

Harriett O'Brien, sworn, saith:—I am 13 years of age; I live at Victoria Park with my father; I know my sister Anne's selection; I have been there; I go there to keep her company; I cannot tell how often I have been there.

Taken and sworn before us, at Mulwala, this 19th day of December, 1889,— H. O'BRIEN.

F. W. WATT, J.P., Chairman.
J. H. WOOD, J.P., Member Local Land Board.

Marie Sandraal, sworn, saith:—I live with my father at Fontainbleau; I know Miss Anne Nash O'Brien; I have been to her selection; it is close to our place; I have been there once; Miss O'Brien was there then; I went with her to the selection from my place; she had not been staying with me; she had come to my place that day, and we both went to the selection: Margaret O'Brien was also with us; no one was at the house on the selection when we arrived there.

Taken and sworn before us, at Mulwala, this 19th day of December, 1889,— MARIE SANDRAAL.

F. W. WATT, J.P., Chairman.
J. H. WOOD, J.P., Member Local Land Board.

Terence O'Shaughnessy, Catholic clergyman, residing at Corowa, sworn, saith:—I know Miss Anne Nash O'Brien; I have been to her selection; when returning from holding Mass at Myall Plains I got lost, and meeting Mr. John O'Brien he directed me to the right road, and in passing I called at the selection of Miss O'Brien and saw her there.

By the Board: When I met Mr. O'Brien Miss O'Brien was not with him; she was at the house on the selection when I called; I was only at the selection on one occasion; I never had occasion to pass by there but on this occasion; the nearest I have been to the selection outside this was about a mile distant; when I called at the selection Miss O'Brien was there with her father only; it came on to rain; Mr. O'Brien went on by himself, and Miss O'Brien came into my hooded buggy, and we drove to Mr. O'Brien's homestead, where I held Mass; I believe that no one but Mr. O'Brien was at the selection with Miss O'Brien.

Taken and sworn before us, at Mulwala, this 19th day of December, 1889,— TERENCE O'SHAUGHNESSY.

F. W. WATT, J.P., Chairman.
J. H. WOOD, J.P., Member Local Land Board.

Prosper Sandraal, farmer, of Narrow Plains, sworn, saith:—I know Anne Nash O'Brien's selection; I have been there; I saw her there; she was residing; Miss O'Brien has often visited me.

By the Board: I was at the selection once; I was there on 2nd September, 1888; this was not at the time my daughter visited there; at the time I called I saw Miss O'Brien, Mr. O'Brien, and a younger daughter; the reason why I went to the selection was that two or three days before the second eldest daughter of Mr. O'Brien had sprained her wrist, and Mrs. Sandraal asked me to go over and see how she was.

Sworn at Mulwala, this 19th day of December, 1889, before us,— P. SANDRAAL.

F. W. WATT, J.P., Chairman.
J. H. WOOD, J.P., Member Local Land Board.

Patrick O'Keeffe, farmer, Narrow Plains, sworn, saith:—I know Miss Anne Nash O'Brien's selection; I have visited it; I found Miss O'Brien there on several occasions; I often pass there; sometimes I might pass there and she would not be there; I saw Miss O'Brien and Mr. O'Brien there; I have seen Miss O'Brien's sisters there; Miss O'Brien has often called at my place when I have been at home; I cannot fix the number of times I have been to Miss O'Brien's selection; I have been going backwards and forwards past there for the last three years.

Mr. M'Phillamy: It is my nearest point to the cleared road to go close to Miss O'Brien's selection; I called at her selection about a fortnight ago about a dog, and found her and her sister Margaret there; I have been in the habit of going backwards and forwards past the selection; it would be about 10 chains away from the house; during the three years I have been about half a dozen times to the selection; there is only one entrance to the selection; I never went through that entrance with a vehicle.

Taken and sworn before us, at Mulwala, this 19th day of December, 1889,— P. O'KEEFE.

F. W. WATT, J.P., Chairman.
J. H. WOOD, J.P., Member Local Land Board.

William Cahill, farmer, of Narrow Plains, sworn, saith:—I know Miss Anne Nash O'Brien's selection; I have visited there, and saw Miss O'Brien there; I have been there a good many times extending over a period of nearly three years.

Taken and sworn before us, at Mulwala, this 19th day of December, 1889,— WM. CAHILL.

F. W. WATT, J.P., Chairman.
J. H. WOOD, J.P., Member Local Land Board.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CROWN LANDS.

(CORRESPONDENCE RELATING TO THE SALE OF A RESERVE IN THE PARISH OF LITTLE BILLABONG, COUNTY OF GOULBURN, TO MESSRS. ROSS BROTHERS.

Ordered by the Legislative Assembly to be printed, 24 *March*, 1892.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 13th January, 1892, That there be laid upon the Table of this House,—

"Copies of all papers and correspondence in reference to the sale of a "reserve of 628 acres in the parish of Little Billabong, county of Goulburn, "to Messrs. Ross Brothers, proprietors of an adjoining station."

(Mr. O'Sullivan.)

SCHEDULE

869—A

[870 copies—Approximate Cost of Printing (labour and material), £14 16s. 0d.]

CROWN LANDS.

No. 1.

W. J. Lyne, Esq., M.P., to The Under Secretary for Lands.

Dear Sir, 7, Norwich Chambers, 28 September, 1889.

The enclosed letter is in reference to a reserve upon which the homestead of Hillside stands. If any way exists by which the owners can get the homestead I certainly think they should do so.

Yours, &c,
WILLIAM JOHN LYNE.

The reserve referred to is reserve 493, notified 3rd August, 1866, situated in the parish of Little Billabung, county of Goulburn, and forms part of the leasehold area of Hillside holding, No. 266 eastern. It is not a reserve from lease. I think it probable the District Surveyor at Wagga Wagga has already had a report on the reserve.—J.T.K., 16/10/89.

Mr. DeLow,—Will the District Surveyor please report.—R.H.D. (for the Under Secretary), 17/10/89. The District Surveyor at Wagga Wagga—R.H.D. (for the Under Secretary), B.C., Lands, 17/10/89–315. Surveyor Barlow has now been asked to inspect and report. May await his reply.—W.O., District Surveyor, 18/10/89.

[*Enclosure.*]

Sir, Kinross, Germanton, 25 September, 1889.

I beg to request that you would revoke reserve No. 493, notified 3rd August, 1866, and bring the same to public auction.

The homestead of my Hillside Station, No. 266, Eastern Division, is situated upon this reserve, and as the improvements consist of house, garden, dams, huts, yards, and the usual erections to work the station are of the value of considerably over £1 per acre for the whole reserve, I would respectfully request that you would add the value of improvements to upset price, in order that if any other person than myself should purchase that such value should be paid to me.

The reserve in question is upon leasehold area, but I would, as lessee, give my consent for it to be sold by auction before expiry of lease, 11th July, 1890, in order that it would not be open to conditional purchase. If it is not submitted to public auction till after expiry of lease, I beg to suggest that the date of sale may be so arranged with the revocation that no Thursday would intervene otherwise some person would probably select the homestead, or else leave out the improvements, but select so as to ruin the station.

I am, &c.,
JANET ROSS.

The Honorable the Minister for Lands.

No. 2.

Office Memorandum.

District Surveyor's Office, Wagga Wagga.

Mr. Surveyor Barlow is requested at his early convenience to inspect and report as to whether there is any necessity for retaining reserve No. 493, notified 3rd August, 1886, situated in the parish of Little Billabung, county of Goulburn, or whether the whole or any part of it may be revoked without injury to the public estate.

In the event of revocation being recommended, he is requested to report fully as to the nature, position, date of erection and ownership of the improvements existing on the land, an application having been made by the lessee Janet Ross for the submission of the land to auction.

This report is obtained notwithstanding the fact that the land is situated on the leasehold area.

The value of the land, and the cost of inspection and report should also be stated.

The improvements above referred to comprise the Hillside Home Station, and it is desirable that a report be obtained as early as possible.

Mr. Barlow's duties may, however, prevent him attending to this matter soon, and, if so, he will be good enough to forward a memo., in order that I may avail myself of any other opportunity for obtaining a report that might occur.

WILLIAM ORR,
District Surveyor,
18th October, 1889.

Mr. Surveyor Barlow.

Reported on by my letter, No. 90-3, of 9th January.—M. Barlow, Surveyor.

No. 3.

Mr. Surveyor Barlow to Mr. District-Surveyor Orr.

Sir, Albury, 9 January, 1890.

In accordance with your instructions, No. 89–126, of 18th October, requesting me to report as to any necessity for retaining reserve No. 493, parish of Little Billabung, county of Goulburn, I have the honor to transmit herewith a sketch, showing the position of improvements on the above reserve, and to state that the revocation of the whole or any part of this reserve will not be prejudicial to public interests, as it is not situated on any main track, and is not required for stock purposes.

Vide plan.

The reserve is situated within the leasehold area of the Hillside holding, No. 266, and includes the Hillside homestead.

The greater portion of the reserve consists of rough slate hills, timbered with stringy bark and stunted box, but there is some fairly good land immediately on either side of the creek, which runs through the reserve.

The

The western half of reserve is well improved, the greater portion of the improvements having been effected prior to July, 1876, but the eastern half of the reserve is not improved in any way, and is poor country.

The improvements on the land with their values are as follows :—

	£	s.	d.
Dwelling-house, slate and weatherboard, eight rooms, boarded, lined, and papered, galvanised-iron roof, four brick chimneys, verandah on two sides	300	0	0
Kitchen, slab roof, partly bark and partly iron, two brick chimneys, store and bedroom attached, stone cellar	100	0	0
Garden and orchard, trees in full bearing, also vines, 1 acre trenched ...	30	0	0
Paling fence	25	0	0
Slab stable, buggy shed, and hay yard	50	0	0
Pig-sty...	1	0	0
Horse yard, calf pen, and bale	10	0	0
Well, built up with stones; pump and tank	20	0	0
Iron piping laid under ground, conveying water from well to house ...	16	10	0
Old well near creek, slabbed...	5	0	0
Men's hut, slab and bark	8	0	0
Dam, 1,400 cubic yards, at 1s.	70	0	0
12 acres cleared, under cultivation, at £2 an acre	24	0	0
72 acres, partly cleared and burnt off, at 7s. per acre	25	4	0
125 acres, ringbarked and twice scrubbed, at 5s. per acre...	31	5	0
50 chains (about) old 6-wire split fence	19	0	0
NOTE.—The above improvements were all effected prior to July, 1876, but the dwelling-house and out buildings have been repaired from time to time.			
40 chains new 7-wire fence, erected 1878	22	10	0
	£757	9	0

These improvements are now the property of the lessee of the Hillside holding, Janet Ross.

I value the western half of reserve at £2 per acre, but the eastern half is poor stony stringy-bark country, not worth more than 25s. an acre.

I would therefore suggest that if it is intended that the lessee should be allowed to purchase the land containing the improvements, that the reserve be cancelled and subdivided by a line north from the north-eastern corner of portion 63, of 270 acres 2 roods, and that the western portion be submitted to auction with the value of improvements added, and that the eastern half be thrown open to selection at the expiration of the present lease.

The time occupied by me in dealing with this case was one day in field, 23rd November, 1889, and three-quarters of a day office work, 9th January, 1890.

I have, &c.,
MAURICE BARLOW.

Re proposed subdivision of reserve 493, parish of Little Billabung, county of Goulburn. This report indicates that the retention of reserve 493, in the parish of Little Billabung, county of Goulburn, is no longer necessary in the public interest. I therefore recommend its revocation after subdivision, with a view to the land being proclaimed a special area, and thrown open to alienation on the determination of the leasehold area of the Hillside holding, and if not selected within reasonable time that the land be submitted to auction, with the value of the improvements added for the protection of the owners. The eastern portion of the reserve is so inferior in quality that, if measured separately, it is not likely to be taken up, and for this reason I recommend that the land be subdivided by a line east and west, instead of north and south, and the 1-chain road should be reserved through both areas. I am of opinion that the land so subdivided is worth £1 13s. an acre.—WILLIAM ORR, District Surveyor, Wagga Wagga, 14/1/90. The Under Secretary for Lands.

Submitted the land be measured and made a special area at 35s. per acre.—R.H.D., 20/1/90. F.H.W. (for the Under Secretary), 20/1/90. Approved.—J.N.B., 23/1/90. District Surveyor, Wagga Wagga.—R. H. DELOW (for the Under Secretary), B.C., Lands, 25/1/90–35. For measurement, 28/1/90. Mr. Licensed-Surveyor Smith has now been instructed to measure; may await survey.—W.O., 6/2/90. The Chairman. Resubmit, April, 1890.—A.B.C., 7/2/90. District Surveyor, Wagga Wagga.—J.O'D. (for the Under Secretary), B.C., Lands, 6/5/90–232. As to whether survey has been carried out. Survey has not been carried out yet; see my memorandum of 2nd May, 1890, herewith.—W.O., District Surveyor, Wagga Wagga, 9/5/90. The Under Secretary for Lands.

No. 4.

Office Memorandum.

District Surveyor's Office, Wagga Wagga.

MR. Licensed Surveyor Smith is requested at his early convenience to subdivide reserve No. 493, in the parish of Little Billabung, county of Goulburn, into two blocks of about 320 acres each, in accordance with design shown in red on accompanying tracing. *Vide* plan

WILLIAM ORR,
District Surveyor,

No. 5.

Mr. District-Surveyor Orr to I. Smith, Esq.

2 May, 1890.

MR. LICENSED-SURVEYOR SMITH will be good enough to postpone the survey of the subdivision of reserve 493, parish of Little Billabung, county of Goulburn, dated 6th February, 1890, pending consideration of an amendment of design submitted to the Under Secretary for Lands this day.

WILLIAM ORR,
District Surveyor,

I shall postpone the survey accordingly.—IRWIN SMITH, Licensed Surveyor, 5/5/90.

No. 6.

Mr. District-Surveyor Orr to The Under Secretary for Lands.

Hillside Home Station, parish of Little Billabung, county of Goulburn.

2 May, 1890.

Vide plan. WITH reference to the design approved, enclosed, Mr. Alexander Ross informs me that the Minister has promised, in view of the fact that the home station was erected some twenty or thirty years ago, to offer the land on which the station stands at auction.

On examining the design it will be seen that I have divided the land in such a manner that all the improvements are not on one portion. My reason for doing so is set forth in my previous minute of the 14th January (Ms. 90-1,056) and need not be repeated herein.

The survey has not yet been carried out, and if it is desirable to include the whole of the improvements in one portion as previously designed by Surveyor Barlow (the road in the centre forming the division instead of the east and west line through the centre), I have the honor to request instructions to that effect.

If, however, there is no objection to offering the land at auction in two portions as designed by myself I think it would be desirable to make the survey in that form.

I wish to add that there is no written promise of the Minister's with the papers to offer the land at auction.

I have, &c.,
WILLIAM ORR,
District Surveyor.

Ask the District Surveyor to return the papers.—J.O'D., 12/5/90. District Surveyor asked, 16 May, 1890. Submitted. This case is now complete, and the papers do not disclose that the Minister has made any promise as regards auction sale.—J.O'D., 11/7/90.

No. 7.

Mr. A. Ross to The Secretary for Lands.

Sir, Kinross, Germanton, 18th July, 1890.

In reference to the erection of the improvements on reserve from sale 493, Hillside Run, Eastern Division, I beg to inform you that the said improvements were put on the land a long time previous to July, 1876. In part they have been on considerably over twenty years, and I would suggest that the land could be offered in one block, so as to save the cost of subdivision.

I have, &c.,
ALEX. ROSS.

On the 14th January last Mr. District-Surveyor Orr recommended that water reserve No. 493, county of Goulburn, be revoked after subdivision, with a view to special area if not selected within a reasonable time to be submitted to auction with the value of the improvements added, for the protection of the owners. Mr. Orr further pointed out that the eastern portion of the reserve is so inferior in quality, that if measured separately it is not likely to be taken up, and, for that reason, he recommended that the land be subdivided by a line east and west instead of north and south, and the 1-chain road reserved through both areas (90–1,056). It was thereupon decided that the land be measured and made a special area at 35s. per acre. Instructions for measurement were then issued, but the District Surveyor returned the papers with a report to the effect that Mr. Alexander Ross had informed him that the Minister promised, in view of the fact the home station was erected some twenty or thirty years ago, to offer the land on which the station stands at auction. Mr. Orr reports that the survey has not yet been carried out, and if it is considered desirable to include the whole of the improvements in one portion (the *Vide* plan. road in the centre forming the division instead of a line east and west through the centre, *vide* tracing) he requests instructions to that effect. The papers do not disclose that the Minister has made any promise as regards auction sale. Application is now made by Mr. Alexander Ross to have the land offered at auction in one block. He states that the improvements have been on the land more than twenty years. The local surveyor values the improvements at £757 9s., and states that (with the exception of wire fencing to the value of £22 10s. erected in 1878) they were effected prior to July, 1876 (90–1,056). The case is submitted, as the Minister may, perhaps, have made some verbal promise to Mr. Ross, but if not, it would appear advisable to adhere to the decision on 90–1,056.—J. O'D., 24/7/90.

Special.—R.H.D., 28/7/90. Special.—F.H.W. (*pro* Under Secretary), 28/7/90. The land may go to auction in one block at an upset price of 35s. per acre; the value of the improvements to be added for Ross's protection.—J.N.B., 23/9/90. The District Surveyor, Wagga Wagga, for survey.—J.O'D. (for the Under Secretary), B.C. Lands, 23/9/90-505.

No. 8.

No. 8.

Mr. District-Surveyor Orr to Mr. Licensed-Surveyor Smith.

Memorandum.

26 February, 1890.

HAVING regard to instructions No. 6, dated 6th March, 1890, to Mr. Smith, for subdivision of reserve No. 493, in the parish of Little Billabung, county of Goulburn, on which Mr. Smith was requested to delay action pending further instruction, Mr. Smith is now requested to measure the whole area in one block, taking care, however, to reserve the road north and south through the portion, as shown on the design forwarded with the instruction. *Vide* plan.

WILLIAM ORR,
District Surveyor.

No. 9.

Mr. Licensed-Surveyor Smith to Mr. District-Surveyor Orr.

Sir,

Camp, 22 December, 1890.

I have the honor to transmit herewith the plan of one portion of land, containing 628½ acres, numbered 90, in the parish of Little Billabung, in the county of Goulburn, measured by me on the 12th December, 1890, in accordance with instructions No. 90-6, dated 6th February.

I have to report that at the time of survey, improvements upon the land consisted of :—

	£	s.	d.
Dwelling-house, slab and weatherboard, eight rooms, boarded, lined, and papered, galvanized iron roof, four brick chimneys, verandah on two sides	300	0	0
Slab kitchen, roof partly bark and partly iron, two brick chimneys, store and bedroom attached, with stone cellar	100	0	0
Garden and orchard, trees and vines in full bearing; one acre trenched	30	0	0
Paling fence	25	0	0
Slab stable, buggy shed, and hay yard	50	0	0
Pig-sty...	1	0	0
Horse yard, calf pen and bale	10	0	0
Well, built up with stones ; pump and tank	20	0	0
Iron piping laid underground, conveying water from well to house ...	16	10	0
Old wells near creek slabbed	5	0	0
Men's hut, slab and bark	8	0	0
Dam, 1,400 cubic yards, at 1s.	70	0	0
12 acres cleared and under cultivation	24	0	0
72 acres partly cleared and burnt off	25	4	0
125 acres ringbarked and twice scrubbed	31	5	0
About 50 chains old 6-wire split-fencing	19	0	0
About 40 chains new 7-wire fence, erected in 1878	22	10	0
	£757	9	0

These improvements are now the property of the lessee of the Hillside holding (Janet Ross), and all except the last item were effected prior to July, 1876, but the dwelling-house and out-buildings have been repaired from time to time.

This portion is situated about 25 miles from Germanton, and there is a practicable road leading to it.

The land is very rough, small patches only being fit for cultivation. The area (about one-third of the whole) which has been improved produces a fair amount of grass, but the remainder is very inferior country, heavily timbered with stringy-bark, box, gum, and apple.

The climate is healthy, and there is a good supply of permanent water upon the land.

I am of opinion that on the whole this portion is not worth more than 25s. per acre.

There are no natural boundaries.

I have, &c.,
IRWIN SMITH,
Licensed Surveyor.

---

1. G. 2,868–1,475. Reserve 493, parish of Little Billabong, county of Goulburn. Plan approved, 6th February, 1891. The land embraced within reserve No. 493, parish of Little Billabong, county of Goulburn, has now been measured in one block, containing 628½ acres, with a view to the portion being offered at sale at an upset price of 35s. per acre, with the value of improvements added, in accordance with Ministerial approval on Miscellaneous 90–10,924 enclosed. The improvements are valued at £759 9s. A description is enclosed for the revocation of the reserve.—WILLIAM ORR, District Surveyor, 6/3/91. The Under Secretary for Lands.

Mr. O'Dwyer,—Approval of auction sale has already been given on Miscellaneous 90–10,924. Now for action as regards the reserve. The land should probably be reserved from sale other than auction.—E.A.B., 16/3/91.

In view of the decision on 90–10,924 Miscellaneous, the land should probably be reserved from sale other than auction sale only. Submitted.—J.O'D., 1/4/91. I take it such was the Minister's intention.—R.H.D., 3/4/91. Submitted.—F.H.W. (for the Under Secretary), 6/4/91. Yes.—J.N.B., 6/4/91. Please supply description.—J.O'D., 8/4/91. Mr. M'Lean,—Description enclosed.—J.N.P., (for R.M.), 23/4/91. Executive Council Minute,—Inform applicants Miscellaneous 90–10,924.—W.H.H., 2/6/ . Applicant, with slips.—(P.), 4/6/91. Crown Land Agent, with slips.—(P.), 4/6/91.

No. 10.

No. 10.

Minute Paper for the Executive Council.

Recommending the Revocation of Reserves from Sale, &c.

Department of Lands, Sydney, 30 April, 1891.

It is recommended to His Excellency the Governor and the Executive Council that the temporary reservation of the portions of land within described and particularised in the annexed schedule be now revoked under the provisions of the 39th section of the Crown Lands Act of 1889, and that, in terms of that section, the herein defined area of 628½ acres, viz., portion 90, in the parish of Little Billabung, county of Goulburn, be reserved from sale other than auction sale only.

JAMES N. BRUNKER.

His Excellency the Governor and the Executive Council.

Schedule.

Registration number Misc., Aln. 91-2,392; No. of reserve, 493; county of Goulburn; parish of Little Billabung; area to be cancelled, about 640 acres; date of notification of reserve, 3rd August, 1866.

The Executive Council advise that the recommendation in each case herein set forth be approved.—Alex. C. Budge, Clerk of the Council, 5/5/91. Min. 91-20. Approved.—Jersey, 5/5/91. Confirmed, 12/5/91.

No. 11.

Gazette Notice.

Department of Lands, Sydney, 23 May, 1891.

Revocation of Temporary Reserves.

It is hereby notified, for general information, that His Excellency the Governor, with the advice of the Executive Council, has been pleased to revoke, under the provisions of the 39th section of the Crown Lands Act of 1889, the temporary reservation from sale of the portions of land hereinafter described,—the land not to be sold till after the expiration of sixty clear days from this date.

JAMES N. BRUNKER.

Eastern Division—Land District of Albury.

Within Hillside holding, resumed area No. 266a.

No. 493, notified 3rd August, 1866. County of Goulburn, Little Billabong, near the main Melbourne Road, 640 acres: Commencing at a tree marked R over 52 bearing north 68 degrees 40 minutes east, distant 102 chains from the north-east corner of Thomas Lunt's conditional purchase of 41 acres; bounded on part of the west by a line thence bearing north 10 chains; on the north by a line east 1 mile; on the east by a line south 1 mile; on the south by a line west 1 mile; and again on the west by a line north 70 chains, to the point of commencement.

Reserve 13,807 from sale other than auction sale only, notified this day, includes the above.

No. 13.

J. Gormly, Esq., M.P., to The Secretary for Lands.

Sir, Parliament House, 29 July, 1891.

I have the honor to enclose a letter I received, and would respectfully request that an inquiry be made into the matter referred to. The writer of the letter is a person whose statement I can trust.

Yours, &c.,

JAMES GORMLY.

Application protesting against the sale of portion 90 by auction at Albury on the 23rd September, 1891. On the 12th December, 1890, Mr. Licensed-Surveyor Smith measured portion 90, and found that it contained improvements to the value of £757 9s. On the 6th April the Minister approved that the portion should be reserved from sale other than auction, Alienation 91-2,392, and on Miscellaneous 90-10,924 decided that the land should be offered at auction at 35s. per acre, with the value of the improvements

improvements added to the upset price, for Ross's protection. Submitted whether the sale shall proceed, as gazetted, in view of the surveyor's report as to the value of the improvements.—E.A.B., 4/8/91.

For special consideration in view of the statement conveyed in letter from L. Cox, of the 10th ultimo.—W.H.C., 5/8/91. Send to District Surveyor for report upon Cox's letter.—J.N.B., 10/8/91. The District Surveyor at Wagga Wagga.—E.A.B. (per Under Secretary), 10/8/91. J. Gormly, M.P., informed, 10/8/91.

[*Enclosure.*]

Dear Sir, Ti Tree Creek, 10 July, 1891.

Knowing that you take a keen interest in the settlement on the lands by conditional purchase as against auction sales, I beg to bring under your notice the following facts. Reserve No. 493, county of Goulburn, parish of Little Billabung was revoked by *Gazette* No. 319, 23rd of May, 1891. On the same date 628 acres, portion of above, was reserved from sale other than auction. This is the first case that has come under my notice where the right to conditionally purchase land has been absolutely prohibited. I trust therefore you will see fit to bring this case under the special notice of the Honorable the Minister for Lands, and ask for an explanation on the subject. I have no doubt it will be found that representations have been made to the Department of Lands that this portion of land contains the homestead and improvements connected with the working of the station—such, however, is not the case. I can testify to the fact that the old homestead is now enterely abandoned as a station residence, and a large part of the improvements removed to other parts of the run. Trusting that you will use your best endeavours to prevent the sale of the land in the manner specified.

I have, &c.,

James Gormly, Esq., M.L.A. LAURENCE COX.

No. 14.

The Under Secretary for Lands to J. Gormly, Esq., M.P.

Sir, Department of Lands, Sydney, 10 August, 1891.

I have the honor to acknowledge receipt of your letter of the 29th ultimo, respecting the sale by auction at Albury of portion No. 90, Little Billabong, and to inform you that the same has been forwarded to the District Surveyor at Wagga Wagga for report upon Cox's letter.

I have, &c.,

WILLIAM HOUSTON,
Under Secretary.
(*Per* E.A.B.)

No. 15.

Mr. District-Surveyor Orr to Mr. Surveyor A. H. Chesterman.

[Very Urgent.] 12 August, 1891.

Re Hillside Station:—The Minister for Lands has directed that a statement made by Mr. Laurence Cox, to the effect that the old homestead at Hillside is now entirely abandoned as a station residence, &c., should be investigated. I have to request Surveyor Chesterman to make an inspection, and report by wire if necessary, should the statement have any foundation.

The homestead referred to is about 12 miles (in a direct line) south-west from Humula, and about 2 miles south-east from Luntsville Post Office, on the Sydney Road.

The helios. attached will serve to show Mr. Chesterman if any improvements have been removed since survey, and his report will be required on this point also.

If Mr. Chesterman is unable to attend to this case personally, his assistant may be deputed. Under any circumstances prompt action is desirable.

WILLIAM ORR,
District Surveyor.

Being very busily engaged upon other work, I deputed my field assistant, Mr. G. W. Orr, in accordance with last paragraph of instruction, to visit Hillside Station. He reported that he found the dwelling house unfurnished, the kitchen padlocked, the homestead untenanted, and in fact abandoned as a station residence. Upon making inquiries in the locality he was informed that Mr. and Mrs. Ross are now residing at Lunt's Vale, from which place the run is worked. All improvements on reserve at time of survey by Mr. Licensed-Surveyor Smith were found to be in existence. Mr. L. Cox, in his letter of 10th July (alienation 91-6,893), was referring to some bark-roofing, &c., said to have been removed from an old wool-shed nearly adjoining the western boundary of the reserve. The foregoing information was transmitted by wire from Kyamba on 19th instant.—A. H. CHESTERMAN, No. 69, 21/9/91.

The papers were received from Surveyor Chesterman this day, and refer to the matter of the occupation of the Hillside Home Station, which was reported upon in my letter addressed to the Under Secretary for Lands, dated 22nd August, 1891, No. 705.—WILLIAM ORR, District Surveyor, Wagga Wagga, 26/8/91. The Under Secretary for Lands.

No. 16.

Mr. District-Surveyor Orr to The Under Secretary for Lands.

Re occupation of Messrs. Ross Brothers, Hillside Homestead.

Sir, District Surveyor's Office, Wagga Wagga, 22nd August, 1891.

Having regard to Mr. Laurence Cox's statement respecting the removal of improvements and abandonment of the Hillside homestead, situated on portion No. 90, parish of Little Billabung, county of Goulburn, as set forth in his letter submitted to the Honorable the Minister for Lands by James Gormly, Esq., M.L.A., I have the honor to report that the flooded state of the country and the impassable condition of the roads between here and Hillside rendered it impossible for me to make a personal inspection without cancellation of my previous arrangement to represent the Department in the matter of appraisements at Cootamundra.

As Surveyor Chesterman was working within a distance of 12 miles of the locality, and as he was not one of the surveyors who had previously inspected the ground, I deemed it advisable, in view of the fact that the Minister had written personally a minute on the papers directing prompt action, to instruct that officer (Surveyor Chesterman) to make the necessary investigation without any delay.

Surveyor

Surveyor Chesterman telegraphed the report now enclosed, from which it appears that Mr. Ross does not reside at Hillside at present, the property being worked from Lunt's Vale, about 2 miles distant. The improvements, however, are still intact, and though the residence there may not be in use just now, I have every reason to believe they were effected for the beneficial occupation of the country, as they were in use to my own personal knowledge over twenty years ago.

The valuable character of these improvements must, I think, operate as a bar to *bonâ fide* conditional purchase in the event of it being decided to throw the area open to that class of settlement.

In connection with this matter it may not be deemed out of place to give the following further explanation:—"Hillside" is near the old Sydney-Melbourne road; and many years ago, before the construction of the Great Southern Railway, when the traffic along the road was considerable, an hotel was built at the roadside nearly 2 miles distant. The building is a large and substantial one, but it ceased to be used as an hotel in March last, and the landlord (Lunt), remaided only a short time after. On his removal the place was unoccupied for some time, and, like all untenanted buildings, soon began to show signs of ill usage and decay; the owner of Hillside removed his residence to the hotel to protect his property.

It is, perhaps, hardly necessary to mention that a building such as the hotel mentioned, viz., Lunt's Vale, abutting immediately upon the main Southern Road, is not suitable for the requirements of a head station; and, moreover, hotel improvements are not, as a rule, adapted to station conditions.

Mr. James Ross resides on the Hillside property, but he happened to be away from Lunt's Vale when Surveyor Chesterman inspected the land. Mr. John Ross, however, called at this office this morning, and informed me that his brother had returned to Hillside immediately after Mr. Chesterman's visit, when he learned that his non-residence was likely to injuriously affect the auction sale of the portion.

In view of the foregoing facts in connection with this case I would respectfully submit that, seeing that the auction sale has been advertised to take place on the 23rd September next, it should be allowed to proceed, or, at all events, that Ross Bros. should be afforded an opportunity of showing causes against its withdrawal.

I regret to report that the papers have not yet reached me from Mr. Chesterman's hands, and it cannot be estimated with any certainty when they will reach me, owing to the bad state of the roads.

The papers will be returned to Head Office immediately after they are received here, and in the meantime I beg to enclose copies of the correspondence as far as I am able to do so, for reference.

I have, &c.,
WILLIAM ORR,
District Surveyor.

[*Enclosure.*]

Telegram from Mr. Staff Surveyor Chesterman to Mr. District-Surveyor Orr.

Kyamba Station, 19 August, 1891.

Re Hillside homestead; no one living there now; house unfurnished; Ross lives now at Luntsville; run worked from there; all improvements at time of survey still standing.

A. H. CHESTERMAN,
Staff Surveyor.

Re Hillside Station.

THE Minister for Lands has directed that a statement made by Mr. Laurence Cox to the effect that the old homestead at Hillside is now entirely abandoned as a station residence, &c., should be investigated, I have to request Surveyor Chesterman to make an inspection and report by wire, if necessary, should the statement have any foundation.

The homestead referred to is about 12 miles (in a direct line) south-west from Humula, and about 2 miles south-east from Luntsville Post Office on the Sydney Road.

The helio. attached will serve to show Mr. Chesterman if any improvements have been removed since survey, and his report will be required on this point also.

If Mr. Chesterman is unable to attend to this case personally, his assistant may be deputed. Under any circumstances prompt action is desirable.

WILLIAM ORR,
District Surveyor.

[*Enclosure.*]

Telegram from Mr. District-Surveyor Orr to Mr. Staff Surveyor Chesterman.

Kycamba, 19 August, 1891.

PLEASE return Hillside papers at once with report. All papers sent in error. One only intended. Wire, if papers returned.

WILLIAM ORR,
District Surveyor, Wagga Wagga.

No. 17.

Ross Brothers to The Secretary for Lands.

Sir, Kinross, Germanton, 24 August, 1891.

Mis. 91-4120, Dep., Reserve 13,807, from sale other than auction sale only. Portion 90, of 628¼ acres, county Goulburn, parish Little Billabong.

Referring to the land described on the margin, which is to be sold by auction at Albury on 23rd September next, and about which Laurence Cox has lodged a complaint that the improvements have been removed, and that it has ceased to be resided on, or used as the head station of the holding, we beg to state that no improvements have been removed, and it has not been abandoned as the head station. Our manager recently removed to a building on the side of the main road that had previously been let for an hotel. The tenant had gone out of it a few months ago, and it was being injured by travellers in its untenanted state.

The removal, however, was only temporary, and he has now returned to the old station.

It was not intended to remove the station permanently to the old hotel, it being too near the main road, and quite unsuitable.

Our manager was not at home when Mr. Chesterman, of the Survey Department, called last week, or he would have explained all particulars to him, and that arrangements had been made to return to the old station, which has since been carried out.

The

The action of Mr. Laurence Cox is prompted by personal ill-feeling, which he has lately taken every opportunity of displaying, and were the land in question thrown open for conditional purchase it would only be a prey to speculators to blackmail us afterwards. We confidently trust to the Department honorably fulfilling their promise to sell this land by auction as now advertised.

We may add that the land would have been measured sooner, and sold ere this, had we not told the surveyor we were not in a hurry, and he had better measure selector's land, who were waiting to go into occupation.

Yours, &c.,
ROSS BROTHERS.

Presented by Messrs. Lyne and Hayes, Ms.P., and J. Abbott, 27/8/91.

On Miscellaneous, 90–10,924, the Minister decided that this land should be offered for sale by auction, with the value of the improvements added for Mr. Ross' protection. On Alienation, 91–2,392, it was decided to reserve the land from sale other than auction sale. The approved upset price was 35s. per acre, exclusive of £757 9s., the value of the improvements. On 29th July, Mr. Gormly, M.P., forwarded a letter from Mr. Cox, protesting against the sale by auction under the conditions referred to above, and stating that the homestead had been abandoned, and part of the improvements had been removed. Ross Brothers now state that although for a short time the homestead was not occupied it is in use again now. Mr. District-Surveyor Orr's report bears out this statement, and he also reports that the improvements have not been removed, and recommends that the sale by auction be allowed to proceed. Ross Brothers state that Mr. Cox's letter is the result of some ill-feeling existing between them. In view of the District-Surveyor's report perhaps the sale may be proceeded with.—E.A.B., 27/8 91.

For approval.—W.H.C., 27/8/91. Submitted.—W.H., 27/8/91. In view of the report of the District Surveyor I see no reason for disturbing my previous decision.—J.N.B., 28/8/91. Inform.—E.A.B., 28/8/91. J. Gormley, M.P., and Ross Brothers informed, 28/8/91.

No. 18.

The Under Secretary for Lands to Messrs. Ross Brothers.

Gentlemen, Department of Lands, Sydney, 28 August, 1891.

In reply to yours of 24th instant, respecting the land referred to in the margin, I am directed by the Secretary for Lands to inform you that he sees no reason for disturbing his previous decision. The land will, therefore, be offered for sale, as already advertised.

628 acres 2 roods, portion 90, parish of Little Billabung, county of Goulburn.

I have, &c.,
WM. HOUSTON,
Under Secretary.

No. 19.

The Under Secretary for Lands to J. Gormly, Esq., M.P.

Sir, Department of Lands, Sydney, 28 August, 1891.

Referring to your letter of 29th ultimo, covering a communication from Mr. L. Cox, protesting against the sale by auction of the land, noted as per margin, I am directed by the Secretary for Lands to inform you that in view of the District Surveyor's report, after a careful consideration of the matter, he can see no reason for disturbing the decision already arrived at, viz., to send the land to auction, with the value of the improvements added, for the protection of Ross Brothers.

628 acres 2 roods, portion 90, parish of Little Billabung, county of Goulburn.

I have, &c.,
WM. HOUSTON,
Under Secretary.
(*per* W.H.C.)

No. 20.

Application by Messrs. Ross Brothers for refund of value of improvements.

Crown Lands Acts, Regulation No. 198.

We, Alexander Ross and John Ross, hereby apply that the value of certain improvements on the following lands, Land District of Albury, parish of Little Billabong, county of Goulburn, being portion 90, advertised for sale at Albury, on the 23rd September, 1891, may be remitted or refunded to us in pursuance of the provisions of the Crown Lands Acts. Particulars of the said improvements are specified in the schedule attached hereto. The said lands are now held by , of , as .

Our application is based on the following facts:—These improvements were effected prior to July, 1876, and consist of the homestead of the run Hillside, No. 266, Eastern Division.

Signed this 1st day of September, 1891.

ALEX. ROSS,
JOHN ROSS,
Kinross, Germanton.

To the Under Secretary for Lands.

[*Enclosure.*]

Schedule.

Nature of Improvement:—House, outbuildings, orchard, fencing, wells, iron piping, dam, ringbarking, &c.; value, £757 9s.

No. 21.
Declaration.

We, Alexander Ross and John Ross, of Kinross, Germanton, do solemnly and sincerely declare that the improvements to the value of £757 9s. are upon portion 90, parish of Little Billabong, county of Goulburn, and that they are still our property. And we make this solemn declaration conscientiously believing the same to be true, and in virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

Made and signed before me, at Germanton, this 1st day of September, 1891,—

ALEX. ROSS.
JOHN ROSS.

Chas. Rooke, J.P.

No. 22.
Minute for the Executive Council.

Subject: Remission of value of improvements under the 61st section of the Crown Lands Act of 1884.

Department of Lands, Sydney, 8 September, 1891.

It is recommended to His Excellency the Governor and the Executive Council that, in accordance with the provisions of the 61st clause of the Crown Lands Act of 1884, the sum specified in the schedule be remitted to the person mentioned therein, should the portion quoted be purchased at auction, such sum being the value of the improvements thereon, added to the upset price for the benefit of the owner.

JAMES N. BRUNKER.

His Excellency the Governor and the Executive Council.

Schedule referred to.

Papers, Alienation 91-8,112; portion 90; parish of Little Billabung; county of Goulburn; value of improvements added to upset price, £757 9s.; names of owners, Alexander Ross and John Ross.

The Executive Council approve of the remission of the value of the improvements referred to as proposed.—Alex. C. Budge, Clerk of the Council, 15/9/91. Min. 91-52. Approved.—Jersey, 15/9/91. Confirmed, 22/9/91. Auditor-General informed, 25/9/91. Mr. Crowley, 25/9/91. Sale list noted, 28/9/91. Portion 90 sold to Alexander Ross and John Ross, and £757 9s., value of improvements thereon, remitted on day of sale.—C.W.C., 28/9/91.

No. 23.

Upset price includes £757 9s., value of improvements

No. 24.
The Under Secretary for Lands to The Auditor-General.

Sir,

Department of Lands, Sydney, 25 September, 1891.

Portion 90, parish Little Billabung, county Goulburn.

I have the honor to inform you that His Excellency the Governor, with the advice of the Executive Council, has approved of the sum of £757 9s., value of improvements added to the upset price of the land noted in the margin, being remitted to Alexander and John Ross, who became the purchasers thereof at the sale of Crown Lands, advertised to be held at Albury, on 23rd September, 1891.

I have, &c.,
WM. HOUSTON,
Under Secretary.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CROWN LANDS.

(RETURN RESPECTING RESERVES IN LAND DISTRICTS OF FORBES, PARKES, AND CONDOBOLIN.)

Ordered by the Legislative Assembly to be printed, 31 *March*, 1892.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 19th August, 1891, That there be laid upon the Table of this House,—

> "A Return showing the number and kind of reserves in the leasehold and "resumed areas of the several pastoral holdings in the respective Land "Districts of Forbes, Parkes, and Condobolin; such Return to give the "dates of notification of each reserve, the acreage of each reserve, and the "purposes for which such reserves have been made; and also the number "and kind of reserves that have been revoked and thrown open for "settlement in such land districts since the year 1885."

Sydney : Charles Potter, Government Printer.—1892.

1891.

(SECOND SESSION.)

NEW SOUTH WALES.

CROWN LANDS.

(PROPOSED DEDICATION OF CERTAIN LANDS UNDER THE ACT 48 VIC. NO. 18.)

Presented to Parliament, pursuant to Act 48 Vic. No. 18.

Department of Lands,
Sydney, 31st July, 1891.

PROPOSED RESUMPTION AND RE-DEDICATION OF CHURCH OF ENGLAND CHURCH AND PARSONAGE SITES AT LAMBTON.

IT is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to resume and rededicate the Church of England Church and Parsonage sites at Lambton, area 1 acre 2 roods, hereunder described, an amended plan of the land in question having been furnished.

[Ms. 90-18,510] JAMES N. BRUNKER.

DESCRIPTIONS.

Area proposed to be resumed.

County of Northumberland, parish of Newcastle, Lambton, area 1½ acres: Commencing on the eastern boundary line of the Lambton Colliery Company's portion 14 of 320 acres, at a point 12 chains north from the south-eastern corner of that portion; and bounded thence on the west by part of that boundary line bearing north 3 chains; thence on the north by a line bearing east 5 chains; thence on the east by a line bearing south 3 chains; and thence on the south by a line bearing west 5 chains, to the point of commencement,—to include portions 317 of ½ acre and 318 of 1 acre,—as shown on plan catalogued C. 97-1,984.

Area proposed to be dedicated.

County of Northumberland, parish of Newcastle, Lambton, area 1½ acres: Commencing on the western side of Church-street, at the south-east corner of portion 124 of 30½ perches; and bounded thence on the east by the west side of Church-street bearing south 2 degrees 34 minutes 52 seconds east 3 chains 57 $\frac{7}{10}$ links to the north-east corner of portion 270 of 28 perches; thence on the south by the northern boundaries of portions 270, 269, and 266, bearing south 87 degrees 56 minutes west 4 chains 23 links to the eastern side of More-head-street; thence on the west by the eastern side of that street bearing north 1 degree 40 minutes 38 seconds west 3 chains 57$\frac{7}{10}$ links to the south-west corner of portion 43 of 25$\frac{3}{4}$ perches; and thence on the north by the southern boundaries of portions 43, 122, 123, and 124 aforesaid, bearing north 87 degrees 56 minutes east 4 chains 17$\frac{3}{5}$ links, to the point of commencement,—to include portion 2,365,—as shown on plan catalogued N. 2,165-2,111.

NOTE.—The above is in lieu of the notice in the Government Gazette of 15th December, 1890.

171—

Department of Lands,
Sydney, 31st July, 1891.

PROPOSED RESUMPTION OF SITES FOR BENEVOLENT ASYLUM AND MECHANICS' INSTITUTE AT SCONE.

IT is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884 and the 41st section of the Crown Lands Act of 1889, it is proposed to revoke the dedications of the site for Benevolent Asylum at Scone, area 2½ acres, and the site for Mechanics' Institute, area 1 rood 19½ perches, both hereunder described, with a view to sale by auction or other appropriations under the Crown Lands Acts.

[Ms. 90-19,248] JAMES N. BRUNKER.

DESCRIPTIONS.

Benevolent Asylum Site.

County of Brisbane, parish of Scone, village of Scone, allotments 16, 17, 18, 19, and 20 of section 3. 2 acres 2 roods: Commencing at the north-west corner of the section; and bounded thence on the north by Liverpool-street easterly 5 chains; on the east by the western boundary-line of allotment 15 southerly, at right angles to Liverpool-street, 5 chains and ¼ link; on the south by the northern boundary lines of allotments 5, 4, 3, 2, and 1 westerly, parallel with Liverpool-street, 5 chains to Aberdeen-street; and on the west by that street northerly 5 chains and ¼ link, to the point of commencement. Plan S. 45-999.

Mechanics' Institute Site.

County of Brisbane, parish of Scone, village of Scone, allotment 3 of section 14, 1 rood 19½ perches: Commencing on the eastern side of Kelly-street, at south-western corner of allotment 2 of section 14, T. French's 3 roods; and bounded thence on the north by the southern boundary of that allotment bearing north 89 degrees 58½ minutes east 3 chains; on the east by part of the western boundary of portion 13, W. Dumaresq's 620 acres bearing south 1½ minutes east 2 chains 50 links; and on the south-west by part of a north-eastern side of the Great Northern Road, 1 chain 50 links wide, bearing north 50 degrees 13½ minutes west 3 chains 90½ links, to the point of commencement. Plan S. 47-999.

NOTE.—The above is in lieu of notice in the Government Gazette of the 15th May, 1891.

Department of Lands,
Sydney, 31st July, 1891.

PROPOSED RESUMPTION OF LIBRARY SITE AT KIAMA, AND DEDICATION OF SITE FOR MECHANICS' INSTITUTE IN LIEU.

IT is hereby notified, for public information, that, in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to resume the library site at Kiama, area 2 roods—viz., allotment 5 of section 3, hereunder described—with a view to its sale or other appropriation under the Crown Lands Acts, and to the dedication in lieu of allotment 19 of section 5, in the same locality, area 24 perches, for site for Mechanics' Institute.

[Ms. 90-4,765] JAMES N. BRUNKER.

DESCRIPTIONS.

Library site proposed to be resumed.

All that piece or parcel of land situate in the county of Camden, parish of Kiama, being allotment 5, section 3, of the town of Kiama, and containing by admeasurement 2 roods: Commencing on the south-eastern side of Manning-street, at the most western corner of allotment 4, dedicated as site for Church of England; thence by a line forming the south-western boundary of that allotment and allotment 3 bearing south 63 degrees east 5 chains; thence by a line forming the north-western boundary of the Reverend J. Barnier's allotment 10 bearing south 27 degrees west 1 chain; thence by a line forming the north-eastern boundaries of A. King's allotments 7 and 6 respectively bearing north 63 degrees west 5 chains to the south-eastern side of Manning-street aforesaid; and thence by that side of that street bearing north 27 degrees east 1 chain, to the point of commencement,—as shown on plan K. 32-1,091.

Site for Mechanics' Institute proposed to be dedicated.

County of Camden, parish of Kiama, area 24 perches: Commencing at a point on the north-western side of Manning-street bearing south 27 degrees west 2 chains 49 links from its intersection with the south-western side of Terralong-street; and bounded thence on the north-east by a line bearing north 63 degrees west 1 chain 50 links; thence on the north-west by a line bearing south 27 degrees west 1 chain; thence on the south-west by a line bearing south 63 degrees east 1 chain 50 links to the north-western side of Manning-street aforesaid; and thence on the south-east by that side of that street bearing north 27 degrees east 1 chain, to the point of commencement,—being allotment 19 of section 5, town of Kiama, as shown on plan K. 42-1,091.

NOTE.—The above is in lieu of the notice in the Government Gazette of 15th December, 1890.

PROPOSED RESUMPTION OF RECREATION RESERVE AT RAYMOND TERRACE, AND DEDICATION FOR TOWN HALL SITE AND PUBLIC RECREATION.

It is hereby notified, for public information, that, in accordance with the provisions of the 105th section of the Crown Lands Act of 1884 and the 41st section of the Crown Lands Act of 1889, it is proposed to revoke the dedication of the land at Raymond Terrace, area 62 acres, dedicated 15th August, 1871, for public recreation, and hereunder described, with a view to the dedication of 1 acre 2 roods 16 perches thereof for Town Hall site, and the re-dedication of the remainder, 60 acres 0 roods 26 perches, for public recreation.

[Ms. 91-3,055 Dep.] JAMES N. BRUNKER.

DESCRIPTIONS.

Recreation reserve proposed to be resumed.

County of Gloucester, parish of Eldon, town of Raymond Terrace, area 62 acres: Commencing on a northern boundary of R. Windeyer's 664 acres, at the south-western corner of the reserve for a general cemetery; and bounded thence on the north-east by the south-western boundary of that reserve and its extension bearing north 50 degrees west in all 10 chains; on the south-east by a line bearing north 40 degrees east 8 chains 50 links; on the south-west by a line bearing south 50 degree east 9 chains 80 links to the north-east corner of the aforesaid reserve; on the east by a line dividing it from R. Windeyer's 664 acres aforesaid bearing north 1 degree 6 minutes west 7 chains 20 links to Kangaroo-street; again on the north-east by that street bearing north 50 degrees west 23 chains 30 links to Irrawang-street; on the north-west by that street bearing south 40 degrees west 38 chains 28 links; and on the south by a line dividing it from G. T. Graham's 640 acres and R. Windeyer's 664 acres aforesaid bearing north 89 degrees 54 minutes east 37 chains and 54 links, to the point of commencement,—exclusively of a road or street 1 chain 50 links wide from Kangaroo-street to Tod-street passing through this land along the north-west boundary of the cemetery reserve in a south-westerly direction, the area of which has been deducted from the total area.

Town Hall site proposed to be dedicated.

County of Gloucester, parish of Eldon, town of Raymond Terrace, area 1 acre 2 roods 16 perches: Commencing on the south-eastern side of Urawanga-street, at its intersection with the south-easterly prolongation of the north-eastern side of Glenelg-street, being a point bearing south 50 degrees east and 1 chain 50 links distant from the southern corner of John Coyle's allotment 10 of section 16; bounded thence on the north-east by a line bearing south 50 degrees east 6 chains 7 links to the north boundary of G. T. Graham's portion of 640 acres; thence on the south by part of the north boundary of that portion, being a line bearing south 88 degrees 54 minutes west 8 chains 6 links, to the south-eastern side of Urawanga-street aforesaid; and thence on the north-west by the south-eastern side of that street bearing north 40 degrees east 5 chains 31 links, to the point of commencement,—to include portion 6, as shown on plan catalogued G. 2,303-1,497.

Recreation reserve proposed to be dedicated.

County of Gloucester, parish of Eldon, town of Raymond Terrace, area 60 acres 0 roods 26 perches: Commencing at the intersection of the south-eastern side of Urawanga-street with the south-western side of Kangaroo-street, being a point bearing south 49 degrees 57 minutes east, and distant 150 links from the north-eastern corner of allotment 20 of section 14; bounded thence on part of the north-west by part of the south-eastern side of Urawanga-street aforesaid, being a line bearing south 39 degrees 54 minutes west 33 chains, to the northern corner of the site appropriated for Town Hall; thence on part of the south-west by the north-eastern boundary of that appropriation, being a line bearing south 50 degrees east and distant 6 chains 7 links, to the north boundary of G. T. Graham's 640 acres; thence on the south by part of that north boundary and that of R. Windeyer's 664 acres in all a line bearing north 88 degrees 42 minutes east and distant 29 chains 64 links, to the western extremity of the southernmost boundary of the General Cemetery at Raymond Terrace, dedicated 16th July, 1863; thence on part of the north-east by the south-western boundary of that cemetery, being a line bearing north 53 degrees west and distant 10 chains 10 links, to its westernmost corner; thence on the south-east by the north-western boundary of that cemetery, being a line bearing north 40 degrees 4 minutes east and distant 8 chains 50 links, to its northernmost corner; thence on the remainder of the south-west by the north-eastern boundary of the cemetery referred to, being a line bearing south 52 degrees 14 minutes east 9 chains 74 links, to the western boundary of J. Windeyer's 1,208 acres; thence on the east by part of that west boundary, being a line bearing north 1 degree 42 minutes west 6 chains 77 links, to the south-western side of Kangaroo-street first mentioned; and thence on the remainder of the north-east by part of that side of that street, being a line bearing north 49 degrees 57 minutes west and distant 23 chains 54 links, to the point of commencement,—but exclusive of a road 1 chain 50 links wide from Kangaroo-street to Tod-street, passing through this land along in a south-westerly direction, the area of which has been deducted from the total area, shown on plan catalogued G. 16-2,066.

NOTE.—The above is lieu of the notice in the Government Gazette of 15th May, 1891.

Department of Lands,
Sydney, 31st July, 1891.

PROPOSED RESUMPTION OF SCHOOL OF ARTS SITE AT CARGELLICO.

It is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884 and the 41st section of the Crown Lands Act of 1889, it is proposed to revoke the dedication of the School of Arts site at Cargellico, area 2 roods, viz., allotment 3 of section 3, dedicated 6th October, 1882, and hereunder described with a view to the reservation of that area for site for Post and Telegraph Office,

[Ms. 91-2,449 Dep.] JAMES N. BRUNKER.

DESCRIPTION.

County of Dowling, parish of Gurrangully, village of Cargellico, allotment 3 of section 3, 2 roods: Commencing on the south-western side of Canada-street, at the eastern corner of allotment 1; and bounded thence on the north-east by that street south-easterly 2 chains; on the south-east by the north-western boundary line of allotment 4 south-westerly, at right angles to Canada-street, 2 chains and 50 links to a lane; on the south-west by that lane north-westerly, parallel with Canada-street, 2 chains; and on the north-west by the south-eastern boundaries of allotment 2 and aforesaid 1, in all north-easterly at right angles to Canada-street 2 chains and 50 links, to the point of commencement.

Sydney, 31st July, 1891.

PROPOSED RESUMPTION OF GENERAL CEMETERY AT WEST BALLINA AND DEDICATION OF PART THEREOF FOR SHOW GROUND.

IT is hereby notified, for public information, that, in accordance with the provisions of the 105th section of the Crown Lands Act of 1884 and the 41st section of the Crown Lands Act of 1889, it is proposed to revoke the dedication of the land at West Ballina, area 7 acres 2 roods 23 perches, dedicated 4th February, 1876, for general cemetery, and hereunder described, with a view to the dedication of 5 acres 3 roods 9 perches thereof for show ground, and to the appropriation or sale of the remainder as provided in the Crown Lands Acts.

[Ms. 91-3,905 Dep.] JAMES N. BRUNKER.

DESCRIPTIONS.

General Cemetery proposed to be resumed.

County of Rous, parish of Ballina, area 7 acres 2 roods 23 perches: Commencing at the intersection of the north-western side of Cherry-street with north-eastern side of Skinner-street, town of West Ballina; and bounded thence on the south-west by part of that side of Skinner street first mentioned, being a line bearing north 71 degrees 45 minutes west 8 chains; on the north-west by a line bearing north 18 degrees 15 minutes east 5 chains; on part of the north-east by a line bearing south 71 degrees 45 minutes east 4 chains 12½ links: on part of the south-east by a line bearing south 18 degrees 15 minutes west 3 chains 87 links; on the remainder of the north-east by a line bearing south 71 degrees 45 minutes east 3 chains 87½ links to the north-west side of Cherry-street first mentioned; and thence by part of that side of that street, being a line bearing south 18 degrees 15 minutes west 1 chain 13 links, to the point of commencement.

Again commencing at the intersection of the north-western side of Cherry street with the south-western side of Skinner-street, town of West Ballina; and bounded thence by part of that side of Cherry-street, being a line bearing south 18 degrees 15 minutes west 5 chains; on the south-west by a line bearing north 71 degrees 45 minutes west 10 chains 43 links; on the north-west by a line bearing north 18 degrees 15 minutes east 5 chains to the south-west side of Skinner-street first mentioned; and thence by part of that side of that street, being a line bearing south 71 degrees 45 minutes east 10 chains 42 links, to the point of commencement,—shown on plan catalogued C. 481-1,984.

Show Ground proposed to be dedicated.

County of Rous, parish of Ballina, town of West Ballina, containing an area of 5 acres 3 roods 9 perches. The Crown Lands within the following boundaries: Commencing at the intersection of the eastern side of Moon-street with the northern side of Fox-street, being a point bearing north 16 degrees 15 minutes east, and distant 1 chain 50 links from the north-western corner of portion 199 (site for hospital); thence by Moon-street north 16 degrees 15 minutes east 10 chains to the southern side of Skinner-street; thence by that street south 73 degrees 26 minutes east 1 chain 63 links to the road from Tintenbar to Ballina; thence by that road south 23 degrees 30 minutes east 13 chains and 7 links to the northern side of Fox-street; thence by that street bearing north 73 degrees 26 minutes west 9 chains 99 links, to the point of commencement,—being portion 203, as shown on plan catalogued R. 4,613-1,759.

NOTE.—The above is in lieu of the notice in the Government Gazette of 15th May, 1891.

Department of Lands,
Sydney, 31st July, 1891.

PROPOSED RESUMPTION OF PART OF RESERVE FOR RECREATION AND PASTURAGE AT DUBBO AND DEDICATION FOR ADDITION TO SHOW GROUND.

IT is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to resume that part of the reserve for recreation and pasturage at Dubbo, within the boundaries of measured portion 206 of 8 acres and 10 perches, parish of Dubbo, county of Lincoln, hereunder described, with a view to the dedication of that area for addition to show ground.

[Ms. 91-4,517 Dep.] JAMES N. BRUNKER.

DESCRIPTION.

CENTRAL DIVISION.

LAND DISTRICT OF DUBBO.

County of Lincoln, parish of Dubbo, 8 acres 0 roods 10 perches, portion 206: Commencing on the eastern side of Fitzroy-street, at the south-west corner of portion 310 of 15 acres, show ground, dedicated 22nd April, 1886; bounded thence on the north by the south boundary of that portion, bearing north 89 degrees 59 minutes east 12 chains 30½ links to its south-east corner; thence south 6 chains 55 links; thence north 89 degrees 57 minutes west 12 chains and 30½ links to the eastern side of Fitzroy-street aforesaid; and thence on the west by that side of that street bearing north 6 chains 53½ links, to the point of commencement,—as shown on plan catalogued L. 1,736-1566.

NOTE.—The above is in lieu of the notice in the Government Gazette of 10th July, 1891.

Department of Lands,
Sydney, 31st July, 1891.

PROPOSED RESUMPTION OF PART OF PUBLIC ROAD AT WHITE BAY.

IT is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of the part of the public road at White Bay, Balmain, dedicated 18th January, 1884, hereunder described, with a view to the completion of an exchange under the 69th section of the Act quoted.

[Ms. 91-5,358 Dep.] JAMES N. BRUNKER.

DESCRIPTION.

All that piece or parcel of land situated at White Bay, Balmain, parish of Petersham, county of Cumberland, containing by admeasurement 6 perches: Commencing at a point where the north-western side line of Mansfield-street meets the north-eastern side line of a reserved road 40 feet wide, leading from Reynolds-street along the foreshore of White Bay to Mansfield-street; and bounded thence on the south-east by part of the north-western side line of Mansfield-street, bearing north 59 degrees east 16$\frac{4}{10}$ links to the southernmost corner of 4$\frac{6}{10}$ perches approved to be alienated to King and Sullivan under 10th section; on the north-east by the south-western boundary of that area bearing north 14 degrees 42 minutes west 234$\frac{1}{10}$ links; on the north-west by a line bearing south 77 degrees 27 minutes west 15$\frac{5}{10}$ links to the said reserved road, 40 feet wide; and on the south-west by a north-east side line of that road bearing south 14 degrees 42 minutes east 239 links, to the point of commencement.

NOTE.—The above is in lieu of the notice in the Government Gazette of 10th July, 1891.

Department of Lands,
Sydney, 31st July, 1891.

PROPOSED RESUMPTION OF RECREATION RESERVE AT GUNDAGAI NORTH, AND DEDICATION FOR RACECOURSE IN LIEU.

IT is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884 and the 41st section of the Crown Lands Act of 1889, it is proposed to revoke the dedication of the land at Gundagai North, area 123 acres, dedicated on the 12th March, 1869, for public recreation, and hereunder described, with a view to the dedication in lieu of 268 acres in the same locality, to include the above, for racecourse.

[Ms. 91-2,594 Dep.] JAMES. N. BRUNKER.

DESCRIPTIONS.

Recreation Reserve proposed to be resumed.

County of Clarendon, parish of Gundagai, 123 acres, at Gundagai: Commencing on the left bank of a lagoon, at a point bearing south 79 degrees 20 minutes east and distant 10 chains 86 links from the southern corner of allotment 2 of section 31, in the town of Gundagai; and bounded thence on the south-west by Sheridan street bearing east 16 degrees 17 minutes south 9 chains 14 links; thence by Johnson-street bearing south 16 degrees 17 minutes west 11 chains and 50 links to Landon-street; again on the south-west by that street bearing east 16 degrees 17 minutes south 33 chains to Thackeray-street; on the south-east by that street bearing north 16 degrees 17 minutes east 33 chains to Hanley-street; on the north-east by Hanley-street bearing west 16 degrees 17 minutes north 37 chains and 77 links to the aforesaid lagoon; and on the north-west by that lagoon downwards, to the point of commencement,—as shown on plan G. 27-1,028.

Racecourse proposed to be dedicated.

County of Clarendon, parish of North Gundagai, containing an area of 268 acres. The Crown Lands within the following boundaries: Commencing on the right bank of the Murrumbidgee River, at a point where the eastern extremity of the south side of Neptune-street intersects it; and bounded thence by part of the south side of Neptune street bearing west 14 chains and 41 links; thence by a line bearing south 25 degrees 19 minutes west 22 chains 64 links; thence by a line bearing south 46 degrees 22 minutes west 5 chains 4 links to the north-eastern side of Sheridan-street; thence by part of the north-eastern side of that street bearing south 73 degrees east 7 chains 52 links to the south-eastern side of Johnson-street; thence by part of the south eastern side of that street bearing south 17 degrees west 11 chains 50 links to the north-eastern side of Landon-street; thence by part of the north-eastern side of that street bearing south 73 degrees east 11 chains 50 links to the south-eastern side of Maturin-street; thence by the south-eastern side of that street bearing south 17 degrees west 13 chains to the right bank of the Murrumbidgee River; thence by the right bank of that river upwards, to the point of commencement, being portion 253, as shown on plan catalogued C. 2,944-1,578 Roll.

NOTE.—The above is in lieu of the notice in the Government Gazette of the 22nd May, 1891.

Department of Lands,
Sydney, 31st July, 1891.

PROPOSED RESUMPTION OF GENERAL CEMETERY AT BRELSFORD, (COFF'S HARBOR), AND DEDICATION FOR THE SAME PURPOSE IN LIEU.

IT is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of the general cemetery at Brelsford, area 9 acres 1 rood 38 perches, dedicated 20th December, 1887, and hereunder described, with a view to that area being included in a proposed extension of the village, and to the dedication in lieu of 11 acres, also hereunder described for general cemetery.

[Ms. 91-5,359 Dep.] JAMES N. BRUNKER.

DESCRIPTIONS.

General Cemetery proposed to be resumed.

County of Fitzroy, parish of Coff, area 9 acres 1 rood 38 perches: Commencing on the north-eastern side of a road in the south-easterly prolongation of the south-western boundary of section 14, village of Brelsford, at the intersection with the south-eastern side of a road, the north-western side of which forms the south-eastern boundary of portion 14 aforesaid at a peg bearing north 58 degrees 28 minutes west and distant 66·3 links from a bloodwood-tree marked broad-arrow cemetery; and bounded thence on the north-west by part of the south-eastern side of the road aforesaid bearing north 8 degrees 30 minutes east 10 chains 58·7 links; thence on the north-east by a line bearing south 49 degrees east 13 chains 70⅛ links; thence on the south-east by a line bearing south 29 degrees 30 minutes west 6 chains 69·7 links to the north-eastern side of the road first-mentioned; thence on the south-west by part of that side of that road being lines bearing respectively north 69 degrees 30 minutes west 2 chains 93·6 links, and north 60 degrees 30 minutes west 6 chains 73¼ links, to the point of commencement.

To include allotments 1 to 7, plan catalogued C. 1,122-1984.

General Cemetery proposed to be dedicated.

County of Fitzroy, parish of Coff, village of Brelsford, containing an area of 11 acres. The Crown Lands within the following boundaries: Commencing at a point on the northern side of Coff-street bearing south 66 degrees 49 minutes east and distant 13 chains 64 links from the north-east corner of allotment 6 of section 5, village of Brelsford; thence north 9 degrees 57 minutes east 4 chains 60 links; thence north 29 degrees 30 minutes east 8 chains 18½ links; thence south 60 degrees 30 minutes east 9 chains 14 links; thence south 29 degrees 30 minutes west 12 chains 51 links to Coff-street aforesaid; thence by part of the northern side of that street north 60 degrees 30 minutes west 7 chains 60 links, to the point of commencement,—as shown on plan catalogued Ms. 217 Gfn.

NOTE.—The above is in lieu of the notice in the Government Gazette of the 10th July, 1891.

Department of Lands,
Sydney, 31st July, 1891.

PROPOSED RESUMPTION OF PART OF TAMWORTH COMMON EXTENSION AND REDEDICATION OF PART THEREOF FOR GENERAL CEMETERY.

IT is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of that part of the extension to Tamworth permanent common, area 47 acres 1 rood, dedicated 16th November, 1886, hereunder described, with a view to the dedication of 13 acres 3 roods 24 perches thereof for general cemetery, and to the reservation of the remainder—33 acres 1 rood 16 perches—for plantation and cemetery extension.

[Ms. 91-4,156 Dep.] JAMES N. BRUNKER.

DESCRIPTIONS.

Area proposed to be resumed.

County of Inglis, parish of Tamworth, area 47 acres 1 rood: Commencing on the west side of a road 150 links wide, at a point bearing south 1 degree 36 minutes west, and distant 17 chains 83·7 links from the south-east corner of portion 59, Joshua Dawes' 35 acres 2 roods; and bounded thence on the east by a line bearing south 21 chains 79 links; on the south by a line bearing west 21 chains 79 links; on the west by a line bearing north 21 chains 79 links; and on the north by a line bearing east 21 chains 79 links, to the point of commencement,—as shown on plan catalogued Ms. 111 Th.

General Cemetery proposed to be dedicated.

County of Inglis, parish of Tamworth, area 13 acres 3 roods 24 perches: Commencing at a point bearing south 13 degrees 32 minutes west, and distant 23 chains 48 links from the south-east corner of portion 59, Joshua Dawes' 35 acres 3 roods; and bounded thence on the east by a line bearing south 11 chains 79 links; on the south by a line bearing west 11 chains 79 links; on the west by a line bearing north 11 chains 79 links; and on the north by a line bearing east 11 chains 79 links, to the point of commencement,—shown on plan catalogued Ms. 111 Th.

NOTE.—The above is in lieu of the notice in the Government Gazette of the 10th July, 1891.

Department of Lands,
Sydney 31st July, 1891.

PROPOSED RESUMPTION OF PART OF PUBLIC SCHOOL RESERVE AT CUNNINGAR.

IT is hereby notified for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, and the 41st section of the Crown Lands Act of 1889, it is proposed to revoke the dedication of that part of the land at Cunningar, dedicated 18th February, 1870, for Public School purposes, within the boundaries of measured portion 170 of 8 acres 3 roods 39 perches, parish of Cunningar, county of Harden, with a view to the reservation of that area for camping.

[Ms. 91-2,426 Dep.] JAMES N. BRUNKER.

DESCRIPTION.

EASTERN DIVISION.

LAND DISTRICT OF YOUNG.

County of Harden, parish of Cunningar, containing an area of 8 acres 3 roods 39 perches. That part of Public School site, dedicated 18th February, 1870, within the boundaries of measured portion 170,—as shown on plan catalogued H. 5,340-1,716.

NOTE.—The above is in lieu of the notice in the Government Gazette of 15th May, 1891.

Department of Lands,
Sydney, 31st July, 1891.

PROPOSED RESUMPTION OF RECREATION RESERVE AT ARAKOON, AND REDEDICATION FOR RACE-COURSE

IT is hereby notified, for public information, that, in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of the land at Arakoon, area 60 acres, viz.: Portion 161, in the parish of Arakoon, county of Macquarie, dedicated 18th January, 1884, for public recreation, and hereunder described, with a view to the rededication of that area for racecourse.

[Ms. 91-4,339 Dep.] JAMES N. BRUNKER.

DESCRIPTION.

County of Macquarie, parish of Arakoon, area about 60 acres: Commencing at a point situated south 41 degrees 18 minutes east 37 chains 34 links from the south-east corner of allotment 3 of section 10, village of Arakoon; and bounded thence on part of the north by a line bearing west 10 chains; thence on the west by a line bearing south 30 chains; thence on the south by a line bearing east 20 chains; thence on the east by a line bearing north 30 chains; thence on the remainder of the north by a line bearing west 10 chains, to the point of commencement. To include measured portion 161,—as shown on plan catalogued M. 9-2,069.

NOTE.—The above is in lieu of the notice in the Government Gazette of 10th July, 1891.

Department of Lands,
Sydney, 31st July, 1891.

PROPOSED RESUMPTION OF GENERAL CEMETERY AT TAMWORTH.

IT is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884 and the 41st section of the Crown Lands Act of 1889, it is proposed to revoke the dedication, with a view to sale by auction, of the land at Tamworth, area 7 acres 1 rood 30 perches, dedicated 15th March, 1865, for general cemetery, and hereunder described, it being intended to dedicate another site in lieu.

[Ms. 91-4,514 Dep.] JAMES N. BRUNKER.

DESCRIPTION.

County of Inglis, parish of Tamworth, area 7 acres 1 rood 30 perches: Commencing at a point on the eastern side of Janison-street, being the south-western corner of an area of 100 acres, dedicated 13th May, 1887, for recreation purposes; and bounded thence on the north by part of the southern boundary of that recreation reserve, being a line bearing east 10 chains; on the east by a line bearing south 8 chains to the north side of North-street; on the south by part of that side of that street, being a line bearing west 10 chains to the east side of Janison-street, first mentioned; and thence on the west by part of that side of that street, being a line bearing north 8 chains, to the point of commencement, but exclusive of intervening road 62 links wide. Plan catalogued C. 871-730 Roll.

NOTE.—The above is in lieu of the notice in the Government Gazette of 10th July, 1891.

Department of Lands,
Sydney, 31st July, 1891.

PROPOSED RESUMPTION OF PART OF PERMANENT COMMON AT WEST KEMPSEY.

IT is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884 and the 41st section of the Crown Lands Act of 1889, it is proposed to revoke the dedication of that part of the permanent common at West Kempsey, area 70½ acres, hereunder described, with a view to that area being included in a reserve for Racecourse.

[Ms. 91-3,050 Dep.] JAMES N. BRUNKER.

DESCRIPTION.

EASTERN DIVISION.

LAND DISTRICT OF KEMPSEY.

County of Dudley, parish of Yarravel, area about 70½ acres. That part of the Kempsey Permanent Common, dedicated 1st June, 1866, included within the following boundaries: Commencing at a point 15 chains east from the north-east corner of camping reserve 12,995, notified 22nd November, 1890; and bounded thence on the south by a line east 30 chains; thence north to Warwick Creek; thence by that creek upwards to a point due north from point of commencement; thence south to that point,—being that part of portion 166 of 90 acres within permanent common, shown on plan catalogued D. 1,243-1,505.

NOTE.—The above is in lieu of the notice in the Government Gazette of 15th May, 1891.

Department of Lands,
Sydney, 31st July, 1891.

PROPOSED RESUMPTION AND REDEDICATION OF GENERAL CEMETERY AT HANGING ROCK.

IT is hereby notified, for public information, that, in accordance with the provisions of the 105th section of the Crown Lands Act of 1884 and the 41st section of the Crown Lands Act of 1889, it is proposed to revoke the dedication of the General Cemetery at Hanging Rock, area 3 acres 3 roods, dedicated 14th February, 1873, and hereunder described, with a view to rededication with an area of 4 acres and 5 perches.

[Ms. 91-3,712] JAMES N. BRUNKER.

DESCRIPTIONS.

General Cemetery proposed to be resumed.

County of Parry, parish of Nundle, area 3 acres 3 roods, dedicated 14th February, 1873: Commencing at a point bearing north 61 degrees 4 minutes west and distant 3 chains 77 links from the south-western corner of R. L. Jenkins' 14 acres 1 rood; and bounded thence on the north-east by a line bearing north 40 degrees west 5 chains 66 links; on the north-west by a line bearing south 50 degrees west 7 chains 14 links; on the south-west by a line bearing south 40 degrees east 5 chains 66 links; and on the south-east by a line bearing north 50 degrees east 7 chains 14 links, to the point of commencement; exclusive of a road 50 links wide running through the cemetery,—as shown on plan catalogued C. 145-1,984.

General Cemetery proposed to be dedicated.

County of Parry, parish of Nundle, area about 4 acres 0 roods 5 perches: Commencing at a point bearing north 61 degrees 4 minutes west, and distant 3 chains 77 links from the south-western corner of R. L. Jenkins' 14 acres 1 rood; and bounded thence on the north-east by a line bearing north 40 degrees west 5 chains 66 links; on the north-west by a line bearing south 50 degrees west 7 chains 14 links; on the south-west by a line bearing south 40 degrees east 5 chains 66 links; and on the south-east by a line bearing north 50 degrees east 7 chains 14 links, to the point of commencement,—as shown on plan catalogued C. 145-1,984.

NOTE.—The above is in lieu of the notice in the Government Gazette of 15th May, 1891.

(SECOND SESSION.)

NEW SOUTH WALES.

CROWN LANDS.

(PROPOSED DEDICATION OF CERTAIN LANDS UNDER THE ACT 48 VIC. NO. 18.)

Presented to Parliament, pursuant to Act 38 Vic. No. 18, sec. 105.

Department of Lands,
Sydney, 21st August, 1891.

PROPOSED RESUMPTION OF HOSPITAL SITE AT WALCHA AND DEDICATION FOR THE SAME PURPOSE IN LIEU.

IT is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of the land at Walcha, area 10 acres, viz., section 48, dedicated 2nd December, 1887, for hospital site, and hereunder described, with a view to sale thereof by auction, and to the dedication in lieu of allotment 1 of section 17, town of Walcha, area 5 acres 3 roods 39 perches, for site for hospital.

[Ms. 91-6,457 Dep.] JAMES N. BRUNKER.

DESCRIPTION.

Area proposed to be resumed.

County of Vernon, parish of Walcha, area 10 acres, being measured section 48 in the town of Walcha. The Crown Lands within the following boundaries: Commencing at the intersection of the western side of Lagoon-street and the northern side of Jamieson-street; bounded on the south by the northern side of the last-mentioned street bearing west 10 chains; on the west by the eastern side of Middle-street bearing north 10 chains; on the north by the southern side of Plumb-tree-street bearing east 10 chains; and on the east by the western side of Lagoon-street aforesaid bearing south 10 chains, to the point of commencement,—as shown on plan catalogued W. 44-1,493.

Area proposed to be dedicated.

County of Vernon, parish of Walcha, town of Walcha, being allotment 1 of section 17, town of Walcha, area 5 acres 3 roods 39 perches: Commencing at the intersection of the east side of South-street with the south side of Croudace-street; and bounded thence by that side of the latter street bearing east 7 chains 92$\frac{4}{10}$ links to the north-west corner of allotment 7 of section 17 aforesaid; thence by the west boundaries of allotments 7 and 6 of said section bearing south 18 minutes west 7 chains 63$\frac{1}{10}$ links to the north side of Legg-street; thence by that side of that street bearing north 89 degrees 18 minutes west 7 chains 88$\frac{6}{10}$ links to the aforesaid east side of South-street; and thence by that side of that street bearing north 7 chains 53½ links, to the point of commencement,—as shown on plan catalogued W. 46-1,493.

Department of Lands,
Sydney, 21st August, 1891.

PROPOSED RESUMPTION AND REDEDICATION OF ROMAN CATHOLIC CHURCH AND PRESBYTERY SITES AT CANONBA.

IT is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to resume and rededicate the Roman Catholic Church and presbytery sites at Canonba, area 1 acre and 32 perches, viz., allotments 1 and 2 of section 18a, dedicated 3rd May, 1878, and hereunder described, an amended survey of the land in question having been effected.

[Ms. 91-6,459 Dep.] JAMES N. BRUNKER.

DESCRIPTIONS.

Area proposed to be resumed.

County Gregory, parish of Canonba, town of Canonba, area 1 acre 0 roods 32 perches: Commencing on the right bank of Duck Creek, at a point where the north-western side of Mole-street meets that creek; and bounded thence on the south-east by part of that side of that street, being a line bearing north 43 degrees east 2 chains 50 links; on the north-east by Young-street bearing west 43 degrees north 6 chains; on the north-west by a line bearing south 43 degrees west and distant 1 chain to the right bank of Duck Creek first mentioned; and thence by that side of that creek upwards, to the point of commencement,—to include allotments 1 and 2 of section 18a, as shown on plan catalogued C. 613-1,984.

Area proposed to be dedicated.

County of Gregory, parish of Canonba North, town of Canonba, area 1 acre 0 roods 32 perches: Commencing at the intersection of the north-western side of Brown-street with the south-western side of Young-street: and bounded thence on the north-east by part of that side of Young-street, being a line bearing north 47 degrees west 589¼ links; on the north-west by a line bearing south 43 degrees west 162 links; on the south-west by lines bearing south 37 degrees 22 minutes and 47 degrees east, and distant 370½ links and 224 links respectively, to the north-west side of Brown-street first-mentioned; and thence on the south-east by part of that side of that street, being a line bearing north 43 degrees east and distant 224 links, to the point of commencement,—to enclose allotments 1 and 2 of section 18a,—as shown on plan catalogued C. 6-1,943

Department of Lands,
Sydney, 21st August, 1891.

PROPOSED RESUMPTION OF CHURCH OF ENGLAND SCHOOL SITE AT DENILIQUIN SOUTH.

IT is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication (with a view to sale by auction) of the Church of England School site at Deniliquin South, area 2 roods, viz., allotment 1 of section 7, dedicated 16th July, 1863, and hereunder described, the purpose of dedication having failed.

[Ms. 91-6,456 Dep.] JAMES N. BRUNKER.

DESCRIPTION.

County of Townsend, parish of South Deniliquin, town of South Deniliquin, allotment 1 of section 7, area 2 roods: Commencing at the intersection of the south-western side of George-street with the north-western side of Butler-street; and bounded thence on the north-east by part of that side of George-street being a line bearing north 45 degrees west and distant 2 chains 50 links to the north-eastern corner of allotment 2 adjoining; on the north-west by the south-eastern side of that allotment being a line bearing south 45 degrees west 2 chains to the north-western corner of allotment 5; on the south-west by the north-eastern boundary of that allotment being a line bearing south 45 degrees east 2 chains 50 links to the north-western side of Butler-street above-mentioned; and thence on the south-east by part of that side of that street being a line bearing north 45 degrees east 2 chains, to the point of commencement,—shown on plan catalogued D. 48-1,458.

Department of Lands,
Sydney, 21st August, 1891.

PROPOSED RESUMPTION OF SHOW GROUND AT WALCHA.

IT is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884 it is proposed to revoke the dedication of the land at Walcha, area 9 acres 2 roods 30 perches, viz., section 39, dedicated 30th November, 1877, for the use of the Southern New England Pastoral and Agricultural Association, and hereunder described, with a view to reservation of that area for Show Ground, for the use of the Walcha Pastoral and Agricultural Association.

[Ms. 91-6,575 Dep.] JAMES N. BRUNKER.

DESCRIPTION.

County Vernon, parish of Walcha, town of Walcha, section 29, area 9 acres 2 roods 30 perches: Commencing on the southern side of Jamieson-street, at its intersection with the western side of Pakington-street; and bounded thence on the north by Jamieson-street bearing west 10 chains; on the west by Derby-street bearing south 10 chains; on the south by North-street bearing east 10 chains; and on the east by Pakington-street bearing north 10 chains, to the point of commencement,—exclusive of a lane 30 links wide passing through this land in an easterly direction, the area of which has been deducted from the total area,—plan W. 34-1,493 Roll.

Department of Lands,
Sydney, 21st August, 1891.

PROPOSED RESUMPTION OF TOWN HALL SITE AT WEST BALLINA.

IT is hereby notified, for public information, that, in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of the land at West Ballina, area 2 roods, viz., allotment 1 of section 22, dedicated 15th January, 1886, for Town Hall site, and hereunder described, with a view to the reservation of that area for public buildings, another site having been set apart for Town Hall in the locality in question.

[Ms. 91-6,915 Dep.] JAMES N. BRUNKER.

DESCRIPTION.

County of Rous, parish of Ballina, town of West Ballina, allotment 1 of section 22, area 2 roods: Commencing at the western corner of the section; and bounded thence on the south-west by Swift-street bearing south 74 degrees east 2 chains; on the south-east by the north-western boundary of allotment 2 bearing north 16 degrees east 2 chains 50 links to a lane; on the north-east by that lane bearing north 74 degrees west 2 chains to Norton-street; and on the north-west by that street bearing south 16 degrees west 2 chains 50 links, to the point of commencement. Plan B. 6-1,612.

Department of Lands,
Sydney, 21st August, 1891.

PROPOSED RESUMPTION OF GENERAL CEMETERY AT GUNDURIMBA SOUTH AND DEDICATION AT GUNDURIMBA FOR THE SAME PURPOSE IN LIEU.

IT is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884 and the 41st section of the Crown Lands Act of 1889, it is proposed to revoke the dedication of the General Cemetery at Gundurimba South, area 8 acres 2 roods 4 perches, dedicated 24th October, 1882, and hereunder described, with a view to the reservation of that area for public recreation and to the dedication of 14 acres at Gundurimba, also hereunder described for General Cemetery in lieu.

[Ms. 91-6,573 Dep.] JAMES N. BRUNKER.

DESCRIPTION.

Area proposed to be resumed.

County of Rous, parish of South Gundurimba, town of South Gundurimba, area 8 acres 2 roods 4 perches: Commencing on the south-western side of South-street, town of South Gundurimba, at a point bearing south 24 degrees west and distant 1 chain 50 links from the western corner of allotment 1 of section 2; and bounded thence on the north-east by part of that side of that street, being a line bearing south 66 degrees east and distant 9 chains 81 links to the north-western side of a road 1 chain 50 links wide dividing it from suburban portions 1 and 2; on the south-east by part of that side of that road being a line bearing south 20 degrees west and distant 8 chains 54 links to the north-east corner of an area of 5 acres 3 roods 27 perches, appropriated for police purposes; on the south-west by the north-eastern boundary of that appropriation being a line bearing north 66 degrees west and distant 10 chains 40 links to the south-eastern side of Johnson-street; and thence on the north-west by part of that side of that street being a line bearing north 24 degrees east and distant 8 chains 52 links, to the point of commencement,—as shown on plan catalogued C. 932-1,984.

Area proposed to be dedicated.

County of Rous, parish of South Gundurimba, area 14 acres. Commencing at a point bearing north 25 degrees east, and distant 4 chains 65 links from the most southerly south-east corner of reserve for plantation and extension; thence north 65 degrees west 13 chains 56 links; thence north 9 chains 92·7 links; thence south 65 degrees east 17 chains 75·4 links; thence south 25 degrees west 9 chains, to the point of commencement,—being the area shown as a cemetery on plan catalogued Ms. 195 Gfn.

Department of Lands,
Sydney, 21st August, 1891.

PROPOSED RESUMPTION OF PART OF COMMON AND RECREATION RESERVE AT BATHURST.

IT is hereby notified, for public information, that, in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of that part of the land at Bathurst, dedicated 10th January, 1865, for Permanent Commonage and Public Recreation, within the boundaries of measured portion 160 of 17 acres 2 roods 10 perches, parish of Bathurst, county of Bathurst, as shown on plan catalogued B. 3,347-2,009, with a view to the reservation of that area for Gaol reservoir.

(SECOND SESSION.)

NEW SOUTH WALES.

CROWN LANDS.

(PROPOSED DEDICATION OF CERTAIN LANDS UNDER THE ACTS 48 VIC. No. 18, AND 53 VIC. No. 21.)

Presented to Parliament, under Acts 48 Vic. No. 18, and 53 Vic. No. 21.

Department of Lands,
Sydney, 18th September, 1891.

PROPOSED RESUMPTION OF SCHOOL OF ARTS SITE AT WELLINGTON AND DEDICATION OF SITE FOR FREE PUBLIC LIBRARY IN LIEU.

IT is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, and the 41st section of the Crown Lands Act of 1889, it is proposed to revoke the dedication of the land at Wellington, area 11 perches, viz., allotment 21 of section 77, dedicated 22nd March, 1878, for site for School of Arts, and hereunder described, with a view to sale thereof by auction or other appropriations under the Crown Lands Acts, and to the dedication in lieu of allotment 13 of section 2, town of Wellington, also hereunder described, for site for Free Public Library.

[Ms. 91-7,556 Dep.] JAMES N. BRUNKER.

DESCRIPTIONS.

School of Arts site proposed to be resumed.

County of Wellington, parish of Wellington, town of Wellington, area 11 perches: Commencing on the southern side of Warne-street, at the north-western corner of allotment 14 of section 77; and bounded thence on the north by that street bearing west 1 chain; on the south-west by a line bearing south 31 degrees east 1 chain and 16½ links; on the south by part of the northern boundary of allotment 16 bearing east 40 links; and on the east by the end of a lane 30 links wide and the western boundary of allotment 14 aforesaid, in all bearing north 1 chain, to the point of commencement, to include allotment 21 of section 77,—as shown on plan catalogued W. 44-1,281.

Free Public Library site proposed to be dedicated.

County of Wellington, parish of Wellington, town of Wellington, area 2 roods 9 perches: Commencing at a point on the western side of Lee-street, being the south-eastern corner of allotment 14 of section 2, containing 1 rood 22 perches; and bounded thence on the north by the south boundary of that allotment, being a line bearing north 89 degrees 40 minutes west and distant 3 chains 69 links to the eastern side of a lane 31 links wide; on the west by part of that side of that lane, being a line bearing south 18 minutes west, and distant 1 chain 50·3 links to the north side of Gisborne-street; on the south by part of that side of that street, being a line bearing south 89 degrees 37 minutes east 3 chains 69 links to the western side of Lee-street first mentioned; and thence on the east by part of that side of that street, being a line bearing north 18 minutes east and distant 1 chain 51 links, to the point of commencement, to include allotment 13 of section 2, and shown on plan catalogued W. 57-1,281.

Department of Lands,
Sydney, 18th September, 1891.

PROPOSED RESUMPTION OF CATTLE SALE-YARDS AT TAMWORTH, AND REDEDICATION OF PART THEREOF FOR THE SAME PURPOSE.

IT is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, and the 41st section of the Crown Lands Act of 1889, it is proposed to revoke the dedication of the land at Tamworth, area 4 acres 3 roods 37 perches, dedicated 29th April, 1884, for cattle sale-yards, and hereunder described, with a view to the reservation of 1 rood 32 perches thereof for public pound, and to the rededication of the remainder, 4 acres 2 roods 5 perches, for cattle sale-yards.

[Ms. 91-7,558 Dep.] JAMES N. BRUNKER.

DESCRIPTIONS.

Area proposed to be resumed.

County of Inglis, parish of Tamworth, town of Tamworth, 4 acres 3 roods 37 perches: Commencing on the north-eastern side of a road 1 chain 50 links wide, at the south-eastern corner of James Dwyer's portion 49 of 2 acres 1 rood 9 perches; and bounded thence on the south-west by that road dividing it from part of James Dwyer's portion 50 of 6 acres 3 roods 10 perches bearing south 53 degrees east 2 chains 97 links to Marius-street; on the south by that street bearing east 4 chains 13 links; on the east by a road 1 chain wide dividing it from James Dwyer's portion 47 of 3 acres 32 perches bearing north 8 chains; on the north by a road 1 chain wide dividing it from W. H. Russ' portion 39 of 6 acres 3 roods 5 perches bearing west 6 chains 50 links; and on the west by the eastern boundary of portion 49 aforesaid bearing south 6 chains 20 links, to the point of commencement,—plan catalogued I. 148-1,690.

Area proposed to be dedicated.

County of Inglis, parish of Tamworth, area 4 acres 2 roods 5 perches: Commencing on the north-eastern side of a road 1 chain 50 links wide, at the south-eastern corner of James Dwyer's portion 49 of 2 acres 1 rood 9 perches; and bounded thence on the south-west by part of that side of that road, being a line bearing south 53 degrees east and distant 2 chains 97 links to the north side of Marius-street; on part of the south by part of that side of that street, being a line bearing east 4 chains 13 links to the west side of a road 1 chain wide dividing it from James Dwyer's portion 47 of 3 acres 32 perches; on the east by part of that side of that road, being a line bearing north 8 chains to the south side of another road 1 chain wide; on part of the north by part of that side of that road, being a line bearing west 4 chains 50 links to the north-eastern corner of portion 119, site for public pound, and containing an area of 1 rood 32 perches; thence on part of the west by the eastern boundary of that site, being a line bearing south 2 chains 25 links; thence on the remainder of the north by the southern boundary of that pound site, being a line bearing west 2 chains to the eastern boundary of portion 49 first mentioned; and thence on the remainder of the west by part of that boundary, being a line bearing south and distant 3 chains 95 links, to the point of commencement, being portion 48,—as shown on plan catalogued I. 148-1,690.

Department of Lands,
Sydney, 18th September, 1891.

PROPOSED RESUMPTION OF GENERAL CEMETERY AT KINGSGATE (RED RANGE), AND DEDICATION FOR THE SAME PURPOSE IN LIEU.

IT is hereby notified, for public information, that, in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of the General Cemetery at Kingsgate (Red Range), area 13 acres, dedicated 8th June, 1888, and hereunder described, with a view to that area being reserved for village purposes, and to the dedication in lieu of 12 acres 1 rood 28 perches in the same locality, also hereunder described, for General Cemetery.

[Ms. 91-7,557 Dep.] JAMES N. BRUNKER.

DESCRIPTIONS.

General Cemetery proposed to be resumed.

County of Gough, parish of Rusden, 13 acres: Commencing at a point bearing west 3 chains from the intersection of the northern side of High-street with the western boundary of the suburban lands of the village of Kingsgate, proclaimed 20th March, 1885; and bounded thence on the east by a line bearing north 11 chains; on the north by a line bearing west 13 chains; on the west by a line bearing south 11 chains; and on the south by a line bearing east 13 chains, to the point of commencement,—but exclusive of a road 1 chain wide,—shown on plan catalogued Ms. 4 A.E.

General Cemetery proposed to be dedicated

County of Gough, parish of Rusden, containing an area of 12 acres 1 rood 28 perches: Commencing at a point bearing north 45 degrees west and distant 2 chains $82\frac{8}{10}$ links from the south-east corner of reserve for plantation; and bounded thence by a line bearing west 13 chains; thence by a line bearing north 9 chains $1\frac{1}{2}$ link; thence by lines bearing north 79 degrees 0·6 minutes east 9 chains $51\frac{3}{10}$ links and north 69 degrees 26 minutes east 3 chains $90\frac{7}{10}$ links; and thence by a line bearing south 12 chains $18\frac{1}{2}$ links, to the point of commencement,—but exclusive of a road 1 chain wide.

NEW SOUTH WALES.

CROWN LANDS.

(PROPOSED DEDICATION OF CERTAIN LANDS UNDER THE ACTS 48 VIC. No. 18 AND 53 VIC. No. 21.)

Presented to Parliament, pursuant to Acts 48 Vic. No. 18 and 53 Vic. No. 21.

Department of Lands,
Sydney, 8th January, 1892.

PROPOSED RESUMPTION OF GENERAL CEMETERY AT TAMBAR SPRINGS, AND DEDICATION FOR THE SAME PURPOSE IN LIEU.

It is hereby notified, for public information, that, in accordance with the provisions of the 105th section of the Crown Lands Act of 1884 and the 41st section of the Crown Lands Act of 1889, it is proposed to revoke the dedication of the General Cemetery at Tambar Springs, area 7 acres 3 roods 34 perches, dedicated 18th January, 1884, and hereunder described, with a view to its being made available for conditional purchase, and to the dedication in lieu of 11 acres in the same locality, also hereunder described, for General Cemetery.

[Ms. 92-46 Ind.] HENRY COPELAND.

DESCRIPTIONS.

General Cemetery proposed to be resumed.

County of Pottinger, parish of Tamba, at Tambar Springs, area 7 acres 3 roods 34 perches: Commencing on the northern side of the road 3 chains wide from Tambar Springs to Quirindi and Murrurundi, at a point bearing about north 64 degrees 47 minutes west and distant 59 chains 72 links from the north eastern corner of portion 58 of 560 acres; and bounded thence by part of the road aforesaid bearing west 9 chains 96 links; thence by a line bearing north 8 chains; thence by a line bearing east 9 chains 96 links; and thence by a line bearing south 8 chains, to the point of commencement,—plan catalogued C. 968-1,984.

General Cemetery proposed to be dedicated.

County of Pottinger, parish of Tamba, area 11 acres: Commencing at a point 1 chain 50 links south from the south-east corner of portion 72 of 100 acres; and bounded thence by a line bearing west 12 chains 60 links; thence by a line bearing south 6 chains 12 links; thence by a line bearing east 18 chains; thence by a line bearing north 6 chains 12 links; and thence by a line bearing west 5 chains 40 links, to the point of commencement,—plan catalogued Tambar Springs 2.

Department of Lands,
Sydney, 8th January, 1892.

PROPOSED RESUMPTION OF PUBLC SCHOOL SITE AT MILONG.

It is hereby notified, for public information, that, in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of the Public School site at Milong, area 2 acres, viz, portion 159, in the parish of Milong, county of Bland, dedicated 22nd January, 1886, and hereunder described, with a view to sale thereof by auction.

[Ms. 92-45 Ind.] HENRY COPELAND.

DESCRIPTION.

County of Bland, parish of Milong, area 2 acres, portion 159: Commencing on the southern side of a road 1 chain wide, at a point distant 1 chain southerly from the south-eastern corner of portion 83 of 275 acres 1 rood; and bounded thence on the north by that road dividing it from part of that portion bearing westerly 4 chains; on the west by a line and an eastern boundary of portion 160 of 38 acres, in all bearing southerly 5 chains; on the south by a northern boundary of that portion bearing easterly 4 chains; and on the east by a road 1 chain and 50 links wide dividing it from part of portion 144 of 640 acres bearing northerly 5 chains, to the point of commencement,—plan catalogued P. 1,462-1,978.

Presented to Parliament, under Acts 48 Vic. No. 18 sec. 105, and 53 Vic. No. 21 sec. 41.

Department of Lands,
Sydney, 5th February, 1892.

PROPOSED RESUMPTION OF RECREATION RESERVE AT ATTUNGA, AND REDEDICATION OF PART THEREOF FOR SITE FOR MECHANICS' INSTITUTE.

It is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of the land at Attunga, area 3 acres, viz., portion 200, in the parish of Burdekin, county of Inglis, dedicated 7th January, 1879, for public recreation, and hereunder described, with a view to the rededication of 2 roods thereof for site for mechanics' institute, and to the sale or appropriation of the remainder under the Crown Lands Acts

[Ms. 92-371 Ind.] HENRY COPELAND.

DESCRIPTIONS.

Recreation reserve proposed to be resumed.

County of Inglis, parish of Burdekin, portion 200, area 3 acres: Commencing on the south-western side of a road 1 chain 50 links wide, at the north-eastern corner of portion 201 of 2 acres, site for Public School; and bounded thence on the north-east by that road bearing north 41 degrees 10 minutes west 5 chains 31 links; on the north by a line bearing west 5 chains 77 links; on the west by a line bearing south 4 chains; and on the south by a line and the northern boundary of portion 201 aforesaid, in all bearing east 9 chains 27 links, to the point of commencement. Plan I. 616–1,690.

Site for Mechanics' Institute proposed to be dedicated.

County of Inglis, parish of Burdekin, containing an area of 2 roods. The Crown Lands within the boundaries of measured portion 233 of 2 roods,—as shown on plan catalogued I. 1,235–1,690.

Department of Lands,
Sydney, 5th February, 1892.

PROPOSED RESUMPTION OF MARKET SITE AT DUBBO AND REDEDICATION THEREOF FOR PUBLIC RECREATION.

It is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884 and the 41st section of the Crown Lands Act of 1889, it is proposed to revoke the dedication of the land at Dubbo, area 3 acres, dedicated 17th March, 1876, for market site, and hereunder described, with a view to the rededication of that area for public recreation.

[Ms. 92-370 Ind.] HENRY COPELAND.

DESCRIPTION.

County of Lincoln, parish of Dubbo, town of Dubbo, part of section 13, area 3 acres: Commencing at a point on the eastern side of Brisbane-street, being the north-west corner of allotment 1 of section 13; and bounded thence on south by the north boundary of that allotment and of allotment 6, section 13, bearing east 5 chains to the north-east corner of last-mentioned allotment; thence by part of the western boundary of allotment 4 and part of the western boundary of allotment 5 bearing north 6 chains to the south-east corner of allotment 3, same section; thence by the south boundary of that allotment and allotment 2 bearing west 5 chains to the eastern side of Brisbane-street aforesaid; and thence by that side of that street south, to the point of commencement,—as shown on plan catalogued D. 20–1,349.

1891–2.

NEW SOUTH WALES.

CROWN LANDS.

(PROPOSED DEDICATION OF CERTAIN LANDS UNDER THE ACT 48 VIC. No. 18.)

Presented to Parliament, pursuant to Act 48 Vic. No. 18, sec. 105.

Department of Lands,
Sydney, 23rd February, 1892.

PROPOSED RESUMPTION OF RESERVE FOR CAMPING, PUBLIC BUILDINGS, AND OTHER PUBLIC PURPOSES, AT RIVERSTONE, AND REDEDICATION OF PART THEREOF FOR GENERAL CEMETERY.

It is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of the land at Riverstone, area 25¾ acres, dedicated 22nd January, 1886, for camping, public buildings, and other public purposes, and hereunder described, with a view to the the rededication of 14 acres and 29 perches thereof for general cemetery, and to the reservation of the remainder, 11 acres 2 roods 11 perches, for access.

[Ms. 92-563 Ind.] HENRY COPELAND.

Descriptions.

Area proposed to be resumed.

All that piece or parcel of land situated in the parish of Saint Matthew, county of Cumberland, containing by admeasurement 25 acres 3 roods: Commencing on the left bank of Eastern Creek at the southernmost corner of S. Marsden's 140 acres grant; and bounded thence by the south-east boundary of that grant bearing south 70 degrees west 28 chains 26½ links to the north-east corner of G. M. Pitt's 53 acres grant; thence by the north-east boundary of that grant bearing south 19 degrees 27 minutes east 10 chains 55½ links to the north-west corner of J. Elder's 80 acres grant; thence by the north-west boundary of that grant bearing north 68 degrees 24 minutes east 27 chains 72¾ links to the aforesaid left bank of Eastern Creek; and thence by that bank of that creek downwards, to the point of commencement; but exclusive of the surveyed road 1 chain wide leading from the Blacktown Road to Riverstone, and a reserved road 1 chain wide leading from the aforesaid road to the north boundary of this land, the areas of which roads have been deducted from the total area,—shown on plan catalogued C. 64–2,063.

General Cemetery proposed to be dedicated.

County of Cumberland, parish of St. Matthew, area 14 acres 0 roods 29 perches: Commencing on the north-eastern boundary of G. M. Pitt's 53 acres, at the most western corner of James Elder's 80 acres; and bounded thence by the said north-eastern boundary bearing north 19 degrees 27 minutes west 10 chains 55 links to the south-western extremity of the south-eastern boundary of Samuel Marsden's 140 acres; thence by part of that boundary bearing north 70 degrees east 13 chains 79 links; thence by a line bearing south 20 degrees east 8 chains 80 links to the north-western side of the road from Blacktown Road to Riverstone; thence by the said road bearing south 34 degrees 1 minute west 2 chains 42 links to the north-western boundary of James Elder's 80 acres before mentioned; and thence by that boundary bearing south 68 degrees 24 minutes west 11 chains 94 links, to the point of commencement,—as shown on plan catalogued Ms. 509 Sy.

Department of Lands,
Sydney, 23rd February, 1892.

PROPOSED RESUMPTION OF PERMANENT COMMON AND GENERAL CEMETERY AT LIVERPOOL.

It is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedications of the permanent common at Liverpool, area 296 acres 3 roods 5 perches, dedicated 30th May, 1884, and the general cemetery at that place, area 19 acres and 35 perches, dedicated 12th February, 1889, both hereunder described, with a view to the rededication of parts thereof for public recreation and for show ground, and to the sale or other appropriation under the Crown Lands Acts of the remainder.

[Ms. 92-564 Ind.] HENRY COPELAND.

Descriptions.

All that piece or parcel of land situate in the county of Cumberland, parish of St. Luke, area 296 acres 3 roods 5 perches: Commencing on the right bank of Cabramatta Creek, at the north-western corner of R. Cartwright's 30 acres; and bounded thence on the south-west by part of the north-eastern boundary of that land bearing south 34 degrees 41 minutes 15 seconds east, magnetic, about 17 chains 50 links to the north-western corner of Maria Rock's 40 acres; thence on the south by the north boundary of that land bearing north 89 degrees 21 minutes east, magnetic, 31 chains 68$\frac{3}{10}$ links to the north-eastern corner of that land; thence on the west by the eastern boundary of that land bearing south 49 minutes 51 seconds east, magnetic, 17 chains 11$\frac{2}{10}$ links to the north boundary of E. Bunker's 500 acres; thence again on the south by part of the north boundary of that land and part of the north boundary of E. Bunker's 400 acres bearing north 89 degrees 9 minutes 15 seconds east, magnetic, 22 chains 75$\frac{4}{10}$ links to the south-west corner of Thomas Chipp's 100 acres; thence on the east by the western boundary of that land bearing north 42 minutes 38 seconds west, magnetic, 25 chains 72½ links to the north-west corner of that land; thence again on the

south by part of the northern boundary of that land bearing north 89 degrees 17 minutes 15 seconds east, magnetic, 1 chain to the western boundary of the town of Liverpool, as aligned by plan catalogued L. 2–2,163; thence again on the east by that boundary of the town as aligned by said plan bearing north 42 minutes 15 seconds west, magnetic, 58 chains 38 links to the south-eastern boundary of John Mernagh's 100 acres; thence on the north-west by part of that boundary of that land bearing south 77 degrees west, magnetic, 4 chains 3½ links to a north-eastern corner of Joshua Holt's 100 acres, and by the south-eastern boundary of that land bearing south 24 degrees west 31 chains 49$\frac{9}{10}$ links to the south-eastern corner of that land; thence on the north-east by part of the south-western boundary of that land bearing north 66 degrees west, magnetic, 35 chains 29$\frac{2}{10}$ links to the north-eastern corner of Mary Greave's 30 acres; thence on the west by the eastern boundary of that land bearing south 48 minutes east, magnetic, 20 chains 5$\frac{1}{10}$ links to a south-eastern corner of that land; thence again on north-east by a south-western boundary of that land bearing north 59 degrees 20 minutes 45 seconds west, magnetic, 19 chains; thence again on the north-west by the south-eastern boundary of that land bearing south 37 degrees west, magnetic, about 5 chains 80 links to the aforesaid right bank of Cabramatta Creek; and thence again on the south-west generally by that bank of that creek upwards in a south-easterly direction, to the point of commencement; but exclusive of the Roads and Cemetery sites included within the above-described boundaries, the areas of which have been deducted therefrom,—as shown on plan catalogued C. 41–2,063.

The above was dedicated for permanent common, 30th May, 1834.

County of Cumberland, parish of St. Luke, town of Liverpool, area 19 acres 0 roods 35 perches: Commencing at a point bearing west 1 chain from the intersection of the north side of Scott-street with the east boundary of the Town Common for Liverpool; and bounded thence on part of the east by a line bearing north 40 minutes west 7 chains; thence on the north by a line bearing west 14 chains 7 links; thence on the west by a line bearing south 13 chains 60 links; thence on the south by a line bearing east 14 chains 23 links; thence on the remainder of the east by a line bearing north 40 minutes west 6 chains 60 links, to the point of commencement,—as shown on plan C. 894–1,984.

The above was dedicated for general cemetery 12th February, 1889.

Sydney: Charles Potter, Government Printer.—1892.

TABLE OF CONTENTS.

ANNUAL REPORT.

To the Honorable Sydney Smith, Esq., M.P., Minister for Mines and Agriculture, &c., &c.

Sir,

I do myself the honor to submit to you the following report upon the working of the Department (other than Agriculture), under your control, and also the progress of mining and the results obtained during the year 1890.

The following statement conveys some idea of the clerical work of the Department during the year:—

Statement of the Number of Papers registered and Letters despatched by the several Branches (other than Agriculture) of the Department of Mines.

	Papers Registered.		Letters Written.	
	1889.	1890.	1889.	1890.
Mines proper	28,169	*26,042	16,305	20,918
Lease Branch, applications and plans registered	.....	4,323	.....	.....
Account Branch	11,190	11,813	.....	.....
Stock Branch	15,090	†12,293	5,626	5,832
Water Conservation	9,082	‡11,050	5,300	‡7,248
Prospecting Votes and Chief Inspector of Mines	2,565	3,049 563	1,871	2,013 207
Diamond Drills	4,037	3,548	1,760	1,451
Geological Branch	1,573	1,986	3,536	3,206
	71,706	74,667	34,398	§40,875

*Exclusive of applications to lease. † Returns and circulars not registered this year. ‡ Exclusive of caretaker's reports, gauge readings, and correspondence between Chief Engineer and his officers. § Exclusive of printed forms, circulars, and telegrams.

The work done during the year shows a fair increase upon the previous year, and that without any material increase in the clerical staff. The officers, as a whole, have performed their duties in a highly satisfactory manner, and always cheerfully work after office hours when necessary, for which I take this opportunity to express my thanks and high appreciation. I also desire to express my indebtedness to the Assistant Under Secretary, the Chief Mining Surveyor, the Geological Surveyors, the Chief Inspector of Mines, and the other heads of branches for the valuable and ready aid they have at all times given me in discharging the duties of my office.

With regard to the acquisition of lands for mining purposes:—

The number of applications made to lease Crown lands for mining purposes during the year 1890 including applications for special gold leases, was 2,748, being an increase of 463 as compared with the number of such applications made in 1889.

Of the 2,748 applications so made 1,263 were for auriferous land comprising an area of 10,254 acres 3 roods 29 perches; and 1,485 were for mineral land comprising an area of 75,913 acres.

The number of applications dealt with in 1890 was 2,878, which, compared with the number dealt with in 1889 shows a decrease of 1,277. While keeping in view the necessity of extreme care to guard against the creation of conflicting titles, I have in no wise relaxed my efforts to secure such expedition in dealing with applications as is consistent with safety. The result of my efforts (though seconded by the Chief Mining Surveyor) has not been such as I could desire, but that is, I venture to think, mainly due to the need of reform in the Charting Branch.

Of the 2,878 applications dealt with in 1890, 1,533 were for gold-mining leases, comprising an area of over 13,407 acres, and 1,345 were for mineral leases embracing an area of 81,934 acres.

he

The area of auriferous Crown land applied for in 1890, as compared with 1889, shows a decrease of over 1,054 acres. The area of mineral Crown land applied for in 1890 is greater than the area applied for in 1889 by nearly 3,684 acres.

LAND applied for to Lease during the year 1890, and the Minerals to be mined.

	a.	r.	p.

Tin and diamonds	180	0	0
Tin and emeralds	60	0	0
Tungsten	80	0	0
Wolfram	40	0	0
Total	86,167	3	29

The aggregate area applied for in 1890 is 3,683 acres 3 roods and 13 perches in excess of that applied for in 1889. The increase is chiefly in silver, antimony, silver and lead, and tin. Gold, coal and shale, coal and diamonds show a decrease, while emeralds, tungsten, and wolfram are new.

The following table shows the quantity of Crown land held under application to lease, on the 31st December, 1889, and the minerals proposed to be mined :—

	a.	r.	p.

	77,178 0 4	93,659 0 27½	2,641 1 33	173,478 2 24½

The above table shows a considerable decrease upon the area held uuder lease at the end of 1889. This is probably due to the large number of leases cancelled during the year. The number of leases cancelled during the year either for non-observance of the labour conditions or for non-payment of rent was 2,314 comprising an area of 67,762 acres, of which 1,637 were mineral leases, covering an area of 62,447 acres, and 677 were gold leases, covering 5,315 acres.

The number of applications for permits or authorities under section 27 or 28 of the Mining Act to mine under reserves received during 1890 was 290, being a decrease of 50 upon the number in 1889. The number dealt with in 1890 was 280, being a decrease of 110 upon the number dealt with in 1889.

This table shows the area of reserved lands comprised in permits or authorities granted during 1890, and minerals to be mined thereunder:—

	a. r. p.
Coal	9,997 0 0
Coal and shale	19,782 2 22
Copper	80 0 0
Tin	33 2 0
Antimony	57 1 15
Gold	41 0 16
	29,991 2 13

In many cases the permits or authorities had not actually issued prior to 31st December, 1890. This table shows a considerable decrease as compared with the area granted in 1889.

This table shows the area of reserved lands comprised in authorities granted under sections 27 and 28, which were issued prior to 1890, and the minerals to be mined thereunder:—

	a. r. p.
Coal	21,764 1 23
Coal and shale	649 1 0
Coal, iron, and shale	18 2 16
Shale	8 2 32
Limestone	10 0 0

Bismuth	4	1	7
Marble	5	0	0
Antimony	7	1	15
Shale	8	2	32
Gold	29	2	24
	32,294	2	20

The decreased area shown in the two foregoing tables as compared with 1889 is due to the cancellation of authorities during the year.

The foregoing represents all lands occupied for mining purposes except freehold lands and Crown lands held under miners' rights and mineral licenses. The area comprised in these exceptions represents a considerable area.

The following information in regard to the search for or removal of minerals from alienated lands:—

The number of applications for permits under section 45 of the Crown Lands Act of 1884 to dig and search for gold received during 1890 was 327, being an increase of 7 as compared with 1889. The number dealt with in 1890 was 246, of which 174 were granted and 72 were refused, as compared with 182 granted and 91 refused in 1889. The number of such permits in force at the end of 1890 was 283. The number in force at the end of 1889 was 235.

The regulations under section 98 having been repealed, no applications thereunder were received; but some permits issued under such regulations are still in force.

The number of applications for permits under the Mining Act of 1889 to dig and search for gold or other minerals received during 1890 was 172, and the number dealt with was 164, of which 100 were granted and 64 were refused. The number in force on the 31st December last was 74.

The number of applications for permits under section 7 of the Crown Lands Act of 1884 to remove reserved minerals received during 1890 was 92. The number dealt with was 94, of which 62 were granted and 32 were refused. The number in force on the 31st December last was 150.

The amount received as royalty during the year on reserved minerals was £5,606 10s. 11d. This source of revenue may be expected to reach in the course of a few years a considerable amount.

During the year the returns of gold and Mineral leases, and of authorities under sections 27 and 28, have been published with commendable punctuality. It is much to be feared that the miners do not avail themselves of the information thus supplied to so full an extent as could be desired.

Prospecting Board.

During the year 1890 the Prospecting Board visited the following amongst other places, viz.:—

Albury	Emmaville	Peak Hill
Alectown	Eurongilly	Peel
Barmedman	Forest Reefs	Pyramul
Barraba	Glen Innes	Queanbeyan
Bega	Gulgong	Quartz Ridge
Berrima	Gundagai	Reedy Flat
Bingera	Hargraves	Sally's Flat
Box Ridge	Hill End	Scrubby Rush
Braidwood	Hill Grove	Shoalhaven
Bungendore	Ironbarks	Sofala
Camden	Jew's Creek	Sunny Corner
Canowindra	Junee	Tallewang
Captain's Flat	Lewis' Ponds	Tambaroora
Carcoar	Little River	Tomingley
Cargo	Marulan	Tumut
Cheshire's Creek	Mitchell	Two-mile Flat
Cobargo	Mittagong	Temora
Coolah	Mookerawa	Upper Turon
Coolagalite	Mount M'Donald	Walcha
Cootamundra	Mudgee	Wattle Flat
Clear Creek	Narangaiee	Wellington
Cowra	Nerriga	Windellama
Cobar	Nerrimunga	Windeyer
Crudine	Orange	Woodstock
Dark Corner	Palmer's Oakey	Woodstown
Denisontown	Pambula	
Dubbo	Parkes	

Aid granted in	207 cases.
„ refused in	217 „
Applications not yet dealt with	324 „
	748

The following extracts are taken from Reports by officers instructed to measure up the work of parties aided from the Prospecting Vote.

The Day Dawn Gold-Mining Co., Little River, cut the reef at 200 feet; reef 3 to 4 feet in width, with well defined walls, gold can be plainly discerned in the stone. The Manager reports (30th December, 1890), clearing up at the small mill on Christmas Day after a run of 126 hours. The stone crushed was 26 tons, and the gold obtained 120 oz. 12 cwt. After the next month he expects to be able to bank 250 oz. monthly for a long time to come.

Griffin and Keir's, Mine Boro.—The prospects of this property have improved to such an extent that I (Warden King), am credibly informed that the prospectors have sold to a Sydney syndicate for £500 and a large number of shares. Samples from this mine assayed from 9 oz. 5 dwt. 2 gr. to 666 oz. 18 dwt. 21 gr. silver per ton.

J. R. Everetts' claim at Scrubby Rush.—In the drive from the 125 feet level, about 3 feet in, struck a reef about 20 feet wide, a sort of dyke, and from the appearance of the stone considered to be worth 15 dwt. to the ton.

S. Patterson and party, Blayney, have struck a rich patch, they have obtained 8 oz. of gold from about 1 cwt. of stuff.

The Britannia Co-operative Gold-Mining Co., Forbes.—The reef appears to widen out into a lode about 6 feet wide, composed of what the Manager calls quartz and quartzite. The stone shows gold freely and large quantities of pyrites which also contain gold. The reef in the winze is rather irregular, about 3 feet 6 inches wide, but the stone shows gold freely, and prospects about 3 oz. to the ton.

Anderson and party, Nerrigundah.—At 28 feet 6 inches from the main shaft in the eastern drive a leader was cut running north and south averaging about 4 inches wide. This leader is carrying a very good prospect of loose gold, as shown by a dish panned off in my presence. About 1 cwt. of the stone has been brought to grass and gold can be seen in almost every piece with the naked eye. Had the vein been 1 foot thick it would have been considered a very important find. In view of the above report the Minister was pleased, on the recommendation of the Prospecting Board, to grant further aid to Anderson and party. Warden Maunsell reports at the end of the year that this party, at a depth of 115 feet have struck a very rich lode from 2 to 3 feet wide showing splendid gold in black slate below water level.

James Gins, Coolagalite.—The reef was cut through at the 60 feet level, under laying on the south side of shaft carrying more or less gold. Warden Maunsell reports that 1 ton of ore from Riley's lease, which adjoins Gins, was crushed for a return of 14 oz. 10 dwt.

Gold has been struck in the bore in the flat opposite Lindley's lead Gundagai, in Dodds claim. It is fully anticipated that the Lindley rich lead has been hit in the deep ground, and the flat has been pegged out by various parties. The prospectors have been boring for the lead with the aid of the Government Prospecting Vote, and the result is very satisfactory.

Ellis and party, Oakey Creek, have struck a reef in their tunnel 2 feet wide bearing east and west showing gold freely, assayed 14 oz. to the ton; on 3rd November, they completed their first crushing of 85 tons which yielded 106 oz. superior quality of gold. The reef varies from 2 to 5 feet in width, and was discovered by Ellis and party, assisted by aid from the Prospecting Vote. This is the most valuable discovery that has been made in this district for years past. The Warden reports 500 tons crushed for a yield of 330 oz. retorted gold.

Shield and party, Boney's Rocks.—There is now on the bottom a vein of about 8 inches showing gold freely; also to the west a very rich small vein.

W. H. Pascoe and party, Lunatic Reef.—The reef is about 8 inches wide, and shows gold very freely. A dish of loose rubble from the bottom of the shaft was washed in my presence and several coarse pieces of gold could be seen in the dish and a number of small specimens.

Patrick M'Hugh and party, Bowraville, have again struck the ore at about 12 feet in, and have now a lode of about 3 feet wide to work on. There is a large and rich vein of metallic antimony through the lode which would yield a high percentage of metal.

George Greenaway and party, Dalmorton.—The driving on this claim disclosed a shoot of gold about 16 feet in width, and after passing through 18 feet of barren stone another shoot has been discovered, the extent of which has not yet been proved. I may here state that apart from this claim the Government aid has been the means of opening up another reef, "The Golden Hope," which the prospectors sold to Mr. Beacroft for £500 cash and 5,000 paid up shares. The reef named was opened by Greenaway and party during the time they were prevented working their claim owing to wet weather.

George Fauvel, Nana Creek.—The reef is still well defined, and shows a fair quantity of gold.

Emmett and Hughes, Hill End, took up the ground next to T. C. Suttor and party, who discovered payable gold by aid from the Prospecting Vote, and they are now getting very rich stone.

W. Bursell and party, who were aided from the 1888 Vote, and have worked without cessation ever since, have struck payable gold on the Periwinkle Lead, 3 miles from Gulgong, on the Home Rule Road. They got 2 feet of wash at the 120 feet level showing coarse gold, some of the pieces weighing 15 dwt.

The Mount Browne Gold-mining Co. in the beginning of 1890 had struck at 247 feet wash 12 inches in depth, yielding 5 dwt. to the load. A drive was put in for 170 feet, when a rise of 12 feet to the wash was made. The dirt here is from 5 to 3 feet in depth, and is estimated at half an ounce to the load.

The Lady Mary, Adelong (late Channon and party), who were assisted out of the Prospecting Vote, have just (14/1/90) finished a crushing of 60 tons of quartz from the gap reef for 80 oz. of gold. This is above their expectations, and will cause a fresh impetus to quartz-mining in the Adelong District.

Brankin Ferguson and party, Mount M'Donald, are still following the vein, which is carrying good gold.

W. Ovington, Forest Reefs, sunk through the basaltic rock, cut a splendid wash 4 feet in thickness, carrying payable gold 8 or 10 dwt. to the load, and under that they have struck basalt rock pretty hard and water heavy.

Wilson and Day, Albury, have owing to the subsidy received, been enabled to open up what promises to be one of the most valuable claims in the district.

Rivers and party, near Drake, have opened up one of the richest gold-mines in the Northern district. The body of auriferous matter is from 5 to 6 feet wide. During the year 480 tons were treated for a yield of 1,617 oz. of gold.

P. Myers, Fiery Creek, 1 oz. per ton free gold, 6 oz. per ton of pyrites.

"Nil Desperandum" Reef, Nerrigundah.—This mine which had it not been for the Government aid would have been abandoned, is now considered a valuable property.

These results, I venture to submit, are satisfactory, and reflect credit upon the Prospecting Board, who have spared no pains in the performance of the onerous and important duties cast upon them. They are not only a complete answer to those who condemn the Vote, but are an evidence of the wisdom of the member who first advocated in Parliament the grant of public money for this purpose.

During the year aid was granted to several parties to prospect tracts of country recommended in most cases by the warden of district as likely to contain valuable mineral deposits, and the work of these parties was carried on under the general supervision of the warden; but, though in many instances gold or other minerals were found, the deposits were not sufficiently rich to pay for working.

Mr. David M'Culloch, as Secretary to the Board, in addition to his ordinary work, performed with great credit the very large amount of clerical work connected with the administration of this Vote.

GEOLOGICAL SURVEY.

The Geological Surveyors have inspected during the year many parts of the Colony. Some of the localities were visited in connection with the applications for aid out of the Prospecting Vote.

Mr. C. S. Wilkinson, Geological Surveyor-in-charge, examined the Mittagong and Bowral District and reported on its mineral resources, which embrace iron ores, coal, kerosene shale, stone for building, and road metal, &c. He also furnished a special report on the iron ores of this and other parts of the Colony, pointing out that the deposits available for smelting in the Mittagong and Picton District, contain 8,234,000 tons of ore, chiefly of brown hematite yielding 2,484,000 tons of metallic iron.

Mr. Wilkinson inspected portions of the country between Nowra, on the Shoalhaven River, Jervis Bay, Milton, and the head of the Clyde, and ascertained that the workable coal seams of the last named locality belong to a series of coal-measures geologically lower than the Bulli or Wollongong series, and that therefore these or other seams hitherto unknown, may be found to pass under the Illawarra District. Mr. David and Mr. Stonier, Geological Surveyors, continued the examination of this important part of the Southern coal-field, but had to leave it uncompleted, as their services were urgently required in other parts of the Colony. For the same reason the Geological survey of the Maitland coal-field, upon which Mr. David for several years has been occasionally engaged, remains unfinished.

On 1st May, Mr. Wilkinson left for England, having been commissioned as Geological Director for New South Wales at the International Exhibition of Mining and Metallurgy, London. Mr. J. E. Carne, Curator of the Mining and Geological Museum, who was instructed to accompany Mr. Wilkinson, carried out the detail work of arranging the exhibits. Most of the departmental and private collections of minerals had been sent direct from the New Zealand Exhibition by Mr. Oscar Meyer, the Executive Commissioner, and these were supplemented by certain fresh exhibits collected by direction of the Minister for Mines from Broken Hill and other mining districts. They were all effectively arranged in the south nave and gallery of the Crystal Palace, and this display of our mineral resources has been generally acknowledged to have been superior to that made at any previous exhibition. The Hon. Sir Saul Samuel, K.C.M.G., C.B., Agent-General for New South Wales; Mr. Francis Abigail, M.P.; and Mr. W. Knox, Secretary of the Broken Hill Proprietary Company, took an active interest in the work. This exhibition, while making widely known the nature of our various minerals and the attention which they attracted, will, it is believed, be productive of much good and inspire confidence in our mining industry. Mr. Wilkinson gave several public addresses on the mineral resources of New South Wales. He also visited some of the mining districts and reported upon certain improved mining appliances for coal washing, ore dressing, coking, &c., which he considered might be advantageously introduced into the Colony.

Mr. Carne has also reported on some processes which he inspected; but during his stay in England he was almost in constant attendance at the Mining Exhibition to afford information regarding the mineral exhibits.

The exhibition was open for two and a half months, and during this period 740,000 persons visited the Crystal Palace.

Mr. T. W. E. David, B.A., F.G.S., Geological Surveyor, has been very zealous in his work both in the field and at the head office. He has continued the geological survey of the Newcastle and Maitland Coal-field and reported thereon; has inspected and reported on the kerosene shale deposits at Megalong, Hartley Vale, and near Doughboy Hollow; the coal and iron deposits in parts of the Southern Coal-field; the supposed auriferous basalts near Wyong; the Junction Mines, near Mandurama; parts of the Canowindra, Blayney, and Orange Districts; the tunnelling in granite for the Bathurst Water Supply, which resulted successfully in obtaining a supply of good potable water flowing at the rate of 200,000 gallons per day; the Sunny Corner mining deposits; the Narrabeen Gas and Cremorne Diamond-drill bores, &c. As a member of the Prospecting Board he has dealt with many of the applications for aid out of the Prospecting Vote. During the absence of Mr. Wilkinson, in England from the 1st May, Mr. David took charge and ably directed the work of the Geological Branch, which necessitated his close attention to the office duties in Sydney.

Mr. W. Anderson, Geological Surveyor, as a member of the Prospecting Board, dealt with applications in the northern, western, and southern districts. He has also furnished reports on the boring for artesian water near Nyngan; the geological features of Peak Hill; the new Pambula Gold-field; the Dromedary Gold-field; the Great Southern Silver Mine, near Grenfell; the Jingellic Silver Mines; the Cargo Gold-field; and attended to the office work in Sydney during the absence of Mr. Wilkinson and Mr. David.

Mr.

Mr. Geo. A. Stonier, C.E., Geological Surveyor, besides inspecting and reporting upon certain cases in some of the gold and coal fields, has assisted Mr. David both in the field and at the office. He acted as Curator for some time during Mr. Carne's absence in England, and prepared and arranged collections of minerals for display at the Muswellbrook, Narrabri, Tamworth, and Ballarat Exhibitions, which latter necessitated his visiting the Hillgrove, Broken Hill, and other mines to secure suitable exhibits. He also supervised the treatment of five different parcels of ore sent to the Clyde Works by the Prospecting Board.

The Palæontological work of the Geological Survey has been continued by Mr. Robert Etheridge, junior. The following memoirs of the Palæontological series have been published during the year, the issue of which reflects much credit upon the Government Printer's Department:—

No. 3: Geological and Palæontological relations of the coal and plant-bearing beds of Palæozoic and Mesozoic age in Eastern Australia and Tasmania, by Ottaker Feistmantel, M.D.

No. 4: The Fossil Fishes of the Hawkesbury series at Gosford, by Arthur Smith Woodward.

No. 7: The Mesozoic and Tertiary Insects of New South Wales, by R. Etheridge, junior, and A. Sydney Olliff.

No. 8: Contributions towards a Catalogue of Works, Papers, and Reports on the Anthropology, Ethnology, and Geological History of the Australian Aborigines by R. Etheridge, junior.

Part 1 of Memoir No. 5, on the Corals of the Permo-Carboniferous Invertebrata of New South Wales, by Mr. Etheridge, is in the printer's hands; and part 2 of this work, containing the Echinodernata, and Nos. 6 and 9, are in progress. The index to vol. I of the Records of the Geological Survey of New South Wales, and parts 1 and 2 of vol. 2 have been published. They contain, amongst others, seven papers by Mr. Etheridge, who has also edited each of the above-mentioned publications.

Mr. J. E. Carne, F.G.S., Curator and Mineralogist, reports that of the numerous samples of minerals and water which were received and examined, chiefly on behalf of mining prospectors, 3,323 samples were sent on to the laboratory for assay or analyses. Reports on each were furnished. The information thus afforded must be a valuable aid to the development of mining. Another means of imparting useful information is the providing collections of typical mineral specimens for exchanges with other countries and for reference at the Schools of Arts or other public institutions. It is intended to supply these reference collections to all the principal mining towns and the Technical Schools in the Colony as soon as sufficient duplicate specimens have been obtained for the purpose. Collections of minerals have also been prepared by Mr. Carne and other officers of the Geological Branch, and displayed at various exhibitions in the Colony, the Industrial Exhibition, Ballarat, and at the International Exhibition of Mining and Metallurgy, London. In reference to the latter, Mr. Carne deserves much credit for the manner in which he carried out the arrangement of the mineral and timber exhibits.

Numerous specimens have been added to the collections of the Mining and Geological Museum, but they cannot be displayed, and have to be packed away, owing to want of more room than the present inadequate Museum building affords. During his absence from the Colony Mr. Carne visited some of the principal Museums, and reports that he has obtained much useful information regarding Museum management.

The library of the Department has received many additional works, partly in exchange for the publications of the Department and partly by purchase. Owing to the increase in the duties of Mr. Carne, who has hitherto received and registered the books of the library, Mr. Robert Etheridge, palæontologist, has been appointed librarian. Mr. Whittell has been very energetic in carrying on much of the work in the office of the curator during the absence of the latter in England.

A large amount of work has been performed in the laboratory by Mr. Mingaye, F.C.S., analyst and assayer, and his assistant, Mr. White; no fewer than 3,323 samples having been submitted for assay or analysis. Mr. Mingaye furnished an important report upon analyses of some of the cokes manufactured in the Colony. Particulars of the assays and analyses are given further on in this report under the heads of the different minerals and waters to which they refer.

The caves in different parts of the Colony are increasing in public importance now that better roads to them and improved accommodation are provided. Many improvements in and about the caves for the safety and convenience of visitors have been carried out during the year, and at the Wombeyan

and

and Yarrangobilly Caves new accommodation houses have been erected. At Jenolan Caves, the keeper, Mr. Jeremiah Wilson, has discovered another very fine cavern. New caves have been discovered in other parts of the Colony, viz., at Bendithera, near Moruya; Kybean, near Cooma; and Jerrara, near Marulan. Descriptions of these are herewith given in the Progress Report of Mr. W. S. Leigh, the Superintendent of Caves.

Mining Surveys, &c.

The total number of mining surveys made during the year 1890 was 1,718, comprising 939 gold-lease portions, 636 mineral lease portions, 102 mining permits, and 41 mining tenements. This is the smallest number that has been dealt with since the year 1887, when the total was 1,418. The small number of surveys made during the year is mainly due to the fact that they were more scattered than in previous years, there being few large rushes in 1890. Thirty-two surveyors were employed, 8 of whom were in receipt of salary, the remainder being paid by fee. On the 1st January, 1891, there were 375 lease applications awaiting survey.

In the Charting Branch there were received during the year 2,581 applications for gold and mineral leases, and 2,554 were finally dealt with during the same period. 195 new applications under the 28th section of the Mining Act of 1874 were received, and 235 were finally dealt with. The number of cases dealt with in 1890 is considerably less than in 1889, due to the fact that the overtime contract work was discontinued during the year, though the number of draftsmen has since that event been increased. Eighteen parish maps were compiled, and assistance was rendered to the Lands Department in the compilation of 13 others, as per accompanying list.

Return of Compiling Work for 1890.—New Maps compiled.

Parish.	County.	Parish.	County.
Coolamigal	Roxburgh.	Somers	Bathurst.
Cullen Bullen	„	Toogong	Ashburnham.
Mingelo	Narromine.	Mitchell	Clarke.
Cooney (2nd edition)	Sandon.	Seeley	„
Metz (2nd edition)	„	Sara	Gresham.
Edgar (3rd edition)	Yancowinna.	Umberumberka	Yancowinna.
Bray (3rd edition)	„	Coally	Evelyn.
Bomangaldy (2nd edition)	„	Orr	„
Naradin (3rd edition)	„	Milring	„

During the year arrangements were completed with the Survey Branch of the Lands Department to avoid the unnecessary duplication of compiling work in the two departments. Under the new arrangements, maps compiled in the Lands Department, and which show mining measurements, are now prepared in accordance with a system mutually agreed upon, and proofs of same are forwarded to this Department for revisal before publication.

The following is a list of the maps so prepared, revised, and adopted as mining maps during the year:—

Parish.	County.	Parish.	County.
Jamieson	Cook.	Stowell	Gloucester.
Arvid	Gough.	Yowaka	Auckland.
Bloxsome	„	Muckerwa	Wellington.
Bald Nob	„	Albury	Goulburn.
Heathcote	Cumberland.	Tumberumba	Selwyn.
Southend	„	Eumur	Darling.
Coolamin	Wellington.		

The local offices (warden's clerks, &c.) have been supplied with 674 copies of mining maps charted up to date during the year.

A large proportion (about 300) of the plans of mining tenements (previously undealt with) have been systematically dealt with, and charted on the office maps in this Department and in the Department of Lands.

INSPECTION OF MINES OTHER THAN COAL-MINES.

The Chief Inspector of Mines (Mr. Slee, F.G.S.), reports 16 fatal and 21 non-fatal accidents in metallic mines during 1890, an increase as compared with 15 fatal and 16 non-fatal in 1889; though in regard to fatal accidents the percentage is lower in 1890, being ·072 as compared with ·08 in 1889. In 1890 there was 1 fatal accident for every 1,384 miners employed. The percentage of non-fatal accidents in 1890 was higher than in 1889, being ·094 as compared with ·085. In 1890 there was 1 non-fatal accident for every 1,055 miners employed.

Of the fatal accidents in 1890, 6 were caused by falling down shaft, 4 by falls of earth, 4 by explosives, 1 by dynamite fumes, and 1 by scalding.

Of the non-fatal accidents in 1890, 8 were caused by explosives, 5 by material falling down shaft, 4 by fall of earth, and 4 from various causes.

During the year the mines in the following localities were inspected:—

By the Chief Inspector.

North—Maitland, Hillgrove, Armidale. South—Nerriga, Braidwood, Queanbeyan, Bungendore, Gundaroo, Goulburn, Mittagong, Joadja, Yalwal. West—Orange, Lewis Ponds, Mount M'Donald, Woodstock, Cowra, Broula, Lyndhurst, Sunny Corner (Mitchell), Clear Creek, Bathurst, Wattle Flat, Sofala, Palmer's Oakey, Hill End, Quartz Ridge, Pyramul, Windeyer, Hargraves, Mookerawa, Wellington, Dubbo, Tomingley, Peak Hill, Alicktown, and Parkes.

By Inspector Rue.

Broken Hill, Pinnacles, Thackeringa, Umberumberka, Day Dream, Purnamoota, Mount Gipps, Black Mountain, and Corona.

By Inspector Milne.

Sunny Corner, Wattle Flat, Sofala, Hill End, Pyramul, Windeyer, Hargraves, Peak Hill, Parkes, Forbes, Grenfell, Canowindra, Young, Pambula, Bega, Dromedary, Wagonga, Nerrigundah, Moruya, Araluen, Braidwood, Major's Creek, Little River, Boro, Bungendore, Captain's Flat, Hillgrove, Stewart's Brook, Dennison, Tamworth, Nundle, Hanging Rock, Bowling Alley Point, Walcha, Niangala, Glen Morrison, Uralla, Melrose.

The report of the Chief Inspector appended hereto contains matter of considerable interest.

DIAMOND DRILLS AND WATER AUGERS.

Under the supervision of Mr. Slee, F.G.S., the working of the diamond drills during the year was satisfactory. The aggregate depths bored during the year was 7,857 feet 4 inches, being 3 feet 6 inches in excess of the depth in 1889. The average cost per foot in 1890 was 14s. 5$\frac{3}{16}$d. per foot, as compared with 14s. 3$\frac{1}{4}$d. per foot in 1889. The cost per foot in destruction of diamonds in 1890 was 7$\frac{3}{4}$d., as compared with 1s. 3$\frac{1}{8}$d. in 1889. The aim being to perform the work of boring at such a price as will cover the cost of working, so that the persons who employ the drills, and who, as a rule, are prospectors engaged in developing the mineral resources of the Colony, shall reap the fullest benefit of the drills provided by the State. It is, therefore, gratifying to find that the operations of the year have resulted in a credit balance of only £83 1s. 11d. showing how closely the estimates of cost fixed by the Superintendent have approximated the cost.

The work of the Water Augers has been delayed during the year by reason of the want of tubing. There are at present only two bores in progress, namely, one at the 106-mile, and one at the 121-mile on the Wanaaring to Milparinka Road. The former has now reached 1,206 feet 6 inches, and the latter 1,112 feet 8 inches. The depth bored during the year was 497 feet 4 inches, at a cost per foot of 32s. 0$\frac{3}{8}$d. per foot The water auger will, probably, at no distant date, be entirely superseded by the various makes of well borers, but in the meantime, though slow, they have done good work in very dry country, where, so far, it has not been possible to get owners of well-borers to undertake the work. It is hoped that the two bores in progress will shortly reach artesian water, as the depth already reached severely taxes the powers of the augers, and it requires the utmost skill and care to avoid mishaps.

Mr. Slee in addition to performing ably the duties of Chief Inspector of Mines and Superintendent of Diamond Drills and Water Augers, has discharged the duties of Warden at Peak Hill for some months.

The staff under Mr. Slee in the office, the store, and the field, work with a zeal which is deserving of all praise.

Mineral Products.

The aggregate value of the mineral products of this Colony to the end of 1890 amounted to £86,881,953. The value of such products for the year 1890 was £5,283,840, being an increase of £503,474 upon the value of minerals raised in 1889. This is a most gratifying result, when it is remembered that during the year a strike occurred which for a time paralysed more than one branch of mining, and caused a reduction in the output of our Coal-mines to the value of £353,759 16s. 1d. The greatest increase is, as might be expected, from our Silver-mines; but, perhaps, the most interesting increase is in our output of gold, that for 1890 being the largest since 1882. There are grounds for believing that if the fields recently opened be properly worked our output of gold will continue to increase for some years to come. The increase in the output of antimony indicates that more attention is being given to our important deposits of that mineral, and as soon as a practicable method of separating the gold from our antimony ores shall have been introduced, it may fairly be expected that the output will be very largely increased. In the return for the year 1890 are mentioned alum, of which one important deposit has been opened; limestone for flux, which will probably soon employ a large number of men; and opals, emeralds, and diamonds may be expected to increase our mineral products in the near future.

The following table shows the aggregate value of minerals, the produce of New South Wales for the years 1889 and 1890 respectively compared :—

Minerals.	Quantity.	Value.	Quantity.	Value.	Increase in Value.	Decrease in Value.

* The greater part of the silver produced is exported in the shape of silver lead and ore. † Not manufactured from the ore, but old iron.

2,225 carats emeralds were got at Emmaville, value not ascertained; but some of the gems have been sold in London at the rate of £1 per carat.

The value of the mineral products in 1890 exceeds the decennial average by £1,866,056.

The

The following Return shows the quantity and value of Gold, Coal, Shale, Copper, Tin, Silver, Silver-lead Ore, Iron, Antimony, Asbestos, and Bismuth, &c, &c, produced in the Colony of New South Wales during the last ten years —

Gold.

The output of gold, from the opening of the gold-fields to the end of 1890, amounts to 10,220,116 oz., valued at £38,075,172 5s. 7d. The output for 1890 was 127,760 oz, valued at £460,284 16s. 2d., being the largest since 1882, and exceeds the decennial average by 10,604 oz, valued at £30,502. The auriferous country at Pambula bids fair to add considerably to our gold yield, and we may fairly expect a considerable

considerable addition from Peak Hill when the mines get into full work. If some inexpensive method be found of treating pyritous and other gold ores many deposits which are now neglected might be worked, and it is therefore highly desirable that the attention of experts be attracted to this branch of mining industry. I look forward to a large yield of gold from the extensive deposits which are found in the vicinity of some of our rivers, as soon as the difficulty of bringing water to bear upon such deposits shall have been overcome.

The following extracts, taken from the reports furnished by the Wardens and Mining Registrars, indicate the condition of mining in the several districts during the past year :—Bathurst District: Sunny Corner division—gold won £1,877 15s.; Sofala division—gold won £14,568 19s. 6d.; Tuena division—£5,812 10s.; Trunkey division—£4,124 16s. 3d.; Mount McDonald division—£3,249 13s. 5d.; Bathurst, Burraga, Oberon, and Rockley divisions—value of gold won £1,368 3s. 4d. Orange—The Queen of the Mount, near Ophir, is producing a satisfactory return for the labour expended. At Forest Reefs, Ovington and Co. (aided from the Prospecting Vote) came upon good wash at 96 feet deep, but not supposed to have reached the bottom yet. In the Cowra North division, Firth and party crushed 36½ tons for 27 oz. 5 dwt., and from McInnes' freehold, Tenandra, 21 tons gave 6 oz. 5 dwt. per ton, and now crushing 50 tons expected to yield 1½ oz. per ton. At King's Plains, the tributors of North Confidence Co., just started, had one crushing which gave 43 oz. of gold; the lode is 30 feet wide, and averages 3½ dwt. per ton.

Mudgee District: At Hargraves, the Big Nugget Co. crushed, for various small parties, 160 tons of quartz for 306¼ oz. McGregor and party obtained 33 oz. from 30 tons of quartz. The quartz crushed from the Homeward Bound line averaged 3 oz. per ton. The following notes, furnished by the Manager, are inserted, as showing how an abandoned mine may, by good management, be made to pay :—

DESCRIPTION OF THE MITCHELL'S CREEK FREEHOLD GOLD ESTATE, WELLINGTON, N.S.W.

This well-known ground, which has been the property successively of a public company, of two absentee owners, and now of a private co-partnery of four (one being resident), occupies the spot from which gold-bearing stone was said to have been obtained, as early as 1848, by a shepherd from Montefiores named MacGregor *(vide* Professor Liversidge's "Minerals of New South Wales," page 33), and has been worked as far back as twenty years ago.

The ground comprises an area of 600 acres freehold land, situated close by the Wellington to Gulgong road, about eight miles from Wellington township, in the parish of Bodangorra, and overlying the divisional line between the counties of Bligh and Lincoln. It is traversed by a strong quartz reef, between walls of hard black diorite, exceedingly well defined, and with every indication of a permanent character.

The supply of quartz, which appears inexhaustible, is highly auriferous, and is associated with minerals of considerable value—viz., iron and copper pyrites, galena, zincblende, magnesia, alumina, a little carbonate of lime, a little cobalt, and talc; an almost constant average of 18 dwt. gold, 6 oz. silver, and about 5 lb. copper being contained per ton of this lode-matter.

The reef, which is traceable a length of 8,000 (eight thousand) feet—viz., for the whole extent of the estate—underlies to the east at an angle of 45°, its strike being N. 15° west, and has an almost invariable width of 2 feet. Owned originally by a Sydney company, the old "Mitchell's Creek Gold Mining Company," and subsequently by Messrs. J. B. Rundle and S. D. Gordon, it was worked at intervals between 1869 and 1881. During these twelve years 2 (two) portions from a central point upon this long line were extensively worked—viz., southwards about 1,600 feet in length, and to various depths, from 100 to 360 feet; and northwards, up-hill, for about 1,800 feet in length, and to depths varying from 90 to 140 feet; the extremities, both northern and southern, remaining unworked. These operations took place chiefly under a tribute system, the reef being let, in respect of the free gold (but the pyrites being entirely reserved by the proprietors) in sections of 150 feet per working party, upon a royalty of 15 (fifteen) per cent. of the gold obtained. This arrangement appears to have served well in the upper portions of the reef—naturally the most abundant in free gold—but to have led to prompt cessation of work on the part of the tributors at such points as sulphides began to predominate in the vein-stuff. These workings, completely stoped-out (underhand) from the surface thus exhibit an extremely uneven line of depth. Upon reaching the water-level operations were discontinued. For the following eight years (1881–1889) no effort was made to resume working the reef, regarded by the owners as consisting thenceforward almost exclusively of sulphides too intricate to treat with profit. In 1889 the estate was purchased by the present proprietary (Messrs. Phillip Davies, T. M. Dalveen, and J. M. Findlay, of Sydney,

Sydney, and James Dick, of Glasgow) for the purpose of reopening the mine. By these owners a shaft upon the southern workings has been enlarged and carried down to 440 feet (327 feet through former workings and 113 feet through solid lode), the resources of the mine at this deeper level being thus clearly ascertained, and two levels have been extended below the former workings at depths of 327 feet and 400 feet respectively, these having reached a distance of 220 feet and 213 feet respectively in payable quartz along the entire length opened. At the lower end of the northern workings a similar shaft (No. 2) has been commenced, which will enter the solid at a depth of about 140 feet. On the deeper level reached by present workings the reef averages 2 feet 4 inches over the whole extent of that level, and the quartz here is being found more highly mineralised.

The stone (some 30,000 tons) taken out in former years, is recorded to have yielded in free gold about 8 dwt. per ton —a little over 1 dwt. per ton more being accounted for in pyrites. That undue loss had occurred appears from the vast heap of tailings, the whole mass of these averaging 8 dwt. fine gold and about 9 dwt. silver per ton, and containing an inordinate quantity of escaped quicksilver. A consideration of the difficulties thus apparently experienced by former proprietors has influenced the present owners in the arrangement of their plant. This, though as yet only on a preliminary scale, is of a very substantial and valuable kind, comprising the most improved mechanical appliances for gold saving; an extreme measure of care being bestowed on the amalgamation, which is necessitated by the very finely-divided nature of the gold, not the slightest particle being visible in the stone.

The crushing and concentrating plant consists of a 15-head stamper battery (weight of stamps, 784 lb.; length of drop, 8 in.; speed, 75 drops per minute), discharging through screens (of 180 holes to the square inch) on to an inclined table in front of each (5-head) stamper-box (length of table, 10 ft.; width, 4 ft. 8 in.; pitch of table, 1¾ in. per ft.). Electro-silvered copper-plates (2 oz. electro-silver per super. foot) cover 8 ft. 2 in. in length of each table (width, 4 ft. 8 in.), the size and spacing of plates being as follows:—Top-plate, 1 ft. 6 in.; space, 1 ft. 8 in. (occupied by wooden distributing-lozenges); 2nd plate, 5 ft. 0 in.; ripple, charged with mercury, here intervenes; 3rd plate, 1 ft. 8 in.; bottom ripple, charged with mercury, here ensues. Superficial area per table, occupied by electro-plates, 38 ft. 2 in. An inclined wooden shoot, at right-angles to the tables, and 400 ft. in length, connects the battery with the grinding and concentrating works, and conveys the pulp from battery to the latter. Small electro-plates, 1 ft. long 4 in. wide, are laid at several points in this narrow shoot, in transit through which the pulp from battery undergoes a very marked amount of friction, resulting in the cleansing and liberation of much free gold that has resisted amalgamation in the boxes or on the battery tables. The shoot discharges into two Lamberton grinding mills (horizontal), four heavy balls in each mill revolving in a circular "race," which is charged with mercury. These discharge through fine-wire screens on to inclined tables (length, 8 ft.; width, 5 ft.; pitch, 1¾ in. per ft.) having 6 ft. each of electro-silvered copper-plates (size and spacing:—Top-plate, 3 ft.; space (unoccupied), 2 ft.; bottom plate, 3 ft.; superficial area per table, occupied by electro-plates, 32 ft.). From this point launders and pipes distribute the pulp to 6 (six) small electro-plated copper troughs, discharging over another electro-copper plate on a wooden "distributing-apron" attached to Frue-Vanner concentrators, the amalgamation ending here. Of the gold saved in passage through this process, less than 2½ per cent. (two and a half per cent.) is arrested in the battery-boxes, 75½ per cent. (seventy-five and a half per cent.) on the battery-tables (on plates 71¾ per cent., and in ripples 3¾ per cent.), and 22 per cent. (twenty-two per cent.) at the grinding shed (in mills, on plates, and in Frue-Vanner feed-troughs). Six (6) smooth-belt Frue-Vanner concentrating machines receive the residue from "distributing-apron" plates, and separate almost the entire mineral sulphides from the gangue, the tailings thence passing over blankets covered by wire-netting (forming a universal ripple over them) laid upon two wide slime tables slightly inclined. The slimes collected by these tables are periodically retreated, from the grinding-mill downwards. The final tailings from the whole process average 1 dwt. 15 gr. per ton.

The concentrates withdrawn hour by hour from the Frue-Vanner machines are freed of moisture by moderate heating in a brick drying-furnace, being then immediately filled into strong canvas bags. These are despatched for the meantime to public chlorination works for further treatment.

Prior to completion and start of this full plant in June last, the present owners ground and concentrated 2,188 tons of the former owners' tailings, yielding a value of £1,166 14s. 10d. From June 24th to December 24th, 1890 (the past half-year), they crushed from the reef (327 ft. and 400 ft. levels, No. 1 shaft), 2,362 tons of quartz and 17 tons of old tailings, or 2,379 tons in all, yielding 1,396 oz. 2 dwt. 9 gr. smelted gold bullion (value £4,829 5s. 7d.) and 551 oz. 0 dwt. 20 gr. fine gold (in concentrates), value £2,204 16s., or a total of 1,947 oz. 3 dwt. 5 gr., value £7,034 1s. 7d. An average has thus been obtained, in free gold, of 11 dwt. 18 gr. per ton, and in pyrites, of 4 dwt. 15 gr. per ton, or 16 dwt. 9 gr. in all, while only 1 dwt. 15 gr. per ton escapes in tailings. An average of 9½ tons quartz was crushed per week (several stoppages in early part of period reducing the mean considerably), 4 tons 16 cwt. 9 lb. being concentrated therefrom, showing a percentage of 5¼ per cent. pyrites. These concentrates, amounting for the six months to 124 tons 18 cwt. 21 lb., averaged 4 oz. 8 dwt. 4 gr. fine gold, 7½ oz. silver, and 4·82 per cent. copper per ton, and therefore contained as by products, 930 oz. silver, (value, £174 7s. 6d.) and 5¾ tons of copper (value, £287); no return for these, however, is allowed by the Chlorination, Co., who purchase the concentrates.

The large amount of sulphides in the stone combined with the extreme fineness of the gold, make incessant attention to the copper plates necessary. Though the stamper boxes are charged with mercury, not 2½ per cent. of the gold is retained by them. Care is therefore bestowed in keeping the copper plates in constant order. These are dressed 3 (three) times daily (morning, noon, and evening) invariably, a clear surface being thus preserved. As 71¾ per cent. of the gold obtained during the last half year has been saved on them, these measures are of high utility. A very small proportion (only 3¾ per cent.) of the gold saved, results from the ripples (or mercury wells), of which there are two on each table, one at the middle, and one at the lower end. A total superficial area of 114 feet 4 inches is covered by the copper plates (at battery), yet past these, with the six (6) mercury wells, and quicksilver in the battery boxes, and notwithstanding painstaking attention to the amalgamation, over 22 per cent. of the gold escapes. This flows over 100 yards before it is arrested on the second set of amalgamating tables and wells (at the lower shed) comprising a total superficial area of 64 feet of electro copper plates (stationery), and about 12 feet in oscillating troughs. Proportionately to each, 5-head of stampers, there is thus in all a super area of 59¾ feet of stationery electro plates, two stationery mercury wells, and two oscillating electro-plated copper troughs, besides mercury in the Lamberton grinding mills, where pulp from the battery is rough-ground. "Cleaning up" is carried out with very great regularity; amalgam being removed once, weekly (Saturday), from the tables only; once fortnightly, from tables and ripples; once monthly, from all sources, including battery boxes, plates in long shoot, oscillating copper troughs, &c.

An interesting feature in the present owners operations has been the variation in the value of the gold which, commencing at £3 2s. 3¾d. per oz. in July, has risen progressively throughout the half year to £3 10s. 5d. per oz. the mean for this period being £3 8s. 8¾d. A corresponding variation of the percentage of gold contained by the amalgam is also notable. This, beginning in July at 18·87 per cent. (much less than a fifth), progressed steadily reaching in August, 26·00 per cent (over a quarter) in September, 33·33 per cent (one third) in October 37·53 per cent. (three-eighths) since which it has been constant at 33 to 34 per cent. The mean for the six months has been 30·16 per cent.

The water supply is obtained from the Mitchell's Creek on the northern extremity of the estate, about a mile and a quarter from the battery. A Blake pump at this place, steamed from an 8-horse power vertical Tangy boiler, forces the water through 4-inch pipes along the above distance to a small reservoir dam behind battery. To assist this supply, which is variable, a tailings pump at the concentrating works returns the waste water from there, leaving the sand to settle.

The drainage of the mine is affected by the pumps at the No. 1. and No. 2. shafts, the discharge from the latter also serving as an auxiliary supply to the battery. The steam winding and pumping plants at these shafts are both alike and haul a ¼ ton truck on the underlay by steel wire cable from the extreme depth of the shaft. The entire plant erected by the present owners, comprises 5 boilers (aggregating 88-horse power) and 5 engines besides the Blake steam pump, 22 cords of fire-wood (128 feet per cord) are consumed weekly, amounting to £14 17s. 6d. The owners crush on the average 18½ tons a day. The total cost of working, including the management and the heavy charges incidental to realisation of the concentrates, is £182 per week, the average number of men employed being 63. The reef being of fair size, remarkably even, and free from disturbances or faults, it is easily and cheaply timbered. So firm is the ground that the short props placed years ago in the underhand stopes worked by former company, and open to the surface, are still intact. The stone is tough to work and hard to crush. Its extreme hardness is best shown by the consumption of charcoal for sharpening drills (which is a considerable item of expense and keeps one smith constantly employed), and by the large consumption of explosives (averaging for the half year 1s. 4¾d. per ton of the stone raised). Miners of a kind adapted to this ground not being easily procurable, the owners have experienced much difficulty in gathering a good staff of diligent, practical miners around them. After many changes, this seems at last to have been secured. The most powerful explosives and most efficient drill-work are indispensable to success, and a valuable Air rock drill plant (McCulloch's "Rio Tinto") which is being imported by the owners, is relied on to materially reduce the cost of breaking out stone in the next half year, besides rapidly extending the various levels. From

From the present solidity of this lode and its well defined walls from grass, to the extreme depth (440 feet) reached, and throughout the distance (over 3,400 feet) blocked out to various depths by the former companies, it is evidently capable of producing vast supplies of stone for considerable time and justifies the confidence that it will continue to a great depth. To the constant personal supervision, forethought, and acumen of the resident owner (and general manager) Mr. Philip Davies, it is owing that this abandoned mine, now gives promise of ranking as the premier auriferous pyrites quartz-mine of New South Wales.

STATEMENT of Battery Crushings for half-year, 24 June–24 December, 1891, work of 15 head of Stampers.

The plant and machinery may be described as follows :—

Winding and pumping plant, No. 1 shaft, comprises vertical Tangye boiler of 10-horse power, steaming horizontal Tangye engine, with winding gear attached ; also pumping gear, working two 18-inch by 5 pumps, with two connecting-rods (of steam gas-pipe) and 3-inch delivery pipe. The rods rest on friction pulleys, the shaft going down on the underlay of lode at an angle of 45°. The pump draws the water from depth of 437 feet in one column. A substantial steel rail tramway is laid from top to bottom of the shaft upon which the trucks are hauled by means of steel-wire rope attached to drum of the winding gear. This plant is entirely under a substantially-built wooden shed, covered with galvanised iron.

Winding and pumping plant, No. 2 shaft, is a sister plant to the above described.

Crushing plant, erected on the machinery site of the former company, about midway along the reef, consists of a new 27 feet x 6 feet Cornish boiler, with Galloway tubes seated in solid brickwork, and the flues connected with a substantial brick stack ; an 18-inch horizontal engine, driving 15-head stamper battery (weight per stamper, 784 lb.; length of drop, 8 inches; speed, 75 drops per minute) ; inclined wooden tables, 10 feet long, 4 feet 8 inches wide, 1¾ inch per foot pitch, with two mercury wells on table—one in middle, one at lower end—the intervening space covered by electro-silvered copper-plates (2 oz. electro-silver per super. foot), in length 8 feet 2 inches, in width 4 feet 8 inches, in front of each box, the remaining space —1 foot 8 inches upon each table—being occupied by wooden "distributing-lozenges."

Grinding and concentrating plant, about 400 feet distant from battery, and connected with same by narrow wooden shoot, conveying the pulp from stampers. This comprises one 20-horse power double-cylinder Marshall's portable engine, driving two Lamerton grinding mills imported from Glasgow. These regrind the tailings after the stampers, and discharge on to inclined tables, 8 feet by 5 feet, with pitch of 1¾ inch per foot, covered by electro-silvered copper-plates in following order :—Top of table, 3-foot plate ; space of 2 feet unoccupied ; bottom plate, 3 feet. Distributing shoots (wooden launders) and pipes deliver pulp from grinding mill tables to 6 Frue-Vanner concentrating machines, driven by a Tangye vertical 5-horse power engine, steamed from the Marshall's portable boiler. Two 7-inch plunger sand pumps, driven from the 20-horse power portable engine, return waste water from the tailings dam to the reservoir at battery through 4-inch cast-iron pipes, distance 550 feet.

Both battery and concentrating plant is supplied by a line of 3-inch pipes laid down between supply-reservoir and the concentrating shed. The concentrating shed is very substantially built, and measures 100 feet long by 60 feet wide, and 20 feet high, to the wall plates. Nearly the whole floor is boarded or bricked, and a large area is kept in perfect order for depositing and bagging pyrites. The whole of shed is covered with galvanised iron. A drying furnace of brickwork for freeing pyrites from moisture opens from the shed.

The main water supply is furnished by pumping plant at the Mitchell's Creek on extreme northern end of property. A Blake steam-pump, steamed from a steel tubular boiler, 8-horse power Tangye vertical, pumps from an undercurrent on west bank of the creek, and forces the water through a mile and a quarter in length of 4-inch cast-iron pipes to the supply dam at the battery.

The buildings comprise a three-roomed office (one compartment for smelting gold, one for assay-weighing, and the third for clerical purposes, a very complete assay plant being housed here) ; a substantial residence for general manager ; storehouse ; smith's shop ; explosives magazine (brickwork) ; and stable. Water is laid on to the office and residence, and every precaution provided against fire.

JAS. M. LINDLAY, 10/3/91.

At

At Peak Hill, 5 claims (alluvial) in the Eastern Valley obtained payable gold. Cummins and party, the prospectors, have washed 21 loads yielding 35 oz. 10 dwt. 20 gr., besides 18 oz. 6 dwt. picked out by hand. About 1,000 loads have been brought to grass at the 5 claims. The depth of the wash is 5 to 6 feet, the depth of sinking being 130 feet. There are also about 20 payable alluvial claims working east of the Peak, in addition to the 5 above mentioned; a few parties are still working on the boulder lead, a 6½-oz. nugget having been found there recently. Several parties are prospecting for alluvial leads within 5 miles of Peak Hill. On the lode, the Proprietary Mine has reached 120 feet in depth, and a cutting has been made 116 feet in length; across the auriferous stuff of this cutting 800 tons of material have been taken which is likely to yield ½ oz. per ton. The Company have crushed 486 tons for a yield of 413 oz. McRae and Co. had 120 tons crushed for a yield of 11 dwt. per ton. Gibson and Co. crushed 72 tons for 75 oz. The other principal holdings have been prevented by litigation, &c., from starting. Gold won during the year: alluvial, 6,380 oz.; lode or dyke, 620 oz.; at Tomingley, 500 oz.

Tambaroora and Turon District:—Hill End there is a visible improvement in mining matters, chiefly in consequence of Emmett and Hughes, Riley Brothers, and others at Prince Alfred Hill, striking wonderfully rich stone. The first-named party have obtained over 1,018 oz. of gold from 24 tons of stone. and in the adjoining mine C. Suttor has been raising good stone, while Riley and party won 1,156 oz. 4 dwt. as the result of four men's work. On the Golden Gully line of reef two parties have struck payable stone. At Hawkin's Hill the Cornelian Company has recently been raising good stone, and Vere and party are said to have cut through a belt of veins all carrying gold. Sofala—The heavy rains in the early part of the year enabled parties of men to roughly ground-sluice some of the old alluvial workings. Some of these parties made as much as £200 for six months' work. Ellis and party, from a reef 3 to 5 feet wide, crushed 510 tons of stone for a yield of 330 oz. The Queensland Company after removing their crushing plant to the mine have crushed 365 tons for 65 oz. 18 dwt. 12 gr. of gold. The dyke from which the crushing stuff is taken is very wide, and a small yield should pay if a large quantity be put through. East of Razorback some men are working new alluvium, depth 30 to 35 feet, with 3 feet of wash.

Lachlan District:—Forbes—The Pinnacle Company during the early part of the year were prevented by scarcity of water from working. They raised 800 tons of stone, of which 200 tons crushed gave fair returns. Parkes—At Hazelhurst Proprietary Company Mine 200 tons of stone crushed yielded 844 oz., and there is 1,600 tons at grass. The reef at the bottom of the shaft is 5 feet wide. In the stopes the reef averages 4 feet, and the stone shows gold freely. The Gladstone Company crushed 100 tons of stone for a yield of 248 oz. of gold, the reef averaging 2 feet in width. Barnett's Reef Company at Tichbourne obtained 170 oz. of gold from 16 tons of stone. At Alectown a large number of men (say 500) are prospecting under permits. The alluvial deposits are shallow, dry, and easily worked, and appear to extend a considerable distance, giving remunerative employment to a large number of miners. The puddler's returns show 5,574 oz of gold won from 11,149 loads of wash. Four large reefs have been discovered near the town, the stone from which looks promising. At Boney's Rocks, Cudal, there are four claims at work. From a vein 10 inches wide in the London claim, 40 tons crushed gave 3 oz. per ton. Nine tons from Shield and party's claim treated at the Clyde works produced 18 oz. of gold. At Paling Yards, Court and party, working on a soft lode from 2½ to 6 feet wide, have crushed 295 tons, yielding from 6 to 8 dwt. per ton. At Cargo the Iron-clad lode is 3 to 4 feet wide, made up of small veins of pyrites and quartz. After the pyrites is picked out the stone yields from 1 to 3 dwt. of gold, and 10 per cent of concentrates which average 3 oz. per ton. Between 500 and 600 tons have been treated during the year. At Canowindra the reef in the Blue Jacket Mine averages 18 inches. During the year 650 tons crushed gave 1½ oz. per ton, and 22 tons of tailings gave 10 oz. 12 dwt. per ton. The ground is soft and easy to work. On Haye's line of reef M'Intyre and Co. have crushed 90 tons of stone for 1½ oz. per ton. At Delany's Dyke, about 14 miles from Molong 1,630 tons of stone have been treated for a yield of 820 oz. At Grenfell two alluvial claims at the Quondong are on payable gold. On the Enterprise Reef one mine is putting out payable stone, and at Lawson's Reef one mine is raising stone said to be payable. At Sandy Creek Alsop and party obtained ¾ oz. per ton from 80 tons. At Creamy Hills Euabalong Cabot and party at 65 feet deep struck a reef 2½ feet wide, about 10 inches of which shows gold freely. The reef appears to improve in depth. The country around is well worthy the attention of prospectors. At Young gold raised 4,829 oz. 2 dwt. 23 gr., valued at £18,477 14s. 11d., the South Burrangong Company contributing about £9,000 and the Cunningar Reef about £1,300. At Temora the output of gold for the year was only 474 oz. 1,800 loads of wash-dirt puddled averaged 2½ dwt. per load. From Hennsler's prospecting claim 18 tons of quartz crushed gave 100 oz., and 30 tons gave 60 oz. At Sebastopol a quantity of stone is ready for crushing. There are said to be numerous reefs that under good management with requisite capital would pay well. Junee output of gold 230 oz.; Cootamundra output of gold 321 oz. At Barmedman 1,002¾ tons of stone crushed yielded 327 oz. 0 dwt. 12 gr. The greater part of the mines are idle for want of appliances to work below the water level. Near Junee Reef Dillon and party are said to have bottomed at 30 feet on quartz

wash,

wash, showing colours of gold. At Eurongilly 41⅓ tons from the Enterprise claim yielded 67 oz. Seven tons crushed from the Pioneer claim yielded 19½ oz., and 35 tons from the Victoria Reef gave 41½ oz.

Tumut and Adelong District:—There is now a prospect of the value of the large river flats at the Gundagai being tested. Borings on the flats have given indications of a heavy gold-bearing deposit at depths varying from 60 to 100 feet. The water is so heavy that the deposit can be worked only by the aid of powerful machinery, but if any one of the three parties now prospecting should find payable gold a very large area will probably be opened up, giving employment to a great number of miners. At South Gundagai Mr. Lindley has opened a valuable alluvial gold-mine on his private property on the banks of the river. Up to the present he has won about 300 oz. of gold. The lead or deposit appears to trend across the river towards the extensive flat on the north side. On Higgins' lease, adjoining Lindley's land, a similar deposit has been found by means of a series of bores. About 5 miles further south from Gundagai Mr. M'Inerney is opening up an alluvial lead on his property at Stony Creek; the prospecting shaft first struck payable wash at 40 feet on a false bottom; the shaft being continued down reached the lower or main lead at 85 feet, containing more gold than the upper wash. There is upwards of a mile in length of this lead in Mr. M'Inerney's property. The lead is said to have been proved to be nearly 200 feet in width. Two properties below M'Inerney's, known respectively as Annett's and Edwards', have been tested by boring, and the same lead proved to extend through them. These discoveries have given quite an impetus to alluvial prospecting, which will probably lead to other discoveries. At Adjungbilly Creek some extensive alluvial works are in progress, such as constructing tail-races. At Adelong the yield of gold is set down at 4,931 oz. 9 dwt. 6 gr., of which 1,562 oz. 8 dwt. is from quartz, the Reefer Battery having crushed 869 tons for 1,062 oz. 8 dwt., and the Perseverance Battery 499 tons for 500 oz. The bulk of the alluvial gold was obtained from Mr. A. D. Shepard's lease. Phillips and party have won 100 oz. from their creek claim; the run of gold is likely to be traced into private property. The Manager of the Proprietary Mine reports having crushed 300 tons of quartz for 683 oz. of gold, and 143 tons (seconds) for 85 oz., the vein being 1 foot wide. From the Lady Mary Mine Gap Reef 194 tons yielded 129 oz. 6 dwt. 14 gr., and 76 tons (seconds) yielded 22 oz. 11 dwt. of gold. The shaft on the western channel has been let to tributors, who raised 12 tons of stone, which yielded 2½ oz. per ton; this vein is well defined, but small. The opening of the deep lead under the basalt at Cherry Hill, about 10 miles from Tumberumba is an important event, as it may lead to other mines being opened, as the lead extends some 20 miles, with breaks here and there. The ground has yielded well so far. Alves & Co. are working vigorously opening up the eastern lead at Watson's, about 5 miles from Tumberumba. The Burra Company, the largest sluicing company in the division, has been engaged on dead work nearly all the year, which has reduced the yield of gold for the year. The sluicing claims on Tumberumba and Back Creek, and on the Tarcutta, are doing well. A fair sized reef has been opened about 20 miles from Tumberumba, from which quartz showing gold has been obtained. The quantity of gold raised in the division during the year was about 1,600 oz. Hertzog and party at Mount Pleasant, near Albury, obtained 56 oz. of gold from 36 tons of stone. Messrs. Wilson and Day, after sinking 103 feet, came upon an apparently valuable body of stone, but they have been prevented by a flood from working it. The yield of gold in the Albury Division during the year was worth £1,155.

Southern District:—A large extent of land has been taken up at Yellow Spring Creek on the great auriferous drift deposit on the Shoalhaven River. A Company has been formed to work this drift deposit at the Oallen Crossing, and another Co. has commenced operations at Spa Creek. Should these companies succeed, their operations will doubtless bring into notice these immense auriferous deposits. The auriferous drift-bed which underlies large areas of the basaltic hills at Kangaloon, &c, appears to be precisely similar in character to the great Shoalhaven deposits, though carrying less gold, and so fine as to be exceedingly difficult to save. The first occurrence of this auriferous drift-bed is at Wild's Meadow, Burrawang, where it outcrops under a basaltic hill known as Grice's Farm, and thence in many other places trending northerly to the Mittagong Gold-fields, a distance of 8 or 10 miles. Its outcrops show it to be 2 or 3 miles in width, and there is reason to believe it will in places prove to be 100 feet in thickness. Quartz pebbles and boulders in this drift contain gold. Over 1,000 oz. of gold have been won from the Dansfield Estate, at Jembaicumbene, in the Braidwood division. There is a great quantity of private land in the locality yet untouched. At Major's Creek, the gold won amounted to 545 oz. 13 dwt. 8 gr. The prevailing opinion that the reefs in the Little River division do not carry gold to a depth, but this idea has been dispelled by the Day Dawn Co. cutting a reef at 200 feet deep, from which 120 oz. of gold was obtained from 25 tons of quartz. There is a great extent of alluvial ground suitable for sluicing in the Little River division. There are several companies in the Nerriga division engaged in constructing dams and races for sluicing extensive deposits of wash on the banks of the Shoalhaven and tributaries. The quantity of gold won in the Araluen division during the year was 2,675 oz. 10 dwt., viz., 2,600 oz., from alluvium, and 75 oz. 10 dwt. from quartz. The New Koh-i-noor Co., at Captain's Flat, crushed 4,860½ tons

tons of ore for 823 oz. 12 dwt. of gold. The Caledonian Co., at Yalwal, have over 200 tons of stone at grass, a parcel treated at the Mint yielded 14 oz. to the ton, and 50 tons crushed at the old Homeward-bound Co.'s battery yielded over 3½ oz. per ton. The Star Co., south of Homeward-bound, has a lode 12 feet wide, two parcels of 1 ton each, from which was tested at the Mint—one yielded 5 dwt. and the other 11 dwt. The Brewery Co., at Micalago, have about 150 tons of stone at grass ready for crushing; width of reef, 2 to 6 feet; and they have purchased a 10-head battery, &c. The original prospector at Colinton, W. W. Quigg, treated 390 tons of stone for 254 oz. of gold, the reef varying from 4 inches to 3 feet 6 inches. Bradley and party have sunk three shafts on veins, all showing gold; crushings averaging 10 dwt. per ton. At Fiery Creek 182 tons of stone crushed gave 193 oz. of gold. A trial crushing from a gossan reef yielded 3 oz. per ton. At Pambula there are now three crushing plants completed, two in course of erection, and two very large ones projected. The prospector's shaft is 120 feet deep, There are 700 miners at work on the field. At Nerrigundah, Anderson and Mitchell (aided from the prospecting vote) have struck a rich lode at a depth of 115 feet; width of reef 2 to 3 feet. The Wandella Co. have raised some stone from below the water level, which surpasses in richness anything previously found in the mine. Several parties are winning good returns of gold from alluvium, chiefly creek claims in the Nerrigundah division. At Coolagalite a rich leader has been struck in Riley's prospecting claim, one ton treated at Mount Dromedary yielded 14 oz. 15 dwt.; depth of shaft, 100 feet; width of vein at that depth, 2 feet; 50 tons at grass. There are several other mines on gold, and the reef promises to be of great importance. Gold has been found at Punkally below high-water mark and traced to a reef in the adjoining main land. The reef in Hobbs' lease at Currowan is 3 feet wide, 100 tons of ore at grass, and gold is seen in the stone on the adjoining lease. On No. 1 North, a reef about 4 feet wide has been opened out showing gold. At Bumbamalla the prospectors have sunk four shafts on the reef, and have a quantity of stone at grass. Hobbs and party have 80 tons at grass, and several other parties have raised quantities of stone ready for crushing. At Bullock Creek Ray's prospecting claim and other mines show good gold. At the Italian mine, Turlingah, a large quantity of stone has been raised, and Mr. Leoni is now looking for suitable machinery.

Hunter and Macleay District:—At Copeland 243 tons quartz crushed for 132 oz. of gold. Andrew Clark has a reef from 6 inches to 2 feet 6 inches wide showing gold; no stone crushed yet. The Belmore Co. raised 33 tons which yielded 47 oz. The Granville Co. raised 30 tons of stone which yielded 15 oz. The United Reefs Co. raised 150 tons which yielded 70 oz. The Black Prince Co., width of reef 2 feet to 4 feet; 30 tons of stone at grass; not yet started to crush. At Coolongolook the Mountain Maid Co. has about 40 tons of stone at grass, but has not yet crushed. At Deep Creek (Kempsey Division) the Deep Creek Co. have sunk 170 feet, the 25 to 30 feet they have been sinking in the heart of the lode; nothing but rich stone all around them. They have driven 12 feet and have not yet reached either wall. A small parcel of the stone was sent to England on trial, but it was sold for £7 per ton. A parcel of 52 tons sent to the Clyde Works, and was there sold on assay at 4 oz. 17 dwt. per ton of gold and a trace of silver. The Co. have 100 tons of pyrites (first-class) at grass, besides hundreds of tons of stone which it is thought will pay when the plant is erected. Anderson and party have very encouraging prospects on the same lode. Alluvial gold has been found on the sea beach at three different points, but owing to its fineness special appliances are required for saving it. Some rather coarse gold has been found on Taylor's Arm.

Peel and Uralla District:—In the Scone division 4,500 tons of stone crushed at the various batteries gave 3,800 oz. of gold. At Stewart's Brook the United Bluey Co. crushed 2,000 tons for 1,560 oz. of gold; average width of reef, 2 ft. The Ethel May Co. crushed 1,300 tons of stone for 555 oz. of gold; reef large, some places as much as 10 feet wide; average width, 3 feet. A trial crushing of 2 tons from the Teddy Morgan mine gave 5 oz. 5 dwt. of gold. The Terry Co. crushed 42 tons for 24 oz. 9 dwt., and 59½ tons 52 oz. 9 dwt. Twenty tons crushed from the Little Nell claim, south of the Great Britain and Mountain Maid mines, gave 9 oz. 13 dwt. From the Alice mine, top end of Stewart's Brook, one crushing of 13 tons averaged 1 oz. 4 dwt. per ton; another of 12 tons yielded 1½ oz. per ton; width of reef, 4 to 8 inches, increasing in depth. From the Pride of the North mine one crushing of 18 tons in Sydney yielded 2¼ oz. per ton; another of 45 tons treated locally yielded 14 dwt. per ton. A crushing of 7 tons from the Lady Maude mine gave 13 dwt. per ton. On the Denison Field the Newcastle Co. crushed 600 tons of stone from Fuller's reef for 1,076 oz. of gold; average thickness of reef 16 inches; the tailings are heavily charged with pyrites. Taylor and party have struck very good stone. At Mount Misery (Nundle division) Mr. Norris has struck a payable run in the cement lead, wash 8 feet thick and a good width. The Peel River Proprietary Co. have raised 1,005½ tons of stone which was crushed at their own battery, and yielded 298 oz. 7 dwt. 23 gr. of gold. The Lady Mary Co. at Happy Valley crushed 250 tons for 50 oz. of gold. The Royal Mountain, Hanging Rock, crushed 28 tons for 33 oz. Isaacsohn and Thompson obtained some very rich specimens at Hanging Rock—33 tons gave 8 oz. per ton. One or two sluicing parties are making good wages on old

ground

ground at Bowling Alley Point. Two new fields have been opened, namely, Niangula, 30 miles from Walcha and 47 from Tamworth, and Swamp Oak, 10 miles from Niangula and about equidistant from Tamworth and Walcha. At Niangula there are three or four payable claims; the deepest shaft, the prospectors', is 65 feet deep, but there is no battery on the field to treat the stone. At Swamp Oak there are eight or ten good claims; the reefs average about 15 inches. The greatest depth reached is 40 feet on the Tichbourne reef, 1½ to 2 feet wide. A trial crushing in Sydney is said to have yielded 11½ oz. per ton. The country for 20 miles below the rush is similar formation, with veins crossing it at intervals. At Bullawa Creek (Narrabri) the prospectors (Sheppard and party) washed one load, and obtained 1 dwt. 17 gr. of gold, besides 12 small diamonds. At Melrose the Enmore Co. had a trial crushing of 10 tons, which gave 11 oz. per ton, but subsequent crushings gave less than 2 oz. per ton. The mine was closed in November last. This caused other mines, supposed to contain payable gold, to be abandoned, with the exception of a few miners who are erecting a 5-head battery to prospect the reefs. The Comet reef, on private property about 12 miles north of Hillgrove, is from 5 to 7 feet wide and can be traced for 40 chains. About 10 tons of stone, tested in Sydney, gave 1 oz. per ton of free gold, the concentrates assaying 8 oz. per ton. The Garibaldi Co. have crushed 842 tons of stone for 739 oz. of gold. The Sunlight Co crushed 2,009 tons of stone for 1550 oz. of gold, and 310 oz. of silver; lode about 6 feet wide. Baker's Creek Co. have three reefs, one (average width 15 inches) giving an average yield of 2 oz. per ton; one 2 feet wide, average yield about 12 dwt; and a new reef which averages 1¼ oz. per ton. They crushed during the year 5,725 tons of stone for 11,476½ oz. of gold. The Lady Carrington Co. have a lode of quartz and antimony carrying gold; about to erect furnaces; have about 160 tons of concentrates ready for treatment. The Baker's Creek North Co. have a lode about 8 inches wide, carrying gold. The Starlight Co. have a lode about 6 inches wide of quartz and antimony. A trial crushing of 8 tons gave 6 oz. per ton of gold. The Eleanora Co. have a lode of quartz and antimony about 8 feet wide, intersected by a sandstone dyke about 4 feet wide; quantity of gold won during the year, 1,640 oz. The Golden Gate Co. have a reef 2 feet wide, a crushing of 300 tons from which gave 170 oz. of gold. They have also two other reefs from which they have obtained fair prospects. The Earl of Hopetoun Co. have a lode of quartz and antimony from 6 to 60 inches wide. A trial crushing of 5 tons gave about 4 oz. of gold per ton. About 250 tons of stone at grass, waiting erection of plant. The Glen Morrison Co. at Glen Morrison have 100 tons of stone at grass awaiting crushing. Boggy Creek Hydraulic Sluicing Co. (Walcha division); average earnings £2 per week per man. At Kookabookra Butcher's Reef Co. treated 150 tons of quartz for 400 oz. of gold. The Bear Hill Proprietary Co.'s reef is 12 to 15 inches wide, carrying gold; 800 tons at grass ready for crushing. The Starlight reef, Oakwood Gully, about 10 miles from Bear Hill, averages about 3 feet wide; prospects considered good. The Adeline Mine at Drake having been tested in depth, the lode, which is 4½ feet wide, is found to contain ore composed of copper, iron, and galena, containing gold. 40 tons of this ore has been reduced to matte containing gold, silver, and copper, at the Glen Smelting Works, and it was thought it could be worked at a profit by having the appliances on the mine, but having erected the necessary furnaces and reduced 100 tons of ore to matte, it was found the cost of treatment was too great. 417 tons of ore have been raised, and 140 tons treated as above-mentioned. Rivers and party (Lady Jersey Mine), about 6 miles south of Drake, struck payable gold. The ore contains copper and iron pyrites, and free gold, the lode being about 18 inches, but the associated rock on either side of the lode is impregnated with gold to a distance of about 2 feet, so that the gold-bearing material is from 5 to 6 feet wide. 480 tons of ore have been treated for 1,617 oz. of gold. At Mount Carrington a small vein was found by Monley and Co. which has at a depth of 20 feet opened out to 5 feet wide, estimated to yield 3 to 4 oz. per ton. Barker and party, south-east of Monley and Co., have had 12 tons crushed, yielding 5 oz. per ton. At Nana Creek (Grafton) Thompson and Mathews had 25 tons of stone crushed for 23 oz.; reef 18 inches wide. From the Jubilee Mine 197¼ tons gave 224 oz. 5 dwt.; average width of reef, 1 foot. No. 1 West, 25½ tons gave 25¼ oz. Forbes and Co., Bella reef, 159 tons gave 247 oz. 19 dwt. 12 gr. Nana's Daughter Co., 53 tons gave 58½ oz. After heavy gales about 100 men find profitable employment between Ballina and Byron Bay washing the beach sand. In places the sand pays well, but the appliances are not of the best. The prospecting party found coarse gold in several places in the locality of Byron Bay, but were unable to contend with the heavy influx of water. About 800 oz. of gold won in the Lismore division.

Cobar District:—The Occidental Co. were engaged the greater part of the year erecting machinery, &c., which was completed early in December last; since then 140 tons of stone crushed yielded 118 oz. 10 dwt. of gold. In the Chesney North a lode 8½ feet wide of blue and green carbonates was struck, from which two trial crushings gave 12 dwt. per ton. The Chesney Cobar Co. worked through the year, but the Warden could obtain returns for the last five months only, namely, 880 tons crushed yielded 586 oz. of gold. Two trial crushings from a lode 20 feet wide in the Fort Bourke Mine averaged 3½ dwt. The Jubilee are raising promising stone. At Mount Hope Riley and party reported the discovery of gold

at

at Iron-stone Hill in a lode or dyke 60 feet wide; yield, about 8 dwt. per ton. Upon the south and east occurs a lode composed of ferruginous felspathic ore from 20 to 25 feet wide, carrying free gold apparently equal to about 2 oz. per ton. The lode has been laid bare about 50 feet in length. At the Mount Dromedary Mine, about 10 miles north of Mount Hope, gold is found in a lode about 30 feet wide where opened, and said to be something like 1 oz. per ton; 10 tons were sent to Melbourne for treatment some time since, said to have yielded 16 dwt. A parcel of 5 tons is being prepared for treatment at Parkes.

Albert District.—At Cawker's Well, 37 miles west of Wilcannia, gold was discovered about two years ago; the reefs have been opened to a depth of 100 feet. One reef is 2 feet wide at the surface, and has increased in width to 2½ feet. Assays have been made, the results averaging from 1½ to 3 oz., one from the "Golden Ridge" yielding as high as 19 oz. per ton. Bulk samples have been sent to Victoria; 5 tons from the "Golden Ridge" tested at Sandhurst yielded 5 oz. 2 dwt. of gold. A small parcel tested at the School of Mines, Ballarat, yielded at the rate of over 1 oz. per ton. At a mine due south of the "Golden Ridge" three reefs have been discovered, an assay of stone from one giving 2 oz. 17 dwt. per ton. The Peak Tank Mine is about 82 miles from Wilcannia, on the Mount Brown Road. At Stringer's Hill, in the Milparinka division, a fair amount of work has been done by a large number of miners, but with a plentiful supply of water double the number could find payable ground in this locality. The average depth of sinking is 90 feet, with about 4 inches of wash, and the average yield is estimated at 9 dwt. per load. The principal returns are:—Campbell and party, 240 loads for 222 oz.; depth of sinking, 75 feet; wash, 10 inches; Mercer and party, 197 loads for 96 oz.; depth, 80 feet; wash, 9 inches. The surfacing at Mount Browne has yielded from ½ dwt. to 2 dwt. to the load; the quantity of surfacing is practically unlimited. The wash in the Mount Browne Co.'s mine varies from 1 to 5 feet, yielding 3 to 12 dwt. per load, but the quantity of water in the mine equals 45,000 gallons per twenty-four hours. At the Good Friday the returns principally from surfacing averaged 1½ dwt. per load. At Evan's Gully fair returns were obtained so long as the water lasted. Around Tibooburra good wages can still be made so long as the water lasts. The quantity of gold won in the division is estimated at 2,210 oz.

The following information has been kindly furnished by R. Hunt, Esq., C.M.G., F.G.S., the Deputy-Master of the Royal Mint.

QUANTITIES of Gold, the produce of New South Wales, received into the Royal Mint, Sydney, during 1889 and 1890 compared.

District.	Division.	1889.	1890.	Increase.	Decrease.
		oz.	oz.	oz.	oz.

SUMMARY.

District.	1889.	1890.
	oz.	oz.
Bathurst	7,780·65	6,493·60
Tambaroora and Turon	5,617·03	2,986·64
Mudgee	4,733·13	3,590·66
Lachlan	13,494·24	13,926·48
Albert	2,720·22	2,235·33
Southern	4,585·33	4,149·49
Tumut and Adelong	4,632·63	6,916·55
Peel and Uralla	29,811·97	18,924·63
Hunter and Macleay	124·82	71·31
Clarence and Richmond	559 69	363·23
New England	603·68	768·52
Mixed—Western, Northern, and Southern	.....	20,740·04
Localities unknown	39,822·90	38,397·42
	114,486·29	119,563·90

From the above statement it is seen that the quantity of gold sent to the Mint in 1890 exceeds that of 1889 by 5,077·61 oz. Forbes, Adelong, and Nundle show the largest increases, while Parkes and Armidale show the largest decreases; but then 20,740·04 oz. appears under the head of "Mixed Western, Northern, and Southern" in the return for 1890, whereas in the return for 1889 there is no such item. However, the aggregate for the year shows a moderately satisfactory increase, and we may be well satisfied if we can maintain such an increase year by year.

The following table is compiled from information kindly furnished by the Collector of Customs:—

EXPORT OF GOLD, 1890.

Gold.		Quartz Tailings and Pyrites.		Total.	
Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
oz.	£		£	oz.	£
34,852	137,169	Quartz, 105 packages ..... Pyrites, 10 tons 16 cwt.....	1,822	35,324	138,991

The quantity of gold sent to the Royal Mint plus the quantity exported in 1890 equals 154,887·90 oz., but of the 35,324 oz. exported we are informed 27,127 oz. passed through the Mint, and is included in the return furnished by the Master. The output of gold for 1890 may, therefore, be set down at 127,760·90 oz., which, compared with the yield for 1889, shows an increase of 8001·61. This increase is small as compared with the increase in the output of 1889 over that of 1888, and I think we may fairly expect that with increased knowledge concerning the mode of dealing economically with our refractory gold ores and the separation of gold from other metals, our gold production will not only increase, but we shall be able to take credit for considerable quantities of gold which now leave the Colony associated with other metals of which no account is or can be taken.

The returns furnished by the Mining Registrars of the gold won in their respective divisions is less by 1,904 oz. than the quantity sent to the Mint, and consequently is less by 9,905 oz. than the year's production as shown by the Mint and Customs returns.

RETURNS of Gold for 1890 from Mint and Mining Registrars compared.

The quantity sent to the Mint exceeds returns by Mining Registrars by			1,904	

The Mining Registrars' returns of Gold for 1890 show an increased yield of only 4,711 oz. over that of 1889, but then it is abundantly clear that these returns are incomplete.

Increase in yield for 1890			4,711	

The following statement shows the results obtained from the treatment of parcels of alluvium in one district in 1890. The yield though good is not so high as the average for 1889. The fact that returns have been obtained from only one district indicates the reluctance shown by miners to disclose the results of their labours. Of course it is well known that in many cases the miners are too careless to keep any record of the quantity of dirt washed, and it is also well known that the gold is separated from a large proportion of the alluvium in this colony by sluicing, and in the latter case it is difficult if not impossible to keep a record of the quantity of earth treated, but after making due allowance for these there must be a large quantity of wash-dirt respecting which statistical information could be given which would be of the greatest value to the miners especially, but which is withheld from a mistaken idea that the public has no right to know the result of their private operations.

COMPARATIVE Statement of Average Yields from Alluvial Mines for 1889–90.

	5,764	0 13 14	3,920 0 0		11,761	0 9 11	5,717 10 0

The following statement shows the average yield of sundry parcels of quartz crushed in the several mining districts. Though it is comparatively easy to furnish returns of quartz crushed, because it is almost impossible to escape the necessity of taking some account of the quantity of stone crushed, still, in many cases the miners do not keep any record, especially where they own the plant or hire it by time, and there are instances of refusal to supply returns by persons possessing full information, consequently, of all the stone treated in the Colony, we are able to give, for the purposes of comparison, the results of only 46,294½ tons. If it were possible to obtain the results of every parcel of stone crushed year by year, some very valuable information might be deduced that would be of incalculable benefit to the very persons who might, but who do not, supply the information. For example, the average yields per ton in 1890, as compared with 1889, show some extraordinary fluctuations, but the return for neither year is complete, and, for aught we know to the contrary, if each were complete it might be found that each district had maintained a comparatively even yield per ton. It is to be hoped that both the Mining Registrars and the miners will realise the value, for statistical purposes, of furnishing complete returns, and will in future give their aid to secure the desired end.

The number of miners engaged in gold-mining, more or less constantly during 1890, was 12,589, being an increase over 1889 of 2,397. The number engaged in alluvial mining was 5,597 Europeans and 707 Chinese = 6,304. The number engaged in quartz mining was 6,285—all Europeans. There is an increase in each class of miners as compared with 1889, but the increase in alluvial miners far exceeds that of the quartz miners.

Dividing the quantity of gold won by the number of miners, the result obtained is that each miner appears to have earned 10 oz. 3 dwts. of gold, valued at £36 11s. 3d. during the year, being less by £6 0s. 6½d. than the average earnings in 1889. A reference to the reports of the Wardens and Mining Registrars will however show that a large proportion of the miners have been engaged in prospecting. And it must be remembered that several new or comparatively new fields, from which little or no returns have yet been obtained, have attracted large numbers of miners, many of whom have been engaged in preliminary works. As for example, Pambula, Niangala, Swamp Oak, &c., to say nothing of the men engaged on works preparatory to extensive sluicing operations.

During the year 3,084 samples were assayed for gold, by direction of this Department.
1,715 yielded nil.
1,013 yielded under 10 dwts. per ton.
356 yielded as follows:—

Coal.

The output of coal for 1890 shows as compared with that of 1889, a decrease in quantity of 594,756 tons, and in value of £353,760. This unfortunate result is clearly traceable to the very serious strike which caused the greater part of the collieries to be closed for a considerable period. If no worse result than the loss already sustained attend the strike, we may consider ourselves exceedingly fortunate seeing that it is quite possible the stoppage of supplies to vessels waiting for loading may very seriously affect our export of coal for some time hence. The trade thus lost in 1890 nearly equals the aggregate increase in the coal trade for the years 1888 and 1889, and exceeds by 28,928 tons the increase in our export of coal for those two years. These facts should make very plain to both owners and miners the importance of avoiding in future by every possible means such interference with the progress of this important industry. The average price per ton of coal on the whole output was 8s. 4 29d. The average price per ton of coal sent to colonial ports was 10s 6 96d. The average price per ton of coal sent to foreign ports was 11s 3 31d., being a decrease in the average rate per ton of the total output equal to 6 91d , while the average rate per ton to colonial and foreign ports show an increase respectively of 2 72d. and 1·43d.

QUANTITY and Value of Coal raised from the opening of the Coal-seams to 1857, inclusive :—

The aggregate thickness of coal bored through by the Government diamond drills during the year was 138 feet 1½ inche, namely:—At Liverpool, 8 ft. 9½ inches; at Nowra, 6 ft. 2½ inches; at Joadja, 10 inches: at Ravensworth (1st bore), 39 feet 11 inches, (2nd bore) 83 ft. 2½ inches. The drills pierced in addition to the above 40 ft. 6½ inches of coal and bands.

The number of collieries under inspection in 1890 was 64 coal and 1 shale mine in the Northern District, 15 coal and 2 shale mines in the Western District, and 16 coal and 1 shale mine in the Southern District; total, 99, as compared with 103 in 1889.

The number of mines opened out or in course of opening during the year was 30, and 5 were abandoned as compared with 16 opened out and 8 abandoned in 1889.

During the year a fair amount of prospecting for coal has been carried out.

The existence of coal in the neighbourhood of Coraki has been known for a considerable time, but until the late strike very little was done towards proving the seams. The scarcity, however, of coal during the strike last year, and the local demand for it for sugar-mills and river steamers, and the prospective market for it on the Lismore to Tweed railway for supplying the locomotives, &c., led to these seams being prospected in several places in the neighbourhood of Lismore in 1890. The principal seams at present proved are three in number, viz., the top seam, of which the total thickness (including bands) of portion of seam possibly workable is 4 feet 2 inches. In this thickness there are three bands of one half an inch each, and the coal between the bands contains rather a high percentage of ash, as shown by the samples taken by Mr. Geological-Surveyor David, and assayed by the Department. The percentage of ash varies from 15·59 up to 39·94 per cent. in the average samples. A picked sample, however, was found to contain only 11·06 per cent. of ash, and was proved by analysis to have the following composition:—

Hygroscopic moisture	·48
Volatile hydrocarbons	14·33
Fixed carbon	74·13
Ash	11·06
	100·

Coke, 85·19 per cent.

"Well swollen, with cauliflower excrescences; fairly firm and bright." This sample, however, represented only a few inches of the best coal in the seam. The analysis shows it to be a first rate steam coal, but it cannot of course be taken as representing the average composition of the seam. About 50 feet below the floor of this seam is the second seam not yet fully tested, but showing at the outcrop a thickness of 3 feet of black dirt (perished coal with probably some bands).

About 30 feet below the floor of this seam is a third seam, showing about 11 feet of black dirt, but not yet fully tested. The coal in the top seam has been opened up principally at Bungawalbyn, about 8 miles south from Coraki, and has been traced thence along the line of outcrop for a distance of about 6 miles to the Richmond River, about 4 miles below Coraki, and for a further distance of over half a mile on the north side of that river. The geological examination and analyses of the coal from the upper seam show that it contains too much ash and is too brittle to be used for anything more than local comsumption, and even for this purpose it would require to be washed in a coal-washing machine before it could be converted into a marketable commodity. The local consumption of coal at present amounts to about 30,000 tons annually, which are supplied chiefly from Newcastle.

Aid has been given out of the Prospecting Vote to assist in testing the two lower seams. The general dip of the seams is to the west-north-west at a gentle angle. These seams appear to be identical with those which have already been examined and reported on by Mr. C. S. Wilkinson at Maclean and Coaldale, and like them are capped by a current-bedded white sandstone, much resembling the Hawkesbury sandstone, and probably identical with it, as suggested by Mr. Wilkinson. It is intended to make a further geological examination of the Clarence and Richmond River District, which may lead to the discovery of workable coal-seams in certain areas.

The following statement shows that the output of the Northern collieries in 1890 was less by 504,300 tons, valued at £265,293, than the output for 1889; while output from the Western collieries exceeded in quantity that of 1889 by 13,519 tons, but the value of the output fell short of

that

that of 1889 by £15,463. This is to some extent accounted for by the low rate at which the contract for supplying the Railway Department with coal was taken. The output from the Southern collieries shows a decrease of 103,974 tons, value £73,002.

The number of men actually employed in and about the collieries, raising coal and shale, was 10,315. The total number of fatal accidents in 1890 was 13 as compared with 41 in 1889. The total number of non-fatal accidents in 1890 was 36 as compared with 57 in 1889. Of these—9 fatal and 28 non-fatal occurred in the Northern district, 2 fatal and 6 non-fatal in the Southern district, and 2 fatal and 2 non-fatal in the Western district.

From the table supplied by the Examiner of Coal-fields it is seen that during a period of fourteen years the average number of deaths from accidents in coal mines in Great Britain per 1,000 persons employed was 2·158, whereas during a period of sixteen years the average number of deaths from accidents in coal mines in New South Wales per 1,000 persons employed was 2·580.

Coke.

The quantity of coke made in the Colony during 1890 was 31,097 tons, valued at £41,147, namely—in the Northern district 15,886 tons, valued at £22,955, and in the Southern district 15,211 tons, valued at £18,191.

During the year the following analyses of Coal were made in this Department:—

Locality.	Description of Mineral.	Analysis in 100·00 Parts. Hygroscopic Moisture.	Volatile Hydrocarbons.	Fixed Carbons.	Ash.	Coke.	Sulphur.	Specific Gravity.	Remarks.
						℔ cent.	℔ cent.		
Buttai	Bright, bituminous coal.	3·04	33·66	54·55	8·75	63·03	0·315	1·336	Coke, fairly well swollen, lustrous, and firm. Ash, dark grey.
Burragorang	Splint coal.	1·49	17·51	43·49	37·51	Nil.	0·439	1·656	Ash, nearly white.
Bundanoon	Bituminous coal	2·26	28·76	52·33	16·65	68·98	0·442	1·449	Coke, fairly swollen, with slight cauliflower-like excrescences, bright, and firm. Ash, grey, and dense.
Ballina (Bungawalbyn Creek)	,, ,,	0·58	14·47	66·65	18·30	84·95	0·49	1·388	Coke, very much swollen up, forming a somewhat conical shell, extending two-thirds of the height of the crucible. Fairly lustrous, fairly firm. By experiments conducted in a Thompson's Calorimeter, it was found that 1 lb. of this coal will convert 10·98 lbs. of water into steam. This coal is very brittle.
Coraki, Richmond River	Small pieces of bituminous coal, and much coal dust.	2·09	14·31	68·55	15·05	83·06	0·60	1·414	Coke, dull in colour, slightly swollen into a cone-like form. Very firm. Ash, light grey in colour.
Cullen Bullen	Bituminous coal	2·27	33·58	48·90	15·25	64·15	0·837	1·421	Coke, well swollen, fairly bright, and firm. Ash, grey and heavy.
,, ,,	,, ,,	2·20	31·85	45·25	20·70	65·95	0·59	1·416	Coke, well swollen, lustrous, and firm. Ash, grey and heavy.

Shale.

The output of boghead mineral or petroleum oil cannel-coal, commonly called shale, in 1890 exceeded that of 1889 in quantity by 15,449 tons, and in value by £26,437. The output for 1890 was by far the largest we have yet had, and the average price per ton was only 1s. 1·48d. less than in 1889. The price had never been so low since 1883. The increased output was probably due to the scarcity of coal during the strike. The

The following table shows the quantity and value of Kerosene Shale produced during the years 1865 to 1890.—

Year.	Quantity	Average price per ton	Total value.	Year	Quantity.	Average price per ton	Total value.
	Tons	£ s. d.	£ s d		Tons.	£ s. d.	£ s. d.

Silver and Lead.

Notwithstanding that so many mines containing large and valuable lodes of silver ore are standing idle, owing to the inability of the owners to treat the ore economically, the value of the output of our silver mines for 1890 exceeds that of the previous year by £791,356. Fortunately we are by degrees overcoming the difficulties surrounding the treatment of our silver ores, and to this fact may be to some extent due the very large increase in our output; but when we shall be in a position to deal satisfactorily with all the varieties of ore found in this Colony, not only will the value of our silver and lead production increase enormously, but our silver lodes should provide an almost inexhaustible field for the employment of labour and capital It is of course much to be lamented that so much capital has been wasted in the erection of unsuitable plant, and in the employment of unsatisfactory modes, but in this respect our experience has been very similar to that of most other silver producing countries, and we have no right to expect exemption from trials and losses which attend similar pursuits in other countries.

Note.—In the Annual Report for 1888, 11,739 tons 7 cwt. of silver ore valued at £164,620 was omitted from the table.

The bulk of the silver is exported as silver-lead or in the ore.

During the year 3,083 samples were assayed for silver by direction of this Department.

1,210 yielded nil.
1,741 yielded under 20 oz. per ton.
132 yielded as follows:—

Locality.	Description of Mineral.	Per Ton.		Per Cent.

In the Bathurst District the Warden reports the silver industry has quite collapsed at Cordillera, Mount Costigan, and Peelwood, in the Tuena Division, and at Back Creek and Wiseman's Creek, in the Rockley Division. The matte produced at Sunny Corner during the year was valued at £82,771 2s. 1d., namely, £72,642 17s. 3d. from the Sunny Corner Mine, and £10,128 4s. 10d. from the Silver King Mine. From the Phœnix Mine, ore to the value of £2,250 was sent to Lithgow. At Lewis' Ponds, Tom's Co. have done a considerable amount of work, though during part of the year the roads were in such a bad state that they were unable to procure fuel or send away their bullion. The quantity of ore raised was 8,116 tons, producing 1,272 oz. gold, 104,727 oz. silver, and 110 tons lead, and they have ore at grass valued at £5,304—total value for the year, £32,218. The Company having purchased the mine of the N. L. P. Co., have raised a considerable quantity of good ore from it, and the old slag left is found to be an excellent flux, besides containing both gold and silver. They effect a saving of expense by using a larger proportion of charcoal in lieu of coke.

In the Mudgee District, at Denison Town it has now been proved that a mineral belt exists 10 miles in width, with four lines of lode, nearly all parallel, bearing N.E. and S.W. Assays from the Dynevor (the more eastern lode) show as high as 300 oz. silver and 2 oz. gold per ton. The Mount Stewart line has been systematically worked for over three years. Smelters are about to be erected. On the Narangarie line but little is doing. From the Gladstone the ore is said to contain from 100 to 1,095 oz. of silver, and from 6 to 9 oz. of gold per ton, and about 40 per cent. of lead. This lode in the Bullinda Mine shows, on 30 chains in length, from 2 to 6 feet wide, the gossan assaying from 24 oz. to 75 oz. of silver per ton. At Mount Tingha, in the Condobolin District, it is probable a payable silver lode has been discovered, but owing to the distance from a railway the carriage of ore would be very expensive. About 5 miles from Condobolin, on the main road, silver was discovered some years ago. The Great Southern Silver-mine, at Uramajong, about 15 miles in a southerly direction from Grenfell, contains a lode 20 feet wide, 20 tons of ore from which is reported to have realized £900. Ore is now being raised for treatment at the Clyde

works

works. 5 tons 14½ cwt. of ore from the Mount Billagoe Mine, was sold in South Australia for £510, but the quantity of gold and silver contained therein is not known to the Company. The Black Mountain Silver-mine is situated about 90 miles from Wilcannia. A shaft is being sunk through very promising looking manganese and rotten ironstone, with veins of kaolin clay. In two other mines the cap of a large body of ore was struck, which gave fair assays. At Nuntherungie there are several mines. The ore from the Proprietary Mine has assayed 55 oz. silver and 26 per cent. of lead. From the Nil Desperandum Mine about 10 tons of rich ore, showing chlorides very freely, have been bagged for testing. Assays show 88 oz. silver and 3 per cent. lead. Some good assays have been made of ore from the Tarella Consols. From the Broken Hill and Silverton Division the following was exported during the year:—Silver lead bullion, 40,755 tons 9 cwt. 1 qr. 7 lb., valued at £1,844,262; silver lead ore, 88,870 tons 13 cwt. 2 qrs., valued at £774,500; copper ore, 580 tons 6 cwt. 1 qr., value £9,774. During the year the Broken Hill Proprietary Company raised 192,546 tons, valued at £1,778,362. Of this 174,807 tons were smelted at the mines, resulting in a return of 7,490,654 oz. of silver, and 30,486 tons of lead, of the total value of £1,690,986. The Company's plant now consists of thirteen 80-ton furnaces, capable of smelting about 5,778 tons of ore weekly. A concentrating plant, capable of treating 90 tons of ore per day, has been erected at Broken Hill North Mine. The erection of three 80-ton smelters have been completed at the Central Mine. Valuable discoveries of ore were made during the year at the South Mine. A smelter for refractory ores is being erected at the British Mine. At the Australian Broken Hill Consols Mine two valuable discoveries of rich ore were made. At the Umberumberka Mine a new leaching plant and roasting furnace have been erected. The Pioneer Company, Thackaringa, have purchased an ore dressing plant with improvements, cost £8,000. At Corona a considerable amount of prospecting for silver has been done. From Donnelly and Party's Mine, at Coppabella, 2 tons of ore sent to Sydney, and a similar quantity sent to the School of Mines, Ballarat, have given such results that the party has determined to go to work on a larger scale. A ton of picked ore sent to Footscray (Victoria) for treatment, yielded 40 oz. silver, 6 dwts. gold, and 3 cwt. lead. The shaft is 40 feet deep. The lode, which was 6 inches at the surface, is 7 feet wide at bottom of shaft. In the Braidwood Division, about 5 miles from Major's Creek, a silver lode was found from which some stone tested gave from 10 to 15 oz. of silver to the ton, and a small percentage of gold. At Boro, in the Braidwood Division, a large area of land has been taken up, and assays of ore from the lodes have given a high percentage of silver. The refractory character of the ores at Captain's Flat has caused a considerable decrease in the output of silver, and this will not be remedied until an effective method of treatment be introduced. The Commodore Vanderbilt Company smelted 3,986 tons of gossan ore, producing 33,857 oz. silver, 80 tons 1 cwt. of lead, and 602 oz. 16 dwts. of gold. At the silver-mine 4 miles from Moruya, about 900 tons of ore was raised. 300 tons have been partly treated at the mine and then sent to Sydney for further treatment, as the zinc blend in the quartz renders it very difficult to treat. Webb's Silver-mine (Emmaville Division) produced 92,750 oz. of refined silver. 6,500 tons of lode stuff was raised which, on being hand-picked and machine dressed, gave 833 tons of concentrates, which was sent to Dry Creek, South Australia, for treatment. The width of the lode ranges from 4 to 8 feet. Webb's Consols raised about 560 tons of lode stuff, from which 270 tons concentrates, treated at Dry Creek, gave 4,070 oz. of silver and 38½ tons of lead. Mt. Galena Mine, close to Webb's Consols and on a parallel vein, showing good bodies of argentiferous galena, said to assay 40 oz. silver per ton and 50 per cent. of lead. Webb's South Extended has bulky veins of lode stuff, the widest being 10 feet; assays said to average 20 oz. silver and 50 per cent. of lead. Castlerag Mine, 4,000 tons of ore at grass, giving an average assay of 30 oz. of silver; 20 tons of concentrates, sent to Dry Creek, gave 90 oz. of silver per ton; 26 tons of crude ore, sent to Adelaide, gave 60 oz. per ton; and 50 tons, shipped to London, gave 50 oz. of silver per ton. 26 tons of hand-picked ore from the Castle King Mine, treated at Dry Creek, yielded an average of 30 oz. per ton. The Castle Wellington Company have a lode at Nine-Mile, 10 tons of ore from which, sent to Germany for treatment, gave 37 oz. per ton, but the ore is reported to be very refractory. Pye's Creek Mine is let on tribute, and the tributors are said to have netted £200 from a parcel of ore sent to Adelaide. At Paddy's Land Ranges, south-east of Glen Innes, there are three parallel lodes, 6 feet, 4 feet, and 4 feet wide, 300 tons of ore at grass. Assays give 40 per cent. of copper and 41 oz. of silver per ton. Bland and party, 8 miles from Boonoo Boonoo, have sent parcels of silver ore to Germany for treatment; results not yet known. Morgan and Kermode have a quantity of ore bagged, ready to be sent away; veins very rich, but narrow. A number of mines have been opened up at Rivertree, about 18 miles east of Wilson's Downfall, and a large amount of prospecting has been done, the lodes showing good ore, but said to be refractory. One parcel of ore was treated locally, but the treatment was not satisfactory. It is proposed to establish works on a large scale for treating the ore from the several mines, under the management of a first-class man. The operations of the White Rock Company have been retarded by the delay in completing a portion of their reduction works and defective concentrating appliances. 4,000 tons of ore have been put through for a yield of 135 tons of concentrates, of an average value of 125 oz. silver

per

per ton=16,875 oz., leaving fully 20,000 oz. still in the tailings. During the first two months, not more than 35 per cent. of the silver contained in the ore was saved in concentration, but during the last three months the silver saved has come up to 50 per cent. Further improvements are being made, and the plant increased. There is 20,000 tons of ore at grass. The Mascotte Mine has been extensively explored, showing that they have an almost unlimited quantity of ore, rich in gold and silver, but requiring special treatment, and they may now at any time commence the erection of the necessary chlorination and amalgamation works. Two silver lodes have been opened in the Solferino Division. One between the Horseshoe Bend and Yugilbar Crossing consists of sulphide of lead and zinc blende; a sample assayed gave 25 oz. of silver per ton. At Horseshoe Bend another lode is said to contain chlorides and bromides.

Tin.

Prospecting for tin has lately received an impetus in the neighbourhood of Euriowie (Albert District) where payable tin ore is being raised by various parties. The Wheal Byjerkemo Company have 150 tons of ore at grass, and are arranging for purchase of machinery. Attempts have been made to discover tin on the Tantawanglo Range, and some very good samples of stream tin were obtained. Mr. H. M. Joseph has recently put on men to work his freehold. The Government prospecting party found patches of stream tin near the Range, but not in payable quantities. At Bendemeer, the Giant's Den Company have raised 20 tons of tin, Anderson and party 4¾ tons, Reeves and party 5⅓ tons. In the Tingha Division, 1,000 tons of tin raised, value £52,000. The alluvial deposits are practically exhausted, and the numerous lodes have not yet been opened up. At Emmaville, 152 tons of tin was raised from lodes. The lode in the Ottery Mine is 14 feet wide in places. The Butler's lode, further down Glen Creek, is rich in ore, and 5 feet wide, between well-defined walls. It has been proved a distance of about ¼-mile. In the parishes of Muir, Land's-end, and Flagstone, there are numerous uncovered lodes and veins more or less rich in tin. Twenty-six miners obtained 21¼ tons of ore from one or other of these reefs during the year by dollying and hand-dressing. In the parish of Flagstone, two men from a small hole, 3 feet x 2½ feet and 16 feet deep, raised and hand-dressed 2½ tons of ore in three weeks, the lode being more than 9 feet wide. Another lode, 2 miles distant, averaging 2 feet wide, has returned 1½ tons of clean hand-dressed for the labour of three men for three weeks. 1,150 tons of tin ore was won in the Emmaville Division. Of this quantity, 745 tons was treated at the Tent Hill smelting works, giving 538 tons of refined tin. Lodes of a promising character are known to exist at Pheasant Creek. Tin deposits are found from Haynes' Creek to Oban, a distance of 50 miles. Recently, a rich deposit has been found in shallow ground on Reserve 11,170. About 8 miles from Glen Innes as much as 7 lb. of tin ore was washed from one bucket of drift, from a depth of 5 feet. 151 tons 18 cwt. of tin ore was raised in the Glen Innes Division. Hall Bros. are still working at Kangaroo Flat. The sinking varies from 30 to 100 feet. They raised 38 tons of ore during the year. The quantity of tin ore raised at Wilson's Downfall was 220 tons, valued at £11,248.

Table showing the quantity and value of Tin exported from, and the product of, the Colony of New South Wales, since the opening of the Tin-fields in 1872.

From the above table it will be seen that the out-turn of tin and tin ore for 1890 is less, both in quantity and value, than any year since 1872. This is mainly due to the fact that the shallow deposits of stream tin have been to a great extent exhausted, and the deep deposits have not yet been opened up to any extent, and the tin lodes are being worked only to a very limited extent. It is, however, no doubt difficult to find capital for the exploration of so many and such varied mineral deposits as we have in this Colony.

During

During the year eighteen assays were made for Tin, the following giving the most favourable results:—

Locality.	Description of Mineral.	Tin, per cent.
Bendemeer	Titanic iron-sand, with a little tin oxide	3·7
Germanton	Quartz, with felspar, mica, oxides of tin, and molybdemum and molybdenite	2·15
Grafton (40 miles from)	Quartz, zircon sand, and stream tin	24·
Stannifer	Quartz, with oxide of tin	13 31
Tenterfield	Quartzite, with oxide of tin	5·3
Do	Compact felsite	2·2
Do	Compact felsite, with oxide of tin, magnetic iron, and a little carbonate of bismuth.	8·9

Copper.

Though the Burraga Mine was in full work during the year, the output was far less than in the previous year, the quantity being 420 tons, valued at £24,150. At Cadia, the Scottish-Australian Co. raised 300 tons of copper ore during the year—assay value, 13 per cent. copper. From the Nymagee Co.'s Mine 7,865½ tons of sulphide ore was smelted at the mine, realising 794 tons of copper, valued at £43,868 10s. The New Burra Burra Co. raised 500 tons of ore, of which 5 tons 17 cwt. smelted at the mine yielded 98 per cent. of metal. The New Mount Hope Co. raised 1,143 tons of ore, which yielded 218 tons of copper, valued at £10,900. The width of the lode is 68 feet. From the Great Central Mine, at South Mount Hope, 1,855 tons of ore raised. Of this, 1,667 tons was smelted, giving 228 tons of copper. At Coan Peak, near Mount Hope, there is said to be a splendid show of copper ore. Payable copper ore is now being raised at Mount Badgerrigarn, near Corona (Albert district). From the following table it will be seen that our output of copper continues to decline, both in quantity and value, the fact being that at the present price of copper it does not pay to work mines that are not very favourably placed in regard to facilities of transit. There are numerous lodes that would pay to work, and would afford employment to a very large number of men, if facilities were provided for bringing fuel to the mine and sending away the produce. The projected railway to Cobar will no doubt have the effect of setting to work some important mines that are now idle, and it is to be hoped that our output will then equal that of seven or eight years back.

Table showing the quantity and value of Copper, the produce of the Colony, exported from the Colony of New South Wales, from 1858 to 1890.

Orange District.....	Ferruginous carbonate of copper	42·95	27 19 12	.....	

Iron.

Considerable attention was given during the year to our iron ore deposits and to the question of iron-making in this Colony. Mr. Ormiston, an eminent authority, having been at the instance of Mr. Joseph Mitchell, M.P., sent by English capitalists to inspect our deposits of iron, coal, and limestone, and to report upon the cost of iron-making here.

In New South Wales there are important deposits of rich iron ores, together with unlimited supplies of coal and limestone suitable for smelting purposes, and that for the manufacture of steel of certain descriptions abundance of manganese chrome and tungsten ores are available.

There are three localities favorably situated for the establishment of smelting works, viz., near Mittagong or Picton, in the South-western Coal-field, on the Great Southern Railway Line; near Wallerawang or Lithgow, on the edge of the Western Coal-field, on the Great Western Railway; and near Rylstone, also in the Western Coal-field on the Wallerawang-Mudgee Railway Line.

The ore in the two latter localities might, if required, be worked together, and smelted at some central works near Wallerawang or other convenient site.

The quantity of iron ore available for smelting works in the Mittagong or Picton District is estimated approximately at 8,234,000 tons, containing 3,684,000 tons of metallic iron; in the Wallerawang District 2,484,000 tons of ore, yielding 1,212,000 tons of metallic iron; and in the Rylstone District 2,226,000 tons of ore, containing 957,180 tons of metallic iron; or a total quantity of 12,944,000 tons of ore, containing 5,853,180 tons of metallic iron.

The quantity of iron made at Eskbank during the year was 3,413 tons, valued at £39,948 12s. 2d.

During

During the year the following assays and complete and partial analyses were made of Iron Ores:—

Locality.	Description of mineral.	Analysis.		Iron %.	Specific gravity.	Remarks.

Singleton	Concretionary ironstone.			49·53		
,,	,, ,,			62·78		
Washpool, Lionsville	Magnetic iron with a little quartz.			64·36		
Wollongong District Jondarin Creek.	Brown iron ore			40·44		
,, ,, ,,	Spongy brown hematite with carbonaceous matter (mother of coal?) on joint faces.	Moisture at 100° C.	3·77			The organic matter present in this sample somewhat resembles coal, the bituminous matter being absent. The ore being in a cellular or spongy state, and the large amount of carbonaceous matter present should render it easily reduced to the metallic state. The percentage of iron, however, is low, and would not pay to smelt in its present condition, but might be used to mix with a richer ore.

			99·50			

† On referring to the analyses it will be seen that the samples yielded from 26·77% to 46·75% of metallic iron and from 12·87% to 43·86% of silica. The silica exists in the ores combined with alumina, and two of the samples marked * contained a small quantity of sand. The samples are practically free from phosphorous and sulphur. Small quantities of titanic acid were found present, the highest amount estimated being ·66%. Samples marked * are too poor to smelt, the other samples if averaged would give about 37% of metallic iron.

Antimony.

The Wangwauk Mine, situated about 5 miles north of Coolongolook, is being opened up from one of the shafts. Some very fair samples of antimony have been obtained, the lode being about 2 feet thick. Numerous discoveries of antimony veins have been made between the sea-coast at the Bellinger and Bowra, and the head waters of the Nambucca. From 40 to 50 tons of antimony ore have been shipped from Nambucca to Sydney to test the market. Woodley & Co., at Nundle, have met with some good 65 per cent. ore, the lode being from 12 to 18 inches wide. The Cosmopolitan Co., Hillgrove, sold 130 tons of antimony in London for £30 per ton. No. 1 Freehold, head of Butler's Creek Falls, has a lode 1 foot wide of quartz and antimony carrying gold; about to erect smelters. On Brereton's freehold, ½ mile east of Hillgrove, there are several good antimony lodes mixed with quartz, varying from 1 to 10 feet wide. One lode, 1 foot wide, traceable for 14 chains, carrying 60 per cent. antimony and quartz, from which as high as 1 oz. gold per ton has been obtained. Another lode about 6 feet wide, 2 feet of which is nearly solid antimony, averaging 50 per cent. The Hillgrove Antimony Co. has two lodes 18 inches wide. Antimony and quartz can be traced about 28 chains. The Eleanora Co. has a lode of quartz and antimony, carrying gold, about 8 feet wide, intersected by a sandstone dyke about 4 feet wide. During the year they sold 348 tons 6 cwt. of antimony ore. Burke and party have an antimony lode 14 inches wide, traceable 12 chains. Sold 12 tons of ore at £11 per ton on the mine. Cock and party have four distinct lodes of antimony; averages 10 inches wide; ore assays 50 per cent. Have sold about 40 tons of ore at £10 per ton on the mine. About 1,000 tons of antimony, raised in the Hillgrove division. At Ashford, some 40 miles north of Inverell, there have been some large finds of antimony with indications of gold. There are rich deposits of antimony in the Drake division which have attracted attention. Twenty-six tons of antimony was raised in the Drake division. Some antimony lodes have been found in the Solferino division, and small samples from 2 to 5 tons have been sent away from the several lodes.

During the year twenty-one assays were made for Antimony, the following giving the most favourable results:—

Locality.	Description of Mineral.	Antimony, per cent.	Per ton.		Lead, per cent.

Do do	Brown iron ore with a little oxide of bismuth	0·63	trace	trace
Tenterfield (near)	Compact felsite with oxide of tin, magnetic iron, and a little carbonate of bismuth.	1·50	.....	.....

Alum.

In the range at the back of the village of Bulladelah is an enormous deposit of alum-stone, the outcrop can be traced over 100 chains, with a width of from 3 chains at the top of the cliffs to fully 20 chains at the foot. The deposit is about 35 miles from Port Stephens, one of the finest harbours in Australia, and can be reached by the Myall River, navigable by small vessels up to 100 tons burthen. This river runs right up to the Australian Alum Co's. mine. About 1,000 tons of stone has been treated by a new process, yielding 220 tons of alum. 500 tons of stone is being sent to England for treatment.

Limestone.

Messrs. Partridge & Co. have forwarded 1,000 tons of stone from their quarry on the Myall Lakes, near Bungwall, to their Asphalt Works in Sydney.

During the year eleven analyses were made eight of which are given—

Locality—Burragorang.

Description of mineral—Calcite.
Analysis—Carbonate of lime, 98·30 per cent.

Locality—Bushy Hill, Page River, about 9 miles East by North from Scone.

Description of mineral—Oolitic limestone.
Analysis—

Moisture	nil.
Iron peroxide	·70
Manganese protoxide	nil.
Alumina	1·05
Lime (Ca O)	48·70
Magnesia (Mg O)	1·84
Strontia	strong trace.
Sand	6·45
Soluble silica	trace.
Organic matter	·74
Carbonic acid	=40·27
Phosphoric acid ($P_2 O_5$)	nil.
Sulphuric acid ($S O_3$)	trace.
Alkalies	nil.
	99·75

Locality—Clifton.

Description of mineral—Slightly ferruginous limestone.
Analysis—Carbonate of lime 53·47 per cent.

Locality—

LOCALITY—COUNTY OF CUMBERLAND, NEAR SYDNEY WATER SUPPLY CANAL.

Description of mineral—Limestone.
Analysis—

Moisture	2·71
Organic matter	traces.
Oxide of iron	4·47
Alumina	2·17
Lime (Ca O)	30·02
Magnesia (Mg O)	·70
Strontia	trace.
Insoluble in acids	34·93
Carbonic acid ($C O_3$)	24·78
Sulphuric acid ($S O_3$)	nil.
Phosphoric acid ($P_2 O_5$)	trace.
	99·78

Remarks:—The insoluble matter consists almost entirely of coarse sand with a small quantity of clay. The presence of so much sand renders this limestone unsuitable for cement making purposes.

LOCALITY—ILLAWARRA DISTRICT.

Description of mineral—Siliceous limestone.
Analysis—

Moisture at 100° C Combined water	3·30
Silica	17·70
Soluble silica	trace.
Ferric oxide	·22
Ferrous oxide	·76
Manganese oxide	trace.
Lime	36·73
Magnesia	·88
Strontia	trace.
Alumina	11·07
Carbonic acid	28·89
Phosphoric acid	·19
Sulphuric acid	trace.
Organic matter	·21
	99·95

LOCALITY—ILLAWARRA DISTRICT.

Description of mineral—Limestone.
Lime, 36·9 per cent.

LOCALITY—ILLAWARRA DISTRICT.

Description of mineral—Fossil-bearing limestone
Lime, 31·08 per cent.

LOCALITY—PEAK HILL.

Description of mineral—Limestone.
Analysis—

Moisture	·29
Ferric oxide ($Fe_2 O_3$)	·22
Ferrous oxide (Fe O)	·14
Alumina	1·12
Lime	44·52
Strontia	2·24
Magnesia	·86
Silica	12·80
Potash	trace.
Soda	·68
Carbonic acid	36·89
Sulphuric anhydride	trace.
Phosphoric „	·05
Organic matter	trace.
	99·81

Note.—It will be noticed on perusing the above that the limestone yielded 2·24 per cent. of strontia in combination with carbonic acid. This is the largest amount yet found, although a large quantity of minerals have been tested in the laboratory for its presence.

WATER.

During the year the following analyses were made in this Department:—

LOCALITY—BYROCK.

Appearance in 2-ft. tube, reddish-brown colour. Odour when heated to 100° F., slight.

	Grains per gallon.	Parts per 100,000.
Chlorine as chlorides	1·40	2·00
Phosphoric acid as phosphates	Heavy traces.	Heavy traces.
Nitric acid as nitrates	trace.	trace.
Nitrous acid as nitrites	„	„
Free ammonia	·007	·010
Organic nitrogen, or albuminoid ammonia	·034	·049
Oxygen absorbed in 15 minutes	·059	·085
„ „ „ 4 hours	·115	·165
Poisonous metals	nil.	nil.
Total solid residue	11·368	16·24
Loss on ignition	*2·772	3·96

Remarks:—Water turbid, due to finely-divided matter (clay) held in suspension. The residue on ignition* darkened, thus showing the presence of organic matter. The bulk of the total solid residue consists chiefly of clay, the soluble portion being chloride of sodium, and traces of sulphates. The large amount of albuminoid ammonia found proves the water to be seriously contaminated

contaminated with sewerage matter, and in its present state is quite unfit for human consumption. The pollution appears to have been only recent, and is, no doubt, due to the heavy rains which have soaked and drained over a large catchment area, the water carrying the impurities into the tanks. Before condemning the water for good, I would ask to be supplied with fresh samples, the first, say, in one month's time.

J. C. H. MINGAYE, F.C.S.,
Analyst and Assayer.

LOCALITY—HERMITAGE COLLIERY, LITHGOW.

The water yielded on evaporation :—

	Grains per gallon.
Total solids	12·04
Insoluble solids	1·14
Soluble ,,	10·90
	12·04
Chlorine in combination	1·40
Sulphuric acid in combination	4·56

The insoluble solids were found to consist of :—Silica, alumina, and oxide of iron. The soluble of :—Chiefly magnesia, with lesser quantities of lime, potash, and soda, combined with sulphuric acid, nitric acid (nitrates), and chlorine. Water free from odour, with a small quantity of matter held in suspension, which was found to consist of :—Oxide of iron and alumina. From experiments made in the laboratory, the water was found to exert a decided action on iron at a temperature of 212° F. One gallon of the water dissolving ·0908 grains of iron, 1,000 gallons would therefore dissolve 90·8 grains of iron. This action is due to the reduction of the nitrates at high pressure in the boilers, which causes the plates and boiler-tubes to corrode. In order to obviate this action and the incrustation properties of the water, I would recommend that at stated times the boilers be cleaned out, and occasionally small quantities of caustic soda be added to the water.

J. C. H. MINGAYE, F.C.S.,
Analyst and Assayer.

LOCALITY—NETALLIE, 17 MILES FROM WILCANNIA.

Total solid matter	669·200 grains per gallon.
Equal to 956 parts per 100,000.	
Soluble solid matter	633·949 grains per gallon.
Equal to 905·641 parts per 100,000.	
Insoluble solid matter	35·400 grains per gallon.
Equal to 50·571 parts per 100,000.	
Clay held in suspension in water	17· 22 grains per gallon.

Analysis of total solid matter in water (filtered) :—

	Grains per gallon.	Parts per 100,000.
Chloride of sodium	297·266	424·666
,, of potassium	183·558	262·222
,, of magnesium	36·672	52·390
,, of ammonium	·185	·264
Sulphate of lime	63·021	90·030
,, of magnesia	53·247	76·060
Carbonate of lime	21·419	30·590
,, of magnesia	13·981	19·970
	669·349	956·192

Remarks :—Water turbid, due to fine clay held in suspension. On standing in the bottle for 24 hours, almost the whole of the suspended matter settled, the analysis being conducted on the clear water which was filtered before use. Zinc was detected in this water, the amount present being at the rate of 1·067* grains per gallon, or 1,524 parts per 100,000, probably existing in the water, combined with chlorine or sulphuric acid, as chloride or sulphate. The presence of zinc in water is peculiar, and it has most probably been derived from the action of the water which is heavily charged with sulphates and chlorides on zinc ore through which the water has percolated before reaching the bore. I am of opinion that this water is not a very suitable one for stock purposes, but as this is more of a medical question, I would submit that the analysis be furnished to the Government Veterinarian for his opinion.

* Chloride of zinc (Z_n Cl_2), 2·232 grains per gallon—equal to 3·189 parts per 100,000. Sulphate of zinc (Z_n SO_4), 2·642 grains per gallon—equal to 3·774 parts per 100,000.

LOCALITY—ROCK FLAT, NEAR COOMA, COUNTY BERESFORD.

	Grains per gallon.
Bicarbonate of sodium	24·723
,, of potassium	54·642
,, of calcium	81·387
,, of magnesium	53·305
,, of lithium	trace.
Chloride of sodium	3·114
Silica	·189
Oxide of iron and alumina	·280
	217·640

Carbonic acid gas, 379·75 cubic inches per gallon.

LOCALITY—ROCK FLAT, NEAR COOMA, COUNTY BERESFORD.

	Grains per litr	Grains per gallon
Bicarbonate of calcium	·744	52·08
Magnesium	·320	22·40
Sodium	·647	45·29
Potassium	·245	17·15
Chloride of sodium	·072	5·04
Silica	·008	·56
Alumina	trace.	trace.
	2·036	142·52

Remarks :—Water turbid, due to finely-suspended matter, which was found to consist of iron, lime, and magnesia existing as carbonates. The analysis was made of the filtered water. No iron was detected in solution. A strong trace of strontia and a trace of nitrates were detected. An examination was made of the water for poisonous metals with a negative result. The sample received was much too small to permit of an exhaustive analysis being made.

LOCALITY—

LOCALITY—YARRANGOBILLY.

Total solid residue—9·044 grains per gallon.
Free ammonia—nil per gallon.
Organic ammonia, or albuminoid ammonia—·026 parts per 1,000,000 parts.
Chlorine—·8 grains per gallon.

Analysis of total solids:—

	Grains per gallon.
Carbonate of lime	6·552
„ magnesia	nil.
Silica	·868
Alumina	trace.
Chloride of sodium	1·318
Strong trace of strontia, nitrates, and undetermined	·306
	9·044

No poisonous metals detected. Water free from odour, and matter in suspension.

MISCELLANEOUS.

LOCALITY—ADELONG.

Decription of mineral—Quartz, containing in some of the pieces thin flat layers of magnesium limestone, also a very small quantity of magnetic oxide of iron.

Silica	87·50
Alumina	1·96
Ferric oxide	1·92
Ferrous oxide	·75
Carbonate of lime	5·77
„ magnesia	2·43
Sulphuric anhydride ($S O_3$)	·06
Phosphoric anhydride (P_2O_5)	trace.
	100·39

Gold, 5 oz. 4 dwt. 12 gr. per ton. Silver, 3 dwt. 6 gr. per ton.

Remarks:—The gold is in the free state, but in a very fine state of division, there being no refractory metals present which will interfere with the amalgamation of the crushed stone. The loss of gold is due to the fineness of the particles. This is partly proved by the assay of the tailings, which yielded 1 oz. 7 dwt. 5 gr. per ton; and I should expect the slimes to yield a further portion of the metal, and also a further loss as float gold, which would be carried off in suspension and not recovered. The whole of the ore was crushed, and several assays made, it being found impossible to get any two assays to thoroughly agree, in consequence of the free gold present. Three large assays were made by amalgamating a weighed quantity of the ore, and the following result is the mean of the experiments:—Gold, 4 oz. 15 dwt. 9 gr. per ton; silver, 5 dwt. 10 gr. per ton.

LOCALITY—NEAR BURROWA.

Description of Mineral—Yellow copper, sulphide ore with blende, &c.

Sulphide of copper (Cu_2S)	17·87
„ iron (Fe_2S_3)	28·84
„ lead ($Pb S$)	2·76
„ zinc ($Zn S$)	1·64
Alumina (Al_2O_3)	4·28
Lime ($Ca O$)	0·60
Magnesia ($Mg O$)	1·64
*Gangue	42·05
	99·70

*The gangue (insoluble in acids) consists of quartz. Gold, 3 dwt. 6 gr. per ton, silver, 9 oz. 3 dwt. 22 gr. per ton.

Remarks.—If the above analysis represents anything like a fair average of the ore treated at the mine, it should be readily smelted if properly fluxed, there being nothing present in its composition to cause the action complained of, *i.e.*, "said to destroy the bottoms of furnaces in an unusual manner." The action on the furnace bottoms is possibly due to an imperfect system of fluxing the ore before smelting.

LOCALITY—CASINO.

Description of Mineral—Carbonaceous shale.

Hydroscopic moisture	5·13
Volatile hydrocarbons	19·87
Fixed carbon	12·40
Ash	62 60
	100·00

LOCALITY—COOMA.

Description of Mineral—Infusorial earth.

Moisture at 100° C	7·18
Combined water	3·77
Silica	81·64
Alumina	3·20
Oxide of iron	0·40
Carbonate of lime	1·50
„ magnesia	2·16
Oxide of manganese	trace
Phosphoric acid	„
Organic matter	„
	99·85

LOCALITY—

LOCALITY—GUNNEDAH.

Description of Mineral—Resinous shale.

Moisture at 100° C	1·35
Volatile hydrocarbons	32·18
Fixed carbon	3 61
Ash	62 86
	100·00

Sulphur 1·208 per cent.
Specific gravity 1·755 per cent.
Coke—No coke formed, a dark powder being left.
Ash—Redish tinge, dense.

Remarks.—On heating, this mineral evolved sulphurous acid, and on burning in the open air gave off a fetid smoky flame. Acted upon by alcohol, ether, and bisulphide of carbon, the extract having a yellowish resinous appearance. On distillation yielded a heavy oil and solid product having a very disagreeable odour. Under the microscope the specimen had the appearance of containing a number of seed spores, and pieces of stone containing pyrites were also detected. This mineral has somewhat the appearance of Tasmanite, but its solubility in alcohol, ether, and carbon bisulphide does not class it as the resiniferous shale described by Professor Church, who states that it is not dissolved in the least degree by alcohol, ether, benzol, or carbon bisulphide.

The large percentage of ash in this substance renders it of little value for the manufacture of oil.

LOCALITY—HASTINGS RIVER.

Description of mineral—Kaolin.

Moisture	·49
Alumina	31·75
Oxide of iron	trace.
Protoxide of manganese	·37
Silicia	63·03
Lime	.....
Magnesia	1·12
Potash (K_2O)	1·66
Soda (Na_2O)	·86
Phosphoric acid (P_2O_5)	·31
Sulphuric acid (SO_3)	trace.
	99 59

LOCALITY—HERMITAGE COLLIERY, LITHGOW.

Description of substance—A yellowish hygroscopic powder caked in parts, formed on the outside of a boiler by the escape of steam.

The greater part of this powder is soluble in water, the solution being strongly alkaline. The soluble portion was found to consist largely of magnesia, with lesser quantities of lime, potash, and soda in combination with sulphuric acid, nitric acid (nitrates), and chlorine. The insoluble portion consisted of oxide of iron, alumina, silica, and a small quantity of organic matter.

LOCALITY—KOGARAH.

Description of mineral—White clay.

Moisture at 100° C	3·44
Combined water	11·67
Alumina and oxide of iron*	33·25
Silica	48 65
Lime	trace.
Magnesia	·93
Potash	·35
Soda	1·51
Titanic acid	trace.
	99·80

* Ferric oxide, 1 per cent.

LOCALITY—MUDGEE.

Description of mineral—White clay.

Moisture at 100° C	·32
Combined water	3·82
Silica	69 40
Alumina	19·33
Ferric oxide	1·31
Ferrous oxide	nil.
Manganese oxide	,,
Lime	·59
Magnesia	1·23
Potash	3·73
Soda	·52
Sulphuric anhydride	nil.
	100·00

LOCALITY—

LOCALITY—NAMBUCCA DISTRICT.

Description of mineral—Black viscous substance.

Analysis—

Moisture at 100°	1·58
Matter soluble in petroleum spirit	35·27
„ ether	8·30
„ water	*4·10
Matter insoluble in petroleum spirit, ether, and water	1·73
Silica	32·52
Alumina	10·33
Lime	trace.

LOCALITY—UNDERCLIFF, WILSON'S DOWNFALL.

Description of mineral—Inferior graphite.

Moisture	7·90
Carbon	28·60
Ash	63·50
	100·00

OPAL.

The opal mines are situated on the Momba Pastoral Co.'s run, 60 miles north-west of Wilcannia. Opals have been found within a few feet of the surface, in layers between a hard silicious sandstone; as much as £5 per oz. being offered locally for good specimens. During the year 195 lb. of noble opal has been raised.

GEMS.

The Warden at Berrima reports that he has men (employed out of the Prospecting Vote) at work prospecting the Wingecarribee River and its tributaries for gems with the view of tracing them, if possible, to a source. The result, so far, has been to trace the gems and gem sand in large quantities, comprising sapphires, topaz, zircon, garnets, pleonast (the latter largely predominating), brookite (lavender coloured corrundum) &c., and a little gold all along the river course, but, so far as I can discern no diamond as yet. At Bingera the diamonds won amounted to about 200 carats, worth from 14s. to 20s. per carat. At Bullawa Creek, about 10 miles from Narrabri, twelve diamonds were found, about ⅛ carat straw colour. Five hundred and thirty carats of diamonds, value 6s. per carat won in the Inverell Division. At the Glen, a few miles from Emmaville, a discovery of emeralds has been made, and 2,225 carats forwarded as a trial shipment to London; some of the gems were sold at £4 per carat. The lode formation is a dense quartzite about 3 feet wide. A parallel lode is being opened at 1 mile distant.

SUMMARY.

	Quantity.	Value.	Total Values.

Department of Mines,
Sydney, 9 March, 1891.

HARRIE WOOD,
Under Secretary for Mines.

WARDENS' AND MINING REGISTRARS' REPORTS.

BATHURST DISTRICT—Trunkey Division.

(T. A. Smith, Warden.)

In forwarding my report for the past year, I regret that I am unable to report favourably of the mining prospects in my District. The silver industry has quite collapsed in the Tuena District (Cordillera, Mount Costigan, and Peelwood); also at Back Creek and Wiseman's Creek, in the Rockley Division. The output of copper, as supplied to me, shows a falling off that I cannot account for, unless the ore has become poor. The Burraga Mine was in full work during the whole year, yet the output was far less than in the previous return, which was for only nine months of the preceding year. The returns of coal are not reliable; nearly the whole of the Lithgow Companies positively refuse information. I hope the Department has some other means of obtaining the required information.

The total value of minerals obtained, in accordance with the returns furnished, amounted to £139,586 11s. 1d. The total value of machinery in the District, as returned, is £79,460, and the revenue £1,748 15s. Sunny Corner returned matte valued at £82,771 2s. 1d., and gold valued at £1,877 15s.; Sofala following with gold to the value of £14,568 19s. 6d.; Tuena, £5,812 10s.; Trunkey, £4,124 16s. 3d.; Mount McDonald, £3,249 13s. 5d.; Bathurst, £472 8s. 4d.; Burraga, £220; Oberon, £387 10s.; and Rockley, £288 5s. Burraga also returns 420 tons of copper, valued at £24,150; Lithgow returned 8,628 tons of coal, valued at £1,663 11s; Katoomba 9,000 tons for three months' work, valued at £2,475.

About 7,000 oz. of the gold returned is alluvial. The last winter having been very wet, water was obtainable to sluice old workings. This has been particularly noticeable at Sofala, Tuena, and Trunkey. In quartz-reefing no satisfactory progress has been made. At Wattle Flat, near Sofala, an old reef which was worked seventeen years ago and abandoned was taken up by Ellis & Co., who obtained aid from the Prospecting Vote, thus enabling them to drive a tunnel into the hill. At 300 feet a large reef from 3 to 5 feet in thickness, having well-defined walls, was struck. 500 tons of stone have been taken out and crushed, yielding 330 oz. of retorted gold. The Bathurst Gold-mining Company at Trunkey has ceased working; their returns were never less than 2¼ oz. to the ton, but this does not seem to have paid. The reef known as No. 7 Cromies is working, and Mount Grey has recently been floated in London, with a reported capital of £60,000. No doubt work will be more vigorously prosecuted shortly.

The Balmoral Mine at Mount M'Donald has been struggling along, also Butcher's (this company is receiving assistance from the Prospecting Vote); the Eureka and Grant's Amalgamated are also working.

At Tintern, Everett and party have been working two leases, and report their prospects to be very good indeed; but the absence of machinery within reasonable distance is a great drawback, the nearest being 8 miles distant.

The Butcher's Flat Sluicing Claim, unfortunately, up to the present time has not been dividend paying.

Near Newbridge, on the Great Western Railway, Heaton and party are working an iron lode; and at Back Creek, 6 miles from George's Plains Station, Great Western Railway, are working a manganese lode.

Two parties of prospectors were, this spring, engaged by the Department, under special arrangements, to search the country between Jenolan and Wombeyan Caves for gold and other minerals. These parties did not succeed in making any discoveries. I have no doubt whatever that the country about Tuglow is rich in minerals, both gold and silver. Good specimens of both being found occasionally by fossickers. The country also from the junction of the Little River with the Abercrombie downwards for many miles is deserving of more attention than it has yet received from miners. The whole of the country between Jenolan and Wombeyan Caves is exceedingly wet. The creeks never cease running in the driest seasons. This militates against prospecting. The country is very sparsely populated, which necessitates prospecting parties carrying all their own supplies, tools, &c. Attached is a schedule in explanation of my report, from which you will notice that 1,122 men, exclusive of coal miners, are working for minerals in this District.

P.S.—The average rainfall for the year was 40 inches. The average rate of wages paid in the district is: Miners, 8s. 4d. per day; labourers connected with mines, 7s. 6d. per day; feeders, 7s. to 9s.; and engineers, 10s. to 12s.

Return showing the Mining Business transacted at the Divisional Offices under the charge of Mr. Warden T. A. Smith, during the year 1890:—

* Refused information from Vale of Clywdd, Oakey Park, Zig Zag, and Eskbank.

BATHURST DISTRICT—Orange Division.

(J. T. Lane, Warden.)

In submitting my report for the past year, I am sorry to be unable to supply you with any facts of a very encouraging or hopeful character. Some of our gold miners possess an amount of perseverance which reflects honor on their courage. They seem determined that no effort shall be spared in testing localities where any promise of a show exists. Silver-mining operations are becoming very circumscribed, and we hear little or nothing said about our once promising interest—copper.

Ophir.

Still lives, and is not likely to die a natural death so long as Mr. G. Slater retains his wonted health and vigour. He is now the sole proprietor of the quartz-crushing plant at the Bluff. The old company became tired of hoping—"hope deferred maketh the heart sick"—and Mr. Slater's confidence in Ophir being unabated, he purchased the whole of their interest. He promises vigorous operations, and I am sure his "pluck" merits our warmest wishes. The Queen of the Ranges is producing a satisfactory return for the labour expended. These workings are a small distance north-east of Ophir proper. There are some operations going on at and around Ophir, but the results are not encouraging save at the spot referred to.

Forest Reefs.

The Grand Junction resumed operations a few weeks ago, but have not met with any encouraging results as yet. This company is aided by the Prospecting Fund or it would never have resumed work. W. Ovington and Party are prospecting about ½ mile west of the Extended and have come upon good wash stuff at 96 feet. O'Shea and Party are forming a new company. It is estimated that about £8,000 have been expended on this claim, which is designated the Great Combined Leads at Forest Reefs.

Byng.

Nothing doing save on Dr. Codrington's lands known as Carangara. Gold is being procured, but in quantities insufficient to cover cost of labour.

Cadia.

I know of nothing of sufficient interest to report.

Diggers' Creek, or Four-mile.

Nothing of importance since my last report.

Lewis

The latter are almost abandoned. There are two or three claims indicating the presence of copper being worked.

Three of the Lewis' Ponds mines, from which the most sanguine expectations were indulged, have collapsed.—New Lewis' Ponds, South Lewis' Ponds, and Spicer's. I believe the action in winding up these mines to have been absurdly precipitate. Tom's Company are putting the slag from the first of these through the furnace again, and procuring a payable quantity of silver, &c., &c., and are raising from 45 to 50 tons of rich ore per week, at a comparatively trifling cost. These facts demand some explanation. As regards South Lewis' Ponds, I still maintain that nature has made a great mistake if she do not prove equal in richness to either of her neighbours. The lodes may lie deep; but they are there. The strange anomalies in connection with the management of some of our mines do a deal of injury to mining enterprise. No satisfactory reason has been given why New Lewis' Ponds should have erected a second smelting furnace, and almost immediately after it was completed to discover that the ores were too poor to pay for working; nor are the knowing ones satisfied that there was a necessity for Spicer's to succumb.

The following received aid from the prospecting vote:—

1. Hidden Treasure, at Bulga, ceased working months ago.
2. Lucas' Gully Gold-mining Company, near Ophir, finished vote; no success.
3. Ashby and Party, near Ophir, not worked for some time, but I hear are going to commence again shortly.
4. Murry and Party, at Dead Horse Gully, have not been working for some time, through too much water; intend commencing when water subsides.
5. Quinn has left the Blackfellow's Reef.
6. Payne and Party are working at Lewis' Ponds, or Kelly's Gully.

Mr. Murphy is in a better position to supply figures than I am, and he has promised to give you a few bearing upon our mining industry in this District.

I should have stated that Tom's Mine looks well. The shareholders and general public have implicit confidence in Mr. Hibbard the manager. If the company be strong enough, I should like to see them add the South Lewis' Ponds and Spicer's to their present holding.

BATHURST DISTRICT.—Carcoar Division.

(N. Connolly, Warden.)

I have the honor to forward my report for the past year of the Carcoar portion of the Bathurst Mining Division in my charge.

The valuable cobalt lodes discovered some two years since on private property, close to the town of Carcoar, remain as yet unworked; but there is some prospect that during the current year a company will be formed to develop them and bring them under further public notice.

The Confidence Mine at King's Plains is, I am glad to say, again at work under a new proprietary, with every promise of yielding a fair return to the shareholders.

Flanagan's Gully still maintains its reputation as a field on which rich patches are occasionally struck, but no work of importance is being prosecuted with the exception of Watson and Party's lease, on which sinking is being continued at a considerable depth, in hopes of striking some of the rich leaders believed to exist in the locality.

Brown's Creek Mine is also again at work in the hands of a new company, which started work towards the close of the year. The yield of gold from the trial crushings gives evidence, I am informed, that this mine, under careful and intelligent supervision, will shortly resume its position as the premier gold lease of the district.

At Gold Hill, which, as well as Brown's Creek, is situate, on Church and School Estates, work has been carried on during the past year with fair results; but as the gold from this locality is taken by private hands to Orange, there is much difficulty in ascertaining the exact measure of success attending operations.

Scarcely any work has been done at the "Mandurama Gold Trust Mine" (previously known as the "Old Junction") since my last report, with the exception of placing a large amount of machinery on the ground, whether of a character to deal efficiently with the very fine gold the mine produces it is impossible to say until active operations are resumed, but it is expected that work will be started once more shortly after the holidays.

At Galley Swamp the Homeward Bound has been worked continuously. The results, as the mine deepens, are reported to be improving.

Raine's Gold-mining Company, on the same field, has also continued work with fair results so far as the water level—about 60 feet; but no attempt has been made to provide pumping machinery to test the ground at a lower depth.

Some of the old miners of the field have lately obtained from ground formerly part of Rowe and Company's leases, some very satisfactory yields at a comparatively shallow depth, but there is a want of systematic and resolute enterprise at the Galley Swamp Gold-field, which retards very much its progress, notwithstanding the success that has attended work in times past here with the most primitive appliances for crushing the stone.

At "The Needles," on the north bank of the Belabula, and the other leases taken up in the neighbourhood, work is virtually suspended, through the want of proper shoots to carry the wash to the river for sluicing, nor does there seem to be any prospect of this want being supplied by the parties interested. Although several mineral leases have been applied for during the year, no report of work on any of them has reached me.

The escort returns of the past year show that 888 oz. 16 dwt. 7 grs. have been forwarded, which is a poor result compared with the returns of former years, and affords a striking proof of the decadence of gold-mining in this District owing to various causes, but principally to the absence of capital on the fields and legitimate mining enterprise.

The judicious arrangement now being carried out by the Department in reference to the notification of intended forfeitures of unworked leases, and in various ways connected with mining matters, will, I think, have a most beneficial effect in showing to holders of leases for speculative purposes, without any intention of doing solid work, that they can no longer calculate upon doing so with impunity.

BATHURST DISTRICT—Mitchell Division.

(T. G. Wright, Mining Registrar.)

Things in general have been in a flourishing state at the Sunny Corner Mine during the past twelve months under the management of Mr. Tremenack. The old plant, being completely worn out, was taken down, and a new plant erected, which is a great improvement on the old one, especially for the men employed at the furnaces. The ore raised from this mine during the year was 42,253 tons 3 qr., valued at £112,792 17s. 3d., of which 27,653 tons 3 qr. have been smelted, yielding 1,489 tons 5 cwt. of argentiferous matte, valued at £72,642 17s. 3d., leaving 14,600 tons of calcined ore still at grass, valued at £40,150. The number of men employed in and out of the mine are 300. The value of the smelting plant is £10,322 12s. 8d.

The Silver King Mine had a fairly good run until April last. The quantity of ore raised up to that date was 3,646 tons 2 cwt., producing 181 tons 15 cwt. of argentiferous copper matte, valued at £10,128 4s. 10d. The number of men employed to that date was 160, but at the end of the year was only 9. The value of the plant would be £6,000. The lode appears to have cut out, but prospecting is still being carried on.
