As I was aware that a very complete and detailed report had been submitted on "Sewage Purification as practised in Great Britain" so recently as 1891, by Mr. Staynton, M. Inst. C.E.; from information gathered by him during a prolonged visit to Europe, I did not consider it necessary to enter into a detailed examination of different sewage systems—for which indeed I had neither time nor funds available—but rather endeavoured to obtain what information I could, as to practical results from interviews with well known sanitary authorities in England and Ireland, and by the personal examination of a few typical works. I avoided obtaining information from the proprietors of any patented process—except in one case, where it was unavoidable, and then I carefully verified the information—as I generally find such information is apt to be highly coloured.

As the result of my observations, I am inclined to believe that after all the best system is the old-fashioned one of Ocean discharge, simply discharging the crude sewage into the deep water of the ocean. Unfortunately, there are few instances remaining where this can be done in the old country without injuring the adjoining foreshores. It is about to be adopted for the city of Dublin, the outfall being at the extremity of the south wall at the entrance to the river, where it is expected, with the system of reservoirs, to retain the sewage till the commencement of ebb, that the strong sweep of the tide, concentrated by the port training walls, will be effectual in carrying the sewage out into the deep waters of the Irish Channel. A similar system was tried unsuccessfully in London, owing to the outfall being too far from the ocean. In the case of Dublin, it will probably be successful, though I would prefer seeing the outfall at the point of Howth Head.

Next in order of merit, I would place a suitably-selected and well managed sewage farm, of which there are many examples in England. This system has stood the test of centuries, and with unprejudiced engineers, would always be adopted in preference to any chemical process. Sewage farms.

The Croydon farm, near London, I took, as a good example of sewage disposal by broad irrigation on unprepared and undrained land. Though some of the land is well suited for the purpose, being light and friable, with a gravelly sub-soil, much of it is of clayey nature and not by any means what one would desire—nevertheless, the farm is worked most successfully, and creates no nuisance to the adjoining suburban towns. Though I frequently crossed the farm both in summer and winter, I only once detected an unpleasant smell, and that was in a cold frosty day in November, when apparently, some grass meadows were receiving more irrigation than they could absorb. It is obvious that in cold countries sewage farms work under a great disadvantage in winter time, when the ground becomes frozen, and the growth of plants practically ceases. It is at such times that a sand filtration area proves a valuable aid. Broad Irrigation.

To dispose of the sewage of a large city on the broad irrigation principle, would require such an enormous area of land, that in most instances its future adoption is debarred in the old country. For instance, to treat the present North London outfall would require an area of about 8,000 acres.

Precipitation
and irrigation.

In order to reduce the area of land necessary previous precipitation is often resorted to with success. There are many precipitating agents and processes, all of which may be styled successful when the effluent is afterwards filtered through land or specially prepared filters. It is, however, generally allowed that where possible it is better to apply the crude sewage to the land, as the disposal of the sludge is always a difficulty, and never repays the cost of the chemicals used in its precipitation, or the expense of pressing it: besides the precipitating agents employed are generally antagonistic to the "friendly microbe," whose aid must be relied on to finally purify the effluent.

Intermittent
filtration and
irrigation.

From what I learn in the course of my investigations I am convinced that intermittent filtration on specially prepared areas will be largely resorted to in the future. I find that the highest authorities on the subject are constantly experimenting in this direction with specially prepared filters and with most satisfactory results. It is only at the present time that the action of a sewage filter is beginning to be understood. It is no longer looked upon simply as a strainer, which in time would become choked by foal sediment, but rather as a nursery in which to rear "friendly microbes." The publication of the results of the valuable experiments carried out by the State Board of Massachusetts, has done more to remove the old erroneous opinion than any works previously published on the subject. It appears now that the most perfect sewage system is that which to the greatest degree, and in the simplest manner, assists nature in her constant work of purifying the world.

On a well constructed and managed sewage farm, the greater part of the solids contained in sewage is utilised by nature for the growth of plants, while what escapes in solution to the lower strata is there devoured by the "friendly microbe," and split up into useful components.

In order to cultivate this "friendly microbe," it is only necessary to have a porous bed, and to give it short periods of rest sufficient to allow it to become aerated. It seems to thrive better in sand than in clay, in coarse sand than in fine, and in gravel than in sand.

I am convinced that a mistake is being made in many sewage farms by keeping portions of them as grass meadows. The grass sward—naturally impervious to air—is rendered more so by the tramping of cattle, I have noticed in several instances that the only objectionable portions of a sewage farm were these water meadows, as they are termed.

Precipitation
and filtration.
International
system.

Of precipitating processes combined with filtration perhaps the most largely advertised, and therefore best known, is the International. In this system the sewage is first precipitated by aid of a natural substance which is termed "Ferozone," containing the well known agents, oxide of iron, alumina, and magnesia. The effluent is there passed through a well designed filter, consisting of layers of sand, and a spongy form of magnetic oxide of iron, called polarite, for which special virtues are claimed. There is no doubt that the process is a good one, and does its work well, except in cases where it is attempted to work with too small an area of filter bed; it, however, appears to come rather expensive—ferozone costing in London about £2 per ton, and polarite £4. I am informed that it requires about 10 cwt. of ferozone to precipitate 1,000,000 gallons of sewage, or £1 worth per million, so that if this agent were employed at North London to deal with a sewage flow of 120 millions, the cost would amount to some £11,000 per annum, or fully three times what the present chemicals cost. With regard to the polarite used in the filters; it seems hardly worth while paying £4 per ton for a substance, which after all only forms a small portion of the filter, the remainder being the old fashioned material sand—when practically as good results can be obtained by the use of the small waste coke from a gas works.

Experimental
coke filter.

While in London I saw an experimental filter of less than 1 acre, consisting of 3 feet 6 inches of waste small coke, covered by 6 inches of sharp gravel, through which daily 1,000,000 gallons of the North London sewage were being passed after precipitation. This filter had only been in use sixteen days, and was being worked with varying periods of rest. The effluent appeared bright and sparkling, and I was informed, proved on analysis to be as pure as those given by more expensive processes.

It is quite apparent therefore, so long as the filtering material is porous and open, and is given the opportunity to aerate at proper intervals, that the "friendly microbe," or "nature's scavenger," may be relied upon to do its work effectually.

Failures will generally be found to have arisen from the use of too close a material in the filters—or sewage farm, as the case may be, or from the areas being too small and consequently overworked.

Precipitation
without
filtration.

Precipitation without subsequent filtration is resorted to under various systems. The effluent being discharged into a river, or if that is impossible, utilised for irrigation. In the latter case it really amounts to filtration, while in the former reliance is placed on the volume and purity of the river to oxidize what at the best, is always a putrifying effluent. The peculiarity of the system introduced by Messrs. Adeney and Parry—to be afterwards described—is that they charge the effluent with oxygen in order to encourage the growth of the friendly microbe, and insure it doing its work effectually before the effluent has time to putrify.

London sewage
system.

The North London sewage outfall works being of very modern construction, and probably by far the largest in the world, were carefully examined by me in November, previous to which I had a long interview with Mr. Alexander Binnie, M. Inst. C.E., Engineer to the London County Council, who kindly supplied me with plans of the works and much valuable information, and gave instructions that I should be shown everything I wished to see. The following description of the process may be found useful:—

The sewage arrives at the works in three sewers each 9 feet in diameter, the summer flow being about 110,000,000 gallons per day. It passes through coarse grids, removing about 13 tons of floating refuse per day, which is burnt in a furnace along side. It then receives a charge of quick-lime slacked in the surface water from the sludge settling tanks—30 tons being the daily consumption of lime, which is added in varying quantities, according to the hour of the day. After flowing about a quarter of a mile, in a closed sewer, it receives a charge of solution of proto-sulphate of iron, and then after a further flow of 700 feet it reaches a long valve chamber from which it is allowed to flow into a series of precipitating channels, thirteen in number, each being about 1,000 feet long, 30 feet wide, and 20 feet deep, with arched top and bottom. The total capacity being about 20,000,000 gallons, or one-sixth the daily average flow—and allowing for one channel always being empty for cleaning, it would appear that the sewage gets about four hours for precipitation.

After flowing slowly through the precipitating channel, the sewage escapes over a weir at the far end, and passing through the sewage storage reservoir—used in former years to hold back the crude sewage till time of ebb—it escapes into the Thames at the mouth of Barking Creek, nearly opposite Woolwich Arsenal. It is not found necessary to hold back the effluent, but it can be done if desired. During very hot weather, when there is little fresh water in the Thames, a small quantity of manganate of soda and sulphuric acid is added to the effluent as a deodorizer. This is, however, not often necessary. The maximum quantity used in any week during last summer—which was the hottest and driest ever known in England—amounted to manganate of soda, 6 tons. sulphuric acid, 4 tons.

The precipitating channels are emptied in rotation every fifty hours. After closing the inlet valve the water is drawn off from the surface through a series of beautifully-constructed hydraulic valves, which follow down the water as the surface sinks. The liquid sludge which remains at the bottom—varying in thickness from 4 feet at the inlet, to 1 foot at the outlet end—is then drawn and swept off to a pump-well, through a drain along the bottom. The chamber is then scraped and roughly washed out by a gang of men employed constantly at the work. I was all through one of these channels immediately after being cleared, and did not find it unpleasant in any way, except that it was rather warm. I learned that the workmen do not find it unhealthy; one of them informed me he had been sixteen years at this or similar work, and was hardly ever ill.

The sludge, before reaching the pump-well, is submitted to a further screening, to remove stones, &c., which might destroy the pumps. It is impossible, however, to remove the sand, and, in consequence, the pumps, plungers, and centrifugal pump-shells, are very soon destroyed.

From the well it is pumped into sludge settling-tanks, where it remains till the steam-hoppers arrive to carry it to sea. The surface-water which rises off the sludge, being too foul to discharge into the river, is pumped back to the liming station and used for slacking the lime. From the sludge-tanks the sludge is pumped to the extremity of a pier, and into hopper-steamers, which convey it to the "Deeps" at the mouth of the Thames, some 12 miles below the Nore.

This mode of getting rid of the sludge is the only way in which such a vast quantity could be dealt with. The cost of pressing it, I was informed, would have amounted to 4s. 6d. per ton.

The following particulars, which I extracted from the books at the works, may prove instructive:—

Week ending 28 October, 1893.

Sewage treated, 833,000,000 gallons.
Lime used, 273 tons; sulphate of iron, 57 tons. 16 cwt.
Refuse strained out and burnt, 90 tons.
Sludge sent to sea, 31,000 tons.

The

The effluent I found to be very fair, though a little tinged with yellow, and smelling slightly of paraffine. It was in appearance clearer than the Thames at the best of times when passing London Bridge.

One million gallons of the effluent were being passed daily through an experimental filter of less than one acre in area, with very good results. This filter has already been described.

The North London system must, I think, be looked upon as a success, and if the Thames were not already so foul there would be no further trouble with the effluent or need for deodorizers. It would, however, be a vast improvement if there was added to the scheme about 100 acres of coke filter-beds, similar to the one already in use. Appended is a lithographic plan showing the whole works.

It remains for me to now describe the "Oxygen Sewage Purification System," as introduced by Messrs. Adeney and Parry, of Dublin.

Mr. Adeney, I may mention, is a scientific chemist and Curator of the Royal University of Ireland, while Mr. Parry is a well-known sanitary engineer who has carried out many small sewage works, and is looked upon as one of the best authorities in Ireland on domestic sanitation.

These two gentlemen, who have been experimenting for some years, have conjointly brought out this apparently simple and efficient method of treating sewage which is now in use at several places in Ireland. I had several interviews with Mr. Parry, and accompanied him over the works at the Criminal Lunatic Asylum in Dundrum, near Dublin. The compactness of the works, the freedom from all smell, and the slight attention required, at once struck me as points in favour of the adoption of this system for isolated cases, such as public institutions, small villages, private houses, and where land is not available for sewage farms or filters.

The works at Dundrum Asylum, treating the sewage of a population of 250, are contained in a shed measuring 25 feet by 20. In it there are three similar tanks, very much deeper than the ordinary sewage tank, being 7 feet square and 16 feet deep, with conical bottoms and pump-wells.

The sewage as it arrives falls on a small overshot water-wheel, which actuates a number of tappet valves, and regulates the supply of chemicals according to the quantity of sewage.

The sewage passes without any addition of chemicals down a pipe to the bottom of the first tank, and is there delivered evenly over the bottom, and as it rises through the 16 feet depth is naturally strained by having its fine particles caught in the gelatinous matter and thus partially purified.

It is important that the sewage should rise evenly through the whole tank without forming currents, in future, therefore, the tanks will be constructed of a circular form.

The effluent from the surface of the first tank, after passing through a mixing race where it receives a dose of from 3 to 4 grains to the gallon of manganate of soda, and then a small dose of sulphate of alumina, passes to the bottom of the second tank, and after rising through its depth flows in a comparatively clear stream to the bottom of the third tank, at the surface of which it receives a final charge of 2 or 3 grains to the gallon of nitrate of soda, and is discharged over a white weir into a small brook, which flows on its course to the river through a gentleman's private domain. This brook though originally of a smaller volume than the sewage effluent it receives is apparently unpolluted.

The minimum sewage flow is about 6,000 gallons per day, but during wet weather it probably rises to 20,000, owing to the drainage from about 1½ acres of roofs and concrete yards passing into the sewers.

It will be seen from the foregoing, that the sewage is subjected to the following processes, viz. :—(1) Mechanical subsidence; (2) chemical precipitation; (3) oxidation. The oxidation brought about by the admixture of nitrate of soda with the already clarified effluent is relied upon to promote the growth of the friendly microbe, and thus prevent the small brook becoming foul, and it certainly appears to answer the purpose intended.

The sludge is drawn from the bottom of the tanks by means of an exhaustor, consisting of a reservoir and air-pump—by far the largest deposit is found in the first tank—while very little is found in the third. It is not necessary to stop working or to run off the tanks when this is being done. The sludge is then strained through canvas bags, and either buried as manure in the Asylum gardens, or dried and kept for use as required.

The drying process is very simple, and by an ingenious method goes on without creating any objectionable smell. The pressed sludge is spread on the floor and mixed with a little of the oxyhydrate of manganese which is deposited in and recovered from the second tank, and by simply turning the whole occasionally to expose fresh surfaces to the air the mass dries to a powder without creating any nuisance—in this form, it is very valuable as a manure.

I was unable to arrive at the cost of the chemicals consumed, as experiments were still being carried on so as to determine the most economical mode of working. I was informed that all the manganese can be recovered from the second tank and reconverted at about half its original cost, and that the nitrate of soda is the most expensive item.

I was also informed that the total cost of the works was about £500, and that the working expenses, including attendance, amounted to 3s. 6d. per day. The operations are almost automatic throughout, requiring only about half the time of an unskilled labourer, who is otherwise employed about the asylum, all motive power—except for working the exhaust pump—is supplied by the slight fall of the sewage itself, and the arrangements for admitting the proper quantities of chemicals and for exhausting the sludge are most simple and efficient.

Trusting that the above information which was collected with some difficulty, may prove of value to the Department.

I have, &c.,

[To Evidence of O. N. Bell, Esq.]

NOTES RESPECTING SEPARATION OF RAIN FROM SEWERS, AND THE EFFECTS OF DOING SO.

THE scheme being taken as a mean between the extremes of present requirements and supposed future extension, viz., 20,000 people at 40 gallons per 24 hours one-half flowing in 8 hours gives 833 gallons per minute. The rain admitted, as proposed, is 1 inch on 200 square feet of roof for each person, giving 1,503 gallons per minute.

The 833 gallons of sewage is equal to 1.33 inches of rain in 24 hours over the entire area of the farm, and the 1 inch of rain is equal to 2.33 inches over the same area. Together they equal 3.66 inches of rainfall, which is in addition to the natural rainfall on the farm itself; so that if there happens a 2½-inch fall of rain, which is not unusual, the farm has to sustain 6¼ inches of rainfall in place of 3¾ inches if the rain were kept out of the sewers; and this 3¾ inches is quite enough for the farm to deal with in wet weather.

In a rain-storm of 2½ inches every gallon of sewage will be drenched with nearly 5 gallons of rain, and this is just what makes farmers object to receiving sewage on their land, as they get it drenched at a time when it has all it can do to absorb the sewage only.

The allowance of 200 square feet of roof-area to each person equals in a family of five to 1,000 square feet, which is about the roof-space of a house 33 feet by 30 feet. This allowance is, in fact, intended to include the whole roof-area of the town, which is more than half the total area of closely-built towns, counting in streets, yards, and open spaces. It follows that were Parramatta closely built over more than half the area of the town will have the total rainfall admitted to the sewers, for there are no means of excluding it, and if 1 inch is admitted all will get in.

The sewers are built to carry 1 inch only of this rain, but 2½, and even 4 inches of rain, are not unusual; the sewers will in such a case be gorged with rain, and must be relieved by storm overflows. At the pumps also the surplus will be made to overflow, so that only the intended 1 inch on roof-area will come to the pumps. But the sewage will be drenched with useless water, and to that extent injured for purposes of the farm.

By admitting this amount of rain, the sewers have to be made big enough to carry 2,336 gallons per minute; whereas, if the rain were excluded, 833 gallons per minute would suffice.

It is often urged that the rain is necessary to flush the sewers and keep them sweet. This argument is of no value, as the sewers, if ever foul, will be so in dry weather, and means must then be taken to flush them with the water supply. If these means are effectual in dry weather, they will be so at all times, therefore the rain is unnecessary, as it does not act when most wanted.

In many cases where a separate system is adopted it is necessary to build storm-water sewers also; this is not required at Parramatta, as it is excellently situated for draining off rain-water by the side-channels of the streets to the river, and a storm-water channel is already provided for the low parts.

There

There would be some better reason for admitting the rain-water off the streets, as this is very filthy; but the sand, mud, and road-grit is very injurious and troublesome if admitted to the sewers, and difficult to exclude if the street-water is admitted. There is no good reason for admitting rain-water off the roofs, which is quite clean.

The general practice in England of admitting some portion of rain to the sewers is due to the unwillingness of engineers to disturb and upset old-established house arrangements of rain-water down-pipes and other connections of dwellings which of old have been used to carry rain and sewage together. There has been a very natural reluctance to making the people incur the expense of entirely changing the system of their house-pipes, so as to separate the sewage from the rain, the cost of which to the inhabitants came to enormous sums in large towns. The engineers therefore let these fixtures alone, with the consequence that the sewers had to receive a certain proportion of rain along with the sewage.

A separate system aims at conveying away only such water as is fouled by use—that is, all slops, bath-water, water from yards and stables.

By reducing the size of the sewers to suit them for the smaller quantity they have to carry by excluding the rain, it sometimes happens that the gradients have to be steepened, thus incurring greater expense in deeper trenches. I have looked over the gradients for the sewers for Parramatta, and I see no reason to steepen the gradients of any of the sewers which have their sizes reduced, as these gradients have been in use in Christchurch and elsewhere for many years with no bad results.

The Hon. W. F. Taylor, M.D., M.L.C., at a meeting of the Royal Society, 1892, mentioned the system of sewerage introduced at Memphis on the Mississippi, U.S.A., as the best illustration of the separate system, and differing from ordinary usage on the following particulars: Storm and surface water rigorously excluded from the sewers; pipes to be so small as to be never less than half-full of sewage; automatic flushing tanks of 120 to 150 gallons at top end of each line of pipes. Has been in operation for four years with perfect satisfaction. Memphis is a town of 50,000 people; the drainage is for foul water and sewage only; drains are 6 feet deep; average house-pipes are 4 inches diameter, and sewers are 8, 10, 12, and 15 inches diameter. By adopting the separate system, and excluding the rain, a saving has been effected of £280,000 in the drainage of Memphis.

At Christchurch, N.Z., no rain is admitted, but a good deal of subsoil water is purposely admitted with the object of drying the ground, also the waste from many artesian wells driving hydraulic rams is admitted on payment of a small early sum as a contribution to the cost of pumping.

13 February, 1894.

M. Inst. C.E.

C.

THE BOROUGH OF GRANVILLE AND THE PROPOSED SEWAGE-FARM.

Sir, Public Works Department, Sydney, 12 February, 1894.
I am directed by Mr. Secretary Lyne to forward, for the information of the Committee, copies of correspondence which has taken place between the Borough Council of Granville and this Department, on the subject of the proposed sewage-farm in connection with the scheme of sewerage for Parramatta.

The Secretary, Parliamentary Standing Committee on Public Works.

I have, &c.,
J. BARLING,
Under Secretary.

Re Sewage-farm for Parramatta.

Sir, Borough of Granville Council Chambers, 9 February, 1894.
His Worship the Mayor of Granville has noticed that the question of establishing the above has again been referred to the Public Works Committee for consideration. I am directed to inform you that the Borough of Granville has always objected to the establishment of this farm, and that evidence to such effect was furnished by the Mayor during the time of the first consideration. The prospective rights of the Borough of Granville were not, however, made clear on that occasion, and it is hoped that should a majority of that Committee decide in favour of the scheme, that the right of this Borough to the use of the farm, whenever such use may be required, may be fully and firmly stated and established.

The Under Secretary, Public Works Department.

Yours, &c.,
JOHN SCARBOROUGH,
Council Clerk.

Sir, Department of Public Works, Sydney, 12 February, 1894.
I am directed to acknowledge the receipt of your letter of the 9th instant, in which you ask that, should the Public Works Committee decide in favour of the proposed sewerage scheme for Parramatta, the right of the Borough of Granville to the use of the sewage-farm, whenever such use may be required, may be established, and, in reply, am to inform you that, in the event of the scheme being passed by the Committee, and approved by Parliament, provision will be sought in the Construction Bill to enable your Council to take advantage of the sewage-farm if existing legislation is found insufficient for the purpose; but I am to point out that sub-section 1 of section 136 of the Metropolitan Water and Sewerage Act of 1880 would seem to provide for cases such as this, and Granville being in the county of Cumberland, comes under the provisions of this Act—see section 124. The farm will be quite capable of serving the requirements of both boroughs, and will thus lessen the cost to each.

The Council Clerk, Granville.

I have, &c.,
J. BARLING,
Under Secretary.

D.

[To Evidence of G. Chamier, Esq.]

AUTHORITIES IN FAVOUR OF SEWAGE IRRIGATION.

Sir, 60 Elizabeth-street, Sydney, 22 February, 1894.
In my evidence before the Parliamentary Standing Committee on Public Works, with reference to the proposed sewage works for Parramatta, I was unable, from memory, to answer certain questions involving names and figures. I beg, therefore, to furnish herewith, some of these particulars, which I have since obtained from reliable sources.

1. I was asked for the names of leading engineers who favoured the system of broad irrigation for the disposal of sewage. The principal writers on sanitary engineering, such as Baldwin Latham, Bailey Denton, Santo Crimp, and others, all strongly support sewage irrigation in preference to any other system. The late Sir Joseph Bazalgette and the late Mr. W. Clark preferred sewage irrigation wherever it could conveniently be adopted. Among the well-known sanitary engineers of the present day there are Dr. Dupré, Sir Robert Rawlinson, Messrs. W. J. Dibdin, C. H. Cooper, James Mansergh, Malcolm Paterson, and many others who have strongly declared in favour of sewage irrigation wherever suitable land was available for the purpose. The leading French, German, and American sanitary engineers are of the same opinion.

2. The Adelaide sewage farm.—I find that the quantity of land secured by the Government of South Australia for this purpose is 480 acres, of which only a portion has yet been utilised. The total area which admits of broad irrigation is 404 acres. The extent of the present filter-bed is 14 acres.

3. Cost of Adelaide sewage scheme.—The total outlay incurred to 30th June, 1891, was £446,966 14s. 6d., involving a yearly charge for working expenses of £16,418, for a population estimated at 60,000.

The Secretary to the Parliamentary Standing Committee on Public Works.

I have, &c.,
GEORGE CHAMIER,
M. Inst. C.E.

E.

[To Evidence of J. M. Smail, Esq.]

Metropolitan Board of Water Supply and Sewerage, Sydney, 24 February, 1894.
MEMORANDA of cost of wages, &c., at screening chambers, Cook's River, and on sewage farm, Sydney main drainage:—

	Cost per annum.		
	£	s.	d.
1. Inlet house, screening chambers	679	1	7
2. Working expenses of sewage farm	968	8	2
3. Revenue from farm.....	333	9	11
4. Net cost of working farm	634	18	3

J. M. SMAIL,
Engineer.

The Chairman, Public Works Committee.

F.

[To Evidence of J. W. Grimshaw, Esq.]

Department of Public Works, Harbours and Rivers Branch, Sydney, 27 February, 1894.
MINUTE PAPER.—Subject—Parramatta Sewage Farm.

Expenditure on fascine and earth banks.

THE following is the information asked for by the Parliamentary Standing Committee on Public Works:—

	£	s.	d.
<i>Work completed—</i>			
Fascine bank round eastern end of proposed farm; length, 1,101 lineal feet; cost	643	7	2
Earth banks on northern and southern sides; length, 4,521 lineal feet; cost	295	8	10
Clearing scrub, 25 acres	130	15	6
Sluice-box	19	8	6
Total expenditure to date.....	1,089	0	0
<i>Estimate of work still to be done—</i>			
Fascine bank to close gap; length, 30 feet; cost	80	0	0
Backing up fascine bank; length, 1,181 lineal feet; cost	66	0	0
Putting sluice-box in place, &c.....	4	0	0
Total	£150	0	0

J. W. GRIMSHAW,
M. Inst. C. E.

The Secretary, Parliamentary Standing Committee on Public Works.

G.

[To Evidence of G. H. Stayton, Esq.]

PARRAMATTA SEWAGE.

118, Pitt-street, Sydney, 28 February, 1894.

STATEMENT showing the comparative cost of the schemes under consideration.

<i>Proposed scheme—</i>	
Departmental estimate of present scheme for existing population	£75,926
Add estimated cost of filling up filtration area of 42 acres (properly forming part of the works), and preparing land	12,100
	£88,026
<i>International system—</i>	
Departmental estimate of cost of works for present population above pumping station (<i>vide</i> Question 72, 1892, Proceedings)	£53,416
Add estimated cost of pumping station and purification works complete, as recommended by me, capable of treating the sewage of a population of 22,000 persons	20,000
	£73,416

Showing a saving of £14,610 upon the first section of the entire scheme.

Ultimate Cost of Scheme.

<i>Departmental scheme—</i>	
Departmental estimate for entire scheme for 48,000 persons (<i>vide</i> Questions 68 and 75).....	£131,054
Add estimated cost of filling up filtration area of 42 acres, and providing precipitation tanks and works complete upon the farm to ensure efficiency	24,000
	£155,054
<i>International system—</i>	
Departmental estimate of cost of works above pumping station (<i>vide</i> Questions 72 and 75)	£88,269
Add estimated cost of pumping station and purification works complete, for a population of 48,000 persons	40,000
	£128,269

Showing a saving of £26,785 upon the complete scheme.

Annual Cost.

It is obvious that the annual charge of 4 per cent. upon the capital outlay saved by adopting the International system would effect a reduction in the yearly cost to the ratepayers. There would also be a slight saving in the cost of pumping. I estimate the working expenses of the International system for the present requirements of Parramatta at between £500 and £600 per annum.

The comparative annual cost of the first section of the scheme may be stated thus:—

<i>Departmental scheme, with additions pointed out—</i>	
4 per cent. interest on £88,026	£3,521
Working expenses (<i>vide</i> Question 350)	1,292
	£4,813
<i>International scheme—</i>	
4 per cent. interest on £73,416	£2,936
Working expenses for pumping, purifications, sewer flushers, and contingencies	1,308
	£4,244
Annual saving	£569

GEO. H. STAYTON,

G1.

AGENCY OF THE INTERNATIONAL PURIFICATION COMPANY.

Sir,

Sydney, 6 March, 1894.

I was not a little astonished to learn from the *Daily Telegraph* of Friday last, that at the meeting of the Public Works Committee on the previous afternoon, a statement was made to the effect that I was the accredited representative of the International Purification Company in New South Wales.

It is not true that I am acting as the Company's agent. If the Company have written, as asserted, there must be some misapprehension on their part. I am not aware that they have done so, and cannot be held responsible for what may have been received.

It is perfectly true that about a year ago the Company asked me whether I could take up their agency, or whether I could recommend anyone. I replied that I could not see my way to become their agent; but that as I so strongly believed in the efficacy of their process I should be happy to allow them to refer anyone to me, or I could supply anyone with their papers on application.

I have only had one inquiry, have done nothing in the matter, and have not received one farthing from the Company. I am venturing to uphold the system for Parramatta, because it is specially suitable, efficient, and cheap. I should be content to stake my professional reputation upon its success if properly applied. I take this stand merely upon its merits, and because I should regret to see a waste of public money upon a scheme which *must* eventually entail a further outlay.

I am, &c.,

GEO. H. STAYTON,

M. Inst. C.E.

The Chairman, Parliamentary Standing Committee on Public Works.

[To Evidence of R. R. P. Hickson, Esq.]

TREATING SEWAGE BY NATURE'S SCAVENGER.

Minute Paper.

Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 17 February, 1894.

THE result of a very careful study of the various means adopted and suggested for dealing with the disposal of sewage, has convinced me that the only effective mode of treating sewage (other than sending it out to sea) is by the aid of a bacillus, commonly known as the "friendly microbe," or "Nature's scavenger."

It has been proved beyond all question that this microbe is produced and cultivated by the judicious application of sewage on to a properly formed filter-bed, and that with the natural elements, air and heat, they can be produced to an unlimited extent.

These microbes are brought into existence for the express purpose of destroying all matter hurtful to life and health.

Declaux says:—"Whenever and wherever there is a deposit of organic matter, whether it be the case of a herb or an oak, of a worm or a whale, the work is exclusively done by small organisms. They are the important and almost the only agents of universal hygiene: they clear away more quickly than the dogs of Constantinople, or the wild beasts of the desert, the remains of all that has had life. They protect the living against the dead; they do more—if there are still living beings—if, since the hundred of centuries the world has been inhabited, life continues, it is to them we owe it. But for these minute creatures mankind would long ago have perished from the face of the earth. Unquestionably there are microbes which possess the power of propagating a direful class of diseases. But these creatures are comparatively rare, and the microbes which are beneficial serve to destroy them. The non-pathogenic or harmless bacteria are not only antagonistic to those that are hurtful, but are specially valuable as 'Nature's scavengers.'"

Dr. Koch says:—"Another point of the greatest interest attaches to the system of bacteriological purification, inasmuch as it is now proved beyond doubt that the intervention of a colony of non-pathogenic liquifying organisms is a perfect guarantee against the passage of the bacillus of cholera, and almost certainly of the bacillus of typhoid fever as well."

Mr. A. C. Houston, M.B. D.Sc., says:—"These organisms have been separately identified and counted, and there is no longer any reason to doubt that they are in reality 'Nature's scavengers.' They are already well known to bacteriologists, being classed as non-pathogenic or harmless bacteria, but it was little suspected that they could carry on the vast and beneficent work of which they are capable when cultivated under proper conditions. *What chemistry and elaborate mechanism have failed to do, these organisms accomplish.* By their action they peptonise the complex organic substances existing, and directly and indirectly affect its purification."

The following pithy article on bacteriological purification is worthy of notation:—"It seems that there are living organisms which could not exist without filth: man has only to call them into vigour at the right time, in order to make them do his bidding, and add to the enjoyment of life. Here we are, worrying and fretting our souls about costly problems for the disposal of filth, while there are at hand natural scavengers in countless millions, awaiting our bidding, and prepared to solve our problems at comparatively trifling cost."

With regard to chemicals, there can be no reasonable doubt that up to the present they have not been successful.

A writer in the paper *Industries and Iron* says:—"The efforts of chemists to force the hand of nature, as it were, and to discover some solution for an apparently insoluble problem, have hitherto been in evidence only as a praiseworthy exertion of the intelligence without any corresponding results."

A writer in the *Engineer* says:—"The various chemical processes are now practically admitted to be failures, as even if by their means a good effluent is produced, there is still the resultant sludge to be dealt with, and here the difficulties invariably begin."

As I have in a previous report pointed out, the objections to a chemical process are based on scientific grounds. The action of chemicals is only partial. They act as clarifiers rather than purifiers of the sewage, leaving a doubtful effluent and an unmarketable sludge to be finally dealt with.

As a further proof of the action of this "friendly microbe," it is only necessary to refer to what is actually taking place on the Botany sewage farm, and to the analysis of the effluent and the soil therefrom.

Exhibit "A" is taken from a well in the centre of one of the cultivation paddocks. The water in this well remains at a depth of about 3 feet below the surface, and is described by Mr. Hamlet, Government Analyst, as follows:—"This water may be allowed to flow into creeks and rivers without creating a nuisance, its composition being equal to some waters used for drinking purposes."

Exhibits "B" and "C" are from Botany, "B" being a sample of virgin soil, and "C" the soil on which sewage has been constantly run for the last five years.

Mr. Hamlet reports the organic matter in the first to be 4.85 per cent., and in the latter 4.97, practically the same. The question, therefore, naturally arises: If the effluent and soil are uncontaminated, what has become of that portion of the sewage matter which, most unquestionably, does contain germs of diseases and other particles injurious to health? My reply is that the "friendly microbe," "Nature's scavenger," has been at work, and completely eaten up and destroyed all hurtful matter, and left the ground and effluent clean and pure.

In connection with this wonderful natural process, Dr. Koch says:—"This is what nature has been doing since the dawn of life on the planet—that is to say, if some such process were not going on, the earth would have been uninhabitable."

It is only necessary to add that, owing to the absence of frost, the climate of this country is exceptionally favourable to the growth of these natural scavengers.

ROBERT HICKSON.

The Chairman, Parliamentary Public Works Committee.

H1.

PARRAMATTA SEWERAGE SCHEME.—COST AND ESTIMATE OF MAINTENANCE.

Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 2 March, 1894.

Original cost of works was as follows :—	£	s.	d.
Works above pumping-station	£54,756	0	0
Pumps, boiler, land, delivery-mains, &c.	22,170	0	0
	£75,926	0	0
Estimate of maintenance :—			
Interest and payment in sixty years at 4 per cent.	3,040	0	0
Coals, stores, and engine-house expenses	728	0	0
Expenses of working farm	500	0	0
	£4,268	0	0

The first cost of works and annual expenses may, I think, owing to the altered condition of affairs—1st, as regards the low rate at which contracts are now being let; and 2nd, as regards our experience of the Botany farm, when the farm will not only be taken off our hands, but a rent paid for the use thereof—be greatly reduced.

Our contracts now are being let from 15 to 30 per cent. below estimate. Applying the lesser rate to the estimate of works yet to be carried out above the pumping-station, the total cost would be reduced to about £69,000.

In the same way, by deducting the cost of working the sewage farm, as well as the reduced rate of interest on the reduced cost of work, the annual cost of the whole scheme would be reduced to about £3,488.

Assuming these figures to be correct, the rate to cover this annual cost would be reduced from 10·97 to 8·97 in the pound.

Taking credit for what the Council now pay for their pan system, the annual extra rate the Council would have to pay for this sewerage scheme would be 5½d. in the pound.

ROBT. HICKSON.

The Chairman, Public Works Committee.

I.

COST OF DREDGING AND LANDING SILT FOR SEWAGE FARM.

Public Works Department, Sydney, 27 February, 1894.

Sir,

With reference to the inquiry now being held by the Committee in regard to the proposed scheme of sewerage for Parramatta, I am directed by Mr. Secretary Lyne to ask you to be so good as to bring under the attention of the Committee the following matter in regard to the scheme.

It has been suggested that perhaps the Committee in taking into consideration the cost of the proposal would add that of dredging and landing silt for the purposes of the sewage farm. I am, therefore, to say that it is not the intention of the Minister to debit the cost of the sewerage scheme with any expenditure on this account. When the river is being dredged, the farm will be a most convenient site for landing the silt, and as the material has to be got rid of, it will, the Minister points out, be actually cheaper to dispose of it in this way than to send it to sea. The flats in the river above the railway bridge are nearly all good sand, very suitable for the purposes of the farm.

I am, therefore, to request that, in dealing with the question of cost, the Committee will leave out the expense of dredging and landing silt, as none of it will be debited to the cost of the scheme.

The cost of forming the fascine banks stands in a different category, and properly so, and will be charged to the scheme.

I have, &c.,

J. BURLING,

Under Secretary.

The Secretary to the Parliamentary Standing Committee on Public Works.

J.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

METROPOLITAN WATER AND SEWERAGE ACTS.

(REPORT OF COMPLETION OF DARLING POINT BRANCH INTERCEPTING SEWER.)

Ordered by the Legislative Assembly to be printed, 13 March, 1894.

Report by The Secretary for Public Works.

REPORT OF THE COMPLETION OF DARLING POINT BRANCH INTERCEPTING SEWER.

To the Honorable the Speaker of the Legislative Assembly of New South Wales.

Sir,

Pursuant to the provisions of the Metropolitan Water and Sewerage Acts of 1880-1889, I, the Minister for Public Works, do hereby report to the Legislative Assembly of New South Wales the completion of the Works for Darling Point Intercepting Sewer, in accordance with the said Acts.

WILLIAM JOHN LYNE,

Minister for Public Works.

Department of Public Works,
Sydney, 14th February, 1894.

1894.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

JOHNSTONE'S BAY STORM-WATER SEWERS BILL.

(MESSAGE No. 36.)

Ordered by the Legislative Assembly to be printed, 25 April, 1894.

R. W. DUFF,
Governor.

Message No. 36.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends for the consideration of the Legislative Assembly the expediency of making provision to meet the requisite expenses in connection with a Bill to sanction the construction of certain storm-water sewers, discharging into Johnstone's Bay, Port Jackson.

NEW SOUTH WALES.

PUBLIC WORKS ACT OF 1888.

(RESUMPTION OF LAND IN CONNECTION WITH THE DRAINAGE WORKS AT TUCKOMBIL CREEK.)

Ordered by the Legislative Assembly to be printed, 16 May, 1894.

NOTIFICATION OF RESUMPTION OF LAND UNDER THE "PUBLIC WORKS ACT OF 1888," 51 VICTORIA No. 37.

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable Sir ROBERT WILLIAM
(L.S.) } DUFF, a Member of Her Majesty's Most
R. W. DUFF, } Honourable Privy Council, a Knight
Governor. } Grand Cross of the Most Distinguished
Governor and Commander-in-Chief of
the Colony of New South Wales and its
Dependencies.

WHEREAS I, Sir ROBERT WILLIAM DUFF, the Governor aforesaid, with the advice of the Executive Council, have directed that a certain public work, that is to say, Drainage Works at Tuckombil Creek, in the said Colony, the estimated cost of which does not exceed twenty thousand pounds, shall be carried out under the provisions of the "Public Works Act of 1888," as an authorised work by the Minister for Public Works as Constructing Authority; and that the lands described in the Schedule hereto which are in my opinion required for carrying out the said work, shall be acquired by taking the same under the "Lands for Public Purposes Acquisition Act," as adopted by the "Public Works Act of 1888": Now, therefore, I, the said Governor, with the advice aforesaid, in pursuance of the "Public Works Act of 1888," do declare by this notification, to be published in the Government Gazette, and in one or more newspapers published or circulated in the Police District wherein the said lands are situated, that the Crown Land comprised within the descriptions set forth in the Schedule hereto has been appropriated, and the private property within such descriptions has been resumed, for the public purpose aforesaid, to the intent that upon the publication of this notification in the Gazette, the said lands described in the said Schedule hereto shall forthwith be vested in the said Constructing Authority as a corporation sole on behalf of Her Majesty, for the purposes of the said "Public Works Act of 1888," for an estate in fee simple in possession, freed and discharged from all trusts, obligations, estates, interests, contracts, charges, rates, rights-of-way, or other encumbrances whatsoever; and to the further intent that the legal estate therein, together with all powers incident thereto or conferred by the said last-mentioned Act, shall be vested in such Constructing Authority as a Trustee; and I declare that the following is the Schedule of the lands hereinbefore referred to:—

SCHEDULE.

1. All that piece or parcel of land being part of portion 29 of 240 acres, situate in the parish of Riley, county of Richmond, and Colony of New South Wales, being conditionally purchased by William Trustum, containing by admeasurement 38 acres 3

roods and 10 perches: Commencing at the intersection of the common boundary line of portions 29 and 30, as fenced, with the north-eastern side of a road 1 chain wide, as fenced; and bounded thence on the north by part of that common boundary line, as fenced, bearing south 89 degrees 45 minutes east 19 chains 64½ links; thence on the north-east by a line bearing south 48 degrees 9 minutes east 51 chains 97 links to a point in the southern fenced boundary line of portion 29, distant 3 chains 77½ links westerly from its south-eastern corner peg; thence on the south by part of that southern fenced boundary line bearing south 89 degrees 32 minutes west 9 chains; thence on the south-west by a line bearing north 48 degrees 9 minutes west 35 chains 77 links; thence by a convex curve of 1,500 feet radius 18 chains 41¾ links in length whose chord bears north 71 degrees 21 minutes west 17 chains 91¼ links; thence again on the south by a line bearing south 85 degrees 26 minutes west 3 chains 84¾ links to a road; and thence again on the south-west by the fenced boundary lines of that road bearing north 3 degrees 59 minutes west 1 chain 68½ links and north 21 degrees 50 minutes west 4 chains 25¾ links, to the point of commencement.

2. All that piece or parcel of land being part of portion 30 of 105 acres 2 roods and 18 perches, situate in the parish of Riley, county of Richmond, and Colony of New South Wales, being conditionally purchased by James Watson, containing by admeasurement 2 acres 2 roods and 26 perches: Commencing at the intersection of the common boundary line of portions 29 and 30, as fenced, with the north-eastern side of a road 1 chain wide, as fenced; and bounded thence on the south by part of that common boundary line, as fenced, bearing south 89 degrees 45 minutes east 19 chains 64½ links; thence on the north-east by a line bearing north 48 degrees 9 minutes west 2 chains 50¾ links; thence on the north by a line bearing south 85 degrees 26 minutes west 16 chains 12½ links; thence on the east by a line bearing north 3 degrees 59 minutes west 75¾ links; thence on the north-east by a line bearing north 68 degrees 12 minutes west 6 chains 82 links to the road; and on the south-west by that road being lines bearing south 55 degrees 50 minutes east 5 chains 54½ links and south 24 degrees 50 minutes east 74¾ links, to the point of commencement.

3. All that piece or parcel of land being part of portion 163 of 80 acres, situate in the parish of Riley, county of Richmond, and Colony of New South Wales, being conditionally purchased by Frank Hertram, containing by admeasurement 1 acre 2 roods and 13 perches: Commencing at a point on the left bank of Evans' River, being high-water mark, and distant 8 links south from the south-eastern corner peg of portion 163; and bounded thence on the east by part of the eastern boundary line of that portion bearing north 1 chain 49½ links; thence on the north by a line bearing north

88 degrees 52 minutes west 8 chains $74\frac{4}{10}$ links; thence on the west by a line bearing south 1 degree 8 minutes west 48 links to high-water mark; and thence by the high-water mark of Evans' River downwards, to the point of commencement.

4. All that piece or parcel of land being part of portion 161 of 83 acres, situate in the parish of Riley, county of Richmond, and Colony of New South Wales, being conditionally purchased by J. Moss, containing by admeasurement 1 acre 3 roods and 2 perches: Commencing at a point on the right bank of the Evans' River, being high-water mark, and distant 35 links north from the north-eastern corner peg of portion 161; and bounded thence on the east by part of the eastern boundary line of that portion bearing south 2 chains $44\frac{4}{10}$ links; thence on the south by a line bearing north 88 degrees 52 minutes west 8 chains 42 links to high-water mark; and thence by high-water mark of Evans' River downwards, to the point of commencement.

5. All that piece or parcel of land being part of water reserve 4, notified 24th December, 1861, situate in the parish of Riley, county of Richmond, and Colony of New South Wales, containing by admeasurement 1 rood 30 perches: Commencing at a point on the left bank of the Evans' River, being high water mark, and distant 8 links south from the south-eastern corner peg of portion 163; and bounded thence on the west by part of the eastern boundary line of that portion bearing north 1 chain $49\frac{7}{10}$ links; thence on the north by a line bearing south 88 degrees 52 minutes east 3 chains $37\frac{1}{2}$ links; thence on the east by a line bearing south 1 degree 8 minutes west 90 links to high-water mark; and thence by the high-water mark of Evans' River upwards, to the point of commencement.

6. All that piece or parcel of land being part of portion 162 of 91 acres, situate in the parish of Riley, county of Richmond, and Colony of New South Wales, being unalienated, containing by admeasurement 2 roods 23 perches: Commencing at a point on the right bank of the Evans' River, being high-water mark,

and distant 56 links north from the north-western corner peg of portion 162; and bounded thence on the west by part of the west boundary line of that portion bearing south 2 chains $72\frac{2}{10}$ links; thence on the south by a line bearing south 88 degrees 52 minutes east 2 chains 21 links; thence on the east by a line bearing north 1 degree 8 minutes east 2 chains 78 links to high-water mark; and thence by high-water mark of Evans' River upwards, to the point of commencement.

7. All that piece or parcel of land being part of a boundary road 1 chain wide between portions 161 and 162, situate in the parish of Riley, county of Richmond, and Colony of New South Wales, containing by admeasurement 1 rood: Commencing at a point on the right bank of the Evans' River, being high-water mark, and distant 35 links north from the north-eastern corner peg of portion 161; and bounded thence on the west by part of the eastern boundary line of that portion bearing south 2 chains $44\frac{4}{10}$ links; thence on the south by a line bearing south 88 degrees 52 minutes east 1 chain; thence on the east by part of the western boundary line of portion 162 bearing north 2 chains $72\frac{2}{10}$ links to a point on high-water mark, distant 56 links north from the north-western corner peg of portion 162; and thence by the high-water mark of Evans' River upwards, to the point of commencement.

In witness whereof I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this ninth day of May, in the year of our Lord one thousand eight hundred and ninety-four, and in the fifty-seventh year of Her Majesty's Reign.

By His Excellency's Command,

HENRY COPELAND.

GOD SAVE THE QUEEN!

• LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PROPOSED RECLAMATION OF DARLING HARBOUR.

(RETURN RESPECTING.)

Ordered by the Legislative Assembly to be printed, 8 June, 1894.

RETURN (*in part*) to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 12th October, 1893, That there be laid upon the Table of this House,—

“Copies of all papers, reports, minutes, and correspondence in connection with the proposed building of a sea-wall and filling in of Darling Harbour.”

(*Mr. Darnley.*)

SCHEDULE.

NO.	PAGE.
1. Letter from the Manager for Public Wharfs to the Under Secretary for Finance and Trade, dated 3rd April, 1891, <i>re</i> water-frontages belonging to the Government, Darling Harbour.....	2
2. Letter from the Assistant Town Clerk to the Under Secretary for Finance and Trade, dated 24th April, 1891, acknowledging receipt of letter <i>re</i> lease of water-frontage on south side of Erskine-street	2
3. Letter from the Acting Under Secretary for Finance and Trade to the Acting Crown Solicitor, dated 22nd May, 1891, asking for particulars as to what water-frontages in Sydney Harbour, more especially in Darling Harbour, have been vested in the City Council by grant from the Crown	2
4. Letter from the Acting Crown Solicitor to the Under Secretary for Finance and Trade, dated 15th June, 1891, in reply to above, and enclosing :—	
5. List marked “A,” giving particulars of water-frontages in Darling Harbour, extending from Dawes Point to the Government Railway wharf in Darling Harbour, occupied by the City Corporation	3
6. List marked “B,” complete list of all water-frontages and wharfs extending from Dawes Point to the Government wharfs in Darling Harbour	4
7. Letter from the City Solicitor to the Acting Under Secretary for Finance and Trade, dated 19th May, 1891, <i>re</i> cancellation of lease of water-frontages occupied by Messrs. Byrnes and Joubert, on the southern side of Erskine-street	5
8. Treasury Minute, dated 9th July, 1891, respecting right of ownership of certain harbour-frontages at present in the possession of the Municipal Council of Sydney	5
9. Letter from the Crown Solicitor to the Under Secretary for Finance and Trade, dated 19th July, 1891, in continuation of letter of 15th June, 1891, <i>re</i> water-frontages in Darling Harbour	6
10. Report of Deputation from Balmain, Drummoyne, and Ryde, <i>re</i> proposed new bridge from Pymont to Glebe Island. 29th July, 1892	6
11. Letter from Mr. J. E. F. Coyle to the Minister for Public Works, dated 30th July, 1892. Suggestions <i>re</i> proposed reclamation of Darling Harbour.....	6
12. Letter from Mr. William Neilley to the Under Secretary for Public Works, dated 2nd August, 1891, suggesting scheme for reclamation of Darling Harbour.....	7
13. Memorandum from the Under Secretary for Public Works to the Engineer-in-Chief for Harbours and Rivers, 11th August, 1892. That Alderman Harris had pointed out that in the event of filling up Darling Harbour beyond Pymont Bridge it would be necessary to resume a considerable quantity of low-lying land at the rear of Darling Harbour, which can only with difficulty be drained at present	7
14. Memorandum from the Under Secretary for Public Works to the Engineer-in-Chief for Harbours and Rivers, dated 13th August, 1892, calling for report as to estimated cost of filling up Darling Harbour	8
15. Memorandum from the Under Secretary for Public Works to the Engineer-in-Chief for Harbours and Rivers, 4th November, 1892. Minister wishes to know what it would cost to carry out an alternative scheme, <i>viz.</i> , to construct a coffer-dam, or wall, near the bridge, to be used as a road; to pump out water behind this dam, and to use the land thus exposed in its present state, for cellarage purposes	8
16. Letter from Mr. G. A. Brown, Wharfinger, to the Minister for Public Works, 22nd November, 1892, forwarding scheme and plan to reclaim Darling Harbour up to the present site of Pymont Bridge	8

No. 1.

The Manager for Public Wharfs to The Under Secretary for Finance and Trade.

Sir,

Public Wharfs Office, 3 April, 1891.

I beg to bring under the notice of the Honorable the Colonial Treasurer, owing to more water-frontage likely to be required in Darling Harbour for ferry purposes, that there is a water-frontage belonging to the Government on the south side of Erskine-street, adjoining some Government frontage on the same side of said street. The frontage was, to the best of my knowledge, leased by the Lands Department to the City Council some ten or twelve years ago for market purposes, but was never used for that purpose. The property is now leased by the City Council to Mr. N. Joubert, proprietor of the Lane Cove ferry, and to Mr. M. Byrnes, proprietor of the Pymont ferry. Mr. Joubert, I believe, would give up his lease on favourable terms to the Government. I would suggest for the consideration of the Honorable the Treasurer that the City Council be communicated with, with a view to cancelling the lease of the property held by them, or to resume it if found necessary. The whole of the land from Erskine-street has about 300 feet frontage, and would be sufficient for all ferry requirements for many years to come.

I have, &c.,

JOHN JACKSON,

Manager.

The Mayor of Sydney to be communicated with.—W.M., 22/4/91. Done.

No. 2.

The Assistant Town Clerk to The Under Secretary for Finance and Trade.

Sir,

Town Clerk's Office, Sydney, 24 April, 1891.

I have the honor to acknowledge the receipt of your letter of the 23rd instant, upon the matter hereunder mentioned, and to inform you that it will receive consideration as soon as possible.

I have, &c.,

JOHN R. PALMER,

Assistant Town Clerk.

Subject:—Re lease of water-frontage on south side of Erskine-street.

No. 3.

The Acting Under Secretary for Finance and Trade to The Acting Crown Solicitor.

Sir,

The Treasury, New South Wales, Sydney, 22 May, 1891.

I have the honor, by direction of the Colonial Treasurer, to request that you will be good enough to advise—at the earliest possible moment—what water-frontages in Sydney Harbour (more especially in Darling Harbour) have been vested in the City Council by grant from the Crown.

I have, &c.,

F. KIRKPATRICK,

Acting Under Secretary for Finance and Trade.

No. 4.

The Acting Crown Solicitor to The Under Secretary for Finance and Trade.

Sir,

Crown Solicitor's Office, Sydney, 15 June, 1891.

I have the honor to return your letter of 22nd ultimo, requesting to be advised as to what water-frontages in Sydney Harbour, more especially in Darling Harbour, have been vested in the City Council by grant from the Crown, and, in reply, to state that I had no materials in this office enabling me to furnish the information, but, having placed myself in communication with the Department of Lands, I have obtained particulars of all the property occupied by the Corporation, extending from Dawes Point up to the Railway Wharf in Darling Harbour. I enclose a list showing these properties. I also take advantage

advantage of the present occasion to enclose a list, compiled from the materials supplied by the Lands Department, of the whole of the wharfage properties, including that held by the Corporation extending between the same limits.

The former list is enclosed herein and marked "A;" the latter list is marked "B."

As the result of my search I have ascertained—

1. That the land No. 5, in list "A," is a large block of property with a considerable frontage to Kent-street, and a large frontage to the water. This property seems never to have been granted by the Crown, but was dedicated as a landing-place and approach for ferry passengers, apparently from Balmain, but it had never been so utilised, and in lieu thereof is now used, as I am informed, as a storage ground for wooden pavement blocks.
2. The next piece of property is that No. 8 on the list "A," and therein called sewerage reserve. I have not been able to ascertain whether this property is occupied by the Corporation or by the Water and Sewerage Board. It seems to me that it ought to be handed over to the Water and Sewerage Board. It does not appear to have been the subject of a grant, or to have been lawfully appropriated to any particular purpose.
3. We then come to a grant of land in Lime-street, which at present has been let by the Corporation to Messrs. Garrett and Byrnes, and is occupied as a site for ferry-boats trading to Pymont and Lane Cove. This land appears to have been the subject of an out-and-out grant, but I have not yet obtained a copy of such grant.
4. Adjoining this property is a lease of occupancy, granted to the Corporation, of a large block of land, also in Lime-street, which is at present, I understand, let by the Corporation to the Adelaide Steamship Company, and the Newcastle Steamship Company in violation, as far as I can understand, of the terms on which the land was appropriated to the City Council, which terms are said to set out in the letter from the Colonial Secretary, not yet supplied, No. 54, written May, 1854. Particulars of this letter I have not been able to obtain, and understand they are not forthcoming, but it was written from the Colonial Secretary's Office to the City Commissioners, and apparently gave them the use of this portion of land for the purpose of storage and receipt of produce, or some analogous purpose, and not the one to which it is put.
5. The property known as Market Wharf on the north side of Market-street, and the land known as the Corporation Wharf on the south side of Market-street. Of these properties, the former, in violation, as I understand, of the terms of the grant, has been let by the Corporation to Mr. Kethel, and the latter south of Market-street is also used by the Corporation for a purpose at variance with the terms of the grant.

As already stated, I have not obtained sufficient particulars to enable me to bespeak copies of the grants, but they will be obtained and forwarded in due course.

I have, &c.,

R. S.

(For JOHN WILLIAMS,
Crown Solicitor).

Captain Jackson.—F.K., 29/6/91.

I find from the Crown Solicitor's letter herewith that very large water frontages in Darling Harbour, valued at many thousands of pounds, are illegally held by the City Council, these frontages and others, blocks of land, not having been used for the purposes dedicated. I beg most respectfully to suggest that steps be taken by the Government to obtain possession of all frontages so held by the City Council.—J J., Circular Quay, 2/7/91. The Under Secretary, Finance and Trade.

No. 5.

List "A."

Giving particulars of water frontages in Darling Harbour, extending from Dawes Point to the Government Railway Wharf in Darling Harbour, occupied by the City Corporation.

1. Dawes Point Baths (northerly) and north end of George-street Wharf.
2. Foot of Pottinger-street.
3. Kent-street North.
4. Foot of Clyde-street southerly.
5. Corporation land in Kent-street dedicated as a landing place and steps.
6. Permission to reclaim water frontage of No. 5, given to Municipal Council.
7. Foot of Margaret-street.
8. Sewerage reserve.
9. Foot of Erskine-street.
10. Land granted to the Corporation in Lime-street, occupied by Garrett and Byrnes as a site for ferries for Pymont and Lane Cove respectively.
11. Land appropriated to the City Commissioners in 1854 by letter from the Colonial Secretary No. 54, and now sublet by the Corporation (a) to the Adelaide Steamship Company (Limited), and (b) the Newcastle Steamship Company (Limited).
12. Foot of King-street, leased as a wharf to the Parramatta Steamship Company.
13. Market Wharf, same as No. 14 *post*.
14. North of Market-street, block of land granted to the Corporation, and now let by the Corporation in violation, as it is believed, of the terms of the grant to Mr. Kethel, and sublet partly to John Sec & Co.
15. Pymont Bridge Road.
16. Corporation Wharf, south of Market-street, said to be granted to the Corporation for market purposes, but now occupied as storage ground for the Corporation.
17. Foot of Druiitt-street. This appears to be illegally closed by Chapman's trustees and a foundry built across the street, and can hardly, therefore, be said to be in the occupation of the Corporation.
18. Foot of Bathurst-street, two jetties said to be leased by the Corporation.

No. 7.

The City Solicitor to The Acting Under Secretary for Finance and Trade.

Sir, City Solicitor's Office, 28, Castlereagh-street, Sydney, 19 May, 1891.

In reference to your letter to the Town Clerk of the 23rd ultimo, desiring to know "whether the Municipal Council would be prepared to agree to a cancellation of the 'lease' granted to the Council of the water-frontages at present occupied by Messrs. Byrne and Joubert on the south side of Erskine-street." I am directed by His Worship the Mayor to inquire whether the portion occupied by Messrs. Byrnes and Joubert is the only one required by the Minister for Government purposes.

I might here state that the site in question, together with other water-frontages adjoining, are vested in the Council by grant from the Crown.

I have, &c.,
GEORGE MERRIMAN,
 City Solicitor.

Captain Jackson, 20/5/91. The land now occupied by Messrs. Joubert and Byrnes is the only water-frontage that I think will be required by the Government for ferry purposes for years to come. It is stated that the land in question, together with other water-frontages, have been vested in the City Council by grants from the Crown; as there may be some mistake in this matter, I would most respectfully suggest that the Crown Solicitor be requested to ascertain without doubt what water-frontages in the harbour of Sydney have been vested in the City Council by grant from the Crown.—J.J., 21/5/91.

No. 8.

Treasury Minute.

Right of ownership of certain Harbour Frontages at present in the possession of the Municipal Council of Sydney.

The Treasury, New South Wales, Sydney, 9 July, 1891.

THE Colonial Treasurer desires to submit, for the consideration of his Honorable Colleagues, the following particulars respecting the present ownership of several Darling Harbour water-frontages. As a result of recent consideration as to what foreshores at Darling Harbour were likely to be required in the near future for ferry purposes, a letter was addressed by the Treasury, on the 23rd April last, to the Town Clerk, inquiring if the Council would object to a cancellation of a lease understood to have been issued by the Government some years ago in respect of certain land on the south side of Erskine-street. The Council's reply was to the effect that the site referred to was part of a grant by the Crown. This raised a question as to the Council's right of occupancy in regard to various other portions of the foreshore, reference being made to the Crown Solicitor, on the 22nd ultimo, for advice as to what water-frontages in Sydney Harbour (more especially in Darling Harbour) have been vested in the City Council, by grant from the Crown. A report (or rather, a progress report) was furnished by Mr. Smith, on the 15th instant, enclosing two statements marked respectively "A" and "B." Statement "B" is a complete list of all water-frontages and wharves, extending from Dawes Point to the Government Wharves in Darling Harbour. Statement "A" gives particulars of water-frontages in Darling Harbour, extending from Dawes Point to the Government Railway Wharf in Darling Harbour, occupied by the City Council. In regard to item 5, in this latter statement, the Crown Solicitor remarks, that the land is a large block of property with a considerable frontage to Kent-street, and a large frontage to the water; this property seems never to have been granted by the Crown, but was dedicated as a landing place and approach for ferry passengers, apparently from Balmain, but has never been so utilised, and is now used as a storage ground for wooden pavement blocks. Item 6 is called a sewerage reserve; it has not yet been ascertained whether this block is occupied by the Corporation or the Sewerage Board; Mr. Smith adds that it seems to him that the land should be handed over to the Sewerage Board; it does not, however, appear to have been the subject of a grant or to have been lawfully appropriated to any particular purpose. Item 10 refers to a grant in Lime-street, at present let by the Corporation to Messrs. Garrett and Byrnes, and is occupied as a site for ferry-boats trading to Pyrmont and Lane Cove; the land appears to have been the subject of an out-and-out grant, but a copy of such grant has not yet been obtained. Adjoining this property is a lease or occupancy granted to the Corporation, of a large block of land, also in Lime-street, at present understood to be let by the Council to the Adelaide Steamship Company and the Newcastle Steamship Company, in violation, as far as at present understood, of the terms on which the land was appropriated to the Council, which terms are said to be set out in a letter from the Colonial Secretary to the City Commissioners, in May, 1854; particulars of this letter the Crown Solicitor has not yet been able to obtain, but it was written by the Colonial Secretary to the City Commissioners, apparently giving the latter the use of the land in question for the purpose of storage and receipt of produce, or some analogous purpose, and not the one to which it is applied.

Item 13 refers to property known as Market Wharf, on the north side of Market-street, and the land known as the Corporation Wharf, on the south side; the former of these properties has been let to Mr. Keibel, apparently in violation of the terms of the grant, while the latter is used by the Corporation for a purpose at variance with the conditions of grant.

The Crown Solicitor concludes his report, now under notice, by intimating that he has not obtained sufficient particulars to enable him to bespeak copies of the grants, but adds, that the same will be obtained and forwarded in due course.

Perhaps the Crown Solicitor might be asked if he has any further information respecting this matter, and what action he would recommend on the part of this Department.

F.K., 17/9/91. Approved.—B.S., 18/9/91. The Crown Solicitor.—F.K., 18/9/91.

No. 9.

The Crown Solicitor to The Under Secretary for Finance and Trade.

Sir,

Sydney, 19 July, 1891.

I have the honor, in further reply to your letter No. P.O. 1,135, 4,831, Mis., and in continuation of my letter of the 15th June, 1891, No. 91,851, to enclose papers from the Department of Lands, noted as in margin, with their respective enclosures. These papers show the terms on which the three principal properties are held by the Corporation, viz. :—1. Land in Kent-street. 2. Land in Lime-street. 3. Market Wharf.

I have also the honor to enclose three further bundles of papers borrowed from the Department of Lands, which must be returned again as soon as possible, relating to various leases to the City Corporation.

I would suggest if these lease papers are not wanted they be returned at once, as they are wanted for reference at the Lands Department.

I have, &c.,

For JOHN WILLIAMS,

Crown Solicitor,

Report of Deputation, &c.

REPORT of deputation representing Balmain, Drummoyne, and Ryde, that waited on Minister for Works, 29th July, 1892, to urge consideration of the matter of constructing a new bridge from Pymont to Glebe Island.

Department of Public Works, Sydney, 29 July, 1892.

Proposed new Bridge from Pymont to Glebe Island.

A DEPUTATION, representing the Municipalities of Balmain, Drummoyne, and Ryde, introduced by Messrs. Johnston, Darnley, G. D. Clark, Black, Kelly, and Murphy, M's.P., waited upon the Minister this morning to urge him to consider the matter of constructing a new bridge from Pymont to Glebe Island as soon as possible.

It was pointed out that the present bridge was built over thirty years ago, and was not suitable for present requirements, the traffic over the bridge having increased extensively; and that the structure was considered to be unsafe. The deputation represented that the traffic in the quarter of the metropolis in question warrants the construction of a bridge of the most improved type, and that Mr. Bruce Smith had promised a former deputation that a new bridge, connecting Pymont with Glebe Island, would shortly be constructed, with a tramway to Balmain over it.

The Minister said he found that in 1890 a special report was prepared on three questions: namely, the construction of a new Pymont Bridge, the construction of a new bridge for Glebe Island, and the construction of a tramway to Balmain; but he could not find any record of a promise by Mr. Bruce Smith to invite competitive designs for the Glebe Island Bridge. Mr. Bruce Smith had, however, invited competitive designs for the Pymont Bridge. The designs for the latter bridge were now in and the prizes in connection with the competition had been awarded.

The report stated, in regard to the Glebe Island Bridge, that the proposed new bridge ought to be built at a point adjacent to its present site, by which the heavy grades now existing could be abolished; and the construction of a bridge with cast-iron cylinders, wrought-iron or steel superstructure, roadway 36 feet wide, two 7 feet footpaths, and clear headway of 12 feet, with a draw-span for the centre of the bridge, was recommended. The estimated cost of the bridge was about £140,000. That was a pretty large sum of money, and the Pymont Bridge was estimated to cost £220,000. It was rather a difficult matter for him to say absolutely that the matter would be taken in hand. However, the Engineer-in-Chief was still favourable to the construction of a new bridge, and thought that it would be desirable to submit a sum for a new Glebe Island Bridge on the Estimates.

Some reference had been made to the "patching up" of the bridge. Mr. Johnston had called at the office several times about the old bridge, and it was in consequence of what he had said that the "patching" had been going on in order to make the bridge safe.

Before anything could be done in the direction of constructing a new bridge he would have to submit a sum of money for the consideration of Parliament, and then the matter would have to be referred to the Public Works Committee. It would be some months before anything could be done; but it was evident that something must be done, and, without making any definite promise, he felt disposed to submit for the consideration of the Cabinet a sum of money to be placed on the Estimates for next year. He felt very much disposed to do so, and in all probability it would be done.

In referring again to the Pymont Bridge, at the conclusion of the interview, the Minister said that it was a question which presented itself to his mind as to whether it would not be better to fill up the whole of the water beyond Pymont Bridge to the head of Darling Harbour than to expend a quarter of a million of money in constructing a new bridge. He considered it would be cheaper to fill up that piece of water and convert it into land than it would be to build a new bridge. The Department was engaged in filling up and reclaiming lands all over the harbour, and it was but a question as far as expense went whether it should be done at Darling Harbour or any other spot. If they filled up the portion of Darling Harbour in question, they would have an asset which would cover the cost of reclamation, and a railway could be run across it to Circular Quay. It was a question well worth consideration, and he intended to go into the matter thoroughly to see how the project would work out.

W.J.L.

No. 11.

J. E. F. Coyle, Esq., to The Secretary for Public Works.

Dear Mr. Lyne,

Norwich-chambers, Hunter-street, Sydney, 30 July, 1892.

I observed lately in the Press that, in reply to a deputation, you made some remarks as to the filling in of Darling Harbour above the existing Pymont Bridge. About sixteen months ago I concluded a somewhat exhaustive inquiry into this and other matters relating to Darling Harbour land resumption, railway connection with Circular Quay, and Woolloomooloo Bay reclamation, &c. The plans and other papers were handed in to the then Minister for Railways on the 20th March, 1891.

The

The reclamation of the head of Darling Harbour up to Bathurst-street, Druitt-street, and Pymont Bridge were severally considered, and the chief objections to filling up to the bridge were that 4,750 lineal feet of water-frontage would be extinguished as against 990 feet gained along the front of the reclamation. The accommodation for a certain amount of coastal trade would require to be found elsewhere, considerable disturbance of existing market arrangements would take place, and a bridge was in existence.

The advantages were very obvious, 38½ acres could be reclaimed at a cost of £152,955. Ample space for railway accommodation would be obtained, and sufficient ground would be left to complete the rearrangement of the land and streets along the western side, which will in any case require to be resumed.

The question of a new bridge to Pymont, costing £300,000, did not arise at the time of the inquiry, and as my instructions did not admit of my taking evidence as to the importance of the trade above the bridge, I made no official recommendation as to the filling in, but my notes show that if Government put a siding 50 chains long from the railway at Eveleigh, by way of Philip or Gerard Streets, into the sandhills to the eastward, that the material for reclamation could be put in place for 1s. 6d. per cubic yard.

The value of this reclamation could not be put at less than a million sterling. The estimate of cost is as follows:—

Area, 38½ acres.			
Sand, 1,490,720 cubic yards, at 1s. 9d. per cubic yard	£130,438
Clay covering, 6 inches in depth, 31,057 at 2s. 6d. per cubic yard	3,882
Rubble embankment, 45,408 at 5s. per cubic yard	11,352
Supervision, 5 per cent.	7,283
Total	£152,955

Yours, &c.,
J. E. F. COYLE.

No. 12.

W. Neilley, Esq., to The Under Secretary for Public Works.

Sir,

33 Imperial Arcade, Sydney, 2 August, 1892.

Observing that the attention of the Minister has been turned towards the reclamation of the water space of Upper Darling Harbour, I have the honor to point out that a project of the nature referred to was placed before the Royal Commission on City and Suburban Railways by Mr. Oscar Schulze, and will be found lettered Va. in the Report of the Commission. At the time this was considered the competitive designs for a bridge to replace that connecting Sydney with Pymont had only been called for; but an impression gained ground that at least a quarter of a million would be required to complete the proposed bridge, and that a further outlay of a large sum would be necessary to make the railway wharfage frontages available for large ships.

Again, in considering the future connection with the western suburbs, the crossing, or heading, of Darling Harbour was looked upon as one of the principal obstacles to a complete system of circular railways, and the opinion expressed by Mr. Schulze in his evidence that Sydney needed land reclamation, as in the case of Blackwattle Bay, seemed to find favour with the Commission; but the project was set aside, mainly as not meeting present requirements, but quite as much in the idea that it was a proposal that the next generation would require to see carried into effect, and it was, in a measure, relegated to posterity.

The Commission practically settled the question east or west of George-street for the city extension by adopting the Railway Commissioners amended proposal. In this view I had the honor to suggest, twelve months ago, a cheaper and, I venture to think, a more effective scheme, which would in some respects fall in with the project, lettered "J" in the report, which was all but approved by the Legislature in 1886. I have, since seeing the bridge designs a few weeks back, revived my knowledge of the subject, gained by close attention to it during the last four years, and I am satisfied that I can show how the east and the west of the city can be served with an actual profit on the city extension, and that properly arranged starting points can be secured for the needed suburban extensions to the eastern and to the western suburbs. My city project would utilise Government property that the Darling Island proposal would render almost valueless, and serve for goods and wool, as well as for passengers.

I have, &c.,
WM. NEILLEY.

B.C.—Mr. Darley.—D.C.McL. (for U.S.), 4/8/92.

This proposal to fill up the head of Darling Harbour above Pymont Bridge is a very old one, the only thing that prevented it seriously being entertained before this was the probable cost. I am having a careful estimate made to ascertain as near as possible what the cost is likely to be, and will submit the whole scheme for the Minister's consideration.—C.W.D., 12/8/92.

B.C.—The Under Secretary for Public Works.

No. 13.

Memo. from The Under Secretary for Public Works to The Engineer-in-Chief for Harbours and Rivers.

Department of Public Works, Sydney, 11 August, 1892.

Proposed Reclamation of Darling Harbour, beyond Pymont Bridge.

ALDERMAN John Harris called at the office yesterday respecting a notice he had seen in a paper as to the proposal of filling up Darling Harbour beyond Pymont Bridge. He pointed out that, in the event of this being done, it will be necessary to resume a considerable quantity of land at the rear of Darling Harbour—low lying land, and which can only with great difficulty be drained at present.

J.B.

Seen. Mr. Tillett to note. A contour plan of the land around head of Darling Harbour must be prepared in connection with this estimate.—C.W.D., 15/8/92.

No. 14.

No. 14.

Memo. from The Under Secretary for Public Works to The Engineer-in-Chief for Harbours and Rivers.

Department of Public Works, Sydney, 13 August, 1892.

Proposed improvements at Darling Harbour.

ENCLOSED will be found a plan which has been handed to the Minister, showing proposed improvements at the head of Darling Harbour, and also the continuation of the railway from Darling Harbour to Sydney Cove.

The Minister would like to have this project, so far as the filling-up of the head of Darling Harbour is concerned, inquired into as quickly as possible. At present he wishes the inquiry limited to the probable cost of filling up the space indicated, including of course, the necessary retaining walls. It must be borne in mind that a very large sum of money will be required to reconstruct the Pyrmont Bridge which would, of course, be unnecessary were this space filled in. The Minister understands that the compensation for the loss of water-frontage would not be so large as would at first sight appear, as he is informed that many of the wharves are unauthorised as well as the reclamations which have been made. This, therefore, should be looked into.

Will Mr. Darley kindly in the first instance have an estimate prepared of the cost of filling-in with the best appliances which can be obtained—namely, the sand-pump dredge. Mr. Lyne thinks it might be done at a very small cost, judging from the reports which Mr. Darley has already supplied him with, as to the cost of reclamation by this means.

The Minister has had some conversation with Captain Jackson on the subject, and perhaps Mr. Darley will be so good as to see that gentleman before making his report.

J.B.

Approved,—W.J.L., 13/8/92. B.C. Mr. Darley, with plan, J.B., 13/8/92.

No. 15.

Minute from The Under Secretary for Public Works to The Engineer-in-Chief for Harbours and Rivers.

Sydney, 4 November, 1892.

Darling Harbour Reclamation Scheme.

THE Minister has had before him a proposition with regard to Darling Harbour, which is somewhat different from that which Mr. Darley is investigating. It consists in constructing a coffer dam, or wall, near the bridge, to be used as a road. It is then proposed to pump out the water behind this dam, and to use the land thus exposed, in its present state, for cellarage purposes and stores.

Will Mr. Darley kindly let the Minister know, roughly, what it would cost to construct such a water-tight road, and pump out the impounded water, and about what time it would take to do the latter portion of the work with the pumping machinery which can be readily made available.

J.B., 5/11/92.

Prepare an estimate for a coffer dam somewhat of the nature shown on rough sketch, close sheet piling 12 in. x 12 in. Oregon, front piles to be creosoted to protect them during progress of work from Teredo. Wall of concrete faced with sandstone to within 2 feet of low-water mark, and Trachyte on top. Cofferdam on harbour face to be removed, piles to be cut off at ground level. Compute capacity of harbour above the wall up to (say) mean tide level. I think the coffer dam should be constructed on harbour side of Pyrmont Bridge, so as to preserve the continuity of Market-street and Union-street, Pyrmont. Two of our sand-pump dredges could easily be laid alongside the wall to pump out the upper 15 or 18 feet of water. Some centrifugals on shore would do the remainder.—C.W.D., 8/11/92. Mr. Tillett.

No. 16.

Mr. G. A. Brown, Wharfinger, to The Secretary for Public Works.

Sir,

Pyrmont Wharf Office, 22 November, 1892.

See Appendix A.

I do myself the honor of enclosing you sketches referring to Darling Harbour Reclamation, &c., and sincerely trust that you will excuse the liberty I have taken.

I have, &c.,

GEORGE A. BROWN,

Wharfinger.

P.S.—I should be very happy to communicate with you at any future time.

Mr. Darley to see.—J.B., 23/11/92. Seen.—C.W.D., 25/11/92.

No. 17.

Particulars of Scheme.

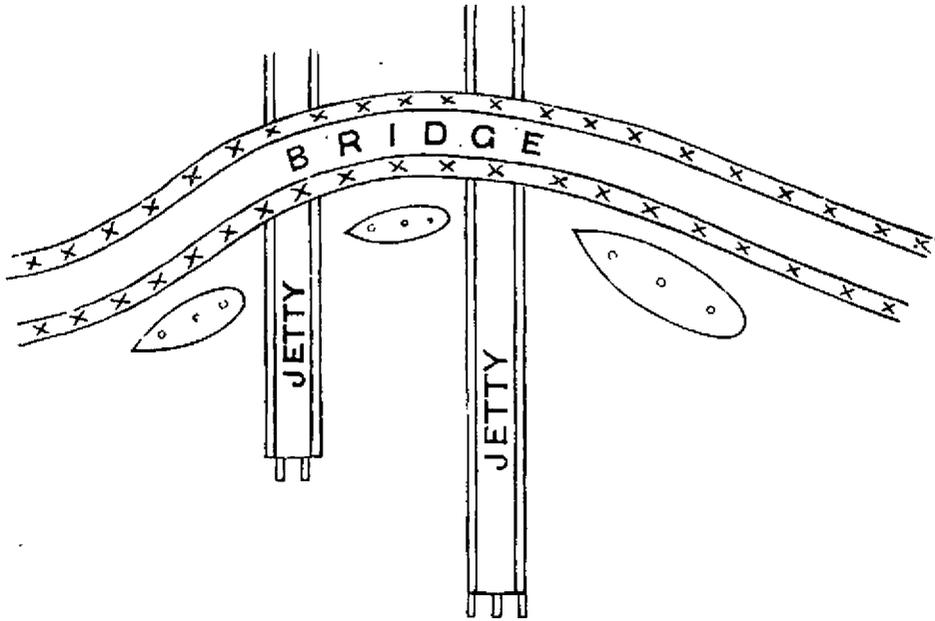

Enclosure (Mr. G. A. Brown's letter, 22/11/92.)

THE proposed plan is to reclaim Darling Harbour up to the present site of the Pyrmont Bridge, that is to say, not in a direct line across but to take the form of a Circular Quay—by doing this a great deal of deep water filling up will be dispensed with, and the portion alluded to will give sufficient depth to say at least six large sized ships which you will observe on reference to the enclosed plan.

It is also intended to place the railway lines along each jetty similar to those at the new Government Wharf at Pyrmont, thus bringing shipping in connection with the railway—thus the traffic as far as ships are concerned is complete. The next matter is the traffic from Pyrmont to Sydney and *vice versa*, or from Union-street to Market-street, which is at present carried over the present bridge.

This

This plan proposes to erect a bridge only high enough to allow a locomotive with its probable highest load to pass underneath—the bridge to take the course of the Circular Quay, and to be built right around the edge, which, when erected, would form a covering and be a protection for the goods landed at the circular portion of the reclaimed section, as marked here :—

This bridge will answer all the requirements of the passenger and vehicular traffic. Ships are not required to pass under the same; then cargoes may be landed on the wharf or the jetties for either road or rail, and the rail shunting and work may be done without any other traffic interfering with it, all traffic being independent and confined to their allotted portions. This plan also deals with the Darling Island eastern frontage, suggesting a line of wharf facing or forming the line of reclamation to the Point. Below would be the line of water-frontage from the bridge to the eastern point of Darling Island.

No. 18.

Minute from The Engineer-in-Chief for Harbours and Rivers to The Under Secretary for Public Works.

Sydney, 8 February, 1893.

Darling Harbour, above Pyrmont Bridge.

THE proposal to construct a new bridge across Darling Harbour to replace the existing timber bridge, at an estimated cost of about £290,000, has brought forward several proposals aiming at the reclamation of the upper portion of the harbour, and consequently the abolition of a bridge with an opening span.

Two suggestions have been submitted for me to report upon. Both are closely allied, the only difference being that scheme No. 2 proposes to save some of the filling by introducing cellarage on an extensive scale. Plans showing details which I have worked out for both schemes are attached.

No. 1 scheme, as worked out.

To maintain the continuity of the road connection between Market-street on the Sydney side and Union-street on the Pyrmont side, I have provided for constructing the quay wall to the north of Pyrmont Bridge, keeping it sufficiently clear to give free access for its construction without interfering with the present bridge or the traffic.

I propose to construct this wall in the dry between two coffer-dams, each framed of double rows of 12 inches by 12 inches Oregon piles driven close together, the space between them to be excavated down to the sound clay, and filled with puddle clay; the two coffer-dams being kept far enough asunder to lay the foundations for the wall which I propose to form of concrete faced with sandstone up to low water mark, and above low water to be faced with trachyte from Bowral.

If the space behind the wall is to be wholly filled up, and reclaimed as in No. 1 scheme, then it will only be necessary to stop this quay wall where it meets the wharf level on each side of the harbour.

I have assumed that the clay met with in the borings at about 8 feet below the present surface will be strong enough to found the wall upon. The borings indicate it to be of a strong tough nature, but should it prove upon further investigation not to be sufficiently strong, it will be necessary to take the foundation down to the rock; this, however, would have to be done on piles or cylinders at a greatly enhanced cost. I think it sufficient for the present to assume that a good foundation can be obtained at the depth shown. I estimate the cost of constructing this wall, including the coffer-dams, removing outer one upon completion, formation of roadway, including kerbing, guttering, wood-blocking, footpaths, &c., but not the filling, as this will be dealt with separately, at £156,000.

Constructing

Brief details of plans, &c., accompanying this Report :—

- Plan No. 1.—General plan of proposal.
- " 2 and 3.—Disposal of sewage.
- " 4.—Design for sea wall.
- " 5.—Design for cellarage.
- " 6.—Design for elevated roadway.

Constructing a permanent sea-wall in the first instance is a costly work, but it will undoubtedly make the best and most satisfactory finish, as the work will then be done for all time; but it is not absolutely essential, for the reclamation could be carried on behind a rubble wall formed of stone ballast tipped across the harbour. This form of wall is, however, not without objection, for it will be necessary to construct a timber wharf in front of it to bring vessels alongside, and the piles cannot be easily driven, repaired, or replaced at any time in the stone filling. The cost of this ballast dyke, including a timber wharf 35 feet wide and formation of roadway as before referred to, I estimate at £13,000—the cost of filling being omitted as before.

Before the filling can be commenced it will be necessary to provide for the drainage now finding its way into the upper part of the harbour. I attach, as an appendix, a report from Mr. Smail, the Engineer for Sewerage under the Water and Sewerage Board. He deals fully with the whole question, and the plans show the extent of drainage works involved. That this must be extensive, I have only to mention that the area draining into the harbour above the bridge is about 500 acres; the whole of the storm-water off this area has to be provided for as well as the sewerage from the Zone below the 40 feet contour level.

The cost of the storm-water drains must be wholly charged to this scheme, but the cost of the low-level system for intercepting the sewerage from the Zone below the 40 feet contour might fairly be charged to the Sewerage Loan Vote, as sooner or later this must be undertaken, being part of the low-level system of the Main Drainage Scheme.

The cost of all these drainage works is estimated at £128,000, of which £30,000 would be fairly chargeable to the Sewerage Loan Votes, leaving £98,000 chargeable to this reclamation scheme as wholly consequent thereon.

The plan shows the main duct carried down the centre of the harbour. This would have to be constructed on a platform carried on piles, and, as before mentioned, should be carried out before the filling in is commenced.

Upon completion of the sea-walls and drainage and sewerage works, the reclamation could be commenced. This can easily be done with sand-pump dredges which would be moored near the wall and kept constantly at work lifting and pumping into the enclosure all the sand, silt, and mud raised by the ladder dredges in various parts of the harbour. I estimate the quantity of filling required at 2,586,000 tons.

If all the material lifted by the four dredges now working in Sydney Harbour, namely the "Sydney," "Samson," "Hercules," and "Charon," can be made available and be taken to Darling Harbour it will take at least three years to fill in the reclamation, as the greatest aggregate output from these four dredges in one year only amounted to 879,000 tons.

The material mostly dredged up in Sydney Harbour consists of mud and clay. Should the whole of the reclamation be made of this material without the admixture of a good percentage of sand, the land so formed will take a long time to consolidate owing to the great depth of filling, namely, from 25 to 35 feet. It would probably be three or four years before a reclamation this depth, formed of mud and clay, could safely be walked on, much less built upon. The reclamations we have so far made with the sand-pump at Long Cove and Neutral Bay have been largely composed of sand, which has been obtained between Darling Point and Garden Island, opposite Rushcutters' Bay, where there was a large sand-bank in the way of navigation on the south side of the harbour. This bank has been almost entirely removed. Therefore, to obtain such a quantity as will be required to fill Darling Harbour would necessitate placing a dredge or dredges to work at some place such as in the eastern channel, or Middle Harbour, or Rose Bay, for the special purpose of obtaining sand to mix with the mud. The cost of this special dredging and towage should be charged to the reclamation work. I estimate the cost of filling up with the sand-pump dredge, including wear and tear of pipes, &c., at 3d. per ton.

Cost, therefore—2,586,000 tons, at 3d.	£32,325
But if half the material has to be specially procured, a further sum of 6d.						
per ton must be added on this quantity, viz., 1,293,000, at 6d.						32,325
						<hr/>
Total cost	£64,650

On one of the sketch plans submitted to me with the papers for report, I observe that a number of jetties are sketched out projecting down the harbour in front of the reclamation. To make these jetties of practical use in connection with the Railway yard it would be necessary to lay rails thereon connecting them with the Railway, and thus form a number of level crossings over the main road from Sydney to Pyrmont. Besides, there would be other level crossings leading to the Pyrmont wharfs.

These numerous level crossings would be a great source of danger to the public using the road, as well as a serious hindrance and inconvenience to the road traffic. The approaches to the low-level road would also require steeper gradients than they have at present, although they are even now almost too steep for the heavy traffic. I am therefore of opinion that to obtain good gradients, and to permit of the new frontage being made full use of for shipping purposes, as well as to allow free access to the Pyrmont wharfs and jetties, that the road traffic should be carried across the reclamation on a bridge sufficiently high to admit of railway traffic passing underneath.

I attach a tracing showing such a structure, the road being carried on brick arches. I estimate the cost of this, including formation of roadway, footpaths, &c., at £102,900.

With regard to the suggested jetties, I should point out that if they are constructed it will be necessary to resume the wharfage now occupied by the Newcastle and Hunter River Steam Navigation Co., and the North Coast Steam Navigation Co., as the jetties projecting down the harbour would prevent the coasting steamers approaching these companies' wharfs end on as they do at present. I am, however, omitting the cost of any such resumption from my estimates, as well as the cost of constructing jetties.

Resumption of wharfage inside Pyrmont Bridge, between Pyrmont Bridge and the Government land now occupied by the Railway Department, at the head of Darling Harbour, there are twenty-three different sets of wharfs or properties having a total frontage to the harbour of 2,107 feet, and wharfage accommodation to the extent of 6,630 feet. The whole of this would necessarily have to be resumed, and in doing so the resumption would have to embrace all the land now occupied by stores, yards, &c., in connection with the wharfs.

I believe I am right in saying that nearly the whole of this is privately owned, having been wholly alienated from the Crown; but, up to the present, I have not been able to procure from the Department of Lands the detailed information, asked for some time ago, showing exactly how the matter stands as regards titles, leases of wharfs, &c.

It is not easy to say what would have to be paid for all this frontage, but I think that at the very least it would cost £150 (one hundred and fifty pounds) per lineal foot, at which rate the resumption would cost (say) £316,000.

To this must be added the loss of revenue now derived from leases of the wharfs, which amounts to a considerable sum—I understand about £1,400 per annum—and which may be largely increased as the present leases expire.

The Government wharfs inside the bridge have a frontage of 2,408 feet, and were constructed at a cost of about £69,000. This wharfage, much of it quite recently constructed, would be lost. Up to this, however, full use has not been made of these wharfs, but, with a good large opening in the bridge, I see no reason why they should not be turned to most profitable account, seeing that there are such extensive railway facilities alongside.

The whole cost of this scheme may be summarised as follows:—

	£
Sea wall and formation of roadway	166,000
Drainage and Sewerage works chargeable to this scheme	98,000
Filling in at back	61,000
High level roadway, excluding formation of road, &c., charged above (say)	92,000
Resumption of land (say)	316,000
Value of Government wharfs abandoned, put down at (say) half cost . . .	34,500
Total cost...	£770,500
If a Rubble Stone Dyke and Timber Wharf be constructed in place of concrete sea wall, deduct	123,000
	647,500
And if the high-level roadway be dispensed with, deduct a further sum of...	92,000
	£555,500
As a set off, the cost of the proposed new bridge will be saved, estimated at	£295,000
And 38½ acres of land will be reclaimed, which may be valued at, say,	
£2,000 per acre for railway purposes	77,500
Total	£372,500
This showing a loss by the Reclamation scheme of at least	£183,000

I think it would be a great mistake to deprive the city of the benefit derived, or that possibly can and should be derived, from the advantages of having this large and well-sheltered area of water surrounded by wharfage in such close proximity to the centre of the city.

In most ports at the present day every effort is being made by the construction of docks, canals, or the improvement of channels, to bring shipping close to the city. I therefore cannot help expressing the opinion that it would be a decidedly retrograde movement to close this valuable basin, and in exchange for an area of land for which it would be difficult to find immediate use. It would not be of a nature fit to erect large buildings or stores upon, as the cost of providing foundations through such a depth of reclamation would make building prohibitory.

No. 2 Scheme.

This is practically the same as No. 1, except that it is proposed to construct extensive cellarage behind the sea-wall.

In this case the construction of a watertight sea-wall to act as a coffer-dam is quite indispensable; and, moreover, the ends of the wall must be carried further into each side than would be necessary under the scheme last dealt with.

I estimate the cost of this wall, including roadway formation, pumping appliances, &c., at £181,000.

After the completion of the sea-wall and the drainage works as before described, the space behind could be pumped out, and the bottom excavated and prepared for cellarage; this I show on the plan to be a space 1,009 feet long by 550 feet wide (about 12½ acres), enclosed with brick-faced concrete retaining walls and a concrete floor 18 feet below low-water level. The whole area to be roofed over with brick arches carried on brick piers. The arches are shown with 20-foot spans, and high enough to give a headway of 24 feet, so that by adopting hydraulic truck elevators it would be possible to lower down goods trucks containing meat or other produce to the cold storage, and move them about to any part required by laying lines and sidings in the basement. The arches are shown very strong and with about 2 feet 6 inches of earth cover over them to enable railway lines and sidings being laid overhead, &c., and ballasted in the usual manner.

The remainder of the space surrounding that occupied by cellarage to be reclaimed by the sand-pump dredge as before specified:—

I estimate the cost of constructing the cellarage, including pumping out the space behind the retaining wall, and providing permanent steam pumping appliances	£500,000
And the reclamation of the surrounding space—1,774,000 tons, at 6d. (say)	45,000

With

With a combined engine and centrifugal pump of about the same power as that now on board the dredge "Neptune," the whole space behind the retaining wall, containing at low water about 265 million gallons, could be pumped out in from seven to eight days of continuous work. It would, however, be preferable to adopt a smaller pump as being more easily handled and requiring a smaller boiler, &c., the whole plant to be placed on a pontoon, which might be kept afloat inside the retaining wall; by adopting this arrangement the suction lift will be constant, while the discharge lift will increase as the enclosed water level is lowered. Under such circumstances the best results will be obtained with a centrifugal pump. The same pump could be availed of for keeping the whole of the foundations dry during the construction of the cellarage, &c., and upon completion of the work might be disposed of, and a more suitable pump purchased and permanently fixed for draining the cellarage,—a complete system of drainpipes being provided for under the floor for this purpose, all leading to one sump.

The whole cost of this scheme may be estimated as follows:—

Sea walls, including coffer dams and removal of same, formation of roadway at back, &c.	£181,000
Drainage and sewerage works as before	98,000
Cellarage covered in, including pumping and permanent pumping station, complete	500,000
Filling in at back	45,000
High level roadway, foundations in this case being put in dry will be cheaper, say	80,000
Resumption of land as before	316,000
Value of Government Wharfs abandoned, half cost	34,000
Total cost of Cellarage Scheme... ..	£1,254,000
Against this, to be allowed the estimated cost of constructing a new bridge as before, say	295,000
38½ acres of land reclaimed, &c., say	77,500
Value of cellarage, say, £3,000 per year capitalised	75,000
	£347,500
Total estimate	1,254,000
Less value of improvements as a set-off	347,500
Estimated loss on transaction	£906,500
To this must be added the capitalised value of the rent now derived from leases, say £1,400 at 4 per cent.	£35,000

This charge applies to both schemes and should really be placed at a higher sum, seeing that the rentals may be so largely increased as the leases, which are only short ones, fall in.

Since writing the foregoing I have received Mr. Perdriau's report (attached) with detailed Schedule and plans of all the properties between Pymont Bridge and the head of Darling Harbour.

The Schedule summarised shows that the Government derives annual rents amounting to £1,373 for the various wharf leases, and that the present occupants are paying rent to the various owners to the extent of £8,850 per annum. There are some twenty-three properties scheduled, and of these all but two seem to be wholly alienated—two small portions only having unauthorised reclamations in front of the freeholds.

The above figures go to show that my estimate of the value of the land to be resumed is under rather than over the true value.

At least one third of the properties are not leased or profitably held at present, so this proportion may fairly be added to the rentals, thus £8,850 + 1/3rd = £11,800, being the proportional rental value of the whole of the properties.

This sum capitalised @ 4 %	£295,000
10 % forced sale	29,500
Add for goodwill and disturbance of established businesses such as the Ice Company, Messrs. Allen and Walker, Saw Mills, Shipping Companies, &c., say at least	55,500
Probable value	£380,000

This amount being £64,000 in excess of the sum I allowed in my estimate. The sum I put down for disturbance of established business is low when compared with the sums paid to similar establishments when the land on the opposite side of the harbour was resumed, Messrs. Goodlet & Smith getting the sum of about £90,000 for being disturbed, their claim being £168,000.

After investigating and fully considering the whole case, I am strongly of the opinion that the benefits to be derived from the reclamation of the head of Darling Harbour would be purchased at too great a cost, and that it would most unquestionably be better in the interests of the Colony, the City, and all concerned, to construct a good bridge with a large opening span as proposed, and make full use of the wharfage round the head of Darling Harbour.

C. W. DARLEY,
Engineer-in-Chief for Harbours and Rivers.

No. 20.

Report by Mr. Perdriau.

[To accompany my letter to the Acting Chief Surveyor, No. 93-1, of 19th January.—S. E. PERDRIAU, Government Surveyor.]

PROPOSED RECLAMATION OF THE HEAD OF DARLING HARBOUR, SYDNEY.

SCHEDULE of water frontage properties on the east side of Darling Harbour, lying to the south of Pyrmont Bridge, giving particulars as to areas and dimensions of the lands, names of freeholders and lessees; also, as to terms of leases, and of the tenure of the lands beyond high-water mark for wharfs and jetties.

No. on Plan.	Name of Freehold and Lessee	Allotment No.	Description and Dimensions of Freehold or other tenure; also Dates and Terms of Leases.	Dates, Terms, and Conditions of Special Leases under the 89th section, for Wharfs and Jetties.
SECTION 30, CITY OF SYDNEY.				
1	Reclaimed Crown Land. Passage to steps now disused. The entrance to this land is closed by a close fence erected by the City Council.	
2	City Council, part of the Market Wharf Reserve.	Freehold, 11½ perches. The reclaimed land, about 19 perches, has apparently not been alienated, and it does not appear that permission was given to reclaim it. Upon my stating these facts to the Town Clerk he promised to inquire into the matter, and if he discovered any authority from Government for the reclamation, to communicate with the Department to that effect.	Annual lease of 17 perches for wharf and jetty, at £25 per annum, from 1st January, 1891. NOTE.—The rent for 1891 not having been paid, although two reminders were sent, the Crown Solicitor was instructed, 23/12/92, to institute legal proceedings for recovery of same.
3	“Baltic Wharf”; Thomas Buckland and Executors of the late John Williams.	5	Unauthorized reclamation, 32½ perches. Application to purchase same refused. Ms. L. 92-2,451. Alexander Burns, timber merchant, has a lease of the jetty and the area shown upon plan for one year from 31st May, 1892, at £700 per annum, six months notice of determination of lease, before expiry of the one year, to be given by either party. Burns has no power to sublet without Buckland's consent in writing. Before the above-mentioned date, Burns had a seven (7) years lease, and he erected the brick offices now upon the land at his own expense, without right of removal, and will receive no compensation for same. J. Toohy and Buzacott & Co., of the hotel and shops respectively, have a right of way over the drayroad to their back premises.	The jetty, about 148 ft. x 52 ft., was erected many years ago, under permission granted by the Governor-General in 1850. It is not held under lease, and Mr. Buckland was called upon, 17/9/91, by the Department to tender a special lease application. NOTE.—Further action by the Department has apparently been delayed, pending decision as to a substitute for Pyrmont Bridge. If a new bridge be erected as proposed, it would be necessary to resume part, if not the whole, of this property.
	The tenants		
4	Albion Wharf, James Cooper, of 58, Pentridge Villas, Bayswater, near London, England.	4	Reclamation 19 perches has not been purchased from the Crown, but the recent opinion of the Crown Solicitor is that it is included in the original grant to James Cooper.	There are two jetties on the frontage of allotment 4. The northern one is about 164 ft. x 26 ft. The southern one about 174 ft. x 24 ft. They were erected many years ago, under permission granted by the Governor-General in 1850.
.....	Lessees	Block 410. Fo. 949. John See and W. H. Hinton have a lease for twenty-one years from 1st November, 1888, of the whole of allotment No. 4, and the two jetties, paying during the first fourteen years, £1,500 per annum, and during the last seven years, £2,000 per annum, payable in equal monthly instalments. Lessees to pay all rates and taxes, except the land tax, and landlord's income tax, if any. Provided that if the lessees be desirous of pulling down the stone store, situate near the water, they must first deposit £2,000 as guarantee, in some Bank to be approved by the lessor; then erect buildings to the value of £5,000 on the site, and then the £2,000 will be returned to them; or if the lessees expend £5,000 in buildings on the land elsewhere than on the site of said stone store, they may pull the store down and remove it. The building covenant has evidently been carried out. Book 436. Fo. 467. Walter Russell Hall advanced £8,000 on 8th April, 1890, on mortgage at 7½ per cent. per annum over See and Hinton's lease, to be repaid on the 5th April, 1895. Mortgagor to insure the buildings and keep same insured for £8,000 until that date.	These jetties are not held under lease, and Mr. Buckland, as agent for James Cooper, was called upon, 12th April, 1892, to tender a special lease application for same, this not having been done, the Crown Solicitor was instructed, 16th December, 1892, to take action to compel Cooper to legalise his occupation. NOTE.—Since my survey in January, 1891, two additional small areas have been covered by wharfs on piles, without authority from the Department. [See plan.]

No. on Plan.	Name of Freehold and Lessee.	Allotment No.	Description and Dimensions of Freehold or other Tenure; also Dates and Terms of Leases.	Dates, Terms, and Conditions of Special Leases, under the 59th section, for Wharfs and Jetties.
SECTION 30, CITY OF SYDNEY—continued.				
.....	Sub-lessees	Book 498. Fo. 903. John Lysaght & Co. (Limited), galvanised iron merchants, have a sub-lease for seven years from See and Hinton of the area shown on plan from 1st March, 1892 at £900 per annum—£75 per month. The Company to pay all rates and taxes, except the land tax and landlord's property tax, if any. Lessees to keep property in good repair, less ordinary wear and tear and damage by fire. In the event of resumption by Government, Lysaght & Co., are to receive the compensation money, and See and Hinton are not to be responsible to them, nor liable in any way for such resumption. The lessors to be at liberty at the expiration of the lease to pay for at a valuation—to be fixed by arbitration, in case of difference—any buildings, erections, or improvements of any sort made by the Company.	As to the jetty fronting the Company's leasehold. The Company is to have exclusive use of same. to berth vessels north and south of it, but the lessors (See and Hinton) also have a right to the use, in common with the lessees, of the water between the said jetty and adjacent jetty of the lessors to the north.
4	Sub-lessees	John Lysaght & Co. (Ltd.). The company have a right to three years' extension of this lease, making ten years in all, by giving notice any time within three years of the commencement of the seven years' term.	Upon inquiry of John See, I was informed that Nicoll has no lease. There is one drafted, but it is not signed; also, that Nicoll has not the exclusive right to the wharf, but only a right to berth vessels there, which right Mr. See also retains and exercises, principally for the discharging of timber, for which he receives the wharf dues. Mr. See also stated that Nicoll has no right to use the store, but is allowed to do so on sufferance only. Roche and Bloomfield, timber merchants, have a lease of the two sheds indicated on plan, area about 20 perches, for five years, from 1st December, 1891, at £5 per week. The tenants of the stores on the Sussex-street frontage have a right of way to the back of their premises.
.....	Nicholl's lease is not registered	Geo. W. Nicoll has a three years' lease of the jetty (northern jetty of Albion Wharf), and storage accommodation, as shown upon plan, at £20 per month, from 1st October, 1891. The store was erected prior to the commencement of the lease, but Nicoll's office was erected at his own expense (it is on a recent addition to the wharf which is not covered by special lease from the Department).	Special lease for jetty, area, 300ft. x 30ft. for ten years from 1st January, 1888, at an annual rental of £150, granted to M'Iraith, M'Eacharn, & Co.
5	Union Finance, Guarantee, and Investment Company of Australia (Ltd.), now in private liquidation, late M'Iraith, M'Eacharn, & Co.	3	Reclamation 0a. 1r. 16 perches, purchased by trustees of the late Esther Hughes, the owners at that time of the freehold on 22nd May, 1876.	There are two special leases for jetty areas fronting this property, viz., a lease for a new jetty, 275ft. x 40ft. = 1 rood, for five years from 1st July, 1891, at £175 per annum, granted to the U. F. Co., and for two parts, 7 perches and 1 perch = 8 perches, of a former lease of 20 perches. The present rental is £20 per annum. An annual lease from 1st January, 1888, granted to Thomas Street, and now held by the U. F. Co.
.....	Union Finance, Guarantee, and Investment Company of Australia (Ltd.), formerly Thos. Street, and lately M'Iraith, M'Eacharn, & Co.	2	Reclamation, 28½ perches; purchased by Alexr. Campbell, 26th February, 1886. Reclamation, 1 rood 16 perches. Application to purchase refused. Ms., 90/4,991.	Special lease for two jetty areas fronting the 1 acre 1 rood 4½ perches, No. 1, 245 ft. x 30 ft., and No. 2, 250 ft. x 50 ft.; total area, 1 rood 31 perches. Lease for ten years from 1st January, 1889. Rental, £300 per annum for first five years, and £450 per annum for remaining five years. The U.S.S. Company (Limited) have acquired this lease from Allen and erected the jetties.
.....	The "Old Labour in Vain Hotel" is very much out of repair, it is untenanted, and the license is refused pending extensive repairs. Also, the remaining buildings on this land adjoining and to the south of the hotel are in a similar condition, untenanted, and must not be occupied pending repairs.	
6	W. C. Wentworth, now Fitzwilliam Wentworth.	1	Reclamation 2 acres 9 perches, purchased 15th September, 1862, by W. C. Wentworth; purchase money, £50. Lessees, Allen and Walker—now Thomas Allen—has a lease of 1 acre 1 rood 22½ perches in two pieces of 1 acre 1 rood 4½ perches and 17½ perches (see plan) from F. Wentworth for twenty-one years from 1st October, 1888, at £1,300 per annum clear for first ten years, and for the remainder of the term £1,700 per annum clear, payable quarterly, with a covenant that any buildings which may be erected shall be of brick or stone, and that pile jetties to cost £7,000 shall be built fronting the land according to plans and specifications exhibited within two years of commencement of lease; and also that the lessee will by dredging maintain a depth of water on the premises surrounding said jetties of not less than 18 feet at ebb tide. The covenant as to expenditure upon jetties has been fulfilled. (See below.)	

No on Plan.	Name of Freehold and Lessee.	Allotment No.	Description and Dimensions of Freehold or other Tenure; also Dates and Terms of Leases.	Dates, Terms, and Conditions of Special Leases, under the 89th section, for Wharfs and Jetties.
-------------	------------------------------	---------------	---	---

SECTION 30, CITY OF SYDNEY—continued.

7	<p>Sub-lessees (Book 427, Fol. 146).....</p> <p>.....</p> <p>City Council, Druitt-street, reclamation</p>	<p>.....</p> <p>.....</p> <p>.....</p>	<p>Allen and Walker—now Thomas Allen—has sub-leased to the Union Steamship Company (Limited) of New Zealand, two parts of the areas leased by him from Wentworth, viz., 2 roods 39½ perches, leased for twenty years and eighty-nine days from 1st July, 1889, to 27th September, 1909; the rental to 1st October, 1898, to be £1,300 per annum, and for the remainder of the term £1,700 per annum; payments to be made quarterly on 1st days of October, January, April, and July in each year—£325 per quarter for first part of the term and £425 per quarter for the second part of the term. The covenant made by Allen with Wentworth relative to buildings and jetties has been accepted by the U.S.S. Company, and Allen holds an acknowledgment from Wentworth that the same has been fulfilled. The second part is a small area at the corner of Druitt-street and D'Arcy-street, for which the U.S.S. Company pay Allen £104 per annum, the lease being from 1st July, 1890, for nineteen years and eighty-nine days, expiring 27th September, 1909. The Company has the right to remove the weighbridge and any other fixed machinery during their lease. The Company are to pay all rates and taxes, except the land tax and landlord's income tax, if any. The Company also in both leases is bound to keep the buildings, jetties, &c, insured to their full insurable value during the term of their leases.</p> <p>Allen's leaseholds from Wentworth and his sub-leases to the U.S.S. Co. are clearly shown upon my plan. He has retained a water frontage of about 35 feet.</p> <p>Permission was given to the City Council, 1st November, 1883, to reclaim the area shown upon my plan. Such reclamation has not yet been effected, and no deed of grant has issued for the area.</p>	<p>On the water frontage of the 35 feet there is an old jetty. Allen and Walker applied for a special lease of this jetty on 27th June, 1890. Area, 7 perches. The Land Court, on reference by the Minister, fixed the annual rental at £40. The Land Board has recommended a term of 9 years, from 30th June, 1890. The rental for 1890, £20, and for 1891, £40, not having been paid the Executive Council approved that the lease be forfeited. The papers are now with the Crown Solicitor for the recovery of the rent. Note.—Since the Land Board dealt with the application the jetty has been enlarged.</p>
---	---	--	---	---

SECTION 21.

8	<p>"Pacific Wharf," claimed by Thomas Henry Dearin; Chapman & Co. lessees. The lease is not registered.</p>	<p>Part of allotment No. 2; part of the unalienated reclaimed land fronting same.</p>	<p>The area—about 2 roods 32 perches—of reclaimed land embraces nearly the whole of site of the "Pacific Foundry," the freehold being only about 4½ perches. The said site—2 roods 36½ perches in all, is leased to Chapman & Co. (executors of the late Richard Manning) for five years from 1st June, 1889, at £420 per annum, payable monthly. The lessees pay the rates and taxes.</p>	<p>Special lease of about 18 perches = 200ft. x 25ft. granted to the late J. B. Dearin, father of T. H. Dearin, for 5 years, from 1st January, 1890, at £120 per annum.</p>
---	---	---	--	---

No. on Plan.	Name of Freehold and Lessee.	Allotment No.	Description and Dimensions of Freehold or other Tenure ; also Dates and Terms of Leases.	Dates, Terms, and Conditions of Special Leases under the 39th section for Wharfs and Jetties.
SECTION 21—continued.				
152-C	The reclaimed area, 2 roods 6½ perches was applied for to purchase by T. B. Dearin, and refused 22nd November, 1888. Ms. 88-14,406.	When the lease was given there was an old jetty, situate as shown on my plan, it has since been demolished. At the commencement of the term of lease, the buildings on the site were mutually estimated by the lessor and the lessees at £1,000 and at the termination of the lease, the lessor T. H. Dearin, has the option of purchasing whatever buildings there may be on the site at a valuation. The price to be reduced by £1,000 the value on those on site when leased. Dearin erected the present jetty, which is comparatively new, at his own expense. He pays the rent for the jetty area to the Government, and receives nothing extra for same from the lessees. The lease is not registered, and I have not seen it. The above information, and that as to the limits of the lease, was obtained from Dearin. It will be observed that part of Drutt-street extended is embraced by same. The City Council aligned the extension of Drutt-street in 1880. In 1884 steps were taken towards asserting the City Council's right over the street, and causing the removal of the obstructions. It appears that action was stayed upon Dearin's writing to the Department of Mines, stating that immediate action would result in loss and probable litigation; and upon his promising to give up possession of the encroachment at the expiry of the lease, then about five years to run. Records, 89/259-3.	[See NOTE *.]
9	Claimant, John Henry Seamer	Fronting part of allotment 2.	Unauthorised reclamation :—About 26 perches, claimed and occupied by John Henry Seamer : application by him to purchase under the 9th clause of the Crown Lands Act of 1861, refused, 29th March, 1884. Ms. 86-5,821.	
10	James Thompson Wilshire, owner of freehold, and claimant of the reclaimed land.	Part of 2	The freehold is a small irregular area of about 11½ perches, fronting the freehold, and the unauthorised reclamation by Seamer is an unauthorised reclamation of about 1 rood 24 perches, which is claimed by J. T. Wilshire. These two areas, together with the wharf on piles on the western frontage thereof, are leased by J. T. Wilshire to John Hay Goodlet for fourteen years, from 11th October, 1882, at £500 per annum—£41 13s. 4d. per month, the last monthly payment to be in advance on 1st October, 1896. The lessee to pay all rates and taxes, and to keep the wharf and other erections on said premises in repair, reasonable wear and tear excepted. The £75 per annum charged by Government for said wharf area is paid by Wilshire. *NOTE.—Action has been taken by the Crown Solicitor towards establishing the Crown's right to the three unauthorised reclamations mentioned above, claimed by Dearin, Seamer, and Wilshire respectively. The Crown Solicitor is now—11th January, 1893—awaiting instructions from the Department of Lands as to whether writs of intrusion are to issue against these claimants and others in the immediate neighbourhood.	Special lease of the wharf area fronting this property for wharf as erected, was granted to J. T. Wilshire from 1st January, 1887, on an annual tenure at £75 per annum. Special lease of the jetty area for the jetty as erected on the northern frontage of Seamer's leasehold, about 12 perches, was granted to J. H. Seamer for five years from 1st January, 1888, at £35 per annum. Seamer has recently applied for a renewal of said lease, offering £30 per annum as rent.
11	Municipal Council of Sydney, Bathurst-street.	Permission to reclaim 12 perches was granted to the Municipal Council of Sydney. Such reclamation has not yet been effected.	Special leases for two areas fronting Bathurst-street have been granted to the City Council for five years from 1st January, 1890, at a nominal rental of £1 per annum each, and jetties have been erected thereon. The northern area is about 66ft. x 18ft. (about 4 perches), and the southern one is about 120ft. x 18ft., = 8 perches.

No. on Plan.	Name of Freehold and Lessee.	Allotment No.	Description and Dimensions of Freehold or other Tenure; also Dates and Terms of Leases.	Dates, Terms, and Conditions of Special Leases under the 89th section for Wharfs and Jetties.
SECTION No. 10.				
12	William Kite and George Lee, trustees for Mrs. Cousins. Lessees, Gillespie Bros. & Co.	Part of purchased reclamation, fronting allotment 2, granted to Thos. Barker.	The freehold is irregular in shape, about 167 ft. x 80 ft., and with the stores and buildings then upon it was leased from 1st January, 1892, to Gillespie Bros. & Co. (John and John William Gillespie) for seven years, at £200 per annum, payable quarterly on 1st days of April, July, October, and January. The lessee to pay all rates and taxes of every description, and within the first year of the term to expend not less than £450 in permanent improvements upon the said land, and keep the wharf, buildings, and premises in good repair, damage by fire, storm, and tempest, and other inevitable accident, and reasonable wear and tear excepted. In the event of the Government setting up a right to any portion of the said premises, the lessees are not to be liable therefor to a greater extent than £10 per annum, in addition to the £200 per annum. If any part of the property be resumed by Government during the lease a fair proportion of the rent shall be abated, according to the nature and effect of the injury sustained by the lessees by reason of such resumption. Any dispute about same is to be settled by arbitration by two indifferent persons, one chosen by each side. Such dispute to be conducted according to the Act 31 Vic. No. 15 intitled "The Arbitration Facilitation Act."	Special lease for 8 perches, as occupied, granted to Kite and Lee for five years from 1st January, 1892, at £32 per annum.
13	Gillespie Bros. & Co., owners and occupiers.	Part of allotment No. 2 and part of the reclamation area fronting allotment 2. It also includes the 10 perches of reclaimed land granted to Jos. Wearne.	This area, 2 roods 1 perch—about 290 ft. x 78 ft., is under the Real Property Act (vol. 31, folio S3). Upon it the Anchor Roller Flour Mills are erected.	Special lease of 4 perches, about 80 ft. x 14 ft.; approved by Minister, 9/8/92, to be granted for a term of five years at £20 per annum. Date of commencement is not mentioned, but presumably it will be 1st January, 1892.
14	"Russell's Wharf." John Taylor, lately the Darling Harbour Wharf and Land Investment Co. (Ld.)	Part of purchased reclamation fronting allotment No. 2 granted to Thos. Barker—2 acres 1 rood 12½ perches.	This area, 1 acre 3 roods 4 perches, which includes that extending along the water frontage on piles, the latter varying in width from about 5 feet to about 20 feet (area, about 12½ perches), is under the Real Property Act. The 12½ perches have not been purchased from the Crown, and I presume it will be held that it was erroneously included in the Real Property certificate.	
	Lessees	The Postal Department of N.S.W. had a lease of the southern portion of this land, about 27½ perches, which expired 31st December, 1898. The term was five years, at £400 per annum, the Department paying rates and taxes. They are still in occupation at the same rental, payable quarterly, without a lease. Taylor thinks the Department would be entitled to at least three months' notice, if he wished to determine their occupation.	
	Weekly tenants	Upon the Barker-street frontage there are eleven shops—Nos. 1 to 11, as shown upon the plan—whereof the rentals are, for Nos. 1 and 2, £1 5s. per week; for No. 3, £1 10s. per week; for Nos. 4 to 11, £1 per week. At the date of my inspection they were all let at these rentals except Nos. 4, 5, and 7, which were vacant. The solid land of Taylor's wharf has all been reclaimed. It comprises the 1 rood 21 perches granted to P. N. Russell & Co., and part of the 2 acres 1 rood 12½ perches granted to Thos. Barker. The western portion of the southern part of Barker-street is enclosed in common with the remainder of Taylor's property, and occupied by him.	
15	Frederick Thomas Miller and George Robert Harrison, occupiers and owners	Very small part of allotment 2 and reclaimed land.	Area, 3 roods 18½ perches by deed. It is nearly all reclaimed land, composed of part of the 2 acres 1 rood 12½ perches granted to Thomas Barker, and the 19 perches and 15 perches granted to Miller and Harrison. The eastern portion of the southern part of Barker-street, a length of about 44 ft. 6 in., is enclosed in common with applicants' property, and occupied by them. Their conveyances do not embrace this land. The strip of wharf on piles on the water frontage is not held under lease from the Department.	

No. on Plan.	Name of Freehold and Lessees.	Allotment No.	Description and Dimensions of Freehold or other Tenure; also Dates and Terms of Leases.	Dates, Terms, and Conditions or Special Leases under the 89th section for Wharfs and Jetties.
SECTION No. 19—continued.				
16	About 2 perches, very irregular in shape, part of "site of the old jetty" included in the grant of 2 acres 1 rood 12½ perches to Thomas Barker. This area is covered by part of an old jetty on piles, erected and occupied by the Misses Murphy, whose lease to the F. F. and Ice Co. purports to include same.	
17	The Misses Elizabeth and Mary Ann Murphy, Lessees, the N.S.W. Fresh Food and Ice Company. The lease is not registered.	Small part of allotment 1 and part of the 1 acre 0 rood 10 perches reclaimed land granted to Richard Brooks.	Lease from 7th July, 1892, for 21 years, at £500 per annum, payable quarterly, on 7th October, January, April, and July. Lessees to pay the taxes and keep premises in same condition of repair as at commencement of lease, less wear and tear, and damage by fire, storm and tempest, or other inevitable accident, and to insure for £1,000 in the joint names of lessors and lessees. This lease includes that part of Special Lease No. 664, granted to the Misses Murphy, and expiring 30th June, 1899, which fronts the part of the Misses Murphy's land referred to. The rent of which special lease payable to Government is £100; whereof the part embraced in this lease is estimated at three-tenths and the rental thereof at £30; which amount the lessees are to pay to Government during the continuance of the special lease and are to renew said special lease during the continuance of their lease, from time to time. Provided that if Government at expiration of special lease require a higher rental for same the lessors shall be at liberty to abandon or refuse to renew said special lease, and after such abandonment or refusal this lease shall cease and determine as regards the special lease area, and the rent thereunder payable by the lessees shall be abated at the rate of £7 10s. per quarter; and if during the lease the special lease be resumed by Government or if the lessors be compelled by Government to remove the structures thereon; or if such special lease or any renewal thereof be otherwise determined by Government for any cause other than the breach or non-performance by the lessees of any of the covenants on their part herein contained, then, and in either of such cases, this lease shall cease and determine as regards the special lease area, and the rent payable thereunder shall be abated.	Special lease for 32½ perches, reclaimed land and old pile jetties, granted to the Misses Murphy from the 1st July, 1890, to 30th June, 1899, at £100 per annum. Said 32½ perches extend across the whole frontage of the Misses Murphy's property, whereof only a part is leased by the N.S.W. F. F. and Ice Co. the remainder being leased by Bernard Byrnes. NOTE. —Murphy's lease to the F. F. and Ice Co. purports to include the 2 perches described in this schedule and numbered 16.
18	The Misses Elizabeth and Mary Ann Murphy. Lessee, Bernard Byrnes. The lease is not registered.	Part of the 1 rood 10 perches reclaimed land granted to Richard Brooks.	The lease is for two pieces of land, from 7th July, 1892, for 21 years, at £650 per annum (being a clear rental of £600, and £50, the one half the rent payable under special lease hereinafter mentioned), part of which is held in fee-simple and part under special lease No. 664 for nine years, expiring 30th June, 1899, at the quarterly rental of £100; and the proportionate part of the area held under said special lease, embraced by this lease, is estimated at one-half the total rent therein—viz., £50. The rent is payable monthly—£54 3s. 4d. on 7th of each month. Lessee is to pay all rates and taxes, and to keep in repair; fair wear and tear, and damage by fire, storm, tempest, or other inevitable accident excepted; to insure buildings, &c., for £500, and use piece held under special lease for wharf and jetty only. Provided that if the half of such rent of special lease renewed at desire of lessee shall be more than £75 per annum, the lessors shall not be bound to pay more than £75 per annum of such rent, but the remaining portion of such rent shall be payable by the lessee, and shall be added to the clear yearly rental of £600. If said special lease be resumed by Government, or if lessors be obliged by Government to remove the structures thereon, or if the special lease or any renewal thereof be determined by Government for any cause other than the breach or non-performance by the lessee of any of the covenants on his part therein contained, then, and in either of such cases, this lease shall cease and determine.	Special lease for 32½ perches reclaimed land and old pile jetties, granted to the Misses Murphy from 1st July, 1890, to 30th June, 1899, at £100 per annum. Said 32½ perches extend across the whole frontage of the Misses Murphy's property, whereof only a part is leased by Bernard Byrnes, the remainder being leased by the New South Wales Fresh Food and Ice Company. (Limited).
19	The City Council	Liverpool-street.	

No. on Plan.	Name of Freehold and Lessees.	Allotment No.	Description and Dimensions of Freehold or other Tenure; also Dates and Terms of Leases.	Dates, Terms, and Conditions of Special Leases under the 89th section for Wharfs and Jetties.
SECTION 1.				
20	Robert Chadwick Lessee, Bernard Byrnes. The lease is not registered.	Reclaimed land. Part of the 1 acre and 8 perches granted to Henry Mace, and part of the 21½ perches granted to J. H. Williams.	Chadwick's title, under the Real Property Act, embraces an unauthorised reclamation. I presume it will be held that the title to same still vests in the Crown. The lease is for 10 years, from 1st October, 1891, at £830 per annum, payable monthly—£69 6s. 8d.; after that term a monthly tenancy only; lessees to pay rates and taxes. There were no improvements upon the land at commencement of the lease. The lessee is to keep premises in order, less wear and tear. Any improvements made upon the land shall, at the end of the lease, be the property of the landlord. The area is 1 rood 32¼ perches.	Special lease of 1¼ perches, occupied by a jetty and coal-shoot, granted to Bernard Byrnes, from 1st January, 1891. Annual lease, terminable upon three months' notice being given, in writing, by the Government. Rent, £15 per annum. Special lease of 3¼ perches, occupied by a jetty, recommended by the Land Board, under an annual tenure, with six (6) months' notice on non-renewal, at £20 per annum. This case was dealt with by the Land Board on 10th January, 1893, and has not yet (14th January, 1893) reached the Minister.
21	Robert Chadwick. Lessees, The N.S.W. Fresh Food and Ice Co. (Ltd.), H. Paterson, Manager. The lease is not registered.	Reclaimed land, part of the 1 acre and 8 perches granted to Henry Mace, and part of the 21½ perches granted to J. H. Williams, also part of the 2 roods 14¾ perches granted to G. T. Pickering.	Chadwick's title, under the Real Property Act, embraces an unauthorised reclamation. I presume it will be held that the title to same still vests in the Crown. The lease is for 29 years from 1st January, 1893. The rental for the first 10 years is £800 per annum; for the second 10 years, £900 per annum; and £1,000 per annum for the remainder of the term. Quarterly payments. There is no building covenant. The Manager of the N. S. W. F. F. & I. Co. informed me that the buildings upon the area on 1st January, 1893, were worth about £500; he also supplied me with the above-mentioned particulars. The lease is not yet formally drawn up, but I had a sight of the approved diagram showing the area.	
22	Elizabeth Bell and Richard Holdsworth, trustees of Henry Bell, deceased. Lessees, The N.S.W. Fresh Food and Ice Co. (Ltd.)	Part of allotment 1 and of the reclaimed area fronting same, 1 acre 2 roods 5 perches, granted to James Ryan.	Lease for 33 years from 1st January, 1889, at £1,000 per annum; £250 per quarter, without any reduction or abatement whatsoever for rates or taxes, except the lessors' income or land tax. The lessees to expend £1,000 in buildings (to be approved by the lessors) upon the land within two years from commencement of lease, to keep them in good order, and insured to their full insurable value during the term.	NOTE.—The value of the buildings erected exceeds that above specified very considerably.
23	N.S.W. Government. Lessee, the late T. S. Mort. Lease assigned to the New South Wales Fresh Food and Ice Co. (Ltd.)	Reclaimed land and a small piece of Darling Harbour.	Leased by John Rac, as Commissioner for Railways, to T. S. Mort, for fifty (50) years from 1st July, 1874, at £1 per annum: Provided that the premises are to be used only for his (Mort's) business of a carcass butcher, &c., and freezing meat, &c., for export from the Colony, and that the revenue for freight and railway charges for carcasses, &c., from Lithgow Valley and other places on the line of railway to these premises shall yearly and every year during the said term of 50 years amount to not less than £500. The residue of the term of this lease was assigned on 7th November, 1889, to the New South Wales Fresh Food and Ice Co., Ltd., for 10s.	

21

No. 21.

The Under Secretary for Public Works to The Under Secretary for Lands.

Sir,

Sydney, 8 November, 1892.

With reference to your letter of the 7th ultimo, in regard to the proposed reclamation of Darling Harbour above Pymont Bridge, I am directed to inform you that to allow of a reliable estimate being formed of the value of the interests which would be affected by the suggested reclamation, it is considered that all the information asked for is absolutely necessary, and the Secretary for Public Works has therefore authorised the expenditure required for obtaining the desired information.

I have, &c.,
J. BURLING.

No. 22.

The Under Secretary for Lands to The Under Secretary for Public Works.

Sir,

Sydney, 15 April, 1893.

Reverting to your letter of the 3rd November last, relating to the proposed reclamation of Darling Harbour above Pymont Bridge, I have the honor to inform you that the service in connection therewith has now been carried out, and I am to request that, as an expenditure of about £71 has been involved, you will be good enough to cause steps to be taken to have the expense incurred recouped to this Department.

I have, &c.,
WM. HOUSTON.

Mr. Darley.—B.C., 17/4/93.

No. 23.

The Engineer-in-Chief for Harbours and Rivers to The Under-Secretary for Lands.

Sir,

Sydney, 24 April, 1893.

I have the honour to acknowledge the receipt of your letter of the 15th instant respecting the expenditure incurred by your Department in connection with the proposed reclamation of Darling Harbour above Pymont Bridge, and in reply beg to inform you that if you will kindly send the account to this branch it shall receive attention as soon as possible.

I have, &c.,
C. W. DARLEY.

No. 24.

The Under Secretary for Lands to The Under Secretary for Public Works

Sir,

Sydney, 10 May, 1893.

Referring to your letter of 24th ultimo, I have the honor to transmit herewith a voucher for £71 for cost of investigation, by Mr. Perdrian, salaried surveyor of this Department, of water frontage properties on the eastern side of Darling Harbour, as requested therein, and to ask that you will be so good as to have the same certified and passed for payment in the manner indicated on the voucher.

I have, &c.,
WM. HOUSTON.

No. 25.

Memos. from Mr. C. O'Neill to The Under Secretary for Works.

8 February, 1893.

Re Darling Harbour.—Again pardon me for troubling you, but as I have already explained to you, the matter is very urgent and most important to me to-day. I will call again before 1 o'clock.

CHARLES O'NEILL.

16 Elizabeth-street, Sydney, 9 February, 1893.

Re Darling Harbour.—Excuse me for again reminding you of the pressing urgency of my business. I will call on you later on, when I do trust you will have matters arranged.

CHARLES O'NEILL.

Sydney, 10 February, 1893.

Re Darling Harbour Reclamation.—Kindly bear in mind that my scheme was the only one ever laid before Mr. Lyne, and it was my plan and scheme that were sent to Mr. Darley to report upon. I am, therefore, fully and justly entitled to consideration. The reclamation of 40 acres of land would be worth an enormous amount to the Government, even after paying all expenses, besides saving the cost of the bridge, £250,000; besides the public are all in favour of the scheme.

CHARLES O'NEILL.

Put with the other papers. I have told Mr. O'Neill that we cannot recognise any claim.—J.B., 22/2/93.

No. 26.

Memorandum from The Under Secretary for Public Works to The Engineer-in-Chief for Harbours and Rivers.

Utilisation of Head of Darling Harbour.

Sydney, 2 March, 1893.

THE Minister has directed that the sum of £5 be paid to Mr. O'Neill for the trouble he has taken in preparing a design for the utilization of the head of Darling Harbour.

Will Mr. Darley please see that this is paid at once.

J.B.

No. 27.

Minute by The Minister for Public Works.

Sydney, 1 June, 1893.
 Mr. O'NEILL called upon me to-day and complained that the small amount given him for his report on the proposal to drain the head of Darling Harbour was not nearly sufficient for the labour spent upon it. I am disposed to give him a further sum of £5, and this may be done. W.J.L.

Mr. Darley.—J.B., 1/6/93. Seen; pay from Advance. I never saw his report, however. I have only seen a bit of a plan with a few notes on it.—C.W.D., 1/6/93. He prepared a plan—gave verbal explanation to the Minister.—J.B., 2/6/93.

No. 28.

Mr. B. C. Simpson to The Secretary for Public Works.

Sir,

27 December, 1893.

Some weeks ago I had the honor of calling on you with reference to a scheme prepared by Mr. Cardew and myself for a roadway across Darling Harbour, which would, in my opinion, be of value to your Department as a permanent and very economical solution of the Pyrmont Bridge difficulty. The design, a drawing of which is now prepared, is also applicable to other bridges (especially the Glebe Island Bridge) which must very soon be repaired or reconstructed.

Both Mr. Cardew and I have given considerable time and care to the preparation of the plans and estimates, under the idea that if the officers of your Department to whom you may refer this scheme concur with me as to its value some arrangement may be made by which it may be utilized for the public benefit, and we may be recompensed for our professional services in this matter. And I submit for your consideration the following alternative arrangements by which these ends may be secured:—

- (1.) That if the design should be approved by you, Mr. Cardew and I should be allowed to carry out the works for the Department, under the supervision of the departmental officers, and that we should be paid the ordinary professional charges thereon.
- (2.) That if you approve of the design, but prefer that the works should be carried out by the officers of your Department, the sum of £1,000 sterling should be paid to Mr. Cardew and myself for the plans and estimates furnished.
- (3.) That the Government should support a Bill, to be promoted in Parliament by Mr. Cardew and myself, empowering us to construct these works and to charge tolls on the roadways so constructed; the works to become the property of the Government when the aggregate amount of the tolls received shall amount to the total cost of the works, including professional charges and 6 per cent. interest on capital to the date of repayment, and 10 per cent. added as profit to those who shall provide the capital for the proposed works. But failing the passage of this Bill, that either arrangements No. 1 or 2 shall be adopted.

If you can give me an assurance that *on your being satisfied as to the value of the proposed scheme*, one or other of the arrangements herein stated will be carried out, I shall be glad to refer the scheme with plans, estimates, &c., to you, or to any officer of your Department, for your and their information—on the understanding that if it is not considered worth adoption, the Department shall be in no way bound to accept it.

I have, &c.,

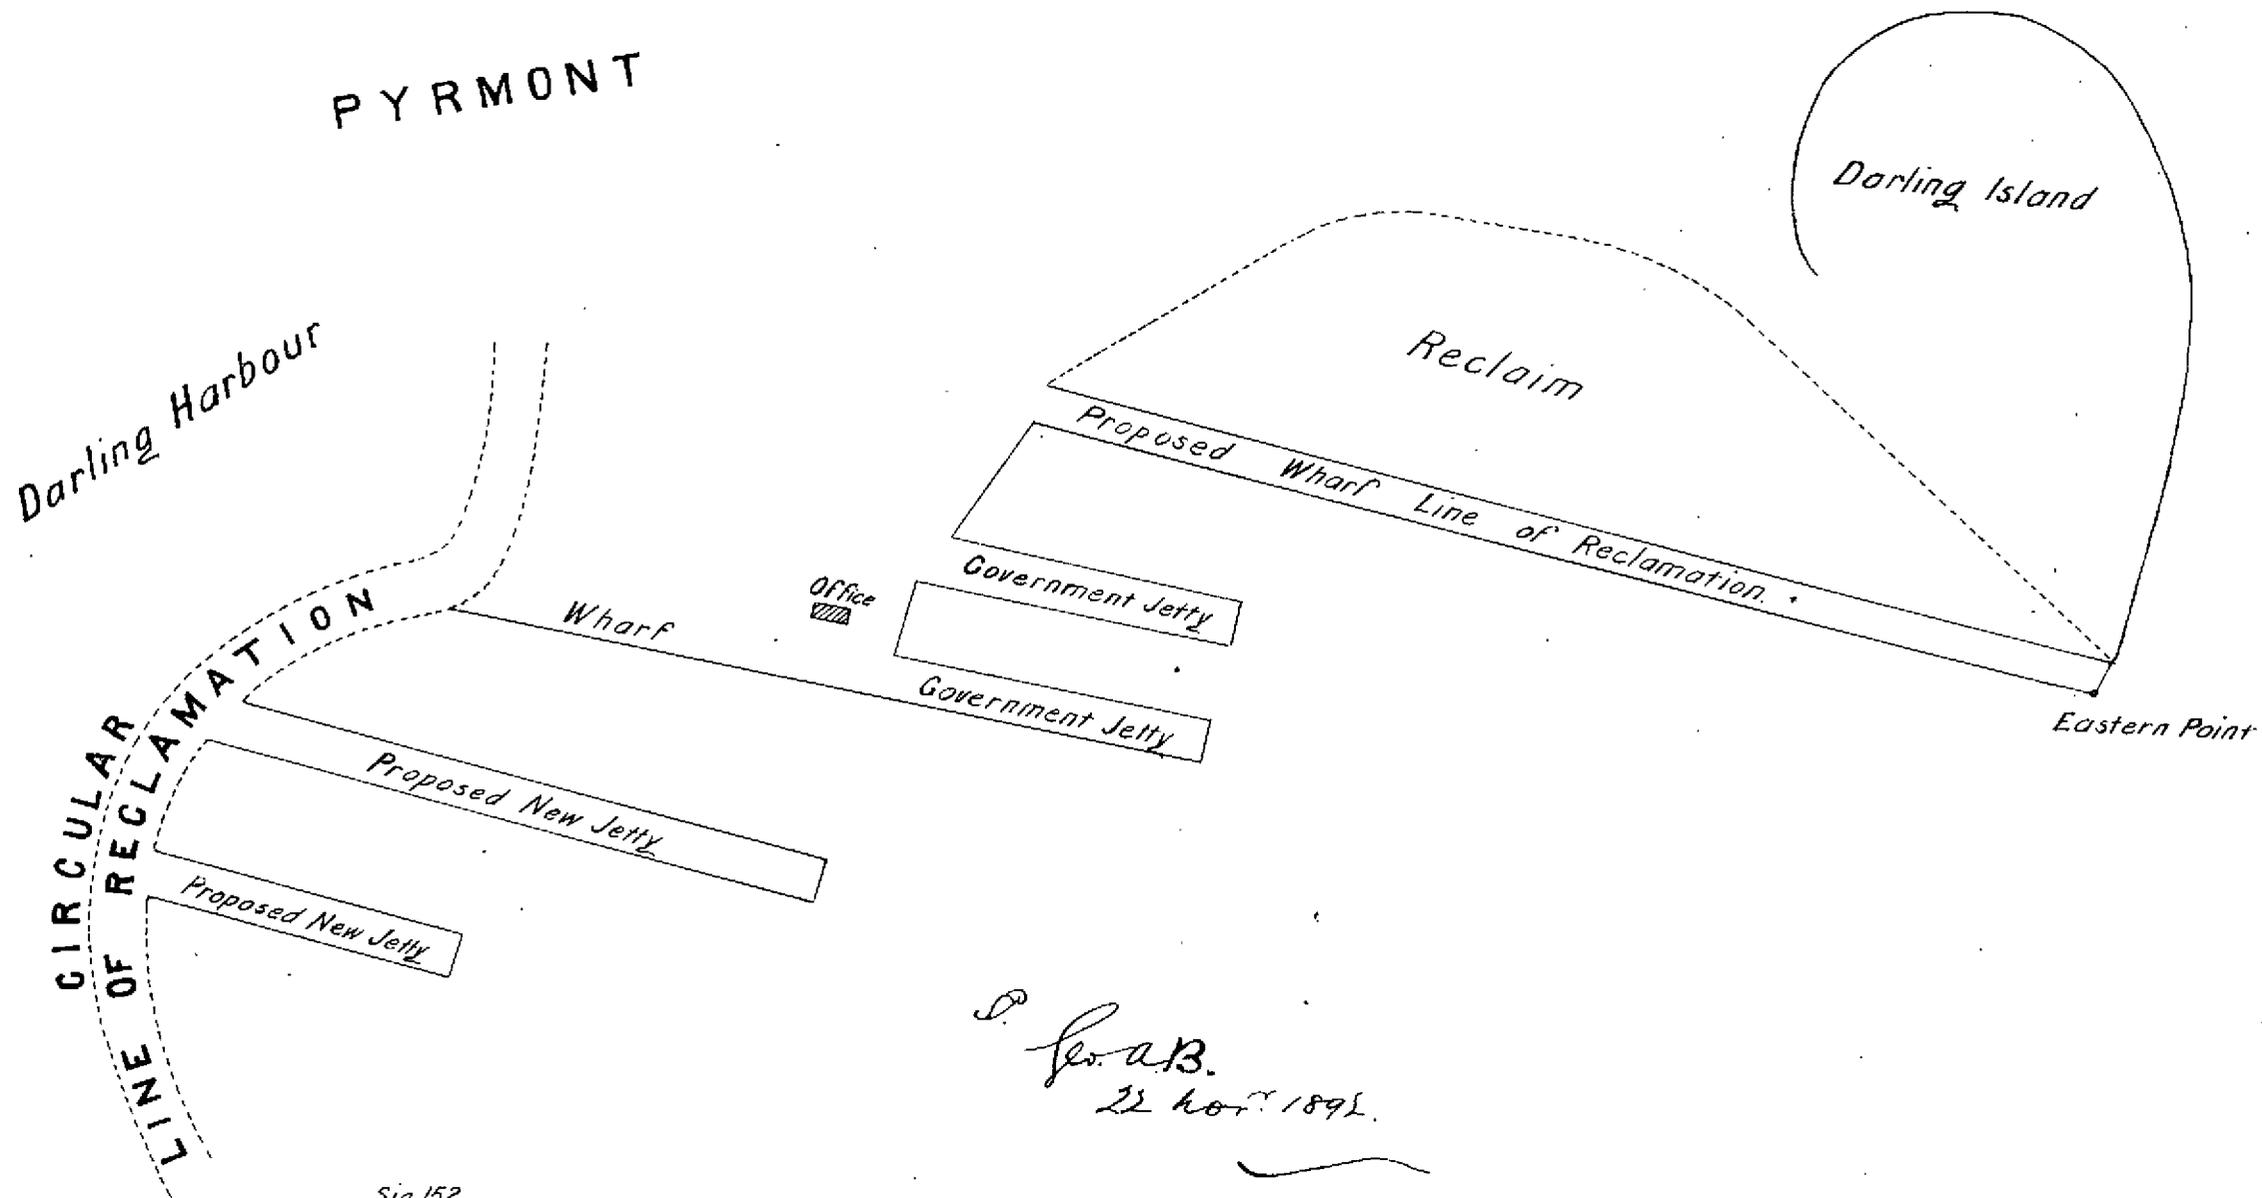

B. C. SIMPSON.

Submitted to Minister.—J.B., 28/12/93. I think this proposal has been considered long since, but should like Mr. Darley to report upon it.—W.J.L. Mr. Darley.—B.C., 9/1/94. I have reported fully on several schemes for embanking and bridging across Darling Harbour, but as Mr. Simpson does not unfold the nature of his scheme I cannot say whether it is similar to any I have reported on.—C.W.D., 12/1/94. The Under Secretary for Public Works. Submitted to Minister as to what further steps, if any, should be taken herein.—J.B., 15/1/94. A motion may be prepared for submission to Parliament for the best means of connecting the east with the western side of Darling Harbour.—W.J.L., 22/1/94.

[One Plan.]

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PUBLIC WORKS ACT OF 1888.
(RESUMPTION OF LAND FOR RECLAMATION WORKS, ROSELLE BAY.)

Ordered by the Legislative Assembly to be printed, 28 February, 1894.

**NOTIFICATION OF RESUMPTION OF LAND UNDER
THE "PUBLIC WORKS ACT OF 1888," 51 VICTORIA
No. 37.**

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable Sir ROBERT WILLIAM
(L.S.) } DUFF, a Member of Her Majesty's Most
R. W. DUFF, } Honourable Privy Council, a Knight
Governor. } Grand Cross of the Most Distinguished
Governor and Commander-in-Chief of } Order of Saint Michael and Saint George,
the Colony of New South Wales and its }
Dependencies. }

WHEREAS I, Sir ROBERT WILLIAM DUFF, the Governor aforesaid, with the advice of the Executive Council, have directed that a certain public work, that is to say, Reclamation Works on the western side of Roselle Bay, in the said Colony, the estimated cost of which does not exceed twenty thousand pounds, shall be carried out under the provisions of the "Public Works Act of 1888," as an authorised work by the Minister for Public Works as Constructing Authority; and that the lands described in the Schedule hereto, which are in my opinion required for carrying out the said work, shall be acquired by taking the same under the "Lands for Public Purposes Acquisition Act," as adopted by the "Public Works Act of 1888": Now, therefore, I, the said Governor, with the advice aforesaid, in pursuance of the "Public Works Act of 1888," do declare by this notification, to be published in the Government Gazette and in one or more newspapers published or circulated in the Police District wherein the said lands are situated, that the Crown Land comprised within the descriptions set forth in the Schedule hereto has been appropriated, and the private property within such descriptions has been resumed, for the public purpose aforesaid, to the intent that upon the publication of this notification in the Gazette, the said lands described in the said Schedule hereto shall forthwith be vested in the said Constructing Authority as a corporation sole on behalf of Her Majesty, for the purposes of the said "Public Works Act of 1888," for an estate in fee simple in possession, freed and discharged from all trusts, obligations, covenants, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the further intent that the legal estate therein, together with all powers incident thereto or conferred by the said last-mentioned Act, shall be vested in the said Constructing Authority as a Trustee: And I declare that the following is the Schedule of lands hereinbefore referred to:—

SCHEDULE.

1st. All that piece or parcel of land situate in the parish of Petersham, county of Cumberland, and Colony of New South Wales, being part of section 24 of a subdivision of a grant of

290 acres to George Johnstone, known as the North Annandale Estate, and comprised in certificate of title, registered volume 1,046, folio 22: Commencing on the south-eastern side of Taylor-street at its intersection with the north-eastern side of a drain reserve 5 feet wide separating lots 40 and 41 of the said section 24; and bounded thence by part of the south-eastern side of Taylor-street aforesaid bearing north-easterly 1 chain 81 links; thence by a line bearing south 21 degrees 50 minutes east 1 chain 31 $\frac{1}{2}$ links; thence by a line bearing south 33 degrees 56 minutes east 1 chain 12 $\frac{1}{2}$ links to the north-eastern side of the aforesaid drain reserve 5 feet wide; and thence by that side of that drain reserve bearing north-westerly to the point of commencement,—containing 18 perches or thereabouts, and said to be in the possession and occupation of the Sydney Freehold Land, Building, and Investment Company.

2nd. All that piece or parcel of land situate as aforesaid, being part of section 23a of the aforesaid subdivision: Commencing on the north-western side of Taylor-street at its intersection with the north-eastern boundary of lot 39 of the said section 23a; and bounded thence by the north-eastern boundary of the said lot 39 bearing north-westerly 1 chain 81 $\frac{1}{2}$ links to the south-eastern side of a lane 20 feet wide; thence by part of that side of that lane bearing north-easterly 4 chains 9 $\frac{1}{2}$ links; thence by a line bearing south 21 degrees 50 minutes east 3 chains 36 $\frac{1}{10}$ links to the north-western side of Taylor-street aforesaid; and thence by part of that side of that street bearing south-westerly 1 chain 32 $\frac{1}{2}$ links to the point of commencement,—containing 1 rood 38 perches or thereabouts, and said to be in the possession and occupation of the Sydney Freehold Land, Building, and Investment Company.

3rd. All that piece or parcel of land situate as aforesaid, being part of lots 57 to 63 inclusive of section 23 of the aforesaid subdivision: Commencing on the south-western side of Piper-street at a point bearing south-easterly and distant 1 chain 33 $\frac{1}{10}$ links from its intersection with the south-eastern side of Nelson-street; and bounded thence by a line bearing south 21 degrees 50 minutes east 1 chain 44 $\frac{1}{10}$ links to the north-western side of a lane 20 feet wide; thence by that side of that lane bearing south-westerly 55 $\frac{1}{10}$ links to the north-east corner of lot 56; thence by part of the north-eastern boundary of that lot bearing north-westerly 45 links; and thence by a line bearing northerly, to the point of commencement,—containing 10 perches or thereabouts, and said to be in the possession and occupation of the Sydney Freehold Land, Building, and Investment Company.

4th. All that piece or parcel of land situate as aforesaid, being part of the aforesaid subdivision: Commencing on the south-western side of Rose-street, at a point bearing south-easterly and distant 2 chains 12 $\frac{1}{2}$ links from its intersection

with the south-eastern side of Nelson-street; and bounded thence by part of the south-western side of Rose-street aforesaid bearing south-easterly $92\frac{3}{4}$ links to land resumed for tramway purposes, notified in Gazette, 24th March, 1891; thence by part of the south-western boundary of that land bearing south-easterly 1 chain $93\frac{2}{5}$ links; thence by a line bearing south 36 degrees 52 minutes west 1 chain $39\frac{1}{2}$ links; thence by a line bearing south 24 degrees 1 minute west 6 chains $72\frac{1}{10}$ links to the south-eastern side of a lane 20 feet wide; and thence by that side of that lane bearing north-easterly 9 chains $40\frac{2}{10}$ links, to the point of commencement,—containing 3 roods 31 perches or thereabouts, and said to be in the possession and occupation of the Sydney Freehold Land, Building, and Investment Company.

5th. All that piece or parcel of land situate as aforesaid, being part of the aforesaid subdivision: Commencing on the south-western side of Rose-street at a point bearing south-easterly and distant 4 chains 34 links from its intersection with the south-eastern side of Nelson-street; and bounded thence by part of the south-western side of Rose-street aforesaid bearing south-easterly $58\frac{1}{10}$ links; thence by a line bearing south 36 degrees 52 minutes west $52\frac{3}{4}$ links to land resumed for tramway purposes, notified in Gazette, 24th March, 1891; and thence by part of the north-eastern boundary of that land bearing north-westerly $60\frac{1}{2}$ links, to the point of commencement,—containing $2\frac{3}{10}$ perches or thereabouts, and said to be in the possession and occupation of the Sydney Freehold Land, Building, and Investment Company.

6th. All that piece or parcel of land situate as aforesaid, being part of the aforesaid subdivision: Commencing on the south-eastern side of Nelson-street at a point bearing north-easterly and distant 4 chains $54\frac{1}{2}$ links from its intersection with the north-eastern side of Rose-street; and bounded thence by part of the south-eastern side of Nelson-street aforesaid bearing north-easterly $93\frac{2}{5}$ links; thence by a line bearing south 67 degrees 52 minutes east 1 chain $7\frac{1}{2}$ links; thence by a line bearing south 47 degrees 53 minutes east 6 chains $27\frac{3}{4}$ links; thence by a line bearing south 36 degrees 52 minutes west 2 chains $44\frac{1}{2}$ links to the north-eastern side of Rose-street aforesaid; thence by part of that side of that street bearing north-westerly 1 chain $61\frac{1}{10}$ links to land resumed for tramway purposes, notified in Gazette, 24th March, 1891; thence by the south-eastern and north-eastern boundaries of that land, being lines bearing north-easterly 2 chains $93\frac{3}{4}$ links,

north-westerly 2 chains $83\frac{3}{4}$ links, and again north-westerly 1 chain $52\frac{3}{4}$ links, to the point of commencement,—containing 3 roods $32\frac{3}{4}$ perches or thereabouts, and said to be in the possession and occupation of the Sydney Freehold Land, Building, and Investment Company.

7th. All that piece or parcel of land situate as aforesaid, being part of the aforesaid subdivision: Commencing on the north-western side of Nelson-street, at its intersection with the north-eastern side of The Crescent; and bounded thence by part of the north-western side of Nelson-street aforesaid bearing north-easterly 1 chain $11\frac{1}{10}$ links; thence by lines bearing north 67 degrees 52 minutes west 5 chains $63\frac{1}{10}$ links and north 16 degrees 9 minutes west 5 chains $33\frac{3}{4}$ links to the north-eastern side of The Crescent aforesaid; and thence by part of that side of The Crescent bearing generally south-easterly, to the point of commencement,—containing 2 roods 28 perches or thereabouts, and said to be in the possession and occupation of the Sydney Freehold Land, Building, and Investment Company.

8th. All that piece or parcel of land situate as aforesaid, being part of the aforesaid subdivision: Commencing on the south-eastern side of Johnstone-street at its intersection with the north-eastern side of The Crescent; and bounded thence by part of the south-eastern side of Johnstone-street aforesaid bearing north-easterly $85\frac{1}{2}$ links; thence by a line bearing south 18 degrees 38 minutes east 4 chains and $\frac{1}{10}$ of a link; thence by a line bearing south 38 degrees 54 minutes west 67 links to the north-eastern side of The Crescent aforesaid; and thence by part of that side of The Crescent bearing generally north-westerly, to the point of commencement,—containing $35\frac{3}{4}$ perches or thereabouts, and said to be in the possession and occupation of the Sydney Freehold Land, Building, and Investment Company.

In witness whereof I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this seventeenth day of February, in the year of our Lord one thousand eight hundred and ninety-four, and in the fifty-seventh year of Her Majesty's Reign.

By His Excellency's Command,

WILLIAM JOHN LYNE.

GOD SAVE THE QUEEN!

1894.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

WHARF AT LIME AND ERSKINE STREETS, SYDNEY.
(CORRESPONDENCE RESPECTING.)

Ordered by the Legislative Assembly to be printed, 2 May, 1894.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 21st March, 1894, That there be laid upon the Table of this House,—

“ Copies of all papers, plans, reports, evidence, correspondence, minutes, and memoranda in connection with or having any reference to the property of Matthew Smith, situated at Lime and Erskine Streets, in the city of Sydney, together with copies of all communications between the Works Department and the Crown Solicitor subsequent to the papers printed under order of this House, dated 22nd February, 1892.”

WHARF AT LIME AND ERSKINE STREETS.

No. 1.

Minute by The Secretary for Lands.

At the request of the Treasury, "pending certain inquiries," action has been delayed in this case.

Some further papers have now been received, wherein the Secretary for Lands is asked to approve of the leasing by the Treasury to the "Balmain Ferry Company (Limited)," for wharfage purposes, the Crown land situated at the foot of Erskine-street, which has been occupied by one M. Smith (whose freehold it adjoins) for a number of years.

It appears, however, from these papers, that the Company claim that the Treasury has already entered into a contract with them to lease the land, and that such contract was provisionally agreed to in April last, and concluded in September, while, in fact, Smith's Special Lease application for the land under the Crown Lands Acts, tendered by advice of the Department, was *sub judice*, and which is even now not disposed of.

The desire of this Department to deal with the case on its merits, and in view of the exceptional circumstances surrounding it, has possibly been defeated by the action of the Treasury, which has been prosecuted without either notice to this Department, or the nature of the negotiations pending with the Balmain Ferry Company being disclosed, during the progress of the correspondence.

As this Department is responsible for the proper administration of the law as it affects Crown lands, I conceive it to be my unavoidable duty to strongly protest against the course of action followed by the Treasury in this matter, which is a repetition of the proceedings in connection with wharves on the Parramatta River wherein the Treasury, without reference to this Department, leased to a Mr. Joubert certain Crown lands and wharves which had been previously applied for as Special Leases by the Borough Council of Hunter's Hill (and were being dealt with by the Local Land Board) from which the utmost confusion and grave complications have ensued.

So far, however, as the alleged contract is concerned, I submit that it is legally void, on the grounds that the Crown Lands Act of 1884 expressly provides that Crown lands shall not be sold or leased except under and subject to the provisions of that Act, and that the Treasury is not a competent authority to make a lease.

The question is now, what had best be done in the circumstances. Perhaps this Department should proceed with the matter in its own way after due notice to the Treasury of the illegality of its proceedings.

W.H., 28/1/92.

Will my honorable colleague, the Treasurer, be good enough to say how it comes that while this Department have refrained from dealing with this case at the request of the Treasury, they, the Treasury, should take upon themselves to apparently deal with these Crown lands outside the Crown Lands Act, which are the only channels through which a legal title can be created which would warrant the occupation of land of this character. I may point out to my honorable colleague that action of this kind on behalf of the Treasury is likely to lead to complications of a very serious character, to say nothing of the fact that the usurpation by his Department of the powers vested solely in the "Lands" is calculated to bring the officials of the two Departments into conflict, and must, in any case, tend to confusion. I should be glad if my honorable colleague would inform me what action the Treasury have taken in the matter up to the present, and how far the Government stand committed by the action of his Department.—H.C., 3/3/92. The Under Secretary for Finance and Trade, B.C., 7/3/92. Captain Jackson, 8/3/92.

No. 2.

Captain Jackson to The Under Secretary for Finance and Trade.

Sir,

Public Wharves Office, 10 March, 1892.

The New Balmain Ferry Company applied for a landing in Darling Harbour, and as the land in question was the only available and in every way suitable water-frontage belonging to the Government, and as it would be in the interest of the general public, I recommended it.

It was promised to the company by the two late Colonial Treasurers Mr. McMillan and Mr. Bruce Smith, on the strength of which promises the company are now constructing boats for this service. I beg most respectfully to suggest that the Minister for Lands be requested to cause this small water-frontage to be handed over to the Treasury for the purpose of constructing the ferry-landing, and all complication, I think, will cease.

I may mention that this land has for a number of years been leased at a nominal rental, I understand £10 per annum, and sublet to the Balmain Ferry Company at £510 per annum, which amount the company now pay.

I think it only right that the Government should have the benefit of this larger rental.

I have, &c.,

JOHN JACKSON,
Manager.

No. 3.

Précis, and Minute by The Colonial Treasurer.

Erskine-street Jetties.

In order to provide additional wharf accommodation at the foot of Erskine-street, and also to afford increased facilities for the passenger traffic at that place, Mr. McMillan resumed certain land on the north side of the abovenamed street, known as Cox's land.

It was also decided to erect new jetties for the Balmain Ferry Company. Just about the time this matter was being considered an application was received from the Balmain New Ferry Company for wharfage accommodation on the Sydney side. The Treasurer at once directed that the old company was

was not to be allowed a monopoly, and he accordingly inquired whether the new company could be provided for. Captain Jackson's reply was that this company's requirements could be conveniently met, as the Government had sufficient available land. Thereupon Mr. McMillan at once guaranteed the wants of the new company, without which it could not have completed its formation.

The land to which Captain Jackson referred was the reclamation on the south side of the street, occupied by Matthew Smith, and let (wholly or in part) to the old company. I feel that my position enables me to state absolutely that Mr. McMillan had not the faintest idea when he made the above promise that the carrying out of such would encroach, in any way, upon land held by the Lands Department, especially as such land, or a part of it, was already being used for ferry purposes.

Neither did it then occur to Captain Jackson to so advise the Treasurer, in consequence of which Mr. McMillan officially incurred obligations which would have been deferred had he understood that he was dealing with land not at his disposal, and not included within the resumption which this Department had effected.

As soon as the Treasury became aware that the land in question was not within the jurisdiction of its Minister, the Lands Department was advised of the action taken, and learned that there was a proposal to issue a lease of the land, which the Land Board found it could not recommend. At the hearing Captain Jackson stated, in evidence, that the land was required for ferry purposes.

Briefly, neither Mr. McMillan nor his immediate successor (Mr. Bruce Smith) had any knowledge that they were trenching on a matter within the province of the Minister for Lands. The Lands Department was advised as soon as the facts became known. The Treasury has a tenant, at a high rental, in the Balmain New Ferry Company, and, as it would be unquestionably advisable that the jetties at the foot of Erskine-street (in course of erection and proposed to be erected) should be under the control of the Marine Board, I recommend that Mr. See be asked to request Mr. Copeland to be good enough to waive his right to deal with the land in question, and thus permit of the satisfactory discharge, by the present Treasurer, of the obligations towards the Balmain New Ferry Company incurred by the late Government. This might be specially urged, as the accommodation for the last-named company is to be carried out almost at once, to admit of the new service commencing in about four months' time, in addition to which, as has already been pointed out, it is very probable that it will shortly be necessary in the interest of the travelling public to place these wharves under the provisions of the Navigation Act Further Amendment Act of 1879, in order that the regulations of the Marine Board may apply to them.

Some of the attached papers seem to indicate that Matthew Smith (or Mrs. Smith) is the owner of a certain block of land in Erskine-street, adjoining the unauthorised reclamation under notice. As this land was the subject of a grant for a Bethel Union Chapel (3/6/42), the Treasurer may think fit to suggest to the Minister for Lands the advisability of an inquiry into Smith's right of ownership, as the land does not now appear to be used for the purpose for which it was originally granted.
The Under Secretary. F.G., 18/3/92.

It will be seen from this *précis* that neither the late Colonial Treasurer, Mr. McMillan, nor the officers of the Treasury Department, intentionally usurped the functions or powers of either the Minister for Lands or of any officer of the Lands Department. That a misunderstanding occurred with respect to the land in question is admitted. As, however, it was promised, both by Mr. McMillan and Mr. Bruce Smith, to the Balmain New Ferry Company, perhaps the Secretary for Lands might be asked to waive his right to deal with the land referred to, otherwise serious complications and actions at law may ensue. It is not within the province of the Treasury to deal with the matter referred to in the concluding paragraph of this paper.—F.K., 18/3/92. Submitted.

I shall be glad if my honorable colleague will reconsider this question, and consent to the Treasury dealing with it.—JOHN SEE, 2/4/92. The Under Secretary for Lands.—F.K., 2/4/92.

In view of the above minute, I do not wish to push the matter further, but it should be pointed out that the conduct of Captain Jackson seems to be open to serious comment. That officer, although aware of the negotiations pending with the Balmain Ferry Company, appears to have withheld that information from the Local Land Board when giving his evidence *re* the special lease application of M. Smith and depositions. Smith's application has not yet been finally dealt with. I might further add that there is nothing whatever in the point brought forward in the concluding paragraph of the Treasury report of 18th March last, as by Act of Parliament, 15 Vic., the trustees of the Sydney Bethel Union were empowered to sell the Erskine-street site and buildings.—W.H., 13/5/92.

No. 4.

The Secretary, Balmain New Ferry Company (Limited), to The Under Secretary for Finance and Trade.

Balmain New Ferry Company (Limited), 9, Shelley-street, off Erskine-street,
Sir, Sydney, 22 March, 1892.

It is of most vital interest to this company that it may speedily be in receipt of an answer to our letter to the Treasurer of the 24th December, 1891.

Might I solicit the favour of your early attention to this matter.

I am, &c.

WILLIAM HENDERSON,
Secretary.

No. 5.

Minute by The Secretary for Lands.

THE Treasury asks this Department to waive its right of dealing with this question; but it may again be pointed out that for any other Department to deal with it would be illegal, and would probably lead to complicated lawsuits as, if the Treasury conferred a lease or title of any kind, it would be contrary to law. This Department also finds itself to a certain extent committed to Smith, who, being the owner of the Bethel

Bethel land, was the only person that could acquire a right to make a reclamation, and although Smith did not make this reclamation under the authority of law, yet he was in the act of rectifying this defect when the present complication arose, Smith having at that time, on the recommendation of this Department, lodged his application for a special lease, this fact being known at the time to Captain Jackson, who appears to have withheld this information from the Treasurer.

The question now is,—How can the difficulty be met without an injustice to either Smith or the New Ferry Company? Smith undoubtedly has the stronger claim, inasmuch as he reclaimed the land, and is now in possession. I should like to know what steps, if any, have been taken by the Treasury as to erection of wharves on land referred to.

I should also like to know whether the Treasury have committed themselves further than what is shown by letter of 17th September, 1891, to Secretary of New Ferry Company. Has any lease been granted, or have any exclusive rights to the new company been defined? I may again point out that Smith's application for a special lease is still pending, and that he, Smith, has subleased the wharfage rights to others.

Neither of the parties whose interests are being considered have any legal status, as the Treasury had no legal power to promise anything to the new company; while, on the other hand, Smith's application for special lease not having been as yet dealt with, he is at present in illegal occupation.

I think the only feasible way out of the difficulty would be to bring the two parties together, and endeavour to make an amicable compromise.

I should like to have the opinion of the Treasurer on this memorandum.

H.C., 14/5/92.

The Under Secretary for Finance and Trade, 19/5/92. Captain Jackson.—For report.—F.K.,
John Sec, 25/5/92.

No. 6.

J. Johnston, Esq., M.P., to The Secretary for Lands.

Sir, Parliament House, Sydney, 6 May, 1892.
I beg most respectfully to ask you when I will be supplied with the papers in connection with the wharfage *re* the Balmain New Ferry Company.

Yours, &c.,
JAMES JOHNSTON.

No. 7.

The Under Secretary for Lands to J. Johnston, Esq., M.P.

Sir, Lands Department, Sydney, 18 May, 1892.
In reply to your letter of the 6th instant, asking when the papers in connection with the desired wharfage accommodation for the New Balmain Ferry Company will be ready, I have the honor to inform you that information will be laid on the Table of the House when Parliament meets.
You can, however, see them upon application to this Department.

I have, &c.,
W. HOUSTON,
Under Secretary.

No. 8.

The Secretary, Balmain New Ferry Company, to The Secretary for Lands.

Sir, The Balmain New Ferry Company (Limited), 9, Shelley-street,
Sydney, 16 May, 1892.
The late Government promised us wharf accommodation at Erskine-street for our ferry-boats, and we are informed that the matter rests with you to be concluded.

As our boats are nearly ready, we are desirous of being placed in possession of the landing, so that we can commence the penny-ferry service.

We append copy letter from the late Colonial Treasurer on the subject and an abridged prospectus of the Company.

I have, &c.,
WILLIAM HENDERSON,
Secretary.

[*Enclosure.*]

Sir, The Treasury, New South Wales, Sydney, 17 September, 1891.
I am directed to intimate that it has been arranged to place at the disposal of your company certain wharfage accommodation to be erected on the southern side of Erskine-street, subject to terms being agreed upon, which will be the same as those extended to the old company.

The particulars of the proposed jetties can be obtained from Captain Jackson, at the Circular Quay office, with whom you are invited to consult respecting the minor conveniences in the construction of the wharves.

I have, &c.,
F. KIRKPATRICK,
Under Secretary for Finance and Trade.

W. Henderson, Esq., Secretary, Balmain New Ferry Company.

No. 9.

The Under Secretary for Lands to The Secretary, New Balmain Ferry Company
(Limited).

Sir,

Lands Department, Sydney, 19 May, 1892.

With reference to your letter of the 16th instant, stating that the late Government had promised the Balmain New Ferry Company (Limited) wharf accommodation for its ferry boats, and, forwarding copy of letter from the Treasury Department, with a view to substantiating that statement, I have the honor, by direction of the Secretary for Lands, to inform you that the Treasury authorities had no legal power to grant any concession of the kind referred to, the matter being one entirely within the province of this Department to deal with.

The matter is, however, under consideration, and probably some equitable adjustment will be arrived at before long, when the Company will be informed of the decision.

I have, &c.,

W. HOUSTON,

Under Secretary

(Per R.H.D.)

No. 10.

Captain Jackson to The Under Secretary for Finance and Trade.

Sir,

30 May, 1892.

I beg to state that no further steps have, to my knowledge, been taken by the Treasury in connection with the above than what is shown in the letters of 17th September, 1891, and no actual lease has been granted to the Company referred to.

But I would point out that this Company have, on the strength of the promises made by the two late Treasurers, built, and are nearly ready to launch two steamers for the trade. Having this fact in view it seems to me that if the promise is not carried out the Company would have a good action at law.

The small portion of land in question is not used by the present ferry, only the waters fronting same. Perhaps the Hon. the Minister for Lands can see his way to allow the Treasury to carry out its promises to the Company, if the actual land is not interfered with, and the ferry be constructed something similar to what it is at present, the passengers landing on Erskine-street.

I think the suggestion made by the Hon. the Minister for Lands to bring the two parties together, and endeavour to make an amicable compromise, should be acted upon.

In justice to myself I beg to state that the fact of a lease for the land in question being applied for was known to me, but I in no way withheld the information from the Treasury. I beg to refer you to my letter, dated 7th November, 1890, herewith.

I have, &c.,

J. JACKSON.

Submitted for consideration.—J.F.M., 7/6/92. Mr. Johnston, M.P., and some of the officials of the Balmain New Ferry Company desire to see the Minister next week in this matter.—W.H., 8/6/92. Perhaps this suggestion might be adopted by my honorable colleague.—J.S., 31/5/92. The Under Secretary for Lands.—F.K., 1/6/92.

No. 13.

Deputation.

INTERVIEW between Mr. Copeland, Secretary for Lands, and Messrs. Johnston, M.L.A., Napier, and the Secretary of the New Balmain Ferry Company re wharf accommodation, Erskine-street.

Mr. Copeland: The papers are not clear whether the new wharf is built on this land occupied by Mr. Smith.

The Deputation: No; just the old premises.

Mr. Copeland: I understand the old Company have got a lease from the City Council. The land adjoining a street. I suppose the Council have a lease from the Government.

The Deputation: did not see how that could well be, as the land fronting the street was all timbered over. Mr.

Mr. Copeland : The papers are not quite so clear on the point as they might be. Mr. Perdriau, in his memo., says : That portion of the public wharf at the foot of Erskine-street marked "Balmain Ferry Waiting Room" on tracing is leased to the Ferry Company by the City Council. I understand the Company are paying Smith for the use of the water frontage of his land.

The Deputation : Yes ; something like £510 per annum.

Mr. Copeland : Show me on this tracing which wharf the old Company are using.

The Deputation indicated the wharf marked "Balmain Ferry Waiting Room."

Mr. Copeland : Is that under the City Council ?

The Deputation : No ; only the waiting-room. The Government are building a new wharf on the north side, and when that is finished the old Company will not want the present wharf. The old Company is being accommodated by these wharfs on the north side of Erskine-street.

Mr. Copeland : I shall require to know what arrangement the old Company has made with the Government for accommodation. If they have made satisfactory arrangements I don't see much difficulty in the matter. The case has got most fearfully complicated through both the Treasury and this Department dealing with the wharfs. I must consider Smith's interest in the matter. Smith has been in illegal occupation, but was now placing himself in legal occupation at the request of this Department, and Smith's interest must receive the fullest consideration, though as yet no lease had been granted to him.

The Deputation urged the Minister to take a run down in a cab and see the wharfs for himself.

Mr. Copeland said he could not well spare the time, and thought he could understand the position of the wharfs pretty well as well from the tracings. Before I do anything I must hear the version of the old Company. Who represents them ?

The Deputation : Captain Heselton. This new Company of ours represents 800 shareholders, and is largely the outcome of the late strike. We understand from Captain Jackson that the Treasury will be willing to let us have the wharf at the same terms as the old Company when they give up possession.

Mr. Copeland : Have you had any communication with Smith ?

The Deputation : No ; we don't know him in the matter at all.

Mr. Copeland : Unfortunately Mr. Perdriau (our surveyor) is out of town. I cannot give you any reply at present. I must consult Mr. Perdriau, and, if necessary, visit the place myself. In the face of Smith's claim, I must go into the matter more fully, and must have an assurance from the old Company that they are going to give up possession.

Mr. Copeland : Mr. Bruce Smith assumes that the two Companies use the one wharf.

The Deputation explained that, owing to the large amount of traffic, that was not practicable now. They had gone on with the building of their boats on the faith of the assurance given them by the Treasury.

Mr. Copeland : When do you think your boats will be ready to run ?

The Deputation : In about three months.

Mr. Copeland : I cannot say anything further. I must see Mr. Perdriau and consider the matter.
W.D.B.

This matter has been considerably complicated by the Treasury committing itself more or less to the new Company by way of assuring them wharfage accommodation. After giving the matter a good deal of attention, visiting the locality, I am of opinion that the only feasible way out of the difficulty, if faith is to be kept with the new Company, will be for the Treasury to obtain the resumption, through the Works Department, under the Land for Public Purposes Resumption Act, of that portion hatched blue on tracing 91-5,786, which forms an unauthorised reclamation by Matthew Smith, the owner of the land which this reclamation fronts. As the land in question was reclaimed without the authority of this Department, Smith's right to compensation must be a limited one, and of somewhat doubtful legality ; yet, I think it must be recognised, as the resumption will deprive him of his legal right to a water-frontage. If this course be adopted, I would recommend that a new wharf be constructed on the north, and adjoining the Pyrmont Ferry Wharf, the outer edge of the new wharf being about where the broken black line is shown. The steamers of the new Company would then be able to berth on the north side of the wharf, while the reclaimed land would provide room for offices, &c., and, having access to Erskine-street, would be independent of the back land, while a rent of £1 per week to the City Council for the use of their waiting-room would be saved. If the new Company is charged 12½ per cent. on value of land resumed and cost of wharf, the public funds would not suffer, while a shocking disgrace to our harbour frontage would be removed, and the new Company and those it represents would be accommodated, though they would have to make the best terms they could for the use of the old wharf and buildings while the new one was being constructed, for over these the Government have no control, except in respect to leasing the water-frontage to the owner of the back land, an application for which has already been made at the instigation of this Department. The old jetty is in a fearfully dilapidated state, and it would be very much in the public interest to carry out this resumption. I would also recommend my honorable colleague for Works to cover in the whole of the two new wharfs intended for the old Company, provided they agree to pay interest on cost of covering, as it would be a great convenience to the public to be sheltered from both sun and rain.—H.C., 20/6/92.

No. 14.

The Council Clerk, Balmain, to The Under Secretary for Lands.

Sir,

Town Hall, Balmain, 24 June, 1892.

I have the honor, by direction of the Mayor, to state that a large public meeting of the inhabitants of Balmain and Leichhardt was held in the Town Hall here last night, at which the Mayor was Chairman, and at which the following resolutions were unanimously carried :—

- 1st. That this meeting hears with regret and alarm that an attempt is being made by private speculators to obtain possession of the foreshores on the southern side of Erskine-street, Sydney, at a nominal rental, to the great injury and loss to the travelling public of Balmain and the western suburbs.

2nd.

2nd. That a deputation, consisting of the Mayors and Aldermen of Balmain, Leichhardt, Drummoyne, and Hunter's Hill, the Members for Balmain and Leichhardt, West Sydney, Canterbury, and Central Cumberland, and other gentlemen, wait upon the Honorable Minister for Lands to urge that no private individual or syndicate be allowed to obtain possession of the said land, and that it shall be in no way alienated, but shall be retained for ferry accommodation for the residents of Balmain and of the western suburbs.

In compliance with the above resolution, the Mayor will be glad to know when the Honorable the Minister for Lands will be pleased to receive the deputation referred to in the above resolution.

I have, &c.,

H. B. MACINTOSH,
Council Clerk.

No. 15.

The Under Secretary for Lands to The Council Clerk, Balmain.

Sir,

Department of Lands, Sydney, 4 July, 1892.

With reference to your letter of the 24th ultimo, I have the honor to inform you that the Secretary for Lands will receive the deputation from residents of Balmain and Leichhardt, in regard to the wharfage accommodation for the New Balmain Ferry Company, &c., on Friday next, the 8th instant, at 11.15 a.m.

I have, &c.,

W. HOUSTON,
Under Secretary
(Per R.H.D.)

No. 16.

Deputation.

DEPUTATION, consisting of Messrs. Johnston, Murphy, Clark, Darnley, and A. Kelly, M's.P., Wheeler (Mayor of Balmain), J. Sewell (Mayor of Drummoyne), Captain Napier (Chairman of New Balmain Ferry Company), and residents of Balmain, Leichhardt, Drummoyne, and western suburbs, re wharf accommodation, Erskine-street.

The deputation represented that they had come about a matter which had recently been brought before the Minister by another deputation—the want of wharf accommodation at the foot of Erskine-street, especially for the New Company. Since that interview a public meeting of residents of the above-mentioned suburbs had been held, at which statements were made that the land was likely to pass from the hands of the Government into the hands of private speculators, which would be, they held, greatly to the detriment of residents of such suburbs, who would lose in ferry accommodation. They were now here to urge that the Government should retain the land at the foot of Erskine-street in their own hands, and it should in no way be alienated. They had a deputation to the Minister for Works for a horse-ferry, and were told there was no land available, so they were surprised to hear this was Crown land.

There was amongst their number an old Registrar-General (Mr. Jaques), who was of opinion that the Crown had never parted with its title to these lands at the foot of Erskine-street.

The Minister (Mr. Copeland) said that it would perhaps save delay if he informed them that he had the facts before him, and could put it all pretty well in a nutshell. He had a report of the public meeting held, and copies of resolutions passed. He had gone into the matter, and was free to admit that the thing had been a muddle between the Lands and Treasury Departments, both Departments having dealt with the case, though he thought it was strictly a subject for this Department. The difficulty appeared to have been the mixing up of the land on the north side of Erskine-street with that on the south side. The late Government resumed Cox's land, and decided to erect two new wharfs there. One had been completed, and the other was not yet finished. He understood the late Government had given the old Company a monopoly of these two wharfs, but the papers before him did not show such a lease. As to the land on the south side, Mr. Smith had made an unauthorised reclamation, and was called upon by this Department to legalise his occupation. He applied for a special lease, and his application came before the Local Land Board, on the 6th of April, 1891. The Board then found as follows, viz. :—

We find that we cannot recommend that a lease be granted as desired; but if it be desired to condone or legalise existing trespass, we should recommend a lease for one year from 31st January, 1890 (the date when instructions for proceedings in trespass were issued), and we appraise the rent for that term at £100 (one hundred pounds).

That matter had gone no further, and had never been dealt with by him or his predecessor; he was, consequently, at a loss to know why the statement had been made at the public meeting as to the land passing into the hands of private speculators. He noticed at the meeting that a letter was read from Sir H. Parkes, in which he says that their request was in accord with the decision of the late Government. Well, the late Government had given a monopoly of all the land available to the old Company, and made no provision whatever for the new Company. They had granted a lease on the 11th of April, 1891, of the two wharfs to the old Company at £600 a year. This was afterwards, in October, 1891, reduced to £300 per year. Whatever Sir Henry Parkes might say, it was the Government of which he himself was the head which had granted the monopoly, if there was any. In his letter he also says the decision was not of a Department but of the New South Wales Government. That implies that it was a Cabinet matter. There was nothing to show amongst the papers that it had been brought before a Cabinet. The matter was dealt with by Mr. McMillan alone. The letter was utterly and entirely misleading. It made it appear that this Government was undoing something that the late Government had done for the benefit of the people, whereas the matter had never moved an inch since the Land Board's decision. He would read them the minute he had written on the 20th June last, after a visit to the locality. (*Read minute on Misc. Lease, 92-4,384.*) He could not say anything much else, except that while meetings were being held and deputations coming the matter was blocked. He hoped that when this deputation was over the matter would be allowed to rest, and the Department get to work on it.

Mr. Wheeler (Mayor of Balmain) said that they came on the broad principle that the lands should not be alienated. They could not know the secrets of the Department, and what was being done.

The

The Minister: What I complain of is, that some of the councils are inclined to think that the Minister, who is here to conserve the public interests, is always wishing to go against such interests.

Mr. Murphy, M.P., said that the first boat of the new Company would be ready for launching on the 30th instant, and there would be no accommodation at this end for her. She would have to lie up, so he hoped the matter would be pushed on.

The Minister: Is it necessary the old Company should have the use of both wharfs?

Mr. Murphy: No; but we do not wish to put that forward. We could use one side of the new wharf now being built.

The Minister thought there ought to be room on the south side. If they were satisfied with his action, and would undertake not to get up any more deputations, he would undertake to push the matter on.

Mr. Kelly asked if he was correct in understanding that the whole of the land on the south side was the property of the Government.

The Minister: Yes.

Mr. Kelly: Well, why did the late Government resume land on the north side at a cost of £60,000? He intended to bring this matter before Parliament as soon as it met.

The Minister thought that it would be found that the land was all required, and that the resumption was necessary.

The deputation asked whether the Government could give them any assistance in obtaining accommodation until the wharf was provided.

The Minister could only advise them to see the Treasury Department and ascertain what the terms of the lease to the old Company were, and if it allowed of their being given any accommodation. From personal inspection of the locality he thought there ought to be no difficulty in getting the use of the south side of the wharf.

WALTER D. BINGLER.

I should be glad if my hon. colleague, the Treasurer, would read my minute on next paper and give his approval, if favourable, to my proposal, and then have the papers forwarded direct to the Minister for immediate action, as the matter is very urgent.—H.C., 11/7/92.

Approved. I shall be glad if my hon. colleague for Works will have the necessary steps taken to resume.—J.S., 13/7/92. The Under Secretary for Public Works.—F.K., 13/7/92. Approved for resumption.—W.J.L., 21/7/92. M. W. Thompson,—Please take action at once.—J.B., 22/7/92. Very urgent. A tracing of the land to be resumed, showing lengths and bearings required.—A.B. (*pro* Land Valuer), 23/7/92. Will the Under Secretary for Lands please prepare me a plan showing the land to be resumed?—J.B., 25/7/92. Urgent. Probably Mr. Surveyor Perdriau should be instructed to transmit a plan and description of the area to be resumed.—27/7/92. The Chief Surveyor. The dimensions of the area, $4\frac{1}{2}$ perches, approved to be resumed, are now shown in red colour on the tracing with these papers.—S. PERDRIAU, Government Surveyor, 30/7/92.

No. 17.

The Under Secretary for Public Works to The Secretary for Lands.

Dear Mr. Copeland,

Department of Public Works, Sydney, 23 July, 1892.

Mr. Lyne yesterday approved of the resumption of the additional land in Erskine-street, and our land valuer has been instructed to lose no time in preparing the necessary notification. He is, however, asking for a tracing of the land to be resumed, showing the lengths and bearings.

We need this for our notification. Perhaps one of your officers can supply us with this at once.

Yours faithfully,
J. BARLING.

Balmain Steam Ferry Company, lease from 11th April, 1891, granted by Mr. McMillan, at £600 per annum, afterwards reduced from 1st October, 1891, to £300 per annum.

No. 18.

Memorandum from The District Surveyor to Mr. Surveyor Perdriau.

25 July, 1892.

PARTICULARS are required for the formal resumption of Matthew Smith's unauthorised reclamation at Darling Harbour.

The papers are not to hand. Probably Mr. Perdriau is acquainted with the case, and will be able to obtain such measurements as may be required for formal description.

No. 19.

No. 19.

Minute for The Executive Council.

Subject :—Recommending that the work of providing wharf accommodation at Erskine-street, Sydney, may be deemed an authorised work, and for the appropriation and resumption of land for the purposes thereof.

Department of Public Works, Sydney, 24 September, 1892.

THE Minister for Public Works applies for a direction that a certain public work, that is to say: Wharf accommodation at Erskine-street, Sydney, and for which public funds are lawfully available, the estimated cost of which does not exceed £20,000, may be carried out under the "Public Works Act of 1888," as an authorised work, and that in respect of the said work, he may be deemed the constructing authority.

The Minister for Public Works desires that the land mentioned in the Schedule hereto, so far as the same is Crown land, may be appropriated, and so far as the same is private property resumed for the purpose of carrying out the said work; also, if His Excellency, with the advice of the Executive Council, is of opinion that such land is required for the aforesaid public work, that it may be acquired by taking the same under the "Lands for Public Purposes Acquisition Act," as adopted by the "Public Works Act of 1888."

It is recommended to His Excellency the Governor and the Executive Council that the work above referred to, the estimated cost of which does not exceed £20,000, may be directed to be carried out under the provisions of the "Public Works Act of 1888," as an authorised work, by the Minister for Public Works, and that he may in respect thereof, be deemed the constructing authority; also that the land described in the Schedule hereto, which is required for carrying out the work referred to, may be directed to be acquired under the "Lands for Public Purposes Acquisition Act," as adopted by the "Public Works Act of 1888."

SCHEDULE.

All that piece or parcel of land situate in the city of Sydney, parish of St. Phillip, county of Cumberland, and Colony of New South Wales: Commencing on the southern boundary of Erskine-street at a point bearing west 15 degrees 30 minutes, south 1 chain 36 links from its junction with the western boundary of Lime-street; and bounded thence on the north-west by the southern boundary of Erskine-street bearing south 74 degrees 49 minutes west 24 feet 1½ inches; on the south-west by the present high-water mark of Darling Harbour, bearing south 24 degrees 37 minutes, east 52 feet 2 inches; on the south-east by the present high-water mark aforesaid, and a line bearing in all north 74 degrees 8 minutes, east 25 feet 6 inches; and on the north-east by a line bearing north 26 degrees 12 minutes, west 52 feet 1 inch, to the point of commencement,—be the said several bearings and dimensions all a little more or less, containing 4½ perches or thereabouts, and said to be in the possession of Matthew Smith.

WILLIAM JOHN LYNE.

The Executive Council advise that authority be granted for the construction of the wharf referred to, and that the land required for the same be acquired in terms of the said Act.—ALEX. C. BUDGE, Clerk of the Council.

Min. 9,753, 7/11/92. Confirmed, 15/11/92. Approved.—JERSEY, 7/11/92. Forwarded for the signature of His Excellency the Governor and the Great Seal of the Colony.—D.C.McL. (*per* U.S.), B.C., 16/11/92. The Principal Under Secretary. Sealed and submitted for His Excellency's signature. The Private Secretary.—C.W., P.U.S., B.C., 17/11/92. The Under Secretary for Public Works.—C.W., P.U.S., B.C., 21/11/92. The Land Valuer.—D.C.McL. (*pro* U.S.), B.C., 21/11/92. *Gazette*.—Dated 25th November, 1892. No. 818, page 9,317.

No. 20.

Messrs. Abbott and Allen to The Secretary for Public Works.

Sir, 14, Castlereagh-street, Sydney, 17 November, 1892.

We have ascertained that it is proposed by the Government to resume certain reclaimed lands in front of allotment No. 14, in the city of Sydney, Erskine-street, originally granted on the 3rd June, 1842, as a site for the Bethel Union Chapel, now owned by Mr. Matthew Smith.

On his behalf we must most emphatically protest against the resumption of this land which affords to him access by water to his land. We need hardly point out to you that the waters of the harbour are the public highways for the owners of land upon the shores, and that that highway should not be interfered with, unless there is an absolute necessity, and so far as we can gather the resuming of this land from Mr. Smith is for the purpose of giving it to a private company.

If the Government are determined upon taking the land for the purpose stated, then we would urge that they should resume the remainder of the land belonging to Mr. Smith extending back to Lime-street, as it is not of much value to him without the frontage.

In the case of any such resumption Mr. Smith is quite willing to accept payment for it in Funded Stock 4 per cent. bills.

We need hardly point out to you that our client will, at every point, contest the right of the Government to interfere with his frontage to the harbour. We shall be glad of an early reply.

We have, &c.,

ABBOTT AND ALLEN.

The land does not appear to be required so far as we are aware. The matter should, however, be dealt with by the Treasury.—J.B., B.C., 22/11/92. The Under Secretary for Finance and Trade.—This letter should, I think, be referred to the Minister for Lands.—F.K., 24/11/92. Approved.—J.S., 25/11/92. The Under Secretary for Lands.—F.K., 25/11/92.

Mr. Matthew Smith (*per* Messrs. Abbott and Allen) protests against the proposed resumption of Crown land fronting his freehold, and lying between it and the water of Port Jackson; and, further, gives notice of his intention to contest the "right of the Government to interfere with his frontage to the harbour." On this point I may invite the attention of the Honorable the Minister to the remarks contained in the decision of His Honor the Chief Judge in Equity, in the case of *Day v. Brunner*, N.S.W., L.R.,

vol. XII, Post. 3, page 166, which appear to apply directly to the present case, *i.e.*, so far as the legal position of Mr. Smith is concerned in any attempt to assail the Government in respect of the proposed resumption.

Messrs. Abbott and Allen's letter is submitted for the consideration of the Minister.—W.H., 21/12/92.

New South Wales Law Reports, 1891, vol. XII.—Case in Equity—*Day v. Bruncker*. Extract from the remarks on the decision of the Chief Judge in Equity:—"If Day without authority, reclaimed land on the foreshore of Darling Harbour, thereby rendering access to the water impossible without crossing over the reclaimed land, he has himself cut off the original access and pushed the water-frontage further away than it formerly was, and he cannot claim from the Government a right-of-way or easement, the necessity for which has been created solely by his own act."

Let former decision be given effect to.—H.C., 23/12/92. The Under Secretary for Public Works, 24/12/92.—R.H.D. (for the Under Secretary).

No. 21.

Précis.

Matthew Smith's unauthorised reclamation of foreshore.

MR. M. SMITH is the owner in fee of a piece of land at the foot of Erskine-street, with a frontage to Darling Harbour. On the water-front of this land Mr. Smith has without legal authority reclaimed the land and erected a wharf, from which latter it is said he has derived a handsome revenue.

When it was discovered that Mr. Smith was in illegal possession of the foreshore, he endeavoured to put himself right by making application (*ex post facto*) for permission to reclaim and purchase the land he had encroached upon, but this application, on the recommendation of the Harbours and Rivers Department, was refused, and the Minister for Lands determined to let the land by public auction. While, however, the matter was still under discussion the Treasury, without concert with the Lands, agreed to grant a lease of the site to the new Balmain Ferry Company, and so far committed the Government that they could not, with honor, recede from the position.

20/6/92.—Hereon Mr. Secretary Copeland minuted, "The matter has been considerably complicated by the Treasury committing itself more or less to the new company, &c. &c., I am of opinion that the only feasible way out of the difficulty will be for the Treasury to obtain the resumption through the Works Department under the Land for Public Purposes Acquisition Act of that portion hatched blue in tracing, being an unauthorised reclamation by Matthew Smith, the owner of the land which this reclamation fronts. As the land in question was reclaimed without the knowledge of this Department, Smith's right to compensation must be a limited one, and of somewhat doubtful legality, yet, I think, it must be recognised, as the resumption will deprive him of his legal right to a water-frontage." Mr. Copeland went on to request that the Treasury would read the above minute and, if he concurred, send the papers to the Minister for Works for immediate action in regard to resumption. The Treasurer concurred, and forwarded the papers to the Minister for Works for further action. Mr. Secretary Lyne formally approved of the resumption, and the reclaimed land was resumed accordingly by notice in the *Gazette*, dated 21st November, 1892.

The fact that it was proposed to resume the land became known to Mr. Smith, and per letter of 17/11/92, Messrs. Abbott and Allen wrote, on behalf of that gentleman, protesting against the resumption of the land which afforded access by water to his property, urging that the Government should resume the remainder of the land belonging to Mr. Smith, which would be of little value without frontage, and intimating that that gentleman would contest at every point the right of the Government to interfere with his frontage to the harbour.

The Under Secretary for Lands, in submitting his letter for the information of his Minister, pointed out that the case was on all fours with that of *Day v. Bruncker*, which was gained by the Government, and in regard to which the Judge, in giving judgment, said, "If Day, without authority, reclaimed the land on the foreshore of Darling Harbour, thereby rendering access to the water impossible without crossing over the reclaimed land, he has himself cut off the original access, and pushed the water-frontage further away than it formerly was, and he cannot claim from the Government a right-of-way or easement, the necessity for which has been created solely by his own act."

The Minister for Lands minuted, "Let former decision be given effect to." But it will be seen that the Minister's decision had already been acted upon on the resumption of the reclaimed land.

C.A.B., 9/1/93.

We have taken the land, and are in possession, I think, and as we have heard nothing further on the subject, I suggest we let it stand. Submitted that the papers be put away.—J.B., 6/6/93. Approved.—W.J.L., 17/6/93.

No. 22.

Mr. J. Lovatt to M. Smith, Esq., J.P.

Dear Sir,

88, Trafalgar-street, Annandale, 16 August, 1893.

With reference to your wharf at foot of Erskine-street, Sydney, called Bethel Wharf, I am willing to take a lease of it from you on the terms and amount agreed on between us, provided you guarantee me free ingress and egress to and from the wharf on the water-frontage. I make this stipulation, as I find there are at present certain obstructions immediately fronting the wharf in the shape of piles and moorings of steamers, boats, &c., which would render the wharf practically useless to me for business purposes unless permanently removed therefrom. Please let me know, as early as you can, whether you are prepared to do this. Please address answer to my private residence.

Yours, &c.,

JOHN LOVATT.

Captain Jackson for report.—F.K., 17/8/93. The water-frontage referred to in this letter has been resumed by the Government for ferry purposes, I beg to refer it to the Under Secretary of Works.—J.J., 18/8/93. The Under Secretary for Finance and Trade. The Under Secretary for Works.—F.K., 21/8/93.

Town

Town Grant.

Town of Sydney, parish of Saint Phillip, county of Cumberland, allotment No. 14 of section No. 55; bounded on the north by a line bearing east 15 degrees 30 minutes north 121 links; on the east by allotment No. 15, bearing north 15 degrees 30 minutes west 76 links; on the north by Erskine-street, bearing west 15 degrees 30 minutes south 136 links; and on the west by the Darling Harbour;—being the allotment promised by His Excellency Sir Richard Bourke, on 22nd September, 1834, as the site for the Bethel Union Chapel; being also the allotment advertised as No. 38 in the Government notice, 26th February, 1841.

No. 23.

Messrs. Abbott and Allen to J. F. Waller, Esq., Government Valuator.

Re Matthew Smith.

Dear Sir,

Audit Chambers, 14, Castlereagh-street, Sydney, 12 October, 1893.

In compliance with your request to Mr. Smith, to be supplied with evidence upon statutory declaration of the facts in connection with the removal of the old wharf at the foot of his property at the corner of Erskine and Lime Streets, in the city of Sydney, and showing that there was never any reclaimed area there, we beg to forward you herewith six declarations made by Messrs. Matthew and Henry Smith, J. S. McGowen, H. Whetton, G. F. Hobson, and B. J. Bishop, which we trust will be found satisfactory and sufficient for the purpose required.

As this is a very important matter to our client, we beg to request that you will lose no time in sending in your report, and we shall be glad to know when you have sent it in.

Yours, &c.

ABBOTT AND ALLEN.

[Enclosures.]

New South Wales, }
to wit.

I, MATTHEW SMITH, of Waterloo, in the Colony of New South Wales, do solemnly and sincerely declare as follows:—

(1.) I am the owner of a portion of land containing about 15½ perches, situate fronting Erskine and Lime Streets, in the city of Sydney, and extending to the original high-water mark of Darling Harbour, and have been such owner for about twenty-one years.

(2.) Until about the month of April last I was under the impression that my predecessors in title of the said land had effected what I thought was a reclamation of an area of about 4½ perches or thereabouts, extending into the water from the western boundary of my said land, and what I considered was such reclamation I then discovered consisted of nothing more than an old wharf composed of piles driven closely together, on the top of which wooden girders and planks had been fixed (some of the girders abutting on the stone retaining-wall forming the western boundary of my said land), and these planks had from time to time become covered with ashes and rubbish, the accumulation of years.

(3.) In the month of April last I employed men to remove the said wharf and planks and the ashes and rubbish that had accumulated on the top thereof, and whilst doing so some of the ashes and rubbish fell through the planks into the water below, which ashes and rubbish I caused also to be removed, of which there were about six cartloads.

(4.) When the top covering of the said wharf had been removed by my men, I then discovered that the underneath part of the wharf between the piles and my retaining-wall was vacant space, and that the waters of the harbour flowed in and out with the tide and washed against my said retaining-wall forming the western boundary of my said land.

(5.) I have never removed, nor caused to be removed, any land or earth in front of the retaining-wall forming the western boundary of my said land, and the place from whence I removed the said wharf is now in the same condition as it was when the same was removed.

(6.) I am now satisfied that there never was any reclamation effected outside the western boundary of my said land, and that what appeared to be such reclamation consisted of the old wharf or jetty with the ashes and rubbish on top thereof, as hereinbefore described.

And I make this solemn declaration conscientiously believing the same to be true, under and by virtue of the provisions of an Act of the Governor and Legislative Council of New South Wales, made and passed in the ninth year of the reign of Her present Majesty, intitled "An Act for the more effectual abolition of oaths and affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of voluntary and extra-judicial oaths and affidavits."

M. SMITH.

Declared before me, at Sydney, this twelfth day of October, in the year of our Lord one thousand eight hundred and ninety-three,—

W. H. MOSELEY, J.P.

Dated 12th October, 1893.

Declaration of Matthew Smith,—

ABBOTT AND ALLEN.

New South Wales, }
to wit.

I, HENRY SMITH, of Redfern, in the Colony of New South Wales, do solemnly and sincerely declare as follows:—

(1.) I am a brother of Matthew Smith, who is the owner of a piece of land situate at the corner of Erskine and Lime Streets, in the city of Sydney.

(2.) I was present frequently whilst my brother's workmen were engaged in removing some wooden girders and planking on piles and ashes and rubbish on the top thereof, which formed an old wharf or jetty jutting out into the water from the retaining-wall, forming what I understand is the western boundary of my brother's said land.

(3.) Shortly after the work of removal began I looked down through a hole made by the men when removing the planking forming the floor of the old wharf and saw that the water of the harbour flowed in through the piles and washed up against the said retaining-wall, the space beneath the planking and between the retaining-wall and the piles on the outside was quite vacant, and except the ashes and rubbish which fell through the planking into the water whilst the planking was being removed, there was no earth or soil in the space beneath, and no sign of any land having been reclaimed there.

(4.) The whole structure from the retaining-wall outwards was removed by my brother's men; it was nothing more than an old wharf or jetty.

And I make this solemn declaration, conscientiously believing the same to be true, under and by virtue of the provisions of an Act of the Governor and Legislative Council of New South Wales, made and passed in the ninth year of the reign of Her present Majesty, intitled "An Act for the more effectual abolition of oaths and affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of voluntary and extra-judicial oaths and affidavits."

H. SMITH.

Declaration of Henry Smith,—

ABBOTT AND ALLEN.

New

New South Wales, }
to wit.

I, JAMES SINCLAIR MCGOWEN, of Redfern, in the Colony of New South Wales, do solemnly and sincerely declare as follows:—

(1.) In the month of April last I inspected Mr. Matthew Smith's property, situate at the corner of Erskine and Lime Streets, in the city of Sydney, and saw where the top of what apparently had been an old wharf jutting out into the water from the retaining-wall forming what I understand is the western boundary of Mr. Smith's land, had been shortly before removed; I saw two rows of old piles within about 15 feet of the said retaining-wall; between these piles from the outside and up to the retaining-wall, was clear vacant space, and the waters of the harbour flowed in and up against the said wall; there was no sign of any reclamation having been made there.

And I make this solemn declaration, conscientiously believing the same to be true, under and by virtue of the provisions of an Act of the Governor and Legislative Council of New South Wales, made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of oaths and affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of voluntary and extra-judicial oaths and affidavits."

Declaration of James Sinclair McGowen.

ABBOTT AND ALLEN.

New South Wales, }
to wit.

I HERBERT WHETTON, of Sydney, in the Colony of New South Wales, contractor, do solemnly and sincerely declare as follows:—

(1.) In the month of April last, my father contracted with Mr. Matthew Smith, the owner of certain property situate at the corner of Erskine and Lime Streets, in the city of Sydney, for the drawing up of some old piles which had formed part of an old wharf jutting out into the water from the retaining-wall, forming what I understand is the western boundary of Mr. Smith's property.

(2.) Under the said contract with Mr. Smith, I superintended the drawing up and removal of about eighty-five piles, and whilst so employed I could see clearly that the waters of the harbour flowed in through these piles, and washed up against the said retaining-wall on the western side of Mr. Smith's land, the space between the piles and the retaining-wall was quite vacant, and there was no sign of any land having been reclaimed within this space.

And I make this solemn declaration, conscientiously believing the same to be true, under and by virtue of the provisions of an Act of the Governor and Legislative Council of New South Wales, made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of oaths and affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of voluntary and extra-judicial oaths and affidavits."

HERBERT WHETTON.

Dated 12th October, 1893.

Declaration of Herbert Whetton.

ABBOTT AND ALLEN.

New South Wales, }
to wit.

I, GEORGE THOMAS HOBSON, of Waterloo, in the Colony of New South Wales, labourer, do solemnly and sincerely declare as follows:—

(1.) In the month of April last I was employed by Mr. Matthew Smith to assist in removing some wooden girders and planking fixed on the top of piles forming part of an old wharf jutting out into the water from a retaining-wall, which, I understand, is the western boundary of Mr. Smith's land, situate at the corner of Erskine and Lime Streets, in the city of Sydney.

(2.) In order to get at the planking we had first to remove a lot of ashes and rubbish which had accumulated on the top of the planking, and upon removing the planking I saw the waters of the harbour washing up against Mr. Smith's retaining-wall, and between the planking and the water and the rows of piles supporting the planking was vacant space, the girders and planks were very old, and evidently had been there for many years, and the ashes and rubbish on the top must have taken years to accumulate.

(3.) I was also employed by Mr. Smith to slightly repair his retaining-wall, putting in a stone here and there, and patching it up.

(4.) Edward James Bishop was also employed by Mr. Smith in connection with the same work, and he and I worked together on the job.

(5.) There was no sign of any land having been reclaimed where this old wharf stood outside the retaining-wall.

And I make this solemn declaration, conscientiously believing the same to be true, under and by virtue of the provisions of an Act of the Governor and Legislative Council of New South Wales, made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of oaths and affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of voluntary and extra-judicial oaths and affidavits."

GEORGE HOBSON.

No. 24.

Messrs. Abbott and Allen to J. F. Waller, Esq.

Re Matthew Smith.

Dear Sir, Audit Chambers, 14, Castlereagh-street, Sydney, 18 October, 1893.

We are in receipt of your letter of yesterday's date. We do not remember anything being said on the subject of furnishing receipts for the payments made to the contractor for removing the wharf, but in any case we are satisfied to rely upon the declaration sent in to you. We should be extremely glad if you will deal with the matter at once.

Yours, &c.,

ABBOTT AND ALLEN.

No. 25.

The Land Valuer to M. Smith, Esq.

Dear Sir, 23 October, 1893.

Before proceeding any further in the matter of your land at the foot of Erskine-street, I would like to be quite clear on the following points:—

- (a) That you assert the water-frontage to your land is now as it always was, and that it was never interfered with by you by increasing or decreasing.
- (b) That the only structure in front of your land, and going out into the water was a wharf which existed for years, and previous to my purchasing the property, say twenty-one years ago.
- (c) That you contend the water-frontage to your land has been illegally obstructed by reason of certain piles which have been placed there preventing free water access to your land, or indeed access at all for steamers or boats of any size.
- (d) That all you desire is removal of the said piles, and free water access to your land, and an acknowledgment that the water-frontage is yours, and that you have not directly or indirectly interfered with your water rights (if any) as may be contained in the original grant.
- (e) That you do not desire the resumption either of your land or the alleged water to same, but simply desire to be left in peaceable enjoyment of the said land, and all water and other rights appertaining thereto.

When I get your reply I will at once attend to the matter.

Yours faithfully,
J. F. WALLER.

No. 26.

Messrs. Abbott and Allen to J. F. Waller, Esq.

Re Smith, Erskine-street property.

Dear Sir, Audit Chambers, 14, Castlereagh-street, Sydney, 30 October, 1893.

Referring to your letter of the 23rd instant to Mr. Smith, and to our Mr. Allen's interview with you, we beg to state that, as to the points (a), (b), and (c), mentioned in your letter, we consider that they have been fully dealt with and established by the declarations previously supplied to you, and until Mr. Allen had seen you on the subject we were under the impression they comprised the only matter (namely, the establishing of our client's right to the water-frontage) you were called upon to report on.

With reference to points (d) and (e), having now seen Mr. Smith, and discussed these points with him, we are instructed to say that he claims to be acknowledged by the Crown as having the absolute, free, and uninterrupted right to and use of the water frontage to his land; such an absolute right as his predecessors in title were possessed of, and of which he has been deprived of, for about two years, including in such rights the right without charge to erect such a wharf as he may think fit. He also claims that all piles and other obstructions shall be removed by the Crown, and that he shall be compensated for the loss and expenses he has been put to in the meantime by the Crown's action in depriving him of his rights, and also in establishing his rights, and to state, further, that failing his being fully satisfied as above, he would prefer that the whole of his land be resumed by the Crown, in which case he would be prepared to forego his claim for compensation.

Please understand that this letter is without prejudice, and we shall be glad if you will deal with this matter without delay.

Yours, &c.,

ABBOTT AND ALLEN.

No. 27.

Minute by the Land Valuer.

Subject:—That Matthew Smith illegally reclaimed certain land, and then endeavoured to put himself right by making application to reclaim.

Department of Public Works, Valuation Branch, Sydney, 3 November, 1893.

Apparently, *vide* Abbott and Allen's letter of 17th November, 1892, Smith, at that date, was under the impression that the structure was land, but which subsequently on removal was proved to be a wharf on piles only; *vide* the affidavits of W. Smith, Redfern; George T. Hobson, Waterloo; E. J. Bishop, Waterloo; H. Whitton, Sydney; M. Smith, Waterloo; J. S. McGowen, M.P., Sydney; and Smith appears to have continued under the impression till the month of April, 1893, when the said wharf was removed, *vide* his affidavit of 12th October, 1893.

The

The application by Smith to purchase a small area of reclaimed land—say 5 perches—under date 30/9/90, Papers 90-9,038 Aln., and refused 17/10/90, *vide* Papers 90-9,683 Aln., would naturally indicate that Smith had, or believed he had, reclaimed land adjoining his purchased land, and the affidavit of the 12th October, 1893, shows such to have been his impression up to April, 1893. Subsequently, it appears from Mr. Twynam's minute of 19/11/91, Mis. 91-7,781, that the application of Smith to purchase the land being refused, it was then suggested to him that he might apply for a lease. "This he had previously done," *vide* 90-2,175, as also by written application, dated 1st October, 1890, and numbered by Land Board Office, 90-5,115. These documents are somewhat puzzling, as the official application is made for a special lease for an "existing wharf, &c., and piles." There is no mention made of land in this document, unless the word etcetera can be intended to refer to the reclaimed area. Be that as it may, the application apparently was refused by the Local Land Board on the 6th April, 1891, *vide* 91-2,629, and the existing wharf or reclamation, or whatever it was, was apparently considered by the Land Board to be a trespass, but the Land Board stated as follows:—"If it be desired to condone or legalise existing trespass, we should recommend a lease for one year from 31st January, 1890, the date when instructions for proceedings in trespass were issued, and we appraise the rent for that term at £100." Why Smith's application was refused does not appear to be very clear, beyond the fact that it was strenuously opposed by Captain Jackson.

Having, on 6th day of October, in company with Mr. M'Gowen, M.P., and the Messrs. Smith, as also, on 19th day of October, in company with Mr. Perdriau, and, on 23rd day of October, in company with Captain Jackson, visited and inspected the land in question, I am forced to the conclusion that there never was any reclamation, provided the boundary wall is the correct boundary to the land owned by Mr. Smith, and which I believe it to be; but this is a matter to be determined by a surveyor. I think I may say, without fear of contradiction, that Captain Jackson holds my views, *i.e.*, that the foreshore has not in any way been interfered with.

Granting that it was possible, in years gone by, to have reclaimed land without it being possible at the present date to obtain proof of such reclamation, I think it is against reason and common sense to suppose that such reclamation, if any, and stated to be an area of 5 perches, could be removed in 1893 from such a busy centre of the city without the knowledge of hundreds of persons, whether such removal was done by land or water; and in refutation of such removal, affidavits have been sent in by W. Smith, Redfern; George Hobson, Waterloo; Edward J. Bishop, Waterloo; H. Whetton, Sydney; M. Smith, Waterloo; J. S. McGowen, M.P., Sydney; all dated 12th October, 1893.

I may also state that the present occupant, W. H. Daniels, of the shed on Smith's ground, in conversation with Mr. Perdriau and myself, assured us that he saw the wharf removed, that it was taken away by horses up Erskine-street, and that there was no land removed whatever, or any change made in the boundary of Smith's land beyond the placing of a few stones filling up broken parts of the walls bounding the land on its water frontage, and on its Erskine-street side line. The affidavit referred to include those from Whetton, the son of the contractor who removed the wharf, and the labourers, G. T. Hobson and E. J. Bishop. Mr. Perdriau, the surveyor from the Lands Department, whom I am given to understand advised that a reclamation had been made, is, I think, now doubtful on that point, and inclined to believe that what he took to be a reclamation and land was really, as stated in the affidavit, a wharf only. Mr. Perdriau may easily be excused for thinking that the wharf was land, because it was close piled underneath, thus hiding the surface of the water, and the flooring was covered with soil, the *debris* or droppings from cargo, and on which soil I understand grass had sprouted. Mr. Perdriau's error (if it was an error) is the more excusable when it is borne in mind that the owner, Smith, himself believed it was land, and was under the impression until the wharf was removed in 1893, and during its removal one of the horses of the contractor, it is stated, broke through the flooring of the wharf. Against my opinion and the various affidavits that there was no reclamation, has, of course, to be set Smith's own letters, *i.e.*, to purchase the reclamation—say 5 perches, *vide* his letter of 30/9/90, No. 90/9,038 Aln., and his application to lease "existing wharf, &c., and piles," *vide* papers 90/2,175, and his own letter of the 1st October, 1890, 90/5,115, and which only can be accounted for by his affidavit of the 12th October, 1893, in which he explains that he was, up to April, 1893, under the impression that there was a reclamation. Apparently the Land Board, *vide* their decision of 6th April, 1891, Papers 91/2,621, were of the opinion that Smith was a trespasser, but whether they were of that opinion because they believed Smith or some one else previous to him had reclaimed land I cannot say, and it may be that they would not have held that opinion had they known that there was a wharf only, for it may be that the original owners of the property had obtained permission to erect a wharf in connection with the chapel; but on this point I have not any information before me, but consider it is of sufficient importance to ascertain whether such permission had or had not been granted, and also if the building of the wharf without permission by Smith's predecessors, or by Smith himself, in part or altogether, would be a trespass, and if a trespass of sufficient gravity to place him in the position of one who by his own act had cut himself off from his water rights, *vide* the minute of the Minister for Lands, under date 23/12/92, papers 92/9,263, bearing in mind that apparently the wharf was permitted to be put up and to remain there for a number of years without remonstrance from the Government, until subsequent to 30th September, 1890, *vide* Smith's letter of the 1st October, 1890, papers 90/5,115, although the Land Board, *vide* 91/2,629, state that the Government issued instructions on 31/1/90, for proceedings to be taken against Smith. The whole matter is one, to my thinking, which is more for an opinion by the Crown Solicitor than by any one else, as:—

- (a) The reclaiming of the land or otherwise must be determined by evidence, though, personally, I am satisfied there was no reclamation.
- (b) Presuming there was no reclamation, it must be determined whether the wharf, as erected by Smith or his predecessors, or by both, was illegal; and if illegal, how far, if at all, by the erection of the wharf, Smith destroyed his rights, if any, to a water frontage.
- (c) Anticipating that Smith desires to obtain a bald statement from the Government whether they would not acknowledge he had not reclaimed land, and in the event of obtaining such an acknowledgment, that he, Smith, would then either demand heavy compensation for interference with his rights or the resumption of the whole of his property, induced me to write my letter of the 23rd instant, and to which I have received a letter from Messrs. Abbott and Allen, dated the 30th instant, in answer to same. By this letter, it will be seen that Smith demands acknowledgment

acknowledgment by the Crown "to having the absolute, free, and uninterrupted right and use of the water-frontage to his land, such an absolute right as his predecessors in title were possessed of, and of which he has been deprived for about two years, including in such rights the right, without charge, to erect such a wharf as he may think fit; he also claims that all piles and other obstructions shall be removed by the Crown, and that he shall be compensated for the loss and expenses he has been put to by the Crown's action in depriving him of his rights, and also in establishing his rights, and to state further that failing his being fully satisfied as above he would prefer the whole of his land be resumed by the Crown, in which case he would be prepared to forego his claim for compensation. Please understand that this letter is without prejudice, and we shall be glad if you will deal with this matter without delay."

This letter convinces me that although I hold the opinion that the land was not reclaimed by Smith or anyone else, still the Crown Solicitor is the proper officer to deal with this case, and that before any reply whatever is given to Smith or his solicitors; for it may be that the Crown Solicitor will advise Smith to be allowed to prove everything in Court, and for the Crown not to acknowledge anything.

It may be well to point out for the guidance of all concerned that I understand that the water-frontage in question is not required for ferry purposes, as was at one time thought to be the case, as it is now found that the Government own the frontage supposed to belong to the Council, and by shifting the floating jetty a few feet to the north side of the piles complained of by Smith, ample room can be given for the requirements of the ferry companies, and at a cost of (say) £10. Captain Jackson and the Engineer-in-Chief for Harbours and Rivers can fully explain this.

T.F.W.

Perhaps the Minister will approve of Mr. Waller going into the matter with the Crown Solicitor.—J.B., 6/11/93. Approved.—W.J.L., 14/11/93. Mr. Waller.—D.C.M'L., per U.S. B.C., 15/11/93. Will the Under Secretary be good enough to make an appointment with the Crown Solicitor for me.—T.F.W., 17/11/93. Under Secretary for Public Works

After going into this matter with Mr. Waller (this day), I think that this report, and the evidence therein referred to, should be referred to the Lands Department for a surveyor to report on the land as it now stands, particularly as to whether there are any encroachments beyond the boundary of the grant, and as to whether there is any evidence to modify or contradict the evidence put forward by Smith.—E.A.S., 27/11/93. B.C., The Under Secretary for Works.

Submitted.—J.B., 27/11/93. Approved.—W.J.L., 28/11/93. B.C., The Under Secretary for Lands.—J.B., 28/11/93. In compliance with the request contained in the Crown Solicitor's memo. of 27th ult., it is submitted that the matter be referred to the Chief Surveyor—H.O., for the U.S., 2/12/93. Mr. Surveyor Perdriau for such survey as may be requisite, and comprehensive report.—E. TWYNHAM, C.S., 5/12/93. Replied to by my report of the 12th December, No. 93/131, transmitting a sketch showing the present condition of the land.—S. E. PERDRIAU, Government Surveyor. Submitted.—27/11/93. Approved.—W.J.L., 28/11/93. Under Secretary for Lands.—W.C., 28/11/93.

No. 28.

Government-Surveyor S. E. Perdriau to The Chief Surveyor.

Reporting upon illegal reclamation at Darling Harbour, on the frontage of Matthew Smith's land, at the corner of Erskine and Lime Streets, allotment No. 14, section 55, City of Sydney.

Sir,

12 December, 1893.

1. In compliance with your instructions, No. 93-990, dated 5th instant, on Miscellaneous Lease 93-9,219, I have the honor to report upon the above-mentioned land, "as it now stands," and "as to whether there is any evidence to modify or contradict the evidence put forward by Smith," such report having been asked for by the Crown Solicitor.

2. With the papers there is a *précis* of the case, dated 9th January, 1893, and Mr. Waller, the Acting Government Valuator, has written a very comprehensive minute upon the case, dated 3rd November, 1893; but if I recapitulate a few of the principal facts, I may perhaps save you the necessity of perusing many of the papers, which are now voluminous. Such recapitulation I have deemed requisite in view of the present phase of the case, and of the recommendation which I intend making in this report, in order that the case may be finally disposed of.

3. This allotment was originally granted as a site for a Bethel Union Chapel.

4. Matthew Smith has owned the allotment for about twenty-one years to date. When he purchased, the structures beyond the limits of the grant, shown upon my sketch with the papers, and marked Miscellaneous Lease 91-5,786, had already been erected.

5. In July, 1890, Smith applied for a special lease for existing wharf, &c., and files, "as per plan attached," to cover the unauthorised erections fronting his allotment. The Local Land Board, in April, 1891, reported that they could not recommend that a lease be granted as desired.

6. Being under the impression that the area abutting on the water-frontage of his allotment was reclaimed land, Smith, on 30th September, 1890, applied to purchase same. Said application was refused, 17th October, 1890.

7. Apparently, the next action of importance to this Department was the resumption (under the Lands for Public Purposes Acquisition Act, as adopted by the Public Works Act of 1888) by *Gazette* notice of 21st November, 1892, of the $4\frac{1}{2}$ perches shown upon my sketch above referred to, which was supposed to be reclaimed land, such resumption having been recommended by the Honorable the Minister for Lands in his minute dated 20th June, 1892, the purpose being for wharf accommodation for the Balmain New Ferry Company (Limited) whereon to erect offices, &c.

8. Since the date of the notice of resumption other arrangements have been made, whereby the Ferry Company have erected their offices upon the public wharf adjoining, and it would appear that the area of $4\frac{1}{2}$ perches resumed is not now required by the Government.

9. The sketch above referred to shows the structures in existence on the date of my former report (30th July, 1892), and the sketch, which I beg to transmit with this report, shows the present condition of the site, the said structures having been demolished in the meantime.

10. Smith now contends—*vide* letter dated 12th October, 1893, from the solicitors, Messrs. Abbott and Allen, with the papers—that the land marked “Reclaimed land” on the sketch was not, and never had been, reclaimed, and with said letter forwards six declarations to that effect by witnesses of the demolition, who state that the area had been planked over, and that rubbish and earth had so accumulated on the surface that the area had the appearance of having been reclaimed.

11. Here I might point out that Smith, after having shown by two separate applications to this Department for purchase and for lease of the foreshore, that he knew the structures had been erected in trespass, took upon himself, without permission from this Department, to remove the structures.

12. It would have been much more satisfactory to me if I had seen the site immediately after the surface had been removed, for the land presented the appearance of land reclaimed in the old-fashioned style, *viz.*, by a sea-wall of close piling and plank sheathing backed by ballast. The work was very old and dilapidated, and reclamation material, such as ashes, would wash through the openings (caused by decay) at high tides and during rainy weather. Such action continuing for years, a hollow would be created under the wharf-deck, and gradually the filling material would all wash out, leaving the area in the condition of partial reclamation in which I represented it, *viz.*, “Very old reclamation, washing away in parts.”

13. If Smith, as he alleges, discovered that the land had not been reclaimed, evidently it was his duty to inform this Department to that effect before he removed all the material therefrom and destroyed the possibility of disproving his allegation.

14. All the affidavits, except that by Mr. McGowen, M.P., are by persons employed by Smith or related to him, and are consequently perhaps not free from bias.

15. I am informed that Smith's contention now is that as there was no reclaimed land, the *Gazette* notice purporting to reclaim such land becomes null and void. Admission of that contention will not apparently affect the matter to Smith's benefit, for both his applications to reclaim and lease the area fronting his freehold have been refused. Also nothing has been done to interfere with Smith's freehold, except that he has been denied the concession of permission for extending same into the harbour by reclamation or jetty, and in this he has been similarly treated to others owning properties adjoining public streets. *Vide* Occ. 87/14,077—Application by one Fenwick for a special lease of land fronting his freehold, which adjoins Darling-street, Balmain. Refused, because, if erected, the jetty would interfere with traffic to the public wharf at Darling-street, which is a place of call by ferry steamers.

16. It appears to me that no action is necessary in this matter now by the Department of Lands. Smith's applications have been refused simply upon public grounds.

17. Day's case, in which the Government was successful in Equity, has been quoted as similar to this, and in that case it was decided that the proprietor having cut off his access to the water by illegal reclamation, had deprived himself of his water-frontage. To make the cases quite parallel it would be necessary to decide—if it be admitted that reclamation had not been effected in the usual way—that close piling plank sheathing, with ballast packing at the back, and decking over as a wharf, are not as effectual a reclamation as by filling in the area with ashes in the usual way—in both cases the water at high tide percolates through the material to the original high-water mark. The steamers of the Balmain New Ferry berth at the southern side of the public wharf (which occupies the whole of the water-frontage of Erskine-street), and occupy part of the water space in front of Smith's allotment (see my sketch “A” with this report). These steamers ply every quarter of an hour from 5 a.m. till 12 p.m., and are berthed here for about five minutes each trip, consequently their occupation is almost perpetual, and the two piles (said to have been driven by the Government) used to spring the steamer to the berth, further prevent Smith from using his water-frontage.

18. I am informed that the Balmain New Ferry Co. pay the Government about £300 per annum as rent.

19. Upon the question of riparian rights, I beg respectfully to point out that the opinion of the Crown Solicitor upon such questions as follow would be of considerable value in dealing with this and other cases, *viz.* :—

1. In such a case, what riparian rights has Smith?
2. Can Smith command the sole use of the water in front of his allotment for mooring vessels there?
3. Where such authorised extensions exist as the public wharf and the Pyrmont jetty in this case, has Smith any special and peculiar right whatever in law over the water in front of his allotment; and, if so, is that right superior to that of the Crown—the Crown being the owner of the public wharf?

I have, &c.,

STEPHEN E. PERDRIAU,
Government Surveyor.

The Metropolitan District Surveyor.

Submitted this report be forwarded to the Crown Solicitor in compliance with his memo. of 27th ultimo. Approved.—W.H., 22/12/93. The Crown Solicitor.—H.O. (for U.S.), 27/12/93.

No. 29.

The Crown Solicitor to The Under Secretary for Public Works.

Sir,

Crown Solicitor's Office, Sydney, 9 January, 1894.

I have the honor to return herewith the papers relating to the illegal reclamation at Darling Harbour, on the frontage of Matthew Smith's land, at the corner of Erskine and Lime Streets.

On the report of Mr. Surveyor Perdriau, forwarded on the 27th ultimo, I think that the proper course is to inform Messrs. Abbott and Allen that their client's claim cannot be recognised; and further, that their client, in removing the filling-in and erections outside the boundaries of his Crown grant, has been guilty of an action of trespass for which he is held liable.

I have, &c.,

ERNEST A. SMITH.

Messrs. Abbott and Allen may be so informed.—F.W., 7/2/94.

Approved.—W.J.L., 8/2/94.

17

No. 30.

Messrs. Abbott and Allen to The Under Secretary for Public Works.

Sir,

14, Castlereagh-street, 7 February, 1894.

Referring to the correspondence between ourselves and Mr. J. F. Waller, representing the Crown, respecting Mr. Matthew Smith's property at the foot of Erskine-street, city of Sydney, more particularly our last letter to Mr. Waller of the 30th October last, we shall be glad to know what determination has been arrived at by the Minister for Works.

We would draw your attention to the fact that since our last letter to Mr. Waller on the subject, more than three months ago, we have had no communication from your Department.

We have, &c.,

ABBOTT AND ALLEN.

The Land Valuer.—D. C. McL., per U.S., B.C., 8/2/94. This letter has crossed reply sent on, 8/2/94.—J.T. Put by.

No. 31.

The Under Secretary for Public Works to Messrs. Abbott and Allen.

Gentlemen,

Public Works Department, Sydney, 8 February, 1894.

With reference to your letter of the 30th October last, respecting the reclamation of certain land at the corner of Erskine-street and Lime-street, Darling Harbour, by your client, Mr. Matthew Smith, I am directed by the Secretary for Public Works to inform you that, under the advice of the Crown Solicitor, who has carefully gone into the whole matter, he cannot recognise your client's claims; and further, that your client, in removing certain "fillings in" and "erections" outside the boundaries of the Crown grants, has been guilty of an act of trespass, for which he is held liable.

I have, &c.,

J. BARLING,

Under Secretary.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PUBLIC WORKS ACT OF 1888.

(RESUMPTION OF LAND FOR WHARFAGE ACCOMMODATION AT KENDALL, CAMDEN HAVEN RIVER)

Ordered by the Legislative Assembly to be printed, 21 February, 1894.

**NOTIFICATION OF RESUMPTION OF LAND UNDER
THE "PUBLIC WORKS ACT OF 1888," 51 VIC-
TORIA No. 87.**

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable SIR ROBERT WILLIAM
DUFF, a Member of Her Majesty's Most
Honourable Privy Council, a Knight
(L.S.) } Grand Cross of the Most Distinguished
Order of Saint Michael and Saint George,
R. W. DUFF, } Governor and Commander-in-Chief of
Governor. } the Colony of New South Wales and its
Dependencies.

WHEREAS I, Sir ROBERT WILLIAM DUFF, the Governor aforesaid, with the advice of the Executive Council, have directed that a certain public work, that is to say, Wharfage Accommodation at Kendall, Camden Haven River, in the said Colony, the estimated cost of which does not exceed twenty thousand pounds, shall be carried out under the provisions of the "Public Works Act of 1888," as an authorised work by the Minister for Public Works as Constructing Authority; and that the land described in the Schedule hereto, which is in my opinion required for carrying out the said work, shall be acquired by taking the same under the "Lands for Public Purposes Acquisition Act," as adopted by the "Public Works Act of 1888": Now, therefore, I, the said Governor, with the advice aforesaid, in pursuance of the "Public Works Act of 1888," do declare by this notification, to be published in the Government Gazette and in one or more newspapers published or circulated in the Police District wherein the said land is situated, that the Crown Land comprised within the description set forth in the Schedule hereto has been appropriated, and the private property within such description has been resumed, for the public purpose aforesaid, to the intent that upon the publication of this notification in the Gazette, the said land described

in the said Schedule hereto shall forthwith be vested in the said Constructing Authority as a corporation sole on behalf of Her Majesty, for the purposes of the said "Public Works Act of 1888," for an estate in fee simple in possession, freed and discharged from all trusts, obligations, estates, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the further intent that the legal estate therein, together with all powers incident thereto or conferred by the said last-mentioned Act, shall be vested in such Constructing Authority as a Trustee: And I declare that the following is the Schedule of land hereinbefore referred to:—

SCHEDULE.

All that piece or parcel of land situate in the parish of John's River, county of Macquarie, and Colony of New South Wales, being part of portion 120: Commencing at the north-eastern corner of portion 96 of 2 roods 9 perches measured as a site for a landing place; and bounded thence by lines bearing south 1 chain 14 links, east 2 chains 50 links, and north 1 chain 20 links to the right bank of the Camden Haven River; and thence by that bank upwards, to the point of commencement,—be the said several dimensions all a little more or less, containing 1 rood 1½ perches or thereabouts, and said to be in the possession and occupation of M. Fagan.

In witness whereof I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this ninth day of February, in the year of our Lord one thousand eight hundred and ninety-four, and in the fifty-seventh year of Her Majesty's Reign.

By His Excellency's Command,

WILLIAM JOHN LYNE.

NEW SOUTH WALES.

PUBLIC WORKS ACT OF 1888.

(RESUMPTION OF LAND FOR WIDENING OF ROAD FROM BUNDANCOON TO THE GULLIES.)

Ordered by the Legislative Assembly to be printed, 21 February, 1894.

**NOTIFICATION OF RESUMPTION OF LAND UNDER
"THE PUBLIC WORKS ACT OF 1888," 51 VICTORIA
No. 37.**

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable Sir ROBERT WILLIAM
DUFF, a Member of Her Majesty's Most
(L.S.) } Honourable Privy Council, a Knight
Grand Cross of the Most Distinguished
Order of Saint Michael and Saint George,
R. W. DUFF, Governor and Commander-in-Chief of
Governor. } the Colony of New South Wales and its
Dependencies.

WHEREAS I, Sir ROBERT WILLIAM DUFF, the Governor aforesaid, with the advice of the Executive Council, have directed that a certain public work, that is to say, widening of the Road from Bundanoon to the Gullies, in the said Colony, the estimated cost of which does not exceed twenty thousand pounds, shall be carried out under the provisions of "The Public Works Act of 1888," as an authorised work by the Minister for Public Works as Constructing Authority; and that the lands described in the Schedule hereto, which are in my opinion required for carrying out the said work, shall be acquired by taking the same under "The Lands for Public Purposes Acquisition Act" as adopted by "The Public Works Act of 1888": Now, therefore, I, the said Governor, with the advice aforesaid, in pursuance of "The Public Works Act of 1888," do declare by this notification to be published in the Government Gazette, and in one or more newspapers published or circulated in the Police District wherein the said lands are situated, that the Crown Land comprised within the descriptions set forth in the Schedule hereto has been appropriated, and the private property within such descriptions has been resumed, for the public purpose aforesaid, to the intent that upon the publication of this notification in the Gazette, the said lands described in the said Schedule hereto shall forthwith be vested in the said Constructing Authority as a corporation sole on behalf of Her Majesty, for the purposes of the said "Public Works Act of 1888," for an estate in fee simple in possession, freed and discharged from all trusts, obligations, estates, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the further intent that the legal estate therein, together with all powers incident thereto or conferred by the said last-mentioned Act, shall be vested in such Constructing Authority as a Trustee: And I declare that the following is the Schedule of the lands hereinbefore referred to:—

1. All that piece or parcel of land situate in the parish of Bundanoon, county of Camden, and Colony of New South Wales, being part of portion 55: Commencing at the north-east corner of that portion; and bounded thence by its east boundary bearing south 12 chains 38½ links; thence by a line bearing west 50 links; thence by a line bearing north 13 minutes east 12 chains 38½ links; and thence by the north boundary of the aforesaid portion bearing east 45½ links, to the point of commencement,—be the said several dimensions all a little more or less. Containing 2 roods 14½ perches or thereabouts, and said to be in the possession and occupation of Charles C. Gale.

2. All that piece or parcel of land situate in the parish of Sutton Forest, county of Camden, and Colony of New South Wales, being part of portion 57: Commencing at the south-east corner of that portion; and bounded thence by its east boundary bearing north 20 chains; thence by the north boundary of the aforesaid portion bearing west 50 links; thence by lines bearing south 14 minutes west 12 chains 30 links and south 40½ minutes east 7 chains 70 links; thence by the south boundary of portion 57 aforesaid bearing east 46 links, to the point of commencement,—be the said several dimensions all a little more or less. Containing 1 acre 5½ perches or thereabouts, and said to be in the possession and occupation of W. A. Nicholas.

3. All that piece or parcel of land situate in the parish of Sutton Forest, county of Camden, and Colony of New South Wales, being part of portion 90: Commencing at the south-east corner of that portion; and bounded thence by its south boundary bearing west 50 links; thence by a line bearing north 48 links; thence by the south boundary of portion 119 bearing east 50 links; and thence by the east boundary of portion 90 aforesaid bearing south 48 links, to the point of commencement,—be the said several dimensions all a little more or less, containing 4 perches or thereabouts, and said to be in the possession and occupation of W. A. Nicholas.

4. All that piece or parcel of land situate in the parish of Sutton Forest, county of Camden, and Colony of New South Wales, being part of portion 90: Commencing at the north-east corner of portion 119; and bounded thence by the north boundary of that portion bearing west 50 links; thence by a line bearing north 1 chain 23 links; thence by the south-eastern boundary of a road 1 chain wide bearing north 78 degrees 56 minutes east 51 links; and thence by the east boundary of portion 90 aforesaid bearing south 1 chain 33 links, to the point of commencement,—be the said several dimensions all a little more or less, containing 10½ perches or thereabouts, and said to be in the possession and occupation of W. A. Nicholas.

5. All that piece or parcel of land situate in the parish of Sutton Forest, county of Camden, and Colony of New South Wales, being part of portion 119: Commencing at the south-east corner of that portion; and bounded thence by its east boundary bearing north 2 chains; thence by the north boundary of the aforesaid portion bearing west 50 links; thence by a line bearing south 2 chains; and thence by the south boundary of the aforesaid portion bearing east 50 links, to the point of commencement,—be the said several dimensions all a little more or less, containing 16 perches or thereabouts, and said to be in the possession of the Church of England.

In witness whereof I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereunto affixed, at Government House, Sydney, this thirteenth day of February, in the year of our Lord one thousand eight hundred and ninety-four, and in the fifty-seventh year of Her Majesty's Reign.

By His Excellency's Command,

WILLIAM JOHN LYNE.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PUBLIC WORKS ACT OF 1888.

(RESUMPTION OF LAND FOR DEVIATION OF ROAD FROM WANDSWORTH TO "OLD BEN LOMOND INN.")

Ordered by the Legislative Assembly to be printed, 29 May, 1894.

**NOTIFICATION OF RESUMPTION OF LAND UNDER
THE "PUBLIC WORKS ACT OF 1888," 51 VICTORIA
No. 37.**

NEW SOUTH WALES,)
to wit.) Proclamation by His Excellency The
Right Honourable Sir ROBERT WILLIAM
DUFF, a Member of Her Majesty's Most
Honourable Privy Council, a Knight
(L.S.) Grand Cross of the Most Distinguished
Order of Saint Michael and Saint George,
Governor and Commander-in-Chief of
R. W. DUFF, the Colony of New South Wales and its
Governor. Dependencies.

WHEREAS I, Sir ROBERT WILLIAM DUFF, the Governor aforesaid, with the advice of the Executive Council, have directed that a certain public work, that is to say, Deviation of Road from Wandsworth to "Old Ben Lomond Inn," through portion 28, parish of Moredun, county of Hardinge, in the said Colony, the estimated cost of which does not exceed twenty thousand pounds, shall be carried out under the provisions of the "Public Works Act of 1888," as an authorised work by the Minister for Public Works as Constructing Authority; and that the land required for carrying out the said work, shall be acquired by taking the same under the provisions of the "Lands for Public Purposes Acquisition Act," as adopted by the "Public Works Act of 1888": Now, therefore, I, the said Governor, with the advice aforesaid, in pursuance of the "Public Works Act of 1888," do declare by this notification, to be published in the Government Gazette, and in one or more newspapers published or circulated in the Police District wherein the said land is situated, that the Crown Land comprised within the description set forth in the Schedule hereto has been appropriated, and the private property within such description has been resumed, for the public purpose aforesaid, to the intent that upon the publication of this notification in the Gazette, the said land described in the said Schedule hereto shall forthwith be vested in the said Constructing Authority as a corporation sole on behalf of Her Majesty, for the purposes of the "Public Works Act of 1888," for an estate in fee simple in possession, freed and discharged from all trusts, obligations, estates, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the further intent that the legal estate therein, together with all powers incident thereto or conferred by the said last-mentioned Act, shall be

vested in such Constructing Authority as a Trustee; and I declare that the following is the Schedule of the land hereinbefore referred to:—

SCHEDULE.

All that piece or parcel of land situate in the parish of Moredun, county of Hardinge, and Colony of New South Wales, being part of portion 28: Commencing on the south-western boundary of portion 28, at a point bearing north 22 degrees 43 minutes west, and distant 13 chains 55 links from the south-western corner of that portion; and bounded thence toward the north, the west, and the north-west by lines bearing south 66 degrees 37 minutes east 6 chains 66 links, south 75 degrees 56 minutes east 9 chains 14 links, north 72 degrees 9 minutes east 7 chains 42 links, north 3 minutes east 4 chains 61 links, north 24 degrees 47 minutes east 7 chains 63½ links, north 29 degrees 59 minutes east 7 chains 96 links, north 41 degrees 35 minutes east 6 chains 37½ links, and north 9 degrees 59½ minutes east 1 chain 54½ links respectively to the south boundary of portion 50; thence on the north by that boundary bearing east 1 chain 1½ links; thence towards the south-east, the east, and the south by lines bearing south 9 degrees 59½ minutes west 2 chains and ¼ of a link, south 41 degrees 35 minutes west 6 chains 55½ links, south 29 degrees 59 minutes west 7 chains 81½ links, south 24 degrees 47 minutes west 7 chains 37½ links, south 3 minutes west 5 chains 12 links, south 72 degrees 9 minutes west 8 chains 43½ links, north 75 degrees 56 minutes west 9 chains 50½ links, and north 66 degrees 37 minutes west 5 chains 70½ links respectively to the aforesaid south-western boundary of portion 28; and on the south-west by that boundary bearing north 22 degrees 43 minutes west 1 chain 44½ links, to the point of commencement,—be the said several dimensions a little more or less, containing 5 acres and 31 perches or thereabouts, and said to be in the possession and occupation of Robert Barbour.

In witness whereof I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this fourteenth day of May, in the year of our Lord one thousand eight hundred and ninety-four, and in the fifty-seventh year of Her Majesty's Reign.

NEW SOUTH WALES.

PUBLIC WORKS ACT OF 1888.
(RESUMPTION OF LAND FOR DEVIATION OF ROAD FROM ROSEWOOD TO COPPABELLA.)

Ordered by the Legislative Assembly to be printed, 29 May, 1894.

NOTIFICATION OF RESUMPTION OF LAND UNDER
THE "PUBLIC WORKS ACT OF 1888," 51 VICTORIA
No. 37.

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable Sir ROBERT WILLIAM
(L.S.) } DUFF, a Member of Her Majesty's Most
R. W. DUFF, } Honourable Privy Council, a Knight
Governor. } Grand Cross of the Most Distinguished
Governor and Commander-in-Chief of
the Colony of New South Wales and its
Dependencies.

WHEREAS I, Sir ROBERT WILLIAM DUFF, the Governor aforesaid, with the advice of the Executive Council, have directed that a certain public work, that is to say, Deviation of the Road from Rosewood to Coppabella, through portion 15, parish of Craven, county of Selwyn, in the said Colony, the estimated cost of which does not exceed twenty thousand pounds, shall be carried out under the provisions of the "Public Works Act of 1888," as an authorised work by the Minister for Public Works as Constructing Authority; and that the land described in the Schedule hereto, which is in my opinion required for carrying out the said work, shall be acquired by taking the same under the "Lands for Public Purposes Acquisition Act," as adopted by the "Public Works Act of 1888": Now, therefore, I, the said Governor, with the advice aforesaid, in pursuance of the "Public Works Act of 1888," do declare by this notification, to be published in the Government Gazette and in one or more newspapers published or circulated in the Police District wherein the said land is situated, that the Crown Land comprised within the description set forth in the Schedule hereto has been appropriated, and the private property within such description has been resumed, for the public purpose aforesaid, to the intent that upon the publication of this notification in the Gazette, the said land described

in the said Schedule hereto shall forthwith be vested in the said Constructing Authority, as a corporation sole on behalf of Her Majesty, for the purposes of the "Public Works Act of 1888," for an estate in fee simple in possession, freed and discharged from all trusts, obligations, estates, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the further intent that the legal estate therein, together with all powers incident thereto or conferred by the said last-mentioned Act, shall be vested in such Constructing Authority as a Trustee; and I declare that the following is the Schedule of land hereinbefore referred to:—

SCHEDULE.

All that piece or parcel of land situate in the parish of Craven, county of Selwyn, and Colony of New South Wales, being part of portion 15. Commencing on the north boundary of that portion, at a point distant 27 chains 23 links from its north-east corner; and bounded thence by that boundary bearing west 7 chains 51 $\frac{1}{10}$ links; thence by lines bearing south 46 degrees 16 minutes east 4 chains 43 $\frac{1}{2}$ links and north 54 degrees 39 minutes east 5 chains 28 $\frac{1}{10}$ links, to the point of commencement, be the said several dimensions all a little more or less, containing 1 acre and 24 perches or thereabouts and said to be in the possession of J. Brock, Wm. M'Eachern and W. H. Mortimer.

In witness whereof I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this fourteenth day of May, in the year of our Lord one thousand eight hundred and ninety-four, and in the fifty-seventh year of Her Majesty's Reign.

1894.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LENNOX BRIDGE, PARRAMATTA.

(RETURN RESPECTING WIDENING OF.)

Ordered by the Legislative Assembly to be printed, 14 February, 1894.

Minute Paper.

Department of Public Works,
Roads and Bridges and Sewerage Branch, Sydney, 14th February, 1894.

Subject:—Lennox Bridge, Parramatta.

MR. HUGH TAYLOR, M.P., is to ask the Minister in the House to-day when it is likely that tenders will be invited for the widening of Lennox Bridge which, in view of the increased traffic over it, is, he states, becoming dangerous to travellers.

Mr. Taylor has been agitating for this work for some years, and a sum of £4,000 was voted for it on 1884 Loan Estimates; but the money was not expended in view of the construction of new bridges at the Gas Works and at O'Connell-street, which, it was represented, would take part of the traffic, and also in view of the late Commissioner's opinion that the proposed Dural Railway would also take much of the traffic. This railway line, however, has not been built.

In October, 1891, Mr. W. A. Smith, who, in accordance with the Ministerial promise was called upon for a report on this matter, stated that he had gone into the question and could not obtain any information that would justify him in recommending an expenditure of £4,000, which was the estimated cost of giving the roadway an additional width of 22ft. (existing roadway 30ft.) On Mr. Taylor continuing to press the matter, Mr. J. A. McDonald (the late Engineer for Bridges) and Mr. W. A. Smith were deputed to make a joint inspection, and these gentlemen reported that what Mr. Taylor wanted was the substitution of an iron superstructure for the existing stone arch, and this would necessitate the destruction of the present bridge with the exception of the foundations of the abutments and wing-walls, and the erection of an iron bridge at a total estimated cost of £7,300. They considered that the advantages to be gained would not be commensurate with the expenditure of so large a sum. Mr. Hickson minutated that he did not think there was any justification for the work, and a copy of above report was sent to Mr. Taylor.

I am still of opinion there would be no justification for this expenditure.

R.H., 14/2/94.

Under Secretary.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PUBLIC WORKS ACT OF 1888.

(RESUMPTION OF LAND FOR NATIONAL DEFENCE, TOWN AND PARISH OF WOLLONGONG.)

Ordered by the Legislative Assembly to be printed, 7 February, 1894.

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable Sir ROBERT WILLIAM
DUFF, a Member of Her Majesty's Most
(L.S.) } Honourable Privy Council, a Knight
Grand Cross of the Most Distinguished
Order of Saint Michael and Saint George,
R. W. DUFF, } Governor and Commander-in-Chief of
Governor. } the Colony of New South Wales and its
Dependencies.

WHEREAS by the "Wollongong Harbour Trust Act, 1889," certain pieces or parcels of Crown Lands, according to the descriptions contained in the First Schedule to the said Act, were declared to be vested in the Commissioners appointed by the said Act for the purposes thereof, but subject to the right of Her Majesty to resume possession at any time, without payment of compensation, of any land required for purposes of national defence, or for giving ingress, egress, and regress to and from the shore: And whereas the land described in the Schedule hereto, which forms part of the lands described in the First Schedule to the said Act is now required for purposes of national defence: Now, therefore, I, the said Sir ROBERT WILLIAM DUFF, as such Governor as aforesaid, with the advice of the Executive Council of the said Colony, do hereby, in pursuance of the right reserved to Her said Majesty the Queen as aforesaid, in the name and on behalf of Her said Majesty the Queen, by this Proclamation, resume and take into the possession of Her said Majesty the Queen, the said land described in the said Schedule hereto, to the intent that the same may at all times hereafter be used for the purposes of national defence:—

THE SCHEDULE REFERRED TO.

All that piece or parcel of land situate in the town and parish of Wollongong, county of Camden, and Colony of New South Wales: Commencing at a point bearing north 3 degrees 20 minutes west 11 chains 59 links from the intersection of the south-eastern side of Gipps-street with the eastern side of Corrimal-street; and bounded thence on the south-west by a line bearing north 33 degrees 5 minutes west 4 chains 54 links; thence on the north-west by a line bearing north 56 degrees 52 minutes east 1 chain 35 links; thence on the north-east by lines bearing south 77 degrees 55 minutes east 1 chain 8 links; south 33 degrees 7 minutes east 1 chain 15 links; south 33 degrees 11 minutes east 1 chain 11 links; and south 1 degree 59 minutes east 1 chain 77 links; and thence on the south-east by a line bearing south 56 degrees 53 minutes west 1 chain 20 links, to the point of commencement,—as surveyed and shown on plan catalogued Ms. 643 Sy.; containing by admeasurement 3 roods 18 perches, and said to be in the possession of the Wollongong Harbour Trust.

In witness whereof I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this twenty-fourth day of January, in the year of our Lord one thousand eight hundred and ninety-four, and in the fifty-seventh year of Her Majesty's Reign.

By His Excellency's Command,
WILLIAM JOHN LYNE.
GOD SAVE THE QUEEN!

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

NAVAL TORPEDO DEFENCE OF THE COLONY.

(RETURN RESPECTING PAY AND ALLOWANCES TO OFFICERS AND MEN OF.)

Ordered by the Legislative Assembly to be printed, 20 February, 1894.

[Laid upon the Table of this House in answer to Question No. 2, of 20 February, 1894.]

Question.

2. MR. TONKIN asked THE COLONIAL SECRETARY,—What is the pay and allowances that would be received by officers and men in the Royal Navy holding similar positions in England to the officers and men employed in the Naval Torpedo Defence of this Colony?

Answer.

It is not known exactly what pay and allowances would be received by officers and men in the Royal Navy holding similar positions in England to the officers and men employed in the Naval Torpedo Defence of the Colony; but it is believed that the attached scale of pay and allowances is in force there:—

THE Pay and Allowances that would be received by officers and men in the Royal Navy holding similar positions in England to the officers and men employed in the Naval Torpedo Defence of this Colony.

Position.	Full Pay.	Lodging allowance.	Allowance in lieu of provisions.	In charge of machinery and stores.	Total.
	£ s. d.	£ s. d.			£ s. d.

1894.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PERMANENT FORCES OF THE COLONY.
(PARTICULARS RESPECTING.)

Ordered by the Legislative Assembly to be printed, 14 March, 1894.

[Laid upon the Table of this House in answer to Question No. 12, of 14 March, 1894.]

Question.

12. MR. DANAHY asked THE COLONIAL SECRETARY,—

- (1.) Is it a fact that some of the officers of the Permanent Forces of the Colony have been, or are about to be, paid an extra amount of money, computed upon the basis of the 1894 Estimate, for their services during 1893?
- (2.) If so, will he state whether it is intended to make the reductions in pay as well as the increases retrospective?
- (3.) Will he also explain what is meant by "South African pay and Colonial allowances"?
- (4.) Will he give the names of the officers who have or are about to receive such retrospective pay, and the amount to be paid to each officer?

Answer.

(1.) No; the emoluments accorded to officers in the 1893 Estimates have been reconstructed upon the same basis as that laid down for 1894.

(2.) The reconstruction proposed for 1893 has been made retrospective to the 1st January of that year.

(3.) The reconstruction of pay and allowances to officers of the Permanent Forces required to be based upon some generally accepted basis, and that laid down in the Royal Warrant of Pay for officers, dated 1892, has been accepted as that which exactly meets the conditions of life, and the reductions in pay and allowances necessitated by the retrenchment required.

(4.) Attached list gives the information required, showing the balance of reconstructed pay transferred to officers stated:—

Name of Officer.	Amount paid to each Officer as approved by Executive Council.	Name of Officer.	Amount paid to each Officer as approved by Executive Council.

1894.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MILITARY.

(MINUTE BY MAJOR-GENERAL HUTTON REGARDING PROVISION BEING MADE FOR SHORT PERIODS OF CONTINUOUS TRAINING.)

Ordered by the Legislative Assembly to be printed, 21 March, 1894.

Question.

5. Mr. McCOURT to ask THE COLONIAL SECRETARY,—

- (1.) Has Major-General Hutton, in a memorandum dated 7th March, 1894, recommended that the sum of £11,331, saved by reduction in pay of the Partially-paid Forces, should be applied to holding camps of five days' continuous training in various parts of the Colony, thus allowing each Volunteer private £7 12s. as his pay for the year?
- (2.) Has the Commandant, in same memorandum, practically stated that unless this or some similar scheme of continuous training is adopted the Volunteer Forces will be disintegrated?
- (3.) Has he come to any conclusion with regard to the Commandant's memorandum of 7th March, 1894?

Answer.

Major-General E. T. H. Hutton, A.D.C., Commanding Military Forces, to The Principal Under Secretary.
Subject:—Estimates, 1894.

Sir,

Military Staff Office, Head-quarters, 7 March, 1894.

Herewith I have the honor to forward a Minute for the Colonial Secretary on the subject of the Naval and Military Estimates for 1894, a copy of which I received yesterday.

I have, &c.,

EDW. T. H. HUTTON,

Major-General and A.D.C., Commanding Forces, New South Wales.

Major-General E. T. H. Hutton, A.D.C., Commanding Military Forces, to The Colonial Secretary.

Subject:—Military Estimates for 1894.

Head-quarters Staff Office, Victoria Barracks, Sydney, 7 March, 1894.

1. I HAVE to acknowledge the receipt of the copy of the Naval and Military Estimates forwarded to me yesterday.

2. I note that while my proposed reduction in pay to the Partially-paid Forces has been accepted, the pay and expenses for the complete period of continuous training in camps of instruction, upon which my proposal was based, has been omitted. I find that the total amount of pay which each private soldier therefore can earn in 1894 will only amount to £6, in place of £9 12s.

3. This sudden reduction of pay and emolument to the Partially-paid Force entailed by the existing curtailed Estimates will, in my opinion, result in a serious disintegration of the Force, upon which the Defence of the Colony must depend, and a feeling of discontent will undoubtedly be created in all ranks.

4. I have pointed out in a previous memorandum that the sum of £11,331 will be saved by the reduction in pay to the Partially-paid Force as proposed by me.

5. Having in view the continued financial depression in the Colony, and your wishes as to the strictest economy, I would suggest that this sum of £11,331 be placed on the Additional or Supplementary Estimates for 1894, and that I may be empowered to make use of the same for the purpose of giving as much continuous training to the Partially-paid Force as can be carried out for that sum. Each private soldier under this arrangement would be able to earn £7 12s., and I could hold camps of continuous training at various places in the Colony for short periods of five days at suitable times during the year.

6. The expenses of such local camps may be thus summarised:—

	£		£
Amount allowed—saving of reduction of pay on 1893	11,331	Training	7,440
Expenses for small camps on 1894 Estimates	1,605	Railway expenses	2,516
		Incidentals	710
		Rations	1,621
		Field pay	488
		Hire of horses	150
	£12,936		£12,925

EDW. T. H. HUTTON,

Major-General and A.D.C., Commanding Forces, New South Wales.

1894.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

HYDRO-PNEUMATIC GUNS.

(RETURN RESPECTING.)

*Ordered by the Legislative Assembly to be printed, 23 May, 1894.**[Laid upon the Table of this House in answer to Question No. 4, of 23rd May, 1894.]*

Question.

4. MR. FEGAN asked THE COLONIAL SECRETARY,—

- (1.) Did the gun which burst on board H.M.S. "Cordelia" in any respect whatever resemble the gun with which an accident occurred at Fort Scratchley?
- (2.) Was the cause of the bursting of the gun on H.M.S. "Cordelia" ever ascertained?
- (3.) Was the bursting of that gun in any way attributable to the muzzle of the gun "drooping," as the result of repeated firing?
- (4.) Has any report ever been made relative to the 6-inch breech-loading guns in this Colony to the effect that they are liable to suffer from muzzle-drooping?
- (5.) Have any of the 6-inch breech-loading guns in this Colony been sent to England to be muzzle-chased, so as to strengthen them and guard against the possibility of their muzzles drooping?
- (6.) How many of the 6-inch breech-loading guns in this Colony have been sent to England to be muzzle-chased?
- (7.) Was the gun at Fort Scratchley one which had been so dealt with?
- (8.) How many 6-inch breech-loading guns are there in the Colony?
- (9.) Do experts consider that muzzle-drooping would cause a projectile or shell to become impacted in a gun, and that the bursting of the gun would follow?
- (10.) Are the 9-inch anti-bombardment breech-loading guns recently mounted on the coast liable to muzzle-drooping?
- (11.) Will be cause an inquiry to be made with a view to determining whether they require to be muzzle-chased, or strengthened in any other way?
- (12.) What is the cost of each 6-inch breech-loading gun, inclusive of emplacements, mounting, &c.?
- (13.) What is the cost of each 9-inch breech-loading gun, inclusive of emplacements, mounting, &c.?
- (14.) What is the cost per round, with projectile or shell, of firing the 6-inch breech-loading guns?
- (15.) What is the cost per round, with projectile or shell, of firing the 9-inch breech-loading guns?
- (16.) What is the life of a 6-inch breech-loading gun?
- (17.) What is the life of a 9-inch breech-loading gun?

Answer.

- (1.) The only point of resemblance is that the calibre is the same.
- (2.) Yes.
- (3 and 4.) No.
- (5.) They are being chase-hooped, but not by reason of any fear of the muzzles drooping.
- (6.) Six.
- (7.) No.
- (8.) Fourteen.
- (9.) It would depend on the amount of "droop." "Drooping" would not necessarily cause a gun to burst.
- (10.) No.
- (11.) An inquiry does not appear to be necessary.
- (12.) Cost of gun and mountings, &c., £2,675; emplacement, £2,200.
- (13.) Cost of gun and mounting, &c., £9,183; emplacement, £4,100.
- (14.) With common shell, cast iron, £4 1s. 3d.; with common shell, cast steel, £6 1s. 4d. With Shrapnell shell, cast iron, £4 11s. 1d.; with Shrapnell shell, cast steel, £6 16s. 1d.
- (15.) With common shell, steel, £17 17s. 8d.; with common shell, iron, £13 1s. 8d.
- (16.) Probable first life of 6" B.L. gun, before it ceases to properly rotate its projectile, 395 rounds (full charges); with reduced or practice charges, wear of bore about one-fourth that which would take place with full charges. At the end of first life the gun would be re-lined.
- (17.) 9.2" B.L. gun, first life, 196 rounds (full charges). The gun would then be re-lined.

1894.

1894.

CASE OF STAFF-SERGEANT W. JIFFKINS.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly appointed on 24th April, 1894, “with power to send for persons and papers to inquire into and report upon the case of Staff-sergeant W. Jiffkins,” and to whom was referred, on 25th April, 1894, The Return to Order of Session 1892-3, “Suspension of Staff Colour-sergeant William Jiffkins, Volunteer Permanent Staff,” have agreed to the following Report :—

1. Your Committee having examined the witnesses named in the List* *Sec list, p. 4. (whose evidence will be found appended hereto), find—

- (1.) That the facts as disclosed in the evidence show that Staff-sergeant Jiffkins was dismissed from the service on the uncorroborated statement of Warrant-officer Barnwell, that he saw Jiffkins copying from an official register.
- (2.) That the official register referred to had been out of use for a number of years, and that at the time it was lying open in the lavatory, and consequently accessible to all persons in the Department.
- (3.) That for a considerable time prior to the date of dismissal, disagreements between Warrant-officer Barnwell and Staff-sergeant Jiffkins had been of frequent occurrence, and that a recommendation by minute had been made by Major-General Richardson for their separation, which minute was not given effect to.

2. In view of all the circumstances, and taking into consideration his long services, your Committee are of opinion that Staff-sergeant Jiffkins has been harshly treated; and that had the recommendation to separate the two officers been carried out, he would probably not have been dismissed; and they therefore recommend his case to the favourable consideration of the Government.

G. D. CLARK,
Chairman.

No. 2 Committee Room,
Sydney, 9th May, 1894.

PROCEEDINGS OF THE COMMITTEE.

 WEDNESDAY, 25 APRIL, 1894.

MEMBERS PRESENT:—

Mr. G. D. Clark.

[In the absence of a quorum the meeting called for this day lapsed.]

 THURSDAY, 26 APRIL, 1894.

MEMBERS PRESENT:—

Mr. G. D. Clark,
Mr. Darnley,Mr. Chapman,
Mr. O'Sullivan.

Mr. G. D. Clark called to the Chair.

Entries from Votes and Proceedings appointing the Committee, and *referring* the Return to Order "Suspension of Staff Colour-sergeant William Jiffkins, Volunteer Permanent Staff," of Session 1892-3, read by the Clerk.

Committee deliberated.

Ordered,—That William Jiffkins be summoned to give evidence next meeting.

[Adjourned till Tuesday next, at *Half-past Ten* o'clock.]

 TUESDAY, 1 MAY, 1894.

MEMBERS PRESENT:—

Mr. G. D. Clark in the Chair.

Mr. Darnley,

Mr. O'Sullivan.

Mr. McCourt,

William Jiffkins called in, sworn, and examined.

Witness withdrew.

Ordered,—That Warrant-officer Barnwell be summoned to give evidence next meeting.

[Adjourned till To-morrow, at *Half-past Ten* o'clock.]

Ordered,—That Colonel Roberts be summoned to give evidence next meeting.

[Adjourned till To-morrow, at *Half-past Ten* o'clock.]

 THURSDAY, 3 MAY, 1894.

MEMBERS PRESENT:—

Mr. G. D. Clark in the Chair.

Mr. Darnley,

Mr. McCourt.

Charles Fyshe Roberts (*Military Secretary*) called in, sworn, and examined.

Witness *produced* butt of railway-pass issued to Staff-sergeant T. Moyens, from West Maitland to Sydney, on 14th February, 1890.

Witness withdrew.

William Jiffkins further examined.

Witness withdrew.

Re-assembling of Committee to be arranged by the Chairman.

[Adjourned.]

 WEDNESDAY, 9 MAY, 1894.

MEMBERS PRESENT:—

Mr. G. D. Clark in the Chair.

Mr. Darnley,

Mr. McCourt.

Charles Fyshe Roberts called in and further examined.

Witness withdrew.

Chairman submitted Draft Report.

Same read, amended, and agreed to.

Chairman to report to the House.

 LIST OF WITNESSES.

	PAGE.
Barnwell, W.	6
Jiffkins, W.	1, 15
Roberts, Colonel C. F.	11, 16

1894.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

CASE OF STAFF-SERGEANT W. JIFFKINS.

TUESDAY, 1 MAY, 1894.

Present:—

MR. DARNLEY, | Mr. McCOURT,
MR. O'SULLIVAN.

G. D. CLARK, ESQ., IN THE CHAIR.

Mr. William Jiffkins called in, sworn, and examined:—

1. *Chairman.*] You are not in any occupation at present? No.
2. You were in the Military Service of this Colony for some time? Yes, nearly seven years.
3. On what date did you leave the Service? I was discharged on the 6th April, 1892.
4. Had you been in the Public Service of this Colony before joining the Military Department? Yes; Prison Department.
5. But you were in the military branch of the Imperial Service in the old country? Yes.
6. *Mr. O'Sullivan.*] What Force? Always in the Infantry.
7. What regiment? First, in the Royal Bucks Militia; second, in the 76th Foot; third, in the Commissariat Staff Corps during the New Zealand war; after that, I went back to the 76th Foot, and on my discharge from that regiment I joined the First Royal Militia, London.
8. What made you change your regiment so often? I first joined the Militia Force, and I volunteered from the Militia into the Regulars, the 76th Foot; and then when the Commissariat Staff Corps was formed, being a young man, I joined that corps and went to the New Zealand war. When the New Zealand war was over our services were not required in that branch any longer, and I was sent back to my regiment, the 76th Foot. After receiving my discharge from this regiment in India, I joined the First Royal Light Infantry Militia, in London, and served in that Force for twelve months and one day.
9. *Chairman.*] You were dismissed from the Service here, I believe, for making an alleged false statement, and for copying from an official register? Yes. After I was discharged they altered the charge, and said it was for tampering with official records.
10. The alleged false statement was that you had not copied from the official register? That is my contention.
11. Where was the book at the time? In the lavatory.
12. A public place, to all intents and purposes? Yes; a public place—never under lock and key.
13. Had you any business in the lavatory at the time? Yes.
14. Can you give the Committee any reason why you were there on the occasion referred to? I was ordered to make out this return [*produced*] and if you read that you will see that the book I had to make that return from was wrong; the two sides did not agree.
15. *Mr. McCourt.*] Does this statement appear in your defence? I was never asked to make a defence.
16. *Chairman.*] Had you to go to this particular book? No; I had not any particular occasion to go to it, but I had occasion to go to another book, and putting this other book into the place caused me to fall in with the register lying open in the lavatory.

Mr.
W. Jiffkins.
1 May, 1894.

- Mr. W. Jifkins.
1 May, 1894.
17. Was the register supposed to be a private document? No; not in the slightest degree.
 18. Was it in use in the Department at that particular time? No; it was left in the lavatory as a reference.
 19. Do you know how long it had been out of use? Four years.
 20. Any one going into the lavatory could, of course, have seen the book? Yes.
 21. Who was it that charged you with copying from this book? Colonel Roberts charged me with taking notes from the register.
 22. But was it Colonel Roberts who saw you? No.
 23. Who saw you? Warrant-officer Barnwell. He charged me with making a false statement. Half an hour afterwards I was placed under arrest.
 24. Were you placed upon trial in the barracks or before the military authorities in connection with this particular charge? Yes; this occurred on the 22nd, and I was brought before Colonel Roberts on the 25th.
 25. And Warrant-officer Barnwell then stated that he saw you copying from this document? No; Warrant-officer Barnwell on that occasion, to my knowledge, never opened his mouth.
 26. To testify to your having been seen copying from this book? As I said just now I was charged with making a false statement. That is what I was brought before Colonel Roberts for. In making the inquiry as to how this alleged false statement came about, it transpired in the evidence that Warrant-officer Barnwell said I was making notes from this book, and that I said I was not. That was the false statement. Then Colonel Roberts amended the charge to one of tampering with official records.
 27. But was there no proof furnished at this inquiry, or statement made, that you had been seen copying them? I put the question to Captain Bouverie. I was searched in the lavatory. Warrant-officer Barnwell said I had a paper in my possession, and pointed to one of the pockets of my coat. In that pocket I had some tram tickets, a knife, a little bit of pencil, and a very short bit of paper. Captain Bouverie said, "Pull out all the papers you have in your possession." I pulled them out, and Captain Bouverie took out of my hand the little bit of paper. After examining it in the best manner that his eyesight would allow he came to the conclusion that there were five figures on it, namely, 22, 4, 89. I believe that is what they said was on it. At any rate Warrant-officer Barnwell said, "That is not the paper." The consequence was that he gave me the paper back again and I put it in my pocket. Captain Bouverie said, "Take all the papers you have got out of your pockets, if you have got any." I pulled everything out of my different pockets; but they did not find the paper they wanted to find.
 28. Because you had not the paper upon you? I had not the paper. When before Colonel Roberts I asked Captain Bouverie, "Is that the paper?" (producing one) and he would not make any reply. I said, "Did not Mr. Barnwell say that was not the paper?" He said he had forgotten what Mr. Barnwell had said. The paper was then in my hands. I produce the remains of the paper, which I had torn up and chucked into the fire place. That was the whole of the conversation I had with Colonel Roberts on that occasion. When I put the question to Captain Bouverie as to what Barnwell said about the bit of paper—that that was not the paper—he said he had forgotten what Barnwell had said, and he gave me the paper back again, and I put it in my pocket.
 29. But did not Warrant-officer Barnwell appear at the Court of Inquiry? He did.
 30. And did he state that he saw you copying from the book? No; he never opened his mouth. No questions were put to him by any one to my knowledge. I never asked him any questions.
 31. But were you present during the whole time? Yes; and Molloy was present during the whole time.
 32. So that although Barnwell was the only man supposed to have seen you copying from this document, he gave no evidence before the court of inquiry? Not in my presence; neither he nor Molloy.
 33. What could have been the object of Warrant-officer Barnwell in charging you with this offence;—have you any reason to believe he had an object? He had an object for two years to get me dismissed—tried all he could.
 34. Mr. McCourt.] Before Barnwell reported you, did you not report him? No.
 35. Do not the papers show that you did? No; I do not think so.
 36. Did you never report Barnwell? Yes.
 37. Chairman.] As a matter of fact, you and Barnwell did not get on very well together in the Service? No; not for two years before he got me dismissed.
 38. There was friction between you while at Maitland? Yes.
 39. Mr. O'Sullivan.] What was the original cause of the disturbance between you and Barnwell—was there any personal difference? Not the slightest.
 40. What caused you and Barnwell to get at logger-heads? I do not know, I am sure, how it came about. I had served under Barnwell in the Northern District.
 41. Mr. McCourt.] According to paragraph 5, page 3, of the printed papers in your case, did you not, on the 4th June, 1889, and the 2nd November, 1889, report to Warrant-officer Barnwell alleged irregularities on the part of the late Quartermaster-sergeant Moyens? That was contained in a letter which the General told me to send to him, and in which I inserted complaints I had against Warrant-officer Barnwell.
 42. Mr. O'Sullivan.] Then you only reported Barnwell when you were called upon to do so? When it was in connection with my duty.
 43. This statement appears in your letter of 8th January, 1892, to the Major-General:—

On the 4th June, 1889, and 2nd November, 1889, Sergeant Jifkins reported to Warrant-officer Barnwell the irregularities carried on by the late Quartermaster-sergeant Moyens, and purchasing wood and coals, and charging the same to the Department for cooking purposes in the orderly-room (office), and the office being kept in a filthy condition. This filthy condition was owing to warrant officer getting the cleaning taken away from the usual woman, and giving it to his wife at 5s. per week, and no cleaning being done. The above reports are the outcome of the following.

On the 9th January, 1890, a report was made by the Quartermaster-sergeant and Warrant Officer to Officer Commanding the Northern District Reserves:—"We, the undersigned, protest against doing duty with Sergeant Jifkins, through his general disagreeable, cynical, underhanded, and *quid-nunc* manner being obnoxious to them in the extreme." (Signed) Warrant Officer and Quartermaster-sergeant.

What caused those two officers to make that protest? Barnwell was warrant-officer. Moyens was Quartermaster-sergeant. Moyens and Barnwell were together. I being the third party in the office they did not want me there. This Moyens was allowed to run wild in Maitland, and to get into debt everywhere. Eventually he had to come and live in the office—a little place for which the Government paid 12s.

12s. 6d. a week. He was allowed to do his cooking in the office, and to sleep there, and because I spoke about it to Warrant-officer Barnwell, and reported it to that officer, then, through some word I made use of, Moyens threatened to knock my teeth down my throat; and at this time the two officers submitted this quarrelsome sort of report against me on purpose to get me out of their way.

Mr.
W. Jiffkins.
1 May, 1894.

44. *Mr. McCourt.*] Did Barnwell join in that? Yes.

45. I think you stated that you did not report Barnwell previous to your dismissal? Yes, I did; but not on the occasion mentioned in the paragraph just read.

46. Is it true that on the 8th November, 1891, you made a charge against Barnwell, as appears from this paragraph in your letter to the Major-General:—

With reference to a report made by me, dated 8th November, 1891, re errors made by the warrant officer in district order-book, dated 23rd October, 1891 (four telegrams were used in this one instance), I was brought to an account for, and informed by the Adjutant that at end of year whether the General Officer Commanding should not be advised to dispose of my service. The friction referred to was brought about by the warrant officer.

—? Yes; I made that report.

47. Before Barnwell reported you, you commenced by reporting him? No; I did not.

48. What is the date of Barnwell's first report against you? The 13th February, 1889, as shown on page 18 of the printed papers.

49. You stated that when brought before Colonel Roberts in reference to taking notes from the register, you were not called upon for any defence? I was not.

50. Was there not a full inquiry made? There was no full inquiry made.

51. Colonel Roberts states, page 31 of the printed papers:—

For these he was dealt with in the usual way, receiving frequent warnings; and eventually, after a final one, when he was informed that the next time he committed a crime it would be necessary to have him removed from further employment in the Military Forces, he was again brought before the military authorities, and, after a full inquiry, his dismissal was recommended, as he had been found guilty of making a false statement and taking notes from military records without proper authority.

You mean to say no opportunity was afforded you to make a defence on that charge? Exactly.

52. Then a full inquiry was not made? That is my complaint—that a full inquiry has not been made.

53. Was no inquiry at all made? There was such an inquiry as I have related.

54. Were you not present? I was present.

55. Did you, at that inquiry, offer to make any statement in your own defence? I offered a statement, but it would not be taken.

56. What statement did you offer? I was brought before Colonel Roberts for making a false statement. Warrant-officer Barnwell said that I was taking notes from the book, and I said that I was not. It came out in the evidence about taking the notes from the official record, and Colonel Roberts there and then amended the charge.

57. What to? To taking notes from the register. It was Colonel Roberts who made the charge of taking notes from the register.

58. *Chairman.*] The charge made against you by Barnwell was for taking notes from this official register? No; for making a false statement.

59. But Warrant-officer Barnwell was supposed to have seen you taking notes from the official register—he charged you with it? No; he did not.

60. Not at the time he saw you? No; he knew it was not a breach of discipline.

61. *Mr. McCourt.*] No matter what the charge was, or whether it was amended or not, had you not an opportunity at this inquiry of making your defence? No.

62. What prevented you from making it? At the time of the inquiry Colonel Roberts was acting for the General. I had written to the General a letter containing the complaints just referred to. Colonel Roberts finding that I had sent this letter to the General, accused me of writing to some one outside with reference to military matters. He considered that the General was outside when he was on leave, although the General gave me permission, as you will see by that letter. Colonel Roberts said, "If you were in the British Army, you would be tried by Court-martial. You have been writing to some one outside." I said, "Not outside the Department, sir." He said, "You are remanded until the return of the General, to a higher authority." No question was put either to Barnwell or to Molloy. The only question I asked was with reference to the bit of paper, when Captain Bouverie said he had forgotten what Barnwell had said about the paper, when I asked him if Barnwell had not said that it was not the paper.

63. Without allowing you to make any defence at all, he remanded you until the General came back—were those the words? Yes; until the General came back.

64. Were you ever tried before the General? No. The inquiry was on the 25th February. The General came back from leave of absence on the 8th March. From the 25th February I was waiting every day to be brought up, but I was kept for forty-five days, until the 6th April, under suspension. When the General was acquainted with the matter, he wrote, as you will see on page 2 of the printed papers, wanting to know the reason why I had been kept waiting so long. Then I was brought up before the General on the 6th April. I said to the General, "Before you decide either one way or the other, would you allow me to make a statement," and he said, "I cannot." "But," I said, "I have been officially informed that the charge against me has been added to since I was remanded. I was first charged with making a false statement, and then I was charged with taking notes from the register, which charge has never been inquired into." The General said, "It is no use, I cannot hear what you have to say in the matter. You have been dismissed by order of the Government, and entirely behind my back."

65. *Chairman.*] The false statement with which you were charged was simply a denial on your part that you had copied from the register? Yes.

66. When you were summoned before Colonel Roberts, and when Captain Bouverie said he had forgotten what Barnwell had said about the paper, was Barnwell present? Yes, and Molloy.

67. And was not Barnwell called upon to make a statement? No; not in my presence, nor Molloy either, and I was not allowed to put any question to either of them; and the only question I asked was about the paper that was found on me, which was admitted not to be the paper, Captain Bouverie having forgotten what was said.

Mr.
W. Jifkins.
1 May, 1894.

68. Have you any idea who was responsible for not separating you and Barnwell in the first instance. On the 28th January, 1892, page 4 of the printed papers, Major-General Richardson says :—

Seeing the long continued friction between W. O. Barnwell and this N. C. O., it would, perhaps, be well to transfer him, and thus give him a final chance of re-establishing himself.

Of course, that was subsequent to the Maitland affair? That was subsequent to this charge. It was written to Colonel Roberts on the 28th January. I was kept in the office until the 22nd February, on purpose to work this charge of tampering with the register, because I wrote that letter to General Richardson.

69. Warrant-officer Barnwell, Quartermaster-Sergeant Moyens, and yourself were altogether at Maitland, were you not? Yes.

70. There was a quarrel there? Yes.

71. You were all transferred from Maitland? We were.

72. And you were all placed together again in Sydney? We were.

73. Although Colonel Spalding had recommended that you should be separated? Yes. Not only Colonel Spalding, but also Colonel Wilkinson, wrote and wired to the effect that we should be separated.

74. Do you know who was responsible for keeping you together? The Assistant Adjutant-General—he was the head. Colonel Wilkinson as well as Colonel Spalding suggested that I should be away from Barnwell, but no notice was taken of the matter. That was twelve months before Barnwell got me dismissed. On two occasions also Colonel Eden recommended that I should be separated from Barnwell.

75. When you were transferred from Maitland to Sydney was it not the decision of the court that you should each pay your expenses down? Yes.

76. Did you pay your expenses? Yes, and never recovered the amount.

77. Did Moyens pay his passage down? A railway pass was made out for him by Barnwell.

78. And that was one of the things you reported to the General? Yes, and I reported it at the time he made the pass out; but he would not allow my report to be forwarded. He prevented my report from being forwarded to the Major-General.

79. *Mr. McCourt.*] You stated just now that Colonel Roberts said that your case was to stand over until the General came. Colonel Roberts states, page 29 of the printed papers :—

On the 22nd February, 1892, he again committed himself, and was charged with making notes from one of the regimental registers—a duty he was not called upon to perform. He was brought before the Acting-Commandant on the 23rd February, and failing to clear himself of the charge, and taking into consideration the warning he had received only six weeks before, he was remanded under arrest until his case was decided by higher authority, viz., that of the Honorable the Colonial Secretary. His case was reported that day, in letter of 25th February, 1892, attached.

Sergeant Jifkins is therefore in error in saying his case was to stand over until the return of the Major-General from leave.

You say your case was ordered to stand over until the return of the Major-General? Yes.

80. And that Colonel Roberts never called upon you for any defence? No.

81. Nor did you volunteer any defence? I was not allowed. I was given the order to "Right turn; quick march." When a man is standing before his Commanding Officer, and receives such an order, there is no such a thing as a reply.

82. *Mr. Darnley.*] Had your quarrel with Moyens and Barnwell any connection with the fact that you had reported Moyens for purchasing wood and coal and charging the same to the Department? No.

83. *Chairman.*] What caused Moyens to threaten that he would knock your teeth down your throat? The time was the commencement of the year. We had to make out an annual return for the previous year.

We had twenty-nine companies on the northern side, and the returns were supposed to be in Sydney by the 6th January. About a fortnight before that date, seeing that the returns were not being pushed forward, I spoke to Moyens about having them done, and he said, "Don't bother your head about the returns, they will be done in time." Of course I said no more about it. The end of December came, and I could see that things were not being done. At any rate, on the 6th January, when the returns should have been in Sydney, they were in Maitland. I was doing the returns at this time. Warrant-officer Barnwell said to Moyens, "You might as well help Jifkins to make out these returns, as you know they should be in Sydney." I then said to the Warrant-officer, "If the Quartermaster-sergeant had allowed me to make out these returns before when I asked him, they would have been done now"; whereupon Moyens jumped up out of his chair, and threatened to knock my teeth down my throat.

84. *Mr. McCourt.*] You say that your case was remanded by Colonel Roberts until the General came back? Those were the words I understood him to use. He said, "You are remanded until the return of the General, to a higher authority."

85. On the 15th May, 1892, you wrote to Mr. Bradbury, of Picton, to this effect :—

I was dismissed by Colonel Roberts, and behind the back of General Richardson (who was on leave) on 6th April, on a groundless charge, made through spite.

So that you knew then that you were dismissed by Colonel Roberts? Dismissed through Colonel Roberts.

86. But you say dismissed by Colonel Roberts? It is all the same—dismissed by Colonel Roberts, or dismissed by the Government. I was dismissed. Of course, if the words are there, I suppose I must have used them; but you will see I was not dismissed by Colonel Roberts.

87. But you say so, and "behind the back of General Richardson"? That is right. That is the expression General Richardson made use of.

88. But when you wrote to Mr. Bradbury the words "I was dismissed by Colonel Roberts, and behind the back of General Richardson," you must have known that Colonel Roberts dismissed you? That letter was written a long time after I was dismissed. The General told me I was dismissed by order of the Government. I said in the letter I was dismissed by Colonel Roberts. He, of course, was the cause of it.

89. *Mr. Darnley.*] When you were brought up before Major-General Richardson, did he merely inform you that you had been dismissed by the Government or that he was there only as the mouth-piece of the Colonial Secretary? That is what the General said.

90. *Chairman.*] Do you remember the occasion of the first quarrel or difference which you had with Warrant-officer Barnwell? The first difference I had with him was when Moyens threatened to knock my teeth down my throat.

Mr.
W. Jiffkins.
1 May, 1894.

91. In consequence of that quarrel you were all three transferred to Sydney? Yes.
92. And to the same office? The three of us were in the one office, and with nobody else there for some days after we arrived in Sydney. Moyens was on one side of the table, I was on the other, and Barnwell was somewhere else at the table.

93. Were any orders supposed to be in existence to prevent anyone getting at the official register? No; neither written nor verbal.

94. There was no one in the room at the time but yourself and Barnwell? No one else.

95. Therefore it was simply his word against yours as to whether or not you were copying? That is so.

96. *Mr. McCourt.*] I think it was on the 22nd February when the case was inquired into by Colonel Roberts? That was the day when I was supposed to have told the lie. The date on which the case was before Colonel Roberts was the 25th February.

97. Colonel Mackenzie, on the 4th May, writes as follows:—

With reference to ex-Sergeant Jiffkins' statement as to the manner he was dealt with on 22nd February, 1892, I have the honor to state that Sergeant Jiffkins was brought before the Acting Commandant in the usual manner, on the charge of making a false statement. That upon evidence being adduced Colonel Roberts amended the charge in Jiffkins' presence to one of tampering with records, and this was then and there investigated. Sergeant Jiffkins not being in any way able to clear himself of the charge.

Were you prevented from making a statement? I was.

98. Then these words are not true "Sergeant Jiffkins not being in any way able to clear himself from the charge"? They are not true.

99. You made no attempt to clear yourself from the charge? I was prevented from doing so. I was ordered away.

100. Colonel Mackenzie goes on to say:—

Colonel Roberts thought the matter so serious, taken into consideration with previous reports, and history of this non-commissioned officer, that he forthwith, by letter, reported the circumstances to the Colonial Secretary.

You are emphatic in your statement that on the 25th February you were prevented from making any defence from the charge brought against you? Exactly. I have never been allowed yet to examine my accusers in this matter.

101. That boiled down is your complaint? And that I had permission to go to the register.

102. From whom did you get permission? I did not want permission.

103. How did you get authority—by general order, or what? By reason of my being a clerk in the office.

104. Had you permission to take notes from the register and copy from it on a piece of paper? Yes, if I thought it necessary—particularly this old register in the lavatory, which was not in use. If I have a return to make out, and the book I am supposed to get my information from is wrong, I must naturally go to another book to get the information.

105. *Mr. Darnley.*] You admit that you were looking at this register? No, I do not admit even looking at the register. I admit that the register was left open on the bath-stand. I hope the members of the Committee will visit the lavatory, because it is important that they should see the place. This old book was left wide open on a bath-stand at one end of the lavatory. Knowing it was out of its place, I closed it up and put it in the pigeon-hole. As I was closing it Barnwell came in and accused me of taking notes from it. If you go to the lavatory you will see that from the position of the bath behind the door it would have been impossible for Barnwell to have seen me do anything.

106. *Mr. McCourt.*] Was it simply on account of this last charge that you were dismissed, or were all charges taken into consideration? There is no such thing as taking all charges into consideration. They cannot do that. It is the last charge for which a man is dismissed.

107. No consideration is taken of any previous misconduct? It appears that they did so in this case; but I am willing to go into all of them for that matter.

108. Now, what defence do you make to the charge? That I told no lie in the first instance. Barnwell says he saw me taking notes; I say he did not, and there is no evidence to prove it. In the second place, Colonel Roberts says that I had no right at the register. I say that I had a right of access to the register by reason of my position in the office, and that my position in the office gave me the right to take notes from it. My next contention is that I have not yet been allowed to examine my accusers in the matter.

109. *Chairman.*] Were you suspended at once when Barnwell came in and saw you as you were picking up the book? Half an hour afterwards.

110. By Barnwell? No. When Captain Bouverie ordered me to take the papers, &c., out of my pocket, he said, "The matter resolves itself into this: Barnwell says you were taking notes from this book, and you say you were not. One of you is telling a lie. I am going down to the battery, and I shall report the matter to the Adjutant-General."

111. *Mr. Darnley.*] You stated a short time ago that when you were before the Major-General he, practically, did not investigate the charge—he said that the charge had been investigated, and that you had been dismissed by order of the Government behind his back? Yes.

112. If those were his remarks they would lead anyone to suppose that he knew nothing at all about the case, and did not desire to take any responsibility in the matter. But I see by his letter of 5th May, 1892, he says:—

His misbehaviour was duly investigated, with the result that a report was forwarded to the Minister, who approved of his discharge from the service. Mr. Jiffkins has been very troublesome, and I can see no reason to recommend a reconsideration of his case.

—? That was afterwards, and when I commenced to inquire what I was dismissed for.

113. But the Major-General said you had been very troublesome—taking into consideration, I suppose, all your misdeeds according to your defaulter's sheet—and he could see no reason to recommend any reconsideration of your case? It was not likely that he was going to fight against Colonel Roberts in the matter, or against Sir George Dibbs.

114. Possibly, if he had thought you unjustly dealt with, he would have recommended a reconsideration of your case? Well, he thought so when he wrote to the effect that owing to the continual friction it would be advisable to transfer the men and give me a final chance.

115. That was sometime before this letter? It was on 23th January, after I was suspended (22-2-92), that he wrote the letter.

116. When the letter was written in May, in what state of health was Major-General Richardson? It was directly afterwards that he took ill.

WEDNESDAY,

WEDNESDAY, 2 MAY, 1894.

Present:—

Mr. FULLER, | Mr. McCOURT,
Mr. DARNLEY.

G. D. CLARK, Esq., IN THE CHAIR.

Mr. William Barnwell sworn and examined:—

- Mr. W. Barnwell. 117. *Chairman.*] What position do you hold at present? I hold the position of warrant-officer on the Volunteer Permanent Staff, with the pay at present of colour-sergeant only, there being no vacancy as warrant-officer.
- 2 May, 1894. 118. For what length of time have you held that position? I have been on the staff ten years this year. I could not tell you the exact date of my promotion.
119. Had you any military experience before joining the forces here? Yes.
120. In the Imperial service? Yes; ten years in the Royal Marine Light Infantry.
121. You know ex-Staff-sergeant Jiffkins? Yes; I have known him for some years. I have known him ever since he has been on the staff.
122. You were over him in the service here, were you not? Yes, for some time. He has served at other places.
123. Do you remember his dismissal from the service? Yes; about two years ago.
124. And the cause of it? Yes, I remember the cause of it; but having dismissed the matter entirely from my mind, I should have to refer to the printed papers to give any evidence now.
125. Do you remember the charge which was made against him, and which led up to his dismissal? There were numerous charges. I remember the final charge.
126. I am asking you about the final charge? Yes; I remember.
127. He was charged with making a false statement and taking notes from an official register;—do you remember who made that charge against him? I made the original charge in the first instance, considering it my duty to do so.
128. What was the false statement with which you charged him? Sergeant Jiffkins said he was doing nothing, and afterwards prevaricated by producing a piece of paper upon which he was taking notes from this official register.
129. Did you see him taking notes from the book? I distinctly saw him taking notes from the book.
130. Where was the offence committed? In a room opposite the orderly-room used for a messenger and for lavatory purposes.
131. Was this book supposed to be private and confidential? Yes; all official registers are confidential, and only certain persons are allowed access to them.
132. Do you know if any orders were given either to Sergeant Jiffkins or anybody else who might be about, against touching or even taking notes from this particular official register? No, I do not.
133. Was the room in which this book was lying at the time a private room? It belonged to the offices of the Metropolitan, Western, and Southern Reserves. It formed part of the offices, and was used for the storage of old books and documents.
134. So that practically it was accessible to any of the persons about? Accessible to the whole of the staff.
135. Was it the lavatory that the book was in? It was used as a lavatory. It was used, in fact, for three purposes—for the storage of old documents and books, as a lavatory, and for the messenger to sit in.
136. Had Sergeant Jiffkins any right of entry to this room? He was ordered by Captain Bouverie to stay in there while he was under arrest.
137. Had he any right to be in the room at the time you say you saw him copying from this book? He had a right to be there. He was ordered to stay there, but he had no right to interfere with the books.
138. *Mr. Darnley.*] Do you mean to say he was under arrest when you saw him taking the notes? No.
139. Had he a right to be in the room at that time then? Yes, he had a right.
140. *Chairman.*] Do you know if the book was on the shelves, or if it was lying open, so that any one could look into it? I could not say where it was originally. When I first saw it the book was open, and Sergeant Jiffkins was taking notes from it. I went into the room promiscuously.
141. Was anyone else in the room at the time besides yourself and Sergeant Jiffkins? Not at that time.
142. Did you at once charge him with taking notes when you saw him with the book? No; he closed the book hurriedly, and went into the orderly-room. When I went in I asked him what he had been hunting up in the register.
143. What was his reply? His reply was, "Nothing."
144. Did you see the notes he took, or was supposed to have taken, from the book? I saw the piece of paper with a note on it.
145. But he denied having taken it from that book? He said he was hunting up nothing.
146. *Mr. Darnley.*] To what officer did you report the case? Captain Bouverie, Commanding Metropolitan, Western, and Southern Reserves.
147. Did Captain Bouverie investigate the charge? Yes.
148. Was the charge for taking notes, or for making a false statement? Both charges.
149. I mean the charge you made? Yes. Captain Bouverie investigated it at once.
150. I want to know what charge you laid against Sergeant Jiffkins—whether it was a charge of taking notes, or making a false statement? I told the Captain Commanding what I saw Jiffkins doing. It was for him to formulate the charge, not me.
151. *Chairman.*] Did you retain possession of the piece of paper he handed back to you? No; he did not hand it back to me.
152. But he showed it to you? After the case was referred to Captain Bouverie, Captain Bouverie ordered the whole of us into the lavatory; and after some prevarication and hesitation Sergeant Jiffkins produced this piece of paper. After saying he was doing nothing, he produced the piece of paper, which I recognised as the piece of paper on which he was taking notes.
153. But you could not be positive that he took these notes from the book that was lying there? I saw him writing on the book and putting down figures.

154. Was this register in use at the time? No; it was a back register.
155. About how long was it out of date? I could not say for certain; it must have been two or three years back—an old register.
156. Do you know what Sergeant Jiffkins was doing in this room at the time—was he sent there for any purpose? I do not know exactly.
157. Would there be any possibility of his having to refer to the register in fulfilment of any duties laid upon him? Not the slightest. He had nothing whatever to do with the correspondence contained in the register.
158. *Mr. Darnley.*] Did Sergeant Jiffkins ever have to make up a return which would necessitate his going to the book;—did his duty call upon him to do that at any time? I do not think so. I could not say at this length of time.
159. Was it a portion of his duty to make up returns? Not to make up returns—only to do ordinary official work, such as copying and the like of that; possibly to copy a return, or to do whatever he was told to do.
160. *Chairman.*] Is it not a fact that Sergeant Jiffkins had instructions to make out this particular return [*paper shown to witness*]. Do you recognise the figures? I could not say at this length of time; but I think Quartermaster-sergeant Molloy would be able to give information on the subject.
161. *Mr. McCourt.*] Is that a return such as Sergeant Jiffkins usually makes out? This is a return referring to arms.
162. *Chairman.*] Suppose he had instructions to make out a return of that kind, might he not, for the purpose of comparison, have occasion to refer to this register? All these records with regard to arms are kept in different books. He had no necessity whatever to refer to the register for that information.
163. Who was responsible for altering the charge against Sergeant Jiffkins from that of making a false statement to the charge of tampering with official records? That lies with my superior officer.
164. You simply charged him with making a false statement? I simply charged him with taking notes from the register, and also with making a false statement—the two charges. You will see in my report the words, “and afterwards prevaricated by producing a piece of paper.”
165. Who ordered Sergeant Jiffkins to turn out his pockets or to produce the papers? Captain Bouverie.
166. Was there any hesitation on his part to produce what he had? Yes. In the first instance he hesitated to produce the paper; but after considering the matter he pulled out the piece of paper and showed it to all present in the room.
167. Could you produce this register to the Committee? No. I am not certain whether the records are at the Barracks or not; it is so long since. The military authorities would be able to supply information on that point. The register is an official record of the military force.
168. *Mr. Darnley.*] On page 26 of the printed papers, Colonel Mackenzie, Assistant Adjutant-General, under date 4th May, 1892, says:—
- With reference to ex-Sergeant Jiffkins' statement as to the manner he was dealt with on 22nd February, 1892, I have the honor to state that Sergeant Jiffkins was brought before the Acting Commandant in the usual manner, on the charge of making a false statement.
- There is no reference there to the charge of taking notes? That is not for me to say anything about.
169. Then this memo. goes on to say:—
- That upon evidence being adduced, Colonel Roberts amended the charge in Jiffkins' presence to one of tampering with the records.
- ? That was on my evidence.
170. And it says “and this was then and there investigated”? Yes.
171. By Colonel Roberts? Yes.
172. Can you give us any information with reference to this investigation—as to how far it extended? Only what is in the printed papers.
173. *Chairman.*] Were you present at the investigation? I was present I believe.
174. And you gave evidence? I gave evidence.
175. Was Sergeant Jiffkins permitted to cross-question you in regard to the statements made? It is not military usage for one man to be allowed to cross-question another.
176. Is not it in accordance with military usage to give the accused an opportunity of stating his case? When you are brought up you are brought up together, and the Colonel, or whoever presides, asks one the reason for certain things, and then asks the other—each has an equal opportunity.
177. *Mr. Darnley.*] Did you produce the paper upon which Sergeant Jiffkins had taken the notes? The piece of paper was given back to Sergeant Jiffkins, and had been destroyed in the meantime.
178. When you were before Colonel Roberts at this investigation, it was practically your word against that of Sergeant Jiffkins? Not at all. Look at the evidence.
179. You had no material evidence to offer that he had been taking notes? The material evidence was taken by the Officer Commanding Metropolitan, Western, and Southern Reserves in the lavatory. That was the material evidence that was taken—immediately after the original report by me.
180. *Chairman.*] The evidence in substantiation of your assertion, that you had seen him copying from this register, was the piece of paper he produced? The evidence in substantiation was the fact of Captain Bouverie and Quartermaster-sergeant Molloy having seen the piece of paper.
181. You were the only person who saw him copying? Yes.
182. And the only evidence in corroboration of your statement was the paper he produced upon which certain figures were written? The only circumstantial evidence, of course, would be the piece of paper; but that was seen by Captain Bouverie, and recognised by him in his presence, and also that of Quartermaster-sergeant Molloy.
183. *Mr. McCourt.*] Did Sergeant Jiffkins give the piece of paper to Captain Bouverie? Sergeant Jiffkins handed it to Captain Bouverie, and Captain Bouverie handed it back to Sergeant Jiffkins, having viewed it.
184. What were you doing when you saw Jiffkins—were you watching him? No.
185. What were you doing in the lavatory? I could not say what I went into the room for. I went in quite casually.
186. Was it your duty to be there? It was my duty to be everywhere in the office.
187. You were not watching him then? Not at all.

Mr.
W. Barnwell.
2 May, 1894.

Mr. W. Barnwell, 2 May, 1894. 188. Had not you and Jiffkins disagreements previous to this occurrence? I had no disagreement with Sergeant Jiffkins—only what he made himself.

189. But had you any disagreement with him? None at all.

190. Did you not, on the 9th January, 1890, join in a memo. to this effect:—

We, the undersigned, protest against doing duty with Sergeant Jiffkins, through his general disagreeable, cynical, underhanded, and *quid-nunc* manner being obnoxious to them in the extreme.

—? Yes; but I had no personal disagreement. I objected to having him under me. If a man chooses to quarrel with you, you are not obliged to quarrel with him.

191. I ask you, had not you any disagreement with him previous to this? I had no disagreement with him.

192. Why did you report him? Because it was my duty.

193. But he must have done something to you? No; that is where it becomes personal. That is the difference between a personal matter and a military duty.

194. If he was a capable officer, and a nice officer to work with, why did you report him? Because it was my duty to do so in the interests of the service.

195. You say in the memo. just read:—

We, the undersigned, protest against doing duty with Sergeant Jiffkins, through his general disagreeable, cynical, underhanded, and *quid-nunc* manner being obnoxious to them in the extreme.

What was his underhand action referred to there? It is borne out in the evidence.

196. I want your answer? I cannot remember the circumstances after five years have passed.

197. Surely, having made this report, you can remember generally upon what it was based? I cannot remember things which occurred five years ago against any man in this world, and I must respectfully decline to answer a question unless I am certain.

198. You do not remember—is that it? After the lapse of time I do not remember.

199. That memo. may have been true, or it may not have been true? Not at all; it was perfectly true.

200. How can you say that it was perfectly true, if, after the lapse of five years, you do not remember the circumstances? Because I have documentary evidence which recalls the circumstances to my mind. I can call nothing to mind only what I see in print or in writing, and then I recognise the evidence. The matter has been dismissed from my mind for so long.

201. *Chairman.*] Is your memory fairly good? My memory is very good.

202. *Mr. McCourt.*] The printed papers, page 3, contain this statement:—

The Court of Inquiry held on 24th January, 1890, was of opinion that the quarrel might have been checked before reaching such a crisis by the exercise of more tact and firmness on the part of Warrant-officer Barnwell.

Was that the decision of the Court of Inquiry? Yes.

203. They blamed you for want of tact and firmness? I do not know about blaming; that was the decision.

204. Would that not carry a certain amount of blame? You can get that information from the military authorities.

205. I ask you if what I have just read was the finding of the Court? Yes.

206. Would not that carry a certain amount of blame? It might do.

207. All this time these military quarrels were going on between you and Sergeant Jiffkins? There was no quarrel between me and Sergeant Jiffkins.

208. In regard to neglect of military duty and disagreeableness? Notice the origin of the quarrel in that case. The quarrel originated not between me and Sergeant Jiffkins, but between Sergeant Jiffkins and Moyens.

209. You joined in saying that Sergeant Jiffkins, was disagreeable, cynical, and underhanded? I joined in that memo.; but as to joining in the quarrel, I object to that term.

210. Do you wish the Committee to understand this, that although you reported Sergeant Jiffkins for neglect of military duty you were still on friendly terms with him personally? Not friendly. I should not take him home and make a bosom friend of him at this time; but I had no ill-will or animosity against him. I gave him every chance to do his duty, but he would not leave me alone—he kept irritating me.

211. At the inquiry before Colonel Roberts, do you remember whether Sergeant Jiffkins was called upon to make any defence in reply to your evidence? He was given a good opportunity.

212. He was asked if he had anything to say in his defence? Yes.

213. Did he say anything, do you remember? I cannot remember the exact circumstances.

214. You are sure he was asked if he had anything to say in his defence—that is the usual thing, is it not? It is the usual thing. I could not say for certain now, after a lapse of two years, whether Colonel Roberts put it to him exactly in those words.

215. To the best of your belief was he called upon? To the best of my belief, he had an opportunity of defending himself.

216. *Mr. Darnley.*] It is stated on page 4 of the printed papers:—

On the 4th June, 1889, Sergeant Jiffkins reported to Warrant-officer Barnwell the irregularities carried on by the late Quartermaster-sergeant Moyens, and purchasing wood and coals, and charging the same to this Department for cooking purposes in the office (orderly room).

Would it be your duty to forward that report on to head-quarters? If I received a written report it would be my duty to forward it on.

217. At that time you were on duty in the same office with Jiffkins and Moyens? Yes.

218. And it would be your duty to forward that report on? Yes.

219. You recognise that that is a very serious charge against Moyens? Yes, but a groundless charge, I reckon.

220. An official minute signed "A.H.," referring to the paragraph just read, says:—

This matter has not been forwarded to Military Staff Office to be dealt with, though forming a grave charge apparently.

—? That minute is merely a *précis* of the papers. It is an explanation of their contents by a clerk.

221. But he says that this matter was not forwarded to the Military Staff Office to be dealt with;—if it was your duty to forward it, can you tell us why you did not send it on? I do not remember having seen

Mr.
W. Barnwell.
2 May, 1894.

seen the report in writing. No report was rendered in writing. It might have been a verbal report. In any case, it was a groundless charge.

222. At the end of paragraph 5, page 4 of the printed papers, in which Sergeant Jiffkins states that he reported to you the alleged irregularities on the part of Moyens in regard to the purchase of wood and coal, Sergeant Jiffkins states that the outcome of his action in thus reporting was the joint complaint by you and Moyens against him on the ground of his disagreeable and cynical manner; if that report were made by Sergeant Jiffkins in reference to Moyens purchasing wood and coal, and you failed to forward it to the proper authorities for investigation, and afterwards sent a joint protest against doing duty with Sergeant Jiffkins, do you not think that fact reflects very much upon your conduct and that of Moyens? It would if such were the case. One counterbalances the other; that is to say, it cuts both ways.

223. I notice that Sergeant Jiffkins reported this matter about the wood and coal on the 4th June, 1889, and the joint protest of yourself and Moyens was made on the 9th January, 1890—some six months afterwards? Does that not show a desire on the part of Sergeant Jiffkins to hunt up all these things—these false and groundless charges?

224. We are not in a position to judge, because this matter of the purchase of the wood and coal has not been investigated? That is not for me to give information upon.

225. But it is a matter as to which you might call to mind whether or not you forwarded that report? But if I had never received a written report. Perhaps there is documentary evidence. If Sergeant Jiffkins could show me a report or a copy it would recall to my mind whether I did receive it or not.

226. But if you did receive a report of that kind you would have sent it on? Yes; it would have been my duty, if there was any foundation in the report.

227. Is it at your discretion to suppress any report for which you think there is no foundation? Not to suppress it.

228. But is not that what it means;—you say it would be your duty, if there was any foundation for the report? If there was any foundation in the report.

229. Is it your duty to judge whether or not there is any foundation, or should you send it on to your superior officer? It is my duty to judge whether there is any foundation in the report, knowing personally the circumstances of the case.

230. Prior to forwarding it on? Yes; that is to say, as to whether it refers to military matters or not. Anything connected with a private matter, of course, I should not have authority to forward on to a military officer.

231. Would you consider a report of that character a private matter? I should.

232. When one officer charges another with purchasing wood and coal, and charging the same to the Department for cooking purposes, you do not think it necessary that such a matter should be investigated by your superior officers? I said before I did not remember ever having seen the report.

233. I am asking you whether you would consider it a private matter, or a military matter, to be investigated by your superior officer? If such a charge were brought by one member of the staff against another, it would be my duty then to forward it.

234. *Chairman.*] You say that there was no animus on your part against Sergeant Jiffkins, and that you had no personal feeling against him? No personal feeling whatever.

235. Is there any reason why it came about that you were so frequently charging him with offences of some kind? Because Sergeant Jiffkins would not do his duty in a proper manner without insulting me, and making all sorts of difficulties. Instead of assisting me in my duty, he put all sorts of difficulties in my way.

236. Do you remember the quarrel between Sergeant Jiffkins and Quartermaster-sergeant Moyens, at West Maitland? Yes.

237. According to the finding of the Court, Moyens was the chief offender—he threatened to knock Jiffkins' teeth down his throat? Yes; he was the chief offender on that occasion.

238. And you were reprimanded also, it being stated that you could have prevented a good deal of the trouble if you had been a little more firm? I was not reprimanded for that.

239. Is it not a fact that, as the outcome of that trial the three of you were transferred from West Maitland? That is a fact borne out in the evidence.

240. And that the three of you were supposed to come down to Sydney at your own expense? Those were the orders issued.

241. Is it not a fact that, in spite of that finding, you passed Moyens down in the ordinary way, at the expense of the country? It is not a fact, to my knowledge. I do not remember having done so. I had no authority to do that.

242. And you do not know whether you did it or not? I could not say at this time. I am of opinion I did not do it. It is five years since the occurrence of all these little details.

243. What did you mean by writing this letter of the 25th January, 1890, page 14, of the printed papers:—

I have the honour to respectfully request that the General Officer Commanding will be so kind as to allow me to withdraw my letters of 20th and 21st instant, on the subject of "Charges against Staff-sergeant Jiffkins," evidence at Court of Inquiry, &c.

—? I had committed a breach of military discipline. It was for that that I was reprimanded.

244. Although you have said that you did not quarrel with Sergeant Jiffkins, does it not abundantly appear that something very much like quarrelling was constantly taking place between you? In the military service a subordinate is not supposed to quarrel with a superior, when he is given an order.

245. After the recommendation was made that you should be separated, do you know who was responsible for the three of you being transferred to Sydney together? I presume the General Officer Commanding. He is in charge of the whole Military Force, and I suppose he would be responsible.

246. *Mr. Darnley.*] Was Colonel Roberts at that time in command? No; I think Major-General Richardson. Colonel Roberts only assumed command in the absence of Major-General Richardson.

247. *Chairman.*] In reference to the occurrence at West Maitland, in which you admit that Moyens was the aggressor, you presented a railway pass for Moyens to the staff-sergeant for signature? I do not think I did. I could not say for certain. The pass would have to be accounted for, and in that way it would be brought to the knowledge of the military authorities, who would settle the question at once as to the correctness of the matter. Returns of railway passes are always rendered to the authorities, and compared with the railway record. There would not be the slightest chance of my giving a railway pass and the fact not being found out.

- Mr. W. Barnwell,
2 May, 1894.
248. *Mr. Darnley.*] In your letter of the 25th January, just referred to by the Chairman, you say that you were greatly excited by the proceedings of Staff-sergeant Jifkins in hunting up outside evidence for the Court of Inquiry. What had you to fear? Having seen him about the town with private individuals, and having been given information about the inquiry—that he was travelling all over the district hunting up evidence as to the private character of this deceased non-commissioned officer.
249. You were not afraid of Sergeant Jifkins hunting up evidence against yourself? Not at all.
250. Only against Moyens? I did not care to be dragged into the quarrel. I wanted to be kept out of the matter as far as the private part of the business was concerned.
251. You were evidently aware of something which would not be very creditable to all parties concerned, had it been brought forward? It did not refer to me; and Moyens' private life, as far as it has no regard to military duties, does not, or should not, trouble anyone in the military service.
252. If it did not trouble you what had you to fear? Being brought in to give evidence, and one thing and another. I wanted to have nothing to do with any private quarrel between Jifkins and Moyens in regard to private matters that I knew nothing about. My concern was for military duty only.
253. I understand that your concern was in military matters, and that is the reason I have asked the question why you were so greatly excited about these other matters; because if it did not come within your duty to consider them, you should not have had any fear whatever? On the Volunteer Permanent Staff we have a dual capacity, as it were. We have a military capacity, and we are allowed to go to our homes and become private citizens. We have both interests to consider, and that renders it rather difficult sometimes.
254. *Chairman.*] It comes right back to this then, that Staff-sergeant Jifkins was discharged from the service simply, according to your evidence, for making a false statement in regard to having copied from this official register? Not necessarily. Sergeant Jifkins was discharged for general behaviour since his coming on the Staff—during the whole time of his being on the Staff. You will notice that in some of the General's letters. There are so many papers that you do not know where to refer to.
255. Do you know what the third entry in Sergeant Jifkin's defaulter's sheet, on page 2 of the printed papers, "Insolence to Warrant-officer Barnwell," refers to? There should be some evidence concerning it in the papers.
256. But surely if this matter has been so notorious and there has been so much correspondence passing, your recollection would not fail you in all these particulars? Has my recollection failed. Could you keep all that is contained in these papers in your head for five years, and at the same time attend properly to your ordinary military duties? Is such a thing to be expected?
257. *Mr. Fuller.*] The question is whether you remember yourself, not whether the Chairman could remember? I ask is it possible?
258. *Chairman.*] And you do not remember anything about this charge against Sergeant Jifkins of insolence to yourself? I do not remember after the lapse of time.
259. *Mr. McCourt.*] In a letter by you to the Adjutant-General dated the 1st December, 1891, you say:—
I had previously received orders from Captain Bouverie to point out errors to instructors, and warn them to initial all alterations in scoring-book. Sergeant Jifkins being present, I transmitted the Adjutant's orders in the words, "In future, Sergeant Jifkins, all alterations in scoring-books are to be initialled." He replied, "I do do it." Considering the reply unnecessary, I took Sergeant Jifkins before the Adjutant.
- Do you consider it a breach of duty to make that reply? If you had evidence in your hands of a thing not having been done and one of your subordinates said, "I do do it," meaning that he had never failed in doing it, would you consider that that was a proper way to answer?
260. Your reply is that you had evidence before you that he had not initialled the book? Yes; or else why is the book sent out?
261. That was the reason you took him before the Adjutant? That was the reason—the answer was not necessary.
262. The answer was not true? The answer was not true. He could not have done it if there was evidence there that it had not been done.
263. *Chairman.*] You said that when Sergeant Jifkins took the piece of paper out of his pocket and handed it to Captain Bouverie, Captain Bouverie handed it back again to him; do you remember making any remark then about Sergeant Jifkins. Did you make any direct reflection upon him in any way? I do not think it would have been possible for me to make any remark to Sergeant Jifkins in the presence of a superior officer.
264. Do you know why Colonel Roberts amended the charge? It would not be possible for me to know that.
265. Do you remember what Colonel Roberts said to Sergeant Jifkins at the time he remanded him. Do you know if he was remanded to appear before Major-General Richardson? I remember Colonel Roberts saying something about Jifkins having written over his head to a superior authority.
266. But was not Sergeant Jifkins remanded that the case might go before Major-General Richardson for his decision? He was remanded to superior authority. That meant Major-General Richardson.
267. *Mr. Darnley.*] The occasion of the quarrel between Moyens and Jifkins which you reported on the 6th and 10th January, 1890, was the first time that you had occasion to report Sergeant Jifkins according to the defaulters' sheet, which, I suppose, is a correct record—that would be the first charge you brought against Sergeant Jifkins? Yes.
268. That was subsequent to the charge being made by Jifkins against Moyens in reference to the purchase of wood and coal, &c. You also reported the "insolence to Warrant-officer Barnwell," on the 17th April, I suppose? Yes, I must have done that.
269. You also reported the cavilling at orders on the 17th December? Yes.
270. And the neglect of duty on the 12th January, 1892? Yes.
271. So that you reported five charges between January, 1890, and February, 1892? Yes.
272. *Mr. McCourt.*] If you had been on friendly terms with Sergeant Jifkins at the time when he said "I do do it," would you have considered it your duty to have brought him up? Perhaps, if he had been a non-commissioned officer whom I could have trusted, I might have said, "Here is evidence that you did not do it."
273. You would have done that instead of taking him before the Adjutant? Perhaps. I might have considered the circumstances anyhow.

274. But you could not trust Jiffkins—is that it? At that time I could not trust him.

275. *Chairman.*] Sergeant Jiffkins in his letter to the Major-General, paragraph 8, page 4, of the printed papers, says:—

Mr.
W. Barnwell.
2 May, 1894.

The awards of above Court of Inquiry were, Warrant-officer and late Quartermaster-sergeant Moyens and self to be transferred to Sydney from Maitland, at own expense (see General Order No. 26, paragraph 1, of 12th January, 1890), but, nevertheless, Warrant-officer Barnwell, on the 14th February, 1890, made out a railway order for late Quartermaster-sergeant Moyens to travel to Sydney on duty; and, further, prevented a report on the same being forwarded from me, 18th February, 1890, to Assistant Adjutant-General for the information of the General Officer Commanding.

Do you say you have no recollection of making out this railway order for Moyens? I have no recollection at the present time of having done so. If I had made out the pass it would have been certain to have come under the notice of the military authorities through the railway pass return. Therefore, if I had had the mind to give him a railway pass with the intention of his escaping the punishment and getting his passage free, there would have been no means of preventing the military authorities from finding it out.

276. So you can say that you are almost certain you did not make it out? I have no recollection whatever of the circumstance having come under my notice as regards the railway pass.

277. How do you account for this passage in the "Minute Paper," page—

G, 7, and 8.—Proceedings of Court of Inquiry attached, on which General Officer Commanding decided. A free pass should not have been issued.

Is not that evidence that the free pass had been issued to this man? There is no evidence to show that the pass was issued.

278. But is it not assumed there that the pass was issued? That lies with the military authorities. If that pass was issued they could have deducted the cost of the pass. There is really nothing in that matter at all. If the man made out a pass himself and came down on a railway pass, and the authorities would not allow it, they could easily stop his pay for that amount. There was nothing in that even if the pass was made out.

279. There is a good deal in it for this reason: Here are two men quarrelling, and according to the decision of the Court one of them is the aggressor and chief offender; and you yourself have admitted that to be so. Although those two men, as well as yourself, who were blamed as well for not stopping the quarrel more quickly, were ordered to come down to Sydney at their own expense, according to the statement made by Sergeant Jiffkins, which you cannot deny, and which in this minute is presumed to be true, you made out a pass for the man who had been the chief offender? I did not say that I made it out, and there is nothing to prove that I did.

280. Do you deny it? I say I have no recollection. It is not necessary for me to deny a thing which did not happen—that I have no recollection of.

281. But what could this minute mean unless you had made out the pass? It does not follow that I made out the pass.

282. Could anyone else have made it out? In any case the Commanding Officer of the district would have to sign it.

283. But whose duty would it have been to make out a pass? Anyone in the office requiring a pass makes one out by taking a blank form and filling in the stations, and the Commanding Officer has to initial it.

284. The records of the office would show whether or not a pass was issued? I do not know.

285. Is it a fact that Sergeant Jiffkins himself made out the pass under your instructions? I could not say. If I have no recollection of the circumstance, how can I say anything about it?

286. Do you desire to make any statement in addition to your evidence already given? I would like to point out some discrepancies in the printed papers.

287. *Mr. McCourt.*] Do the facts to which you desire to refer already appear in the printed papers? Yes.

THURSDAY, 3 MAY, 1894.

Present:—

MR. McCOURT,

MR. DARNLEY.

G. D. CLARK, Esq., IN THE CHAIR.

Charles Fyshe Roberts called in, sworn, and examined:—

288. *Chairman.*] What position do you occupy in the Public Service? I am Military Secretary.

289. You knew Sergeant Jiffkins? I have seen Sergeant Jiffkins several times. To the best of my recollection the first time I saw him was some time in 1892.

Colonel
C. F. Roberts.
3 May, 1894.

290. You remember the circumstance of his dismissal from the service? I do not know that he was dismissed until some time after I recommended his dismissal. His dismissal was carried out by General Richardson.

291. Do you remember what charge led to his dismissal? He was up before me on a charge, and I cautioned him that it would be his last chance if he was brought up again. That arose from some disagreement, if I remember rightly. Afterwards he was brought up before me for making a false statement to Captain Bouverie, I think it was; and while that charge was being investigated it transpired that he had been looking at some books that he was really not entitled to look at, or it was not his duty to look at.

292. He was charged with making a false statement. He was accused by Warrant-officer Barnwell with taking notes from an official register, and he denied having taken any notes from the book? That was partly it; but I think the false statement had reference to something else before that. I cannot remember exactly, not having had the papers before me to refresh my memory. To the best of my recollection, he was brought up before me for making a false statement, and during the examination it turned out that he had been found looking at one of these registers. That is distinctly against the rules. A man should not do that unless he is ordered to do it, and it is part of his duty. That was added as part of the crime.

293. But was not the false statement a denial of having copied anything from the book? I think it was something of that sort, as well as I remember. I know Captain Bouverie brought him up for making a false statement to him.

- Colonel
C. F. Roberts,
3 May, 1894.
294. You have no knowledge personally of his having copied from this book? No; it took place in quite another office. It took place in Phillip-street, and he was brought up before me at Dawes' Battery. He was brought up before me because I was Acting Commandant.
295. The statement was made by Warrant-officer Barnwell? Warrant-officer Barnwell was one of the witnesses, and there was somebody else. I remember Captain Bouverie and Warrant-officer Barnwell, and, I think, another witness was Garrison Sergeant-major Tideswell.
296. Was the official register in use at the time? I suppose it would be at that time. It might have been, but I do not know. The reserves offices were down in Phillip-street, quite distinct from the headquarters office, and any work they had would be done in their own offices under Captain Bouverie.
297. Do you know if the register was of a private and confidential character? I would not say that it was private and confidential, but it was a Service register, not supposed to be looked into unless by order. For instance, if you wanted to look up anything, you might give direct instructions to a sergeant or somebody—generally a confidential clerk—to look up in the register so-and-so, or so-and-so.
298. Do you know where the register was at the time? From what I remember from the evidence, it was in a sort of an out-office they had, or a part of their offices—a place that was being used as an office, I think, or a lavatory.
299. Was the book lying open in the lavatory? I think the lavatory at that time was being used as part of the office; at least to the best of my recollection the evidence before me proved that.
300. But you are not sure about that? No, I cannot be certain; but to the best of my recollection one of the sergeants said he had been himself using the book in that place, and had left it open at the middle or beginning and when he came back it was open at a totally distinct and different place.
301. Had Jiffkins any right to go into that room? He might have had for all I know. I do not know exactly what his duties were.
302. Did you see the paper upon which he had written what was supposed to have been copied from the book? There was a small piece of paper produced at the inquiry which was said to be the piece. I cannot remember whether it was the particular piece of paper itself with the writing on, or a corresponding piece of the envelope—one of the two. What I do remember is this, that there was a date on this piece of paper, or so it was stated in the evidence, some five or six years back. I think it was eighty something.
303. *Mr. McCourt.*] Is this anything like the paper [*Paper handed to witness*]? No.
304. *Chairman.*] Is that a return that Sergeant Jiffkins received instructions to make out in the very room where this book was lying? I cannot tell you that, because I had nothing to do with the reserves. The only way that I remember anything about this matter is that Jiffkins being a staff-sergeant his case had to be referred to the Commandant, and as the Commandant was on leave, and I was acting for him, Jiffkins was brought up before me, as any other staff-sergeant would have been for having committed a crime of some sort. This paper I know nothing about.
305. You could not tell whether, in making out this return, Jiffkins might possibly have had to refer to this particular register? He might or he might not, that is a thing I could not say anything about. This paper does not look a bit like an official document. The person who might give the best evidence in regard to this paper would be either Warrant-officer Barnwell or Sergeant-major Tideswell, who would understand more about these things than I do, because this is purely Rifle Reserve Company business. I may say that I gave no instructions in reference to this return.
306. Sergeant Jiffkins was charged with this offence of making a false statement and brought before the proper authorities? Yes. First of all he was brought before Captain Bouverie, as would naturally be the case, and Captain Bouverie brought the case on to the headquarters' office.
307. When he was brought before the proper officers was Sergeant Jiffkins permitted to make his defence? He was allowed to say all he could before me; but it was not very much that he could say in his defence.
308. *Mr. McCourt.*] You called upon him? Yes; he could say as much as he desired. In fact, he talked so much that we were obliged to put an end to it.
309. *Chairman.*] He was allowed to cross-question his accusers? He was allowed to ask them any questions. I can remember one question distinctly. He asked, "Can you produce the piece of paper that I wrote upon?" I remember that distinctly. Some three-cornered bit of paper was brought out which I think one of them said they had taken out of his pocket.
310. *Mr. McCourt.*] He had ample opportunity of clearing himself—you are distinct upon that? As far as I am concerned, I let him ask all the questions I thought were necessary. When I had made up my mind about the case, there was no further necessity to go on.
311. *Chairman.*] All your knowledge of this particular case was based upon a statement by Captain Bouverie? I think there were three witnesses against him.
312. *Mr. Darnley.*] Was not Quartermaster-sergeant Molloy one of the witnesses? Yes. I remember now it was Quartermaster-sergeant Molloy.
313. *Chairman.*] Captain Bouverie's knowledge must have been based upon the statement of Warrant-officer Barnwell, who has himself admitted that he was the only person present in the room at the time Jiffkins was said to have been copying from the register? To the best of my recollection Captain Bouverie said he went into this charge, and Sergeant Jiffkins denied ever having done anything of the sort, and eventually, before Captain Bouverie, they took the piece of paper out of his pocket.
- 314-15. Do you know why the charge was altered from one of making a false statement to the charge of tampering with official documents? I altered that myself, because the latter was, in fact, an additional misdemeanour. When Jiffkins was brought before me, it was proved that he had no business there. Barnwell and Molloy said they knew he had no business there. I think it was Molloy who was taking the extract from the book, so that he would be the only person who ought to have had charge of it at that time.
316. Is it possible that the register that Jiffkins was supposed to have copied from was not the book that it was represented to you to be? That I could not say. They told me most distinctly it was the book that Jiffkins had no right to. In fact, as far as I remember, Molloy said, "I was using that book during the day, and had left it open at a certain place, and when I went back I found the book turned up in another place"; and one of them saw Jiffkins taking notes, whereupon, I think they went on to say, he hurriedly shut up the book.
317. Are you aware of any personal animus between Barnwell and Jiffkins? According to the evidence produced before me they had several disagreements. To the best of my recollection Jiffkins said he could not serve or could not work under Barnwell.

318. After the trouble at West Maitland the three men were transferred to Sydney. The Major-General recommended that they should be separated, and wrote this minute :—

Colonel
C. F. Roberts.

Seeing the long-continued friction between W.-O. Barnwell and this N.C.O., it would perhaps be well to transfer him, and thus give him a final chance of re-establishing himself.—J.S.R., M.-G., 28/1/92.

3 May, 1894.

They were all three sent to Sydney and kept together in the same office. Do you know who was responsible for keeping them together after it had become apparent to the superior officers in the service that they could not get on together? I should say either the Reserves Staff or the Headquarters Staff. I should think the Adjutant-General would be the only person who could direct that they should be separated.

319. I suppose, in your judgment, Captain Bouverie was a thoroughly reliable man? Oh, yes, I think so, from all I have known of him—and I have known him a good many years.

320. If you will look at the bottom of page 23 of the printed papers you will find that Captain Bouverie states in a memo., "Whilst I was taking this down Mr. Barnwell called S.G.S. Jiffkins a mischief-making cur. He also called him a thing." You would hardly think that was proper language for a superior officer to address to one of his staff? I should certainly say not; it would be most improper language.

321. And it is hardly likely that very cordial relations should subsist between those two officers if that kind of thing were indulged in? This seems to have taken place some time after Sergeant Jiffkins was before me.

322. I suppose that if an officer in the position of Warrant-officer Barnwell had a personal animus against a man under him, he could not only make things very uncomfortable for that man, but he could frequently find opportunities of bringing complaints against him? If he were a man of unworthy motives like that, of course he could. It would be easy enough to make a small crime into a big one if he could get sufficient evidence.

323. On page 12 of the printed papers, Colonel Mackenzie says :—

Warrant-officer Barnwell, of the Permanent Staff, and attached to the Northern Reserves, has seen fit to interfere with instructions, evince undue animus, cavil at decisions, and finally ignore his Commanding Officer.

If that is the case, do you not think it is just possible that in these frequent charges against Jiffkins, Barnwell may have been actuated more by personal feeling than from any desire to uphold proper discipline in the service? I do not think it would be to the benefit of the service to retain a man of that disposition.

324. In a letter by you to the Principal Under Secretary, dated the 5th June, 1892, speaking of Sergeant Jiffkins, you say :—

On the 12th January, 1892, he was brought up for neglect of duty. The case was a serious one, connected with non-delivery and posting of letters, and for this he was reduced to a lower grade of pay.

Was it the duty of Sergeant Jiffkins to attend to the delivery of letters, and so on, neglect in respect of which is here complained of? In that case, I remember the evidence proved to me that he had been distinctly told to deliver certain letters that day.

325. And he had failed to do so? Yes; he was told to deliver the letters by a certain hour, or by a certain day? I know there was a failure to perform the duty, and he went away. He was absent for a considerable time. Instead of delivering the letters he failed to do so.

326. Had you any evidence of the incompetence of Sergeant Jiffkins during the time he was in the service? No; I was only acting as Commandant from the 1st of January to the end of February, while General Richardson was away. In fact, the first time I saw Jiffkins was on the occasion of the inquiry of the 12th January, 1892.

327. You are aware that he had a long military experience in the Imperial service? I was not aware of that at the time. I knew he had been placed in the position, and having been placed there by the General I supposed he ought to be a fit person. With regard to this charge, I say in my letter, to which reference has just been made, that Captain Bouverie had given him notice that if he continued to go on in the way he was going on, it might be necessary to recommend his dismissal. It was because he had been cautioned so recently that I cautioned him that the next time he came before me after January it must be his last chance.

328. Were you annoyed at Jiffkins at the time when the case came before you, in consequence of his having written direct to the Major-General? I was not annoyed. I pointed out to him that he had written a letter to the officer commanding the garrison, and at the same time he had written a similar letter to the General, who was on leave, which was not a correct thing to do.

329. Had he not permission to write direct to the General? That I know nothing about. He afterwards told me had, but that would make no difference to me. Jiffkins, with his long knowledge of the service, ought to have known that the proper way to forward any grievance was through the proper authorities. As far as I can recollect, his letter to the Major-General did not go through the Adjutant-General.

330. At the inquiry at which you presided—the last inquiry—was not Jiffkins given to understand that no final decision would be come to until the General returned? No, distinctly not. I have a most distinct recollection of saying that I would report the matter to a higher authority. For the time being, I was the highest authority, and it could only go to one other authority, and that was the Chief Secretary, and, as well as I remember, on the very day that Jiffkins was before me, I wrote the letter to the Chief Secretary.

331. *Mr. McCourt.*] Do you know whether Sergeant Jiffkins was, generally, a good officer? I had not sufficient knowledge of him to say. The whole of my knowledge of Jiffkins was from the middle of January to the end of February.

332. In one of his letters, on page 27 of the printed papers, Sergeant Jiffkins says :—

On 2nd April, 1892, Sergeant Jiffkins was informed unofficially that the charge upon which he had last been dealt with (paragraph 6) had been added to by charges of "taking notes from a register," and "furnishing information outside to someone."

Sergeant Jiffkins has never been officially informed that any such charges were against him, and if they exist he has never been given an opportunity of replying thereto.

Is that true, or is it not true? It is it not true. The charge itself disproves the statement. The charge is entered in these words, "making a false statement and taking notes from an official register."

333. Then it is not true that he had not an opportunity of defending himself? I do not know whether he had before the General afterwards.

334.

- Colonel C. F. Roberts. 334. But before you? He had every opportunity of clearing himself from the charge of taking notes from the official register. I added that charge after I had heard the evidence of Captain Bouverie—that, in addition to making a false statement, he had done this.
- 3 May, 1894. 335. In recommending his dismissal did you take into consideration the previous charges against him? Certainly; as far as I was concerned. Within three months there had been three cases against him, as far as I knew.
336. If the last charge against him of 22nd February had stood alone, would you have considered it so serious that you would have recommended his dismissal? Well, no. I might possibly have said, "I really cannot stand this; you can have another chance; the next time you will be dismissed."
337. Would you have taken the extreme course of recommending his dismissal if that charge had stood alone against the man? I most likely would have reported it. I might not have recommended dismissal, but I would have requested that some special notice might be taken of the matter.
338. But you would not have gone so far, if that charge had stood alone, as to dismiss the man for it? No.
339. Therefore, you considered the previous charges for which he had suffered? I considered that his previous conduct had been so bad, and there having been three distinct charges against him three months running, namely, December, January, and February, I thought it was of no use having a man of that sort in the Service.
340. Did it occur to you that these officers—Moyens, Barnwell, and Jiffkins—having been quarrelling and fighting for a long while, one was as bad as another? That could not occur to me. All I knew from Jiffkins was that he could not serve with one of these men. All this previous knowledge in reference to his quarrelling came out through the rest of the staff. I knew nothing of my own personal knowledge, except what I heard from these people. As to his fighting and quarrelling with Barnwell, and these other things, they occurred previously.
341. Have you looked through these printed papers? I have only glanced over them now. I remember seeing them when they first came out.
342. Did you look over them then? I did.
343. In view of what you have seen in the papers, do you not think Barnwell, Molloy, and the others were all to blame to a certain extent, having been fighting one with the other? I do not know so much about Molloy, but—perhaps I have no right to make this remark—I do not think Barnwell has done his work as he should have done it.
344. Having had a quarrel with Jiffkins, and Jiffkins being a quarrelsome man, do you not think that perhaps Barnwell was a little more strict towards him than he might have been? That might have been the case. If you find a man always giving you trouble, you naturally keep your eyes specially upon him. If you do not I do not consider that you are doing your duty.
345. One of the charges brought against Jiffkins was something to this effect—that Barnwell gave him instructions that when there was an alteration made in the book he should initial it, and Jiffkins in reply said, "I do do it";—on that Barnwell immediately had him arrested and brought up on a charge of cavilling at orders;—if these men had been working harmoniously together, do you think a charge would have been laid on such a slight statement as that? It depends upon the tone in which the remark was made. You can say a thing nicely, and you can say a thing insolently if you like.
346. When Jiffkins was brought up on a charge of taking notes from the register the only defence he could possibly offer would be a simple denial;—he had no witnesses, and it was simply his word against that of Barnwell's? Yes; and there was the fact that they did find something in his pocket—some extract or some paper.
347. To the best of your recollection, was there anything on the piece of paper that was taken from the book? That was a matter which could have only been decided by reference to the book which was kept in Phillip-street, and the charge was investigated at Dawes' Battery. The date on the piece of paper may or may not have been in the book.
348. But was not the piece of paper taken as corroborative evidence of his guilt? Certainly; they declared that that was the piece of paper upon which he had taken the notes, and that it was found in his hand. When we investigated the case it was very clear to me, from the evidence produced, that some extract had been taken from the book, or at any rate that the book had been searched by an unauthorised person.
349. Were the records in the book of a private nature? All military matters are more or less confidential, and, as I said before, only an authorised person should go and take extracts.
350. Do you produce the butt of a railway pass-book in which there is an entry dated 14th February, 1890, of what purports to be a second-class railway pass from West Maitland to Sydney, granted to Staff-Sergeant J. Moyens on duty? Yes. There is a blank for the signature of the Lieut.-Colonel Commanding the Reserves, and across the butt is written the word "cancelled" with the initials "A. W.," which are probably the initials of Colonel Wilkinson.
351. Do you know the handwriting in the butt? No.
352. *Mr. McCourt.*] Do you remember the nature of any of the questions put by Jiffkins to Captain Bouverie when you held the inquiry? I think Jiffkins proved that Captain Bouverie had not seen him taking notes from the book. I think he asked the question "Did you see me do it?"
353. In the printed papers there is a report of the proceedings of a Court of Inquiry concerning a charge against Warrant-officer Barnwell, and the evidence is given exactly as it was taken by the Court;—in the case against Jiffkins, was not the evidence taken down in the same way? No; the two inquiries were very different. In the case referred to, the Court of Inquiry sat for the purpose of taking evidence to be forwarded to the Commandant to enable him to arrive at a decision. Where a case occurs in Sydney, if it is sufficiently serious to be brought before the Commandant, he hears the case personally.
354. Is the evidence then taken down? No; the examination is *viva voce*. It is very much like Police Court evidence.
355. At the inquiry did Jiffkins produce any return which he said he had been ordered by Barnwell to make out? Not to the best of my recollection.
356. He may have done so without your recollecting it? I do not think he did, because he never gave any reasons why he should have been at the register

357. You did not feel any pique or offence at Jiffkins writing to General Richardson when he was on leave? It was immaterial to me what he did, except that he was doing wrong.
358. One of the main points in Sergeant Jiffkins' case was that he had not a chance to clear himself—that he was dismissed on a charge of which he had no knowledge until after he received notice of dismissal;—are you clear upon the point that he had ample opportunity of clearing himself if he wished? When I altered the charge I read it to him. The whole thing was gone into. He said all he could say for himself with regard to taking notes, and the other witnesses proved as much as they could against him. It was clear, to my mind, that he had been at the book which he really had no right to.
359. And he had ample opportunity of proving otherwise if he could? Yes. I think Jiffkins' complaint is, that when he was finally told that he was to be discharged, he had not the opportunity of explaining himself. That is the impression in my mind—that when he was sent for in April and told that he was to be dismissed, he had no opportunity of saying anything in defence.
360. When you decided the case, did you inform Jiffkins what your decision was? I could not. I said, "This case will be referred to a higher authority."
361. You did not intimate to him the nature of your decision? He should have known, from his having been up before me previously, when I told him it would be his last chance, what the decision must be. In fact, to the best of my recollection, I did tell him he would be discharged; but it is now two years ago, and I cannot speak positively.

Colonel
C. F. Roberts.
3 May, 1894.

Mr. William Jiffkins recalled, and further examined:—

362. *Chairman.*] Is the butt of the railway pass produced the record of the railway pass stated in your evidence as having been made out by Warrant-officer Barnwell in favour of Quartermaster-sergeant Moyens? Yes.
363. Is it in Barnwell's handwriting? It is.
364. The word "cancelled" is written across it;—do you know if it was cancelled without being used, or if it was used on the understanding that Moyens would have to repay the amount? There was no understanding about Moyens having to pay it afterwards.
365. Are you sure Moyens used it to come to Sydney? I could not say that. I will swear that the pass was taken out between the hour of 4 o'clock that afternoon and 10 o'clock next morning. Moyens travelled to Sydney that night.
366. *Mr. McCourt.*] The first charge against you in these papers is one of general laxity and want of zeal, reported by Major MacDonald, Cavalry Brigade? I never knew of the charge until I saw it in print in these papers. I was brought up for something, but what it was I do not know.
367. Were you not informed of it? "Laxity and want of zeal," I never heard expressed until I saw it in writing.
368. The entry in the defaulters' sheet says, "Return to duty with Infantry Reserve"? Yes.
369. What did you say in answer to the charge? When I was brought up the charge was for irregularities, or, as I understood, some deficiency in spelling; something in connection with the horse equipment. At that time I was Acting Quartermaster-sergeant in the Cavalry Brigade, Phillip-street.
370. It was something in regard to your writing or spelling? Yes. They afterwards altered the charge, but I was never questioned about it, and never saw it, until I read it in this paper as laxity and want of zeal.
371. *Mr. Darnley.*] What happened was that you were taken from the Cavalry to the Infantry Reserve? Yes.
372. *Mr. McCourt.*] You are a drill-instructor, are you not? Yes.
373. In regard to the performance of your actual duty as drill-instructor, has there ever been any charge brought against you by any of the officers of the Department? You will see something in the papers in reference to a charge of disrespect, rudeness, and offensiveness, at Inverell.
374. Generally speaking, so far as your actual duty of drill-instructor was concerned, your service was good and was not objected to by any officer in the Department? It was never objected to before nor since. There was only one paltry case at Bombala, in reference to which they have a letter in the office complaining that I would not allow certain men to shoot and fire away just as they thought fit—a letter from a solicitor named Loveridge, and a Mr. Dawson, of Bombala. That is the only complaint against me as a drill sergeant.
375. None of the officers who have inspected your work ever complained? I got the highest praise.
376. For doing your actual duty? Yes.
377. Do you attribute your dismissal from the Service practically to trivial quarrels that arose between you and other officers connected with you? Practically through Barnwell.
378. But owing to little petty disagreements? Yes; that should not be on paper at all.
379. If you had been separated from Barnwell when you were ordered to be separated, do you think you would have continued to do your duty to the satisfaction of your superior officers? I do. Perhaps I may be allowed to explain in reference to an entry in the defaulters' sheet, of "Insolence to Warrant-officer Barnwell." That occurred in this way: In the room in which we were working my table was close to the edge of the door when it was open, and I sat writing at the end of the table. Barnwell sat up in a corner, as it were. The table he had was crossways, with another man at the other end. Captain Nathan came to the door, where he could almost touch my elbow, and turned round and said, "Have you seen the messenger lately?" He being close to me, I said, "He was here half a second ago, sir." Barnwell in the same breath said, "He was here half a minute ago." I think I said half a second and Barnwell said half a minute; but it may have been the other way. At any rate, Captain Nathan was satisfied with the reply and went away. Immediately he had gone, Barnwell jumped up and said, "I do not see, Sergeant Jiffkins, what business you have to make a reply when an officer comes in and asks a question." I said, "Well, I thought really that you were not prepared—that you did not know where the messenger had gone." He said, "Consider yourself a prisoner; I will not stand any more of your insolence." That is every word that was said, and I lost 6d. a day through that—that was in April—from the time I was dismissed, besides having to sit in the wash-house through Barnwell's orders—in this lavatory.
380. *Mr. McCourt.*] Did you ever give any information that you ought not to have given to any newspaper or newspaper reporter? Never, knowing as I did the serious consequences of it in the Service.
381. What is your age? Fifty-seven.

Mr.
W. Jiffkins.
3 May, 1894.

MINUTES OF EVIDENCE ON THE CASE OF STAFF-SERGEANT W. JEFFKINS.

WEDNESDAY, 9 MAY, 1894.

Present:—

MR. DARNLEY, | MR. McCOURT.

G. D. CLARK, Esq., IN THE CHAIR.

Charles Fyshe Roberts recalled and further examined:—

Colonel C. F. Roberts. 382. *Chairman.*] In reference to that pass, dated 14th February, 1890, on which Sergeant Moyens was supposed to have come from West Maitland to Sydney, do you recognise the handwriting? From a comparison made between the writing on the pass and a return made out by Staff-sergeant Barnwell, I am convinced that the handwriting is that of Barnwell.

9 May, 1894.

1894.

NEW SOUTH WALES.

PROTECTION OF THE ABORIGINES.

(REPORT OF BOARD FOR, 1893.)

Presented to Parliament by Command.

The Aborigines Protection Board to The Principal Under Secretary.

Sir, Office of the Board for the Protection of the Aborigines, Sydney, 1 March, 1894.

In accordance with the usual practice, we have the honor to furnish, for the Chief Secretary's information, a report of the operations of the Board during the year 1893, together with particulars regarding the present condition of the Aborigines of the Colony, and a statement in detail of the expenditure of the funds voted by Parliament for their relief.

The census returns of the Aboriginal population of the Colony [*Appendix A*], compiled from information collected by the police on the 15th October last, show that during the twelve months ended that date there was a decrease of 230 in the number of full-bloods, and an increase of 136 half-castes, or a net decrease of 94. The total now stands as 7,255, as against 7,349 in 1892.

In the case of the full-bloods, the reported deaths exceeded the reported births by 43, the numbers being 150 and 107 respectively. The number of deaths, however, was 57 less than the average for the five previous years, indicating the probable result of increased care and comfort administered to the race. The deficiency unaccounted for is probably due to the difficulty of taking a correct census, owing to the migratory habits of the Aborigines in the remote districts, and by the Border tribes crossing into the other Colonies. The Aborigines on the Paroo and other rivers are continually moving between stations in this Colony and others in Southern Queensland. A number have also returned to the Coranderrk Mission Station, Victoria, which place they were induced to leave some years back to take up their residence at Maloga, in the Moama district.

The increase by births over deaths amongst the half-castes was 74, the numbers being 136 and 62 respectively, which figures are about the general averages.

A total sum of £15,253 14s. 1d. was expended by the Government during the year for the benefit of the Aborigines. [*See Appendix C.*] This includes an expenditure of £7,809 3s. 1d. by the Board on Aborigines generally, £826 0s. 8d. for the fares of Aborigines travelling on the Government Railway lines, and £2,189 11s. 3d. in liquidating claims incurred by the Aborigines Protection Association in connection with the Mission Stations at Cumeroogunga, Warangesda, and Brewarrina; £822 3s. 2d. by the Medical Adviser to the Government; £1,157 16s. 9d. by the Minister of Public Instruction; £2,378 19s. 2d. by the Controller-General of Stores; and £70 by the Principal Under Secretary.

For purposes of comparison, it may be remarked that in the neighbouring Colony of Victoria, where the total number of Aborigines is 732, the sum voted by Parliament on their behalf for the current year is £5,600, or £7 13s. per head, against an actual expenditure of £15,253 14s. 1d., or £2 2s. per head, in New South Wales last year.

A statement in detail is given of the expenditure by the Board. [*See Appendix D.*] On the last day of the year 1,614 Aborigines were being supported by the Board. Of this number 727 were children, and of the remainder 2 were over the estimated age of 90 years, 16 over 80, 72 over 70, 212 over 60, 180 over 50, and 405 between 20 and 40. Of the total, 453 were classed as too old and feeble to earn a living for themselves, 17 as blind, 54 sick or recently sick, and 46 crippled or of weak intellect. Forty-eight

families were being temporarily assisted whilst cultivating Government Reserves, and 41 men and 194 women were unable to procure employment. Of the children, some were orphans, others were the children of destitute Aborigines, whilst a large number were receiving rations as an inducement to attend school.

During the year ten additional reserves, aggregating an area of 791 acres, have been set apart for the use of Aborigines at Currowan, Parkes, Ingalba, Oban, Terembone, Glenorchy, Tingha, Booligal, Shark Islands, and Spencer Creek. Extensions of the reserves at Grafton, St. Clair, Cumeroogunga, and Blakeney Creek have been granted, the increased area totalling 640 acres, and the Minister for Lands has approved of the Aborigines being allowed to retain the use of Cabbage-tree Island, Richmond River, which they themselves took possession of a few years back. The reserves at Brewarrina and Tathra have been reduced in area 600 and 45 acres respectively, and those at Mongarlowe (9 acres) and Cargo (40 acres) have been revoked.

On the 31st December last there were ninety-four reserves in different parts of the Colony, with a total area of 23,894 acres.

The following are extracts from district reports regarding the new reservations, showing the uses to which they are being put:—

Currowan.—Area, 60 acres. A fair quantity of timber has been felled to fence in the land, and 3 acres have been enclosed for the cultivation of maize. The tools and farming implements supplied by the Board have proved very acceptable, and are being made good use of. The Aborigines are cultivating wattle, and also purpose growing maize, potatoes, &c. They have built themselves good, substantial dwellings, and it is probable they will soon be independent of Government aid.

Parkes.—Area, 85 acres. A number of families intend residing on the reserve on Coobang Creek, and the use they purpose making of it is principally as a run for their horses.

Ingalba.—Area, 107 acres. This reserve is the general camping-ground for the Aborigines of the Walcha district. As a rule there are from thirty to fifty residing upon it. They are improving it a good deal by clearing, ringbarking, fencing, and making vegetable-gardens. The land is of good quality, situated in a nice bend of the M'Donald River, in which fish abound. They are all very well sheltered, having good slab huts.

Oban.—Area, 200 acres. Thirty Aborigines in all camp on the reserve. The old and infirm are comfortably housed in the three dwellings recently erected for them by the Board. The dwellings are kept clean and tidy. A little clearing has already been done around them, and small vegetable-gardens made.

Terembone.—Area, 15 acres. Used merely as a camping-ground, Aborigines to the number of thirty usually residing upon it. The able-bodied are employed on neighbouring sheep-stations, and the old and infirm receive rations from the Board.

Glenorchy.—Area, 23 acres. The land is used as a camping-ground. The men are generally employed on stations. Comfortable dwellings have been erected for the old and infirm, who are in receipt of rations from the Government.

Tingha.—Area, 20 acres. This reserve is occupied by an old half-caste woman and some of her children. She has cattle of her own, keeps bees, &c., and with a little assistance from three of her daughters, who are out at service, is independent of Government aid.

Booligal.—Area, 250 acres. About twenty Aborigines who reside in the neighbourhood of Booligal intend making use of the reserve as a camping-ground, and to graze their horses upon. The land has a good frontage to the Lachlan River.

Shark Islands and Spencer Creek.—These reserves, with an area of 25 and 6 acres, respectively, are situated in the Macleay district. They are both occupied and being prepared for the cultivation of maize.

St. Clair.—This reserve, the area of which has been increased from 58 to 82 acres, is now occupied by fourteen Aborigines (six men, four women, and four children), all full-blood. They have enclosed for cultivation purposes about 20 acres, and good crops of maize, tobacco, vegetables, and fruit are expected. They are also the owners of horses, pigs, and poultry, and have erected comfortable dwellings for themselves. The leader is an excellent farmer, and his portion of the reserve can compare favourably with his white neighbours' places.

Cabbage-tree Island.—This island, which contains an area of about 200 acres, is situated in the Richmond River, about 2 miles from Wardell. Seven men, with their wives and children, and two single men reside thereon. The land has been measured off into 10-acre blocks, and one allotted to each family. The Aborigines have cleared 40 acres, one-half of which have been planted with sugarcane, the remainder with maize, vegetables, &c. They all work well, and are in a fair way of making comfortable homes for themselves. Their dwellings are now being made more weatherproof, a quantity of roofing-iron having been supplied by the Board. A suitable building has been erected and furnished for the education of the Aboriginal children residing on the island. A teacher was appointed, and the school brought into operation in October last. At the end of the year the enrolment of the pupils was 24.

As instances of the improvement which has been effected by Aborigines on reserves which have been in use for some years past, the following extracts from a few district reports will be read with gratification:—

"Nearly the whole of the Pelican Island Reserve, Macleay River, is now under cultivation, 55 acres being under maize."

"At Belmore River a full-blooded Aboriginal woman and her children have erected a neat weather-board cottage for themselves, and they keep it exceedingly clean. The reserve is all fenced and under crop."

"There

"There is every indication of a prosperous season in the Macleay district, and the police are making arrangements with the Aborigines to ship their produce to the Sydney market."

"The Aborigines at Gulargambone have enclosed the whole of their reserve with a six-wire fence, have 4 acres grubbed and cleared ready for the plough, and are now erecting a drop-fence around that portion."

"The reserves in the Port Stephens district are now again occupied by the Aborigines. Several comfortable huts have been erected by them, and a fair start has been made in the way of preparing the land for cultivation."

The total number of children now receiving instruction is 640—607 at schools, and 33 privately.

Schools have been established during the year in connection with the Home for Aborigines near Grafton, and at the Aboriginal settlements at Mulyan, near Cowra, and Cabbage-tree Island, near Wardell. The school at Pelican Island, Macleay River, was closed towards the end of the year, in consequence of the diminished attendance of pupils. A number of the children, however, have since been induced to attend the Public School in the neighbourhood.

There are now twelve schools in operation specially for the instruction of Aboriginal children, viz., at Barrington, Brewarrina, Brungle, Cabbage Tree Island, Cowra, Cumerogunga, Forstor, Grafton, Rollands Plains, Walaga Lake, Warangesda, and Wauchope. These schools are inspected periodically by the district school inspectors, and satisfactory reports are received as to the progress made by the pupils. The usual standard for Public Schools being scarcely applicable for schools for Aboriginal children, at the suggestion of the Board, the subjects now taught are confined to reading, writing, dictation, and arithmetic.

The police succeeded in obtaining twenty convictions during the year against persons for supplying Aborigines with intoxicating liquor, heavy fines being inflicted by the Benches in the majority of the cases.

A marked improvement is noticeable in the habits of the Aborigines, which is chiefly due to the efforts of the police to keep them from the towns away from temptation.

On the 11th August last a tribe of Aborigines was discovered in a wild state by some civilised half-castes in the south-western corner of the Colony, at a place known as Scotia Blocks, or "No Man's Country," about 100 miles in a northerly direction from Tareena, and in a space of country between Lake Victoria and Popiltah Stations. The tribe, consisting of 12 men, 8 women, and 10 children, are the progeny of an old man who, after committing a depredation some thirty years ago, escaped from Popiltah Run with another Aboriginal's wife. The Board requested the police at Wentworth to see that the Aborigines were in no way molested, and have applied to the Minister for Lands to have an area at Travellers' Lake, on which they are now camped, set apart as a reserve for their use. The site is isolated, and marsupials and game are plentiful in the locality.

The Aborigines, and more especially those of the inland districts, still cling to their old traditions and superstitions. An unusually large number congregated in August last at a place known as the Mole, on Bulregar Creek, about 85 miles from Warren, for the purpose of carrying out the rites known as "Bora," or "making of young men." Ninety-eight Aborigines in all assembled, some going from places as far distant as Cobar and Wilcannia. As the number included children, also aged men and women, by instructions from the Board, where any cases of destitution existed they were relieved by the issue of weekly rations of food, while the ceremonies were going on. The Barwon River tribes are now gathering at Goondooblue, near Mogil Mogil, for the performance of similar rites.

There are now fifty Aborigines in residence at the "Home," near Grafton. The health generally has been good during the year. Measles and influenza went through the settlement, but all the patients recovered, though several died of the same complaints in camps in other parts of the Clarence district. The site has been extended by taking in 105 acres of the adjoining Temporary Common, bringing the total area up to 305 acres. During the year 15 additional acres of forest land have been cleared and burnt off, 160 yards of permanent and a mile of temporary fencing erected, as also six huts and a number of other buildings. A bridge has also been constructed across the creek dividing the reserve, and the roadway improved. Floods in January and June covered the cultivation area, destroying nearly seventeen acres of crops. During the last few months of the year a fair quantity of potatoes, oaten hay, lucerne, sorghum, and buckwheat was raised. The total value of all improvements standing at the Home, and of stock and other property, on the 31st December, was estimated at £800. The expenditure during the year, including wages to Aborigines, was £500, or £300 less than in 1892.

The number of Aborigines at the settlement at Brungle, Tumut District, on the 31st December was 96, of whom 43 were full-bloods. Nearly half of the reserve is now under cultivation, principally wheat. The men are beginning to appreciate the advantage of having small portions of the reserve to cultivate for themselves, and additional blocks are now being allotted. The general condition of the
Aborigines

Aborigines has greatly improved, and their dwellings are comfortable and cleanly kept. Twenty children attend the school, and on inspection the classes obtained the requisite number of marks for a pass. This is all the more satisfactory when it is considered that a few years back not one of the children knew the alphabet. Sickness has been prevalent during the year, especially measles and pulmonary diseases. Deaths numbered six, and births five.

No change has yet been effected in the control of the Mission Stations at Cumeroounga, Warangesda, and Browarrina.

The donations to the Aborigines Protection Association reached a total of £326 0s. 11d., or £157 19s. 1d. more than in 1892. This, however, was chiefly the result of the appointment of a collector, who, with two Aborigines, visited several country districts during the first six months of the year, holding special meetings for the purpose of enlisting increased support from the public.

The cost of collecting the subscriptions (salary and commission to collector, travelling expenses, &c.) amounted to £119 2s. 4d., or 36 per centum of the total sum received. The net amount of subscriptions was, therefore, £206 18s. 7d.

The experiment of taking Aborigines about the country for the purpose of enlisting sympathy in their behalf, to which the Board were strongly opposed at the outset, was not accompanied by the success the Association anticipated, the expenses of collection being altogether out of proportion to the amount of subscriptions received, and the Aborigines were in consequence returned to the Mission Station at Warangesda.

The amount expended during the year on the three Mission Stations from the vote of Parliament was £2,189 11s. 3d., which, with a sum of £1,233 4s. 9d. expended by the Association from revenue received by them, makes a total of £3,422 16s. Claims for the last quarter of the year for payment by the Government, amounting in all to £436, were also outstanding on the 31st December.

In concluding their Report, the Board desire to acknowledge their appreciation of the liberality of Parliament—but which may admit of even further extension; of the valuable assistance rendered them by the several District Boards of Advice; and of the kindly feelings and sympathies exhibited by the members of the Police Force generally in assisting the Board to ameliorate the condition of the race, the result, we venture to think, in the interests of the Aborigines, eminently satisfactory.

We have, &c.,

EDMUND FOSBERY, Chairman.

APPENDIX I.

BOARD for Protection of Aborigines, 31st December, 1893.

		Date of Appointment.
Chairman.....	Edmund Fosbery, Inspector-General of Police.....	5 June, 1883.
Members.....	Hon. Richard Hill, M.L.C.	"
	Hon. Philip Gidley King, M.L.C.	"
	Sydney Burdekin, M.L.A.	27 May, 1887.
	A. M. Hutchinson, J.P.	26 August, 1887.
	G. O'Malley Clarke	24 April, 1889.
	Hon. W. H. Suttor, M.L.C.	25 July, 1890.
Secretary	Thomas Colls, M.L.A.	11 November, 1891.
	A. Berckelman	30 April, 1888.

1894.

NEW SOUTH WALES.

INSPECTOR-GENERAL OF THE INSANE.

(REPORT FOR 1893.)

Presented to Parliament, pursuant to Act 42 Vic., No. 7, sec. 73.

The Inspector-General of the Insane to The Chief Secretary.

Sir, Lunacy Department, Inspector-General's Office, Gladesville, 17 March, 1894.

In accordance with the 73rd section of the Lunacy Act of 1878, I do myself the honor to submit for your information a report on the state and condition of the Hospitals and other Institutions for the Insane for the year ending 31st December, 1893. In appendices will be found reports on the Hospitals by the Medical Superintendents, together with the statistics of each Institution.

I have, &c.,

F. NORTON MANNING,

Inspector-General.

On 31st December, 1893, the number of insane persons on the official registers was 3,425, and their distribution was as follows:—

Institution.	Number on Register.			Number on Leave.		
	Male.	Female.	Total.	Male.	Female.	Total.
Hospital for the Insane, Gladesville.....	523	322	845	13	25	38
Do Parramatta (Free)	642	385	1,027	6	7	13
Do do (Criminal)	41	8	49
Do Callan Park	442	395	837	6	6	12
Do Newcastle	153	142	295	1	1
Do Rydalmere	272	272	1	1
Licensed House for the Insane, Cook's River.....	19	79	98	2	4	6
Licensed Houses do Picton	2	2
Total.....	2,092	1,333	3,425	28	43	71

The number on 31st December, 1892, was 3,312 (2,031 males and 1,281 females), so that the increase for the year was 113 (61 males and 52 females). This increase is in excess of the average for the last ten years by 13, as is shown in the following return:—

Year.	Increase.	Year.	Increase.
1883	96	1888	76
1884	121	1889	76
1885	119	1890	128
1886	74	1891	32
1887	104	1892	178

Total for 10 years, 1,004, or an average of 100 a year.

The increase for the year 1892 was 178, so that the two years, 1892 and 1893, have added 291 patients to the registers. As explained in my report for last year, this large increase has been due almost entirely to the general commercial depression, acting, in the first place, directly by causing insanity; in the second, by compelling persons to part with imbecile and demented relatives who they supported at home in more prosperous times; and, in the third, by driving into the Institutions for the Insane the somewhat weak-minded folks who can obtain work when work is plentiful, but who are handicapped when it is scarce, and who, in the absence of employment and the consequent distress, become the subjects of increased mental disability. That the somewhat mentally weak and unstable of the community have been thus affected is shown by the large number of readmissions—that is, the admission of those at some prior time under Hospital care and treatment. In 1892 these numbered 81, and in 1893 106, whilst the average number for the ten years, 1882 to 1891 inclusive, was 50 only.

239—A

The

[1165 copies—Approximate Cost of Printing (labour and material), £53 18s. 8d.]

The proportion of insane to population has risen from 1 in 361, or 2·77 per thousand, at the end of 1892 to 1 in 357, or 2·80 per thousand, at the end of 1893, which is the highest proportion in any year since 1882.

The proportion of insane to population in New South Wales for the last twenty years, and also the proportion in England for the same period, and the proportion in Scotland and Ireland for each year from 1881 to 1892 is shown in the following return:—

Year.	Population of New South Wales.	Total Number of Insane in New South Wales on 31 Dec.	Proportion of Insane to Population in New South Wales.	Proportion of Insane to Population in England.	Proportion of Insane to Population in Scotland.	Proportion of Insane to Population in Ireland.
			Per M.	Per M.	Per M.	Per M.
1873	560,275	1,526	1 in 367 or 2·72	1 in 381 or 2·62
1874	584,278	1,588	1 in 367 or 2·72	1 in 375 or 2·66
1875	606,652	1,697	1 in 357 or 2·80	1 in 373 or 2·68
1876	629,776	1,740	1 in 361 or 2·77	1 in 368 or 2·71
1877	662,212	1,829	1 in 362 or 2·76	1 in 363 or 2·75
1878	693,743	1,916	1 in 362 or 2·76	1 in 360 or 2·77
1879	734,282	2,011	1 in 365 or 2·74	1 in 363 or 2·75
1880	770,524	2,099	1 in 367 or 2·72	1 in 353 or 2·83
1881	781,265	2,218	1 in 352 or 2·84	1 in 352 or 2·84	1 in 370 or 2·70	1 in 386 or 2·59
1882	817,468	2,307	1 in 354 or 2·82	1 in 348 or 2·87	1 in 369 or 2·71	1 in 372 or 2·68
1883	869,310	2,403	1 in 361 or 2·77	1 in 345 or 2·89	1 in 365 or 2·73	1 in 358 or 2·78
1884	921,129	2,524	1 in 364 or 2·74	1 in 345 or 2·89	1 in 363 or 2·75	1 in 350 or 2·85
1885	980,573	2,643	1 in 374 or 2·67	1 in 348 or 2·87	1 in 353 or 2·79	1 in 344 or 2·90
1886	1,030,762	2,717	1 in 379 or 2·63	1 in 349 or 2·86	1 in 358 or 2·79	1 in 335 or 2·98
1887	1,042,919	2,821	1 in 369 or 2·71	1 in 346 or 2·88	1 in 352 or 2·84	1 in 319 or 2·13
1888	1,085,740	2,898	1 in 374 or 2·67	1 in 344 or 2·90	1 in 345 or 2·89	1 in 307 or 3·25
1889	1,122,200	2,974	1 in 377 or 2·65	1 in 341 or 2·92	1 in 339 or 2·94	1 in 295 or 3·38
1890	1,170,000	3,102	1 in 377 or 2·65	1 in 343 or 2·91	1 in 335 or 2·98	1 in 288 or 3·46
1891	1,165,300	3,134	1 in 371 or 2·69	1 in 335 or 2·98	1 in 315 or 3·47	1 in 281 or 3·55
1892	1,197,050	3,312	1 in 361 or 2·77	1 in 330 or 3·02	1 in 311 or 3·21	1 in 270 or 3·69
1893	1,223,370	3,425	1 in 357 or 2·80

It will be seen—1st, that the proportion of insane to population in New South Wales is still decidedly below that in England and Scotland, and very greatly below that in Ireland; and, 2nd, that notwithstanding the very large increase in the number of registered insane in this Colony, the proportion to population has increased very little, and is only a trifle in excess of what it was in 1873—twenty years ago—and exactly the same as in 1875. Of the number on the registers at the close of the year (3,354), 2,064 males and 1,290 females were in the institutions and 71 (28 males and 43 females) were absent on leave, under the provisions of the Lunacy Act. The returns from the institutions show an increase of 28 at Parramatta (Free), 25 at Callan Park, 32 at Newcastle, and 47 at Rydalmere; whilst there has been a decrease of 7 at Gladsville, 8 at Parramatta (Criminal), and 4 at Cook's River.

The increase at Rydalmere and at Newcastle was due almost entirely to the transfer of chronic cases from Gladsville and Callan Park to relieve the over-crowded condition of the wards at these hospitals, which receive all the new cases from the Metropolitan, Coast, and Southern districts of the Colony.

The following tables show the number of admissions, discharges, and deaths, the proportion of recoveries, the rate of mortality, the causes of insanity in those admitted, those who recovered, and those who died; the causes of death, the length of residence in those who recovered and those who died, and also the ages, condition as to marriage, religious profession, nationality, and previous occupation of those admitted and of all under care, as well as the form of mental disorder in those admitted, those who recovered, and those who died during the year:—

TABLE I.

SHOWING the Admissions, Readmissions, Discharges, and Deaths in the Hospitals and Licensed Houses for the Insane during the year 1893.

In Hospital on 31st December, 1892	Male.	Female.	Total.

Admissions.

The number of patients admitted during the year was 668—410 males and 278 females—and of these 582 were admitted for the first time and 106 were re-admitted, having been at some previous time under care in one of the Hospitals for the Insane in this Colony. The number of admissions was the largest in any one year, and was 22 in excess of the number for 1892. The ratio of admissions to the general population, or what is denominated the "occurring insanity," was a very high one, being 1 in 1,778.

The following return shows the ratio of admissions to population, or the proportion of "occurring insanity" for the last 20 years:—

Year.	Admissions.	Population.	Proportion to Population	Year.	Admissions.	Population.	Proportion to Population.
1874	330	584,278	1 in 1,770	1884.....	493	921,129	1 in 1,868

1882	473	817,468	1 in 1,728	1892.....	666	1,197,050	1 in 1,797
1883	476	869,310	1 in 1,826	1893.....	688	1,223,370	1 in 1,778

Under the provisions of the 9th section of the Lunacy Act Amendment Act, which was assented to on June 8, 1893, the Order, Request, Medical Certificate, or other documents by which an insane person has been received into an Hospital for the Insane may be amended under process much more simple than was provided for by the original Lunacy Act, so that it is not now necessary to reject the documents and delay the admission of the patient.

Under

Under the provisions of this section 67 medical certificates, 13 orders and statements, and 4 requests and statements have been amended during the half year from June 30th to December 31st, and in addition to this 5 certificates and 1 request have been rejected and new papers procured. In all these cases the patients were insane when presented at the hospital and fit subjects for admission, but care had not been taken to fill in the formal papers in accordance with the provisions of the Lunacy Statutes, although the marginal notes on all of them are full and explicit. The certifying medical practitioners and the officials concerned in completing these papers do not appear to have realised the importance of an accurate compliance with the provisions of the Lunacy Act, or that the documents may at any time be subjected to examination in a Court of Law.

For many years there has been an influx to the Institution for the Insane in this Colony of insane persons who were insane on arrival in the Colony by sea, or became insane shortly after, and this influx has of late years been greater by reason of enactments in neighbouring colonies, which prevented the landing of such cases therein. In the Act to amend the law relating to the insane, which was assented to on the 8th of June last, there is a section rendering the owner, charterer, agent, or master liable for the maintenance of any insane person landed in the Colony. This section, which is as follows, will no doubt prevent in a great degree the importation of insane persons:—

4. (i) If the Health Officer, or the Immigration Officer, or the Inspector-General of Police, or the Inspector-General of the Insane certifies to the Master within sixty days after the arrival of any ship at any port in New South Wales, that a passenger or seaman arriving by that ship is insane, imbecile, or idiotic, and has become, or is likely to become, a charge upon the public as an inmate of a reception house or hospital for the insane, it shall be lawful for the Master thereupon to require the owner, charterer, agent, or master of that ship to execute, with two sufficient sureties, jointly and severally, a bond to Her Majesty in such a sum as the Master may determine not exceeding five hundred pounds, conditioned to pay to the Master the maintenance of that passenger or seaman in such reception house or hospital at such rate and for such term as may be determined by the Master; or at the option of the owner, charterer, agent, or master, subject to the approval of the Master, to return such passenger or seaman to the place whence he was shipped.
- (ii.) The sureties shall justify before or to the satisfaction of the Master, and shall by their oaths or affirmations satisfy him that they are respectively resident in New South Wales, and worth treble the amount of the penalty of the bond over and above all liabilities.
- (iii.) Provided that no bond shall be required when the passenger or seaman is, at the date of the arrival of the ship, domiciled in New South Wales; but the onus of proving such domicile as aforesaid shall be upon the said owner, charterer, agent, or master.

Under its provisions 10 cases have been reported since June 8th, of these 7 soon recovered and were discharged, 2 were returned by the steamship companies to the ports from which they were shipped, and 1 remains in hospital at the charge of the owners of the ship in which he arrived.

Of the patients admitted during the year 55 were under 20 and 52 upwards of 60 years of age. The former were for the most part of congenitally weak intellect and the latter chiefly demented. These figures go to bear out the remarks previously made with regard to adverse circumstances compelling relatives to part with imbecile and demented relatives heretofore supported at home.

Perhaps the most striking feature in the returns is the large increase in the number of admissions of patients suffering from General Paralysis. During the 10 years, 1882 to 1891 inclusive, the average number of general paralytics admitted was 19, and the highest number in any one year 29. In 1892 the number rose to 42, and in 1893 to 56, or about one-twelfth or 8 per cent. of the total number of admissions. General paralysis is a comparatively new disease, is admittedly due to living at "high pressure," and is a product of urban as opposed to country life. Of the 56 cases admitted in 1893, 44 were admitted to Callan Park which receives patients from the Metropolitan districts; 9 to Gladesville, the majority of these being from Newcastle and the surrounding district, and only 2 or 3 from the Coastal and Southern districts; whilst at Parramatta, which receives the whole of the patients from the Western district of the Colony, 3 cases only of this disease were received.

As this disease is, so far as is at present known, incurable, the subjects living on an average only between two and three years from the appearance of the early symptoms, the increase of the malady is not only a serious matter from a social point of view, but will tend to affect hospital statistics by diminishing the recovery and increasing the death rate.

There does not appear to be any decided increase in the number of epileptic patients admitted, and at the end of the year they numbered 274, or exactly 8 per cent. of the total number under care at the close of the year, a percentage which differs very little from that of ten years ago.

Transfers.

The number of patients transferred from one institution to another under the provisions of section 80 of the Lunacy Act was 165—104 males and 61 females. Of these 117 were chronic cases sent from Gladesville and Callan Park to Newcastle and Rydalmere to relieve overcrowding. 13 were transferred from the Hospital for the Criminal Insane at Parramatta when no longer subject to Criminal process, and the residences of the remainder were changed either at the request of friends or of the Medical Superintendent in charge, or of the patients themselves.

In some of these cases the change was followed by recovery, in others by improved mental or physical health, and in the greater number by increased contentment and tranquility.

Discharges.

The number of patients discharged during the year was 328, and of these 286 had recovered and 42 were relieved, being so far well as to admit of discharge to the care of relatives or friends. The recoveries give a percentage of 41.63, and the cases relieved a percentage of 6.11 on the admissions, so that a percentage of 46.74 so far recovered under Hospital care and treatment as to admit of discharge.

Escapes.

Escapes.

The number of escapes was 36 and in all except one instance the patients were returned to Hospital within a short period.

The following return shows the Number of Escapes during the last ten years:—

Year.	Number of Escapes.	Returned to Hospital.	Not Returned.	Year.	Number of Escapes.	Returned to Hospital.	Not Returned.
1884	34	30	4	1889.....	42	33	9
1885	43	36	7	1890.....	45	41	4
1886	37	30	7	1891.....	45	39	6
1887	34	30	4	1892.....	29	24	5
1888	47	42	5	1893.....	36	35	1

Considerable liberty within the Hospital grounds is allowed to convalescents and to quiet and harmless patients—whilst a number of those usefully employed are necessarily from time to time beyond the immediate supervision of attendants. It is from among these classes that escapes for the most part take place, and nothing has occurred for some years which seems to render necessary an alteration of the system pursued in dealing with them.

Deaths.

The number of deaths was 246, and the percentage to the daily average number resident was 7.42, the death-rate for males being 8.37 and for females 5.88. The death-rate was higher than usual, indeed it was higher even than during the year 1891 when influenza appeared in all the hospitals except Newcastle and added to the average percentage, which has been 6.96 for the last ten years.

The death-rate at the different Hospitals was as follows:—Gladesville, 6.44; Parramatta Free, 6.25; Parramatta Criminal, 6.00; Callan Park, 9.14; Newcastle, 8.51; Rydalmere, 8.66; and Cook's River, 8.00. The death-rate, as in former years, has been highest in the Hospital at Callan Park where the number of acute and recent cases has been largest, and at Newcastle and Rydalmere where many of the patients are in feeble bodily condition.

In Table 4 the causes of death are shown. Of the total number 113 were due directly to disease of the brain, and of these no less than 44 were caused by general paralysis, and 26 by epilepsy. The deaths from inflammatory and other diseases of the lungs, and from pulmonary consumption numbered 43, and those from disease of the heart and blood vessels 11. There were 83 deaths from general debility and old age, and some patients who had been resident in the Hospitals for many years were among the number who died from these causes. There was no death from typhoid fever or other epidemic ailment.

Total number under care, &c.

The total number of patients under care was 4,465—2,545 males and 1,620 females, and the daily average number resident 3,312.

Leave of Absence on Probation.

The following return shows particulars as to leave of absence during the year 1893:—

RETURN showing particulars as to Leave of Absence during the year 1893.

Institution.	Remaining on leave 31st December, 1892.			Number granted leave during the year 1893.			Discharged—Recovered, &c.			Returned to Hospital.			Died whilst on leave.			Remaining on leave 31st December, 1893.

Total	28	54	82	43	76	119	21	46	67	21	41	62	1	...	1	28	43	71

It will be seen that 82 patients were absent on 31st December, 1892, and that leave was granted to 119 during the year, making a total of 201 coming under the provisions of section 82 of the Lunacy Act. Of these, 67 were discharged recovered, 62 returned to Hospital, 1 died whilst on leave, and 71 were still on leave at the close of the year. Several of those returned to Hospital had been absent for long periods, and some of those now on leave have been away from the Hospitals for several years, the leave being renewed from time to time, generally at intervals of three months, when the patient visits the Hospital, and sees the Medical Superintendent, or forwards a recommendation from a Medical Practitioner for an extension of the term. The system works satisfactorily in all respects.

Accidents, &c.

Two cases of suicide and one case of accidental poisoning occurred during the year. A man at the Hospital for the Insane, Parramatta, who had for a long time been convalescent, had never shown any tendency to suicide, and was allowed a considerable degree of liberty as a preliminary to discharge, cut his throat with a knife which he had surreptitiously obtained, and a Chinaman at Gladesville, who was employed in the kitchen, found his way into an unfinished laundry building, still in the hands of the contractors,

contractors, where he hanged himself with a rope left by workmen. He had, it appeared, displayed no symptoms of depression for several weeks and worked industriously. Inquests were held in both these cases, and no blame was imputed to the officers in charge. After an inquiry into the circumstances in each case, I saw no reason to dissent from the opinion expressed at the inquest. The case of accidental poisoning occurred at the Licensed House at Cook's River, and death resulted to a female patient from an overdose of chloral and bromide of potassium administered by mistake by one of the nurses. The Jury in this case added a rider to their verdict censuring the Medical Superintendent for allowing the medicine to leave the dispensary in a concentrated form, and subsequent inquiry showed such serious irregularity on the part of the matron and a nurse in this case as led to their dismissal. The other accidents were 2 cases of intracapsular fracture of the neck of thigh-bone caused by falls in aged patients; 3 fractures of the leg due to falls, one of which was during an epileptic fit; 1 fracture of the arm in an epileptic; 2 fractures of the radius, and 3 of the ulna, all the result of accident; 1 of the both bones of the forearm caused by a fall when climbing through a window; 1 of the olecranon by a fall from a step-ladder; 2 of the clavicle, the sufferers having been pushed down by fellow patients; and 1 of the finger during a quarrel. One patient under religious delusions injured himself by tearing his scrotum, and another removed the end of one finger. Two patients wounded themselves with suicidal intent, but did not cause serious injury, and one received a severe cut on the foot which he thrust through the glass panel of a door. One of the patients at Gladesville, who was employed in cleaning in the ward, and had not previously displayed aggressive or dangerous propensities, struck an attendant with a broom handle causing a somewhat severe scalp wound. On the whole the number of accidents was smaller than usual, and, considering that 4,152 patients were under care, all insane and irresponsible, many violent, a considerable proportion suicidal or prone to self injury, and no less than 313 epileptics, the care and supervision exercised would appear to have, on the whole, been close and satisfactory.

Changes in the Staff.

The only change among the officers was caused by the resignation of Miss Frances G. Spencer, who was appointed to the position of Matron in charge of the Walker Convalescent Hospital at its opening, and who was succeeded by Miss Mary T. Cooke, who has had experience in English hospitals. Miss Spencer had only been a short time in this Department, but the special aptitude and tact she displayed in the performance of her duties made her resignation a matter of considerable regret.

The changes among the attendants and nurses have been few, and the following return, giving the length of service of attendants and nurses, shows that the general staff possess considerable experience in the performance of their special duties.

RETURN showing length of service of Attendants and Nurses at Hospitals for the Insane on the 31st December, 1893.

Training of Attendants and Nurses.

The special training of attendants and nurses, which has for several years been carried out by the medical officers at Gladesville, and for the last three or four years at Newcastle, has now been commenced at Callan Park, Parramatta, and Rydalmere. This training consists of lectures and demonstrations, extending over two years. The first year being devoted to general instruction as to nursing, bandaging, &c., and the second to the special care and treatment of the insane. The examinations held at the close of each year are conducted either by medical practitioners unconnected with the Department, or by the Medical Superintendent of one of the other Hospitals for the Insane. I have myself conducted the examination at Gladesville after the second year's training during several years, and have been much gratified by the knowledge of their special work displayed by the members of the class, and the evident interest taken therein.

The arrangement with the Department of the Medical Adviser, under which the nurses each spend three months at the Coast Hospital so as to gain practical experience in the nursing of typhoid fever and other diseases, has been continued, and is likely to be more largely useful during the coming than it has during the last year, as a larger number of nurses have now undergone the necessary preliminary training.

Stimulants in Hospitals for the Insane.

It is now some years since the issue of beer as a part of the dietary was stopped, and its use as an extra for patients actively employed was subsequently discontinued. Stimulants are now only used in cases of bodily sickness, in melancholic or maniacal exhaustion, and in other cases in which the medical officers consider their use likely to tend to improve mental or physical health. The total amount now used is comparatively small, and tends rather to diminish than to increase. The total cost during the year 1891 was £282 16s. 7d., or at the rate of 1s. 10½d. per patient; during 1892 it was £258 14s. 4d., or 1s. 8½d. per patient per annum, and during 1893 £237 5s. 5d., or 1s. 5½d. per patient per annum. For the last two years, 1892 and 1893, no stimulants whatever were used at the Hospital at Rydalmere, and the patients who are of the chronic class do not appear to have in any way suffered from their absence.

The treatment of patients from Broken Hill.

This matter has formed the subject of comment in several previous reports, and especially in that for the year 1890. Taking into consideration the great difficulty and expense of sending these patients to hospital under proper escort, the distance to be travelled by the speediest route being nearly 1,000 miles, and the journey being through South Australia and Victoria, in which the orders for conveyance to hospital are inoperative, it was decided to erect a small building in connection with the general hospital at Broken Hill for the temporary reception and treatment of insane patients until they could be sent on to Gladsville. Owing to unforeseen circumstances this building was not immediately commenced or speedily completed, but in June last it was reported as nearly ready for occupation, and I proceeded to Broken Hill to advise as to its minor fittings and the regulations under which it should be worked.

When passing through Adelaide the Chief Secretary of that colony placed me in official communication with the Colonial Surgeon, who is the head of the Lunacy Department of South Australia, with the result that an agreement was drafted under which persons found to be insane at Broken Hill, will, on being handed over to the authorities in South Australia, be dealt with under the lunacy laws of that colony, and cared for and treated in its Hospitals for the Insane at the charge of the Government of New South Wales. This agreement, after being amended in minor particulars, has now been agreed to by the Governments of both colonies, and can be put in force as soon as an Act has been passed in this Colony legalising the action to be taken under it. The passing of this measure has been delayed, but it is hoped that it will be accomplished during the present session of Parliament. The building at Broken Hill has, pending the completion of the arrangements above mentioned, not been used for the purpose for which it was intended, but it is a useful addition to the hospital, and can be made available for the isolation and treatment of cases of infectious disease or other special ailments.

Cost of Maintenance.

The receipts of the Department from all sources amounted to £14,430 16s. 3d. being somewhat less than during the year 1892.

The collections by the Master-in-Lunacy towards the maintenance of patients, together with payments made at the Reception House, amounted to £13,298 16s. 5d. This was only £53 13s. 8d. more than was collected during the year 1892, although the daily average number of patients under care was 160 more than during that year. The falling off in the average collections per patient from £4 6s. 10d. in 1892 to £4 2s. 10½d. in 1893 was no doubt due to the generally depressed financial condition of the Colony. The sum of £292 15s. 8d. was paid by the Imperial Treasury, £740 11s. 9d. was received for fat, old stores, &c., and £98 12s. 5d. for rent of land.

The details are shown in the following return:—

TABLE showing Total Receipts on account of Institutions for the Insane during the year 1893.

Name of Institution.	Collected for maintenance of Patients.	Paid from Imperial Treasury for maintenance of Patients.	Sale of Fat and old Stores.	Rent of Land.	Total.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Hospital for the Insane, Gladsville.....	4,163 8 11	266 19 9	4,430 8 8
Do Parramatta	2,144 16 8	263 10 1	253 15 3	2,662 2 0
Do Callan Park	5,617 0 4	177 8 6	5,794 8 10
Do Newcastle	892 10 10	29 5 7	23 14 1	945 10 6
Do Rydalmere.....	410 8 5	18 14 2	429 2 7
Licensed House for the Insane, Cook's River.....	63 6 3	63 6 3
Reception House for the Insane, Darlinghurst	7 5 0	7 5 0
Inspector-General's Office	98 12 5	98 12 5
Total	13,298 16 5	292 15 8	740 11 9	98 12 5	14,430 16 3

The total expenditure was £101,077 15s. and was made up as follows:—Maintenance of patients in Hospitals for the Insane, £93,781 14s.; maintenance of Government patients at the Licensed House, Cook's River, £2,928 13s. 6d.; maintenance of patients in the Reception House, £1,545 11s. 7d.; and general expenses, including cost of Inspector-General's Office, payments to official visitors, maintenance of steam launch "Mabel," &c., £2,821 15s. 11d. The expenditure in 1893 was less under each heading than during the preceding year, and an average number of 160 more patients was maintained in the hospitals for a cost of £1,441 19s. 6d. less than was expended in 1892.

The average weekly cost per head at all the hospitals was 11s. 2½d., without deducting collections, and 9s. 6½d., after those were deducted, and was lower than during any preceding year. The cost per head in 1892 was 11s. 11½d., without deducting collections, and 10s. 2d. after these were deducted. The cost for maintenance would have been still lower but for the fact that the votes for the Government Architect's Department having been greatly reduced, it has been necessary to charge the expenditure for various necessary additions and alterations to the votes of this Department. The maintenance rate at Newcastle has in this way been nearly £1 a head higher than it would otherwise have been, and the cost of workshops, &c., at Parramatta, and rooms for attendants and nurses at Gladsville, have been included in the maintenance rate. It will be seen that the maintenance rate differs considerably at the several Hospitals, being higher at Callan Park and Gladsville than at Parramatta, Newcastle, and Rydalmere. This depends partly on the character of the patients and the proportion of acute cases. Acute cases are much more costly than chronic ones as regards attendance, food, clothing, and other items, and the proportion of these is large at Callan Park and Gladsville, whilst the cases are all chronic ones at Newcastle and Rydalmere, and the proportion of this class is very large at Parramatta. A further reason for the higher cost at Callan Park is that there are at that Hospital special quarters for paying patients, and the special provision for this class swells the general cost, though it is subsequently recouped by the collections for maintenance. The cost is also to some extent determined by the relative number of male to female patients. The latter can be maintained for something between 1s. and 2s. each per week less than the former, by reason of the smaller salaries paid to female attendants or nurses

in

in comparison with male attendants, the smaller cost for clothing, and the smaller dietary scale necessary. The female patients at Parramatta are only one-third of the total number, and there are none at Rydalmere. The maintenance rate at both these Hospitals would be much less if half or more than half the patients were women as is the case in most English asylums.

The cost for each patient at the Reception House was £2 11s. 3d., as against £2 18s. 0½d. during the preceding year.

The following returns show (1st) the average weekly cost at the Hospitals for the last ten years—1884 to 1893; (2nd) the weekly cost at all Hospitals from 1870 to 1893 inclusive; and (3rd) the particulars of expenditure in the Hospitals during the year 1893:—

* Report of Commissioners in Lunacy, England, 1892 † Includes chronic sick cases. ‡ Includes chronic sick cases and lepers.
 ** Report of Committee on Lunacy, Pennsylvania, 1892. *** Report of Inspector of Asylums, 1892.

Reception House for the Insane, Darlinghurst.

The number of patients admitted to this Institution in 1893 was 594, and with 9 remaining from the previous year makes a total of 603—428 males and 175 females—under care. Of these, 475 were transferred to Hospitals for the Insane, 117 were discharged recovered, 1 was discharged to care of friends, 2 died, and 8 remained at the close of the year.

The patients admitted are of two classes—those under medical certificate and those under remand under the provisions of section 1 of the Amending Lunacy Act. Of the first class, the number admitted was 354, and with 3 remaining from the previous year made a total of 357 under care. Of these, 348 were sent on to Hospitals for the Insane, 7 were discharged recovered, 1 was handed over to the charge of friends, and 1 remained at the close of the year. Of the second class, 240 were admitted and 6 remained from the previous year, making a total of 246. Of these, 127 were returned to Police Court, then certified as insane, and returned to the Institution, to go subsequently to Hospital; 110 were discharged as recovered, 2 died, and 7 remained in the Institution at the close of the year. It will be seen that 127 patients are counted twice, having first been admitted under remand and subsequently under medical certificate. During the year 10 patients were admitted twice, and 71 were admitted who had been previously inmates during the 26 preceding years.

I visited the Institution at least once in each month without any previous notice, and always found it in good order and the patients properly attended to. There has been no serious accident, the death-rate has been unusually small, and the Institution, as in many former years, has done most useful work.

Alterations to the laundry and bath-rooms, to which attention has been called in previous reports, are much needed; but funds have not yet been available for carrying out the necessary work.

The following returns give the statistics for the Reception House for the year 1893:—
 TABLE showing the number of Patients under Certificate received at the Reception House for the Insane during the year 1893, and their disposal.

Year.	Remain- ing 31st Dec., 1892.			Received.			Sent to Gladesville.			Sent to Parramatta.			Sent to Callan Park.			Sent to Newcastle.			Sent to Licensed House, Cook's River.			Discharged of sound mind.			Discharged to friends.			Died.			Remaining 31st Dec., 1893.

HOSPITALS FOR THE INSANE.

The statistics of these institutions will be found in the reports of the medical superintendents. [Appendices A, B, C, D, E.] The official visitors, Sir Arthur Roberts, Dr. J. Cox, and Mr. Nugent Robertson, have visited the Hospitals at Gladesville and Callan Park, and Dr. Walter Brown, Dr. Huxtable, and Mr. Nugent Robertson, the Hospital at Parramatta once in each month, and have forwarded reports for the information of the Chief Secretary after each visit, in accordance with the provisions of the Lunacy Act.

Gladesville.

This Hospital as in former years has received all patients from the southern and coast districts of the Colony. The number of patients on December 31st, 1892, was 852, and 223 were received during the year, making 1,075 under care. Of these, 106 were discharged recovered, 12 were discharged relieved, 60 were transferred to other institutions, 52 died, and 845 remained at the close of the year. The daily average number resident was 807.

The percentage of recoveries on admissions was 49.84, and the average recovery rate for the last five years 47.48. The death-rate was 6.44, and the return showing the causes does not reveal anything unusual. There was no death from typhoid fever or other epidemic ailment. Only one fatal accident occurred—a suicide by hanging—and in this case the usual inquiries were held. The

The Hospital has been much overcrowded, especially in the division for women, and a new ward to accommodate 70 women—which was in progress throughout the year—was not ready for occupation at its close. An important addition was made to the Laundry Building, under the direction of the Government Architect, this included new drying, folding, ironing, and sorting rooms, and allowed a reorganisation of the old laundry and an increase in the space set apart for washing and other preliminary laundry processes. The laundry as altered is conveniently arranged and fitted, and is large enough for the whole of the work of the Hospital.

The necessity for comfortable dining and sitting rooms for the attendants and nurses has long been apparent, but the work has been from various causes delayed. During the year, however, a good start has been made. The Medical Superintendent has undertaken the erection of the rooms for attendants by means of the labour of artisans and patients, and good progress has been made with the work. The Government Architect has taken a contract for the rooms for nurses, and there is good reason to hope that the members of the Ward Staff in both divisions of the Hospital will be in occupation of the new buildings long before the close of the current year. Various minor improvements and alterations have been made in the buildings, and the whole Hospital has been kept in good repair.

The arrangements mentioned in the Report for last year, under which two wards in the male division were set apart for new patients on admission, one being devoted to the more quiet and orderly and another to the more demonstrative cases, have worked most satisfactorily, and go far to insure the proper individual care and treatment of patients in the earlier and more curative stage of the malady. On the completion of the new ward for women, Dr. Sinclair proposes to make similar arrangements in that division of the Hospital. Considerable and commendable care has been taken with regard to the industrial occupation of the inmates, and the returns forwarded quarterly for my information show that, on the average, upwards of 64 per cent. of the patients are usefully employed.

Upwards of 52 per cent. of the patients attend Divine Service on Sundays, and the room used for this purpose is well filled.

I have on several occasions made inquiries into the arrangements for nursing and supervising the patients at night and attending to those with faulty habits, and consider these satisfactory.

My official inspections of the Hospital were made on January 9th and 19th, February 23rd and 24th, March 21st, April 20th and 29th, May 1st and 15th, June 19th, July 17th and 24th, August 19th and 20th, September 11th and 28th, October 12th and 16th, November 13th, and December 21st; and I have, on various other occasions, visited the Hospital for special purposes. I am glad to be able to report that the general management is careful, judicious, and progressive.

Parramatta.

This Hospital has continued to receive recent cases of insanity from the whole of the Western District, and the number of these is slowly increasing, the number admitted during 1893 being larger than during any previous year. The greater proportion of patients are, however, suffering from chronic insanity, and have been transferred from other Hospitals. The number on December 31st, 1892, was 999, and 158 were received during the year, making a total of 1,157 under care. Of these, 59 were discharged as recovered and 5 as relieved; 2 were transferred to other Hospitals; 1 escaped and was not retaken; 63 died; and 1,027 remained at the close of the year. The recoveries give a per-centage of 47.96 on the admission; whilst the deaths were only 6.25 per cent. on the average daily number resident. Of the total number of deaths, 32 were due to disease of the brain, 9 to disease of the lungs and heart, and 18 to general debility and old age.

The general health has been good, but both measles and influenza were prevalent in the wards for short periods, and one patient died from the sequelæ of the former disease.

The accidents have been extremely few, considering the large population of the Hospital and the large number of epileptic, and aged, and feeble patients. One case of suicide occurred, and is fully mentioned in the Report of the Medical Superintendent.

The most important addition to the buildings during the year has been a new kitchen block, containing a spacious and lofty kitchen, with meat and vegetable stores, lavatories, cook's room, and dining and sitting rooms for the attendants. The work has been carried out by the Government Architect's Department, and the result is a handsome and convenient addition to the Hospital.

The staff of artisans, together with a number of patients, have been engaged throughout the year in erecting new workshops for carpenter, painter, and blacksmith, in refitting the sculleries of two wards, and in effecting improvements in the Farm buildings, which are now in a creditable condition.

The water supply to the Hospital has been a matter of anxiety. The source is the town supply, but the pressure has been varying and insufficient, and the defective condition of some of the mains has added to the danger. Steps have, however, now been taken to lay larger additional mains, and to clean those already in use, and by these means, if the municipal authorities maintain a fair and equable pressure, the buildings will be reasonably safe. A contract was taken towards the close of the year for various much-needed alterations to the weatherboard buildings; these included new bath and dressing rooms, pantries, lavatory, stores, and additional sleeping rooms for attendants, as well as various minor alterations and repairs. When completed, this division of the Hospital will be in serviceable working order, and will be good for the accommodation of chronic cases for a number of years. I visited the Hospital on January 12th, February 2nd and 17th, March 12th, May 10th and 23rd, June 2nd and 23rd, July 21st, August 10th and 24th, September 5th, October 13th and 24th, November 14th, December 1st, 12th and 22nd. At my visits I visited various parts of the Hospital, which now extends over a considerable area, and made the inquiries and inspections prescribed by statute.

Callan Park.

This Hospital still receives the whole of the recent cases of insanity from the metropolitan area, and the number of acute cases, in proportion to the general asylum population, is larger than at any other of the Hospitals.

The admissions have been considerably above the average number for the last five years, and, owing to the want of room in other institutions, it has been found impossible to remove the chronic cases, so that the wards have been unduly crowded throughout the year, especially in the female division.

On December 31st, 1892, the number in Hospital was 812, and 298 were admitted during the year, making a total of 1,110 under care. Of these, 105 were discharged as recovered and 14 as relieved, 80 were transferred to other hospitals and 74 died, leaving 837 under care at the close of the year.

The recovery rate only gives a percentage of 35.59 on the admissions, being the smallest for some years, this being probably due to the large number of general paralytics and other incurable cases among the patients received. The death-rate was 9.14 on the average number resident.

The general health was good, but minor epidemics of both measles and mumps occurred, as well as two or three cases of erysipelas.

Additions to the laundry, a sitting room for nurses at the cottages, and some alteration in the wards of the female division, so as to insure a better observation of the sick at night have been carried out under the supervision of the Government Architect, and various alterations to closets, drains, &c., at the older buildings have also been made. The water supply to the older buildings having been found defective, a new main was laid to these, so as to insure an adequate pressure in the event of fire.

A large reclamation of the harbour has been carried out by the Department of Harbours and Rivers, the banks being made by fascines and the space within these filled with sand and silt by means of steam dredges. In this way an unsightly and unwholesome mud flat has been done away with, and the Hospital estate increased by an area of some 5 acres. To complete the work, a road and fences along the eastern boundary are required, so as to give access to the property of adjoining owners, and to protect the Hospital gardens and grounds, which is now open to spoliation by trespassers.

The main wants of the Hospital at present are an additional sewing room for patients, sitting rooms for nurses and attendants, and detached sleeping rooms for the members of the staff employed on night duty.

I visited the Hospital on February 14th and 28th, March 7th, April 27th, May 8th and 30th, June 1st, July 31st, August 8th and 29th, September 13th and 30th, October 26th, November 7th and 21st, and December 11th and 19th, and carried out the inspections and inquiries required by the Lunacy Act.

Newcastle.

This Hospital has continued to receive imbecile and idiotic patients both direct and by transfer from the other hospitals, to which patients of this class are not unfrequently sent by mistake.

The number of patients on December 31st, 1892, was 263, and 22 were admitted direct, and 45 by transfer, making the total number under care 330. Of these, 6 were discharged relieved, 5 were transferred to other hospitals, 24 died, and 295 remained at the close of the year.

The number of direct admissions was larger than during any year, except 1892, since the opening of the Hospital. The death-rate was somewhat high, being 8.51 per cent., but the patients are in the main a feeble folk, of whom one-third suffer from epilepsy, and among whom a high death-rate may be expected. Of the 24 deaths 11 occurred from epilepsy and 8 from diseases of the lungs.

The general health has been fairly good, although at the beginning of the year a number of the inmates looked pallid and weak after an outbreak of influenza, from which 44 suffered. Though measles were,—at the time this disease was so general throughout the Colony—very prevalent in Newcastle, both in the houses near the Hospital and in those occupied in various parts of the town by the families of attendants and other members of the staff, this disease did not appear among the patients. This immunity was doubtless due to precautions taken by the Medical Superintendent, who insisted, among other things, that all attendants coming from houses in which the disease had appeared should change their clothes before commencing duty daily.

A number of the inmates suffer from minor physical deformities and defects, and care has been taken to remedy these as far as possible, specialists being called in to perform any necessary operations which would tend to the comfort of the patients or conduce to their mental development.

The system of night attendance is efficient, the proportion of wet and dirty beds at night being very small, notwithstanding the feeble and limited intelligence of the inmates, and their liability to faulty habits.

Attention has been paid to the employment of the inmates, and upwards of 52 per cent. are usefully employed daily, whilst about 75 per cent. are able to attend the religious services and amusements which are held regularly.

The new ward for female patients opened at the close of last year has been put into good order and set apart for the younger or nursery patients, to whom it gives a bright and cheerful home.

The Medical Superintendent has carried out various alterations to the buildings. Workshops for carpenters and painters have been provided in the basement of the new ward, and for mat-makers in connection with the stable buildings. Several of the dormitories have been improved by cutting large arches between adjoining rooms and by better ventilation, and the buildings throughout have been kept in good repair.

The chief work carried out under the supervision of the Government Architect was the screen fence at the back of the buildings, to shelter the inmates from the observation of people in adjoining streets. This work has been carried out in a very efficient and satisfactory manner, and serves all the purposes for which it was designed.

I visited the Hospital on January 27th, March 16th and 17th, May 4th and 5th, July 27th and 28th, September 20th and 21st, and December 7th and 8th, and on each occasion made a full inspection of the Hospital, and inquired into its general management. I am glad to report this as in all respects satisfactory.

Rydalmere.

New cases are not received at this Hospital which is filled with chronic cases transferred from the other institutions, mainly from Callan Park and Gladesville, as the wards at these Hospitals become overcrowded with this class of patients. The patients are for the most part quiet, and more or less demented, and a considerable proportion are epileptic, a special ward being set apart for this class.

The number of patients on December 31st, 1892, was 225, and 72 were transferred from Callan Park and Gladesville during the year, making a total of 297 under care. Of these 1 was discharged to the care of friends, 2 were transferred to the Hospital for the Insane at Parramatta, being found unfit, by reason of violence, for this institution, 22 died, and 272 remained at the close of the year.

The daily average number under care was 254, and the death-rate calculated on this was 8.66 per cent.

The ward for epileptics has now been occupied for nearly a year, and has answered its purpose in the most complete and satisfactory manner. The dormitory is well ventilated, and admits of easy supervision. The day and dining room is of ample size, and the airing yard, whilst of sufficient area, is not large enough to allow the patients to be at any time beyond the ready help and care of the attendants.

The Hospital ward has been altered in various minor particulars, and affords a comfortable home for the sick and more aged patients, but it is much too small, and additional dormitories on the ground floor, together with a few single rooms for special cases, are absolutely necessary.

The Medical Superintendent, whilst exercising a close watchfulness over the health and general welfare of the patients, has devoted particular attention to the improvement of the gardens and grounds of the Hospital. The orchard and the vegetable and flower gardens have been greatly extended and improved, and the airing courts, planted with shrubs and bright with flowers at all times of the year, are kept in admirable order, and are a great attraction to both patients and visitors.

The number of patients usefully employed has averaged 40 per cent. throughout the year. The night attendance appears to be satisfactory, and the number of patients wet at night is reported as averaging 10, about half of whom are epileptics. No seclusion or restraint has been used for two years in succession, and no fatal accident or suicide has occurred. Nothing whatever has been spent in wine, beer or other stimulants.

The protection of the buildings against fire has received consideration. Additional hydrants and more lengths of hose have been supplied, and fire buckets are set in the verandahs of all wards and filled every night. A pretty cottage which has been erected in the grounds, and is at present used for the needlewomen and laundresses, is designed as a residence for one of the officers, and will be occupied in accordance with the original arrangement so soon as the new buildings for women are completed. These buildings, for which a contract was taken at the close of the year, will afford accommodation for 150 female patients, and include cottages for the matron, nurses, laundresses, and other members of the staff, as well as a new and spacious laundry, large enough to serve for the whole establishment and for a number of additional patients as the ward accommodation, is extended.

An Act passed during the last session of Parliament provides for a private railway from Rosehill, near Parramatta, to Dural. This passes through a corner of the Hospital Estate, and is likely to be a great trouble to the officers in charge during construction, and a permanent source of danger to the patients and anxiety to the Medical Superintendent.

I visited the Hospital on January 12th, February 2nd and 17th, March 13th, April 24th and 25th, May 10th and 26th, June 16th, July 21st, August 4th, September 5th, October 10th, and December 22nd, and made the various inspections and inquiries required by statute. The Hospital, which has now been managed for nearly three years as a separate institution, shows evidence of steady progress.

The maintenance rate has fallen to 9s. 9½d. per head, and will, no doubt, be still lower during next year when the number of patients will be somewhat larger.

LICENSED HOUSES FOR THE INSANE.

Bay View House, Cook's River.

The number of patients on December 31st, 1892, was 102, and 24 were admitted during the year making 126 under care.

Of the admissions, 19 were admitted for the first time, 1 was readmitted, and 4 were transferred from Hospitals for the Insane. During the year 13 were discharged recovered, 4 relieved, 3 were transferred to Hospitals for the Insane, and 8 died, leaving 98—19 males and 79 females—at the close of the year. The number of patients under care was 125, and the average daily number resident, 100. The recovery rate was 65 per cent. on the admissions, and this raises the average recovery rate for the last five years to the satisfactory percentage of 47.16 per cent. The death-rate was 8.00, being considerably higher than last year.

Of the number on the register at the close of the year 6 were absent on trial, in accordance with the provisions of the Lunacy Act.

I visited this institution on February 8th, March 20th, May 2nd, June 12th, July 25th, August 28th, September 14th, October 23rd, and November 28th, and the Official Visitors, Sir Alfred Roberts, Dr. J. C. Cox, and Mr. Nugent Robertson, Barrister-at-Law, paid visits once in each month during the year.

At my visits I made the inquiries prescribed by statute, and was careful to see all the patients, especially those recently admitted, and to make inquiries as to their fitness for care and treatment in an institution for the insane. I have investigated all complaints made to me, which were not obviously due to delusions, and have, when necessary, seen the patients alone. I have on all occasions found the rooms everywhere clean and orderly, and consider the general management of the institution satisfactory. An unfortunate accident by which a patient died from an overdose of chloral hydrate and bromide of potassium has been noted in a former part of my report.

Very considerable additions has been made to the institution by the purchase of an adjoining property, the house on which has been repaired and greatly altered, and rooms set apart for 9 patients and the necessary attendants. These rooms have been very nicely furnished and give excellent accommodation for private cases. The alterations were approved by the Chief Secretary under the provisions of section 27 of the Lunacy Act, on October 13th, and the building now forms part of the Licensed House.

The number of Government patients has been kept at 50 during the year, vacancies by death being filled by transfer of others from the Hospitals. The quarters for these patients have been rendered more comfortable by the addition of a large covered and enclosed verandah, which serves as an additional day-room.

The following are the main statistics for the year:—

TABLE 1.

SHOWING the Admissions, Readmissions, Discharges, and Deaths in the Licensed House for the Insane, Cook's River, during the year 1893.

	Male.			Female.			Total.		
	Male.	Female.	Total.	Male.	Female.	Total.	Male.	Female.	Total.
In Hospital on 31st December, 1892	17	85	102						
Admitted for the first time during the year	8	11	19						
Readmitted during the year	2	1	3						
Transferred during the year	2	2	4						
Total under care during the year 1893	10	14	24						
Discharge or removal—									
Recovered	3	10	13						
Relieved	1	3	4						
Transferred	1	2	3						
Escaped (and not recaptured)	—	—	—						
Died	3	5	8						
Total discharged or died during the year 1893	8	20	28						
Remaining	19	79	98						
Average number resident during the year	17	83	100						
* Persons under care during the year †	27	98	125						
* Persons admitted	8	11	19						
* Persons recovered	3	10	13						

* Persons, i.e., separate persons in contradistinction to "cases" which may include the same individual more than once. † Total cases minus readmission of patients discharged during the current year.

TABLE 2.

SHOWING the Admissions, Discharges, and Deaths, with the Mean Annual Mortality, and the proportion of Recoveries, &c., per cent., at the Licensed House for the Insane, Cook's River, from the years 1876-1893 inclusive.

Swiss and Woodland Cottages, Picton.

These houses are licensed, under the provisions of the 42nd and 43rd sections of the Lunacy Act, each for a single patient.

They were visited on April 13th and August 25th, and were found in good order, and the patients properly cared for in all respects. Both are visited by Dr. Arthur Mills, of Picton, the Government Medical Officer for the district, in accordance with the provisions of the Lunacy Act, and the medical journals are properly kept.

Ryde.

A license was granted on the 6th of September to the Rev. Mother Joseph, of the Little Company of Mary, for the reception of 6 female patients, the license being conditional on the carrying out of certain alterations and improvements, so as to ensure the safety, comfort, and health of the patients.

I visited this licensed house on the 6th of November, and found that the improvements referred to had all been carried out, and the house was furnished and ready for the reception of patients. Dr. Cotton D'Englesqueville has been engaged to attend as Visiting Medical Officer, the nursing will be carried out by the Sisters of the Society, and the house, which is pleasantly situated in a large area of land, has all the requirements of a comfortable home for cases of mental disease.

No patients have been received up to the close of the year.

HOSPITAL FOR CRIMINAL INSANE, PARRAMATTA.

The number of inmates on December 31st, 1893, was 57, and 11 were admitted during the year, making a total of 68 under care. Of these, 3 recovered, 13 were transferred to other Hospitals on termination of sentence or other change of status, and 3 died, leaving 49—41 males and 8 females—under care at the close of the year. The percentage of recoveries on admissions was 27·27, and the percentage of deaths 6·00, on the average number resident.

The majority of the patients are what is known as Governor's pleasure cases, those acquitted on the ground of being insane at the time they committed the offence with which they were charged, and ordered by the Courts to be kept in confinement during the Governor's pleasure. In addition to these are certain cases certified to be insane whilst awaiting trial, or found to be insane by jury on arraignment. The patients serving sentence are becoming fewer in number with each year, none being now received who are serving sentences exceeding one year.

The following return shows the classification of the patients:—

TABLE showing Classification of the Crimes of Patients remaining in the Hospital for the Criminal Insane, at Parramatta, on the 31st December, 1893.

Crime.	Classified with reference to the period at which insanity was recognized.

I visited the Hospital on February 17th, May 10th, July 21st, August 24th, October 13th, and November 14th, and on two of these occasions I checked the registers and saw every patient thereon.

The instances in which seclusion or restraint have been necessary have been very few, and the general condition of the ward has been one of quietness and good order. An average number of 42 patients or upwards of 85 per cent. of the whole are actively and usefully employed daily, and upwards of 50 per cent. have attended divine service every Sunday.

During the year extensive and much needed alterations have been carried out under the direction of the Government Architect. The main corridor has been enlarged and made brighter and more cheerful by throwing into it three single rooms. A small seclusion yard found to be unnecessary has been converted into an additional dormitory for eight beds. A steep, dark, dangerous, wooden staircase has been replaced by well-lighted wide and safe stone and slate steps, and a proper room for the night attendant as well as store-rooms, &c., have been provided.

The carrying out of these works necessitated the temporary employment of additional attendants to prevent accidents among a particularly dangerous class of patients.

The full statistics of the Hospital will be found in the report of the Medical Superintendent. (Appendix F.)

OBSERVATION WARDS H.M. GAOLS, DARLINGHURST AND PARRAMATTA.

These wards are under the administration of the Department of Prisons, but the Lunacy Act provides further inspection by the Inspector-General of the Insane once in every three months, and I have, as during former years, been met at my visits with extreme courtesy by the officers of the Prisons Department, and afforded all assistance in carrying out any inquiries, and all necessary information in the cases of individual prisoners.

I visited the ward at Darlinghurst on March 8th, June 14th, August 30th, and October 27th, and at each visit saw every prisoner on the register, and inquired into the circumstances of his detention. The ward has been under careful administration, and the observation of the prisoners has been close and intelligent and their treatment and management judicious.

On December 31st, 1892, there were 7 prisoners in the ward, and 35 were admitted, making 42 under care. Of these, 26 were discharged of sound mind, 4 were certified as insane and sent to Hospital, 4 were discharged to the Police Courts, and 8 remained at the close of the year.

In addition to these cases admitted to the ward under the provisions of the Lunacy Statute, there was 1 case in the ward whilst awaiting trial, 6 whilst detained during the pleasure of His Excellency the Governor, together with 24 under sentence, and 104 under remand from the Police Courts. The majority of the latter cases were suffering from delirium tremens or temporary mental aberration due to drink, and were placed under the trained warders in charge of the ward for their own safety and care, and to the convenience of departmental administration.

I visited the ward at Parramatta on March 24th, May 26th, August 24th, and November 16th, and on each occasion made a careful examination of the inmates and their surroundings.

The statistics of the ward show that 14 inmates remained on December 31st, 1892, and 16 were admitted during the year, making a total of 30 under care. Of these, 11 were discharged of sound mind, 10 were sent on the Hospitals for the Insane, and 9 remained at the close of the year. In addition to these

these the following were during the year treated in the ward under departmental arrangements: Detained during the pleasure of His Excellency the Governor 4, awaiting trial 1, under sentence from Police Courts 6, and under remand 21.

The records have been carefully kept, and the ward and its inmates have been in all respects under satisfactory management.

APPENDIX A.

The Medical Superintendent, Hospital for the Insane, Gladsville, to The Inspector-General of the Insane.

Sir,

Hospital for the Insane, Gladsville, 16 March, 1894.

I have the honor to forward for your information a report on this Hospital for the year 1893, together with the usual statistical tables.

At the beginning of the year there were 852 patients in the Hospital. During the year 223 (124 men and 99 women) were admitted. The whole number under treatment was 1,075, and the average number resident 807. There were discharged 230, of whom 106 had recovered, 12 were relieved, 60 were transferred to other Hospitals, and 52 died. There remained at the close of the year 523 men and 322 women, a total of 845.

Of those discharged 106, or 48.84 of the admissions had recovered. Unfortunately the number of relapses has at the same time been large, as shown by the increase in the readmissions—46 this year as compared with 32, the average for the past 5 years. This is, however, probably only temporary, and due to the pressure of hard times.

There

There has been no increase in the number of patients this year, owing to the transfer of 60 to other Hospitals less overcrowded than this. The admissions and discharges have thus balanced each other. The ward for men opened in 1892 so increased the accommodation on the male side that the 22 patients in excess of the proper number did not seriously incommode the working of the Hospital. On the female side, however, the overcrowding has continued, and it is now so great that the opening of the ward approaching completion will hardly do more than absorb the number at present in the Hospital in excess of the accommodation. Before the end of 1894, if the admissions continue as numerous as usual, the wards will again be over-full.

The general health of the Hospital has been good; the death rate 6·44 is low for an institution of this nature, and is about the average of previous years. There has been no outbreak of epidemic or infectious disease since the influenza of 1892. It is worthy of note in this connection, that typhoid fever, of which there have been occasional cases for some years past, has practically disappeared from the Hospital since the introduction of Nepean water, and the discontinuance of the supply from the Hospital reservoirs, which had become polluted—and this too, though the fever has been prevalent in the neighbourhood.

During the year the addition to the laundry erected by the Government Architect was occupied and afforded welcome relief to the cramped and insufficient quarters previously existing. The whole laundry is now a convenient and well-arranged one, and is expected to prove sufficient for all demands likely to be made on it. The new building consists of receiving, sorting, and delivering rooms, of a mangle and calendering room, and of a drying closet. The rooms formerly used for these purposes have been thrown into the general laundry. It is unfortunately impossible to increase the area of the drying green, which is bounded by the public road, and is now much too small for the work done in the laundry.

I beg on behalf of the Hospital to tender thanks to those who kindly gave entertainments, viz.:—Messrs. Williamson and Musgrove, and the members of the Lyceum Comic Opera Company, The Sydney Orpheus Club, The Lotus Dramatic Club, Mr. J. Hellmrich and friends, Miss Millic Davis and Miss Colbourne Baber, the Id-Agere Dramatic Society, Mr. Grimm and friends, Mr. E. P. Everett and Mr. Lister Bellingham and friends, ladies and gentlemen from Willoughby, Mr. Crabtree and friends, and the following bands—Ryde, Enterprise, Paddington Borough, and Balmam Coldstream.

The following donations have been received, and I take this opportunity of thanking the donors for their gifts:—Illustrated papers and books from Mrs. Salter, Mrs. Pearson, E. O. Smith, Esq., Miss Gerard and Miss Kilby, Honorary Secretaries of the Hunter's Hill Library, and Miss Hood; 4 Lord Howe Island Fruit Pigeons, from T. R. Iecly, Esq.; Christmas cards from the Rev. Samuel Wilkinson; a Kangaroo, from Dr. Thring; £5 10s., from Mrs. Salter; and £3 from anonymous donors.

The proprietors of the following newspapers:—*Bathurst Free Press*, *Bathurst Daily Times*, *Burrangong Argus*, *Deniliquin Chronicle*, *Dubbo Dispatch*, *Goulburn Herald*, *Hawarra Mercury*, *Kiama Independent*, *Wagga Wagga Express*, *Maitland Mercury*, *Monaro Mercury*, *Queanbeyan Age*, *St. Leonards Recorder*, *Western Post*, *Weekly Advocate*, *Yass Courier*, and *Sydney Daily Telegraph*, have generously forwarded a copy of each issue free during the year.

To the officers and staff I beg to tender my hearty thanks for the willing and efficient assistance they have rendered me during the year.

I have, &c.,
ERIC SINCLAIR,
Medical Superintendent.

APPENDIX B.

The Medical Superintendent, Hospital for the Insane, Parramatta, to the Inspector-General of the Insane.

Sir,

Hospital for the Insane, Parramatta, 19 February, 1894.

I do myself the honor to forward herewith a report upon this Hospital for the year 1893, accompanied by the usual statistical tables.

By reference to the latter it will be seen that there were 999 patients in the Hospital on the 31st of December, 1892; that 108 were admitted during the year for the first time, 15 readmitted, and 35 transferred from other institutions, making a total of 158 (107 men and 51 women), and raising the number of those under care and treatment during the year to 1,157 (727 men and 430 women). Of this number 36 men and 23 women were discharged recovered, and 3 men and 2 women relieved; 1 man and 1 woman were transferred to another institution, 1 woman escaped, and 45 men and 18 women died during the year, leaving a total of 1,027 (642 men and 385 women) on the 31st of December, 1893, being an increase of 28 over the numbers at the corresponding period of the previous year.

By further reference to the statistics of preceding years it will be seen how great has been the increase in the population of this Institution. The number on the 31st of December, 1882, was 790, and the increase in eleven years was 237. In this total is not included the 49 criminal patients, who, although in a portion of the same Institution, are accounted for in a separate report.

The percentage of recoveries on the admissions and readmissions for the twelve months was slightly higher than for the preceding year, being 46.73 for the latter and 47.96 for the former; whilst the death-rate, calculated upon the average number resident, was 6.25, being higher than 1892, owing in a great measure to the falling off of a great many of the old and feeble, 16 of whom were more than 70 years of age, and 12 others between 60 and 70. The general health of the patients has, however, on the whole been good. An epidemic of measles broke out amongst the female patients, but fortunately the disease was of a very mild type, and with one exception all those attacked made a rapid recovery. The exception was a young woman, who was in a very feeble state of health and was suffering from severe chorea, and who died from a complication of ailments.

The escapes have been ten, and with one exception the patients were returned to the Hospital within a very short time.

The accidents were neither numerous nor of a serious nature, with the following exceptions:—A female patient fell during an epileptic attack, and sustained a simple fracture of both bones of the leg, a few inches above the ankle. A man, whilst attempting to escape, fell and fractured one of the bones of the left arm; and a simple fracture of the clavicle was due to a fall resulting from a push by a fellow patient. Each of these patients made an uninterrupted recovery. Two cases in which death occurred somewhat suddenly were reported to the District Coroner, but in neither was an inquiry deemed necessary.

Unfortunately the year was not passed without an occurrence of a melancholy nature. A patient who had for a long time been convalescent, who was employed in carrying messages about the neighbourhood, and was a general favourite and much trusted, committed suicide. He had only a day or two before obtained a situation, and was about to be discharged. The whole circumstances of the case formed the subject of a special report to you at the time, and an inquiry was held by the Coroner, at which the jury did not attribute blame to anyone.

Divine Services have been regularly held in the Institution, and the entertainments and recreation of the patients has not been neglected. In this connection I desire to point out the necessity for a special room, to be used in the evenings for smoking, billiards, music, and other amusements, in connection with but somewhat detached from the wards for convalescent and industrious patients, in the male division. The dining rooms at present used are within the wards, surrounded by dormitories and single rooms, in which patients who go to bed somewhat earlier than others cannot sleep owing to the noise made

made by those who are up. There is an admirable site for such a room, and if built of wood its cost would not be great. A large amount of work has been done by the Government Architect's Department; the most important being the erection of a new kitchen on the site of the old one. This kitchen is fitted with the most modern and convenient cooking apparatus to be obtained in the Colony. The result has been equal to the expectations formed of it, and the patients now have their meals served up in a much more comfortable and appetising manner than was possible under former arrangements. New and convenient stables have been built on a detached site. The whole of the outside of the wards for women has been repainted, the gutters, spouting, &c., being repaired at the same time, and the work performed in a more thorough and satisfactory manner than at any previous time. Alterations to the weatherboard division for men—which include new bath and dressing-rooms, additional rooms for attendants, and other important improvements—are now in progress, and new water mains, which will it is hoped, give an increased supply at a higher pressure, are being laid, and will be soon completed.

As in a previous report, I wish again to point out that the two most urgent requirements still unsatisfied are a dining-room for the nurses and a detached cottage in which those nurses who are on duty during the night could sleep. This, for obvious reasons, should be as far removed as possible from the bustle and noise inseparable from the wards of a large hospital such as this.

The usual amount of work has been done in connection with the gardens and ornamental grounds, the trees and plants in which are rapidly growing, and already give to the hospital a sheltered and picturesque appearance. A number of patients have been employed at this work, whilst others have, under the supervision of the artisans, completed a new shop for the painter and made good progress with large shops for the carpenter, blacksmith, and other tradesmen. These new shops will render the industrial occupation of the patients more easy, as they will have abundant space for work and be under efficient supervision whilst employed.

The hospital farm, with the buildings thereon, has received the usual amount of attention. The old fences have been removed and replaced by others which now include a larger area under cultivation, and by the aid of a larger number of patients than usual the supply of vegetables and fruit has been decidedly increased.

The changes during the year amongst the staff were not numerous. Miss Spencer, who succeeded Mrs. Burn as Matron, applied for and received the position of Matron to the Walker Hospital, and was succeeded by Miss Mary T. Cooke.

I have to thank several ladies and gentlemen of Parramatta and Sydney, and especially Mr. Arthur Massey, organist of St. John's, Parramatta, for their kind efforts in organising and carrying out musical and other entertainments for the benefit of the patients, and also the proprietors of the *Sydney Illustrated News*, *Bathurst Free Press*, and others for newspapers regularly forwarded.

In conclusion, I must record my thanks to Drs. Russell and Millard and all others associated with me during the year for the able and efficient assistance at all times willingly given.

I have, &c.,
EDWIN GODSON,
Medical Superintendent.

TABLE I.

*Persons recovered	36	23	59

* Persons, i.e., separate persons in contradistinction to "cases" which may include the same individual more than once.

† Total cases, minus

readmission of patients discharged during the current year.

The recreation of the patients has not been neglected. The usual out-door sports, such as cricket (which is played every Saturday with outside clubs), bowls, quoits, &c., have been carried out. During the winter the usual fortnightly dances were held, and in the wards means of amusement have also been provided in the form of billiards, bagatelle, pianos, &c., and the library has been kept well supplied with books. Through the courtesy of Dr. Sinclair, many of the patients were enabled to attend the Gladesville dances which are held every second week.

The usual picnics have been held, and through the kindness of Mr. Sager of the Health Department an exceptionally enjoyable one was held at the Quarantine Ground, when the greatest kindness were shown by the Superintendent and his assistants. I have to thank Mr. Huenerbein for his kindness in organising several excellent concerts in which most of the leading artists in Sydney have taken part; also several ladies and gentlemen amateurs who kindly tendered their services; and several local bands, the members of which have attended on Saturday afternoons and played in the cricket ground. The following donations have been received during the year:—Illustrated and other papers from Miss Morehead, Mrs. Wm. Chisholm, Dr. Manning, Judge Fitzhardinge, Mr. Nathan, Mr. Harrook, and Christmas cards from Rev. S. Wilkinson; plants and palms from Dr. Manning and Mr. Justice Owen, pipes from Dr. Traill, and 10s. from Mrs. Brown.

Divine Service has been held regularly, and Mr. Lunn kindly presided at the harmonium at the Church of England services.

During the year a course of lectures was delivered to the nurses and attendants on "first aid"—bandaging, nursing, &c.—Dr. Miles and Dr. Henry co-operating with me in arranging and carrying out this task. The examinations, which were kindly conducted by Dr. Sinclair and Dr. McDouall, of Gladesville, showed that the members of the staff had profited by the instruction given.

A new dining room for nurses, and a storeroom at the cottages for female patients, were completed during the year, and the sorting room at the laundry was enlarged so as to facilitate the work which before was rendered difficult by the want of sufficient space. The refuse and coal shed in the female division has been removed to a more suitable position, and alterations have been made in the wards so as to enable the night nurse to exercise better supervision of the hospital and epileptic patients. A requisition has lately been forwarded for additions to the sewing room, which at present is far too small for the number of patients employed there.

The work of reclaiming the bay at the north-east boundary of the grounds has made fair progress, but is not yet completed. The road has not yet been started, and the Hospital grounds in that portion of the estate are quite open to the public, and unprotected.

A considerable amount of work was carried out during the winter at the cricket ground, which has been much improved and drained where necessary. The trees that line the avenue bordering the ground have been carefully pruned and the lower branches removed, and a pleasant shady walk has been made, which is a frequent resort for patients of both sexes.

The pressure in the water main has been very unsatisfactory, averaging during the day time only from 5 lb. to 8 lb., which in case of a fire would be quite useless. Steps have now been taken, under the supervision of the officers of the Water Supply and Sewerage Board, to increase the pressure by running a 6 in. pipe from the 15 in. main in Balmain-road in addition to the present branch that supplies the Hospital main.

In conclusion, I have to thank the Officers and Staff for the cordial and willing assistance I have received from them during the year.

I have, &c.,

HERBERT BLAXLAND,

Medical Superintendent.

APPENDIX D.

The Medical Superintendent, Hospital for the Insane, Newcastle, to the Inspector-General of the Insane.

Sir,

Hospital for the Insane, Newcastle, 20 February, 1894.

I have the honor to forward for your information a report on this Hospital for the year 1893, together with the usual statistical tables.

At the beginning of the year there were in the Hospital 146 males and 117 females—a total of 263. The admissions numbered 67, of whom 43 were females; of these, 15 males and 7 females were received direct, the remainder having been transferred from the other Hospitals for the Insane. The total number under care during the year was 330, with an average resident number of 282. The discharges were 4 males and 2 females relieved, and 5 females transferred. During the year 3 males and 2 females were absent on trial, 1 of whom was discharged and 1 died whilst on leave, and 2 were returned to Hospital, leaving 1 absent at the close of the year. Of the deaths (24 in all), 13 were males and 11 females. At the end of the year there remained 153 males and 142 females—a total of 295.

The number of admissions for the year show 26 more than for 1892, and is the largest since the opening of the Institution in 1871. The death-rate was higher than usual, 8.51 per cent. The general health of the inmates was good, and although the town and district suffered severely from epidemic measles, the disease did not reach the Hospital. One accident, an intra-capsular fracture of the neck of the femur, in a male patient, was reported to you at the time of its occurrence.

The comfort of the patients has been materially added to during the year, by ventilation of all the dormitories and by the reorganisation of several wards. The wing for female nursery patients, opened early in the year, has been a success in every way. It is spacious, well lighted and well ventilated, and very comfortable in all weathers. The building being detached prevents the children from seeing the older and more degraded patients, from whom bad habits and objectionable gestures, so common in this class of patients, might be contracted. The dormitory of the male nursery has been improved by a system of hammocks, which, when "stowed," allow of the room, in which there is a guarded stove, to be used as a day-room in cold and inclement weather. The cricket paddock has been levelled and made available for the male patients, numbers of whom get the utmost enjoyment from its use. For some years the rain-water from the roofs has been unused; but it was found that the district water was so destructive to clothing and expensive as regards soap and soda, that a pump was placed near the steam boilers, which gives the laundry a copious supply of soft water from underground tanks. The buildings generally are in excellent repair, and can comfortably accommodate a maximum of 300 patients. A carpenter's shop, a timber-room, and a painter's shop have been improvised in the basement of the east end of the female nursery ward, and are cool, commodious, and well lighted. The vegetable garden has been reorganised by doing away with unnecessary paths and asphalted the remaining ones. For many years difficulties have arisen through defective drains; these have been put in order, and a plan made of their situation and direction. During the month of March a gale of unusual severity visited the district, doing a great deal of damage to the garden and grounds, and disturbing the slates on many of the roofs. Several handsome pines were blown down and a galvanised iron fence on the south side of the vegetable garden completely demolished. In place of it has been erected, on a substantial rubble wall, a suitable picket fence. Perhaps, however, the most important and desirable improvement of the year has been the erection of a screen by the Government Architect's Department along the western boundary of the Hospital, which effectually hides the inmates from the public gaze.

The

The recreation hall, as in past years, has been of much service, and the number of entertainments large, for which I am indebted to the Dan Tracey Dramatic Company and kind amateur friends. On two occasions the patients had the uncommon treat of a monster picnic—one at Tomago, on the river, by Mr. Walton, who provided a steamer and grounds; and one by some friends to The Ridge, on the grounds of Mr. Merewether, who otherwise assisted to make the day a happy one. The religious services have been well attended and regularly held.

The proportion of patients usefully employed continues reasonably large, and interesting work in the form of mat and mattress making has been found for the younger and more intelligent male patients.

The yield of vegetables, notwithstanding a dry spring and summer, has been large and varied, and sufficient for general use and for the special diet of the epileptic patients.

Instead of the customary Christmas tree, a sports-day was held, the prizes being mainly given by Mr. C. Nettheim of Sydney, who in previous years assisted by a present of toys, &c.

The accompanying table gives evidence of the various deficiencies, other than mental, to be met with among the inmates, together with the number of epileptics, and is of interest, as showing to what physical blemishes this class of patient is liable. Under "deformed" are classified all those having deformities on any part of the body, including redundant organs, webbing of fingers and toes, &c., and the "crippled" are practically bed-ridden. It will be seen that more than one-third are epileptic, about one-fifth are dumb, rather less than one-eighth deformed, one-fourteenth bed-ridden, whilst a small proportion are deaf or blind.

Total number of Patients in Hospital, 31 Dec., 1893.		Epileptic.		Dumb.		Deaf.		Blind.		Deformed.		Crippled.

† Total cases.

use of the present female staff. This was much needed as their previous quarters were within the building occupied by male patients. A copper, with washing tubs, &c., have been supplied in the new shed attached to the laundry, and a useful annexe made to the cottage occupied by the clerk and storekeeper. A quantity of canvas hose and other appliances for fire extinguishing purposes has been obtained. Hoods have been fixed over all the windows of the Hospital on the weather side as a protection in bad weather, and a considerable amount of new fencing carried out.

Much useful work has been accomplished by the staff and patients in the way of draining, trenching, planting, and general cultivation. The entire vegetable garden, as also portion of that devoted to flowers have been thoroughly drained, the stone for the same being obtained from the quarries on the estate. The road in front of the main building has been entirely laid down and formed, a large area of land has been cultivated in the vegetable garden, and an attempt made to grow at least portion of the potatoes used in the Hospital. The airing courts of No. 3 Ward have been laid out, and the tar-painted paths, grass beds, trees and flowers, give the whole place a decidedly cheerful and orderly appearance.

Much planting and levelling has been done in various portions of the grounds, and avenues of trees for shade and general effect have been made in several directions. The airing courts of Nos. 1, 2, and the Hospital wards are now in excellent order, and the flowers, trees, &c., afford pleasure and interest to those patients who are unable to work, as well as occupation to those whose peculiarities prevent their employment elsewhere. The ward opened some twelve months since for the exclusive use of epileptics has worked smoothly, and the arrangements thereof generally have given satisfaction. For various reasons it is found more convenient to locate all the epileptic patients within one ward, where attendants soon gain special insight into individual peculiarities, and supervision is in consequence closer and often preventive of excitement and its results.

The Hospital buildings have been kept in good order throughout the year. A considerable amount of colouring and painting has been done to dormitories and day-rooms, and the walls of the latter have been considerably improved by the hanging of pictures, &c. The trees, shrubs, &c., planted last season have done remarkably well, and already the grounds have a different appearance in consequence. The orchard and vineyard are thriving well, and next season there should be a large addition to the fruit supply.

The contract for the erection of various buildings connected with the proposed female division has been let, and a commencement is now being made with the work. The new wharf on the river bank is also under construction and will be a great acquisition when finished. I hope during the current year that a boathouse for the shelter of the boats, which suffer from exposure may be provided. The need of a porch over the main front entrance is much felt. The rain beats in freely, and in the wet season the entrance hall is very uncomfortable. Cottages for the use of the chief attendant and for a resident gardener are also required, as is also some enlargement of the quarters occupied by the night attendant, where room should be provided for at least two men engaged on this duty.

With such a large number of epileptic, feeble, and aged patients but little can be done by way of amusement involving active exertion. Occasional games of cricket, boating parties, visits to the theatre or circus have been indulged in, and a good supply of newspapers—illustrated and otherwise, playing cards, &c., has been kept up.

To the officers and staff many thanks are due for their hearty co-operation in carrying out the work of the hospital during the year.

I have, &c.,

W. COTTER WILLIAMSON,
Medical Superintendent.

APPENDIX F.

The Medical Superintendent, Hospital for the Criminal Insane, Parramatta, to The Inspector-General of the Insane.

Sir, Hospital for the Criminal Insane, Parramatta, 17 February, 1894.
I do myself the honor to forward herewith a report upon this Hospital for the year 1893, together with the usual statistical tables.

By reference to the latter, it will be seen that both the number admitted and the number remaining in Hospital at the end of the year were less than in 1892, this being accounted for by the fact that prisoners serving long sentences are now detained in the observation wards of Darlinghurst and Parramatta Gaols instead of being sent on to Hospital.

The number of patients in the institution on the 31st of December, 1892, was 57 (48 men and 9 women). During the year 9 men and 2 women were admitted, making a total of 68 (57 men and 11 women), under care and treatment during the twelve months. Of these 3 men were discharged recovered. Eleven men and 2 women were transferred to the free division on the expiration of their sentences, and for other reasons, and 2 men and 1 woman died, leaving a total of 49 (41 men and 8 women) in the Hospital on the last day of the year, being a decrease of 8 as compared with the corresponding date of 1892.

The customary tables, giving the mortality, per centage of recoveries, &c., &c., are appended.

The daily life of the occupants of this part of the Hospital has been particularly uneventful, no accident and no epidemic disease having occurred. As usual the great majority have been usefully occupied at some or other of the various works carried on under the supervision of the attendants and other members of the staff, but principally in cultivating and growing vegetables, and in sawing and splitting wood in the yard specially set apart for them. Several who could not be safely trusted at this kind of work remain in the wards, and find plenty of employment in teasing coir and horse-hair, which are used in the matting-room; and some few are engaged in the necessary cleaning of wards and other domestic duties.

During the year the alterations and repairs so urgently needed to this part of the institution have been completed, and, as anticipated, have proved of great benefit and convenience.

I have, &c.,

E. GODSON,
Medical Superintendent.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

BRUSH FARM, PARRAMATTA RIVER.

(LEASING OF.)

Ordered by the Legislative Assembly to be printed, 5 June, 1894.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 19th April, 1894, That there be laid upon the Table of this House,—

“Copies of all papers in connection with the leasing of Brush Farm, Parramatta River, by the Government.”

(*Mr. Darnley.*)

Minute by the Principal Under Secretary.

20 November, 1893.

Subject:—Proposed Site for Boys' Reformatory at Brush Farm.

It is suggested, with a view to facilitating the establishment of a Boys' Reformatory, that the Director of Government Asylums be instructed to proceed to Brush Farm and report upon that locality as a site for the institution before any action is taken to lease the premises. I shall be glad if the Chief Secretary will kindly consider this suggestion, and instruct me accordingly.

C.W.; P.U.S.

Approved.—G.R.D., 20/11/93. The Director of the Government Asylums, B.C., 20/11/93.—
C.W., P.U.S. Report herewith.—S.M., 28/11/93. The Principal Under Secretary.

The Director of the Government Asylums to The Principal Under Secretary.

Proposed Reformatory for Boys.—Report on the Brush Farm Estate.

Sir,

Charitable Institutions Office, Paddington, 28 November, 1893.

In compliance with the Chief Secretary's direction, I have the honor to submit the following report on the suitability of Brush Farm as a site for a Boys' Reformatory:—

Locality, area, &c.

Brush Farm is situated in the Municipality of Dundas, 13 miles from Sydney, on the Great Northern Railway Line, the nearest point of communication being the Eastwood Railway Station, which is about 1 mile distant. The tinted sketch* on the accompanying plan accurately outlines the general contour of the estate. The principal boundary is the main road to Parramatta, which town lies 4 miles south-west. The farm is thus easily and conveniently accessible from several directions, and the locality is probably one of the healthiest in the Colony. Its altitude is about 400 feet above sea level, and the natural facilities for drainage are such that perfect sanitation can be secured without difficulty, and with a very trifling expenditure indeed.

The whole estate covers a surface area of about 60 acres, more or less, at least two-thirds of which are already under cultivation as an orangery and general orchard. All the trees appear to have been well selected, properly classified, and carefully tended; the orchard and grounds are, on the whole, in very good order, and I am informed that the total pecuniary return from fruit and vegetables in an ordinary good year has exceeded £500 per annum, but this return does not take into consideration the cost of labour in working the estate. I have merely referred to this aspect of the question here in order to

320—A

show

show that if it is determined to establish a Reformatory at Brush Farm it may be taken for granted that the monetary returns from the sale of fruit, vegetables, and general produce will prove a large source of revenue, and the inmates' labour can be so utilised as to reduce the actual cost to the State under this heading to a comparative trifle. Such returns might also fairly be taken as a set-off against the rent-charge, if it is decided to secure the property on lease, or against interest on a loan vote, if it be determined to purchase it outright. I have not considered it necessary, however, to enter into this matter more fully, as it does not really come within the scope of my instructions; and the Chief Secretary has himself so recently inspected the estate that he is the best judge of what should be done in the interest of the Government in this particular.

Buildings.

* Appendix B.

The whole of the buildings on the estate, which are clearly set out in the accompanying plan,* can be utilised for reformatory purposes, with slight and comparatively inexpensive alterations. An expenditure of from £200 to £250 will probably be sufficient to do all that is necessary to renovate the buildings and make them immediately available for such an institution, but this estimate does not include the larger question of providing an adequate water supply, which I have briefly dealt with under a separate heading. The buildings are so arranged as to admit of the necessary classification of inmates in the dormitories and day-rooms; and judging from the statistics relating to juvenile offenders, which I obtained when previously dealing with the question of a Boys' Reformatory, I am of opinion that, with some slight additions, accommodation can be found for all the lads who are likely to be committed under the "Reformatory Schools Act" in this Colony for some years to come. If the method of dealing with lads which I have previously recommended be adopted,—*viz.*, to apprentice them as a rule after they have been subjected to twelve months' discipline and instruction on the farm,—I do not think their average number is likely to exceed from sixty to seventy, and ample accommodation can be provided to meet this demand at a very small outlay. Exclusive of the rooms which it will be necessary to set apart for the local administrative staff, accommodation can be immediately found for from forty to fifty boys.

I may mention that the Rydalmere Home for Boys, at present leased by the Government at a rental of £125 a year, is distant about 1 mile from Brush Farm. Under the conditions of the lease (which terminates in about eight months, and will not be renewed) two detached weatherboard buildings can be removed to Brush Farm, and utilised either for workshops, additional dormitories, or day-rooms. It may not be out of place here to suggest that if the Chief Secretary decide to secure Brush Farm, the question of whether it should be leased or purchased might be considered in conjunction with the proposal not to renew the lease of the Rydalmere Home, as that event would effect a saving of the existing rent charge of £125 a year.

The main building at Brush Farm, which is marked "A" on the plan, is substantially built of stone, and contains nineteen rooms, in addition to dry, well-drained cellars in the basement (which can be used as store rooms). The dwelling rooms, the majority of which are exceptionally large, are arranged on the first and second floors, with verandah and balcony. Their dimensions are set out in detail on the plans, for the information of the Chief Secretary. This division can be used for the principal dormitories and day rooms, for Superintendent's quarters, and for other administrative purposes. It will be necessary to improve the ventilation, and also to afford access by a flight of steps to the room on the first floor (marked 25 x 16 on the plan) which has never yet been opened, and to place a door and two windows in it. It will also be necessary to provide two large cooking ranges and two coppers in the kitchen, which is 25 x 16'6", and contains at present only one small stove. By making use of the available labour of the Department, all these additions and alterations should not cost more than from £75 to £100.

About 4 chains distant from the main building is a substantial brick stable (marked "C" on the sketch), on the ground floor of which, by breaking away divisions, one apartment 57 x 15 feet can be secured for a general dining-room, while three lofts on the first floor can be converted by the same means into a dormitory for one class of boys, with an overlooking room for the night officer, if necessary. At the rear of and attached to the stables are a coach house 16 x 18, and cow bails, &c., the former of which may be used as at present; but it would be necessary to remove the cow bails to a more remote site. The stables should be newly floored and otherwise improved, and the upper story will need slight alterations and improved ventilation, but any interior changes that may be found necessary can be carried out with institution labour, which would confine the principal outlay to the purchase of material, and the total cost would, therefore, probably not exceed £25.

It will be necessary to provide a special division in which to confine some of the lads temporarily after their committal until they are made amenable to discipline, and their classification is determined upon. A room, 16 x 14, about 80 feet distant from the main building (marked "D," brick loose box, on the plan) can be devoted to this purpose. It can be converted into cells, and enclosed by either an open picket fence (barred outside to prevent the lads from climbing) or by a close galvanized iron fence (say) 10 to 12 feet high, in order that the boys should not escape while undergoing probationary confinement. This punishment division cannot be attractively described; but it is an indispensable reformatory adjunct. Under an able superintendent, however, possessing the necessary tact and discretion to deal successfully with juvenile offenders, it need not be largely resorted to; but the boys would know of its existence, and the moral effects would be good. An expenditure of about £75 will be probably sufficient to carry out the necessary alterations here, the cost of fencing being the principal item.

On the south-western corner there is a substantial weatherboard cottage (marked "B" on the plan). It contains four rooms and kitchen, and can be used as quarters, either for the matron, or assistant superintendent and schoolmaster, or for some other purpose to be determined upon. At the rear of this building there is a very good stable.

A four-roomed weatherboard cottage (marked "E") on the north-eastern corner of the estate, can be used as the out-door overseer and gardener's quarters. It is in a fair condition, and needs only some slight improvements and alterations, which can be effected by institution labour.

Water Supply.

This will be a somewhat large question to deal with ultimately, and it should be allowed to stand over until the actual needs of the institution are ascertained. At present all the underground and overhead tanks on the premises have a total storage capacity of about 100,000 gallons. A much more extensive supply will of course have to be provided eventually, if it is ultimately decided to secure the estate permanently

permanently for reformatory purposes. In the meantime, a sufficient number of galvanized iron tanks can be provided to meet the requirements of the institution. A sufficient water supply is of primo importance, because the successful administration of the farm and orchard will largely depend on the application of a thorough system of irrigation; and fruit culture, dairy, and general farming will be the main industries in which the boys will be instructed. The permanent water supply can be procured from two sources—either by constructing a local reservoir, for which there are great natural advantages, or by a connection with the Sydney water supply main at Ryde, about a mile distant. A 3-inch pipe, which would probably be laid by the Water and Sewerage Board for about £400, would be amply sufficient for all purposes, but the expenses under this head would be further increased by the cost of reticulation; in all probability another £150 would be required for this purpose. It would be necessary, however, to obtain a competent professional opinion on this particular point; and I would, therefore, suggest that the Government Architect be invited to report upon the matter at his convenience.

General Remarks.

It will be seen from the foregoing brief descriptions that Brush Farm and the buildings already upon it can, with a comparatively small expenditure, be made quite suitable for a temporary Reformatory for Boys. I do not consider it necessary to again submit, in connection with this report, the details of a reformatory scheme. The Chief Secretary has already had these under consideration, and has, I understand, generally approved of them in connection with my previous reports upon the Rookwood and Shaftesbury buildings, and my visit of inspection to the Ballarat Reformatory in Victoria.

All those details can be applied in establishing and organising a Boys' Reformatory on the Brush Farm Estate. My present direction is merely to report as to the suitability of the site, and I have not, therefore, presumed to enter into negotiations with the owner of the estate, who intends, I understand, to make his proposals, of which I have not any knowledge whatever, directly to the Government, as to terms of rental or ultimate purchase, if one or both courses be decided upon. The total value of the estate, which is undoubtedly large, can, however, easily be determined by the regular income now realised from the orchard, by the buildings upon it, by its area and the quality of the land, by its convenient and healthy locality, and by the advantages it possesses for instruction in the industrial occupations necessary for boys of the reformatory class, which can really be made a source of income, if not of profit, to the Department, as well as a means of securing good reformatory results. The whole success of the experiment will, of course, depend upon the thorough competency of the officials who may be appointed to manage the institution, and, this being admitted, I would respectfully suggest that none but well tested and experienced persons be selected, especially at the outset, to fill the important positions which will constitute an effective reformatory staff.

At Newington Asylum, in connection with which the privilege of selecting all the officials, with one exception, was granted to me (subject to the approval of the Chief Secretary), a model establishment of its kind has been created, because the local management has been satisfactory, while under opposite conditions failure has resulted in other directions. If a Boys' Reformatory is to be established, and my Department is to be made responsible for its success or failure, I would beg that the same concession be granted as at Newington, and I would further suggest that all officers be appointed on probation until their capacity is tested.

These are points of detail, however, which have been fully dealt with in previous reports, and I merely incidentally refer to them here in order that they may not be lost sight of.

Awaiting your further instructions,

I have, &c.,
SYDNEY MAXTED,
Director of Asylums, &c.

Enquire from owner the rental upon a ten years' lease, subject to resumption at any time during the lease, under the Lands Resumption Act, or upon terms to be mutually agreed. Any improvements the Government may make not to be counted in any valuation that would be made.—G.R.D.

The Principal Under Secretary to Mr. J. Bennett.

Sir,

Chief Secretary's Office, Sydney, 28 December, 1893.

With reference to the proposal to establish a Boys' Reformatory on the Brush Farm Estate, I am directed by the Chief Secretary to inquire what rental you would be prepared to accept upon a ten years lease, subject to resumption at any time during that period under the Lands Resumption Act, or on terms to be mutually agreed upon.

2. I am at the same time desired to add that it must be distinctly understood that any improvements the Government may make, are not to be counted in any valuation that may be made.

I have, &c.,
CRITCHETT WALKER,
Principal Under Secretary.

Mr. J. Bennett to The Principal Under Secretary.

Sir,

Brush Farm, Dundas, 3 January, 1894.

Replying to your letter of the 28th ultimo, inquiring what rental I would accept for a ten years lease of Brush Farm subject to resumption, I beg to state that I will accept £500 per annum upon the conditions set out in your letter.

The minor improvements and repairs to the present buildings and in maintaining the orchard I shall expect to be taken into consideration in any valuation, as every lease usually requires the tenant to maintain and repair, but new buildings erected by the Government I agree shall not be valued against them. The lease to contain all usual clauses, and to be agreed upon and settled by the Crown Solicitor and my solicitor who will submit the usual draft.

I have, &c.,
JOHN BENNETT.

Submitted

Submitted for approval.—C.W., 5/1/94. The Rookwood buildings originally intended as a Boy's Reformatory having been given up to the aged and infirm, and an establishment for a Boys' Reformatory being required, and after a careful examination of this property, I approve of a lease of ten years of Brush Farm at £500 per annum for a Boys' Reformatory, possession to be given to the Government on 1st March next, lease to be prepared upon basis of this letter and the Under Secretary's of 28th December.—G.R.D., 20/1/94.

The Principal Under Secretary to Mr. J. Bennett.

Sir,

Chief Secretary's Office, Sydney, 23 January, 1894.

Referring to your letter of the 3rd instant, I am directed to state that the Chief Secretary has approved of your property, known as "Brush Farm," being leased by the Government for a term of ten years, for a Boys' Reformatory, at an annual rental of £500, upon the conditions set forth in your communication now under acknowledgment and mine of the 28th December last. Possession of the estate to be given to the Government on the 1st March next.

I have, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

Memorandum by The Director of the Government Asylums to The Principal Under Secretary.

Proposed Boys' Reformatory (30 Vic. No. 4).

FULL details of the Reformatory scheme have been submitted to the Chief Secretary in the following documents, namely:—Memorandum, dated December 1, 1891; letter, dated December 4, 1891; Report, dated December 9, 1891; and Report on Brush Farm, dated November 28, 1893. [Documents herewith.]

These letters, reports, &c., relate to several existing sites and buildings; but as it has been determined to utilise Brush Farm for a Boys' Reformatory, it is only necessary to refer here to that estate, to which, however, may be applied all the recommendations made in connection with the other proposals.

The Reformatory is required for training lads under 16 years of age committed through the Courts for criminal offences, and who are now usually sent to the gaols.

These lads are at the outset a most difficult class of offenders to deal with, and under the Act they may be detained for any period not exceeding five years. Experience elsewhere, however, has shown that the detention period seldom need exceed nine to twelve months, when the boys are generally sufficiently disciplined to be apprenticed out; and thus the daily average number of inmates, when the Institution is in full operation, will probably never be more than seventy-five to eighty.

The success of the new reformatory system will depend almost wholly upon the proper classification, treatment, and instruction of the boys, and the selection of competent experienced officers to deal with them.

With regard to the first point, I beg to draw attention to the memo. dated 1st December, 1891, which briefly explains the methods to be adopted. It is of course, obvious that if a number of criminal boys were taken from the Courts and at once placed in an institution from which they could escape they would run off immediately. The usual provision against this is suggested in the full report on Brush Farm dated 28th November, 1893.

As fruit-growing and agriculture will be the principal industries taught at Brush Farm, the suggestions made in the memo. as to teaching other trades may be modified. I may here mention that it is usual for attendants upon the boys to be qualified to instruct them in the industrial occupations.

I have fully explained in the main report on Brush Farm how the buildings now on the land can, at very little cost, be reconstructed as required for classification purposes, and this work should be at once proceeded with, as until it is completed the reformatory cannot be proclaimed. Asylum labour can be largely availed of in carrying it out.

In the meantime, however, the estate may be dealt with so as to reduce the rent charge and bring it into harmony with the general scheme.

Near to Brush Farm there is an establishment, known as the Rydalmere Boys' Home, rented from the Bank of New South Wales at a charge of £125 per annum. The lease will terminate in about five months, and I do not recommend its renewal. The inmates of this home, of whom there are forty-one, are largely boys who were found to be too vicious to be kept in ordinary homes. They can be transferred to a separate division at Brush Farm, and several large wooden buildings, closets, urinals, &c., which the Government has power to remove from the Rydalmere Home in terms of the lease, might be pulled down at once and re-erected at Brush Farm.

In order also that the Brush Farm orchard may be made as profitable as possible, I purpose, under approval, transferring to it a number of the more able-bodied men from the Government Asylums, who, together with a number of the Rydalmere boys, can work it under competent instruction. As it is intended that their labour shall be a source of profit, they should be paid monthly small daily bonuses subject to good behaviour.

For the purpose of carrying out the foregoing proposals, it will be necessary to at once appoint the following officials:—

1. Man thoroughly qualified to instruct the boys in orchard work and agriculture and see that the produce is properly marketed.
2. Working matron to attend to the domestic comforts of the inmates and cleanliness of the institution. (I beg to suggest that the Rydalmere Home matron, who is very competent, be taken over with her boys. She has had three years' experience).

3. Man able to look after the place in the instructor's absence, superintend and work at alterations to buildings and keep them in repair, take charge of stores, distribute rations, &c. (I am informed that a competent officer, a Mr. Dixon, who has already waited upon the Chief Secretary, is available for this purpose from another Department, whence he desires a transfer).

It will thus be seen that only one officer, not already in the public service is recommended, and, in order to save expense, any other prime positions need not be filled until the buildings are ready to be proclaimed for the reception of young criminals.

I respectfully await your further instructions.

S. MAXTED,
21/2/94.

The lease having now been signed, Mr. Maxted might be instructed to take over the premises and make proper arrangement for the care of the garden and buildings pending further steps being taken for their utilization for reformatory purposes.—C.W., 2/4/94. Approved, G.R.D., 3/4/94. The Director of the Government Asylums.—B.C., 3/4/94. C.W., P.U.S. Inform Mr. Bennett.

Under the approval minuted on these papers I have employed Mr. Small to take charge of the orchard, work it, and arrange for the packing, despatch, &c., of the fruit and other produce to market. I have also employed the Mr. Dixon herein referred to, to carry out indispensable alterations to the buildings, &c., mainly with institution labour, as recommended, and a number of old men from the asylums and boys from Rydalmere Farm are already employed on the estate. When the alterations are effected the Rydalmere Boys' Home can be given up, and a rental of £125 a year thus saved to the Government, as the inmates may be transferred to Brush Farm.—S.M., 10/4/94. The Principal Under Secretary.

[Enclosures to Memorandum dated 21/2/94.]

Sir, Charitable Institutions Office, Oxford-street, Paddington, 1 December, 1891.

In compliance with the instructions of the Colonial Secretary, I have the honor to forward for his information a memorandum containing an outline of a scheme for establishing and managing a Shore Reformatory for Boys in this Colony.

I have, &c,
SYDNEY MAXTED,
Director of Asylums, &c.

The Principal Under Secretary.

Shore Reformatory for Boys.

Charitable Institutions Office, Oxford-street, Paddington, 1 December, 1891.

THE boys are managed under a system of rewards and punishments by which corporal chastisement is almost avoided.

For this purpose it is necessary to divide the institution into three distinct divisions, namely:—“A,” “B,” “C,” each having a separate lavatory, dining-room, bath-room, and dormitory.

“C” is the lowest division, and it is practically a prison. It is enclosed by a high galvanised iron fence, and contains, in addition to the usual provisions, cells for refractory boys. All the windows are barred. There are no bedsteads, the beds being made on the floor. The food is also rough, and the only opportunity for recreation is in an enclosed, unattractive yard, about 60 feet square. This is the only division from which the boys cannot escape.

“B” is the next division to which a boy is transferred as soon as his conduct justifies that step. There are here bedsteads, but no pictures on the walls, and the furniture is very meagre. The food is also better than in “C,” and the boy has here first practically realised that it is good policy to behave himself, with the prospect of further advancement, which is fully explained to him.

“A” is the highest division, and it is made as bright and attractive as possible. The food is excellent, the dormitories and other apartments are very cheerful, the walls are covered with pictures, and the boys are so trusted that, in conjunction with their transfer from the lower grades, their self-respect is in a measure restored, and they are in many ways encouraged to merit the full liberty and concessions which can be granted to them under the system.

In a yard adjoining these three divisions, which constitute the main building, are placed workshops, at which boys in “A” and “B” divisions are taught trades—such as boot-making, tailoring, carpentering, painting, &c, and adjacent to it are the general recreation ground, vegetable garden, and farm. All these places are merely enclosed by three-railed fences, the only closed part, as stated, being the recreation ground belonging to “C” division.

There are two buildings detached from the boys' divisions—namely, the Superintendent's residence and the teachers' residence. The other officers' quarters are in the main building, among the boys, for whose oversight at night as well as during the day provision is made.

When a lad is first admitted he is taken before the Superintendent, who questions him closely as to his parentage, previous history, and so forth. All the answers to these questions are recorded in the history book, and are verified or otherwise by inquiries made by the Superintendent or some other officer. According to this information the lad is classified—that is, he is either placed in “C” or “B” divisions. He is never placed in “A” division on first admission, but is usually entered in “C” (the lowest division), and the length of time he remains depends entirely upon his conduct. Sometimes he may only remain a few days. When a lad is transferred to “B” division, he usually remains there three months, except in very occasional circumstances.

Boys who misbehave are degraded by transfer to the inferior divisions, but this course is seldom necessary, their first experience in that direction generally being sufficient.

The boys are committed in the first instance for periods ranging from one to five years. The average length of their detention in the institution is about nine months. They are then sufficiently reformed and instructed to be placed out—some to trades, others to farm work—the greatest care being taken in the selection of homes. The Superintendent generally visits the home himself, and informs the applicant of the lad's character and antecedents, and any peculiarities about him that may require special treatment.

Sometimes lads are discharged on probation to their parents, and are kept under surveillance until the period of probation expires, when, if their conduct has been satisfactory, they are written off the books, under the authority of the Executive Council. In a well-managed institution experience has shown that no boy need be detained for the full term of his sentence.

The

The one great objection raised to a shore reformatory is that the boys will abscond. This, however, has been effectually met by a judicious classification of the inmates; by the system of dietary and other rewards; and by the initiatory confinement and strict discipline, from which there is no chance of escape and which so break the boys into discipline, and, in a sense, give them experience of hardship, that they are, as a rule, glad enough to take advantage of the free life, healthy employment, and indulgences which they are treated to subsequently.

The following figures show the improvement effected in the matter of absconders at an institution where, in the first year, the lads were not classified, but where classification was adopted as a remedial measure afterwards:—During 1884, of 199 boys dealt with, 26 individual boys (13·06 per cent.) absconded, or attempted to abscond; during 1885, of 178 boys dealt with, 5 individual boys (2·81 per cent.), absconded, or attempted to abscond; during 1886, of 156 boys dealt with, 4 individual boys (2·56 per cent.) absconded, or attempted to abscond; and cases of absconding at this institution are now almost unknown. There was last year only one, although every boy might have absconded if he had so desired. Examples of this character can be multiplied.

The boys are provided with an excellent library, available only to inmates of "A" and "B" and to the lads who have been apprenticed out. To these the librarian sends books on application, and on return of the book previously lent. Cricket, football, draughts, dominoes, chess, a gymnasium, and other facilities for healthful in-door and out-door amusement and recreation, are among the means liberally provided for the mental and physical improvement of the boys. They are also taught swimming, a huge tank, which can be emptied and refilled from the main source of water supply, being provided for that purpose. The waste water may be utilised for irrigation purposes.

Sufficient provision is made for Sabbath services and Sunday schools, in connection with which the voluntary assistance is a leading feature.

There is a Visiting Committee of eight (four ladies and four gentlemen) appointed to visit the institution and report to the head of the Department, in the same manner as the lady visitors do in the case of boarded-out children. This Committee has not power to interfere with the management in any way, but they may make suggestions. The uncertain visits of the Committee, or any members of it, must have a good moral effect upon the officials, as well as upon the lads.

The foregoing is an outline of a reformatory scheme which has been so fully tested elsewhere that it cannot fail, except through maladministration, neglect, or carelessness. In order to avoid these, very great care should be exercised with regard to the appointment of the officials. If I may be allowed to make a suggestion, I would respectfully recommend that the head of the Department should be made the official solely responsible to his Minister, and that he be allowed a free hand with regard to his officials. Where this has been the case in the Department of Charitable Institutions—as in the State Children's Relief Branch, for instance—no difficulty whatever has been experienced. In other divisions, where the contrary system has prevailed, difficulties are frequent. There should be a distinct understanding upon this point with regard to the reformatory, which will be the initiation of an entirely new method of dealing with young criminals in this Colony. It should be fully realised that this new system will not be a simple matter to handle, and that failure at the outset from preventible causes will probably cause the experiment not to be repeated.

I should like to say that I have written exhaustively upon this subject during the past ten years; that I am consequently aware that the shore reformatory has many enemies among persons who know nothing whatever about it; and, therefore, extra care should be taken to leave no weak spot in the system with regard to either arrangement or administration.

There are many other points not already enumerated to be considered (as, for instance, character and strength of staff and their duties; books to be kept; matters of domestic economy; regulation of industrial training, &c., &c.), but it is not necessary to refer to them fully at this stage.

With reference to the Rookwood buildings, I do not think they are fully suitable for the purpose contemplated, but additions might be made to overcome existing difficulties. They need not be very costly, nor entail great delay.

Indeed, if the Colonial Secretary determines to establish the reformatory, and make it a branch of the Department of Charitable Institutions, I would (if facilities are afforded in connection with additions to buildings and other matters) undertake to have it in operation within two months.

S.M.

Sir,

Charitable Institutions Office, 4 December, 1891.

With reference to the Colonial Secretary's verbal instructions in connection with the proposed Reformatory for Boys at Rookwood, I beg to suggest that, with the object of obtaining as much information as possible with regard to this important matter, I may be authorised to visit the Reformatory for Boys at Ballarat, Victoria, which has been in operation for some years with highly satisfactory results, in order that as much of the system of that institution as may appear to be advantageous may be incorporated with the method of management to be adopted in New South Wales.

If the Rookwood buildings are to be utilised as a reformatory, it will be necessary to carry out the following additions and repairs:—

1. Erect galvanised-iron fence to enclose refractory division ("C").
2. Erect other fences where required.
3. Colour interior of walls, and limewash ceilings.
4. Asphalt yards.
5. Paint exterior of buildings where necessary to exclude damp.
6. Relay existing drain-pipes, and provide additional pipes where necessary.
7. Repair roofs.
8. Subdivide large hall into schoolroom and gymnasium.
9. Erect tank for teaching boys swimming, with necessary supply and escape connections.
10. Lay on water to existing buildings.
11. Convert apartments attached to main hall into workshops.
12. Erect water-closet, &c., to superintendent's residence.
13. Place stoves where required for cooking in various divisions.
14. Furnish inmates' divisions and attendants' quarters where required.

If

If the foregoing recommendations are approved, the Government Architect might, perhaps, be invited to have the necessary works carried out as speedily as possible, and, as soon as they are completed, the establishment can be proclaimed a Reformatory for Boys in accordance with the provisions of Act 30 Vic. No. 4, immediately after which it can be occupied for its legal purposes.

Although the additions referred to are enumerated under fourteen headings, they are not very extensive in character, and they should, I think, be completed without difficulty (if a special effort is made in that direction) within a period of six weeks.

As there is not at present a Parliamentary vote for a boys' reformatory, the amounts needed for additions, maintenance, and management might be obtained as required from time to time from the Treasurer's Advance Account, and refunded thereto by a vote on the next Estimates.

I have, &c.,

SYDNEY MAXTED,

Director of Asylums, &c.

Charitable Institutions Office, Oxford-street, Paddington,
9 December, 1891.

Sir,

Report on Reformatory for Boys at Ballaarat.

I have the honor to report that, in accordance with the Colonial Secretary's instructions, I visited the Reformatory for Boys at Ballaarat on Saturday and Sunday last, and made a thorough investigation into its methods of arrangement and administration, with the view of adopting any features that might appear to be desirable in connection with the proposed reformatory system in New South Wales.

The Ballaarat institution is, undoubtedly, a very successful one; and the satisfactory results achieved in defiance of the buildings, which are admitted by experts to be most unsuitable for the purposes they are put to—inasmuch as thorough classification and separation of inmates cannot be effected in them—warrant the belief that, under more favourable conditions, an even higher measure of success can be secured in a better-arranged similar establishment in this Colony.

I have very little to add to the full minute which I have furnished to the Colonial Secretary on this subject. As I have already said, I do not consider the Rookwood buildings are in every respect suitable for a reformatory; but if the suggestions made with reference to their arrangement are carried out, they will admit of the experiment being tested under far more favourable conditions with regard to premises than was the case in Victoria.

The success of the Ballaarat institution has resulted from observance of the following points:—

1. Firm and wise administration.
2. A system of rewards and punishments.
3. Classification, and, where necessary, segregation of inmates as far as possible.
4. Their occupation in industrial pursuits—principally in labour on the land.

In addition to spending a day and a half at the Ballaarat Reformatory, I have had lengthy conversations with the officials who established and for several years managed it, and who now hold high positions in the Civil Service of Victoria, in recognition of their efforts to make it a success. I allude to Capt. Evans, R.N., Inspector-General of Penal Establishments; and Mr. Connor, his deputy. The former has had large experience of ship and shore reformatories in Great Britain and Victoria, and has no doubt whatever that the shore system is in every way the best for criminal lads where the object in view is to convert them into respectable colonists, and enable them to settle upon the land. His opinion on this point is also endorsed by the best authorities in England and elsewhere who have dealt with this important department of social science.

The two prime objections which have been raised to this system by its opponents in this Colony, and which are officially on record, are—

1. That the shore reformatory must be in all essentials a prison, or, otherwise, the boys will abscond.
2. That it is necessary to detain them at great cost to the State for long periods in the institution before they are eligible for outside service.

The operations of the Ballaarat Reformatory and other similar establishments (I mention the Ballaarat Reformatory because it is near home, and may be inspected by any person curious to test the accuracy of this statement) are a complete answer to both these objections.

It is not, apart from its probationary division, in which it is seldom necessary for the lads to be detained more than a week, in any sense a prison; and although the boys employed on the farm—who have full liberty—occasionally take it into their heads to run away, they have in nearly every case only remained absent for a very brief period; and their average term of detention at the institution last year was only nine months.

There was practically one absconder last year; and instances of this character will of course occur at any institution which is not absolutely a prison, whether it is afloat or ashore.

It is not, however, within the scope of my instructions to discuss the relative merits of the two methods; but merely to report whether or not, in my opinion, the reformatory system in operation at Ballaarat can be applied to criminal boys in this Colony with any prospect of success. I have no doubt whatever that it can be, with some modifications with regard to which its managers agree with me, and which can be carried out at Rookwood, while, from the nature of the buildings, they could not at Ballaarat. These modifications relate to more extensive classification; re-arrangement of staff for the purposes of economy; re-adjustment of education and labour periods for the boys; and other details into which it is not necessary to enter at this stage.

The main point to be borne in mind at the outset—apart from the arrangement of buildings, and classification of inmates—relates to the official staff; and if it is determined to entrust me with the duty of testing the possibilities of this new method of dealing with young criminals, I would earnestly beg that the suggestions I have already made in this matter may be adopted.

The officers of every grade should be appointed on probation; and they should have before them the penalty of immediate dismissal for improper discharge of duty, as well as the distinct promise of substantial rewards for faithful service. They must all possess special qualifications, and should be selected by the head of the Department, after careful inquiry, as he of course will be held directly responsible to the Government for failure.

It

It is not, as you are aware, my custom to mention the services which I have myself rendered in connection with the social institutions of this country, and I do so now with much diffidence, but with a set purpose. I have had the honor of thus far administering the boarding-out system, from its inception under 44 Vic. No. 24, and of carrying out substantial reforms at the Government Asylums for Infirm and Destitute, as well as of reporting upon cognate institutions from time to time, in connection with which it was requisite to remedy serious abuses. In every case powerful and unfair opposition has been offered to necessary changes; and where there has not been a free hand with regard to officials, it has been most difficult to carry them into effect.

I venture to predict similar obstacles to the proposed shore reformatory; and hence my anxiety that there should be no probable element of failure to contend with at the outset.

At present, I need only further say that if it is determined to convert the buildings at Rookwood into a reformatory, the recommendations made in the memorandum already furnished to the Colonial Secretary will have to be first carried out. I would respectfully suggest that the Government Architect be invited to consult with me in that matter.

It will subsequently be necessary to amend the present Reformatory Act in several important particulars, and to make suggestions in connection with the appointment of officers and other matters; but all these questions can be attended to while the alterations to buildings are in progress. I shall be prepared to submit a short and practicable Amending Bill in the course of a few days, if so directed.

Awaiting your further instructions,

I have, &c.,
 SYDNEY MAXTED,
 Director of Asylums, &c.

Minute by The Principal Under Secretary.

THE Crown Solicitor will perhaps kindly advise whether the conditions in the Memorandum of Lease herewith have been complied with and whether the document is in proper form before being signed. B.C., 15/3/94.—C.W., P.U.S.

Mr. J. Bennett to The Principal Under Secretary.

Sir,

Sydney, 21 March, 1894.

I beg to hand you herewith a certificate by Mr. A. W. Stephen, licensed surveyor, showing that he has made a survey of the land described in certificate of title, vol. 578, fol. 212, in order that it may be forwarded to the Crown Solicitor.

I have, &c.,

JOHN BENNETT.

It will be necessary to have a description of Brush Farm, the land leased from Mr. Bennett for a reformatory by the Government. The certificate herewith signed by Mr. Stephen is the land so leased, and it may be now forwarded to the Crown Solicitor for inspection.—B.C., 21/3/94. C.W. The Crown Solicitor.

[Enclosure.]

Surveyor's Certificate.

50, Castlereagh-street, 6 December, 1890.

I HEREBY certify that I have made a survey of the land described in certificate of title, vol. 578, fol. 212, containing 37 acres 0 roods 21 perches of the Brush Farm estate, and I certify that the brick and stone house known as the Brush Farm-house, with brick stables and out-houses, stands within the boundaries, and does not encroach.

A. W. STEPHEN,

(STEPHEN AND HALLOBAN),

Licensed Surveyor.

The Crown Solicitor to The Principal Under Secretary.

Sir,

Crown Solicitor's Office, Sydney, 27 March, 1894.

I have the honor to return herewith the papers relating to the proposed lease of Brush Farm from Mrs. Emma Bennett as a Reformatory for boys, together with the draft lease submitted for my consideration.

Having regard to the contract between the parties, as disclosed by your letters of the 28th December last and 23 January last, and Mr. Bennett's reply of 3rd January, the two former of which Mr. Bennett kindly lent me for reference—no copies thereof having been submitted with the papers—I think the only alterations to be made are in clauses 1 and 3, and would suggest that in lieu of the latter clause, as originally drawn, the provisions as shown in type-writing annexed to the draft lease herewith should be inserted in the lease. If the alterations meet with your approval the draft should be re-submitted for the lessors perusal.

I have, &c.,

ERNEST A. SMITH,

Crown Solicitor.

Amended leases signed and returned herewith, B.C., 28/3/94.—C.W. The Crown Solicitor. The amendments having been accepted by the Crown Solicitor, the three memorandums have been handed to Mr. Bennett's solicitor for registration. The Crown Solicitor, B.C., 30/3/94.—C.W., P.U.S.

Memorandum

Memorandum of Lease.

(Stamp Duty
£1 5s.
Sydney, 29/3/04)

(26 VICTORIA No. 9.)

I, EMMA BENNETT, wife of John Bennett, of Brush Farm, in the Colony of New South Wales, Esquire, being registered as the holder of a power of appointment over an estate in fee simple in the land hereinafter described, subject, however, to such encumbrances, liens, and interest, as are notified by memorandum underwritten or endorsed hereon: Do hereby appoint by way of lease unto Her Most Gracious Majesty the Queen all that piece of land containing thirty-seven acres and twenty-one perches situated in the parishes of the Field of Mars and Hunter's Hill, county of Cumberland, being the whole of the land comprised in Certificate of Title, dated 19th May, A.D. 1882, registered volume 578, folio 212, to be held by Her said Majesty as tenant for the term of ten years computed from the first day of March, one thousand eight hundred and ninety-four, at the yearly rent of five hundred pounds (£500), payable as follows, quarterly, subject to the following covenants, conditions, and restrictions, viz.:—

1. To the covenants and powers implied in every Memorandum of Lease by virtue of the Real Property Act, secs. 51 and 52, or such of them, or so far, as not hereby expressly negatived or modified.

2. To the following special additional provisions, viz.:—

- (a.) That the lessee shall maintain and keep the orchard on the said land in good condition, and shall at least once in every year well and sufficiently manure such orchard with all proper and necessary manures, and shall as when the same shall require spray and wash with all proper and necessary materials all the orange trees in such orchard, and shall once in every year prune all trees in such orchard, and shall remove all trees which in the discretion of the lessee, her agent or manager shall be useless, and replace the same with others.
- (b.) In case the lessee or the Colonial Secretary for the time being on her behalf shall, at any time during the said term, give to the lessor one calendar month's notice of the desire of the lessee to purchase the said premises hereby demised, the lessor shall sell to the lessee the inheritance in fee simple in possession, free from incumbrances, of the said demised premises, with all buildings and improvements thereon, at a price to be agreed upon between the said parties, or in the event of no price being agreed upon within fourteen days from the date of such notice, then at a price to be ascertained by reference to two arbitrators and their umpire, under the Arbitration Act of 1893: Provided that in estimating the price to be paid for the premises, the amount to be paid therefor shall be the then value thereof exclusive of any buildings or improvements erected or made by the lessee other than the necessary improvements and repairs which are to be made by the lessee under the terms of this lease: Provided always and it is hereby expressly agreed that if the lessee shall elect to purchase the premises hereby leased the price to be paid shall be mutually agreed upon by the lessor and her mortgagee (if the premises shall then be subject to any mortgage) on the one part and the lessee on the other part, but if no agreement shall be come to as to the price to be paid and arbitration is resorted to, the arbitrator to be appointed on behalf of the vendor shall be so appointed with the consent of the mortgagee for the time being of the premises.
- (c.) The power to purchase under the clause lastly hereinbefore contained shall in no way prejudice the right of the Crown to resume the land under any Act then in force in the said Colony, and in estimating the amount of compensation to be paid on any such resumption, the first proviso of the last clause shall apply in the same manner as if the demised premises were purchased under the power conferred by such clause.
- (d.) That if the said premises shall not be purchased or resumed the lessee shall be at liberty to remove all wood and galvanized iron buildings erected by the lessee at the end or sooner determination of the term hereby granted and any extension thereof, or within thirty days of such end or determination of the said term.

I, George Richard Dibbs, Knight, of the Most Distinguished Order of Saint Michael and St. George, Premier of the Colony of New South Wales, on behalf of Her said Majesty the Queen, and so as to bind the Government of the Colony of New South Wales, do hereby accept this lease as tenant, subject to the conditions, restrictions, and covenants above set forth.

GEORGE R. DIBBS.

Dated this twenty-eighth day of March, one thousand eight hundred and ninety-four.

Signed by the said Emma Bennett, who is personally }
known to me, in my presence,— }
WM. ANDREWS, Solicitor, Sydney.

EMMA BENNETT,
Lessor.

Accepted, and I hereby certify this lease to be correct for the purposes of the Real Property Act.

Signed by the said George Richard Dibbs, K.C.M.G., }
who is personally known to me, in my presence,— }
CRITCHETT WALKER, J.P.

GEORGE R. DIBBS,
On behalf of Lessee.

ANNEXURE to Memorandum of Lease from Emma Bennett to Her Majesty the Queen, dated
28th March, 1894.

THIS is to certify that Emma Bennett, wife of the abovenamed John Bennett, came before me, William Alexander Abbott, Deputy Registrar-General, and she being by me examined apart from her said husband, acknowledged that the within written instrument was executed by her, and that she was acquainted with, and understood the nature and effect thereof; and she declared that she has so executed the same freely and voluntarily, and without menace, force, or coercion, either on the part of her husband or of any other person.

Witness my hand at Sydney, the 28th day of March, 1894.

W. A. ABBOTT.

The

The Principal Under Secretary to Mr. J. Bennett.

Sir, Chief Secretary's Office, Sydney, 3 April, 1894.
With reference to previous correspondence on the subject of the project to convert the Brush Farm Estate into a Boys' Reformatory, I am directed by the Chief Secretary to inform you that, the lease having now been executed, the Director of Government Asylums has been duly instructed to take possession of the premises with a view to their being utilised for this purpose.

I have, &c.,

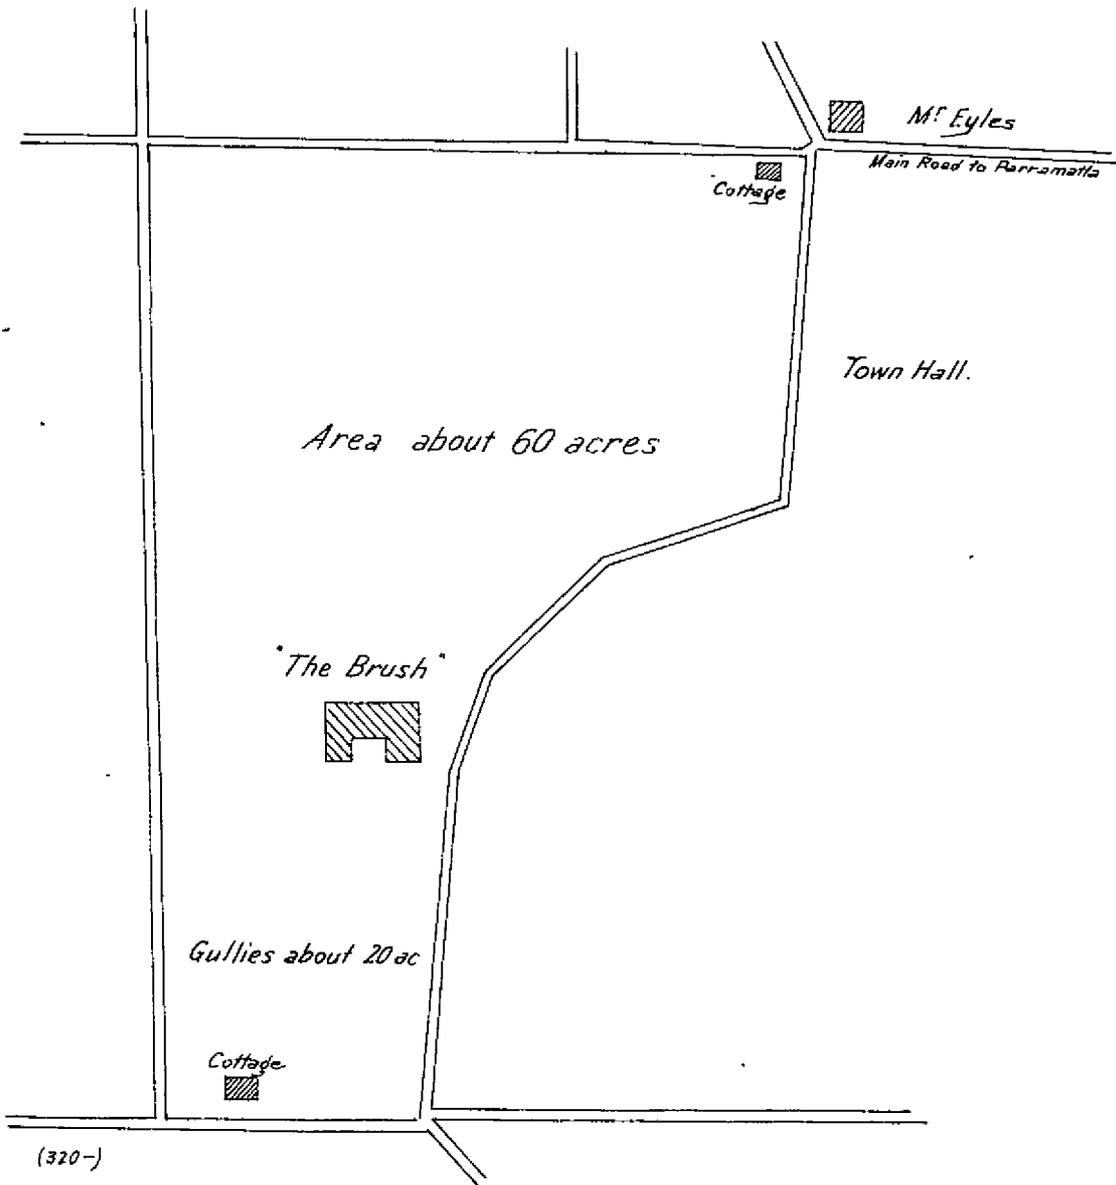

CRITCHETT WALKER,
Principal Under Secretary.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PUBLIC WORKS ACT OF 1888.

(RESUMPTION OF LAND FOR ENLARGEMENT OF THE GROUNDS FOR THE HOSPITAL FOR INSANE AT KENMORE.)

Ordered by the Legislative Assembly to be printed, 7 February, 1894.

NOTIFICATION OF RESUMPTION OF LAND UNDER
THE "PUBLIC WORKS ACT OF 1888," 51
VICTORIA No. 37.

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable Sir ROBERT WILLIAM
(L.S.) } DUFF, a Member of Her Majesty's Most
Honourable Privy Council, a Knight
Grand Cross of the Most Distinguished
Order of Saint Michael and Saint George,
Governor and Commander-in-Chief of
the Colony of New South Wales and its
Dependencies.

WHEREAS I, Sir ROBERT WILLIAM DUFF, the Governor aforesaid, with the advice of the Executive Council, have directed that a certain public work, that is to say, Enlargement of the Grounds for the Hospital for Insane at Kenmore, in the said Colony, the estimated cost of which does not exceed twenty thousand pounds, shall be carried out under the provisions of the "Public Works Act of 1888," as an authorised work by the Minister for Public Works as Constructing Authority; and that the land described in the Schedule hereto, which is in my opinion required for carrying out the said work, shall be acquired by taking the same under the "Lands for Public Purposes Acquisition Act," as adopted by the "Public Works Act of 1888": Now, therefore, I, the said Governor, with the advice aforesaid, in pursuance of the "Public Works Act of 1888," do declare by this notification, to be published in the Government Gazette, and in one or more newspapers published or circulated in the Police District wherein the said land is situated, that the Crown Land comprised within the description set forth in the Schedule hereto has been appropriated, and the private property within such description has been resumed, for the public purpose aforesaid, to the intent that upon the publication of this notification in the Gazette, the said land described in the said Schedule hereto shall forthwith be vested in the

said Constructing Authority as a corporation sole on behalf of Her Majesty, for the purposes of the "Public Works Act of 1888," for an estate in fee simple in possession, freed and discharged from all trusts, obligations, estates, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the further intent that the legal estate therein, together with all powers incident thereto or conferred by the said last-mentioned Act, shall be vested in such Constructing Authority as a Trustee; and I declare that the following is the Schedule of land hereinbefore referred to:—

SCHEDULE.

All that piece or parcel of land situate in the parish of Narrangarril, county of Argyle, and Colony of New South Wales: Commencing at the westernmost corner of lot 32 on a plan deposited in the Land Titles Office, Sydney, numbered 479; and bounded thence by the south-western boundary of that lot bearing south 61 degrees east 24 chains 94 links to the left bank of the Wollondilly River; thence by that bank upwards to a point distant 2 chains rectangularly from the first-described line; thence by a line bearing north 61 degrees west about 25 chains 13 links to the south-eastern boundary of a road one chain wide; and thence by that boundary bearing north 50 degrees 30 minutes east 2 chains 15 links, to the point of commencement,—be the said several dimensions all a little more or less, containing 5 acres or thereabouts.

In witness whereof I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this twenty-fourth day of January, in the year of our Lord one thousand eight hundred and ninety-four, and in the fifty-seventh year of Her Majesty's Reign.

By His Excellency's Command,

WILLIAM JOHN LYNE.

GOD SAVE THE QUEEN!

1894.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

THE BENEVOLENT ASYLUM.
(RELIEF AFFORDED BY.)

Ordered by the Legislative Assembly to be printed, 8 June, 1894.

[Laid upon the Table of the House in answer to Question No. 7, of 7th June, 1894.]

Question.

- (7.) PERSONS RELIEVED AT THE BENEVOLENT ASYLUM IN SYDNEY:—DR. ROSS *asked* THE COLONIAL SECRETARY,—
- (1.) The number of persons relieved weekly or monthly at the Benevolent Asylum in Sydney, and the amount of provisions served out weekly or monthly to the same?
 - (2.) Why are provisions made for relieving the distressed at the Benevolent Asylum in Sydney, and not in inland towns and districts of the Colony, where distress is in many cases equally as great and as keenly felt as in Sydney?
 - (3.) Will he see that some provision is made for relieving the poor and distressed during winter in inland towns, the same as is done in Sydney?
 - (4.) How much does the Benevolent Asylum in Sydney cost the Colony annually?

Answer.

(1.) The weekly average number of cases (families and the aged poor) is 720, representing 2,500 adults and children. The following provisions, &c., and rent money, were granted during the month of April, 1894:—11,589 loaves of bread, 6,999 lb. of flour, 2,983 lb. of mutton, 1,491 lb. of beef, 2,985 lb. of sugar, 744 lb. of tea, 243½ lb. of sago, 170 lb. of rice, 272 lb. of oatmeal, 4½ lb. of arrowroot, 51 pairs of boots, 2 pairs of blankets, 36 quarts of milk; rent money distributed, April, 1894, £153 4s.; cost of above provisions, &c., £216 3s. 11½d. Total, £369 7s. 11½d.

(2 and 3.) The matter shall have attention.

(4.) The Government allow £2,500 per annum for the purposes of out-door relief.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

EIGHTH GENERAL REPORT.

To His Excellency the Right Honorable SIR ROBERT WILLIAM DUFF, a Member of Her Majesty's Most Honorable Privy Council, a Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,—

The Parliamentary Standing Committee on Public Works, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, and the Public Works (Committees' Remuneration) Act of 1889, 53 Vic. No. 11, have the honor to submit the following General Report of their proceedings since the date of their last General Report, 26th April, 1893:—

1. At the date of their last General Report the Committee had completed the inquiries respecting the proposed works which up to that time had been before them, and since then they have had one other work under consideration. This work—the proposed Railway from Narrabri to Moree—was referred to them by the Legislative Assembly on 1st November, 1893, and the inquiry connected with it has been duly carried out. The Committee find that it is expedient the railway as proposed should be constructed, but they recommend that the work be not undertaken until a Betterment Act is passed. The Committee's inquiries to date.

2. The proposed Railway from Narrabri to Moree is noticeable from the circumstance that it is regarded as the first of a system of cheaply constructed railways which, under the name of "pioneer lines," are, in the opinion of the Commissioners for Railways and the Department of Public Works, well suited to the requirements of the pastoral districts of the Colony not yet possessing railway communication. The first of a system of cheap railways.

3. It is also noticeable from the fact that its construction is conditional upon the application of a betterment rate to the land served by the railway. The proposed line was referred to the Committee for inquiry with the stipulation that the work was "to be subject to the provisions of any Act that may be passed dealing generally with the 'betterment principle' with regard to public works." It is the first instance in which any provision as to betterment has been introduced into a resolution of the Legislative Assembly referring a proposed work to the Committee, and in that respect is important. In some of their reports the Committee have found occasion to urge the application of the betterment principle to the construction of railways, and in two cases approved of the construction of the lines only with the condition that a betterment rate be charged to provide a fair proportion of the cost. In their Sixth General Report the Committee expressed the opinion that the principle "might without injustice to landowners, and with great advantage to railway construction, be applied to the area of all the land distinctly increased in value by the construction of the railway." And further, that "with power existing by which the Government would be able to obtain from all landowners a fair proportion of the additional value imparted by railways to their land, railway construction might proceed rapidly and profitably.

Some

Some of the most significant features in the Committee's inquiries concerning proposed country railways, are the large extent of private land through which the lines would run, the little return the land is likely to make to the railways, and the great increase to private wealth which is thus brought about in the interests of a few landholders at the expense of the general community." The railway from Narrabri to Moree, though a work said to be necessary for the retention of traffic at present carried on the railways and for the acquisition of other traffic, is one of those lines in connection with which a betterment rate may justly be charged. Whether it should be imposed to the extent indicated by the Minister for Public Works to the Committee, through the Under Secretary of the Department, and fully stated in the Committee's detail report respecting the proposed railway, is a question that requires consideration. The most difficult points in the betterment system are the area over which the principle should operate, and the graduated scale upon which the rate should be based.

Sittings held
and witnesses
examined.

4. In the consideration given to the subject of the Narrabri to Moree Railway the Committee have held 11 meetings and examined 20 witnesses; and a Sectional Committee, who visited the Narrabri and Moree districts, held 11 meetings and examined 61 witnesses.

Returns
containing a
record of the
Committee's
inquiries, and
Minutes of
Proceedings.

5. Attached to this Report, and completed to the present date, are the returns which have been published with previous General Reports, and which contain a record of the whole of the works inquired into by the present Committee and by previous Committees that have been appointed under the "Public Works Act"; and also a copy of the Committee's Minutes of Proceedings.

J. GARRARD,
Chairman.

Office of the Parliamentary Standing Committee on Public Works,
Sydney, 12 January, 1894.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

RECORD OF INQUIRIES.

List of Proposed Public Works inquired into by the several Committees, with the results of their inquiries, from 27 August, 1888, the date of the first sitting of the first Committee appointed under the Act, to 12 January, 1894.

Date of inquiry.	Proposed Work.	Expenditure proposed by the Government.	Expenditure recommended by the Committee.	Amount in excess of that proposed.	Amount in reduction of that proposed.	Remarks
		£	£	£	£	
1888. 4 Sept. to 22 Oct.	Improvements to the Circular Quay.	120,000	125,000	5,000	The Committee recommended an alteration in the plan of these improvements, by which the total estimated cost would be increased to £125,000.
26 Sept. to 22 Oct.	Storage reservoir at Potts' Hill, and second line of pipes to Crown-street.	120,000 165,000	} 285,000	Recommended as proposed.
13 Sept. to 22 Oct.	New Central Police Court	48,000	48,000	Recommended as proposed.
4 Oct. to 22 Oct.	Drainage works, Manly...	34,114	22,000	12,114	The Committee recommended the adoption of a modified plan of these drainage works, by which the total estimated cost would not exceed £22,000.
10 Oct. to 22 Oct.	Drainage works, North Shore.	77,062	107,000	29,938	The Committee recommended the adoption of the complete scheme proposed in relation to this work, and the estimated cost of which, as shown by the evidence, is £107,000.
31 Aug. to 22 Oct.	Harbour improvements at Newcastle.	112,000	112,000	Recommended as proposed.
19 Sept. to 22 Oct.	Wharfage accommodation, Woolloomooloo Bay.	42,000	42,000	The Committee were of opinion that the proposed expenditure was not justified either by the requirements in connection with the wharfage accommodation of the port, or by the nature of the proposal if regarded as a scheme for the improvement of a very valuable Government property.
16 Nov. to 1889. 11 Jan.	Bridge at the Spit, Middle Harbour.	62,000	62,000	The Committee decided that the proposed expenditure was not justified by the evidence, and that a steam-punt would meet the requirements of the district in the vicinity of the proposed work for some years to come.
1888. 7 Dec. to 1889. 27 Aug.	Drainage works for the Western Suburbs.	830,304	830,304	Recommended as proposed.
26 June to 30 Sept.	Improvements to the entrance of the Richmond River.	326,000	326,000	The Committee recommended that the proposed works be carried out in a certain order, so that the results from the works first constructed might be ascertained before others were proceeded with.
9 Oct. to 11 Dec.	Railway to connect North Shore Railway with Port Jackson, at Milson's Point.*	262,000	262,000	The Committee considered, for various reasons stated in their report on the subject, that the work as proposed should not be carried out.
20 Aug. to 12 Dec.	Railway from Culcairn to Corowa.	197,300 (or £4,184 per mile.)	164,500 (or £3,500 per mile.)	32,800	The Committee were of opinion that this line should be constructed at a cost not exceeding £3,500 per mile.
22 Aug. to 10 Dec.	Railway from Goulburn to Crookwell.	198,300 (or £5,984 per mile.)	148,500 (or £4,500 per mile.)	49,800	The Committee considered that the cost of this railway should not exceed £4,500 per mile, and that a saving should also be effected by utilizing a certain portion of the present main line instead of taking the proposed railway through a part of the city of Goulburn.
1890. 22 Jan. to 6 Feb. 1889.	Dredge and plant for Sydney Harbour.	30,000	30,000	The evidence showed that this class of dredge was not required.
25 Sept. to 1890. 18 Feb.	Railway from Nyngan to Cobar.	207,360	207,360	The Committee recommended the construction of this railway as part of a line which should be extended to Wilcannia and Broken Hill.
14 Jan. to 11 Feb.	Offices for the Board of Water Supply and Sewerage.	50,000	50,000	Recommended as proposed.
14 Jan. to 6 Feb.	Reticulation of the Western Suburbs Drainage Scheme.	713,592	713,592	Recommended as proposed.
14 Jan. to 11 Feb.	Extension of Sydney Water Supply to Southern Suburbs—Hurstville and Rockdale.	66,000	66,000	This expenditure was rendered unnecessary by reason of a temporary water-supply scheme being sufficient to meet requirements for some years.
19 Nov. to 2 April.	Railway from Marrickville to the Burwood Road.	90,250	90,250	Recommended as proposed.
	Carried forward.....£	3,751,282	3,229,506	34,938	556,714	

List of Proposed Public Works inquired into by the Committee, &c.—*continued.*

Date of inquiry.	Proposed Work.	Expenditure proposed by the Government.	Expenditure recommended by the Committee.	Amount in excess of that proposed.	Amount in reduction of that proposed.	Remarks.
1890.	Brought forward ...£	£ 3,751,282	£ 3,229,506	£ 34,938	£ 556,714	
23 Oct. to 24 April.	Improvements to the entrance of the Clarence River.	580,900	211,900	369,000	In this case the Committee recommended the construction of only a portion of the works proposed, as they were of opinion that when this portion had been constructed it might be found that the remainder would not be required.
31 Oct. to 15 April.	Breakwater at Byron Bay.	241,723	241,723	The original estimate for this work was £162,000; the increase was due to a difficulty in obtaining stone.
4 Dec. to 24 April.	Railway from Kiama to Nowra.	381,390	381,390	In this case there was an original estimate of £441,063. The reduction was due to an amended estimate made by the Acting Engineer-in-Chief for Railways since the railway was referred to the Committee.
12 Nov. to 24 April.	Railway from Grafton to the Tweed.	1,728,100	800,000	928,100	The Committee recommended that this railway should be constructed from Lismore to Murwillumbah, instead of from Grafton to Murwillumbah, the Committee's recommendation involving a length of about 60½ miles as compared with 140 miles 76 chains, the length of the line as referred to them by the Legislative Assembly.
15 Jan. to 24 April.	Railway from Cootamundra to Temora.	138,000 (or £3,656 per mile.)	125,400 (or £3,300 per mile.)	12,600	The Committee considered that the cost of constructing this railway should not exceed £3,300 per mile.
23 Jan. to 24 April.	Railway from Moss Vale to Robertson.	84,900	84,900	The Committee negatived this proposal because they considered another route, described in their report, was preferable.
23 Jan. to 25 Mar.	Railway from Mudgee to Gulgong.	109,330	109,330	The Committee decided against this work, on the ground that any extension of the Mudgee Railway should form part of a more comprehensive proposal, the consideration of which should be deferred until after the suggestion for the connection of the Northern and Western systems, by a line between Dubbo and Werris Creek, has been dealt with.
12 Feb. to 24 April.	Bridge over Tarban Creek, Parramatta River.	26,000	26,000	The Committee considered this bridge to be unnecessary.
20 Feb. to 15 April.	Bridge over the Hunter River, at Jerry's Plains.	20,000	20,000	The Committee considered that a less expensive bridge would be sufficient to meet requirements.
25 Feb. to 24 April.	Bridge to connect Bullock Island with the mainland at Newcastle.	33,000	33,000	The Committee considered that this proposed expenditure was premature, pending certain reclamation works.
12 Feb. to 21 May.	Iron Bridge at Cowra ...	26,537	26,537	The original proposal represented an expenditure of £69,971, which amount was afterwards reduced to £26,537, as the result of a revision of the system of bridge-building in the Colony. Recommended as proposed.
22 Jan. to 21 May.	Railway from Molong to Parkes and Forbes.	433,000	433,000	
28 May to 8 July.	Hospital for the Insane upon the Kenmore Estate, near Goulburn.*	120,000	120,000	This proposed work, after being partly considered, was withdrawn from the Committee by resolution of the Assembly.
28 May to 21 Aug.	Railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point. (Second Reference).	231,156	231,156	This proposal was before the Committee on a previous occasion (estimated cost, £262,000), when it was negatived; but having been referred to the Committee for further consideration, and circumstances appearing in the second inquiry which justified the construction of the railway, the Committee approved of the proposed work.
10 Dec. to 13 May, 1891.	Hospital Buildings, Macquarie-street.	140,000	56,000	84,000	In this case, two sets of plans for the buildings were submitted to the Committee, one representing a design that was estimated to cost £140,000, and the other a design to cost £56,000, and the Committee approved of the latter.
1891.	College for the Training of Teachers of Public Schools.	37,500	37,500	Recommended as proposed.
19 Feb. to 21 April.	Extension of the Kiama to Nowra Railway into the town of Nowra.	75,000	75,000	Recommended as proposed.
24 Feb. to 14 May.	Railway from Cobar to Cockburn.	1,168,000	1,018,000	150,000	The Committee recommended the construction of this railway as far as Broken Hill only, which would reduce the proposed expenditure by £150,000.
22 Jan., 1890, to 19 May, 1891.	Cable Tramway from King-st., via William-street, to Ocean-street.	80,000	80,000	Recommended as proposed.
25 Nov., 1890, to 3 June, 1891.	Cable Tramway through George, Pitt, and Harris Streets, Sydney.	120,000	120,000	The Committee considered that it was not expedient at present, for reasons stated in their report, that this tramway should be constructed.
	Carried forward.....£	9,525,818	6,947,112	34,938	2,613,644	

List of Proposed Public Works inquired into by the Committee, &c.—continued.

Date of inquiry.	Proposed Work.	Expenditure proposed by the Government.	Expenditure recommended by the Committee.	Amount in excess of that proposed.	Amount in reduction of that proposed.	Remarks.
1892. 5 May, to 2 June.	Brought forward . . £ Improvements at Darling Island.	9,525,818 142,000	6,947,112	£ 34,938	£ 2,613,644 142,000	The Committee considered that the proposed works might be postponed for the present without inconvenience, and that a more suitable design might be submitted.
7 June, to 12 July.	Stormwater sewers discharging into Johnstone's Bay.	51,352	51,352	Recommended as proposed.
15 June, to 4 Aug.	Reservoir at Centennial Park for Sydney Water Supply.	83,000	83,000	Recommended with an alteration of site.
14 July, to 24 Aug.	Water Supply for Wollongong and the surrounding districts.	66,000	30,000	36,000	The Committee found that the Water Supply proposed for the surrounding districts was not needed, and that the estimate of cost for supplying Wollongong might be reduced to £30,000.
23 July, to 24 Aug.	Second pipe-line from Walka to Buttai, for Hunter River District Water Supply.	50,000	50,000	Recommended as proposed.
26 July, to 9 Aug.	Sewerage works at Cottage Creek.	25,000	13,000	12,000	The amount of £25,000 provided for a covered sewer; but the Committee found that a cover was not necessary at present, and that by constructing an open sewer the cost could be reduced by £12,000.
21 April, 1891, to 27 May, 1892.	Railway from Glen Innes to Inverell.*	427,400	427,400	The evidence in this case showed that the estimated cost of constructing the railway was excessive, and indicated the probability of a serious annual loss in the working of the line. In addition to this, the Committee were not as fully informed as desirable with regard to connecting Inverell not only with the Great Northern Railway but with the coast, a matter of considerable importance in the inquiry.
31 May, to 18 Aug.	Railway from Jerilderie to Deniliquin.	148,000	148,000	The Committee were of opinion that the consideration of this proposed work should be postponed until it should be determined by Parliament as a matter of public policy to purchase the Deniliquin to Moama Railway.
12 July, to 24 Aug.	Lunatic Asylum at Kenmore, near Goulburn. (Second Reference).	150,000	150,000	Recommended as proposed.
14 June, to 28 Sept.	Railway from Grafton to Lismore.	602,000 (or £8,000 per mile.)	108,000 (or £6,000 per mile.)	554,000	The Committee decided that, for the present, only the Lismore to Casino section of the proposed railway should be constructed, that the cost should not exceed £6,000 per mile, and that the betterment principle be applied to the land to be served by the proposed line.
10 July, to 26 Oct.	Railway from Eden to Bega.	564,000 (or £15,350 per mile.)	564,000	The Committee considered that the present resources of the district did not warrant the construction of such an expensive line, but they were of opinion that a cheaply constructed railway might be favorably considered.
22 June, to 4 Oct.	Sewerage Works for Parramatta.	75,926	75,926	The Committee were of opinion that the sewage farm included in the scheme was too small for the purpose, and that the sewage should be dealt with by precipitation and filtration or other effective modern process at a proposed pumping station at Clay Cliff Creek.
12 Oct. to 21 Dec.	Water Supply for Tamworth.	22,500	22,500	Recommended as proposed, with a provision as to the quantity of water obtainable, and the resumption of land surrounding the well in the drift forming the source of supply.
14 Sept. to 16 Nov.	Water Supply for Lithgow	15,000	15,000	Recommended as proposed.
15 Sept. to 16 Nov.	Water Supply for Armidale.	43,500	43,500	Recommended as proposed.
17 Nov. to 10 Jan. 1893.	Railway from Glen Innes to Inverell. (Second Reference).	421,400 (or £7,975 per mile).	369,862 (or £7,000 per mile).	51,538	The Committee considered it expedient this railway should be constructed, provided that the cost did not exceed £7,000 per mile, that special local rates were charged until the railway paid working expenses and interest on cost of construction, and that the betterment principle was applied to the land served by the railway.
14 Feb. to 8 Mar.	Waterworks for the town of Junee.	45,000	45,000	The Committee recommended that these works should be carried out, conditionally upon the Railway Commissioners undertaking to enter into an agreement for a period of not less than ten years to pay a minimum of £1,000 per annum for water supplied for railway purposes at Junee and Bethungra.
14 Nov., 1893, to 11 Jan., 1894.	Railway from Narrabri to Moree.	153,000	153,000	Recommended as proposed, with the condition that the work be not undertaken until a Betterment Act is passed.
		£ 12,670,896	8,081,326	34,938	4,624,508	

* The proposed works marked with an asterisk have been twice referred to the Committee, and together, as first referred, represent an estimated expenditure of £809,400, by which amount the total expenditure proposed by the Government and the amount in reduction of that proposed expenditure as shown by the result of the Committee's inquiries should be reduced. A further reduction should be made of £108,000 as the estimated cost of the railway recommended by the Committee between Lismore and Casino, which while being a portion of the proposed line between Grafton and Lismore is also a part of the line originally proposed from Grafton to the Tweed. With these reductions the total expenditure proposed by the Government is £11,753,496, and the saving effected by the Committee, allowing for the £34,938 excess, £3,672,170.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

RETURN SHOWING THE COURSE OF THE COMMITTEES' INQUIRIES FROM THE REFERENCE OF THE WORKS TO THE ULTIMATE ACTION RESPECTING THEM.

FIRST COMMITTEE—FROM 12 JUNE, 1888, TO 22 OCTOBER, 1888.

MEMBERS OF THE COMMITTEE.

LEGISLATIVE COUNCIL.

The Honorable JOHN LACKEY, Chairman.

The Honorable WILLIAM HENRY SUTTOR.

The Honorable GEORGE CAMPBELL.

The Honorable JAMES WATSON.

The Honorable FREDERICK THOMAS HUMPHERY.

LEGISLATIVE ASSEMBLY.

JOSEPH PALMER ABBOTT, Esquire, Vice-Chairman.

JOHN RENDELL STREET, Esquire.

JAMES NIXON BRUNKER, Esquire.*

THOMAS MICHAEL SLATTERY, Esquire.

HENRY COPELAND, Esquire.

JACOB GARRARD, Esquire.

ALEXANDER KETHEL, Esquire.

SYDNEY SMITH, Esquire.

* James Nixon Brunker, Esquire, by reason of his accepting the office of Minister for Lands, did not take his seat as a member of the Committee.

Proposed Work.	Date of reference to Committee.	Date upon which inquiry was opened.	Date upon which Sectional Committee was appointed.	Date of Sectional Committee's Report.	Date of Committee's Report.	Statement of Committee's recommendation.	How dealt with by Parliament.	Date of Parliamentary action.
Wharfage Accommodation, Woolloomooloo Bay.	1888. 23 July	1888. 19 September	1888. Inquiry completed by Second Committee.	See Second Committee.	See Second Committee.	See Second Committee.
Improvements to the Circular Quay.	23 ,,	4 ,,	22 October ...	The Committee recommended an alteration in the plan of these improvements, by which the estimated total cost would be increased from £120,000 to £125,000.	Passed.	Legislative Assembly—11 April, 1889—Bill read third time. Legislative Council—24 April, 1889—Bill read third time; 30 April, 1889—Assent reported.
Storage Reservoir at Potts' Hill	23 ,,	26 ,,	22 ,, ...	Recommended as proposed.	Passed.	Legislative Assembly—17 May, 1889—Bill read third time. Legislative Council—30 May, 1889—Bill read third time; 5 June, 1889—Assent reported.

FIRST COMMITTEE—continued.

Proposed Work.	Date of reference to Committee.	Date upon which inquiry was opened.	Date upon which Sectional Committee was appointed.	Date of Sectional Committee's Report.	Date of Committee's Report.	Statement of Committee's recommendation.	How dealt with by Parliament.	Date of Parliamentary action.
Second Pipe between Potts' Hill and Crown-street.	1888. 23 July.....	1888. 26 September	1888. 22 October ...	Recommended as proposed.	Passed [Sydney Water Supply (Partial Reduplication) Bill].	Legislative Assembly—24 July, 1889—Bill read third time. Legislative Council—17 Sept., 1889—Bill read third time; 30 Sept., 1889—Assent reported.
Dredge and Plant for Sydney Harbour.	23 „	Dealt with by Third Committee.	See Third Committee.	See Third Committee.	See Third Committee.
Improvements to the Entrance of the Richmond River.	23 „	„ „	„ „	„ „	„ „
Bridge at the Spit, Middle Harbour.	23 „	Dealt with by Second Committee.	See Second Committee.	See Second Committee.	See Second Committee.
New Central Police Court	23 „	13 September	22 October ...	Recommended as proposed.	Passed.	Legislative Assembly—15 May, 1889—Bill read third time. Legislative Council—23 May, 1889—Bill read third time; 30 May, 1889—Assent reported.
Improvements to the Entrance of the Clarence River.	23 „	Dealt with by Third Committee.	See Third Committee.	See Third Committee.	See Third Committee.
Drainage Works, Manly	23 „	4 October	22 October ...	The Committee recommended the adoption of a modified plan of these drainage works, by which the estimated total cost would not exceed £22,000, or £12,114 less than the original estimate.	Passed.	Legislative Assembly—23 May, 1889—Bill read third time; 3 Sept., 1889—Bill finally passed. Legislative Council—20 June, 1889—Bill read third time; 12 Sept., 1889—Assent reported.
Drainage Works, North Shore	23 „	10 „	22 „ ..	The Committee recommended the adoption of the complete scheme proposed in relation to this work, the estimated cost of which, as shown by the evidence, was £107,000.	Passed.	Legislative Assembly—17 April, 1889—Bill read third time; 15 May, 1889—Bill finally passed. Legislative Council—9 May, 1889—Bill read third time; 22 May, 1889—Assent reported.
Drainage Works for the Western Suburbs.	23 „	Dealt with by Second and Third Committees.	See Third Committee.	See Third Committee.	See Third Committee.
Harbour Improvements at Newcastle.	23 „	31 August	22 October ...	Recommended as proposed.	Passed.	Legislative Assembly—11 April, 1889—Bill read third time. Legislative Council—24 April, 1889—Bill read third time; 30 April, 1889—Assent reported.

SECOND COMMITTEE--FROM 24 OCTOBER, 1888, TO 19 JANUARY, 1889.

MEMBERS OF THE COMMITTEE.

LEGISLATIVE COUNCIL.

The Honorable JOHN LACKEY, Chairman.
The Honorable GEORGE CAMPBELL.

The Honorable WILLIAM HENRY SUTTON.
The Honorable JAMES WATSON.

The Honorable FREDERICK THOMAS HUMPHERY.

LEGISLATIVE ASSEMBLY.

JOSEPH PALMER ABBOTT, Esquire, Vice-Chairman.
HENRY COPELAND, Esquire.
JACOB GARRARD, Esquire.
ALEXANDER KETHEL, Esquire.

SYDNEY SMITH, Esquire.
THOMAS MICHAEL SLATTERY, Esquire.
JOHN RENDELL STREET, Esquire.
DANIEL O'CONNOR, Esquire.

Proposed Work	Date of reference to Committee	Date upon which inquiry was opened.	Date upon which Sectional Committee was appointed.	Date of Sectional Committee's Report.	Date of Committee's Report.	Statement of Committee's recommendation.	How dealt with Parliament.	Date of Parliamentary action.
Wharfage Accommodation, Woolloomooloo Bay.	1888. 23 July	1888. 19 September	1889. 10 January ...	The Committee were of opinion that the proposed expenditure was not justified either by the requirements in connection with the wharfage accommodation of the port, or by the nature of the proposal if regarded as a scheme for the improvement of a very valuable Government property. See Third Committee.	Not dealt with.
Dredge and Plant for Sydney Harbour.	23 ,,	Dealt with by Third Committee.	See Third Committee.	See Third Committee.
Improvements to the Entrance of the Richmond River.	23 ,,	,, ,,	,, ,,	,, ,,	,, ,,
Bridge at the Spit, Middle Harbour.	23 ,,	16 November	11 January ...	The Committee decided that the proposed expenditure was not justified by the evidence, and that a steam-punt would meet the requirements of the district in the vicinity of the proposed work for some years to come. See Third Committee.	Not dealt with.
Improvements to the entrance of the Clarence River.	23 ,,	Dealt with by Third Committee.	See Third Committee.	See Third Committee
Drainage Works for the Western Suburbs.	23 ,,	7 December	Inquiry completed by Third Committee.	,, ,,	,, ,,	,, ,,

THIRD COMMITTEE—FROM 7 JUNE, 1889, TO 6 JUNE, 1891.

MEMBERS OF THE COMMITTEE.

LEGISLATIVE COUNCIL.

- | | |
|--|---|
| * The Honorable JOHN LACKEY, Chairman. | The Honorable FREDERICK THOMAS HUMPHRY. |
| The Honorable ANDREW GARRAN. | The Honorable WILLIAM JOSEPH TRICKETT. |
| * The Honorable JAMES WATSON. | * The Honorable GEORGE HENRY COX. |

LEGISLATIVE ASSEMBLY.

- | | |
|--|-------------------------------------|
| * JOSEPH PALMER ABBOTT, Esquire, Chairman. | * JOHN SUTHERLAND, Esquire. |
| * JACOB GARRARD, Esquire, Vice-Chairman. | EDWARD WILLIAM O'SULLIVAN, Esquire. |
| HENRY COPELAND, Esquire. | * JOHN HURLEY, Esquire. |
| JAMES EBENEZER TONKIN, Esquire. | * CHARLES ALFRED LEE, Esquire. |
| WILLIAM SPRINGTHORPE DOWEL, Esquire. | * WILLIAM MCCOURT, Esquire. |
| | * JAMES PATRICK GARVAN, Esquire. |

[* Shortly after the first meeting of the third Committee, John Sutherland, Esquire, died, and his place was filled by the appointment of Charles Alfred Lee, Esquire. Subsequently the Honorable James Watson resigned his seat on the Committee, and the Honorable George Henry Cox was appointed in his place. On 22nd October, 1890, Mr. Joseph Palmer Abbott, having been appointed Speaker of the Legislative Assembly, resigned his position as Chairman and member of the Committee. The Honorable John Lackey, who at that time was Vice-Chairman of the Committee, was appointed Chairman in Mr. Abbott's place, and Mr. Jacob Garrard was chosen as Vice-Chairman. Mr. William McCourt was appointed a member of the Committee on 16th July, 1890, in the place of Mr. John Hurley, whose seat became vacant by reason of his resignation from the Legislative Assembly; and Mr. James Patrick Garvan was appointed a member on the 6th November, 1890, in the room of Mr. Joseph Palmer Abbott.]

Proposed Work.	Date of reference to Committee.	Date upon which inquiry was opened.	Date upon which Sectional Committee was appointed.	Date of Sectional Committee's Report.	Date of Committee's Report.	Statement of Committee's recommendation.	How dealt with by Parliament.	Date of Parliamentary action.
Dredge and Plant for Sydney Harbour.	23 July, 1888	22 Jan., 1890	6 Feb., 1890	The evidence showed that this class of dredge was not required.	Not dealt with.
Improvements to the Entrance of the Richmond River.	23 ,, ,,	26 June, 1889	30 Sept., 1889	The Committee recommended that the proposed works should be carried out in a certain order, so that the results from the works first constructed might be ascertained before others were proceeded with.	Passed.	Legislative Assembly—23 July, 1890—Bill read third time. Legislative Council—28 Aug., 1890—Bill read third time; 3 Sept., 1890—Assent reported.
Improvements to the Entrance of the Clarence River.	23 ,, ,,	23 Oct., ,,	14 Nov., 1889	28 Jan., 1890	2 April, 1890	In this case the Committee recommended the construction of only a portion of the works proposed, as they were of opinion that when this portion had been constructed it might be found that the remainder would not be required.	Passed.	Legislative Assembly—23 July, 1890—Bill read third time. Legislative Council—17 Sept., 1890—Bill read third time; 1 Oct., 1890—Assent reported.
Drainage Works for the Western Suburbs.	23 ,, ,,	7 Dec., 1888	27 Aug., 1889	Recommended as proposed.	Passed.	Legislative Assembly—26 Sept., 1889—Bill read third time. Legislative Council—26 Sept., 1889—Bill read third time; 30 Sept., 1889—Assent reported.

THIRD COMMITTEE—continued.

Proposed Work.	Date of reference to Committee.	Date upon which inquiry was opened.	Date upon which Sectional Committee was appointed.	Date of Sectional Committee's Report.	Date of Committee's Report.	Statement of Committee's recommendation.	How dealt with by Parliament.	Date of Parliamentary action.
Railway from Goulburn to Crookwell.	31 July, 1889	22 Aug., 1889	29 Aug., 1889	17 Sept., 1889	19 Dec., 1889	The Committee considered that the cost of this railway should not exceed £4,500 per mile, and that a saving should also be effected by utilizing a certain portion of the present main line instead of taking the proposed railway through a part of the city of Goulburn.	Negated by the Legislative Council.	Legislative Assembly—10 July, 1890—Bill read third time. Legislative Council—6 August, 1890—Second reading resolved in the negative.
Railway from Nyngan to Cobar	1 Aug., "	25 Sept., "	24 Sept., "	31 Oct., "	18 Feb., 1890	The Committee recommended the construction of this railway as part of a line which should be extended to Wilcannia and Broken Hill.	Passed.	Legislative Assembly—10 July, 1890—Bill read third time. Legislative Council—17 July, 1890—Bill read third time; 23 July, 1890—Assent reported.
Railway from Kiama to Nowra	1 " "	4 Dec., "	14 Jan., 1890	30 Jan., 1890	22 April, "	In this case there was an original estimate of £441,663. The amount recommended by the Committee was £381,390. The reduction was due to an amended estimate made by the Acting Engineer-in-Chief for Railways after the railway was referred to the Committee.	Passed.	Legislative Assembly—10 July, 1890—Bill read third time. Legislative Council—7 Aug., 1890—Bill read third time; 13 Aug., 1890—Assent reported.
Railway from Marrickville to the Burwood Road.	1 " "	19 Nov., "	2 " "	Recommended as proposed.	Passed.	Legislative Assembly—11 Dec., 1890—Bill read third time. Legislative Council—18 Dec., 1890—Bill read third time; 19 May, 1891—Assent reported.
Railway from Culcairn to Corowa.	6 " "	29 Aug., "	29 Aug., 1889	11 Sept., 1889	12 Dec., 1889	The Committee were of opinion that this line should be constructed at a cost not exceeding £3,500 per mile.	Passed.	Legislative Assembly—10 July, 1890—Bill read third time. Legislative Council—31 July, 1890—Bill read third time; 6 Aug., 1890—Assent reported.
Breakwater at Byron Bay	6 " "	31 Oct., "	14 Nov., "	28 Jan., 1890	15 April, 1890	The original estimate for this work was £162,000. The estimate placed before the Committee, which they adopted in their recommendation, was £241,723. The increase was due to a difficulty in obtaining stone.	Negated by the Legislative Council.	Legislative Assembly—17 July, 1890—Bill read third time. Legislative Council—15 Oct., 1890—Bill negated in Council on motion, "That it be read the second time this day six months."
Railway to connect North Shore Railway with Port Jackson, at Milson's Point.	7 " "	9 " "	11 Dec., 1889	The Committee considered, for various reasons stated in their report on the subject, that the work as proposed should not be carried out.	See second reference.	See second reference.
Railway from Grafton to the Tweed.	27 Sept., "	12 Nov., "	14 Nov., "	28 Jan., "	15 April, 1890	The Committee recommended that this railway should be constructed from Lismore to Murwillumbah, instead of from Grafton to Murwillumbah, the Committee's recommendation involving a length of about 60½ miles as compared with 140 miles 76 chains, the length of the line as referred to them by the Legislative Assembly.	Passed.	Legislative Assembly—17 July, 1890—Bill (Lismore to the Tweed Railway Bill) read third time. Legislative Council—10 Sept., 1890—Bill read third time; 24 Sept., 1890—Assent reported.
Railway from Cootamundra to Temora.	27 " "	15 Jan., 1890	16 Jan., 1890	11 Feb., "	23 " "	The Committee considered that the cost of constructing this railway should not exceed £3,300 per mile.	Passed.	Legislative Assembly—23 July, 1890—Bill read third time. Legislative Council—17 Sept., 1890—Bill read third time; 1 Oct., 1890—Assent reported.

THIRD COMMITTEE—continued.

Proposed Work.	Date of reference to Committee.	Date upon which inquiry was opened.	Date upon which Sectional Committee was appointed.	Date of Sectional Committee's Report.	Date of Committee's Report.	Statement of Committee's recommendation.	How dealt with by Parliament.	Date of Parliamentary action.
Railway from Mudgee to Gulgong.	27 Sept., 1889	23 Jan., 1890	12 Mar., 1890	26 Mar., 1890	6 May, 1890	The Committee decided against this work on the ground that any extension of the Mudgee Railway should form part of a more comprehensive proposal, the consideration of which should be deferred until after the suggestion for the connection of the Northern and Western systems, by a line between Dubbo and Werris Creek, had been dealt with.	Not dealt with.
Railway from Moss Vale to Robertson.	1 Oct., "	23 " "	30 Jan., "	12 Feb., "	29 April, "	The Committee negatived this proposal because they considered another route, described in their report, was preferable.	" "
Railway from Molong to Parkes and Forbes.	1 " "	22 " "	12 Feb., "	19 Mar., "	21 May, "	Recommended as proposed.	Passed.	Legislative Assembly—23 July, 1890—Bill read third time. Legislative Council—21 Aug., 1890—Bill read third time; 27 Aug., 1890—Assent reported.
Bridge over Tarban Creek, Parramatta River.	1 " "	12 Feb., "	15 April, "	The Committee considered this bridge to be unnecessary.	Not dealt with.
Bridge over the Hunter River, at Jerry's Plains.	1 " "	20 " "	4 Mar., "	11 Mar., "	15 " "	The Committee considered that a less expensive bridge would be sufficient to meet requirements.	" "
Bridge to connect Bullock Island with the Mainland at Newcastle.	1 " "	25 " "	4 " "	11 " "	29 " "	The Committee considered that this proposed expenditure was premature, pending the carrying out of certain reclamation works.	" "
Iron Bridge at Cowra	1 " "	12 " "	18 Feb., "	19 " "	21 May, "	The original proposal represented an expenditure of £69,971, which amount was afterwards reduced to £26,537, as the result of a revision of the system of bridge-building in the Colony, and the construction of the bridge at the reduced cost was recommended by the Committee.	Passed.	Legislative Assembly—23 July, 1890—Bill read third time. Legislative Council—21 Aug., 1890—Bill read third time; 27 Aug., 1890—Assent reported.
Hospital for the Insane upon the Kenmore Estate, near Goulburn.	1 " "	28 May, "	Inquiry not completed.	This proposed work, after being partly considered, was withdrawn from the Committee by resolution of the Assembly.	Rescinded.	Legislative Assembly—2 July, 1890—Resolution passed rescinding previous resolution referring proposed work to the Committee.
Offices for Board of Water Supply and Sewerage.	1 " "	14 Jan., "	11 Feb., 1890	Recommended as proposed.	Passed.	Legislative Assembly—7 Nov., 1890—Bill read third time. Legislative Council—20 Nov., 1890—Bill read third time; 27 Nov., 1890—Assent reported.
Reticulation of Western Suburbs Drainage Scheme.	1 " "	14 " "	6 " "	" "	"	Legislative Assembly—23 July, 1890—Bill read third time. Legislative Council—24 Sept., 1890—Bill read third time; 8 Oct., 1890—Assent reported.

THIRD COMMITTEE—continued.

Proposed Work.	Date of reference to Committee.	Date upon which inquiry was opened.	Date upon which Sectional Committee was appointed.	Date of Sectional Committee's Report.	Date of Committee's Report.	Statement of Committee's recommendation	How dealt with by Parliament.	Date of Parliamentary action.
Extension of Sydney Water Supply to Southern Suburbs—Hurstville, Rockdale.	1 Oct., 1889	14 Jan., 1890	11 Feb., 1890	This expenditure was rendered unnecessary by reason of a temporary water-supply scheme being sufficient to meet requirements for some years.	Not dealt with.
Cable Tramway from King-street, via William-street, to Ocean-street.	" "	22 " "	2 June, 1891	Recommended as proposed.	Passed.	Legislative Assembly—8 March, 1892—Bill read third time. Legislative Council—10 March, 1892—Bill read third time; 17 March, 1892—Assent reported.
Cable Tramway through George, Pitt, and Harris Streets, Sydney.	1 " "	25 Nov. "	4 " "	The Committee considered that it was not expedient, for reasons stated in their report, that this tramway should be constructed.	Not dealt with.
Railway to connect North Shore Railway with the deep waters of Port Jackson, at Milson's Point (second reference).	8 May, 1890	28 May, "	21 Aug., 1890	This proposal was before the Committee on a previous occasion when it was negatived; but having been referred to the Committee for further consideration, and on circumstances appearing in the second inquiry which justified the construction of the railway, the Committee approved of the proposed work.	Passed.	Legislative Assembly—12 Nov., 1890—Bill read third time. Legislative Council—20 Nov., 1890—Bill read third time; 27 Nov., 1890—Assent reported.
College for the Training of Teachers of Public Schools.	21 Nov., "	11 Feb., 1891	19 Mar., 1891	Recommended as proposed.	Not dealt with.
Hospital Buildings, Macquarie-street.	3 Dec., "	10 Dec., 1890	12 May, "	In this case two sets of plans for the buildings were submitted to the Committee, one representing a design that was estimated to cost £140,000, and the other a design to cost £56,000, and the Committee approved of the latter.	Passed.	Legislative Assembly—9 March, 1892—Bill read third time. Legislative Council—17 March, 1892—Bill read third time; 29 March, 1892—Assent reported.
Railway from Cobar to Cockburn.	19 " "	24 Feb., 1891	14 " "	The Committee recommended the construction of this railway as far as Broken Hill only, thereby reducing the proposed expenditure (£1,168,000) by £150,000.	Not dealt with.
Railway from Glen Innes to Inverell.	19 " "	21 April, "	23 April, 1891	2 June, 1891	See Fourth Committee.	See Fourth Committee.	See Fourth Committee.
Extension of the Kiama to Nowra Railway into the town of Nowra.	19 " "	19 Feb., "	21 April, 1891	Recommended as proposed.	Not dealt with.

FOURTH COMMITTEE—FROM 31 MARCH, 1892, TO 12 JANUARY, 1894.

MEMBERS OF THE COMMITTEE.

LEGISLATIVE COUNCIL.

The Honorable WILLIAM HENRY SUTTOR, Vice-Chairman.
 The Honorable JAMES HOSKINS.
 The Honorable FREDERICK THOMAS HUMPHERT.

* The Honorable ANDREW GARRAN, LL.D.
 The Honorable JOHN DAVIES, C.M.G.
 * The Honorable WILLIAM JOSEPH TRICKETT.

LEGISLATIVE ASSEMBLY.

JACOB GARREARD, Esquire, Chairman.
 THOMAS THOMSON EWING, Esquire.
 WILLIAM CHANDOS WALL, Esquire.
 WILLIAM McCOURT, Esquire.

JOHN CASII NEILD, Esquire.
 EDWARD WILLIAM O'SULLIVAN, Esquire.
 CHARLES COLLINS, Esquire.
 HENRY DAWSON, Esquire.

[* The Honorable Andrew Garran, LL.D., on 5th October, 1892, resigned his seat as a member of the Committee, and on 12th October, 1892, the Honorable William Joseph Trickett was appointed to fill the vacancy.]

Proposed Work.	Date of reference to Committee.	Date upon which inquiry was opened.	Date upon which Sectional Committee was appointed.	Date of Sectional Committee's Report.	Date of Committee's Report.	Statement of Committee's recommendation.	How dealt with by Parliament.	Date of Parliamentary action.
Improvements at Darling Island	29 Mar., 1892	5 May, 1892	2 June, 1892	The Committee considered that the proposed works might be postponed for the present without inconvenience, and that a more suitable design might be submitted.	Not dealt with.
Water Supply for Tamworth...	29 ,, ,,	12 Oct., ,,	12 Oct., 1892	15 Nov., 1892	21 Dec., ,,	Recommended as proposed with a provision as to the quantity of water obtainable, and the resumption of land surrounding the well in the drift forming the source of supply.	,, ,,
Storm-water Sewers discharging into Johnstone's Bay.	29 ,, ,,	7 June, ,,	12 July, ,,	Recommended as proposed.	The money for these works was voted in the estimates for 1891 and 1892.
Reservoir at Centennial Park for Sydney Water Supply.	29 ,, ,,	15 ,, ,,	4 Aug., ,,	Recommended with an alteration of site.	Not dealt with.
Water Supply for Wollongong and the Surrounding Districts.	29 ,, ,,	14 July, ,,	24 ,, ,,	The Committee found that the Water Supply proposed for the surrounding districts was not needed, and that the estimate of cost for supplying Wollongong might be reduced to £30,000.	,, ,,
Second Pipe-line from Walka to Buttai, for Hunter River District Water Supply.	29 ,, ,,	23 ,, ,,	16 ,, ,,	Recommended as proposed.	,, ,,
Sewerage Works at Cottage Creek.	29 ,, ,,	26 ,, ,,	9 ,, ,,	The estimated cost of this work was £25,000, which provided for a covered sewer; but the Committee found that a cover was not necessary, and that by constructing an open sewer the cost could be reduced by £12,000.	,, ,,
Water Supply for Lithgow ...	29 ,, ,,	14 Sept., ,,	22 Oct., ,,	24 Oct., ,,	16 Nov., ,,	Recommended as proposed.	Passed.	Legislative Assembly—2 February, 1893—Resolution passed that the works be carried out.
Sewerage Works for Parramatta	29 ,, ,,	22 June, ,,	4 Oct., ,,	The construction of this work the Committee did not recommend, as they were of opinion that the sewage farm included in the scheme was too small for the purpose, and that the sewage should be dealt with by precipitation and filtration, or other effective modern process, at a proposed pumping station at Clay Cliff Creek.	Not dealt with.

FOURTH COMMITTEE—continued.

Proposed Work.	Date of reference to Committee.	Date upon which inquiry was opened.	Date upon which Sectional Committee was appointed.	Date of Sectional Committee's Report.	Date of Committee's Report.	Statement of Committee's recommendation.	How dealt with by Parliament.	Date of Parliamentary action.
Water Supply for Armidale ...	29 Mar., 1892	15 Sept., 1892	12 Oct., 1892	20 Oct., 1892	16 Nov., 1892	Recommended as proposed.	Not dealt with.
Railway from Eden to Bega ...	29 „ „	10 July, „	11 Aug., „	7 Sept., „	26 Oct., „	The Committee considered that the resources of the district did not warrant the construction of such an expensive line, but they were of opinion that a cheaply constructed railway might be favorably considered.	„ „
Railway from Grafton to Lismore.	29 „ „	14 June, „	15 June, „	10 Aug., „	28 Sept., „	The Committee decided that, for the present, only the Lismore to Casino section of the proposed railway should be constructed, that the cost should not exceed £6,000 per mile, and that the betterment principle be applied to the land to be served by the proposed line.	„ „
Railway from Glen Innes to Inverell.	29 „ „	6 April, „	23 April, 1891 (See Third Committee.)	2 June, 1891 (See Third Committee.)	27 May, „	The evidence in this case, which was partly inquired into by the Third Committee and partly by the Fourth Committee, showed that the estimated cost of constructing the railway was excessive, and indicated the probability of a serious annual loss in the working of the line. In addition to this, the Committee were not as fully informed as desirable with regard to connecting Inverell not only with the Great Northern Railway but with the coast, a matter of considerable importance in the inquiry. The Committee therefore did not recommend that the railway should be constructed.	See second reference.
Railway from Jerilderie to Deniliquin.	29 „ „	31 May, „	2 June, 1892	23 June, 1892	18 Aug., „	The Committee were of opinion that the consideration of this proposed work should be postponed until it should be determined by Parliament as a matter of public policy to purchase the Deniliquin to Moama Railway.	Not dealt with.
Lunatic Asylum at Kenmore, near Goulburn (second reference).	31 „ „	12 July, „	24 „ „	Recommended as proposed.	„ „
Railway from Glen Innes to Inverell (second reference).	27 Oct., „	17 Nov., „	23 Nov., „	13 Dec., „	10 Jan., 1893	The Committee considered it expedient this railway should be constructed, provided that the cost did not exceed £7,000 per mile, that special local rates were charged until the railway paid working expenses and interest on cost of construction, and that the betterment principle was applied to the land served by the railway.	„ „
Waterworks for the town of Junee.	2 Feb., 1893	14 Feb., 1893	15 Feb., 1893	28 Feb., 1893	14 Mar., „	The Committee recommended that the proposed works should be carried out, conditionally on the Railway Commissioners entering into an agreement for a period of not less than ten years to pay a minimum of £1,900 per annum for water supplied for railway purposes at Junee and Bethungra.	„ „
Railway from Narrabri to Moree.	1 Nov., „	14 Nov., „	15 Nov., „	5 Dec., „	12 Jan., 1894	Recommended as proposed, with the condition that the work be not undertaken until a Betterment Act is passed.	„ „

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF PROCEEDINGS.

TUESDAY, 14 NOVEMBER, 1893.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

Jacob Garrard, Esq., Chairman.

<p>The Hon. William Henry Suttor, The Hon. James Hoskins, The Hon. Frederick Thomas Humphery, The Hon. John Davies, C.M.G., The Hon. William Joseph Trickett, Thomas Thomson Ewing, Esq.,</p>	<p>William Chandos Wall, Esq., William McCourt, Esq., John Cash Neild, Esq., Edward William O'Sullivan, Esq., Charles Collins, Esq., Henry Dawson, Esq.</p>
---	---

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence:—

Letters from the Principal Under Secretary stating that His Excellency the Governor, with the advice of the Executive Council, had approved of the Regulations framed by the Committee under section 17 of the Public Works Act, with the exception of Regulation 16, and that they had been published in a supplementary *Government Gazette*, dated 6th June, 1893.

Opinion of the Attorney-General, declaring Regulation 16 to be *ultra vires*.

Copy of the supplementary *Government Gazette* of 6th June, 1893, containing the Regulations approved.

Letter from the Clerk of the Legislative Assembly informing the Committee that on 1st November, 1893, on motion of Mr. Lyne, the Legislative Assembly had referred to the Committee for consideration and report "the expediency of constructing a line of Railway from Narrabri to Moree, such work to be subject to the provisions of any Act that may be passed dealing generally with the 'betterment principle' with regard to public works."

Letter from Mr. Job Sheldon, M.P., requesting on behalf of others that a Sectional Committee should visit Narrabri West, Wee Waa, and Millie, for the purpose of taking evidence in relation to the proposed railway from Narrabri to Moree, and that the District Surveyor and members of his staff be called to give evidence on the same subject.

Letter from Mr. James Halse, hon. secretary Millie Railway League, requesting that a Sectional Committee visit Millie and take evidence in the Court-house there, with reference to the proposed railway from Narrabri to Moree.

The correspondence was received, and it was resolved that the letters from Mr. Sheldon, M.P., and Mr. Halse, hon. secretary Millie Railway League, be referred to the Sectional Committee to be appointed in connection with the Committee's inquiry respecting the proposed railway.

The following accounts were passed for payment:—

	£	s.	d.
Motherell & Co.—Framing plans	5	16	0
William B. Neilley (<i>Bega Standard</i>)—Advertising visit of the Sectional Committee with reference to the proposed Railway from Eden to Bega ...	0	9	0
William H. Braine (<i>Bega Gazette</i>)—Advertising visit of the Sectional Committee with reference to the proposed Railway from Eden to Bega ...	0	12	0
K. Kennelly, office cleaner, for month of October, 1893	6	0	0
Total	£12	17	0

The Chairman reported that since the last meeting, and in consequence of the work of the Committee being now less than it had been, the Committee's office staff had been reduced by the retirement of Mr. W. D. White and Mr. H. V. O'Meagher.

The Chairman also reported that in conjunction with the Vice-Chairman he had endeavoured to have the estimate of the Committee's yearly expenditure placed upon the Estimates for 1894 and future Estimates under the heading "Legislative Council and Assembly," instead of under that of "Secretary for Public Works" as at present; that the President of the Legislative Council and the Speaker of the Legislative Assembly approved of the proposed alteration; but that in consequence of the Minister for Public Works objecting the proposal had not been carried out.

Mr. Davies moved,—“That the Committee approve of the action of the Chairman and the Vice-Chairman in regard to the position of the Committee's estimate of expenditure upon the Estimates for 1894 and future Estimates.”

The motion was seconded by Mr. Neild, and passed

The Committee proceeded to consider the proposed Railway from Narrabri to Moree.

The Secretary read the resolution of the Legislative Assembly, referring the proposed work to the Committee.

Joseph

Joseph Barling, Esq., Under-Secretary, Department of Public Works, and Charles James Saunders, Esq., Chief Draughtsman, Department of Lands, were sworn, and examined.

Mr. Trickett gave notice that he would move at the next meeting of the Committee,—“That Mr. Suttor, Mr. Davies, Mr. O’Sullivan, Mr. McCourt, Mr. Dawson, and Mr. Wall be appointed a Sectional Committee to inspect, take evidence, and report, with reference to the proposed line of railway from Narrabri to Moree.”

The Committee adjourned at 12 minutes past 4, until 2 o’clock p.m. on Wednesday, the following day.

WEDNESDAY, 15 NOVEMBER, 1893.

The Committee met at 2 p.m.

MEMBERS PRESENT :—

Jacob Garrard, Esq., Chairman.

<p>The Hon. William Henry Suttor, The Hon. James Hoskins, The Hon. Frederick Thomas Humphery, The Hon. John Davies, C.M.G., The Hon. William Joseph Trickett, Thomas Thomson Ewing, Esq.,</p>		<p>William Chandos Wall, Esq., William McCourt, Esq., John Cash Neild, Esq., Edward William O’Sullivan, Esq., Charles Collins, Esq., Henry Dawson, Esq.</p>
---	--	---

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence :—

Letters from W. M. Borthwick and Theo. Morath, Narrabri, expressing a desire to give evidence with reference to the proposed Railway from Narrabri to Moree.

Letter from the Under-Secretary, Department of Public Works, forwarding, at the request of Mr. Sheldon, M.P., a letter received by him from Mr. Halse, secretary of the Millie Railway League, and also a copy of the report by Mr. R. E. Jones on proposed railway extensions, ordered by the Legislative Assembly to be printed, 29th July, 1891.

The correspondence was received, the letters from Messrs. Borthwick and Morath to be referred to the Sectional Committee to be appointed with reference to the proposed Railway from Narrabri to Moree.

Mr. Trickett moved,—“That Mr. Suttor, Mr. Davies, Mr. O’Sullivan, Mr. McCourt, Mr. Dawson, and Mr. Wall be appointed a Sectional Committee to inspect, take evidence, and report, with reference to the proposed line of railway from Narrabri to Moree.”

Mr. Hoskins seconded the motion.

Mr. O’Sullivan moved,—“That the motion be amended by adding the Chairman (Mr. Garrard) to the Sectional Committee.”

The amendment was seconded by Mr. McCourt, and passed, and the motion as amended was then adopted.

The Committee further considered the proposed railway from Narrabri to Moree.

Henry Deane, Esq., Engineer-in-Chief, Railway Construction Branch, Department of Public Works; and Hugh M’Lachlan, Esq., Secretary to the Railway Commissioners, were sworn, and examined.

The Committee adjourned at 7 minutes to 4, until 2 o’clock p.m. on Thursday, the following day.

THURSDAY, 16 NOVEMBER, 1893.

The Committee met at 2 p.m.

MEMBERS PRESENT :—

Jacob Garrard, Esq., Chairman.

<p>The Hon. William Henry Suttor, The Hon. James Hoskins, The Hon. Frederick Thomas Humphery, The Hon. John Davies, C.M.G., The Hon. William Joseph Trickett, Thomas Thomson Ewing, Esq.,</p>		<p>William Chandos Wall, Esq., William McCourt, Esq., John Cash Neild, Esq., Edward William O’Sullivan, Esq., Charles Collins, Esq., Henry Dawson, Esq.</p>
---	--	---

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence :—

Letter from 25 residents of Narrabri, expressing a desire to give evidence in the inquiry with reference to the proposed railway from Narrabri to Moree.

The correspondence was received.

Mr. Wall moved,—“That the name of Mr. Ewing be substituted for that of Mr. Wall in the list of members of the Sectional Committee appointed to inspect, take evidence, and report, with reference to the proposed railway from Narrabri to Moree.”

The motion was seconded by Mr. O’Sullivan, and passed.

The Committee further considered the proposed railway from Narrabri to Moree.

Hugh M’Lachlan, Esq., Secretary to the Railway Commissioners, was sworn, and further examined; John Harper, Esq., Goods Superintendent, Department of Railways; and Carriek Paul, Esq., surveyor, Railway Construction Branch, Department of Public Works, were sworn, and examined.

The Committee adjourned at 19 minutes past 4 o’clock p.m.

TUESDAY,

TUESDAY, 5 DECEMBER, 1893.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

Jacob Garrard, Esq., Chairman.
 The Hon. William Henry Suttor, | William Chandos Wall, Esq.,
 The Hon. James Hoskins, | William McCourt, Esq.,
 The Hon. Frederick Thomas Humphery, | John Cash Neild, Esq.,
 The Hon. John Davies, C.M.G., | Edward William O'Sullivan, Esq.,
 The Hon. William Joseph Trickett, | Charles Collins, Esq.,
 Henry Dawson, Esq.

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence:—

Letter from the Under Secretary, Department of Lands, with reference to the attendance before the Committee of Mr. F. Poafe, District Surveyor, as a witness in the Committee's inquiry respecting the proposed Railway from Narrabri to Moree.

Memorial from a sub-committee of the Upper Barwon Progress Association with reference to the proposed Railway from Narrabri to Moree,—forwarded to the Committee by the Minister for Public Works.

The correspondence was received.

The following accounts were passed for payment:—

	£	s.	d.
K. Kennelly, office cleaner	6	0	0
L. Malone (<i>Narrabri Herald</i>)—Advertising visit of Sectional Committee on Railway from Narrabri to Moree	1	7	0

The Committee further considered the proposed Railway from Narrabri to Moree.

John Taylor, Esq., Glen Alvon, Murrurundi; and Robert Edward Jones, Esq., Divisional Engineer, Department of Roads and Bridges, were sworn, and examined.

Mr. McCourt gave notice that he would move at the next meeting of the Committee:—"That the Committee proceed to consider the evidence on the proposed Railway from Narrabri to Moree, with a view to reporting on the subject to the Legislative Assembly."

The Committee adjourned at 4 minutes past 4, until 2 o'clock p.m. on Tuesday, 19 December.

TUESDAY, 19 DECEMBER, 1893.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

Jacob Garrard, Esq., Chairman.

<p>The Hon. William Henry Suttor, The Hon. James Hoskins, The Hon. Frederick Thomas Humphery, The Hon. John Davies, C.M.G., The Hon. William Joseph Trickett,</p>		<p>William Chandos Wall, Esq., William McCourt, Esq., John Cash Neild, Esq., Edward William O'Sullivan, Esq., Charles Collins, Esq.,</p>
---	--	--

Henry Dawson, Esq.

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence:—

Letter from Mr. Charles W. Lloyd, expressing a desire to give evidence before the Committee with reference to the proposed Railway from Narrabri to Moree.

The correspondence was received.

The Committee further considered the proposed Railway from Narrabri to Moree.

John McElhone, Esq., Ingham Suttor Clements, Esq., William Henry Moseley, Esq., William Theodore Foxlee, Esq., Engineer-in-Chief for Existing Lines, Department of Railways, and Charles William Lloyd, Esq., were sworn, and examined.

Henry Deane, Esq., Engineer-in-Chief, Railway Construction Branch, Department of Public Works, was sworn, and further examined.

Mr. McCourt moved,—“That the Committee proceed to consider the evidence on the proposed railway from Narrabri to Moree, with a view to reporting on the subject to the Legislative Assembly.”

The motion was seconded by Mr. O'Sullivan, and passed.

The

The following account was passed for payment :—

W. H. Midgley (*Gwydir Examiner*)—Advertising visit of Sectional Committee
on Railway from Narrabri to Moree... .. £1 0 6

On the motion of Mr. Davies, seconded by Mr. Dawson, it was resolved that a bonus of £10 be paid to Arthur Hurley, messenger on the Committee's office staff, for extra duties as a clerk.

Mr. Davies moved,—“That at their rising this day the Committee adjourn until 2 o'clock p.m. on Tuesday, 9th January, 1894.”

Mr. McCourt gave notice that he would move at the next meeting of the Committee,—“That in the opinion of the Committee it is expedient that the proposed Railway from Narrabri to Moree, as referred to the Committee by the Legislative Assembly, be carried out.”

The Committee adjourned at 8 minutes past 4, until 2 o'clock p.m. on Tuesday, 9th January, 1894.

TUESDAY, 9 JANUARY, 1894.

The Committee met at 2 p.m.

MEMBERS PRESENT :—

The Honorable William Henry Suttor, Vice-Chairman.

The Hon. James Hoskins,	Thomas Thomson Ewing, Esq.,
The Hon. Frederick Thomas Humphery,	William Chandos Wall, Esq.,
The Hon. John Davies, C.M.G.,	William McCourt, Esq.,
The Hon. William Joseph Trickett,	John Cash Neild, Esq.,

Henry Dawson, Esq.

The minutes of the previous meeting were read, and confirmed.

The Vice-Chairman reported that Mr. W. Shellshear, who had been sent by the Railway Commissioners to America to inquire respecting the construction and maintenance of cheap railways, had returned to Sydney, and, if the Committee desired, could be examined by them with reference to the proposed Railway from Narrabri to Moree.

Mr. Davies moved,—“That Mr. Shellshear be examined with reference to the proposed Railway from Narrabri to Moree.”

The motion was seconded by Mr. McCourt, and negatived on the following division :—

Ayes, 3.	Noes, 5.
Mr. Davies,	Mr. Hoskins,
Mr. Ewing,	Mr. Humphery,
Mr. McCourt.	Mr. Trickett,
	Mr. Wall,
	Mr. Neild.

Mr. McCourt moved,—“That, in the opinion of the Committee, it is expedient that the proposed Railway from Narrabri to Moree, as referred to the Committee by the Legislative Assembly, be carried out.”

Mr. Davies seconded the motion.

Mr. Trickett moved, as an amendment,—“That all the words after the second word ‘that’ be omitted, with a view to inserting the following words: ‘a railway should be constructed to connect Narrabri with Moree, but that the weight of evidence is in favour of a line to the west of the proposed Government line and in the locality of the Gurligh Point line, or travelling stock route, forty-three out of sixty-eight witnesses having testified in favour of a western deviation; one strong objection to the Government line being that it would not serve a large area of country to the west of Millie and Narrabri, whilst a deviation to the westward, as before suggested, would, in addition to connecting Narrabri and Moree, be advantageous to a large area of country and a considerable population to the west. The Committee recommend accordingly.’”

The Committee divided on the question—“That the words proposed to be omitted stand part of question,” with the following result :—

Ayes, 6.	Noes, 4.
Mr. Suttor,	Mr. Trickett,
Mr. Hoskins,	Mr. Wall,
Mr. Humphery,	Mr. Neild,
Mr. Davies,	Mr. Dawson.
Mr. Ewing,	
Mr. McCourt.	

The amendment was, therefore, negatived, and the motion was passed on the following division :—

Ayes, 6.	Noes, 4.
Mr. Suttor,	Mr. Trickett,
Mr. Hoskins,	Mr. Wall,
Mr. Humphery,	Mr. Neild,
Mr. Davies,	Mr. Dawson.
Mr. Ewing,	
Mr. McCourt.	

The Committee adjourned at 37 minutes past 3, until 2 o'clock p.m. on Friday, 12th January.

FRIDAY,

FRIDAY, 12 JANUARY, 1894.

The Committee met at 2 p.m.

MEMBERS PRESENT :—

Jacob Garrard, Esq., Chairman.

The Hon. William Henry Suttor,	The Hon. William Joseph Trickett,
The Hon. James Hoskins,	Thomas Thomson Ewing, Esq.,
The Hon. Frederick Thomas Humphery,	- William Chandos Wall, Esq.,
The Hon. John Davies, C.M.G.,	William McCourt, Esq.,
	John Cash Neild, Esq.

The minutes of the previous meeting were read, and confirmed.

The following accounts were passed for payment :—

	£	s.	d.
S. K. Johnstone—Shorthand-writer accompanying the Sectional Committee on the proposed railway from Narrabri to Moree	23	4	0
John Fairfax and Sons (<i>Sydney Morning Herald</i>)—Advertising with reference to the proposed Railway from Narrabri to Moree	1	1	0
S. Bennett (<i>Evening News</i>)—Advertising with reference to the proposed Railway from Narrabri to Moree	0	12	0
Total	£24	17	0

The Committee proceeded to consider their Report to the Legislative Assembly on the proposed Railway from Narrabri to Moree.

The preamble and clauses 1—13 were passed.

Clause 14—The Betterment Principle and how it may operate.

Mr. Wall moved—"That the clause be amended by the omission of all the words after '1893,' in the 14th line, on page 10, to and inclusive of the words 'Crown lands' in the 12th line, on page 11."

The amendment was seconded by Mr. Neild, and negatived on the following division upon the question "That the words proposed to be omitted stand part of the clause":—

Ayes, 4.	Noes, 4.
Mr. Garrard,	Mr. Hoskins,
Mr. Suttor,	Mr. Trickett,
Mr. Davies,	Mr. Wall,
Mr. McCourt.	Mr. Neild.

The voting being equal the Chairman gave his casting vote in favour of the ayes.

The clause was then passed.

Clause 15.—Opposition to the proposed Railway.

Mr. Neild moved,—“That the clause be amended by the omission, from the sixth line, of the words ‘much more expensive.’”

The amendment was seconded by Mr. Trickett, and negatived on the following division upon the question,—“That the words proposed to be omitted stand part of the clause.”

Ayes, 4.	Noes, 4.
Mr. Garrard,	Mr. Trickett,
Mr. Suttor,	Mr. Wall,
Mr. Hoskins,	Mr. McCourt,
Mr. Davies.	Mr. Neild.

The voting being equal the Chairman gave his casting vote with the ayes.

Mr. Wall moved,—“That the clause be amended by the omission, from the seventh line, of the words ‘and more liable to the effects of flood-water.’”

The amendment was seconded by Mr. Neild, and negatived on the following division upon the question,—“That the words proposed to be omitted stand part of the clause.”

Ayes, 5.	Noes, 3.
Mr. Garrard,	Mr. Trickett,
Mr. Suttor,	Mr. Wall,
Mr. Hoskins,	Mr. Neild.
Mr. Davies,	
Mr. McCourt.	

The clause was passed on the following division :—

Ayes, 5.	Noes, 3.
Mr. Garrard,	Mr. Trickett,
Mr. Suttor,	Mr. Wall,
Mr. Hoskins,	Mr. Neild.
Mr. Davies,	
Mr. McCourt.	

The remaining clause of the Report was passed, the Report was adopted, and the Chairman was authorised to sign it for presentation to the Legislative Assembly.

The Committee proceeded to consider their Eighth General Report to His Excellency the Governor. The Report was adopted, and the Chairman was authorised to sign it for presentation to His Excellency the Governor.

The Committee adjourned at 32 minutes past 3 o'clock p.m.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

SECTIONAL COMMITTEE.

Railway from Narrabri to Moree.

MINUTES OF PROCEEDINGS.

MINUTES of the proceedings of the Sectional Committee of the Parliamentary Standing Committee on Public Works, appointed on 15th November, 1893, to inspect, take evidence, and report, with reference to the proposed railway from Narrabri to Moree.

The Committee, accompanied by Mr. Paul, of the Railway Construction Branch, having inspected the route of the proposed railway from Narrabri Railway Station to the town of Narrabri, met at the Courthouse, Narrabri, at 2.15 p.m. on

MONDAY, 20 NOVEMBER, 1893.

MEMBERS PRESENT:—

Jacob Garrard, Esq., Chairman.	
The Hon. William Henry Suttor, The Hon. John Davies, C.M.G., Thomas Thomson Ewing, Esq.,	William McCourt, Esq., Edward William O'Sullivan, Esq., Henry Dawson, Esq.

Jacob Garrard, Esq., was called to the Chair.

Resolution of Legislative Assembly, referring the proposed railway to the Parliamentary Standing Committee on Public Works for consideration and report, was read.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PUBLIC WORKS BETTERMENT BILL.

(MESSAGE No. 10.)

Ordered by the Legislative Assembly to be printed, 24 January, 1894.

R. W. DUFF,
Governor.

Message No. 10.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends for the consideration of the Legislative Assembly the expediency of making provision to meet the requisite expenses in connection with a Bill to amend the "Public Works Act of 1888" and the "Public Works Act Amendment Act of 1889"; to make better provision with regard to the costs of arbitration; to establish and give effect to the betterment principle with regard to Public Works; to establish a sinking fund for repayment of the cost of the said works; to repeal portions of the "Public Works Act of 1888"; and for other purposes in furtherance of, or consequent on, the aforesaid objects.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PUBLIC WORKS ACT OF 1888.

(RESUMPTION OF LAND FOR THE FORMATION OF A NEW CHANNEL FOR SHEA'S CREEK.)

Ordered by the Legislative Assembly to be printed, 13 March, 1894.

**NOTIFICATION OF RESUMPTION OF LAND UNDER
THE "PUBLIC WORKS ACT OF 1888," 51 VICTORIA
No. 37.**

NEW SOUTH WALES,) Proclamation by His Excellency The
to wit.) Right Honourable Sir ROBERT WILLIAM
DUFF, a Member of Her Majesty's Most
Honourable Privy Council, a Knight
(L.S.) Grand Cross of the Most Distinguished
Order of Saint Michael and Saint George,
Governor and Commander-in-Chief of
the Colony of New South Wales and its
Dependencies.

R. W. DUFF,
Governor.

WHEREAS I, SIR ROBERT WILLIAM DUFF, the Governor aforesaid, with the advice of the Executive Council, have directed that a certain public work, that is to say, the formation of a new channel for Shea's Creek, in the said Colony, the estimated cost of which does not exceed twenty thousand pounds, shall be carried out, under the provisions of the "Public Works Act of 1888," as an authorised work by the Minister for Public Works as Constructing Authority; and that the land described in the Schedule hereto, which is in my opinion required for carrying out the said work, shall be acquired by taking the same under the "Lands for Public Purposes Acquisition Act," as adopted by the "Public Works Act of 1888": Now, therefore, I, the said Governor, with the advice aforesaid, in pursuance of the "Public Works Act of 1888," do declare by this notification, to be published in the Government Gazette and in one or more newspapers published or circulated in the Police District wherein the said land is situated, that the Crown Land comprised within the description set forth in the Schedule hereto has been appropriated, and the private property within such description has been resumed, for the public purpose aforesaid, to the intent that upon the publication of this notification in the Gazette, the said land described in the said Schedule hereto shall forthwith be vested in the said Constructing Authority as a corporation sole on behalf of Her Majesty, for the purposes of the "Public Works Act of 1888," for an estate in fee simple in possession, freed and discharged from all trusts, obligations, estates, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the further intent that the legal estate therein, together with all powers incident thereto or conferred by the said last-mentioned Act, shall be vested in such Constructing Authority as a Trustee: And I declare that the following is the Schedule of land hereinbefore referred to:—

SCHEDULE.

All that piece or parcel of land situated in the parish of Alexandria, county of Cumberland, and Colony of New South

Wales, being part of a grant of 1,400 acres to William Hutcheson, known as part of the Waterloo Estate: Commencing at a point bearing south 16 degrees 39 minutes west, and distant 5,879·56 links from the intersection of the south-western boundary of Alexandria Park with the south-eastern side of Buckland street; and bounded thence on the north-west by other part of the said grant as follows,—by 1,152·43 links of a concave curve of 7,768·16 links radius, the chord of which bears south 20 degrees 38½ minutes west 1,151·3 links; thence by a line bearing south 16 degrees 24 minutes west 1,006·06 links; thence by 609·29 links of a convex curve of 3,431·81 links radius, the chord of which bears south 21 degrees 29 minutes west 608·15 links; thence by a line bearing south 26 degrees 34 minutes west 868·93 links; thence by 783·56 links of a convex curve of 2,431·82 links radius, the chord of which bears south 35 degrees 12½ minutes west 730·78 links; thence on the south-west by the north-eastern boundary of land resumed by notification in Gazette of 14th June, 1889, bearing south 46 degrees 9 minutes east 1,136·36 links; thence on the south-east by other part of the aforesaid grant by 1,076·35 links of a concave curve of 3,568·18 links radius, the chord of which bears north 35 degrees 12½ minutes east 1,072·27 links; thence by a line bearing north 26 degrees 34 minutes east 868·94 links; thence by 810·57 links of a concave curve of 4,568·18 links radius, the chord of which bears north 21 degrees 29 minutes east 809·51 links; thence by a line bearing north 16 degrees 24 minutes east 1,006·05 links; thence by 983·84 links of a convex curve of 6,631·8 links radius, the chord of which bears north 20 degrees 38½ minutes east 982·89 links; and thence on the north-east by other part of the aforesaid grant bearing north 65 degrees 06 minutes west 1,136·36 links, to the point of commencement,—containing 51 acres 3 roods 9¼ perches or thereabouts, and said to be in the possession of W. Cooper, and partly in the occupation of Ah Lum, See Tuck, and others.

In witness whereof I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this sixth day of March, in the year of our Lord one thousand eight hundred and ninety-four, and in the fifty-seventh year of Her Majesty's Reign.

By His Excellency's Command,

WILLIAM JOHN LYNE.

NEW SOUTH WALES.

PUBLIC WORKS ACT OF 1888.

(RESUMPTION OF LAND FOR PERMANENT ADDITIONS TO SUPREME COURT BUILDINGS, SYDNEY.)

Ordered by the Legislative Assembly to be printed, 17 May, 1894.

NOTIFICATION OF RESUMPTION OF LAND UNDER THE "PUBLIC WORKS ACT OF 1888," 51 VICTORIA No. 37.

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable Sir ROBERT WILLIAM
DUFF, a Member of Her Majesty's Most
(L.S.) } Honourable Privy Council, a Knight
Grand Cross of the Most Distinguished
Order of Saint Michael and Saint George,
R. W. DUFF, } Governor and Commander-in-Chief of
Governor. } the Colony of New South Wales and its
Dependencies.

WHEREAS I, SIR ROBERT WILLIAM DUFF, the Governor aforesaid, with the advice of the Executive Council, directed that a certain public work, that is to say, Permanent Additions to Supreme Court Buildings, Sydney, in the said Colony, the estimated cost of which does not exceed twenty thousand pounds, shall be carried out under the provisions of the "Public Works Act of 1888," as an authorised work by the Minister for Public Works as Constructing Authority; and that the land described in the Schedule hereto, which is in my opinion required for carrying out the said work, shall be acquired by taking the same under the "Lands for Public Purposes Acquisition Act," as adopted by the "Public Works Act of 1888": Now, therefore, I, the said Governor, with the advice aforesaid, in pursuance of the "Public Works Act of 1888," do declare by this notification, to be published in the Government Gazette and in one or more newspapers published or circulated in the Police District wherein the said land is situated, that the Crown Land comprised within the description set forth in the Schedule hereto has been appropriated, and the private property within such description has been resumed, for the public purpose aforesaid, to the intent that upon the publication of this notification in the Gazette, the said land described in the said Schedule hereto shall forthwith be vested in the said Constructing Authority as a corporation sole on behalf of Her Majesty, for the purposes of the said "Public Works Act

of 1888," for an estate in fee simple in possession, freed and discharged from all trusts, obligations, estates, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the further intent that the legal estate therein, together with all powers incident thereto or conferred by the said last-mentioned Act, shall be vested in such Constructing Authority as a Trustee: And I declare that the following is the Schedule of land hereinbefore referred to:—

SCHEDULE.

All that piece or parcel of land situate in the City of Sydney, parish of Saint James, county of Cumberland, and Colony of New South Wales, being part of a grant of 1 rood 19 perches to the Trustees of Saint James' Church: Commencing at the southernmost south-western corner of that grant; and bounded thence by part of its southernmost boundary bearing easterly 75 feet; thence by a line at right angles to the last described line bearing northerly about 6 feet to the chancel wall of St. James' Church; thence by that wall bearing westerly about 17 feet and northerly about 4 feet; thence by a line parallel to and rectangularly distant 10 feet from the first-described line bearing westerly about 58 feet to a western boundary of the aforesaid grant; and thence by that boundary bearing southerly 10 feet, to the point of commencement,—be the said several dimensions all a little more or less, containing 2½ perches or thereabouts, and said to be in the possession of the Trustees of St. James' Church.

In witness whereof I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this seventh day of May, in the year of our Lord one thousand eight hundred and ninety-four, and in the fifty-seventh year of Her Majesty's Reign.

By His Excellency's Command,
WILLIAM JOHN LYNE.

—
1894]

1892-3.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES No. 33. WEDNESDAY, 16 NOVEMBER, 1892.

4. OXFORD-STREET IMPROVEMENT BILL (*Formal Motion*):—Mr. Neild moved, pursuant to Notice,—
(1.) That Oxford-street Improvement Bill be referred to a Select Committee, with power to send for persons and papers, for consideration and report.
(2.) That such Committee consist of Mr. Marks, Mr. McGowen, Mr. McCourt, Mr. Perry, Mr. Hart, Mr. Gormly, Mr. Lees, Mr. Waddell, Mr. O'Sullivan, and the Mover.
Question put and passed.

VOTES No. 36. WEDNESDAY, 23 NOVEMBER, 1892.

7. OXFORD-STREET IMPROVEMENT BILL:—Mr. McGowen presented a Petition from William Brereton, Joseph Brereton, Elizabeth McAnally, Charlotte Hamilton, Mary Ann Sherlock, Theresa Agnes Moore, and Frances Brereton, setting forth that the Oxford-street Improvement Bill has been introduced into the House to enable the Council of the Borough of Paddington to close certain portions of Marshall-street in the said Borough, and a certain right-of-way leading therefrom, and to vest the fee-simple of a part of the said land in the Marshall's Paddington Brewery (Limited); that the said Bill has been referred to a Select Committee for consideration and report; and praying that, they being largely interested in the questions to be considered, may be granted permission to appear before the said Select Committee in person, or by solicitor or counsel, and, if necessary, to adduce such evidence as they may be advised, and examine and cross-examine witnesses called before the said Committee.
Petition received.
Mr. McGowen (*by consent*) moved, That the prayer of the Petitioners be granted.
Question put and passed.

- Pages 3 and 4. *Omit* Schedules *insert* the following new Schedules.

THE FIRST SCHEDULE REFERRED TO.

All that piece or parcel of land situated in the parish of Alexandria, county of Cumberland, Colony of New South Wales, be the hereinafter mentioned dimensions a little more or less, containing by admeasurement five thousand two hundred and twenty-eight square feet: Commencing at a point on the south-east boundary-line of block L of the subdivision of the Sydney Common, at its intersection with the new building-line on the south-west side of Oxford-street; and bounded thence on the north-east by said building-line of Oxford-street bearing south fifty-five degrees forty-one minutes thirty seconds east forty-two feet seven and three quarter inches to land formerly granted to Maria Zouch, and now the property of Marshall's Paddington Brewery (Limited); thence on the south-east, north-east, and again on the south-east by the boundary-lines of that land bearing south fifty-four degrees thirty-five minutes thirty seconds west sixty-four feet four and a quarter inches, south forty-five degrees thirty-seven minutes east fifty-six feet, south forty-three degrees twenty-five minutes east thirty feet nine inches, and south forty-five degrees forty-one minutes west twenty-seven feet and a half inch to land formerly the

property of George Brereton; thence on the south-west, north-west, and again on the south-west by the boundary-lines of that land bearing north forty-three degrees thirteen minutes west twelve feet six inches, north forty-five degrees forty-one minutes east fourteen feet seven inches, and north forty-three degrees twenty-five minutes west eighteen feet and two and a half inches to other land now the property of Marshall's Paddington Brewery (Limited); thence again on the south-west, south-east, and south-west by the boundary-lines of last-mentioned property bearing north forty-five degrees thirty-seven minutes west twenty-six feet eleven inches, south forty-five degrees west four feet six inches, and north forty-six degrees forty-eight minutes west thirty-one feet eleven and a half inches; thence on remainder of the south-east by the north-west boundary-line of said property, and the north-west boundary-line of land before referred to, formerly the property of George Brereton, bearing south fifty-four degrees thirty-five minutes thirty seconds west in all twenty-seven feet four inches to the westernmost corner of last-mentioned land; thence on remainder of the south-west by the north-eastern termination of Marshall-street bearing north forty-six degrees twenty-three minutes west thirty-seven feet eight and a half inches to block L of the subdivision of the Sydney Common aforesaid, now the property of Marshall's Paddington Brewery (Limited); and thence on remainder of the north-west by part of the south-east boundary-line of that land bearing north fifty-four degrees thirty-five minutes thirty seconds east ninety-five feet seven and a half inches, to the point of commencement.

THE SECOND SCHEDULE REFERRED TO.

All that piece or parcel of land situated in the parish of Alexandria, county of Cumberland, Colony of New South Wales, be the hereinafter mentioned dimensions a little more or less, containing by admeasurement three hundred and twelve square feet, and being part of the land comprising block L of the subdivision of the Sydney Common: Commencing at the intersection of the present building-line on the south-west side of Oxford-street with the east building-line of Dowling-street; and bounded thence on the north-east by said building-line of Oxford-street, being the north-east boundary-line of said block L bearing south sixty-nine degrees forty-six minutes thirty seconds east ninety feet eight inches to the easternmost corner of said block L; thence on the south-east by part of the south-east boundary-line of said block L bearing south fifty-four degrees thirty-five minutes thirty seconds west eight feet four inches to the new building-line in Oxford-street; and thence on the south-west by that building-line bearing north fifty-five degrees forty-one minutes thirty seconds west eighty-six feet two and three-quarter inches, to the point of commencement.

And also all that piece or parcel of land situated in the parish of Alexandria, county of Cumberland, Colony of New South Wales, be the hereinafter mentioned dimensions a little more or less, containing by admeasurement one thousand three hundred and forty-five square feet, and being part of the land granted to Maria Zouch, by Crown grant dated thirtieth April, one thousand eight hundred and forty: Commencing at the intersection of the present building-line on the south-west side of Oxford-street with the south-east building-line of Marshall-street; and bounded thence on the north-east by said building-line of Oxford-street bearing south sixty-nine degrees forty-six minutes thirty seconds east thirty-two feet five and a half inches and south forty-seven degrees thirty-seven minutes forty seconds east one hundred and forty feet seven inches to the northernmost corner of land now the property of H. E. Castle; thence on the south-west by the new building-line of Oxford-street bearing north forty-three degrees thirty-six minutes thirty seconds west one hundred and thirty-eight feet six inches and north fifty-five degrees forty-one minutes thirty seconds west thirty-seven feet one and a half inch to Marshall-street aforesaid; and thence on the north-west by the south-east building-line of said Marshall-street bearing north fifty-four degrees thirty-five minutes thirty-seconds east twelve feet five and three-quarter inches, to the point of commencement.

1892.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

OXFORD-STREET IMPROVEMENT BILL.

THURSDAY, 17 NOVEMBER, 1892.

Present:—

MR. HART,		MR. LEES,
MR. MCGOWEN,		MR. NEILD,
MR. O'SULLIVAN,		MR. PERRY,
	MR. WADDELL.	

J. C. NEILD, ESQ., IN THE CHAIR.

Mr. T. Marshall, solicitor, appeared on behalf of the Promoters of the Bill.

Mr. John White called in, sworn, and examined:—

1. *Chairman.*] You are Mayor of Paddington? I am. Mr. J. White.
2. How long have you been Mayor? During the present municipal year—about nine months.
3. You have been a member of the council for some years? I have been a member for two years during 17 Nov., 1892. Mr. J. White.
4. You are acquainted with the locality referred to in this Bill? I am.
5. And you know the wishes of the council and the ratepayers with reference to the proposal? Yes.
6. Is there any statement you would like to make to the Committee with reference to it? I might, perhaps, give briefly, as far as I am acquainted with it, the history of the matter: These buildings have been a great eyesore to the residents of Paddington—I refer to the buildings known as Marshall's Brewery—for a great many years past; and certain action was taken by the council with a view to the removal of a portion of them, as we considered them an encroachment on the footway. After we had several times taken certain action with reference to the matter, a petition largely signed by the ratepayers of Paddington was presented to the council, asking them to close Marshall-street, which runs at the side of the brewery upon the condition that the buildings I have just mentioned as encroaching on the foot-path were removed. When that petition was received a committee of which I was a member was appointed to try to negotiate with the brewery company in reference to the closing of the street and the removal of the encroachment. The proposal embodied in this Bill was the result of negotiations which took place between the council and the brewery company. Every action taken by the committee was unanimously endorsed by the council. We are all in accord in thinking that this improvement is urgently required, and that it is to the benefit of the residents of Paddington that it should be carried out.
7. Was the arrangement into which the council entered with the company the same as the agreement suggested in the petition presented to the council? No, it was not.
8. Is the present arrangement more or less beneficial to the council and the public than the proposal referred to in the petition? It is very much more to the benefit of the public.
9. And of course to the benefit of the borough? Yes I may say that it is to the benefit of the whole of the eastern suburbs.

- Mr. J. White. 10. And necessarily to the benefit of the city? Exactly.
11. In what way is the proposal of the Bill more beneficial? There is a very acute angle at this point of the road, and it means the widening of the narrowest part of the roadway by 13 ft. 6 in. That additional width would be thrown into the roadway at the very point of the angle.
12. That is to say that the arrangement which it is now sought to legalise gives a greater width of roadway, and the brewery company would give up a larger area of road than was originally proposed? Yes, there is no comparison at all between the two proposals.
13. In other words, you have made a better bargain? Well, we wanted a fair *quid pro quo*. We gave up a large area of land in the street, although it was not used for public traffic, and we thought we were entitled to something in return for it.
14. With reference to Marshall-street, has the council ever treated it as a thoroughfare, and spent money on it, and so on? A very small amount. I do not think anything has been spent there for some years, but as I do not represent that ward I cannot speak definitely.
15. Was the road ever ballasted? I could not say. I do not know that it has been, it was never metalled.
16. It was never a street for much traffic? Not to any extent.
17. It has been for years largely occupied as a storage ground for tanks connected with the brewery? I do not know that it has been used as a storage ground, but it has been used chiefly by the brewery company; the whole of their traffic passes along the street.
18. Mr. Lees.] Was the street ever proclaimed? I could not say, but I should imagine that it has been.
19. Mr. Perry.] It is simply a road on paper? It has always been open for traffic.
20. But it is not a made road? No.
21. Chairman.] The council are then obtaining from the brewery company a portion of the freehold as well as the putting back of the alleged encroachment? Very nearly 2,000 feet of freehold.
22. You put in a plan showing the proposed improvements? Yes. [Vide Appendix A.]
23. The dotted line on the plan shows the present kerb? Yes.
24. The next line shows the existing building's enclosure line? Yes.
25. The next inner line is the line represented by the proper street alignment? Yes.
26. And the fourth line is the line which it is proposed to create as a building line under this Bill? Yes.
27. The space between the second and third lines shows the area of encroachment which it is proposed to give up? Yes.
28. And the space between the third and fourth lines shows the area of freehold which the Company are relinquishing to the borough? Yes.
29. The portion of Marshall-street which it is proposed to close is fronted by the property of the Marshall Brewery Company almost exclusively, a small portion, viz., 14 ft. 4 in., being fronted by the property of George Brereton? Yes.
30. The right-of-way which it is proposed to close is exclusively fronted by the property of the Marshall Brewery Company? Yes.
31. And is not used by anyone else? Not that I know of.
32. The portion of Marshall-street, opposite Brereton's property, which it is proposed by this Bill to be closed, is given as a freehold to Brereton? Yes.
33. The effect of the Bill upon Brereton's property is that he gets a westerly frontage to Marshall-street of 31 ft. 4 in., instead of a northerly frontage, as at present, of 14 ft. 4 in.? Yes.
34. Have the council received any intimation of any opposition to this proposal from either Mr. Brereton or other property-owners? None whatever.
35. Mr. McGowan.] Nor from any ratepayers? Not a single line.
36. Chairman.] How many signatures of ratepayers were attached to the petition presented to the Council? I think there were between 500 and 600; it was an enormously signed petition.
37. Mr. McGowan.] There has been no protest against the proposed act of the Council? None.
38. Chairman.] This matter has been before the council, and has been referred to in the city and local papers for several months? Yes.
39. On how many occasions was the matter before the council? In connection with the last negotiations on three different occasions.
40. And meetings I suppose have been held at intervals of some months? Yes.
41. So that there has been a very considerable degree of publicity given to the matter? The utmost publicity, and the council are unanimously in favour of the exchange being made.
42. So that you have every reason to believe that the owners of property concerned, and the ratepayers in the locality and borough generally, are thoroughly well aware of the proposal? Yes.
43. They have either approved of it definitely or have failed to give any intimation of dissent? That is so.
44. Has the matter to your knowledge been mentioned at any public meeting held in the borough? No; I do not think it has.
45. Do you remember whether it was mentioned at a public meeting held by one of the members for the district within the limits of the borough? I saw from the newspaper reports that it was mentioned, but I was not personally aware that that was the case.
46. That was a further publication of the proposal? Of course.
47. Speaking generally, from your long and intimate knowledge of borough matters, you believe that this proposal as submitted carries out the unanimous wish of the council? Yes.
48. And as far as you are aware the unanimous wish of the ratepayers? Yes.
49. Mr. McGowan.] Referring to the right-of-way off Marshall-street, do you know whether it was made by the council? I could not say.
50. Do you know if it was made for the use of the brewery company alone? That I could not say.
51. Someone must have spent a certain amount of money in the making of the right-of-way? Yes.
52. I understood you to say just now that it was not used by any persons except the Marshall Brewery Company? As far as I know it is not.
53. There is no other property affected by the closing of Marshall-street, except the property owned by Brereton apart from the property of the brewery company? That is the only property within the portion to be closed. There are two small houses at the corner of the lane further down.
54. Mr. Brereton gets a westerly frontage? Yes.

55. And is not the remainder of Marshall-street closed to his property? Yes.
56. What property is there in the portion of the street which is not to be closed? There are two small two-storey houses on the eastern side.
57. Have you received any protest from the owners of the property? No.
58. They are not affected by the transaction? Well, they are not injured by it.
59. *Mr. Perry.*] I suppose they know of this proposal? We have not communicated with them officially, but the utmost publicity has been given to the matter. The only gentlemen from whom we had any reason to expect any opposition was a Mr. Castles. Many years ago when there was an agitation of a similar nature on foot he protested against the street being closed, but on the present occasion he is thoroughly in accord with it on account of the great improvement resulting in the widening of the road. In the first instance I was opposed to the petition of Marshall's Brewery Company. I was one of the strongest opponents of the alteration upon the terms then suggested. Under that arrangement the street would have gone back only to the proper building alignment.
60. You thought the borough did not receive sufficient in exchange? No.
61. You know the right-of-way personally? I know there is such a place; but I have never been there.
62. You think that the closing of Marshall-street, and the giving of an extra width to Oxford-street, would be a distinct advantage to the borough? Not only to the borough but to the whole of the eastern suburbs.
63. You think the traffic would be in no way impeded by the closing of Marshall-street? In no way whatever. I am strongly in favour of the work being carried out.
64. *Mr. O'Sullivan.*] You appear to be giving up a great deal of land for a narrow strip in Oxford-street, but I suppose the value of the land you receive is much greater than the value of the land you give up? Yes.
65. What has been the cause of the long delay in dealing with the matter—what have been the points in dispute? The Building Act does not give us power as a municipality to condemn the buildings, and they have become really a danger to pedestrians.
66. I suppose they are likely to be removed now? Yes.
67. You say that there is a danger to pedestrians who pass these old buildings? A very considerable danger, although I believe the company have taken some little precaution in removing a portion of the timber.
68. Then the proposed improvement will remove a public danger as well as an eyesore? Yes; there is no foot-path there at all now.
69. As the line is marked on the plan it seems to strike through a portion of the Paddington Brewery Fire Brigade building;—will those buildings remain there? The buildings has been taken down, and re-erected higher up Dowling-street.
70. To what extent will Oxford-street be widened by the carrying out of the proposed improvement? About 25 ft. 6 in. The kerb goes back 13 ft. 6 in., and the building line will be 12 feet from that.
71. *Mr. Lees.*] Can you tell us how Marshall-street came into existence—was it dedicated or proclaimed? I cannot tell you that, my knowledge does not extend so far back.
72. How long has the street been there? I cannot say. It has been there a great many years.
73. But although you do not know whether the street was proclaimed or dedicated, it is under the control of the Paddington Council? Yes; we are liable for any accident that may occur in the street.
74. Were the proposed improvements approved by a resolution by the council? Yes; they were unanimously agreed to, and I believe the committee who had the matter in hand had a vote of thanks passed to them in recognition of the able manner in which they carried through the negotiations.
75. Do you know whether there are any owners of property adjacent to the street who purchased upon a plan showing Marshall-street as a thoroughfare? That I could not say.
76. You say that the owner of the piece of land between Brereton's property and the lane facing Marshall-street have not made any objection? No, not that I know of.
77. Do they approve of the alterations? That I could not say.
78. Brereton's estate is an old estate I believe? I do not know.
79. Did not the piece of land between Marshall's Brewery and the lane form part of Brereton's estate? I did not think so.
80. Have you any idea what Marshall's Brewery Company propose to do when they get the street handed over to them? I did hear that they intended building some shops, but I have not heard anything definite.
81. *Mr. McGowan.*] You have not looked upon the right-of-way as being the property of the borough of Paddington? It is only a few days ago that I knew of such a place being there.
82. You could not tell me positively that it has not been considered by any of the aldermen as forming part of the property of the borough? No; all that I can tell you is that not a farthing has been spent upon it since I have been in the council.
83. There are no private dwellings facing the right-of-way? Not that I know of.
84. *Chairman.*] The gradient of Marshall-street is pretty steep, is it not? Well, I do not know that you would call it steep in comparison with other portions of the borough.
85. Not for its length? I think I could find some much steeper grades in the borough.
86. Is it customary for persons driving vehicles to pass from Oxford-street directly into Dowling-street and *vice versa*, or to use Marshall-street when proceeding from one to the other? I never saw any vehicles in Marshall-street except those belonging to the brewery company.
87. *Mr. Perry.*] If you were driving and wanted to get from Paddington along Dowling-street some distance which road would you take; would you go along Marshall-street or would you go round the corner into Dowling-street? I should go round the corner.
88. *Mr. Lees.*] If you were on the Sydney side of Dowling-street and on the northern side of Napier-street and wished to make for Paddington would you come through Marshall-street or go round Dowling-street and turn into Oxford-street that way? I should go round by Dowling-street.
89. Would that be because the road was impeded more or less by brewer's tanks or blocked by vehicles? Well, the road has never been used for traffic. The council never spent any money on it, and as far as I know have never been asked to do so. I do not think that anyone but the brewery company ever makes any use of the road.
90. *Mr. Marshall.*] Is not the whole of the land on the northerly side of Marshall-street owned by the Marshall Brewery Company? Yes.

Mr. John Beveridge called in, sworn, and examined :—

- Mr. J. Beveridge.
17 Nov., 1892.
91. *Chairman.*] You are the Secretary to the Marshall's Brewery Company (Limited) ? I am.
92. And you are well acquainted with the proposed setting back of the encroachment and the giving up of a portion of your company's freehold for the widening of Oxford-street, in exchange for a portion of Marshall-street and the right-of-way running therefrom ? Yes.
93. Has the proposed arrangement been before the board of your company ? It has.
94. Has it been approved by your company ? It has.
95. Has it been before a meeting of your shareholders ? No.
96. Has it been incidentally mentioned to them ? Yes, it was mentioned in our last report and balance-sheet.
97. The directors have power under their articles to carry out such an arrangement ? Yes.
98. At any rate there has been no opposition on the part of your shareholders ? None whatever.
99. With reference to the right-of-way off Marshall-street is it to your knowledge used by any persons other than the proprietors of the brewery ? It is not.
100. Is it a cul-de-sac ? Yes.
101. And it can be used by no one else ? It has only one entrance, and no one can get into it as far as I know unless they are coming to the brewery ; the brewery gate is in it.
102. To your knowledge have the municipal council ever spent a penny upon it ? No.
103. Have the council ever been in the habit of spending any money in Marshall-street ? No.
104. What is the grade of Marshall-street, is it as level as Dowling-street, and has it as steep a grade ? There is an incline of 6 or 7 feet.
105. It is a pretty steep grade is it not ? Rather steep from Oxford-street.
106. *Mr. Perry.*] It would be about 1 in 10 would it not ? Yes.
107. *Chairman.*] The rise from Oxford-street to the highest part of Marshall-street would be 1 in 10 ? I think so.
108. And there is a fall from that point to Dowling-street ? Yes.
109. So that in a pretty short length of street you rise and fall with a fairly steep grade ? Yes.
110. That would be a great inconvenience for general vehicular traffic ? I think so.
111. As compared with the almost level character of Dowling-street and Oxford-street ? Yes.
112. Is there any traffic at the present time through Marshall-street other than the traffic connected with your brewery ? None whatever.
113. Have you seen a single vehicle go through the street ? I have seen no vehicles in it except the company's drays and waggons.
114. Is the street used by foot-passengers ? No.
115. Then all the traffic, vehicular and foot, passes from Oxford-street into Dowling-street direct ? Exactly.
116. Have you had any communication with the Brereton's as to the proposed closing of the street ? None whatever ; I am unable to find their representatives.
117. You have made efforts to find them ? Yes, I heard a daughter mentioned and I traced her to Redfern, I there found that she had removed and I have not her present address.
118. So that the proposal to give a piece of freehold to the Brereton estate out of Marshall-street is made without consulting the owners of the property ? Exactly.
119. But you think that the piece of land mentioned would be ample compensation for any possible right-of-way that might exist in connection with Marshall-street ? I think so.
120. Are you acquainted with the owners of the property lying between Brereton's property and the lane ? I am not.
121. Do you know whether the owners or occupiers of that property have any knowledge of the proposal contained in this Bill ? I am not aware.
122. Do you know whether they signed the petition presented to the council ? I could not say.
123. Have you or have any of the members of your company had any conversation with the occupiers of this piece of ground ? No communication whatever.
124. What is the total width of the land you propose to give up in addition to the encroachment ? At the extreme point 13 ft. 6 in.
125. The land tapers off to nothing at either end of a line about 306 feet long ? Yes, inclusive of Marshall-street. You would have to deduct some 37 feet on account of Marshall-street.
126. Upon this freehold area and upon the encroachment area you have buildings standing at the present time ? Yes.
127. And the carrying out of this scheme would necessitate the pulling down and rebuilding of the entire frontage of your brewery ? Yes.
128. And also the pulling down of the whole of the front of the old dwellings to the eastward ? Yes.
129. So that while you would obtain a piece of freehold land in Marshall-street and in the right-of-way you would relinquish a strip of land along the whole length of your frontage to Oxford-street and would do so at the expense of pulling down and rebuilding a large portion of your brewery and other premises ? Yes ; something was said some time ago with reference to tanks impeding the traffic in Marshall-street. I should like to mention that that is not the case.
130. There is no obstruction to Marshall-street by the brewery company except so far as their vehicles are concerned ? No.
131. *Mr. Perry.*] You have made every effort to find the owners of the adjacent property to which you have referred ? Yes.
132. And you have not succeeded ? No.
133. Are they asked to give up any land whatever ? No.
134. On the contrary they will receive some ? Yes.
135. So that in your opinion they will not be injured in any way by the proposed alteration ? In my opinion the only injury they can sustain is the loss of the exit to Oxford-street ; they will still have the exit to Dowling-street.
136. A perfectly level street as against a sandy hill ? Yes.

Mr.

Mr. Thomas Marshall sworn and examined :—

137. *Chairman.*] You are the solicitor in charge of this Bill? Yes.
138. And you are a son of the original proprietor of the brewery? Yes; of the late Mr. Joseph Marshall, senr.
139. Have you any interest in the company at the present time? Only as a shareholder.
140. I suppose you have known this property from boyhood? For a period of about thirty years.
141. During the time you have known this property have you ever known Marshall-street to be used for vehicular or foot traffic? Never.
142. The portion which it is proposed to close has been used solely by the proprietors of the brewery? Yes.
143. Has the right-of-way ever been used by any one but the brewery company? Not since the company bought from the owners of the Brereton estate the south-west and south-east side of the right-of-way.
144. To your knowledge has the municipal council ever expended any money on the right-of-way? Not a farthing.
145. Has the council spent any money on the portion of Marshall-street which it is proposed to close? Not to my knowledge.
146. Is it ballasted or metalled? It seems to be sand.
147. You heard the evidence of Mr. Beveridge as to the owners of the Brereton estate? Yes.
148. Have you also made any effort to discover them? Yes.
149. Without success? Without success. I discovered one member of the family out Redfern way. I tried to get the people there to interest themselves in connection with the property, but they did not seem to be interested at all. They would not bother themselves about it.
150. Brereton's property is leased to the brewery? Yes.
151. For what term? For a number of years. The company are going to purchase the land.
152. Have they any purchasing right under their lease? No; but it is well understood by both parties that the company will purchase.
153. To whom is the rent paid? I believe it is paid into the bank.
154. Do you know if any effort has been made to find the persons who own the piece of land between Brereton's estate and the lane? Yes, I was informed that it belonged to Mr. John Neale, and I caused a communication to be addressed to him, but received no reply.
155. Did not Dr. Fullerton own some land there? I think you are referring to the piece of land which was bought by Mr. French, the bootmaker, who built a number of houses upon it.
156. From your knowledge of the locality you think no damage will be done to the interests of the infants under Brereton's will? No, I think not; in fact an additional value will be given to the property. I think there are eight children interested, and the property is of so little value that I believe that if it were put up for sale to-morrow it would bring only about £200. I doubt if it would bring that.
157. And you think their indifference in the matter is simply due to the fact that their interest is so small? Yes.
158. *Mr. McGowen.*] What is the width of the right-of-way? It would be just sufficiently wide for a cart to pass.
159. You heard the Mayor say, in his evidence, that he did not think the right-of-way belonged to the council? Yes; I do not think it does. It is a right-of-way left in connection with some old subdivision, and seems to have been forgotten.
160. It is not contained in the deeds of the brewery company's land? No, although it is exclusively used by the brewery. It is shut in by the brewery gate, and has been so, I think, for seventeen years. It leads up to the brewery stables. The horses go that way to the stables.
161. No one appears to possess a title to the land comprised in this right-of-way? So far as the knowledge that I have been able to obtain goes it is not vested in anyone. It appears to be there for the exclusive use of the brewery.
162. This Bill, if passed, will pre-suppose that the land was a gift from the municipal council to Marshall's Brewery Company, while as a matter of fact the council have no title to the land. If this Bill be passed Marshall's Brewery Company will possess a title? The Bill will give a title to a piece of land for which no title exists.
163. So far as you know? I think I know the circumstances of the case pretty well. I believe it was originally a right-of-way, to give access to the properties subsequently purchased by the brewery company. The land was formerly attached to the property on the south side of the lane.
164. *Mr. Perry.*] There was a well in the middle of the roadway at one time, was there not? Yes, but it was never used; it was filled with rubbish.
165. *Chairman.*] You say that the persons interested in Brereton's strip of land are several in number, and are possibly scattered over different parts of the Colony? Yes.
166. In your opinion it would be impossible to obtain decisive evidence with reference to the views of the whole number? I think so.

Mr.
T. Marshall.
17 Nov., 1892.

TUESDAY, 22 NOVEMBER, 1892.

Present:—

MR. LEES. | MR. MCGOWEN,
MR. NEILD, | MR. PERRY.

J. C. NEILD, Esq., IN THE CHAIR.

Mr. T. Marshall, solicitor, appeared on behalf of the promoters of the Bill.

Mr. Joseph Brereton called in, sworn, and examined:—

167. *Chairman.*] Are you the owner of the piece of land fronting Marshall-street, Paddington? I am interested in the piece of land there. My father has a life interest in it; it was previously my grandfather's property.
168. Will the property be transferred to you on your father's death? To the family.
169. There are other members of the family? Yes.

Mr.
J. Brereton.
22 Nov., 1892.

170.

- Mr. J. Brereton.
22 Nov., 1892.
170. Among how many will the property be divisible? Nine. I believe my father has power to give the property to any number he chooses; to divide it among them in accordance with his own wishes.
171. What is your father's name? William Brereton.
172. Where does he reside? He is living now at 53, George-street North.
173. What age is he? I could not say exactly, but I should say about 63 or 64.
174. Prior to the last few days did you know of this Bill dealing with Marshall-street? Only from what I saw about it in the newspapers.
175. Has your father, to your knowledge, seen any notification of it in the press? I think he only knows what I have mentioned to him.
176. You have conversed with him on the subject, then? Yes.
177. If you look at the plan you will see that it is proposed to close a portion of Marshall-street and the right-of-way off it edged with red, and to give it to the Marshall Brewery Company in exchange for the company setting back its buildings not only to the proper alignment, but to a further depth of 10 feet, so as to widen Oxford-street, and that it is also proposed to close that portion of Marshall-street tinted green, and to hand it over to your family by way of compensation for any loss you might sustain by reason of the closing of the portion of Marshall-street to which I have referred. Therefore, if this Bill were passed into a law you would have a westerly frontage of over 31 feet to Marshall-street. You would also have a frontage to a right-of-way 6 feet 6 inches wide, which would take the place of the present footpath on the north-west side of Marshall-street; is that a proposal which meets with your approval, and which you think would meet with the approval of the rest of your family? In the first place, I should like to ask a question. I should like to know what is supposed to be the depth of the allotment marked on the plan as owned by George Brereton?
178. I suppose it would be about 145 feet deep? Then I also want to know something about the right-of-way?
179. What information do you want on that point? I do not see any name down on the plan in connection with the property. I consider that, according to the will of George Brereton, my father is the owner of that property. My solicitor is of that opinion.
180. *Mr McGowen.*] Do you collect the rent for the portion of the Brereton property which is now let to Marshall's Brewery Company? I collect the rent for the house, ground, and right-of-way. That is the way in which the receipt is made out.
181. How often do you go to collect the rent? Generally every fourth week. I go sometimes on the first Monday, and sometimes on the last Monday of the month. The last rent was paid, if I am not mistaken, on the 31st of last month.
182. Who pays the rent? The accountant in the brewery company's office.
183. *Mr. Lees.*] Does that right-of-way as shown on the plan, affect the rear of the property which is not leased to the Brewery Company? I do not know how it would affect the property, I have not been to that portion of it for some years. It would of course decrease the value of the property if the right-of-way were disposed of, because the right-of-way is one half of the property. The Marshall Brewery Company are supposed to have purchased 18 feet 2½ inches of frontage. When they purchased, if I am not mistaken, there was a cottage on the property. We have a plan drawn showing that the cottage was on something like 13 feet of ground.
184. *Chairman.*] What do you wish to convey by that statement? I merely make it in order to show that the right-of-way should be wider than is shown on this plan.
185. You are under the impression then that your family have an interest in the right-of-way shown on the plan? Yes; a big interest, I think, considering that our family owns the right-of-way.
186. *Mr. McGowen.*] Where do you get that opinion? From the deeds.
187. Have you got deeds? Yes.
188. *Mr. Marshall.*] Have you the will of George Brereton? Yes; but Mr. Burton Bradley, my solicitor, told me not to bring it with me this morning.
189. *Mr. McGowen.*] At all events you have the will, it is in your solicitor's hands? Yes.
190. *Chairman.*] You have consulted with Mr. Bradley on this matter? Yes; he has given me a petition for presentation to Parliament.
191. It appears from your evidence that you have known what is going on. You have learned this from the press from time to time, and you have discussed the matter with your father? Only recently.
192. Have you discussed it with other members of the family? Yes.
193. When did you see them on the subject? I was talking to some of them about it last Sunday. We were waiting for the Marshalls to write to us. When I saw my solicitor in the first instance, he told me that he could do nothing until I obtained a plan and a copy of the Bill. I have been running all over the place trying to get a copy. I went to the Government Printing Office, and they told me that the Bill had not yet been printed.
194. How long ago was that? I called last Thursday for the first time, and I called afterwards on Saturday.
195. You were told the Bill was not printed? I was told that it would not be printed until it came out of Committee.
196. *Mr. McGowen.*] You called to see me on the night after the first meeting of the Committee? Yes.
197. Where did you get the information that I was a member of the Committee? I saw it in the newspaper. I then went to the Paddington Council Chambers to get a copy of the plan, but found that the Council Clerk would not give me a copy until I obtained the permission of the Mayor. I was not able to find him, and I went to see Mr. Ramsay.
198. Have you obtained a copy of the plan since? No. The solicitor said he would see Marshall's solicitor and see if he could get a copy of the plan from him; if he did not receive it yesterday he has not got a copy.
199. *Mr. Lees.*] Although you went to the brewery so often you heard nothing of the proposed changes? No; I simply went there, gave the receipt for the rent, and walked away.
200. *Chairman.*] What rent are you deriving from this piece of property? Ten shillings a week.
201. For the whole thing, buildings, and all? Yes: house, grounds, and right-of-way.
202. *Mr. McGowen.*] You are sure the right-of-way is mentioned in the receipt? Yes.
203. *Mr. Perry.*] You have not got one of those receipts? No, but I could write you one from memory.
204. We should like to see one of the receipts? Of course the brewery company would keep the receipts themselves.

Mr.
J. Brereton.
22 Nov., 1892.

205. *Mr. McGowen.*] In making out the receipts you have always written "house, ground, and right-of-way;"—you are quite sure of that? Yes.
206. *Mr. Perry.*] How long have you known the property marked on the plan as a right-of-way? The house standing on George Brereton's property, as shown on the plan, was the house in which my grandfather resided, and in it I was born. On the property marked as owned by the Marshall's Brewery Company, and fronting the right-of-way, there used to be a cottage in which my aunt lived. Very close to that, and somewhere in the right-of-way, there used to be a well. There was no water supply to Paddington in those days, and we used to get our water from that well.
207. How long back can you recollect this property? I can recollect being there in 1875, on the occasion of my mother's death.
208. Was the well in use then? I cannot recollect; I know it was used when we were living there.
209. Was the well within a fence or not? It was cased in; there was a kind of door to it.
210. Affording protection to the well? Yes.
211. As long as you can recollect there has been a right-of-way there? It used to be a right-of-way to get at the cottages to the back. I produce a plan from which you will see that the property bought in Marshall-street was 41 feet. I also produce a plan showing the land when it was first sold by auction, and when lot 7 was bought by George Brereton. The first plan I produce is a subdivision of lot 7.
212. *Mr. Marshall.*] Were houses built and occupied at the eastern end of the property and fronting the right-of-way at its eastern extremity? Yes.
213. Were those houses owned by Mrs. M'Culloch? They were owned by George Brereton, and willed to Mrs. M'Culloch, or the M'Culloch family.
214. The only access to those properties willed to Mrs. M'Culloch, was through the right-of-way? That is, I believe, the only way in which you could get to them.
215. Are the cottages to which I now refer the property of the brewery company? I could not say to whom they belong now. I never knew what the brewery company actually bought.
216. Do you not know that the property has been sold by the M'Culloch family? I believe Mrs. M'Culloch sold the Marshall family some property, but I never knew what was sold.
217. Do you not know that the particular property is now occupied by the brewery stables? I do not know how it is occupied now. I have not been there for some time.
218. On one of the plans produced by you there is shown another cottage half way up the right-of-way, and fronting it? Yes.
219. Do you know whether that cottage is now the property of the brewery company? That question I cannot answer; I do not know how much was sold to the company.
220. Do you not know that it is occupied by the brewery company? I could not say.
221. Is the property immediately in front of the last-mentioned cottage, and fronting Marshall-street, now the property of the brewery company? That is another question I cannot answer; I do not know what the Marshalls bought.
222. Do you not know that the M'Culloch family sold their property? I know they sold it, but I do not know to whom.
223. Do you not know that the tower of the brewery is built on that very property? I do not know. The only part of the brewery I ever saw was the front of it.
224. *Chairman.*] Yet you say you go there every four weeks for the rent? I go to the office only to get the rent. I do not go there to inspect the premises.
225. But cannot you see the buildings referred to from the South Head Road? Some of the Brewery buildings can be seen, but not much can be seen from the front of the street.
226. Although you know absolutely nothing about the sale of the property, although you cannot say whether it has been sold by members of your family or not, although you cannot say if it has been bought by the brewery company, although you decline to say who are the owners, or give any information whatever about the matter, you are nevertheless prepared to swear that the right-of-way is the property of your family? So far as the right-of-way is concerned you can see from the will that it has been willed to my father. I could not tell you how much property Mrs. M'Culloch sold.
227. *Mr. Marshall.*] What do you value your father's property at now? I am not prepared to give an estimate.
228. Do you think it is of a greater value than £200? Yes.
229. Do you think it would bring that in the open market? I do.
230. What do you think it would bring;—do you think it would bring more? It depends upon how much land is sold.
231. *Chairman.*] Have you or any of your family ever used Marshall-street as a thoroughfare? Yes.
232. In what way;—have you ever driven a vehicle along it? Not so far as I am concerned; but I do not know for what purposes it may have been used by other members of the family. My father lived there after my grandfather, and he may have had a conveyance.
233. *Mr. McGowen.*] You say that you have collected the rent, and that the brewery company have leased a portion, if not all, of the land of the Brereton family;—when does their lease expire? When the eldest boy in the family is 21 years of age.
234. When will that be? Next October.
235. *Mr. Lees.*] You see the piece of land upon the plan crossing Marshall-street and tinted green. Do you think that would be anything like a fair compensation for what you would lose in your present frontage to Marshall-street in your exit to Oxford-street, and in respect of the right-of-way. Do you think it would be a sufficient compensation? I do not think it would.
236. *Mr. Marshall.*] By how much do you think you would be short? I consider that we are in a position to prove that the right-of-way belongs to us.
237. But how much do you think you would be short in the matter of compensation? I am not prepared to answer that question now.
238. *Mr. Lees.*] I would like a more definite answer to my question. I will again ask you whether you consider the piece of land, tinted green, anything like a compensation for what you would lose? Of course we should lose our exit to Oxford-street if Marshall-street were closed as proposed, and we should also lose the right-of-way. I should like to know also of what use the piece of land you refer to would be. What could you do with a frontage like that? What could you put upon it?

Mr.
J. Brereton.
22 Nov., 1892.

239. *Mr. Perry.*] Putting the question of the right-of-way aside for the time being, if you received the portion of land tinted green, would it compensate you for the closing of Marshall-street? Putting the question of the right-of-way aside, if Marshall-street were closed, as shown on the plan, the value of our property would be considerably decreased, and I do not consider that the piece of land which it is proposed to give us would recoup us for our loss.
240. Do you not think that the piece of land, tinted green, with its frontage to Marshall-street, would be a sufficient compensation for your right-of-way to Oxford-street along Marshall-street? No; because we should lose a certain amount upon our original property through Marshall-street being blocked.
241. Your objection to the Brewery Company having the right to the right-of-way as proposed in the Bill is due to the fact that you consider you have an interest in that right-of-way? Yes.
242. Not as a right-of-way, but as owning the land? Yes.
243. *Mr. Lees.*] Do you know whether the triangular piece of land adjoining was laid down as part of the Sydney common when your father became possessed of the land there? I doubt it very much; I do not think it was so at the time my father became possessed.
244. *Mr. McGowen.*] You are here representing a section of your family? I am representing the family.
245. Are they aware of your coming here to-day? Yes.
246. How many members of your family are interested in this property? To the best of my belief, nine.
247. Have you communicated with the whole of them? Not with all.
248. With how many? With four; including myself, I represent five.
249. *Chairman.*] You are proposing to present a petition to the House. Have four members of your family besides yourself signed it? I fancy there are three signatures besides mine. My solicitor told me that it was necessary to get only three members of the family to sign.
250. You say that you represent four members of the family besides yourself, but only three besides yourself appear to have signed the petition? I did not get the petition for signature until about an hour ago. If I had had it before, and had looked up the members of the family, I dare say I could have obtained the whole of the signatures.
251. *Mr. McGowen.*] You think you could have got them all to sign the petition if you had had time? Yes.
252. During any portion of the time you have drawn the rent, has it been paid into a bank to your credit? No; my father has a life interest in the property, and that being so, I take it that he can do what he likes with the rent.
253. *Chairman.*] I suppose the evidence you have given this morning is given on behalf of the owners of the property, and sets forth their objection to the Bill? I do not know whether they object to Marshall-street being closed; but if it were closed they would want some compensation for it. I think they would want something more than is proposed to be given under this Bill. I have had a great difficulty in seeing the plan, and other members of the family have been unable to see it. Had I seen the plan before, I should have given you much more information on the subject.
254. Am I to understand from your last answer that your objection is not to the closing of Marshall-street, but to the insufficiency of the proposed compensation? Yes. I consider that the closing of Marshall-street will decrease the value of our property.
255. You think you ought to receive larger compensation than is proposed by the Bill? The Bill does not propose to give us anything for the right-of-way.
256. *Mr. Lees.*] Would you be prepared to sell right out to the brewery company? The family might be prepared to sell right out, but I should have to consult them on the point. I think they could do so, and to the best of my belief they would do so.
257. That would be a much better transaction in the interests of your family than the acceptance of the proposed strip of land, you think? Yes.
258. In the event of any proposal being made to you to buy your family's interest right out, on what basis would you sell? In the first place, if the brewery company would submit an offer to the family, and they were contented to take it, I would most certainly accept it. If, on the other hand, they thought they were not getting proper value, it might be determined by some other person, such as an auctioneer's valuator.
259. Richardson and Wrench, or Hardie and Gorman? Yes.
260. You would be prepared to accept the valuation of any reputable firm of valuers? Yes.
261. *Mr. Marshall.*] You only want the market value, whatever that may be? Yes.
262. Will you see the members of your family and talk the matter over with them? Yes.
263. Will you get a valuation made by some leading valuator, or shall the brewery company get a valuation made? In the first place I should like to take a copy of the plan and show it to the rest of the family in order that they may see what is going to be done.
264. *Mr. Lees.*] You have read the schedules to the Bill? Yes.
265. Does the schedule containing the description of the property belonging to the late George Brereton describe it accurately? I could not answer that question.
266. It is not correct in accordance with the plans you have produced to-day, is it? No, not according to our plans.
267. In what respect does it differ from those plans? In the frontage. Our plan shows more than the plan before the Committee. There is a difference in the width of the right-of-way.

1894.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

OXFORD-STREET IMPROVEMENT BILL.

TUESDAY, 13 FEBRUARY, 1894.

Present:—

MR. NEILD, | MR. GORMLY,
MR. PERRY.

JOHN CASH NEILD, ESQ., IN THE CHAIR.

Mr. Thomas Marshall called in, sworn, and examined:—

1. *Chairman.*] Are you solicitor for the Bill? Yes.
2. Since you were last examined has there been any dealing to your knowledge with any of the land referred to in the Bill and shown on the plan put in? The Marshall's Paddington Brewery Company (Limited) have purchased from the trustees and beneficiaries of the Brereton family, under an order of the Equity Court, by indenture of the 2nd February, 1894, all the lands to which the Brereton family were entitled fronting Marshall-street.
3. Does that purchase include any rights that were alleged to exist in the Brereton family to the right-of-way shown in the plan? Yes; the description includes that right-of-way as well.
4. Has that purchase been completed? Yes; completed, stamped, and registered, and the consideration, £500, paid. It was registered on the 5th February, 1894, No. 830, book 530.
5. Do you produce the conveyance? Yes.
6. Does the conveyance of this property to the brewery company remove every ground of objection that might have existed on the part of the Brereton family? Yes.
7. Have you since the Committee last met received any intimation of any objection on the part of any property-owner in the vicinity to the Bill? No.
8. You are then absolutely without knowledge of any objection to the measure as now submitted? Yes.
9. Do you produce a new plan showing that the property in question is now vested in the brewery company, and a plan showing the altered circumstances consequent upon the conveyance? Yes.
10. Do you hand in that plan? Yes. [*Appendix A.*]
11. Do you put in new schedules to take the place of those in the Bill, so as to meet the altered circumstances? Yes. [*Appendix B.*]

Mr.
T. Marshall.
13 Feb., 1894.

OXFORD-STREET IMPROVEMENT BILL.

APPENDIX.

[*Handed in before Select Committee.*]

A.

[Plans.]

B.

THE FIRST SCHEDULE REFERRED TO.

All that piece or parcel of land situated in the parish of Alexandria, county of Cumberland, Colony of New South Wales, be the hereinafter mentioned dimensions a little more or less, containing by admeasurement five thousand two hundred and twenty-eight square feet: Commencing at a point on the south-east boundary-line of block L of the subdivision of the Sydney Common, at its intersection with the new building-line on the south-west side of Oxford-street; and bounded thence on the north-east by said building-line of Oxford-street bearing south fifty-five degrees forty-one minutes thirty seconds east forty-two feet seven and three quarter inches to land formerly granted to Maria Zouch, and now the property of Marshall's Paddington Brewery (Limited); thence on the south-east, north-east, and again on the south-east by the boundary-lines of that land bearing south fifty-four degrees thirty-five minutes thirty seconds west sixty-four feet four and a quarter inches, south forty-five degrees thirty-seven minutes east fifty-six feet, south forty-three degrees twenty-five minutes east thirty feet nine inches, and south forty-five degrees forty-one minutes west twenty-seven feet and a half inch to land formerly the property of George Brereton; thence on the south-west, north-west, and again on the south-west by the boundary-lines of that land bearing north forty-three degrees thirteen minutes west twelve feet six inches, north forty-five degrees forty-one minutes east fourteen feet seven inches, and north forty-three degrees twenty-five minutes west eighteen feet and two and a half inches to other land now the property of Marshall's Paddington Brewery (Limited); thence again on the south-west, south-east, and south-west by the boundary-lines of last-mentioned property bearing north forty-five degrees thirty-seven minutes west twenty-six feet eleven inches, south forty-five degrees west four feet six inches, and north forty-six degrees forty-eight minutes west thirty-one feet eleven and a half inches; thence on remainder of the south-east by the north-west boundary-line of said property, and the north-west boundary-line of land before referred to, formerly the property of George Brereton, bearing south fifty-four degrees thirty-five minutes thirty seconds west in all twenty-seven feet four inches to the westernmost corner of last-mentioned land; thence on remainder of the south-west by the north-eastern termination of Marshall-street bearing north forty-six degrees twenty-three minutes west thirty-seven feet eight and a half inches to block L of the subdivision of the Sydney Common aforesaid, now the property of Marshall's Paddington Brewery (Limited); and thence on remainder of the north-west by part of the south-east boundary-line of that land bearing north fifty-four degrees thirty-five minutes thirty seconds east ninety-five feet seven and a half inches, to the point of commencement.

THE SECOND SCHEDULE REFERRED TO.

All that piece or parcel of land situated in the parish of Alexandria, county of Cumberland, Colony of New South Wales, be the hereinafter mentioned dimensions a little more or less, containing by admeasurement three hundred and twelve square feet, and being part of the land comprising block L of the subdivision of the Sydney Common: Commencing at the intersection of the present building-line on the south-west side of Oxford-street with the east building-line of Dowling-street; and bounded thence on the north-east by said building-line of Oxford-street, being the north-east boundary-line of said block L bearing south sixty-nine degrees forty-six minutes thirty seconds east ninety feet eight inches to the easternmost corner of said block L; thence on the south-east by part of the south-east boundary-line of said block L, bearing south fifty-four degrees thirty-five minutes thirty seconds west eight feet four inches to the new building-line in Oxford-street; and thence on the south-west by that building-line bearing north fifty-five degrees forty-one minutes thirty seconds west eighty-six feet two and three-quarter inches, to the point of commencement.

And also all that piece or parcel of land situated in the parish of Alexandria, county of Cumberland, Colony of New South Wales, be the hereinafter mentioned dimensions a little more or less, containing by admeasurement one thousand three hundred and forty-five square feet, and being part of the land granted to Maria Zouch, by Crown grant dated thirtieth April, one thousand eight hundred and forty: Commencing at the intersection of the present building-line on the south-west side of Oxford-street with the south-east building-line of Marshall-street; and bounded thence on the north-east by said building-line of Oxford-street bearing south sixty-nine degrees forty-six minutes thirty seconds east thirty-two feet five and a half inches and south forty-seven degrees thirty-seven minutes forty seconds east one hundred and forty feet seven inches to the northernmost corner of land now the property of H. F. Castle; thence on the south-west by the new building-line of Oxford-street bearing north forty-three degrees thirty-six minutes thirty seconds west one hundred and thirty-eight feet six inches and north fifty-five degrees forty-one minutes thirty seconds west thirty-seven feet one and a half inch to Marshall-street aforesaid; and thence on the north-west by the south east building-line of said Marshall-street bearing north fifty four degrees thirty-five minutes thirty seconds east twelve feet five and three-quarter inches, to the point of commencement.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

AUSTRALASIAN RIGHTS PURCHASE BILL.

(PETITION FROM THE MUNICIPAL COUNCIL OF THE BOROUGH OF RICHMOND IN FAVOUR OF.)

Received by the Legislative Assembly, 19 April, 1894.

To the Honorable the Speaker and to the Honorable Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the Municipal Council of the Borough of Richmond, in New South Wales,—

RESPECTFULLY SHOWETH:—

1. That the Bill now before your Honorable House, intituled "The Australasian Rights Purchase Bill," etc., etc., has been under our consideration, and we unanimously approve of it.
2. The peculiar situation of Richmond, being so near the Rivers Colo and Grose, enables us to confidently assure your Honorable House that the scheme for generating electric light and power, as proposed by the Bill, is calculated to confer great advantages upon this Borough.
3. For many years the inhabitants of Richmond have waited for a feasible scheme for lighting the Borough. There is no probability that gas will be introduced, and even if it should be it is inferior to electricity. This Bill, therefore, if passed into law, will be the means of lighting the streets and houses of the Borough at a moderate cost.
4. Your Petitioners are deeply sensible of the advantages which will accrue to the inhabitants of Richmond by the introduction of the electric power as a cheap and highly efficient motive force for manufactories, and they welcome the proposal to supply it.
5. Your Petitioners would further humbly represent that many persons now ineffectually seeking labour in and about this Borough would find profitable employment on the works at the Colo and Grose Rivers and other places along the main cable line. In addition, a very large sum of money must be spent in carrying out the works and maintaining the same from year to year, which will be of the utmost benefit to the inhabitants of this Borough and neighbourhood.
6. Your Petitioners, therefore, humbly pray that your Honorable House will be pleased to pass the Bill referred to.
7. And your Petitioners, as in duty bound, will ever pray.

[Here follow 9 signatures.]

NEW SOUTH WALES.

DEPARTMENT OF MINES AND AGRICULTURE.

(ANNUAL REPORT OF THE STOCK AND BRANDS BRANCH)

Presented to Parliament by Command.

TO THE HONORABLE T. M. SLATTERY, ESQ., M.P., MINISTER FOR MINES AND
AGRICULTURE.

Sir,

In presenting the Report of the Acting Chief Inspector of Stock for the year 1893, I have the honor to invite attention to the increase of cattle during the past year, and to suggest that this may to some extent be due to the prospective increase in dairying throughout the Colony.

The decrease in the number of horses is so small as to need no notice, but it is very satisfactory to notice that in a large majority of the districts the breed is improving in quality and that they were generally free from disease.

In the number of sheep there was at the end of last year a decrease of 1,099,426, due to the numbers boiled down, exported, and bad seasons in some districts. It is satisfactory to find that the question of exporting frozen mutton is beginning to attract the attention due to so important a subject, and if the project which has been started to form a "Graziers Meat Export Company" should result in success, we may fairly hope that a large increase upon our present export of frozen mutton will follow. There is ample room for considerable expansion, as the Acting Chief Inspector estimates the cast of fat sheep for the ensuing season at 5,708,466, whereas so far as I have been able to ascertain our export of frozen meat for last year was only 486,709 sheep, 47,241 haunches of mutton, and 4,670 quarters of beef. Of course a quantity of tinned meat was exported, but the whole of our meat export bears no comparison to what it should be, considering the immense capabilities of this Colony and the practically unlimited market for our meat in Great Britain and the Continent. Representatives of some of the large firms in England who have recently visited these colonies with the object of taking stock of our resources have assured the Department that in various parts of Great Britain there are immense markets which have not yet been tapped. For example, the opening of the Manchester Ship Canal will enable us to reach an immense population of well-paid artisans, who may be reasonably expected to become large consumers of Australian mutton.

The success which has attended the introduction of this trade in New Zealand has, no doubt, had much to do with the present desire in this Colony to enter vigorously into an enterprise which promises to become, in the near future, one of our most important branches of industry. It has been urged, and no doubt with truth, that the proximity of the shipping ports to the pastures of New Zealand gives that Colony a great advantage over this Colony, and that consequently the success achieved in that Colony is no proof that the trade will be a success in this, but, on the other hand, it is stated that in America, where the trade is successfully conducted,

341—A

[2,015 copies— Approximate Cost of Printing (labour and material), £31 3s. 0d.]

meat

meat is carried by rail 1,000 or even 1,400 miles to the port of shipment, and though the sea voyage from America to Great Britain is much shorter than from this Colony the distances by rail are so much greater that possibly it will be found that the conditions in this Colony will enable her to compete successfully with both of those countries. Our success will probably depend, in a large measure, upon the solution of the problem, how to kill our sheep on or near their pastures, and to bring them in the best condition, and at the smallest cost, to the port of shipment. However, we may expect to receive a full report from the Chief Inspector of Stock (Mr. Alexander Bruce) as the result of his investigations into the meat trade in America, Canada, Great Britain, and the Continent, and, as he has been actively advocating for so many years the export of our mutton, there can be little doubt that the question will be exhaustively dealt with by him. While on the subject of export of frozen meat, I may perhaps be pardoned for inviting attention to the very satisfactory prices realised in London for rabbits recently sent there, and to suggest that by the aid of rabbit-proof netting an inexpensive mode of trapping on a large scale might be introduced which, if supplemented by the best methods of preparing for export, might enable this Colony to secure a large and profitable trade which would prove a boon to pastoralists and farmers, and give employment to a very large number of men.

As regards our wool clip for last year, it is gratifying to note that the estimate shows an increase of 18,160,914 lb. over the clip of the previous year, and it is equally gratifying to note that each year the proportion of our clip that is shipped at our own ports of Sydney and Newcastle is increasing, while the proportion sent through Melbourne and Adelaide is decreasing.

I have, &c.,

HARRIE WOOD,
Under Secretary.

Department of Mines and Agriculture,
Sydney, 21st May, 1894.

The Acting Chief Inspector of Stock to The Under Secretary for Mines.

Department of Mines and Agriculture,

Stock and Brands Branch, Sydney, 1 May, 1894.

Sir,

I have the honor to submit my Report of this Branch for the year 1893, and to state for your information that cattle have increased during the year to the extent of 8,426, while horses and sheep have decreased during the same period, the former in the small number of 17, and the latter to the considerable extent of 1,099,426. The decrease in sheep is occasioned by large transactions in boiling down, bad seasons in some districts, and numbers exported.

Several deaths have occurred among sheep in the Colony during the year, but the numbers dying is not unusually large. A small percentage of deaths from pleuro-pneumonia has taken place among cattle, but has not been so extensive as to warrant any special reference thereto. Altogether, I am pleased to state that the health of the flocks and herds generally will bear favourable comparison with former years, allowing for altered circumstances, which are herein referred to.

Recently reports have reached this office from some districts of several deaths among sheep, and as some of those have occurred rather suddenly, the cause has been attributed to anthrax.

From the description of the various organs after *post mortem* examination, I am convinced that the greater portion of the losses are not occasioned by anthrax, but rather to anæmia, consequent upon dropsical affection induced by liver rot, or fluke, in an advanced stage.

I am further convinced that much of these losses, from the disease last referred to, may be averted by change in the system of management.

Sheep have been placed upon country for years past which in the first instance, in my opinion, was never naturally intended for them, and by continuously stocking, and in some cases, overstocking this country, many of the original and virgin herbage and grasses have been eaten out. The surface features of the land have also changed by reason of storages of water in swamps, and breaking out of springs, and in many instances little or no attention has been paid to drainage of land which is naturally devoid of all saline properties, and by that reason most favourable to propagation by natural agencies of fluke, and owners have not, as a preventive, used salt plentifully in addition to sulphate of iron, but have, in many instances, had recourse to these substances when the disease has become firmly established.

These alternatives are not cures, merely preventives, and tending to assist any natural defect in the country by supplying the requisites to maintain health.

Further, sheep of the same age are, to a large extent, kept in the same paddocks for many months without any change; this in itself is a mode calculated to induce disease, and it is only reasonable to suppose that a change of diet is most necessary and essential to good health in sheep, as in all other animals.

Sheep of different ages require different feed, as an animal of a year old or less cannot digest, thrive, and maintain in good health upon the same diet as an animal of mature age. Neither can those that have passed the prime of life assimilate the same class of food as those of a more youthful age.

I am convinced that were sheep changed with tolerable frequency into other paddocks (although it is some labour and trouble to do so) the results would in every way compensate, and the death-rates, as occurring lately, would be, I am sure, considerably reduced, and I would desire, with all respect, to place these suggestions before the owners of sheep in this Colony in the hope that they may be induced to practically test the mode herein described, and the results will, as before stated, I feel sure, be in every way satisfactory.

Regarding anthrax, I regret to state it is undoubtedly increasing, and is largely attributable to the non-destruction by fire of animals dying from that disease, there is no better or more effectual means of destroying sources of infection than fire, and all animals dying from whatever cause should be completely destroyed by that means, and there is no surer way of disseminating this disease than leaving dead carcasses on the surface undestroyed. I have instructed the various inspectors to be vigilant in detecting and rigorously prosecuting and pressing for fullest penalties allowed by law, all persons leaving dead stock undestroyed on the travelling stock reserves or within the legal distance ($\frac{1}{2}$ a mile) of any public road.

The decrease of sheep during the year is principally through large numbers being boiled down, in consequence of saleable prices not being obtained otherwise. The past year has been one of universal depression, and its effects have been most keenly felt by those engaged in grazing and pastoral pursuits, but with the interest taken in, and attention being devoted to freezing and preserving meat in this Colony, I anticipate matters relating to stock will considerably improve in the very near future.

In order to increase the size of the frames of the sheep in this Colony in the future and render them more suitable for export a number of coarse-woolled sheep—Lincoln, Border Leicester, and Romney Marsh rams—have been imported from New Zealand. The judicious mating of these with our well-grown Merino ewes should result in a breed of sheep of good marketable size. Some 1,300 of the rams before referred to arrived here during the year and have been forwarded to different parts of this Colony for breeding purposes, and I anticipate a much larger number of a similar class of rams (and probably ewes also) will be imported here during 1894 for the same purposes.

I beg to point out the very great losses that occur to this Colony owing to many parts being infested with the Bathurst burr, and the great necessity for legislation on the subject, so that this useless, destructive weed may be destroyed, as the depreciation in value caused by the prevalence of this noxious growth is almost incalculable.

During the year I have inspected the following District Inspectors' Offices, and their books and work:—Balranald, Bourke, Cannonbar, Condobolin, Deniliquin, Dubbo, Forbes, Gundagai, Hay, Hillston, Ivanhoe, Menindie, Molong, Naranderra, Narrabri, Urana, Wanaaring, Wentworth, and Wilcannia.

This necessitated very considerable travelling and in some instances great difficulty owing to some portions of the Colony being flooded.

I found the officers in most cases performing their duties satisfactorily, while in a few cases they were not so, and I have recommended some retirements and changes which have been approved and carried into effect, and which I have every reason to believe will have the effect of improving the tone of this Branch. I am of opinion and would recommend that the whole of the inspectors' offices and their work should be personally examined by the Chief Inspector or some responsible officer of this Branch once every year. This action would, I feel sure, conduce to greater efficiency, by keeping the head of the Branch in more direct touch with his country inspectors, as personal examination into these duties and the manner in which they are performed, and notation of events referring to stock reserves, &c., is at all

times

times more valuable than documentary reports only. Further, the various owners of holdings whom I met during my visit were very pleased to meet the Acting Chief Inspector, and expressed the hope that the visits would be more frequent than hitherto, and any of the Boards of Directors I met expressed the same sentiment, and even went so far as to say that they considered these annual inspections a positive necessity. In travelling in the Bourke and Wanaaring districts I observed large numbers of camels or dromedaries roaming about the country and grazing uncontrolled; these animals are no doubt useful for carrying purposes in a climate such as the district referred to, but in my opinion they should be made amenable to the laws that regulate the movements and grazing of other stock. The Impounding and Public Watering-places Acts, I suggest, should at the earliest possible moment be amended, and their provisions extended to include these animals. The Brands Act I think should be also so amended as to include the necessary provision to allot brands, so that these animals should be branded and thus ownership established, for at the present time it is almost impossible for any but an Afghan to identify them, and in the absence of proof of ownership it is most difficult to substantiate any action for trespass, &c., &c.

The Brands Act as at present in existence, in my opinion, should be amended with respect to branding horses and cattle, and different portions of the hides of cattle selected for imprinting brands upon than those at present in existence, and which are found to interfere very seriously with the commercial value of the hides, for use subsequently as leather—other and less valuable portions of the hides should be chosen for branding, *i.e.*, such as the cheek, neck, or low down on the forearm or thigh. The portions of the hide here suggested to be branded upon, under the altered circumstances under which cattle are now kept as compared with the manner years ago (when the Act was passed), would be, in my opinion, quite as effectual for purposes of recognition, and would result in considerable increase of price for the animals and their hides.

It has frequently been reported during the year that hares in the more settled districts are becoming a source of trouble and great loss, and some persons even go so far as to say they threaten to become more disastrous than the rabbits.

In my opinion this is an exaggeration. No doubt hares are very destructive both to orchards and farms; but these, by comparison with the vast area of Crown lands upon which sheep are depastured and where the rabbits prevail unduly, reducing the country to the state of almost perpetual drought, is widely dissimilar to the ravages of hares, who practically confine their depredations to the smaller areas of orchards and farms, which in most instances are freeholds, or presumably so. These properties may be wire-netted by individual owners in the cases of orchards, and in the same manner, in groups, the farms. The cost of so doing is not an insurmountable difficulty.

This course has been adopted in the rabbit-infested country over immense areas of Crown lands, with the prospect of an early termination of lease, in very self-interest protection; and it, I think, may with advantage be followed by owners of freehold or leasehold properties.

Altogether I think the work of protecting such properties as orchards and farms from intrusion of hares may be undertaken at a cost not inconsistent with the value of the property to be defended, and the desired results obtained by the use of wire-netting as before stated.

Some experiments not yet completed are being carried out at Moss Vale under the direction of Dr. Cobb, who is, and has for some months been, scientifically engaged in investigating worms and other parasites affecting sheep, and it is hoped that, when his labours in this matter have been completed, much valuable information may be obtained.

During the year a quarantine for ships' stock has been established at the port of Newcastle, and has been extensively used; so much so that it has been found necessary to erect additional buildings for the accommodation of animals that may be quarantined there.

I have, &c.,

RICH. D. JONES,

Acting Chief Inspector of Stock.

RECORD OF INSPECTORS' WORK.

The Colony is now divided into sixty-four Sheep Districts, and there are forty-eight Staff Inspectors employed, who have made the following inspections during the year 1893:—

Stock, including horses, cattle, and sheep	23,911 inspections.
Reserves	4,343 "
Public Pounds	359 "
Commons	603 "
Dogs	1,313 "
Pigs	1,658 "
Under Pastures and Stock Protection Act	7,045 "
Under Public Watering-places Act	1,696 "
Total	40,928

being an average of 853 inspections by each inspector.

The total number of stock inspected was 149,593 horses, 1,000,612 cattle, and 28,499,037 sheep. This shows a decrease of 25,821 sheep inspected during 1893, as compared with the previous year, while there is an increase of 13,240 horses, and 75,847 cattle.

Homebush Sale-yards.

The whole of the stock arriving at these yards were carefully inspected on each sale day, by an Inspector of Stock and the Government Veterinarian, with the result that a considerable number were condemned as unfit for human consumption. The numbers of stock submitted to auction were as follows:—

Cattle, 110,450 head.

Sheep, 3,209,691 head.

a weekly average of 2,124 cattle, and 61,725 sheep. Compared with 1892 this is a decrease of 100 cattle, and an increase of 13,317 sheep per week. These inspections occasionally lead to the detection of stolen stock, as the inspector's duty requires him to compare the brands and marks on the stock with those in the permits and travelling statements accompanying them. These documents are filed in this office for reference, and are frequently referred to by persons inquiring about stock supposed to have been stolen.

Inspectors'

Inspectors' Mileage.

During the past year the staff of forty-eight inspectors travelled over a distance of 182,688 miles while on duty, an average of 3,806 each per annum.

Prosecutions and Convictions obtained.

Under what Act.	No. of Prosecutions.	No. of Convictions.
Diseases in Sheep Acts	86	65
Imported Stock Acts...
Registration of Brands Acts	9	8
Pastures and Stock Protection Acts	163	139
Public Watering-places Act... ..	54	33
Impounding Acts	6	6
Discased Animals and Meat Act	8	8
Total	326	259

The large number of cases under the Pastures and Stock Protection Acts were principally against owners who had failed to make returns of their stock at the proper time. In this respect it has been known for some time past that some owners have been in the habit of making incorrect and insufficient returns, and the inspector at Braidwood has, during the past two years, been successful in obtaining convictions against several persons for so doing, and the energy displayed by him in working up these cases is deserving of special notice.

Altogether, the number of prosecutions were less than those in 1892.

HORSES.

The number of horses in the Colony during the thirty-three years previous to and including 1893 was as follows:—

Year.	No.	Year.	No.	Year.	No.
1861	251,497	1872	304,100	1883	326,964
1862	233,220	1873	328,408	1884	337,172
1863	273,389	1874	334,462	1885	344,697
1864	262,554	1875	357,697	1886	361,668
1865	284,567	1876	366,703	1887	390,609
1866	282,587	1877	328,150	1888	411,368
1867	278,437	1878	336,468	1889	430,777
1868	280,201	1879	360,038	1890	444,163
1869	280,818	1880	395,984	1891	459,755
1870	280,304	1881	398,577	1892	481,416
1871	337,597	1882	328,026	1893	481,399

Showing a decrease of only 17 on the number returned for the previous year. In Appendix A will be found a return of the number of horses in each sheep district of the Colony, also the numbers of cattle and sheep, and total number of pigs.

Breed of Horses.

Under this head the inspectors' returns give the different breeds of horses as follows:—

	Ordinary.	Thoroughbred.	Total.
Draught	127,508	21,010	148,518
Light harness	107,894	16,708	124,602
Saddle	176,545	31,734	208,279

Grand Total 481,399

Horses introduced into the Colony.

From other Australian Colonies.—By sea—190 stud horses and mares, and 760 ordinary horses and mares; total, 950. Overland—42 stud horses, and 8 stud mares, and 4,600 ordinary horses and mares; total, 4,650.

From England and Foreign Countries.—During the year 22 horses were imported into the Colony from England and other countries, and were subjected to the prescribed quarantine of fourteen days before being allowed to go inland. Particulars as to number and breed of these horses are given below.

FOREIGN Horses imported.

Name of Importer.	Address.	Where Imported from.	Cleveland Bays.		Breeds.						Total.

Horses fit for sale, and number imported, improvement, &c.

In the several districts of the Colony inspectors' reports show that there are 26,385 draught, 27,222 light harness and 39,430 saddle horses fit for market, while of this number 21,806 are considered suitable for requirements of India and China.

3,362 horses were exported during the year. Forty-six districts report horses as improving in quality, and this is attributed to the introduction of thoroughbred entires, breeding from good mares, and generally paying more attention to the rules of breeding. Fifteen districts report that there is no improvement in the quality of horses, while in three districts they are said to have deteriorated. Unfortunately too much attention is paid in these days to the breeding of galloways for racing purposes, to the detriment of the horse stock generally. A tax on entires is advocated by a large number of breeders on this account, and which I think is desirable.

Disease.

The horses were very free from disease during the year. *Anthrax* was reported in three districts, *Australian Stranghalt* in three districts, and *Strangles*, but only in a mild form, in eighteen districts. Prurigo (mange) is still reported to have shown itself in some of the coast districts, but not to any great extent. When this disease makes its appearance owners should see at once to the cleanliness of the horse's body, and wash with caustic soda and water, $\frac{1}{2}$ oz. to a pint of water, which gives good results. Only two districts report influenza, while glanders is unknown. A few horses have been attacked with blindness, which is being inquired into by this Department. (See Appendix H as to treatment for Influenza.)

The estimated total losses in horses from disease, accidents, and other causes amount to 8,040.

CATTLE.

The returns of cattle in the Colony during the thirty-three years ending 31st December, 1893, stand as follows:—

Year.	No.	Year.	No.	Year.	No.
1861	2,271,923	1872	2,287,660	1883	1,640,753
1862	2,620,383	1873	3,794,327	1884	1,425,130
1863	2,032,522	1874	2,856,699	1885	1,317,315
1864	1,924,119	1875	3,134,086	1886	1,367,844
1865	1,961,905	1876	3,131,013	1887	1,575,487
1866	1,771,809	1877	2,746,385	1888	1,622,907
1867	1,728,427	1878	2,771,563	1889	1,741,592
1868	1,761,411	1879	2,914,210	1890	1,909,009
1869	1,795,904	1880	2,580,040	1891	2,046,347
1870	2,195,096	1881	2,597,348	1892	2,147,074
1871	2,014,888	1882	1,859,935	1893	2,155,500

From the above it will be seen there was an increase of 8,426 cattle during the year 1893, and an increase of 514,747, as against the decennial year 1883.

The number of cattle in each of the Sheep Districts of the Colony will be found in Appendix A.

209,235 head of cattle were introduced from other colonies during the year, and 60,567 exported.

Breeds of Cattle.

	Pure and Stud.	Ordinary.	Total.
Shorthorns	58,524	701,404	759,928

Increase and Decrease of Cattle.

From thirty-four districts the cattle are reported as increasing, the principal reasons given being good seasons, introduction of large numbers of store cattle from Queensland, and more owners having taken to breeding cattle and stocking up their runs. The remaining districts say the cattle are decreasing through sales, owners not breeding or stocking up and changing for sheep.

The "Cast" of Fat and Store Cattle.

The estimated "cast" of fat cattle to be sent to market during the coming year is 342,734, and store cattle, 299,086. From fourteen districts the fat cattle are principally sent to Victoria; from two districts they are principally sent to South Australia and Tasmania; and the remaining districts supply the markets of Sydney, Maitland, Mudgee, Bathurst, Orange, Goulburn, Tamworth, and Albury. The principal markets for store cattle are Muswellbrook, Maitland, Goulburn, Wagga Wagga, and Wodonga, in Victoria.

How kept.

The number of cattle kept wholly in paddocks is returned as 1,725,093; on open runs, 281,033; and the balance, 149,374, are depastured both ways.

Improvement and Deterioration.

In thirty-nine districts the cattle are said to be improving; in twenty districts they are stationary; and in five districts deteriorating. The principal reasons given for the improvement are—introduction of good stud stock; more attention and care in selection and breeding of stock, more particularly those for dairying purposes; also, in culling and keeping in paddocks. The reason given for deterioration is inattention to breeding, many owners breeding from all sorts without respect to breed or quality, and using the same blood for years.

Their Diseases and Ailments.

Pleuro-pneumonia.—Inspectors' reports show that this disease existed in twenty-four districts, and that the cattle on 150 runs were affected; while the other districts are reported to be free from the disease.

Cumberland Disease.—From seven districts the number of cattle reported to have died from this form of anthrax is 562.

Symptomatic Anthrax or Blackleg is reported to have carried off 923 head in nine districts.

Tuberculosis.—Cattle to the number of 3,370 are reported from thirty districts to have died of cancer and tubercular swellings in the throat.

Red Water.—From two districts 16 deaths are recorded. The disease is prevalent in certain localities in the coast country at particular seasons, more so in spring.

Ophthalmia occasionally assumes an epidemic form, and the numbers attacked are in some cases considerable, causing much temporary inconvenience to stock from blindness. Outbreaks have been reported from four districts.

Poisonous Plants.—From eight districts deaths to the number of 930 are reported through eating supposed poisonous plants.

SHEEP.

The number of sheep in the Colony during the thirty-three years ending 31st December, 1893, stands as follows:—

Year.	No.	Year.	No.	Year	No.
1861	6,119,169	1872	17,873,696	1883	37,915,510
1862	6,558,896	1873	18,990,595	1884	31,660,321
1863	7,169,126	1874	22,797,416	1885	37,820,906
1864	9,082,463	1875	25,353,924	1886	39,169,304
1865	9,650,106	1876	25,269,755	1887	46,965,152
1866	11,644,593	1877	21,521,662	1888	46,503,469
1867	15,066,377	1878	25,479,484	1889	50,100,768
1868	16,000,090	1879	30,062,910	1890	55,986,431
1869	16,848,217	1880	35,398,121	1891	61,831,416
1870	16,218,825	1881	36,591,946	1892	58,080,114
1871	16,766,012	1882	36,114,814	1893	56,980,688

The

The number of sheep in the several Sheep Districts will be found in Appendix A.

A statement has been prepared, and will be found as Appendix B, giving the number of owners in each district with sheep from 1 to 500, 501 to 1,000, 1,001 to 2,000, 2,001 to 5,000, 5,001 to 10,000, 10,001, to 20,000, 20,001 to 50,000, 50,001 to 100,000, 100,001 and upwards, together with the number of sheep respectively owned by each class of owners in the several districts.

Increase and Decrease.

This shows a decrease for the whole Colony of 1,099,426.

The number of sheep imported during the year was 1,017,253, and the number exported 933,012, being an increase in the imports over the exports of 84,241 sheep.

Sheep introduced and imported into the Colony.

AUSTRALIAN SHEEP INTRODUCED.

Overland from other Colonies.—Stud sheep, 7,415; ordinary, 1,004,504; total, 1,011,919.

By sea from other Colonies.—5,279 stud sheep were introduced from the other Australian Colonies by sea, particulars of those sold at the annual stud sales are given in Appendix C.

The prohibition against the introduction of sheep, as well as all other stock, from Western Australia is still in force.

Foreign sheep imported from England.

Fifty-five stud sheep were imported from England, and passed through quarantine in Sydney before going inland. These were isolated for sixty days, and dressed three times with a mixture of tobacco and sulphur, in terms of the Regulations of 10th January, 1893. The following table gives the names, addresses, &c., of the importers:—

Name of Owner or Importer.	Address.	Breeds Imported.

The "Cast" of Fat and Store Sheep.

The annual "cast" of fat sheep for the ensuing season is estimated at 5,708,466, and store sheep, 6,656,271.

How Sheep are kept.

Paddocked	55,514,399
Shepherded	697,639
Both ways	768,650
							56,980,688

Condition of the Flocks.

In fifty-one districts the sheep are said to be improving, the principal reasons given being more attention to breeding, paddocking, introduction of high-class rams and ewes, more careful classing and culling, better management, and good seasons.

In ten districts they are said to be stationary, and in three districts they are deteriorating. The reasons given are effects of bad seasons, breeding from inferior ewes, bad management, bad selection of rams, and purchase of stores.

Lambing.

From a return of the autumn, winter, and spring lambings obtained from the Inspector for each Sheep District, the average percentage of lambing for the whole Colony is estimated at 69 per cent, *i.e.*, calculating the number of lambs marked on the number of ewes put to the rams. The autumn lambing was the highest, averaging 70½ per cent., while the spring and winter lambings averaged 67¼ and 63¼ per cent. respectively.

The Clip.

Average per Sheep.

Lambs.—The number of lambs shorn in the grease was 7,482,936; the number washed, 169,698; total lambs shorn, 7,652,634.

Sheep.—The number of sheep shorn in the grease was 45,443,757; hot water and spout-washed, 7,000; creek-washed, 85,169; and scoured, 1,000,549; total sheep shorn, 46,536,475.

The average weights of the clip are estimated as follows:—

	Lambs.	Sheep.
	lb. oz.	lb. oz.
Grease	2 1	5 15
Creek-washed	1 5	3 5
Scoured	3 5

Total Clip.

The total clip in the Colony for the year 1893, according to the number of sheep, would be:—

45,348,757 sheep shorn in the grease; average clip, 5 lb. 15 oz. per sheep	=	269,258,245 lbs.
81,169 " creek-washed	" 3 " 5 " "	= 282,122 "
1,007,549 " scoured	" 3 " 5 " "	= 3,337,506 "
7,482,936 lambs shorn in the grease	" 2 " 1 " per lamb	= 15,433,556 "
169,698 " washed	" 1 " 5 " "	= 222,729 "
		<u>288,534,158 lbs.</u>

- Showing an increase of 18,160,914 lb. on the previous year's clip.

The estimated total weight of the clip is considerably over that of the previous year, but the number of sheep shorn was less, while the number of lambs was greater than that for 1892. The average clip per fleece for sheep and lambs is also higher, owing to the good seasons, good condition of the sheep, runs not being overstocked, and improved quality of the sheep.

Condition of Clip.

In twenty-seven districts the clip is reported as sound and containing a good supply of yolk; in twenty districts sound, although deficient in yolk; and in remaining districts weak, owing to absence of yolk. On the whole the clip was clean, but in a few districts the value of the wool was affected by grass-seed and burrs.

Exportation of Clip.

The clip grown in the Colony of New South Wales is shipped principally to England, America, France, and Germany, and considerable portions of it is so from the ports of the three neighbouring Colonies, as well as from Sydney and Newcastle. The portions of our clip thus shipped from the other Colonies is often mistaken as the produce of those Colonies, more particularly for that of Victoria and South Australia.

The following is an estimate of the clip sent to Sydney, and also the proportion sent across the Borders and to Melbourne, Adelaide, and Brisbane for the years 1892 and 1893:—

Port of Shipment.	1892.			1893.		
	Greasy.	Washed.	Total.	Greasy.	Washed.	Total.
	lb.	lb.	lb.	lb.	lb.	lb.
Sydney	205,870,638	3,296,462	209,167,100	218,563,673	2,544,409	221,108,082
Melbourne	46,884,104	615,782	47,499,886	53,339,634	499,692	53,838,326
Adelaide	12,756,674	683,240	13,439,914	12,456,645	799,256	13,255,901
Brisbane	266,344	266,344	331,849	331,849
	<u>265,777,760</u>	<u>4,595,484</u>	<u>270,373,244</u>	<u>284,691,801</u>	<u>3,842,357</u>	<u>288,534,158</u>

This shows an increase in the quantity of wool shipped during the year from the Ports of Sydney and Newcastle of 11,940,982 lb., as compared with that shipped in 1892.

Classing of Clip.

In thirty-seven districts the clip is reported as having been well classed. In the other districts it is not considered to have been so, the reasons given being, owners consider it does not pay, that prices obtained are no better, also want of convenience, sheds not large enough to warrant expense, and the difficulty of obtaining competent wool-sorters.

Wool-presses.

A great number of different kinds of presses are used; those most in favour are Ferrier's Patent and Williams' and Robinson's; rack screw and pinion presses are used. There is still room for improvement in the mode of pressing, especially by the owners of small clips.

Woolpacks.

The woolpacks used are mostly Calcutta and Dundee, of various sizes, from 4 ft. 6 in. x 2 ft. 2 in. to 5 ft. 3 in., and the weight from 10 to 12 lb.
On sixty holdings the wool is dumped before leaving.

Sheep-brands and Marks.

During the year 1893 the number of Sheep Brands and Ear-marks recorded, transferred, and cancelled were as follows:—

		Recorded.			
Fire Brands	223
Tar do	1,699
Ear-marks	1,008
		<u>Total</u>	<u>2,930</u>
		Transfers.			
Fire Brands	59
Tar do	159
Ear-marks	131
		<u>Total</u>	<u>349</u>

Cancelled.

										Cancelled.
Fire Brands	301
Tar do	773
Ear-marks	425
Total										1,502

The large increase in the number of cancellations arises from the revision which has been carried out of the Sheep Brands and Marks Directory, and the cancellation of all Brands and Marks of owners who have died, or who have parted with the holdings for which the Brands and Marks were recorded. This work has now been completed and will it is believed render the identification of ownership of sheep a much easier matter than hitherto.

Ear-marking and Tattoo-marking.

In all districts the system of ear-marking sheep is now generally carried out, and the system of tattoo-marking is mostly used by owners of stud-sheep, not as yet to any great extent in the case of ordinary flock sheep, but where tried it has been found to be a good preventive to sheep-stealing.

DISEASES IN SHEEP.

Scab.—The flocks in this Colony and in the Colonies of Queensland, Victoria, South Australia, New Zealand, and Tasmania are free from scab. It exists, but to a very slight extent, in Western Australia, but it is hoped that Colony will soon be declared clean. The importation of sheep from Western Australia into this Colony is still prohibited, as well as all other stock.

Anthrax.—There have been no serious outbreaks of anthrax during the past year. Several owners have had their sheep vaccinated with M. Pasteur's "Vaccine for Anthrax," with satisfactory results, as shown below.

STATEMENT showing the result of Vaccinations for Anthrax during year 1893.

Lots Vaccinated.	Number of Sheep Vaccinated.	Were any Sheep dying when they were vaccinated?	Number of vaccinations, 1st, 2nd, and 3rd.	Number of deaths after 1st vaccination. 16	180	"	"	"	
	119,380			425	25		

Foot-rot.—In thirty-eight districts the sheep have been more or less affected with foot-rot during the year, the reasons given being continued wet seasons, running on low rich pasture, unsound country, and diseased land. The principal remedies tried, with careful paring, were butyr of antimony and bluestone, bluestone and kerosene, arsenic, arsenic and lime, blue vitriol, sulphate of copper, carbolic acid, and nitric acid—with satisfactory results. Of these, bluestone and butyr of antimony have been most effective for hand-dressing, and arsenic and bluestone in troughs. For the dressings recommended by the Government Veterinarian, see Appendix G.

Fluke.—In twenty-nine districts the sheep were affected with fluke, through wet seasons, depasturing on low swampy ground, unsound country, and rank pasture. The preventives used were salt, tar, and turps, sulphate of iron, and Liverpool salt and sulphur, with good results; but the best course, where it can be followed, is to remove the sheep to salt-bush country, and, where that cannot be done, to keep the country free from surface-water by means of drains run with a plough and helped with a spade, and burn the grass when opportunity offers, besides giving the lieks mentioned.

Parasitic Worms.—In thirty-two districts the sheep are reported as having been infested with worms to an extent of (say) 10½ per cent. In seventeen districts the sheep are reported as having been infested with stomach, lung, and tape worms; in seven districts with stomach and tape worms; in six districts with stomach worms; and in one district with lung-worms. The prevalence of the worms is attributable to the frequent summer rains following upon a wet winter, which lessened the nutrition in the pasture and lowered the stamina of the sheep, while at the same time the moisture and heat tended to a large development and increase of the worms. A brief statement of the remedies used, and the result, will be found in Appendix F.

Dr. Cobb, Vegetable Pathologist for the Department, is still engaged upon the study of the life history of the worms which cause the chief losses in our flocks, with the view to find a remedy for them, or at least to ascertain when, where, and how they can best be attacked.

PIGS.

The estimated number of pigs in the Colony at 31st December, 1893, is 240,000, being a decrease of 9,512, as compared with the returns for the previous year.

From the other colonies 183 have been introduced by sea.

The prohibition which has existed for some years against the introduction of pigs from foreign countries has now been removed, and they are admitted on undergoing a quarantine of sixty days.

The number of pigs exported from port of Sydney was 633.

Four ships' pigs were quarantined during stay of vessels in port.

Diseases in Pigs.

The pigs are occasionally found to be affected with tuberculosis, cancer, and contagious catarrhal pneumonia.

According to late reports swine fever still exists in Great Britain, and there have been considerable losses, although vigorous repressive measures are being taken.

DOGS.

Thirty-two dogs were imported last year from England and other places outside the Australasian Colonies, and were subjected to the prescribed quarantine of six months before being admitted into the Colony, while 422 colonial dogs were introduced at the Port of Sydney from the other colonies.

One hundred and eighty-six dogs were inspected prior to exportation, as also forty-six "ships' dogs."

All "ships' dogs," and other stock on board foreign vessels for the use of the passengers and crew, are now quarantined during the stay of the vessel to which they belong in port, whether in Sydney or at Newcastle.

Diseases in Dogs.

Rabies is still prevalent in England and on the Continent. It is also reported from the Mauritius, India, and the Straits Settlement. The proximity of the Straits Settlement to these colonies shows the absolute necessity for every possible precaution being taken to prevent the introduction of hydrophobia into this and the other colonies, and a continuance of the present term of quarantine.

TRAVELLING STOCK (*Reserves, Roads, Tanks, Wells, &c.*).*Trespass on Reserves.*

In thirty-six districts the travelling stock and camping reserves are reported as having been trespassed upon. In twenty-eight districts they are reported as being free from trespass.

Marking of Travelling Stock and Camping Reserves.

Good progress has been made with regard to the marking of travelling stock and camping reserves, there being at present about 60 miles surveyed and about 140 miles in course of survey. The routes marked are:—

1. From Boggabilla, *via* Yetman and Warialda, to Cobbadah, with the continuation on to Breeza in course of survey.
2. From Moree, *via* Millie, to Narrabri, with the continuation *via* Boggabri and Breeza to the Liverpool Range in course of survey, and a further continuation from there to the Bulga Mountains surveyed.
3. From Walgett, *via* Coonamble, Mendooran to Uarbry.
4. From Coolah, *via* Uarbry, to Kylstone.
5. That portion passing through Terry-hie-hie holding.

With a view of making these surveys of practical benefit to drovers, stock-owners, and others, lithographs, showing lengths of between 20 and 30 miles, are being prepared containing all information available that will enable the roads to be easily followed. The lithographs will be procurable from the local Stock Inspectors at a cost of 2s. each.

Grass on Reserves and Driftways.

The Inspectors report that in all the districts in good seasons there is sufficient grass on all the reserves and driftways to enable fat stock to reach market in good condition. In ten districts there is not sufficient in ordinary seasons.

From nine districts it is reported that sheep to the number of 292,114 have passed through during the year in search of grass and water. From two districts the number of loafing sheep is given at 50,700.

New Stock Roads required.

In eleven districts new roads are required for travelling stock, and to obtain these action has been already taken in seven districts.

New Stock Reserves required.

In eleven districts new reserves and alterations of existing ones for travelling stock are required. In fifty-three districts there are sufficient reserves; but in a great many cases the reserves are leased under annual lease, and are, therefore, kept very bare of feed.

New Wells, Tanks, or Dams.

In eighteen districts the inspectors report that new wells, tanks, or dams should be constructed by the Government at places which they indicate.

REGISTRATION OF HORSE AND CATTLE BRANDS.

Brands registered.

The number of horse and cattle brands registered up to 31st December, 1893, was 71,758. The number of brands registered during the year 1893 was—Horse brands (alone), 412; cattle brands (alone), 482; and horse and cattle brands, 1,263; making a total of 2,157.

This shows a decrease of 419 in the total number of brands registered during the year as compared with 1892. There is an increase in the number of brands transferred and cancelled.

Brands

Brands transferred.

The brands recorded during the year 1893 as transferred were—Horse brands, 34; cattle brands, 48; horse and cattle brands, 68; total, 150, being an increase of 17 on previous year.

Brands cancelled.

The brands cancelled (horse and cattle) in 1893 were 193.

Addresses changed.

The number of addresses of owners changed in 1893 was 90.

Compliance with the Act.

In all the districts the provisions relating to registration and the other requirements of the Act are reported as being fairly carried out.

Benefits of the Act.

The inspectors, in alluding to the benefits of the Act, report that it prevents duffing, stock-stealing, facilitates identification, assists in recovering lost stock, and otherwise is a great convenience and protection to stock-owners.

POUNDS.

Number and Inspection.

There are 435 pounds in the Colony, some of which are at present closed for want of poundkeepers. The whole of the pounds are inspected periodically by the various inspectors of stock.

State of Yards.

Nineteen of the pound-yards are reported to be old; some require renewing, being unfit for the safe custody of stock; while others need repairs. The remainder are said to be in a fair and good condition.

Keeping and Depasturing Pound Stock.

The provision made for the proper sustenance of impounded stock, according to the reports received, is satisfactory. As a rule, poundkeepers have now paddocks for the stock.

Management of Pounds.

The poundkeepers are reported to be performing their duties, upon the whole, in a satisfactory manner, and the appointment of inspectors of stock as inspectors of pounds has had a very beneficial effect.

NOXIOUS ANIMALS.

The Districts in which the Pastures and Stock Protection Act is in force.

The Act has been brought into operation in all the districts, and during the year work has been done to the extent shown in Appendices D and E.

Receipts and Expenditure under the Act.

The amount of assessment paid by stock-owners in 1893 was £39,116 15s. 7d.; and the amount expended £46,688 5s. 8d., the difference being accounted for by the subsidy granted by the Government to the Boards, and large amount to credit of some of the Boards at commencement of the year. Six districts are reported to be in debt to the amount of £978.

In six districts full rates were levied, in forty-eight districts less than full rates, while in ten districts no rates whatever were levied.

During the year the bonuses paid by the Boards for scalps ranged as follows:—For kangaroos, from 1d. to 1s.; kangaroo rats, 1d. to 6d.; wallaroo, 3d.; wallaby, from 1d. to 6d.; paddymelon, from 1d. to 6d.; bandicoot, 2d. and 3d.; hares, from 1d. to 6d.; native dogs, from 10s. to 60s.; pups, 2s. 6d. to 10s.; wombats, 2s. 6d.; opossums, 2d.; wild pigs, 6d. and 1s.; eagle-hawks, 6d. to 10s.; emus, 3d. to 6d.; and crows, 2d. to 6d.

Increase and decrease.

Kangaroos are reported to be increasing in sixteen districts, wallabies in twenty-one districts, native dogs in thirteen districts, hares in twenty-one districts, and wild pigs in seven districts. In twenty-one districts kangaroos are reported to be decreasing, wallabies in sixteen districts, and native dogs in seventeen districts, hares in eight districts, and wild pigs in four districts.

Number destroyed.

The number of kangaroos destroyed during the past year was 49,254; of kangaroo rats, 234,528; of wallabies, 743,017; of wallaroo, 445; of wombats, 46; of bandicoots, 1,857; of paddymelons, 49,028; of wild pigs, 8,802; of hares, 734,212; of native dogs, 14,148; of opossums, 3,635; of eagle-hawks, 6,784; of crows, 44,974; and of emus, 899.

Steps taken for their destruction.

In the majority of the districts hunting with dogs, drives, shooting, trapping, and poisoned water have been adopted with satisfactory results. In fifty districts poison has been used, mostly for dogs, with fair to best results, and from four districts it is reported that the results have not been satisfactory, the dogs being too cunning to take baits.

Amendments suggested in the Act.

Owners are desirous that the Amended Stock and Pastures Bill speedily become law; and they suggest that all owners of stock, irrespective of number, should be liable to an assessment, as also owners of 5 acres of land and over; that farmers and owners of orchards and vineyards should pay to the fund; that hares be included in the list of noxious animals; that the Boards be empowered to cope with the rabbit

rabbit nuisance; that the Government should grant larger subsidy; that uniform rates be levied; that the rate of bonus be the same throughout the Colony; that all returns of stock be made on the same day; that adjoining Boards assimilate bonuses; and that the provisions of the Act *re* defaulting Boards be strictly enforced.

Losses from Tame and Native Dogs.

The losses in stock for the past year from the ravages of native dogs are estimated at 109,265 sheep, valued at £23,937, and from tame dogs, 54,327 sheep, valued at £12,700, making the loss from tame and native dogs together, £36,637.

COMMONS.

Number and extent.

The number of Commons in the Colony is 311, with an average of about 4,160 acres each.

Number of Commoners, Stock, &c.

The average number of Commoners to each Common is estimated at 86, and the average number of stock kept on each Common at 186.

In two districts some of the Commons are reported to be used for other purposes than that of grazing Commoners' stock. Many of the Commons are unfenced, consequently are trespassed upon by travelling stock, &c.

MISCELLANEOUS.

Artificial Grasses.

In twenty-five districts artificial grasses have been sown for pasture during the year to a small extent, in nine districts to a large extent, and in remaining districts none; the most successful being lucerne, prairie, and rye.

Number and Division of Runs.

The number open or unenclosed runs in the Colony is 7,474; the number enclosed is 39,053; the number partially sub-divided is 14,724; and the number properly sub-divided is 24,329.

Improvements, Fencing, Dams, Tanks, and Wells.

The number of miles of fencing throughout the Colony is estimated as follows:—1,567,948 miles without wire netting, at an average cost of (say) £38 8s. per mile, amounting to £60,219,450, and 61,914 miles with wire netting, average cost at (say) £69 16s. 4d. per mile, amounting to (say) £4,322,625.

The number of dams used for stock purposes is estimated at 59,846, at an average cost of (say) £77 17s. 6d.; number of tanks, 34,839, average cost of each, £198 6s.; and the number of wells used is estimated at 3,992, at an average cost of £203 2s. each.

Cost of fencing, £64,542,075; cost of dams, £4,657,750; cost of tanks, £6,907,852; cost of wells, £810,698; making a total of £76,918,375, as representing the amount expended by way of improvements, &c.

Plants and Weeds.

Prevalence.

In fourteen districts *trefoil burr* grows to a very large extent; in eleven districts, to a considerable extent; in nineteen districts, to a slight extent; and in twenty districts there is none reported.

In thirty districts *variegated thistle* is reported to a slight extent; in ten, to a considerable extent; in ten, to a very large extent; and fourteen districts are reported as free from it.

In twenty-five districts *black thistle* is reported to slight extent; in eleven, to a considerable extent; in thirteen, to a very large extent; and fifteen districts are reported to be free from it.

In seven districts the land is reported as being infested to a considerable extent with *Bathurst burr*; in thirteen districts, to a very large extent; in thirty-four districts, to a slight extent; and in ten districts the land is not infested.

In twenty-six districts, other noxious weeds grow to a slight extent; in thirteen districts, to a considerable extent; in sixteen districts, to a very large extent; and in nine districts there is none reported.

Legislation for Noxious Weeds.

Legislation is urgently required for dealing with noxious weeds and plants, more especially the *Bathurst burr*, the prevalence of which is inflicting very serious loss on travelling stock.

Cost of clearing Commons, Reserves, &c., of Weeds.

The cost of clearing the Commons of noxious weeds throughout the Colony is estimated by inspectors at £74,504; the police paddocks, £5,011; the travelling stock reserves and droving roads at £206,497; amounting in all to (say) £286,012.

Experiments in growing Roots and Pasture under Systematic Rotation and fattening Cross-bred Sheep.

Mr. Bruce, while visiting New Zealand with a view of inquiring into the stock-breeding and fattening industry, was much impressed with their system of rotation of crops for fattening purposes, and, being strongly of the opinion that the system could be worked with great advantage in this Colony, obtained permission from the Hon. the Minister to experiment on a small scale.

With that view he has secured the co-operation of three practical farmers well qualified to carry out the experiments, who have agreed to give it a trial for five years.

The districts selected are New England, Orange, and Monaro, which are similar in climate, soil, and rainfall to New Zealand; and, being so, Mr. Bruce holds that it only requires the adoption of the New Zealand system to make it as successful in this Colony as in that.

The area set aside on each of the farms selected is twenty acres, which has been thoroughly worked and sown with turnip seed of three different varieties, viz., Drummond's Improved Purple Top, Sutton's Champion Top, and Monarch Purple Top. This seed has been sown in drills in the proportion of 1 lb. per acre, with 2 cwt. of bone-dust and superphosphate mixed in equal quantities.

After

After feeding this crop off, which will be done by penning the sheep in lots on the land so as to compel them to eat the roots up clean as they go, the land will be broken up and sown with a grass and clover crop, either with or without a small quantity of rape, or an oat or barley crop. The third, fourth, and fifth years the land will remain at pasture. The number and breed of sheep to be depastured will be decided by the Minister, and a record kept of all returns therefrom.

The Stock and Pastures Bill.

It is hoped that the state of the Government business will soon admit of this measure, which is so urgently required, being passed to enable inspectors to deal with diseased stock, which are now, through the want of the legislation so frequently asked for, allowed to travel throughout the Colony, spreading the infection as they go. This is especially the case with Queensland cattle infected with pleuropneumonia, which frequently introduce the disease in our herds.

APPENDIX A.
RETURN of Stock in the several Sheep Districts.

ABSTRACT I.

Number of Sheep-owners.	Ranging—		Number of Sheep owned.
	From	To	
6,193	1	500	1,105,083
2,275	501	1,000	1,747,860
2,041	1,001	2,000	3,110,361
1,640	2,001	5,000	5,293,544
717	5,001	10,000	5,092,939
475	10,001	20,000	6,722,825
477	20,001	50,000	14,966,272
162	50,001	100,000	11,296,811
53	100,001	and over.	7,644,973
Total, 14,033	56,980,688

ABSTRACT II.

Number of Owners.	Number of Sheep.	
	From	To
46	100,001	150,000
8	150,001	200,000
5	200,001	250,000
2	250,001	300,000
1	400,001	500,000
62*

*The number of owners of over 100,000 sheep given here is greater than that given in Abstract No. I, and is accounted for by the fact that one person frequently has several holdings, and while the number on one holding is under 100,000 the total of them all is over that number.

341—0

* N.B.—The whole of the accounts of expenditure for 1893 are not yet to hand. † Includes Kangaroo Rats.

APPENDIX F.

From Inspectors' Reports the following results have been gathered regarding the efficacy of the various Drenches and Licks used for Sheep for Worms:—

Drenches.

Arsenic.—For the stomach and tape worms the arsenic and soda drench is still reported as the most effective, and has been by far the most generally used. It has, however, been recommended that potash, as being less severe on the lining of the stomach, should be substituted for soda in its preparation. The arsenic and soda drench is reported by several of the Inspectors as having been also efficacious for lung-worms. No authenticated information has been received of this drench affecting the health of the sheep or injuring the wool.

Turpentine.—Turpentine, with various mediums, has been very generally given for stomach, tape, and lung worms, with good results, when repeated.

Fumigation with Sulphur is reported to have been tried in one case for lung-worms with the best results.

Sulphate of Iron, Horehound, Sulphur, Salt and Iron are reported to have been given, but not with satisfactory results.

Hayward's Specific has given very good results for lung-worms; but the reports as regards stomach and tape are conflicting.

Pottie's and Weaver's Drenches are reported to have been used in several districts with fairly satisfactory results.

While it can be said that a decided improvement follows the administration of most of the drenches generally used, it is a fact that even in the case of the most effective the *post-mortem* examinations disclose that generally where the sheep are at all badly infested some worms are still alive; and this again, it is believed, arises from the owners delaying too long in drenching, and allowing the worms to have too great a hold on the sheep before they are drenched. The consequence is that some worms are left, which keep the sheep from thriving, and, with the introduction of fresh eggs from the water and pasture—if the weather is at all favourable for the development of the worms—in the course of a few months make the sheep as bad as they were before they were drenched. To make the cure effective, therefore, sheep which have been badly infested should, on receiving one drench, be kept as near the drenching yards as possible, and receive a second drench in the course of twelve or fourteen days after the first.

But, while licks and drenches should be provided and given at as early a date and as often as required, owners should give their earnest attention to the removal of what may be termed the contributing causes of the pest by avoiding overstocking, attending to the proper nourishment of the lambs and weaners, burning off old pasture, and getting rid by draining of surface and stagnant water, as suggested in Vol. II, part 2, of the *Agricultural Gazette*.

Licks.

It is reported that the following licks have been used with good results:—

Salt and sulphur.	Salt, sulphate of iron, and Hayward's specific.
Salt and sulphate of iron.	Salt, tar, and turpentine.
Salt and turpentine.	Pottie's Preventive Lick.
Salt, sulphate of iron, and turpentine.	Salt and lime.
Salt, sulphur, and sulphate of iron.	

It is scarcely necessary to point out that a lick, if it is efficacious in warding off an attack of worms is far preferable to a drench; and as owners in all but the purely saltbush country are now aware that it pays them well to give their sheep a liberal supply of salt, it would add very little to the trouble or expense to give once a month with the salt some of the other ingredients here mentioned which they found from experience was to any extent effective in protecting their sheep from the worm pest.

APPENDIX G.

FOOT-ROT.

Dressings recommended by Mr. E. Stanley, Government Veterinarian. (For further details see *Agricultural Gazette*, July, 1891):—

Arsenic Dressing.

Arsenic, from 1 to 2 oz.
Potash, „ 2 to 4 „
Water, 1 gallon.

To be used in troughs for the sheep to walk through. The mixture to be boiled slowly for half-an-hour at least, till the arsenic is thoroughly dissolved.

Sulphate of Copper (Bluestone) Dressing.

Sulphate of copper, from $\frac{1}{2}$ lb. to 1 lb., dissolved in a gallon of water, may be used instead of arsenic. The following healing dressings may be used by hand after the above caustic applications:—

Tar Dressings.

Stockholm tar, 20 parts; carbolic acid, 1 part.
Or,
Stockholm tar, 8 parts; bluestone in powder, 1 part.
Or,
Oil of tar, 10 parts; carbolic acid, 1 part; olive oil, 1 part.

Lime

Lime Dressing.

Quick-lime, sprinkled on a dry surface, and the sheep walked through it frequently, will be found very beneficial. Before any dressings are used, the whole of the loose horn should be pared carefully from the diseased feet. It is of the greatest importance that the sheep's feet should, on the dressing being applied, be kept thoroughly clean and dry for at least three hours afterwards. They should, therefore, on leaving the troughs, or being dressed, be passed directly on to a battened or wooden floor, if it can be got, and, where neither of these is obtainable, they should be passed into a dry yard, in which there is a good coating of straw, cut grass, or dry bark, taken from trees which have been rung, or, in fact, any other thing which will keep their feet clean and dry.

APPENDIX H.

INFLUENZA IN HORSES.

(By E. Stanley, F.R.C.V.S., Government Veterinarian.)

Character.—It is a contagious equine fever, due to germinal matter invading the system, producing disastrous changes in the blood, which interfere with nutrition, excite congestion, and occasionally inflammation of important organs or tissues.

Cause.—The germs of this disease are always lurking about, and epidemics are due to exceptional climatic changes that have a lowering effect on the health of horses, and at the same time favour the vitality of the disease germs.

The worst cases are amongst hard-working horses in overcrowded sheds, with bad sanitary surroundings; next come fat horses, and the least susceptible are horses that are in good working condition, cleanly kept, and well cared for; if such have the disease at all it is in a mild form, and they speedily recover.

Symptoms.—In the onset loss of appetite, drowsy headache, pain in the limbs, general weakness; in many cases the eyelids are swollen, tears trickle down the face; there may be discharge from the nostrils, and occasionally coughing; the eye will be found scarlet and orange colour, the tongue furred, breath offensive, the heart beats feebly but quick, the pulse is small and weak, the dung is soft, and the urine high-coloured; there is a general rise of the bodily temperature.

As the disease progresses the symptoms will depend on its course, which is very variable, as the numerous names given to the disease indicate. The vital forces in many cases overcome the toxic effects and excrete the poison from the system; it is to assist this process that we have recourse to treatment.

The Treatment.—This should consist of rest, pure air, shelter from sun, rain, or wind, bran mashes, and cut green food with drachm doses of chlorate of potash, carbonate of ammonia, or nitrate of potash given in the drinking water; if the case has been taken early enough, and the surroundings are good, the fever will abate, and recovery be complete in a very few days.

Unfortunately many horses are worked at the commencement of the illness; then they are completely knocked up, and they present a variety of bad symptoms, owing to the mischief being located in individual organs, such as those of respiration, or the bowels, liver, spleen, lymphatic glands, or cerebro-spinal system. The location can only be diagnosed by the educated veterinarian, and every case should be treated to suit the nature and stage of the illness; dropsical swellings are a favourable indication, but time and patience must be allowed for recovery. No case is cured until the horse is playful at exercise.

I would caution owners to beware of amateur veterinary advice, as far more harm is done by ignorant treatment than by the disease. To illustrate my meaning, a horse with this sickness often has an anxious countenance, dilated nostrils, rapidly panting flanks due to acute pain, which may be owing to congested liver, laminitis, or other obscure complication, but the charlatan says he has got it on the lungs, and proceeds to torture the poor brute by blistering his sides, bleeding, setoning, &c. Such treatment as bleeding, blistering, or purging is very antiquated and erroneous.

My advice is to employ the best qualified veterinary surgeon available, and to see the poor animal has a good nurse, with pure air, cleanliness, rest, and comfort. It is cruel to turn sick horses out to shift for themselves.

1894.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

GLEBE ISLAND ABATTOIRS.

(RETURN RESPECTING.)

Ordered by the Legislative Assembly to be printed, 22 May, 1894.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 9th May, 1894, That there be laid upon the Table of this House,—

“ A Return showing the number of horned cattle, sheep, calves, and pigs respectively, condemned as unfit for food at the Glebe Island Abattoirs for each month of the year 1893, and for the first four months of 1894.”

(*Mr. Young.*)

RETURN showing the number of horned cattle, sheep, calves, and pigs respectively, condemned as unfit for food at the Glebe Island Abattoirs for each month of the year 1893, and for the first four months of 1894.

 NEW SOUTH WALES.

VINE DISEASES ACT.

(REGULATION UNDER.)

 Presented to Parliament, pursuant to Act 56 Vic. No. 22, sec. 52.

Department of Mines and Agriculture,
 Sydney, 5 May, 1894.

VINE DISEASES ACT OF 1893.

PURSUANT to the provisions of Act 56 Victoria No. 22, section 52, the Governor, with the advice of the Executive Council, hereby makes the following Regulation:—

For the purpose of completing the revision of the Vinegrowers' Roll for any district proclaimed under the "Vine Diseases Act of 1893," any Magistrate appointed under section 24 of the said Act to hold a Court for the revision of a Vinegrowers' Roll, may adjourn such Court to such other place or places, and to such other time or times as may from time to time appear to him necessary.

T. M. SLATTERY.

1894.

NEW SOUTH WALES.

DEPARTMENT OF AGRICULTURE AND FORESTS.

(FIRST REPORT.)

Presented to Parliament by Command.

To The Honorable T. M. Slattery, Esq., M.P., Minister for Mines and Agriculture.

Sir,

In my report for 1892, for reasons therein given, I trenched upon the operations of 1893, so as to cover the work done up to the date on which the Departments of Agriculture and Forestry were, in the interests of economy, reorganised, and for convenience of management brought together. I shall, therefore, with your permission, restrict this report mainly to the operations of the combined Departments, say, from the 1st July last.

At the outset, I may, perhaps, be pardoned for expressing my high appreciation of the services of the Chief Clerk of the Department, Mr. W. S. Campbell. To this gentleman I am deeply indebted for his very valuable aid in the work of reorganisation, both in the Department and in the field, he having seconded all my efforts to the utmost of his ability; while his extensive and varied experience in matters relating to agriculture, horticulture, and arboriculture has given his assistance special value. Mr. Cheesborough, in the Forest Branch, and Mr. Pready, in the Agricultural Branch, and the gentlemen under them respectively, deserve my best thanks for their devotion to their duties.

Of the work of the scientists and specialists connected with the Department, I cannot speak too highly, and I desire to record my thanks to those gentlemen for the ready and able assistance they at all times render me.

Notwithstanding the heavy reduction (due to the Government scheme of retrenchment) in the votes granted to this Department, and the consequent decrease of the staff, I am happy to say the necessary work of the Department has been efficiently performed. After the reorganisation of the Department in June last, the monthly crop reporting was continued on very similar lines to those previously worked, but within such limits as enabled one officer to include it within the scope of his duties.

The crop returns from May to September inclusive were prepared by Mr. Dummicliff, under such conditions, and duly published, after which the duties were transferred to the Department of the Government Statistician, which has special facilities for such work.

The number of papers registered during the year was: Agriculture, 16,025; Forests, 7,870; as compared with Agriculture, 12,724; Forests, 10,250, in 1892. From these figures it may be inferred that the usefulness of the Departments has been in no way impaired, and that the interest of the general public in the work has not decreased.

The number of letters issued during the year was: Agriculture, 9,045 (exclusive of 5,520 post-cards and 15,630 circulars); Forests, 5,653. The decrease in the number of letters issued from the Agricultural Branch during the year as compared with the previous year, is due to certain changes in the system of working, whereby the number of letters written to officers of the Department has been reduced.

I am happy to say that the *Agricultural Gazette* is still growing in popularity, the number issued during 1893 reaching 40,800 copies, whilst 24,663 miscellaneous publications were also issued. The number of letters received during the year from farmers and fruit-growers relating the satisfactory results which have been obtained from following the instructions given in the *Gazette* for the treatment of insect and other pests is very gratifying. The best thanks of the Department are due to the gentlemen who contribute the articles, and to the editor, Mr. Gray, for his efforts to issue the *Gazette* punctually, and in a creditable form. I propose at an early date to submit a scheme under which I trust the cost to the State of publishing the *Gazette* will be considerably reduced.

Précis of pamphlets issued from 1st July to 31st December, 1893:—

Tobacco as a farmer's crop for New South Wales. Part 3. By G. F. Sutherland.—A description of the method of "hilling," "pruning," "topping," and "suckering" the tobacco plant; also a description of the best method of constructing a curing-house, with illustrations. From vol. 4, part 7, of the *Gazette*.

Tobacco as a farmer's crop for New South Wales. Part 4. By G. F. Sutherland.—Describes the method of harvesting and curing tobacco; also sorting, bulking, and packing same. From vol. 4, part 8, of the *Gazette*. The

- The cultivation and uses of the "Caper Bush." By F. Turner.—Description of the method of propagating and planting. Chemical composition and uses. Illustrated. From vol. 4, part 7, of the *Gazette*.
- Poultry, No. 6. By S. Gray.—A description of the "Plymouth Rock." General characteristics. Principal breeders in New South Wales. Illustrated. From vol. 4, part 7, of the *Gazette*.
- Tan substances.—"Canaigre." By J. H. Maiden. Description of the first efforts to establish its commercial value. Method of preparing for shipment. Illustrated. From vol. 4, part 7, of the *Gazette*.
- Heredity in Bees. By Albert Gale.—A paper on this subject appeared in the *British Beekeeper's Journal*, of 11th May, 1893, by Mr. Grimshaw, in which it is stated that the "external organs and mental characteristics in worker bees are produced by means of brood food." Mr. Gale in this pamphlet denies this, and states that the theory is wholly untenable. From vol. 4, part 8, of the *Gazette*.
- Poultry, No. 7. By S. Gray.—Describing the "Leghorn fowl." General characteristics and principal breeders in New South Wales. Illustrated. From vol. 4, part 8, of the *Gazette*.
- Lumpy jaw in cattle.—Extracts from a report on this disease prepared by the United States Government from the experiments of Dr. D. E. Salmon, Chief of the Bureau of Animal Industry, and Dr. V. A. Norgaard, Veterinary Inspector. Description of the experiments carried out. Cost of treatment. Successes of the "Iodide treatment." Description of *post mortem* examination of cattle supposed to be cured; and also of cattle suffering from this disease. Illustrated. From vol. 4, part 8, of the *Gazette*.
- Report of the Department of Agriculture for 1892.
- Cross-breeds for freezing and export.—A tabulated return obtained by the Agent-General, London, from the principal breeders in England of the weight and value of the fleeces of the leading breeds of English sheep at the ages of 3, 15, 27, and 39 months, in order to ascertain which is the best description of English ram for our merino ewes, for the production of cross-breeds for freezing and export. From vol. 4, part 9, of the *Gazette*.
- Poultry, No. 8. By S. Gray.—"Capons and caponising." A description of the tools required, and how the operation is performed. Illustrated. From vol. 4, part 9, of the *Gazette*.
- Orange culture. By A. H. Benson.—Portions of the Colony in which the oranges can best be cultivated. Climate and soil most suitable. Best method of drainage. Situation and aspect, their importance. Preparation of the land. Propagation and stocks. Laying out and planting an orchard. Directions as to general cultivation. Diseases of the orange and their treatment. Handling and marketing the fruit. From vol. 4, part 9, of the *Gazette*.
- Pruning. By A. H. Benson.—Gives directions for pruning the apple, pear, apricot, cherry, plum, peach, nectarine, fig, almond, lemon, mandarin, and various other fruit-trees. Illustrated, from vol. 4, part 10, of the *Gazette*.
- Experiments with Pulses. By Geo. Valder.—Results of experiments carried out by Mr. Valder, with a view to testing the comparative value of the pulses cultivated in this Colony. From vol. 4, part 11, of the *Gazette*.
- The Northern Rivers. By A. H. Benson.—A description of a trip taken by Mr. Benson to the Northern Rivers District, giving his opinion of the varieties of fruit most suitable to each locality visited. From vol. 4, part 11, of the *Gazette*.
- Cold Storage of Fruit. By A. H. Benson.—A description of experiments carried out with regard to the cold storage of deciduous fruit, and the results obtained with each of the following varieties:—Apples, pears, plums, peaches, nectarines, grapes, mangoes, pine-apples, tomatoes, and passion fruit. From vol. 4, part 11, of the *Gazette*.
- Corkwood or Duboisia. By J. H. Maiden.—A description of the plant, and the opinion of different authorities as to its medicinal uses. Illustrated. From vol. 4, part 11, of the *Gazette*.
- Poultry, No. 9. By S. Gray.—Description of the Dorking fowl. General characteristics. Principal breeders in New South Wales, &c. Illustrated. From vol. 4, part 11, of the *Gazette*.

The Department, recognising that the future prosperity of this Colony depends largely upon the extent to which our products, such as meat, butter, cheese, wine, fruit, tobacco, &c., &c., can find a profitable export market, is using every effort to encourage the export of these articles, so far as can be done with the means at its disposal, and so far as the producers and exporters are willing to avail themselves of the help of the Department.

I take the opportunity of inviting attention to the exports of agricultural products from the United States, America, for the fiscal year, ending 30th June, 1892, as published in the report of the Secretary of Agriculture for 1893.

It appears that during the period mentioned that these exports "attained the enormous figure of eight hundred million dollars (approximately £160,000,000 sterling), being 78·7 per cent. of our total exports. In the fiscal year following, this aggregate was greatly reduced, but, nevertheless, attained the very respectable figure of six hundred and fifteen millions (approximate £123,000,000 sterling), being 74·1 per cent. of all American commodities exported. The value of the foreign markets to our farmers, and to the entire population can hardly be over estimated. . . . In almost every line the United Kingdom and Ireland absorb by far the largest proportion."

It is clear that the Americans are fully alive to the importance of retaining as much of this trade as possible, and also of increasing it largely. The Secretary states, "It must not be forgotten that in the universal competition for enlarged trade constant efforts are being made, and will continue to be made, by other countries producing a surplus of agricultural products, to wrest from us the supremacy we now hold in supplying Great Britain and a few other countries, that are not self-providing in such products; that many of these are British colonies, and that, except as regards cotton, there are none of which we enjoy the practical monopoly." . . . To overcome impediments to trade the plan of sending agents into Germany, Sweden, and other European countries, to tell foreigners the value of Indian corn as human food, was inaugurated. . . . The missionary labours in the food-consuming fields of Europe of the special agents of this Department, which the law provides for have been extended, so that a thorough inquiry is being prosecuted as to why American meats are partially excluded; why American tobacco is not more demanded; why American wheat-flour cannot be more generally marketed in Europe; why cranberries are not sold there; why American wines are not called for; and why Europeans generally shall not be consumers of American canned goods?"

From

From this it may be seen how necessary it is for us to be on the alert; to keep up to the highest standards with our products; to suit the tastes of our customers, and use every means possible to gain a firm footing in British and Foreign markets.

To take one production alone, that of pork, I think a vast trade might be done. To give an idea of the magnitude of the American pork exports I will again quote from the Secretary's report:—"Of pork products, the total exports for 1892 aggregated in value eighty-five million dollars (£17,600,000), of which Great Britain took forty-seven millions (£9,400,000), and in 1893 eighty-five millions, of which Great Britain took fifty-three millions (£10,600,000)." This seems almost incredible. If we could export from this Colony, or even from Australia, to the extent of a tenth part of this value the benefits would be great. The production of pork in America is due to the immense quantity of maize raised. In this Colony maize can be grown even better than in America, and our average yield per acre is greater.

In connection with the export of meat, the Chief Inspector of Stock (Mr. Alex. Bruce) visited New Zealand, and furnished a valuable report, and he is now engaged in collecting information on the same subject in America, Canada, Great Britain, and the Continent.

In the meantime the following extracts from a review of the frozen meat trade (1893) by a leading firm of colonial commission agents may prove interesting.—

The importation of frozen mutton and lamb from Australia has increased from 400 carcasses in 1890 to 605,692 in 1893. The anticipated increase during 1893 in the output of the various new freezing works not being fully realised, the closing year's import exceeded the previous year's record by only 100,000 carcasses. Stocks were at that time unmanageable, the arrivals having been, on the whole, fairly regular, and thus admitting of more satisfactory handling than was possible in some earlier seasons when imports were much lighter in aggregate but not so well distributed over the year. A larger import could undoubtedly have been dealt with. Arrivals from New South Wales, Victoria, and Queensland came into competition at times with one another, besides being in a state of constant rivalry with River Plate mutton; but, generally speaking, Australian sheep sold relatively more freely and at better prices in and around London than in the northern counties. Argentine mutton arriving at Liverpool is still able to hold its own around that centre, for the threefold reason that its reputation was first established there, that its quality suits purchasers, and that its cost laid down there is necessarily lower than that of mutton landed in London and forwarded by rail to the Liverpool district, at an average cost of about one farthing per lb.

Irregularity was again the outstanding feature of the numerous shipments received from New South Wales, Victoria, and Queensland. Merino sheep under 45 lb. were not likely to command good prices, but the 45-lb. to 55-lb. carcasses helped to fill the gap between ordinary River Plate sheep and secondary New Zealand sheep, while the limited number of 55-lb. to 65-lb. crossbred sheep received intermittently from various districts in Australia, found there was room for them, too, in the same gap, but at an appreciably higher level of value. These resemble in quality and style of carcass the River Plate crossbred mutton more nearly than the crossbred mutton shipped from New Zealand. If received regularly and in large numbers, such sheep would soon establish a distinct position for themselves in the market midway between the prices secured by the two great competing sources of production. Australian and River Plate merinoes are more likely to become keener competitors as imports from the former source increase, and Australian shippers will doubtless so lay their plans as to be able to meet the inevitable struggle with their Argentine rivals for the custom of the masses of Great Britain and continent, to which our lowness of price is as much a necessity as are a reliable standard of quality and unfailing regular supply.

Supplies from Australia were again intermittent and of no great bulk, but their presence on the London market frequently prejudiced the sale of New Zealand consignments, owing to their being worth considerably less money. Shipments coming to hand early in the year were readily sold, and at no time was the market overstocked. That the prices obtained were satisfactory to shippers is doubtful, but it is not improbable that a net result was arrived at in 1893, which will prove a fair average of ordinary seasons. Lambs which are not really prime are not particularly wanted in this market, and many of the parcels received from Australia were very far from being prime, an average weight of as little as 25 lb. per carcass being occasionally reported.

The unreasonable objections raised in some quarters to the general adoption of some intelligent system of grading shipments has now practically disappeared, and almost every freezing establishment in New Zealand has a recognised mode of classifying its output. The advantages of grading are thoroughly well appreciated by everyone who desires to see the retail trade expand without hindrance. The absence of uncertainty as to quality and weights of graded parcels admits of their rapid distribution in the most suitable markets and lessens appreciably the cost of handling at this end. So well-established is now the preference for graded mutton and lamb that many of the largest London and provincial retail buyers decline to buy ungraded shipments, even at a concession in price—in other words, are prepared to pay a premium on graded parcels.

Existing systems are, however, by no means all perfect. In some cases, beyond separating merinoes and old ewes from the crossbred wethers and maiden ewes, little attention appears to be paid to anything except weight. Unless quality is considered first and weight only second, disappointment is certain to result to both shippers and buyers. Roughly speaking, the various districts in New Zealand are represented by more or less distinctive types of carcass, but in some parts, where the variety of carcasses is great, or where different works draw their supplies from the same district, it is not always possible to discover any definite basis upon which grading has been effected, except that of weight. A further element of uncertainty is introduced by shipping from one district sheep or lambs which were bred or even fattened in another district.

The following extract from the report of the Committee of the House of Lords fairly summarises the case for foreign meats as compared with home-grown meats:—

The Committee desire to draw especial attention to the possible effect which any system of marking may have on prices. It is impossible to foretell precisely what may be the result of legislating in this direction, but so far as your Committee are able to judge, any course which would affix to meat an unmistakable mark of its place of origin would, temporarily at least, produce some variation in price, and some dislocation in the trade. At first it is probable that those butchers who have hitherto supplied customers very largely with imported meat would find it necessary to restrict their purchases for a time to home-grown animals, with a corresponding diminution in their own profits. But most of the witnesses agree that as the imported meat became better known, so would it increase in popularity. While the Committee believe that it will be impossible to place before the consumer meat equal in quality to the best that can be grown in these islands, and that consequently such meat will continue to command the top price, they think that there is a large quantity of meat produced in Great Britain of less good quality, which is inferior to the beef imported from America, and even to the mutton imported from New Zealand.

The ultimate result, therefore, might be that meat would come to be divided into four general classes, with considerable variation of price.

First, the best home-grown meat; secondly, the best imported meat; thirdly, the second class home-grown meat; and lastly, the inferior meat, both home grown and imported. Whereas the third class now stands in point of price ahead of the second, the indication of the country of origin might transpose their values in the market.

It was very generally asserted before the Committee that the average excellence of imported meat was higher than that of home-grown meat.

"The Committee think that considerations such as these ought not to be lost sight of by those who are advocating this principle (marking foreign meat) in the interests of the producers of meat in these islands.

It remains for Australasian shippers of frozen beef, mutton, and lamb to follow up this most valuable testimony as to the quality of their exports. Let them take up the proposals of those who hoped to handicap the importation of meat into this country and adopt them forthwith for their own protection. By all means mark Australian meat in some such way as will prevent its being mistaken for meat killed at home. Let each freezing establishment have an official inspector, whose certificate of health, attached to each quarter of beef or carcass of mutton and lamb, will be an absolute guarantee that the meat is wholesome. In due time the public would expect to see these certificates attached, and retailers would find

find it in their interest to retain them. If registered as official trade marks by the various Colonial Governments (each colony using a distinctive colour for its certificates), it is most probable that any tampering with such labels on this side would be punishable under the existing law. These certificates could be made similar to those now used by shippers of American chilled beef (under compulsion by the United States Government), viz., stout parchment labels about 4 inches by 2 inches, firmly affixed by wire, and sealed with an official leaden stamp, so that the label cannot be transferred to any other piece of meat without the change being discoverable. This cannot, of course, prove a complete protection against fraud, but it would go a long way towards reducing it to a minimum, and would tend to increase the popularity of colonial meat. The adoption of some such scheme would not in any way interfere with the existing methods of distinguishing the meat of the various shippers by brands on cloths and on tabs.

Prior to the inquiry above alluded to, the opinion was generally held that it was best not to interfere in any way with the sale of colonial meat; but it has now been demonstrated very clearly that colonial shippers have everything to gain by marking their meat as indelibly as is possible without disfiguring it, and thus giving a practical certificate of health with each animal exported. A further advantage would be gained by the assistance thus given to introducing Australian meat into continental markets, where more strict regulations exist than in this country, and where a certificate of health is invariably required.

The import of all kinds of live and dead meat into this country now represents just one-third of the total consumption, or (say) 700,000 tons out of 2,122,000 tons. The home production of beef and mutton does not increase so rapidly as do the requirements of the growing population, and the quantities of imported dead meats of all kinds have risen from 13.5 lb. per head in 1873, to 19.1 lb. in 1883, and 29.0 lb. in 1891 (the latest official return). Apart from the question of the increasing annual consumption, these figures reveal a steadily growing dependence on foreign supplies, and afford a guarantee of a sustained demand for colonial beef and mutton. The last Census returns show clearly that, out of a population of 37,704,233 persons in the United Kingdom, about 25,000,000 represented working men and their families. Twenty years ago the great bulk of the home production of meat was consumed by the upper and middle classes, the working man using comparatively little meat then. The scale of living amongst the masses of our population is now, however, undoubtedly rising steadily, and low price of frozen meats is fostering a taste which could not be gratified until within recent years. The capabilities of this undeveloped field cannot be gauged even approximately; but at a moderate level of prices, and with the rate of increase reasonably regulated, there can be little doubt that the outlet will prove to be co-extensive with the producing capacities of the colonies.

In regard to butter, &c., the Department, through the Agent-General, obtained a valuable report from Mr. Charles R. Valentine on the grading of butter and the production and marketing of colonial dairy produce. During his visit to this Colony, Mr. Valentine, accompanied by Mr. Dunnichiff, visited the butter factories in the South Coast and Hunter River Districts. He stated that at least one of the factories inspected was equal to anything they had in England. He also complimented the Colony on the possession of such excellent dairy cattle, particularly those in the Illawarra District. During the year the Department was able to render some assistance in sending away a trial shipment of butter to the continent of Europe.

I venture to think we should use every effort to secure uniformity in the make of our butter, as I fear until we do we shall not take that position in the English markets to which we may fairly aspire. The establishment of creameries in the country, and large factories near the port of shipment, will, I think, be one of the means to this end.

The quantity of butter exported has greatly exceeded that of last year. With the shipping season as yet unfinished (on 31st January), the quantity exported has already exceeded 2,880,000 lb., valued at £114,000; against a total shipment of last season of 2,255,551 lb., of a value of £89,929. It is, however, too early in the year to furnish statistics of this industry.

It is also worthy of note that the returns from England up to date show that consignments of butter for sale in the open market have realised satisfactory prices.

The following extracts from the report of the *Herald's* Special Commissioner on the Victorian butter export have an important bearing on the export of butter question:—

"It is no use sending an inferior article to London," remarked Mr. D. Wilson, the Victorian dairy expert, as he explained the whole system to me. "The buyers there are keen judges of the quality of butter. They know the article as well as anyone in the world. Good margarine is better than bad butter, and if we cannot send the finest quality of butter, it is better to send none at all."

These words furnish the key to the whole situation, and explain the phenomenal expansion of the Victorian butter export, an expansion which is probably without parallel in the records of colonial trade with the Mother Country.

"The Corporation refrigerators to which I have already referred are leased and worked by the Government, which conducts all the operations of shipping. Here there is storage-room for some 500 tons of butter, and even this accommodation frequently proves insufficient, and many cases have to wait for days before finding room in the cold chambers. On arrival at the stores, the butter is tested by the Government expert, Mr. Waugh, who has had thirteen years' experience in the Cork butter trade, and, if found sound and pure, and of a sufficiently high grade, is stamped with the mark of State approval. The package is then placed in one of the numerous little cold chambers, and kept for a week or so at a temperature varying from 20 to 35 degrees. It is then ready for shipment, and all that remains is to run it down to the Port Melbourne railway pier, and place it in the cold chamber of the steamer.

"For all this costly work the Government generously charges nothing, so that here we have another bonus, though of an indirect character, granted to the producer. The cost of maintaining this elaborate refrigerating plant, and providing the labour needed for handling the butter three times, must be very large, though I have not, as yet, been able to ascertain the exact sum. As if this were not enough, the State also contracts for the freight to England. By an arrangement with the P. and O. and Orient Companies, the Government takes up all the space available for the cool storage of butter in each steamer. This space is then allotted equitably amongst the various shippers, the freight charged being only 1d. per lb. Small as this may seem for a voyage of 13,000 miles, an agitation is now on foot to obtain a reduction in the rate, as the shippers complain that they find it difficult, even under the present favourable conditions, to make a profit."

Extracts from the report of the *Herald's* Special Commissioner on the New South Wales butter export:—

"The difference between Victoria and New South Wales is just this: In Victoria they manufacture the butter expressly for export and sell the surplus locally, whilst in New South Wales they make for the local market and export the surplus.

"It may be interesting to Sydney consumers to learn that the export trade is only valued by the shippers in so far as it serves as a lever to sustain the local price at an artificial level. It is a discharge-valve which prevents the market from overflowing by sending the surplus away. There is no secret about the matter. Anybody in Sussex-street will explain to you how the thing works. It is all done openly in the interests of the producer, for it is not the business of the dairyman or their agents to look after the consumer. "It is better," said one dealer to me, "to lose a few thousands yearly on the export of butter, so long as we can keep the Sydney market at a satisfactory level." The same thing is printed in the report of the South Coast Company, from which I have just quoted. The directors remark:—"It is estimated that a distinct benefit of not less than £50,000 has been gained by the consignors to this company alone by this exportation movement." For the present season a large trade is anticipated, and the report winds up with the following clear statement of the situation:—"If profitable prices are to be sustained in Sydney during the summer, then the surplus must be sent to London at lower prices, and the profit and loss on London sales on this surplus is a mere nothing when compared to the immense momentary benefit derived by producers with the sustained prices from October to March."

"As far as the export trade goes, this heading is somewhat misleading, for though very excellent butter is made in Sydney, it is not for export purposes. The two chief factories belong to the South Coast and West Camden Company and the Fresh Food and Ice Company. At each of these establishments there is a first-class churning plant, capable of making the finest creamery butter, and creamery butter, it may be regarded, is now recognised as being as far ahead of factory butter

butter as the factory article is ahead of the old hand-made dairy article. It commands about 1d. per lb. better price, and any quantity of it could be made were it only possible to get the cream. This is the great difficulty. The factories, of which there are many within easy reach of Sydney, prefer to send their butter rather than their cream to Sydney, and it is very difficult to persuade them that the latter plan would be more advantageous. "We want all the butter we can make to meet local demand," said the manager of the Fresh Food and Ice Company, and at the South Coast Company's the complaint was the same, consequently the butter which is exported, instead of being specially manufactured for the purpose as at Melbourne, is merely the overplus of the Sydney market. After a long journey by steamer or rail the butter arrives in Sydney in but poor condition. The buyers select what they require of it and the balance is placed into boxes and chilled for export. It is impossible under these circumstances to give the London buyers a sound, pure, and uniformly graded article.

This method may answer for a time, but unless I am much mistaken, the butter-making industry will in a few years have increased to such an extent that the quantity of butter required for the local market as compared with the total production will be so small as to be quite unimportant, and the full importance of the export trade will have to be recognised, and the special requirements of that trade must then be the first consideration. In the meantime it may, though it is to be hoped it will not, be found that this Colony has, for the sake of securing present and temporary gain, sacrificed its chance of building up a reputation, and that it may have great difficulty in recovering lost ground. The only way in which this Colony can hope to secure a commanding position in outside markets is to send produce of first quality and uniformity, so that its brands may have a recognised value.

In view of the growing importance of the dairy industry steps have been taken to provide instruction at the Hawkesbury Agricultural College in butter and cheese making on the best known principles. To this end a number of dairy cattle have been procured, the services of a most experienced butter and cheese maker have been secured, a building which will be fitted with all the most approved appliances is now in course of erection, and as soon as arrangements are completed, non-resident students (male and female) in this special branch, will be instructed by lectures and demonstrations in all the details of dairying, cheese and butter making, &c. A very valuable work on dairying, edited by Mr. J. P. Dowling, has been published by the Department, which it is hoped will prove of great service to dairymen or to persons intending to enter upon the work of butter and cheese making.

In connection with this branch of industry some valuable experiments have been made under the Principal of the Hawkesbury Agricultural College, by the Science-master, Mr. E. C. Wood, assisted by the Chemist of the Department in the condensing and concentrating of milk both whole and separated. Some experiments were also made in the milk-producing properties of certain fodders, but as the results obtained were not quite satisfactory, it is proposed to make others under more satisfactory conditions.

An interesting report was prepared by Mr. E. Clarence Wood, in December last, on the manufacture of condensed milk as a proposed colonial industry. This was fully published in the December number of the *Agricultural Gazette*, so that it will be sufficient to refer briefly to the great possibilities of this trade, both for supplying local wants, and also for export.

The report is based upon the results of his own direct observations and experiments, and conclusively shows that, as an industry, condensed milk would be even more lucrative than butter and cheese-making, while the cost of erecting a complete plant would be no greater.

Mr. Wood gives a brief outline of the process of manufacture, which shows that the management would require neither more labour, nor more skill than butter-making—far less indeed than cheese-making.

The report is well worthy of the attention of dairy farmers, as affording another opening for their produce.

With a view to extend the New South Wales wine trade in England, the Department, acting on the suggestion of Mr. C. W. Lett, of the Imperial Institute, has taken steps, which will, it is thought at a minimum of expenditure, make known to the public in London some of the best brands of the New South Wales wines. The action of the Department in this regard appears to have met with the approval of some of the leading wine-makers of this Colony, and there is reason to believe that ere long a trial shipment to London will be made. Recognising the absolute necessity of exercising a wise discretion in regard to the wines to be shipped, the Department has invited P. F. Adams, Esq., and Dr. Fiaschi to form in conjunction with Mr. Despeissis (Consulting Viticulturist of the Department), a committee to test any wines submitted before shipment to London, and these gentlemen at once kindly consented to place their services at the disposal of the Department. Efforts are now being made to secure cellar accommodation for wines submitted to the committee. It is possible that this movement may lead to consideration of the expediency of establishing a cellar or cellars for the blending and export of our wines. In this connection it is proposed to make a systematic investigation of the wines of this Colony, with a view to assist in judging, treating, blending wines, and in selecting wines that are suitable for brandy making and so forth. It is felt, that under proper conditions and management, there is a great future for the wine industry of this Colony, and the problem which the Department has to face is how it can best help in placing the produce of our vineyards in the European and other markets, whether as wine or brandy in a manner best calculated to secure such a reputation as will ensure a permanent and growing demand without involving the expenditure of public money, and without interfering unnecessarily with the normal operations of private enterprise.

The experiments in connection with wine fermentation carried out last year were, on the whole, fairly satisfactory, and a number of wine-growers have decided to continue the experiment with fresh levures this season.

The Corowa Fruit-growers' Association tested a number of samples of wine treated with levures, together with those untreated, and reported that, taken as a whole, the levured wines were slightly the better, but it was considered premature to express a decided opinion.

From the favourable results which have followed from the use of levures in France, California, and Algeria, it is probable that better results would have been obtained if all the experimenters had the proper appliances, and thoroughly understood the process to be carried out. The Department is, therefore, issuing explicit instruction to experimenters this year, in addition to which Mr. J. D. Lankester, at Albury, and Mr. Despeissis (Consulting Viticulturist), at Tamworth, are arranging to carry out a systematic test during the 1891 vintage, the results of which will be embodied in my next report, and will be of much interest to the wine-growers generally.

In connection with the wine industry, attention is invited to the great importance of encouragement being given to the manufacture of brandy and other spirits.

If the Government in its wisdom could see the advantage of abolishing the excise duty on spirits, it should give a great impetus, especially to the vine-growing industry, and provide an important item for
It

It might also lead to distillation from grain, roots, &c., &c.; and if a system of licensing were introduced, whereby it would be possible to ensure that spirits made from grapes could be distinguished from spirits made from grain, roots, &c., we should be able to guard against adulteration.

The Vine Diseases Act was assented to on the 7th June last, and steps were at once taken to prepare lists of vine-growers, appoint returning officers, and make the necessary arrangements for holding the first election to the several Vine Disease Boards. The Board for the Cumberland District was elected on the 29th November last. The Board of the Murray River District was not elected till the 18th January, 1894, and the election for the Hunter River District failed in consequence of no candidates having been nominated. Steps are being taken to appoint a Board for that district.

As might naturally be expected, some little difficulty has been experienced by the Boards in putting the Act into operation, but this has been mainly due to want of acquaintance with the provisions of the Act, and inexperience in working the same, and will no doubt be readily overcome.

The fact that the Act makes no provisions for paying members of Boards for loss of time and money out of pocket in attending meetings is regarded by many of the vine-growers as fatal to the efficient working of the Boards.

Pending the establishment of the Cumberland Vine Diseases Board, and the appointment by it of an Inspector, the Department has completed the rooting up of the two small vineyards condemned by the Board appointed under the repealed Act.

In regard to the fruit-growing industry, the Department has, by its Expert, given instruction and advice in spraying and propagating of trees and eradication of insect and fungus pests, grading and packing of fruit.

A series of experiments in the cold storage of fruit, extending from 28th January to 26th August, 1893, were conducted by the fruit expert (Mr. A. H. Benson), for the Department of Agriculture, at the cold storage rooms attached to the Government meat market, at Darling Harbour; Messrs. Hudson Bros., lessees, having kindly placed a chamber of 50 tons capacity ships measurement at the disposal of the Department, free of all charge.

The system of cold storage employed was one in which an even temperature combined with a constant influx of cold fresh air was maintained, and this system, or rather principle, is the only satisfactory one for use in the case of fruit, as a merely cold air without the necessary ventilation and influx of fresh air has been proved to be insufficient to keep fruit in good condition for any length of time.

The fruits experimented with consisted of the following varieties, viz.:—Apples, pears, plums, peaches, nectarines, grapes, mangoes, pine-apples, tomatoes, and passion fruit; and were obtained from fruit-growers in various parts of the Colony.

Different materials were tried for packing, and the fruit was tested under various conditions, wrapped and unwrapped, in light cases and open well ventilated cases, and in various states or degrees of ripeness.

The average temperature maintained was 41.74 degrees, and was very evenly maintained. The extreme limit of variation ranged from 37 degrees to 51 degrees, and those extremes were only reached on two or three occasions. The ventilation was at all times satisfactory.

The general results of the experiments may be summarised as follows:—

1. Apples, midseason and late variety of pears, solid-fleshed plums, and tough-skinned, fleshy grapes may be kept in perfect condition without any appreciable loss for a period of two months, when stored in a cold dry fresh air, maintained at an even average temperature of 41 degrees to 43 degrees; provided that the fruit is carefully gathered, handled, and packed, and that all blemished fruit is discarded. Apples will keep equally as well if the temperature is raised 10 degrees, but the other fruits require the lower temperature. Two months allows for the extreme outside time required to place the fruit on the English market.
2. After being removed from the cold storage, the fruit keeps in good condition for a sufficient time to enable it to be disposed of and consumed, with only a small percentage of loss, provided that previous to its removal from cold storage, the temperature of the store is gradually raised to that of the outside air, as any condensation of moisture on the fruit, which would tend to create decay, is thereby prevented.
3. Soft fruit, such as peaches and nectarines, may be safely stored without deterioration from one to two weeks, according to variety, thereby preventing to a certain extent the glutting of the markets with these fruits during the height of the season.
4. The cost of cold storage by the method employed is much less than that at present used for the conveyance of fruit to England and the results are much better. At present the three great drawbacks Australian fruit-growers have to compete with in the export of fruit to the English market are, first, the excessive freight; second, the large percentage of loss arising through the fruit being carried without a proper system of ventilation; and thirdly, through the bad keeping qualities of the fruit when landed, which necessitates the fruit being disposed of and consumed as rapidly as possible. All these drawbacks would be, to a great extent, prevented if the fruit were carried under similar conditions to those maintained during the experiments, and a cheaper and better carriage would tend to greatly increase our export of fruit to England, which, unless such steps are shortly taken, threatens to become a thing of the past, as the prices received for our fruit in London are entirely prohibitive in the majority of cases. No doubt this is not always the fault of the high freight and bad system of carriage employed, but is often largely due to the carelessness of the growers or shippers themselves in sending worthless and inferior fruits; and this was shown many times in last year's shipments of Tasmanian apples. The English market wants one class of fruit only—the best—and that fruit put on the market in the best condition and most attractive manner; and if growers or shippers try to palm off any inferior grades they will get left every time, as the English buyers will not have them, except at very low rates.

The value of these experiments to the New South Wales fruit-grower, is that by this means the Government have practically shown the conditions that it is necessary to maintain in order to successfully keep fruit in cold storage, and also what fruits are most suitable, and what care is necessary to be taken with the grading-wrapping and packing of the fruits so as to render them suitable for cold storage, especially

as

as adapted to an export trade. It is to an export trade that the fruit-growers must eventually look if the industry is to take a prominent place in colonial industries; and by showing how the export of fruit may be most economically and successfully carried out these experiments are likely to be of great value to the fruit-growers and to the Colony in general.

Experiments have been made in lemon-curing for export, and experiments with various fungicides and insecticides have also been made.

The Department has long since recognised that as a first step towards securing a satisfactory market for citrus and other green fruits in England, it is absolutely necessary that the quality of the fruit grown be improved, and that such fruit shall be properly graded, packed, and attractively got up. Efforts have been made to impress this fact upon the fruit-growers, but, of course, it is a work of time to effect an important change of this kind. In the meantime, as demonstrating the correctness of this view the Department has recently received details of the cost attending the placing on the London market of a shipment of 350 cases of oranges shipped as ordinary cargo, and the price realised there. The average cost per case was 4s. 8½d., and though the fruit arrived in good condition, the price realised was 3s. 6½d. per case. The charges are doubtless too high, and steps are being taken by the Department to secure, if possible, a reduction, but the loss on the shipment above referred to is mainly due to the quality of the fruit. It has been suggested, that before we can hope to build up a trade for our fruit in London, it will be necessary to have an agent there to see that our produce is properly marketed, and it is also urged that until we have packing companies centrally located, as they have in California and Florida, we shall not have our fruit sent to market in the most attractive form. It is quite certain that we can grow fruit equal to any in the world, and it is equally certain that if we send none but the best quality of fruit properly graded, packed and got up, we shall soon be able to establish a reputation both in England and in Canada that will command a very extensive and profitable trade.

Preparations are being made in the experimental farm at Wagga Wagga for establishing an orchard and vineyard, at which a complete course of instruction in fruit-growing nursery-work, planting out, pruning and cultivation, and after the fruit is grown, drying, canning, jam, and jelly making, raisin-making, prune manufacture, as well as grading and packing for market will be imparted.

Towards the accomplishment of this project a large number of scions of different varieties of fruit trees received from Victoria have been taken to Gosford Nursery, and worked and set out there ready for removal to the Wagga farm in June next. A large collection of American varieties of fruit-trees have been obtained from the Californian Nursery Company, and have been planted temporarily, until in due course they also can be planted out at the Wagga farm. The above-mentioned trees are all true to name.

Good work has been done by the Pomological Committee in connection with the classification and naming of Australian-grown fruit.

The objects of the Pomological Committee are as follows:—

- 1st. To endeavour to correct by degrees our very mixed fruit nomenclature.
- 2nd. To take note of, and publish descriptions of any new fruits—especially locally raised seedlings.
- 3rd. To determine the value of, and suitability of different fruits, for the various parts of the Colony.
- 4th. To take note of any other matters of interest connected with the fruit industry. The Committee held several meetings during the autumn of 1893, but it was not until the fruit season of 1893–1894 commenced that the work of the Committee got fairly into shape.

Since the first meeting, held on 16th November, 1893, meetings have been held on the second and fourth Thursdays of each month, and will be continued as long as there is any quantity of fruit to come forward. Numerous samples of fruit have been submitted, something like 400, since the Committee began work, and of these descriptions and drawings for future reference have been taken, where typical specimens have been available. Arrangements have been made with the Railway Commissioners whereby fruit submitted to the Committee is now carried free, and forms and labels have been distributed to a number of fruit-growers. A complete record of the proceedings of the Committee is kept, which will be of great value for reference purposes. It is the intention of the Committee to publish eventually a work on Australian Pomology, on lines similar to the works of Dr. Hogg and Chas. Downing.

As regards tobacco the work done by the experts is as follows:—

During the past six months Mr. S. Lamb has been busily engaged in visiting some seventy places in New South Wales, for the purpose of meeting the farmers, and giving instruction in the cultivation, curing, classing, and packing of tobacco, both on their homesteads and by means of lectures. He has visited, among other districts, the Richmond River, New England, Gwydir, Hunter, Hawkesbury, Narrabri, and Tamworth.

The lectures, which were very well attended (at Gunnedah more than fifty people being present), were followed by animated and interesting discussions upon the future development of the tobacco industry.

The result of this instruction may be gathered from the fact that no fewer than 351 farmers are carrying out experiments with a number of new varieties of tobacco seed imported from abroad by the Department, many applications having to be refused in consequence of the supply of seed becoming exhausted.

Mr. Lamb's attention will be fully occupied for some time to come supervising, as far as possible, the gathering and curing of the leaf obtained from these plots.

One of the most serious obstacles Mr. Lamb has had to combat is the prevalent opinion that the Excise duty is the cause of the present low price of tobacco, whereas the real cause has been over-production, and a consequent glut of the limited Colonial market. The true remedy for the depression therefore, lies in the improvement of the tobacco grown, so that it may be readily saleable in the many foreign markets which are open to our trade.

Mr. Lamb has also afforded information to many country newspapers, which has enabled them to publish interesting articles on the tobacco industry. These are tending to awaken an interest in the matter, and many farmers are making arrangements to plant for export next year.

At Inverell and Bendemeer Mr. Lamb found tobacco leaf which, though produced under disadvantageous conditions, was of a very excellent quality for cigarette purposes.

Mr. Lamb visited the Department's tobacco plots at Moonbi, Gosford, Richmond, and Campbelltown, at each of which a large quantity of acclimatised seed of Havana, Virginia, and other varieties will be available for distribution next season.

At

At Moonbi the experiments were carried out on a more extensive scale, and a curing-shed is being erected, in accordance with Mr. Lamb's instructions.

Mr. Sutherland has been engaged giving advice to farmers as to the best methods of growing, curing, and preparing their tobacco for home and foreign markets, and also in carrying out a demonstration at Tumut in air-curing, and the subsequent process, after the American fashion. The latter work was much impeded owing to the want of proper accommodation, and to the fact that only Chinese labour was supplied during the early part of the experiments, and the Chinese were found to be very hostile to the introduction of the new and improved methods of curing, as practised in America.

Mr. Sutherland was unable to personally supervise the harvesting operations, and as a consequence a large percentage of immature leaf was housed against his orders; besides which, much damage was done to the crop from the careless way in which it was handled.

In the stripping and sorting of the leaves Mr. Sutherland obtained the assistance of Europeans, who took a keen interest in learning the improved methods adopted.

The tobacco-shed was merely an open-sided iron-roofed building, the walls being temporarily enclosed with loose-hanging strips of flimsy hessian, which was penetrated by the rain.

The perfect command of the internal atmosphere, so requisite to good curing, and subsequent handling of the tobacco, was, therefore, quite unobtainable, but it was considered desirable to test the efficiency of existing appliances.

The results, though, not altogether unsatisfactory, conclusively show that such structures as described are perfectly worthless for the purpose of tobacco curing, and the improvements which the Government so earnestly desire to see effected in the tobacco industry can only be brought about by the use of improved buildings, such as are employed in the most advanced tobacco-growing countries.

Some 400 or 500 lb. of this crop were prepared, but a deal of it was destroyed by the rain, owing to the need of proper accommodation.

Still, the advantages of the system adopted were fully shown by the fact that the first consignment of leaf sent to Sydney (53 lb.), sold for 7½d. per lb., chiefly on the merits of its "put up." A glut occurred on the market, however, shortly afterwards, and it is doubtful if the latter consignment forwarded will realise more than 4d. or 4½d. per lb. This again points to the urgent necessity for opening up a foreign market, and it will be interesting to see what price will be obtained for a case of the same tobacco which was forwarded to England from Tumut.

Much of Mr. Sutherland's time was occupied in visiting the surrounding farmers, and giving them instruction in connection with the experimental plots of the new varieties of seed introduced by the Department, which they are cultivating.

It is gratifying to note that Dr. Mason, of Tumut, raised plants of seven of these varieties sufficient for 20 acres, and if the season is favourable Mr. Sutherland anticipates having sufficient leaf to thoroughly carry out the proposed curing experiments in the new shed, which is now erected.

Owing to the low price of tobacco in the local market, and the complicated labour necessary for its cultivation, together with the better prices obtainable for wheat and maize, the Europeans are almost universally adopting the latter crops, to the exclusion of tobacco.

The industry is, therefore, at present practically in the hands of the Chinese, who grow the plant fairly well, but absolutely refuse to adopt the improved methods of curing, which are necessary to ensure increased prices.

Mr. Sutherland visited the Albury district during October, where the industry is also chiefly in the hands of the Chinese, and here again the leaf had been cut in an unripe stage—some very green. The so-called curing had been carried out in the usual unprotected shed, and the mass of leaf was uniformly bad. This is the more remarkable as the local circumstances of soil and climate are favourable to the industry.

Mr. Sutherland subsequently visited Richmond College, Gosford, and Rooty Hill. At the former place plants of the sixteen varieties of imported seed had been successfully grown, and were being cultivated for the production of seed.

During October and November "blue mould" appeared in the Tumut district, and repeated spraying with eau celeste and Bordeaux mixture were made by Mr. Sutherland. The results clearly showed that if systematic spraying had been made with these fungicides upon the first appearance of the plant above ground, as advised, the "blue mould" would have been effectively kept in check.

While in Sydney Mr. Sutherland took the opportunity of interviewing a number of the leading merchants regarding the possibilities of the tobacco industry. The opinion was freely expressed that with the favourable conditions existing in New South Wales if proper attention were given to the details of curing, sorting, and packing, it would lead to an immediate improvement of local prices, besides enabling the merchants to open up an export trade, which they are unable at present to do with any prospect of success.

Mr. Sutherland suggests the bestowal of a small bonus per lb. of leaf for consignments selling in foreign markets for (say) over 6d. per lb., which inducement, coupled with the opportunities now afforded to the growers for instruction in improved methods, would, he believes, give a great impetus to the trade.

In accordance with permission granted by the Minister, experiments have been made to test the values of our citrus orchards for the production of essential oils, &c., suitable to the manufacture of perfumes and flavouring essences, &c. The matter was placed in the care of Mr. Dunncliff, and I was fortunately enabled to secure the co-operation of W. H. McKeown, Esq., of Pymble, in the work, who generously placed his orchards at the disposal of the Department. Having made arrangements for the necessary apparatus, these were fitted up, and, with the assistance of Mr. B. G. Hardy, a practical distiller and perfume-maker, and two children to pick leaves, operations were commenced on 10th September. These operations were continued for over four months, during which Mr. Dunncliff attended at the orchards on over fifty separate days, and at both early and late hours.

The experiments have clearly shown that plenty of profitable employment and much wealth may be obtained from sources which have been hitherto neglected or unrecognised. Some fine specimens of essential oils have been produced, and much valuable information has been obtained, which may serve as encouragement or warning to those disposed to take up the work as a permanent industry, and which will be fully set forth in the report on the same now in course of preparation.

These

These experiments were visited, almost daily, by many persons interested in the prospect of new sources of industry, the opening of fresh avenues for trade or safe investments for capital, and received many complimentary expressions of opinion on the value and usefulness of their character. The local and immediate results of these tests, Mr. Dunnicliff anticipates, will be some extensive plantings of the Seville orange next season, together with increased care in the cultivation of orchards generally.

In order to arrive at an estimate of the value, from a commercial point of view, of the oils and perfumes prepared in this series of tests, Mr. C. S. Taylor, of the firm of W. J. Bush & Co., distillers of essential oils, &c., &c., London, Grasse (Alpes Maritimes), Messina (Sicily), and Melbourne, was invited to inspect samples, and the following is a copy of a very interesting and encouraging letter received by the Department from that gentleman respecting the oils and perfumes brought under his notice:—

Dear Sir,

"Hotel Australia," Sydney, 17 February, 1894.

Referring to my visit to your office this morning, made, I understand, at the request of your Department, I cannot too deeply commend the spirit and enterprise displayed by your Department in their endeavour to promote new industries, having for its object the promotion of the interests of the people of this Colony. I have pleasure in testifying, as one having had a long and special knowledge of essential oils, both to the skill and merit displayed by you in relation to the experimental drawing of certain essential oils from raw materials grown, I understand, under the auspices of your Agricultural Department. These comprise oil of petit grain, oil of mandarin, oil of bitter orange, oil of sweet orange, oil of lemon, and oils obtained from the leaves of the lemon and orange trees.

Considering the very crude appliances at your disposal, and other difficulties with which you have made me acquainted, and with which you had to contend, the samples submitted as "first attempts" are "very creditable productions," and, while not equalling the Sicilian, nevertheless point in the right direction for further development in the near future.

The two leaf-oils* shown me are unknown to commerce, hence they would have to force their way into permanent existence.

It should not be lost sight of that every country possesses in itself certain climatic advantages over that of others (simply from its geographical position) for the culture of raw material, from which manufactured goods are produced. New South Wales, being particularly well favoured in this respect, should, in my opinion, have much to give the outer world generally, and the English-speaking people in particular, in the way of new essential oils and perfumery, drawn from some of its strongly-odoriferous plants and flowers.

Your Department and those embarking in the industry should not be daunted by a few apparent failures in the "first attempts"; but, as all experience should tend towards ultimate success, so in this industry experience alone can bring great results.

My firm, Messrs. W. J. Bush & Co., of Distillery-lane, London, and 170, William-street, Melbourne, will always be glad to do what they can in furthering the commercial aspect of this most important question.

I am, &c.,

C. SANSOM TAYLOR.

* These were the oils of mandarin leaf and sweet orange leaf.

In respect to special plantings of flowers for perfume purposes, the Department has made a beginning by setting out at the Hawkesbury Agricultural College several hundred strong clumps of the tuberose, kindly presented by Messrs. Pearce Bros., florists, of this city. Beyond this we have not yet gone, but there is a continuous demand for reliable information, based upon local experience, which can only be obtained as the Department is enabled to proceed with experiments in this section of the industry. Awaiting this knowledge we have from the country many indications of an intention to immediately prepare land for this particular work, which it is thought may be safely entered into by careful men, with a certainty of success.

Further, in connection with this work, it may be interesting to mention that Mr. Dunnicliff prepared for, and took charge of an attractive exhibit at the recent United Horticultural Societies' Show at Prince Alfred Park, where each day and night he attended and explained the various processes to some scores of visitors. The exhibit attracted a good deal of attention, and curiously enough appeared to possess greater interest for the foreigners present than for our own people, judging by the questions asked. Mr. Dunnicliff also prepared the samples and explanatory circular regarding essential oils and extracts, which the Hon. Mr. Mackenzie Bowell was kind enough to take charge of on his return to Canada, as well as duplicate samples and notes which were sent to Messrs. Oppenheimer Bros., of Vancouver, and it is thought that in that country there is ample scope for products of this kind to create a very considerable and profitable branch of trade.

With a view to demonstrate that sericulture may be made a suitable and profitable industry in this Colony, the Government has secured the services for a term of years of Mr. Charles Brady, who is regarded as the most experienced sericulturist in New South Wales, to give instruction in all the branches of sericulture, including the selection of mulberry-trees according to the soil and climate in various parts of the Colony, and the treatment of such trees, in order to produce the requisite kind of leaf for feeding worms in their several stages, the means to be adopted to procure healthy and suitable graine, and the best methods of preparing graine and cocoons for market. Preparations are being made for the establishment of mulberry plantations in suitable localities, but in the meantime the Department has secured for a term of years the plantation at Booral, belonging to the Australian Agricultural Company, so that instruction may be given without delay, and also that the valuable parcel of graine brought by Signor Martelli from Italy, and presented by him to this Department, may be at once provided for.

It seems somewhat surprising that no general efforts have been made by settlers in this Colony to vary their crops to any considerable extent, or to give attention to the production of small auxiliaries to the main crops on which dependence is placed for a livelihood. This is probably due to a want of knowledge, for many of the persons who settle on the land are entirely ignorant of farming or the production of crops. Even amongst many of those who have had experience, there seems to be an entire absence of economy in not raising a sufficiency of (or, perhaps, not any) wholesome and useful products for their family's consumption. Take, for example, coffee. In some of the warmest districts it would be quite possible for every family to grow sufficient for its own requirements, and some to spare, and the time occupied in this work would not be missed. Again, the growing of fruits and vegetables is strangely neglected, and so on with many other things which might add considerably to the comfort of the family, and considerably lessen the cost of living. Occasionally, hard-working thrifty families are to be met with, generally foreigners, who produce on very small areas, nearly sufficient, or quite sufficient, for their needs, with the exception of clothing and groceries. Grain and roots are grown for the feeding of pigs, cows, and poultry, and bacon and pork are cured for use. A few bees produce ample supplies of honey. A fruit garden of no very great extent provides sufficient fruit for drying and making into

preserves to last through the year, and milk, butter, and cheese are always available. Such economy, however, is unfortunately only too rare, and unaccountable indifference and carelessness seem to pervade a considerable section of the farming population.

It is probable that many small industries might add considerably to the farmers' income, if taken in hand by them intelligently, and, it is reasonable to think, a great deal of fairly light employment might be given to poor women and also to many men who are physically or mentally incapable of hard hand or arduous head work, and who are either the recipients of charity or next door to it. Amongst these industries may be mentioned silk culture, scent farming, and bee culture, all of which are likely to prove sufficiently profitable to give employment to many persons. The success of silk culture will depend entirely upon the extensive planting of the proper varieties of mulberry. It is simply a matter of providing food. When this is forthcoming in abundance the industry will prosper and may extend to considerable proportions, as it has been proved that the climate is admirably suited to the mulberry silkworm, and silk of the best quality can be produced here. The scent farming, too, is likely to succeed well and become profitable, judging from experiments made by the Department. Bee culture is gaining ground rapidly in the Colony, and many persons who have mastered the art of managing bees have found this small industry to be profitable. There are many other things which might be successfully combined with the above, such as the growing and making arrowroot, olive growing, osier willows, the caper, broom corn, chicory, flax and hemp, the growing of nuts, including the ground nut, oil plants, fruits for drying, &c., according to locality.

There are other crops, too, well worthy the attention of farmers to produce on a large scale, such as the growing of barley, hops, and fibre plants, such as flax and hemp, for if these can be produced of the very best quality, the demand is likely to be considerable. With our varied climate and soil, together with proper management and good seed, that excellence should be obtained.

Pig raising, for bacon, should be a profitable industry for export purposes, as the best of food can be cheaply raised. Such an industry has attained enormous proportions in the United States of America. Every small farmer should be able to raise a few pigs.

Hawkesbury College and Farm.

The progress made at the Hawkesbury Agricultural College during the past year has been eminently satisfactory, fully realising in its results the anticipations entertained concerning it at the commencement of the year.

The fifth session of the institution opened with 48 students, 15 of whom formed the diploma class, 11 the second session, and 22 the first session students.

Early in the year, on Saturday, the 11th March, the first diplomas were presented, and the two initial years of the work of the College, which was necessarily accomplished under very difficult circumstances, was found to be productive of very gratifying results. Eight students had won their diplomas, and were presented with them by the Minister. Through the generosity of Sydney Burdekin, Esq., M.P., each student receiving his diploma was presented with a silver medal, suitably inscribed. This generous act of Mr. Burdekin's is, upon that gentleman's unsolicited promise, to be repeated annually.

Among these diploma men the dux of the College, Student Henry Shute, received the Ministers' gold medal, which is awarded to the best student for practical work upon the farm, and the gold medal presented by the Principal to the dux of the College. This student subsequently accepted the position of experimentalist on the College farm.

Another diploma student, Elliot John Rien, who took special prizes, has been engaged to take care of the bees and poultry. It is gratifying to find that erstwhile students have so amply realised the benefits of the institution as to qualify themselves to be enrolled among its trusted officers.

The presentation of the first diplomas was honoured with the presence of, in addition to the Hon. T. M. Slattery, the Hon. John Kidd (Postmaster-General), Messrs. Burdekin, T. Waddell, R. Barbour, C. J. Jeanneret, and J. Stevenson, M's.P., P. H. Ridge, Esq., the Mayor of Richmond, Professor Shelton (Queensland), and Professor Lowrie (South Australia), Mr. A. Pearson, of Victoria, Mr. Farrer, of Queanbeyan, and the Rev. Thompson, of Tasmania (the five last-named gentlemen being members of the Sub-committee of the Rust in Wheat Conference), A. Bruce (Chief Inspector of Stock), T. Collier, (Mayor of Waterloo), A. Rogers, J.P., A. Redwood, J. L. Purves, J. T. Wiltshire, G. L. Matheson, J. Ross, W. Bloxham, and the Rev. Principal J. Kinross from Sydney, the Revs. Dr. Cameron, Jas. Kinghorn, B. Keenan, and other distinguished residents of the district. I also had the pleasure of being present. The company completely filled the hall of the School of Arts.

The improvement in practical work during this session by contrast with the previous one was very marked, and the progress of the students, taken as a whole, was a matter for congratulation.

The sixth session commenced on the 15th August, when there assembled a full complement of students, numbering 53, 1 of whom was non-resident. The diploma class numbered 12, the third session 8, the second session 16, and the first session 16. Of the 10 students who sat for their diploma examination, 8 passed. In addition, 2 ex-students were allowed to sit for this examination, 1 of whom passed.

The results of this, the second diploma examination, were highly satisfactory. The examiners of the candidates for the diploma for both the class and the practical work on the farm were gentlemen of distinction and ability, outside altogether of the College, and even the Department. They set the several papers, and subsequently examined them, allotting the marks, and, as each paper was only recognisable by a number, the name of the candidate was unknown, and a decision on pure merit was secured.

The gentleman who set and examined the paper on "Agriculture," Professor W. Brown, the Principal of the Dookie Agricultural College, Victoria, reported of the papers submitted to him, "Several are exceptionally good, and most of them carefully got up. The thorough teaching of details is marked." The reports of the other gentlemen who set and examined their several papers were of a correspondingly satisfactory nature, and one of them states he noticed a marked improvement upon the previous year.

In their farm, orchard, and dairy work, the gentlemen who examined them reported in brief as follows:—F. B. Kyngdon, Esq., M.R.A.C., writes: "I spent many hours on the farm with the students, and inquired into every branch, more especially from a strictly practical and economical point of view." Mr. Edw. Whitaker, who examined these students in orchard work, says: "Having examined these students in practical orchard work, such as grafting, budding, pruning, and the general working of an orchard with a view to profit, I find that they possess a satisfactory knowledge of the subject."

The report of D. L. Dymock, Esq., J.P., of South Coast (the gentleman who examined these students in dairying), is eminently satisfactory, and shows that (to quote his words) he was pleased to report "a general interest in their studies for a definite purpose."

The temporary expedients inseparable from the use of two buildings, the distance of the students from the scene of their practical operations, the absence of the necessary farm buildings and appurtenances, are still the difficulties this institution has to contend with, and yet the Principal, supported by his staff, is enabled to make advances of a most encouraging nature. With the termination of the next year of college work, it is anticipated the buildings and furnishings of the College and farm may be completed, and the fifth year of the existence of this excellent institution be inaugurated with a completeness in its appointments worthy of the institution, its objects, its Principal, staff, and students.

An experiment made during last session of receiving a young lady non-resident student for special branches of study thoroughly practical, in apiculture and poultry-farming, has encouraged the Department to yield to the desires of several, and anticipate the desires of others, in forming classes and sessions for non-resident students, male and female. The lady referred to (Miss Manning), after two months' tuition and practical experience, passed a very creditable examination in the management and practical working of an apiary, and received a certificate of her qualifications and abilities to manage one from the Rev. J. Ayling, the Vice-President of the Bee-keepers' Union of New South Wales, who conducted a *viva-voce* examination, in addition to a very exhaustive written one.

Arrangements are being made, and in part approaching completion, in the erection of suitable buildings, &c., to afford the necessary facilities for special instruction in dairying work, bee and poultry farming, which, it is believed, will meet a widespread and recognised want.

A desire, too, for short sessions has been expressed by many who are anxious to gain the advantages of a practical instruction in special branches, farm work, &c., and who cannot afford either the time or cost of the two years' complete College course.

It is intended to make provision to meet this requirement in the organisation of this institution in the near future, so that those desiring it can receive as non-resident students a short session in dairying work in all its branches, orchard work, apiculture, and poultry-farming.

During the year the operations on the farms have been carried on with a fair proportion of success. Greater results might have been accomplished but for numerous drawbacks.

Farm.

A most promising crop of melons and pumpkins, together with one of sorghum and maize, was practically destroyed by a terrible hailstorm which occurred on the 18th January of last year, involving the district in the loss of thousands of pounds worth of produce, in which the College Farm unfortunately participated to a great extent. Following this, later on during the year, the baneful effects of a prolonged drought, broken by sudden heavy tropical rains, told terribly on a fine promising heavy crop of oats and wheat, which became so luxuriant that the rust set in to such an extent, and with such rapidity, that it had to be cut for hay immediately.

This hay was harvested and stored in a first-class hay-shed erected for the purpose of conserving the hay produced upon the farm.

One hundred and thirteen tons of first-class swedes and mangolds were placed upon the market during the year, and realised full market prices. Two acres of cabbages yielded the fair return of 10 tons to the acre. Four acres of potatoes have given a return of 16 tons.

There are 25 acres prepared and sown with sorghum, which is now standing, and 55 acres planted with maize, which promises a good yield.

Orchard.

The orchardist has during the year replaced 1,000 vines, planted 300 pear-trees, 425 orange and lemon trees, 1,000 apple-stocks in the nursery for budding and grafting, besides peach, pear, and quince stocks; also a bed of tuber roses; all of which are looking well. The usual work of pruning and budding has been carried on. Five acres have been subsoiled for vineyard, levelled, pegged, and planted out. Another 5 acres have been planted out with pumpkins, melons, and vegetable-marrows, the yields from which are excellent.

The vines planted only two years ago are now bearing, and the fruit is pronounced to be of a first-class quality.

Experimentalist.

The experimentalist has been occupied during the year in testing the relative values of seeds, manures, and the various methods of cultivation.

Among his numerous experiments with grain may be cited an experiment made with sixty-five varieties of wheat reputed to be rust-resisting. Every care and attention was given this experiment, and the result was that no sample of milling-wheat was obtained from amongst the lot, each one being more or less destroyed by rust.

Another interesting experiment was made in the direction of sowing wheat at depths varying from 1 to 8 inches. Only 100 grains in all were sown. It was found that of the seed sown at the depth of 8 inches, only 8 per cent. germinated; while of that sown at the depth of 2 inches, 74 per cent. germinated. The seed planted at a depth of 1 inch was destroyed by birds. The weight of the crop harvested was shown to average from 1½ ounces from the seed planted at 8 inches to 149 ounces from that planted at 2 inches.

The value of manures was tested by numerous experiments, which have proved of the highest educational value, and of which one may be mentioned. Peas were tried with and without manure. The result showed those without manure yielded 7 bushels to the acre; those with manure, 12 bushels to the acre.

The value of all these experiments educationally considered is great, and they are conducted with the greatest fidelity and care.

The following are being grown on the experimental plots:—Cow-pea, chick-pea, prickly comfrey, tobacco, buck-wheat, salt-bush from seed, and many other plants of a kindred nature.

Dairy.

Dairy.

Extensive experiments have been carried out with regard to the effect of different feeds upon the milk production of the cow, but the results, although of a highly educational value, can hardly yet be considered conclusive. The importance of this work is acknowledged to be sufficiently great to warrant a continuation of the experiments during the present year.

The dairy herd consists of 124 cows and heifers, among which are 100 of the famed Illawarra dairy cattle. At present there are 60 cows being milked daily. There are four bulls, including the Ayrshire "Warrior," and five small bulls together with thirty-three calves.

The dairying industry will be most sedulously advanced on the College Farm.

Bees and Poultry.

The apiarist has thirty-seven full colonies of bees, seven nuclei, and two swarms of native bees. All the bees are being Italianised, but owing to their close proximity to other swarms of black bees in the town a larger percentage of the queens are mis-mated. The removal of the bees to the farm will, however, greatly relieve this difficulty.

The poultry consist of various breeds:—Houdan, Langshan, White Leghorn, Brown Leghorn, Spanish, Plymouth Rock, Golden Wyandotte, Silver Wyandotte, Light Brahas, Colonial Game, Black Hamburgh, and a number of ordinary barn-doors.

Among the ducks are Black Muscovy, White Muscovy, Peking, Aylesbury, and a number mostly Rouen and crosses.

There are two incubators, "Hearson," one a 50- and the other a 200-egg; but owing to the limited space of the temporary premises the work of breeding has been greatly checked.

Improvements.

These are as follow:—About 15 acres have been thoroughly pipe-drained, and progress is still being made with the main drain for the purpose of more effectually draining the farm-lands.

Stock-yards, cow-sheds, and subdivision fencing have been constructed. The saw-mill has been kept busy preparing the hardwood required for capping stock-yards, erecting milking-sheds and other buildings now in progress on the farm. A large and substantial hay-shed covering a space of 90 feet by 53 feet has been erected and filled with hay, as before mentioned. A cottage for the orchardist, weather-board roofed with iron, plastered inside, and containing seven rooms, has been completed, and is now occupied by that officer. A milking-shed, orchardist's tool-house, and storage have been built. A cottage for the dairy expert, three cottages for workmen, a portion of the square of farm buildings, and a residence for the Principal are in progress, and it is anticipated will be completed by the end of May.

Murrumbidgee Experimental Farm.

On the Murrumbidgee Experimental Farm during the year, under the management of Mr. John Coleman, there has been erected about $9\frac{1}{2}$ miles of boundary seven-wire fence, six plain No. 8 best steel and one barbed wire along the tops of centre of posts.

Posts are placed 7 feet apart, 2 feet in the ground, and $4\frac{1}{2}$ feet out, squared up 7 inches wide by 4 inches thick. Straining-post every fifty-sixth post, 3 feet in the ground, with a stay on each side for extra strength, thus making a thoroughly neat and substantial fence. In addition, the experimental paddock of about 50 acres has been enclosed with rabbit-proof wire netting.

Fourteen pairs of double gates have been erected the same pattern and style as those at the Hawkesbury College, painted with three coats of paint, and completed in a workmanlike manner. Three pairs of temporary scantling gates are erected to enclose the farm from the Common until such time as the boundary-fences are completed.

All that portion proposed for orchard and vineyard site, about 80 acres more or less, has been cleared. Also experimental paddock on the western side of Sister Hills, about 50 acres more or less, 30 acres of which are cleared and ploughed; the remainder is grubbed, and is now being cleared and ploughed as quickly as our strength will allow.

All the boundary-fence lines, also roads, are cleared in readiness for erection of fences in the future.

I may add that all the timber grubbed has been utilised for fencing, and the firewood carefully saved, either for market or for future use if required on the farm.

All the vineyard and orchard site has been ploughed 12 inches deep, and about 50 acres have been cross-ploughed 9 inches deep. All has been harrowed and cross-harrowed, to give it the benefit of the sun to air and sweeten the soil.

The 30 acres previously mentioned in the experimental paddock have been kept thoroughly harrowed down after the plough, so as to have the full benefit of the sun for next season's wheat crop.

A trial shaft has been sunk 16 feet in depth, and the recent showers we have had filled it with water, which stands well, showing it is good soil to hold water.

The tender for the tank is now under consideration.

A trial shaft is now being dug at bottom of vineyard site to try for water. A little was found at 26 feet in depth, but not sufficient for good supply. It is hoped that a better spring will be found at a lower depth.

In commencing operations we were late in the season, consequently the experimental wheats were not planted until late in May and beginning of June, thereby not having quite so good a chance as could have been wished.

There were planted, under the direction of Dr. Cobb, about 400 varieties of wheats, and, by a little extra cultivation and care during their growth, they came out at harvest fully equal to the expectation of Dr. Cobb, and were all harvested in good condition.

They are stored in the granary at Estella, in readiness for autumn sowing.

The few varieties of wheats tried separate from those put in under the direction of Dr. Cobb came out very satisfactorily.

Two varieties of oats were tried. Algerian, which only came out very moderate, and Carter's Royal Cluster, which is without exception the best variety of oats seen by Mr. Coleman. It is proposed that these should be all sown this season for distribution next year amongst the farmers.

Two varieties of rye were sown. Common English and Arctic, the latter being by far the best, producing nearly double the crop of the other variety.

Mr. Coleman considers malting barley stands next to wheat in importance for this large district, and he states he has seen samples produced here equal in quality to any that the Colony, or even the world, could grow, and thinks in a few years it will become one of the leading cereal crops in the Wagga Wagga district.

Carter's Prolific, a first-rate malting barley, was tried, and had a fair crop, which would have been much better if sown earlier. Goldthorp, another good variety, did not germinate well, it is thought through the seed being heated. About sufficient of the latter variety to sow 1 acre next season has been saved. Of the former variety sufficient seed has been saved for 4 or 5 acres.

Other varieties of barley were grown—Algerian and Cape; also Skinless Barley, which is used for Pearl Barley. All these produced good crops, and are worthy of cultivation.

All the peas grew well, and would have produced very heavy crops if sown earlier.

Early sowing for peas, Mr. Coleman thinks, is the true secret of growing heavy crops in the Wagga district. The following varieties were planted:—Maple, Dunn, Black-eyed Susan, White Field, Blue Imperial, Blue Prussian, and Yorkshire Hero.

All these were harvested in good condition, and saved for future sowings if required.

The following varieties of potatoes were planted—some on the 11th August, and the others 12th September, the first plantings producing very much the heaviest and best crops:—Brownell's Beauty, White Elephant, Imperator, and Magnum Bonum, "all good heavy croppers"; Flourballs and Early Rose only moderate and diseased. Myatis Ashleaf, Scotch Greys, Flounders, and Rubys a failure, not worth the planting. This ordinary forest soil without good cultivation is too raw and green to grow successfully certain varieties of potatoes.

On 30th August 16 varieties of tobacco were planted, but only three or four sorts germinated, and I should think not more than thirty to forty plants grew; most of these have dwindled away and died; the soil seems too poor for tobacco. In this district it is grown on the rich alluvial river-flats, and only in small quantities, by Chinamen. It was very much more extensively cultivated a few years ago, but was found to be a non-paying crop.

A team of eleven yoke of oxen, two draught-horses, harness for same, farm-dray, one double-furrow digging-plough (Howard's), and a set of three harrows were purchased last December, and are now at work clearing and ploughing the remainder of experimental paddock in readiness for autumn sowing. The great drawback is want of water; it is necessary to take all stock every day to the river to drink, occupying at least two hours daily, thus delaying our work very considerably.

All the cereal crops grown on the farm are carefully stored in granary at Mr. Coleman's residence, in readiness for sowing when required.

The following work is intended to be done during the coming season:—

To complete the boundary and road fences about $4\frac{1}{2}$ miles more is needed, and an extra mile of fencing will be required between the land of W. Mathews and the orchard and vineyard before the rabbit-proof netting is erected.

Five pairs more gates will be required for roads and entrance to paddocks when fence is completed.

In addition to the tank about to be dug, one will be required in central paddock below the experimental paddock, of about the same size and capacity. Stables and implement-sheds are much needed, and some additional implements will be required for next season.

Mr. Coleman suggests that special attention be given to growing on this farm the very best varieties of pure seed for distribution at a fair price amongst the farmers. First-class wheat, oats, and malting barley can be grown to perfection throughout this large district.

During these last few days repeated applications have been received from large wheat-growers for good early varieties of seed-wheat; and it is thought that if good seed is grown there will be a ready sale for it at a price that will cover the working expenses of the farm.

The work done on this farm reflects the greatest credit upon the manager, Mr. John Coleman.

Experimental Farm, Richmond River.

The area set apart for this farm is situated at Wollongbar, on the southern side of the road from Lismore to Ballina, and midway between these towns. It has a considerable frontage to the main road, and also a frontage to Merom Creek. The soil is typical of the "red soil" of the important and large tract of country lying between and about the Richmond and Tweed Rivers, locally known as the "Big Scrub."

About two years ago, 50 acres was felled and the timber burnt off, under the supervision of this Department, but no further steps were taken to establish the experimental farm until in November last Mr. W. S. Campbell proceeded to the land and commenced operations. Tenders were accepted for the stumping and ploughing of 8 acres, which area will be quite sufficient at present for autumn planting. The work of preparation of the soil will be most thorough, to determine whether good cultivation will not prove far more profitable than the slovenly system which at present obtains generally in the district. Mr. M'Keown, who was engaged for some time at the State Nursery, Gosford, has been appointed to the charge of the farm. He is a capable man, and takes great interest in the work.

On this farm experiments will be made to determine the most suitable fodder-plants for the district, and to ascertain the best way to manage them in the peculiar climate. This alone will be a matter of great importance, as dairying is likely to develop into a very great industry. At the present time the method of sowing grasses and fodder-plants which obtains in the district is of the rudest description.

Steps have been taken to experiment with all the varieties of sugar cane that can be procured from this or other countries, to determine their value and suitability. A number of different kinds have lately been received from Jamaica through Kew Gardens, and they have been planted, and are being attended to by Mr. M'Keown. From time to time various experiments will be carried on in planting and cultivating sugar cane, and doubtless the results will prove of considerable value.

As the future prosperity of this Colony will to a great extent depend on its exportation of produce, it is of the utmost importance that the produce raised for that purpose be of the best quality only, and suitable for British and foreign markets. From information received from exporters, it appears that the quality

quality of our citrus fruits (oranges and lemons) which have been placed on the London market is of an inferior quality, and, consequently, it cannot possibly pay the expenses connected with the packing, sending, &c.

As all kinds of citrus fruits thrive to perfection in the north-eastern coastal districts, a considerable portion of the area being prepared on the experimental farm will be devoted to the growing of plants belonging to the citrus order, to test varieties, and establish a standard orchard, where all varieties will be kept perfectly true to name. As many kinds as possible will be obtained from time to time from various parts of the world. Seedlings will be raised, and every means taken to improve quality.

Various semi-tropical, as well as many tropical plants and fruits, will be experimented with, and tested, and their suitability, or otherwise, for the northern coast district determined. The good and progressive work that can be done on this farm is unlimited, and there is perhaps no portion of the Colony where a demonstrating and experimental farm is more needed, or where it will be more welcomed. The cost of managing and working this will be but little in comparison with its usefulness.

Experimental or Trial Stations.

As showing the great advantage of having the administration of the Public Watering-places Act under the Minister for Agriculture, I may perhaps be permitted to refer to the great success which has attended the establishment of Experimental or Trial stations at some of the artesian bores in the arid country between the Darling River and the Queensland Border. The Superintendent of Public Watering-places has been able to obtain not only suitable seeds from the Agricultural Department, but advice and assistance from the officers of that Department, and it is largely due to the harmonious relations existing between the officers of these branches of the Department of Mines and Agriculture that so much useful work has been done. It is intended that experiments with new crops shall be continued from year to year, so as to practically demonstrate what can, and what cannot, be grown with profit. In this way, it is hoped that bores belonging to the Department will be let to advantage, and that the tenants thereof, as well as other occupiers of land in that part of the Colony, will be taught how to grow produce that will reduce to a minimum the disastrous effects of droughts, and will render the transit of goods practicable in all seasons of the year, besides materially reducing the cost of living. Fruit grown at these bores can be brought to Sydney fully a month earlier than from most other parts of the Colony, so that fruit-growing may, within certain limits, be a profitable industry.

Steps are also being taken to establish on a small scale similar stations at some of the public watering-places in other parts of the Colony, with a view of showing how these public watering-places can be made more profitable, whereby persons may be induced to lease them, and thus save the Department the cost of employing caretakers.

Date-palms have been sent to a number of the caretakers of tanks, who planted them. In some cases these have failed, but generally they have proved a great success. Fruit-trees and timber-trees have been planted at several of the public watering-places, and are making good progress.

In the General Report for 1891 to the hon. the Secretary for Mines and Agriculture, on the subject of artesian boring, the Superintendent of Public Watering Places draws attention to the possibilities of the north-western portion of the Colony by means of irrigation from artesian bores. This subject, so far as I am aware, had not been previously touched upon in any way. The attention of the Minister was drawn to the supply of water from the artesian bores available in excess of stock requirements, and the question arose as to how the supply in excess of those requirements could be made available for other purposes which would assist the progress and development of that particular district. Taking the experience gained in other countries of irrigation by means of artesian water, it was submitted as to whether one or more of the bores sunk by this Department could not be utilised for experimental farms, and before a decision on the matter was definitely arrived at, the question was referred to the Chief Engineer for Water Conservation for an expression of opinion on the points affecting his Branch.

The opinion of the Chief Engineer was given on the 4th January, 1892. It recapitulated the possibilities of the use of artesian water for irrigation; but he was of opinion that the scheme of an experimental irrigation farm would be less satisfactory than the leasing of the bores under special arrangement. The Director of Agriculture was subsequently addressed upon the subject, and after analysis of the soils, furnished a report based upon that analysis. He considered that it would be unwise to do more than at present to conduct experiments on a small scale. An experimental cultivation has been carried out at the Native Dog and Barrington Bores, on the road from Bourke to Hungerford, and more recently areas have been planted at the Engonia and Belalie Bores with fruit and forest trees. So far, the reports submitted have been highly satisfactory, and tend to show that the fears which have been openly expressed, that the alkalinity of the water would ultimately have a detrimental effect upon the growth of the produce, have not been realised. The Department is retaining the Barrington and Native Dog farms for conducting its own experiments in cultivation. The soils at these two farms are widely different and typical of the two classes of soil in the district, one being red loamy soil and the other black alluvial soil of the river flats. Samples of the soil were taken from the Native Dog bore after some eighteen months of irrigation by means of this water, and in only one sample out of seven could be found a trace of the alkalinity, while the growth of vegetable produce has been almost phenomenal. There are a great variety of plants cultivated at these two bores, but with few exceptions they have proved highly satisfactory. The result obtained should go far to remove from the minds of the sceptical the idea that artesian water is unsuitable for irrigation.

The following are details of the various crops planted, and the results:—

Experimental Farm at Native Dog Bore.

Farm laid out October, 1892. Operations commenced during November and December, 1892. Planting, cereals, July, 1893.

Fruit trees.—Apricots, peaches, mulberries, apples, plums, nectarines, quinces, figs, and bananas, all doing well; guavas, loquats, and citrous fruits failed; date palms and olives did not arrive at farm in good condition.

Forest trees, mostly pine, willow, and poplars.—The pines did not thrive; the willows and poplars are doing very well.

The grape vines that struck are doing well.

Maize.—

Maize.—A very good crop; togosaste seed did not germinate; calabash growing very well.

Sugar-cane.—Doing very well; planted on 20th October, now more than 3 feet high, and healthy.

Wheat.—Two varieties of wheat sown; good crop from both.

White Clover, Red Clover, Giant Hybrid Clover.—Good crop, yielding a good cutting every six weeks.

Two varieties of potatoes planted, and found to grow well.

Pop-corn.—Two varieties, Porcupine and Large White; both did fairly.

Pumpkins, water melons, rock melons, and cucumbers did very well.

Seven varieties of clover,—Bokhara, Alsike, Sutton's Giant Cow, Red Clover, Cow Grass, and White Dutch Clover,—were sown on 16th October, but this date was apparently too late, very little of the seed germinating.

Several kinds of seed, such as carob bean, ceara rubber, &c., were sown, but too late in the season to succeed.

Water was applied to all the above crops, ranging from three applications to the wheat to ten to the vines, at different times throughout the season.

The caretaker is of opinion that the results would have been very much better had some of the crops been planted earlier, so as to attain during cool weather sufficient hardihood to withstand the summer heat.

Some splendid samples of lucerne were received from this farm, indicating the suitability of the soil and district for that crop. The caretaker reports that he has been cutting this lucerne every two months for feed for working horses.

Among the samples of produce received at the Department from the Native Dog Bore were:—

Allora Spring Wheat—Sown, 16th June, 1893; harvested, 6th November, 1893; watered three times; yield, 35 bushels per acre; weight, 65 lb. per bushel. Plants exceptionally strong and healthy.

Farmer's Friend Wheat.—Sown, harvested, and watered as above; yield, 32 bushels per acre; weight, 63½ lb. per bushel.

Blount's Lambrigg Wheat.—Sown, harvested, and watered as above; yield, 24 bushels per acre; weight, 56½ lb. per bushel.

Lucerne.—Last cutting, 19 October, 1893; specimen cut, 3 December, 1893; average height, 3 feet; strong and healthy, and plenty of leaf.

Barrington Bore Farm.

Laid out about December, 1892, and the following crops, &c., were sown in July, 1893:—

Wheat, two varieties, did well.

Brown Red Clover, White Clover, Giant Hybrid Clover, succeeded very well (yields cutting every six weeks).

Potatoes, two varieties, succeeded very well.

Popcorn, two varieties, succeeded very well.

Seven varieties of clover (Bokhara, &c.) were sown, but caterpillars destroyed the plants as they showed above ground.

Maize looks very well.

Fruit trees, 200 different kinds—apricots, peaches, figs, apples, pears, bananas, pine apples, date palms, oranges, and lemons. All except the three last named doing well.

Grape vines.—A good many vines failed, but the rest are healthy and looking very well.

Calabash, doing well.

Sugar-cane, growing very well, and healthy.

As at the Native Dog Bore, the miscellaneous seeds (ceara rubber, carob bean, &c.) did not germinate, having been sown too late in the season.

All the above crops were watered—wheat, three times; clover and sugar-cane, seven times; potatoes and popcorn, five times; maize, four times in the season; fruit trees and vines, every month.

Lucerne grows well at this bore, and yields a cutting (on an average) every month.

Among the samples received from this bore were—

Lucerne.—Once watered. A month's growth of about 28 inches.

Cabbage.—Splendid sample from good crop, which received four waterings.

Specimens of onions, potatoes, and kohl rabi all very good.

Belalie Bore Farm.

The area for planting at this bore was laid out during July, 1893, and the following trees, &c., planted:—Forest trees, 747; fruit trees, 128; grape vines, 600. The forest and fruit trees were of similar varieties as those sent to Native Dog Bore. The majority of forest trees did well. A large proportion of the fruit trees and vines are doing very well. They were watered at the rate of a pint a day each until drains were laid out, in October, since when water has only been applied once a month.

Engonia Bore Farm.

This farm was laid out in July, 1893, and the following trees, &c., planted:—Forest trees of various kinds, fruit trees of various kinds, grape vines. Water was applied every two or three weeks. The greater proportion did well, and are now thriving. In October a small sample of wheat was sown, with good results.

Coolabah Tank.

Fifty fruit trees, 30 ornamental trees, including a few elms, poplars, and willows, for which the soil is suitable, 220 forest trees planted out, and the majority looking well.

Byerock

Byerock Tank

An assortment of forest and fruit trees were sent to the above tank, and also sufficient privet to form a hedge to surround the tank. This and other trees have flourished, the only failures being a few fancy varieties of pines. The bananas forwarded are now showing great promise.

Waddell Tank.

An assortment of similar trees were sent to Waddell Tank, and they are reported to be doing well.

Moongulla Bore.

Packets of seed of the Orinoco, Virginia, and Yellow Prior varieties of tobacco were sent for trial at the above bore.

The growth of the plants was exuberant, and samples of the leaf are now being cured.

Newcastle Sand-drift.

An extension to the plantation was made during July, 1893, and some young trees, consisting of *Pinus pinaster*, *Lagunaria patersoni*, and Norfolk Island pines, were planted. Between the trees Marram grass (*Psamma arenaria*) was planted in rows, as well as a row of *Arundo donax*.

The Marram grass has proved a great success, and is growing most luxuriantly, being now about 3 feet in height. The planting of this grass seems to be the most effectual means of binding the sand and preventing it drifting. The same variety of grass, planted on the steep bank facing the ocean some years ago, has grown well, and has become a dense mass. The Norfolk Island pines, *Arundo donax*, *Lagunaria patersoni*, *Pinus maritima*, and *Tamarix*, planted some years ago, have proved to be successful, and are able to stand against severe ocean winds in this exposed locality. The rubble sea-wall has been extended, and its total length is now about 6 chains. It is a great protection to the edge of the bank of sand over which the grass has now grown. But for this wall the waves would have encroached considerably. The caretaker, Mr. M'Carthy, has considerable difficulty in preventing damage to the plants by the numbers of men and boys who bathe on the beach in front of the plantations.

Forestry.

Notwithstanding the reductions in the staff the forestry operations during the latter half of the year have been conducted on a scale quite equal to those of a like period in any previous year.

The following is a brief statement of the planting and thinning operations of the Department for the year:—

Otford Plantation.

One thousand and eighty young trees have been planted, consisting of Silky Oak, Coachwood, Blueberry Ash, Cork Oak, Citron-scented Gum, English Oak, Elm, Colonial Deal, &c.

Those planted during 1892 have been cleared round, and are generally looking well. It is estimated that the plantation now contains some 23,750 trees.

Moonbi Plantation.

An area of 50 acres was cleared, fenced, and prepared, and 8,692 young trees planted, consisting of Catalpa, Cedar, Ash, Pines, Oaks, Elms, Coachwood, &c.

The planting on this reserve has been very successful, notwithstanding the fact that operations were not commenced until very late in the season. The Catalpas have made wonderful progress, some having attained a height of 5 feet already, and other plants are doing well, the percentage of failures being very small.

Wyong Plantation.

It has been decided to abandon this site, as it is found to be subject to inundation, and to be otherwise unsuited for the purpose of a forest plantation.

Wilcannia Plantation.

Planting operations were continued on this area, but recent reports show that the work has not been attended with success. The apparent reasons for the lack of success are:—

1st. Extremely dry season.

2nd. Too many open-rooted plants sent.

3rd. Owing to the scarcity of suitable plants at the Gosford Nursery the overseer was obliged to send a great many open-rooted plants of varieties not suited to the district.

The caretaker (Constable Pyvis) reports that some of the trees planted in 1892 are, owing to the long drought, dying, although apparently well grown and strong.

Wattle Plantations.

The Wattle Plantations at Bargo, Tomago, and Otford have been protected from fire, and otherwise attended to, and will be ready for stripping next season.

Thinning.

Thinning operations were commenced in May last on the Monma red-gum forest reserves, where an area of about 300 acres was dealt with, at a cost of £86 5s. 7d. On this area there are now growing between 350 and 400 trees per acre. Owing to the country being flooded in June the men were moved to the Wahgunyah pine forest reserve in the county of Denison, where about 1,300 acres were thinned, at a cost of £240 11s. 6d., leaving about 350 trees to the acre, representing 455,000 trees, which, when matured, and at the present market rate, would yield on this reserve alone royalty of about £51,187 10s.

Work was discontinued early in October owing to there not being any funds available to defray the cost.

It is anticipated that the timber on these reserves will be of great value to the State in a few years' time. Some idea of the value may be gained from the fact that even at the present rate of royalty charged the gum trees are worth from 5s. to 30s. each and the pine about 2s. 3d. each.

Specimens

Specimens sent to the Imperial Institute.

The curator of the Imperial Institute, who takes a great interest in the timbers of the Colony, has been supplied with the following specimens for exhibition in the Institute:—

<i>Railway Sleepers.</i>				Botanical Name.
Vernacular Name.				
Red mahogany	<i>Eucalyptus resinifera.</i>
White mahogany	" <i>acenioides.</i>
Swamp mahogany	" <i>robusta.</i>
White box	" <i>hemiphloia.</i>
Grey gum	" <i>saligna.</i>
Spotted gum	" <i>maculata.</i>
Forest red gum	" <i>tereticornis.</i>
Blackbutt	" <i>pilularis.</i>
Tallowwood	" <i>microcorys.</i>
Bloodwood	" <i>corymbosa.</i>
Turpentine	<i>Syncarpia laurifolia.</i>
Apple gum	<i>Angophora lanceolata.</i>

Gun Stocks.

One finished and one unfinished of each timber.

Vernacular Name.				Botanical Name.
Blackwood	<i>Acacia melanoxylon.</i>
Lightwood	" <i>peninervis.</i>
Black bean	<i>Castanospermum Australe.</i>
Coachwood	<i>Ceratopetalum apetalum.</i>
Maiden's Blush...	<i>Echinocarpus Australis.</i>
Mountain Ash	<i>Evdia micrococca.</i>
Negrohead beech	<i>Fagus Moorei.</i>
Red bean	<i>Dysoxylon Muelleri.</i>
Rosewood	" <i>Fraserianum.</i>
Pigeonberry ash	<i>Elæocarpus obvatus.</i>
Teakwood	<i>Endiandra glauca.</i>
Spotted gum	<i>Eucalyptus maculata.</i>

One hundred specimens tested by Professor Warren; sixty specimens polished, size 6 inches by 4 inches by 2 inches; twelve finished walking-sticks, each made of different timbers; 150 unfinished walking-sticks, thirty-one different kinds of timbers; seven panels, each panel made up of six kinds of timbers; one inlaid table.

Specimens of timber have also been sent to England, Germany, and British Columbia, through private persons, who are trying to open up a trade for railway-sleepers and wood-paving blocks.

Revenue.

Owing to the general depression in all classes of industrial pursuits throughout the Colonies, and the falling off in railway and other public works, there has been a considerable decrease in the returns for royalty and license fees for the last year, as compared with previous years. This has been most marked in the case of the revenue from the Murray forest reserves. These reserves usually furnish about half of the total revenue of the Department, and as Victoria is the chief market for the timber, it may be seen that the stoppage of public works in that colony has mainly been responsible for the decrease in the revenue.

The State Forest Nursery, Gosford.

At this establishment the propagation of plants suitable for street and avenue planting, and timber trees suitable for putting out on our forest reserves has been carried out as usual.

Further work was carried out upon a portion of the area not previously utilised, resulting in about an acre of ground being cleared and stumped, and a permanent cart road made to the extent of about 12 chains in length. Eighty chains of additional drains have also been made.

About an acre of land has been permanently planted with fruit-trees, named varieties, and an acre has been also planted with timber-tree seeds and cuttings of various varieties.

Three hundred and fifty young trees were planted on permanent borders.

The various shade sheds have been repaired, and new roofing of tea-tree put on them where necessary.

In order to make more room for potted plants, and concentrate the sphere of operations, one new shade shed for pot-plants was erected, and an addition made to one of the old sheds.

The estimated number of plants and shrubs fairly established at the Nursery is:—

Open rooted plants and shrubs	400,000
Trees and shrubs in pots... ..	23,000
Trees and shrubs in boxes	30,000
Total	453,000

It may be perhaps as well to note that the Nursery has seed-beds now coming on containing many thousands of red cedar (*Cedrela australis*) seedlings, and it is anticipated, therefore, that a large stock of these valuable embryo timber trees will be available during the coming, and next planting season. Particular attention has also been given to the propagation of the most valuable varieties of ironbark timber trees, also to such timbers as silky oak (*Grevillea robusta*), beefwood (*Stenocarpus salignus*), colonial deal (*Podocarpus elata*), black apple (*Achras australis*), &c.

The total output from the Nursery of forest, fruit, and ornamental trees and plants has been :—

Reserves, plantations, and artesian bores	127,911
Schools and public bodies	46,547
Total						174,458

The expenses attached to the working of the Nursery has been very considerably reduced, without impairing the efficiency of the establishment, as the following statement will show :—

January, 1892.	Wages	£	s.	d.
January, 1893.	Wages	168	3	0
January, 1894.	Wages	188	4	4
		72	9	8

Pathologist.

During the year 1893 the work of the pathologist, Dr. N. A. Cobb, has been carried on according to the plans submitted at the beginning of the year, and approved by the Minister for Agriculture. The work has related to,—

1. Rust in wheat.
2. Diseases of the Sugar-cane.
3. The Parasites of Sheep.
4. Various less important matters.

1. The plans submitted with regard to wheat have been carried out successfully, the most marked success being at the experimental farm at Wagga Wagga. Mr. Wm. Farrer has had entire charge of the wheat sown at Lambrigg, and the entire results, which he will, no doubt, soon publish, are due to his well-known aptitude in, and enthusiasm for, this work. Messrs. Warboys (Spring Hill), Bragg (Narromine), Quick (Tamworth), Berthoud (Corowa), have each done good work in raising seed-wheat pure and true to name, and each has stated that he considers it a paying business (Mr. Berthoud excepted). Only one of these seed-growers has received a small amount of aid from the Department in the shape of subsidy, this being granted only as a special case, and not to be repeated. The pathologist visited all these farms except Mr. Quick's, and is pleased to report that the work undertaken by these seed-growers has been carefully done. Mr. Berthoud, by treating his seed (supplied by the Department) with too strong a solution of bluestone, injured its germinating power, and his results are less satisfactory on that account. There is every prospect that the new and improved sorts of wheat raised specially for seed will sell readily at prices varying from 5s. to £1 per bushel. The publications on the subject of rust in wheat undertaken by the branch are continued in the *Agricultural Gazette*. The descriptions of colonial wheats have had a good reception, the demand—not by any means confined to this colony—having exceeded the supply by some thousands.

As

* Including £1,326 10s. 8d. paid from Treasurer's Advance Account, Retired Officers, &c.

† Paid from Contingent Vote.

As chairman of the Intercolonial Wheat Nomenclature Committee, the pathologist called a meeting of that body early in 1893. The meeting was held in Sydney, and was attended by every member of the Committee, viz.:—A. N. Pearson, Esq., Department of Agriculture, Victoria; Professor Lowrie, Roseworthy Agricultural College, S.A.; Professor E. M. Shelton, Instructor in Agriculture, Department of Agriculture, Queensland; Rev. E. H. Thompson, Tasmania; Mr. Wm. Farrer, New South Wales.

The Committee examined the result of the work done under its direction in this colony and by this Department, with the result that a number of most important points were settled, and a plan adopted for 1894. It is fully expected that at the forthcoming conference in Brisbane final action will be taken by this Committee, which will settle once and for all the many difficulties that surround the subject. To show the importance of the subject it is only necessary to point out that no reliable recommendations on the subject of what wheat to grow can be made until the different varieties have been defined and named. Until recently the utmost confusion prevailed, but this is certain shortly to disappear before the clear ideas of the specialists delegated to give the matter attention. It is a very pleasant feature of this work that all the colonies have engaged in it and contributed equally to it, and that the result will be a uniform system of naming wheats throughout Australia.

2. Diseases of the Sugar-cane.

The investigation of the diseases of the sugar-cane were undertaken on the Clarence River, that being the locality where disease was most prevalent. The work occupied two months, and the preparation of the report six weeks. The report was published in the *Agricultural Gazette*, and was issued as a special publication for thorough distribution on the northern rivers, wherever sugar-cane is grown. At the request of the Department of Agriculture, Queensland, a special edition has also been issued for distribution in that Colony. This edition was paid for by the Queensland Government.

This report has been well received, and the results of the investigations are regarded as correct. The recommendations based on the results of the investigations have been acted on, and with much benefit already.

3. The Parasites of Sheep.

This subject has been dealt with at the special experiment station erected at Moss Vale, on the property of the Honorable John Lackey, President of the Legislative Council. The results thus far attained are in every way satisfactory. They are as yet unpublished. Both from a practical and theoretical point of view, our knowledge of these baneful animal parasites will be advanced considerably by these experiments. It is hoped that no more than a few months will elapse before a preliminary report will be before the public.

4. Various less important matters.

These are the partial investigation of a variety of diseases of both animals and plants, the answering of correspondence, the publication of a host and habitat index to the Australian fungi, and the publication of the descriptions of the various free-living nematode worms found about the roots of diseased banana plants, sent to this Department at the instance of His Excellency Sir J. B. Thurston, Governor of Fiji.

Publications.

The publications of the Pathological Branch for 1893 cover the equivalent of upwards of 200 pages of the *Agricultural Gazette*, and are accompanied by over 200 figures, mostly in the text, and for the most part drawn by the pathologist. Beside the matter relating to practical agriculture they contain the record of over sixty new species of animals and plants, discovered during the investigations.

The work done by the artist, Mr. Grosse, since June, 1893, was as follows:—

June.—Engaged making numerous drawings of wheat in connection with Dr. Cobb's experiments.

July and August.—Drawing botanical plates for reproduction in the *Gazette*. Developing a large quantity of photographic plates taken by Dr. Cobb at Harwood, in connection with sugar-cane disease. Making drawings of sugar-cane and spores of diseases attacking same.

September, October, November, and December.—Engaged extensively at Moss Vale with Dr. Cobb, investigating the parasites of sheep, and making photographs of same through microscope. Making a large number of botanical plates for reproduction in the *Gazette*, also several plates of poultry to illustrate Mr. Gray's articles for the *Gazette*.

During July Mr. Helms was, to a great extent, occupied in assisting Dr. Cobb making preparations for the microscope, and in other ways. At the same time during periods when not otherwise occupied, he arranged and labelled some of the collections made by him during the early parts of the year. He also began in July with some experiments in connection with the effect of the spore preparations of *Botrytis tenella* upon the larvae of beetles that infest the ground, to the detriment of plant life. These were continued during August, and the remaining time of that month was filled in with arranging collections as before mentioned, and by attending to different subjects to which his attention was diverted, which included a number of replies to letters in connection with bee diseases. He also assisted for some time at the spraying experiments carried on in the orchard of the Rookwood Benevolent Asylum. During September and part of October he assisted Dr. Cobb in connection with his researches about the cane diseases, and corrected the proof of the "Habitat Index" of the fungi of Australia, which occupied his time about a fortnight on account of the intricacy of the references. During the latter part of October, and the whole of November till the beginning of December, he assisted Dr. Cobb, at Bong Bong, in his investigations of the intestinal parasites of sheep. The greater part of December has been occupied in experimenting for the suppression of certain bee diseases, for which purpose he spent most of his time at Campbelltown.

Chemist.

The work done by the chemist, Mr. F. B. Guthrie, in the chemical laboratory of the Agricultural Department since 1st July, 1893, is as follows:—

The analyses made include the following:—

Soils, 30; fertilisers and manures, 15; fodders, 8; wheats, 20; sugar-beets, 8; waters, 4; milks, 26; condensed milks, 3; butters, 8; insecticides and preservatives, 6, making a total during the year 1893, of soils, 82; fertilizers and manures, 41; waters, 9; fodders, 9; wheats, 20; milks, 29; sugar-beets, 8; butters, 8; insecticides, &c., 10, in addition to numerous miscellaneous analyses such as plants for various ingredients, soils for special points, &c., reports, and replies to correspondents seeking advice, &c. As

As in the previous year the analysis of soils has occupied a large proportion of time. From the results of these analyses, which are made as complete as possible, and from other information as to the surrounding conditions of the soil, advice has been given as to the best method of treatment and manuring for different crops, particularly in the matter of the use of artificial chemical manures. That this information is valued is attested by the large number of soils sent in for analysis by farmers from all parts of the Colony.

As the number of these soils renders it impossible for us with our small staff to keep pace with them in a satisfactory manner, it is proposed next year to limit the complete analysis of soils to such as are typical, or of special interest, as the time hitherto devoted to them can be more profitably employed in other and more important work.

The analyses of manures and fertilisers are undertaken in the interests of the farmers as a check upon the different manures on the market, a complete list of which is kept, as far as possible, together with their manurial value as determined by analysis. Information as to the best and cheapest manure for different purposes can thus be readily obtained. The substances examined included also several waste products with a view to determining their value as manures.

The analyses of insecticides and preservative substances are in the same way a check upon the different specifics offered for sale. They were undertaken principally with the object of guiding the departmental experts in their selection and recommendation. It is hoped to extend this line of work during next year.

The analysis of wheats was instituted, in the first instance, with the object of determining the amount of gluten in the different varieties of wheat, the gluten content indicating the milling value of the grain, and being an important factor in the choice of wheats in connection with their ability to resist rust. In the course of the work several interesting points bearing on the constitution of the grain have presented themselves, which it is intended to work out.

During the year a series of experiments upon the milk-producing values of different fodders was instituted.

In September the Principal of the Hawkesbury Agricultural College placed three cows at the disposal of Mr. E. C. Wood, the science master, for the purpose of this investigation. The feeding of the cows, and their treatment during the period the test lasted, was superintended by Mr. Wood, who determined also, at frequent intervals, the fat percentage, the butter produced, and other points of comparison.

The fodders were analysed and the milk-testings checked by Mr. Guthrie.

The result of these experiments, though of interest to those concerned, has failed so far in establishing any fixed relation between the fodders used and the quality or quantity of the milk produced. The experiments have, however, been of value in indicating methods of overcoming the difficulties of detail which are inseparable from a first attempt to solve a problem presenting so many complex points.

The problem presented is one the solution of which is of the first importance to dairy-farmers, and it is, moreover, one that we must solve for ourselves, as the experience of other countries applies only in a limited degree to our own conditions.

Mr. Guthrie bears testimony to the painstaking care and scientific exactness with which Mr. E. C. Wood conducted the experiments.

A circular is in course of preparation inviting wine-growers and merchants to submit samples of their wines for analysis. The result of a systematic investigation of this kind, which has not hitherto been attempted, will be of interest in comparing our wines with those of other countries, in assisting in the judging of wines, in suggesting proper treatment and blending, in indicating the wines that are suitable for brandy-making, and in suggesting improvements in the treatment and cultivation of the soils and vines.

The composition of the different varieties of the fruits grown in the Colony will also be the subject of investigation, especially in reference to the composition of their ash. The experience of others shows that differences of soil and climate materially alter the chemical composition (and with it the properties) of the same fruit, and the line of investigation here indicated will show to what extent the conditions prevailing with us have affected the nature of the fruits, and will indicate improved methods of treatment.

Mr. Guthrie's assistant (Mr. E. H. Gurney) has rendered valuable assistance in the analytical work of the Department.

Entomologist.

A considerable amount of time of the entomologist has, as usual, been devoted to the work of preparing the material obtained by collectors and sent in by correspondents, for the collection of economic insects which is in process of formation.

From correspondents we have received a fair amount of specimens which make a valuable addition to our collection; and a considerable amount of advice, as to remedies and preventives, has been supplied to those sending and bringing in insects to the Department.

During the month of August the entomologist made a tour through the vineyards of the Mudgee district, embracing the towns of Cullenbone, Coolah, Cassilis, and Merriwa.

The objects of this tour were to make field observations upon various matters of economic interest and to experiment upon those root-feeding insects, which cause so much loss to agriculturists, with the so-called "*Parasite du ver Blanc*" (*Botrytis tenella*), with the view of ascertaining whether its use as a means of eradicating these pests is of any practical value in Australia.

To this end many experiments were made in selected places in the districts which were visited, but without any gratifying results, the fungus having no apparent effect upon the grubs. Not satisfied with these results, Mr. Olliff brought a large number of grubs of cockchafer beetles—which live on the roots of vines and other plants—to Sydney with him, and this material was handed over to Mr. R. Helens to experiment with. This gentleman found, after treating these, as well as other specimens received from various sources, with excessive quantities of spore matter, that none of the larvæ were in the least affected by the fungus, and in fact appeared to be not the least troubled by the treatment, and a few weeks afterwards were found to have progressed in their metamorphoses towards pupation.

Through the kindness of Mr. A. K. Bovil, acting principal forest officer of Vicosia, Cyprus, we have been supplied with several consignments of Capri figs containing the caprifigation fig-insects (*Blastophaga psenes*).

These

These consignments, unfortunately, arrived in a rather dry condition, and upon opening the figs the voyage had, in every instance, proved too much for the insects.

Mr. Bovill has been informed of this, and has been advised as regards packing the figs, and has also been asked to favour us with another attempt to introduce the useful insects.

During the year an epidemic broke out among some of the apiaries around Sydney, and the disease appearing to be of a micro-organistic nature, its investigation has been undertaken by Dr. Cobb and Mr. Helms.

From time to time a number of notes have appeared in the Departmental *Gazette*, dealing with such subjects as the codling-moth, the potato-moth, the Bugong-moth, and crickets—which latter insects have been the cause of much trouble in orchards lately. In part 9, vol. 4, of the *Gazette*, an article appeared upon the brown and salt-bush scale-moths (*Thalpocares spp.*), which was accompanied by a beautiful drawing in colours of the life-histories of these insects, which have been worked out in this Branch, and in the case of the salt-bush scale-moth for the first time.

Botanical Branch.

Since July last the consulting botanist (Mr. J. H. Maiden) has performed all the botanical work required for the Agricultural Branch, in addition to his botanical investigations made for the Forest Branch. The whole of this work has been effected promptly and satisfactorily. Numbers of miscellaneous plants sent in by the public or collected by officers of the Department have been named, and information respecting them has been supplied.

In addition to this work for the Agricultural Branch a report has been made on *Sida rhombifolia* (Paddy's lucerne), a pest in the coastal districts.

A report on potato flour and spirit, on oil-seeds, fibre-plants, &c.

Reports on fodder-plants, bee-plants, plants supposed to be injurious to stock, tan-plants, the native bread or truffle, noxious weeds, and other miscellaneous subjects too numerous to individualise.

Some articles and miscellaneous notes on plants interesting to the agriculturist and pastoralist have been furnished to the *Agricultural Gazette*.

For the Forest Branch the consulting botanist has performed a considerable amount of work in the determination of herbarium specimens and timbers sent by the foresters, several of whom show a considerable zeal in the acquisition of an accurate knowledge of the timber-trees of their districts.

Seeds of timbers have been sent by some of the foresters. These have been named, and form the stock from which the State Forest Nursery at Gosford is supplied, and exchanges effected.

Some fine specimens of cabinet woods and timbers for structures have been named for transmission to the Imperial Institute during the year.

Report on *Duboisia* leaves now used for the preparation of drugs used in ophthalmic surgery.

Report on the extraction of kino from red-gum trees.

Supervision of the drawing of illustrations of our indigenous flora.

Supervision of collections of timbers and tan barks for Canada, which are likely to further trade between that country and Australia.

Nomenclature of plants at the Gosford State Nursery.

The most important, or rather laborious, item of the year, was the examination of the replies to the circular letter sent to Foresters in the matter of ringbarking and sapping.

Report on wattle-plantations, West Bargo.

A most valuable report on Don Dorrigo Forest Reserve.

Enrichment of the herbarium by a large number of interesting species now under examination.

Reports on tan-barks.

Articles on timber-trees in *Agricultural Gazette*, which are of considerable value.

Fruit Expert.

During the past six months the work of the fruit expert (Mr. A. H. Benson), has been of a somewhat varied nature, and has included visits to various parts of the Colony, practical spraying experiments at Rookwood, propagation of fruit-trees at Gosford, lectures in different parts of the Colony and before the Fruit-growers' Union at Parramatta, completion of the cold-storage experiments, experiments with lemon-curing, work of the Pomological Committee, and several reports and articles both for the *Agricultural Gazette* and for Departmental use. His visits included a tour through the Northern Rivers District from Coff's Harbour to the Tweed, during which he gave several lectures and spraying demonstrations, and made a general report on the district, which has been published in the *Agricultural Gazette*. In connection with the Northern Rivers District he also prepared a report on the growth of fruit-trees suitable to the district, which was sent to the members for the district, and published by them in the local papers. He also visited Orange, where he gave a spraying exhibition; Bowning, where he visited orchards and gave a lecture; Wagga Wagga, where he visited the experimental farm and prepared a report on the proposed orchard and vineyard; also a number of places near to Sydney, where he visited orchards and gave general advice on fruit-growing and the eradication of insect and fungus pests. A series of experiments was carried out by him at Rookwood with various fungicides and insecticides on a number of different trees, and has made a full report thereon, which will appear in the February number of the *Agricultural Gazette*.

A large number of scions of different varieties of fruit-trees were received from Victoria late in the season, and although there were no stocks on which to work them he managed to save a large number of the varieties by root-grafting. The scions were taken to the State Nursery at Gosford and worked and set out there, and will be removed to Wagga Wagga next June.

The experiments in the cold storage of fruit were completed for the season; the result of the experiments was, on the whole, satisfactory, as it has definitely proved the necessary conditions to be maintained in order to keep the fruit successfully, and it has also shown what fruit to store, and how and when to store it. A full report on the experiments has been published in the *Gazette*.

An experimental curing of lemons was also made, the lemons being cut the beginning of July, and being still in use. Samples were sent to various persons, and a small box was sent to the Honorable Mackenzie Bowell on his departure for Canada.

The

The Pomological Committee held their first meeting on 16th November, three subsequent meetings having been held. About 100 samples of fruit have been submitted, and arrangements have been made whereby samples may be more readily forwarded to the Department. A number of forms for the classification of different fruits have also been printed, and a description and drawing of all the different fruits have been kept for future reference, with the ultimate view of publishing a work on Australian-grown fruit.

The fruit expert has given a series of lectures before the Fruitgrowers' Union on Manuring, Utilisation of Fruit, Draining and Liming, Packing, Grading, &c., and has written articles for the *Agricultural Gazette* on Orange-culture, Pruning, Orchard-manures, Cold Storage, Northern Rivers, and Orchard Notes for each month. He has also made a number of reports for Departmental purposes, and has answered a number of official letters on all subjects connected with fruit-growing. He has also given information to a large number of persons on various matters who have visited him at his office. In connection with the proposed orchard and vineyard at the experimental farm at Wagga Wagga, he has obtained a large collection of high-class American varieties of fruit-trees from the California Nursery Co., through the Universal Nursery Co., which have arrived in first-class order, and are at present temporarily planted at Wahroonga, but will be removed to and planted out at Wagga Wagga in June or July next, so that the foundation of an experimental orchard for reference purposes will be laid.

He visited the Paterson River district for the purpose of making a report on the cause of the orange and other citrus fruits dying out. A full report of his visit was at the time sent to and published by the local press.

Seed Branch.

The work done in the Seed Branch under the charge of Mr. G. Valder during the half-year ending the 31st December, 1893, has been very satisfactory.

The interest taken by farmers in the introduction of seeds of new commercial crops by the Department is still on the increase, and the applications received for these seeds by far exceeded the supply. The number of packets distributed was not equal to that of the same period last year, but this is accounted for by the fact that the quantity of seeds available for distribution was not nearly so large this year as last. Last year a considerable sum was expended in obtaining seeds, but this year only a very small sum was spent, most of the seeds being either obtained by exchange or grown by the Department. The first six months of this year 779 persons were supplied with 4,675 packets of seeds, and the last six months 2,257 persons with 5,158 packets. The totals for the two years were as follows:—

	Persons supplied.	Packets distributed.
1892	3,182	13,235
1893	3,036	9,813

The following table gives the names of the principal crops of which seeds were supplied, and the number of packets of each that were distributed:—

SEEDS, Roots, and Cuttings distributed during the half-year ending 31st December, 1893:—

	Name.	Persons supplied.	Packets distributed.
Seeds	Tobacco, sixteen varieties	351	1,075
	Chocho	187	386
	Pigeon-pea	132	132
	Mung-bean	157	157
	Cow-pea, three varieties	74	172
	Carob-bean	146	146
	Tagosaste	227	227
	Teosinte	49	49
	Bokhara-clover	128	128
	Sugar-beet, two varieties	34	34
	Mangels, nine varieties	82	278
	Thousand-headed kale	135	135
	Rock-melon. Imp. Cassaba	147	147
	Native grasses	26	112
	Black wattle	32	32
	Miscellaneous	86	86
			1,993
Roots	Potatoes, six varieties	114	292
	Sweet potatoes, two varieties	14	28
Cuttings and Plants.....	Basket-willows	14	504
	Grape	25	480
	Sugar-cane	77	438
	Smyrna fig	12	72
	Giant lemon of Fiji	8	48
	Total	2,257	5,158

Upwards of 2,000 reports were received regarding results obtained from the seeds distributed by the Department last year. From these some very valuable information has been gathered, and the reports are being collated for publication in the *Gazette*. The sorghums cultivated in this Colony have of late years become much deteriorated in consequence of inoculation and mixing. The varieties imported by the Department from America and India, viz., "Coleman," "Collier," "M-Lean," "Dari," and "Black African," were, therefore, watched with great interest by our farmers, and as they all did remarkably well, in many instances proving themselves far superior to the varieties previously grown here, they will no doubt prove a very valuable introduction. Several letters were received thanking the Department for the good work done in introducing these sorghums.

Among other forage crops, teosinte, bokhara clover, pearl millet, and tagosaste gave some very fine results, the yield in several instances being very heavy.

Samples

Samples of sugar beets were sent in which had been grown from seed supplied by the Department. As was the case the previous season, it was found on analysis that they contained a very satisfactory percentage of sugar, proving how suitable this Colony is for the cultivation of that crop.

Of the pulses distributed, the "Cow Pea" (*Vigna catieng*, Endl.), appears to be the most valuable. It thrives remarkably well here, producing from 8 to 10 tons of green fodder, and from 30 to 33 bushels of dry pulse per acre. As this plant is valuable in several ways it will no doubt soon be largely grown here. Of the other pulses sent out, pigeon-pea, Chick-pea, and Soy-bean appear to have given the best results.

Samples of mountain rice grown from seed supplied by the Department were sent in by several farmers from the northern rivers. These were submitted to an expert, who reported that it would be worth while to try the experiment on a larger scale, as the samples were of a very good quality. This is now being done by several farmers, and the experiment will no doubt be watched with great interest, as some idea will be obtained of the value per acre of this crop.

In October last year Mr. G. Valder made a sowing in measured plots of fifty-four varieties of pulses and a number of other new commercial crops, with a view of obtaining definite information regarding their value in this Colony. The produce from these sowings has been harvested, the seeds of the most suitable varieties distributed (amounting to nearly 2,000 packets), and the information gathered therefrom is now being published in the *Gazette*. A number of packets of these seeds were sent to the artesian bore farms, the products of which have lately been exhibited in Sydney.

From the herbarium 273 specimens of our native grasses and fodder-plants have been sent to foreign herbariums, and some 300 specimens have been received in exchange, including 100 specimens of native grasses of the United States of America. A number of specimens of grasses, fodder-plants, weeds, and other plants of interest to agriculturists have been added to the herbarium.

About 400 specimens have been added to the Museum, and many of the exhibits have been relabelled and classified. The whole of the exhibits have been moved to the building in the Domain lately occupied by the Technological Museum, and will there form a portion of the Mining and Agricultural Museum.

In August last Mr. Valder spent a fortnight at Booral pruning, spraying, and propagating the white mulberry trees at that plantation. He also, in September, spent a fortnight at Gosford, assisting the fruit expert in propagating fruit-trees, and inspected several wheat-plots in connection with the rust-in-wheat experiments.

A large number of letters have been answered by Mr. Valder regarding all branches of agricultural and horticultural subjects, especially those referring to the sowing and cultivation of farm and garden crops.

Subsidies to Agricultural Societies.

In consequence of the reduction of the vote for subsidising Agricultural Societies, and the alteration in the terms of the vote, the work of disbursing it has involved strict scrutiny into the revenues of Societies, and the classification of the same under the heads of "Members' Subscription" and "Contributions" respectively. The introduction of a new method of dealing with claims for subsidy, rendered necessary by the terms of the Appropriation Act has no doubt given extra trouble to the officers of the Societies, but as soon as it was made clear to them that the change was unavoidable they cheerfully acquiesced, and rendered every assistance to Mr. Fitzgerald (the officer in charge of this work) in the performance of his onerous and difficult duties. Much of the success which has attended the introduction of the new method is due to the excellent management of Mr. Fitzgerald. In future, it is hoped this method will work without trouble either to the Societies or to the Department.

With regard to the work actually done, some 282 separate accounts of claims have been rendered, of which 148 claims had to be returned for revision, and the claims of sixty-seven Societies have been passed for payment. These claims refer to forms "A," which is confined to actually-paid annual subscriptions of members. The claims in respect of donations, &c., dealt with on form "B," cannot be dealt with until all claims under "A" have been paid, and the balance remaining for distribution has been ascertained. Some seventy letters have been written by Mr. Fitzgerald to officers of Societies in reply to questions of detail upon agricultural and pastoral show subjects and subsidy, and he has kept a statement of accounts showing moneys paid in subsidy, and reasons for claims being returned to Associations, and nature of information required to be supplied by these Societies. An account is also kept of the dates of all Shows, to admit of information in that regard being supplied to business people of the Colony, and also for *Gazette* and other purposes.

The books and accounts and butts of receipts given at Inverell, Glen Innes, Tentersfield, Armidale, Maitland, Dubbo, Forbes, Orange, Cootamundra, Wagga, Albury, and the Royal, also various Horticultural Societies in and around Sydney, have been examined and initialled, and the officers of many Societies have been advised concerning future requirements.

In conclusion, I may perhaps be permitted to express a hope that during the year 1894 we shall be able to demonstrate in more marked manner the advantages of the reorganisation and amalgamation of the Departments of Agriculture and Forests.

I have, &c.,

HARRIE WOOD,
Under Secretary for Mines and Agriculture.

Department of Mines and Agriculture,
19 February, 1894.

1894.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

GOVERNMENT LABOUR BUREAU.
(SECOND ANNUAL REPORT.)

Ordered by the Legislative Assembly to be printed, 14 March, 1894.

The Superintendent, Labour Bureau, to The Principal Under Secretary.

I HAVE the honor to present herewith the second Annual Report of the Labour Bureau, viz., from 18th February, 1893, to the 17th February, 1894.

Labour.

The general depression which has prevailed throughout the colony for the last three years, and particularly during the last year, has been keenly felt by all classes of the community, and particularly by the industrial classes. It has, indeed, been an era of adversity. The terrible financial crisis which the colony has passed through has had a depressing effect on trade in every direction. It has, naturally, checked the circulation of capital, while the high rate of interest prevailing has had a most disastrous effect on enterprise. Heavy financial losses have blighted the prospects of thousands of employers of labour, and a feeling of uncertainty as to future developments has had the effect of entirely shaking confidence. As a result, retrenchment has been the order of the day in all the avenues of industry, and thousands of men having been thrown out of work the labour market has been congested to an unprecedented extent. Among the men who have thus unexpectedly been deprived of the means of livelihood is a class who have suffered acutely. I refer to clerks, accountants, and professional men with families, who, unfitted for heavy manual labour, have found it very difficult to obtain employment in the country districts, where the principal demand has been mainly for farm or other labourers. It can therefore be readily understood that the absolute privation, the terrible struggle with poverty and destitution which these, as well as other industrious deserving men have undergone, has been very severe and painful. Despite all efforts not to reveal their poverty, they have been at length compelled to seek assistance from the relief department of the Bureau.

The state of the building trade, which is, as a rule, a correct index of the labour market generally, has been for some years, and is still, very much depressed, resulting no doubt from the collapse of so many building societies, and the failure of banking and mining companies.

At a meeting recently held in Sydney of those directly connected with the building trade, it was stated that no fewer than 6,000 operatives connected with that trade had been thrown out of employment through the general depression, and the statement does not appear to me to be much exaggerated. It is pleasing to note that large numbers of tradesmen connected with the building trade, who have lost their employment, have shown their bona-fides in the matter of desiring to obtain work by taking whatever has

offered, and in almost all kinds of farm work, as well as even less remunerative callings, they have shown their readiness to make use of whatever legitimate means there were to hand to enable them to tide over the depression. It will thus be seen that through the extra strain of increased supply from an unusual quarter there has been a corresponding difficulty added to those seeking the ordinary laborers' work offering.

It almost invariably follows that where the building trade is prosperous the labour market is in a satisfactory condition; and as the trade is in such a depressed state, not only in this colony but in the other colonies as well as in other parts of the world, the condition of the labour market generally in New South Wales can be adequately gauged.

In spite of the depression however, its severity, and widespread character, I am inclined to think that there are not so many persons unemployed this year as there were last.

The number of unemployed registered during the past year (1893) amounted to 12,145, consisting of 5,048 married men, having 10,215 children depending on them; and 7,097 single men, while the number of unemployed registered during 1892 was 18,600, consisting of 7,449 married men with 16,854 children. This shows a decrease for the past year of 6,455 as compared with the year 1892.

The number assisted and sent to work last year (1893) is 10,349, while the number for the year 1892 was 8,154. These figures show a decrease of 6,455 in the number registered last year, and an increase of 2,195 in the number outgoing for 1893, as compared with that of the previous year. It may also be noted that the percentage assisted and sent to work from the unemployed registered during the present year was equal to 85½ per cent. of the whole, while that for 1892 was equal to 44 per cent.

In addition to those sent to work by the Bureau an estimated number of 1,500 registered as unemployed have found work incidentally, but have not informed us that they have done so. Taking this into account the total number sent out for the year would be 11,849; deducting this number from those registered, and allowing for a percentage for double registrations, and taking into consideration a number of others registered, who have gone into the country or to the other colonies on their own account, also a large number who are partially employed, and taking further into account the number of unemployed at the beginning of the year, and the difference between those registered and sent to work this year, I estimate the number of unemployed in Sydney and suburbs at the present time at about 6,000.

There has been a considerable demand during the last six months for bush clearers and farm labourers.

No doubt this demand has been brought about in consequence of the reduction in wages, owing to the large number of unemployed throughout the colony.

Landowners finding that they are able to get men at reduced wages are clearing land throughout the country, which under ordinary circumstances would have been left in a state of nature, and everything goes to show there will be next year a large increase in the acreage under cultivation as compared with last year, although that exceeded the acreage under cultivation in any preceding year. In addition to a number of gangs of men engaged for "clearing" bush land, batches of miners have been engaged as tributors to work mines which have ceased operations, owing to their properties getting into more or less serious difficulties. Many of these mines are now being worked on the share or co-operative principle. These two sources of employment have been the means of providing at least a living to a large number of men in various parts of the colony.

Although there has been a rush of unemployed registered at the Bureau during the past month (January), there has also been an increase in the number sent out. Indeed, the indications all round, so far as I am able to judge, are that there are some signs of an improved state of affairs, as far as the working classes are concerned. Although wages are lower than formerly, if we could have public confidence restored, there would be every reason to hope that we have seen the last of the terrible wave of depression which has been passing over New South Wales, as well as the other Australasian colonies, and has in fact been world-wide in its disastrous effects.

It has, however, taught us this lesson—however bitter the experience may be—that land-booming extravagance and reckless investment are not the best methods to adopt to become a happy and prosperous nation. With a cheaper money market enterprise and confidence would follow, and as the industrial classes generally found employment prosperity would again return.

The large number of public works for which contracts have been accepted recently have given employment to a very large body of men. I may be permitted here to respectfully suggest that if possible it would be very desirable in the case of any public works contracts not requiring expensive plant or machinery in carrying them out, should be let in small sections, and thus enable gangs of unemployed men to tender for them, or do them at schedule prices.

If this could be done it would undoubtedly tend largely to relieve the present congested labour market. I am informed that in New Zealand an experiment in this direction has been found to turn out well, and with the present seriously over-crowded labour market the present time would be opportune to give the matter a trial. If this could be satisfactorily arranged by the unemployed themselves in their own interests coming forward and doing their part in an honest and conscientious manner, which under the circumstances I am certain many would do, it would increase the hope that a better state of things, so far as labour is concerned, is nearer than may be imagined.

A Select Committee was appointed during the year to enquire into the working of the Bureau, and having taken evidence of various witnesses, sent in a report to Parliament, which has, however, not yet been adopted by the House.

A severe depression in the coal trade has thrown out of employment a very large number of miners at Newcastle, Greta, Lithgow, and Wollongong. I visited Newcastle on three different occasions, and found a large number of able-bodied men in great poverty. I sent away from Newcastle and district alone no fewer than 857 men to the old goldfields in different parts of the colony to try and make their living by fossicking. At Greta, which I also visited, there was likewise a large number of miners unemployed, and from whence I despatched 49 men fossicking. Wollongong, Lithgow, and Goulburn were subsequently visited by me, and from these places I sent away 99, 52, 148 men respectively to try and make a living fossicking.

Fossicking

Fossicking.

In August last the Under-Secretary for Mines prepared a minute showing that a number of the unemployed might make a living on the old goldfields of the colony. This minute was approved by the Minister for Mines, and afterwards by the Premier, the result being that a board was appointed to give effect to the minute. The board consisted of Mr. Harrie Wood, Under-Secretary for Mines, Mr. W. Dowell, M.P., Mr. W. J. Slee, Chief Inspector of Mines, and the Superintendent of the Government Labour Bureau. This board met from time to time to consider the best means to be adopted, with the view of sending out fossicking those of the unemployed who desired to do so; and it is, perhaps, surprising the large number of them who have taken advantage of this means of obtaining a livelihood.

The mode adopted is, that those desirous of going on the old goldfields apply to Mr. Slee, at the Mines Department. If the applicant is considered to be suitable he is given a recommendation to the Superintendent of the Labour Bureau, who is empowered to grant a railway pass and a miner's right, the cost for which each man signs a guarantee to refund when able to do so. Those in destitute circumstances receive in addition to the miner's right and railway pass, the following rations to assist them to their destination, viz.,—10 lbs. flour, 5 lbs. sugar, and $\frac{1}{2}$ lb. tea, costing 2s. 6d. each.

During the six months that this means of finding employment has been in operation no less than 4,516 men have been assisted and sent to the different gold-fields of the Colony. Many of those who are sent are strong able-bodied men with years of mining experience.

From Sydney alone the number of men sent fossicking is 2,989; from Newcastle 857 were despatched; from Greta, 49; from Wollongong, 99; from Lithgow, 52; and from Goulburn, 148. The total number sent include some of the best miners in the Colony. They have been requested to write back to the Bureau giving information as to how they succeed; and, while many have complied with this request, a large number have not done so. Taking into consideration, however, the many hundreds who have corresponded with the Bureau, it is satisfactory to know that among all these men a large proportion of them have done fairly well, while the great bulk of them have succeeded in making a living.

Some, of course, have not been successful, and in not a few cases this has been because they have not had means to purchase necessary tools and machinery. In other cases some have found work at wages, whilst others have made up tribute parties. The very best evidence that a number of the miners have succeeded is the fact that no less than 122 have written to the Bureau asking for their wives and families to be sent to them, which has been done, their prospects being such that they look forward to making a living and a home for themselves and families.* Although this means of finding employment has been in operation six months, it increases in favour with the men themselves, as is evidenced by the fact that the large number of 1,530 have been sent out fossicking since 1st January to 17th February this year, being a daily average of nearly forty.

Considering the large numbers of men who have been sent out in this way, many of them thoroughly practical miners with lengthened experience, it is but reasonable to expect and sincerely to be hoped that some of them may succeed in finding payable fields, and thus be largely instrumental in reducing to a minimum the depression from which the Colony is now suffering.

The offer of a Government reward of £1,000 to the finder of a payable alluvial gold-field is much appreciated by old miners, and such an inducement will no doubt have a stimulating effect, and cause still more life to be thrown into this line of industry. And before leaving this subject it might be noted that numbers of those who have gone out to old patches where they know they can make at least bare living, or have done so previously, remain there pending the passing of the Mining on Private Property Act, so that they may be near the spot they desire to operate on the moment it becomes law.

The number of miners' rights issued to those going fossicking during the last six months is 3,623, at a cost of £1,240 15s.

The number of miners' rations issued to date is 2,278, costing the sum of £285 10s. 2d.

Labour Settlements.

The Act to establish and regulate labour settlements on Crown Lands was passed in June, 1893, and under that Act the Minister set apart land to form three settlements as a commencement, namely, one at Bega, one at Wilberforce, and one at Pitt Town.

The regulations governing these settlements are somewhat different in principle. The Wilberforce is more of a company of shareholders, who put down so much money each, to be all expended previous to any Government aid being obtained. There are at present on the settlement—men, 38; women, 22; children, 69; being a total of 129 souls.

The Bega settlement differs somewhat, each settler having his own area of land, but is co-operative in principle, and there are at present—men, 18; women, 18; children, 61 upon the settlement, making a population of 97 souls.

The Pitt Town settlement with which I am more conversant, being a member of the Board of Control appointed by the Minister soon after the passing of the Act. The regulations governing this settlement are communistic and co-operative in principle. The settlers consist of men taken from the ranks of the unemployed, and were without means. The funds for carrying on this settlement are advanced by the Government under the regulations, viz., £25 for a married man with family, £20 for a married man without family, and £15 for a single man. Under the Act I was appointed to receive and register all applications and report on the fitness of applicants to become settlers.

Up to the present time 723 applications have been received, consisting of 614 married men, with children representing 1,986, and single men and widowers, 119, making a total of 3,333 souls.

On the Pitt Town settlement there are at present 90 married men with wives and children numbering 265, and also 6 single men, being altogether 451 souls. It has now been in existence six months.

There are many who speak in favour of the possible ultimate success of this settlement, whilst others criticise it adversely. It is, perhaps, too soon to express an opinion as to the ultimate success of either of these settlements, but it is considered very doubtful by some whether the communistic co-operative principle will succeed. I am, however, afraid the want of incentive, which has made our pioneer

* NOTE.—This represents 122 women, with 350 children in addition, permanently settled in the country.

pioneer farmers successful, will be the chief obstacle to the success of these settlements, viz., by hard work and perseverance, looking forward to ultimately becoming the owner, and receiving the benefit of such industry and perseverance for themselves and families.

The chief elements, however, in any successful settlement under the Act must be good land, plenty of water, and convenience to market.

If, after time, experience shows that these settlements are going to succeed, it would be in the interest of the country to establish many more under the Labour Settlements Act.

Wages.

The Bureau has nothing whatever to do with the rate of wages; its functions being merely to bring employer and employee together, leaving the question of wages and terms to be settled by themselves. However, from the large number of letters received daily from employers in all parts of the Colony, and stating the wages to be given, it is evident that the general rate of wages for the past year has shown a reduced tendency all round, though in some branches it is more noticeable than others.

In the latter category it may be noted that amongst the country engagements farm and orchard hands are paid from 10s. to 20s. per week and found, as against 12s. to 25s. last year; station carpenters, 15s. to 32s. 6d. per week and found, as against 25s. to 35s. last year; married couples, £50 to £80 per annum against £55 to £90, the average rate showing a deduction of from 10 per cent. to 15 per cent. upon the previous year; bushmen, 10s. to 25s. as against 15s. to 30s.; camp cooks, 12s. 6d. to 30s. against 27s. 6d. to 30s.; general station hands, 10s. 6d. to 27s. 6d. against 15s. to 30s.; handy and general useful men, from 8s. to 20s. and found. A large number of elderly men are glad to accept employment at merely nominal wages in order to get a home.

Within the metropolitan area the building trade shows reduced wages, though with first-class tradesmen this is not noticeable as the scarcity of demand is for such services. Of foundry hands, blacksmiths, bootmakers, tailors, &c., it may be said that their trades are still very dull, though the wages appear to remain much the same as for the greater portion of last year.

Clerical engagements are small by comparison with the number who have been retrenched, and when fresh hands are employed the rate of wages shows a general reduction to have taken place of from 10 per cent. to 25 per cent.; indeed, many educated men are offering their services for anything they can get.

Refunds.

The refund of fares—rail, and steamer—as compared with last year shows a considerable increase, although there is still a very large amount owing on the account.

The “fossickers” are mainly responsible for the latter, but as the system of drafting men off under this head has only been in operation six months, and they have had to provide themselves with tools, &c., it is not surprising that only a small return has at present been made by them, but it is to be hoped that after a further short extension of time a substantial refund from this source will be received.

In many cases men who have gone mining have sent for their wives and families, and in these instances time must be allowed for them to settle down before expecting payment. Liberal time is granted in all cases, and payment by instalments taken.

The total amount received for the year 1892 was £1,135 16s. 1d., and for the last year, 1893, the sum of £2,676 10s. was paid, showing an increase of £1,540 13s. 11d. on the year, and being at the rate of about 44 per cent. on the total outstanding amount due by those sent out to their employment through the Bureau, and less than $\frac{1}{2}$ per cent. only on those sent out fossicking.

The system of refunds for papers came into operation in July, 1892, and the total amount received is £3,812 6s. 1d.

Relief Department.

It is to be much regretted that the nature of the report under this head is of an unsatisfactory character in many important respects.

During the past year, notwithstanding the extensive ramifications of the several charitable organizations and relief committees outside of this department, there has been a vast increase in the number of applicants here, showing that the depressed state of the labour market is still at a low ebb, and that the means have become exhausted with those who have struggled on against adverse circumstances for, perhaps, several years past.

The distress has been more varied, far-reaching, and painful in many cases than hitherto, and this more particularly is obvious among the non-manual labour class, such as professional men, clerks, accountants, shop hands, and those whose callings have to a large extent unfitted them to cope successfully with adversity.

One reason for what may be looked on as a temporary increase, is that so many have been sent out lately fossicking for gold, and in the meantime have left their families to be provided for through the Bureau, until they can either send them means to live on, or, as many have done, get their families sent to them when they have found they could make a living at their present occupation.

This department mainly concerns itself with relief of the women and children who have no means of livelihood. Unfortunately it is a fact that the effect of receiving relief on many hitherto manly dispositions has been deplorable, in that their sense of independence is gradually being sapped, and is being allowed by themselves to drift away, and in its place is slowly, but surely, asserting itself all the attributes of what go to make what is known as the “loafer” pure and simple. The sooner this is remedied the better for all concerned, and the best method for so doing seems to point to the system adopted in older and more experienced countries, viz., for every applicant for relief to earn the cost of such relief in whatever way may seem best to meet the special case.

By this means, whilst a man might not reap pecuniary profit for his labour, he at least would remain an independent citizen, and his moral and manly feelings would not become saturated with indifference and wholly debased, as they are now in danger of being under the present system of getting food without effort. This subject is further referred to with suggestions in this report under the heading of “loafers.”

It is further to be noted in this connection that there are not infrequent instances when men (and, sometimes women) refuse work offered, giving the reason that the wages are not sufficient (or not standard), while at the same time they expect to obtain the relief, which, except under extraordinary circumstances is, of course, refused.

An adult's ration given by the Bureau consists of 4 lb. bread, 3 lb. meat, $\frac{1}{2}$ lb. tea, and 2 lb. sugar, and in providing for the supply of a family two children are reckoned as one adult. The cost since September last is 1s. 5d. per ration, previous to which date it was 1s. 6d. In special cases of sickness infants and sick mothers are allowed a little milk, sago, or oatmeal, and there is no doubt that this has assisted to prevent an increase of infantine mortality (and possibly of crime) in the city.

While there has been so many cases of genuine distress relieved by the Bureau, these have been accompanied by attempted impositions of a kind that will call for condemnation; for instance, a few days ago an application was made by a man of means who was erecting a house for himself; another case, a woman could not be "bothered" replying to questions put to verify apparent misstatements in the form filled up. So long as some men get rations for their families they will make no effort to obtain any employment, but in these cases, as well as in others, the impostors have had a very brief reign. This section of the Bureau's work is carried out as follows:—Every applicant for relief has to fill up the attached form, which is handed to one of the inspectors, who thereupon visits the address and institutes inquiries.

The result is embodied in a report to the superintendent, and upon the report is based the issue or refusal and quantity of rations.

Cases of attempted fraud occur nearly every day, and it requires the greatest care and vigilance on the part of the inspectors, which I need hardly say are exercised to prevent them succeeding.

The greatest difficulty to contend with in giving relief is where the father of the family seems to have no sense of responsibility as such. So long as the Government keep the family he is content to linger on in laziness, but to stop the rations abruptly in such cases would be too harshly punishing the wife and children for the husband and father's offences. To deal with the various conditions and circumstances of the many deserving and undeserving applicants is a most difficult and anything but a pleasant duty, and requiring a good deal of discretion and care to do the right thing.

Nineteen thousand seven hundred and five weekly applications have been received during the year. This number represents a total of 2,169 distinct families, with 6,319 children, many of whom have been forced to apply several times at different periods of the year, thus giving a total of 19,705 shown as applicants. Of the 2,169 families 1,655 have been either refused or, having had relief for some time or obtained employment, been discontinued.

Fifty-two thousand five hundred and twenty-five rations have been issued (being an increase of 21,565), at a total cost of £3,840 6s. 0 $\frac{1}{2}$ d., as against the sum of £2,324 11s. 6d. for the preceding year.

The average cost of each family being relieved is £1 15s. 4 $\frac{1}{2}$ d.

Adverting generally to this department of the Bureau, there is no room for doubt that had these operations closed here the benevolent organizations of the city would have been taxed to an extent such as they may have found it impossible to cope with, taking into consideration the already heavy burden they were asked to bear.

To afford shelter to the homeless, a shelter shed was opened on Woolloomooloo wharf in one of the large Government sheds on the 1st day of June, and closed on the 27th day of September, 1893.

During the period it was available it was used nightly by an average of 503 men, and throughout the whole time good conduct and order prevailed.

The cost of administering this species of relief was about £50 and a small sum for incidental expenses.

In connection with this shed, teas were supplied at 1 $\frac{1}{2}$ d. per head, at the Mission Hall, Sussex-street, the cost of which was £121 2s. 3d.

Owing to the wet weather which set in some two or three months ago, after the shed was closed, arrangements were made for shelter to be given, upon tickets obtainable at the Bureau, at the Mission Hall before mentioned, at the rate of 1d. per head per night, and this is still being continued. The cost of this up to date is £35 13s. 2d.

Inspector's Report.

Relief in the Country Districts.

The distress from which the unemployed has suffered, and are still passing through, has not been confined to the metropolitan district alone.

Owing to the state of the coal trade (which a few years ago was so flourishing and promising, but now unfortunately so diminished and depressed) thousands of miners have been thrown out of employment, and their unfortunate families are suffering great distress. During

During my visits to Newcastle, Greta, Adamstown, Dudley, Minmi, Plattsburg, Wallsend, Lambton, Wollongong, Goulburn, and other places, I was made painfully aware of the enormous amount of destitution existing among the miners' families. As I have already pointed out, 4,516 miners have been distributed all over the Colony "fossicking," some on the old gold-fields and others trying new ground, but all striving to earn a living for themselves, their wives, and children.

To prevent the latter from starving I was authorised by the Government to issue rations to destitute families of women and children. In this way the sum of £1,277 17s. 7d. has been already expended in relief for Newcastle and district, viz., Plattsburg, Lambton, New Lambton, Carrington, Wickham, Merewether, Dudley, Adamstown, Hamilton, Teralba, and W. Wallsend.

The sum of £431 12s. 9d. has been expended for relief to the destitute of Greta, making a total of £1,709 10s. 4d.

In the month of December the Premier approved a minute that in future relief votes should be given as a subsidy of £ for £ for an equal amount voted by the Municipal Council or raised by the public, and expended in giving work on the roads and streets to the destitute unemployed, instead of giving out gratuitous rations, and this system is now being carried out.

Loafers.

In all large cities there is invariably to be found a number of men who have from different causes forsaken the path of honest labour and become what is commonly known as loafers on society. Unfortunately this class is very largely represented in Sydney at the present time. Many of these men were a few years ago hard working and industrious, but through bad habits, bad associations, and the neglect of manly principles, step by step they got off the right track.

In many cases the too free use of strong drink has made them lazy, idle, and degraded, causing them to lose their self-respect, any ambition they may have possessed, and at last their manhood, and they at length become a disgrace to their fellow men, and a nuisance and a burden to society. Loafers will not work if they can help it; they prefer to beg or steal rather than work for an honest living. This class is to be met with in all large cities at all times; in prosperity or adversity we have the loafer. In this city at the present time I estimate that there are from 400 to 500 confirmed loafers. They are daily to be seen in our parks, sleeping their indolent lives away, while all about them may be seen hundreds of foreigners with nothing like the opportunities and far greater disabilities to contend with, honestly working for and making a living, and rarely if ever seeking Government relief. Our climate is so favourable to this class that they can almost do without a home or shelter; and with really little or no physical exertion it does not take much to keep them alive.

How to deal with this class is a somewhat difficult problem to solve. I will, however, suggest one mode which might be made successful. If, say, 100 acres or more of fairly good land were set apart as an industrial farm, convenient to the city, and in connection with the Bureau, these idlers could be sent to it and compelled to earn their living. In fact, this farm could be made to serve the same purpose for the loafer as the "Sobraon" does for the homeless and neglected youth.

The men sent to the farm need not be confined to farm work, but could be set to do any suitable work. With good regulations and strict supervision, a great deal might be done towards reforming a fair proportion of the class to which I refer. I am convinced that one effect of compelling these men to work for a living would be that in some cases at least their former habits of industry and self-respect could be restored, and they would again take their places as worthy members of society. As reformation in this direction proceeded applicants for employment from amongst them might find situations through the Bureau in the country, and in this way lead on to the desired result.

The cost of such an experiment would not be very great; and, if some such scheme were adopted, it would, I believe, give results as satisfactory as similar schemes carried out on the Continent of Europe, especially in France, Germany, Holland, &c., where, as a recent traveller remarked, a beggar is not to be seen in the streets, and the loafer has no chance to follow his profession, being compelled to accept one of two alternatives—either work or starve. I think this scheme is worthy of a trial, and, if the reformation of this class can be brought about at a comparatively small cost to the State, the country would be relieved of a considerable financial burden, and society of an increasing nuisance and a danger.

It must be borne in mind that this paragraph does not refer to those of the unemployed who are honestly desirous of obtaining work, but are unable to do so, of which, I regret to say, there is still a great number, but to that other class who are always loudly professing to look for work, at the same time praying that they may not get it.

In addition to the estimated number of thorough professional loafers, are a number treading closely on their heels, and who work sufficiently long to enable them to unfit themselves for more exertion by getting drunk; and there is still another class, principally of younger men, whose only work consists of waiting until others more honest and less cute earn it, and then proceed to fleece them in various ways. I regret to say that this class appears to be on the increase, judging by the large number of such cases noted at the Bureau.

Registry Offices.

During the existence of the Bureau numbers of persons engaged through registry offices for employment in the country have applied to me for railway passes to enable them to reach their destinations; and in all cases which I believe to be genuine I have granted such passes, at the same time taking an order on the employer in each case for a refund.

My experience, however, of these registry offices during the existence of the Bureau leads me to the conclusion that a great many abuses exist in connection with them which might and should be remedied.

In the interest of the unemployed themselves I would strongly recommend that these offices should be licensed and placed under Government supervision. The principal reason that prompts me to bring this matter specially under notice is that I am satisfied that several of those professing to have obtained employment through registry offices have been victimised. After reaching their destinations by means of the railway pass obtained from the Bureau, some of these find that they are "not wanted," in some cases that no authority was given for their engagement, whilst in others there has been absolutely

no employment. After spending, perhaps, all they possessed in registry fees, the result is that they have found themselves stranded in a strange place without employment, and without the means for existence whilst they looked for it. When a person applies for a railway pass the original letter from the employer must be produced, and when this is not forthcoming a pass is rarely granted.

In some cases several persons I am certain are engaged for one and the same place, in others the offices are established simply to obtain fees from the highest bidder. It also happens, from information I have obtained the fare has in some cases been paid in advance by the employer and retained by the registry office, and then the man engaged has been sent to the Bureau to obtain a pass. Several parties have had to sell almost all they possessed to raise the registry office fees, in some cases as much as £3, and in these instances, if the Bureau did not come to the relief, the applicants, perhaps a married couple would be left destitute.

In the interests of all those seeking employment through these offices, I would recommend that they all be licensed in order to prevent fraud, and placed under the supervision of the Government, and so prevent poor people from being victimised.

This would result in benefit to the unemployed and be a source of revenue to the state.

Agencies.

I may mention here with respect to the establishment of agencies throughout the Colony in connection with this department as recommended in the report of the Select Committee on the working of the Bureau, that it is questionable whether they would realise all that is expected of them by their advocates. Personally, I should like to see three or four agencies established in a few large centres of population in the country with a view to practically testing their utility. One great objection to them would be the expense attendant upon the appointment of new sets of officers, but if it could be arranged that in each centre an officer already holding a Government appointment should perform the duties in addition to those he is already discharging this objection would be removed.

One direct benefit from the establishment of these agencies would be the collection of reliable information as to the state of the labour market in the country districts, in regard to which there has been some difficulty in the past. In regard to this suggestion to establish agencies a meeting was recently held at Bathurst at which the unemployed of that city to the number of from eighty to 100 were present. At that meeting a resolution was submitted affirming the desirableness of establishing in Bathurst an agency in connection with the Government Labour Bureau. Opposition of an unmistakable character was shown to the proposal, the argument being that such an agency would be the means of attracting a large number of the unemployed to Bathurst who would not otherwise go there. The motion to establish the agency was subsequently lost. The Mayor at the close of the meeting alluding to the necessity of giving relief to the unemployed requested those of this class who were present to call at the Council Chamber on the following morning, when temporary work of some kind would be provided and rations given to them in lieu of wages. Strange to say, out of the large number of the unemployed present at the meeting only some five or six turned up to take work. Therefore, so far as this district is concerned, the establishment of an agency in connection with the Bureau did not meet with the approval of many of those present, including the unemployed who voted against the resolution.

New Zealand Labour Bureau.

In the report of the New Zealand Department of Labour and Bureau of statistics dated 10th June 1893, a paragraph appears relating to the working of this department, to which I deem it worthy to direct your attention. In this it states that the number of men assisted by the New Zealand department during the year was 3,874, whilst the total assisted since it started in 1891, a period of one year and ten months was 6,467. Comparing these figures with ours, I would point out that we have assisted and sent to work in the two years during which the Bureau has been in existence, nearly three times that number, viz., 18,503.

A subsequent paragraph in the same report states that the New Zealand Bureau has been somewhat more successful than those established in other of the Australasian Colonies. "In New South Wales, continues the paragraph, the Parliamentary Committee appointed to report on the working of the Bureau in that colony, criticises it rather unfavourably, pointing out that there has been neglect of country agencies, and a tendency to centralize the unemployed in the capital city, and that the Sydney Bureau has been used as a means of lowering wages in the country districts." Without disputing the claim that is made for the successful working of the New Zealand Institution, permit me to observe that notwithstanding all the power and influence of a ministerial department, together with its provincial agencies—with all these advantages (if they are advantages)—our report shows, as already stated, nearly three times the work done. No doubt this in consequence of having a much larger population and number of unemployed as compared with those of New Zealand. This Bureau has had nothing to do with the reduction of wages which has taken place. All that is done is to bring employer and employee together, leaving the matter of wages to be settled by them. The wages question is plainly a matter of supply and demand. For instance, if 50 men are wanted and 500 offer, there is the danger of reduction of wages, but, if 500 men are required and only 50 offer, an increase of wages will assuredly take place. I would further add that we have received back from the men so sent to employment, the large sum of £3,812 6s. 1d., as a refund of railway and steamer fares since the system was inaugurated, some 6 months after the opening of the Bureau. So far as the New Zealand institution is concerned, I cannot find in their report any mention of refund of fares on part of the men sent to work, which is a matter of importance to consider when contrasting the efficiency of the two departments.

And in this connection it may be said, further, that hundreds of letters have been received from both employers and employees expressing their approval of the Bureau,—on the one hand because it has supplied the person wanted, and on the other because it has been the means of forwarding on to employment men who otherwise might have up till now been filling the ranks of the unemployed in Sydney.

General.

General.

The average daily attendance of the unemployed at the Bureau is from 400 to 500. They come and go all day and if nothing turns up to suit them they go elsewhere looking for work.

There is a considerable decrease of the unemployed from the other colonies this year compared with last. The number registered in 1893 was 1,057; the number for the previous year 1892 was 1,771; showing a decrease of 714. All those residing in the colony over three months are registered as citizens of New South Wales. It is probable that a number of those from the other colonies on our books do not give us correct information on this point.

The conduct of the men on the whole is good and orderly, and they give very little trouble except when a few larrikin loafers come among them and who have to be dealt with firmly.

The police returns for the year are less than last, the convictions for this year being 195 as against 399 for the previous year, showing a decrease of 204.

The work at the Bureau has almost doubled during the year 1893 in consequence of the large number going fossicking on the old gold-fields daily, and the great increase in the applicants for relief in the city and suburbs. Each application has to be inspected, reported on, checked, and marked by the superintendent for rations if correct; there is also the superintending the administration of relief in the country districts.

Registering and reporting on all applications for the Labour Settlements, together with a very large increase in the correspondence from all parts of the colony, which has to be attended to, answered, and frequently necessitating the whole of the staff remaining back after office hours to keep pace with the work. I am pleased to be able to report that notwithstanding the increased duties, the whole of the officers of the Labour Bureau do their work cheerfully and well, conscientiously keeping in view the object for which the Institution was established by the Government.

Appended are statements in detail of the work and operations of the Bureau for the year ending February 17th, 1894.

JOSEPH CREER,
Superintendent.

NEW SOUTH WALES.

LABOUR SETTLEMENTS ACT.

(REGULATIONS UNDER.)

Presented to Parliament, pursuant to Act 56 Vic. No. 34, sec. 8.

Department of Lands,
Sydney, 10th May, 1894.

REGULATIONS UNDER THE LABOUR SETTLEMENTS ACT:

It is hereby notified, for public information, that the following Regulations, made in pursuance of the Labour Settlements Act, by the Board of Control of the Labour Settlement at Wilberforce, have been approved by His Excellency the Governor, with the advice of the Executive Council, to apply to such Labour Settlement.

[94-122 L.S.L.]

HENRY COPPLAND.

REGULATIONS made in pursuance of the Labour Settlements Act by the Board of Control of the Labour Settlement at Wilberforce.

1. The Board shall, not later than at its fourth meeting, and thereafter annually during the month of January, and also from time to time as necessity shall arise, elect from among its own members a Chairman, Vice-Chairman, Honorary Treasurer, and Honorary Secretary.

2. The retiring Chairman, Vice-Chairman, Honorary Treasurer, and Honorary Secretary shall be eligible for re-election, and shall continue in office until their successors are elected.

3. The Chairman or Vice-Chairman shall preside at all meetings of the Board at which they may be present, and the officer presiding shall have a casting but not a deliberative vote.

4. During the temporary absence of the Chairman and Vice-Chairman, the members of the Board assembled at any meeting may elect any one of their number to act as Chairman. An acting Chairman shall do all such things as the Chairman is required to do by these Regulations during the absence or inability of the Chairman or Vice-Chairman.

5. The Chairman, the Honorary Treasurer, and the Honorary Secretary shall sign all cheques authorised by the Board; but in the absence of one or more of them, the signatures of such member or members as may be duly authorised by the Board to sign in their stead shall be sufficient.

6. The Honorary Secretary shall keep minutes of all meetings of the Board, receive and conduct the Board's correspondence, subject to the general supervision and directions of the Board, and act generally as the Board's agent in all such matters as the Board shall require.

7. In addition to the ordinary meeting of the Board, to be held at least once in every month, an extraordinary meeting of the Board may be summoned at any time by authority of the Chairman, or upon the requisition of three members of the Board. At every meeting four members shall form a quorum. Not less than twelve hours' notice in writing of the time and place of any Board meeting shall be given; but no such notice shall be necessary for any regular Board Meeting which the Board may have arranged to hold at certain stated intervals.

8. The Honorary Treasurer shall keep all the accounts of the Board and pay and receive all moneys on the Board's behalf. No money shall be paid or expended without the authority of the Board being first had and obtained, and a receipt in writing shall in every case be taken, which receipt shall be filed as part of the records of the Board.

9. The Governor may appoint two auditors who shall from time to time, but not less than once in each period of six months, examine the Board's accounts and certify to the accuracy and general correctness of the statements prepared by the Honorary Treasurer, and of any abstract or balance sheet professing to represent the same. They shall also report upon the manner in which such accounts have been kept and make any suggestions which they may think necessary.

10. All orders of the Board for provisions, goods, or otherwise, shall be signed by the Chairman, the Honorary Secretary, and the Honorary Treasurer, on forms provided for the purpose, butts of which forms shall be kept as part of the records of the Board.

11. The Board shall not be responsible for any debt incurred by, or on behalf of, any individual member of the Settlement, nor for any debt incurred without the order of the Board.

12. The Board may from time to time appoint one of the enrolled members of the Settlement as a Working Overseer of the Settlement, and such overseer shall see that any directions of the Board are carried out, and shall, subject to the Board's directions, apportion and determine the character of the work to be performed on the Settlement, and fix the hours during which it shall be performed. Any person appointed as Overseer shall, if a member of the Board, resign his position as member of such Board before he shall be competent to act as Overseer.

13. The Board may from time to time appoint one of the settlers to act as Storekeeper, and it shall be the duty of the storekeeper to keep an accurate account of all the provisions received and issued by him, and of all the property of the Settlement, including tents, tools, implements, and vehicles, live stock, and stock in trade, and property or goods of every kind. He shall also keep a record of all changes in the said property and of the incomings, outgoings, and balance, in such a form as shall be required by the Board, and he shall embody the same in a report to the Honorary Treasurer whenever such report shall be called for by the Board. The Board shall require such a report at least once every three months.

14. The Board may, whenever it shall deem it expedient, call upon the Overseer or Storekeeper to resign, or may remove them from office and appoint successors in their stead, subject to Regulation No. 13.

15. The principle of the Settlement shall be co-operative. Members shall each work on an average at least forty-eight hours in every week for their common benefit, but in any case of necessity, emergency, or expediency, any such members shall work such number of hours as the Overseer shall direct. No member shall be credited in the time-book with any excess over such forty-eight hours, except the Overseer shall have directed it as necessary. The Overseer shall keep a time-book, in which shall be entered at the close of each day the number of hours every individual member has worked, and every Saturday there shall be issued to each member, and publicly exhibited, a record of the number of hours he has worked during that week. Beyond the number of hours during which any member shall be compelled to work, the time and earnings of such members shall be at his own disposal, provided that the Board shall have full power to restrain him from using such spare time, or any member whatever, from acting in such a manner as may interfere with the work of the Settlement as a whole.

16. No work for private emolument outside the Settlement shall be undertaken by any person resident in the Settlement, unless he shall have first obtained express permission from the Board to undertake the same.

17. Any part of the labour at the disposal of the Board may be employed in works outside the limits of the Settlement, on such terms and conditions (not inconsistent with these Regulations) as the Board may see fit, provided that the Board shall in no case accept any such work on such terms as might compete on the basis of a lower wage with workmen outside the Settlement.

18. All moneys derived from the Settlement, and all moneys earned by the members thereof, whether by employment outside the Settlement or not, except moneys earned by a member in his own time, shall be paid to the Board, and the Board shall deposit all such moneys in a bank to be approved by the Minister, to be held in trust for such Board. Such moneys shall be applied or retained by the Board in the first instance to such extent as may be necessary for the purposes of the Settlement; but if the whole of such moneys are not so required, the portion not required may be dealt with in the following manner:—Such portion as the Board shall consider desirable shall be carried to a sinking fund to provide for the first rent required by section 3 of the Act, and the first instalment required by section 6 of the Act, due at the expiration of the fourth year of the lease; and when the amounts carried to such sinking fund shall equal the amounts due to the Crown at the expiration of the fourth year of the lease, the sinking fund shall be held to be satisfied and shall cease. The balance may, from time to time, be divided among the members thereof, and each member's proportion of the money distributed for any period shall correspond to the proportion which the number of hours he shall have worked shall bear to the total number of hours worked by the whole of the members of the Settlement during such period. Such number of hours, in either case, shall be ascertained from the Overseer's book, and shall be based on the record contained therein.

No part of any moneys advanced to the Board by the Colonial Treasurer under section 6 of the Act, and no part of any moneys received from such persons as are referred to in that section, shall be distributed under this Regulation.

19. Any child, over the age of 14 years, of a member of the Settlement, may, if physically capable, be required by the Board to assist thereon, but shall not be entitled to anything further than the allowance prescribed by Regulation 22. Nothing herein shall prevent the employment of such child elsewhere if the parent shall so desire. Provided that if any child over 14 years of age shall be employed otherwise than for the Settlement, no rations shall be allowed; but no part of such child's earnings shall be claimed by the Board.

20. Any settler disobeying any direction, rule, or order of the Board, or any direction of the Overseer, shall be liable to a penalty not exceeding £2 for every such offence, which shall be a charge against his share of the proceeds of the Settlement; and obstinate and continued disobedience of any such rule or direction shall render any settler guilty of the same liable to be disenrolled.

21. A plan of the Settlement, dealing with residence areas, reserves, sites for the establishment of industries, and the allocation of particular allotments to the individual members, shall be designed by the Board, and submitted to the Minister for Lands for approval; and residence sites approved by the Minister may be assigned by the Board for occupancy to individual members of the Settlement, who shall thereupon become entitled to retain and use solely for their own benefit such residence sites so long as they shall remain members of the Settlement.

22. The storekeeper on the Settlement shall on application issue each week to the settlers and their families, such provisions or other articles (exclusive of clothing) to the following values as may be kept in the store:—

Each enrolled member.....	6s. per week.
The wife of an enrolled member	4s. „
Each child over 14 years of age in work for the Settlement	8s. „
Children under 14 years of age	1s. „

23. Such clothing and materials as shall be necessary, and as the available funds of the Board will admit of, may be advanced by the Board to the members of the Settlement for the use of such members or their families.

24. The maintenance of the members of the Settlement and their families shall be charged as a whole upon the funds of the Settlement, until the net results of the labours of the Settlers shall produce more than the amount necessary for the subsistence of such Settlement, when the cost of maintenance of any enrolled member and his family shall be taken into account against him in connection with the distribution of such proceeds.

25. Any member admitted to the Settlement after the expiration of six months from the establishment thereof, if not a transferee as provided by Regulation 26, shall be debited with such an amount as the Board shall deem equitable. Such member shall not receive any part of the proceeds of the Settlement beyond the amount necessary for subsistence until such debit shall have been extinguished, but on the distribution of any proceeds he shall, notwithstanding, be credited with such proportion thereof as he might have received had no amount been debited against him. The amount credited but withheld from such member, shall be available for distribution among such other members of the Settlement as may be entitled to share in the general distribution of any proceeds.

26. Any member after the expiration of six months from his arrival on the land may, if not disenrolled in the meantime, transfer his interest to another, providing only such transfer shall be approved by the Board, and the transferee enrolled by the Board. If the Board approve of the transfer, the transferee shall succeed to all the rights and liabilities of the transferor, and such transferor shall be disenrolled on the day on which the transferee shall be enrolled.

27. If any member shall retire from or abandon the Settlement during the first six months of his arrival on the land, or shall at any time be disenrolled, he shall, except as provided in Regulation 28, forfeit to the Board all his interest in such Settlement and all share of any distribution to which he might otherwise have been entitled. But where such retirement is caused by sickness or other sufficient cause, the Board may, out of any moneys at its disposal, assist such retiring member by payment to him of such sum as they may think he is, under the circumstances, entitled to.

28. Should any member of the Settlement die or be declared a lunatic, his interest as such member may be disposed of by his legal representatives to any person who shall be competent to become and shall become an enrolled member; and such person shall, when enrolled by the Board, succeed to all the rights and liabilities of his predecessor. Failing disposal as aforesaid within six calendar months from the date of death or declaration of lunacy, as the case may be, the Board may dispose of the interest of the deceased or lunatic member either for cash or upon terms, and pay the same to his legal representatives, provided always that the Board may, but shall not be legally compellable, to pay to the representatives of any deceased or lunatic member such sum of money as, in the opinion of the Board, shall represent the interest of such member at the time of his death or the declaration of lunacy.

29. A widow of a deceased member may hold a share in the Settlement, upon enrolment, provided that the conditions of labour prescribed by the Rules and Regulations governing the Settlement are complied with on her behalf.

30. Every member to have such area of land for his own private use as may be approved by the Minister, and allotted by the Board under Regulation 21.

31. Every member is expected to do his utmost to promote the interest of the Settlement, and to do such work as the Overseer may think he is best suited for.

32. Every member must keep his allotment clean and in good order, and attend to the sanitary arrangements necessary for the well-being of the Settlement.

33. All complaints and propositions shall be given in writing to the Board at least twenty-four hours before the time of meeting.

34. No intoxicating liquors shall be sold within the limits of the Settlement, and any member selling or purchasing the same within such limits shall be liable to disenrolment.

35. No gambling shall be permitted within the limits of the Settlement.

1894.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LABOUR SETTLEMENTS ACT AMENDMENT BILL.

(MESSAGE No. 34.)

Ordered by the Legislative Assembly to be printed, 19 April, 1894.

R. W. DUFF,
Governor.

Message No. 34.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends for the consideration of the Legislative Assembly the expediency of making provision to meet the requisite expenses in connection with a Bill to amend the "Labour Settlements Act."

*Government House,
Sydney, 31st January, 1894.*

1894.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LABOUR SETTLEMENTS ACT AMENDMENT BILL.

(PETITION FROM CERTAIN SETTLERS ON THE PITT TOWN LABOUR SETTLEMENT, SUGGESTING
CERTAIN AMENDMENTS.)

Received by the Legislative Assembly, 1 May, 1894.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly, in
Parliament assembled.

The humble Petition of the undersigned,—

RESPECTFULLY SHOWETH :—

1. That your Petitioners are settlers on the Pitt Town Labour Settlement, enrolled under the
“Labour Settlements Act of 1893.”

2. That a Bill having been presented to your Honorable House to amend the said “Labour Settlements Act of 1893.” your Petitioners are of opinion that to secure the better working of the Settlement provisions should be inserted in the said Amending Act for the following purposes :—

- a.* To confer on the settlers the right to elect their own officers.
- b.* To give the settlers direct representation on the Board of Control.
- c.* To confer on the settlers power to recommend the disenrolment of any of their number, by ballot of the settlers, two-thirds to constitute a majority.

3. That, at our instance, and by our desire, Mr. Schey, M.L.A., has formulated a series of amendments to provide for the carrying out of our wishes as aforesaid, which amendments have been read and approved by us whose names are appended hereto.

Your Petitioners therefore most humbly pray that your Honorable House will take the facts and circumstances detailed in their said Petition into most favourable consideration, and will pass the aforementioned amendments into law, or grant such other relief to your Petitioners as may seem just and right to your Honorable House.

And your Petitioners, as in duty bound, will ever pray, &c.

[Here follow 68 signatures.]

1894.

NEW SOUTH WALES.

POLICE DEPARTMENT.

(REPORT FOR 1893.)

Presented to Parliament by Command.

The Inspector-General of Police to The Principal Under Secretary.

Sir, Police Department, Inspector-General's Office, Sydney, 11 January, 1894.

As the Police Estimates for the current year will shortly be under consideration by Parliament, I think it advisable not to delay the transmission of the annual statement of the strength and distribution of the constabulary, and to accompany it as usual with my report for the year 1893, as required by the Police Regulations, and the Chief Secretary's instructions.

During the year new stations have been formed at the places hereunder named :—

Towamba	Southern District.
Trundle	Western District.
Dudley...	North-Eastern District.
Burren...	North-Western District.
North Broken Hill	South-Western District.
Yerong Creek—Culcairn	Murray District.

The strength of the Police has also been increased in the Metropolitan District and at the following places :—Broken Hill, Grenfell, Newcastle, Campbelltown, Wilcannia, West Maitland, Warialda, Deniliquin, and Carrathool.

The station at Eulowrie was discontinued.

One hundred and thirty-eight appointments were made during the year to provide for the above increases, and to fill vacancies occasioned as under :—

Resignations	52
Discharges	28
Dismissals	13
Superannuations	16
Deaths	7

Eight Police pensioners died in 1893, who had been in receipt of pensions amounting in the aggregate to £350 1s. 8d. per annum.

Sixteen members of the Force of various ranks were superannuated during the year, ten receiving pensions at rates varying between £68 8s. 9d. and £500 per annum, amounting in all to £1,929 2s. 6d. per annum, and six were granted gratuities upon their discharge, which entailed a charge of £830 10s. upon the Fund.

A temporary pension of £68 8s. 9d. per annum lapsed during the year, and a gratuity of £112 10s. awarded as a final payment in lieu thereof.

Seven widows of members of the Force were awarded gratuities from the Police Reward Fund, amounting in all to £902 5s.

The condition of the Police Reward and Superannuation Funds becomes more unsatisfactory every year. The Treasury accounts show a balance on the combined funds of only £26,686 13s. 4d., after payment of the pensions, &c., up to the 31st December, £24,000 of that amount being investments, whilst in the year 1890 the investments to the credit of the funds amounted to £40,000, £16,000 having since been realised to meet the charges upon the fund in excess of the current income.

As there are many officers and men who must be superannuated in the near future, it will be necessary to take measures to place the funds on a permanently settled basis. Up to the present time the demands upon the funds have been met without any contribution from public moneys during the forty-two years it has been in operation.

15—A

The

[1,015 copies—Approximate Cost of Printing (labour and material), £16 14s. 3d.]

Deducing my information from annual reports furnished to me by chiefs of police of cities and states in other parts of the world, it is of interest to note that the system and discipline of police bodies is gradually assimilating in all civilised places, and further, that similar difficulties present themselves in all places in directing the operations of the police to the best public advantage, legislation on social matters being desired in many places to give the police more effective control.

As a natural result of this system of management and operation, it is found that there is prompt co-operation whenever it is found necessary to ask for information regarding criminal absconders, or upon other police matters, and I am glad to acknowledge the services rendered to me in this regard by the chiefs of police in other countries, which it is my endeavour at all times to reciprocate.

As regards provision for police station buildings, barracks, lock-ups, and other departmental matters, I believe New South Wales to be in advance of all other places.

The undermentioned works in connection with buildings have been completed during the year on behalf of the Department :—

Molong...	Additions to lock-up.
Murwillumbah...	Additions to court and watch house.
Germanton	Additions to lock-up.
Braidwood	Repairs, &c., to court and watch house.
Wentworth	Repairs, &c., to police-station.
Balranald	Erection of grill-yard at lock-up gaol.
Gunning	Additions, &c., to court and watch house.
Tamworth	Erection of lock-up.
Yerong Creek	do
Warialda	Erection of police barracks.
Sydney	The watch-house in Regent-street is approaching completion, to replace the building objectionably situated and badly constructed near Christ Church.

The occupation of the police barracks at the Central Police Station has proved very advantageous to the Service. An average of fifty single constables are quartered there, and, as the lodging allowance thus saved amounts to about £900 per annum, the rental thus represented is a handsome return for the moderate cost of the building. Superintendent Read reports that the management under Sergeant Mitchell has been excellent, there having been but very little friction, and absolutely no difficulty; and, as a result of the superior sanitary arrangements, the health of the inmates has, he thinks, been above the average. The advantage to the Service has been a more vigorous enforcement of necessary discipline among the junior members of the Force, and the constant readiness of a large body of men in the centre of the city for any emergency that might arise either by day or night. Several instances have already occurred showing the advantage of such an institution to the Service and the public.

The conduct of the police generally has been excellent, the number of dismissals lower than the average, and, judging by the numerous recommendations for promotion made by officers of the Department, magistrates, and other influential persons, many of the police must have performed their duties with exceptional efficiency.

I have, &c.,

EDMUND FOSBERY,

Inspector-General of Police.

RETURN of the Strength and Distribution of the Police Force on the 31st December, 1893.

1894.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

REMOVAL OF CONSTABLE ANDREWS FROM BYRON BAY.
(CORRESPONDENCE RESPECTING.)

Ordered by the Legislative Assembly to be printed, 15 March, 1894.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 14th November, 1893, That there be laid upon the Table of this House,—

“Copies of all letters, reports, papers, and correspondence relating to the removal of Constable Andrews from Byron Bay.”

(*Mr. Perry.*)

Telegram from J. P. Garvan, Esq., M.P., to The Chief Secretary.

Byron Bay, 1 May, 1893.

LOCAL trespassers forcibly entering on my land; policeman aiding and assisting. I want protection from this gross outrage, and consequently appeal to you.

The Inspector General of Police.—C.W., B.C., 1/5/93. I received a similar communication and wired to local police at once.—E.F., B.C., 1/5/93. The Principal Under Secretary.—Since writing the above, I have received a report which I attach.—E.F. Inform Mr. Garvan, M.P., accordingly.—C.W., 9/5/93.

Telegram from J. P. Garvan, Esq., M.P., to The Inspector-General of Police.

Byron Bay, 1 May, 1893.

CONSTABLE Andrews with party of trespassers entered on my land yesterday, and, ejecting my men, threatening to arrest if they did not leave. The men informed Andrews that they were there by my authority. I request immediate reparation for the outrage by your office.

Telegram from the Inspector-General of Police to The Inspector of Police, Armidale.

Sydney, 1 May, 1893.

MR. J. P. GARVAN, Byron Bay, wires, Constable Andrews, with party of trespassers, entered on his land yesterday, ejecting men, and threatening to arrest, &c. Please inquire into this at once by wire, and reply.

For very careful inquiries and full report. What does this mean? What was Constable Andrews doing at Mr. Garvan's—his duty? Who are the persons that were with him? I want full particulars. What was said and done? Why necessary to go there on Sunday? Report all the facts.—THOS. GARVAN, Superintendent, Armidale, 1/5/93. W. C. Andrews, Byron Bay.

Telegram from the Inspector of Police, Armidale, to Senior-Constable Andrews.

Armidale, 1 May, 1893.

MR. J. P. GARVAN, Byron Bay, telegraphs Inspector-General, Constable Andrews, with party of trespassers, entered on his land yesterday, ejecting men and threatening to arrest, &c. Wire me particulars immediately what you were doing there and what occurred; your business, &c., and report fully by post as well. Urgent.

THOS. GARVIN.

233—A

Telegram

Telegram from the Superintendent of Police, Armidale, to The Inspector-General of Police.

Armidale, 1 May, 1893.

SENIOR-CONSTABLE ANDREWS telegraphs as follows:—Dispute between Mr. Garvan and tenant. I was present by request of tenant to prevent probable violence. Acted in that capacity. Did not threaten to eject or arrest anyone. Had no occasion to interfere in any way. Report by first post upon receipt will be sent you.

Police Report.

Police Station, Byron Bay, 1 May, 1893.

W. C. ANDREWS, Senior-constable, reports *re* the attached that on Saturday evening, 29th April, Mr. Bryen, a tenant of Mr. Garvan's, informed the Senior-constable that three men had got into a house on one of his farms, and when requested had refused to leave and used threatening language, and brandished a knife, and stated their determination of remaining there. Mr. Bryen stated that he wished to give them in charge. The Senior-constable refused to take them into custody, and informed Mr. Bryen that he had no power to act in the matter, only so far as to try to prevent any undue violence. Mr. Bryen stated he was going to put them out, and was afraid the men would do some act of violence, as they were half intoxicated and had liquor in the house, and requested the senior-constable to go with him and his sons to the house in question. On the following morning the senior-constable went with Mr. Bryen and his sons to the house. There were two men there, and Mr. Bryen requested them to leave the place peaceably, as it was his. After some conversation between the Bryens and the men, it was arranged that the men should shift their things out of the house they occupied into an outhouse. The Bryens then fastened the door and left the premises.

The senior-constable did not say anything to the men to induce them to leave the house. He neither suggested nor used any threats of any kind whatever. He simply watched what was being done. He did not get off his horse, nor did he take any part whatever in the affair.

W. C. ANDREWS,

Senior-constable.

Forwarded to the Inspector-General of Police in connection with the Superintendent's telegram of the 1st instant.—GEO. MCKERROW, Sr.-Sgt., *abs.* Supt. Garvin, Armidale, 6/5/93. Forwarded to the Principal Under Secretary in connection with Mr. Garvan's complaint. As, however, I have heard from Mr. Garvan an account of what happened (as related to him) which is at variance with the senior-constable's statement, I have directed a further inquiry and informed Mr. Garvan.—EDM. FOSBERRY, I.G.P., B.C., 9/5/93. The Principal Under Secretary. Await further report.—C.W., 13/5/93.

Telegram from The Inspector-General of Police to J. P. Garvan, Esq., M.P.

Sydney, 2 May, 1893.

CONSTABLE ANDREWS explains that he was requested to be present by your tenant to preserve the peace. Has no power to interfere further in private disputes respecting property. States he was not called upon to do anything. Further report called for.

J. P. Garvan, Esq., M.P., to The Inspector-General of Police.

Sir,

Avoca, Byron Creek, 3 May, 1893.

I am just now in receipt of your telegram, as follows:—

"Constable Andrews explains that he was requested to be present by your tenant to preserve the peace. Has no power to interfere further in disputes respecting property. States he was not called upon to do anything. Further report called for."

In the first case, it was unwarrantable for Constable Andrews to assume, no matter who made a statement to him, that there was likely to be a breach of the peace in any lawful negotiations with me. I think my character and standing should have saved me from such an aspersion.

Bryen was not my tenant with reference to this farm. About two years ago I allowed him to temporarily use it for the purpose of grazing some cattle of mine that he was dairying on the halves in an adjoining farm. Over a year ago I told Bryen I would discontinue the arrangement, as I had decided to turn the farm to more profitable account. Bryen expressed regret then at my decision, and asked me to include it in the lease of the other farm, but I declined, as the farm I had already leased them was too large.

Bryen then removed their servant from the farm, and I tried on two occasions to let it, but could not arrange with a suitable tenant, and I have reason for supposing that Bryen discouraged these people from taking the farm.

At the time, and several times since, I entered on possession, and had peaceable and undisputed possession. The dry cattle from the herd Bryen had the use of were grazing on the farm. All the cattle were mine.

But I need not occupy time with these details; sufficient to say Bryen was not my tenant. He never paid me a shilling rent, and he had no document to show that he was my tenant in respect of this land, and never thought of setting up any claim to the land till he heard I was about letting it, which, of course, would lessen his grass area, and by doing a bit of low bluff, he thought he would frighten away the incoming tenant, as most people will not deal with land that is in any way in dispute.

The action of Constable Andrews in coming with six men of the Bryen family and servants, ordering my men out of my cottage, into which I put them in peaceable possession, had a most prejudicial effect.

The men who were in possession of the cottage were peremptorily ordered by Bryen to leave it, and they declined to leave.

Bryen then said they, including the six of themselves and the policeman, would remove them by force.

One

One of my men appealed to the policeman, and asked if they were going to remove them by force. The policeman answered, "Yes; that is what I came for, if you do not go quickly," and he did not think he was exceeding his duty. One of my men then said to the policeman, "If you have come to remove me by force I might as well go myself," and then removed his things.

You will see what a gross outrage this was on my rights and my property. I may also state that my men told the constable that they were in possession by my orders; nevertheless he insisted that they should leave the place.

I need not explain the importance of placing a person in possession of a property who has never paid rent nor attorned as a tenant, and the fact that there was an intimacy existing between Bryen and this constable puts a deeper complexion on this action.

I am not a lawyer, and do not know what amounts to a conspiracy in law to do an illegal act, but certainly there was a most outrageous act done to me and my property by these seven men.

Yours, &c.,

JAMES P. GARVAN.

Police Report.

Police Station, Byron Bay, 6 May, 1893.

W. C. ANDREWS, senior-constable, reports further *re* the attached, that the names of the other persons present on the 30th April at a farm known as Bonnal's, the property of Mr. J. P. Garvan, and in the occupation of Mr. Robert Bryen, were—R. Bryen, his two sons James and David Bryen, John and Thomas Lindsay, and one Martin Turner. The names of the men who were in the house—one was Thomas Hill and the other man the senior-constable did not know.

The conversation between Mr. R. Bryen and Hill and his mate, was as follows, as near as the senior-constable recollects:—Mr. Bryen said, "Now, men, I want you to leave this place peaceably, as it belongs to me," and Hill said, "Well, Mr. Garvan told us to remain here; you had better see Mr. Garvan." Bryen then said, "No, I am not going to see Mr. Garvan. The place belongs to me, and I want you to leave without any bother. I have nothing against you personally." Hill then said, "We can't shift all our things to-day. Suppose we put them into that place up there" (pointing to an old barn on the land), and Bryen then said that they could do so, but to remove their things on the following day. Hill then went to the back door and brought his tent, blankets, &c., out of the house and laid them on the grass. Hill's mate did the same. Hill then said, "There you are then; all our things are out." They then carried their things towards the back of the house, and the constable did not see where they put their things. They did not put them in the barn previously mentioned. Mr. Bryen and Mr. Lindsay then fastened the doors of the house and took the key and left. The senior-constable remained on his horse about 8 yards from the corner of the house the whole of the time; he made no suggestion; he did not advise any one; he neither threatened to eject or arrest any one; he took no part in the affair; he had no interest whatever in the business; he only saw what was done, and left with the others. The senior-constable believes that Robert Bryen and the Lindsays are partners, or are in some way jointly interested in the estate. They are considered highly respectable and reliable people in the district.

W. C. ANDREWS,

Senior-constable.

Sub-Inspector Carroll, Lismore,—For Mr. Carroll's information in connection with papers sent him yesterday from Maclean; attach these to them. It is always better for the police to keep clear of such matters. Let landlord and tenant fight out their disputes at the police court. So far as I can judge from papers I have seen, I really do not see why Andrews went there at all. In cases of doubt a telegram to me should always be sent.—THOS. GARVIN, Superintendent, Palmer Island, 13/5/93.

The Principal Under Secretary to J. P. Garvan, Esq., M.P.

Sir,

Chief Secretary's Office, Sydney, 9 May, 1893.

Referring to your telegram of the 1st instant, representing that a local policeman is aiding and assisting persons who are forcibly trespassing on your property at Byron Bay, I am directed by the Chief Secretary to transmit herewith for your information a copy of a telegram from Senior-constable Andrews, of Byron Bay, on the subject.

I am at the same time desired to add that the Inspector-General of Police is engaged in instituting inquiries into the complaint, and that any additional report in the matter will be duly communicated to you.

I have, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

Telegram from J. P. Garvan, Esq., M.P., to The Inspector-General of Police.

Byron Bay, 9 May, 1893.

ENCOURAGED by assistance your local officer gave on the occasion complained of, trespassers have since made two violent raids, and drove off horses of my tenant, and endeavouring to frighten him off place. Three Supreme Court writs for trespass have been served. Two of the trespassers when served with writs said they were not liable; they were only servants. Cannot my property and my tenant be protected from these gross outrages?

Telegram from J. P. Garvan, Esq., M.P., to The Inspector-General of Police.

Byron Bay, 9 May, 1893.

Am leaving for Brisbane to-morrow. Can officer investigating arrive before I leave.

Telegram from The Inspector-General of Police to J. P. Garvan, Esq., M.P.

Sydney, 9 May, 1893.

Your letter received, also constable's report. As he denies doing or saying anything on occasion, have ordered further inquiry.

Minute

Minute of The Inspector-General of Police.

Sydney, 9 May, 1893.

MR. GARVAN's letter contains statements founded apparently upon what he was told entirely at variance with W. C. Andrews' report. The matter must be, therefore, more closely investigated to elicit the facts.

I send this to Grafton direct to save time; but if Mr. Garvan can be communicated with, the papers should be shown to him.

Inspector Casey, Grafton.

E.F.

Telegram from Inspector Casey to The Inspector-General of Police.

Grafton, 9 May, 1893.

SUPERINTENDENT GARVIN out of reach of telegraph line; will be here early to-morrow morning.

Telegram from Inspector Garvin to The Inspector-General of Police.

Grafton, 10 May, 1893.

RETURNED here seven o'clock this morning. Have wired Mr. Garvan, Byron Bay, for names of persons who can prove unwarrantable interference by Constable Andrews he complains of, and informed him searching investigation will be held by Sub-Inspector Carroll, and that his complaint will be thoroughly inquired into. Have telegraphed Armidale send papers to me here, and will give Mr. Carroll full instructions. Leaving very early to-morrow morning, returning here Monday, finally leaving for Armidale Tuesday.

Telegram from J. P. Garvan, Esq., M.P., to The Superintendent of Police, Grafton.

Brunswick Heads, 10 May, 1893.

THOS. HILL and Daniel Curran, names of men evicted. They are now felling timber on same land, 'Possum Creek. I am on my way to Brisbane. Hugh Galen, lessee of farm, heard their statement as made to me.

Police Report.

Re Mr. Garvan's complaint against Constable Andrews, Byron Bay Station.

Police Station, Maclean, 11 May, 1893.

I FORWARD these papers to Sub-Inspector Carroll for prompt and careful investigation and full report. I have to request Mr. Carroll to read papers with particular care, and in prosecuting this inquiry to see that every accusation, charge, or objection, made by Mr. Garvan against the constable is fully gone into and explained clearly, so that papers can be sent Inspector-General complete, and put in such a way as to enable him to grasp the facts without trouble.

Mr. Garvan names Thomas Hill and Daniel Curran as persons evicted; they will be found at 'Possum Creek. Hugh Gillan should also be examined, as well as Constable Andrews, and any other persons who can throw light upon the matter. *The whole truth is required.*

Who requested Andrews to be present, and for what reason? What did Constable Andrews do or say? So far as I can judge from Mr. Garvan's letter, I fail to see why the constable should have gone there at all. The matter should and could have been settled by police court proceedings.

Did Andrews state he was there to remove them by force, &c.? Did he see Mr. Garvan at all; if not, why?

Senior-constable Andrews' report puts a different complexion upon the case, but I wish the inquiry to be of such a searching character as to clearly show the whole facts of this business.

THOS. GARVIN,

Superintendent.

Sub-Inspector Carroll, Lismore.

Memo. by Police-Superintendent Garvin.

Re Mr. James P. Garvan's complaint against Senior-constable Andrews of Byron Bay Station.

Police Department, Armidale, Superintendent's Office,

Northern District, 25 May, 1893.

I FORWARD papers to Inspector-General of Police, result of an inquiry held by Sub-Inspector Carroll, regarding this complaint. So far as I can judge, the inquiry has been a careful one.

I am of opinion that Senior-constable Andrews exceeded his duty in going out to the place at all under all the circumstances; but he probably did so more through ignorance or perhaps over-zealousness, believing he was taking the proper course.

The matter in dispute between Mr. Garvan and Bryen should have been left to themselves to settle by police court proceedings, or any other way they thought fit, without intervention or presence of police.

It is to be regretted Senior-constable Andrews went to the place, but I think it was more from want of knowing better. Had the senior-constable telegraphed to me, as he should have done had he any doubt, I would have instructed him not to interfere or identify himself with the dispute in any shape whatever.

THOS. GARVIN,

Superintendent.

[Enclosure.]

POLICE REPORT.

Police Station, Byron Bay, 18 May, 1893.

SGE-INSPECTOR CARROLL reports that yesterday at Byron Creek, in the presence of Mr. John Garvan, Mr. James P. Garvan's son, and Senior-constable Andrews, he took statements from seven witnesses regarding the complaint made by Mr. James P. Garvan against Senior-constable Andrews. These were all the witnesses that could throw any light on the subject.

The

The witnesses were carefully questioned by me, and not one of them stated that Senior-constable Andrews used any threats or intimidations towards either Thomas Hill or Daniel Curran.

There is no doubt, in my opinion, Senior-constable Andrews was wrong in going to this place with the Bryens; he should have let them settle their disputes in the law courts or otherwise. Still he does not appear to have done anything except to be simply present.

D. CARROLL,
Sub-Inspector.

INQUIRY.

Byron Creek, 17 May, 1893.

Re complaint by James P. Garvan, Esq., M.P., against Constable Andrews, of Byron Bay.

Thomas Hill states:—I am a labourer, residing at Bloomfield, near Byron Creek: remember Sunday, the 30th of April last; I remember Senior-constable Andrews and five of the Bryens coming to my place on that date; when they came up first, which was about noon, Robert Bryen said, "Are you going to leave the place?" in reply, I said, "I am here by Mr. Garvan's authority, and that I was not to allow anyone on the premises"; one of the Bryens then said, "If you don't remove your things we will put them out for you"; I then said—speaking to Senior-constable Andrews—"Are you going to evict us?" he replied, "That is what I am here for; I then said, "If you are going to put us out we may as well go out peaceably"; we then removed our things out of the house; Robert Bryen then nailed up the door.

By Senior-constable Andrews:—There were three of the Bryens and a man named Turner there; before you came some of the Bryens told me that they were going to bring a constable; shortly after I saw you coming with Robert Bryen: when you first came up you said, "Good-day"; Mr. Robert Bryen then commenced to speak to me; when he asked me to leave the place he said the place belonged to him; I said, "You ought to go and tell Mr. Garvan"; he said, "I do not want to see Mr. Garvan"; the words I used to you were, "I suppose you are come to evict us"; I believe you said, "I am here for a certain purpose"; I am not positive which words you used, that is, when I said, "Are you going to evict us?" "That is what I am here for," or "I am here for a certain purpose"; I was standing in front of the house, leaning against the verandah-post; I said to Mr. Bryen, "Will you let me put my things in the barn"; he said, "No"; he afterwards agreed to let me put my things in another house on the premises; you were sitting on your horse all this time in front of the verandah; you did not make use of any threatening language to me; you did not threaten to arrest or eject me.

By John Garvan:—I did not make any notes of what occurred that day; I am now speaking from memory; on the following day I did make a statement to Mr. James P. Garvan of what occurred on the Sunday, but I am not quite certain if it were not on Tuesday instead of Monday after that I made that statement, but it is either of those two days.

Taken before me this day, the }
17th May, 1893,—

THOMAS HILL.

D. CARROLL, Sub-Inspector.

Daniel Curran states:—I live at Bloomfield with Thomas Hill; I remember Sunday, the 30th of April last; on that date, about noon, Mr. Turner and three of the Bryen family came to our house; in about a quarter of an hour afterwards Mr. Bryen, senior, one of his family, and Senior-constable Andrews came; when Mr. Bryen came up he said, "I want you (meaning the two of us) to leave this place, the place belongs to me"; Thomas Hill said in reply, "I don't know about that, we are left here in charge by Mr. Garvan"; one of the Bryen family then said that we would have to shift our things out of the place, and if we did not they would shift them for us; Thomas Hill said to Senior-constable Andrews, "I suppose you will evict us, Mr. Andrews"; he made some reply in a low tone of voice; I did not hear what he said; I said to my mate Hill, "Suppose one of us goes to Mr. Garvan and the other remain here"; he did not go then; there was nothing more said by anyone that I remember; we then went out and took our things out, and put them in one of the out-houses. Mr. Bryen, senior, and one or two of his family then nailed up the door; they then all left the place, and my mate and I left to go to Mr. Garvan's; we, however, met him on the road; he took us back to the house we left, and again put us in possession.

By Senior-constable Andrews:—I did not hear you using any threats towards either my mate Hill or myself; you spoke to my mate Hill in a low tone of voice; I did not hear what you said; you did not get off your horse during the time you were there.

Taken before me, this 17th }
May, 1893,—

DANIEL x CURRAN,
mark

D. CARROLL, Sub-Inspector.

Witness to mark,—W. C. ANDREWS.

Hugh Galen states:—I am a farmer, residing at Bloomfield; I was at Mr. Garvan's place on Wednesday, the 3rd of May; heard Thomas Hill make a statement to Mr. Garvan of what occurred at Bloomfield on Sunday, 30th of April last; that is with reference to the occasion when Robert Bryen and his family and Senior-constable Andrews were there; Senior-constable Andrews was not present when this statement was made; Mr. James P. Garvan took down the statement in writing from Hill, read it over to him if it were correct, and he said it was; Hill or his mate did not sign it, nor were they asked; I know nothing further of what occurred.

Taken before me, this 17th }
day of May, 1893,—

HUGH GALEN.

D. CARROLL, Sub-Inspector.

David Bryen states:—I am a farmer, living at Grannaile; I remember going to Byron Bay on Saturday, the 29th of April last to see Senior-constable Andrews; I said, "Father sent me down to see him; that there were three men on the place that he had leased of Mr. Garvan; that my father had asked them to go off and they refused to go, and he wanted him up to arrest them"; I think he replied that he did not think he could do anything, but he would come up and see father; he came up to our place that evening and saw my father; I told Senior-constable Andrews at the Bay that the men who were on the farm were intoxicated; also, that they had threatened me and brandished a knife; Senior-constable Andrews remained at our house all night, and remained there until we went out to Bloomfield on the following day; on the following day (Sunday) John Lindsay, James Bryen, Martin Turner, and myself went out to Bloomfield, about a mile from my father's place, and saw two men there; the two men's names are Thomas Hill and Daniel Curran—the two men that are here to-day giving their statements; my brother said to them, "I see you are here yet"; they replied, they would not go away; in about a quarter-of-an-hour afterwards my father, brother, and Senior-constable Andrews came; I knew they were coming; my father asked them if they were going to leave the place; they (Hill and Curran) replied, that Mr. Garvan told them to stop there; father told them that he had the place leased from Mr. Garvan, and that he wanted them to leave; one of them (Hill), addressing Senior-constable Andrews, said, "I suppose you are here to evict us?" Andrews replied, "I am here for a certain purpose"; Hill said, "I suppose we may as well go"; Hill asked my father if he could shift his things into one of the back premises (houses); my father said he could do so; they then removed their things to the out-house; I did not hear Senior-constable Andrews using any threats towards anyone there.

Taken before me, this 17th }
day of May, 1893,—

DAVID BRYEN.

D. CARROLL, Sub-Inspector.

Robert Bryen states: I am a farmer, living at Opossum Shoot; on Saturday, the 29th of April last, I sent a message by my son David to Senior-constable Andrews, that I wished to give some men in charge that were trespassing on my land; in consequence of that Senior-constable Andrews came to my place that evening; on the following day I went out to this place—Bloomfield—with Senior-constable Andrews and my sons, and a man named Turner; on arriving there I saw two men named Hill and Curran in possession of the place; I said to them, "I see you are here yet"; I said to them, "You are trespassing here, and I want you to leave"; one of them (Hill) said that they were there by Mr. Garvan's orders; then he said to Senior-constable Andrews, "Are you going to evict us?" Andrews replied, "I am here for a certain purpose"; I then asked him to go out peacefully and quit the house; he said he would; he asked me if he could put his things in an out-house, and I said he could; he took his things out; I then went inside, nailed up the back door, and locked the front door; I then left

left the place with my sons and Senior-constable Andrews; the above is all that took place; Senior-constable Andrews did not get off his horse during the whole of the time; there is a misunderstanding between Mr. Garvan and myself regarding this property; when Senior-constable Andrews came to my place he told me that he would have nothing to do with the men, and that he could not arrest them; I asked him to come with me for protection, as they were pretty rough; while I was speaking to these men, Andrews was with me.

Taken before me this 17th }
day of May, 1893,— }

ROBERT BRYEN.

D. CARROLL, Sub-Inspector.

Martin Turner, farm-hand, living with Mr. Bryen:—Remember Sunday, the 30th of April last; went with the young Bryens to Bloomfield; was there when old Mr. Bryen and Senior-constable Andrews arrived; Mr. Bryen told the two men (Hill and Curran) who were in the house that the place was his, and for them to go out of the house; Hill replied that he had been put there by Mr. Garvan, and that he was paid to keep possession of the house; Mr. Bryen said that had nothing to do with him; he would have to leave the place; Hill then said to Senior-constable Andrews, "I suppose if we do not go out you will evict us?" Andrews said he was there for a certain purpose, and he must do his duty; the men asked Mr. Bryen if they could leave their things in an outhouse until the following day; he said they could do so; they then removed them, and Mr. Bryen shut up the place; we all then left.

Taken before me this 17th }
day of May, 1893,— }

MARTIN TURNER.

D. CARROLL, Sub-Inspector.

Senior-constable Andrews states:—On Saturday, the 29th of April last, Mr. David Bryen came to the Police Station at Byron Bay, and informed me that three men had got into a house on one of his father's farms, and that morning, when he, his father, and others had requested them to leave, they refused to do so, and had threatened to assault anyone that would interfere with them; I said, "I will see your father about it"; I went to his father's residence that evening, and saw his father; he made a similar complaint to me; he told me that there was a dispute between himself and Mr. Garvan regarding this property; I then told him that I had no power to arrest or interfere with the men, only so far as to try and prevent any violence. He then requested me to go with him to the house, as he was afraid that if he tried to put them out they would do him some injury; it was late, so I remained there that night; on the following Sunday I went with Mr. Bryen and his sons to this place; on arrival there Mr. Bryen said to the men who were in charge there, Hill and Curran, "Now, men, I want you to leave this place as it belongs to me; I would like you to go quietly, I do not want any bother"; Hill then said, "Mr. Garvan put us here, and told us to stop here; why don't you go and see Mr. Garvan?"; Bryen said, "It has nothing to do with Mr. Garvan, and I want you to leave"; Curran said, "Suppose one of us stops here, and the other goes and sees Mr. Garvan"; some of the young Bryens said, "No, we want you to leave now"; Hill said, "Suppose we shift our things into the old barn"; Bryen said, "All right, but you must shift them away to-morrow"; Hill then turned to me and said, "I suppose you come here to evict us, Mr. Andrews"; I replied, "Well, I came here for a certain purpose"; they then shifted their things to an out-house, Mr. Bryen locked up the house and we left; the above is all I said, and all I did; I did not go to see Mr. Garvan in reference to this matter either before or after this transaction; my only object in going to this place was to prevent a breach of the peace.

W. C. ANDREWS,

Senior-constable.

Taken before me, this 17th day }
of May, 1892,— }

D. CARROLL, Sub-Inspector.

The Inspector-General of Police to J. P. Garvan, Esq., M.P.

My dear Sir,

Sydney, 26 May, 1893.

Though it is not exactly the usual official method of dealing with such matters, I think it well to ask you to read the enclosed papers, and favour me with your observations, before I take action.

Yours, &c.,

EDMUND FOSBERY,

Inspector-General of Police.

J. P. Garvan, Esq., M.P., to The Inspector-General of Police.

Dear Sir,

Sydney, 30 May, 1893.

In returning you the papers, I would point out that my charge against Constable Andrews is sustained by the evidence: that I was the owner of the land, and Constable Andrews was aware that Hill and Curran were in possession by my orders and authority; that Bryen and his family tried to bounce them off the place; that Hill and Curran refused to go, and said they would keep possession of the place as instructed by me; that Bryens came again on Sunday and tried to bounce the men out of the place, but without success; that later on Bryen, with five men and the constable, came and ordered my men to leave the place, and that if they did not go they (the Bryens) would shift them; that Constable Andrews went with Bryen, knowing that Bryen intended to take possession of the land and house by force against law and endangering the peace; that after threat of removal by force, Hill appealed to the constable as to whether he was going to remove them by force, and he replied, "I am here for a certain purpose, and I must do my duty." It was this statement of the constable's that caused my men to give up possession. The several previous threats of Bryen and his family were ineffectual, and it was these words of the constable, coupled with his presence, that caused my men to give up the place.

I would draw marked attention that Constable Andrews, in his report of the 1st and 6th May, entirely omits this important episode, and which contains the essence of the charge against him, and which reports, when read in conjunction with my letter to Mr. Fosbery of 3rd May, and which caused him to write his memo. of 9th May, as follows:—"Mr. Garvan's letter contains statements founded apparently upon what he was told, entirely at variance with Senior-constable Andrews' report. The matter must therefore be more closely investigated."

The investigation bears out almost to the letter, and certainly the very essence of the statement made in my letter.

It will not be necessary for me to point out how grossly unfair it was for the local policeman, who knew me well by repute, and as a large land-owner in that district. Before he committed himself to the improper action of aiding and abetting the Bryens, they told him there was a dispute with me about the land, and he admits that the men told him they were in possession by my orders and authority, and though I was living on the adjoining farm, within a short distance of the place, Constable Andrews remained at Bryen's the whole of Saturday night and until midday on Sunday, in conference with them, before taking the action complained of, and did not attempt to see me, though I was living on the adjoining farm.

Bryens

Bryens had no right whatever to this land, and it will seriously prejudice the law-abiding respect for the police uniform if land-jumpers are to be aided and abetted by policemen in such cases as this. I know there are people in the community who have peculiar views about landed property; but I trust that whoever prostitutes the police uniform by such improper interference and such gross outrage as I have been subjected to, will not be tolerated in the Service.

I would also point out that Bryens have not taken any legal steps to establish their claim to this property, but, encouraged by the countenance given by Constable Andrews on the occasion under consideration, have since continued to terrorise my tenants, breaking down the fences several times and driving my tenants' stock off the place.

I am seeking a remedy for these continued outrages in the Supreme Court, and I trust your decision in this matter will prevent a recurrence of the improper action of Constable Andrews.

Yours, &c.,

JAMES P. GARVAN.

The Inspector-General of Police to The Superintendent of Police, Armidale.

Police Department, Inspector-General's Office, Sydney, 31 May, 1893.

I HAVE thought it proper to show these papers to Mr. James P. Garvan, who is naturally greatly incensed against Senior-constable Andrews, whose action has done very considerable injury, pecuniary and otherwise [*vide* letter attached], to which Mr. Garvan adds a strong protest, and urges that the senior-constable should be dismissed.

The serious mistakes that Andrews made are:

1. That he stayed a day and a night as the guest of one of the interested parties.
2. That he accompanied them to the scene of the threatened disturbance instead of going alone.
3. That he had not the common-sense and courtesy to see Mr. Garvan before lending himself to the proceedings at all; and
4. That when appealed to, instead of foolishly saying that he was there for a purpose, he did not say openly that he was not present to interfere in any way, but merely to use his endeavours to prevent any breach of the peace.

The result has been very serious, but I await Mr. Garvan's further inquiries and report (prompt) before coming to a decision.

EDMUND FOSBERY,

Inspector-General of Police.

Re Mr. James P. Garvan's complaint against Senior-constable Andrews, of Byron Bay Station.

Police Department, Armidale, Superintendent's Office,
Northern District, 1 June, 1893.

FORWARDED to Mr. Carroll for further inquiries. Senior-constable Andrews should be allowed to see all these papers, and submit any additional explanation he might desire to make.

The senior-constable has made some serious mistakes regarding this business, which I saw was most damaging when reading the papers.

He should have seen Mr. Garvan, knowing he was at his place at Byron Creek, upon the complaint being made, before he went to Hill's at instigation of Bryen.

There is no doubt, in my opinion, after reading Senior-constable Andrew's statement, pages 12 and 13, that it looks as if he was favouring the Bryens. At the same time, I do not think he was, but that construction can be put upon it.

I think Hill's suggestion was a wise one [*see* page 13]. Mr. Garvan should have been seen.

Had the senior-constable not been present, it is very evident, Hill would not have given up possession. It was his presence and his weak remarks, "I came here for a certain purpose," that led to their going out.

It was wholly a matter of dispute between landlord and tenant, not one for police presence or interference.

Senior-constable Andrews had better go very carefully over the papers, as this might be a very serious business to him.

THOS. GARVIN,

Superintendent.

Sub-Inspector Carroll to Superintendent Garvin.

Police Station, Lismore, 3 June, 1893.

SUB-INSPECTOR CARROLL begs to forward herewith an additional explanation from Senior-constable Andrews regarding the complaint made against him by Mr. Garvan.

The Sub-Inspector will offer no further opinion on the facts. He will leave that to his superior officers to judge. He may, however, state that he has always found Senior-constable Andrews steady, careful, and attentive to his duties, with this present exception. The Police Magistrate (Brace) at Murwillumbah has frequently spoken to the Sub-Inspector in very high terms of Andrews for the manner he always conducted the police business at the Brunswick.

D. CARROLL,

Sub-Inspector.

[Enclosure.]

Police Station, Lismore, 3 June, 1893.

W. C. ANDREWS, senior-constable, further reports *re* the attached, that when he went to Bryen's place it was too late to go to Bloomfield, the place in question, and he remained there until the following morning rather than return to Byron Bay and again come back.

As to seeing Mr. Garvan he did not think that was necessary. He knew that the place in question was in possession of Bryen, and, so far from imagining that it was a dispute between landlord and tenant, concluded that it was rather a dispute between tenant, or, so far as he was concerned, between owner and occupier, against trespassers, and he considered it was his imperative duty when he received the information from Bryen to proceed to the place. The senior-constable would respectfully submit that upon information being given him by a man of the standing and reputation for honesty and respectability as Mr. Bryen in the district—a man working the largest dairy-farm in the Richmond River and Byron Bay district,

district, and with considerable landed property of his own—it would be information that should receive attention at his hands, and that in going there he did his duty as a preserver of law and order, and if any illegal act was done by Mr. Bryen towards Mr. Garvan, and the same is proved in the action Mr. Garvan mentions he is taking against Mr. Bryen, no doubt he will be fully compensated.

Again, if, when the senior-constable arrived at the place he had found the premises occupied by apparently respectable people, his suspicions would at once have been aroused, and he would have been led to make inquiries as to their position there; but when he saw the man "Hill" whom he knew as a disorderly man, and who had been convicted at Ballina for a grossly unprovoked assault on another man at Byron Bay, he saw that a breach of the peace was not at all improbable; but even then lent no assistance, good, bad, or indifferent, or took any part in the proceedings other than being present in the execution of his duty in seeing that no breach of the peace took place on the one side or the other. For Mr. Garvan to say that the senior-constable prostituted his uniform is quite uncalled for, for so far as the senior-constable is concerned he entertains as great a respect for Mr. Garvan as for Mr. Bryen, and as a matter of fact has only spoken to the latter gentleman on one occasion previous to this affair, and was never before inside of his house, and had Mr. Garvan gone to him in a similar way, and had given him similar information to that given by Mr. Bryen, he would have considered it his bounden duty, and would have gone readily with him as with Mr. Bryen, as he would be fully persuaded from his knowledge of either gentlemen that a complaint in either case, of the sort in question, was not to be disregarded. His superior officers will observe, that it was reported to him (the senior-constable) that one of the men who was complained of as trespassing had brandished a knife, and he would therefore be quite justified in concluding that matters might assume very serious proportions did these people come into conflict. They will further observe that the senior-constable was not in possession of the facts as contained in Mr. Garvan's letter of 3rd May to the Inspector-General of Police (attached) or he might have come to the same conclusion with them, and have informed Mr. Bryen that, as this was a dispute between him and Mr. Garvan as to the right to possession of the land, his proper course would be to test the matter in a Court of Justice, when the rights of all parties could be inquired into; but the facts as disclosed in Mr. Garvan's letter referred to were not known to the senior-constable as disclosed therein. The senior-constable has learnt that Mr. Bryen has issued a Supreme Court writ against Mr. Garvan, claiming damages for trespassing on the lands in question, and that the action will be heard at the next Circuit Court to be held in Grafton.

In conclusion, the senior-constable would remind his superior officers of his fourteen years of service, and of the fact that this is the first and only occasion an inquiry has been held in connection with him and the outside public, and would respectfully urge that if, in their opinion, he has exceeded his duty on this occasion, it was an error of judgment, induced solely by his desire to prevent any breach of the peace, and that he went to the place in execution of his duty, and prepared to do what he considered at the time was right and just with respect to his position, and to act without fear or favour between man and man, and that they will acquit him of the charge urged by Mr. Garvan that he has been guilty of partisanship in any shape or form.

The senior-constable is a married man, and has a family of eight children, the eldest being 12 years old and the youngest 12 months. His wife is also delicate. These are depending solely upon him for support.

W. C. ANDREWS,
Senior-constable.

The Superintendent of Police, Armidale, to The Inspector-General of Police.

Police Department, Armidale, Superintendent's Office,
Northern District, 6 June, 1893.

Re Mr. James P. Garvan's complaint against Senior-constable Andrews, at Byron Bay Station.

SENIOR-CONSTABLE ANDREWS, it is very evident, acted most indiscreetly in dealing with Bryen's complaint, and should not have identified himself with it in any way. I look upon his action more as an error of judgment than intention to give any annoyance to Mr. Garvan, or favour one party more than another. Nevertheless, his conduct has caused Mr. Garvan a deal of inconvenience and, I have no doubt, worry. It would be very hard, I think, to dismiss the constable for his mistake. My recommendation is this: Taking into consideration his length of service—fourteen years—with an excellent character, and that he has a wife and eight children, the oldest only 12 years, wholly depending upon him, and that, when all is said and done, it was an error of judgment, I think a reprimand would meet the case, and be of such a warning to Senior-constable Andrews that he would be more careful in taking notice of such complaints in future.

THOS. GARVIN,
Superintendent.

The Inspector-General of Police to J. P. Garvan, Esq., M.P.

My dear Sir, Police Department, Inspector-General's Office, Sydney, 8 June, 1893.

As you perused the previous papers regarding the inquiry into your complaint against Senior-constable Andrews of Byron Bay, I will trouble you to read my minute of the 31st ultimo, Andrews' further report in explanation, and Superintendent Garvin's memo.

For the reasons I have given, I am of opinion that Andrews behaved indiscreetly, but without any intention of showing partiality. It was certainly his duty to be present on the occasion if applied to, simply to prevent any breach of the peace.

Accordingly I concur in Inspector Garvin's recommendation, and feel sure that upon perusal of the constable's straightforward explanation, you will adopt the same view.

I understand that some actions at law relating to the matter are to be tried at the next sitting of the Grafton Circuit Court, and of course should any facts in evidence affecting the constable, the whole question may call for reconsideration.

Yours, &c,
EDMUND FOSBERY.

J. P. Garvan, Esq., M.P., to The Inspector-General of Police.

My dear Sir, Sydney, 13 June, 1893.

I am in receipt of your note of 8th instant, with additional papers in the case of my complaint against Constable Andrews, and I would point out Constable Andrews' latest statement does not in any way palliate his offence, but intensifies it.

He says that "so far from imagining that it was a dispute between landlord and tenant, he concluded that it was rather a dispute between tenant, or, so far as he was concerned, between owner and occupier and trespasser." He also says that had he been aware of the facts "he would have informed Mr. Bryen that, as this was a dispute between him and Mr. Garvan as to the right to possession of the land, his proper course would be to test the matter in a Court of Justice, when the rights of all the parties could be inquired into." Now this statement, that he did not know it was a dispute between me as owner of the land and Mr. Bryen, who says he is tenant. So far from Constable Andrews being truthful in this statement,

statement, as to his entire ignorance of its being a dispute between Bryen and myself, I have only to refer you to the evidence adduced at the inquiry, but not having a copy, I cannot quote; but I can quote what is quite as conclusive, viz.:—"Telegram from Senior-constable Andrews, Byron Bay, to the Superintendent of Police, Armidale—Dispute between Mr. Garvan and tenants:—I was present by request of tenant to prevent probable violence. Acted in that capacity. Did not threaten to eject or arrest anyone. Had no occasion to interfere in any way. Report by first post." This first telegram from Constable Andrews shows clearly that he knew my relation to the land, and also that of Bryen. His statement therefore, that he did not even imagine it was a dispute between landlord and tenant, is proved to be false by his own telegram.

In addition to the evidence referred to, as also the above telegram, there is the fact that Constable Andrews stayed with the Bryens Saturday evening and night and up to mid-day on Sunday. Is it not almost certain that as Bryens during the three previous days were asserting their claim to this land, and that on one of the days I was present and ordered two of them off the land, and insisted on their leaving it, and that on the two following days they made unauthorised entries on my land and had words with my men—all this occurring before the Sunday—is it not almost an absolute certainty that the whole *pros* and *cons* of the dispute were talked over by the Bryens and Constable Andrews, and that he knew it was a dispute between me, as owner, and Bryen, who claimed to be a tenant.

Constable Andrews' statement, that only on one previous occasion had he ever spoken to Mr. Bryen, is only technically true; for, as a matter of fact, he knew the sons and step-sons well, and they are more of his own age, are really the prime movers in the disturbance, so that Constable Andrews' statement that he only on one previous occasion ever spoke to Mr. Bryen, would convey an erroneous impression. I would also draw attention to the following part of Constable Andrews' report:—"The senior-constable has learnt that Mr. Bryen has issued a Supreme Court writ against Mr. Garvan, claiming damages for trespassing on the land in question, and that the action will be heard at the next Circuit Court to be held at Grafton." This report of Constable Andrews was written on the 3rd of June, and the writ was only issued from the Supreme Court, Sydney, on 1st June. It will show the very intimate knowledge Constable Andrews had of every movement of the Bryen family, and the writ does not give the information that Constable Andrews so glibly volunteers.

I will only say, with reference to this writ, that it has been issued with the apparent design of putting me to the annoyance and expense of having to attend at the Circuit Court, Grafton, to answer a charge of having trespassed on my own land, and I would point out that the writs issued by me more than four weeks previously would test the title to this land, which was bought and paid for by me over two years ago, and that I gave a temporary use of it to Bryen for a period without payment of any rent; that I withdrew the temporary use and entered on possession; that neither Bryen nor anyone else had or has any lease of right to this land; and you can thus value the nature of a writ against me for going on to my own land. I may also state that Bryen asked me in writing for a lease of the land in question, and I declined definitely and distinctly to let him have any lease of it.

Constable Andrews' statement as to the considerable landed property owned by Bryen, and his ability to meet the result of any verdict I might obtain—the correctness of this statement I question. I have had a search made of the conditional purchase lands in that district, and have had a report that there is no conditional purchase land in the name of R. Bryen, but that there was a small conditional purchase of 150 acres in his name, but was transferred about four years ago to one of the banks.

You can, therefore, judge of the value of this part of Constable Andrews' report, and which is indicative of his intimacy with the Bryens.

I am, &c.,
JAMES P. GARVAN.

The Inspector-General of Police to The Superintendent of Police, Armidale.

Police Department, Inspector-General's Office, Sydney, 13 June, 1893.

THOUGH I see no reason to differ from Mr. Garvan's view of this case, I forward Mr. Garvan's further letter for observations before the matter is dealt with.

I attach little importance to the heading of Senior-constable Andrews' telegram which was sent after the event, and when Andrews was aware of the complaint and relative position of the parties.

E. F.

The Superintendent of Police, Armidale, to The Inspector-General of Police.

Police Department, Armidale, Superintendent's Office,
Northern District, 14 June, 1893.

Re Mr. James P. Garvan's complaint against Senior-constable Andrews, of Byron Bay Station.

I HAVE carefully read Mr. Garvan's letter of 13th instant, and see no reason to vary my report of 6th instant, C.M. 93-510.

Without in any way attempting to shield Senior-constable Andrews from his action or stupid expressions made by him upon an occasion when he should have manfully said, "I know no side, but I am here, if possible, to prevent a breach of the peace."

To dismiss Senior-constable Andrews from the Force, with his long service of fourteen years, and during this period he has borne an excellent character, would be a very severe punishment for the error of judgment committed by him.

Judging from Mr. Garvan's letter of 13th instant, he thinks the senior-constable has done him an injury and caused great annoyance. There is nothing to prevent Mr. Garvan taking civil proceedings against him, and if it is proved in evidence the constable acted with partiality, he would be meted in heavy damages and costs—and serve him right if he wilfully so acted—and to dismissal from the Service as well.

THOS. GARVIN,
Superintendent.

The Inspector-General of Police to J. P. Garvan, Esq., M.P.

Sir, Police Department, Inspector-General's Office, Sydney, 15 June, 1893.

In regard to your further letter of the 13th instant, respecting Senior-constable Andrews, of Byron Bay, I beg to inform you that whilst I can in no way acquit the constable from blame, I am unable to see that he exhibited any intentional partiality, or that he is guilty of falsehood. Considering, also, his long and faithful service for fourteen years, without any complaint, his removal from the Service would be too harsh a punishment. As regards the heading of his telegram, referred to by you, it does not appear to me to bear the construction you put upon it, as it was dispatched after the occurrence, when he had been made aware of the nature of the complaint, and relative position of the parties. I am dealing with the matter further.

Yours, &c.,

EDMUND FOSBERY.

Precis.

Inspector-General's Office, Sydney, 20 June, 1893.

MR. JAMES P. GARVAN, M.P., complains of the interference of Senior-constable Andrews, of Byron Bay, by accompanying Mr. Bryen, who desired to remove two men who were in possession by Mr. Garvan's orders, of a farm, of which he states he is the owner. That the men were ordered by Bryen to leave the land, and they refused, whereupon Bryen threatened to remove them by force. On an appeal being made by the men to the constable, that officer stated he was there for a certain purpose, and must do his duty. The men then left, the constable's statement causing them to give up possession. Mr. Garvan states that the constable went with Bryen, knowing that Bryen intended to take possession of the property by force, and that he stayed for the night previous at Mr. Bryen's house. Mr. Garvan expresses his opinion that the constable should be dismissed from the Service for his conduct.

Senior-constable Andrews explains that Mr. David Bryen called at the Byron Bay Police Station and informed him that three men had got into a house on one of his father's farms, and when requested to leave had refused to do so and used threatening language. The constable went the same evening to the residence of the father (Mr. Robert Bryen), who told him that there was a dispute between him and Mr. Garvan regarding the property. The constable then stated that he had no power to arrest or interfere with the men, only so far as to try and prevent any violence. It was then so late that he remained there all night, and next morning went with Mr. Bryen and his sons to the place. Mr. Bryen asked the men in possession to leave peacefully. After some conversation between the parties, one of the men in possession turned to the constable and said, "I suppose you came here to evict us, Mr. Andrews." The constable replied, "Well, I came here for a certain purpose." The men then shifted their things to an outhouse. The constable states his only object in going to the place was to prevent a breach of the peace, and that he remained on his horse all the time.

The Inspector-General of Police wrote that although he was satisfied that the constable did not act with partiality his conduct was apparently improper in the following respects:—

1. That he stayed for a day and a night as the guest of one of the interested parties.
2. That he accompanied them to the scene of the threatened disturbance instead of going alone
3. That he had not the common-sense and courtesy to see Mr. Garvan before lending himself to the proceedings at all; and
4. That, when appealed to, instead of foolishly saying that he was there for a purpose, he did not say openly that he was not present to interfere in any way, but merely to use his endeavours to prevent any breach of the peace.

The Superintendent of Police in charge of the district (Mr. Garvin) reports that he is of opinion that the constable exceeded his duty in going out to the place at all under the circumstances, but he probably did so more through ignorance or perhaps over-zealousness, believing he was taking the proper course; that it is very evident the constable acted indiscreetly, and should not have identified himself with it in any way. He looks upon the constable's action more as an error of judgment than intention to give any annoyance to Mr. Garvan, or favour one party more than another; nevertheless, his conduct has caused Mr. Garvan a deal of inconvenience and, no doubt, worry. That it would be very hard, he thinks, to dismiss the constable for his mistake. The Superintendent recommends that, "taking into consideration the senior-constable's length of service (fourteen years), with an excellent character, and that he has a wife and eight children (the eldest only 12 years) wholly dependent upon him, and that, when all is said and done, it was an error of judgment, that a reprimand should meet the case and be of such a warning to the constable that he would be more careful in taking notice of such complaints in future."

The Inspector-General of Police concurs in the Superintendent's recommendation, but the matter to be considered undisposed of until trial of civil actions at the next Grafton Circuit, when, should any circumstances transpire affecting the action of the police constable, it may be necessary to take other action.

The papers being lengthy, I have made this *precis* of contents for the Colonial Secretary's information.—EDM. FOSBERY, J.-G.P., B.C., 21/6/93. The Principal Under Secretary.

I am of opinion that Senior-constable Andrews grossly exceeded his duty, and that Mr. Garvan has been damaged by the undue interference of the police. Dismissal from the Service would be a just punishment for the offence, but I incline to the opinion that the loss of a stripe and a reprimand will be sufficient as a warning, and that Andrews be removed from the district as speedily as possible.—G.R.D., 1/7/93.

The Inspector-General of Police.—C.W., B.C., 12/7/93. The Colonial Secretary's instructions have been carried into effect.—EDMUND FOSBERY, 20/7/93. The Principal Under Secretary.

1894.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ARREST OF ABRAHAM TAYLOR.

(CORRESPONDENCE RESPECTING.)

Ordered by the Legislative Assembly to be printed, 14 March, 1894.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 22nd February, 1894, That there be laid upon the Table of this House,—

“Copies of all papers and documents in connection with the arrest of
“Abraham Taylor by Police Sergeant Haviston on a charge of being a
“lunatic at large.”

(Mr. Johnston.)

Senior-Sergeant Boyd to Mr. Superintendent Read.

Balmain Police Station, 12 February, 1894.

REPORT.

SENIOR-SERGEANT BOYD begs respectfully to report, for the information of the Superintendent, that on the 13th September, 1893, a man named Abraham Taylor, 61 years of age, residing at No. 40, Smith-street, Balmain, was admitted to the Hospital for Insane, at Callan Park, on the recommendation of Doctors Carruthers and Kelly.

Taylor was subsequently discharged from the Institution to the custody of his wife, who has since died, and a young man, about 26 years of age, named Charles Burnham, who has since been acting as his guardian. Taylor has no friends in this Colony that the senior sergeant is aware of, except a brother-in-law named Edward Barry, a plumber, Bayswater Road, Woollahra.

Burnham, who has been out of employment for some time, is a paper-ruler by trade, and a complete stranger to Taylor, and only became acquainted about two months ago through his mother, who nursed Mrs. Taylor through her illness. Taylor, who is very frail and quite an imbecile, is said to have made a will, which is now at Mr. Slattery's office, in favour of Burnham, leaving him all he is possessed of at his death.

Taylor owns a considerable amount of property in Balmain, besides money and scrip in the banks. He recently sold an allotment of ground for £195, £75 of which was paid away to redeem mortgage, besides £25 paid to satisfy current accounts; the remainder, with the exception of £30, which Burnham has lodged in his own name in the Post Office Savings Bank, Balmain, is unaccounted for.

On the 31st ultimo Sergeant Haviston arrested Taylor in Little Darling-street, and charged him with “deemed to be insane.” He was brought before the Police Doctor next day and remanded until the following Monday, when he was again brought before the Court and further remanded until Saturday last, when he was discharged in the custody of Burnham.

His Worship, Mr. Johnston, S.M., stated that he had received a letter from Dr. Manning, who said, “I gave Charles Burnham charge of defendant Taylor from the Institution.” Mr. Johnston further said, “As Burnham seems a suitable person, I will discharge the defendant into his care.”

It would, therefore, appear obvious from his Worship's remarks that Taylor was not in a fit state, when discharged, to take care of himself.

A. BOYD,
Senior-Sergeant.

Forwarded to the Inspector-General, who may deem it advisable to send this report to the Inspector-General of the Insane.—G. READ (Superintendent), 13/2/94.

The Acting Government Medical Officer to The Government Medical Adviser.

Sir, Office of the Government Medical Officer, Sydney, 12 February, 1894.

I have the honor to bring under your notice the case of Abraham Taylor, discharged from the Reception House on Saturday last, by order of the Police Magistrate.

The particulars of his case as supplied to me by the police, and my own inquiry and observation, are as follows:—

Taylor was discharged from the Hospital for the Insane, Callan Park, on the 30th November last, and I append a statement of his mental condition, at the time of his discharge, written by the Medical Superintendent of that Hospital.

A little time after his discharge his wife died, when a man named Burnham, who had acted as his attendant from the time of his discharge, took entire charge of him.

In December last, Burnham sold some of Taylor's property, and after the settlement of some outstanding debts, presumably contracted by Taylor, banked the balance in his own name. Taylor then made a will, bequeathing in the event of his death, his entire assets to Burnham, a medical certificate by Dr. McDonough having been obtained that Taylor was mentally responsible for his actions. The father and mother of Burnham then came and lived with Taylor at his expense.

The Police, hearing of this state of affairs, arrested Taylor for his protection, and charged him at the Water Police Court, with being of unsound mind. I remanded him to the Reception House until the following Monday, and then in conjunction with Dr. Goode certified him as insane.

A lawyer, on behalf of Burnham, protested against this, and the magistrate remanded Taylor until Saturday, 10th February, when he was discharged.

Taylor is hopelessly demented, and there can be little doubt that although he may be properly nursed and cared for by Burnham, his property is at the man's mercy.

I have, &c.,
G. W. TAYLOR,
Acting Government Medical Officer.

[Enclosure.]

Hospital for the Insane, Callan Park, Balmain, 8 February, 1894.

Dear Dr. Taylor,

Abraham Taylor was discharged from this hospital on the 30th November, 1893, and was then hopelessly demented and quite incapable of managing his affairs or taking care of himself.

The Acting Government Medical Officer.

Yours faithfully,
H. BLAXLAND.

Minute by the Government Medical Adviser.

I think that this grave matter might be inquired into by the Inspector-General of Police.—A.S., 12/2/94.

Minutes by the Inspector-General of Police.

For prompt police inquiry. The Master-in-Lunacy may take action.—E.F., 13/—Immediate. Report attached. I think this man should be again placed in the Asylum. Perhaps the Master-in-Lunacy may intervene.—EDMUND FOSBERY (I.-G.P.), B.C., 13/2/94. The Government Medical Adviser.

Minute by the Government Medical Adviser.

As it seems that the Master-in-Lunacy cannot interfere till the person is actually declared to be insane, it would appear desirable that the Inspector-General of Police should take steps to have Taylor charged again.—A.S., 14/2/94.

Minute by the Inspector-General of Police.

Will Superintendent Read have this attended to.—E.F., 15/2/94.

Minute by Superintendent Read to Inspector Atwill.

Forwarded to Inspector Atwill for attention by Senior-Sergeant Boyd.—GEORGE READ, Superintendent. Police Department, Superintendent's Office, Metropolitan District, 15 February, 1894.

Notice to the Master-in-Lunacy of the admission of Abraham Taylor into the Hospital for the Insane at Callan Park.

Date of admission.	Address of relatives and friends.	Property, &c.	Remarks.
1894. 17 February	£5 18s. 7d., 1 coin and purse, 1 gold watch and guard, 1 gold ring, 1 scarf pin.	Formerly a patient here. Name does not appear on pay list.

H. B., Medical Superintendent.

Urgent.—This man is said to have considerable property in land and money. He was discharged from Callan Park to care of his wife, being then insane, and on her death fell into the hands of Charles Burnham, who had been employed by wife to wait on and attend to him. Burnham is said to have obtained money and other property from patient directly and by deed of gift since the wife's death.—F.N.M., 22/2/94. The Master in Lunacy.

Memo.

Memo. from Senior-Sergeant A. Boyd to Mr. Superintendent Read.

Balmain Police Station, 19 February, 1894.

ABRAHAM TAYLOR referred to in attached papers was on the 16th instant brought before Mr. Smithers, S.M., at the Central Police Court on warrant charged with "deemed to be insane," and on the recommendation of Doctors Taylor and Graham was ordered to be sent to the Hospital for Insane at Callan Park.

Inventory of property now at Taylor's residence, 40, Smith-street, Balmain, and in charge of the Police, herewith attached.

A. BOYD,
Senior Sergeant.

Forwarded to the Inspector-General, who perhaps will be good enough to send an attached list to the Master-in-Lunacy.—G. READ (Superintendent), 19/2/94.

[Enclosure.]

INVENTORY of furniture, &c., belonging to Abraham Taylor (an inmate of Callan Park Hospital for Insane), now at 40, Smith-street, Balmain.

Front Room.

Six horsehair chairs; 1 horsehair couch; 1 chiffonier; 1 pier glass; 1 round table; 1 table cloth; 8 vases; 2 decanters; 1 sugar basin; 1 tray; 2 jam dishes; 1 fly catcher; 1 toast rack; 2 cruet stands; 2 salts (*sic*); 1 work box; 1 album; 7 antimacassars; 2 spittoons; 1 coal scuttle; 1 fender; 1 glass case; 7 pictures; 1 set of window curtains; 1 cornice pole; 10 table spoons; 5 dessert spoons; 6 small spoons; 4 dessert forks; 12 large forks; 1 stool; 9 dinner knives; 2 breakfast knives; 3 walking sticks; 1 carpet; 4 door mats; 1 hearth rug.

Front Bed-room.

One wooden bedstead and bedding; 1 wardrobe; 4 chairs; 2 boxes containing wearing apparel; 1 dressing-table; 1 mirror; 1 small clock; 1 tin hat-box; 2 brushes; 1 comb; 1 wash-hand stand, jug, and basin; 1 water bottle; 1 set window curtains; 1 cornice pole; and a quantity of man's wearing apparel.

Back Bed-room.

One wooden bedstead and bedding; 1 set old curtains; 1 dressing table; 2 small mirrors; 1 chest of drawers containing clothes, &c.; 5 boxes containing lumber; 1 wash-hand stand and set; 1 clothes basket; 5 small pictures; 1 brass candlestick.

Dining-room.

1 table and oilcloth cover; 4 chairs; 1 safe; 1 writing desk; 3 small vases; 10 pictures; 1 set small book shelves; 1 fender; 1 hearth rug; some books and photographs; 2 pieces oilcloth; 1 hair broom; 1 small lamp; 3 tumblers; 1 cosey; 6 straw mats.

Kitchen.

1 table; 1 chair; 1 box iron; 1 coffee-mill; 3 jugs; 1 coffee-pot; 1 lamp; 1 deal box; 5 meat dishes; 2 vegetable dishes; 12 plates; 6 cups and saucers; 3 trays; 3 pots; 2 kettles; 1 carving knife and fork; 3 knives; 6 forks; 2 dessert spoons; 2 table spoons; 9 tea spoons; 1 sugar basin; 1 tablecloth; 1 handsaw; 1 baking board; 2 dish covers; 1 tin dish; 2 tea caddies; 1 frying pan; 3 wash tubs; 1 watering can; 1 wash board; 1 boiler; 1 syringe; a quantity of sundries.

In box in front room—1 cash-box; 2 spirit flasks; 2 pairs scissors in case; 1 cigar holder; 1 horn snuff-box.

A small tin box, containing—1 silver brooch; 3 gold brooches; 2 gold lockets; 1 gold chain; 1 pair gold earrings; 8 gold rings; 1 piece of stone; 1 silver pencil-case.

A tin box, containing—abstract of title to land, papers, &c.

A. BOYD,
Senior Sergeant.

19th February, 1894.

Urgent.—Referred to the Master-in-Lunacy.—EDMUND FOSBERY (I.-G.P.), B.C., 19/2/94.

The Inspector-General of Police might be requested to send the tin boxes (2) to the Master, and retain custody, pending further instructions, of the furniture. The Medical Superintendent might be invited to report as to probability of the patient's discharge, to enable the Master to decide as to disposal or otherwise of his property.—H.E., 22/2/94. Urgent.

Approved.—H.F.B., 22/2/94.

Will the Inspector-General of Police kindly cause the two boxes mentioned in the accompanying inventory, with the contents thereof, to be forwarded to the Master-in-Lunacy, and the patient's furniture herein enumerated to be taken charge of pending further instructions.—HENRY EDWARDS (Chief Clerk), B.C., Master-in-Lunacy's Office, 22nd February, 1894. The Inspector-General of Police.

Boxes handed to Master-in-Lunacy as directed. Receipt herewith attached.—A. BOYD (Sen. Sergt.), Balmain, 24th February, 1894. A. Atwill, Esq., Inspector. Forwarded to the Inspector General.—G. READ (Supt.), 26/2/94. Papers returned herewith.—EDM. FOSBERY (I.-G. Police), B.C., 26/2/94. The Master-in-Lunacy.

1894.

NEW SOUTH WALES.

PRISONS.

(REPORT FOR 1893.)

Presented to Parliament by Command.

The Comptroller-General of Prisons to The Under Secretary of Justice.

Department of Prisons, N.S.W., Comptroller-General's Office,

Sydney, 9 May, 1894.

Sir,

I have the honor to forward herewith my Departmental Report to the Minister of Justice for the year ended 31st December, 1893, together with the usual tabulated statistics.

I have, &c.,

GEORGE MILLER,
Comptroller-General.

The Comptroller-General of Prisons to The Minister of Justice.

Department of Prisons, N.S.W., Comptroller-General's Office,

Sydney, 9 May, 1894.

Sir,

I have the honor to furnish my Report for the year 1893, and to attach the usual statistical particulars in tabulated form.

The number of gaols in operation on the 31st December, 1893, was 59; 36 of these were police gaols, which are occupied partly by this Department and partly by the Police for purposes of economy.

The total number of prisoners distributed throughout these gaols on the last day of the year was 2,445, as against 2,622 at the end of the previous year, while it is estimated that the population of the Colony has increased from 1,197,050 to 1,223,370.

The number of distinct persons received during the year was 12,002, as compared with 11,806 received during 1892.

The total entries and discharges during the year numbered 19,080 and 19,257 respectively, as against 18,910 and 18,904 during 1892. In these numbers are included incorrigible offenders who served more than one short sentence during the year.

The number of deaths during the year was 36. Of this number, 5 were executions and 1 was a case of suicide.

The net value of all kinds of work done by prisoners in the gaols of the Colony was £51,399 19s. 1d. as compared with £52,615 0s. 7d. for 1892. In this return Trial Bay prison is not included.

As regards the employment of prisoners upon useful or productive work, it must be repeated that there is always a large number of men whose services are not available for labour. They consist of prisoners awaiting trial, prisoners in cells, those who are undergoing hospital or medical treatment, and therefore exempt from work, and those sentenced to imprisonment only who keep themselves. There are also incapables, imbeciles, and semi-lunatics, and to take care of such prisoners a certain number of well-conducted, healthy prisoners must be employed. The prison population is chiefly recruited from the idle and vicious classes, not from the hard-working and industrious.

The reconvictions at Circuit Courts and Courts of Quarter Sessions were for the first-class or gravest offenders (five years and upwards) 15 under second convictions, 7 under third, and 39 under fourth or more convictions, as against 10, 16, and 29 for the previous year. For the second class, being prisoners under sentences of less than five years, the numbers were second convictions 111, third 50, fourth or more 101, as compared with 107, 38, and 83 for the previous year. For the third class (imprisonment only) there were 2 prisoners under a second conviction as against 3 for 1892.

The reconvictions at the lower courts (drunkards and petty offenders), during the year 1893 only, were 1,107 second convictions, 343 third, and 338 fourth or more convictions, as against 1,100, 393, and 384 for preceding year.

The Shaftesbury Reformatory for Girls, at South Head, was transferred to the Colonial Secretary's Department by *Gazette* notice on 10th April, 1893.

The new gaol at Grafton, which was referred to in my previous reports, having been handed over by the contractors, was proclaimed on the 8th September last, and the prisoners were removed from the old to the new establishment on the 3rd November following. The new gaol is a fine structure, affording means for the proper treatment of prisoners which could not be carried out in the old gaol.

The police gaol at Grenfell was disestablished and reduced to a police lockup on 9th December last, in consequence of the discontinuance of the Court of Quarter Sessions at that place.

Proper punishment cells have been built in the male and female divisions at Biloea Gaol. The cells were completed and taken into use in September last. These additions have produced a marked improvement in the behaviour of the prisoners of both sexes, inasmuch as breaches of order and prison discipline can now be properly dealt with. The whole of the stone used in building the cells for the female division was quarried, rough dressed, and conveyed to the site by prison labour. Other additions and alterations have been carried out at this gaol which have much improved the organisation. In October last, two small portions of land were by proclamation added to the gaol premises.

By the additions to Goulburn Gaol, which were completed under contract during the year, the accommodation has been increased by 127 cells, which will be of great use in furthering one of the great

aims of the Department, which is to provide a separate cell for every prisoner at night, and thus prevent, in a great measure, the contamination arising from evil association. Six special yards for youthful offenders and a new yard for prisoners awaiting trial have also been constructed. They were built by prison labour at a moderate cost.

The much-needed addition of seven classification yards to Maitland Gaol was completed by prison labour during the year, and this addition has much improved the means of working the gaol. Until these yards were completed there were only two yards for the classification of the prisoners; now there are nine, two of which are special yards for the treatment of refractory men.

The crematory at Bathurst Gaol has been entirely rebuilt by prison labour, and a large smoke stack to carry the fumes and smoke of the crematory above the gaol has been erected. It will be necessary to build another crematory for use while repairs are being effected from time to time to the existing one, as it is not likely that any sort of fireplace can be constructed to withstand the fierce heat to which the crematory is subjected. The Governor reports that the visiting surgeon strongly objects to any more ordure being buried in the prison reserve.

Various minor improvements and additions have been made to Darlinghurst Gaol, which much add to the effectiveness of the organisation. When the necessary funds have been provided by Parliament it is intended to furnish this gaol with the electric light, which is also to be extended to the court-house adjoining, and to the receiving-house opposite the gaol. This, it is estimated, will lead to a very considerable saving, as the expense on account of the quantity of gas which it is necessary to consume to properly light the gaol is now very heavy.

I am glad to be able to state that the separate yard at Armidale Gaol for the accommodation of prisoners awaiting trial and under remand was completed during the year, and has been in use for some time past, much to the improvement of the discipline of the gaol. At Tamworth a similar improvement was commenced, but had not been completed when the year closed.

The necessities of retrenchment prevented me from making recommendations as to further improvements in country gaols, with a view to provide proper means of classifying and separating the prisoners according to modern ideas of prison management. There is still much to be done in this direction in the different gaol establishments of the Colony.

The cabbage-tree hat making industry has been introduced into many of the gaols, and this will enable me to entirely dispense with the felt hat for prisoners, who will in future be provided with cabbage-tree hats made in the gaols.

At Bathurst Gaol, the marble cutting and polishing industry has been started, and the results so far are very satisfactory. The proximity of marble quarries to this gaol makes it an easy matter to procure the necessary material.

The draft amended Regulations for the treatment of youthful offenders, referred to in my report for last year, after undergoing further amendment under the instructions of the late Minister of Justice (Mr. R. E. O'Connor), were formally gazetted and brought into force on the 17th April, 1893, and a copy is attached to this report as Appendix G.

As will be seen from the introductory clause, these regulations apply only to prisoners of not more than 25 years of age, under sentences not exceeding 12 months.

The object aimed at is to endeavour, by short and sharp treatment, to create in the minds of youthful offenders a wholesome dread of a prison.

As under the old Regulations, they are kept apart not only from the older criminals, but also from each other, and the important principle of separation is thus carefully preserved, so as to guard each prisoner against the effects of pernicious association; but the confinement is not "solitary," inasmuch as they are regularly visited by the chaplain, surgeon, schoolmaster, and other officials, and are allowed daily exercise and monthly visits from friends.

In cases where the sentence does not exceed 14 days, the diet is limited to bread and water.

In sentences exceeding 14 days, but not exceeding 6 months, and for the first 6 months of sentences exceeding that period, the bread and water diet alternates weekly with a substantial ration.

When a sentence exceeds 6 months the prisoner is, during the last 14 days of such sentence, limited to a bread and water diet. The object of this treatment is to send him out of the prison with the feeling that it is a place to be dreaded.

In sentences not exceeding 6 months, a plank bed is provided, without a mattress or substitute therefor, throughout that term.

The Regulations further require that the prison surgeon shall visit each prisoner in separate treatment daily, so as to guard against any permanent injury to health.

It is hoped that by the stringent nature of this treatment, juvenile crime and "larrikinism" in their first stages will be effectually checked. Short sentences carrying such treatment should be much more effectual than long ones under the old conditions of servitude. To be deterrent, the punishment must be made a really genuine one.

In its application to youths under 16, this treatment is intended more for the incidental offenders than for the vicious and incorrigible youths. It is recognised that a chance offender, whose crime was committed through recklessness, passion, or the force of bad example, requires penitential discipline only, while the youth who has shown by his depraved and vicious habits that he is incorrigible, should be subjected to lengthened detention and treatment of a disciplinary and instructive character in a reformatory, with plenty of hard work, chiefly in the open air. To place youthful first offenders in a reformatory for a long period would, as a general rule, be an unwise and an expensive proceeding, entailing heavy expense on the State, and relieving the parents of responsibilities which they should be made to bear. The discretion in such cases must, of course, be left with the courts which deal with the young law-breakers.

With a few exceptions, the conduct of the officers of the prison staffs has been very satisfactory, and, generally speaking, good order and discipline have been maintained among the prisoners.

The benefits of the sections of the Civil Service Act providing for superannuation allowances continue to be felt by the Department, as it tends to considerably improve the efficiency of the staff by enabling officers who have reached old age to retire on a small pension and thus make room for young and vigorous successors.

I have, &c.,
 GEORGE MILLER,
 Comptroller-General.

ADDITIONAL REGULATIONS FOR REFORMATORY PRISON TREATMENT OF CERTAIN MALE OFFENDERS.

His Excellency the Lieutenant-Governor, with the advice of the Executive Council, has been pleased, under section 5 of 4 Victoria No. 29, to make the following additional Regulations for Reformatory Prison Treatment of certain Male Offenders, in substitution for those of 15th November, 1888.

R. E. O'CONNOR.

There shall be a seventh class of prisoners, comprising persons of not more than 25 years of age under sentences of imprisonment, with or without hard labour, not exceeding twelve months, who shall be treated during such sentences under the following conditions of separate treatment:—

1. Each prisoner shall occupy a separate cell, and shall be employed upon such suitable work as may be furnished to him.
2. He may be allowed exercise for one hour each day, and a longer period if thought necessary by the surgeon.
3. He may, if coming under the Regulations as to eligibility for school, be allowed one hour daily for performing tasks to be set for him by the schoolmaster, and one hour for reading such instructive and reforming books as may be selected for him by the Chaplain. He shall at all times be provided with a Bible.
4. He shall not, under any pretence, attempt to communicate with another prisoner. He must neither read aloud, sing, whistle, dance, nor make any noise in his cell, exercise ground, in the corridor, or chapel.
5. He shall rise immediately upon the first bell being rung, wash his hands and face, and make up his bedding neatly in such form as may be directed.
6. He shall keep his person, cell, and the furniture therein in the highest state of cleanliness.
7. He shall wash his feet twice in summer, and once in winter, weekly, and shall bathe once a week.
8. He shall not be allowed to alter his clothing, and shall keep it clean and in proper repair.
9. He shall, on hearing his cell door open, at once, if not in bed, stand up in the centre of his cell, facing the door, with his hands by his side and his heels close together.
10. In marching to or returning from the exercise grounds or chapel, he shall keep 5 yards distant from any other prisoner.
11. Any prisoner requiring assistance or instruction, or having anything to communicate, may ring his gong for the officer on duty; but all conversation not strictly necessary is to be avoided, and on no account is the gong to be rung without sufficient reason.
12. At the order "Prepare for exercise," the prisoner shall, as soon as the door is opened, move out of his cell to the exercise circle, and take up the position assigned to him by the officer; at the word "One," he shall stoop down and take hold of the rope handle attached to the marching chain; at the word "Two," he shall at once assume an erect position, retaining hold of the marching chain, and so remain at attention until the officer calls "Walk round." During wet or very hot days he may (by permission of the officer) remain in his cell, or take such exercise as may be practicable and directed, in the corridor.
13. He shall be very respectful to all officers of the Government, and shall never pass a superior officer of the prison without touching his hat.
14. The scale of dietary will be—16 oz. bread; 8 oz. meal; 3 oz. meat; 3 oz. potatoes; 1 oz. sugar; $\frac{1}{4}$ oz. soap $\frac{1}{4}$ oz. salt.
15. The surgeon shall visit daily each prisoner of the seventh class in his prison.
16. Each prisoner shall be weighed monthly, and reports of weight shall be laid before the surgeon at the commencement of each month.
17. The prisoners shall be allowed the usual monthly visits, but in each case the gaoler must be satisfied that the visitor is a person to whom it is desirable to permit the privilege.
18. Correspondence will be permitted in terms of Regulations No. 31.
19. Each prisoner of the seventh class shall be provided with a plank bed, which shall be used without a mattress or substitute therefor for a period of six months. A coir pillow of 4 $\frac{1}{4}$ inches in diameter will be allowed.
20. After a period of six months a coir mattress will be allowed; but, in case of misconduct, the Visiting Justice may direct the prisoner, apart from any cell or other punishment, to be deprived of his mattress for a period not to exceed fourteen days.
21. In cases of short sentences not exceeding fourteen days the dietary scale shall be limited to bread and water (Prison ration No. 5). Each prisoner so treated shall not be subject to the conditions prescribed in Regulations 2, 10, 12, and 14. He shall, however, be required to conform to Regulations 1, 3 (except as regards school), 4, 5, 6, 7, 8, 9, 11, and 13. He shall not be allowed to receive visits, nor to write letters.
22. In cases where the sentence is for more than fourteen days but not exceeding six months, and for the first six months of sentences exceeding that period, each prisoner shall be placed on bread and water diet (Prison ration No. 5) during the first week of his sentence; during the second week he shall receive the ration prescribed in Regulation 14 (Prison ration No. 9), and so on throughout the period of six months No. 5 ration shall alternate weekly with No. 9. In other respects he shall be subject to the conditions of all the above Regulations, excepting 21, *while in receipt of No. 9 ration*, and to the conditions prescribed in Regulations 21 only *while in receipt of No. 5 ration*; but the gaoler may allow such exercise as he may deem necessary, on the advice of the visiting surgeon, for any prisoner on the reduced ration No. 5.
23. In cases where the sentence exceeds six months each prisoner shall, during the last fourteen days of his sentence, be treated in the manner prescribed in Regulation 21.
24. These Regulations shall not apply to any seventh class prisoner who may have been sentenced prior to their publication in the *Government Gazette*, but all such prisoners shall be treated in accordance with, and shall conform to, the Regulations of the 15th November, 1888, hereinbefore mentioned.

1894.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PRISON LABOUR—MAT-MAKING INDUSTRY.

(CORRESPONDENCE WITH MESSRS. ARMSTRONG AND SON RESPECTING.)

Ordered by the Legislative Assembly to be printed, 9 May, 1894.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 8th February, 1894, That there be laid upon the Table of this House,—

“ A Return showing the whole of the correspondence that has passed
“ between the firm of John Armstrong and Sons and the Department of
“ Justice relative to prison labour competing with free labour in the mat-
“ making industry.”

No. 1.

J. Armstrong and Son to The Minister of Justice.

Sir, 114, Riley-street, Woolloomooloo, 2 September, 1887.

We regret that the action of the gaol authorities who have charge of the mat-making department necessitates our bringing the subject again under your notice.

The result of the present policy will be so disastrous to us that we implore your earnest consideration to the statements which follow.

In the beginning of the present year the Darlinghurst Gaol authorities issued a new list reducing the prices of mats from 9d. to 8d. per lb., making a difference in a mat weighing 15 lb. of 1s. 3d., or fully ten per cent. (10 per cent.).

We wrote to Sir Henry Parkes, who referred our letter to you as Minister of Justice, and your reply was to the effect that you saw no reason to interfere, as the reduction was so small and the price still higher than the imported mats.

Recently mat-making has been started at the Parramatta Gaol as well as at Darlinghurst. Price-lists or circulars have lately been issued and presented to our customers reducing the price of the class of mats made by us to sixpence (6d.) per pound net, or more than twenty-five (25) per cent. less than the price obtained last year.

Further, on the 2nd instant a price-list was issued from Darlinghurst which may be termed a measurement-list, offering our description of mats at one shilling (1s.) per square foot, not only another reduction of price, but initiating a system liable to serious abuse. Singular to state, Parramatta Gaol is offering the same mats at 9d. per square foot which Darlinghurst quotes at 1s.

For many years we have laboured hard to establish our business by exercising strict economy and working very hard. We have so far succeeded as to have last year manufactured and supplied to Sydney trades-people over five thousand (5,000) mats at the regular price of 9d. per lb., less 10 per cent., notwithstanding that H.M. Gaol at Darlinghurst was also manufacturing similar goods.

We may point out that the Colonial mats are superior in quality to the imported, and that it is impossible to compete in price with the imported mats and pay wages, or even secure a livelihood; but there is a market here for Colonial-made mats at the old price, and there is no necessity for the reductions which have been made unless the desire is to destroy our means of living. We beg to say that it is not a question of prison labour competing with importers, but of prison labour crushing out a local industry.

As far back as 1880 the gaol authorities proposed to reduce the price. We then wrote to Sir Henry Parkes and we received a letter from Sir George Innes, at that time Minister of Justice, stating that the price should not be lowered.

We also respectfully protest against any persons from Her Majesty's gaols being allowed to measure doorways in the city and supplying mats to order, thus interfering with the interests of trades-people as well as ourselves.

We have no wish to dictate to the Government, but we do earnestly protest against prison labour being permitted, or rather employed, to crush out our business and involve men who are good citizens and struggling hard for their families, to be ruined by such unequal competition.

We

We trust you will give this matter earnest consideration, and if our letter is not sufficiently clear, kindly allow us an interview in order that we may fully explain the whole position, or we should be glad to be examined, not only by yourself, but by any disinterested gentleman or committee who may be appointed to conduct such examination.

Anxiously awaiting your favourable reply,—

We have, &c.,

J. ARMSTRONG AND SON.

Submitted.—A.C.F., 23/9/87. Acknowledge this letter and state that the subject will receive the prompt and serious consideration of the Minister of Justice.—W.C., 27/9/87. The Comptroller-General of Prisons for favour of an early report hereon.—W.C., 27/9/87.

No. 2.

The Under Secretary of Justice to J. Armstrong and Son.

Gentlemen,

Department of Justice, Sydney, 27 September, 1887.

In acknowledging the receipt of your letter of the 22nd instant, calling attention to the reduction in the price of mat-making in Sydney and Parramatta gaols, I have the honor to inform you that the subject will receive the prompt and serious consideration of the Minister of Justice.

I have, &c.,

ARCH. C. FRASER,

Acting Under Secretary.

No. 3.

The Comptroller-General of Prisons to The Under Secretary of Justice.

6 October, 1887.

I beg to refer to my former report of 25th May last. The customers have been and are customers of prison trade as well as of Messrs. Armstrong.

The class of mats is of a cheaper form to give employment to comparatively unskilled hands with lesser appliances, and now employ from forty to fifty men.

The price is cast not as in competition with Messrs. Armstrong, but with English prison-made imported mats of the same class, and at a rate of about 20 per cent. in advance of the charge for imported.

There has been no reduction made, because this article has only lately been introduced, so the alleged reduction from the price of another class of last year does not apply. Were it even applicable it would not be a reduction of 25 per cent., but 15, then by an allowance on the first manufacture of 10 per cent. discount.

2. The alteration complained of is only from weight to measurement at the same price in accordance with the general trade custom. It does not open the way to any abuse. The Parramatta is another class of cheaper mat, and sold without discount.

If Messrs. Armstrong can show that for any class of mat the prison charge is less than their own, the prison charge would be increased in order to relieve them of any disadvantage.

I am informed that Messrs. Armstrong's establishment only employs beyond the family a few hands.

HAROLD MACLEAN,

Comptroller-General of Prisons.

Submitted.—T.E.M.N., 7/10/87. Messrs. Armstrong to be communicated with to this effect.—W.C., 8/10/87.

No. 4.

The Under Secretary of Justice to J. Armstrong and Son.

Gentlemen,

Department of Justice, Sydney, 10 October, 1887.

Referring to your letter of the 22nd ultimo, calling attention to the reduction in price of mat-making in Sydney and Parramatta gaols, I am directed by the Minister of Justice to inform you that if you can show that for any class of mat the prison charge is less than your own, the prison charge will be increased in order to relieve you of any disadvantage.

I have, &c.,

ARCH. C. FRASER,

Acting Under Secretary.

No. 5.

J. Armstrong and Son to The Minister of Justice.

Sir,

114, Riley-street, Woolloomooloo, 15 October, 1887.

We have the honor to acknowledge your letter of the 10th instant, and to express our sincere thanks for your proposal to increase the prison charges of mats to the same as our own, so that we may not be placed at a disadvantage.

We now respectfully point out the reductions in prices, as shown by the enclosed price-lists, issued by the Sydney and Parramatta gaol authorities.

A List—H.M. Gaol, Sydney, 1887:—

No. 1. Diamond-backed brush, 8d. per lb. = our price, 9d.	} In both cases subject to discount of 10 per cent.
No. 2. " border, 9d. " " 10d.	
No. 3. Superfino frame border, 1s. 1d. " " 1s. 2d.	

B.

B. List, H.M. Gaol, Parramatta:—
 C.F.F. Diamond-back mats, 1 to 7, 6d. net = our price, 9d. } Less 10 per cent.
 " " (outside) 7d. net. " 10d. } discount.

The above statements are in accord with the third and fifth sentences of our letter of 22nd September.

C. List, Sydney Gaol, 2nd September, 1887:—
 Diamond-backed brush plain, 1s. per foot.

D. List, Parramatta Gaol.

For same mats, 9d. per foot; and all larger sizes than those enumerated at 7d. per lb. net, as against our 10d. per lb., less 10 per cent., or 9d. per lb. net.

In the sixth sentence of our letter of 22nd September we referred to the issue of measurement lists, not only another reduction in prices, and strangely differing in the two gaols, but also initiating a system liable to serious abuse.

To sell by weight is fairest and most satisfactory both to buyer and seller, but to sell by measurement affords an opportunity for one maker supplying proportionately heavier mats, thus taking advantage of another maker, and in the case of a public institution opening the way for a wrong estimate of the quantity of raw material actually used, and which can only be checked by extremely close and careful stock-taking. This matter could be better explained in a personal interview.

There is no doubt whatever that the system of selling by weight rather than by measurement is now recognised by all competent authorities on modern systems of business, as calculated to provide safety to manufacturers, sellers, and consumers.

We trust that we have been sufficiently explicit in this letter to enable you to see your way clear to give instructions to recall all the price-lists which have been issued this year, and issue new lists at the old rates, and under the system of selling only by weight.

We are, &c.,
 J. ARMSTRONG AND SON.

The Comptroller-General of Prisons for favour of report.—A.C.F., B.C., 21/10/87.

I have, after consultation with Messrs. Armstrong, my own officers, and some gentlemen connected with the sale of mats, arranged this matter to the satisfaction of Messrs. Armstrong.—H.M., B.C., 21/10/87. The Under Secretary of Justice.

Seen.—W.C., 22/11/87. Inform W. S. Buzacott, Esq., Market-street, of the terms of the minute of the C.-G. of Prisons.—W.C., 28/11/87.

No. 6.

The Under Secretary of Justice to W. S. Buzacott, Esq.

Sir,

Department of Justice, Sydney, 29 November, 1887.

With reference to recent correspondence that has taken place between Messrs. Armstrong and Son and this Department respecting the prices charged for mats manufactured in Sydney and Parramatta Gaols, I have the honor, by direction of the Minister of Justice, to inform you that the Comptroller-General of Prisons reports that, after consultation with Messrs. Armstrong and Son, his own officers, and some gentlemen connected with the sale of mats, he has arranged this matter to the satisfaction of Messrs. Armstrong and Son.

I have, &c.,
 ARCH. C. FRASER,
 Acting Under Secretary.

No. 7.

W. S. Buzacott, Esq., to The Minister of Justice.

Dear Sir,

Market and Sussex Streets, Sydney, 30 November, 1887.

I have the honor to acknowledge your letter of the 28th instant, No. 87-1205, informing me that the Comptroller-General of Prisons has arranged the matter of the sale of mats satisfactorily with Messrs. Armstrong and Son.

I am extremely glad of this result, and beg to express my sincere thanks for your kind consideration.

I remain, &c.,
 WALTER S. BUZACOTT.

Seen.—W.C., 1/12/87.

No. 8.

Minute by the Comptroller-General of Prisons to The Superintendent of Prison Industries.

It is represented to me that the new mat, called the "Centennial," is practically as good a mat as the Diamond mat, and that selling them at [the present rate is a departure from the understanding with Messrs. Armstrong & Co.

The price for this mat was approved by me on the understanding that it was a fair price with a moderate margin for profit, for an entirely inferior description of mat, made by an inferior class of workmen, and was in no way within the meaning of the arrangement with Messrs. Armstrong & Co. to Diamond Backs.

It is further represented that the introduction of the "Centennial" mat has materially interfered with Messrs. Armstrong's sale of Diamond Backs.

What amount of sale so to interfere has been made in Sydney? The Superintendent of Industries to visit Parramatta, confer with Overseer Danks, and furnish a full report.

H.M., 2/5/88.

How many men would be thrown out by abandoning the mat industry; how by the "Centennial" mat?

No. 9.

The Superintendent of Prison Industries to The Comptroller-General of Prisons.

Sir,

Sydney Gaol, 7 May, 1888.

I have the honor to report, for information of the Comptroller-General of Prisons, *re* manufacture and sale of mat called "Centennial."

This mat is of a distinctly different class, and much inferior to that called "Diamond Back." It is sold at a fair margin of profit, viz., £17 per ton value of labour, and is in no way a departure from the understanding arrived at with Messrs. Armstrong and Son, and cannot, as stated, have interfered with their sales of "Diamond Back" mats, inasmuch as only a very small quantity—about forty mats—have been sold in Sydney, other than to two firms, viz., Messrs. Briscoe, Drysdale, & Co., and Messrs. Mason Bros., who are not customers of Messrs. Armstrong and Son. (*See* papers attached.)

I beg to state the sale of "Diamond Back" mats has materially fallen off since the price has been increased. The difficulty in effecting sales of mats made either by free or prison labour, at the excessively high price of 9d. per lb. as against an equally good article imported at 4½d. and 3½d. per lb., needs no comment, and in proof of which I have obtained for your inspection samples of these imported mats at prices quoted.

I may state that I have endeavoured to dispose of prison-made "Diamond Back" mats in the adjacent colonies of Queensland and New Zealand. I quoted them at 6d. per lb. The offer was declined as they could be imported from England at a lower rate.

There are at present 160 prisoners employed in the several gaols at the mat and matting industry, forty-eight of whom are on the "Centennial" mat, and for whom other employment will have to be provided in the event of either of these industries being discontinued.

I would respectfully suggest that Messrs. Armstrong and Son be requested to furnish the name of the firms who have ceased to purchase from them in consequence of the prison manufacture. At present it appears to me a statement made without the support of facts.

I have, &c.,

W. B. McLAREN,
Superintendent Prison Industries.

No. 10.

W. S. Buzacott, Esq., to The Under Secretary of Justice.

Dear Sir,

Sydney, 17 May, 1888.

I shall be obliged if you will kindly inform me when it will be convenient for the Minister of Justice to receive a deputation on the subject of the injurious effect on the local mat-making industry, of the action in regard to circulars, and prices taken by the authorities of Her Majesty's Gaols.

I remain, &c.,

WALTER S. BUZACOTT.

Submitted.—A.C.F., 17/5/88. I will see deputation Wednesday next at 10 o'clock. The Comptroller-General of Prisons to be invited to be present.—W.C., 18/5/88.

The Under Secretary of Justice to W. S. Buzacott, Esq.

Sir,

Department of Justice, Sydney, 18 May, 1888.

Referring to your letter of the 17th instant, I have the honor to inform you that the Minister of Justice will be happy to receive the deputation with regard to the local mat-making industry, as affected by the prices charged by the Prison authorities, on Wednesday next, the 23rd instant, at 10 o'clock in the forenoon.

I have, &c.,

ARCH. C. FRASER,

Under Secretary.

No. 12.

The Under Secretary of Justice to The Comptroller-General of Prisons.

Sir,

Department of Justice, Sydney, 18 May, 1888.

The Minister of Justice having intimated his willingness to receive a deputation with regard to the local mat-making industry as affected by the prices charged by the Prison authorities, on Wednesday next at 10 o'clock a.m., I have the honor, by direction of Mr. Clarke, to invite you to be present on that occasion.

I have, &c.,

ARCH. C. FRASER,

Under Secretary.

No. 13.

J. Armstrong and Son to The Minister of Justice.

Sir,

Riley-street, Sydney, 22 May, 1888.

We beg respectfully to call your attention to the enclosed price list of coir mats issued by the authorities of Her Majesty's Gaol, Parramatta, which we submit is an infringement of your decision, communicated to us on the 10th October, 1887.

That decision fixed the price of mats (Diamond Back) made in Her Majesty's Gaols at 9d. per lb., less 10 per cent.

We now produce for your information a sample mat offered at 4½d. per lb., in which you will observe that the style of the back is altered and the quality slightly reduced, yet the quality and make are such

such as to command the market to the exclusion of the mats which were the subject of your consideration and decision in October last. We may add that instead of being termed a "Diamond Back" mat, the new sample is termed a "Centennial" mat.

The whole alteration can only be regarded as a means of securing the whole of the local trade to Her Majesty's Gaols, and seriously interfering, if not entirely destroying, the local industry carried on by ourselves for many years.

We sincerely trust you will kindly give this matter your favourable consideration.

We are, &c.,
JOHN ARMSTRONG AND SON,
(Per F.A.B.)

Minute of The Minister of Justice.

Department of Justice, Sydney, 23 May, 1888.

In the course of conversation with a deputation, *re* prison mat-making, it was stated that the Department of Prisons sold mats to wholesale firms in this city, and that the Department of Works and Railways bought the prison-made mats from these firms.

Inform Minister of Works in terms of above minute, and add that I can scarcely credit such is the case.

W.C., 23/5/88.

No. 15.

The Under Secretary of Justice to The Under Secretary for Public Works.

Sir,

Department of Justice, Sydney, 23 May, 1888.

In the course of conversation with a deputation that recently waited on the Minister of Justice respecting prison mat-making, it was stated that the Department of Prisons sold mats to wholesale firms in the city, and that the Departments of Works and Railways bought the prison-made mats from those firms,—I am directed by the Minister of Justice to request that you will invite the Secretary for Public Works to have the goodness to state if there is any truth in this statement, as Mr. Clarke can scarcely credit that such is the case.

I have, &c.

ARCH. C. FRASER,
Under Secretary.

No. 16.

The Comptroller-General of Prisons to The Under Secretary of Justice.

2 June, 1888.

THE accompanying papers are, by direction of the Minister of Justice, resubmitted in connection with an interview of a deputation regarding the protest of Messrs. Armstrong and Son against the price of a mat manufactured at Parramatta, and known as the "Centennial" mat, and which was alleged to prejudice the trade of Messrs. Armstrong in a mat known as the "Diamond Back."

It was explained by myself that the authority given by me for the manufacture of the "Centennial" mat, was for a mat, the approved sample of which was produced, and which was altogether of an inferior description to the "Diamond Back," and therefore not calculated to interfere with the sale of the last-named.

A mat was produced on the part of Messrs. Armstrong sold as a "Centennial," but of distinctly superior quality, and calculated to interfere with the sale of Messrs. Armstrong's mats.

It was pointed out by myself that my instructions must have been departed from in making this superior mat, and by subsequent inquiry I have found such to have been the case to a considerable extent.

As I undertook at the interview, I have taken strict order that the Parramatta manufacture be limited to the approved pattern of the inferior mat.

This it was understood would meet the objections, so far as they could be considered in any way reasonable, of Messrs. Armstrong.

By desire of and for the information of the Minister of Justice, I forward a further report from the Superintendent of Prison Industries, showing the profit on the material for the Parramatta manufacture, which gives employment to some forty prisoners. The charges against the profit comprehend £2 a ton for railway freight. This can scarcely be considered a real subtraction.

HAROLD MACLEAN,
Comptroller-General.

I have under consideration a question, quite irrespectively of Messrs. Armstrong's objections, of raising the price of the "Centennial" mat.—H.M.

[Enclosures.]

[Enclosures.]

Sir,

Sydney Gaol, 25 May, 1888.

I beg to report, for information of the Comptroller-General of Prisons, re cost of coir yarn, freight, &c., being the material from which the mat called the "Centennial" is made.

Coir yarn delivered at Darlinghurst, £24 7s. 6d. per ton, freight to Parramatta, which is paid by the Stores Department, I find upon inquiry to be £2 per ton, making cost of yarn delivered at Parramatta Gaol, £26 7s. 6d. These mats are sold at 4½d. per lb., or £42 per ton, leaving a labour profit on local sales of £15 12s. 6d. The delivery of these mats in Sydney entails a further cost of £2, reducing the labour profit on Sydney sales to £13 12s. 6d. per ton.

I may again call your attention to the object of this industry, viz., to furnish employment to short-sentenced prisoners, who would otherwise be comparatively idle.

I have, &c.,

W. B. McLAREN,
Superintendent, Prison Industries.

CIRCULAR.

Sydney Gaol, 3 September, 1887.

ENCLOSED please find new price-list for stock mats, which we propose to sell by measurement, in lieu of weight, as at present.

W. B. McLAREN,
Superintendent of Prison Industries.

Messrs. Albery & Co.

Sale of Diamond Back Mats.

1886, from 1st January to 30th April.—515, 4,362 lb., 9d. per lb. 1887.—440 mats, 2,943 lb., 8d. per lb. 1888.—246 mats, 1,727 lb., 9d. per lb. Centennial mats, 30th April, 1888.—MacLean, Rushcutters Bay, 103 lb.; Israel & Co., 89 lb.; R. H. Smith 53 lb.—245 lb. (or 80 mats).

Mr. Buzacott stated the manufacture of Messrs. Armstrong and Son's D.B. mats had virtually ceased. Mats are now on the water at less than those quoted on sample mats.

Sample mat, size 7, 16 lb., 6s. 2d.; Darlinghurst price net, 10s. 10d. Sample, size 4, 9½ lb., 2s. 8d.; Darlinghurst price net, 6s. 5d. Sample size 3, 8 lb., 2s. 2d.; Darlinghurst price net, 5s. 5d.

Dear Sir,

263 to 269, Kent-street, Sydney, 6 March, 1888.

Re mats ordered 2nd instant, please cancel order, as we cannot pay 9d. and sell at 7d. We are surprised that you should be dictated to by Mr. Armstrong, whoever he may be. We must decline to have anything to do with mats at 4½d., fearing that some day he may order you to make the price 7d. We shall have to do as others of your customers will doubtless have to, that is, import an article to sell at 7d., as we have no intention of selling at a loss, even to please Mr. Armstrong.

The Gaoler of Parramatta Gaol.

Yours respectfully,

MASON BROS. (LIMITED)
(Per P. N.)

Forwarded to the Comptroller-General.—J.L., Deputy-Governor, Sydney Gaol, 25/5/88. Submitted.—A.C.F., 5/6/88.

Mr. W. S. Buzacott, of Market-street, to be informed as succinctly as possible, and in general terms, of the tenor of this report, which the Minister of Justice trusts will lead to an absence of any further complaint.—W.C., 16/6/88.

No. 17.

The Under Secretary of Justice to W. S. Buzacott, Esq.

Sir,

Department of Justice, Sydney, 18 June, 1888.

With reference to a deputation introduced by you to the Minister of Justice, on the 23rd ultimo, regarding the protest made by Messrs. Armstrong and Sons against the selling price of a mat manufactured at Parramatta Gaol, known as the "Centennial" mat, and which was alleged to prejudice the trade of Messrs. Armstrong and Sons in a mat known as the "Diamond Back," I am directed by the Minister of Justice to inform you that upon inquiry it has been ascertained that the authority given by the Comptroller-General of Prisons for the manufacture of the "Centennial" mat was for a mat which was altogether of an inferior description to the "Diamond Back," and, therefore, not calculated to interfere with the sale of that mat.

I am to add that strict orders had been given by the Comptroller-General of Prisons, that mats manufactured in Parramatta Gaol be limited to the approved pattern of the inferior mat before referred to, and that Mr. Clarke trusts that such action will lead to an absence of any further complaint on the part of Messrs. Armstrong and Sons.

Sir,
 Department of Justice, Sydney, 2 July, 1888.
 The Minister of Justice having arranged to receive a deputation from the Chamber of Manufactures of New South Wales on the subject of "prison labour against local industry" on Thursday next, the 5th instant, at 12 o'clock, I have the honor, by direction of Mr. Clarke, to invite you to be present on that occasion.

I have, &c.,
 ARCH. C. FRASER,
 Under Secretary.

No. 21.

J. Armstrong and Son to The Minister of Justice.

Honorable Sir,
 Mat Manufactory, 114, Riley-street, June, 1888.
 We beg to state that after being established as mat and matting manufacturers for eight years, in May, 1887, Parramatta and Darlinghurst Gaols reduced the selling price of brush mats 25 per cent. below our prices.

After several interviews with the Comptroller-General of Prisons, on 21st November he agreed to go back to the prices charged in 1884.

We found shortly after this agreement that the Parramatta Gaol brought out a brush mat equal in material to our best and second quality brush mats at 9d. per lb., calling the same a "Centennial Mat," and selling it at half the price agreed upon, viz., 4½d. per lb.

We submit that this is underselling us in the market. Being sold at so low a price, it is purchased in preference to our second quality brush mat, and made of the same quality of material and with as little yarn as possible worked in it, with a view of cheapening the sale against us. The Comptroller-General has also reduced the selling price of sennett mats against us.

This system of competition, we humbly submit, is an injustice against us as citizens and manufacturers, and we trust that you will be pleased to give instructions that this competition against local industry be at once discontinued, and that every description of mats and matting made in the Government gaols be sold at a not less price than the Government price list published for 1884.

We trust that the Government will ultimately confine the manufacture of mats and matting to supplying Government establishments only.

We have, &c.,
 J. ARMSTRONG AND SON.

Mr. Armstrong to send list of his trade prices, and when received resubmit papers.—W.C., 5/7/88. See list herewith (No. 88-8,052) received to-day, 6/7/88.

 Dear Sir,
 I beg to inform you that, in accordance with mine of the 27th instant and yours of the 29th June, the deputation from this Chamber will wait upon the Minister of Justice at 12 o'clock this day.

I have, &c.,
 D. CHADWICK,
 Secretary.

Submitted.—T.E.M.N., 5/7/88.

No. 23.

J. Armstrong and Son to The Minister of Justice.

Honorable Sir,
 Mat Manufacturers, 114 Riley-street, 5 July, 1888.
 We have to thank you for your decision to give instructions to the Gaol officials to take immediate steps to stop underselling us in the market, and further, that in future the Gaol goods shall not be sold at a less price to the trade than our present price list, which we herewith enclose, and beg to state that the same is also the Darlinghurst Gaol price list for the year 1879, the year in which we commenced our present establishment, and we trust, as soon as possible, you will give effect to the above decision, and kindly notify the same to us.

We have, &c.,
 J. ARMSTRONG AND SON.

Submitted.—T.E.M.N., 6/7/88. Comptroller-General of Prisons, these papers now submitted for perusal, and any further report to guide Minister in coming to a final decision in this matter.—W.C., 9/7/88. B.C., A.C.F.

No. 24.

The Comptroller-General of Prisons to The Under Secretary of Justice.

3 August, 1888.
 THE outcome of the deputation was a promise by the Minister of Justice that the Prisons Department would not undersell Messrs. Armstrong in the market.

It was explained by myself that the inferior description of mat made at Parramatta and some country gaols, and sold at a lesser rate than Messrs. Armstrong's price, was not in the same category as their mats, and their price could not be regarded as underselling.

On

On the other hand, Messrs. Armstrong contended that the purchase by the public of these inferior low-priced mats, amounted to under-selling, inasmuch as people bought the inferior mats to the prejudice of his sale of the superior.

If, in the opinion of the Minister, his promise applied to the inferior mat in the position above stated, there is no alternative but to cease their manufacture, now employing some fifty men, as they would not be saleable at a higher rate.

HAROLD MACLEAN,
Comptroller-General of Prisons.

Submitted, with reference to the Minister's minute of the 9th ultimo.—A.C.F., 6/8/88.

No. 25.

J. Armstrong and Son to The Minister of Justice.

Dear Sir, Wholesale Mat Manufactory, 114, Riley-street, 6 August, 1888.

We beg most respectfully to ask if instructions have been given to the Comptroller-General of Prisons and the Gaol authorities, not to sell mats of any description at a less price than the published prison list for the year 1879, the same as our current price list, and which, at your request, we forwarded to you a copy through the Chamber of Manufacturers; and believing that you wish to do us justice, we trust that you will see that this question of under-selling us by prison labour is finally settled, as we have no wish to trouble you again, or to bring the injustice of the case towards us under the notice of the public.

Waiting early reply,

We have, &c.,
J. ARMSTRONG AND SON.

Submitted, in connection with previous papers under consideration.—A.C.F., 8/8/88.

Messrs. Armstrong to be informed, and the Comptroller-General of Prisons advised, that mats of the same quality as manufactured by Armstrong and Son are not to be sold at a less price than that obtained by that firm, but if mats of an inferior quality to those made by Armstrong and Son are made in the gaol the price must be regulated accordingly.—W.C., 18/8/88.

No. 26.

The Under Secretary of Justice to J. Armstrong and Son.

Gentlemen, Department of Justice, Sydney, 23 August, 1888.

Referring to your letter of the 6th instant, inquiring whether instructions had been given to the Comptroller-General of Prisons not to sell mats at less prices than those specified in the published prison list of 1879,—I am directed by the Minister of Justice to inform you that the Comptroller-General of Prisons has been advised that mats of the same quality as those manufactured by you are not to be sold at a less price than that obtained by your firm; but if mats of an inferior quality to those manufactured by you are made in the gaol, the prices thereof must be regulated accordingly.

I have, &c.,
ARCH. C. FRASER,
Under Secretary.

No. 27.

The Under Secretary of Justice to The Comptroller-General of Prisons.

Sir, Department of Justice, Sydney, 23 August, 1888.

With reference to your blank cover of the 3rd instant and previous correspondence regarding the manufacture of mats in gaol, I am directed by the Minister of Justice to inform you that he has decided that mats of the same quality as those made by Messrs. Armstrong and Son are not to be sold at a less price than that obtained by their firm; but if mats of an inferior quality to those manufactured by Messrs. Armstrong and Son are made in gaol, the prices thereof must be regulated accordingly, of which decision Messrs. Armstrong and Son have been apprised.

I have, &c.,
ARCH. C. FRASER,
Under Secretary.

No. 28.

J. Armstrong and Son to The Minister of Justice.

Dear Sir, Wholesale Mat Manufactory, 114, Riley-street, Sydney, 27 August, 1888.

Referring to your letter of the 23rd instant (No. 88-9,123), we beg most respectfully to state that the gaol authorities are still selling brush mats equal to our second quality brush at 4½d. per lb., for which our selling price is 9d. per lb. This has been our contention for the last twelve months, and at our waiting upon you with a deputation from the Chamber of Manufacturers, you kindly promised that in future goods should not be sold below our price list, yet, in the face of this decision, we received from one of our customers a price list obtained last week from Parramatta Gaol, offering brush mats, by the name of "Centennial" mats, as stated above, and 50 per cent. below us; also offering Sennett mats 20 per cent. below us.

We beg to state that if this system is further persisted in by the Government we will be compelled, in justice to ourselves and manufacturers in general, to submit our case to the public and the Legislative Assembly. The simple question is this: Why should mats that have been made of the same material and the same amount of workmanship that have realised to the State 9d. per lb. for the last twenty-five years be now sold at a reduced price, viz., 4½d. per lb., to the injury of the manufacturer, the free workman,

and a loss to the State under the assumed name of "Centennial mats," they being equal to our second quality, and made of the same material, thereby stopping the sale of our goods, and, as before stated, underselling us in the market? We beg also to state that the Comptroller-General of Prisons has never done this under any former Government, and we trust that the present Government and yourself will at once stop this injustice as promised by you to the Chamber of Manufacturers.

As this case has been before you for upwards of twelve months, we will thank you for an immediate reply.

We have, &c.,

J. ARMSTRONG AND SON.

Submitted with reference to the Minister's minute of 18th August, 1888, herewith.—A.C.F.
28/8/88. Comptroller-General of Prisons.—W.C. B.C., 29/8/88, A.C.F.

No. 29.

The Comptroller-General of Prisons to The Under Secretary of Justice.

14 September, 1888.

In the renewed complaint of Messrs. Armstrong and Sons it is stated that this Department are selling mats "equal to our second quality brush at 4½d. per lb., for which our selling price is 9d.," and this is the gist of their present representation.

It will be in the recollection of the Minister of Justice that at the interviews with himself the whole question turned upon whether the prisons are selling mats of the same quality as those of Messrs. Armstrong at a reduced rate, thus under-selling; and the mats in evidence were what were termed Messrs. Armstrong's "Diamond Back" and the Parramatta Prison "Centennial."

What Messrs. Armstrong, in their present communication, call their "brush" mat, at 9d. is the "Diamond Back."

The "Centennial" brush mat, it was contended for the prison, was of a distinctly inferior quality. It is that mentioned as being sold at 4½d.

The difference between the two descriptions of mats is thus reported by the Superintendent of Prison Industries:—"Messrs. Armstrong's "Diamond Back" is close-woven, well finished, and weighs about 1½ lb. to the square foot. The "Centennial" is roughly made, and weighs about 1¼ lb. to the square foot."

The decision of the Minister, conveyed in the Under Secretary's letter of the 23rd August, is that "mats of an inferior quality to those manufactured by Messrs. Armstrong" are to be sold at prices regulated by that inferiority.

The "Centennial" mats come within that decision, and hence their manufacture continues.

I have arrived at the conclusion that the charge of 4½d. per lb. for the "Centennial" is too low, and am willing to increase it to 6d.

HAROLD MACLEAN,

Comptroller-General.

Submitted with reference to Minister's minute of 29th ultimo.—A.C.F., 17/9/88.

Messrs. Armstrong and Son to be informed that it is reported to the Minister of Justice that the Gaol authorities are not disposing of mats at the rate of 4½d. per lb. equal to the mat which they are offering to the public at 9d. per lb. The mat sold at 4½d. per lb. is roughly made, and weighs about 1¼ lb. to the square foot, whilst their mat is closely woven, well finished, and weighs about 1½ lb. to the square foot. It has, however, been determined that the price of the gaol mat should be increased to 6d. per lb.—W.C., 19/9/88.

No. 30.

The Under Secretary of Justice to Messrs. J. Armstrong and Son.

Gentlemen,

Department of Justice, Sydney, 22 September, 1888.

Referring to your letter of the 27th ultimo, further respecting the prices charged for mats manufactured in gaols, I am directed by the Minister of Justice to inform you that it has been reported to him that the gaol authorities are not disposing of mats at the rate of 4½d. per lb. equal to the mat which you are offering to the public at 9d. per lb. The mat sold at 4½d. per lb. is roughly made, and weighs about 1¼ lb. to the square foot, whilst your mat is closely woven, well finished, and weighs about 1½ lb. to the square foot.

I am desired to add, however, that it has been determined that the price of the gaol mat should be increased to 6d. per lb.

I have, &c.,

ARCH. C. FRASER,

Under Secretary.

No. 31.

Messrs. J. Armstrong and Son to The Minister of Justice.

Dear Sir,

Wholesale Mat Manufactory, 114, Riley-street, Sydney, 25 September, 1888.

We have to acknowledge your letter of the 22nd instant (No. 88-10,463), and, in reply, beg respectfully to state that the matter is still unsatisfactory, and the explanation is only evading the question, with a view to the crushing out of our industry in order that Her Majesty's gaols may control the whole of the local market.

We contend that the price per lb. should not be lessened, and that the difference in weight should be sufficient reduction for the inferior mats. It is not a question so much of difference in workmanship as in weight of material.

Please notice the following definition of your own statement of respective weights of the mats manufactured in Her Majesty's gaols and those manufactured by ourselves:—

A mat containing 8 square feet (Her Majesty's gaol) weighs, as per your statement, 10 lb., at 9d. per lb. would be sold at 7s. 6d., less 10 per cent.

A.

A mat containing 8 square feet (J. Armstrong and Son) weighs, as per your statement, 14 lb., at 9d. per lb., would be sold at 10s. 6d., less 10 per cent.

Further, a mat containing 8 square feet (Her Majesty's gaols) weighs 10 lb.; if sold at 4½d. would be sold at 3s. 9d., and if sold at 6d. would be sold at 5s.

It is evident from these figures that our business is to be ruined by the extraordinary competition which could only be carried on by prison labour, and which no free labour can grapple with.

We see clearly that we shall have to appeal to the public of New South Wales in order that we may be able to secure an honest livelihood for ourselves, families, and employees.

We have, &c.,

J. ARMSTRONG AND SON.

Submitted.—A.C.F., 28/9/88. Comptroller-General of Prisons submitted for report.—W.C., B.C., 29/9/88. A.C.F.

I can see nothing herein to call for any addition to my report of the 14th ultimo, which exhausts the controversy. Instructions have been given to increase the price of the "Centennial" mat to 6d. a lb.—H.M., B.C., 4/10/88. The Under Secretary of Justice.

Messrs. Armstrong and Son might be informed, in terms of the Comptroller-General's minute. Submitted.—A.C.F., 5/10/88. Yes.—W.C., 6/10/88.

No. 32.

The Under Secretary of Justice to Messrs. J. Armstrong and Son.

Gentlemen,

Department of Justice, Sydney, 9 October, 1888.

Referring to your letter of the 25th ultimo, further respecting the prices charged for mats manufactured in gaols, I am directed by the Minister of Justice to inform you that he can see nothing to call for any addition to his decision, as conveyed to you in my letter of the 22nd ultimo upon the subject.

I am desired to add that instructions have been given to increase the price of the "Centennial" mat to 6 per lb.

I have, &c.,

ARCH. C. FRASER,

Under Secretary.

No. 33.

F. Abigail, Esq., M.P., to The Minister of Justice.

Dear Sir,

589, George-street, 11 September, 1889.

I have the honor to hand you a letter from Messrs. Armstrong and Son, Mat Manufacturers, of 114, Riley-street, Sydney, from which you will see they complain of the unfair way the work of mat making and selling is carried on in Darlinghurst Gaol. If the statements made by these gentlemen are correct, then a great wrong is being done to both them and the public in the matter. I know the difficulties of the question of prison labour and the fact that prisoners must be employed; but surely it will not be contended for one moment that it should be brought into open competition with the free labour of tradesmen, and the general public pay the loss. I ask your earnest attention to this matter.

I am, &c.,

F. ABIGAIL.

[Enclosure.]

Dear Sir,

Mat Manufacturers, 114, Riley-street, Sydney, September, 1889.

We beg most respectfully to state that eleven years ago we started our trade at the same price as the Darlinghurst Gaol were selling the prison-made goods. Since then the Gaol authorities have reduced the price of goods, and that, at the present time, in many instances this loss will amount to £2 10s. per month per man, and the reduction in most all prisoners' earnings will average two pounds (£2) per month, thus giving, if 100 prisoners are employed at mat making, a loss to the revenue of £200 per month. This requires no evidence, but can be easily proved by comparing the former with the present price list; in fact the goods are being given away at almost any price, and we contend that no individual should be permitted by the Government to act thus, and crush out free labour at a loss to the public of more than £2,000 per annum. We are sorry to say that up to the present time we have found it comparatively useless to point out to the Comptroller-General of Prisons the injustice to us and the loss to the public account in the course he is pursuing.

Yours, &c.,

J. ARMSTRONG AND SON.

The Comptroller-General of Prisons for favour of any further remarks he may desire to make on this subject.—A.C.F., B.C., 13/9/89.

No. 34.

No. 34.

The Under Secretary of Justice to F. Abigail, Esq., M.P.

Sir,

Department of Justice, Sydney, 13 September, 1889.

I have the honor to acknowledge the receipt of your letter of the 11th instant, forwarding a communication from Messrs. Armstrong and Son, complaining of the competition in the mat-making industry at Darlinghurst Gaol.

I have, &c.,

ARCH. C. FRASER,

Under Secretary.

No. 35.

Messrs. J. Armstrong and Son to The Minister of Justice.

Hon. Sir, Wholesale Mat Manufactory, 114, Riley-street, Sydney, 16 September, 1889.

We beg most respectfully to state that, eleven years ago, we started in Sydney as mat and matting manufacturers at the same prices as the Darlinghurst Gaol was selling prison-made goods; which, since the last two years, have been greatly reduced, and at the present time, in many instances, the loss will amount to 50s. per month, and the reduction in most prisoner's earnings will average two pounds (£2) per month; thus giving, if 100 prisoners are employed at mat-making, a loss of two hundred pounds (£200) per month. This requires no evidence, and can be easily proved by comparing the former with the present price-list; in fact, the goods are almost given away at any price, and we contend that the Government should not allow any gaol officials to act thus and crush out free labour at a loss to the public of more than two thousand pounds (£2,000) per year. Although we have frequently brought this under the notice of the Comptroller of Prisons, and a deputation from the Chamber of Manufacturers waited upon the late Minister of Justice (the Hon. W. Clarke), who promised that the gaol selling price in future should be the same as our selling price-list, yet immediately after the deputation left pressure was brought to bear to alter his decision. We are sorry to say that up to the present we have found it useless to point the Comptroller of Prisons to this injustice to us, and also to the public, in the course he is pursuing.

We would also, as a positive proof of our contention to loss in prisoners' earnings, call your attention to the fact that the Comptroller, in his Report for 1888, admits a loss in prisoners' earnings of nearly four thousand pounds (£4,000) per year. This, we contend, is caused by lowering the price of prison-made goods, thereby reducing the earnings to meet the loss. If it is permitted to go on, we would respectfully ask how is it possible for any local industry to stand against such injustice? We believe that sufficient employment for prisoners can be found by supplying public works alone, and so prevent the underselling of free labour if each trade were more equalised, and not so many employed at this one trade. We also enclose two* copies of price-lists from Parramatta Gaol showing a reduction in some instances of 50 per cent. in frame mats since last year.

Trusting that you will see that no goods are permitted to be sold less than the former selling price,

We have, &c.,

J. ARMSTRONG AND SON.

[Enclosure.]

Gentlemen,

In answer to your favour of the 12th instant, I beg to state that the prices of our Diamond Brush Frame mats are as under:—

Size No.	Dimensions	Rate	s.	d.
1	2 feet 4 inches	at 9d. per foot	1	9
2	3 " 0 "	"	2	3
3	3 " 9 "	"	2	8
4	4 " 7 "	"	3	5
5	5 " 6 "	"	4	1½
6	6 " 6 "	"	4	10½
7	7 " 7 "	"	5	8

All larger sizes of the same class of mats are at the rate of 7d. per lb. Fancy coloured bordered mats and lettered mats at 1s. 1d. per lb. and 1s. per letter.

Yours, &c.,

THOMAS BARNETT,

Gaoler.

The Comptroller-General to see me at 10:30 a.m. to-morrow.—A J.G., 16/9/89. B.C., 16/9/89.—T.E.M.N. (for U.S.) Writer to be requested to furnish his price-list of mats of like quality to those made in the gaols.—A.J.G., 17/9/89.

No. 36.

The Under Secretary of Justice to The Comptroller-General of Prisons.

Dear Sir,

Department of Justice, Sydney, 16 September, 1889.

The Minister of Justice will be obliged by your calling to see him at half-past 10 o'clock to-morrow respecting a complaint made by Messrs. Armstrong and Sons, matmakers.

Yours truly,

ARCH. C. FRASER.

The Deputy-Comptroller called this morning, and stated that Mr. Maclean was ill, and could not see the Minister to-day. The Deputy-Comptroller suggested that nothing should be done until Mr. Maclean was able to see the Minister, as the former knows all the facts of the case.—A.C.F., 17/9/89.

The Under Secretary of Justice to J. Armstrong and Son.

Gentlemen,

Department of Justice, 17 September, 1889.

Referring to your letter of the 16th instant, complaining of the reduction made in prices for mats manufactured in Sydney and Parramatta Gaols, I am directed by the Minister of Justice to request you to furnish him with your price list of mats of like quality to those made in the Gaols.

I have, &c.,

ARCH. C. FRASER,
Under Secretary.

No. 38.

J. Armstrong and Son to The Minister of Justice.

Hon. Sir,

114, Riley-street, Sydney, 20 September, 1889.

We beg to forward to you, at your request, our price list of mats, the same as the Hon. W. Clarke promised the deputation from the Chamber of Manufactures that the Government prisons should adopt. It is the former selling price of prison-made goods for twenty-six years, but during the last two or three years the prison authorities have gradually reduced the price of their goods. As stated in our former communication, in the first place they brought out a brush mat, calling the same a "Centennial" brush mat, which is being sold at sixpence (6d.) per lb., and our brush mat, please see list, is 9d. and 10d. per lb. Now you will please to perceive that this is considerably under our price. The gaol authorities say that the mat does not look so well as our brush mat, but the overseer knows full well that he can get any prisoner to make the same mat equal to ours, in the same time, by putting in more material, and, by so doing, undersell us in the market. You will see that the gaol price list for Sennett mats to order is ten pence (10d.) per foot, while ours is 1s. 6d. per lb. (nearly 50 per cent. below us), and we also call your attention to the superfine frame mats, at 1s. per foot, which cannot be made less than 2 lb. to the foot. Here is another reduction of 50 per cent. below our list. Housemaids' kneelers and spittoon mats are also sold 50 per cent. less than us. As per matting, we have been compelled to leave out of our list, the prison reduction in some instances being from 50s. to 60s. per prisoner per month.

We beg most respectfully to state that it is difficult for any tradesman to carry on business with active prison competition against him, at any time, but it becomes ruinous when such unjust means are resorted to, as to lower the price prison-made goods, to crush out free labour, at the expense to the public of over two thousand pounds (£2,000) loss per year; we beg most respectfully to add that, after an experience as overseer in Darlinghurst Gaol for ten years, if any goods are allowed to be sold by the foot or measure, instead of by weight, a loss will be perpetuated at the end of each year. We would also state that the Comptroller of Prisons pointed to the superiority of our mats over the prison-made goods; we beg to state that if the prisoners are properly instructed, there is no need for any inferior work, even by learners, as the time of a prisoner while learning is not considerable, and he can take time during a month or six weeks to perfect himself as a workman.

Trusting you will not think the above is sent in a dictatorial spirit, but only that you may have the plain facts put before you, that you may see that justice is done to us, and the old price list is issued to the trade, and goods not permitted to be sold at a less price.

We have, &c.,

J. ARMSTRONG AND SON.

I am still awaiting an interview with the Comptroller-General on this subject. If Messrs. Armstrongs' representations are correct they have very grave cause for complaint.—A.J.G., 21/9/89. The Comptroller-General of Prisons, B.C., 23/9/89.—T.E.M.N., for U.S.

No. 39.

The Comptroller-General of Prisons to The Under Secretary of Justice.

2 October, 1889.

In connection with my interview upon this subject with the Minister of Justice, I enclose a report from the Superintendent of Prison Industries.

At the time of the arrangement made in the administration of the late Minister the question of underselling Messrs. Armstrong and Son was dealt with solely in reference to the "Diamond Back," "Super Frame," and "Centennial" mats, of which alone at that time complaints were made.

The "Diamond Back" and "Super Frame" were raised in price to Messrs. Armstrongs' standard, and have since been maintained at that price.

The "Centennial" not being a mat made by Messrs. Armstrong, and, therefore, having no standard price, was raised 25 per cent., which almost stopped the sale.

Messrs. Armstrong are in error in the prison list they submitted, wherever it was obtained.

The price for "Super Frame" was given at per foot, of which they complained, instead of at per pound, at which they are sold. This makes a difference of 50 per cent., which they complain of in error.

The list supplied by Messrs. Armstrong is full of inaccuracies, the extensions being almost all erroneous.

The "Sennett" mats to which Messrs. Armstrong refer, formed no part of the arrangement made with Messrs. Armstrong. It seems that the prison pattern is sold under Messrs. Armstrongs' rates. The trade is quite immaterial, being only some £29 a year.

The "Spittoon" mats are sold under Messrs. Armstrongs' rates; the trade is quite immaterial, only £16 a year. The "Housemaid Kneelers" the Superintendent reports to be a different class of mat to Messrs. Armstrongs', and seems to be never on their list.

I think that it will be seen that Messrs. Armstrong have no justification for their complaints, and have had very large concessions at the cost of the Department.

If the Minister thinks fit to direct that any class whatever of mats or matting must be regulated in price entirely by Messrs. Armstrongs' standard, it will have to be done. Their

Their chief complaints refer to Parramatta. I propose to discontinue the mat industry there, which has been, in effect, stifled by the concessions made.

The Superintendent's report disposes of the assertion of Messrs. Armstrong as to loss on the prison trade.

Mat-making forms a large element in prison manufactures in all parts of the world.

HAROLD MACLEAN,
C.-G.P., 2/10/89.

[Enclosures.]

Sir, Sydney Gaol, 26 September, 1889.

I do myself the honor to report *re* allegations of Messrs. Armstrong and Son. In answer to the statement that prisoners employed mat-making are worked at a loss of about £2,000 per annum, I will simply compare the earnings under control of Messrs. Armstrong and under present management:—

Half-year ending 30th June, 1876 : Seventy-nine prisoners employed ; net earnings, £590 16s. 3d.

Half-year ending 30th June, 1889 : Seventy-eight prisoners employed ; net earnings, £1,486.

"Diamond Back" and "Super Frame" mats, both at Parramatta and Darlinghurst, same price as Messrs. Armstrong and Son.

The "Centennial," a different class mat, sold at the advanced price of 6d. per lb. ; trade almost nil.

Matting does not appear on Messrs. Armstrong and Son's price list, either past or present.

"Housemaids' Kncelers" are also a recent written addition to their price list. No previous complaint about our price.

Spittoon mats and Sennett mats sold at a less rate, but very little trade done.

The price-list submitted by Messrs. Armstrong and Son, as a copy of one issued from Parramatta, is full of errors and not to be relied on.

I have, &c.,

W. B. M'LAREN,
Superintendent of Prison Industries.

The Comptroller-General of Prisons.

Forwarded.—J.L., Governor Sydney Gaol, 26/9/89.

Telegram from Thos. Barnett, Governor of Parramatta Gaol, to A. H. Collis, Deputy Comptroller of Prisons, Sydney.

23 September, 1889.

SUPERFINE frame mats : Plain, 1s. per lb. ; bordered, 1s. 2d. per lb.

Sir, Department of Prisons, Sydney, 3 September, 1891.

I beg to report that goods are not manufactured in the gaols of the Colony and sold to the public. The only manufactures sold are mats and matting, and these sales are restricted to the trade only.

I have, &c.,

W. B. M'LAREN,
Superintendent of Prison Industries.

The Comptroller-General of Prisons.

Submitted.—A.C.F., 2/10/89.

Mr. Abigail and Messrs. Armstrong to be informed in suitable terms of the nature of the Comptroller-General's minute and supplied with a copy of the report from the Superintendent of Prison Industries, and further informed that I have given directions for an increase in price of all goods supplied at a less rate than that charged by Messrs. Armstrongs' standard. C.-G. to be informed of my wish in this respect.—A.J.G., 11/10/89.

No. 40.

The Under Secretary of Justice to The Comptroller-General of Prisons.

Sir, Department of Justice, Sydney, 21 October, 1889.

Referring to your report of 2nd instant on a letter received from Messrs. J. Armstrong and Son, further respecting the price of mats manufactured at Darlinghurst and Parramatta Gaols, I am directed by the Minister of Justice to inform you that he has decided that the price of all goods sold at a less rate than that charged by Messrs. Armstrong and Son, should be increased to their standard, and to request that you will be good enough to give the necessary instructions in the matter accordingly.

I have &c.,

ARCH. C. FRASER,
Under Secretary.

No. 41.

The Under Secretary of Justice to F. Abigail, Esq., M.P.

Sir, Department of Justice, Sydney, 21 October, 1889.

Referring to your letter of 11th September last, forwarding a communication from Messrs. J. Armstrong and Son, respecting the prices charged for mats manufactured at Darlinghurst and Parramatta Gaols, I am directed by the Minister of Justice to forward for your information the enclosed copy of a report on the matter received from the Superintendent of Prison Industries, and to inform you that the arrangement referred to by Messrs. Armstrong and Son as having been arrived at during the administration of the late Minister of Justice, Mr. Clarke, was solely in reference to "Diamond Back," "Super Frame," and "Centennial" mats, of which alone at that time complaints were made. The two former were raised to their standard prices, and the "Centennial" not being a mat made by them was raised 25 per cent., which almost stopped the sale.

The Minister has been informed that the "Super Frame" mats are sold by the lb., not by the foot as given in the price list submitted by Messrs. Armstrong and Son, which makes up the difference of 50 per cent. complained of, and brings the price to their standard.

The Minister has further been informed that it is proposed to discontinue the mat-making industry at Parramatta Gaol.

I am to add that Mr. Gould has given directions for an increase of price to Messrs. Armstrong and Son's standard of all goods supplied at a less rate than that charged by them.

I have, &c.,

ARCH. C. FRASER,
Under Secretary.

No. 43.

J. Armstrong and Son to The Minister of Justice.

Mat Manufactory, 114, Riley-street,

Sydney, 24 October, 1889.

Honorable Sir,

We take pleasure in tending to you our heartiest thanks for your assurance that justice shall be done to us in the matter of prison labour competing unduly with free labour. The more so because we have been subjected to a large amount of trouble in the way of correspondence, &c., besides the actual annoyance and pecuniary loss directly traceable to the action of the authorities. In doing this we take the liberty of assuring you that in all our representations we have been careful to advance nothing but what was strictly true, and as a further guarantee we are willing to furnish you with the original Parramatta price list of which we sent you a copy on condition that it is returned to us at your earliest convenience. We make this condition because we are aware that much craft and deception have been used to perpetuate the injustice from which we have so long suffered, and we found it extremely difficult to obtain a price list. Indeed, one of our customers informs us that one of the gaol officials had the audacity to admonish him for supplying us with a price list on a former occasion. From this it will be seen that we have been persecuted and undersold in the market, and that too in a most dishonorable and contemptible manner, and it is certainly satisfactory to find that you intend all prison made goods shall be sold on a par with the prices as shown in our list.

But we would most respectfully ask that you will be good enough to see that this is done, and that the necessary alteration is made in the price list issued to the trade by the prison authorities.

We feel confident that unless this is done they will continue to conduct their business so loosely as to dispose of their goods at the same ridiculously low prices. We trust that the matter will be firmly dealt with by you, and finally settled, as you must perceive how persistently the gaol authorities have sought most unfairly, unjustly, and altogether unwarrantably to injure our business. Hitherto any pretext has sufficed to continue this most detestable practice.

Again thanking you,

We have, &c.,

J. ARMSTRONG AND SON.

Submitted. See also remarks of Messrs. Armstrong and Son, enclosed on the report submitted by the Superintendent of Prison Industries; but as the matter has now been settled to the evident satisfaction of Messrs. Armstrong and Son, there would not appear to be any necessity for further action on the part of this Department. The papers might be forwarded for the perusal of the Comptroller-General.—A.C.F., 31/10/89.

Approved.—A.J.G., 1/11/89. The Deputy Comptroller of Prisons.—T.E.M.N. (for U.S.), B.C., 1/11/89. Perused and returned, new price lists being printed in accordance with the Minister's decision.—A.H.C., B.C., 13/11/89.

No. 44.

J. Armstrong and Son to The Minister of Justice.

Honorable Sir,

Mat Manufactory, 114, Riley-street, 15 November, 1889.

Your kind consideration of our case and decision thereon is highly satisfactory to us, and will, no doubt, be so to all lovers of justice and the public at large.

We beg most respectfully to ask that when the Darlinghurst and Parramatta Gaols new price list is printed and issued to the trade you will kindly oblige us by directing or giving instructions that one copy of each gaol price list be forwarded to us, that we may see that your instructions are fully carried out, and our minds contented that there will be no further contention upon the matter.

We have, &c.,

J. ARMSTRONG AND SON.

Submitted.—A.C.F., 19/11/89.

Price list may be forwarded as desired.—A.J.G., 20/11/89.

Gentlemen, Department of Justice, Sydney, 22 November, 1889.
Referring to your letter of the 15th instant, respecting the prices charged for mats, &c., made in the Sydney and Parramatta Gaols, and asking to be furnished with the new price lists when prepared, I am directed by the Minister of Justice to inform you that the Deputy Comptroller of Prisons has been requested to forward you a copy of the lists when issued.

I have, &c.,

ARCH. C. FRASER,

Under Secretary.

No. 47.

The Governor, Sydney Gaol, to The Comptroller-General of Prisons.

Sir, H. M. Gaol, Sydney, 29 April, 1892.

On 27 June, 1890, the Superintendent of Prison Industries issued a certain circular notifying that a particular class of mat (excepting for public Departments) would be discontinued.

See attached list.

I have now the honor to report that this restriction has led to a serious loss of revenue and also to a large accumulation of brush, bordered, and super mats in the store, a quantity far in excess of any possible want for the Government Departments. I therefore now beg to suggest that circular of the 27th June, 1890, be forthwith cancelled, the manufacture of the particular class of mats therein mentioned resumed, and the goods now in store and to be so manufactured placed for sale in open market at actual current rates. Should such a course be pursued a marked increase of prison earnings will follow without in any way affecting the prices paid to outside firms manufacturing a similar class of goods.

I have, &c.,

P. HERBERT,

Governor, Sydney Gaol.

Superintendent of Prison Industries for report as to reasons for the issue of circular of 27th June, 1890.—G.M., B.C., 2/5/92. Report herewith. Also see papers *re* dismissal of Overseer J. Danks.—W.B. McL., 3/5/92.

The sale of the mats in question was discontinued solely in consequence of the necessity for removing Overseer Danks (the Instructor) from the service. In view of this letter, and as I am informed by Mr. McLaren that the mats can now be manufactured at the gaol under Overseer Foster, sales to the trade may be renewed, on the clear understanding that the prices charged shall not be below the current rates. It is very necessary that every fair effort should be made to secure regular and productive work for prisoners, and that the extensive mat-making machinery which has been provided at Darlinghurst Gaol should be utilised as much as possible.—G.M., 27/5/92. The Governor, Darlinghurst Gaol, B.C. The Superintendent of Prison Industries to note.—P.H., Gov., Darlinghurst, 28/5/92. Noted.—W.B. McL., 30/5/92.

W. FOSTER,
Overseer.

Forwarded to the Comptroller-General of Prisons.—P. HERBERT, Governor, Sydney Gaol, 9/4/92.

No. 48.

J. Armstrong and Son to The Comptroller-General of Prisons.

Dear Sir, Mat Manufactory, 114, Riley-street, 27 June, 1892.

It is with regret that we have most respectfully to address you again as to gaol competition with free labour; but we have thought it our duty to do so before taking any further steps in the matter, you having by circular in 1889 informed the trade that you would not supply the public with Diamond Back brush mats, or super frame mats, or with names on them.

We

We beg to state, for your information, that one of our customers, being at the gaol last week, *was solicited by the overseer for custom for the above mats, also stating that the gaol was going to supply the public.* We trust we have been misinformed, as we have gone to considerable expense in purchasing machinery, &c., to supply the public with the above goods.

Trusting you will give immediate attention to this, and stop any breach of agreement.

We have, &c.,

J. ARMSTRONG AND SON.

The Governor, Darlinghurst Gaol, for report (see passage in italics).—G.M., B.C., 29/6/92. The Superintendent of Prison Industries to make strict inquiry, and then report.—P.H., Governor, Darlinghurst, 30/6/92.

I have made strict inquiry in the matter of this complaint, and beg to report that Overseers Forster and Murphy, in charge of mat-shops, both deny having at any time solicited custom from any visitors to the gaol.—W. B. M'LAUREN, Superintendent of Prison Industries, 30/6/92. The Governor, Darlinghurst Gaol.

Forwarded for the information of the Comptroller-General of Prisons.—P.H., Governor, Darlinghurst, 1/7/92.

Acknowledge letter, and inform that the supply to trade of the mats in question was discontinued in June, 1890, on account of certain departmental reasons, not because it in any way interfered with any manufacturer or with free labour. It has now been found necessary, in the interests of the Department, to resume the sale of the mats, which will be disposed of to the trade only, at current rates, not to the general public. I fail to see that Armstrong and Son have any ground for the complaint which they have made in their letter.—G.M., 1/7/92.

No. 49.

The Comptroller-General of Prisons to J. Armstrong and Son.

Department of Prisons, N.S.W., Comptroller-General's Office,

Gentlemen,

Sydney, 4 July, 1892.

I have the honor to acknowledge the receipt of your letter of 27th June ultimo, respecting the decision to resume the sale of "Diamond Back brush mats" and "super frame mats" which are manufactured at Darlinghurst Gaol.

2. In reply, I beg to inform you that the sale to the trade of the mats in question was discontinued in June, 1890, on account of certain departmental reasons, not because it in any way interfered with any manufacturer or with free labour.

3. It has now been deemed necessary, in the interests of the Department, to resume the sale of the mats, which will be disposed of to the trade only, at current rates, not to the general public as your letter states.

I have, &c.,

GEORGE MILLER,
Comptroller-General.

No. 50.

J. Armstrong and Son to The Minister of Justice.

Dear Sir,

Mat Manufactory, 114, Riley-street, 29 July, 1892.

We beg most respectfully to bring under your notice, as citizens and manufacturers, what we consider to be a gross injustice towards us and the public in general, trusting you will take immediate steps to prevent us from suffering loss of trade by undue competition with prison labour. We beg to state that we have been established in Sydney fourteen years, and have gone to considerable expense purchasing looms and machinery to supply the mat trade of the Colony, and have done so to the satisfaction of the trade in general.

About two years and a half since we wrote to the late Honorable Minister of Justice about prison competition with free labour injuring us, and in June, 1890, the present Comptroller issued a circular to the trade stating that the gaol authorities had given up supplying the trade with our class of goods, viz., Diamond Back brush mats and super frame mats with names on; since then, as above stated, we have given every satisfaction to the trade. Finding that after two years the Comptroller has again commenced to supply the trade, we wrote to him upon the subject, and, in his reply to us he there states that he is not going to supply the public, yet admits he is going to do so through the trade. We would most respectfully call your attention to the Comptroller's Annual Report to you for 1891; he there shows that a greater number of prisoners were employed at the mat trade than in the previous year, and complains about so many recommitals. We beg to state that most of the same is caused by prisoners upon discharge being unable to find employment at the trade; for out of the many thousands of prisoners that have passed through the mat-shops for the last thirty years, we believe there is not one to be found employed at the trade in the Colony, owing to prison competition with free labour crushing out Colonial industry, this being an injustice to the prisoner and a loss to the public in the expense of reconvictions. We candidly admit (and having had great experience with prisons and prisoners, both here and in England,) that employment must be found for them; but, at the same time, in a young Colony like this, they could be employed exclusively in supplying Government establishments with all requirements, and, by this, their time be fully occupied, and not interfere with invested capital or free labour in any way, if proper supervision is used. We beg also to state that for years there was a contention between the Press and the gaol authorities for underselling us to the trade, but when the circular was issued, in 1890, that contention ceased.

We trust also, your honorable self being a member of the present Government, who have promised to protect native industries, will not permit us to be at a loss of trade by having to compete against prison labour.

We have, &c.,

J. ARMSTRONG AND SON.

Submitted. Might be referred to the Comptroller-General of Prisons for favour of report, and with reference to previous papers.—A.C.F., 4/8/92. Approved.—R.E.O'C., 5/8/92. The Comptroller-General of Prisons.—T.B.M'N. (for U.S.), B.C., 6/8/92. See my memo. herewith.—G.M. The Under Secretary of Justice, B.C., 10/8/92.

No. 51.

The Under Secretary of Justice to J. Armstrong and Son.

Gentlemen,

Department of Justice, Sydney, 3 August, 1892.

I have the honor to acknowledge the receipt of your letter of the 29th ultimo, respecting the manufacture of mats in the gaols of the Colony, and to inform you that the same will receive due consideration.

I have, &c.

ARCH. C. FRASER,
Under Secretary.

No. 52.

The Comptroller-General of Prisons to The Under Secretary of Justice.

Darlinghurst Gaol:—Armstrong and Son's letter dated 29th July, 1892, as to sale to the trade of certain mats manufactured at.

The sale to the trade of the mats in question was discontinued on account of a difficulty that arose through the misconduct of an overseer of the mat-shop, and which made it necessary to dispense with his services. It has, however, been found practicable to continue the manufacture of the mats under the supervision of another overseer, and they have accumulated to such an extent as to render it necessary in the interests of the Department to again offer them to the trade, but no attempt to sell at lower prices than those charged by Messrs. Armstrong and Son has been made.

The discontinuance of the sale in June, 1890, was in no way connected with the representations made by Messrs. Armstrong and Son to the late Minister of Justice in 1889 (before I took charge of the Department) which then led to the total discontinuance of the mat-making industry at Parramatta Gaol, which, as the late Mr. McLean reported, "had been in effect stifled by the concessions made" to Messrs. Armstrong and Son. Nor was I influenced in the action I took by any correspondence which had appeared in the Press.

The requirements of the Government Departments fall far short of the quantity of mats manufactured at the gaol, and if the sale were restricted to such Departments, a great part of the valuable mat-making plant at Darlinghurst would have to remain unused, and many prisoners who are now usefully employed would, as a consequence, be left in idleness. Mat-making is an industry which in every country is in favour as a suitable means of employment for prisoners.

If the Department had introduced into the gaols as a new industry something which was carried on by Messrs. Armstrong and Son only, there might be some ground for their complaint, but inasmuch as the making of various kinds of mats was started at Darlinghurst Gaol with an expensive plant many years before the present firm of Armstrong and Son came into existence, I am unable to see any justification for their present action. Mr. Armstrong himself was for ten years employed as an overseer in the mat-shop at Darlinghurst, and his attempt to interfere with the prison industries by asking that the sale to the trade may be stopped is, I submit, most unreasonable.

By some people I am urged to find more useful work for the prisoners confined in our gaols (and this I make every effort to do) while others endeavour to interfere with the industries which the Department has already introduced.

I would invite the Minister's attention to the attached letter from the Governor of the Gaol dated 29th April, 1892. On his recent visit, Mr. O'Connor saw what a large number of mats was in stock at the gaol.

GEORGE MILLER,
Comptroller-General.

The Under Secretary for Justice, B.C., 10/8/92. Submitted.—A.C.F., 12/8/92.

[Enclosure.]

Sydney, 20 April, 1892.

On 27th June, 1890, the Superintendent of Prison Industries issued a certain circular notifying that a particular class of mat (excepting for public departments) would be discontinued.

I have now the honor to report that this restriction has led to a serious loss of revenue and also to a large accumulation of brush-bordered and super mats in the store, a quantity far in excess of any possible want of the Government Departments. I, therefore, now beg to suggest that the circular of 27th June, 1890, be forthwith cancelled, the manufacture of the particular class of mats therein mentioned resumed, and the goods now in store and to be so manufactured placed for sale in open market at actual current rates. Should such a course be pursued a marked increase of prison earnings will follow, without in any way affecting the prices paid to outside firms manufacturing a similar class of goods.

The Comptroller-General of Prisons.

I have, &c.

P. HERBERT.

No. 53.

J. Armstrong and Son to The Minister of Justice.

Honorable Sir,

Mat Manufactory, 114, Riley-street, Sydney, 22 October, 1892.

We beg most respectfully to state that we duly received your letter dated 3rd August last, stating that our correspondence to you upon undue gaol competition with us would have due consideration; we beg also to ask you to consider in addition to our former correspondence the injustice of the Comptroller-General of Prisons, after two years non-supplying the public with prison-made goods, commencing again to supply a few houses in the trade to our loss, also to the exclusion of the general public; and we beg leave to ask most respectfully that the Government will not permit the Comptroller of Prisons to use public money to crush out our industry, and to benefit a few freetrade houses in Sydney, who may profit by our loss of trade, and to the loss of our employees. We trust that you will also see that no tradesman or manufacturer is safe in investing money in machinery to develop trade in the Colony if the head of a department is permitted to use public money in competition against any honest industry to the ultimate ruin of the same, and perhaps driving men into prison for want of employment, of which there is so little in the Colony at the present time. Trusting you will give righteous judgment in our case, and consider our former correspondence with this.

We have, &c.

J. ARMSTRONG AND SON.

Submitted. See 92-12,164 herewith.—A.C.F., 27/10/92.

No. 54.

No. 54.

Mr. A. Forsyth to The Minister of Justice.

Sir,

339, Kent-street, Sydney, 26 October, 1892.

Some two months back I had the honor of interviewing you *re* prison competition with free labour in the manufacture and sale of coir mats, when you promised to give me an answer whether the sale of mats to the public is or is not to be continued by the Prison Department.

As I have not received, up to date, an answer it may be as well to remind you that the right and expediency of employing prison labour in the production of such articles as offer suitable employment for prison labour is fully recognised, but as the Government Departments require more than double of this class of goods than can be produced by prison labour, their sale to the public is unnecessary, and inflicts destructive competition on those employing free labour in the manufacture of similar articles.

Should all prison-made goods be supplied to the Government Departments, this will doubtless decrease the quantity to be made by free labour, but will not in any way tend to reduce the price of those made by private manufacturers; but if prison-made goods are sold to the public, even to the extent of one-twentieth of the aggregate consumption, the effect will be to lower the price of the whole to the rates at which the Prison Department are willing to sell.

This view of the sale of prison-made goods has been taken by nearly all civilised countries, and I most respectfully ask you how can a manufacturer that has to pay current wages, or, at the least, wages sufficient to maintain those employed, compete with prison labour in part supported by the State.

For the reasons above stated, and others that will arise in considering this matter, I hope you will be able to come to an early and favourable decision on the question.

I have, &c.,

ARCHIBALD FORSYTH.

Submitted. See 92-12,164 and 92-16,535 not yet dealt with by the Minister.—A.C.F., 27/10/92.

No. 55.

J. Armstrong and Son to The Minister of Justice.

Honorable Sir,

Mat Manufactory, 114, Riley-street, 23 November, 1892.

Since receiving yours of the 3rd August, stating that our contention *re* prison-labour competition injuring us and the public in general, in answer to which you stated that the same should have due consideration, not having an answer to our application up to the present time, we beg most respectfully to state, for your information, since communicating with you on this subject we have met with a considerable amount of intrigue. In the first place, the gaol authorities have written to our customers and the Steam Navigation Companies, stating that they are prepared to supply special orders. Then our customers have sent to us asking, in many instances, the price for special mats, and, finding the gaol will do the same for less money and more discount, we have lost the order. We trust that you, with the Government, will stop this, to us, ruinous competition of colonial industry.

We beg to enclose, also, for your information, the Prison Report for 1888, a copy of which we sent to the late Hon. Minister of Justice, showing that there was a deficiency of nearly £4,000 which the late Comptroller of Prisons says he could not account for. We then stated that most of the loss was in consequence of reckless competition against us.

Trusting you will see the immediate necessity of stopping all prison competition with free labour.

We have, &c.,

J. ARMSTRONG AND SON.

Submitted, in connection with previous papers, herewith.—A.C.F., 26/11/92.

The Comptroller-General of Prisons for report as to the allegations of communicating with the persons named. If it were possible to use all the mats made in supplying Government Departments none should be sold to the general public. If prison labour could be utilised in supplying other goods than mats to the Government Departments this should be done. Will the Comptroller-General of Prisons please write a full statement as to how matters stand at present, to what extent and with what goods does the Prison Department supply the other Government Departments, and can this mode of employing prisoners be extended so as to employ some of the prisoners now employed at mat-making in other industries?—R.E.O'C., 31/12/92.

The Comptroller-General of Prisons.—T.E.M'N. (for U.S.), B.C. 3/1/93.

No. 56.

The Under Secretary of Justice to J. Armstrong and Son.

Gentlemen,

Department of Justice, Sydney, 26 November, 1892.

I have the honor to acknowledge the receipt of your letter of the 26th instant, further respecting the manufacture of mats within the gaols of the Colony, and to inform you that the matter is still under consideration.

I have, &c.,

ARCH. C. FRASER,

Under Secretary.

No. 57.

J. Armstrong and Son to The Attorney-General.

Dear Sir,

Mat Manufactory, 114, Riley-street, Sydney, 7 January, 1893.

Seeing the amount of Bills and other matters that have engaged the valuable time of yourself and the Honorable Minister of Justice, we have refrained from troubling you with our case *re* prison competition with free labour. It being nearly six months since our case was first brought under notice of the Honorable Minister of Justice, during that time we have suffered considerable loss; our machinery and

and employees have been working only three or four days per week in consequence of prison competition; we, therefore, beg to enclose for your information further correspondence sent to the Honorable Minister of Justice in November last, showing how the gaol authorities are competing against us (the reply to which we received is—that our case is still under consideration); we beg most respectfully, and earnestly entreat you to use your influence with the Honorable Minister to consider all our correspondence, and so prevent us and our employees being ruined by the unjust proceedings of the Comptroller of Prisons in again coming into active competition against us, and persecuting us with public money.

We have, &c.,

J. ARMSTRONG AND SON.

The correspondence in the matter herein referred to appears to be with the Department of the Minister for Justice, within whose province it comes. This letter is submitted with reference to the request contained in the concluding few lines thereof.—W.W.S., 9/1/93.

Forwarded to the Minister for Justice. But first please acknowledge letter, and inform that the matter is one which cannot be dealt with by my Department, and that the letter has been forwarded to my colleague—E.B., 30/1/93.

The Under Secretary of Justice, B.C., 1/2/93.—H.M., for the Sec. Submitted with reference to previous papers now before the Minister.—A.C.F., 2/2/93.

No. 58.

The Secretary to The Attorney-General to J. Armstrong and Son.

Gentlemen,

Attorney-General's Department, Sydney, 1 February, 1893.

I am directed by the Attorney-General to acknowledge the receipt of your letter of the 7th ultimo, complaining of the competition on the part of prison labour against your manufactory, and to inform you that the matter complained of is one which cannot be dealt with by this Department, and that your communication has been forwarded by Mr. Barton to his colleague the Minister of Justice.

I have, &c.,

HERBERT MORRIS,

(For Secretary to Attorney-General).

No. 59.

J. Armstrong and Son to The Minister for Public Works.

Hon. Sir,

Mat Manufactory, 114, Riley-street, Sydney, 27 February, 1893.

We find that you stated in your address at the meeting of Mort's Dock picnic, that the present Government were anxious to help on private enterprise. We are sorry to say such is not the case, we are not disposed to enter into newspaper controversy in that respect, or to bring our correspondence before the Assembly, but to our sorrow, we find that the Government after two years abstaining from competing with us, commenced to do so in June last, by sending circulars to our customers, taking our trade away, and not only that, but giving a greater discount to get our customers, and so throw our employees out of work by competition with convict labour. We have been in correspondence with the Honorable Minister of Justice for the last eight months, and the only reply we receive is, that our case is still under consideration; thus we are being ruined by the present Government permitting the Comptroller of Prisons using public money to crush us, and to throw our employees out of employment, and we beg to refer you to the Honorable Minister of Justice, and to our correspondence with him in the matter as to the persecution of us by the Comptroller of Prisons. We believe, that when you read the whole of the correspondence, you will see we are being cruelly treated by a Government who profess to encourage private enterprise, it seems to us anything but protection.

We have, &c.,

J. ARMSTRONG AND SON.

My dear O'Connor,—Is the statement made herein true?—Yours truly, WILLIAM JOHN LYNE, 28/2/93. Bring the other papers on this matter before me, and prepare statement of how the matter stands.—R.E.O'C., 28/2/93.

No. 60.

J. Armstrong and Son to The Minister of Justice.

Dear Sir,

114, Riley-street, Sydney, 6 March, 1893.

It is with great reluctance we have to again trouble you upon the injustice of the present Government underselling us by prison competition after the Parkes Government had abstained from doing so for two years previously. After eight months correspondence with your office on the matter, the only reply we receive is that our case is still under consideration; at the same time we are being ruined, and our employees thrown out of work. We beg most respectfully to ask you, before bringing our case and correspondence before the Legislative Assembly, if there is any probability of the present Government who profess to encourage private enterprise ceasing to compete with us by convict labour and with public money.

An early reply will oblige.

J. ARMSTRONG AND SON.

Bring all the papers before me as early as possible.—R.E.O'C., 6/3/93.

No. 61.

Minute of The Under Secretary of Justice.

J. Armstrong & Co.'s complaints respecting alleged undue interference with their industry by the sale of prison-made mats.

SUBMITTED.—Messrs. Armstrong & Co.'s complaints that their mat-making industry, carried on by free labour, is unfairly competed with by the sale of prison-made goods has formed the subject of a large amount of correspondence for some years. In November, 1887, it was mutually arranged to the satisfaction of both sides that the Prisons Department was not to undersell Armstrong & Co., and a price list agreed upon.

In June, 1888, Armstrong & Co. asserted they were being undersold in one particular class of mat, the "Diamond Back," but the Superintendent of Prison Industries reported that the "Centennial" (the mat referred to) was not equal in quality to the "Diamond Back." Mr. Clarke (then Minister) on 18th August, 1888, decided that mats of the same quality as those made by Armstrong should not be sold at a less price, but for inferior mats the price must be regulated accordingly. Armstrong & Co. continued to assert that in this respect they were being undersold, but it was shown the "Centennial" was only roughly made and weighed but $1\frac{1}{4}$ lb. to the square foot, while Armstrong's "Diamond Back" was of a better finish, closely woven, and weighed $1\frac{3}{4}$ lb. to the square foot. The prison authorities, however, decided, for the sake of increasing the profit, to increase the price of the "Centennial."

The concessions made to Armstrong & Co. led to the partial cessation of the mat-making industry at Parramatta Gaol, and to its reduction in other gaols, and in June, 1890, sales of some classes of mat were discontinued, through difficulty which arose owing to the misconduct of an overseer. Now it has been found possible to recommence the manufacture of mats, and a large stock having accumulated, former customers—firms and shipping companies—were communicated with, notifying the resumption of sales. The prices asked are still strictly in accord with those charged by Armstrong & Co., and the Prisons Department deny underselling or seeking to take away the customers of the firm named.

The Comptroller-General in his report of 10th August last points out that the mat-making was started in the gaols of the Colony long before the firm of Armstrong & Co. came into existence, that Mr. Armstrong was for ten years overseer in the shop at Darlinghurst. Mr. Miller also points out that if mat-making be discontinued a large number of prisoners would be in enforced idleness, and that the Government Departments could not absorb the quantity of mats manufactured. A.C.F., 13/3/93.

No. 62.

J. Armstrong and Son to The Minister of Justice.

Hon. Sir,

Mat Manufactory, 114, Riley-street, Sydney, 17 June, 1893.

We beg most respectfully to again address you *re* prison-labour competition with us in the market. We have refrained from continuing our correspondence, believing that your time has been fully occupied with Parliamentary business, but we take the liberty of again asking you to consider our correspondence, to which we have not received a reply during the recess, and in doing so, would respectfully call your attention to the fact that, while the Government is, and has been, doing its best to find employment for the working classes, the prison authorities, by competing with and underselling us in the market, are throwing our employes out of work, and thereby increasing the number of unemployed; also ruining us after investing a considerable amount in plant and machinery, believing that the Comptroller of Prisons would strictly adhere to the circular sent round to the trade, stating that the Government would not supply mats as made by us in the future. And we therefore humbly trust that you will see the necessity of taking steps to stop the present course of action pursued by the Comptroller of Prisons.

Trusting you will give the matter your favourable consideration,

We have, &c.,

J. ARMSTRONG AND SON.

Submitted.—A.C.F., 20/6/93.

No. 63.

The Under Secretary of Justice to J. Armstrong & Co.

Gentlemen,

Department of Justice, Sydney, 20 June, 1893.

I have the honor to acknowledge the receipt of your letter of the 17th instant further respecting the manufacture of mats within the gaols of this Colony, and to inform you that the same will receive due consideration.

I have, &c.,

ARCH. C. FRASER,

Under Secretary.

No. 64.

The Under Secretary of Justice to The Comptroller-General of Prisons.

WILL the Comptroller-General of Prisons be good enough to furnish, for the information of the Minister, a statement showing,—

1. The extent of the manufacture of mats in the gaols of the Colony during 1891 and 1892, with the number and description of the mats made.
2. The distribution of the goods manufactured, and,
3. Whether the industry is a paying one to the Government.

A.C.F., 22/6/93.

For report of the Governor, Darlinghurst Gaol, in the first instance.—A.H.C. (for C.-G.P.), 27/6/93. The Superintendent of Prison Industries will be good enough to furnish report as to questions No. 1 and 2.—P.H., Gov., 27/6/93. A return of details herewith.—W. B. McLAREN, 17/7/93. The Governor Darlinghurst Gaol. Information furnished on separate papers with report from myself.—G.M., B.C., 9/8/93. The Under Secretary of Justice.

No. 65.

No. 65.

The Comptroller-General of Prisons to The Under Secretary of Justice

MINUTE PAPER.

Subject:—Under Secretary of Justice's Memo. of 22/6/93 on Armstrong and Son's letter of 17/6/93.

Department of Prisons, Comptroller-General's Office, Sydney.

HEREWITH is transmitted for the Minister's information a report from the Superintendent of Prison Industries, together with returns of manufactures, and sales of mats and matting during the period of 1891 and 1892.

From Mr. McLaren's report it will be seen that the industry is a paying one. I may mention, however, that this is not the only object in view. The principal one is to secure a productive industry, requiring the exercise of intelligence and skill, so that suitable work may be found for hard labour prisoners.

Mat-making is found to be one of the best kinds of productive work for gaols, and a large plant was provided years ago, at considerable cost, for Darlinghurst.

Armstrong and Son have again stated what is not true when they represent that the Prison Department is "underselling" them in the market. Our prices are based upon theirs, and the same discount is allowed to the trade on the class of mats which they manufacture. They do not manufacture coir matting. This Department, further, does not sell to the public,—only to the trade—while Armstrong and Son can sell to whom they please.

I have in a previous report referred to the unreasonableness of Armstrong and Son's efforts to prevent mats made by prisoners from being sold to the trade. I will now quote from the Report of the Queensland Board of Inquiry into Gaols, Penal Establishments, and Lock-ups (1887), which has been highly spoken of in England. In referring to the employment of prisoners that report says:—

"Purely penal labour, such as the crank, shot drill, and the treadmill, is the unreasoning exercise of muscular force, and produces resentment, obstinacy, and hardness in the labourer. It is torture in disguise, can only be carried on for a limited period, and is totally non-reformatory in its effects. That prison labour competes with free labour in a certain limited sense is true, but the labour of the prisoners, if they were at large, would be available in the open market to compete in some direction with that of other free men. Why, then, should not a prisoner compete equally if he is confined and fed at the expense of all free and honest men? Admitting that in certain trades which are best adapted to prison labour there would be competition, individual interests must give way to communal. Gaols must be maintained by the honest and law-abiding; this burden may be lightened by compelling rogues, vagabonds, and dishonest men to maintain themselves by labour in prison. To teach a prisoner to work who has been previously nothing but a parasite on society is to add to the sum of producing power in the community. It is better for the honest man that he should submit to the competition of even prison-taught fellow craftsmen than that he should be the victim of their cupidity or criminality."

GEORGE MILLER,

Comptroller-General.

The Under Secretary of Justice, B.C., 9/8/93.

[Enclosures.]

Sir, Department of Prisons, N.S.W., Comptroller General's Office, Sydney, 31 July, 1893.

I have the honor to report *re* coir matting and mat industry in gaols—Darlinghurst, Armidale, Dubbo, Young, and Tamworth—during the years 1891 and 1892.

During that period 42,953½ square yards of coir-matting have been manufactured, the net value of which amounts to £2,937 2s. 9d.; of this £736 15s. have been supplied to Government Departments, and £1,968 6s. 8d. to the trade. I may here state we are the only manufacturers of coir matting in the Colony, with the exception of the Industrial Blind Institution, which does a small amount of this work.

For the same period 5,542 mats of various kinds have been manufactured, the net value being £1,618 14s. 7d.; of this amount £1,029 2s. 9d. have been supplied to Government Departments, and £426 13s. 6d. sold to the trade.

These two statements show that the aggregate labour profit from mats and matting is £4,160 17s. 11d., representing the quantities sold during the period stated, 1891 and 1892.

The quantities of coir-matting and mats which have not been sold remain in stock, the value of which amounts to £394 19s. 5d.

A detailed statement of manufactures and sales for years 1891 and 1892 herewith.

I have, &c.,

W. B. McLAREN,

Superintendent, Prison Industries.

The Comptroller-General of Prisons.

Memorandum.

It having been decided to resume the manufacture of diamond back, super frame, and lettered mats, orders (from the trade only) may now be forwarded to Darlinghurst Gaol for such class of goods, which shall be supplied at current rates.

P. HERBERT,

Governor, Darlinghurst Gaol.

Memorandum.

Department of Prisons, N.S.W., Comptroller-General's Office, Sydney, 29 June, 1893.

Be good enough to furnish a return showing the extent of the manufacture of mats in the gaol under your charge during the years 1891 and 1892, the number and description of the mats made, and the distribution of them.

The value of labour and material should also be shown.

GEORGE MILLER,

Comptroller-General.

The Gaoler, Armidale.

Please furnish a return showing the value of mats made during the years 1891 and 1892 (labour and material). This return includes those in stock prior to that date.—W.B.M.L., 18/7/93. Return herewith.—H. GOVERS, Gaoler, 26/7/93. The Superintendent, Prison Industries.

The Comptroller-General of Prisons, Sydney.

Memorandum.

Department of Prisons, N.S.W., Comptroller-General's Office, Sydney, 29 June, 1893.

Be good enough to furnish a return showing the extent of the manufacture of mats in the gaol under your charge during the years 1891 and 1892, the number and description of the mats made, and the distribution of them.

The value of labour and material should also be shown.

GEORGE MILLER,
Comptroller-General.

The Gaoler, Dubbo.

Herewith return showing the extent of manufacture of mats for the years 1891 and 1892.—J. BOYDEN, Gaoler, 4/7/93. The Comptroller-General of Prisons.

Labour and material column should be filled in. Were there not lettered mats made during these two years? If so value of letters should be shown, in the sales each line should be extended—also correct errors in extension in manufacturing side of return.—W. B. McL., 18/7/93. The Gaoler, Dubbo.

Herewith returns with alterations; figures marked incorrect, I cannot make them any more or less, or in the manner that you make them.—J. BOYDEN, Gaoler, 26/7/93. The Superintendent, Prison Industries.

No. 66.

Minute by The Under Secretary of Justice.

SUBMITTED. To assist the Minister in the consideration of this matter, I asked the Comptroller-General of Prisons to furnish a statement showing (1) the extent of the manufacture of mats in the gaols of the Colony during 1891 and 1892, with the number and description of the mats made; (2) the distribution of the goods sold; and (3) whether the industry is a paying one to the Government. Mr. Miller's report and the statements of the Superintendent of Prison Industries deal with the matter fully. Attention is also invited to the *procès* dated 13th March last, giving the particulars of the complaints made by Armstrong and Son, and the facts bearing upon them.
11/8/93.

A.C.F.

I have inquired into this complaint, and have considered the report of the Comptroller-General of Prisons and his officers in reference thereto. Messrs. Armstrong & Co. seem to be mistaken in ascertaining that they have been undersold by the gaol authorities. I find that the terms of the arrangement embodied in the circular referred to have been faithfully adhered to, and Messrs. Armstrong & Co. may rest assured that it will continue to be so adhered to.—R.E.O'C., 17/8/93.

Forwarded for the information of the Comptroller-General of Prisons—B.C., A.C.F., 18/8/93.
Read.—G.M., 25/8/93.

No. 67.

The Under Secretary of Justice to J. Armstrong and Son.

Gentlemen,

Department of Justice, Sydney, 21 August, 1893.

Referring to your letter of the 17th June last and previous correspondence, complaining that the sale of prison-made mats enters into unfair competition with your business, I am directed to inform you that the Minister of Justice has written a minute upon the subject, of which the following is a copy:—

"I have inquired into this complaint, and have considered the reports of the Comptroller-General of Prisons and his officers in reference thereto. Messrs. Armstrong and Son seem to be mistaken in asserting that they have been undersold by the gaol authorities. I find that the terms of the arrangement embodied in the circular referred to have been faithfully adhered to, and Messrs. Armstrong may rest assured that it will continue to be so adhered to."

I have, &c.,

ARCH. C. FRASER,

Under Secretary.

No. 68.

J. Armstrong and Son to The Minister of Justice.

Dear Sir,

Mat Manufactory, 114, Riley-street, Sydney, 23 August, 1893.

We beg most respectfully to state in answer to yours of the 21st instant, that there seems to be some misconception of our correspondence to you for the last twelve months, and that you have not had the same laid fully before you. Our contention is, and has been, that the Comptroller of Prisons is not justified in supplying the trade, after sending circulars to the trade, that in the future he would not do so, and after ceasing to do so for two years commenced again, and states he is not supplying the public in competition with us, but that he is only supplying the trade and not the public; we say that it is only an indirect way of supplying the public to the advantage of a few shopkeepers, and loss to us as manufacturers, who have invested a considerable amount of money in machinery, looms, &c., and we believe if the whole of the correspondence is laid before you, that you will see how unjustly we have been dealt with in the matter for the last twelve months by the Comptroller of Prisons, and our hands thrown out of employment by prison competition, which we trust the Government will put a stop to at once.

We have, &c.,

J. ARMSTRONG AND SON.

May await return of papers from Prisons Department.—T.E.M'N., for U.S., 25/8/93.

No. 69.

The Under Secretary of Justice to J. Armstrong and Son.

Gentlemen,

Department of Justice, Sydney, 25 August, 1893.

I have the honor to acknowledge your letter of the 23rd instant further respecting the mat making industry in the gaols of the Colony, and to inform you that the same will receive due consideration.

I have, &c.,

ARCH. C. FRASER,

Under Secretary.

No. 70.

J. Armstrong and Son to T. J. Houghton, Esq., M.P.

Dear Sir,

Mat Manufactory, 114, Riley-street, Sydney, 27 September, 1893.

In yours of the 7th instant you stated that you thought it best to see the Comptroller of Prisons in reference to our grievance of prison competition and underselling us in the market. We think that would be best, for he must either be cognizant of the fact, or he has been deceived for some time by his subordinates so as to keep their billets, but if such is the case, and that he may not be deceived any longer, we wish you to lay the following facts before him, as they are indisputable, and we do not wish to be driven to publish the same through the Press of the Colony, which we must do unless this unjust competition is stopped at once. We beg to state that we have been in business for upwards of fifteen years, and during the whole of that time the gaol authorities have been doing their very best to come into competition with us; in fact, in 1888 and 1889 the prison report showed, as seen by you, a loss of four thousand pounds chiefly by prison competition with us; but for the last twelve months a cunningly devised plan of underselling us has been adopted to take the trade from us, to our loss, and also to our employes, and no firm can withstand such unjust proceedings. For example say that the gaol in manufacturing super frame brush mats for the last twenty years have made a good and a durable article which would weigh not less than 2½ lb. to the square foot, and sold at one shilling per lb. less discount, that a mat four feet by three feet would be 30s. less the ten per cent. discount, please observe that we made and do make our goods the same price, but to undersell us, the gaol for the last twelve months have been supplying the trade with mats at 2 lb. to the square foot, thus reducing the price to the shopkeeper 6s. below us. Now as it takes the same amount of time to make the light mat as the former, also the same amount of material as the face is simply cut to a lower gauge, and what is cut off is waste. Now you see by this plan the mat as stated above is sold for 6s. less than our price, and the former gaol price, although the price per lb. is the same, and the loss falls upon the prison earnings—thus, if a prisoner makes 1½ mats per week as above, which he can easily do, the loss in his earnings to the public is 9s. per week, and in the year for the number of mats made a loss to the State of many hundred pounds, for the benefit of a few shopkeepers who pocket the amount, knowing that we cannot supply goods at that price and pay for labour, you will see that so long as prison labour is permitted to compete with free labour in any trade, capital and honest industry have no chance of employment, and we shall deeply regret to be compelled to

to help put out the present Government by bringing these indisputable facts before the electors of the Colony, but having lost hundreds of pounds during the last twelve months by this underselling mode of prison competition, we think that no honest man or any one with a sense of justice can blame us for doing so; for surely the gaol authorities ought not to be allowed to carry on as they like by giving money away as stated by us, as the facts can be proved by the gaol books and invoices sent to the shopkeepers. We trust that the Comptroller of Prisons will also see that this statement is correct, by comparing in the prison books, the weight and size, also price of mats sold to the Government Establishments, and the difference in those sold to the trade the difference will be in the latter, loss in prison earnings to the tax-payer.

We have, &c.,

J. ARMSTRONG AND SON.

Left by Mr. Houghton, M.P., who asked me to consider the statements made.—G.M., 3/10/93.
Letter to Mr. Houghton, M.P.

No. 71.

J. Armstrong and Son to T. J. Houghton, Esq., M.P.

Dear Sir,

Mat Manufactory, 114, Riley-street, Sydney, 4 October, 1893.

We thank you very much for the trouble you are taking to obtain justice for us. The prison price list is the same as ours, but the way we are undersold is by the mats being made lighter than formerly, and lighter than those at present supplied to Government establishments, that is to say in super frame brush and Sennett mats. Say, for example, that all Government establishments require a good durable article, is it not feasible that the public require the same description of mat; yet the trade, finding that they can get a lighter mat made at the prison, give orders to that effect, and the public are supplied with an inferior article that will only last half the time it should do, at the expense of the prison earnings. This is not easy for the Comptroller to discover, except in the selling price. In the first place, in the making of a mat it has to pass through several hands, viz., the splicer, the baller, the mat-maker, the binder, and the shearer. Now, if the mat is made lightweight, and the size is 4 ft. x 3 ft., the price less than ours is 6s., and the loss falls upon the whole of the earnings of the men who have contributed to make the mat, and can only be shown in the annual report of loss in prison earnings to the advantage of the trade who go to buy in the cheapest market, and we therefore suffer by this unjust competition.

Perhaps, if you could forward these remarks to the Comptroller, it will help him to elucidate the truth from his subordinates.

Again thanking you.

We are, &c.,

J. ARMSTRONG AND SON.

The Comptroller General of Prisons,—

Dear Sir,

At Mr. Armstrong's request I forward this communication for your information. It might be read in conjunction with the letter I left you on Tuesday afternoon.

Yours, &c.,

T. J. HOUGHTON, 5/10/93.

Superintendent of Prison Industries. For report in connection with papers now under reference to him.—G.M., B.C., 9/10/93.

No. 72.

The Comptroller-General of Prisons to T. J. Houghton, Esq., M.P.

Department of Prisons, New South Wales, Comptroller-General's Office,

Sir,

Sydney, 13 October, 1893.

Referring to the letters of Messrs. Armstrong and Son, dated respectively, 27th September ultimo and 4th October instant, addressed to you and forwarded by you to me, I have the honor to subjoin, for your information, an extract from a report of the Superintendent of Prisons Industries upon the representation made by Messrs Armstrong and Son, that this department is underselling them in the market.

"The super frame mat (the class of mat in question) supplied to the trade is a very superior mat, and is manufactured strictly in accordance, both in quality and weight, with mats first introduced under the supervision of Overseer B. J. Danks, in October, 1887. I may here state that Mr. Danks was appointed an Overseer in mat department shortly after the resignation of Mr. J. Armstrong (now of the firm of Armstrong and Son) who had held that position in Darlinghurst Gaol for about twelve years. There have not been any attempts to undersell Messrs. Armstrong and Son. With reference to the loss said to have been sustained by Messrs Armstrong and Son during the last twelve months, viz.:—Several hundreds of pounds by gaol competition, I beg to state the gross value of the mats in question supplied to the trade from Darlinghurst Gaol during the whole of the year 1892, amounts to only £121 9s. 4d. I am unable to understand therefore how Messrs. Armstrong and Son could have lost several hundreds of pounds as stated."

I have further to state that, in view of the improper and offensive terms in which Messrs. Armstrong and Sons' letter of the 27th September, is couched, I must decline to take further notice of their communications. The Minister of Justice has already been placed in possession of the facts as regards the mat-making industry at Darlinghurst Gaol.

I have, &c.,

GEORGE MILLER,

Comptroller-General.

[Enclosure.]

Department of Prisons, N.S.W.,

Comptroller-General's Office, Sydney, 12 October, 1893.

Sir,

I have the honor to report, for information of Comptroller-General of Prisons, *re* allegations of Messrs. Armstrong and Sons.

1. The super frame mat (the class of mat in question) supplied to the trade is a very superior mat, and is manufactured strictly in accordance, both in quality and weight, with mats first introduced under the supervision of Overseer B. J. Danks in October, 1877. I may here state that Mr. Danks was appointed an overseer in mat department shortly after the resignation of Mr. J. Armstrong (now of the firm of Messrs. Armstrong and Sons) who had held that position in Darlinghurst Gaol for about twelve years.

2. There has not been any attempt to undersell Messrs. Armstrong and Sons.

3.

29

3. With reference to the loss said to have been sustained by Messrs. Armstrong and Sons during the last twelve months, viz., several hundreds of pounds by gaol competition, I beg to state the gross value of the mats in question supplied to the trade from Darlinghurst Gaol during the whole of the year 1892, amounts to only £121 9s. 4d. I am unable to understand, therefore, how Messrs. Armstrong and Sons could have lost several hundreds of pounds as stated.

W. B. M'JAREN,
Superintendent of Prison Industries.

The Comptroller General of Prisons.

No. 73.

E. Darnley, Esq., M.P., to The Minister of Justice.

Dear Sir,

Legislative Assembly, N.S.W., Sydney, 28 November, 1893.
Please find enclosed letter *re* "prison labour in competition with free labor." Kindly inform me if it is true or not, as, if not, the firm advertising in the manner shown are doing the Government a gross injustice.

Yours, &c.,
E. DARNLEY.

[Enclosure.]

Dear Sir,

64, Brisbane-street, Sydney, 21 November, 1893.
Seeing that the Honorable Minister of Works stated to you that the Government would not for one moment compete with prison labour against free labour, I enclose for your information an advertisement in the Public Notice column of last Saturday's *Sydney Morning Herald*, and in doing so, state that I was in the employ of that firm for upwards of nine years, but for the last twelve months, with many others, have been thrown out of employment through prison competition with free labour, and those employed at the present time have only two days work per week for many months past. So much for a Government who profess to befriend the working classes and encourage colonial industry. Perhaps you will kindly forward this communication to the Honorable Minister, and open his eyes upon the subject to the injury being done by prison labour being in competition with free labour, and by doing so kindly oblige,

Yours faithfully,
G. READ,
late Employee of the Firm.

E. Darnley, Esq., M.L.A.

[Sub-Enclosure.]

HALL-DOOR MATS at Wholesale Prices.—In consequence of the Government competing against us by prison labour, we are compelled to supply the public at wholesale prices. See the quality of our goods at the Technological Museum. An Design or Pattern made to order.
J. ARMSTRONG AND SON, Manufacturers,
114, Riley-street, Sydney.
Established in Sydney, 1866.

The Comptroller-General of Prisons with reference to previous papers.—B.C., 29th November, 1893.
T.E.M'N. (for U.S.).

I do not know that I can add anything to what I have already said in previous reports to the Minister, which are with the papers that were sent to the Department of Justice the day before yesterday. My impression is, that Armstrong & Son think that by constantly hammering away at the free *v.* prison labour question, they may succeed in stifling the mat-making industry at Darlinghurst, in like manner as they succeeded in stopping that industry at Parramatta Gaol, and thus increase the already very great difficulty which this Department has to contend with in finding suitable employment for the thousands of prisoners who are sentenced to various terms of hard labour in our gaols. It is not unlikely that the letter from "G. Read" has been written at the instigation of Armstrong and Son.—G.M., 1/12/93.

The Under Secretary of Justice.—B.C. Submitted with reference to the Minister's minute of 17th August last. (See also 93-18,731).—T.E.M'N. (for U.S.), 5/12/93.

Inform that the statements in the letter referred to are not correct, and state facts.—R.E.O'C., 8/12/93. Forwarded for the information of the Comptroller-General of Prisons.—B.C., 3rd January, 1894. T.E.M'N. (for U.S.). Seen.—G.M., 4/1/94.

No. 74.

The Under Secretary of Justice to E. Darnley, Esq., M.P.

Sir,

Department of Justice, Sydney, 29 November, 1893.
I have the honor, by direction of the Minister of Justice, to acknowledge the receipt of your letter of the 28th instant, forwarding a communication addressed to you by Mr. G. Read, alleging that mats manufactured by prison labour compete with private enterprise, and to inform you that the same will receive due consideration.

I have, &c.,
ARCH. C. FRASER,
Under Secretary.

No. 75.

The Under Secretary of Justice to E. Darnley, Esq., M.P.

Sir,

Department of Justice, Sydney, 13 December, 1893.
Referring to your letter of the 28th ultimo, forwarding a communication from Mr. G. Read upon the subject of the manufacture of mats in gaols, I have the honor, by direction of the Minister of Justice, to inform you that from reports furnished by the Comptroller-General of Prisons, it would appear that the statement made is not correct, that Messrs. Armstrong and Son seem to be mistaken in asserting that they have been undersold by the Gaol authorities, and that the terms of the arrangement made between that firm and the Prisons Department, 1887, have been faithfully adhered to by the latter, and will continue to be so adhered to.

I am to add that under the arrangement referred to the Prisons Department bases the charges for certain classes of mats upon those fixed by the firm named, and allows the same discount to the trade on the class of mats which they manufacture, and the Department only sells to the trade, not to the public, while Messrs. Armstrong and Son may sell to whom they please.

I have, &c.,
ARCH. C. FRASER,
Under Secretary.

No. 76.

Mr. G. F. Havenhand to The Minister of Justice.

My dear Sir,

36, Renny-street, Paddington, 27 November, 1893.

My attention has been drawn to the advertisement attached, which is appearing in both the metropolitan dailies. I am sure your keen sense of justice will not allow such a state of things as evidently obtains in connection with the gaol at Darlinghurst to continue. It seems to me that if the advertisers represent the matter faithfully you have only to know it to remedy what must reflect upon the administration of this part of your Department.

I have, &c.,

G. F. HAVENHAND.

[Copy of advertisement attached.]

The Comptroller-General of Prisons in connection with previous papers. B.C., 29th November, 1893.—T.E.M'N. (for U.S.). Will the Inspector-General of Police be good enough to favour me with a confidential report as to the position of the writer of this letter (G. F. Havenhand) B.C.—T.E.M'N. (for U.S.) 15/12/93. The information required attached.—E.F. The Under Secretary of Justice, B.C., 29/12/93.

No. 3 Police Station, Sydney, 18th December, 1893.—Sergeant J. E. Sawtell begs to report for Inspector Bremner's information that he has seen Henry Armstrong, of 36, Renny-street, Paddington, "who is a letter carrier," and who admits writing the attached letter under the pseudonym of G. F. Havenhand, in the interest of his father, J. Armstrong, of 114, Riley-street, Sydney. Mr. Armstrong, senior, who is a mat manufacturer, and who has been overseer in the mat department at Darlinghurst Gaol for a number of years, complains of the number of prisoners who are taught the trade every year and when out of gaol become a drug on the market. He also complains of the way the gaol authorities cut down the value of the mats by supplying an inferior article at the same price as his mats of similar size.—J. E. SAWTELL, sergeant. J. Bremner, Esquire, inspector.

Forwarded to Inspector-General.—G. READ. 19/12/93.

The attention of the Deputy Postmaster-General should be called to the conduct of letter-carrier Armstrong in sending a letter to this Department under an assumed name, commenting on the policy of the Department in connection with the mat-making industry at Darlinghurst Gaol.—A.C.F.

No. 77.

The Under Secretary of Justice to Mr. G. F. Havenhand.

Sir,

Department of Justice, Sydney, 29 November, 1893.

I have the honor to acknowledge the receipt of your letter of the 27th instant, with respect to the price alleged to be charged for mats manufactured by prison labour, and to inform you that the same will receive due consideration.

I have, &c.,

ARCH. C. FRASER,

Under Secretary.

NEW SOUTH WALES.

FIRE BRIGADES' BOARD, SYDNEY.

(TENTH ANNUAL REPORT.)

Presented to Parliament, Pursuant to Act 47 Vic. No. 3, sec. 7.

The Chairman to The Chief Secretary.

Fire Brigades' Board, Head Quarters Fire Station,

Sir,

Sydney, 15 February, 1894.

Pursuant to "The Fire Brigades Act, 1884," section 7, I have the honor to present the Report of the Fire Brigades' Board for the Metropolitan District upon their administration during the year 1893.

I have, &c ,

CHARLES BOWN,

Chairman.

REPORT OF THE FIRE BRIGADES' BOARD FOR THE YEAR 1893.

THE Fire Brigades' Board are pleased to have the honor of reporting that the work of the Fire Department during the year 1893 has continued to be of a thoroughly satisfactory character.

The constitution of the Board remains unchanged, the biennial elections having taken place in the Board. previous year.

The sum of the risks declared by the insurance companies within the metropolitan area was £61,185,715, being an increase of £2,769,770 upon the previous return. The number of contributing offices was reduced from forty-five to forty-three, the City of London Fire Insurance Company and the Union Assurance Company of London having closed their agencies in the Colony, and the Union Fire and Marine Insurance Company of New Zealand having been absorbed by the Alliance Assurance Company; while the Batavia Sea and Fire Insurance Company was the only office added to the list of contributories. [Appendix I] During last year the Hong Kong Insurance Company retired from the Colony, and the New South Wales Assurance Corporation and Pacific Fire and Marine Insurance Company went into liquidation; while on the other hand the Royal Exchange Assurance Company and the Indemnity Insurance Company of Australasia entered upon fire business here.

A contribution of £5,500 was levied upon the Companies, pursuant to sections 13 and 14 of the Act—distributed in the ratio of their amounts at risk—being equal to a tax of 2½d. per £100 of risk.

The borough of Rookwood was the only addition to the contributing municipalities, though the extension of the Act to Mosman, in the latter portion of the year, will add that to the number for the current year. The assessments of the thirty-one contributing municipalities amounted to £5,416,778, being an increase of £153,123, or of £135,938 exclusive of the additional borough of Rookwood. These figures exhibit a considerable check in the annual rate of increase hitherto maintained, which becomes more apparent when it is considered that no less than £118,614 of the total addition was in the city proper, and only £17,294 among the twenty-nine other municipalities which contributed in the previous year. It is, however, satisfactory to note that notwithstanding the unprecedented depression prevailing in all classes of property, as well as of business, there still has been an upward tendency, though in less degree than that which hitherto obtained. The contributions of the municipalities, £5,500 in all, was equivalent to 2s. 0¾d. per £100 of the assessed value of their ratable property.

The estimate of £16,500 for the maintenance of the Department was, by careful management, not exceeded; and that for the current year has been set down at a similar sum; but the projected erection of the two fire-stations mentioned below, and the increase of subsidies to Volunteer Fire Companies, added to an impost by the Postal and Electric Telegraph Department for the maintenance of telephones, and fire-alarm lines, will be an additional tax upon our resources.

Unforeseen legal delays prevented the transfer of the site provided for a fire-station in Balmain, anticipated in our last report, but it is expected that the early completion of some legal technicality on the part of the vendors will remove the only remaining obstacle to proceeding with the erection of a building.

building. The selected site is at about the highest elevation in Balmain, having the great advantage of down-hill runs for the fire appliances when called into service, and of commanding a distant view. It has a frontage of 50 feet to Darling-street by a depth of 150 feet, and is close to the town-hall, post and telegraph offices, and the main business portion of the suburb. We expect to establish the local volunteer fire company during this year in a suitable station on that site, the plans for which have already been adopted.

For North Sydney also, which, owing to its isolated position, stands in need of especial protection of the kind, the Government has been pleased to place £150 on the Estimates, in order to secure a most suitable site for the purpose, having a frontage of 39 feet 1 inch to Walker-street, with a depth of 80 feet, situated close to the Masonic Hall, and within easy reach of the main thoroughfare. On that site, if funds permit, it is hoped that a fire-station will be erected on plans similar to that at Balmain; and the St. Leonards Volunteer Fire Company established there, with a horse and hose-waggon, &c., to enable the firemen to speedily reach the more distant parts of the large district entrusted to the company's care. This municipality is supplied with water from the reservoir at Chatswood, and the pressure runs up to the high figure of 150 lb. per square inch near the sea-level. Taking this into consideration, together with the hilly character of the district, it is intended eventually to replace the more cumbersome and heavy manual engine by the lighter equipment, as being more suitable for existing conditions.

Paddington and Burwood.

It is hoped that while provision has been made for the protection of Balmain and North Sydney, the requirements of the thickly-populated eastern suburbs will not be overlooked. There is a most eligible piece of vacant Crown land at the back of the Paddington Town-hall, which we hope may be set apart for similar purposes of fire protection. Early in the year a deputation from the Municipal Council of Burwood waited upon the Chief Secretary to ask that a portion of the ground on Burwood Road, lying waste in consequence of the deviation of the railway, should be utilised for the establishment of a fire-station, and the request was favourably received. This site, however, has not yet been dedicated.

The completion and occupation of No. 3 Metropolitan Fire Brigade Station, George-street North, Circular Quay, on 25th January, 1893, were recorded in our last Report.

Proposed amendment of F. B. Act.

We are given to understand that the proposed amendment of the Fire Brigades' Act has been placed in the hands of the Parliamentary Draughtsman, and we view with satisfaction that there is, therefore, some prospect of its being submitted to Parliament this year. Among the other desirable amendments which previous reports have pointed out, that for the inclusion of the harbour waters in the area within which the Act has operation is continually forced upon our notice by the recurrence of ship fires. Notwithstanding that this class of fire is outside our jurisdiction, and no contribution is made for the protection of property afloat, the Board does not feel justified in withholding any assistance which it is possible to afford. No legislation has yet been attempted to further regulate the sale and storage of inflammable liquids, &c., and the erection of buildings.

Fires.

The number of calls received from the 1st January to the 31st December was 401; and deducting false alarms and chimney fires, the number of actual fires was 258;—less by 54 than those of the previous year. Six fires on vessels in the harbour, an exactly similar number to those of the previous twelve months, were attended, and in every instance satisfactory "saves" were effected. These were on vessels at the wharves, and therefore within reach of land fire-engines and appliances. A notable fire also occurred in the stream, inaccessible to the firemen and their extinguishing appliances, clearly demonstrating the necessity for the floating steam fire-engine, repeatedly recommended in previous reports. By the fire referred to, which occurred in Kerosene Bay on the night of the 29th May, the old training ship "Vernon," then being dismantled, was burned to the water's edge, and involved in her destruction the hulk "Golden South," which was moored close by. Again, on the 22nd July, an explosion of coal gas occurred on the barque "Argo," in Neutral Bay, by which, besides severe damage to the vessel, one life was lost, and four persons were injured. The ship had taken in a cargo of coal, and the accident was the first of the kind recorded to have occurred to a vessel laden with coal of this colony, though similar explosions have occurred in other countries.

For the purpose of dealing with ship fires, the Marine Board had their new pilot steamer "Captain Cook" fitted with a steam pump, having a capacity of 36,000 gallons per hour; and on the occasion of the above explosion she was promptly summoned from Watson's Bay, but happily her services were not required, for no fire followed the explosion.

Inquests.

The number of inquests into fires which, pursuant to the regulations under section 6, sub-section VII, the City Coroner has been moved to hold, has been five. Four of these resulted in verdicts of arson against some person or persons unknown, while that upon the fire at the "Taragon Hotel," on 6th December, concluded with the committal of the proprietor and the manager. Conviction followed, and the former was sentenced to five and the latter to three years' imprisonment. There is little doubt that a considerable number of fires in the past have been the result of incendiarism, and that these coronial inquiries are having a salutary deterrent effect, and reducing the proportion which fires of suspicious origin bear to those that result from accident. The speed with which an alarm can be telephoned to the nearest fire-station, and the rapidity with which a well disciplined and equipped body of firemen can be concentrated upon the scene of fire, render the task of an incendiary increasingly difficult; for time is not allowed for the flames to gain sufficient headway to efface the traces of his guilt.

Telephone fire alarms.

Thirteen additional telephone fire alarms have been installed during the year; in addition, the erection of six in the borough of the Glebe has been almost completed, and a number of others are in progress or contemplation. It is satisfactory to observe that the proportion of false alarms received is less than that recorded in the reports of fire departments elsewhere.

Fire Brigades.

To the Metropolitan Fire Brigade four men have been added, increasing the number to fifty-one, including the superintendent; and the 80-foot extension ladder, mentioned in last year's report as ordered from London, has been added to its equipment; the water-tower for attachment to this ladder has, however, not yet arrived. The Brigade's admirable state of discipline and effectiveness is still maintained; the officers and men have never shrunk from the service they have undertaken, but have always responded manfully when called upon. The ship fires referred to above were especially trying in consequence of the heat and density of the smoke in the holds, difficulty of access to the fires, uncertainty as to their locations

locations, and as to whether an explosion might occur at any moment. Many firemen were carried up, overcome by smoke, from the effects of which they suffered for days, but their comrades continued to battle with the flames, nothing daunted, and, as has been said, in every instance with final success. We are therefore pleased to be able to give our highest commendation to their services. On these and other occasions the volunteer firemen shared the honours with the men of the permanent brigade, those attached to stations within or close to the city boundaries promptly responding to calls to work at all city fires, including the ship fires, and the suburban companies worked well in their own districts. Their efforts are acknowledged by the Superintendent of Fire Brigades in his report, attached hereto; and he also expresses his obligation to the police, the general public, and the officers of the Water and Sewerage Department, for valuable co-operation. The expenditure in subsidies to the twenty-two Volunteer Fire Companies enumerated in Appendix V, was £2,485, an increase of £379 upon that of the previous year. In addition, horses have been provided in several instances, to enable the companies to cover longer distances and to reach fires with greater speed. The maintenance of these has of necessity caused increase of expenditure, which the Board has been called upon to provide, and the additional tax upon the funds at our disposal is considerable.

Pursuant to section 6 of the Fire Brigades Act, the Chief Secretary, on 27th January, 1893, was pleased to approve of the appointment of Mr. Alfred Webb, the Principal Foreman of the Metropolitan Fire Brigade, to be Deputy-Superintendent, to act in case of the absence or other disability of the Superintendent.

Deputy-Superintendent,
appointment of.

Other detailed and very complete information concerning all the operations of the Department is supplied in tabulated form in various appendices.

14th March, 1894.

CHARLES BOWN,
Chairman.

APPENDIX VII.

Mr. Superintendent Bear's Report.

To the Fire Brigades' Board,—
Gentlemen,

Metropolitan Fire Brigade,
Head Quarters' Station,
28 February, 1884.

I do myself the honor to submit my Tenth Annual Report of the working and general efficiency of your Brigade, and the several Volunteer Companies, together with the details of fires attended in the city and suburbs for the year ending 31st December, 1883.

The total number of alarms received for fires, or supposed fires, was 401; of these 68 were false alarms, 75 proved to be only chimney alarms, and 258 were calls for fires. Of the fires 210 were slight or trifling, 23 were serious, and 25 resulted in total destruction. Of the 258 fires 154 were insured, 57 not insured, and in 47 instances the insurances on the buildings or contents could not be ascertained. In addition to the ordinary fires there have been chimney fires, requiring the attendance of firemen with hand-pumps only, making an aggregate total of 401 calls for fires, false alarms, and chimney fires.

The fires of 1893, as compared with those of 1892, show a decrease of 56; in the chimney fires attended with engines, the total 29 is similar; and those attended by firemen with hand-pump only, viz., 46, also corresponds with last year.

In the fires which were slight there has been a decrease of 60; in serious, an increase of 2; and in fires which resulted in total destruction, there has also been an increase of 2. Among the buildings totally destroyed are classed shed-buildings, weatherboard cottages, &c. Attached are detailed statements of the various fires attended by the Brigades and the Volunteer Fire Companies, as well as those unattended, but which have been reported to the Brigade from various sources, and a member of the Brigade has been sent to obtain the necessary particulars. The various summaries appended show the particular dates, times of call, time of outbreak, trades, localities, insurances, hourly and daily, weekly and monthly. There is also appended a summary of the supposed origin of fires for the year.

Referring to the summary of localities, it will be noticed that in the city of Sydney alone there were 200 calls, 104 of which were for actual fires, 39 were false alarms, 18 were for chimney fires reported as houses on fire, and 39 were for chimney fires attended by firemen with hand-pumps only.

Of the fires in the city there were in Macquarie Ward, 19; Brisbane and Cook Wards, 18 each; Denison Ward, 14; Phillip Ward, 12; Fitzroy Ward, 10; Gipps Ward, 7; and Bourke Ward, 6.

In the suburbs there were 201 calls, of which 154 were for fires, 29 were false alarms, 11 were chimney fires reported as houses on fire, and 7 were for chimney fires attended by firemen with hand-pumps only. The suburbs affected in regard to fires only were as follows, viz.:—Rulfern and Newtown, 16 each; Glebe, 11; Ashfield, 9; Balmain and Waverley, 8 each; Parramatta and Waterloo, 7 each; Leichhardt, Marrickville, Paddington, Petersham, Woollahra, and slips in the harbour, 6 each; North Sydney, 5; Alexandria, 4; Canterbury, Darlington, Drummoyne, and Macdonaldtown, 3 each; Auburn, Botany, Burwood, and Rockdale, 2 each; Granville, Manly, Randwick, St. Peters, and Strathfield, 1 each.

In summarising the trades it will be found that private dwellings have been mostly affected by fires, the number for all classes of damage being 93; but taking the actual trades into consideration, the most notable stand in the following order, viz.:—Grocers, 13; commission agents and produce merchants, 12; licensed victuallers, 11; stables, 10; bakers and confectioners, 7; ships, 6; drapers and milliners, painters and decorators, 5 each; boarding-houses and coopers, 4 each; builders and contractors, buildings in course of erection, butchers, fishmongers, furniture dealers, tobacconists and hair-dressers, printers and stationers, restaurants, sheds, unoccupied premises, general dealers, and dairies, 3 each; places of amusement, bedding manufacturers, boot-makers, cabinet-makers and upholsterers, coach-builders, fruiterers and green-grocers, offices, opticians, Government buildings, schools, warehouses, jewellers, workshops, bus proprietors, open yards, soap and candle works, and brass-founders, 2 each; other trades affected, 1 each. These are to be found in the "Summary of Trades."

The strength of the Brigade is as follows:—Two large steam fire-engines, 5 small steam fire-engines, 2 7-inch manual engines, 3 6-inch manual engines, 6 under 6-inch manual engines, 4 telescope ladders, 1 American ladder truck, 1 ladder van, 1 hose van, 1 steam-engine tender, 10 hose reels, 24,535 feet of hose, most of which is in good and fair condition, 18 horses, 52 telephones erected, 7 telephone switchboards, 87 telephone fire alarms, 50 firemen, including Superintendent, Deputy-Superintendent, and coachmen.

The undermentioned Volunteer Fire Companies hold plant on loan from your Board, viz.:—Alexandria, Ashfield, Drummoyne, Burwood, Leichhardt, Granville, Manly, North Botany, North City, Randwick, St. Leonards, Standard Brewery, Waverley, and Woollahra. Six Volunteer Fire Stations are also vested in the hands of your Board.

The following comprise the Volunteer Fire Companies within your Board's jurisdiction:—Alexandria Volunteer Company, subsidised, £100; Ashfield Volunteer Company, £110; Balmain Volunteer Company, £200 (2 stations); Burwood Volunteer Company, £110; Drummoyne Volunteer Company, £50; Glebe Volunteer Company, £150; Granville Volunteer Company, £60; Leichhardt Volunteer Company, £75; Manly Volunteer Company, £75; North Botany Volunteer Company, £50; North City Volunteer Company, £60; Paddington Volunteer Company, £150; Paddington Brewery Volunteer Company, £200; Parramatta Volunteer Company No. 1, £85; Parramatta Volunteer Company No. 2, £85; Randwick Volunteer Company, £60; Rookwood Volunteer Company, £40; St. Leonards Volunteer Company (2 stations), £220; Standard Brewery Volunteer Company, £205; Waterloo Volunteer Company, £110; Waverley Volunteer Company, £100; Woollahra Volunteer Company, £200.

The total amount paid as subsidies and bonuses to the various Volunteer Fire Companies during the year was £2,485. In addition to the subsidies new plant has been supplied in many cases to Volunteer Companies to replace that condemned as unfit for further use. The approximate value of the whole of your Board's plant, together with the land and stations held in trust, is £82,446 13s. 6d. The value of the Volunteer Companies' own plant is not included in this sum.

The undermentioned are the members of the Metropolitan Fire Brigade:—

Name.	Rank.	Date of Appointment.	Where stationed.
William Douglas Bear	Superintendent of Fire Brigades, and Inspector of Kerosene.	Under Government, May, 1884.	Head-quarters.

86	" " " "	" Goulburn and Macquarie Streets.
87	No. 4 Station, Marrickville	" Cook's River Road and Railway-street.

Most of the Volunteer Fire Stations, Theatres and Music Halls, the University, Government Printing Office, Railway Department, Town Hall, and Messrs. Hoffaung and Co.'s warehouse are in direct communication with our permanent stations. The Police Stations are also in communication, through the Central Police Station. The various wharves, warehouses, business houses, and many public buildings, are in telephone communication by means of the General Post Office Exchange, which is open to receive and transmit calls for fires at any hour of the day or night; and arrangements have been made by which the watchmen employed by the principal business houses report through to the Head-quarters' Station several times every night. The new fire-station for the protection of the northern end of the city, which was commenced on the 7th July, 1891, was opened on the 25th January, 1893, and nine men are stationed there, with the necessary fire-extinguishing appliances. On 5th August the Brigade was strengthened by the arrival of a ladder capable of being extended to a height of 80 feet, which has formed a valuable acquisition to the department.

The telephone fire-alarms and nearly the whole of the electrical apparatus has been kept in order by the members of the Brigade.

I have to thank the officers and members of the Volunteer Companies for their valuable assistance during the year. The officers and members of the Police Force have as usual rendered very effective assistance, and I have to express my obligation to them. I have also to tender my thanks to the turncocks and to the public generally for their valuable co-operation.

The discipline and general efficiency of the Brigade are in all respects satisfactory, and although the duties at times have been a severe strain on the whole staff, the work has been performed cheerfully and well.

In conclusion, I beg to tender my most sincere thanks to your Board for the cordial support it has awarded me.

I have, &c.,

WILLIAM D. BEAR,

Superintendent of Brigades, and Inspector of Kerosene.

APPENDIX VIII.

List and Details of Fires attended by, or reported to, the Metropolitan Fire Brigade, or Volunteer Fire Companies, for the Year ending December, 1893.

Date.	When discovered.	Time of Call.	Locality.	Name of Tenant.	How Premises occupied.	Construction of Premises.	Origin or supposed cause of Fire.	Insurances		Extent of Damage, &c.	Extinguished by

1894.

NEW SOUTH WALES.

FRIENDLY SOCIETIES.

(REGISTRAR'S REPORT ON OPERATION OF, FOR YEAR 1893.)

Presented to Parliament, pursuant to Act 37 Vic. No. 4, sec. 45.

Registrar's Report on the Operations of Friendly Societies in the year 1893.

SECTION 45 of the Friendly Societies Act directs that a report shall be prepared annually by the Registrar and laid before Parliament, such report to contain an account of his proceedings within the meaning of Part III of the Act, and of the principal matters transacted by Friendly Societies which have come under his cognisance.

The Act under which the Friendly Societies work was passed in the year 1873, and is a reproduction of the English Act of 1855, with its various amendments. The original was already condemned when the local Act was passed, but, unfortunately, its many and important defects, chiefly due to bad drafting, were faithfully reproduced in the Act of the local Legislature. The principal addition to the original Act is contained in section 6, which forbids an unregistered Friendly Society carrying on business, and imposes a penalty of £20 upon each member of the Committee of Management who shall receive money in consideration of the allotment of shares or any interest in such Society.

In the Colony of New South Wales Friendly Societies are, in the first instance, co-operative associations to secure medical attendance and medicine for members, their wives, and such of their children as may be under the age of 16 years. Next in importance to the medical benefits comes the relief afforded in case of sickness. The funeral benefits given are, as a rule, only enough to defray the expenses of burial, £10 to £15 being usually allowed on the death of a wife, and from £20 to £35 on that of the member. Added to the specific benefits are sometimes benevolent objects, but these are rarely provided for by rule, the giving of money in cases of distress being for the most part purely voluntary.

The function of Friendly Societies in the economy of social life is very important. Their great moral value is undoubted. They induce habits of self-reliance and co-operation which can hardly be over-valued in a country where the State does so much that in other lands is left to private effort. On the State itself the Societies confer an indirect benefit, which is not to be lost sight of; they cope with a large amount of poverty and distress that would otherwise fall upon the general community, and even from this point of view, if no other be taken, the Societies are worthy of every encouragement the State can offer them. The work which the Societies are doing is undeniably valuable, and this notwithstanding the frequent instances of failure. That the interests involved in Friendly Societies are considerable would appear from a statement of the number of members and the amount of funds at their disposal. The returns for 1893 are not far enough advanced to enable a statement to be made of the position of the Societies at the end of that year, but towards the close of the previous year they had on their books 71,218 members, while their accumulated funds were but a few pounds short of half a million.

It would be a happy duty if I were able to report that Societies as a whole are in a sound condition. In the absence of a valuation, nothing can be said about individual Societies, but it would be a vain expectation to look for soundness in view of the fact that the Societies, with few exceptions, are founded on a basis which is theoretically unsound. A combination of happy circumstances could alone make them solvent, and something of the kind has helped them in the past. Some lodges are fortunate enough to have members so well-to-do that they do not take the ordinary sick-pay when invalided, nor even the funeral donation payable on the death of a wife. This condition of affairs was more common in times past than to-day, for things have vastly changed of late in connection with all Societies, and the direct gain derivable from members abstaining from accepting benefits cannot be greatly reckoned on to help them in the future.

The Act provides two important safeguards which, if maintained, would certainly ensure the stability of all registered Societies. Section 7 requires an actuarial certificate, or, rather, provides that it shall not be lawful for the Registrar to grant any certificate of registration to a Society assuring any benefit susceptible of calculation by way of average, unless the tables of contribution payable shall have been certified under the hand of an actuary; and section 40 requires that the rules of every Society shall provide that all moneys received or paid on account of each and every particular fund or benefit assured, for which a separate table of contributions payable shall have been adopted, shall be entered in a separate account distinct from the moneys received and paid on account of any other benefit or fund. Neither of these safeguards has been preserved, and rules have been registered invariably without a certificate as to the adequacy of the contributions, and very frequently without a provision for the separation of funds; and I regret to have to say the unfortunate condition of affairs that now prevails is due mainly to the

neglect by the Societies of these, the most vital parts of the Act. The evil of registering scales of contributions and benefits actuarially unsound has been greatly intensified by the practice indulged in by most Societies of increasing their benefits without correspondingly increasing their contributions, and it has so happened that many Societies, which were originally started on a proper basis, have become unsound through the registration of rules increasing their benefits without touching their contributions.

On my acceptance of office I found the principle of uniform contribution—that is to say, of persons of all ages paying the same weekly or monthly subscription—obtained in nearly all Societies. In one or two cases a graduated scale was adopted, but even in these instances the graduation was imperfect and the contributions were inadequate. Some Societies were established having a uniform subscription, but with the entrance fee so graduated as to make the contributions payable proportionate to the ages of members; but only in one instance, so far as I have been able to discover, was the entrance fee charged sufficient to make up for the uniformity of the subscription. The principle of uniform contribution is essentially unsound, and finds feeble justification in the convenience of secretaries or other lodge officers. The only true system is that which makes the contribution or subscription of the Society proportionate to the risk incurred, and, as the risk rises with the age at which a member joins, it will be apparent that a scale of contribution increasing with the age at initiation is the only one under which a Society can be expected to flourish. At the present moment only two Societies—the National Independent Order of Odd Fellows and the Irish National Foresters—have a scale of contributions applying to all lodges which is adequate. Certain other Societies, viz., the Loyal Protestant Benefit Society (late Orange Benefit Society) and the Sons and Daughters of Temperance have an adequate scale applying to new lodges and new members. The Free Gardeners have adopted a scale that is almost adequate, and the Grand United Order of Odd Fellows have improved their position by adopting a scale averaging within 15 per cent. of theoretical safety.

It has been a difficult matter to get the Societies to look upon the promulgation of inadequate tables as a fraud upon the public. The members, as a rule, do not deny that actuarially it will be impossible to maintain the benefits which the rules profess to give intending members; still they hope in a vague way that something may turn up to their benefit which will enable them to carry out their engagements.

Many Societies have an erroneous idea of their solvency, arising from a consideration of the *per capita* value of their funds, leaving out of sight the indebtedness of members for benefits to be incurred in the future. The question as to the comparative solvency of different Societies depends not only on the accumulated funds under their control, but also on the ages of the members. It is a very common thing for a secretary to state that his lodge, which is worth (say) £4 per head, is in a more solvent condition than another, which is worth but £3. Such a contention would be regarded as of no weight by anyone possessed of even a slight acquaintance with the principles underlying Friendly Societies insurance, unless, in addition, some information was given as to the ages of the members of each lodge. Generally, the average age of the members is furnished, but, even then, no exact conclusion can be arrived at, as the liability to death or sickness does not increase uniformly with advancing age; and if the average age in each lodge were the same, the *per capita* value of their funds must be regarded as giving but an approximation to their true position. Let there be two lodges, A and B, each represented by a pair of members and each offering the same benefits, for which at age 18 a whole-life contribution of 7½d. per week would be required. If at the time of valuation the members of lodge A were aged 36 and 38 years, while those of lodge B were aged 20 and 54 years, the average age in each lodge would be the same, viz., 37 years. But while in lodge A the value of the future contributions would be £53 14s. and that of the future liabilities £95 11s., they would be in lodge B £51 8s. and £95 1s. respectively. Hence, to be in a solvent condition the latter should have in reserve an amount equal to £21 16s. 6d. per member, as against £20 18s. 6d. in the former—a difference of 18s. per member.

The recuperative powers of the Friendly Societies are enormous, and although their condition at the present time may be unsound, there is every reason to hope that a just appreciation of their position, and a speedy bringing about of a correspondence between contributions and benefits, joined to a vigilant watch over expenditure and investments, will enable Societies apparently insolvent to right themselves. The experience both of England and Victoria warrants this supposition, and I have no doubt that if the matter be taken in hand heartily by the Societies, and the scale of contributions be made equal to the benefits, or the benefits lowered to meet the present contributions, within a few years a very different condition of affairs will be disclosed than now meets the eye.

Very great difficulty, however, has been experienced in getting the Societies to realise the necessity for reform, and it is a matter of notoriety that the same difficulties arose in England more than thirty years ago. Societies, for the most part, are willing to increase their subscription, but this willingness does not extend so far as to cause them to make the contribution equal to the benefits. Scales of contributions adapted to any set of benefits have been prepared, and are furnished to any Society desirous of improving its condition, and indeed to every Society, whether it desires to improve its condition or is indifferent in the matter. The keen competition which has existed among Societies is responsible for the inordinate raising of the benefits and the cutting down of rates. Lodges have been opened in many parts of the Colony, where there are insufficient members to enable them to carry on business successfully. No check has been placed upon the opening of these new lodges, nor is it possible to say how such can be done. Many of the Societies are essentially religious or sectarian; and even if the law permitted, it would be unwise to refuse registration to a Society proposing to open in a district in which a religious or sectarian Society was already established, on the ground that such Society was adequate to meet the demands of the district in which it was operating, because it is notorious that many persons are entirely opposed to, and would on no account join, a Society established on a sectarian basis.

Viewed from the Registrar's standpoint, the disheartening feature connected with the Friendly Societies is that there is little or no movement towards reform from within. The improvements now in course of being effected are due to the stand I have taken up, which has been successful only because I have fortunately been able to refuse registration to new lodges with an inadequate scale of contributions, and to amendments to the rules affecting the stability of benefits; and if this power had not been conferred by law upon the Registrar, there is ample evidence that the Societies would not voluntarily make any strong effort in the way of reform. I attribute the want of interest to the fact that some of the more important benefits are remote and contingent upon events which few members realise as likely to happen to themselves, and that the present payments of members in most instances seem to them to be sufficient.

sufficient. Were it not that members generally join a Society at the earlier ages, when the sickness experienced is slight, the inadequacy of rates would ensure insolvency in a few years; as it is, a Society may exist for many years, and accumulate a fairly large sum of money before the period of continually increasing outgo and diminishing returns sets in. To the general apathy there are, it is true, exceptions. Some of the leading officers have for years been conscious of the condition into which their Societies were drifting, and have raised their voices for reform, with but little success, and even now, after the efforts which I have made, and the strong criticism to which the Societies have been subjected, I think it is not too much to say that members as a whole do not yet realise that any reform is needed, and if the pressure were removed, the Societies would speedily fall back to their former condition. To illustrate this view I may mention that several large Societies, in reforming their scale of contributions, propose while adopting an adequate payment by new members, to fix the contribution of old members below the rate for the youngest new entrant, viz., 16 years, and this notwithstanding that few existing members joined at such a low age, while the majority became members when they had reached an age much nearer 30 than 20 years. This anomaly has been pointed out to the Societies, but present members profess to believe they have an accumulation of funds sufficient to make good the deficiency of their contribution. It is probable the end will show that, relying on their invested funds to make good the deficiency, the members have had no better support than a bruised reed.

In view of the many misapprehensions that are current amongst members of Societies as to the value of their contributions compared with the cost to the Societies of the allowance payable in sickness, I have prepared a table showing the average contributions, the value of the sick benefits at each year of age, and the surplus or deficiency of the contribution compared with the benefit. The benefits usually granted in cases of sickness are 21s. per week for the first period of six months during which the sickness lasts, 15s. per week for the second six months, 10s. per week for the third six months, and 5s. per week during the remainder of the sickness. The values set down in the third column of the following table are for the sick benefits just stated, and are the amounts which, according to Ratcliffe's experience, would be paid on an average for the year of life against which each value stands. The contribution set aside to meet these benefits does not usually exceed 5½d. per week or 24s. a year, which is the amount assumed in the table.

Age.	Contribution.	Average value of sick benefits at each age.	Surplus or deficiency of contribution compared with value of sick benefits.	Age.	Contribution.	Average value of sick benefits at each age.	Surplus or deficiency of contribution compared with value of sick benefits.	
			Surplus.				Deficiency.	
20	A weekly contribution of 5½d. per week, equal to 24/- per annum.	14/5	9/7	44	A weekly contribution of 5½d. per week, equal to 24/- per annum.	25/-	1/-	
21		14/9	9/3	45		25/3	2/3	
22		15/1	8/11	46		27/6	3/6	
23		15/4	8/8	47		28/9	4/9	
24		15/6	8/6	48		30/3	6/3	
25		15/8	8/4	49		31/9	7/9	
26		15/10	8/2					
27		16/-	8/-	50		33/4	9/4	
28		16/3	7/9	51		35/2	11/2	
29		16/7	7/5	52		37/-	13/-	
				53		39/3	15/3	
30		17/-	7/-	54		41/6	17/6	
31		17/5	6/7	55		44/-	20/-	
32		17/10	6/2	56		46/8	22/8	
33		18/3	5/9	57		49/9	25/9	
34		18/8	5/4	58		53/2	29/2	
35		19/1	4/11	59		57/-	33/-	
36		19/5	4/7					
37		19/11	4/1	60		61/2	37/2	
38		20/5	3/7	61		65/9	41/9	
39		20/11	3/1	62		70/10	46/10	
				63		76/6	52/6	
40		21/7	2/5	64		82/7	58/7	
41		22/4	1/8	65		89/3	65/3	
42		23/2	-/10					
43		24/-					

The theory of sickness assurance requires that a member shall pay a sum which, with interest added, is equal to the value of the benefits he is expected to draw from the Society. At age 43 years, according to the table, the value of the contribution usually paid and the amount of sick benefits are each 24s. a year, so that it is obvious every member must pay to the Society before he reaches his forty-third year such sums as, with interest thereon, will be equal to the benefits payable after the age mentioned. The lowest age in the series given is 20 years, and from 20 to 44 years the contribution of 24s. a year would show an accumulated surplus of £8 0s. 7d., or allowing interest at 4 per cent., of £13 6s. 8d. This sum is equal to the value of benefits that would on an average be paid to a member who joined at 20 years, but this age is the only one for which the payment of 24s. a year would be sufficient. For a person joining at 25 years of age there would be an accumulation of £8 at age 44, a sum quite insufficient to meet the benefits after the last-mentioned age. A person joining at 35 years would have only a surplus of £1 12s. 6d. at age 44, which in little more than six years would be exhausted. A study of this table is earnestly urged upon the members of benefit Societies, who will be able to discover from it the reason why an accumulation of funds does not of necessity mean solvency, and why no Society can hope for ultimate stability that does not graduate its contributions according to the age at which a member joins.

I think that the powers conferred on the Registrar by section 7 of the Act in regard to the registration of new Societies are perfectly ample. The chief trouble arises in connection with the Societies already registered desirous of forming new branches, and I am face to face with the difficulty that in several of the Orders there are being formed two classes of Societies, one levying contributions more or less adequate, while the other is charging contributions in some instances 50 per cent. below what they should charge; yet both classes give, or profess to give, the same scale of benefits. There is nothing in the Act empowering

empowering the Registrar to require a Society which has been accorded registration to alter its rates of contributions, no matter how unsafe they may be.

Although a close reading of the Act does not warrant the assumption, yet it is unquestionably true that the Registrar's certificate entered upon the rules of any Friendly Society is looked upon as a guarantee of the sufficiency of the tables contained in the rules, and the competency of the Society to meet its engagements. It was, therefore, with great regret that I found myself compelled to register Societies which gave larger benefits than could be paid from the contribution laid down in the rules; but I had to choose between refusing registration to and thus destroying Societies, some of them established for a long period of years, and signing the tables which I knew to be inadequate. I adopted the latter alternative after serious consideration, having obtained from the Societies interested an ample promise that they would take an early opportunity of bettering their condition, and making the contributions correspond with the benefits professed to be given; but it has been distinctly understood that after a given date all new branches and new Societies would be registered only with adequate contribution, and under this decision the formation of new branches of some Societies has ceased until after the occurrence of their annual meetings, when proposals for amending their condition will be considered.

A great defect in the Act is the powerlessness of the Registrar to see that the rules to which he attaches his certificate are properly carried out. Violations of the law are extremely common, and I have had under my attention the case of a Society which, professing to charge an adequate contribution, has returned to the members part of their subscription by way of a bonus, and thus, while nominally complying with the requirements of the Act and its own rules, has virtually stultified the Registrar's certificate. There are also many instances of lodges abolishing their entrance fees, though such fees are really part of the subscription; and cases have been brought under attention, in which the funds have been divided amongst members notwithstanding the rules of the Society, and in defiance of the provisions of the Act. It would seem that some alteration in the Act is required, empowering the Registrar to suspend the registration certificate of a Society wilfully breaking the law.

As already mentioned, unregistered Societies are forbidden to carry on operations, and a penalty is imposed on each member of the committee breaking the law. On taking office I discovered that there were not a few of such Societies in existence. All those that were discovered were written to, and a reasonable time given them to comply with the law, or cease operations. It was found that most of the Societies in existence and unregistered were ignorant of the law, and no difficulty has been experienced so far in inducing these Societies to register or close their books. Apart from the question of illegality, the drawbacks of a non-registered Friendly Society will be gathered from an enumeration of the privileges which a registered Friendly Society enjoys, and which a non-registered Society has no claim to:—

1. It can legally hold land and other kinds of property in the names of trustees, such property passing from one trustee to another by the mere fact of appointment, and can carry on all legal proceedings in the trustees' names.
2. Whilst the only criminal remedy against fraud by its members open to an unregistered Society is confined to cases of larceny or embezzlement, a registered Society has a remedy on summary conviction whenever any person:—
 - (1.) Obtains possession of its property by false representation or imposition;
 - (2.) Having possession of any of its property, withholds or misapplies it;
 - (3.) Wilfully applies any part of such property to purposes other than those expressed or directed by the rules and authorised by the Act.
3. If an officer of the Society dies or becomes bankrupt or insolvent, or if an execution is issued against him whilst he has money or property of the Society in his possession by virtue of his office, the trustees of the Society are entitled to claim such money or property in preference to any other creditors.
4. The documents of the Society are, for the most part, free from stamp duty.
5. The Society can admit members under twenty-one and take binding receipts from them, which would otherwise be of no effect.
6. If it invests money on mortgage, such mortgages can be discharged by a mere endorsed receipt without reconveyance.
7. Its officers are legally bound to render account and give up all money or property in their possession on demand or notice, and may be compelled to do so.
8. Disputes can be legally settled according to the Society's own rules.
9. Members of registered Friendly Societies have the privilege of legally insuring money, on the deaths of their wives and children, for their funeral expenses, without having an insurable interest in their lives.
10. Members of registered Societies may dispose at death of sums payable by the Society by written nomination without a will; and this nomination may be made by youths of sixteen who cannot make a will till they are twenty-one.
11. Where there is no will and no nomination, the trustees may distribute sums without letters of administration being taken out (a person who should do so in any other case would make himself liable for the debts of the deceased).

The practice of registering Societies under names already adopted is very common. This is, undoubtedly, a cause of much confusion, and, though not forbidden by the Act, has been discouraged by me. There is a singular want of imagination amongst the promoters of Friendly Societies, which restricts their choice of names to a comparatively small list, and a reference to the register of names of Friendly Societies shows that a large number of Societies have chosen the same or very similar names, and this sometimes happens with branches of the same Order.

Several proposals have been received for the registration of Societies dividing their funds, but I have considered that the registration of such Societies is expressly forbidden by section 21 of the Act, which declares that it shall not be lawful in any Society to direct a division or appropriation of any part of the funds or property thereof, unless the claim of every member is first duly satisfied, or an adequate provision be made for satisfying such claim. As it is impossible that a dividing Society can do this, it was held by the Registrar of Friendly Societies in England that the formation of dividing Societies is forbidden by the Act; and as I concur in this interpretation of the section just referred to, I have not seen my way to extend registration to any dividing Society.

Another

Another evil which last year's operations disclose is that trades unions entrench on the grounds of Friendly Societies properly so called, and give sick and funeral benefits. The contributions required by the trades unions are seldom or never adequate to the benefits professed to be given, nor is there usually any separation of accounts, by which a portion of the contribution is set apart for benefit as distinguished from union purposes. The whole funds are available for the ordinary trade objects, with the result that when a union breaks up or its funds become exhausted, the members too often find themselves precluded by age from admittance into an ordinary benefit Society.

The practice of forming Societies in connection with workshops, mines, or other employments, has become somewhat common, and in some cases it appears that these Societies are not the voluntary associations contemplated by the Act, but that employment has been made conditional on the members joining such Societies. As the Act makes the voluntary principle the essence of a Friendly Society, the formation of Societies of the kind alluded to is clearly illegal, and registration has not been accorded to any Society in which it is believed there is compulsion on the part of employers to make their workmen join. These Societies have been declared illegal in England, but the illegality, so far as I can judge, has been due to the fact that the stoppage of the contribution from wages has been a breach of the Truck Act.

Another difficulty has arisen in connection with the registration in former years of certain Societies, which are merely branches of other associations, whose head-quarters are not in New South Wales, and whose funds to meet death benefits, and certain other contingencies, are outside the jurisdiction of the local courts. The Societies of this character have been advised that they must take such steps as will be necessary to maintain their funds within the Colony of New South Wales, and to disassociate themselves from orders outside jurisdiction.

There is a growing disposition to establish female branches of Friendly Societies, and for these there is an extremely wide field. There is not, however, sufficient experience of female sickness to warrant the preparation of special tables, and in the absence of such experience, I have adopted the same table for female lives and female sickness as for males.

There is also a tendency to establish lodges for youths and children, the necessity for which is not very apparent. There is one purpose, however, which these juvenile lodges serve; that is, they are recruiting grounds for the regular lodges, and members of juvenile Societies, when they attain their maximum age, drift naturally into the main branches of the orders.

The management expenses of all Societies form a very large percentage of the contributions, especially if comparison be made with the English Societies, but owing to the general smallness of the local Societies, it is very doubtful whether the management expenses can be very much reduced. An average of a rather large number of Societies has been taken, and it has been found that the management expenses alone, excluding medical attendance, and medicines, usually associated with management, amount to 8s. to 10s. per head yearly, which is more than the sum paid for medicine or funeral donation, and rather more than half the amount usually paid for medical attendance.

Most of the Societies look upon the loss of members as a great source of gain. Secessions from the ranks of Friendly Societies are very numerous, and the majority of seceders leave money behind them. Against this, however, it must be said that the selection is, for the most part, against the Societies. The persons who leave are young and active men, while those who are handicapped by bad health, or who know from their family history that they are liable at any moment to require assistance, rarely allow their membership to lapse. It has not yet been proved that any Society derives an advantage from the secessions over and above the loss which it suffers by the selection against it. This can only be demonstrated on an investigation of the assets and liabilities of the Society, and no such investigation has been made. I find on reference to a report of the Registrar of Friendly Societies in New Zealand that out of all the societies examined, about one-fourth proved to be in a solvent condition, and of these latter the solvency was in only four cases due mainly to secessions.

A source of weakness to Societies is their failure to properly invest their funds. It is well known that the rates of contributions to Friendly Societies are fixed from the consideration of the risks of sickness and the expectation of death, and the assumption that the funds of the Society are continuously invested at a certain rate of interest. This interest I have fixed at 4 per cent. I find, however, that a large proportion of the funds of Societies is not invested, and therefore receives no interest; and it is open to question whether, taking all things into consideration, and notwithstanding the general high rate of interest obtaining in the Colony, the rate allowed is not altogether too high. The funds of the Societies are sometimes grossly misapplied, and the intention of section 40 of the Act, by which the different funds are required to be kept separate, is entirely defeated by the practice of trustees lending the money belonging to one fund to another fund which may be insolvent. Although interest is nominally charged against the money so lent, in reality this is a mere book entry, and the money belonging to the original fund is never repaid. The whole business of lending money belonging to one fund to another fund is simply a means of defeating the Act, and a proceeding which should certainly be forbidden by the Legislature.

Another fruitful source of loss to Societies is the misapplication of funds for building purposes. This is not only entirely against the law, but is against all business principles, as the buildings erected in very few cases return the interest which could be earned by ordinary investments allowed by the Act; and many cases have come under my attention in which the buildings not only return no interest at all, but are a heavy charge on the funds of the Society. Someone has said that the worst evil which can befall a Society is to receive a gift of a piece of land on which to erect a hall, and there are not wanting many instances in the operations of Friendly Societies in this Colony which illustrate the truth of the saying.

Nothing has surprised me more in connection with Friendly Societies than the astonishing number of malversations that have come under my attention, and I am of opinion that these have occurred chiefly through the laxity of the officers and of the auditors charged with the supervision of the accounts. Some of the persons stealing money belonging to Friendly Societies have been prosecuted, but in the majority of cases no action has been taken, the defaulters or their friends generally undertaking to make good the amounts stolen, and I regret to say that restoration in very few instances is really made.

Owing to the looseness with which some of the Societies carry on business, I am unable to say how many that have been registered are now in existence; and I find that it has been a common practice for Societies to close their operations and divide their funds without sending any notice to the Registrar. Several Societies have ceased operations during the year, but the number of such cannot be stated, as I have only been advised in a few instances. The collapsing of Societies has been a fruitful cause of distress,

distress, and on investigation it has proved that many persons who have made great sacrifices to keep up their payments have in the end found themselves in an unsound Society, which is unable to pay them the benefits they have subscribed for, while they themselves are too old to be received into another Society.

Under section 45 of the Act the trustees or other officers are required to furnish the Registrar with annual returns of the operations of the Societies, and returns of sickness and mortality are required every fifth year, dating from 1873. The annual returns have usually been made by the Societies, though so far they have not been used, but no quinquennial returns have been received since the Act was passed. Taking advantage of the fact that the year 1893 was the close of the quinquennial period, forms of returns were prepared by me and forwarded to all Societies. These are now being filled in, and many of them have been returned to me and examined, but the operation of examination and tabulation is so heavy that the result of the quinquennial investigation can hardly be looked for before the close of the current year. From these quinquennial returns I hope to obtain experience of sickness and of mortality, as well as sufficient information to determine the solvency or otherwise of the various Lodges and Orders. The forms have been made as simple as possible, and although many that have been received are incorrectly filled up by the officers or trustees, there seems to be everywhere the greatest willingness to afford help and make the returns as complete as possible. Should the information prove as satisfactory as I expect, I shall be able to establish a table of contributions based upon local conditions that cannot fail to be useful. At present the tables on which the rates of benefits are founded are those used by the Manchester Unity of Oddfellows of England, compiled by Mr Henry Ratchiffe from the experience of his Society for five years ending 1870. The only local data yet available in anything like a complete form is that prepared by Mr. Edwin Schofield, Grand Secretary of the local Manchester Unity. These tables, which give the amount of sickness at the various ages, have proved extremely useful. So far as my investigation goes, there is no warrant for supposing that there is less sickness in this Colony than in England; indeed, as the expectation of life has been proved to be longer in New South Wales than in England, it is but a natural expectation that the sickness will also be greater.

Various actions-at-law have been entertained by District Court Judges and Magistrates for the recovery of contributions in arrear, and decisions have been given in favour of Societies prosecuting their members, and this in spite of the fact that section 18 of the Act declares that the subscriptions shall be voluntary on the part of members of the Society. The payment of sick and funeral benefits has also been recovered in the Courts by members from their Lodges, even after the decision of the Arbitration Court of the Lodges has been adverse to the claimant; yet section 14 of the Act expressly declares that the decision of the arbitrators, made in accordance with the Act, shall be binding and conclusive on all parties without appeal.

The principal legal decision affecting Friendly Societies, given during the past year, was that of Judge Murray in the matter of the Sacred Heart Branch of the Hibernian A. C. B. Society *versus* the Sydney District. His Honor decided as follows:—

1. That the limitation, in section 15 of the Friendly Societies Act of 1873, of the jurisdiction of District Courts, by the words "the rules of which do not prescribe," &c., is general, and not confined to the cases provided for by section 14: in other words, that the direction contained in the first sentence of the latter section does not restrict a Society in the making of rules dealing with the settlement of disputes, to cases only of disputes between members and the management; but, while that section virtually *compels* a Society, for the avoiding of litigation, to provide rules for the settlement of these common disputes, the powers impliedly given by section 7 extend to the settling of differences of, generally, all descriptions arising within the Society, leaving to District Courts the determination only of such matters as may appear not to have been dealt with by the rules.

2. That, for the purposes of jurisdiction in determining disputes, a Society may be constituted by a centre and several branches, general rules providing for the settlement of differences arising between branches and the centre being valid, and so effectually limiting the jurisdiction of District Courts.

Under section 42 of the Act, Societies are expressly forbidden to take shares in any joint stock or other company, with or without charter of incorporation; but under the reconstruction schemes of some of the Banks, approved by the Courts, Societies with money on fixed deposit were compelled to take shares in the Banks. Negotiations are now pending between the Societies and the Banking institutions concerned, as the Societies whose money is locked up contend, with some show of reason, that an order of the Court cannot prejudice them against the Friendly Societies Act, which expressly forbids them to do what an order of the Court seems to compel them to do.

As illustrating the peculiar condition of affairs that may arise in connection with the practical working of Societies, it may be mentioned that a lodge in the Braidwood district has drifted into a peculiar position. It had, on 1st January, 1893, but two members, and had for years been unable to hold a meeting for want of five members to form a quorum, and no new members can be admitted, as, according to their by-laws, all candidates for initiation must be approved of by a selection committee of three members.

During September, 1892, an attempt was made by an agent to obtain registration in this Colony for the Independent Order of Foresters of Canada. Their rules could not be approved of, as not only did they propose insurances on the lives of members at rates which experience shows were altogether too low, but it was also provided that the central body in Canada should have sole control and possession of all the funds excepting those required for local management expenses. That the action taken by this office was judicious has been proved by the arrival of the Report of the English Registrar of Friendly Societies for the year 1892, containing information showing that the Chief Registrar of the United Kingdom had felt it his duty to publish in *The Times*, and afterwards to repeat it in January, 1893, "a caution to all who may have dealings with the Independent Order of Foresters on the footing of the prospectus" which had been issued.

Mention has been made of the fact that with the year 1893 a quinquennial period closed, and that returns are being obtained from every Society operating in the Colony. Sufficient has been learnt from returns already furnished to show that the business of local Societies presents many peculiarities which should be considered when an amending Bill is being prepared. Legislation is undoubtedly urgently needed; nevertheless it would seem wise before taking steps to repeal the present Act to await the full results of the investigation now in progress, which it is hoped will disclose the exact condition of affairs in connection with Friendly Societies, and so enable a broad and just judgment to be formed of the matters which should be dealt with in an amendment of the law.

Sydney, 27th March, 1894.

T. A. COGILLAN,
Registrar of Friendly Societies.

APPENDIX I.

The following were the transactions of the year as far as they related to the registration of rules and amendments to rules. The rules of 71 new Societies were registered, 46 complete amendments, 25 partial amendments, and 4 amalgamations. No dissolutions were recorded, and registrations of rules were refused in some 40 instances.

NEW SOUTH WALES.

IMMIGRATION.

(REPORT ON, FOR 1893.)

Presented to Parliament by Command.

The Officer in Charge of Immigration to The Principal Under Secretary.

Sir,

Immigration Office, Sydney, 15 January, 1894.

I have the honor to submit, for the information of the Chief Secretary, my report on Immigration for the year ending 31st December, 1893.

Operations under the Regulations have been confined to the nominations of wives and families by husbands and fathers, of good moral and industrial qualifications, being residents in the Colony.

Of the total of 120 immigrants who so arrived all were nominated in the Colony, none were selected by the Agent-General.

They consisted of 66 individuals above 12 years of age, and of 54 under 12 years of age.

Two deaths occurred during the voyage.

The appendices herewith annexed give full detailed information relative to Immigrants during the voyage:—

- A.—General Statistical Information.
- B.—Nationality of Immigrants.
- C.—Educational Attainments.
- D.—Religious Persuasions.
- E.—Distribution into Country Districts.

I have, &c.,

FRANK J. JOSEPHSON,

Officer in Charge of Immigration.

APPENDIX A.
RETURN of Assisted Immigration to New South Wales, 1893.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

REPORT FROM THE SELECT COMMITTEE

ON

OPERATION OF THE SHIPPING LAWS;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

MINUTES OF EVIDENCE,

AND

APPENDIX.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,5 *June*, 1894.

SYDNEY: CHARLES POTTER, GOVERNMENT PRINTER.

1894.

1894.

**EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.**

VOTES No. 3. TUESDAY, 23 JANUARY, 1894.

28. OPERATION OF THE SHIPPING LAWS :—Mr. Kelly moved, pursuant to Notice,—
- (1.) That a Select Committee be appointed, with power to send for persons and papers, to inquire into and report upon the operation of the “ shipping laws, and abuses connected with the same.”
- (2.) That such Committee consist of Mr. See, Mr. O’Sullivan, Mr. Wise, Mr. Davis, Mr. Molesworth, Mr. J. D. FitzGerald, Mr. Garrard, Mr. G. D. Clark, Mr. Edden, and the Mover.
- Debate ensued.
- Mr. Molesworth moved, That the Question be amended by the omission of the words, “ shipping laws and abuses connected with the same,” with a view to the insertion in their place of the words, “ laws relating to the employment of scamon.”
- Question proposed,—That the words proposed to be omitted stand part of the Question.
- Debate ensued.
- Question,—That the words proposed to be omitted stand part of the Question,—put and passed.
- Original Question put and passed.
-

VOTES No. 57. TUESDAY, 5 JUNE, 1894.

11. OPERATION OF THE SHIPPING LAWS :—Mr. Kelly, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before the Select Committee, for whose consideration and report this subject was referred on 23rd January, 1894, together with Appendix,—and moved, That the Document be printed.
- Debate ensued.
- Question put and passed.

OPERATION OF THE SHIPPING LAWS.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 23rd January, 1894, "*with power to send for persons and papers, to inquire into and report upon the operation of the Shipping Laws and abuses connected with the same,*" beg to report to your Honorable House.

Your Committee having examined the witnesses named in the List* ^{*See List, p. 10.} and carefully considered the evidence taken before the Committee, find as follows:—

1. That, taking into consideration the possible early prorogation of Parliament, your Committee desire to present their report on the inquiry so far as it has been completed, such inquiry being chiefly confined to the mode of shipping seamen, the undermanning of coastal and intercolonial steamships, the incompetence of crews shipped during labour disputes, and the indiscriminate issue of permits by the Shipping Master during labour troubles; also, the evasion of the load-line regulation by colliers.

- (1.) That the evidence discloses that the mode of shipping and discharging seamen on board of coastal and intercolonial vessels is very unsatisfactory, and admits of many abuses and wrongs being done to seamen, also the engaging of incompetent crews, thereby endangering the lives of not only those on board their ship, but the lives of others, through risk of collision.
- (2.) That Mr. Samuel Smith, Secretary of the Federated Seamen's Union, suggests that all crews should be shipped and discharged at the Government Shipping Office. This would, in his opinion, be an effectual means of preventing many misunderstandings that often happen under the present system, by the ship's articles being read and properly interpreted to seamen before being called on to affix their signatures.
- (3.) That the evidence also discloses that at present there does not exist any law providing a schedule for the efficient manning of vessels registered in New South Wales.
- (4.) That three witnesses, viz., Captain Hixson, President of the Marine Board, Captain Edie, Government Shipping Master, and Mr. Samuel Smith, Secretary of the Federated Seamen's Union, recommended, that to meet with the above requirement, the schedule lately adopted by the Board of Trade in Great Britain should be embodied in our Act.
- (5.) That there is also evidence to prove that, during maritime disputes, incompetent crews were shipped on board our coastal and intercolonial passenger steamships.
- (6.) That one of the witnesses examined, Captain Hixson, President of the Marine Board, expressed the opinion that all men, before claiming to be able seamen, should pass some examination, so as to show they were proficient and competent to perform their duties, as is the case in the Royal Navy; and he could not conceive of men who had never been to sea before in their lives going on board ships and pretending to undertake the duties of able seamen.

(7.)

- (7.) That evidence has also been produced before your Committee to show that permits or licenses to ship had been given by the Shipping Master during the recent maritime trouble to persons who were not seamen, and who had not any knowledge of an able seaman's duties, to ship under the title of deck hand, and that such men formed part of the crews of vessels engaged on our passenger, coasting, and intercolonial steamships.
- (8.) That Captain Edie, Government Shipping Master, in his evidence stated that he had no power to refuse a license on the ground that a man is not a competent seaman, and also that the section authorising the Shipping Master to grant licenses to any persons other than a seaman is a provision peculiar to our Act; and, further, is of opinion that a Seaman's Rating Bill, similar to that now in force in Great Britain, should be passed, which would have the effect of preventing men being rated as A.B.'s when they are not competent A.B.'s, as a sailor ought to know his business.
- (9.) That another witness, Mr. W. Cruickshank, Engineer-Surveyor to the Marine Board, stated that in his opinion those men shipped to perform firemen's duties in the stokehole should have some experience.
- (10.) That evidence was also disclosed showing that evasion of the load-line regulations was practised principally by steam colliers trading to the port of Sydney, and arriving during the night, when detection was avoided by reason of no Marine Surveyor being on duty at the time of arrival.
- (11.) That two witnesses, Captain Hixson and Mr. Smith, gave evidence, clearly showing that such practices were of frequent occurrence, Captain Hixson stating that the Marine Board had several times fined Masters for overloading, and that the recklessness with which the Masters of these vessels will sometimes, if they get the chance, load up, is remarkable, and in some cases have gone the length of shifting the load-line mark up after having been surveyed by the Marine Board Surveyor.
- (12.) That, according to the evidence, the present Act, intituled the Consolidated Merchant Seamen Act, for all vessels registered in this Colony, is defective, not being sufficiently stringent in its provisions to prevent glaring abuses being done to the detriment of the seafaring community, and the endangering of life and property.

2. Your Committee recommend that an amended Shipping Act should be, at the earliest period possible, brought forward by the Government, containing the following provisions, viz. :—

- (1.) Compelling all steamships to carry certificates of seaworthiness and efficiency, and to be surveyed half-yearly.
- (2.) All load-lines to be cut into the ship's side.
- (3.) Tampering with load-lines after survey to be a penal offence.
- (4.) The abolishing of shipping and discharging seamen on board intercolonial trading vessels.
- (5.) Shipping and discharging of seamen on board coastal vessels to be permitted only between the issue of articles and prior to expiry.
- (6.) A schedule to provide for the efficient manning of all vessels within the jurisdiction of the Colony, similar to that adopted by the Board of Trade of Great Britain.
- (7.) The rating of seamen, to insure their being proficient before being allowed to ship as A.B.'s or firemen.

A. J. KELLY,
Chairman.

No. 2 Committee Room,
Sydney, 5th June, 1894.

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 30 JANUARY, 1894.

MEMBERS PRESENT:—

Mr. Edden, | Mr. J. D. FitzGerald,
Mr. Kelly.

Mr. Kelly called to the Chair.

Entry from Votes and Proceedings appointing the Committee, read by the Clerk.
Committee deliberated.

Ordered,—That the Shipping Master be summoned to give evidence next meeting.

[Adjourned till Thursday next, at *Half-past Two* o'clock.]

THURSDAY, 1 FEBRUARY, 1894.

MEMBERS PRESENT:—

Mr. Kelly in the Chair.
Mr. G. D. Clark, | Mr. Edden,
Mr. J. D. FitzGerald, | Mr. Garrard,
Mr. Molesworth.

James Edie (*Shipping Master*) called in, sworn, and examined.

Witness withdrew.

Committee deliberated.

[Adjourned till Tuesday next, at *Half-past Two* o'clock.]

TUESDAY, 6 FEBRUARY, 1894.

MEMBERS PRESENT:—

Mr. Kelly in the Chair.
Mr. G. D. Clark, | Mr. Davis,
Mr. Edden, | Mr. J. D. FitzGerald,
Mr. Wise.

James Edie called in, and further examined.

Witness produced,—Copy of Articles of Agreement under Schedule 4 of the Seamen's Laws Consolidation Act; form of Articles of Agreement under "Merchant Shipping Act"; also fore-castle copy of foregoing agreements; also copy of account of change of crew of intercolonial or foreign trade ships; and handed in copy of letter written by Captain Edie, Shipping Master to the Board of Trade, with reference to the withholding of a vessels clearance on account of her not having full complement of crew. [Appendix A1.] Opinion of Board of Trade with reference to the above. [Appendix A2.] Letter from Secretary of Seamen's Union to the Shipping Master, respecting men who had sailed in the "Phoebe" without signing articles. [Appendix A3.] Opinion of Crown Law officers as to proper person to initiate prosecutions. [Appendix A4.] Form of license to ship. [Appendix A5.] Form of mutual release. [Appendix A6.] Form of advance note. [Appendix A7.] Form of certificate previous to clearing outwards in accordance with "Navigation Law Amendment Act, 1881." [Appendix A8.] Certificate previous to clearing outwards in accordance with Customs Regulations, Sydney. [Appendix A9.] Forms of permits of the Colonies of Queensland. [Appendix A10.] South Australia. [Appendix A11.] Victoria. [Appendix A12.] Form of permit used by United States Consul in Sydney. [Appendix A13.] Application by Burns, Philp, & Co., to ship certain men on board s.s. "Hesketh." [Appendix A14, 15, 16, 17.]

Witness withdrew.

[Adjourned till To-morrow, at *Two* o'clock.]

WEDNESDAY, 7 FEBRUARY, 1894.

MEMBER PRESENT:—

Mr. Kelly.

In the absence of a quorum the meeting called for this day lapsed.

THURSDAY, 8 FEBRUARY, 1894.

MEMBERS PRESENT:—

Mr. Kelly in the Chair.
Mr. G. D. Clark, | Mr. Davis,
Mr. Wise.

James Edie called in and further examined.

Witness withdrew.

[Adjourned till Tuesday next, at *Half-past Two* o'clock.]

TUESDAY,

TUESDAY, 13 FEBRUARY, 1894.

MEMBERS PRESENT:—

Mr. Kelly in the Chair.
Mr. G. D. Clark, | Mr. Davis,
Mr. Edden.

William Currie (*Manager of Steamship-owners' Association Free Maritime Labour Bureau*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till Thursday next, at *Half-past Two* o'clock.]

THURSDAY, 15 FEBRUARY, 1894.

MEMBERS PRESENT:—

Mr. Kelly in the Chair.
M. G. D. Clark, | Mr. Davis,
Mr. Edden, | Mr. J. D. FitzGerald,
Mr. Wise.

William Currie called in and further examined.

Witness withdrew.

Ordered,—That Captain Hixson, President of the Marine Board, be summoned to give evidence next meeting.

[Adjourned till Tuesday next, at *Half-past Two* o'clock.]

TUESDAY, 20 FEBRUARY, 1894.

MEMBERS PRESENT:—

Mr. Edden, | Mr. Kelly.
In the absence of a quorum, the meeting called for this day lapsed.

THURSDAY, 22 FEBRUARY, 1894.

MEMBERS PRESENT:—

Mr. Kelly in the Chair.
Mr. Davis, | Mr. Edden,
Mr. J. D. FitzGerald.

Francis Hixson (*President of the Marine Board*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till Tuesday next, at *Half-past Two* o'clock.]

TUESDAY, 27 FEBRUARY, 1894.

MEMBERS PRESENT:—

Mr. Kelly in the Chair.
Mr. G. D. Clark, | Mr. Davis,
Mr. Edden.

Francis Hixson, called in and further examined.

Witness handed in Return of Vessels detained provisionally or finally from going to sea, by reason of unseaworthiness during the last three years. [*Appendix B1.*] Letter from Mr. Cruickshank, Government Engineer-Surveyor, to Captain Lindeman, respecting refusal of passenger certificates to steamers "Kembla" and "Lawrence." [*Appendix B2.*] Schedule of life-saving apparatus. [*Appendix B3.*]

Witness withdrew.

[Adjourned till Tuesday next at *Two* o'clock.]

TUESDAY, 6 MARCH, 1894.

MEMBERS PRESENT:—

Mr. Davis, | Mr. Kelly.
In the absence of a quorum, the meeting called for this day lapsed.

TUESDAY, 13 MARCH, 1894.

MEMBERS PRESENT:—

Mr. Kelly in the Chair.
Mr. G. D. Clark, | Mr. Davis,
Mr. Edden.

William Cruickshank (*Engineer-Surveyor, Marine Board*) called in, sworn, and examined.

Witness withdrew.

Ordered,—That Mr. Sam. Smith (*Secretary of the Seamen's Union*) be summoned to give evidence next meeting.

[Adjourned till Tuesday next, at *Half-past Two* o'clock.]

TUESDAY,

TUESDAY, 20 MARCH, 1894.

MEMBERS PRESENT:—
Mr. G. D. Clark, | Mr. Davis,
Mr. Molesworth.

In the absence of the Chairman, Mr. Molesworth called to the Chair *pro tem*.
And the witness summoned for to-day not being in attendance,—
Committee deliberated.

[Reassembling of the Committee to be arranged by the Chairman.]

[Adjourned.]

THURSDAY, 22 MARCH, 1894.

[The meeting called for to-day postponed by order of the Chairman.]

THURSDAY, 29 MARCH, 1894.

MEMBERS PRESENT:—
Mr. Kelly in the Chair.
Mr. Davis, | Mr. Edden,
Mr. J. D. FitzGerald.

Samuel Smith (*Secretary of the Seamen's Union*) called in, sworn, and examined.
Witness handed in copy of letter written to the *Evening News* with reference to the protection of
seamen from the malpractices of boarding-house keepers [*Appendix C*].
Witness withdrew.

[Adjourned till Tuesday next at half-past *Two* o'clock.]

TUESDAY, 3 APRIL, 1894.

MEMBERS PRESENT:—
Mr. Kelly in the Chair.
Mr. G. D. Clark, | Mr. Edden,
Mr. J. D. FitzGerald.

Samuel Smith called in and further examined.
Witness handed in copy of letter written by himself to various Steamship Companies with reference
to boycotting, and replies thereto [*Appendix D*].
Witness withdrew.

[Adjourned till Thursday next at half-past *Two* o'clock.]

THURSDAY, 5 APRIL, 1894.

MEMBERS PRESENT:—
Mr. Kelly in the Chair.
Mr. G. D. Clark, | Mr. Davis,
Mr. J. D. FitzGerald, | Mr. Molesworth.

Samuel Smith called in and further examined.
Witness handed in report of the decision in the prosecution of Captain Dyson, of the Maritime
Labour Bureau, Melbourne, for illegally supplying seamen [*Appendix E1*]; copy of the opinion of the
Crown Law Officers in England as to the legality of the action of the Shipping Federation [*Appendix E2*];
copy of letter written by Mr. Sam. Smith to the Colonial Treasurer, directing his attention to the breaking
of the Shipping Laws [*Appendix E3*]; copy of letter written by Mr. Sam. Smith to the Colonial Treasurer,
enclosing report of the prosecution of Captain Seymour of the s.s. "Victorian" [*Appendix E4*]; copy
of a letter from the secretary of the British Seamen's Union to the President of the Board of Trade
respecting "Crimping" [*Appendix E5*]; copy of "License to Ship," issued by the Shipping Master of
New South Wales to Otto Herman [*Appendix E6*]; report of the Shipping Master of New South Wales
with reference to the issue of "Licenses to Ship" [*Appendix E7*]; copy of a report of the prosecution of a
registry office keeper in Melbourne for alleged infringement of the Merchant Shipping Act [*Appendix*
E8]; report of a deputation which waited on the Colonial Treasurer with reference to the issue of
"Permits" [*Appendix E9*]; Schedule of Amendments suggested in the "Seamen's Laws Consolidation
Act" [*Appendix E10*].

Witness withdrew.

[Adjourned till Thursday next at half-past *Two* o'clock.]

THURSDAY, 12 APRIL, 1894.

MEMBERS PRESENT:—
Mr. G. D. Clark, | Mr. Davis,
Mr. J. D. FitzGerald, | Mr. Molesworth.

In the absence of the Chairman, Mr. Molesworth called to the Chair *pro tem*.
Samuel Smith called in and further examined.
Witness handed in extract with reference to the overcarrying of passengers by s.s. "Corrinna,"
in consequence of the incompetence of crews [*Appendix F1*]; letter from a passenger who travelled by
s.s. "Elingamite," with reference to the incompetence of the crew [*Appendix F2*].
Witness withdrew.

Reassembling of the Committee to be arranged by the Chairman.

[Adjourned.]

THURSDAY,

THURSDAY, 19 APRIL, 1894.

The meeting called for this day postponed by order of the Chairman.

THURSDAY, 26 APRIL, 1894.

MEMBERS PRESENT:—

Mr. Kelly in the Chair.
Mr. Davis, | Mr. J. D. FitzGerald,
Mr. Molesworth.

Samuel Smith called in and further examined.

Witness handed in report of Mr. Justice William's summing up in the case of the prosecution of Captain Dyson, Manager of the Steamship Owners' Association Free Maritime Labour Bureau, in Melbourne. [*Appendix G.*]

Witness withdrew.

Thomas Robert Allt (*President of the Steamship Owners' Association*), called in, sworn, and examined.

Witness withdrew.

Arthur Benjamin Cockburn (*Secretary of the Steamship Owners' Association*), called in, sworn, and examined.

Witness withdrew.

[Adjourned till Thursday next, at half-past *Two* o'clock.]

THURSDAY, 3 MAY, 1894.

MEMBERS PRESENT:—

Mr. Kelly, | Mr. Molesworth.

[In the absence of a quorum, the meeting called for this day lapsed.]

TUESDAY, 8 MAY, 1894.

MEMBERS PRESENT:—

Mr. Davis, | Mr. Molesworth.

[In the absence of a Quorum, the meeting called for this day lapsed.]

WEDNESDAY, 9 MAY, 1894.

MEMBERS PRESENT:—

Mr. Kelly in the Chair.
Mr. G. D. Clark, | Mr. Davis.

Committee deliberated as to their Report.

Reassembling of the Committee to be arranged by the Chairman.

[Adjourned.]

TUESDAY, 29 MAY, 1894.

MEMBERS PRESENT:—

None.

[In the absence of a Quorum, the meeting called for this day lapsed.]

THURSDAY, 31 MAY, 1894.

MEMBER PRESENT:—

Mr. Kelly.

[In the absence of a Quorum, the meeting called for this day lapsed.]

TUESDAY, 5 JUNE, 1894.

MEMBERS PRESENT:—

Mr. Kelly in the Chair.
Mr. G. D. Clark, | Mr. Davis,
Mr. Edden, | Mr. J. D. FitzGerald,
Mr. Molesworth.

The Chairman submitted Draft Report, which was read 1^o as follows:—

DRAFT REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 23rd January, 1894, "*with power to send for persons and papers, to inquire into and report upon the operation of the Shipping Laws and abuses connected with the same,*" beg to report to your Honorable House.

Your Committee having examined the witnesses named in the List and carefully considered the evidence taken before the Committee, find as follows:—

1. That, taking into consideration the possible early prorogation of Parliament, your Committee desire to present their report on the inquiry so far as it has been completed, such inquiry being chiefly confined to the mode of shipping seamen, "the undermanning of coastal and intercolonial steamships,"
the

the incompetence of crews shipped during labour disputes, and the indiscriminate issue of permits by the Shipping Master during labour troubles; also, the evasion of the load-line regulation by colliers.

- (1.) That the evidence discloses that the mode of shipping and discharging seamen on board of coastal and intercolonial vessels is very unsatisfactory, and admits of many abuses and wrongs being done to seamen, also the engaging of incompetent crews, thereby endangering the lives of not only those on board their ship, but the lives of others, through risk of collision.
 - (2.) That two witnesses, viz., Captain Edie and Mr. Samuel Smith, suggest that all crews should be shipped and discharged at the Government Shipping Office. This would, in their opinion, be an effectual means of preventing many misunderstandings that often happen under the present system by the ship's articles being read and properly interpreted to seamen before being called on to affix their signatures.
 - (3.) That the evidence also discloses that at present there does not exist any law providing a schedule for the efficient manning of vessels registered in New South Wales.
 - (4.) That three witnesses, viz., Captain Hixson, President of the Marine Board, Captain Edie, Government Shipping Master, and Mr. Samuel Smith, Secretary of the Federated Seamen's Union, recommended that, to meet with the above requirement, the schedule lately adopted by the Board of Trade in Great Britain should be embodied in our Act.
 - (5.) That there is also abundance of evidence to prove that, during maritime disputes, incompetent crews were shipped on board our coastal and intercolonial passenger steamships.
 - (6.) That one of the witnesses examined, Captain Hixson, President of the Marine Board, expressed the opinion that all men, before claiming to be able seamen, should pass some examination, so as to show they were proficient and competent to perform their duties, as is the case in the Royal Navy; and he could not conceive of men who had never been to sea before in their lives going on board ships and pretending to undertake the duties of able seamen.
 - (7.) That evidence has also been produced before your Committee to show that permits or licenses to ship had been given by the Shipping Master during the recent maritime trouble to persons that were not seamen, and who had not any knowledge of an able seaman's duties, to ship under the title of deck hand, and that such men formed part of the crews of vessels engaged on our passenger, coasting, and intercolonial steamships.
 - (8.) That the witness examined, being Captain Edie, Government Shipping Master, who stated that he had no power to refuse a license on the ground that a man is not a competent seaman, and states also that the section authorising the Shipping Master to grant licenses to any persons other than a seaman is a provision peculiar to our Act; and, further, is of opinion that a Seaman's Rating Bill, similar to that now in force in Great Britain, should be passed, which would have the effect of preventing men being rated as A.B.'s when they are not competent A.B.'s, as a sailor ought to know his business.
 - (9.) That another witness, Mr. W. Cruickshank, Engineer-Surveyor to the Marine Board, stated that in his opinion those men shipped to perform firemen's duties in the stokehole should have some experience.
 - (10.) That evidence was also disclosed showing that a systematic evasion of the load-line regulations was practised principally by steam colliers trading to the port of Sydney, and arriving during the night, when detection was avoided by reason of no Marine Surveyor being on duty at the time of arrival.
 - (11.) That two witnesses, Captain Hixson and Mr. Smith, gave evidence, clearly showing that such practices were of frequent occurrence, Captain Hixson stating that the Marine Board had several times fined Masters for overloading, and that the recklessness with which the Masters' of these vessels will sometimes, if they get the chance, load up, is remarkable, and in some cases have gone the length of shifting the load-line mark up after having been surveyed by the Marine Board Surveyor.
 - (12.) That, according to the evidence, the present Act, intituled the Consolidated Merchant Seamen Act, for all vessels registered in this Colony, is defective, not being sufficiently stringent in its provisions to prevent glaring abuses being done to the detriment of the seafaring community, and the endangering of life and property.
2. Your Committee recommend that an amended Shipping Act should be, at the earliest period possible, brought forward by the Government, containing the following provisions, viz. :—
- (1.) Compelling all steamships to carry certificates of seaworthiness and efficiency, and to be surveyed half-yearly.
 - (2.) All load-lines to be cut into the ship's side.
 - (3.) Tampering with load-lines after survey to be a penal offence.
 - (4.) The abolishing of shipping and discharging seamen on board intercolonial trading vessels.
 - (5.) Shipping and discharging of seamen on board coastal vessels to be permitted only between the issue of articles and prior to expiry.
 - (6.) A schedule to provide for the efficient manning of all vessels within the jurisdiction of the Colony, similar to that adopted by the Board of Trade of Great Britain.
 - (7.) The rating of seamen, to insure their being proficient before being allowed to ship as A.B.'s or firemen.

Paragraph 1 read and considered.

Amendment moved (*Mr. Molesworth*) to omit word "indiscriminate" in line 4.

Question put, That the word proposed to be omitted stand part of the paragraph.

Committee divided.

Ayes.

Mr. G. D. Clark,
Mr. Edden,
Mr. J. D. FitzGerald.

No.

Mr. Molesworth.

And so it was resolved in the affirmative.

Paragraph, as read, agreed to.

Sub-paragraph 1 read and considered.

Question put,—That paragraph 1 as read stand part of the Report.

Committee divided.

Ayes.	No.
Mr. G. D. Clark, Mr. Edden, Mr. J. D. FitzGerald.	Mr. Molesworth.

And so it was resolved in the affirmative.
Sub-paragraph 2 read and considered.

Amendment moved (*Mr. Molesworth*) to omit the words, "two witnesses, viz., Captain Edie and"
Question put,—That the words proposed to be omitted stand part of the paragraph.
Committee divided.

Aye.	Noes.
Mr. J. D. FitzGerald.	Mr. G. D. Clark. Mr. Edden, Mr. Molesworth.

And so it passed in the negative.
And certain other amendments having been made,—paragraph as amended agreed to.

Sub-paragraphs 3 and 4 read and agreed to.
Sub-paragraph 5 read, amended, and agreed to.
Sub-paragraph 6 read and agreed to.
Sub-paragraphs 7 and 8 read, amended, and agreed to.
Sub-paragraph 9 read and agreed to.
Sub-paragraph 10 read, amended, and agreed to.
Sub-paragraph 11 read and agreed to.
Sub-paragraph 12 read and considered.

Amendment moved (*Mr. Molesworth*) to omit the word "glaring" in line 3.
Question put,—That the word proposed to be omitted stand part of the paragraph.
Committee divided.

Ayes.	No.
Mr. G. D. Clark, Mr. Davis, Mr. J. D. FitzGerald.	Mr. Molesworth.

And so it was resolved in the affirmative.
Sub-paragraph, as read, agreed to.
Paragraph 2 read and considered.

Amendment moved (*Mr. Molesworth*) to add after word "vessels" in line 7 the words "except under the supervision of the Shipping Master or his Deputy."
Question put,—That the words proposed to be added be so added.
Committee divided.

Aye.	Noes.
Mr. Molesworth.	Mr. Davis, Mr. J. D. FitzGerald.

And so it passed in the negative.
Same paragraph.

Amendment moved (*Mr. Molesworth*) to omit the words "only between the issue of articles and prior to expiry," lines 8 and 9.
Question put,—That the words proposed to be omitted stand part of the paragraph.
Committee divided.

Ayes.	No.
Mr. Davis, Mr. J. D. FitzGerald.	Mr. Molesworth.

And so it was resolved in the affirmative.
Paragraph, as read, agreed to.

Motion made (*Mr. Davis*), and Question put,—That the Report as amended be the Report of the Committee.
Committee divided.

Ayes.	No.
Mr. Davis, Mr. J. D. FitzGerald.	Mr. Molesworth.

And so it was resolved in the affirmative.
Motion made (*Mr. Davis*), and Question put,—That the Chairman report to the House.
Committee divided.

Ayes.	No.
Mr. Davis, Mr. J. D. FitzGerald.	Mr. Molesworth.

And so it was resolved in the affirmative.

1894.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

OPERATION OF THE SHIPPING LAWS.

THURSDAY, 1 FEBRUARY, 1894.

Present:—

MR. MOLESWORTH,		MR. DAVIS,
MR. G. D. CLARK,		MR. KELLY,
MR. J. D. FITZGERALD,		MR. EDDEN,
	MR. GARRARD.	

A. J. KELLY, ESQ., IN THE CHAIR.

Mr. James Edie called in, sworn, and examined:—

Mr. J. Edie.

1 Feb., 1894.

1. You are the Government Shipping Master? Yes.
2. How long have you occupied that position? Since November, 1890.
3. I suppose you have had many opportunities of forming an opinion as to the character of the scamen of the port? Yes.
4. You remember the late maritime strike? Yes.
5. How often were you on board vessels during that strike signing crews? I could not say right off.
6. You cannot say how often? No.
7. But it is a fact that you were on board vessels for that purpose? Yes.
8. Did you supply men with permits on board the vessels? Yes; in several instances.
9. Is it a fact that at the present time scamen have great difficulty to obtain permits? No.
10. They have not? No. If they can give any straightforward answer as to their last ship, or as to what they have been doing, they have no difficulty whatever. When a man comes in and asks for a permit we naturally ask him what his last ship was.
11. But it is necessary in order that a man may obtain a permit that he should have a colonial discharge? No.
12. That is not necessary? No.
13. Did you arrange any special facilities for the men wishing to obtain permits during the late strike? No; certainly not.
14. I suppose you are aware that there is such a thing as the Maritime Labour Bureau in Clarence-street, conducted by Mr. Currie? I do not know where it is situated, except from what the men have told me. I have never seen the place to my knowledge, nor have I been near it. I know Mr. Currie is there from what the men have told me. I have had nothing to do with Mr. Currie since the "Helen Nicoll" dispute.
15. You know that there is such a man? Yes, by repute.
16. As a matter of fact, have you not received a number of letters from him, asking you to give the men permits during the late maritime difficulty. In one instance, as far as I can recollect, a man brought an order signed by Currie to grant him a permit, but I declined to accept it. I told the man that I had nothing whatever to do with him, and that I did not recognise him as a shipowner or master.
17. No other correspondence passed between yourself and Mr. Currie with respect to men seeking employment during the difficulty to which I refer? I think I may safely say that there was no other correspondence.

- Mr. J. Edie. 18. Could you produce the order of which you speak? I do not think so. I did not take it. I did not recognise Mr. Currie in any way whatever, and I told the man that I had nothing to do with him. That is as nearly as I can recollect.
19. Was the man sent to you by Mr. Currie a competent seaman? I did not ask the man what he was; I did not choose to recognise Mr. Currie's authority. It is some time ago since the order was brought to me, and one cannot always carry these things in one's memory, but as far as I can remember the wording of it was, "Please give bearer a license," and it was signed by Currie.
20. *Mr. Molesworth.*] You simply declined to recognise Mr. Currie as a shipowner or master? Yes.
21. *Chairman.*] Are you aware that some of the men recommended by Mr. Currie had never been to sea before in their lives. Do you know of instances where Currie put on board ships without your knowledge, men who were not competent seamen? I cannot say anything as to what Currie may have done, but he recommended no case to me beyond the case to which I have referred.
22. *Mr. G. D. Clark.*] Was it possible for him to ship men without your knowledge? Ships registered in New South Wales have the power to engage their crews on board, providing they have a license or permit as it is called. The master has to bring to the office a discharge or license in the case of each man whose name appears upon the articles of agreement.
23. *Mr. Molesworth.*] There is a special privilege granted to New South Wales registered ships, by which owners are entitled to ship men on board the vessels, provided they have either a discharge or are recognised in some form by your office. On the production of the necessary document the men are entitled to be shipped on the articles, but their discharges have to be registered at the office subsequently? Yes.
24. *Chairman.*] Do you think it is right to grant permits to men who have never been to sea before? That depends upon what the men are engaged for.
25. But no man who has not been to sea before can be considered competent to go on board a vessel for duty? All men have to go to sea at some time or other to make a beginning.
26. But we all know that a man's first trip to sea would not make him a competent seaman? If you look at the Act you will see that the word "seaman" means any person employed or engaged on board a ship excepting a master, pilot, or apprentice. A man may be a cook's mate and yet be a "seaman," although you would not call him a sailor.
27. I suppose you would not think a man a qualified seaman when going on board a ship for the first time? As I have said it depends in what capacity he is to be employed.
28. But you would not, from your experience as the captain of a vessel, call such a man a competent seaman? He is not a sailor.
29. Have you ever marked on any of the permits which have been granted by you the words "deck hand?" Yes.
30. Do you know that that is in contravention of the Act, and that it contains no such title as "deck hand?" There are deck hands on many ships.
31. You have referred to the Act;—do you not know you are liable to punishment for marking a man's permit "deck hand" when no such title is recognised by the consolidated shipping law of New South Wales? I dare say it would have answered the purpose to mark the permits "first ship." The men were not sailors, and I did not look upon them as such.
32. No such term as "deck hand" is used in the Act? Not that I am aware of.
33. Would it not be better to sign all the men at the Shipping Office, instead of you or your deputy going round the harbour to sign them? No doubt it would be better to have the thing done there.
34. You think it will be better for all concerned in shipping that the men should sign in the Shipping Office, instead of you or your deputy going round the harbour signing the men on the vessels? That is not for me to say. I do not think I ought to be asked to express an opinion on that point.
35. But would it not be more convenient for you and the others if the men were shipped at the office, instead of your having to leave it? Perhaps I ought to mention that this system of signing on board is one which exists in the old country as well as in this Colony.
36. But do you not think that the course I have suggested would be better? As I have said before I would rather not express an opinion on that point.
37. *Mr. Molesworth.*] Do you think that it would be better in the interests of the New South Wales owned vessels for the men to be shipped at the Shipping Office? It is not done anywhere else.
38. *Chairman.*] All the deep-water ships in the old country sign at the Shipping Office, do they not? Not now, but it used to be so. At the present time if so many hours' notice is given at the Shipping Office an officer will go on board a vessel at a specified time to engage a crew.
39. I suppose you prefer not to give a definite answer as to the shipping of crews at the office? As far as the locally-owned vessels are concerned, it would be a hardship to them to force them to ship there, because, in Great Britain, and the other colonies, what are known as the home trade vessels, make all their arrangements on board.
40. You think it would be a hard thing upon the intercolonial steamers, but what about other vessels which have to sign on? The deep-sea vessels have to do it anywhere, and I do not know that it would be a hardship for them to have to do it here.
41. You do not favour intercolonial crews being signed on at the Shipping Office? I do not think I said that, but as a matter of fact intercolonial ships going to Fiji, or to Noumea, and registered in the Colony, engage their crews on board.
42. Your contention is that all ships registered within the Colony should have their crews signed on board? I did not say that.
43. Would you prefer them to sign at the Shipping Office? Well, the privilege they now enjoy is one they have had for all time.
44. But which would be the more convenient course, so far as the purposes of the Shipping Office are concerned? I would rather the shipping were done at the office, so far as I am concerned.
45. *Mr. Molesworth.*] But does the Shipping Office exist for your convenience, or for the convenience of the public? It certainly does not exist for my convenience. I presume it exists for the convenience of the public.
46. *Chairman.*] Have you any knowledge of several coasting captains making runs to the southern jetties and to Newcastle without signing crews on? I know of one instance in particular—the "Phœbe."

47. How did that arise? The captain's explanation to me was that he was out of the ship, and that the chief officer took the matter in hand. There was some dispute, and that is how the matter leaked out. I wanted the men to come to me and lay an information, but they declined to do so.

Mr. J. Edie,
1 Feb., 1894.

48. I suppose you are aware that a practice of that sort is punishable under the Seamen's Laws Consolidation Act? Yes.

49. Did you ever take any steps in the matter? I got Mr. Smith, the Secretary to the Seamen's Union, to endeavour to get the crew of the vessel so that we might take proceedings, and he called and saw me about it. He said he could not get the men, and, if I recollect rightly, he afterwards wrote to the effect that the men would not come. He said that they decidedly objected to come, because, as they had often told me when I wanted them, and when I had asked them to lay an information, on account of their having been taken to sea without being on the articles, they would be marked men.

50. But it is in your power, independently of the men, to lay an information, and to see that the law is properly administered? Yes; but I will explain the difficulty which comes in. Without the men I can do nothing. Suppose some men go to sea without signing the articles, I appear in court, and in the absence of the men can prove nothing. I have to obtain the men in order to prove that they were on the ship.

51. You consider that your hands are tied unless you get the men? Of course.

52. It is customary for coasting captains, I believe, to deduct fees from the men, and not pay them into the Shipping Office;—have any cases of that sort come under your notice? Not that I am aware of. There are cases in which seamen have called upon me to complain of masters wishing to deduct more than the actual fee.

53. Do you not know that the practice of which I speak obtains? I do not.

54. Still it is customary for vessels going to the southern and northern jetties to take crews on board without your knowledge? It is not done that I know of. Some of the men have told me that things of that sort have happened, but I have had great difficulty in getting hold of the men.

55. Is it not possible for you to take any steps to prosecute the captains under such circumstances? I have not known of any case in which it would have been possible for me to prosecute, and for the reasons I have given you. Of course we can always stop the captain from getting his clearance, and he cannot go to sea without a clearance from our office.

56. You say you have known instances in which captains have charged the men an amount in excess of the proper fee? Yes, I have known cases in which they have charged them too much for their discharges.

57. Have you not heard of any instances in which they have levied fees, and have not paid them into the Shipping Office? No.

58. In any case you admit that there are instances in which ships have gone to the southern and northern jetties, shipping crews without your knowledge? I cannot admit that it is so, because I know nothing personally of the facts. The only case which ever came under my notice was that of the "Phœbe." That is the only case of which I can speak positively. If I recollect rightly an information was made against the captain of the "Kurrajong;" but I am not very sure about that case, and I had better not say that which I am not positive of.

59. Do you think a vessel is properly equipped if it has not a competent crew on board? No.

60. Is it not a part of your duty, and also the duty of your deputy, to see that no ship leaves this port unless she has a competent crew? No.

61. Then any ship can leave the port with an incompetent crew without your knowledge? I think that is a matter which concerns the Marine Board. It does not come upon us.

62. It is your duty to see that there are crews on each vessel? We have no power to stop the vessel from leaving the port although it may not have the specified number of sailors on board.

63. Is that the case under the local Act? We administer both Acts.

64. And it is possible for the ship to go out of port with an incompetent crew? I do not think I said that.

65. Has no instance come under your notice? In the first place I do not go near the ships to see whether what you say is correct or not—it is a matter which does not belong to our department.

66. According to your contention you are helpless in some of these matters? In the first place, the local Act does not specify how many men are to be sailors. It gives a description of the crew and that is all. Then again there is no provision under which we could stop them from going to sea.

67. Is it not an impossibility for an intercolonial steamer to leave the port without the articles first coming before you to be signed? Yes; but I am not in a position to say whether the vessel has a competent crew or not.

68. At the same time you know that they have a sufficient number of men on board? There is no law which says how many men there shall be on board.

69. But the law provides what the number of the crew shall be, does it not? If it is shown that there are so many men on the articles we cannot object to the ship going.

70. Is it not a fact that all the crew must come before you before the vessel leaves port? Yes, before me or my deputy in the case of engagements in vessels registered beyond the Colony. And unless they are provided with licenses or discharges, we do not give the ship its articles.

71. And if the articles are not granted what is the result? The vessel is detained.

72. Under what circumstances do you detain a vessel? When they do not give us the licenses or discharges of the men.

73. I am speaking of cases where the men have already signed on. If they have signed on the ship gets its articles? Yes; but the master says how many men he will carry.

74. But have you not to see that the proper number of men is upon the articles before you sign a vessel off; what I want to know is whether it is possible for any ship in New South Wales to go to sea with an insufficient number in her crew without your knowledge? It would be possible for the ship to go to sea in that condition. We have no means of knowing what takes place after the articles go out of our office.

75. Suppose I come to you as a captain of a vessel, and want you to sign my ship off; I present my articles with the number of my crew; you look over the articles, and if there are no debts against the vessel you will sign me off. What I want to know is whether it would be possible for me to get out of the harbour if the vessel were a New South Wales registered vessel, without your signing the articles and knowing the number of men on board the ship? Yes.

Mr. J. Edie. 76. *Mr. G. D. Clark.*] I should like to know, in the first place, what test you usually apply to a man who is asking for a permit. I should like to know what steps you take to ascertain if he is a qualified seaman or not? We do not give a license specifying whether the man is an engineer, a sailor, a fireman, or anything else. It is simply a license to engage.

1 Feb., 1894.

77. It is possible for an ordinary labourer to obtain a permit to ship as a deck hand? We usually ask them questions, and we endeavour to stop the practice as far as lies in our power. We are not supposed to know what a man is engaged for. If any person were to come to me and ask me to give a license to him as an able seaman, I should endeavour to satisfy myself that he was an able seaman, or if he desired to ship as a fireman I should endeavour to ascertain that he was a fireman.

78. But you admit that men have been shipped as deck-hands? Yes.

79. Do you not think it is dangerous to life and property that men who have never been to sea before in their lives, and who have had no experience before in such matters, should be allowed to ship as deck hands, seeing that they may be sent to the wheel, or put on the look-out? They would never send a deck hand to the wheel—he would be of no use there.

80. My experience some years ago led me to believe that "deck hand" was the usual term for sailors on board the intercolonial steamers? The term is used to distinguish between the stoke-hole and the deck. But a number of large ships leaving this Colony for London, such as the "Macquarie," carry a number of deck hands, men who are not supposed to go aloft, but who stay below, and who may be considered rouseabouts. That is what a deck hand really is.

81. But any man shipping on a coasting steamer as a deck hand would be called upon to do ordinary seaman's work on board? No, not sailors' work. He would be looked upon as knowing nothing about the ship. It would amount to the same thing if we put "first ship" on the license. For instance, some time ago several men came to me and wanted to ship. I put several questions to them. I said, "But you are not sailors at all." They admitted the fact. They said they wanted to be taken as deck hands or rouseabouts. If I recollect rightly the only case where such a thing was done was that of a southern collier. The owners said they wanted men to trim the coal, or some such explanation was given.

82. Have you any means of ascertaining definitely whether a ship is carrying its full complement of men or not. For instance, a vessel is supposed to carry twenty men in the crew; is there any possibility of the captain signing articles and going away with fifteen or say twelve men? The matter is one upon which I have had my doubts. Supposing the articles said there were six or ten sailors, and so many hands all told, the captain might make an arrangement with his men to go to sea a hand short, or perhaps two hands short, dividing the money among those who went. That is often done. There is no law which would allow me to prevent a captain under such circumstances from going to sea. There was some doubt about the matter, however, in my mind, and I wrote to the Board of Trade for their opinion. I have their opinion and can produce it. It was, that I had no power to withhold the clearance of a ship under such circumstances. The reason for my obtaining the opinion was this: A vessel going from here to Newcastle would want its articles. The captain would come to me and say, "We want our articles." I would say, "You have discharged so many men and you have not shipped men in their places. You have not your complement." He would reply, "That is nothing to do with you. I am going to tow round, and I do not require the men." But there is such a thing as a gale even when a vessel has the tow-rope out, and some serious shipwrecks have taken place when vessels have been in tow. Captains in such circumstances have defied us, and I wrote to the Board of Trade on the subject. Of course a seaman or sailor could object to go to sea on an under-manned ship, and would incur no penalty by so doing, because the other party to the contract would not be keeping faith with him in having an insufficient number of men on board. What I want to make quite clear to you is, that we cannot interfere—we cannot stop the vessel from going to sea.

83. One of the objects of the Committee is to obtain legislation on this question, and I would ask your opinion as to whether it is right that any vessel should be allowed to leave the port with only one-half of her proper number of ordinary seamen on board; because if a vessel can leave port with only one or two hands short, there is no reason why she should not reduce the number to one-half of the proper complement and still leave the port? It is purely a matter of agreement between the master and his men. Of course, as Shipping Master, I should not like to see such a thing as you refer to take place.

84. You do not think it is right or safe in the public interest that a vessel should be allowed to leave port with less than the crew ordinarily used for the safe working of the vessel? You see where the difficulty comes in. There is no law specifying how many men shall be carried on a ship. The old tonnage law is abolished. If my memory serves me rightly it was repealed at the same time as the law relating to apprentices. The only case in which a certain number must be carried is that of an immigrant ship. In that case the surveyor is supposed to satisfy himself that the ship is properly equipped, and the crew are as much concerned in the equipment as are the boats.

85. It seems to me, from your general admissions, that it is possible under the existing law for a man to obtain a permit to ship as a deck hand, and to perform the duties of an ordinary seaman without his being a competent seaman; and, in the second place, that it is possible for a ship to leave the harbour without her full complement of crew? Of course a man may obtain a license without it being specified, how he is to be employed on board the ship. It does not say that a man is to be a fireman or a sailor, for instance. If you look at the 33rd section of the Seamen's Laws Consolidation Act you will see that that is so.

86. The point, which seems to me to be important in view of future legislation is, that under the existing law it is possible for a man to obtain a permit to ship; that is, to ship as a deck hand without his being a competent seaman, and that there is nothing to prevent such a man from being sent aloft to reef or take in sail? As I have said, a man can ship as anything.

87. *Mr. Molesworth.*] Will you kindly tell the Committee what Acts guide you in the discharge of your duties as Shipping Master? The Seamen's Laws Consolidation Act and the Merchant Shipping Act of 1854.

88. Are those the only two Acts under which you discharge your duties? There is also the Navigation Act of New South Wales, concerning engineers and officers' certificates.

89. Have you ever been called upon to discharge any duties which are not specially provided for by any of these Acts; in other words, have you been called upon to exercise discretionary power where the Act has not directed you? In the case of disputes with seamen.

90. But not with regard to the shipping or discharging of the men? No; that is provided for in both Acts. Mr. J. Edie.
1 Feb., 1894.
91. In speaking about the intercolonial trade and deep sea vessels some time since, you mentioned Fiji, as though the trade there were a deep sea trade;—do you recognise it as such? I am not sure whether Fiji comes within the Australasian Colonies or not.
92. But under the Customs Regulation Act Fiji is included in the intercolonial ports? Yes.
93. The privilege of shipping men on board vessels in the port is only enjoyed by vessels registered within the Colony? Just so.
94. Has there been any breach of that regulation at all? Not that I am aware of.
95. Under what arrangements then do you allow vessels to ship their crews on board when they are not registered within the Colony? When either I or the deputy-master are present.
96. By what authority? The authority of the Merchant Shipping Act.
97. But in the case of shipping crews on board, do you not insist upon the necessary discharges or permits being subsequently supplied to you? Yes; they have to be produced. We have to take the same course as when men are shipped from the office.
98. In other words, although the privilege of shipping on board is granted in certain instances, you insist, as in the shipping at the office, that the necessary discharges shall be produced? Yes.
99. Do you find the arrangement, permitting men to be shipped on board the vessels, a matter of general convenience to all concerned? It must be convenient to those vessels which have a limited time, that is, vessels which come into port and go out again almost immediately.
100. Do you consider that any risk of shipping unsuitable men or the doing of a wrong to seafaring men is run by such an arrangement? I cannot see where it comes in.
101. Do you find the privilege is abused in any way? I am not aware that it is.
102. Have you any complaints from the men in that direction? We have had complaints, but seldom from the men in the intercolonial steamers. It sometimes happens in the case of little vessels, where there are often squabbles. There may be disputes as to wages, or the master may wish to charge the whole of the Shipping Office expenses.
103. You do not find any complaint among the men generally with regard to this arrangement about shipping at the wharfs? No.
104. You think that the men, as a whole, are pretty well satisfied with the arrangement? As far as we know.
105. You told us just now that there was no means of your insisting upon a certain number of men being carried on any particular ship? No.
106. Is there any other body in existence which can determine whether a ship is properly manned or not? I should think the Marine Board could do so, but I do not know positively.
107. It is not a matter for which you are responsible? No. The Marine Board have an inspector to see that ships are properly equipped, and I take it that a ship's company is just as necessary a part of its equipment as are its boats.
108. What would you do in the event of any complaint being made to you to the effect that a vessel was insufficiently manned? I should lay the matter before the Marine Board, and should expect them to take action.
109. You consider it their province and not yours? Yes.
110. In the issuing of permits, what kind of examination would you put the men through before giving them permits? I should endeavour to ascertain a man's qualifications. For instance, if a man were an applicant for the position of fireman, and if did not think him suitable I should put the word "trimmer" on his permit. I have done so in some instances.
111. When you know that a man has not been to sea before, do you not usually insert words to that effect upon his permit? Generally "first ship."
112. Does not the law provide that you shall do so? No.
113. Does the law provide that you shall put the applicants through any examination whatever? No.
114. Are you satisfied with the law as it now stands; do you think it is sufficiently comprehensive for the business you are called upon to discharge? If the law made provision that I should satisfy myself as to a man's capabilities, I would guarantee that no man would get a license unless he knew his business.
115. Then you think the shipping law requires amendment in some particulars? Yes.
116. Will you kindly make a note of such amendments as you consider necessary, and submit them to the Committee at its next meeting? Yes.
117. *Mr. J. D. FitzGerald.*] Will you also produce a copy of the forms in use in your office, and especially a copy of the licenses you issue? Yes.
118. And also a copy of the opinion of the Board of Trade to which you have referred? Yes.
119. *Mr. Edden.*] I understood you to say, in reply to the Chairman, that vessels left this port contrary to law; that the masters were liable to prosecution; and that you tried to get Mr. Smith, the secretary of the Seamen's Union, to get the men to lay an information, but that they refused on the ground that if they took action they would be marked men? Yes.
120. I suppose you were convinced that the captains of these ships were liable to prosecution? Yes.
121. Do not the shipping laws empower you to institute a prosecution under such circumstances, and to summon the seamen to give evidence? The difficulty would be in getting hold of the men.
122. Does not the law empower you to institute the prosecution? Since the case to which I referred happened, I obtained the opinion of the Crown law officers who think the Shipping Master is the proper person to institute prosecutions; but I do not like taking it upon myself to summon the captain without being able to prove the charge.
123. But does not the same law, which gives you power to lay an information against the captain for a violation of the law, also give you power to summon the seamen to give evidence? Anyone has the power to lay an information. It is not my particular province to do so.
124. But I ask you if you have the power? I could do so.
125. Do you not think you neglect your duty when, knowing as you do, that the captain fails to observe the law, you do not institute a prosecution? It would be of no use to do so when the men cannot be found. I do not even know their names.

Mr. J. Edie. 126. You said that the reason you did not prosecute was that the men were afraid to give evidence. If that be so, it would appear that the men were to be found, but that because they were afraid to give evidence the prosecution was allowed to slip by. Have you not, yourself, said that you have refused to prosecute captains because the men said that if they gave evidence they would be marked men? Men have come to me, and have told me that certain things have been done, and Mr. Smith, who is secretary of the Seamen's Union, has told me the same thing. I think I have a letter from Mr. Smith to the effect that the men object to come forward; but in these instances I do not know the names of any of the men, and I could not find them.

1 Feb., 1894.

127. I thought you said that they had come to you? They came to me, but numbers of men come to me sometimes in the course of a day and make various statements and go away again, and it is impossible for me to know where to find them. Of course I do not ask the name of every man who comes into the office.

128. But sufficient has occurred to induce you to believe that the men are afraid to give evidence, on account of their being afterwards marked men? Yes.

TUESDAY, 6 FEBRUARY, 1894.

Present:—

MR. G. D. CLARK,
MR. DAVIS,

MR. J. D. FITZGERALD,
MR. WISE,

MR. EDDEN.

A. J. KELLY, ESQ., IN THE CHAIR.

Mr. James Edie recalled and further examined:—

Mr. J. Edie. 129. *Mr. J. D. Fitzgerald.* You desire to correct your answer to question 58 in reference to the seamen going to sea without entering into a proper agreement? Yes. I said the other day that the only case I could think of was that of the "Phoebe," but I should have mentioned the case of the "Victorian" and the "Hesketh." As far as I can recollect both of those vessels took men to sea without entering into a proper agreement, and convictions were obtained against them. These cases slipped my memory when I was answering the question the other day.

6 Feb., 1894.

130. You promised to produce certain documents? Yes. I produce the articles of agreement in accordance with the 4th schedule of the Seamen's Laws Consolidation Act; also a copy of the articles of agreement under the Merchant Shipping Act, and the fore-castle copy of the two agreements. With regard to the opinion of the Board of Trade, as to my right to withhold the clearance of a vessel on account of her not having the full complement of her crew, I produce a copy of the letter I wrote to the Board of Trade asking for its opinion. [*Vide Appendix A 1.*] And also the opinion of the Board sent in reply to my letter. [*Vide Appendix A 2.*] Another thing I was asked to produce was the letter I received from the Secretary to the Federated Seamen's Union of Australasia, with reference to its failure to discover the men who had sailed in the "Phoebe" without signing articles. [*Vide Appendix A 3.*] I produce also the opinion of the Crown Law Officers with reference to my duties in initiating prosecutions. [*Vide Appendix A 4.*] Here is a copy of the account of change of crew of intercolonial or foreign trade ships. I produce also a copy of licenses to ship. [*Vide Appendix A 5.*] Forms of mutual release. [*Vide Appendix A 6.*] Forms of advance notes. [*Vide Appendix A 7.*] Number 2 clearance form in accordance with the Navigation Act Amendment Act 1881. [*Vide Appendix A 8.*] And the Customs certificate to vessels clearing issued by us under the Customs regulation. [*Vide Appendix A 9.*] I produce also forms of permit from the Colonies of Queensland. [*Vide Appendix A 10.*] South Australia. [*Vide Appendix A 11.*] And Victoria. [*Vide Appendix A 12.*] Also the form of permit used by the United States Consul in Sydney. [*Vide Appendix A 13.*] I may say that the fee in the other Colonies is 5s. I should like to make an explanation with reference to the shipping of deck hands. Here is a case in which I received an application from Messrs. Burns, Philp, & Co. to ship a man in the following terms:—"We desire to ship the bearer ——— in our steamer 'Hesketh' as A.B." [*Vide Appendix A 14.*] On questioning the man, I was perfectly satisfied that he was not a sailor, and I therefore scored out the letters "A.B." from the application form. He must have received a note from the owners through false representations. Being a sailor myself, when the man came before me I was very soon able to form an opinion as to his qualifications, and I said at once, "You are not a sailor." I asked him, in the first instance, whether he could give me the name of the ship he had been in, and after a time I discovered that he had not been to sea at all. I therefore put the words, "Deck hand—first ship" in the corner of the application form, and on the permit I put the words "first ship." Another man named Cooper brought a similar application to me from Burns, Philp, & Co. [*Vide Appendix A 15.*] I was also satisfied that he was not a sailor, and I therefore put the words "deck hand" on his permit. I may mention here that deck hands are often carried on cattle boats. They are not supposed to go above or below. In fact they occupy the position of common labourers on board the ship, and they are generally set to clean pig-styes and do things of that kind. When these men applied to me for permits as able seamen I satisfied myself that they were no such thing, but I had no power to go further. Of course it remained with the other parties to take action if they were satisfied that the man had represented himself to be that which he was not.

131. *Chairman.* You are not in a position to know whether the hands shipped as deck hands are used for the working of the ship—they might be asked to go aloft, for instance? They could not go aloft.

132. But it is quite evident that the owners who sent these men to you with their applications intended to use them for the working of the ship, because the letters "A.B." are inscribed upon the application forms? They may have obtained the application forms on false representations.

133. *Mr. G. D. Clark.* But in any case you have no power to prevent them from shipping? No.

134. *Chairman.* Did you make any inquiries from Messrs. Burns, Philp, & Co. in reference to these men who presented their applications when you were satisfied that they were not sailors? No; the application forms were stamped with Burns, Philp, & Co.'s office stamp, and had Mr. Forsyth's signature.

135. They must have applied to Messrs. Burns, Philp, & Co.'s office to ship as A.B.'s? Probably; but I had no means of knowing that the persons who brought the application forms to me were identical with the

the persons who had obtained them from Messrs. Burns, Philp, & Co. Another man named Doyle brought an application from the same firm to me to ship as an ordinary seaman. He could not even stand the test of an ordinary seaman. Here is the form. [*Vide Appendix A 16.*] I had it filled in with "O.S." in the first instance, but I afterwards scored that out and inserted "deck hand." Another man named Aylward brought an application from the same firm as an A.B. He was a sailor, but had been a number of years ashore. His last ship was a long way off, and the men came in the category of "shore service." [*Vide Appendix A 17.*] I was satisfied after looking the matter up that the case was genuine, and I gave him a permit without qualifying it in any way whatever. Whenever men apply to me for permits to ship as A.B.'s, and I am satisfied that they are totally unfit for the duty, I do not give them permits to engage as such. There have been complaints that I have refused permits or licenses to men, but the cases in which I have refused them have been where men have shipped and have received advance notes. They have left the ship, after cashing their advance notes, and they have then applied to me for another permit enabling them to ship again and perhaps to repeat the fraud. In cases of that kind I have insisted upon the men bringing their advance notes to me, and I have done so in order to prevent the practice of fraud.

Mr. J. Edie.
6 Feb., 1894.

136. Is it within your recollection that at any time since you have been at the Shipping Office articles have been signed in the labour bureau, in Clarence-street? No.

137. You are sure of that? I am positive of it.

138. *Mr. Davis.* I think you stated last Thursday that the seamen who signed on board did not suffer any inconvenience from being so shipped? Yes. I am not aware of their suffering in any way.

139. Have you known of any cases where men have been paid off on board a vessel and have come to you after the vessel has left the port for their discharges, when they have discovered that their discharges were not at your office? Yes.

140. In such cases, I believe, the men have had sometimes to wait some weeks for the return of the vessel, in order that they might obtain their discharges? I have known of cases of that sort.

141. Do you remember a case of that kind occurring in connection with the "Egmont," about two years back, where the captain forgot to send the discharges to the Shipping Office? I do not recollect that particular case. It must have occurred before I filled the office of Shipping Master.

142. Do you remember the case of the "Gunga"; the vessel went down to Fiji and left the men without their discharges; they tried to recover damages, but got defeated? I think I have heard of it, but I do not know of the case personally.

143. But I suppose you know of a number of cases where men have been put to inconvenience through the discharges not being left at your office—in steamers, for instance, where the handing out of the discharges is left to the purser and mistakes often occur? As I have told you, I have known of cases where the men have not received any discharges, and I think the Act is defective in this respect. There is simply a £10 penalty if the master does not deposit the discharges at the office. But I think mistakes of the kind to which you refer would be prevented if provision were made in the law that the men's wages should continue until their discharges were deposited at the Shipping Office.

144. You think an alteration in the law should be made to that effect? Yes; as the law now stands there is simply a fine of £10, and that does not benefit the men who are deprived of their discharges.

145. You admit, therefore, that some inconvenience arises;—do you not think it would be remedied if vessels had to ship and discharge at your office? I think the case would be met if wages were made to continue until the discharges were deposited. It would protect the seamen and would not inconvenience the ships.

146. In your experience as Shipping Master, have you not known of cases where the articles have not been correctly read over by the captain or mate on board of the vessel, where they have not taken the same trouble in the matter as you or your deputy would have done? We have had sailors and others on ships saying that they did not hear us read them, and they have said the same thing of the officers of ships. That very thing was said during the last dispute. The men said, for instance, that they did not hear the articles read on board the "Wodonga."

147. Cases came before the Police Court, did they not, where the captains admitted that they had not read the articles before the men? There have been cases of that sort.

148. Captain French, of the "Tweed," at the time of the trouble which occurred about fifteen months ago, admitted that the men had signed without having the articles read over to them? Yes; I think there was a case in the last dispute where a similar thing occurred.

149. Have you not known cases where the captains have signed articles in their cabins or in the small smoking rooms in which there were the captain, the purser, and two or three officers, and where it was practically impossible for the bulk of the crew to understand or to know what they were signing? I have known the crew to sign in smoking rooms, and I have known them to be brought in in different lots.

150. But I am referring to cases where neither you nor your deputy were present? I cannot speak as to those cases.

151. Under the present system, however, you have no guarantee that the articles are read out? When I first came to the Shipping Office the rule was to give out a blank form for the fore-castle to copy. The Act specifies that there shall be a copy in the fore-castle, but it does not say that it shall be filled up in the Shipping Office or signed by the Shipping Master. I thought that was very unsatisfactory, and it was totally different from anything I have been accustomed to. I altered that practice, and I had the fore-castle copy filled in with the duplicate in the Shipping Office, the master of the ship signing the whole three, so that the sailors always have a copy in the fore-castle.

152. But you are aware that the present Shipping Masters came into vogue some thirty-five years ago for the special benefit of the illiterate seamen. The Shipping Masters are supposed to explain the articles to those men;—what benefit would it be to them to see a duplicate copy of the articles hung up in the fore-castle, unless they had some one to read them over to them, and to explain them? The law in force here permitting vessels to engage on board is in force in Great Britain, and in all the dependencies where they have what is called a home trade. They can either ship or discharge on board, independently of the Shipping Office. The home trade limits of the Navigation Act are Rockhampton on the one side and Melbourne on the other. Under the Queensland Act the home trade limits are the whole of the Queensland ports, and any of the ports of New South Wales. The home trade limits of the Victorian Act are Port Stephens on the one side, and Spencer's Gulf on the other. I do not know the limits of the

the

Mr. J. Edie. the South Australian home trade. In our Seamen's Laws Consolidation Act we have no home trade, there is only the intercolonial and foreign trade. The definitions in use in the other Colonies are "home trade" and "foreign trade." Anything beyond the limits laid down for the home trade is regarded as foreign trade.

6 Feb., 1894.

153. With reference to the question of permits you have had some notes sent up from the A.U.S.N. Co. and other companies to the effect that they desired to ship the bearers? Yes.

154. Do you know if the men came direct from the persons who subscribed their names to the forms? That I could not say.

155. I believe that in Victoria the law will not allow the men to sign on Victorian-registered vessels, that is, the permits would not allow them to sign on board? Take the case of the Victorian home trade. Suppose a collier is running from Melbourne to Newcastle, I do not think a permit is required even if the men have no discharge. I believe the men ship on board, and that the articles are not witnessed in the Shipping Office.

156. But the men must have a discharge? I do not know about the discharges. Victoria is entirely under the "Merchant Shipping Act," and as I pointed out, their law does not recognise what is known here under our law as the intercolonial trade.

157. Have you ever refused permits to persons other than in the cases of men who have obtained a month's advance, and have left their ships? Yes; during the late dispute I refused two or three permits because I could see that the applications were not genuine. I am always willing to assist those who convince me of the honesty of their intentions, but there were some cases in which that was not so.

158. Did you refuse any cases before the dispute? Not that I am aware of.

159. Have the men not been obliged, since you have been at the Shipping Office, when they have lost their discharges, to make an affidavit that they have lost them, and that they have neither pawned nor sold them? I have never sent a man to make an affidavit, but it was the custom prior to my time at the office. I objected to its being done, and I spoke to the late Mr. Bagar about it. He proposed to have me made a J.P., but something interfered, whether it was his retirement or not I do not know. The present Colonial Treasurer, however, had me made a J.P., and now when men cannot produce their discharges they make a declaration before me, and are not led to any expense. The practice was brought under my notice when a man brought a declaration to me, and I asked him why he had done so.

160. There is nothing in the Act to prevent a ship from going to sea with any number of hands the master may like to take? I know of nothing in the Merchant Shipping Act against it.

161. There is nothing to prevent a ship from going to sea with only its officers;—it can go to sea without any hands at all in fact if the master and the officers are agreeable? If those on board like to make an agreement with the master to that effect.

162. That applies to all classes of vessels—passenger and otherwise? Yes.

163. *Chairman.*] There would be nothing to prevent the captain of a passenger ship from taking to sea a thoroughly incompetent crew? I have nothing to do with the Passenger Act.

164. Who has to do with it? The Marine Board. If you look at the different copies of articles I have handed in you will see that the Merchant Shipping Act simply provides for the description of the number of sailors. Our Act ignores the word "sailors" altogether.

165. *Mr. Davis.*] Is there anything in the law, so far as you know, to prevent a master from taking a vessel to sea against the wishes of the mate and second mate, they being of opinion that the crew are thoroughly incompetent? Well, any man could refuse to do what is not right, and would be absolved from any penalty.

166. No penalty would be incurred by a mate or second mate refusing to go to sea under such circumstances? No; the law will come in there to protect them. It would have to be proved that the ship was properly equipped, and it could not be said to be properly equipped if it had an incompetent crew.

167. *Mr. Wise.*] Have you been a Shipping Master in any other port? No.

168. Certain duties are imposed upon you by law for the protection of seamen? Yes.

169. For instance, every seaman is required to sign articles in the presence of yourself or your deputy? On ships registered beyond the Colony only.

170. In reference to ships registered here, have you any control over seamen? No direct control. They engage the men on board the ships, and the law states that they shall produce the licenses or discharges of the men engaged, with a duplicate of the agreement, at our office.

171. Ships on foreign registers engaging here have to engage in your presence, or in the presence of the deputy? Yes.

172. Ships registered here may engage on board, but the seamen have, after their engagement, to appear before you? No. The owner or master who has engaged has to produce at our office licenses or discharges and a duplicate of the agreement; that is all.

173. Under what section of the Act is that? Under section 16. Section 15 applies to the same thing.

174. Where is the section of the Act which exempts ships registered here from engaging before you or your deputy at the Shipping Office? Section 15.

175. Does not section 15 apply to every ship excepting vessels of less than 80 tons trading on the coast? Yes.

176. Any vessel, excepting those, has to engage seamen in accordance with the provisions of section 15? Yes.

177. Does not that apply to vessels wherever registered? It applies to New South Wales ships only.

178. If you look at the definition of "ship" you will see that it is every description of ship used in navigation, not ordinarily propelled by oars? Yes.

179. I cannot see where you draw the distinction under the Act between the two classes of ships—ships registered in the Colony and those registered abroad;—section 16 applies to the same class of ships as section 15? Look at section 90.

180. Having read section 90, does it not seem to you that the provisions of sections 15 and 16, as to the engagement of seamen, apply to all ships except coasters of less than 80 tons? I do not think so.

181. But in practice, and putting the legal interpretation aside, to what vessels do you consider sections 15 and 16 apply? To all New South Wales registered ships.

182. Only to them? Yes.

183. Then, if a vessel is registered elsewhere than in New South Wales, are you not required to perform the duties imposed on Shipping Masters with regard to the engagement of seamen by the Merchant Shipping Act? Yes.

184. Is there any difference between the duties imposed by section 15 of our Act and the duties imposed by the Merchant Shipping Act as to the engagement of seamen? The Merchant Shipping Act distinctly states that it shall be done before an officer. Mr. J. Edie.
6 Feb., 1894.
185. An officer of the ship? No; a superintendent of mercantile marine, a Shipping Master, or a consul, and, failing, a consular officer before a respectable merchant.
186. The Merchant Shipping Act requires that all engagements shall be before a Shipping Master or his deputy? Except in the case of substitutes.
187. Quite so;—section 150 of the Merchant Shipping Act sets out the duties of Shipping Masters in the engagement of seamen? Yes.
188. Section 155 deals with the foreign trade? Yes.
189. And those are the two sections which relate to the duties of Shipping Masters upon the engagement of seamen? Section 149 gives all the particulars of engagement.
190. We will say the two sections I have named and other sections giving further details for special cases? Yes.
191. Is there any difference between the duties of the Shipping Master under the Merchant Shipping Act and his duties under our Act with respect to the engagement of seamen? The Merchant Shipping Act requires all engagements to be made before the superintendent or his deputy.
192. Is that an advantage to the seamen? I do not see where it comes in. They understand what they are about, and they have a copy of the articles in the fore-castle.
193. It does not make any practical difference to the seamen, you think, whether they sign on in your presence or in the presence of the officers of the ship? No; because any sailor, if he has the slightest doubt about his agreement, has only to come up to the Shipping Office.
194. Will you look at section 16;—does it not provide that you or your deputy shall read over and explain the articles? No; not unless the men sign in the office.
195. Does it not appear to you that the object of this section was to insure the articles being read over by the Shipping Master or his deputy. The Act says: "Provided that the signature of each seaman shall be attested by the Shipping Master, or by some other witness, and before being signed the agreement shall be read over and explained to such seaman." Do you not interpret that to mean that the person to read over and explain the agreement to the seamen is the Shipping Master? No; because the section says, "either before the Shipping Master or on board."
196. Does not that section appear to you to contemplate that, whether the men engage on board or not, the Shipping Master or his deputy shall be present? No; I think not.
197. Under the "Merchant Shipping Act" the superintendent would have to be present? Yes.
198. Is the reading over of the agreement, as a rule, carefully done, or is it merely a perfunctory job? It is very carefully done. I read through all the conditions before the men sign them.
199. If additions are made to the ordinary scheduled articles;—if there are clauses which are not in the printed form—do you make a special point of drawing attention to them and explaining them? Yes; we are bound to read them.
200. But do you specially call attention to the fact that they are unusual and additional clauses? Any special stipulation is carefully called attention to.
201. But do you point out to the men the fact that it is a special stipulation? We read out the conditions carefully, and if exception is taken to any clause attention is called to it.
202. Do you, as a matter of fact, do anything more than read out the clauses? We simply read them out except there is anything extraordinary about them.
203. The words "and explain" in the Act are given effect to only if a question is asked, and not unless? Yes.
204. Do you yourself compare the fore-castle copy with the copy which is signed by the men? Yes; and I sign the fore-castle copy myself.
205. Do you compare the two? Yes. The fore-castle copy is filled in by us. It was not done at one time but it is done now.

THURSDAY, 8 FEBRUARY, 1894.

Present:—

MR. WISE,

MR. G. D. CLARK,

MR. DAVIS.

A. J. KELLY, ESQ., IN THE CHAIR.

Mr. James Edie recalled and further examined:—

206. *Mr. Wise.*] Does not the law require that a seaman shall not be shipped unless he has either a discharge or a license? Yes; that is our local law. Mr. J. Edie.
8 Feb., 1894.
207. The object of that I presume, is to secure to some extent the competence of the crew? And to prevent deserters from other ships getting away.
208. Can you give the Committee any information as to the reason for the departure in our law from the provisions of the English law, which allows a seaman to ship here with a license, even though he may have no discharge? I am not very clear as to the reason. In England there is no inducement for deserters, and I imagine that this section as to licenses was introduced into our law to prevent seamen from deserting. In 1864, there were a great many desertions in Sydney and Melbourne.
209. How would this provision prevent desertion? The seamen have to produce to the party engaging them either a license or a discharge. A deserter would have to satisfy the Shipping Office authorities as to where he came from.
210. Do you claim any power to refuse a man a license? I cannot refuse him if his answers are satisfactory.
211. What do you mean by satisfactory? Well, I have refused licenses to some men.
212. Upon what general grounds would you feel yourself entitled to refuse a license? Well, the fact of a man belonging to another ship still in port or within the Colony.
213. Any other ground? I know of no other ground.

- Mr. J. Edie. 214. Have you any power to refuse a license on the ground that a man is not a competent seaman? No.
- 8 Feb. 1894. 215. Then, if this provision, requiring a seaman to produce a license is intended to be any security for his competence, it is entirely illusory? Just so. It is only in glaring cases which come under my notice that I take it upon myself to refuse a license or to qualify the license. Ordinarily I do not refuse, but I qualify it, and I do not know that even in doing that I am acting within the law.
216. Will you point out to me the section of the Act which authorises the issue of the licenses? Section 33.
217. That is the only section? Yes.
218. The 33rd section recites: "In case any seaman of any ship, of whatever tonnage the same may be, shall have lost his discharge, or from any other cause shall be unable to produce the same, or if any other person shall be desirous of engaging as a seaman, it shall be lawful for any Shipping Master, on being satisfied of the fact of such loss, inability or desire, as the case may be, to grant and deliver to such seaman or other person a license to ship, which license shall be in writing, and signed by the Shipping Master." That section authorises the Shipping Master to grant licenses to any person other than a seaman, and it is a provision which is peculiar to our Act? I think so.
219. From your experience, do you think it would be desirable to assimilate the law of this Colony to the law of England in this particular of only shipping qualified men? The law of England does not distinctly state that that shall be done.
220. Are there no provisions in the Merchant Shipping Act to secure the competence of the men who are shipped? Well, there is the Act 43 and 44 Victoria No. 16, the Merchant Seamen's Payment of Wages and Rating Act of 1880.
221. What does that Act stipulate? A seaman is not entitled to be rated as an A. B. unless he has served at sea four years before the mast. In the case of fishermen on registered deck fishing vessels, they must, before being so rated, have been employed at least three years, and have at least one year's sea service, or in a training vessel, in addition the services to be proved by certificate of service from the Registrar-General of seamen, which is to specify whether the service was on board a sailing or steam ship, or by other proof.
222. Have we any similar provision in our law? No.
223. Does the Imperial Act apply to our Colony? Only in the case of ships registered beyond the Colony.
224. Do you think it would be desirable to introduce into our law a similar provision, which would have the effect of preventing men from being rated as A.Bs. when they are not competent A.Bs.? Undoubtedly; a sailor ought to know his business.
225. Do I exaggerate when I say that as the law now stands it would be possible for any man from the plough to be shipped on board a ship, and to appear on the articles as an A. B.? If those on board the ship choose to put him on the articles as such,—we have no power to prevent them doing so. They can put him on the articles in any capacity they think fit.
226. Chairman.] And you would strongly advise an amendment of our law in this particular? Yes.
227. Mr. Wise.] Is there any other provision in the English law affecting the evidence of the competence of the seamen who are engaged before the Master? Yes.
228. I understand that if a Shipping Master is not satisfied that a seaman has served four years, or that he cannot produce evidence of it, he may, in giving him permission to ship, mark his permit "N.P.," or in other words, not proved, meaning that the man has not proved that he has not served his time as an A.B.? Yes.
229. That does not debar him from shipping? No.
230. Chairman.] In the event of the man being shipped upon such a license, is it in the power of the captain, at the termination of a voyage, to stop his wages for incompetency? Well, he might reduce the man to an "O.S.," or a fireman, for instance, might be reduced to a trimmer.
231. But he is bound to pay the man the wages for the grade to which he is reduced at the terminal port? Yes; but you must state your reasons for saying that the man is incompetent. You must make an entry in the official log, read it over to the man, and also enter any reply the man may make. At the end of the voyage, when you are paying off, the matter has to be settled.
232. Suppose the man disputes the amount of wages, what steps does he take to ventilate his grievance; does he appear before the Shipping Master at the terminal point? Yes.
233. And is it in the province of the Shipping Master to determine the correct rate of wages to be paid? The Shipping Master can advise in a dispute; or, if both sides agree in writing to submit the matter to him, he can settle a dispute.
234. Mr. Davis.] But if they do not agree? Then they must go to Court.
235. Are you not aware that in every port in the United Kingdom, where there is a training-ship or a man-of-war, it is the usual custom for a Shipping Master to give the men whose rate of wages are in question, a letter to one of the officers so that the man may be examined by the boatswain;—if the man satisfies the boatswain as to his competency the opinion of his captain is over-ruled? I believe that is so.
236. Chairman.] Is it within your province to prosecute any man who may ship seamen without your knowledge? It is not definitely specified in the Act, except in the case of deserters.
237. Suppose I wanted to ship a crew without your knowledge;—suppose I took them to a certain place, and got them to sign articles at that place, and did not communicate the fact to you;—would it be within your province as Shipping Master to prosecute me? Yes; the 16th section distinctly states that the men must be engaged before the Shipping Master, or on board the ship in which they are to be employed. Shipping elsewhere would be an infringement of the law.
238. You think you would be justified in prosecuting in a case of that kind? I think I should.
239. Mr. Wise.] Besides the provision relating to the engagement of seamen by yourself and the production of the discharges, is there another provision relating to the engagement of seamen which prohibits any person, not being the owner, master, or mate of the ship, or the *bona-fide* servant, or in the constant employ of the owner or Shipping Master, to engage or to supply or employ any person as a seaman? Yes.
240. What is the object of that section, so far as you are aware? To prevent crimping—to prevent an individual from contracting with a ship's captain to supply a number of men to the detriment of others. There are boarding-houses in Sydney, I am told, where attempts are made to do that sort of thing. Of course I can only go by what I am told.
241. Have you become aware of the existence of an institution here known as the Steamship-owners' Bureau? Yes.

Mr. J. Edie.
8 Feb., 1894.

242. Is a Mr. Currie secretary to that bureau? He is.
243. Do you happen to know that a similar institution exists in London? In London, I believe, they have what are called licensed runners, or outside shipping agents.
244. But do you happen to know that the Steamship-owners' Association has a bureau in London? Yes.
245. Do you know whether the opinion of the Crown law officers was taken by the Board of Trade as to the legality of this body? Yes.
246. Has the Board of Trade supplied you with their opinion? No.
247. Have you seen a copy of the opinion published in any nautical or professional journal? I think I have seen it in *Fair Play*.
248. That is a shipping paper? Yes.
249. Could you supply us with a copy? I think the Exchange is the only place where you could get it in Sydney.
250. Am I right in saying that the opinion of the present Attorney-General and Solicitor-General in England was that the Steamship-owners' Labour Bureau was illegal, and that persons engaging seamen at that institution were liable to prosecution? Yes; I think you are.
251. The English section is the same as ours? Yes; I think it reads the same as ours. Ours is section 14, subsection 1 of the Seamen's Laws Consolidation Act.
252. Is there any similar section in the Victorian Act? They work under the Imperial Act.
253. Do you happen to know whether any prosecution under that Act was commenced against Captain Dyson in Victoria? Yes.
254. He was the manager of the bureau there? Yes.
255. Was the conviction sustained by the Full Court as far as you know? Yes.
256. How is it that there have been no prosecutions here? There have been some prosecutions here. I fancy the secretary of the Seamen's Union took action here, but I cannot be sure.
257. But has there been any official prosecution by you as Shipping Master? No.
258. Does Mr. Currie send you a considerable number of men? Not that I am aware of.
259. You have no written evidence of Mr. Currie having sent men to you? No.
260. Have you any suggestions to make as the result of your experience with regard to any beneficial improvements in the law? I have made a note of several things. There is a provision in our law, I think it is in section 32, with reference to dispensing with discharges on immediate re-engagement. Suppose a man has been several years in a ship, as was the case with many of the men previous to these disputes, he would get no discharge. The men would sign fresh articles every six or twelve months, but they would receive no discharge. Suppose a man signs fresh articles on the 6th June, on the 6th July, a month later, he has a dispute with the owner or master, he is then dismissed with a declined to report discharge. That is, the master declines to report on the man's character or qualifications, or otherwise, and that one month's discharge is all that the man has to show for his three or four years service.
261. What remedy would you suggest? That articles should be taken out as in other places for six months from date to date, and that a man should receive his discharge at the end of each six months, or at whatever time he may leave his ship. Every time he re-engaged, he should produce his last discharge.
262. Is that the practice under the Merchant Shipping Act? Yes. But at present, under our Act, a man can sign articles for an unlimited time. What I suggest is, that he should sign for a fixed period, say, six months.
263. In no other part of the world does this provision of our law prevail? No.
264. *Mr. Davis.*] Do you remember the case in which a Shipping Master proceeded against Howard Smith and Co., who wanted to draw articles for two years. Howard Smith won that case, did they not? The only case in reference to the duration of ships articles was that of the s.s. "Sydney"—Skinner (master of the "Sydney") *versus* Brown (Shipping Master). The Supreme Court decided, without costs against the Shipping Master, that agreements could be made out for two years. Shortly after this case was decided, Messrs. Howard Smith and Co., through one of their captains, applied for articles of agreement for a longer period than six months, but as the vessel in question was registered beyond the Colony, their application was not granted, and the matter was not proceeded with.
265. *Chairman.*] Can you suggest any other amendment in the law? Yes; I would suggest that the 4th schedule of the Act should be so altered as to correspond with the like schedule under the Merchant Shipping Act.
266. *Mr. Wise.*] What are the principal points of difference between the two schedules? Our schedule does not say how many men are to be sailors, and there is no release. Men discharged on board ship are really not discharged because they simply sign the pay-sheet. I recommend that there should be a form of release on the articles, which should be signed by the seamen on discharge.
267. Do the schedules differ on any other important point? I do not think so.
268. Can you recommend any other alteration of the law? I do not know that I can.
269. Would it be a good thing, in your opinion, to provide that all the men should sign articles at the Shipping Office? I do not think it would make any difference.
270. *Mr. G. D. Clark.*] Do you not think some power should be vested in you, as Shipping Master, to refuse to give a permit or license to a man you felt satisfied was not a sailor? Then a difficulty would arise with the men's employers because they would turn round and say, "We are going to employ this man in such and such a capacity."
271. But is it not dangerous to life and property that coasting steamers who carry passengers should be allowed to ship as seamen men who are not seamen at all? I quite agree with you there. It is just as necessary that a ship should have sailors as that she should have boats. If she has boats she must have sailors to use them.
272. Do you not think that there should be some provision enabling the Shipping Master to refuse a permit to a man who he feels satisfied is not a seaman at all? The difficulty is that the law does not provide that a man shall sign as an able seaman—he may sign as anything.
273. You say that you wrote "deck hand" upon some of the permits. That amounts to nothing because the men may be called upon to do seamen's work. Suppose there were half-a-dozen deck hands on board a steamer, and boats were required, those men would not be capable of handling the boats? Before you do anything in that matter, you would have to so amend the law as to compel vessels to carry so many sailors. Even the English law does not say that a certain number shall be sailors.

- Mr. J. Edie. 274. *Chairman.*] Is there anything in the law giving you power to deal with these coasting vessels? In what respect?
- 8 Feb., 1894. 275. The shipping of the men on board of them? They have power to do so.
276. Could you suggest any means by which you could get them under your control? I do not see how you could do so unless you had a law to the effect that vessels of a certain tonnage should carry so many sailors.
277. Would it not be wise to provide in the law that any vessel over a certain tonnage should ship a certain number of sailors, and that either you or your deputy should attest the articles? That is a very difficult point to determine. I am not aware that it is done anywhere else. It is exceedingly difficult for me in my position to give you advice upon such a matter.
278. But is it not a common practice among coasting vessels for the captains to pick up any class of men to take them on board, and to get them to work the ship without your knowledge? A man may ship as anything if he has a discharge.
279. You have absolutely no control over men shipped in coasting vessels? Not beyond seeing that the agreement is drawn up.
280. What do they do when they want to get crews—they have to submit their articles to you for signature? They have to submit the articles to us with the names of the men engaged, and the licenses or discharges must correspond.
281. But if you have any doubt about the men being qualified, you are powerless to prevent them from going to sea? That is outside of my functions altogether. The captain has complied with the requirements of the Act when he produces the discharge or license of each man he has engaged.
282. Would it not be advisable to so amend the law as to give you power to protect life and property from the shipping of incompetent men? I should prefer not to express an opinion upon that point. I should like to qualify an answer I gave to Mr. Davis the other day respecting the shipping men at the Steamship-owners' Association Labour Bureau. I said that I knew of no case where that had been done. I have since thought the matter over, and I think I have heard of cases of that kind occurring, although I cannot speak as to the particular cases. Men have told me that such-and-such things have happened, but I do not know them personally.
283. *Mr. Davis.*] You said, in reply to Mr. Clark, that you could not put the men under any examination to ascertain whether they were seamen, because the master of the vessel might turn round and say that he desired to use the men in some other capacity than as sailors;—would it not be well for the owners to specify what they intend the men to ship as? It would certainly simplify matters; but if you did that it would be putting me in a position of examiner, and I should have to prove the men's competency. I have entered into the question of their competency in certain cases, but I think I have exceeded my duty in doing so. The Act does not specify that I shall do so, but when glaring cases come under one's notice, one cannot, conscientiously, allow them to pass.
284. I suppose you are aware that all steam-ships carrying passengers have to obtain a certificate from the Marine Board every six or twelve months? Yes.
285. What kind of examination is the ship subjected to before that certificate is obtained? The boilers, boats, chain-cables, fire-hose, life-belts, pumps, and general equipment of the ship are examined.
286. And the men on board the ship, who are to use all this paraphernalia, are not subjected to any examination? No.
287. Have you ever known of any examination of boats on board of any steam-ship in the port of Sydney previous to her going out to sea? I have had my own ship surveyed in Sydney only once, so that I have had no means of knowing.
288. Are you aware that the Marine Inspector in Brisbane subjects all steamers leaving that port to an examination of the boats and chain-cables, &c.? I am not aware whether that is so or not.

TUESDAY, 13 FEBRUARY, 1894.

Present:—

MR. EDDEN,

MR. G. D. CLARK,

MR. DAVIS.

A. J. KELLY, ESQ., IN THE CHAIR.

Mr. William Currie called in, sworn, and examined:—

- Mr. W. Currie. 289. *Chairman.*] I believe you are the manager of the Steamship-owners' Association Labour Bureau in Clarence-street? I believe so.
- 13 Feb., 1894. 290. What duties are entrusted to you as manager of the bureau? They are in reference to seamen, firemen, cooks, stewards, and wharf labourers—all sorts of maritime work.
291. I suppose you have had some experience of maritime labour prior to your occupying the position of manager of the bureau? I think so.
292. Is it a fact that you have declined to give the men belonging to the Seamen's Union tickets to ship? No.
293. It is not a fact? No.
294. Are you aware of men coming to you having already secured work from engineers and officers, and of your blocking them? No.
295. Is it not within your knowledge that men have come to you under such circumstances, and that you have blocked them? Well, men have come to me sometimes, and I have had occasion to say, "There are other men before you."
296. Did you, during the late maritime strike, send men on board the steamers? Certainly; in my position of manager of the labour bureau of the steamship-owners, I have acted according to my instructions.
297. Did you ever examine any of those men as to their capabilities as firemen or seamen? It was not my duty to so examine them.
298. What method have you then of discovering whether the men are competent or not? The shipping of competent men depends entirely upon the engineers and officers.
299. Did you ascertain whether the men had discharges or licenses from the Shipping Master? Certainly.

Mr.
W. Currie.

13 Feb., 1894.

300. Do you remember any instance in which the men were without them? There were no such instances that I am aware of.
301. You are not aware of any? I am not.
302. Is it a fact that you supplied men to certain steamers knowing at the time you did so that they had neither discharges nor licenses? No.
303. You are quite sure of that? I am not aware of any such cases.
304. Did you ever tell any men to go on board and that you would provide them with discharges or licenses? Certainly not. How could I do that? I certainly have not done so to my knowledge.
305. You have a knowledge of some men being taken from the depôt ship "Franklin"? I have heard of such a thing, but I do not know anything about it myself.
306. You have no knowledge of it? I heard of it, that is all.
307. Did you not supply men from the depôt ship for certain vessels, the "Emu" for instance? I say distinctly no.
308. Where did that steamer get her crew from, was it from your office? That I cannot say.
309. Have you any knowledge of the fact that the crew of the "Emu" had had no previous experience at sea? I had no such knowledge.
310. They were not signed on on board the ship? I do not know anything at all about that.
311. Have you ever signed any men at your office in time of difficulty? So far as I am concerned no men have ever signed there. I do not know what may have been done when I have been outside.
312. You said just now that you had not blocked any men? No; why should I block them.
313. Do you remember the case of a man named Thomas Conley who had done a trip on the "Rockton"? I cannot recollect it.
314. You are sure you never blocked that man? Not that I am aware of, I do not remember the man's name.
315. The man will probably come before us in the capacity of a witness. He is a very reliable man and I should like you, if possible, to give a definite answer to my question. Your answer may affect you hereafter? I do not remember the man's name—that is all I can say.
316. Did you ever receive any instructions from the Steamship-owner's Association to the effect that you were not to recommend any men who took part in the late maritime strike? Certainly not. It is true that I received certain instructions in a general way, but I used my own discretion.
317. Why did you stop three men from shipping on board the steamer "Arrawatta," knowing as you did that the men had worked a day on board. The names of the men are John Olsen, A. Marshall, and H. Fernman? I do not remember the instance.
318. There has been a good deal of correspondence between you and the Shipping Master? No.
319. Do you say that there has been none? Not that I am aware of.
320. None whatever? None that I am aware of.
321. Supposing I tell you that we have evidence to prove that you had such correspondence? I do not remember any.
322. *Mr. G. D. Clark.*] You surely must remember whether you have corresponded with the Shipping Master or not? I have not had any correspondence with him that I am aware of.
323. *Chairman.*] Supposing that we produced some of the correspondence, I suppose you would look upon it as clear evidence that it has taken place? That would be so I suppose.
324. Did you ever recommend any men to the Shipping Master for licenses to ship? I do not think so.
325. You are sure that you have not done so? I do not think that I have done so.
326. You are not aware that he has refused to grant permits to certain men you have recommended? I do not remember anything of the sort.
327. Is it a fact that the steamship-owners will not employ anyone in any capacity unless he first receives a ticket from you? No.
328. What are the instances in which they employ men without such a ticket? I believe there are many instances.
329. Will you name one? I should have to go through my books and a number of articles in order to find out.
330. Have you books in which such a record is kept? That is a matter which concerns the Association solely, and I decline to answer the question.
331. But I must insist upon some answer. Do you keep no record whatever? We keep no record of men who have gone on board ships without a ticket from the bureau.
332. You do not know of instances where men have got employment without a ticket? On the contrary, I understand that there are a number.
333. Will you name any instances which have occurred since the last difficulty, where men have been shipped without first consulting you? I decline to answer that question.
334. But there have been such instances? I decline to answer the question.
335. It would appear that you have two classes of tickets? Not that I am aware of. We have only one class.
336. What is that? We have only one kind of ticket so far as seamen, firemen, cooks, or stewards are concerned.
337. What sort of ticket is it; has it any distinguishing colour? Certainly not.
338. It is the recognised ticket among the employers? And among the men as well.
339. *Mr. G. D. Clark.*] Could you produce a copy of the ticket? Certainly, with pleasure.
340. *Chairman.*] Do these tickets guarantee the men employment? No.
341. They give no guarantee? There is no guarantee at all; it is in the option of the officer or engineer, whichever department the men may be going to, to employ them or not.
342. In what instances are these tickets used if it is not necessary that the men should obtain one before they can get employment? It is necessary that they should have a ticket.
343. I thought you said just now that there were instances in which men were employed without the ticket? I believe there are.
344. But you say that the ticket does not guarantee employment? No; because the men I send may not suit the officers or engineers.
345. Then, what is the good of the ticket? Well, you must know as well as I do, that when officers or engineers engage men they like to see more than one.

- Mr. W. Currie.
13 Feb., 1894.
346. And you are quite sure that there are no tickets distinguishing firemen from sailors? Certainly not.
347. I suppose you are of opinion that the engineers or officers of a ship are better able to judge of the capabilities of firemen and seamen than you are? I cannot say; that is a matter of opinion.
348. But I am asking you your own opinion? I repeat that what you say is a matter of opinion.
349. But I am now asking you quite a distinct question. I want to know your own opinion? I will not go any further than I have gone in my answer.
350. You believe that you are quite as competent to judge of the men's capabilities as are the officers or engineers? I may be.
351. But you are not quite sure about it? I repeat that it may be so.
352. You are not quite sure on the point? I have already given you my answer.
353. I suppose you are aware that if you do not answer questions the Committee can compel you to do so, that is any question that is lawful? But I have already answered your question.
354. You are in just the same position here as you would be in a Court of Law, and you must give direct answers to questions? I have given a direct answer.
355. Are you not giving very evasive answers? I have given direct answers.
356. Are the officers or engineers obliged to take the men upon your recommendation? Not necessarily.
357. Are all the men required by the Steamship-owners' Association engaged at your office? No.
358. Under what circumstances are the men engaged by the steamship-owners? I do not know what you mean by the circumstances.
359. Can you not give us an illustration? Well, a wharf labourer, if he can do the work, is engaged as a wharf labourer.
360. Is that the only qualification required? Yes; so long as he can do his work, whatever it may be, he may be engaged.
361. Who pays you? The Steamship-owners' Association.
362. What is your remuneration? I decline to answer that question.
363. Perhaps you have no remuneration? I am remunerated.
364. By the Steamship-owners' Association? Yes.
365. And you decline to tell us the amount? Certainly.
366. Have you never detained any money that has been given you to be paid to the men? No.
367. You are sure of that? Certain.
368. *Mr. G. D. Clark.*] Do you charge a fee to the men to whom you give tickets? Certainly not. I have never done such a thing since I have been at the bureau.
369. You have never taken a fee from anyone? No.
370. *Chairman.*] Have you never paid any men at the bureau through the Steamship-owners' Association when wages have been due? So far as I am concerned I can say that no men have been paid at our office.
371. But as far as others are concerned? I cannot say as to that; that has nothing to do with your question.
372. You decline to say whether anyone else in the office has paid the men? I have given information as far as all that is concerned to the Select Committee on the Government Labour Bureau, and I decline to say anything further.
373. *Mr. G. D. Clark.*] What is the nature of the institution which you manage? It is an institution which was started by the steamship-owners themselves.
374. This is an important Committee appointed by Parliament to inquire into the operation of our shipping laws, and the terms and conditions under which men are employed. We are not here to trifle with witnesses, and we do not expect witnesses to trifle with us? I should be sorry to do so.
375. The object of our inquiry is to bring about material changes in the law, and we expect that witnesses will treat us with the respect due to us? I shall be glad to do so.
376. I again ask what is the nature of the institution of which you are the manager? That is rather a hard question for me to answer. If you want an answer to it I should advise you to ask the question of the chairman or secretary of the Association. My duty is merely to obey the instructions which I receive from the chairman or secretary of the Association.
377. The institution is voluntarily created by the ship-owners of this port, is it not? Yes, for their own benefit, I suppose.
378. Can you tell us the objects of the institution? As I said before, you had better ask the secretary or the chairman of the Association. It is beyond me to give you the information you require. It is beyond my duty.
379. Your duty is to give us any information that will help us in this inquiry? Certainly.
380. Surely occupying the position you do you must be able to answer with some approximation to the truth this simple question;—what are the objects of the institution? I am speaking the truth when I say that you will get more information out of the secretary or the chairman of the Association than you will get out of me on that point.
381. Do you not think that it is rather for us to judge whether you are in a position to give us any information or not? That I cannot say.
382. Do you yourself know the objects of the institution? I know what my duties are. I receive my instructions from the Association.
383. Will you state what your duties are? I decline to state what they are.
384. Have you any duties? Certainly, or I should not be in my present position.
385. Are your instructions given you in writing, or is there a general understanding between you and the chairman and the secretary? I get my instructions in writing.
386. I suppose that one of your duties is to give tickets to the men to ship on their making application for the same? To ship on the approval of the officers or engineers.
387. So that you do not object, after all, to tell us what one part of your duties is? That is immaterial. There will be no objection to my telling you that.
388. I suppose the expense of keeping up the institution is met by the ship-owners? Certainly.
389. And that the employees in the institution are there at a stated salary? Certainly.
390. Have you any means of testing whether a man to whom you give a ticket is qualified for the position he is seeking on board a vessel? I do not ask questions to ascertain that. It is a matter which does not concern me so long as the officers or engineers are satisfied as to the man's competency.

391. Can you tell us approximately how many tickets you would supply on the average, say, every month? I could not say off-hand.

392. Could you not give a rough guess? No; it depends upon the number of men who have been discharged, and the number of men who are re-engaged.

393. Do you think it would be 100 a month? I could not say from memory.

394. Of course the Shipping Master can refuse to sign any man to whom you have given a ticket? The ticket a man gets from me has nothing whatever to do with the Shipping Master. I presume that if the men prove to the satisfaction of the Shipping Master that they are capable men, he signs them on.

395. The Shipping Master can decline to sign any man on board a vessel to whom you have given a ticket? The Shipping Master never sees the tickets I give the men.

396. But take the case of any man to whom you have given a ticket, and who is proved to be an unqualified seaman, the Shipping Master can refuse to sign him on? I suppose he can; but I never heard of an instance of that sort.

397. Have you at any time refused to give tickets to men making application for them? Sometimes men come to me and apply for tickets when there are no vacancies.

398. Do you, as a rule, give any reasons when you refuse to grant a ticket? I give no reasons at all.

399. Is it a fact that men have been refused tickets by you on the ground that they had been prominent members of the Seamen's Union? There is nothing at all in that. When I have refused to give men tickets, I have given no reason whatever. We recognise neither Union nor non-Union men.

400. When a ticket is applied for do you ever ask the question whether the applicant belongs to the Union or not? No.

401. You have never done so? No; I have no reasons for asking them that question.

402. I suppose you keep a record of all the men to whom you supply tickets? Yes.

403. Would there be any objection, as far as you yourself are concerned, to supplying the Committee with, or producing the books? I could not do so. I have no power to do so.

404. *Chairman.*] Who would have the power to do so if you would not? The chairman of the Association.

405. Who is he? Mr. Alt; he has just been appointed chairman.

406. *Mr. G. D. Clark.*] But you can produce a copy of the ticket you supply? I can produce a copy of the ticket with the sanction of the Association, but not otherwise. If the Association permit me to send you a copy of the ticket, I will do so with pleasure.

407. You say that you have had no correspondence with the Shipping Master on these matters? Not so far as I can remember.

408. Do you remember sending a man to the Shipping Master with a letter? I may have done so, but I cannot remember it.

409. You do not remember it? I may have done so.

410. Is your memory very good? It is pretty fair as a rule, but in regard to what you now say about my sending a letter to the Shipping Master, I cannot recollect it.

411. There has been no correspondence between the Shipping Master and yourself; that is what I want to get at; I mean as regards the shipping of seamen? I do not remember it. I do not remember getting a note from Captain Edie in my life.

412. *Chairman.*] But did you not send him a letter? I may have done so, but I cannot recollect it at this moment.

413. *Mr. G. D. Clark.*] You are aware that the Union seamen of the port are under the impression, whether well founded or not, that your institution is established for the purpose of injuring or damaging the cause of Unionism? I cannot see that that is so in any way.

414. You know that such an impression exists among the seamen; I suppose you come in contact with a good number of them? No such impression exists that I am aware of. The men all seem pretty well satisfied. I have heard of no objections from them.

415. Are the majority of the men to whom you give tickets seamen, or are they men who desire to work on the wharves? I give tickets to seamen, firemen, and others; but a number of seamen are working on the wharves at the present time, I believe.

416. *Chairman.*] Do you know of any institution similar to your one existing in the other colonies? I understand that there is one in Melbourne.

417. Is there not one in London? I believe there is one in the United Kingdom.

418. Do you know who is at the head of the institution in Melbourne? A person named Dyson, I believe.

419. Has it come to your knowledge that he was prosecuted some time ago? I saw it in the newspapers.

420. Have any proceedings been taken in connection with your own institution? Yes, about eighteen months ago.

421. By whom? By a person named McLean, one of the trustees of the Seamen's Union.

422. What verdict was recorded? The case was dismissed.

423. *Mr. G. D. Clark.*] Do you at any time attempt to fix the rate of wages? I have nothing to do with that.

424. All that you have to do is to give the men tickets to the engineers or officers on board the ships? That is a part of my duty.

425. And it is entirely optional with the officers or engineers as to whether they employ the men or not? Yes.

426. And also to the wages they will give? I have nothing whatever to do with the wages.

427. *Chairman.*] Did you ever procure any men from any boarding-house in Sydney? No.

428. Has any other person in connection with your office procured men from boarding-houses? Not that I am aware of.

429. What other employees are there in your office besides yourself? I have only one clerk—Mr. Chalmers.

430. I suppose he has not a very extensive knowledge of maritime affairs or of the working of your office? He has only been in the office during the last five months.

431. You are sure that the practice of procuring men from boarding-houses and taking them down from the ships has not been resorted to since you have been the manager of the institution? Not to my knowledge. I have never heard of such a thing being done.

Mr.
W. Currie.
13 Feb., 1894.

432. Would anyone else in your office besides yourself have any knowledge of the thing if it had been done? Not so far as I know.
433. *Mr. G. D. Clark.*] Could it be done without your knowledge? I do not think so. Such a thing as you refer to may have been done independently of me and outside of the office entirely.
434. *Chairman.*] Is it not a fact that you keep a constant supply of men at your institution ready to ship whenever they may be required, and that you provide them with a place in which they can stop? No.
435. Is there not a large room at the back of your institution where the men congregate? We have a place there, but it has not been used for some time. We never allow the men inside the office at all.
436. You have shifted your office recently, have you not? That is some time ago.
437. Where do the men congregate? Generally in the lane; they come at certain periods of the day.
438. How do you communicate to the men the fact that some of them are wanted? They know at what time to come up and they get their answer then.
439. You have a specified time when the men attend? Certainly.
440. And supposing there is no employment for them? Then we tell them that it is no use their waiting.
441. Supposing a vessel were to come in at night and that you did not know beforehand of her probable arrival, how do you supply men for her;—have you no address of any individual upon whom you can call to supply the men if they are required? Do you mean for wharf work?
442. I am referring to the shipping of a crew;—suppose the vessel wants a crew? We have certain officers here, and if the order does not come from the captain we cannot help it.
443. But suppose you have left your office when the message arrives, how do you procure the men? No case has ever occurred, to my knowledge, in which a ship has come in at night and has had to go away again before the office opened in the morning.
444. Neither you, nor any one in your employ, has helped to put men on board a ship at night time? I have gone down with the men myself at night time. I did so during the late strike.
445. The men with whom you went down were the crew? Not the full crew.
446. But such men as were required? Yes.
447. You have already said that you have nothing to do with permits? No.
448. It does not come within your province to ascertain whether the men have permits or not? Of course the men have to show a permit or discharge before they are shipped.
449. Still, you have no opportunities of judging of the capabilities of the men, and you accept on good faith the discharges or permits they have obtained? I have already explained that the capabilities of the men is a matter for the officers or engineers to determine.
450. But suppose some of the men have obtained permits from other men? I am not in a position to say anything as to that.
451. Are there any instances in which officers recommend men to you without their having a permit? I do not think they would do such a thing.
452. Suppose an officer knows that a man is a capable man and recommends him to you, if the man has no permit do you refuse to give him a ticket, or do you try to get him a permit from the Shipping Office? He has to get a permit before he gets a ticket from me.
453. Supposing I were sent to you by the officer of a steamer to get a ticket, you would tell me at once that I could not get a ticket unless I had a permit; if I then asked you how I could obtain a permit, I suppose you would tell me that the best thing I could do would be to apply to the Shipping Master;—under such circumstances as those, are there any cases in which you would give men recommendations to the Shipping Master for permits? I do not think so.
454. You would not take such a course upon the recommendation of an officer? No; certainly not.
455. Suppose a case came under your notice in which a man's permit represented that he was competent to do certain work, and in which the Shipping Master had written upon the face of the permit words to the effect that he was not a competent seaman, what would you do in a case of that kind;—would you grant the man a ticket? If the engineer or officer were satisfied with the man he would get a ticket.
456. Supposing, in the case of emergency, a fireman were required, and that his permit were marked "trimmer," would you give him a ticket for the officer of the ship to ship as fireman? If the officer of the ship was satisfied that the man was capable of discharging the duties required of him.
457. Supposing that the word "fireman" were on a permit, and that the Shipping Master had altered the word to "trimmer"? The man's capabilities would be a question for the officers of the ship to decide.
458. *Mr. Davis.*] Did you at the commencement of the last strike ever stand at the bottom of a ship's gangway handing out to the men discharges? Never.
459. Did not the Shipping Master refuse to give permits unless the men were competent? That I do not know anything at all about.
460. Is it not a fact that at the commencement of the late strike the ship-owners were placed in a dilemma from the scarcity of competent men;—is it not a fact that a number of men could not get permits because they were not competent, and that discharges were found for men who were taken from the various boarding-houses in the city? That is a falsehood, so far as the giving of the men discharges is concerned.
461. You have never provided a man with a discharge? Never.
462. Do you remember a case where the captain of one of the Australian Union Steam Navigation steamers sent you a particular man to get a ticket to ship as a boatswain, and where you refused him? If I remember the case to which you refer, I did not refuse the man, I gave him his ticket.
463. You gave one man a ticket, but you refused two other men the captain sent you, and he got so tired of waiting that he took a man up to Brisbane without a ticket? I do not think so.

THURSDAY, 15 FEBRUARY, 1894.

Present:—

MR. G. D. CLARK,	MR. EDDEN,
MR. DAVIS,	MR. J. D. FITZGERALD,
MR. WISE.	

A. J. KELLY, ESQ., IN THE CHAIR.

Mr. William Currie recalled and further examined:—

464. *Chairman.*] You promised us at the last meeting that you would furnish us with a copy of the ticket which you issue to men seeking employment? I think I said that I should have to obtain the sanction of the Association before producing it.

465. Have you taken any steps to obtain that sanction? I spoke to the Secretary, Mr. Cockburn, and he said he could not give me the necessary authority, and that the ticket could not be produced unless with the sanction of the Association.

466. Do I understand that the ticket could not be produced without a meeting of the Board? It could not.

467. *Mr. J. D. FitzGerald.*] I suppose you have charge of the tickets? Yes.

468. Surely it would do no harm for you to produce a copy of one of them? I cannot do so without the sanction of the Association.

469. *Chairman.*] You will bring the matter under the notice of the Board when they next meet? Certainly.

470. *Mr. Wise.*] What do the men come to you for? For employment.

471. Who brings them? They come themselves.

472. Cannot they get employment without coming to you? We have a certain routine, and the men seeking employment have to come to the office.

473. Do you yourself decide whether the men are to be employed or not? No.

474. Then what does their passing through the office mean? Well, it is a sort of check—we know then who is going on board the ships.

475. Do you keep a record of every man you employ? Certainly.

476. I believe you told the Chairman at the last meeting that you received your instructions from the Association in writing. Have you those instructions with you? No; sometimes I get verbal instructions from the Association, and sometimes they are in writing.

477. *Mr. J. D. FitzGerald.*] You know the 33rd section of the Seamen's Laws Consolidation Act? Yes.

478. It is under that section that you send men to the Shipping Master? I do not send men to the Shipping Master. The men seeking employment with us come to me for a ticket, but before I give them a ticket, they must show a permit or discharge. It would be of no use for them to go down to the ship without one or the other.

479. *Mr. Wise.*] In the case of men who come to you with a permit or discharge, what do you do? If there are any vacancies at all, and if I think the men are suitable men, I send them down to the ships to see whether they will suit.

480. Are the tickets marked for particular ships? They are addressed to certain ships.

481. Do the captains keep you informed of what vacancies they have? Yes.

482. And upon that you engage men for them? I simply send the men down to the ships to see whether they will suit the officers or engineers as the case may be.

483. *Mr. Davis.*] If the men go down to the ships without going through you, the officers of the ships do not engage them? That is not invariably the case.

484. Is it not the case with all steamers belonging to the Association? No.

485. Is it not generally understood among the officers and engineers on all the steamers belonging to the Association, that the engaging of seamen by them must rest entirely with you in the first instance, that is to say, they must first get a ticket through you? Yes.

486. So that no matter how much a captain might want a man, unless you first saw your way to give the man a ticket he could not get employment? That is not exactly so.

487. Do you mean to say then that the officers or engineers can take a man in spite of your refusal to give him a ticket? They may do so; of course they do so at their own risk.

488. At the risk of being discharged? I do not say that; but if they engage the men without tickets from me, I take no responsibility at all in the matter.

489. Is it at all likely that the officers or engineers would take the risk, as you call it, for the sake of giving a man employment? I think it has been done.

490. But it is not generally done? No.

491. Generally speaking, the officers and engineers would not engage even men who had been with them time after time without their first getting a ticket from you? It is unusual to engage a man without a ticket; but it has been done.

492. Is there not a general instruction from the Associated Steamship-owners that all the men employed on their steamers and wharfs must first have a ticket from your office? That is supposed to be the general instruction; but it is not carried out.

493. *Mr. Wise.*] If the object of this routine is not to distinguish Union from non-Union men, can you say what the object of it is. Can you explain where the necessity for it exists? I have already said that we do not make any distinction between Union and non-Union men.

494. But can you suggest any other reason besides that which I advance? I cannot say what the reason is.

495. Can you suggest any other reason for insisting that the men engaged should first obtain a ticket from you, other than the desire to keep out certain men whom you do not like? I do not think that is the reason. One advantage about the thing is that it enables us to keep a record of the men; we know who the men are, and what ships they have come from.

496. Would not their discharges show that? Yes.

497. And the information could easily be obtained from the Shipping Office as to any particular men, could it not? That might be done, but the Association think differently; they like to have a record of the men kept.

498. What is the good of their going to the expense of maintaining an office to keep a record when the same information can be obtained at any time from the Shipping Office? I cannot say.

499. You cannot give us any information at all upon that point? No.

500.

Mr.
W. Currie.
15 Feb., 1894.

Mr.
W. Currie.
15 Feb., 1894.

500. It seems to me that unless the object is to keep some sort of control over the men employed by the Association, there is no reason why this record should exist; but you say that that is not the object? Well, if you mean, do we ask whether the men are unionists or non-unionists, I can safely say that that is not done.

501. *Mr. Edden.*] You said just now that if you thought a man likely to prove suitable, you would give him a ticket? Yes.

502. How do you form an opinion as to his suitability? If the man appears to me to be at all suitable I send him down to the officers or engineers.

503. What qualifications do you insist upon before you decide that the man is a suitable man? Well, I should want to see his discharge, for instance.

504. *Mr. Davis.*] Is it not a fact that you have refused to give tickets to a number of men who applied to you for employment—that is, men who came out of ships during the previous strike, and who have since applied to you;—have you not refused these men tickets? I should certainly refuse them if there were no vacancies.

505. *Mr. Wise.*] But have you refused tickets to any men when vacancies have existed? Yes, if other men have been waiting longer than the applicants.

506. Have you put the names of the men whom you have so refused upon the roll? Yes.

507. And have these men ultimately obtained employment through you? Some of them have.

508. Then your evidence is that you have never refused a man a ticket, apart from the fact that there has been no vacancy? Yes; and in cases where men have been there before the applicants waiting for situations.

509. Those are the only two grounds upon which you have refused tickets? As far as I can remember, those are the only reasons; I do not remember giving any other reasons.

510. *Mr. Davis.*] Have you not expressed other reasons to the men themselves? I do not think so.

511. Have you not addressed some of the applicants in these terms—"You left such-and-such a ship, why did you leave that ship?" referring to the men who left ships during the late strike? I do not remember saying that.

512. Have you ever said to any of the applicants, "I do not want you"? I may have said something of the kind in telling them that there were no vacancies. When I have told them that there have been no vacancies that has been the case.

513. *Mr. Wise.*] On Tuesday the Chairman asked you a question about three men who were discharged from the "Arawatta"—Olsen, Marshall, and Fernman; you then said you did not remember the case;—have you since refreshed your memory about that matter? I have endeavoured to do so; but I cannot remember the case.

514. *Chairman.*] Would not the records of your institution give the names of the men? No; the books would not show that.

515. *Mr. Davis.*] Would not the ships' articles give them? No, the men would not be signed on the articles. The only thing likely to give their names would be the pay-sheet, showing the days' work they did.

516. *Chairman.*] These men were not paid at your institution? No.

517. *Mr. Wise.*] At the last sitting you were asked if you knew of any instances which have occurred since the late difficulty, where men had shipped without consulting you. You declined to answer that question. Will you give your reasons for declining to answer the question? I had already said beforehand, in reply to another question, that there were a number of instances.

518. But you declined to answer the Chairman's subsequent question, when he asked you to name the instances? What I meant by declining to answer the question was, that I did not remember the names of the individual cases. I did not intend to imply that I remembered the cases, but that I refused to mention them.

519. *Chairman.*] You said the other day that you went down on board a ship with some men at night time during the late strike. Were those men signed on in the day time at the Shipping Office, or did you pick them up haphazard, and take them on board without their having signed on? I had nothing to do with their signing on. I simply took them on board the ship and left them there.

520. You do not know whether the men signed on or not? That is entirely the business of the captain.

521. Do you know whether the captain has power to sign men on in an emergency of that sort? I am not sure, but I believe there is some power of the kind in cases where ships are registered in New South Wales.

522. But is it not also a fact that the seamen's signatures must be witnessed by some representative of the Shipping Office? That I cannot say.

523. Have you not yourself a knowledge of seafaring matters? Yes.

524. Have you ever signed articles on board these ships? Not here.

525. Never upon any local steamer? No.

526. You have never been on board of them as an employee? No. As far as I know, when the men sign on, their signatures have to be witnessed.

527. *Mr. Wise.*] To what ship did you take the men on the night to which you refer? As far as I know, I took them on board the "Ouraka."

528. *Mr. Davis.*] Is she registered in New South Wales? I do not think so.

529. Then, as a matter of fact, if the men went to sea in her after signing on board, they were simply breaking the law? But they might have signed on somewhere else, probably at the Shipping Office.

530. Before you put them on board? That I could not say.

531. Did the steamer get away on the night you took them on board? No, on the following day.

532. *Chairman.*] You did not supply these men from the Labour Bureau by ticket? I cannot remember, but I expect they had tickets directed to the captain.

533. Was not the ticket a guarantee for their employment? No.

534. Have you any amendment of the law to suggest which, in your view, would make the lot of the seamen or firemen a little more comfortable than it is at the present time? I should have to think over the matter some little time before I answered that question. I might, after thinking the matter over, be able to make some recommendation.

535. If any recommendation occurs to you, will you be so good as to forward it to the Committee? If any recommendation occurs to me, which I think is likely to assist you at all in your labours, I shall be very happy to forward it to you.

536. *Mr. Wise.*] Is the Steamship-owners' Association registered? I believe so.

THURSDAY,

THURSDAY, 22 FEBRUARY, 1894.

Present:—

Mr. EDDEN. | Mr. DAVIS.
Mr. J. D. FITZGERALD.

A. J. KELLY, Esq., IN THE CHAIR.

Captain F. Hixson, called in, sworn, and examined:—

537. *Chairman.*] You are President of the Marine Board? Yes.

538. I suppose that in your capacity as President of the Marine Board you have had an opportunity to observe the operation of the law affecting seamen? I have.

539. Are you familiar with any instances in which the captain and owners of a vessel have evaded the Act? There have been many instances in which the Board have had to interfere and exercise their authority.

540. To what instances do you refer? The cases have been various. Sometimes we have had to deal with a case of overloading and at other times with deck cargo. We frequently prevent ships from taking more cargo on board and in many instances we have made them take off a part of what has been put in.

541. Is it a customary thing for any vessel leaving the port of Newcastle or any of the southern ports of the Colony to put to sea with their hatches off? We have heard of cases of the sort. The practice used to prevail to a considerable extent. The fact is that the coal is pitched into some of the vessels without being trimmed, and it often appeared above the hatches, but the Marine Board took such steps as they could in the exercise of their authority to put the practice down. Among other things they communicated with the insurance companies, and I believe now it is recognised that those companies will not allow colliers to travel without their hatches on. That is to say, if any action occurred through the hatches being off the insurance company would refuse to pay the policy.

542. Did an instance come under your notice recently in which a steam collier entered this port with her hatches off and loaded almost to the deck? I do not remember the case of a steamer lately. A case occurred a few days ago in connection with a sailing-ship. It was reported that she had come in with her mark immersed and we are investigating the case now.

543. What precautions do you take to see that vessels do not come into port overloaded. Are any inspectors told off for that particular duty? Oh, yes; two inspectors perform that duty.

544. Is it a portion of their duty to go outside the heads? No; they do not go outside the heads.

545. Then you have no knowledge of any ships being at sea with their hatches off, apart from what you see when they actually come into port. You do not send anyone out to sea? We do not send anyone out to sea. We get reports from Wollongong and Newcastle occasionally, otherwise we rely on our inspectors. If any officer in the Department observes a vessel overloaded the circumstance is reported and investigated.

546. An instance recently came under my notice, and under the notice of other honorable members (Sir George Dibbs among the number), in which a vessel came into the port of Sydney with her hatches off. I drew the attention of two or three fellow members to the circumstance, and Sir George Dibbs thought it rather a strange thing for a vessel to come into port in that condition; he thought it very dangerous? It is dangerous no doubt, and the remarkable thing is, that the master and persons whose lives are risked by such a proceeding are not more active in putting the practice down; but they appear to be very careless about it.

547. Is there no section of the Act which empowers you to send an inspector out to sea? We could send out an inspector if we thought it necessary to do so, but some expense would be incurred in so doing.

548. Do you not think it would be a wise expenditure by way of a precaution? Perhaps it would be; but as you are aware there are a great many colliers loading at places along the coast, between Newcastle on the one hand, and Kiama on the other. These vessels all make short voyages, and the difficulties of loading are sometimes so great that the colliers are glad to get away from the port immediately they can. Although their coal may sometimes be above their hatches it may be that they are not overloaded.

549. Take the port of Newcastle, for instance; have you no inspector there whose duty it is to go on board a vessel and see that her hatches are properly put on before she leaves the port? We do not go into the detail of putting the hatches on. But we see that it is possible that the hatches can be put on. I do not think vessels are loaded in the manner you describe at Newcastle, because we have an officer there who is specially commissioned to look after that sort of thing. I do not know that he waits to see that the hatches are sealed and battened down, but he sees that all is clear and ready for the work to be done. We do not want to be irksome and detain vessels, and when we see that everything is ready we let them put to sea.

550. Under the 23rd section of the Navigation Act, of 1871, the Marine Board is empowered to inspect documents and muster crews—is that ever done? Not as a rule.

551. Has it ever been done during your occupancy of the office of President of the Marine Board? Not the mustering of crews.

552. Does it not amount to an evasion of the Act that the thing is not done? I do not think the section is mandatory. I think it is permissive only.

553. I will read the section:—

The Marine Board may in cases where there is reason to suspect that the provisions of this Act are not complied with exercise the following powers that is to say—It shall be lawful for the said Board to require the owner master or any of the seamen of any British ship being within any port or place in the jurisdiction to produce any official log-books or other documents relating to such seamen or any member thereof in their respective possession or control and to require any such master to produce a list of all persons on board his ship and take copies of such official log-books or documents or of any part thereof to muster the crew of any such ship to summon the master to appear and give any explanation concerning such ship or her crew or the said official log-books or documents.

I understand that that section is applicable to all vessels which come into our ports? Quite so.

554. But in no instance have its provisions been complied with? I did not say that. What I said was that we never mustered the crew. It is quite true that the Act empowers us to do so. Short of mustering the crews we have done everything under that section which has been considered necessary to be done.

Captain
F. Hixson.
22 Feb., 1894.

Captain
F. Hixson.
22 Feb., 1894.

555. I suppose the inspectors are appointed by yourself and the Board? By the Board.
556. To what examination are the inspectors subject? I do not know that they have ever been subject to a personal examination. The men have generally been selected and appointed from their reputations or well known qualifications.
557. Are they required, for instance, to have a technical knowledge of a ship's gear? Certainly.
558. Are they not supposed to be men of a mechanical turn? We have inspectors and surveyors. Every one of the inspectors is an old master mariner.
559. I suppose there is no instance where you have had to discharge one of these inspectors for neglect of duty? No; they are generally considered to be very efficient men.
560. What qualifications are the surveyors supposed to possess? We have only one shipwrights' surveyor in Sydney. We have temporary surveyors at all the out-stations.
561. The shipwrights' surveyor has to superintend the whole of the work in Sydney? Yes.
562. He has no deputy? No.
563. What are his qualifications? He is a practical shipwright.
564. I see from the Act that it is his duty to board vessels and inspect them, with a view to reporting to the Marine Board? Yes.
565. Can you remember any case in which he has reported the hull of a vessel to be in an unsound condition; has a ship ever been detained for that reason? Such a report has been made several times. I cannot remember the particular instances just now. The shipwrights' surveyor has frequently made reports to the Board which have induced it to detain vessels in port.
566. Would you mind producing these reports? I shall have great pleasure in so doing. At the same time I may tell you that a great deal of the business of the Board is done without written reports.
567. I will ask you to produce those reports of the surveyor upon which vessels have been detained (say) within the last three years? I will produce them, but I repeat that a great deal of our work is done *viva voce*. It frequently happens that we have not time to obtain a report. A rumour reaches us that such and such a thing is taking place, and we send off any inspector who may be available. If the inspector finds the matter is serious he calls in the shipwrights' surveyor, and in that way the case comes to be investigated. An immense amount of the business done through the Department is *viva voce*. Of course we have the documents relating to the detention of certain ships.
568. When a report has been received by the Board with respect to a ship with (say) a bad hull, have you ever inflicted any penalty? We have frequently inflicted fines for overloading; unseaworthiness merges into a different arrangement. If a vessel is unseaworthy we detain her under the Act.
569. You do not work under the Merchant Shipping Act? Not under the Imperial Act; the local Act is our guide.
570. Certain rumours have been circulated with reference to the steamer "Warrimoo." You may have seen statements in the Press as to her boilers being in a very unsound condition? Yes.
571. Did your surveyor go on board the steamer and inspect her boilers prior to her going to sea? He did.
572. And did he make a report to the Board? Yes.
573. Have you any idea of what he reported? It is a recent case, and I remember it quite well. This vessel, I may tell you, is somewhat peculiar, inasmuch, as she employs what is called forced draft. This forced draft is wonderfully powerful, and it was so powerful in her case, that the boilers being salted a little were bulged and put out of shape. The matter was thoroughly investigated by Mr. Cruickshank, the senior engineer's surveyor, and the boilers on examination were found to be perfectly sound, although bulged. Screw-jacks were used, and the boilers were to a certain extent, put in their former condition. The boilers were then tested with pressure. They were pressed, I believe, up to 240 lb. Mr. Cruickshank was then satisfied with the condition of the boilers, except that he reduced the pressure which the vessel formerly carried—that is, 165 lb. down to 140 lb. He also recommended the disuse of the forced draft. I may mention that that will not be necessary for the pressure to which the boilers were reduced. When this had been done, Mr. Cruickshank was satisfied to let the vessel go away.
574. I suppose that in the opinion of the Board the boilers were quite safe? Yes, at the reduced pressure.
575. Are there any instances which have come under your notice where the owners of vessels have neglected to transmit their declaration to the Marine Board with respect to the condition of ships? In the press of business there are little delinquencies of this sort often occurring, but I do not remember any case where the owners have defied the Board.
576. No case of that sort has come under your notice? I do not remember any.
577. What are the times generally appointed by the Board for the surveying of vessels? The Board plays into the owners' hands as much as it possibly can. The Act says that survey shall be done at a certain time, but that would be found to be so very inconvenient, both with regard to the work of the Department, and the laying up of steamers that, as a rule, the Board consult the interests of ship-owners in this respect.
578. The Board generally endeavours to meet the convenience of the owners? That is so.
579. Thirty days is allowed for inspection I see;—suppose it did not suit the convenience of the owners to have a vessel surveyed within that time and that an accident occurred, when the vessel came back to port for inspection I suppose the whole responsibility would fall upon the shoulders of the owners? Yes; it is penal for them to allow their ships to go to sea if they are carrying passengers without exhibiting a passengers' certificate.
580. Do they in a case of that kind have to send to the Custom House to get a clearance? The owners generally have superintending engineers and ships' husbands, and as a rule these men make arrangements for laying up the vessel. When that has been done they communicate with the Board.
581. According to the 31st section of the Act, the Marine Board are to grant certificates and transmit lists to be put up at the Custom House. The question is whether, if the Marine Board is not satisfied that the ship is in a sound condition, and desires her inspection, it is in the power of the Board to stop the vessel from going to sea by not granting the certificate upon which the vessel will get her clearance from the Customs? It could be done by the Board refusing to give the certificate.
582. Have any cases of that kind occurred? Many, in the course of time.
583. Have there been any within the last three years? I do not remember; but I will have the matter looked

Captain
F. Hixson.
22 Feb., 1894.

- looked up. You must understand that vessels are not prohibited from going to sea if they do not carry a Marine Board certificate; they are only prohibited from carrying passengers.
584. But surely you have jurisdiction over vessels which do not carry passengers? Certainly.
585. What inspection are vessels that do not carry passengers subjected to? To the ordinary inspection of inspectors.
586. That would be twice a year? It is done constantly. I must tell you that under the late Act, and it is a transcript of the English Act, responsibility for sending an unseaworthy ship to sea rests with the ship-owners. It is a misdemeanour both on the part of a ship-owner or a master. They are liable to a penalty of £1,000 for sending or taking an unseaworthy ship to sea. There is also a power under the Marine Board Amending Act to detain a ship in the manner I have already indicated.
587. It would be impossible for a ship to go to sea without first obtaining a certificate from the Marine Board? If she were carrying passengers.
588. But in cases where passengers are not carried? We do not certify any vessels except those which carry passengers.
589. Have you no jurisdiction over other vessels? We have jurisdiction, but we do not issue certificates. As I said just now, the responsibility of sending an unseaworthy ship to sea rests with the owners. If there is a complaint on the part of a crew, we can detain the ship.
590. Are all steam-vessels leaving this port obliged to carry two safety valves? Yes.
591. Does the Marine Board see that is done? Yes.
592. That is a part of the duties of Mr. Cruickshank? That is so.
593. No steamer leaves the port without his inspecting her? No; or knowing that she has two safety valves.
594. Does he invariably inspect the steamer to ascertain that she has two safety valves, before she leaves the port? He does not exercise the same supervision over ships which do not carry passengers as over those that do.
595. Suppose an accident were to happen on board a steamer, is it not the duty of the captain or engineer, as the case may be, to report the accident and enter it upon the official log? Yes.
596. I suppose no case has come under your notice where an accident has taken place that has not been reported? Not a really serious accident. Minor accidents may take place which are not reported.
597. I see that by section 52 of the Navigation Act the owner or charterer has to enter into a bond of £500 before a ship is cleared out; I suppose that only relates to foreign-owned steam-ships? Yes.
598. But your inspectors have power to inspect those ships? If they come under that section.
599. And also to muster the crews? Yes.
600. And if it is found that the ship's gear is bad it is the inspector's duty to report the fact? Yes.
601. The question of pilotage-exemption certificates has been agitating the public mind a good deal lately; we know that certain captains are allowed exemption, and that has been detrimental to the interests of the pilots of this community;—do you not think that the law should be so amended as to do away with these exemptions? I think it would be very objectionable to do away with the system of exemptions. The pilots of whom you speak are all Government employees, and they cannot therefore be affected to any considerable extent under the exemption system. The Marine Board's policy has always been to make the port as free and accessible as possible to trade and commerce.
602. Would you apply the system to foreign-going ships? I am dead against foreign-owned ships having exemption certificates.
603. But there are cases where the captains of foreign-going ships have exemptions? Yes; and there are cases in which men sailing under a foreign flag have obtained exemption certificates.
604. In those cases what would you do? I would deter them from obtaining exemption. I would limit the exemption to British captains.
605. Take the case of a British ship (say) from London, which may be a constant trader here, you would give the captain an exemption? Certainly.
606. But in the case of a ship trading here from (say) Germany, you would debar the master from obtaining an exemption? If he flew the German flag I would.
607. In other words would you give the exemption only to those vessels flying the English flag? Yes.
608. Take the case of a ship having to be shifted from Circular Quay round to Lamb's Wharf, would it be necessary in that case to engage a pilot? It is optional with a master of a vessel whether he employs a harbour pilot or not, supposing he is not himself exempted. I believe there are some few cases where the captains have employed persons other than the regular Government pilots for doing this work.
609. But the law does not permit any but licensed pilots to do such work? Not properly speaking.
610. You do not mean to say that unlicensed men have done the work? Not unlicensed men, but men who have not been the captains of the ships have done it. That is, men holding exemptions from the Marine Board; but they are not masters of the vessels they are moving.
611. I suppose there are a good many persons in Sydney at the present time holding these exemptions? A good many.
612. And who undertake this work? I do not think there are many who undertake this work. One or two do it. The Marine Board have lately issued a regulation to stop the practice.
613. I suppose that it is the intention of the Marine Board to see that proper effect is given to this regulation? Yes; the Board believe that the spirit of the Act is, that no man should be allowed the privilege of an exemption unless he be the master of the ship.
614. To what examination do you subject persons before granting them an exemption? They have to go before the Examiner in Pilotage, and he puts them thoroughly through the pilotage of the port.
615. Does he give the certificate of exemption, or is it given by the Marine Board? It is given by the Board upon his recommendation.
616. I suppose the men who get the exemptions pay the usual fee? They have to pay for the exemption certificate. Once they are in possession of the certificate they are subject to no further tax.
617. But do they not pay a yearly fee? There is no yearly fee. Once they obtain possession of the exemption certificate they hold possession for ever without further fee.
618. *Mr. J. D. FitzGerald.*] Do you know of any other port in the world where such an exemption is allowed? The same thing prevails in many parts of the world. It is a practice in all these Colonies, and to a considerable extent now in England.
619. The exemption from pilotage? Yes.

Captain
F. Hixson.
22 Feb., 1894.

620. Is it not a fact that many of the captains of the larger vessels entering Port Jackson, who are holders of exemption certificates, nevertheless engage pilots? Quite so.
621. Is it true, as has been often alleged, that men who hold exemption certificates, are engaged as chief officers, or as officers of vessels entering Port Jackson, by captains who have not the exemption certificates, for the purpose of escaping the pilotage fee? There are a few instances of the sort; but the regulation to which I have already referred as having been issued by the Board will, it is believed, put a stop to that practice.
622. Do you think the regulation has so far been successful in that direction? To a great extent.
623. *Chairman.*] I suppose no master, mate, or engineer is allowed to go on board any of the vessels under your jurisdiction, unless he has first passed the usual examination? No; they must pass that.
624. Do they submit themselves to the Marine Board for the examination? Not directly. The Marine Board have an examiner, and there is a distinct form for all these examinations. These forms are kept in the office, but the Marine Board do not personally take part in the examination. They issue certificates upon the report of the examiner.
625. I suppose the examinations are of several kinds? Yes.
626. One for navigation and the other for seamanship? Yes.
627. There is a third class of examination I believe, relating to harbour and river steamers? Yes.
628. Applicants are not subjected to such a rigid examination in connection with harbour and river steamers? Not to so rigid an examination as in other cases;—and for those going outside there are two classes of examinations, one for the coasting trade and the other for the foreign trade. The examinations are different in each case.
629. With regard to the boats on sea-going ships how do you ascertain whether the boats in the davits or on the chocks are in a fit condition to be used at any time they may be needed? They are thoroughly examined, each time a vessel renews her certificate. Boats are often condemned and new ones placed in a ship at the instance of an inspector.
630. Does your inspector ever have the boats lowered into the water? Often.
631. In how many instances has that been done? I could not say, but I know that Mr. M'Ritchie is a painstaking officer. He exercises great control over vessels' boats.
632. In the case of the "Kanahooka" recently—were not her boats on being lowered found to be in a very bad condition;—the boats, you will remember, were lowered at the time of an accident, and I should like you to account for the circumstance that the bad condition of the boats had escaped notice? It was probably the case of a vessel which did not carry a passengers' certificate. The inspector does not exercise the same supervision in those cases as in others.
633. Would it not be wise in your opinion if these colliers were subject to the same examination as other steamers with a view to the preservation of life? Yes; I believe it would be a very good thing.
634. Did you instruct any of your inspectors to furnish a report in the case of the "Kanahooka"? The case of the "Kanahooka" occurred in Queensland waters, and will be dealt with by Queensland authorities, I presume.
635. I suppose you are satisfied that the regulations in regard to inspection are rigidly carried out? I think they are, fairly well.
636. You would not be sure that they are carried out in their entirety? I do not like to say too much, but I think the inspection is reasonably well carried out. We occasionally have casualties here, but we have had very few. I am proud to say that only four lives were lost on the coast last year.
637. I observe from the Act that you have considerable power in the matter of the load-line. Do you know of any cases where the load-line has been shifted? Yes. We are in communication with reference to a case at the present time. The case of the "Governor Bowen," I think. In several cases after the mark has been agreed to by the Marine Board, the owners or captain have shifted it, and you would think that they would be the last persons to do anything of the kind.
638. I suppose if any case of the kind came under your notice, you would enforce the penalties attaching to such an offence? We should deal with the case on its merits. I cannot say exactly what the Board would do. All these matters come before the Board, and they are very firm in administering the Act.
639. Do you not think it would be well to adopt the practice which has been adopted in the mother country of cutting the load-line into the ship's side, so that it could not be shifted? I think that would be a good plan. Often in the case of the repainting of a ship, it is alleged that the load-line has been shifted by accident.
640. Do you not think it would be well to amend the Act in this direction? I think it might be a good thing to provide that the mark shall be cut in a substantial manner.
641. You would recommend such an amendment of the law? Yes.
642. I see there is a Schedule to the Act in reference to the number and dimensions of boats with which sea-going ships are to be provided—Schedule F? Yes.
643. Have there been any cases in which you have had to make the captain of a vessel remove one boat and substitute another? Yes. Many of these things are done without any correspondence whatever.
644. I suppose that if the captain is a careful man, he will see that such things are done? As a rule, we find that the owners and captains co-operate very fairly with the Board in matters of this sort.

TUESDAY, 27 FEBRUARY, 1894.

Present:—

MR. G. D. CLARK. | MR. DAVIS.
MR. EDDEN.

A. J. KELLY, ESQ., IN THE CHAIR.

Captain F. Hixson, recalled and further examined:—

Captain
F. Hixson.
27 Feb., 1894.

645. *Chairman.*] You promised at our last meeting to produce certain returns? Yes. I produce a return showing the number of vessels detained by the Marine Board during the last three years. [*Vide Appendix B1.*] I also produce a letter from Mr. Cruickshank, the engineer surveyor, relating to the steamers "Kembla" and "Lawrence" having been refused passengers certificates. [*Vide Appendix B2.*] I also

also produce a schedule which I think should be attached to any Bill amending our existing law. [Appendix B3.] It contains the latest regulations of the Board of Trade relating to life-saving appliances. It follows very completely the provisions of our Marine Board Act, and I think it should be attached to any new legislation likely to be brought forward.

Captain
F. Hixson.
27 Feb., 1894.

646. You would recommend that? Yes. It really provides for boat accommodation, and a life-belt for every person going to sea.
647. *Mr. Davis.* You are under the Treasury Department? Yes.
648. Has any Colonial Treasurer applied to you for any information with reference to the framing of a new shipping law? Yes; I have been in communication with the present Colonial Treasurer with reference to the framing of a new law.
649. You have made several recommendations to him? Yes.
650. With regard to deck cargo on steamers, you have stated that there are inspectors whose duty it is to see that no deck cargo, calculated to interfere with the navigation of a vessel is placed on board of her, or that there is not too much deck cargo? That is so.
651. That only applies to passenger steam-ships? It applies particularly to passenger steam-ships, but we have interfered in the case of little vessels carrying boilers or other deck cargo likely to interfere with their safety, but as a rule, our action applies more to passenger steamers than to other vessels.
652. How would an inspector get to know that a little vessel was about to carry a boiler on her deck, or some other heavy piece of cargo which would endanger her safety? There are two inspectors especially told off for duties of this kind in Sydney. They find out, as a rule, anything of the sort which is going on. We often get information too from persons on board the ships.
653. As to deck cargo? Anything that is considered dangerous or inconvenient.
654. Have the inspectors power to stop any vessel from carrying deck cargo? They have certain powers, but the fact is that it is a misdemeanour on the part of owners to send a ship to sea, or on the part of the captain commanding her to take a ship to sea if she is considered dangerous. If the inspector points out to the Marine Board anything which he considers dangerous the Board communicate with the captain or the owners showing them the liability they incur under the Act. This generally has the effect of their seeing that the objectionable cargo is stowed below hatches, or that something of the sort is done.
655. But you only point out the liabilities which the owner or captain incur? No; we go further than that. I have produced a return, from which you will see cases in which we have detained ships which we have considered to be dangerously overloaded. In all cases of that kind the ships are provisionally detained.
656. If your inspector expresses the opinion that the safety of a vessel is endangered from overloading from deck cargo or anything of the kind you have power to provisionally detain her? We treat her as an unseaworthy ship, and provisionally detain her. The provision of the Marine Act, which is a transcript of the Imperial Act, is as follows: In the first instance, it is a misdemeanour, as I have mentioned more than once, on the part of owners or captains to be parties to the taking of ships to sea in an unseaworthy condition, and beyond that the State can step in and interfere if it be considered that the vessel is in an unseaworthy condition. I may mention here that a good deal of responsibility attaches to action of this sort, because we know that ship-owners as well as other classes of the community are very prone to go to law with the Government. You will thus see that we have to act with a great deal of tact, because there are important interests involved in the mere provisional detention of a ship. If a ship is ready for sea and the Marine Board detain her for only twenty-four or forty-eight hours the owners could show that they were injured through the Board's action. We have therefore to be very particular in these cases, but I need hardly say that we do take action when we consider it necessary.
657. You said last week, with reference to steam colliers running to Sydney from the coal ports, that you were aware that some of them arrived in this port with their hatches off, or were probably at sea with their hatches off? Yes.
658. You do not know how the practice could be stopped in the case of colliers arriving during the night? There would be a little difficulty about that.
659. Have you ever had any complaints as to steam colliers being overloaded? Yes.
660. Have you ever had any of the masters up before you? Yes; and we have more frequently sent inspectors on board. I may mention that to my mind the recklessness with which the masters of these vessels will sometimes, if they get the chance, load them up is very remarkable.
661. You are aware that there is a good deal of competition between the steam colliers, and that there is an arrangement whereby the masters obtain a bonus if they take an extra quantity of coal? I have heard that such is the case. I may mention that we have several times had owners or masters fined for overloading.
662. Are you aware that the practice still goes on in this port to an inordinate extent? It is very likely that it goes on. I have had serious complaints more than once as to the condition of the colliers of the port, and it has been ascertained that these vessels have been made the receptacles for the remnants of cargoes of other vessels, and really they have not been at sea in the condition in which they have been seen in the harbour.
663. Are you aware that it is quite a common practice if a steam collier is coaling a ship down at Neutral Bay or one of the large ocean steam-ships, to arrive at night after dark having on board from 50 to 75 tons of coal more than she is allowed to carry? I do not know that.
664. Of course you are aware that gangs of men are always ready to go off from Circular Quay as soon as the collier is alongside the steamer? Yes; I am quite aware of that.
665. And you can see for yourself that if the collier is not discovered at night-time to be overloaded it will be quite possible for her to raise her mark before daylight? That is so.
666. That is quite a common practice in Sydney—colliers having to load a vessel at Neutral Bay or one of the ocean-going steamers frequently come into port at dark, knowing perfectly well that although they are overloaded their mark will be well up before daylight because the discharging will commence immediately they enter the port? I think we shall be able to stop that practice to a certain extent now we know that it prevails.
667. Do you think it will be possible to arrange with the inspectors to visit these places? I think so. Perhaps the better plan would be to gain the co-operation of the water police. They are active in detecting vessels without out lights, and are quite willing to assist us in other ways.

Captain
F. Hixson.
27 Feb., 1894.

668. What is the practice in cases where the inspector has not noticed a part of a vessel which happens to be unseaworthy? We often hear rumours that such is the case. Statements as to vessels being in a bad condition often come from some of the crews. These crews, as a rule, are always anxious—for their own safety, I suppose—and so give us information as to any defects. That has been done in many instances.

669. If the complaint is made by any of the crew, would you require it to be signed by the whole crew? We do not wait for that; as I have said the policy of the Marine Board is usually to discharge duties of this kind as rapidly and effectually as possible. The Act provides for a certain form of declaration—that so many of the crew should come before us—but if we hear of anything detrimental to the safety or even to the comfort of those on board a vessel we always without this formality send an officer or inspector on board, and as a rule with the desired effect. In many instances the men who complain do not care to appear. They give us the information privately, and we do our best to protect them.

670. Suppose a crew sign a requisition for a survey by the Marine Board;—would they have to pay for the survey? The crew are never charged; we do the work with our own people.

671. You have had complaints from several crews, I believe, as to the unseaworthiness of ships? Yes.

672. There was one case in which the crew refused to go to sea on account of the unseaworthiness of the ship. I refer to the case of the "British Commerce" which occurred about eighteen months ago? I think I recollect that case.

673. Her rigging was bad up aloft, and the statement was made that the surveyor sent down by the Marine Board never went up aloft to look at it? I do not think Mr. McRitchie is a man to shirk his work. I believe he was the officer who made the survey in the case to which you refer. As far as I can recollect, the complaint was not borne out. You can quite understand that there are often disaffected people on board ships who make complaints. Men often complain when they want to get discharged. All that they want to do is to get rid of their bond with the ship as easily as they can. We have sometimes had cases of that sort.

674. Do the inspectors ever go on board the cargo steamers, and inspect their life-saving appliances? In the case of vessels that hold our certificates, yes.

675. But it is not absolutely necessary that a vessel not carrying passengers should hold your certificate? No.

676. Do you not think that that is altogether wrong? I have already suggested that the schedule I have handed in, should be attached to any new legislation with a view to remedy that state of things.

677. This is one of the changes you would like to see effected? Yes.

678. Of course if these cargo vessels had to carry your certificates they would have to undergo periodical survey? Yes; every six months.

679. Now, with reference to passenger steamers, do you consider that the intercolonial steamers sailing out of this port with passengers are provided with sufficient life-saving appliances for the number of passengers they carry? Perhaps in some instances they should carry more than they do. If the schedule which I have handed in becomes law, the passengers on every ship will be perfectly safeguarded in this respect.

680. I went to the trouble the other day of counting the passenger list of the "Mararora," one of the finest passenger steamers running into this port. I found that she went away with 217 saloon and 167 steerage passengers, making a total in all of 384. I put her crew down as seventy souls all told. That would make 454. Do you think the "Mararora" carries sufficient life-saving appliances for 450 souls. I may remind you that she carries eight boats? Perhaps she would scarcely have sufficient if she carries only eight boats. That would not be sufficient boat accommodation for the number of passengers you indicate.

681. You could not allow an average of more than forty for each boat? No; and that would provide for only 320, but if the schedule which I have handed in is adopted in the new legislation, it will remedy that state of things. My impression is that the "Mararora" does not hold a New South Wales certificate. In the case of vessels holding our certificates, they are obliged to have a life-belt on board for every passenger and every member of the crew. They do not get their certificate unless that condition is complied with.

682. Are you aware that a Bill has been introduced into the House of Commons, called the Seamen's Rating Bill? I believe so, although I am not posted up in the subject.

683. Do you think it would promote the safety of life if those who are shipped as able seamen, and who may be called upon to work the boats and life-saving appliances, had some certificate of competency? I think there should be something of the kind. I know that it is the case in the Royal Navy. A man does not get his post as able seaman without showing his proficiency.

684. You cannot conceive of men who have never been to sea in their lives going on board ships and pretending to undertake the duties of able seamen? No.

685. I suppose you have heard that of late years that has been the practice in this port in time of trouble? I have heard so.

686. With regard to the number of the crew which a vessel carries, you have no power under your Act to determine the number? No.

687. Do you not think it a strange anomaly that we should be so particular about life-belts and life-boats and fire extinguishing apparatus, and that there should be no provision in the law enabling you to say when a vessel is undermanned? I think it is. The old Act made it compulsory for four seamen and an apprentice to be carried for every 100 tons, but that principle was dropped when the Seamen's Laws Consolidation Act was passed in 1854.

688. From your long experience at sea in various capacities you do not think that a steamer of 400 tons going to sea with only three hands on board could be said to be properly manned? Certainly not.

689. You are aware that a steamer sailed between Newcastle and Sydney during the strike of 1890 in that way? So I understand.

690. If a vessel could not get a crew and the captain was satisfied to take her to sea you could not prevent him from so doing? No.

691. You have nothing to do with the quality of the crew under any circumstances? No.

692. The crew might be suffering from *delirium tremens* or they might be unable to understand a word of English, they might not understand a single word of command, but nevertheless you could not interfere? No.

693. And you think the power of interference in such circumstances as those should be vested in the Board? I certainly think there should be power to prevent evils of that sort somewhere.

694. You do not think that it is calculated to promote the safety of either the travelling public or seamen when vessels are allowed to go to sea either undermanned or manned by men incompetent to perform the duties demanded of them? No.

695. Your inspectors do not go on board vessels of any class not holding your certificate? Not so frequently as in the case of those holding our certificate. If a vessel holds our certificate the Marine Board guarantees that she is fit in every respect to do the work on which she is employed. In the case of vessels which do not hold our certificate there is not the same responsibility upon the part of the Marine Board.

696. The guarantee in that case rests entirely with the ship-owners? Yes; with them and the master.

697. Consequently, if a vessel were not guaranteed by one of your certificates it would be possible for her boats to remain in the chocks until they were pretty well rusted down? Yes; but I think it would be a matter of great difficulty for the State to keep the whole of the boats in order. It really must rest with the captains and officers of the vessels whom you would expect, for the sake of their own safety, to take a little interest in the matter.

698. You are aware that in the bustle of running to and fro between the coal ports and Sydney, short distances, those on board very seldom think of the possibility of disaster coming upon them? I am afraid not.

699. And you think that better provision ought to be made, in view of the contingency of disaster overtaking these vessels? Yes; my experience at sea has always been that it is necessary to keep seamen back from running into danger. They are quite careless in such matters generally.

700. You stated at our last meeting that you had power to survey ships and have their load-lines marked? Yes.

701. Have you any fixed scale? Yes.

702. What scale do you go by? We have a very elaborate scale, which was projected in England by the Board of Trade.

703. So much free board for every foot of hold? Yes, and intricate measurements as to the build of the ship in addition to that.

704. You practically carry out the scheme recommended by the Board of Trade in England? A similar scheme—yes.

705. Are you supposed to insist that a stated number of boats shall be carried? There is a provision in the present Act, but I do not consider that it is satisfactory. That is why I advocate the adoption of the schedule I have produced. I think it should be attached to the first Navigation Act Amendment Bill that is passed.

706. You consider that a vessel undermanned, or carrying a crew of incompetent men, is a danger to other vessels navigating? She is.

707. A case occurs to me in which a Newcastle steamer, full of passengers, was nearly cut down by a vessel carrying a crew of kanakas, none of whom knew port from starboard;—that would be dangerous to the vessel carrying them as well as to other vessels? Certainly.

708. *Chairman.*] The schedule you have handed in this afternoon you desire to substitute for Schedule F of the existing law, I suppose? Yes.

709. You gave the schedule careful consideration before submitting the proposed amendments? I did, and I think it is positively necessary that it should be made law as soon as possible.

710. You strongly recommend that? Yes, I do.

711. *Mr. Davis.*] You have power to issue regulations for the control of the harbour traffic of Sydney? Yes.

712. Do you not think that collisions in the harbour have been very frequent lately? No; I think that we are marvellously safe. I looked out of my window not three days ago and counted sixteen vessels under weigh in Sydney Cove at one time. Considering the traffic of Sydney Harbour, I think we are marvellously clear of collisions.

713. *Chairman.*] Is that not owing to the new wharfage accommodation which has been recently provided? Yes, to a certain extent.

714. In old times the steamers used to cross one another, but now the wharfage accommodation has been so arranged that there is no need for them to cross? The whole of the wharfage improvements are not yet complete, but the work is under construction. The Marine Board have always endeavoured to keep the up-harbour traffic on the west side of Sydney Cove, and the down-harbour traffic on the eastern side, thereby preventing many crossings.

715. *Mr. Davis.*] Have there not been a great many collisions between the two Balmain ferry companies? More bumps than actual collisions. You see the persons employed on the steamers are employed to compete with each other, that is, with the men on the boats belonging to the rival companies, and I am surprised, under the circumstances, that we have not had more serious collisions.

716. The boats sometimes run very close to one another in approaching the wharfs and jetties? I think the masters of these steamers are put in a trying position. The unfortunate men are employed to do all they can for their company, and each company is competing as hard as it can with the other. If a collision occurs the master is the man who is blamed, and he is really only obeying the orders of his employers.

717. You have no power to arrange a time-table for the two companies? No; all that we have power to do is to make them adhere to a time-table upon which they have mutually agreed.

718. *Mr. G. D. Clark.*] Would it not be a good thing if you had power to make a time-table in certain instances; take the case of the Balmain ferry; tables have been arranged on each side again and again, but it seems impossible to arrive at any mutual agreement in the matter—it seems to me that power ought to be vested in some authority not only to draw up time-tables when boats are competing against each other and running to the same wharfs, but insisting on the time-tables so drawn up being adhered to? It would perhaps be a difficult position in which to place a public body to ask it to produce a time-table to suit competing companies. I may say that in the case referred to I have done all I can to bring about an amicable arrangement in regard to the time, but each company insists that certain times of the day, and, in fact, certain minutes of the day, are most favourable to them. In this way a number of difficulties present themselves. No doubt if there were some authority to draw up a time-table for them it would be a good thing.

Captain
F. Hixson.
27 Feb., 1894.

Captain
F. Hixson.
27 Feb., 1894.

719. I understand that you have no power to deal with cases of collision unless the damage to property exceeds £50, or life is lost? We cannot take the master's certificate away unless serious damage is done to a vessel or loss of life occurs; but we often inquire into minor cases. We spent three days over this Balmain ferry business a short time ago, inquiring into an allegation of incompetency and misconduct, and the opinion I formed at the end of the three days was that the man so charged was a smart fellow, and knew his work as well as anybody.

720. *Mr. Davis.*] Of course he was working for his employers? Yes; and all that I can say was that he is a most intelligent man.

721. *Mr. Edden.*] You said in reply to the Chairman that there were cases in which vessels went out of port with their hatches off;—I suppose that at a port like Newcastle many colliers would leave the port at night as well as in the day-time? They leave at night-time almost as frequently as in the day-time.

722. I understood you to say that you had an officer at Newcastle whose duty it was to see that the hatches were put on? Yes.

723. Have you only one officer there who discharges this duty? Only one special officer.

724. Then it would be impossible for this officer to discharge his duty at night-time as well as in the day-time? Of course he cannot be on duty always. There is really more than one officer who discharges this duty. There are inspectors among the pilots and harbour masters people. They take note of these things in the day-time, and the special officer is to a great extent available for night duty. At the same time he is not always there.

725. Do you think that is a sufficient number of officers for a port like Newcastle where so many vessels are always leaving? Of course, if vessels are to be inspected constantly night and day one officer would not be sufficient.

726. Do you not think it is necessary that vessels should be inspected night and day if there is to be safety? I believe it is, but at the same time the masters and officers of the ships who are really the persons most interested in matters of this sort should look after it. One would naturally think that they would be the first men to see that steps necessary for the safety of the ship were carried out. The State cannot possibly look after every ship belonging to private owners. If the individuals on the ships do not look after these matters it is impossible for the State to do it effectively.

727. If a vessel leaves Newcastle at night-time with her load-line below the water, and there is no one on duty to see that the thing is done, there is no one to detect the offence until the vessel arrives at her destination? That is so.

728. And if the ship's destination is beyond the Colony there would be no liability upon the owners? It does not matter at what port the ship arrives so long as it is a British port because the Merchant Shipping Act is reciprocal. A ship leaving Newcastle for instance overloaded could be met at any British port and the masters or owners could be proceeded against. We frequently have communications from the Board of Trade, and from the neighbouring colonies, on the subject.

729. You know for a certainty that there is reckless overloading at times? Upon some of the vessels—yes.

730. I understood you to say that the Board have frequently had occasion to reprimand the owners and masters, and to take proceedings against them? Yes.

731. I see that the penalty for overloading is a fine not exceeding £100, what fine is generally imposed? The magistrates I must say are rather adverse to heavy fines, but I have known £10 and £20 fines inflicted.

732. I suppose you could not suggest any more effectual means of preventing overloading? The public are very apathetic in matters of this sort until a catastrophe occurs. Then everyone wants to know why a certain thing was not done. Perhaps it is not news to you to hear that the Marine Board meet with anything but sympathy on the part of the public when they interfere in the discharge of what they consider to be their duty. Of course when there is a catastrophe the boot is altogether on the other leg. A clever lawyer, before a magistrate who does not perhaps know very much about these matters, would perhaps succeed in covering with ridicule any complaint the Marine Board might make if there were no loss of life or limb involved in the case.

733. I understood you to say a short time ago that you were often under a compliment to the crew of vessels for giving you information with regard to any defect in them? Yes.

734. And that these men in many instances did not like to appear? Certainly.

735. What is the reason of that? They think they might be discharged by the captains or owners if it were known that they had made themselves prominent. I knew of a captain trading out of this port who was notorious for appearing before the owners, and expressing his willingness to do almost anything but for that dreadful Marine Board. The same man used to come quietly to us and say, "Look at what they are going to put on board the ship. Do not let them do it." The man was two-faced. He was anxious for his own safety on the one hand, and on the other frightened of offending the owners, and this is not the only case of the sort.

736. Does not the fact of the Board having to depend upon the sailors and officers for information show either that there are not sufficient inspectors or that the inspectors do not do their duty? As I have said, it is impossible for the State to look after every vessel. All these vessels are private property, and the State must deal very cautiously with the owners of that property. The ship-owning business has latterly been anything but a paying one, and any unnecessary interference would be a mistaken policy. At the same time, if real abuses exist, it is the duty of the State to interpose and sift them out.

737. You said, in reply to Mr. Davis, that the recommendations you have made in the document which you have handed in to-day would provide boat accommodation and life buoys for every passenger on steamers? Yes; and for every other ship sailing out of port.

738. *Chairman.*] I suppose you know that some time ago it was the intention of the Colonial Treasurer, Mr. See, to bring in a Bill for the reorganisation of the Marine Board? I do.

739. Have you had any consultations with Mr. See as to the drafting of that Bill? Yes.

740. You approve of the introduction of that legislation? I do not disapprove of it.

741. You think that the Board, as the Colonial Treasurer proposed to reorganise it, would be preferable to the Board which now exists? Well, the tendency of the present day is in the direction of class representation, and I do not see why it should not be applied to the Marine Board as well as to other bodies.

742. You think that all interests and all those engaged in maritime pursuits would be better served by the Board as proposed to be reconstructed? Yes; and more satisfied, perhaps.

743. *Mr. G. D. Clark.*] Do you not think that the powers of the Marine Board might be extended in the direction of issuing regulations for harbour traffic? It might, perhaps, be done, but you place a public body in rather an anomalous position when you ask it to undertake the control of private enterprise and competition.

Captain
F. Hixson.
27 Feb., 1894.

744. Do you not think it would be well in the case of the two Balmain Ferry Companies for the Marine Board to interfere, and draw up a time-table? I am afraid the Marine Board would not give satisfaction even if it did interfere. It certainly would not satisfy both sides.

745. *Mr. Davis.*] And it might be charged with partiality? Quite so.

746. *Chairman.*] Have your Board any control over the small 50-ton vessels which run down to Lord Howe Island? In the same way that we have control over other vessels.

747. I suppose they are allowed to carry passengers in the case of emergency? There is no restriction of that kind. The passengers go at their own risk. The Passenger Act comes in only when there are over fifty passengers.

748. You have no control with respect to the cargo carried by these vessels? Only if there is overloading, or if there be any dangerous cargo, such as explosives, or things of that sort.

749. Does the jurisdiction of your Board extend to Lord Howe Island? It does. We have a flagstaff there. It is a port of New South Wales. We pay one of the inhabitants a trifle for signalling, and things of that sort. The place is really a part of New South Wales territory.

750. Is it not rather an expensive part? I think it is, and a very troublesome part.

751. *Mr. Davis.*] You are aware that the Marine Board is charged with being over-stringent in what it did in the case of the "Royal Tar." Is there any foundation for that charge? The "Royal Tar" scarcely came under the jurisdiction of the Marine Board. The case was dealt with by the Emigration Department. The Passenger Act to which I referred just now provides that when a vessel carries over fifty passengers it shall come under the special regulations of the Emigration Department. This ship had to be altered from an open hull to a passenger-carrying vessel. I may say that I do not know anything about the case officially, but I did hear that an officer had insisted upon the ship's mainmast being taken out on the plea that it was not sound, and that it was found sound, and was put back again.

752. What officer was that? Captain Vine Hall, I believe.

753. Acting for the Emigration Department? Yes.

754. I believe the cable also had to be increased in size? I heard that that was so.

755. That necessitated the hawse-pipes being made larger? Perhaps it would.

756. Is there any provision in the Emigration Act as to what the size of the chain cable shall be? Not in the Act, but I think there is authority under the Act to enforce certain alterations if they are considered necessary.

757. And the "Royal Tar" was really surveyed by Captain Vine Hall, acting for the Emigration Department? Yes.

758. The Marine Board having nothing whatever to do with the matter? Quite so.

TUESDAY, 13 MARCH, 1894.

Present:—

MR. G. D. CLARK, | MR. DAVIS,
MR. EDDEN.

A. J. KELLY, ESQ., IN THE CHAIR.

Mr. William Cruickshank called in, sworn, and examined:—

759. *Chairman.*] You are Engineer's Surveyor to the Marine Board of New South Wales? Yes.

760. It is the intention of this Committee to make recommendations for legislation dealing with our shipping laws, and we shall be glad to hear your opinion as to the alteration of those laws. I suppose that, in your capacity of Engineer's Surveyor, you have had ample opportunity to observe the defects of the existing law affecting harbour-going steamers and intercolonial boats? I have had a fair experience of the operation of the law.

Mr. W.
Cruickshank.
13 Mar., 1894.

761. Could you suggest any amendment of the law which would tend to safeguard the interests of the public? The principal thing I would point out is the necessity for having all steamships surveyed independently of their carrying passengers.

762. That is not provided for by the Act? No.

763. I suppose you have a good knowledge of the Act? I have a fair knowledge of it in so far as it affects my own Department.

764. Is it not mandatory on your Department to see that all steamers are inspected at least once every six months? It is not compulsory so far as all steamers are concerned for them to be officially examined.

765. Under what conditions do you examine steamers? Only passenger steamers are examined.

766. And you would apply the survey to all steamers? Yes; as is done in Victoria.

767. What term would you suggest? The term is a matter for consideration. Large ocean-going ships might be surveyed once in twelve months, but harbour or coasting steamers should be surveyed every six months. We have no option as the law now stands. We have to examine all passenger steamers every six months.

768. Did you examine the "Warrimoo" lately? Yes.

769. Did you find anything defective in her? Nothing seriously defective.

770. In your opinion she was in a thoroughly safe condition to undertake her voyage? Under the conditions under which she sailed. I may say that I received a letter from the engineer the other day written from Fiji. He said that everything was working satisfactorily.

771. Have you any control over the boilers of harbour steamers? We examine all harbour steamers, provided they carry passengers.

772. Those that do not carry passengers can go as long as they please without examination? Yes.

773. Do you think that is right? No; I think that all steamers, whether they carry passengers or not, should be subject to the same examination.

Mr. W.
Cruikshank,
13 Mar., 1894.

774. *Mr. G. D. Clark.*] How often do you say you examine steamers belonging to this Colony? Every six months officially, but they are examined from time to time as we happen to be about.
775. Do you examine the machinery of foreign-owned vessels which are not registered in this Colony? Sometimes, at their own request.
776. Suppose representations were made to you by the firemen of a particular ship that her boilers were unsafe, would you have power, apart from any request by the captain or engineer, to examine her? That question was decided some years ago when we were surveying some of the French and German vessels. It was decided that we had not the power as there was a treaty existing between the Old Country and France and Germany that their vessels should be treated as men-of-war, and should have all the privileges of men-of-war so far as we are concerned.
777. But in the case of British-owned vessels sailing to foreign ports, I suppose you would have the necessary power? We have the same power over them as we have over our own vessels.
778. Have you power to prevent a vessel from going to sea if, in your judgment, her machinery is not in good order? I have no power.
779. But you report the matter? Yes.
780. Do you know whether the power rests with those to whom you report to prevent a vessel from going to sea if, in your judgment, it is necessary that she should be detained? They have that power.
781. I suppose your examination extends only to the machinery? No; it takes in the whole of the vessels—hull, boilers, engines, and equipment.
782. In the case of any vessel registered in the Colony, if representations were made to you from the firemen, you would not hesitate to ascertain whether those representations were correct or not? We have power to go on board any ship, whether she carries passengers or not.
783. *Mr. Davis.*] Do you ever receive complaints from the crews of passenger steamers? Very seldom.
784. That is, I suppose, on account of your putting them through a periodical overhaul? I suppose so; we have practically no trouble with them.
785. Do you know the steamer "Lass o' Gowrie"? Yes.
786. Do you know what was the matter with her recently? A joint of a patch on her boiler blew out.
787. She would not come under the category of a passenger-carrying steamer? She has not been upon our books for many years.
788. Then I suppose a considerable time has elapsed since you examined her? I do not think we have examined her for ten or twelve years.
789. Do you not think that when the recent accident happened to her she was placed in jeopardy? She may have been, in bad weather.
790. The lives of all hands might have been lost? It is possible.
791. You have no power to determine when a ship is adequately manned in the stoke-hold? None.
792. But you have power to determine when a vessel has all she requires in the engine-room? So far as the engineers and engine-room are concerned, we have ample power.
793. You see that they carry certain spare articles in case of accident? Yes.
794. Are they not supposed to carry them under your regulations? The word is "should," not "shall."
795. Do you not think that the word "shall" should be there instead of "should"? In some cases and with some persons.
796. You mean that "should" is quite sufficient for some companies but not for others? Yes.
797. But the word "shall" would include all? If the word "shall" was there we would give effect to it, but it is not there.
798. But if these things are required in the interests of life and property, surely every effort ought to be made to see that they are there? It is a very large question. I may mention that the word "should" is used under the Board of Trade and Lloyd's rules.
799. Still as regards deck equipment the word "shall" is used? Yes.
800. Why should it not apply to the engine-room? Because it is a difficult thing to know where to stop when you are providing spare gear.
801. But a certain number of articles are enumerated as those which should be carried? Yes.
802. And that number would not be exceeded even if the regulations contained the word "shall"? No.
803. But it would be more definite? Of course if you use the word "shall" whatever articles were enumerated would have to be aboard the ship.
804. But a number of articles are enumerated as being necessary at the present time. I suppose the regulations would not request that they should be carried unless they were considered necessary by those competent to form an opinion? You have to take a number of things into consideration; for instance, some of our vessels make very short journeys on the coast; the owners knowing that these vessels are only a short time away from port and think that if anything happened there would be no difficulty in getting repairs made. You must remember that spare gear costs a lot of money.
805. Could you not arrange that in the case of steamers making short trips the spare gear need not be insisted upon? The whole question has been elaborately gone into by the authorities in the Old Country, and the regulations as at present framed are the outcome. I can quite appreciate the difficulty; sometimes a vessel takes a short run, and sometimes a long run. The majority of vessels, as a rule, carry sufficient spare gear.
806. How many of the accidents which have occurred do you suppose would have been prevented if spare gear had been carried? Comparatively few.
807. You have provided in your regulations for the carrying of spare gear, and you have power to say whether an engine or boiler is sufficiently strong;—do you not think you should have power to define the number of hands necessary to work the machinery? Personally, I do not want any more power. I think I have too much already. I have practically unlimited power.
808. In some directions, but in this particular direction you have none? My personal opinion is that it is a delicate question to touch. The spare gear required for a modern set of engines is a very difficult thing to define, because there are so many different parts which might break. It is difficult to say what part you should compel vessels to carry in duplicate. Suppose you insisted upon twenty duplicate parts being carried, some other part of the engine of which you had no spare gear might break down. The question is surrounded by a lot of difficulty.
809. Do you not think that it is necessary that you should have power to define the number of hands necessary to work the stoke-hold? If we had power to define the number we should be in a position to do so.

Mr. W.
Cruikshank.
13 Mar., 1894.

810. Would you consider a vessel well manned, with due regard to her safety, if she had in her stoke-hold a crew who had never been to sea before as firemen? Decidedly not.
811. Has any case come under your notice within the last few years in which a vessel in these Colonies put to sea with a crew in her stoke-hold who had never been to sea before? Not any. I have not made any inquiries on such a subject; it is not a part of my duty.
812. You are empowered to inquire into the state of the engines and boilers; do you not think it is quite as important that some inquiry should be made into the competency of the men who have to work the machinery? I think it is a very important thing that the men should have had some experience.
813. You think then that you should also have the power to determine whether a vessel is properly manned? Of course those who go into the stoke-hold should have had some experience, but whether I should have power to determine their competency or not is another matter.
814. But do you think you should have the power? I do not think I ought to have the power.
815. You think it should be delegated to someone else? Yes.
816. *Chairman.*] Will you submit to the Committee, in writing, such amendments of the law as you consider necessary? I am quite willing to put a few of my principal suggestions in writing.
817. *Mr. Davis.*] Do you think that in the case of the "Lass o' Gowrie," if you had had power to examine the vessel's boilers, the accident might have been prevented? The probabilities are that it would have been, but you cannot make infallible machinery. We have power to go on board any ship, but it is a delicate matter to interfere with private property. For instance, there are persons who own steam-yachts; we must give them credit for knowing something about their own business. In this democratic country you have to be very cautious.

THURSDAY, 29 MARCH, 1894.

Present:—

Mr. EDDEN, | Mr. DAVIS,
Mr. J. D. FITZGERALD.

A. J. KELLY, ESQ., IN THE CHAIR.

Mr. Samuel Smith called in, sworn, and examined:—

Mr. S. Smith.
29 Mar., 1894.

818. *Chairman.*] You are the Secretary of the Seamen's Union? Yes.
819. How long have you been acting in that capacity? Two years and six weeks.
820. As a rule you have a fair knowledge of seafaring matters. You are acquainted with the wants and requirements of seamen? Yes.
821. You were secretary to the Union during the late struggle between the seamen and their employers? Yes; during the strike of 1893.
822. During that strike you had every opportunity of seeing in what way the operation of the law affected the men of your Union? Yes; I had a good opportunity of learning all that transpired during the dispute.
823. Were there any particular things which came under your notice at that time, concerning which you are in a position to give the Committee any information? On many occasions I saw the law violated by the shipping of men who were neither seamen or firemen.
824. Can you give us the particulars of any of the cases? Yes. I could name the case of the "Hesketh." Several men were shipped on board that steamer who had no previous experience at sea. Men were also shipped on the "Rockton" who had no previous experience at sea. On the "Adelaide" and "Innaminka" men were also shipped who had not been to sea before. The same thing happened on the "Emu."
825. Did any instances come under your notice in which crews were signed on ships without a representative of the Shipping Office being present? In the case of every vessel registered in New South Wales no representative of the Shipping Office would be present when the crews were signed on.
826. Do you not think it rather injudicious that crews should be allowed to sign on on any vessel in the absence of a proper witness from the Shipping Office to attest the signatures? My opinion is that in no case should crews be signed on unless a representative of the Shipping Office is present. That is one of the grievances which the men had in the months of July and August last. Men were being signed on day after day and they did not comply with the law as regards the production of discharges or even licenses to ship.
827. Do you not think it would be better if the crew of every ship were signed on at the Shipping Office? Yes. I should say that that was the proper course to adopt.
828. You would strongly advise it? Yes.
829. Cases have been brought under your notice where the granting of permits was carried on indiscriminately during the late trouble? Yes. In one case five men went to the office of the Shipping Master and asked for permits or licenses to ship; they had already made a voyage on a steamer. The Shipping Master wanted to know what ship they had been on. They were instructed by the captain to say that they were on none, and that they were going to ship on board the "Hesketh." The Shipping Master declined to give them a permit unless they brought a note from the captain or some other person. They went to the Free Maritime Labour Bureau in Clarence-street and each of the men was supplied with a note similar to that which I now produce. They returned to the Shipping Office and got licenses to ship as "deck hands." The Shipping Master considered them so incompetent that he would not rate them either as A.B.'s or firemen.
830. Do I understand you to mean that these men had already gone a voyage without a permit? Yes. They had no license to ship and no discharge.
831. They had not been signed on? No.
832. Could you name these individuals? One of them was named John Mitchell. I have shown you the note he received. Another was named William Cooper, and another John Hall. There was another young man whose name I forget. It happened to be a case in which the captain was prosecuted. A conviction was obtained against him.
833. Do you approve of the system adopted by the Maritime Free Labour Bureau in issuing these notes? No; I and all other men going to sea have a strong objection to applying to the bureau. We think that either the chief officer or engineer is the best man to judge of the fitness of applicants to engage in any capacity.

Mr. S. Smith. 834. It has been denied that the system you indicate was practised by the bureau. We have been told that if men wish to ship on any vessel, they had first to make application to the engineer or mate. If they got a note from either of those officers they went to the Labour Bureau and were supplied with a ticket? They are doing that now—that is since this investigation commenced.

29 Mar., 1894.

835. Had the men in the case to which you have referred made application to the engineer or mate, or did they go direct from Messrs. Burns, Philp, and Co.'s office to the bureau? They were despatched from the bureau. They had never seen the captain until they went on board. The particular men to whom I refer were furnished also with a password.

836. You will see that there is a printed form on the back of these tickets setting forth the conduct and qualifications of the men, and leaving space for remarks of the officers. Do you approve of that being done in the case of these tickets issued by the bureau? The seamen object to the system very strongly. They think it is adopted for the purpose of blacklisting the men. The ticket is sent back to the Maritime Labour Bureau, and if the remarks on the back of it, as to the conduct and qualifications of the man, are not satisfactory, he is refused employment on any future occasion. It is possible to write remarks on these tickets which they would not dare to put on a seaman's discharge.

837. I suppose you have a pretty good knowledge of the Seamen's Laws Consolidation Act? Yes.

838. Is there any particular clause of the Act which you think requires amendment? I have seen the amendment proposed by Mr. Murphy to section 33. The effect would be to restrict the issue of licenses to seamen. I would prevent men who are incompetent from obtaining licenses to ship.

839. You approve of that amendment? Yes.

840. There is a section of the Act under which the Shipping Master may decide questions which seamen may refer to him. Do you know of any matters of that kind which have been brought under the notice of the Shipping Master? The chief disputes referred to him concern wages and things of that sort. Sometimes a question arises as to whether men are entitled to overtime, and that would be referred to the Shipping Master in some cases.

841. Can you call to your memory any particular cases in which the Shipping Master has had to adjudicate? I remember that when Captain Brown was Shipping Master he was called upon to determine the question as to when pay should terminate. The master claimed that when the vessel was laid up the crew were not entitled to wages. The crew claimed that they were entitled to pay while there was a number of the crew upon the articles.

842. I suppose you know of many cases where no account of wages has been rendered? It happens almost daily in the case of ships discharging their men in New South Wales. The provision of the Act in this respect is not complied with.

843. You would recommend that the Act should be strictly enforced, so far as the account of wages is concerned? Yes; that is a further reason for my opinion that all the men should be paid off by the Shipping Master, who would then have an opportunity of knowing whether the Act had been complied with or not.

844. With regard to the twenty-four hours' notice, do you think the laws should be amended in that respect? I think the arrangement meets with the general approval of the men. They are quite willing to give or take twenty-four hours' notice, but the captains often attempt to have the law applied only one way—that is, they say they can give, but that it is optional with them whether they will accept notice. In the case of a number of ships' articles, drawn up in Melbourne, discharge is at the master's option. The "Warrimoo" was signing under those articles while she was trading between Australia and New Zealand or in any part of the Australian colonies. The men feel aggrieved at the idea that they can be discharged anywhere. They would prefer one port of discharge I think, for giving or getting twenty-four hours' notice.

845. With regard to the matter of unclaimed wages, has any case come under your notice where the friends or relatives of a seaman have had any difficulty in regard to wages which should have been justly paid? I have heard of no case of injustice with regard to any of the men here. A case happened recently, however, in which a man belonging to the "Monawai" was drowned at San Francisco. Some interested persons made application here to the Shipping Master, and were informed that if the brother of the deceased applied through the Intestate Office he would get the money. The applicants were asked to communicate with the brother, who is resident in the United Kingdom.

846. Another section to which I should like to direct your attention is that providing for the payment of wages in cases where seamen are left behind on the ground of inability;—have any cases under that section been brought under your notice since you have been secretary to the Seamen's Union? I cannot think for the moment of any case where any men have had their wages taken away. In any case where a man is put ashore the wages are left for him.

847. Is it not possible as the matter now stands for a captain to leave a man behind on the ground of inability, paying him only at the rate of 1s. a month? The practice should be for the captain to go to the hospital and see that the man is satisfied, and that the amount left behind is what he is entitled to. The men think that the captain's statement ought not to be taken as to what is due to the man; but that some opportunity should be afforded for checking the amount left behind.

848. Do you know of any cases in which men have fallen sick on board ship, and have not received proper attention;—do you know of any cases where there have not been proper medical appliances? Yes. The local shipowners are very careless in this matter of attending to men who are injured while following their calling.

849. Is the medicine chest generally properly equipped? No. My experience is that it is generally very inadequately equipped. Nothing of the kind is provided in the case of vessels trading on the coast.

850. You would advise that the law should be more strictly enforced, and that it should be applied to vessels trading on the coast? That is one important amendment which is required. I have known of accidents happening to members of a crew when there has been nothing on board to give them immediate relief—no bandages or anything of that kind. In one case a man got his ankle severely twisted on board one of the Illawarra Company's boats. They did not go to the trouble of getting the man into a hospital, and he was supplied with a hospital ticket by the Seamen's Union. I know of another case in which a man was severely injured and had several of his ribs broken; he was supplied with an outdoor ticket, which was of no service to him, and he had to get an indoor ticket from the Union. Another case happened on board the "Maitland"; a man had one of his fingers taken off, he was also supplied with an outdoor

outdoor

- outdoor ticket. Several other cases of the same kind have occurred on board the "Maitland," and the attention of the owners has been repeatedly called to the necessity for causing the dangerous parts of the machinery to be covered, but the requests have not been complied with. There have been four or five cases on board the "Maitland," where men have lost their fingers through the machinery being exposed.
851. Now, with regard to the boarding-masters' charges, have any cases been brought under your notice where men have been overcharged? The practice is carried on regularly, no doubt, but it is applied more particularly to men engaged on sailing vessels, and of course they do not come so immediately under our notice. Few of these men being members of the Union, it is with great difficulty that we can discover the cases. There is one boarding-master whom the Shipping Master is very anxious to see. He has frequently invited him to come to the Shipping Office, but he has always declined to do so. He has been cautioned with reference to his conduct. He induces men to leave sailing vessels arriving in port; these men are for the most part strangers. He gets the men billets on board some of our local sailing vessels, and imposes charges on them which are contrary to the Act.
852. Has the Shipping Master taken any steps to have this man prosecuted? Yes. He has repeatedly informed me that he has told the man to come down to see him, and has also told him that he is contravening the shipping law, but the man always declines to come to the office.
853. Does the Shipping Master know where this man resides? I dare say he does. I should say that he must do so.
854. Yet he has failed to take any steps towards prosecuting him? He finds a difficulty in getting the men to enable him to lay the necessary information. The men have great diffidence in giving evidence. On one occasion I remember directing his attention to a particular case. The men made certain representations to me, but when it came to taking them down to the Shipping Master to supply him with the necessary information they declined to go, from the fear, as they informed me, that they would be black-listed and prevented from getting further employment. That is a further reason for my opinion that all the men should ship from the Shipping Office. So far as improper charges are concerned, I have in my mind the case of a captain who made a charge of ten shillings to his crew. He informed them that he charged them that money for getting them a job. On the Shipping Master's attention being called to the matter the captain within the last week returned the ten shillings to the men, stating that he did not want to take the money from them, but that he would take particular care to get it out of them in another way, implying that he would only ship his men through a boarding-master, and that he would deduct both his charges and the captain's charges. I am referring to the captain of the brig "Prospero."
855. With regard to the inspection of vessels, do you not think it is necessary that the law should be so amended so as to apply to 50-tonners;—is it not necessary that steps should be taken to see that they are manned by competent men? There are often wages cases upon vessels which do not come within the scope of the Seamen's Laws Consolidation Act, showing that it would be better for the men themselves if the vessels were brought within the Act.
856. Are you aware that some of the seamen shipped on these coasting vessels are most incompetent men? Yes; they will take almost any man, whether he be a seaman or not, if he is a likely looking man to shovel coal. They never ask the men whether they have had any previous experience or ask them to produce papers proving that they are seamen.
857. It is not necessary to get a permit to join these vessels? It is not.
858. The law as to permits only applies to vessels over 50 tons? Yes.
859. I suppose no instance has come under your notice where seamen have refused to join ships? No.
860. No instances have come under your notice where seamen have quitted ships before they have been properly secured? None.
861. I suppose no cases of assaults upon officers have come under your notice? No.
862. Do you approve of the schedule of the Act with respect to the engagement and discharge of crews—I mean as to the fees? There is a great complaint in the case of vessels making trips to some of our coaling jetlies, trips which are accomplished within thirty or even twenty-four hours. The men are made to sign on and sign off, and it costs them a shilling. They think that some arrangement should be made obviating that, because it may occur half a dozen times a month, when it would be a tax of six shillings.
863. Who collects the fees? They go to the Shipping Office; the captain deducts them from the men's pay. The same thing applies to vessels making trips between Melbourne and Sydney, or Brisbane and Sydney. The "Warrego" recently made three trips in a month, and as she is not a New South Wales registered vessel, the men had to pay double fees; that is to say, it cost them 2s. for each discharge.
864. Would you suggest any alteration in the Act passed in 1879 for the protection of the aboriginal natives of the islands of the Pacific Ocean from imposition when engaging as seamen? I do not think any alteration is required; but it is necessary to see that the law is strictly carried out. I know there has been some laxity. It is even more necessary that these men should be taken before a Shipping Master than that other or European seamen should be taken before him.
865. Do you approve of having the boats lowered before a ship goes to sea? I think that every time a vessel is in port there should be a thorough inspection of her boats. I have known of cases where boats have lain in the davits from one six months' end to another.
866. And have never been lowered? They have never been removed from their position. When efforts have been made to raise them out of the chocks and swing them out, it has been found impossible to move them.
867. Has any case recently come to your knowledge where, when the boats were lowered and struck the surface of the water, the water came through the bottoms? It happened on board the "Kelloe"; there was a collision going down the harbour, efforts were made to get the boat swung out and it was found impossible to do so. When they did get the boat out it sank.
868. Could you name any other case in which a similar thing has happened? Another case occurred on board the "Barcoo"; violent efforts were made at boat-drill to swing the boats outside the ship; the efforts were unsuccessful, and they had to put the carpenters on to one of the boats when the vessel got into port.
869. You produce a letter written by yourself to the *Evening News*, with reference to the protection of seamen from the malpractices of boarding-masters? Yes. [*Vide Appendix C.*]
870. *Mr. J. D. FitzGerald.*] You are authorised by your Society to come here and give evidence? Yes.
871. And anything you say would be sure to receive its endorsement? Yes.

- Mr. S. Smith. 872. Has there been any discussion at the meetings of your Society upon these subjects? We have discussed at various times the question of undermanning, the difficulty men have of getting employment, and the question of boycotting.
- 29 Mar., 1894. 873. You mentioned the case of the "Hesketh," which occurred during the maritime strike? Yes.
874. What breach of the shipping law was there in that case? The men had been carried out to sea without entering into an engagement.
875. You say that a conviction was obtained? Yes; in that case, and also in the case of the "Emu."
876. Under the existing Act? Yes.
877. What was the case of the "Rockton"? It was a case of men being taken who had never been to sea before. One of the men is still on board the "Rockton."
878. The men were not seamen in any sense of the word? No.
879. Do you remember the practice of shipping men as "deck hands"? Yes. Where the Shipping Master feared that he might be going outside his functions, he supplied the men with licenses to ship as "deck hands," thinking that they were not competent to be rated as "A.B's." or "firemen."
880. Is there anything in the shipping laws permitting men to be shipped as deck hands? No.
881. What is the ordinary meaning of a deck hand? My idea of a deck hand is that of a man employed to look after cattle, or employed on board a harbour steamer.
882. It is assumed that there is no knowledge of seamanship whatever? Yes.
883. During the maritime strike, did it ever come under your observation that the men who shipped as deck hands took the place of qualified seamen? Yes. A considerable number of them took the place of men who were thoroughly competent seamen, and who were rated as "A.B's."
884. Looking at the practice, not as a seaman, but as a member of the ordinary public, do you not think that it endangered the lives of the travelling public? I think it placed the lives of all persons on board in jeopardy.
885. You are strongly of that opinion? Yes.
886. Officially, you made a protest at the time? Yes. The Union pointed out to the general public that lives were imperilled on board these steamers which were manned by men who had no knowledge of the ordinary duties of seamen.
887. I remember at the time the statement was made that some of these men had never been to sea before? Yes.
888. And that they were seasick? Yes. Several of the men had to be brought out of the stoke-hold in a state of collapse; they were thoroughly done up.
889. Was there any storm on the coast at the time? No; there was only ordinary weather.
890. Fortunately? Very fortunately.
891. You think that if a storm had occurred, disaster would have overtaken some of these steamers? I am positive that if there had been any bad weather it would have been very disastrous to life and property.
892. Through the incompetency of the men? Yes.
893. These men were shipped through the Shipping Office? Yes. They were shipped on board in many instances. In a case of the steamer "Adelaide," some of the officials from the Shipping Office attended and supplied the men with the necessary licenses.
894. The men were shipped with the full knowledge of the Shipping Office officials? Yes.
895. I suppose you have seen the regulations under which the officials of the Shipping Office act? Yes.
896. Do you think those regulations are acted up to, or are over-strained? I think they are very indifferently complied with or acted up to.
897. You think a strict observance of the regulations might have prevented a good deal of the shipping of incompetent men during the recent maritime dispute? I am positive that they would not have erred on the side of injustice if they had seen that the regulations were more strictly complied with. They had ample proof that the men had no knowledge of the work they were undertaking.
898. Do you think they had any legal right to send the men aboard as deck hands, knowing that the men would be used as seamen, and knowing that the ships would be undermanned unless the men undertook seamen's work? I am positive that they wilfully erred in sending these men on board, because they had ample proof that they were not capable of performing the duties required of them.
899. What was the case of the "Innamincka"? Four men had been engaged through the Labour Bureau, in Melbourne, and were placed on board the "Innamincka." They came here, where they were instructed to proceed to the Shipping Office and ask for licenses to ship. None of the four men had ever been to sea before. These men had a conversation with me, and desired to have their passages paid back to Melbourne. While negotiations were being conducted with a view to sending them back to Melbourne, the second engineer came across them and advised them to go and get their licenses. Three of them got licenses, and were sent in the ordinary way on board the vessel. One of them declined to get a license, and proceeded back to Melbourne as a passenger in another vessel. Information was laid against the captain, and a conviction was obtained. None of the four men had ever been to sea before in the capacity of sailors or firemen.
900. Under what section was a conviction obtained? For carrying seamen to sea without an engagement.
901. What do you think of the Steamship-owners' Free Maritime Labour Bureau? I think it is an institution which should be abolished as usurping the functions of the Shipping Office.
902. You think it is opposed to the spirit of the shipping laws? I am quite sure that it is opposed to both the letter and spirit of the shipping laws.
903. You have been a sailor how long? Twelve years.
904. You are a practical seaman? Yes.
905. You have had some experience of English, Scottish, and American ports? Yes.
906. Have you ever seen in the course of your experience at these ports, any such institution as a Steamship-owners Free Maritime Labour Bureau? The institution here is the first I have had any knowledge of. I learn from the English papers, however, that a similar institution is in existence in England. It has been declared to be in contravention of the shipping laws.
907. The free labour offices of the shipping federation of Great Britain have been declared to be illegal, or rather many of their doings have been so declared? Yes.
908. Do you remember the case of the "Phæbe"? Yes.
909. The men were carried to Newcastle without being signed on? Yes.

910. Did the Shipping Master have any communication with you? I drew the Shipping Master's attention to the fact, and he requested me to send the men down to him. I instructed the men to go down, but apparently they had just been informed that there was a likelihood of their getting a job on board the "Phoebe" again. They declined to lay an information. The Shipping Master communicated with the master of the vessel, and the mate informed the men that if it should be discovered who the men were he would discharge them, and they would never get work in the same employ again. Mr. S. Smith.
29 Mar., 1894.
911. Who is supposed to take action in a case of breach of the shipping law? The members of the Seamen's Union have spent a considerable time in trying to make the discovery; they were under the impression that it was the Shipping Office officials, but we have been told by the Colonial Treasurer that it is the duty of any person who thinks he has been injured or has a grievance to institute proceedings against anyone infringing the shipping laws.
912. At their own expense? Yes.
913. Have you, as an executive officer of the Seamen's Union, ever taken such action? We had informations laid in regard to the illegal supply of seamen. We instituted proceedings against Mr. Thompson and Mr. Currie, which have cost a considerable sum of money.
914. That was paid out of your funds? Yes.
915. Do you not think that the initiative ought to rest with the officials called upon to administer the Act? We think the initiative should lay with the Shipping Master.
916. Upon information being supplied to him? Yes.
917. Was there any lack of vigilance on the part of the shipping authorities during the late strike? There was a general complaint as to the supplying of any person with a license to ship. They must have had ample proof that many of the men supplied were thoroughly incompetent.
918. You mean the men who were shipped as deck hands? Yes.
919. In ordinary times when there is no strike on, do the officials of the Shipping Office ship these incompetent men? No; they are very particular in ascertaining whether a man has had any previous experience at sea or not. Unless they have ample proof that a man has been some considerable time at sea they decline to engage him. They are very strict in wanting to see a man's discharge, and if it is for a short term of service, they ask him whether that is all he can show. If it is, the chances are that they will not engage him.
920. Then it would be extremely difficult for an incompetent person to ship during normal times? It would be almost impossible for a man without experience to be shipped.
921. But it is very easy during a time of industrial dispute? There is no difficulty whatever then.
922. You know section 33 of the Seamen's Laws Consolidation Act? Yes.
923. Let me call your attention to these words of the section, "or if any other person shall be desirous of engaging as a seaman it shall be lawful for any Shipping Master, on being satisfied of the fact, &c., to grant and deliver to such seaman or other person a license to ship." Under that section anybody can get a permit to ship? Yes.
924. You see the word "person" in the section;—could not a woman ship under that section? Yes.
925. As a matter of fact stewardesses do ship under it? Yes.
926. But there would be nothing to prevent a woman from shipping as a "deck hand" under the section? Nothing whatever.
927. There would be nothing to prevent that woman from going to sea? Nothing.
928. So that as a matter of fact if the Shipping Master desired to do so in the case of an industrial dispute, he could give permits to women to man ships? Yes.
929. You remember the recent maritime dispute? Yes.
930. There was a good deal of blacklisting? Yes; it still continues.
931. Do you mean to say that the men who then got into disfavour are being kept from earning a livelihood as seamen now? All the seamen who left the vessels in the month of July during the dispute are refused employment up to this day.
932. That seems very unjust? Most unjust. It shows vindictiveness.
933. You seem to have a pretty good knowledge of the Merchant Shipping Act and the Seamen's Laws Consolidation Act? Yes.
934. You have had a pretty good experience as a seaman, and you have made a study of these Acts? Yes.
935. And you naturally think that the shipping law requires amendment? Considerable amendment.
936. Do you think that among other things the Marine Board should be constructed upon a different basis? Yes; I think the whole shipping law could be amended with considerable advantage not only to the seamen but to the general public.
937. Are you prepared to give the Committee detailed information as to the amendments you consider necessary? Yes.

TUESDAY, 3 APRIL, 1894.

Present:—

Mr. G. D. CLARK,

|
Mr. EDDEN.

Mr. J. D. FITZGERALD,

A. J. KELLY, Esq., IN THE CHAIR.

Mr. Samuel Smith recalled and further examined:—

938. *Mr. J. D. Fitzgerald.*] I think I asked you a question at our last meeting about the manning of ships. There is no provision in the law settling the minimum number of men to be employed upon ships? There is no such provision in the colonial law. Mr. S. Smith.
3 April, 1894.
939. From your knowledge of intercolonial trade, do you think the intercolonial boats are sufficiently manned? I think they are most inadequately manned. I might state that quite recently there have been glaring cases of undermanning in the case of the gold rush boats going round to Western Australia. The "Gabo" left last Saturday with considerably more than 200 passengers on board, and only eight A.B.'s.
940. What is the tonnage of those boats? About 1,600 or 1,700.

- Mr. S. Smith 941. Do you think that eight A.B.'s was a fair complement for the "Gabo"? I think that at the very least there should be ten.
- 3 April, 1894: 942. You think that in any amendment of the shipping law provision should be made for a minimum? Yes; decidedly.
943. On cargo ships as well as passenger ships? Yes; I think it should be applied to cargo vessels as well.
944. In the interests of the safety of the seamen, I suppose? Yes. In one instance the "Wodonga" left with 229 passengers and forty in the crew, all told, leaving 269 souls on board. There were eight A.B.'s on the vessel. One of these men was a painter. He is placed on the articles as an A.B., but he is really a painter. That shows the necessity for a rating Bill. I might state there are only three men in a watch in a case of that kind, which would leave one man on the look-out, one at the wheel, and one at liberty if any person were to get overboard.
945. Is that number sufficient? Decidedly not. You have only to refer to the case of an accident on board the "Waroonga." It took some twenty-five minutes to get a boat lowered when a passenger fell overboard. It took them one hour and five minutes to get the man on board. There was only one man at liberty to lower the boat. He had to call out the watch below to get the boat swung out and launched.
946. Does not that show that the vessel was insufficiently manned? Yes. I may state that when the same vessel arrived here from England she had twelve A.B.'s on board. The "Wodonga," the "Arawatta," the "Bulimba," and the "Waroonga," had all twelve A.B.'s on board, together with a boatswain and lamp-trimmer, when they came out from Britain. They would not have been allowed to leave Britain with a less number in the crew. Both the "Waroonga" and the "Bulimba" started carrying as many as twelve hands between Brisbane and Normanton. In each case the number of the crew has been very largely reduced. The "Gabo," which is very nearly of equal tonnage with the "Bulimba" and "Waroonga" has only eight A.B.'s on board.
947. All this goes to show the want of a provision for fixing a minimum number in the crew? Yes.
948. You know the steamship-owners' free Labour Bureau? Yes.
949. How do the operations of that bureau affect the arrangement of the Seamen's Union? Very injuriously.
950. Do you think it probable that the bureau was instituted with the object of injuring the Seamen's Union? I consider that it was instituted for the purpose of discovering, blacklisting, and boycotting union men—preventing them from getting employment.
951. Has this been done? I could give you several instances. I know of one man who applied to Mr. Currie for a job on board the "Aramac." He was in Brisbane, and he was told by the engineer that if he came to Sydney he would get the job. On his making application Mr. Currie refused to give him one of the usual shipping tickets, stating that the man had failed to register his name upon his books. The vessel went to Melbourne, and on its return to Sydney he was again informed by the engineer that he was desirous of engaging him. He again went to Mr. Currie, and requested to be supplied with a shipping-ticket. Mr. Currie again declined to give it to him. The engineer said he was quite willing to employ the man, but Mr. Currie went down and objected.
952. You know this of your own knowledge? Yes. I know of a man who is in Sydney now, he is a competent man, and he has a wife and family, but through the action of Mr. Currie has been unable to get employment. Then there is the case of S. Tanser. The engineer on board the "Cintra" was quite willing to employ him, knowing him to be a competent fireman, but there was some difficulty in the way of his getting a ticket from Mr. Currie.
953. Do all the shipowners use the free Labour Bureau? There are only two companies who use it regularly—the A.U.S.N. Company and the Adelaide Steamship Company. Occasionally the Illawarra Company use it. I have known men to be shipped by the Union Steamship Company through the medium of the bureau. If men apply to Mr. Richmond, the superintendent of the North Coast Company, or to Mr. Todd, the superintendent of the Newcastle Company, for employment, they consult the list, and if they find that the man's name is upon it, they tell him that there is no work for him. Tanser, I may say, applied to Mr. Richmond for work, but Mr. Richmond, looking down the list, saw his name in connection with the "Cintra," and said he could not engage him. No later than Thursday last Mr. Todd questioned a man named McClelland, supposing him to be a man named McLellan, who had been on the "Macleay." He said he thought McClelland was the other man, and, if so, he did not intend to employ him, because he had left one of the vessels during the strike. In the case of the Illawarra Company, the men have to make application to Mr. Turner, or the superintendent, Mr. Fletcher, and in that case also the list is brought into use.
954. Are you aware whether there are similar offices for the supply of these tickets in the other colonies? There was an office in Victoria, but it has been discontinued because of a conviction which was obtained against the manager, Mr. Dyson.
955. What was the charge? He was charged with illegally supplying seamen, not being allowed to do so by the Act. There was an appeal against the decision, but the Supreme Court upheld the decision of the Court below.
956. That would be for pursuing the same practice Mr. Currie pursues here? A similar practice.
957. Are all the men employed on the Association's ships compelled to produce these tickets? In all ships under the Steamship-owners' Association.
958. But there are others outside? There are several small companies, such as G. W. Nicoll, Yeager & Co., McCulloch, and several small steamers. The men are not required to go to the bureau in those cases; they are engaged by the engineer or by the mate, as the case may be.
959. Have the officers or engineers to produce these tickets? No; they make application direct to the superintendent of the company.
960. What is the object of the ticket? It is for the purpose of discovering who are union men and who are non-unionists, more particularly to discover the men who left their vessels in July and August of last year.
961. The bureau is practically an organisation for boycotting? Yes.
962. For the marking of certain men? Yes; in one case three men obtained employment direct from the chief officer, from whom they had been accustomed to obtain employment. Their names were J. Marshall,

Marshall, F. Olsen, and Farnan. These men had worked some portion of a day. In the course of the day it came to the knowledge of Mr. Currie that the men were working without having made application to the bureau. He went down to the "Arrawatta," and saw the chief officer, who said he could not knock the men off until their days' work was finished, because they had started it. Mr. Currie then saw Mr. St. George, and the men were asked to come into his office after they had done their work. Mr. St. George is the superintendent of the A.U.S.N. Company. He wished to know if the men were union men, and had been implicated in the late strike. Marshall told him that he had left his vessel in the ordinary way by giving twenty-four hours notice, and had been paid off. Olsen said he had not been to sea in a steam-boat for the past three years, that would be previous to the 1890 strike, and that he had been only one voyage in a sailing vessel. He also said that he was not a union man. Currie told Mr. St. George that that was a falsehood, that he knew the man to be a union man, and that the other two men, Marshall and Farnan, were union men. Upon this ground he declined to give them employment. The men were told at the close of their days' work that they would not be required further. There is another instance. There was a man named Donovan whom Mr. St. George was anxious to engage, as he thought he was a competent man. He had been for a considerable time in the Royal Navy, and had also been employed in the Prisons Department of this Colony. Mr. St. George said he would be only too pleased to give him a job if he would go to Mr. Currie and get a shipping ticket. The man went to Mr. Currie, who refused to supply him with a ticket. He returned to Mr. St. George, and told him that Mr. Currie declined to give him a ticket. Mr. St. George then supplied the man with a note, requesting Mr. Currie to give him a ticket, as he believed him to be a competent man. Mr. Currie still declined to give the ticket, saying he would see Mr. St. George himself.

963. *Mr. G. D. Clark.*] Did Mr. Currie give any reasons? He intimated, after a good deal of pressure, that he had asked the man a few days previous to the strike starting to take work, and that on his way down to the bureau the man had called at the Seamen's Hall, from which he inferred that he was a union man.

964. *Mr. J. D. FitzGerald.*] If the law does not already provide for the prevention of such offices as the Labour Bureau and the practices of gentlemen like Mr. Currie, you are clearly of opinion that it ought to be amended in that direction? I think that if the law does not already declare such an institution as the Free Maritime Labour Bureau illegal, it should be so amended as to do so.

965. *Chairman.*] For what purpose do you say you think the bureau is run by the Steamship Owners' Association? Although it is ostensibly to engage seamen and wharf labourers, it is actually maintained for the purpose of discovering the unionists among the seamen and wharf labourers. In the case of wharf labourers, they have a system of supplying two separate coloured tickets—one a blue and one a white ticket.

966. *Mr. J. D. FitzGerald.*] I believe they have crushed out the Wharf Labourers' Union? By the operation of the ticket system.

967. And that they have very seriously injured the Seamen's Union? Yes. They supply one colour ticket to what are known as free labourers, and tickets of another colour are given to men who are assumed to be unionists.

968. *Mr. G. D. Clark.*] Do they continue the use of the two coloured tickets down to this day? Yes.

969. *Chairman.*] Do you know whether Mr. Currie has sent any men on board-ship without discharges? Yes. In 1892 he instructed about a dozen men to go on board the "Tweed" lying at Neutral Bay.

970. *Mr. J. D. FitzGerald.*] In what capacity? As firemen and sailors. Two of the men had English discharges, two of them had none at all. Mr. Currie said he would obtain the discharges and forward them on board by one of his assistants. Mr. Currie and Mr. Cockburn, the Secretary of the Steamship Owners' Association, endeavoured to obtain licenses to ship from the Shipping Master for these men, but Captain Edie declined to recognise him in the matter.

971. Do you say that many seamen have been refused tickets at this bureau? I know that one man named William Seaton has been repeatedly refused a shipping-ticket; William Paterson, Robert Wilson, and John Ferguson have also been refused tickets.

972. These cases have come under your own notice? Yes. John Fergusson had worked one day on board the "Wodonga," when the captain brought him to the bureau, to sign him on to get his ticket. Mr. Currie objected, and the man had to stand down. Mr. Currie took the same course on a second occasion, when the man succeeded in getting a job. The man gave up trying here afterwards, and got employment on one of the Canadian mail-boats.

973. Have you any knowledge of Mr. Currie sending men down to ship on steamers who have not previously seen the engineer or mate? Yes. I am aware that he has done that on several occasions in the case of the steamer "Innaminecka." The "Innaminecka" arrives in Sydney from Adelaide on Thursday. She discharges her cargo, and then goes to a coaling jetty, returning on Saturday morning. During one of these absences three men were supplied with tickets by Mr. Currie, who told them to go down to the ship on Saturday morning, and see the engineer, when they would get a job. Two of the men were named Dwyer and Elliott, the third man's name I do not recollect. He has also sent men down to several of the A.U.S.N. Company's boats, without their having seen the mate or engineer, and they have had to accept the men.

974. Whether they were competent or not? Yes. Mr. Currie made no inquiry as to whether the men were competent to fulfil their duty.

975. Do you know of any cases where men have been sent down in excess of the number actually required? On several occasions he has sent down a number of men for whom there were no vacancies. In one case, that of the "Aramac," he sent down certain men for the purpose of putting out some who had proved to be incompetent. They did not care about telling the men straight out that they were unfit for work, because they had previously declared them to be competent men in the newspapers and to the shipping authorities, who questioned them in the matter. They adopted this ruse for the purpose of thinning these men out and engaging competent men.

976. Have any illegal practices on the part of captains of sailing vessels come under your notice? My attention was drawn to a glaring case about six weeks ago of unjustifiable conduct on the part of a captain. I made investigation, and discovered that a man had been charged 5s. by the captain for being supplied with employment. I was informed that the same captain had charged other men 10s. who had been engaged on the same vessel. I refer to the captain of the "Prospero." The Shipping Master laid an information upon the facts, with which I supplied him, and obtained a conviction. The man was fined

Mr. S. Smith. £3, and was ordered to refund the money. He had charged three men 10s., and one man 5s. I will mention another objectionable practice which prevails among many captains here. About two years ago a member of the Seamen's Union had been engaged as second officer on board the "Waitemate." The captain, after getting the man on board, made overtures to him to accept £1 and leave the vessel. The man declined to accept the money, and said he would not leave. The captain then told him that he would have to sleep in the cook's quarters, which so annoyed the man that he eventually went on shore for the purpose of lodging a complaint. He complained to the Shipping Master, but before anything could be done for him the captain had left the port without the second officer, the boatswain on board acting in that capacity. The man made an attempt to obtain redress, but owing to the difficulty of putting the law into operation, he did not succeed. The vessel did not return for a considerable time afterwards, and meanwhile had changed her captain. The captain had placed on the articles against the man's name the statement that he had failed to join the vessel. The man's name is Mackenzie. I informed Captain Edie of the circumstances, but he said he could not do anything. In some cases the captains get men who are masters of vessels, with exemption papers, to sign on as masters, and to act in the capacity of mates. That is a thing which the officers would like to see discontinued.

977. Have you any knowledge of men being induced by Mr. Currie to leave their vessels in order to join coasting steamers? In one instance three men were induced to leave a German steamer lying in the harbour to engage on board a coasting steamer. They were carried to sea without signing articles. An attempt was made to get the case brought before Court, but owing to the men not thoroughly understanding the English language, we failed. One of the men said he was prepared to give evidence, but he could not get his two friends to join him.

978. Is that the only instance you know of? That is the only case I could discover in the strike of 1893, but I have a knowledge of the Superintendent of the Illawarra Company going on board some of the sailing vessels and inducing the crews of those vessels to leave, with the connivance of the masters of the particular vessels, and engage on board coasting steamers, the inducement being the higher wages.

979. What is your opinion of the conviction of Mr. Dyson in Melbourne? We are strongly of opinion that a similar conviction should have been obtained here, because the Crown Law officers of Victoria and England have declared the institution there to be illegal. The Commissioner of Customs in Victoria also gave it as his opinion that Mr. Dyson was acting illegally, and his opinion was endorsed by a Judge of the Supreme Court. I can give you a copy of the opinion of the Crown Law officers in England, in answer to a question asked by Mr. Lockwood. I will also produce copy of the communication which took place between Mr. Wilson of the British Seamen's Union and the Board of Trade on the same subject.

980. Do you think the Seamen's Union serves any purpose other than giving protection to the seamen? Yes; I think it has been the means of directing the attention of the authorities to much misconduct and infraction of the Shipping Law by the captains of vessels. It has served the general public also in obtaining for them better equipped vessels. It has also directed the attention of Marine inspectors to considerable neglect on the part of ship-owners. The authorities have declared that certain allegations made by the Seamen's Union were not backed up by facts. But the contrary is proved by the convictions which have been obtained in the Police Courts.

981. Is it true that the sailors all work eight hours while the firemen and trimmers work only six? A seaman's ordinary day is twelve hours, but occasionally they have to work eighteen hours out of the twenty-four. The majority of firemen and trimmers work eight hours; but on some of the small vessels the firemen have to work six hours. Some of the smaller vessels carry passengers to the northern coast, and the fireman has to act in the capacity of engineer, fireman, and trimmer. He has often to go to the coal-bunkers for coal, and there is then no one in the engine-room to attend to any signal from the deck.

982. Do you think that is justifiable? I think it is a practice very dangerous to every one on board. It imperils the lives of every one there.

983. What do you think would be a fair crew for vessels of the character you describe? They require two more men, one to act as engineer, and the other as fireman.

984. That would allow the men to get four hours on and eight hours off? Yes.

985. *Mr. J. D. Fitzgerald.*] Do you think the Seamen's Union has benefited the men? Yes, it has benefited them considerably. It has got the vessels more efficiently manned, and there are better provisions and better conditions than obtained generally before. I might mention that this was done while the Union was recognised by the Steamship-owners' Association. It was more powerful then than it is at present.

986. You think that the power of the Union itself has succeeded in bringing about these changed conditions? Yes; my reason for saying so is that the steamship-owners said that the law did not admit of a certain number of men being carried. The men said that they thought their request only fair, and that they found the work too hard for the number of hands then carried. In many cases they got an increase in the number of hands, and the increased number engaged had been insisted on by the Board of Trade in the United Kingdom prior to vessels leaving that country. Since 1890 there has been a regular decrease in the number of hands. Many of the vessels have been reduced from fourteen to eight, others from twelve to six. Several vessels which used to carry ten hands, a boatswain, lamp-trimmer, and eight A. B.'s are now carrying five. The vessels in which the number of hands have been decreased are, among others, the "Rockton," "Cintra," "Barcoo," "Waroonga," "Bulimba," the "Glenworth," and "Eurimbla." They are now carrying two trimmers instead of three, and six sailors instead of ten. There is only one man on the look-out on the "Eurimbla" and one at the wheel, and the man on the look-out has to relieve the man at the wheel while he, in turn, goes on the look-out. An instance occurred on board this particular vessel, where a mast-head light went out. Owing to the insufficient number of hands on board, the lamp could not be re-lit until the change of watch. The light was out for two hours. That plainly shows an insufficiency in the number of hands.

987. *Chairman.*] Is it not a well-known rule that all steamers must carry mast-head lights? It is insisted upon by the regulations of the Marine Board.

988. Have the Steamship-owners Association declined to recognise the Seamen's Union? They have declined to recognise it since the month of July, 1890. We made efforts to get them to recognise the Union, so as to effect a settlement of the wages dispute in June, 1893. I and Mr. Guthrie made application to Mr. Burns with a view to arrange some settlement, but he declined to see us as officials of the Union, although he was quite willing to give us an interview as private citizens. I have recently had occasion

occasion to write numerous letters to the Steamship Owners' Association. In some cases they have merely acknowledged the receipt of the letters, and in other cases have ignored them. Mr. S. Smith.
3 April, 1894.

989. Have you ever made any representations to them about boycotting? Yes; I wrote to the Adelaide Steamship Company and to the A.U.S.N. Company in Brisbane, also to the North Coast Steamship Company, the Illawarra Company, and the Newcastle Company. I hand in a copy of the communication and the replies received from two companies—the Adelaide Steamship Company and the A.U.S.N. Company. The others did not acknowledge the communication. [*Vide Appendix D.*]

990. What is the present rate of wages? Fireman receive £7 a month, sailors £5 per month, donkeymen, boatswains, and lamp-trimmers, £8 per month. There is a £2 reduction.

991. Do you think those wages sufficient to maintain a man and his family? I think they are quite inadequate.

992. Does the system of payment of wages give satisfaction? No; the seamen consider the system a very cruel one. It causes much hardship to themselves and families. The present system of signing men on for six months' articles, with the stipulation that they are to be on board for six weeks before they receive one month's wages, has worked very badly. If a vessel should arrive in Sydney, and be ready to go to sea again the day previous to the expiry of the six weeks—and that often happens—nine weeks would elapse before a man would receive one month's pay. A man may have been out of work for six and nine months, and may have his wife and family turned out of home, and his effects sold off before he gets paid. Persons will not extend them much consideration, because they cannot understand how it is that a man should be at work so long without receiving any pay. They do not believe that the man has not received pay.

993. It would be quite possible to pay the hands weekly? It would be quite possible to pay the hands in the coasting trade weekly and those in the intercolonial trade monthly. Some men on board the "Meinderry" have been working two months without wages, and have been practically living on charity. That is owing to the charterer going insolvent, and the owner trying to bluff the crew out of their wages. I know of a case where a man's ships' articles have been up since the 28th March, and he is only expecting to be paid this afternoon, five days afterwards. The Act states distinctly that the men must be paid within two days of the termination of their agreement.

THURSDAY, 5 APRIL, 1894.

Present:—

MR. DAVIS,

MR. MOLESWORTH,

MR. J. D. FITZGERALD,

MR. G. D. CLARK.

A. J. KELLY, ESQ., IN THE CHAIR.

Mr. Samuel Smith recalled and further examined:—

994. *Chairman.*] You promised at the last meeting of the Committee to hand in certain documents? I promised to produce the report of a prosecution in Victoria for the illegal supplying of seamen. I now hand it in. [*Vide Appendix E1.*] I also produce a copy of the opinion of the Crown Law Officers of the United Kingdom as to the illegality of the Free Maritime Labour Bureaus. [*Vide Appendix E2.*] I produce also a copy of a letter forwarded to the Secretary for Finance and Trade of New South Wales, directing his attention to the infractions of the shipping law. [*Vide Appendix E3.*] It had been denied that men had been carried to sea who had not been shipped, or who had not in their possession licenses or discharges. We have proved that such things were done by the prosecutions we instituted in the Water Police Court. We obtained a conviction against the captain of the "Victorian" among others. I also hand in a copy of a report of the prosecution of that captain. [*Vide Appendix E4.*] With regard to the general question of crimping, I hand in a copy of a letter sent by the Secretary of the British Seamen's Union to the President of the Board of Trade. [*Vide Appendix E5.*] In connection with the supply of seamen who have not been to sea before. I produce a copy of a license to ship issued by the Shipping Master of New South Wales to Otto Herman. [*Vide Appendix E6.*] It would appear that Herman had not been to sea for twenty years. I produce also a report by the Shipping Master with reference to the indiscriminate issue of permits. [*Vide Appendix E7.*] In connection with the practice of shanghaiing in Melbourne, I produce a copy of a report of a prosecution which took place in Victoria. [*Vide Appendix E8.*] I also hand in a report of a deputation which waited upon our Colonial Treasurer in connection with the indiscriminate issue of permits. [*Vide Appendix E9.*] The last document I have to hand in is a schedule of the amendments which I suggest should be made in the Seamen's Law Consolidation Act. [*Vide Appendix E10.*]

995. *Mr. G. D. Clark.*] Mr. Curry stated distinctly and emphatically in his evidence that no questions were put to applicants for work as to whether they were Unionists or non-Unionists, do you think that statement is correct? That would be quite correct. They would not ask any man whether he was a Unionist, they would ask him his name, and then refer to their list. I have mentioned to you one instance in which he accused the man of being a Unionist, and said that that was the reason he would not give him a job. The man's name was Olsen.

996. Have you any knowledge of the law relating to the examination of masters' or mates' certificates? No personal knowledge. I was examined myself for a third-class engineer's certificate. I have a certificate of competency from the Marine Board of New South Wales. I received it in 1885.

997. Are you aware that when a man is examined for a mate's certificate it is necessary that he should have been in the Colony three years? That is according to the regulations.

998. It does not mean that the man must have been three years in colonial ships. It means that he must have been resident in the Colony for that time? Yes.

999. Do you not think the law ought to be so altered that in the event of a man being able to show that he has served at sea, and is qualified to pass the Marine Board ought to examine him? I consider that any man who can show servitude in British ships should be entitled to be examined for his certificate.

1000. *Chairman.*] You are of opinion that the Marine Board should be reconstructed? I think so. I am of opinion that representation should be given to the seamen.

1001. I suppose you are also of opinion that the Marine Board should appoint an inspector to look after the interests of the seamen? Yes.

1002.

Mr. S. Smith. 1002. *Mr. Molesworth.*] Is there not a water bailiff, and is it not his duty to look after their interests? No. It is a most difficult thing to know in the first place who are inspectors, and then again, who should carry out certain functions. That is my chief reason for the recommendation I have made for defining more particularly the duties of the Shipping Master. I am personally acquainted with a case in which the captain was disinclined to proceed to sea. He was at a loss to know to whom he could apply for assistance. He knew that he had incompetent men on board, and he requested me, as a favour, to go and shake up the Marine Board inspectors. I could not get an inspector that day. I may mention that this captain, I refer to the captain of the s.s. "Tweed," was provided with the men by Mr. Currie, and he was told that if he did not proceed to sea with the men with whom he had been supplied he would find the consequences unpleasant. Two of the men sent down to him had no licenses to ship, and had had no previous experience at sea. They had been engaged by Mr. Currie as firemen. The captain said he thought they were incompetent, and he wished to know whether if an accident occurred outside at sea, he would be held responsible. He was informed that he would be responsible himself if any accidents occurred, and that there would be a possibility of his certificate being suspended. The captain said he had no intention of proceeding to sea unless he had competent men, but Mr. Currie told him that if he did not go he would have him blacklisted throughout the whole of the steamship-owners of Australia. But for the action which was taken by the Seamen's Union, the captain would have been compelled to go to sea with those incompetent men who admitted in their evidence at the Court, that they had had no experience at sea. Two of them made that admission at the Water Police Court.

THURSDAY, 12 APRIL, 1894.

Present:

MR. G. D. CLARK, | MR. DAVIS,
MR. J. D. FITZGERALD.

E. W. MOLESWORTH, Esq., IN THE CHAIR.

Mr. Samuel Smith recalled and further examined:—

Mr. S. Smith. 1003. *Chairman.*] I understand that one of the principal objections you have to the present shipping law is that there is no definite provision as to the number of men to be carried on a vessel? That is one of my objections. I think there should be some regulation as to the number of men to be carried.

12 April 1894. 1004. Do you think the list you handed in the other day showing the number of men to be carried is likely to be generally acceptable? I think it would meet with general approval.

1005. Another of your objections to the present law is that men are shipped on board vessels instead of at the Shipping Office? That is another objection.

1006. What special advantage would accrue to the men from shipping at the Shipping Office at all times? An opportunity would be afforded them of having the articles explained. That is not now done. It is only when a disagreement arises as a rule that the men discover that something to which they have objected is in accordance with their agreement. We have had several instances of that kind in the Police Court. Even captains in some cases have said that they thought they were doing right and that they did not know that the law prevented them from doing certain things.

1007. Take the case of a steamer coming in after Shipping Office hours and having to leave again the same night. How would you deal with a case of that kind? I have seldom known of a vessel of any size coming in after Shipping Office hours and going out again the same night.

1008. I am speaking of cases of emergency. A ship might come into port after the Shipping Office had closed and might have to leave again before the office opened. How would you deal with an emergency of that kind? I would give power under certain circumstances for the Shipping Master or his deputy to go on board the vessel.

1009. Are not the articles always read over to the sailors before they sign? In many instances they are not. Men are sometimes called up to sign in the midst of their work or while they are on watch, and are told in a very rough fashion to sign their names.

1010. Has not every man a right to demand that the articles should be read to him? Yes. But it often occurs that if a man shows a desire to have the articles properly explained to him, he will be told that he is not wanted. That happens even when the Shipping Master is on board, and it is another reason why I think the men should be invariably taken to the Shipping Office to sign on. In some of the steamers the cabin in which the articles are signed is so small that scarcely any of the men can get inside, and they have to hang round about the door.

1011. Would not that overcrowding be intensified if the men were all put into one room at the Shipping Office? Well, the practice is to take the whole of the firemen in the one batch, the whole of the A.B.'s in another, and then the stewards and cooks. During a late prosecution many of the men said that they had not heard the articles read.

1012. Do you think it is equally necessary that discharges should take place at the Shipping Office? Yes; because in discharging the men frequently have to make complaints, and if the discharge took place at the Shipping Office the dispute could be immediately settled by reference to the Shipping Master.

1013. Another point you raised in your evidence referred to the qualification of the men who were granted permits to ship? Yes; the seamen think there should be a Rating Act, and that no man should be furnished with a license to ship, or should be put in possession of an A.B.'s discharge, unless he has served a certain time at sea as a sailor. We think also that men who are rated as firemen should also have served a certain time at sea. In many cases men are put on board ship as firemen who have not previously served in that capacity; they have not even served as trimmers.

1014. I suppose your remark applies only to firemen and A.B.'s. You would not apply so strict a regulation to the lower grades? We think, for instance, that a man should serve in the capacity of trimmer before he is rated as a fireman.

1015. But the men must make a beginning somewhere? Let the firemen commence as trimmers, by all means. If a man has never been to sea before, he should be entered on a ship's articles as a trimmer.

1016. You see no objection to men shipping as trimmers who have not been to sea before? No.

1017.

1017. I suppose you would not apply the regulation either to ordinary seamen? No; I think you will find the rating liberal enough. If, for instance, a man could show that he has been at the work a certain time on shore, and has six months' service as a trimmer at sea, he would be allowed to rank as a fireman. If a man has had no previous experience, it is considered that he should be twelve months at sea as trimmer before he ranks as a fireman. Mr. S. Smith.
12 April, 1894.

1018. Do you not think that the shipping and paying off of crews at the Shipping Office, if insisted on, would cause considerable inconvenience to the shipping trade? I do not think so. I, myself, for many years, was in the habit of going to the Shipping Office to sign off and on.

1019. *M. G. D. Clark.*] Do you know who drew up the schedule you have handed in, referring to the number of men to be employed on vessels? It is identical with the schedule submitted to the British House of Commons, and it is based upon information supplied to the General Secretary of the British Seamen's Union, Mr. Wilson, by the members of the Union.

1020. I see that it is practically proposed to carry the same number of seamen per ton on steamers as on sailing vessels. I thought it was generally understood that a larger proportion of A.B.'s are required upon a sailing vessel? Not with the modern appliances.

1021. *Mr. Davis.*] Do you think the seamen are at present satisfied with the constitution of the Marine Board? I think the seamen are entirely in accord with the Bill which you yourself have introduced in the Assembly. We think that the representation of seamen on the Board provided by the Bill would be fair.

1022. Are the seamen at the present time satisfied with the manner in which ships are inspected before going to sea? There is a considerable amount of dissatisfaction; we find a difficulty in knowing who are the Inspectors to whom we should appeal when there is any complaint to make. The men, for instance, may often desire to complain of the ventilation, of the position of the water-closets, of the paint-locker, and things of that kind.

1023. Have they not often complained of deck-loading? Yes; it is the source of many complaints at the present time. Men have informed me again and again of the crowded condition, for instance, of the decks of some of the North Coast Company's boats. These boats have been carrying railway locomotives and railway plant generally. They carry passengers, and the decks are so crowded that it is with great difficulty they can move about.

1024. It is a feature of deck loading, I believe, that it is only put on board just prior to the ship leaving? It is put on board within the last hour as a rule.

1025. Consequently it would leave the men only a short time in which to make a complaint? There is really no opportunity at all for the men to lodge a complaint. In fact, the hours of deck loading are, as a rule, after the closing of the Custom-house, when the Marine Board officials have gone.

1026. Then you think that someone should be appointed an Inspector who would make it his business to be down on the wharfs of the various Companies as nearly as possible at sailing time? I think there should be a sufficient number of Inspectors to permit of officers being on duty there night and day.

1027. At the present time there is only one? Yes. I may mention that many vessels leave between the hours 6 and 10 at night, and come in between the hours of 4 and 8 in the morning, with these deck cargoes on board. They frequently carry live stock, and are sometimes in a terribly crowded condition.

1028. And there is no officer to carry out an inspection at that hour? No. To show the necessity for an alteration, or more strict observance of the law, I would mention the case of the "Kanalooka." Twenty tons of coal were taken out of the general cargo, and placed on deck, and what was not washed overboard had to be thrown overboard. The same state of things exists on many colliers coming into this port. They often leave the jetties without having their hatches on.

1029. Is it not a common occurrence for colliers to arrive in this port late at night in an overloaded condition, and to discharge some of their cargo alongside a ship down the harbour? Yes.

1030. To carry out the work of inspection properly, it would be necessary to place a steam launch at the disposal of inspectors, at night-time at all events, in order that they might take a run down the harbour to see the condition in which the colliers come into port? Yes; large colliers come in from the southern jetties between the hours of 6 o'clock and midnight.

1031. You have already given reasons for your opinion that seamen should not be paid off on board ship? Yes.

1032. Have cases ever come under your notice where men have been paid off on board, and where the ship has put to sea again without leaving discharges for the men? That has repeatedly happened. We took proceedings against one captain, but we were nonsuited.

1033. Is not the circumstance of the men being left without discharges generally attributable to an oversight on the part of the purser, who is deputed to leave them at the Shipping Office, and who may perhaps forget to do so? In the case of some of the larger vessels carrying a purser it is sometimes owing to the neglect of that officer; but in many instances the captain himself is at fault—he either cannot find time to go to the Shipping Office or neglects to go there.

1034. You think that the paying of the men off at the Shipping Office would do away with the present risk of their being left behind with no means of obtaining fresh employment? Yes. The men are sometimes greatly inconvenienced through not getting their discharges. They often lose the chance of obtaining other positions. They have to wait in some instances for their discharges as long as three weeks.

1035. Is there not a provision of the Act under which the men's wages are due from the time of their signing on until their discharge? There is a provision in the law to meet the case—that is, discretionary power is left with the magistrate to award the men compensation. It invariably happens, however, that they are allowed a very small sum.

1036. Has it ever come under your notice that the men have only been allowed £3 for four or five weeks? That has happened in several instances. We have the depositions in a case where the chief officer engaged a man in place of another who he said had left the ship, and whom he desired to get rid of. As a matter of fact, the man was still on board. He was carried on board the vessel as far as Cooktown, passed three ports, when he was taken ashore as a stowaway; he had never been discharged. The man was detained at Cooktown until the return of the vessel from the Gulf, when the captain, officers, and some of the crew were cited to appear at Court. The case was eventually dismissed. In the meantime the unfortunate man was left penniless ashore because the ship cleared on the following day. If

the

Mr. S. Smith. the man had been taken to the Shipping Office he would have declined to go until he got what his articles permitted him to have—that is, a free passage back to the port of discharge—which was Sydney. The man would have been perfectly satisfied with that. That is one of many cases where men would not have been left in a helpless condition had it been necessary to obtain discharges at the Shipping Office. The Shipping Master would doubtless have seen that the terms of the agreement were strictly carried out.

12 April, 1894.

1037. Is it not a fact that men of the Royal Navy have to pass examinations before they receive their A.B. certificate? Yes.

1038. Also before they are made full stokers and artificers? Yes.

1039. You think the general public are aware of the incompetence of the crews which have been carried on different vessels on this coast at various times? During the strikes of 1890 and 1893, the matter was brought prominently under the notice of the travelling public. Some persons who were travelling in vessels at that time have voluntarily given evidence on the subject. I have extracts from newspapers, showing cases where persons were over-carried in consequence of the incompetency of the crews. The extract I now hand in refers to a case which occurred on board the steamer "Corrinna" [*vide Appendix F. 1.*] I ought to have explained that it is necessary in many cases for the men to take a line ashore in a boat. In some of the cases to which I refer the men were not able to do so, and, in consequence, the vessel had to proceed without calling. I should like to hand in a letter from a passenger who travelled in the "Elingamite" to Melbourne during the strike in 1893, in which he speaks of the incompetency of the crew. [*Vide Appendix F. 2.*]

1040. Are you not of the opinion that as you did everything in your power, under the circumstances, to warn the travelling public, the authorities ought to have supplemented your efforts by suspending the passenger certificates of the vessels which were inefficiently manned? Yes; I think the Marine Board authorities were exceedingly lax in the supervision exercised in connection with vessels carrying passengers from this port. There was abundance of proof that, although all the necessary life-saving appliances insisted upon by the Board were on the vessels, it would have been absolutely useless material in the hands of the crew had they been required to use it in case of casualty.

1041. Do you remember the loss of the steamer "Hilda"? Yes.

1042. Do you remember it transpiring in the course of the evidence taken before the Marine Board in that case, that the man who was at the helm had only been eighteen months at sea, and that prior to joining the ship he had been something like ten years ashore? Yes. One of the witnesses admitted that.

1043. Was it not discovered that the disaster happened within the space of about ten or fifteen minutes, while the captain had gone down below to obey a call of nature? Yes; the accident was traced to the captain temporarily leaving the bridge.

1044. When the captain came up again the man had got the vessel right round, and was steering her onto the reef off Botany Heads? Yes.

1045. You remember that the matter was commented upon pretty strongly in shipping circles at the time? Yes.

1046. Do you not think a grave injustice was done to the master in the suspension of his certificate? Yes; I think he was in no way to blame.

1047. Do you not think, on the other hand, that the authorities were to blame for allowing the crew of the ship to sign in the capacities they did? Yes; I think considerable negligence was displayed in allowing such men to undertake such duties.

1048. You are aware also that the Marine Board sheltered themselves under the excuse that if a master is willing to take a crew to sea, and consider them efficient, they cannot object? That is the reply they invariably give when their attention is called to the case of a captain putting to sea with an incompetent crew.

1049. Is it not also a fact that the master who complained of the incompetency of a crew on certain occasions would simply be told to make way for someone else? My experience is that captains who have been desirous at times of getting rid of incompetent men have been subject to dismissal.

1050. With regard to mail contracts, I believe the seamen consider that there ought to be a clause in all mail contracts specially providing against the employment of Asiatic crews? Yes. There is a very strong feeling among the seamen in regard to the subsidising the vessels manned by coloured labour.

1051. I suppose in case of a casualty these coloured crews would almost invariably prove incompetent? Yes.

1052. Have any cases come under your notice in which the coloured crew of a vessel, in a position of danger, have failed lamentably in the execution of their duty? Yes; one case to which my attention was directed was that of the P. and O. steamer "Tasmania," in the Mediterranean. When the crew were called upon to man the boats, they failed to execute the order, and were seemingly more desirous of looking after their own safety than that of the passengers.

1053. There was no discipline whatever? No. The men showed they had no idea of what was expected of them.

1054. Do you remember also the case of the "Quetta," in the Torres Straits? In the case of the "Quetta" also, there was a great want of discipline.

1055. And partly in consequence of that many lives were lost? Undoubtedly.

1056. You have probably heard of many cases of shipwreck in various parts of the world where coloured crews have acted in a similar way? Yes. They have always conducted themselves in the most cowardly manner. Some of the steamers in the China trade are manned by the same incompetent crews. I have had opportunities in Queensland of observing the way in which they performed their duties. I have often been struck with the utter incompetence of the coloured crews on the British India Company's steamers. I believe the company has since then discontinued employing them.

1057. You think the contemplated action of the various Postmasters-General of these colonies, recommending to the Imperial authorities the exclusive employment of European crews on mail steamers, is perfectly right? Yes. I think something of the kind is very much required.

THURSDAY, 26 APRIL, 1894.

Present:—

Mr. DAVIS.

Mr. J. D. FITZGERALD.

Mr. MOLESWORTH.

A. J. KELLY, ESQ., IN THE CHAIR.

Mr. Samuel Smith recalled and further examined:—

1058. *Chairman.*] You desire to hand in Mr. Justice Williams' summing up in the case of the prosecution of Captain Dyson, the manager of the Steamship Owners' Free Labour Bureau in Melbourne? Yes.
[*Vide Appendix G.*]

Mr.
S. Smith.
26 April, 1894.

Mr. Thomas Robert Allt called in, sworn, and examined:—

1059. *Chairman.*] I believe you are the chairman of the Steamship Owners' Association? I am.
1060. I believe you are also the chairman of the North Coast Steam Navigation Co.? Yes.
1061. I suppose you have a good knowledge of the shipping of the Colony and the operation of the shipping laws? A fair general knowledge.
1062. I suppose you are aware that this Committee has been appointed to institute an inquiry with a view to an amendment of the shipping laws? I have heard it stated that that is the case.
1063. Can you make any suggestion which in your opinion would facilitate the work of the Committee? None.
1064. You do not think that the law requires amending in any way? I am not exactly in a position to give you information upon that point, but the secretary of the Association is present and he might be able to do so.
1065. I desire to ask you a question in reference to a matter which probably came under your notice in your capacity of chairman of the North Coast Steam Navigation Co. I desire to know whether it is a fact that your company had an engineer out collecting men during the late strike? I could not say.
1066. *Mr. J. D. Fitzgerald.*] Will you swear that during the late strike your company had not an agent collecting sailors and engineers? I could not swear one way or the other. The whole of that portion of the business is left to the management of another man. They are details with which I should not in the ordinary course of things be acquainted.
1067. *Chairman.*] What is the name of the gentleman to whom you leave this business? The marine superintendent, Mr. Richmond.
1068. Do you think he would be in a better position to give us these details? He could certainly give you the details better than I could do. I am merely the governing head.
1069. You would advise the Committee to examine this gentleman with reference to the details? Well, all I can say is, that if there be any information to be obtained in reference to the company, he would be better able to give it than I should be. A member of the Committee mentioned engineers just now. With regard to engineers, I may say, that only yesterday an engineer applied to me to give him a berth, and in that case I put on the man myself.
1070. Have the Board of your company ever given instructions with reference to the employment of certain men? The Board would give no instructions of that kind at all.
1071. As chairman of the Board of directors of the company, you must be acquainted with the fact that men who left your ships during the late strike and who obtained re-employment upon them, were, on being recognised by Mr. Richmond, put off again? I cannot speak as to that.
1072. Were no instructions given to that effect? No; I can only say this, that if any of those men who left my employ without giving me one moment's notice got back into my employ, and the fact came to my knowledge, I should give instructions that I would rather be without the men who had left me in the lurch.
1073. The case to which I refer happened only three weeks ago? I can only repeat that as an employer, I would not again employ if I could help it a man who had left one of my ship's without a moment's notice, and in so doing had left me in the lurch.
1074. But you would not be inclined to impose any hardship upon a man? I would not, but naturally I should be disinclined to give employment again to the men I describe. As regards the men who have left me after giving me twenty-four hours' notice, I have employed them again.
1075. I suppose you have not studied the shipping laws of the Colony very much? I cannot say that I have closely studied the shipping laws. I look at them, of course, in the same way that I should look at many other things in connection with shipping, but I cannot say that I have studied them, and I should be exceedingly sorry to argue with anyone upon any point in the law.
1076. I suppose you are aware that there is a provision in the law to the effect that incompetent men shall not be employed at sea? I have no doubt there is something of that kind. But I do not think any shipowner would employ an incompetent man if he were aware of his incompetence.
1077. I merely asked the question with a view to bring under your notice the fact that the law provides a penalty for the employment of incompetent men? In all cases of that kind I should be guided by my officers. It is not at all likely that I should employ any man unless I knew him to be competent. I would not risk my ships in that way.
1078. You have not, as chairman of your Board of directors, given instructions that the men for your ships shall be engaged only through the Maritime Free Labour Bureau? I cannot call to mind that I have. But, as a matter of fact, our men are engaged through the labour bureau.
1079. What does your company contribute towards the expenses of the bureau? I am not aware that we contribute 1d.
1080. From what fund is the institution maintained then;—I suppose the Amalgamated Steamship-owners must pay the manager's salary, for instance? I know nothing at all about that. That is a detail with which I am not acquainted.
1081. As chairman of the Association it has never been brought under your notice? No.
1082. You believe that the bureau is a good system of employing men? I do.

Mr. T. R.
Allt.
26 April, 1894.

- Mr. T. R. Allt.
26 April, 1894.
1083. I suppose that every man upon your ships is employed in the ordinary way through the bureau? I do not know that that is necessarily the case. For my own part I do not care whom we employ, so long as they are good men. I have no likes or dislikes.
1084. I suppose your company always carries a full complement of men on its ships? I can only say that, as far as my knowledge goes, the whole of our ships are sufficiently manned with competent men.
1085. With competent men? Yes; with men who give every satisfaction.
1086. I suppose you are not aware of the fact that there were men engaged on board your ships during the late strike who were young farmers from the northern rivers? At all times one is liable to get indifferent men. It is impossible for an employer to invariably secure the services of first-class men.
1087. Do you think that the man who has been following the plough is competent to jump on board a ship, and at a moment's notice carry out the duties of a seaman on that ship? I do not say that you could not get better men than those to whom you refer, but you might get many worse men. A good strong able man, even from the plough, would be quite able to do work on board a steamer.
1088. You do not mean to say that a man coming fresh from the plough could take a "turn" at the wheel, for instance? I do not say that he could steer a ship; but you must remember that we do not usually take men from the plough.
1089. Still, you have said in effect that almost any sort of man is good enough to do work on a steamer? If I said that I think I ought to correct the remark by making this explanation. What I wished to convey was this: that sailors on board steamers at the present day are in a totally different position from sailors of twenty or thirty years ago, when it was necessary that they should have a thorough knowledge of sails and ropes. The work on board steamers nowadays is, with the single exception of steering, more labourer's work than sailor's work.
1090. Have you ever come into contact with any number of ordinary labouring men who were competent to do even the labouring work of which you speak on board a ship without having previously gone to sea? I am afraid you must subpoena persons better able to express an opinion on such a point than I am. I am not the captain of a ship and I cannot answer questions of that kind. I am not competent to answer them.
1091. *Mr. J. D. FitzGerald.*] You are the chairman of the Steamship Owners' Association? Yes.
1092. That Association has established a labour bureau in Clarence-street? Yes.
1093. Of which Mr. William Currie is the manager? Yes.
1094. Who appointed him? Although I am chairman of the Association I could not say at this moment, without reference to the secretary, who appointed him. I did not appoint him anyhow.
1095. Is he responsible to you for all his acts? I do not know about that.
1096. It seems somewhat extraordinary that you, as chairman of such a large and important body as the Steamship Owners' Association, should not be acquainted with all these matters in connection with the Free Maritime Labour Bureau? A great many of the details concerning which the Committee apparently want information are left to the manager, and we are perfectly satisfied.
1097. Do you know whether he has ever found it necessary to ask permission of the Steamship Owners' Association to give evidence before this Committee on oath? He has never made the application to me. I have had no communication with him on that subject.
1098. Do you know whether he applied to anyone for permission? If he communicated with anyone on the subject, he would probably communicate with the secretary.
1099. But you are Mr. Currie's employer? To a certain extent I am.
1100. And as one of his employers, you are responsible for most of his acts? I do not consider that I am responsible for nearly all the acts of Mr. Currie; but, so far as the business he does in connection with the Association is concerned, of course I should be to a certain extent responsible.
1101. Do you instruct him how to act? I do not.
1102. Does your Association? No.
1103. Does not your Association supply the funds for the carrying on of the bureau? No funds are supplied to my knowledge, but you would probably be able to get more information upon that point from the secretary himself.
1104. But when we examine your employees they tell us they are not allowed to give us the information we require. Mr. Currie, for instance, said so. He said that without the permission of the officers of the Association, he could not give us information, and that he thought it would be better to get the information we required direct from you. We think that you, as chairman of this important Association, ought certainly to know something of its workings? Although I occupy the position of chairman I do not interfere at all with its working, so far as the details of which you speak are concerned.
1105. How many steamers are owned by the members of the Steamship Owners' Association? That I could not tell you. I should probably be deemed very inquisitive if I were to inquire from each steamship owner how many ships belonged to him.
1106. Do you remember when the bureau was first established? Yes; I think I do.
1107. When was it? I do not quite remember the year, but I may say that the bureau was established in order that we might get men when we wanted them.
1108. What incident out of the ordinary run of things had happened to cause the institution of the bureau? A strike; that was the origin of the bureau.
1109. I suppose that in reality the bureau was established with a view to the employment of non-union men? I know nothing of the kind; the bureau was established with a view to the employment of the men we required. We did not care whether they were union men or non-union men. We wanted men.
1110. Do I understand you to say that you did not care whether the men belonged to unions or not? Undoubtedly.
1111. But you have taken measures by which men who are unionists are not employed on your ships? I have taken no measures against the employment of unionists.
1112. You said in a previous part of your evidence that certain men who had left your ships suddenly during the recent strike would not be again employed if you knew them? If we could get others in their places, certainly not. In the ordinary way, however, I do not care whether the men are unionists or non-unionists.
1113. But you would only employ the men who had left your ships provided you could not help it? Certainly. All those who gave me fair warning, even if it were only twelve or twenty-four hours—sufficient time to give me an opportunity of re-manning my ships—I would employ again. 1114.

Mr.
T. R. Ait.
26 April, 1894.

1114. Did you during the late maritime strike hear the allegation made against certain shipowners that they were sending ships to sea undermanned? That has not come under my notice.

1115. Do you remember any publications being issued by the Seamen's Union at the time? I did not take much notice of them, to tell you the truth.

1116. Were any of the ships of the company with which you are connected undermanned? Not that I am aware of.

1117. Did any accidents occur? No.

1118. Did any reports come under your notice from your officers as to the incompetency of certain men who were shipped? None.

1119. I suppose if there were any such reports they would come before you? Yes.

1120. A matter of detail like that? It would be reported to me.

1121. I thought details of this kind were left to the secretary? In the ordinary way they are; but the undermanning of a ship is a very important matter.

1122. You say that the Steamship Owners' Association established the maritime bureau for the purpose of supplying men to their ships? For the purpose of supplying labour all round.

1123. Including wharf labourers? Supplying labour all round. I do not care to particularise any class of labour. What we desired to do was to get men when we wanted them.

1124. Did you issue any instructions to Mr. Currie? Not that I am aware of. I may tell you that I have only been chairman of the Association two months.

1125. I have been examining you under the impression that you had occupied that position for a much longer period? I have only recently occupied the position, and although my predecessors in office, Mr. Willis or Mr. Burns, might be able to give you information upon some of the points you have suggested, I am quite unable to do so.

1126. *Mr. Davis.*] Although you have only recently occupied the position of chairman, you have been a member of the Steamship Owners' Association for a number of years? Yes.

1127. In the first instance you represented the Clarence and Richmond River Steamship Owners? Yes.

1128. And subsequently the North Coast Steam Navigation Co.? Yes.

1129. Did not anything transpire at the Board meeting of the Steamship Owners' Association, when you were acting as a representative of the companies to which I have referred, with regard to the employment of Mr. Currie at the bureau? What took place at the Board meetings would, I presume, be considered a private matter. I presume I shall not be expected to answer a matter of that kind.

1130. You are chairman of directors of a company, of which Mr. See, the Colonial Treasurer, is the managing director? Yes.

1131. But you say you have no suggestions to make with regard to an amendment of the shipping law? No.

1132. Have you never had any conversation with your co-partner, Mr. See, with regard to amendments of the law? No; having regard to his position, I should not think of asking him questions bearing upon that matter.

1133. Not as president of the Steamship Owners' Association? No; Mr. See being a co-director of mine, I should not do so.

1134. Your vessels trading to the rivers all hold passengers' certificates? Taking them as a whole, they do.

1135. And they all undergo, periodically, an overhaul in dock? Yes; our ships are in thoroughly good order.

1136. You are aware that Mr. See intends to propose an amendment of the law, under which no steamships will be exempt from overhaul? I do not know about that, but all that I can say is that the whole of our steamers are overhauled regularly.

1137. You know that the Act now provides that only those vessels carrying Marine Board passengers' certificates need be overhauled;—do you not think, as president of the Steamship Owners' Association, that all the steamers trading on this coast should be subject to periodical overhaul and inspection? Undoubtedly; that is only fair and right.

1138. You are not a practical seaman? No.

1139. You said a short time ago, in reply to the Chairman, that any man almost was able to undertake work on board a steamer with the exception of steering? In the ordinary way. You do not require a really tip-top man for a sailor on board a steamer now-a-days. You must remember that there is not the same amount of work to do on steamers as on sailing vessels.

1140. But you know that the unexpected often happens at sea? Yes.

1141. When you are manning a vessel it is not safe to man her with a view only to ordinary conditions. Immediately one of your steamers gets outside the Sydney Heads she is liable to encounter heavy weather? That is so.

1142. And your steamers have also at times to cross bars which are very dangerous? Yes.

1143. In view of a vessel, one of your steamers, encountering a gale of wind, or having to cross one of these dangerous bars carrying passengers, do you not think that men knowing something more about the sea than an ordinary ploughman would know should be engaged for service? I do not think so.

1144. Would you like to trust your life on board a steamer, the whole of the crew of which were composed of ploughmen, or any shore labourers who would have no idea of getting out a lifeboat in case of an emergency? It is not fair to assume that the whole of the men would be ploughmen.

1145. Of course we know that there would be a captain, mate, and second mate? Yes; but excepting the officers, the whole of the crew would not be ploughmen.

1146. Is it not necessary, even in the present day, that those who are engaged for service on board steamers should know how to run out a boat? Everything depends upon what you would consider a good seaman.

1147. Are there no conditions through which your vessels would have to pass in the course of twelve months in which a number of passengers would be seriously imperilled in the event of accident, providing a crew of proper seamen were not generally carried? I think there should be good men on board at all times; but I do not think it is necessary to have an entire crew of highly competent seamen.

1148. What proportion of competent seamen do you think ought to be carried? At least one-half.

1149. *Chairman.*] Is it within your knowledge that since the establishment of the Maritime Free Labour Bureau, Mr. Currie, who is employed by your Board, has received his salary from any member of it? I could not possibly answer that question.

1150. *Mr. Molesworth.*] But I suppose you can tell the Committee definitely in whose employ Mr. Currie is? He is employed by the Steamship Owners' Association.

Mr.

Mr. Arthur Benjamin Cockburn called in, sworn, and examined:—

Mr. A. B.
Cockburn.
26 April, 1894.

1151. *Chairman.*] You are Secretary to the Steamship Owners' Association? Yes.
1152. Have you been long in that position? Nearly four years.
1153. I suppose you have a fair knowledge of the shipping interest? Yes; but not so much in matters of detail as generally.
1154. Were you Secretary of the Association during the late maritime strike? Yes; I presume you refer to the strike of last year?
1155. Do you know if your Association has issued any instructions to Mr. Currie with regard to the employment of seamen and other maritime labour? The Association has issued instructions at various times to him relating to the applications he receives at the Bureau—that is, as to what he shall do with them.
1156. Is it a fact that he receives the whole of his instructions from the Steamship Owners' Association in writing? Not all. The most common course is for me to communicate to Mr. Currie what I know to be the wishes of the members of the Association as indicated to me at their meetings. It is very seldom that anything in the way of written instructions are given to Mr. Currie.
1157. Does he always carry the instructions out? So far as I am aware he does.
1158. To the satisfaction of the Association? Yes.
1159. Has your Association ever issued any instructions to Mr. Currie with reference to the securing of incompetent men to man your steamers at particular times? No.
1160. No such instructions have been given? We have never issued instructions to Mr. Currie to try to secure incompetent men.
1161. But you admit that the Association has issued instructions to him to secure men? Not to secure men; but he has been told that men have been required.
1162. Did the Board lay down no definite instructions as to the way in which Mr. Currie was to secure the men? No.
1163. It was optional with him where he obtained them from? Within certain lines.
1164. What are those lines? To keep within the law and do a fair thing. I do not mean to say that those lines have ever been specifically laid down for Mr. Currie's guidance; but we have never asked him to do anything that would involve an infraction of the law, so far as we understood it.
1165. I suppose you have a pretty good knowledge of the shipping laws? Not an intimate knowledge, but I have a general knowledge of them.
1166. You know that a penalty attaches to the offence of engaging men who are not properly authorised? I presume you refer to the 14th section of the Seamen's Laws Consolidation Act. I am quite aware of that.
1167. Then how do you get over the difficulty of Mr. Currie receiving instructions with reference to the engagement of the men? We say that to all intents and purposes Mr. Currie is a legally authorised person.
1168. I suppose you know of the prosecution of Captain Dyson, in Victoria, and of the result of it? Yes.
1169. Notwithstanding the result of that prosecution, you think that Mr. Currie has acted legally? Yes.
1170. That he has acted in accordance with the shipping law of New South Wales? Yes.
1171. Do you think a law which permits such a thing is justifiable? Quite.
1172. You approve of it? I do.
1173. You would not have it amended in any shape or form? I do not know that I am prepared to say that.
1174. We understand that Mr. Currie is actually engaged by the Steamship Owners' Association to carry out the specific duties I have indicated? He is engaged for a variety of purposes.
1175. I suppose he is in the employment of the Steamship Owners' Association? Unquestionably.
1176. And that he receives his salary from them? Unquestionably.
1177. I suppose the reason you employed Mr. Currie in this capacity was that he might carry out this part of the Act? I do not know that we had this part of the Act in view particularly when we employed Mr. Currie. We were in a difficulty, and we wanted to get over it. We selected the best man we could get for the purpose.
1178. If Mr. Currie was not in the employment of a steamship owner he would be liable under the law, would he not? According to your reading of it.
1179. According to my interpretation of the law he would be? According to other interpretations he would not. The law is susceptible of different interpretations.
1180. What persons would your Association be likely to employ to interpret the law? We have our solicitors, of course. But I do not know if they have interpreted the particular section to which we have been referring. I cannot remember for the moment whether they have done so or not.
1181. You yourself have a knowledge of the section? Yes. After consulting persons we thought capable of giving us advice we came to the conclusion that Mr. Currie's action is perfectly within the law.
1182. You are acquainted with the prosecution of Captain Dyson in Victoria? Yes.
1183. Did your Association ever get the Judge's decision in connection with that matter? Yes; I think I have it in my office, but I am not quite sure.
1184. I suppose that you are aware that Captain Dyson was not acting legally? I do not know about that. According to the view of the Judge he was not.
1185. Has any case ever been brought before the Court here by seamen in connection with the Maritime Labour Bureau? Yes.
1186. What was the case? The case of Maclean *versus* Thompson, in which Maclean, who was, as I understood, a trustee of the Seamen's Union, laid information against a man named Thompson, under section 14. In the trial of the case the management of the Bureau, or rather the operation of the Bureau, was to a certain extent involved. The decision of the Police Court being against Thompson, the case was taken on to the Full Court, where the decision of the Lower Court was reversed. This was in effect the Judges' decision: That if anyone had supplied men, it was Mr. Currie and not Thompson, and that as Mr. Currie was in the constant employ of the steamship owners, he was not liable under the Act. What the Judge said is perfectly consistent with our view of the matter, and I may mention that the decision of the Victorian Judge had not then been given.
1187. Can you suggest any amendment of the law which would be beneficial to the Association you represent? I cannot at this moment think of any particular amendment they would desire.

Mr. A. B.
Cockburn.

26 April, 1894.

1188. You know, I suppose, that certain amendments of the shipping law have been suggested to us by Captain Hickson and Captain Eady? I have heard, incidentally, that certain amendments have been suggested; but I am not officially aware of them.

1189. You think that as far as the Association is concerned they would not desire any amendment of the law? It is not a burning question with us; still, at the same time, there are certain amendments of the shipping law we think very desirable.

1190. Would you be prepared to submit them to the Committee? I do not know that I am in a position to do so just now. The matter has been before us at various odd times, but nothing has seemed to be practicable, and the matter has been allowed to lapse. Of course, the views of the Association may change as time goes on, and I should not like to say that the views expressed by them two years ago, for instance, would hold good to-day. There are some matters in connection with which amendments have been suggested, which would have to be brought under the consideration of the Association again before I could say that the proposed amendments were still in accord with the views of our members. I will mention the matter to the Association, and will see whether there are any suggestions they would like to submit to the Committee.

1191. *Mr. Molesworth.*] If I understood you correctly, the Free Maritime Labour Bureau was instituted by the Steamship Owners' Association in order to supply them with men? To a certain extent; it was instituted to facilitate the supply of men.

1192. What first led to the institution of the Bureau? It grew out of the 1890 strike.

1193. I suppose you are aware that it is the practice in the intercolonial shipping to sign articles on board or at the wharf? Yes—in the case of ships registered in the Colony.

1194. Do you approve of that plan? I think it is a very good one, and a very convenient one, so far as it has come under my knowledge.

1195. Do I understand you to mean that it is convenient to the Steamship Owners' Association? To all concerned.

1196. You think it is equally convenient to the seamen? Yes; it prevents them from journeying up town. It often happens that there is very little time to spare, and as matters now stand, the men can go straight down on board and sign without further trouble.

1197. Have you at any time heard objections raised by the men to this system of signing on at the wharf or on board? I have never heard of any. I do not myself see what objection there can be to the practice.

1198. Would it cause any inconvenience to the Association, or the men employed by them, if it were made compulsory for all articles to be signed at the Shipping Office? I should think it would be very inconvenient in many cases.

1199. Could you give any instances? Well, it would be inconvenient in the case of men shipping, when a ship was on the point of departure. The Shipping Office might be closed, and a ship might want to get away late at night.

1200. Have you heard any complaints of men being left behind, without their discharges, in consequence of the present practice? I have occasionally heard of some inconvenience being caused to the men through the neglect of the master, but I understand that that is already provided for by the law.

1201. Have you heard of any difficulty arising through men being left ashore at any port without their wages? There are no instances that I can recall at this moment.

OPERATION OF THE SHIPPING LAWS.

APPENDIX.

[To Evidence of Captain James Edie, Shipping Master.]

A 1.

Sir, I have the honor to request that you will be pleased to advise me upon the following question, viz. :—
 A vessel registered in the United Kingdom arrives in this port from London, and one clause in her articles reads thus, "The crew shall be deemed complete with twenty hands all told." While in port some of the crew desert, which reduces the number to (say) fifteen hands. Will I be justified in withholding the ship's clearance until the master makes up his crew to the number stated in the agreement?
 Shipping Master's Office, Sydney, 9 April, 1892.
 I have, &c.,
 J. EDIE,
 Shipping Master.

The Assistant Secretary, Marine Department, Board of Trade, London.

A 2.

Sir, I am directed by the Board of Trade to acknowledge the receipt of your letter of the 9th ultimo, and, in reply, to inform you that Shipping Masters have no power to refuse a vessel clearance because the contract with respect to the number of seamen to be carried, as expressed in the articles of agreement, is not adhered to.
 Board of Trade, Marine Department, London, S.W., 21 May, 1892.
 I am, &c.,
 GEORGE J. SWANSTON.

The Shipping Master, Sydney.

A 3.

Dear Sir, I was unable to get the names of the men who had been on "Phœbe," as they had all cleared from Bridge-street on Tuesday. I again tried yesterday, but could not find the boat. Will forward the names as soon as I get them.
 Maritime Labour Hall, 172, Princes-street, Sydney, 10 February, 1893.
 Yours, &c.,
 SAMUEL SMITH.

James Edie, Esq., Shipping Master.

A 4.

Sir, I have the honor to request that you will be pleased to obtain from the Crown Law Officers, for my guidance, an opinion as to who is the proper person to take action at law in case of infringement of the Act 27 Vic. No. 13.
 Shipping Master's Office, Sydney, 31 July, 1893.
 I have, &c.,
 J. EDIE,
 Shipping Master.

The Honorable the Colonial Treasurer.

Submitted.—J.K., 2/8/93. Approved.—J.S., 3/8/93. The Crown Solicitor.—J.K., 3/8/93. Crown Solicitor.—3/8/93. No. 654. Attorney-General, N.S.W., 5th August.

Subject:—Who is the proper person to take action at law in case of infringement of the Act 27 Vic. No. 13.

Sir, I have the honor to return herewith the papers relating to the above matter, which were forwarded to me from your Department on the 3rd day of August, 1893, and to state that I have submitted them to Mr. Solicitor-General O'Connor, a copy of whose advising thereon will be found below.
 Crown Solicitor's Office, Sydney, 24 August, 1893.

The Under Secretary for Finance and Trade.

I have, &c.,
 ERNEST A. SMITH
 Crown Solicitor.

Copy of Opinion of the Honorable the Solicitor-General.

ANY person may take proceedings for the recovery of the penalties in question. Inasmuch, however, as it is the duty of Government to see that laws affecting public safety, as these shipping laws undoubtedly do, are strictly observed, the proceedings should, in my opinion, be taken by the Shipping Master.

23rd August, 1893.

R. E. O'CONNOR,
 Solicitor-General.

The papers might now be referred for the information of the Shipping Master.—J.K., 25/8/93. Approved.—J.S., 25/8/93. The Shipping Master.—J.K., 26/8/93.

VESSELS detained provisionally or finally from going to sea by reason of unseaworthiness during the last three years.

Name.	Rig.	Tonnage.	Owner.	Remarks.
Kembla	Paddle steamer	283	Matthew Johnson	Finally detained.
W. C. Wentworth	Barque	315	James C. Ellis	Finally detained.
Caledonia	Fore and aft schooner ..	46	James Robinson	Provisionally detained.
Venture	Brig	117	Thomas Kehoe	Finally detained.
Micronesia	Ship	1,577	J. and W. Goffey	Provisionally detained.

27/2/94.

GEO. S. LINDEMAN,
 Secretary.

B 2.

Sir,

Marine Board Department, Sydney, 27 February, 1894.

Respecting certificates, I have the honor to state that the only steamers that have been actually refused passenger certificates are the "Kembla" and "Lawrence," but in the ordinary course of business we often notify owners that certain work must be done before another certificate can be issued. Generally we have no trouble; the work is almost invariably carried out to our satisfaction, and when it is not the boats are laid up.

Captain Lindeman, Secretary.

I have, &c.,
 WM. CRUICKSHANK.

B 3.

B 3.

SCHEDULE.

LIFE-SAVING APPLIANCES.

For the purposes of these rules, British ships shall be arranged into the following classes :—

DIVISION (A).

- Class 1.—Steam-ships carrying emigrant passengers subject to all the provisions of the Passengers Acts.
- Class 2.—Foreign-going steam-ships having passenger certificates under the Merchant Shipping and Navigation Acts.
- Class 3.—Steam-ships having passenger certificates under the Navigation Acts authorising them to carry passengers anywhere within intercolonial limits.

DIVISION (B).

- Class 1.—Sailing-ships carrying emigrant passengers subject to all the provisions of the Passengers Acts.
- Class 2.—Foreign-going sailing-ships carrying passengers, but not subject to all the provisions of the Passengers Acts.
- Class 3.—Foreign-going sailing-ships not carrying passengers.
- Class 4.—Foreign-going steam-ships not certified to carry passengers.

DIVISION (C).

- Class 1.—Steam-ships not certified to carry passengers plying anywhere within intercolonial limits.
- Class 2.—Sailing-ships in the same trades not carrying passengers.

DIVISION (D).

- Class 1.—Steam-ships having passenger certificates authorising them to carry passengers within certain specified limits, that is to say : On short specified passages along the coast of New South Wales.
- Class 2.—Steam-ships carrying passengers on short excursions or pleasure trips to sea or in estuaries or mouths of rivers during daylight.
- Class 3.—Steam-ships carrying passengers on rivers and (or) lakes, but not going to sea or into rough waters.

DIVISION (A).—CLASS 1.

Rules and Table for steam-ships carrying emigrant passengers subject to all the provisions of the Passengers Acts.

(a) Ships of Division (A), Class 1, shall carry boats placed under davits, fit and ready for use, and having proper appliances for getting them into the water, in number and capacity not less than prescribed by the following table ; such boats shall be equipped in the manner required by and shall be of the description defined in the General Rules appended hereto.

(b) Masters or owners of ships of this class claiming to carry fewer boats under davits than are given in the following table must declare before the Collector or other officer of Customs, at the time of clearance, that the boats actually placed under davits are sufficient to accommodate all persons on board, allowing 10 (ten) cubic feet of boat capacity for each adult person, or "statute adult."

(c) Table for Division (A), Class 1 :—

Gross tonnage.	Minimum number of boats to be placed under davits.	Total minimum cubic contents of boats to be placed under davits. L. x B. x D. x '4.	Gross tonnage.	Minimum number of boats to be placed under davits	Total minimum cubic contents of boats to be placed under davits. L. x B. x D. x '4.
1.	2.	3.	1.	2.	3.
9,000 and upwards	14	5,250	3,500 and under 3,750	8	2,600
8,500 and under 9,000	14	5,100	3,250 and under 3,500	8	2,500
8,000 and under 8,500	14	5,000	3,000 and under 3,250	8	2,400
7,750 and under 8,000	12	4,700	2,750 and under 3,000	6	2,100
7,500 and under 7,750	12	4,600	2,500 and under 2,750	6	2,050
7,250 and under 7,500	12	4,500	2,250 and under 2,500	6	2,000
7,000 and under 7,250	12	4,400	2,000 and under 2,250	6	1,900
6,750 and under 7,000	12	4,300	1,750 and under 2,000	6	1,800
6,500 and under 6,750	12	4,200	1,500 and under 1,750	6	1,700
6,250 and under 6,500	12	4,100	1,250 and under 1,500	6	1,500
6,000 and under 6,250	12	4,000	1,000 and under 1,250	4	1,200
5,750 and under 6,000	10	3,700	900 and under 1,000	4	1,000
5,500 and under 5,750	10	3,600	800 and under 900	4	900
5,250 and under 5,500	10	3,500	700 and under 800	4	800
5,000 and under 5,250	10	3,400	600 and under 700	3	700
4,750 and under 5,000	10	3,300	500 and under 600	3	600
4,500 and under 4,750	8	2,900	400 and under 500	2	400
4,250 and under 4,500	8	2,900	300 and under 400	2	350
4,000 and under 4,250	8	2,800	200 and under 300	2	300
3,750 and under 4,000	8	2,700	100 and under 200	2	250

NOTE.—Where in ships already fitted the required cubic contents of boats placed under davits is provided, although by a smaller number of boats than the minimum required by this table, such ships shall be regarded as complying with the rules as to boats to be carried under davits.

(d) Not less than half the number of boats placed under davits shall be boats of section (A) or section (B). The remaining boats may also be of such description, or may, in the option of the shipowner, conform to section (C) or section (D), provided that not more than two boats shall be of section (D).

(e) If the boats placed under davits in accordance with the foregoing table (c) do not furnish sufficient accommodation for all persons on board, then additional wood, metal, collapsible, or other boats of approved description (whether placed under davits or otherwise), or approved life-rafts shall be carried. One of these boats may be a steam-launch ; but in that case the space occupied by the engines and boilers is not to be included in the estimated cubic capacity of the boat.

Subject to the provisions contained in paragraph (g) of these rules, such additional boats or rafts shall be of at least such carrying capacity that they and the boats required to be placed under davits by table (c) provide together in the aggregate three-fourths more than the minimum cubic contents required by column 3 of that table. For this purpose 3 cubic feet of air-case in the life-raft is to be estimated as 10 cubic feet of internal capacity. Provided always that the rafts will accommodate all the persons for which they are to be certified under the rules.

All such additional boats or rafts shall be placed as conveniently for being available as the ship's arrangements admit of, having regard to the avoidance of undue encumbrance of the ship's deck, and to the safety of the ship for her voyage.

(f) In addition to the life-saving appliances before mentioned, ships of this Class shall carry not less than one approved life-buoy for every boat placed under davits. They shall also carry approved life-belts or other similar approved articles of equal buoyancy suitable for being worn on the person, so that there may be at least one for each person on board the ship.

(g) Provided, nevertheless, that no ship of this Class shall be required to carry more boats or rafts than will furnish sufficient accommodation for all persons on board.

DIVISION (A).—Class 2.

Rules for foreign-going steamships having passenger certificates under the Merchant Shipping and Navigation Acts.

Ships of this Class shall be subject to the same requirements as those in Division (A), Class 1.

DIVISION (A).—Class 3.

Rules for steamships having passenger certificates under the "Merchant Shipping and Navigation Acts," authorising them to carry passengers anywhere within intercolonial limits.

(a) Ships of this Class shall carry boats placed under davits in accordance with the rules and table provided for ships in Division (A), Class 1.

(b) If the boats placed under davits in accordance with this requirement do not furnish sufficient accommodation for all persons on board, then additional wood, metal, collapsible, or other boats of approved description (whether placed under davits or otherwise), or approved life-rafts, shall be carried, of at least such cubical capacity that they and the boats required to be placed under davits by Table (c) provide together in the aggregate one-half more than the minimum cubic contents provided by column three of that Table.

(c) Provided that if (having regard to the avoidance of undue incumbrance of the ship's deck, and to the safety of the ship for her voyage) it is not practicable for any ship of this Class to carry all the additional approved boats or approved life-rafts required by the preceding subsection (b), the deficiency so caused may be made up by the supply of an equivalent number of approved buoyant deck seats or other approved buoyant deck fittings.

(d) Ships of this Class shall carry not less than six approved life-buoys.

(e) They shall also carry, in addition to the boats and appliances required above, approved life-belts or other similar approved articles of equal buoyancy suitable for being worn on the person, so that there may be at least one for each person on board the ship.

(f) Provided nevertheless that no ship of this Class shall be required to carry more boats, rafts, and other buoyant deck fittings than will furnish sufficient accommodation for all persons on board.

DIVISION (B).—Class 1.

Rules for sailing-ships carrying emigrant passengers subject to all the provisions of the Passengers' Acts.

(a) Ships of Division (B), Class 1, shall carry boats in accordance with the Table (c) provided for Division (A), Class 1, and such boats shall be, as far as practicable, placed under davits, with proper appliances for getting them into the water. All boats not placed under davits are to be so carried that they can be readily got into the water.

(b) If the boats so carried do not furnish sufficient accommodation for all persons on board, then additional life-saving appliances shall be supplied as for ships in Division (A), Class 1.

(c) Provided that no ship in this Class shall be required to carry more boats or rafts than will furnish accommodation for all persons on board.

(d) Approved life-belts or other similar approved articles shall be carried as required for ships of Division (A), Class 1, and one life-buoy for each boat of wood or metal.

DIVISION (B).—Class 2.

Rules for foreign-going sailing-ships carrying passengers, but not subject to all the provisions of the Passengers' Acts.

Ships of this Class shall be subject to the same requirements as those in Division (B), Class 1.

DIVISION (B).—Class 3.

Rules for foreign-going sailing-ships not carrying passengers.

(a) Ships of this Class shall carry a boat or boats of Sections (A) or (B) sufficient for all the persons on board, and, in addition thereto, one good serviceable boat of Section (D). Such boats shall be, as far as practicable, placed under davits, with proper appliances for getting them into the water. All boats not placed under davits are to be so carried that they can readily be got into the water to the satisfaction of the Marine Board Officer.

(b) They shall carry approved life-belts as required for ships in Division (B), Class 1, and also one life-buoy for each boat of wood or metal.

DIVISION (B).—Class 4.

Rules for foreign-going steamships not certified to carry passengers.

(a) Ships of this Class shall carry, on each side, at least so many and such boats of wood or metal placed under davits, of which one on one side shall be a boat of Section (A) or Section (B), and on the other side shall be a boat of Section (A) or Section (B) or Section (C), that the boats on each side of the ship shall be sufficient to accommodate all persons on board. They shall have proper appliances for getting the boats into the water.

(b) They shall carry approved life-belts as required for ships of Division (B), Class 1.

(c) They shall carry not less than six approved life-buoys.

DIVISION (C).—Class 1.

Rules for steamships not certified to carry passengers plying anywhere within intercolonial limits.

(a) Ships of this Class shall carry, on each side, at least so many and such boats of wood or metal placed under davits, of which one on each side shall be a boat of Section (A) or of Section (B) or Section (C), that the boats on each side of the ship shall be sufficient to accommodate all persons on board. They shall have proper appliances for getting the boats into the water.

(b) They shall also carry approved life-belts so that there may be at least one for each person carried on board the ship.

(c) They shall also carry not less than four approved life-buoys.

DIVISION (C).—Class 2.

Rules for sailing-ships in the same trades not carrying passengers.

(a) Ships of this Class shall carry a boat or boats of wood or metal, at least sufficient for all persons on board, and in such a position as to be readily got into the water. Each boat shall be provided with one gallon of vegetable or animal oil, and a vessel of an approved pattern for distributing it in the water in rough weather.

(b) Ships of this Class shall also carry an approved life-belt for each person on board.

(c) They shall also carry at least two approved life-buoys.

DIVISION (D).—Class 1.

Rules for steamships having passenger certificates authorising them to carry passengers within certain specified limits; that is to say, on short specified passages along the coasts of New South Wales.

(a) Ships of this Class shall, according to their tonnage, carry boats placed under davits, as required by the Table for ships in Division (A), Class 1, but all such boats as are not required to be of Sections (A) or (B) must be of Section (C).

(b) If the boats placed under davits in accordance with the above requirements do not furnish sufficient accommodation for all persons on board, then additional wood, metal, collapsible, or other boats of approved description (whether placed under davits or otherwise), or approved life-rafts, shall be carried of at least such cubical capacity that they and the boats required to be placed under davits by Table (c) provide together in the aggregate one-half more than the minimum cubic contents provided by column three of that Table. For this purpose three cubic feet of air-case in the life-raft is to be estimated at ten cubic feet of internal capacity; provided always that the rafts will accommodate the persons for which they are certified under the rules.

(c) Provided that if (having regard to the avoidance of undue incumbrance of the ship's deck, and to the safety of the ship for her voyage) it is not practicable for any ship of this Class to carry all the additional approved boats or approved life-rafts required by the preceding subsection (b), the deficiency so caused may be made up by the supply of an equivalent number of approved buoyant deck seats or other approved buoyant deck fittings.

(d) Ships of this Class shall also carry approved life-belts or other similar approved articles of equal buoyancy suitable for being worn on the person, so that there may be at least one for each person on board the ship.

(r)

(e) At least one approved life-buoy shall also be provided for each boat of wood or metal carried by the ship, but in no case shall less than six approved life-buoys be provided.

(f) Provided nevertheless that no ship of this Class shall be required to carry more boats, rafts, and other buoyant deck fittings than will furnish sufficient accommodation for all persons on board.

DIVISION (D).—Class 2.

Rules for steamships carrying passengers on short excursions or pleasure trips to sea, or in estuaries or mouths of rivers during daylight.

(a) Ships of this Class shall carry at least two boats of Section (A) or Section (B) or Section (C), placed under davits, and with proper appliances for getting them into the water.

(b) They shall also carry other boats, approved buoyant apparatus, and (or) approved life-belts sufficient (with the boats required by paragraph (a)) to keep afloat all the persons on board the ship.

(c) At least four approved life-buoys shall be carried.

DIVISION (D).—Class 3.

Rules for steamships carrying passengers on rivers and (or) lakes, but not going to sea, or into rough waters.

(a) Ships of this Class shall carry one boat in such a position that she can readily be got into the water. They shall also carry approved buoyant apparatus or approved life-belts and approved life-buoys at least sufficient, together with the boat, to keep afloat all persons carried on board.

(b) At least four approved life-buoys shall be carried.

Note.—A discretion may be exercised by the Marine Board to relieve steam-launches, steamers plying in narrow waters, and ferry-boats from the operation of the whole or part of rule (a) of this Class.

GENERAL RULES.

1. Boats.—All boats shall be constructed and properly equipped as provided by these rules, and all boats and other life-saving appliances are to be kept ready for use to the satisfaction of the Marine Board. Internal buoyancy apparatus may be constructed of wood, or of copper or yellow metal of not less than eighteen ounces to the superficial foot, or of other durable material.

Section (A).—A boat of this section shall be a life-boat of whale-boat form, properly constructed of wood or metal, having for every ten cubic feet of her capacity, computed as in Rule 2, at least one cubic foot of strong and serviceable inclosed air-tight compartments, so constructed that water cannot find its way into them.

Section (B).—A boat of this section shall be a life-boat of whale-boat form, properly constructed of wood or metal, having inside and outside buoyancy apparatus together equal in efficiency to the buoyancy apparatus provided for a boat of Section (A). At least one-half of the buoyancy apparatus must be attached to the outside of the boat.

Section (C).—A boat of this section shall be a life-boat properly constructed of wood or metal, having some buoyancy apparatus attached to the inside and (or) outside of the boat equal in efficiency to one-half of the buoyancy apparatus provided for a boat of Section (A) or Section (B). At least one-half of the buoyancy apparatus must be attached to the outside of the boat.

Section (D).—A boat of this section shall be a properly constructed boat of wood or metal.

Section (E).—A boat of this section shall be a boat of approved construction, form, and material, and may be collapsible.

2. Cubic capacity.—The cubic capacity of a boat shall be deemed to be her cubic capacity, ascertained (as in measuring ships for tonnage capacity) by Stirling's rule; but as the application of that rule entails much labour, the following simple plan, which is approximately accurate, may be adopted for general purposes, and when no question requiring absolute correct adjustment is raised:—

Measure the length and breadth outside and the depth inside. Multiply them together and by '6; the product is the capacity of the boat in cubic feet. Thus a boat 23 ft. long, 8 ft. 6 in. broad, and 3 ft. 6 in. deep, will be regarded as having a capacity of $23 \times 8.5 \times 3.5 \times 6 = 499.8$, or 500 cubic feet. If the oars are pulled in rowlocks, the bottom of the rowlock is to be considered the gunwale of the boat for ascertaining her depth.

3. Number of persons for boats. The number of persons a boat of Section (A) shall be deemed fit to carry shall be the number of cubic feet ascertained as in Rule 2, divided by 10.

The number of persons a boat of Sections (B), (C), (D), or (E) shall be deemed fit to carry shall be the number of cubic feet ascertained as in Rule 2, divided by 8. The space in the boat shall be sufficient for the seating of the persons carried in it, and for the proper use of the oars.

4. Appliances for lowering boats.—Appliances for getting a boat into the water must fulfil the following conditions: Means are to be provided for speedily, but not necessarily simultaneously or automatically, detaching the boats from the lower blocks of the davit tackles; the boats placed under davits are to be attached to the davit tackles and kept ready for service; the davits are to be strong enough and so spaced that the boats can be swung out with facility; the points of attachment of the boats to the davits are to be sufficiently away from the ends of the boats to ensure their being easily swung clear of the davits; the boats' chocks are to be such as can be expeditiously removed; the davits, falls, blocks, eye-bolts, rings, and the whole of the tackling are to be of sufficient strength; the boats' falls are to be long enough to lower the boat into the water with safety when the vessel is light. The life-lines shall be fitted to the davits and be long enough to reach the water when the vessel is light; and hooks are not to be attached to the lower tackle blocks.

5. Equipments for collapsible or other boats and for life-rafts.—In order to be properly equipped each boat shall be provided as follows:—

(a) With the full single-banked complement of oars, and two spare oars.

(b) With two plugs for each plug-hole, attached with lanyards or chains, and one set and a half of thole pins or crutches, attached to the boat by sound lanyards.

(c) With a sea anchor, a baler, a rudder and tiller, or yoke and yoke lines, a painter of sufficient length, and a boat-hook. The rudder and bailer to be attached to the boat by sufficiently long lanyards, and kept ready for use. In boats where there may be a difficulty in fitting a rudder a steering oar may be provided instead.

(d) A vessel to be kept filled with fresh water shall be provided for each boat.

(e) Life-rafts shall be fully provided with a suitable approved equipment.

6. Additional equipments for boats of Section (A) and Section (B).—In order to be properly equipped, each boat of Sections (A) and (B), in addition to being provided with all the requisites laid down in Rule (5), shall be equipped as follows, but not more than four boats in any one ship require to have this outfit:—

(a) With two hatchets or tomahawks, one to be kept in each end of the boat, and to be attached to the boat by a lanyard.

(b) With a mast or masts, and with at least one good sail, and proper gear for each.

(c) With a line becketed round the outside of the boat and securely made fast.

(d) With an efficient compass.

(e) With one gallon of vegetable or animal oil, and a vessel of an approved pattern for distributing it in the water in rough weather.

(f) With a lantern trimmed, with oil in its receiver sufficient to burn eight hours.

7. Number of persons for life-rafts.—The number of persons that any approved life-raft for use at sea shall be deemed to be capable of carrying shall be determined with reference to each separate pattern approved by the Marine Board: Provided always, that for every person so carried there shall be at least three cubic feet of strong and serviceable enclosed air-tight compartments, constructed so that water cannot find its way into them. Any approved life-raft of other construction may be used, provided that it has equivalent buoyancy to that hereinbefore described. Every such approved life-raft shall be marked in such a way as to plainly indicate the number of adult persons it can carry.

8. Buoyant apparatus.—Approved buoyant apparatus shall be deemed sufficient, so far as buoyancy is concerned, for a number of persons, to be ascertained by dividing the number of pounds of iron which it is capable of supporting in fresh water by thirty-two. Such buoyant apparatus shall not require to be inflated before use, shall be of approved construction, and marked in such a way as plainly to indicate the number of persons for whom it is sufficient.

9. Life-belts.—An approved life-belt shall mean a belt which does not require to be inflated before use, and which is capable at least of floating in the water for twenty-four hours with fifteen pounds of iron suspended from it. Life-belts are to be cut out two inches under the armpits, and fitted so as to remain securely in their place when put on.

10. Life-buoys.—An approved life-buoy shall mean either—

- (a) A life-buoy built of solid cork, capable of floating in the water for at least twenty-four hours with thirty-two pounds of iron suspended from it; or
- (b) A strong life-buoy of any other approved pattern and material, provided that it is capable of floating in the water for at least twenty-four hours with thirty-two pounds of iron suspended from it, and provided also that it is not stuffed with rushes, cork shavings, or other shavings, or loose granulated cork, or other loose material, and does not require inflation before use.

All life-buoys shall be fitted with beekets securely seized, and not less than two of them shall be fitted with life-lines fifteen fathoms in length.

11. Position of life-buoys and life-belts.—All life-buoys and life-belts shall be so placed as to be readily accessible to all persons on board, and so that their position may be known to those for whom they are intended.

12. Water-tight compartments.—When ships of any Class are divided into efficient water-tight compartments to the satisfaction of the Marine Board, they shall only be required to carry additional boats, rafts, and other life-saving appliances of one-half of the capacity required by these Rules.

C.

[To evidence of *Mr. Samuel Smith, Secretary of the Seamen's Union.*]

PROTECTION FOR SAILORS.

To the Editor, *Evening News.*

SIR,—I would tender the advice to your correspondent, James F. Rowell, that he recommends to "Barnacle," viz., to become better acquainted with some of the practices of our boarding-house masters in Sydney and Newcastle before he attempts to deny that such base methods are adopted to plunder sailors of their hard-earned wages by even some American captains as well as British and Australian ship-masters; also to get a copy of the Statistical Register of Shipping. As a proof of the existence of the practice of blood-money being exacted as alleged by "Barnacle," I had occasion to direct the attention of the shipping authorities to the case of a sailor who had 5s. stopped out of £1 13s. 4d., whilst the legal charge is 1s. The sailor states that the master informed him the 5s. was for having given him the job. I only referred to this single case, but have knowledge of many more, and intend to submit them to the Select Committee now inquiring into shipping abuses of the port. I can also have the statements substantiated by seamen in different capacities, from mates downward. We have a few boarding-masters who are known to be engaged in the vile calling of inducing men to leave their vessels with or without the cognisance of the masters, and then supplying these same men to other vessels, getting the men's advance notes by the usual means resorted to by these scoundrels. In New York the system of blackmailing has become so notorious that some of the fairer-minded boarding-masters—after consultation with the British Consul (Mr. Gilbert Fraser)—forwarded an appeal to the British Board of Trade. The appeal said in part: "We, the undersigned, citizens of the United States, having a thorough knowledge of the methods of shipping British seamen at the port of New York, wish to call the attention of your honorable body to a flagrant outrage that has been perpetrated on British seamen by a class of men known here as middlemen, who stand between the British seaman and captain, and who encourage the captain to deduct from one to two months' pay from each seaman who wishes to be discharged at this port, the captain claiming that the said money is to pay for a substitute. Should such seamen wish to sail from this port in other British vessels, the said agent or middleman will tax him from 10 dol. to 15 dol., and sometimes more, the vessel receiving from said agent at least one-half of that money, known here as "blood-money." The names of the vessels and the officers of the same can be supplied. We likewise positively assert that within the past six months there has been an agent or middleman making a tour of England, Ireland, and Scotland, making contracts with the owners of vessels to supply crews at certain rates, with the understanding that the vessel will receive a certain rebate from each seaman in advance. Such contracts have been made by Robert J. Poynter, of the firm of Williams and Poynter, and John Havernon, of the firm of Havernon and Brennan, the former of whom is now in the British Isles." This appeal should show that certain American and British masters are the bloodsuckers they are alleged to be; but I trust, with your assistance, and that of the authorities, as well as the manly help of honorable and just-minded masters like Captain Rowell, we will be able to destroy such marine excrecences as crimps in this port, and which are such a reproach to the American people who tolerate these vultures who fatten on the simple sailor in every port of the United States, *vide New York Herald and Sun*, cuttings from which papers I enclose. I may inform Captain Rowell that we make no distinction here as to whether a seaman is a Californian Dutchman or a Massachusetts mariner. We recognise that all who sail under the Stars and Stripes—if not natural-born Americans—should at least be accorded that treatment expected by all men who lay claim to be free. In conclusion, I can cite many instances where crews are driven out of ships by mates and bo'suns, specially hired by captains for the purpose of doing so. I will also concede that Captain Rowell may know what happens on the "Great Admiral," but that it is quite impossible for him to know what transpires upon other vessels.

Yours, &c.,

SAMUEL SMITH,
Secretary F. S. Union.

D.

[To Evidence of *Mr. Samuel Smith.*]

Manager, Shipping Co.
Dear Sir,

172, Princess-street, Sydney, 21 December, 1893.

Believing that your Directors are not incapable of some compassion for the sufferings of their fellow beings, I am constrained to think that your Board will be generous enough to relax the stringency of regulations now in operation, regarding the shipping or engaging of seamen, particularly those men who left your employment during the strike in July, and who are now being rigorously boycotted. Your Board will surely admit that these men and their unfortunate wives and children have been, even from your standpoint, sufficiently punished already, without carrying your antagonism to the point of vindictiveness.

These men have been guilty of no other crime than exhibiting that spirit of independence so characteristic of our race, and I am certain your Board have no desire to stamp out this quality that has done so much to place the Anglo-Saxon in the fore-front of civilisation.

Your Board are only asked to place these men upon the same footing as all other applicants for employment on your steamers, and that the system of black-listing will cease to operate in prejudicing these men's chances in obtaining employment. You are not asked to discharge any of your present employees.

I appeal to your Board, as humane and Christian fellow-citizens, to be influenced by the spirit of forgiveness expected to be displayed at this particular season, when we are celebrating the birthday of Him who inculcated the precept of "Forgive that ye may be forgiven."

Hoping that the thoughts of the cruel suffering that the wives and children of these men are being subjected to will have some influence, and cause you to decide in favour of these heavily punished men,

I am, &c.,

SAMUEL SMITH,
Secretary, Seamen's Union.

Sir,

We duly received your letter of 21st ultimo, addressed to the writer, concerning the men who left our ships during the strike in July last, and who, by so doing, probably hoped to succeed in preventing us from continuing our operations.

In reply, we desire to say that we repudiate that we are in any way actuated by vindictiveness, or that we are advocates of the system of rigorously boycotting the men in question.

When

When vacancies arise we simply exercise the right of selection of the men who suit us best, irrespective of whether they be Unionists or non-Unionists.

If there be any cruel suffering among the wives and children of those who wilfully deprived themselves of employment, we greatly regret it; but the blame cannot be laid at the door of the steamship-owners.

The Secretary, Seamen's Union,
172, Princes-street, Sydney.

Yours faithfully,
(For the Australasian United Steam Navigation Co., Ltd.),
JAS. MILNE.

Dear Sir,

Your letter of 21st instant (practically unsigned, the signature being type-written) was duly placed before my Board at to-day's meeting; and, in reply, I am directed to write that my Directors regret that you should have thought proper to introduce the elements of boycotting and vindictiveness into your communication, which charges, I need hardly say, are entirely repudiated.

The desire of my Board is to secure a loyal, steady, and able body of men for the Company's steamers, who can be relied on to carry out their engagements with their employers with integrity; and you will, no doubt, agree that this policy is absolutely necessary, in justice both to the travelling public and the shareholders of the Company. Any men possessing the above qualifications will be readily shipped in the steamers belonging to the Adelaide Steamship Company (Limited) as vacancies occur.

Mr. Samuel Smith, Secretary, Seamen's Union, 172, Princes-street, Sydney.

Yours faithfully,
E. NORTHCOTE,
Acting Secretary.

IN MELBOURNE.

THE SHIPPING OF SEAMEN—CAPTAIN DYSON FINED.

Melbourne, Tuesday.—Mr. Nicholson, P.M., delivered his decision to-day in the case in which Captain Dyson, manager of the Maritime Labour Bureau, was charged with supplying a seaman to be entered on board the steamer "Innamineka." Mr. Nicholson held that the defendant was not in the constant employment of a shipowner, and that he was not a *bona fide* servant of any one shipowner. The Bench found the case proved, and fined defendant £5, with five guineas costs. Notice of appeal was given.—*Daily Telegraph*, 9th August, 1893.

E 2.

OPINION OF THE CROWN LAW OFFICERS IN ENGLAND AS TO THE LEGALITY OF THE ACTION OF THE SHIPPING FEDERATION.

In the House: Mr. Lockwood asked—"What was the opinion of the Law Officers of the Crown as to the legality of the action of the Shipping Federation?"

Mr. Mundella answered,—“In 1889 the Board of Trade were informed that a local secretary of the National Amalgamated Sailors and Firemen's Union, though he had no license from the Board of Trade to supply seamen under section 146, did supply seamen, being members of the union, to serve on board British ships. Mr. Wright (now Mr. Justice Wright) advised that the local secretary was liable to conviction under section 147. The Board of Trade, though a technical offence had been committed, considered it contrary to the intention and spirit of the Act to extend its provisions to actions arising out of a trade dispute. In 1890 the Shipping Federation was formed, which practically undertook to supply crews to ship-owners. We declined to prosecute them as we had previously in the case of the Seamen's Union. In consequence of a recent debate, I consulted the Law Officers as to whether the action of the Shipping Federation comes within section 147, and if such action amounts to a technical breach of the section, and if the offence is of such a criminal or quasi-criminal nature that the Board of Trade as Public Prosecutor is bound to prosecute the officials of the Federation. I am advised that the first question is of some nicety, but that upon a strict construction of the section the procedure of the Shipping Federation involves an *infringement of the Act*. The Board, however, is not bound to prosecute the officials unless satisfied that the public interests require it. But it must be remembered *it is open to any parties interested to prosecute*. The preamble of the Act of 1845 shows that the object was to put a stop to the system by which persons having no interest in ships supplied seamen and not to interfere with *bona fide* associations of owners or seamen. The Board of Trade decline to make themselves in any way partisans in a trade dispute. It is open to either party to prosecute if they consider the Act to be infringed. Everything has been carefully put to the Law Officers of the Crown, including the rules of the Shipping Federation and their own statement as to the way in which they worked those rules.”

E 3.

BREAKING THE SHIPPING LAWS.—FURTHER PROSECUTIONS.

The following letter, from the Secretary of the Seamen's Union to the Colonial Treasurer, speaks for itself:—

Sir, Federated Seamen's Union, Maritime Hall, Princes-street, Sydney, 29 July, 1893.

I am instructed to direct your attention to a further infraction of clauses 16, 17 (section 2), 21, and 22 of the Seamen's Law Consolidation Act, by the masters of the s.s. "Victorian" and "Emu." Information has been laid against the master of the "Victorian," and Captain Edie's attention has been drawn to several cases where men have been taken to sea (without producing discharges or licenses to ship) on both steamers. I trust that after a full inquiry into these cases you will accept as truthful and justifiable the allegations contained in previous letters: also statements made by the deputation which waited upon you from the Union.

To the Hon. John See, Colonial Treasurer.

I am,
Yours respectfully,
SAMUEL SMITH, Secretary.

E 4.

REPORT OF THE PROSECUTION OF CAPTAIN SKYMOUR OF THE S.S. "VICTORIAN."

Federated Seamen's Union of Australasia, (N.S.W. Branch).

Sir, Maritime Hall, 172, Princes-street, Sydney, 22 July, 1893.

Adverting to your communication of 8th July (in reply to my letter of 6th instant) wherein you state that our allegations re the indiscriminate issue of permits are without foundation, I beg to enclose for your perusal a copy of the evidence given before Mr. Whittingdale Johnson, S.M., at the Water Police Court on Thursday, 20th July, for a fuller report of which I refer you to the depositions taken at the Court. This, of itself, should be sufficient to show that we had ample ground for directing your attention to the indiscriminate issue of permits. None of the men named had ever been to sea in the capacity of A.B. or fireman, yet each of them was supplied with a license to ship. If further proof be wanted, we can cite many other cases.

Having regard, therefore, to the foregoing facts, we would again respectfully request you to be good enough to name a day and hour on which you could receive a deputation from this Union for the purpose of placing before you some suggestions which, if followed, would have the effect of preventing the abuse of the Shipping Office, which (our members believe) was established for a purpose other than that of shipping incompetent men—a practice which, during the past week, has resulted in the loss of life and property. Hoping for an early reply,

To the Hon. John See, Esq., Colonial Treasurer of N.S.W.

I remain, Sir,
Yours respectfully,
SAM. SMITH.

THE

THE POLICE COURTS.—CHARGE AGAINST A SEA CAPTAIN.

William Stephen Seymour, master of the steamer "Victorian," appeared at the Water Police Court yesterday afternoon, charged by five members of his crew—Henry Page, John Brown, John Willis, William Sheffield, and John Thompson—with having engaged them as seamen without discharges or permits. Mr. J. C. M'Lachlan appeared for the prosecution, and Mr. Osborne, of Messrs. Norton, Smith, and Co., defended. The accused pleaded guilty, and Mr. Osborne pointed out in extenuation that the men were engaged on July 15, the day that the ship was to sail. They were then asked to produce their discharges, and they said they had lost them. Mr. Seymour went ashore to see the Shipping Master to get permits, but the office was closed on account of its being Saturday, so that he was unable to do so. The ship was bound to leave port, and the men were consequently taken. Mr. M'Lachlan said, in reply, that the defence had had plenty of time to see about permits, as the men's pay commenced on July 8, and the vessel did not leave port till the 15th of the same month. Mr. Fisher, S.M., said the accused had clearly made himself responsible for having taken the men to sea, but it was apparent that he had not committed the offence wilfully. He would, therefore, deal as leniently as possible with him. A fine of 20s., with 5s. 6d. costs, was inflicted in each case, and £3 3s. complainant's costs were allowed in one case.—*Daily Telegraph*, 5 August, 1893.

E 5.

IMPORTANT CORRESPONDENCE.

CRIMPING IN GENOA.

Sir,

8 November, 1893.

I am informed by a large number of seamen frequenting the port of Genoa that certain boarding-masters who ship seamen on board of British ships charge them most exorbitant prices—in fact, swindle them in every direction; and it appears to be the opinion of seamen frequenting that port that if a shipping master was appointed, with the sanction of the Board of Trade, it would be much better for the men. There is a captain there, whose name I enclose, who was formerly in the employ of Messrs. Lamport and Holt, and other English shipowners, who would be willing to take the appointment providing the Board of Trade would sanction same. It would be the death-blow to crimping in Genoa.

I am, &c.,
J. H. WILSON.

The Rt. Hon. A. J. Mundella, M.P., Board of Trade.

Dear Sir,

Board of Trade, Whitehall Gardens, S.W., 10 November, 1893.

I am desired by Mr. Mundella to acknowledge receipt of your letter of 8th instant, suggesting that a shipping master should be appointed at Genoa, with the sanction of the Board of Trade.

I am to state that Mr. Mundella has referred the suggestion to the Marine Department and will communicate again with you on the subject.

Yours faithfully,
GARNHAM ROPER.

J. H. Wilson, M.P.

ALLEGED SUPPLY OF SEAMEN BY SHIPPING FEDERATION.

Sir,

Board of Trade (Marine Department), London, S.W., 4 September, 1893.

I am directed by the Board of Trade to state that they have had under consideration your letter to the President, of the 28th ultimo, forwarding a resolution passed by the Council of the Seamen's Union with regard to the proceedings of the Shipping Federation.

The Board of Trade desire me to refer you to the terms of the letter addressed to Sir John Leng on the 11th ultimo, which you state has been laid before your Council, and to call attention to the action taken by the Department in cases in which proceedings under section 148 of the Merchant Shipping Act, 1854, are likely to be successful.

I am at the same time to state that, while the Board of Trade are prepared to consider any specific instances of breach of the law which may be brought to their notice, they are not in possession of any particulars which would justify an inquiry such as that suggested in the resolution.

I am, &c.,
INGRAM B. WALKER.

J. H. Wilson, Esq., M.P.

COMPLAINT AGAINST A CONSUL.

Sir,

I am directed by the Executive Council of the Sailors and Firemen's Union to forward you a statement of W. Lindross, ship's cook, who formerly served on the s.s. "Arthur." We desire particularly to call your attention to the manner in which the British Consul at Antwerp treated this man, and also as to the neglect on the part of the Consul in not seeing that the man's clothes and effects were properly looked after.

Trusting you will cause inquiries to be made,

I am, &c.,
J. H. WILSON.

Sir Edward Grey, Bart, M.P. (Under Secretary), Foreign Office.

Sir,

Foreign Office.

With reference to your letter of the 18th ultimo respecting the case of W. Lindross, a ship's cook, who recently served on board the steamship "Arthur," I am directed by the Earl of Rosebery to inform you that the matter is being investigated.

I am, &c.,
F. A. LISTER.

J. H. Wilson, Esq., M.P., Sailors and Firemen's Union.

NEW PROVISION SCALE.

Sir,

Board of Trade (Marine Department), London, S.W., 7 November, 1893.

I am directed by the Board of Trade to acknowledge the receipt of your letter of the 31st ultimo, and in reply to inform you that on the application of the Shipping Federation they have instructed the Superintendents of Mercantile Marine Offices at certain ports to receive from the Federation printed copies of the Scale of Provisions, drafted by the Merchant Shipping Victualling Scale Committee, with a view to such copies being pasted in the Articles of Agreement when desired, and to state that the Board will raise no objection to copies of the Union Scale being received at their Mercantile Marine Offices in a similar way. The copies or slips should be of a size exactly corresponding with the space allowed on page 2 of the new Form of Agreement, and on hearing from you that they are ready, and receiving from you a list of the ports to which you propose to send them, the Board will issue the necessary instructions.

I am, &c.,
INGRAM B. WALKER.

J. H. Wilson, Esq., M.P., National Amalgamated Sailors and Firemen's Union.

ILLEGAL SUPPLY OF SEAMEN.

Sir,

11 December, 1893.

It is reported to me that there are certain crimps supplying stewards to P. & O. and other steamers, and charging them £5 for each berth. If the statements of the writer of enclosed letter are correct I think it is desirable that the Board of Trade should take steps to prevent such illegal charges being made. I enclose you the letter I have received.

I am, &c.,
J. H. WILSON.

The Assistant Secretary (Marine Department), Board of Trade.

Sir,

Sir, Board of Trade (Marine Department), London, S.W., 22 December, 1893.

I am directed by the Board of Trade to acknowledge the receipt of your letter of the 11th instant, forwarding a letter in which complaints are made of alleged illegal supply of seamen by a crimp.

In reply, I am to state with respect to the alleged supply of a man to the s.s. "Fifeshire" that no person of the name mentioned would appear to have been put on the ship's articles, but that on the vessel's return to the United Kingdom further inquiry will be made.

With regard to the engagement stated to have been procured for a man on board one of the Peninsular and Oriental Company's boats, if full particulars are furnished, the matter will be carefully investigated.

I am to add that the reports received from the Superintendents of the Mercantile Marine Offices at Tower Hill and Victoria Docks do not in any way support the statements made by Mr. Volker.

I am, &c.,
INGRAM B. WALKER.

J. H. Wilson, Esq., M.P., Sailors and Firemen's Union.

E 6.

COPY OF LICENSE ISSUED BY THE SHIPPING MASTER, NEW SOUTH WALES, TO OTTO HERMAN.

Licenses as Issued.

The following is a sample of many of the licenses to ship now being issued by the Shipping Master:—

No. 6,444. [Coat of Arms.] A 12.

License to Ship.

I HEREBY certify that Otto Herman, shore service, has license from me to ship.
Registered at the Shipping Office, Sydney, the 18th day of July, 1893.

J. EDIE,
Shipping Master.

Mr. Herman, to whom this permit was issued, states that he has been twenty years in Australia, during which time he has never been to sea. He has no papers to show that he has ever been to sea at all, and yet had no difficulty at all in obtaining a license to ship.

E 7.

REPORT OF THE SHIPPING MASTER, NEW SOUTH WALES, WITH REGARD TO THE ISSUE OF "LICENSES TO SHIP."

Sir, The Treasury, New South Wales, 25 July, 1893.

I am directed by the Colonial Treasurer to acknowledge the receipt of your letter of 22nd instant, and to hand you, enclosed, copy of the Shipping Master's report thereon.

Mr. See desires me to add, however, that if you can produce any fresh proof or further reliable information, and are still desirous of an interview with him, he will receive a deputation consisting of not more than four persons, on Thursday morning next at 11 o'clock.

I have, &c.,
F. KIRKPATRICK,
Under Secretary.

Samuel Smith, Esq., Secretary, Seamen's Union of Australasia,
New South Wales Branch, Sydney.

Sir, Shipping Master's Office, Sydney, 24 July, 1893.

With reference to the enclosed letter from the Secretary of the Seamen's Union, I have the honor to report:—

The men mentioned in the newspaper clipping came to the office for "Licenses to Ship," stating that they desired to engage as seamen, and as I was satisfied of such desire, licenses were issued to them (each man signing the butt of the License Book), in accordance with section 33 of 27 Victoria No. 13, which reads as follows:—"33. In case any seaman of any ship, of whatever tonnage the same may be, shall have lost his discharge, or from any other cause be unable to produce the same, or if any other person shall be desirous of engaging as a seaman, it shall be lawful for any Shipping Master on being satisfied of the fact of such loss, inability, or desire, as the case may be, to grant and to deliver to such seaman or other person a license to ship, which license shall be in writing and signed by the Shipping Master."

The word "Seaman" in the Act means every person employed in any capacity whatever on board ship, except masters, pilots, and apprentices.

The onus of shipping incompetent men rests with the persons who engage them, as a license to ship does not certify to the competency of the licensee, and the Act does not give power to prevent the master of a ship engaging the holder of a "Certificate of Discharge" or a "License to Ship" in any capacity he, the master, may think proper.

As I am aware of no abuses of this office taking place, I respectfully submit that Mr. Smith can offer no suggestion consistent with the Act which would prevent alleged abuse.

I have, &c.,
J. EDIE,
Shipping Master.

E 8.

PROSECUTION OF A REGISTRY OFFICE KEEPER FOR ALLEGED INFRINGEMENT OF MERCHANT SHIPPING ACT.

BREACH OF THE SHIPPING ACT.—"SHANGHAIING" AT MELBOURNE.

At the District Police Court yesterday, before Mr. C. H. Nicholson, P.M., and a Bench of Magistrates, an information was laid by Mr. J. M. Christie, of the Department of Trade and Customs, against Nathaniel Copeland, a registry office keeper in Little Collins-street, for an alleged infringement of the Merchant Shipping Act.

Mr. Woinarski prosecuted, and Mr. A. E. Jones defended.

The charge, as set forth by the prosecution, was that the defendant did, on the 2nd ultimo, wrongfully supply Thomas Conway, a seaman, to be entered on board the s.s. "Pateena" contrary to the provisions of the Act. The offence was laid under section 147, which states that "no person other than the owner, captain, or mate, or other legally authorised person, is permitted to supply seamen to a vessel under a penalty of £20." Conway, it appears, had no sea training, and had recently been employed as a groom at Marysville. He had applied to Copeland for work as a pick-and-shovel man, and the latter told him if he was a shovel-man he could get him a job as coal-trimmer on board a vessel, and that on payment of 5s. he would give him a note to Captain Dyson, of the Marine Free Labor Bureau. Copeland also said that if Dyson did not engage him his 5s. would be returned. Conway paid him the fee, and Captain Dyson is alleged to have sent him on board the "Pateena" as a fireman. He made a trip to Launceston in the "Pateena," and on arrival there he received a certificate of discharge as an A.B. This was a very irregular proceeding, and it required to be stopped with a firm hand.

As the man Conway failed to appear, although he had been duly served with a summons by Detective Christie, Mr. Woinarski applied for a remand, and he would also ask for a warrant for his arrest, as he has exhibited extreme unwillingness to have anything to do with the case.

Mr. Jones averred that the committee of the Seamen's Union were the real instigators of the prosecution. He should not oppose the application for remand, but he thought he was entitled to costs.

The Bench refused the application for costs then, and the case was postponed until Thursday, the costs to abide the issue of the case.—Melbourne *Argus* of Tuesday.

E 9.

E 9.

SEAMEN'S STRIKE.—DEPUTATION TO MR. SEE.

GRANTING OF PERMITS TO SEAMEN.

THE Colonial Treasurer, Mr. See, was waited upon yesterday morning by Messrs. J. D. FitzGerald, Davis, Black, and Houghton, Ms. L. A., and Messrs. A. Carrol (President), S. Smith (Secretary), J. McLean, and A. McNicoll, representing the Seamen's Union, with regard to the grievances by the Union against the Shipping Office.

Mr. FitzGerald introduced the deputation.

Mr. Smith addressed the Minister at length, and said that he could show that there were men on board the "Emu" who did not possess permits or discharges. They claimed that the greater number of men now employed on the steamers were incompetent. The seamen had been induced to believe, by the statements of the Treasurer in Parliament, that the law would be impartially administered.

Mr. See : I have carried out the law.

Mr. Smith proceeded to refer to the case of the "Hesketh." There was a necessity for amending the law, which could now be interpreted in many different ways. He claimed that, owing to incompetent men having been shipped, accidents had happened, and instanced the cases of the "Hilda," "Elingamite," "Guiding Star," "Franklin," and "Corea." The issue of licenses to incompetent men was altogether too easy.

Mr. See : In a great many cases the men make a declaration that they are seamen. If they afterwards state that they have not been to sea it does not reflect very great credit on them.

Mr. Smith : We assert that a man should not be allowed to obtain a permit by merely saying that he is a seaman.

Mr. See : If a captain takes a man he is responsible, and who is to blame ?

Mr. Davis : The Government, for allowing it.

Mr. See : It is the law. The permit does not say that the man is a seaman.

Mr. Davis : It entitles him to go to sea. Any man who has that document in his possession was licensed to go to sea in any vessel in New South Wales.

Mr. See : In one permit I see that the man is stated to be a shoreman.

Mr. Smith urged that great care ought to be exercised as regarded the issue of permits. The deputation was firmly of opinion that the law was not fairly administered as between the employer and the employee.

Mr. See : Do you know of one case in which a competent sailor, who had not got a discharge, applied for a permit and did not get it ?

Mr. Davis : There was one case in the "Royal Tar." The Marine Board declined to allow any man on board that ship to proceed to sea on a permit. There was one man who was one of the company, and had been a seaman, and they declined to allow him to ship as a sailor.

Mr. Smith said the men were sent away to find a Magistrate in order to make affidavits, and were put to a lot of unnecessary trouble.

Mr. See : For the last twelve months Captain Edie has been appointed a Magistrate in order that he may receive such declarations.

Mr. Smith : There are very few *bonâ-fide* men who lose their discharges. Some people in Sydney get discharges and give them to the men, and tell them to profess to be the men who are named in the discharge.

Mr. See : You never made that statement to me before. Such men ought to be prosecuted.

Mr. Smith : It is very difficult to prosecute a captain, but a captain can easily prosecute the men. We think the shipping officials should take action where they know that the captains are in the wrong.

Mr. See : I know that many shipowners have been summoned for committing breaches of the law.

Mr. McNicoll instanced a number of cases in which he stated there had been breaches of the law. There were, he said, Boards to inquire into the competency of the officers. Why should not seamen who had lost their discharges be subjected to an examination.

Mr. See : The Shipping Master puts them through an examination to a large extent. The present Shipping Master has had thirty years' experience at sea.

Mr. Davis : We do not dispute his capacity at all.

Mr. McNicoll : We come to you as Minister of Marine.

Mr. See : That is a new title. I do not know where you got it from. I have never been called Minister of Marine before.

Mr. Carrol mentioned several cases, and said that one captain on a steamer offered a man £3, after he had got his full crew, to go to Melbourne to steer the vessel, so that he might at least have one competent man on board.

Mr. Smith : We can supply the names afterwards if you wish. There are a large number on men as A.B.s on the coastal boats now who have never been to sea before, except as passengers.

Mr. Davis addressed the Minister at considerable length. He reminded Mr. See that a little time ago he moved the adjournment of the House on this very matter. Mr. See's reply, as reported in *Hansard*, was all that could be expected either from a Minister of Marine or from the most ardent Unionist. Mr. Davis quoted largely from Mr. See's reply, in order to remind him of the fact. But now it had been explained in an official letter that if the owner of a steamer liked to pick up a number of men, and came down to the Shipping Master and said that he wished to engage men, they were given permits to go to sea. The letter explained that only seamen who had lost their discharges had been engaged, or men recommended by the shipowners.

Mr. See : It does not say what the men are shipped as.

Mr. Black : It leaves a large loophole. They may be shipped as anything.

Mr. Davis : I could go on board the steamers in our port and show that 50 per cent. of the men shipped as able seamen are not seamen at all. I have information from officers of vessels on the matter. Many officers are afraid of the risk of losing their certificates owing to the incompetency of the crews. Some of the men who have been shipped as A.B.s do not know the difference between a ship's light and the light of a doctor's shop. The Marine Board were very zealous in the matter of the "Royal Tar." Why are not the authorities equally zealous now ? The Shipping Master's hands are tied. He says in this letter : "Other men produced memorandums from various shipowners." But why should every man be engaged who produces a recommendation from a shipowner.

Mr. See : Captain Edie administers the Act. I have not tied his hands. There has been no interference from me either one way or the other.

Mr. Davis : The position taken up now is quite different from the position you took up in the House.

Mr. See : I am as consistent now as I hope you are.

Mr. Davis : That is a matter of opinion.

Mr. See : I will allow the public to be the judge. Continuing, he said that he noticed that every man who signed articles on the "Emu" gave the name of the ship he had previously been employed in. The deputation could look at the articles if they wished.

Mr. Davis said that he wished to add one thing. There was a person in Sydney who kept a stock of these discharges, and could supply a regiment or two. The establishment of a boarding master was not considered replete unless he had on hand a big stock of discharges. He could prove that forgery had been committed in the case of 30 per cent. of those signed lately.

Mr. See said that the Act designated a sailor to be a person employed in any capacity on a ship, except as master or pilot, and excepting persons employed temporarily on a ship when in port. Amongst the offences provided was one upon the captain if he took men to sea without the signing the articles. All he could say was this : That, as far as the law was concerned, it had been administered with thorough impartiality. As he had stated previously, when this unfortunate dispute began, he told Captain Edie to be careful in the exercise of duty. His own position was one in which he was called on to administer the law, and as long as he did this his responsibility was at an end. The law might be defective, but it was not for him to say so. Whilst it was the law it must be administered. He could take no action which would be contrary to it. If the law provided that a seaman who had lost his certificate might get a permit, that seaman had a perfect right to obtain such a permit. It would be an arbitrary thing to refuse to give a permit to a sailor because he had left the sea for a few years. He maintained that the law had been impartially administered under a most trustworthy, efficient, and capable officer. No pressure had been brought to bear on that officer in any shape or form. Personally, he had only seen him twice during the whole period of the disturbance. As Minister he had been guided entirely by the officer

officer who was appointed to administer the law. It was not because there had been accidents that the system of engaging seamen was to be totally condemned. No doubt some men had said that they were competent seamen, and had thus obtained permits, whilst they had not been such, but if these men deliberately made misstatements the officials were not to blame. Besides, how could a man learn to become competent if he was never to be allowed to have any experience? The deputation spoke from a seaman's point of view, but this matter concerned the officers and the owners, and the public as well. If an accident happened to his vessel the shipowner was a heavy loser. Vessels were not usually covered by insurance for nearly the amount they were worth. It was, therefore, to the interests of the owners to have the vessels properly manned. All the care and the interest was not centered in the gentlemen he saw before him that day. The men whose business it was to own ships and to run them had also an interest in seeing that there were competent men on board, and he noticed from what had appeared in the press that in the majority of cases the seamen who had been engaged were said to be competent men.

Mr. Smith : What is the good of having a Marine Board to see that a vessel has proper boats if the men engaged as sailors are incapable of handling a boat if necessary.

Mr. See : Under the Act if any man makes a false and wilful statement with the view of obtaining a permit he can be fined £5, and the money can be deducted from any wages due to him.

Mr. Davis : Then the Government should deduct a month's salary off about half the men who are running to-day.

Mr. See : It is your duty to see that these men are prosecuted.

Mr. FitzGerald : It is not the duty of the Union officers to do that, but the duty of the police.

Mr. Carrol : Why, a lot of organ-grinders have shipped as A.Bs.

Mr. Davis : Oh, don't run down the profession like that.

Mr. See said that if cases of wrong-doing were brought before him he would take action in the matter.

The deputation then withdrew.

E 10.

SUGGESTED AMENDMENTS IN THE SEAMEN'S LAWS CONSOLIDATION ACT, 1864.

THAT between clauses 6 and 7, Part I, pages 2 and 3, be inserted the following :—

4. Also every Shipping Master, or other person duly authorised in that behalf by the Minister, may, in cases where he has reason to suspect that the provisions of this Act, or the laws for the time being relating to merchant seamen and to navigation, are not complied with, exercise the following powers, that is to say :—

- (1.) He may require the owner, master, or any of the crew of any ship to produce any official log-books or other documents relating to such crew or any member thereof in their respective possession or control.
- (2.) He may require any such master to produce a list of all persons on board his ship at the time of her departure from her first port, and of all persons who have subsequently been received on board at any port of call, distinguishing the passengers according to the classes of saloon, second-class, or steerage passengers, and take copies of such official log-books or documents, or of any part thereof.
- (3.) He may muster the crew of any such ship, and require all persons on board of such ship (other than the crew) to be collected together before him, and, if he finds the said persons to exceed the number of persons (other than as aforesaid) which the ship is authorised to carry, may require all the said persons in excess of such number to leave the ship forthwith.
- (4.) He may summon the master to appear and give any explanation concerning such ship or her crew or the said official log-books or documents; and should such explanation not be deemed satisfactory he may withhold the clearance of such vessel, and, if necessary, prevent her from going to sea for a period not exceeding *sixty* hours from the giving of such explanation.
- (5.) He shall see that every vessel is fully manned in accordance with the provisions of the Seamen's Laws Consolidation Act relating to the manning of vessels.

And if, upon the requisition duly made by any person so authorised in that behalf as aforesaid, any person refuses or neglects to produce any such official log-book or document as he is hereinbefore required to produce, or to allow the same to be inspected or copied as aforesaid, or impedes any such master of a crew as aforesaid, or refuses or neglects to give an explanation which he is hereinbefore required to give, or knowingly misleads or deceives any person hereinbefore authorised to demand any such explanation, he shall for each such offence incur a penalty not exceeding *twenty* pounds.

5. The Minister may from time to time dispense with the transaction before a Superintendent of Mercantile Marine, or in a Mercantile Marine Office, of any matters required by this Act to be so transacted; and thereupon such matters shall, if otherwise duly transacted as required by law, be as valid as if transacted before a Superintendent of Mercantile Marine or in a Mercantile Marine Office :—

That in the last line of subsection 1, section 14, Part III, on page 4, the word "of" be substituted for the words "not exceeding."

That in the fourth line of subsection 2, section 14, Part III, on page 4, the word "of" be substituted for the words "not exceeding"

That in the last line of subsection 3, section 14, Part III, page 5, the word "of" be substituted for the words "not exceeding"

That the word "either" in line 2, clause 16, Part III, on page 5, be omitted; and in the next line, the words "or on board the ship in which they are to be employed" be omitted; and in the tenth line of the same clause, all the words after the word "and" to the end of the clause inclusive to be omitted.

That all words in subsections 1, 2, 3, and 4, of clause 17, Part III, page 5, be omitted or varied if necessary, to conform to the sections 15 or 16, or to any other sections.

That clause 20, Part III, page 6, be repealed.

That in addition to the requisites provided by section 15, Part III, page 5, every agreement entered into by any master with any seaman shall contain the following :—

- i. The nature, and, as far as practicable, the duration of the intended voyage or engagement, or the maximum period of the voyage or engagement, and the places or parts of the world (if any) to which the voyage or engagement is not to extend.
- ii. The number and description of the crew, specifying how many are engaged as sailors.
- iii. The time at which each seaman is to be on board to begin work.

That in section 47, on page 12, be inserted after the tenth line the following clauses :—

In all cases where vessels are owned in or trading in the Colony, and where vessels are engaged on time agreement, all wages earned shall be paid monthly, on the first day of the month, and on vessels trading to ports within the Colony, weekly, or as soon thereafter as the vessel arrives at any port where there is a branch of any bank.

That there be inserted after subsection 4, section 66, on page 19, the following clause :—

That for the purposes of this section any seaman working on a wharf or otherwise on shore, under the instructions of his superior officer, or in pursuance of the shipping agreement entered into by him, shall be considered as in the service of his ship, and shall be entitled in case of illness or accident to the same medical attendance and subsistence as if on board ship at the time of such illness or accident.

That section 72, page 20, be repealed, except as affecting foreign-going ships on the high seas.

That the following clause be inserted after section 72, page 20 :—

That any seaman desiring to leave any vessel in any Australasian port may do so on giving to the master of his ship twenty-four hours notice of his intention, and on procuring a duly qualified substitute to take his place, whereupon the master of the said ship shall give to such seaman so desiring to be discharged a proper discharge.

That between sections 76 and 77 be inserted the following clause :—

That in the event of any seaman prosecuting any master under whom he has served for any penalty or wages or otherwise, the Court may, irrespective of the success of the said seaman's prosecution or claim, make an order on the said master for the immediate payment out of the wages owing to such seaman of any such sum as the Court may deem just, such sum to be applied to the payment of any solicitor or barrister acting on behalf of such seaman in the said prosecution.

That

That between sections 32 and 33, Part IV, page 9, and immediately before any other clause there proposed to be inserted, be inserted the following :—

73. Any document authorising or promising, or purporting to authorise or promise, the future payment of money on account of a seaman's wages, conditionally on his going to sea from any port within the province, and made before those wages have been actually earned, shall be void. No moneys paid in satisfaction or in respect of any such document shall be deducted from a seaman's wages, and no person shall have any right of action, suit, or set-off against the seaman or his assignee in respect of any moneys so paid, or purporting to have been so paid : Provided that—

1. Nothing in this section shall invalidate or affect any allotment-note duly made under this Act.

Discharge and Payment of Wages.

74. In the case of all foreign-going ships and intercolonial ships all seamen shall be discharged and receive their wages in the presence of the said Board, or of a Superintendent of Mercantile Marine duly appointed under this Act, except in cases where some competent Court otherwise directs; and any master or owner of any such ship who discharges any seaman belonging thereto or, except as aforesaid, pays his wages within the province in any other manner, shall incur a penalty not exceeding ten pounds; and, in the case of coast-trade ships, seamen may, if the owner or master so desires, be discharged and receive their wages in like manner.

And the owner or master of the ship shall pay to each seaman on account, at the time when he lawfully leaves the ship, at the end of his engagement, two pounds, or one-fourth of the balance due to him, whichever is least, and shall pay him the remainder of his wages within two clear days (exclusive of any Sunday or public holiday) after he so leaves the ship.

That immediately after clause 35, Part IV, page 9, be inserted the following clause :—

That every master of every vessel of 80 tons burden or upwards trading from any port in this Colony to any of the Australasian colonies or the South Pacific Islands shall keep or cause to be kept an official log-book, either separate from or in conjunction with the ordinary ship's diary, such log-book to be kept in the manner and in the form as provided by law for the keeping of the official log-books of vessels trading to foreign ports.

That in the first line of section 42, page 11, the words "foreign going" be omitted, and in the first line, after the word "ship," the following words be inserted "belonging to or trading with the Colony"

That in the second line of section 31 the word "either" be omitted and all the words after "shipping master" in the sixth line down to the word "him" in the twelfth line inclusive be omitted, and the following section be substituted for it :—

That any notice of dismissal given to any seaman on any vessel trading to any port or parts in the colonies of Australasia or the South Pacific Islands shall not take effect till the expiration of forty-eight hours from the time such seaman commenced his duties on board any such vessel.

That between sections 32 and 33, Part IV, page 9, be inserted the following clause :—

That any seaman serving on board any vessel trading to any port or parts within the colonies of Australasia or the South Pacific Islands shall be entitled to have provided for him a free passage back to the port in which he engaged himself in case the vessel on which he is serving is unfitted to, or is not intended in due course to return to such port, and such seaman shall be entitled to wages in any such event till he actually arrive at the port of engagement.

Ratings.

That after Part 1, page 2, be inserted the following :—

6. From and after the commencement of this Act all vessels engaged in the home or intercolonial trade shall carry the number of seamen, and if a steam-vessel, the number of firemen and trimmers, specified in the *First Schedule* hereto annexed. The master and owner of every vessel proceeding on a voyage, or attempting so to proceed, without a full crew as herein specified shall be liable to a penalty not exceeding *one hundred pounds*.
7. A seaman shall not be entitled to the rating of A.B.—that is to say, of an able-bodied seaman—unless he has served at sea for four years before the mast; but the employment of fishermen in registered decked fishing-vessels or men employed in registered decked cutters shall only count as sea-service up to the period of three years of such employment; and the rating of A.B. shall only be granted after at least one year's sea-service in a trading-vessel in addition to three or more years' sea-service on board of registered decked fishing-vessels or registered decked cutter.

Such service may be proved by certificate of discharge or by other satisfactory proof.

Nothing in this section shall affect a seaman who has been rated and has served as A.B. before the passing of this Act.

8. No person shall be entitled to the rating of fireman who has not served for at least six months as trimmer in a steam-vessel engaged in the home or foreign trade, or who has served for at least six months as fireman in a registered steam-vessel plying within restricted limits, or who has served for at least six months on land as an engine-driver or fireman. Any master giving a certificate of discharge as an A.B. or fireman to any person who has not duly served in that capacity shall be liable to a penalty not exceeding *fifty pounds*.

FIRST SCHEDULE REFERRED TO ABOVE.

SEAMEN TO BE CARRIED IN SQUARE-RIGGED SAILING-VESSELS.

Under 100 tons register, not less than 4 certificated able seamen.				
Over 100	"	and under 300 tons register, not less than 6		} certificated able seamen.
" 300	"	" 600	" 8	
" 600	"	" 1,000	" 10	
" 1,000	"	" 1,500	" 12	
Two able seamen extra for every 500 tons or fraction of 500 tons that the vessel is above 1,500 tons.				

SEAMEN TO BE CARRIED IN SEA-GOING STEAM-VESSELS.

Under 50 tons register, not less than 2 certificated able seamen.				
Over 50	"	and under 100 tons register, not less than 4		} certificated able seamen.
" 100	"	" 400	" 6	
" 400	"	" 800	" 8	
" 800	"	" 1,200	" 10	
" 1,200	"	" 1,600	" 12	
" 1,600	"	" 2,000	" 14	
One able seaman extra for every additional 400 tons or fraction of 400 tons above 2,000 tons.				

FIREMEN.

Under 30 h.p., not less than 2 certificated firemen.				
Over 30	"	and under 100 h.p., not less than 3 certificated firemen.		
" 100	"	" 200	" 6	
" 250	"	" 400	" 9	
" 480	"	" 600	" 12	
One extra fireman for every 200 h.p. over 600.				
Vessels over 100 h.p. shall carry 1 trimmer for every 2 firemen.				

DRAFT BILL TO AMEND THE MERCHANT SHIPPING ACT, 1867.

BE it enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal and Commons, in this present Parliament assembled, and by the authority of the same, as follows:—

1. (1) Subsection (1) of section 9 of the Merchant Shipping Act, 1867, shall be construed as if the minimum space thereby required for every seaman and apprentice in every place in any ship occupied by seamen or apprentices, and appropriated to their use, were 140 (instead of 72) cubic feet, and 18 (instead of 12) superficial feet, measured on the deck or floor of such place. Amendments relating to places appropriated to seamen. 30 & 31 Vic. c. 124, s. 9 (1).
- (2) Such place shall be deemed not to be as far as practicable shut off and protected from effluvia, as required by subsection (2) of section 9 of the Merchant Shipping Act, 1867, if any hatchway or other opening or means of approach leading to the hold or peak of the ship is made, opened, or left open in such place. 30 & 31 Vic. c. 124, s. 9 (2).
- (3) Such place shall be deemed not to be kept free from stores or goods, as required by subsection (6) of section 9 of the Merchant Shipping Act, 1867, if any paint locker or oil store is kept inside such place, or in close proximity thereto, unless partitioned off therefrom by a permanent bulkhead, airtight and watertight. 30 & 31 Vic. c. 124, s. 9 (6).
2. This Act shall come into operation on the first day of September, 1893, and shall not apply to any ship which has not since that date been in some port in the United Kingdom. Commencement of Act and limitation of its operation.
3. This Act may be cited as the Merchant Seamen (Accommodation) Act, 1893, and shall be construed as one with the Merchant Shipping Acts, 1854 to 1890, and the Acts amending the same. Short title and construction.

DRAFT BILL TO AMEND THE MERCHANT SHIPPING ACT, 1854.

BE it enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal and Commons, in this present Parliament assembled, and by the authority of the same, as follows:—

1. Every seaman and apprentice on any British ship or fishing-boat shall be supplied with provisions and water according to the scale contained in the schedule hereto, and, save so far as is by this Act expressly provided, any stipulation whereby any seaman or apprentice agrees to deprive himself of the benefit of this Act or any part thereof shall be void. Fixed scale of seamen's provisions.
2. (1) Notwithstanding anything contained in section 149 of the Merchant Shipping Act, 1854, or in section 13 of the Merchant Shipping (Fishing Boats) Act, 1883, every agreement entered into under either of those sections shall contain a statement of the scale of provisions and water contained in the schedule hereto, as well as a scale of any additional provisions or water which may in any case be specially agreed on. Scale to be inserted in Seamen's agreements. 17 and 18 Vic., c. 104, s. 46 and 47 Vic., c. 41.
- (2) Whenever the officer making or directing such examination finds that the provisions or water are of bad quality or unfit for use, or are of less quantity than is necessary to satisfy the requirements of this Act, then
 - (a) if such deficiency in quality or quantity is due to the neglect or default of the master or of the owner of the ship, the master or owner guilty of such neglect or default shall be liable to a penalty not exceeding £50;
 - (b) if after signification in writing to the master of the result of the examination the master does not thereupon provide other proper provisions or water in lieu of any so signified to be of bad quality or unfit for use, or does not procure the requisite quantity of any so signified to be deficient in quantity, or uses any provisions or water in lieu of any so signified to be of bad quality or unfit for use, he shall in every such case incur a penalty not exceeding £50.
- (3) If the officer to whom complaint is made certifies in his statement of the result of the examination that there was no reasonable ground for such complaint, each of the parties so complaining shall be liable to forfeit to the owner out of his wages a sum not exceeding one week's wages. 17 and 18 Vic., c. 104, s. 222.
3. Section 223 of the Merchant Shipping Act, 1854, so far as it relates to the provisions which any seaman has by his agreement stipulated for, and the quantity specified in the agreement, shall be construed to include the provisions required by this Act to be supplied, and the quantity hereby fixed. Application of enactment relating to allowance for short or bad provisions. 17 and 18 Vic., c. 104.
4. (1) Any three or more of the crew of any British ship or fishing-boat may complain to any officer in command of Her Majesty's ships, or any Consular Officer, or any Superintendent of a Mercantile Marine Office, or any Chief Officer of Customs, that the provisions or water for the use of the crew are of bad quality, or of less quantity than necessary to satisfy the requirements of this Act, and such officer may thereupon examine the said provisions or water, or cause them to be examined; and after making such examination, such officer shall enter a statement of the result of the examination in the official log, and shall send a report thereof to the Board of Trade, and such report, if produced out of the custody of the Board or its officers, shall be received in evidence in any legal proceeding. Examination of provisions on complaint, and penalties in case of deficiency. 17 and 18 Vic., c. 104, s. 221.
5. Sections 221 and 222 of the Merchant Shipping Act, 1854, are hereby repealed. Repeal. 17 and 18 Vic., c. 104.
6. This Act may be cited as the Merchant Seamen (Provisions) Act, 1893, and shall be construed as one with the Merchant Shipping Acts, 1854 to 1890, and Acts amending the same. Short title and construction.

SCHEDULE.

Daily provisions per man:—

- 1 lb. cooked meat (salt beef, pork or fresh beef) exclusive of bone.
- 1 lb. potatoes (or substitute from time to time agreed on).
- 1 lb. bread.
- $\frac{1}{2}$ lb. flour.
- $\frac{1}{2}$ oz. tea.
- 1 oz. coffee and 2 oz. cocoa on alternate days.
- 3 oz. sugar.
- 1 gallon of water.

Weekly provisions per man:—

- | | | |
|---------------------------------------|---------------------------------|--------------------------------------|
| 2 oz. table salt | $\frac{1}{2}$ pint vinegar | 1 lb. currants or raisins |
| $\frac{1}{2}$ oz. ground black pepper | $\frac{1}{2}$ lb. peas or beans | $\frac{1}{2}$ pint bottle of pickles |
| 1 oz. mustard | 1 lb. onions | 1 lb. tin condensed milk |
| 2 oz. currie powder | $\frac{1}{2}$ lb. rice | 1 $\frac{1}{2}$ oz. butter |
| $\frac{1}{2}$ oz. pudding spices | $\frac{1}{2}$ lb. oatmeal | $\frac{1}{2}$ lb. marmalade or jam |

Additional provisions per man:—

- 1 lb. salt or fresh fish twice a week.
- Fresh soup, with vegetables, whenever practicable.

[To Evidence of Mr. Samuel Smith.]

ON THE "CORINNA"—POOR SEAMEN—TO BE BLAMED OR PITIED—THE TORTURES OF THE DAMNED.

A MAN who made a passage from Davenport to Sydney in the s.s. "Corinna," the week before last, gives the following account of the experiences of himself and his mate:—

He says—"My mate and I were 'on the rocks' at Hobart, and as we had to get away by hook or by crook, we began to cruise around the shipping office. Mr. Hawthorn, shipping master, called us in, and asked us to ship in the 'Corinna,' which he said was about to leave for Sydney. We consented, and were referred to Mr. Holdsworth, manager of the Union Shipping Company, whose cordial reception of us was in marked contrast to his manner a few days before, when we had applied for a free passage.

We

We all left that night with three other fellows by the 8 o'clock train to join the ship at Davenport, and when we arrived were at once interviewed by the skipper and engineer, who inquired whether we had firemen's discharges. We all replied in the negative, with the exception of my mate. In fact some of us looked more like farmers than firemen, and one man volunteered the information that he was a gamekeeper. We could not go to sea with the clothes we had, and with some difficulty we got £1 in advance.

The 'Corinna' left Davenport the next day. I was told off to the first watch below in the stokehole, being luckily paired with my mate, who was a fireman, and we did fairly well; but on the next watch, when we turned to to relieve the raw hands, we found only 40 lb. of steam when there should have been 95. The stokehole presented a peculiar appearance with the new hands rolling all over her from bunker to bunker, sick, miserable, and helpless, as in Gustave Doré's picture of the damned in Dante's *Inferno*.

This simile is rather rough on the damned, but let it pass!

Joe and I set to work, and after a hard struggle got up steam again towards the middle of our four hours.

As for the deck hands, only two of them could steer, and they, with the officers, had the deck to themselves during the whole of the passage, the others being snugly stowed away in their bunks, paying the usual tribute to Neptune. When we arrived off Twofold Bay, where two passengers were to be landed, the skipper wisely decided not to attempt to enter with such a crew, and the unlucky passengers, much to their disgust, were brought on to Sydney. All efforts to persuade the raw deck hands to turn to were useless. The chief mate would yell 'Where's that gamekeeper? Fetch the _____ out!' But when he was out he could only cling to the grating of the stokehole and—well—behave as most people do when they are seasick.

We left on Friday, 14th July, at 1 p.m., and arrived in Sydney on Sunday night at 8:30—about twelve hours behind time."

F2.

Melbourne, 25 July, 1893.

Dear Friend,

I promised I should send you some of the particulars about the passage of the "Elingamite." The first thing that I heard before leaving the wharf in Sydney was the captain consulting with the chief officer as to who was to undertake the job of steering her down the harbour; well they came to the conclusion it would be the third officer, as none of the black-leg sailors could manage it, and I must say that the third officer was not a very competent helmsman, as the captain was at him all the time. Well we got out of the heads somehow, and the officer was relieved from the wheel by one of the crew, and I must say that a drunken man with a wheelbarrow could have got along straighter than we did; in fact not one man out of the whole crew could steer to suit any captain during the time of peace.

I disguised myself as much as possible and went in the vicinity of the fore-castle and had a conversation with one of the crew, and I told him I would like a billet on a steamer, and I said I had no discharge; he said it did not matter as they could get me one at the Labour Bureau, and also get me a ship. Well this particular fellow was sent to splice an eye into a small piece of two and a half manilla rope and could not do it; this was on Saturday forenoon, so they had to give the job to one of the others, and he called himself an A.B., or rather the ship-owners did; in fact the whole lot of the sailors were as green to ship's work as a lot of bushmen.

Now I turned my attention to the engine-room and stokehole, and such a sight met my eyes. There were five firemen and an engineer trying to clean a fire, each one taking his turn at it; they put me in mind of a picture I saw once of the Darktown Fire Brigade; during this operation they only lost 15 lb. of steam, and I may also state this was supposed to be the best watch of firemen, as they were lucky enough to secure two young fellows who had been in the Orient boats. During a conversation I had with the captain I remarked how slow we were steaming along, and he told me that there was only 100 lb. of steam on here; well I know for a fact when she had union men she could always be found with not less than 150, and that was kept with two men in each watch; now there are six; no wonder she made such a long passage; in fact the six could not have kept 100 if it had not been for the engineers; they worked like gravediggers the whole of the time. I almost forgot about placing a man on the look out; well one of the scabs was placed on the fore-castle head; he was there about half an hour when I heard the officer on the bridge sing out to him: "Do you see that light on the port bow?" and he did not answer, so he called a man and asked him to go and draw the man on the look out's attention on the look out to the light; well I had seen the light from the saloon deck then at least fifteen minutes; no wonder they run that vessel down when they have such people on the look out. There is one thing I must say in favour of the captain; he does not like these fellows and he sees that they are kept at it from daylight to dark; they get no rest from him. If all the ships in the colonies are carrying two and three blacklegs in the room of one union man, and paying them at reduced rates, I think it would be a saving to them to have union men and give them higher wages than they formerly got, and from what I have seen they would save on it. The weather was splendid all the way down till we got as far as the Promontory, and then we had a fresh breeze to the heads. I might also state I have been this way a good many times, but I never saw such fine weather before, and we did not arrive in Melbourne until half-past 12 Sunday night. You might mention to Sam Smith the receipt of this, and oblige me with a copy of the *Workman*.

If I see anything that will be useful I will send you particulars of it; I am about the shipping a lot.

Yours, &c.,

W. HENRY,

12, Tiffcott-street, West Melbourne.

G.

[To Evidence of Mr. Samuel Smith.]

Herald, 27 September, 1893.

SHIPPING SEAMEN—THE CASE OF CAPTAIN DYSON—APPLICATION TO REVIEW—THE JUSTICES' DECISION UPHOLD BY THE SUPREME COURT.

IN Chambers, before Mr. Justice Williams, this afternoon, Mr. Finlayson applied for an order *nisi* to review the decision of the City Court Justices in fining Captain Dyson, manager of the Maritime Free Labour Bureau, £5, for engaging a crew to serve on the ship "Inamincka," in contravention of the Merchants' Shipping Act.

Mr. C. A. Smyth appeared to show cause, and after arguments by counsel,

His Honor said: In this case Captain Dyson had been appointed manager of the Maritime Free Labour Bureau by a certain number of steamship-owners, who subscribed amongst themselves to keep the institution going. It was part of Captain Dyson's duty to collect the subscriptions and hand them over to the secretary of the Steamship Owners' Association. Then the secretary drew a cheque and paid Captain Dyson for managing the bureau. The Adelaide Steamship Company wanted men for the "Inamincka," and at their instance Captain Dyson engaged four seamen for the vessel. The question is whether on those facts he could be said to be "a person who is the *bona-fide* servant and in the constant employment of the Adelaide Steamship Company." The magistrates thought he was not, and I agree with them. He was the manager of the bureau for half a dozen different companies, and he could not be said to be in the constant employment of the Adelaide Steamship Company, when one part of the day he was employed by them, another part by another owner, and so on. Only portion of his time was devoted to the requirements of one owner, and then only when the occasion arose. I think the word "constant" in that connection is almost equivalent to the word "exclusive," and that he must be a person to whose services the owner has the absolute right. As to the point about the receipt of the log-book in evidence, I think it is perfectly immaterial. I should say as to this particular case that the log-book was not evidence, but the evidence was not necessary to prove that the seaman was entered, but only that he was engaged. On both grounds the order would be discharged, with costs.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

VESSELS ARRIVING AT AND LEAVING PORTS OF
NEW SOUTH WALES.

(RETURNS RESPECTING, FOR 1893.)

Ordered by the Legislative Assembly to be printed, 22 February, 1894.

The Secretary of the Board of Health to The Under Secretary for Finance and Trade.

Sir,

Offices, 127, Macquarie-street, Sydney, 19 February, 1894.

I have the honor to forward you herewith the following returns respecting action taken by this Department with regard to vessels arriving at and leaving the ports of New South Wales during the year 1893:—

- (A) Return of vessels boarded and examined under the provisions of the Quarantine Acts, by the Health Officers, showing a decrease for the year of 42 vessels, and an increase of 3,603 passengers, and 6,055 crew examined;
- (B) Return of vessels quarantined and specially dealt with at Port Jackson, showing an increase for the year of 14 vessels;
- (C) Return of vessels quarantined and specially dealt with at Newcastle, showing an increase for the year of 13 vessels;
- (D) Proclamations in force under the Quarantine Acts;
- (E) Bills of health issued to outward-bound vessels at Port Jackson and Newcastle, showing an increase for the year of 125; and
- (F) Vessels cleared under the Imperial Passenger Acts.

I have, &c.,
EDMUND SAGER,
Secretary.

A.

RETURN of Vessels boarded and examined under the provisions of the Quarantine Acts, by the Assistant Health Officer at Port Jackson and the Health Officer at Newcastle, during the year 1893.

Port.	Number of Vessels.	Number of Passengers.	Number of Crew.	Number of Vessels detained for special action.
Port Jackson	427	11,068	30,950	121
Newcastle	113	84	3,015	71
Total.....	540	11,752	33,974	*192

* Full particulars respecting these vessels are given in Returns B and C.

NOTE.—Dr. J. C. Sibley and Dr. Chisholm Ross have continued to perform the duties of Assistant Health Officer for Port Jackson and Health Officer for Newcastle, respectively, during the year 1893.

B.

RETURN of Vessels Quarantined and specially dealt with at the Quarantine Station, Port Jackson, during the year 1893.

European..	9	11	Same as above. In addition.—All articles of wearing apparel and similar goods were disinfected by dry or moist heat or other process. All compartments were fumigated for five consecutive hours, with all beds, bedding, &c., openly exposed to the sulphur fumes. The ship's papers and all mail matter were disinfected on shore and then returned to ship. Captain reported—Between the 23rd December and the 7th January eight cases of small-pox occurred amongst the Japanese passengers. Two cases were landed at Nagasaki on 31st December. Two cases landed at Hong Kong on 1st January, one case on 6th January, and three cases on 7th January. All Japanese passengers left the vessel at Hong Kong on 9th January, and no sickness of a suspicious nature occurred since that date. The quarters vacated by the Japanese, also those of the crew were thoroughly fumigated and cleaned immediately after the discharge of the Japanese passengers.

7	Himalaya, R.M.S.	16 Feb., 6 a.m.	16 Feb., 10.30 a.m.	London, via ports.	J. Orman	D. W. Williams	P. & O. S. N. Co.; G. Douglas Michie.	Measles on board.	European	133	121	...	11	This vessel was quarantined on arrival in consequence of an outbreak of measles during the voyage. Five convalescent saloon passengers and three members of the crew with the rash well developed landed, and were accommodated in the 1st class quarters. The berths, cabin, and hospital used by them during the voyage were disinfected by washing with a solution of corrosive sublimate, all beds, bedding, cushions, carpets, hangings, &c., having been previously sent on shore and there disinfected. Pratique was granted on the disinfection of the ship being completed. At 2.30 p.m., four of the passengers were released, their effects having been disinfected on shore by dry or moist heat. On 17th February, the remaining passengers with effects were conveyed to ship at Neutral Bay. All beds, bedding, &c., for disinfection were returned at same time. On 17th February, one cook and two waiters were discharged and returned to ship. On 4th March, the remainder of measles cases (three of crew) having completely recovered were transferred to ship at 9 a.m.

Landed two cases of small- pox at the Sema- phore on 10 June	European..	7	49	...	Immediately after arrival all parts of the vessel were put under fumiga- tion with sulphur for eight consecutive hours. The beds, bedding, clothing, &c., having been sent on shore and disinfected by dry or moist heat at a temperature of not less than 250° Fahrenheit. After this all articles that could be washed or boiled without injury to the fabric were dealt with in this manner. On completion of fumigation all parts of the ship were thoroughly cleansed with a solution of perchloride of mercury and when dry washed with clean fresh water. Bilges were pumped out and sea water let in until the dis- charge therefrom was perfectly clear. Fresh water was discharged and iron tanks cleansed and lime-washed. At 2 p.m., 8th July, disinfection having been completed and the vessel being in a good sanitary condition, pratique was granted and ship left quarantine waters

36	Chingtu, s.s. ...	1893. 8 Aug. 1 p.m.	1893. 14 Aug. 11.20 a.m.	Hong Kong, Port Darwin, Thursday Is- land, and Townsville.	Robt. Innes ...	Gerald Weigall	China S. N. Co. ; Lorimer, Rome, & Co.	Landing one case of small- pox at Thursday Island and hav- ing one case on board on arrival.	European.. Asiatic ... Customs Officers ..	26 9 2	11 102	37 111 2	This vessel came direct into Quarantine and was at once boarded by the Assistant Health Officer and Superintendent. At 3 p.m. a Chinaman named Ah Hee and a Japanese named Gamornolo Takijou, both members of the crew, were transferred to hospital ship "Faraway," showing suspicious symptoms. On 9th all persons landed with the exception of the crew, and were accommodated on shore for observa- tion. On 10th the Chief Medical Inspector and the Assistant Health Officer diagnosed the Chinaman's case (small pox), and the Japanese (acme). At 11.20 a.m. on 14th, the vessel having been thoroughly cleansed and disinfected, was allowed to be towed to Sydney, the crew and passengers, with all their effects, being detained in quaran- tine. The Japanese acme case was on this day removed to the shore hospital. All the effects of the crew and passengers were thoroughly disinfected on shore. At 5 p.m. on 23th August the crew and passengers, with the exception of Ah Hee, were released from quaran- tine. On 30th Ah Hee was removed to the shore hospital, and the "Faraway" disinfected. 31st August, all parts of the station being clean and free from infection, with the exception of the hospital, was released from quarantine. On 16th September, Ah Hee, being clean and free from infection, was handed over to the ship's agents. The hospital was then thoroughly disinfected and placed out of quarantine.

No. 1.

The Mayor of North Illawarra to The Colonial Treasurer.

Hon. Sir, Council Chamber, North Illawarra, 1 December, 1893.

I take the liberty of addressing you on a matter which will be brought under your notice, I presume, within the course of a few days, in respect of a vacancy to be filled on the Board of Commissioners of the Wollongong Harbour Trust, in consequence of the North Illawarra Municipal Council having failed to elect such Commissioner, through one of the Aldermen declining to record his vote at the election, the votes recorded being equal, viz., four for each candidate, the candidates being Alderman P. Lahiff and myself.

Two years ago, when this Council was called upon to elect a Commissioner to the Harbour Trust, Alderman Lahiff and myself were then candidates for the office, and notwithstanding that I was the Mayor at that time (which office, I maintain, gave me a precedence). I voluntarily, though very much against the wishes of my supporters, retired, and gave my support to Alderman Lahiff. The

263—A

[770 copies—Approximate Cost of Printing (labour and material), £3 16s. 0d.]

The grounds which I base my appeal to you now against Alderman Lahiff *re* appointment are as follows:—I claim to have the majority of votes of the whole Council in my favour. Allow me to explain so that you may be the better able to grasp the situation. Mr. C. J. Byrnes, the present Chairman of the Harbour Trust, is the proprietor and managing director of the Mount Pleasant Coal-mine. Alderman Lahiff is the nominal manager under Mr. Byrnes. Alderman R. J. Thorne, the only Alderman who did not vote at this election, although in the Council Chamber during the hours of the election, is an employe under Messrs. Byrnes and Lahiff, but he (Alderman Thorne) could not be induced to vote for Mr. Lahiff, and was evidently afraid to vote for myself; yet he (Alderman Thorne) did all that he could to secure my election. I therefore, with every feeling of confidence, respectfully request that you will give to this, my appeal for justice and fair play, your favourable consideration.

I have, &c.,
JOHN PAYNE,
Mayor.

No. 2.

Telegram from Mr. A. Campbell to The Colonial Treasurer.

Wollongong, 4 December, 1893.

MR. JNO. PAYNE, Mayor of North Illawarra, is forwarding letter to you through me, showing cause why he should be appointed Commissioner of Wollongong Harbour Trust to fill vacancy existing owing to deadlock in voting.

A. CAMPBELL.

No. 3.

Memorial to The Honorable John See, M.L.A., Colonial Treasurer.

The humble Memorial of the undersigned,

RESTEECTFULLY SHOWETH,—

That they are Aldermen of the Borough Council of North Illawarra.

That Mr. John Payne is Mayor of the said Council.

That Mr. Payne and Mr. Patrick Lahiff (also an Alderman of the same Council) were candidates at the recent election for the return of a Commissioner to represent that Council on the Wollongong Harbour Trust.

That they voted for Mr. Payne on that occasion.

That the number of votes polled by the two candidates were four each, the ninth member of the Council, Alderman Robert J. Thorne, having declined to record his vote.

That neither of the candidates having polled a majority of the full Council (of nine members), in accordance with the Wollongong Harbour Trust Act, it now devolves upon the Government therefore to fill the vacancy.

That Mr. C. J. Byrnes, the Chairman of the Harbour Trust, is the head of the Mount Pleasant Coal Company, whose working operations are within the Borough of North Illawarra.

That Mr. Patrick Lahiff is the local manager of the said colliery and is also a reputed part owner of the same.

That Mr. John Caldwell, one of the Aldermen who recorded his vote in favour of Mr. Patrick Lahiff, is a contractor in connection with the said colliery.

That Alderman Thorne, who refrained from voting as stated, is also a contractor in connection with the Mount Pleasant Colliery.

That he (Alderman Thorne) was avowedly favourable to the election of Mr. Payne as a Commissioner.

That he was not favourable to the election of Mr. Lahiff as such.

That his (Mr. Thorne's) business connection with the Mount Pleasant Coal Company influenced him not to record his vote for Mr. Payne, which otherwise he would readily have done.

That morally, therefore, a clear majority of five members of the Council, namely, Aldermen Payne, Mackie, Cornford, Bode, and Thorne were in favour of the election of Mr. Payne, and against the election of Mr. Lahiff, who, in addition to himself, had only three other Aldermen (or four in all) to support him.

That the appointment of Mr. Lahiff by the Government to fill the vacancy now existing would be a wrong to the Council of which a minority only is in that gentleman's favour.

That under the circumstances here set forth, Mr. Lahiff, if appointed by the Government, would represent the Borough Council of North Illawarra only in name, while, in fact, he would be a representative of the Mount Pleasant Coal Company in a most objectionable sense—a state of things which your memorialists feel quite assured neither yourself or your Government would knowingly approve or sanction.

That by the appointment of Mr. Lahiff, in view of the facts here stated, the North Illawarra Council would be disfranchised on the Wollongong Harbour Trust.

That by the appointment of Mr. Payne the majority of the Council would be represented, five of the members being favourable to his election as stated, whilst only four favour Mr. Lahiff.

That in every respect Mr. Payne is a most eligible man for the office of a Commissioner of the Wollongong Harbour Trust, he being one of the leading public men of Illawarra for upward of thirty years.

That among the many public services rendered by him he was mainly instrumental in securing the establishment of this very Borough of North Illawarra.

That he was also one of the very foremost members of the Executive Committee of the Wollongong Harbour Trust League that brought the Trust into existence.

Your memorialists, in view of all the important facts here set forth, urge most respectfully, but with all the earnestness of which they are capable, that you will take the premises into your consideration, and having done so, that you will appoint Mr. John Payne to fill the vacancy alluded to in connection with the Wollongong Harbour Trust.

Alderman JOHN D. MACKIE.
Alderman JAMES CORNFORD.
Alderman THEODORE BODE.

3

No. 4.

Mr. A. Lysaght to The Colonial Treasurer.

Dear Sir,

Annandale-street, Annandale, 4 December, 1893.

Failing to see you to-day when I called, I take the liberty of leaving this note for you, as my business is important, and one which calls for your immediate attention. It refers to the election of a Commissioner for the Wollongong Harbour Trust. At the polling last Thursday there were two candidates (Messrs. Lahiff and Payne), and each had an equal share of votes. The appointment, I am informed, rests entirely with you. Therefore, if you will give the retiring Commissioner, Mr. Lahiff, the position, I shall esteem it a great favour. No man in the Trust understands the work better. Over twenty years ago he was contractor for Belmore Basin, Wollongong, which he carried out successfully.

Trusting you will be pleased to comply with my request,

I remain, &c.,

ANDREW LYSAGHT.

No. 5.

Henry Clarke, Esq., M.P., to The Colonial Treasurer.

Dear Sir,

Sydney, 5 December, 1893.

I am informed that there is a vacancy in the Wollongong Harbour Trust in consequence of the North Illawarra Council failing to appoint a Commissioner, and have much pleasure in recommending Mr. Wm. John Gunning to fill the vacancy. I may mention that he has been a Commissioner since the foundation of the Trust, but retires on the 16th instant.

I have, &c.,

HENRY CLARKE.

No. 6.

J. B. Nicholson, Esq., M.P., to The Colonial Secretary.

Hon. Sir,

Legislative Assembly, N.S.W., Sydney, 5 December, 1893.

Seeing that the election of a Harbour Trust Commissioner has resulted in a tie-vote, the appointment of said Commissioner devolves upon the Government. The candidates for the position are Mr. P. Lahiff, part owner and manager of Mount Pleasant Colliery, and Mr. John Payne, Mayor of North Illawarra. Believing that Mr. Lahiff is best qualified for the position, without further comment I have much pleasure in recommending his appointment.

I have, &c.,

J. B. NICHOLSON, M.L.A.

No. 7.

The Secretary, Wollongong Harbour Trust, to The Under Secretary for Finance and Trade.

Sir,

Town Hall, Wollongong, 5 December, 1893.

I have the honor to inform you that the Council of the Municipal District of North Illawarra have failed to return a representative on this Board, the vacancy having been created by the retirement of Mr. Patrick Lahiff, by effluxion of time, in terms of the Act.

The Returning Officer reports that there were two candidates nominated, viz.,—

Patrick Lahiff, Esquire, J.P.,

John Payne, Esquire.

The number of candidates exceeding the number of Commissioners to be elected, a ballot took place on the 30th November, with the result that each candidate received four votes, neither having received a majority of votes of the whole of the members of the Council, pursuant to clause 6 of the Act.

I am directed to respectfully draw your attention to clause 17 of the "Wollongong Harbour Trust Act of 1889," which provides for the appointment of a Commissioner by His Excellency the Governor caused by such failure.

I have, &c.,

C. E. EGGLESE,

Secretary.

No. 8.

Mr. C. W. Marshall to The Under Secretary for Finance and Trade.

Dear Sir,

Savings Bank of New South Wales, Sydney, 16 December, 1893.

My friend Mr. Gunning, of Wollongong, informs me there is a vacancy in the Wollongong Harbour Trust, and that he is a candidate for such vacancy. I should be glad if you could bear his name in mind.

He is a son-in-law of Mr. Henry Clarke, M.P., is a good business man, is one of our local trustees at Wollongong and has been on the Trust already, and is a popular man locally. If there is anything you can do for him I shall esteem it a great favour. The vacancy mentioned is the representation of the North Illawarra Municipal Council on the Trust.

I am, &c.,

C. W. MARSHALL.

No. 9.

No. 9.

Mr. A. Campbell to The Colonial Treasurer.

Sir,

Wollongong, 20 December, 1893.

Re the vacancy in connection with the North Illawarra Council on the Wollongong Harbour Trust, I desire (as already intimated through your Under Secretary) to recommend Mr. John Archibald Beatson, J.P., Mayor of Wollongong, as a most suitable and generally acceptable person, for the said position.

Should you decide, however, not to appoint that gentleman, I would strongly recommend Mr. William John Gunning as the next most eligible man for the office. He has been a Commissioner of the Trust from the outset until to-day, when he lost his seat by one vote only, although every vote polled here (at Wollongong) was recorded in his favour.

Under the circumstances, and failing the appointment of Mr. Beatson, than whom I could recommend no other any stronger, the appointment of Mr. Gunning would give entire and even special satisfaction at this juncture.

I am, &c.,

A. CAMPBELL.

No. 10.

Minute Paper for the Executive Council.

Subject:—Appointment of a Commissioner to the Wollongong Harbour Trust Board to represent the Council of the Municipal District of North Illawarra.

The Treasury, New South Wales, Sydney, 27 December, 1893.

A VACANCY having occurred on the Wollongong Harbour Trust Board through the retirement, by effluxion of time, of Patrick Labiff, Esq., J.P., representative of the Council of the Municipal District of North Illawarra, and that Council having failed to elect a Commissioner in his place,—neither of the two candidates for the vacant position being able to secure a majority of votes of the whole of the Council as required by section 6 of the “Wollongong Harbour Trust Act of 1889,” it devolves upon the Colonial Treasurer, under the provisions of the 17th section of the said Act, to recommend a fit and proper person to fill the vacancy, and I therefore recommend, for the approval of His Excellency the Governor and the Executive Council, that such vacancy be filled by the appointment of William John Gunning, Esquire

JOHN SEE.

The Executive Council approve of the appointment herein recommended.—ALEX. C. BUDGE, Clerk of the Council. Min 93/66, 29/12/93. Approved.—R. W. DUFF, 29/12/93. Confirmed, 2/1/94.

No. 11.

J. B. Nicholson, Esq., M.P., to The Colonial Secretary.

Dear Sir,

Legislative Assembly, N.S.W., Sydney, 3 January, 1894.

I beg most respectfully to remind you that a vacancy still exists on the Wollongong Harbour Trust, and that, according to the provisions of the Act, the appointment rests with the Government. I also beg most respectfully to remind you of a certain recommendation I forwarded you some time ago in connection therewith, and again solicit for it your favourable consideration.

I have, &c.,

J. B. NICHOLSON, M.L.A.

No. 12.

The Under Secretary for Finance and Trade to W. J. Gunning, Esq.

Sir,

The Treasury, New South Wales, Sydney, 5 January, 1894.

I am directed to inform you that His Excellency the Governor-in-Council has been pleased to appoint you a Commissioner to the Wollongong Harbour Trust Board, under the provisions of the 17th section of the “Wollongong Harbour Trust Act of 1889,” to represent the Council of the Municipal District of North Illawarra.

Copy of *Gazette* notice of such appointment is enclosed herewith.

I have, &c.,

F. KIRKPATRICK,

Under Secretary for Finance and Trade.

No. 13.

W. J. Gunning, Esq., to The Under Secretary for Finance and Trade.

Sir,

Wollongong, 8 January, 1894.

I have the honor to acknowledge having received your letter, dated 5th instant, in which you inform me that His Excellency the Governor-in-Council has been pleased to appoint me a Commissioner to the Wollongong Harbour Trust Board to represent the Council of the Municipal District of North Illawarra, and I beg to express my gratefulness for the confidence thus reposed in me.

I remain, &c.,

W. J. GUNNING.

No. 14.

The Council Clerk, Borough of North Illawarra, to The Colonial Treasurer.

Sir, Borough of North Illawarra, Council Chambers, North Illawarra, 19 January, 1894.

I have the honor to forward copy of resolution passed by the North Illawarra Municipal Council, having reference to the appointment of Mr. W. J. Gunning as its representative on the Wollongong Harbour Trust (members present: Aldermen Lahiff, Williams, O'Neil, Caldwell, and Thorne), viz.:—

“That this meeting of the North Illawarra Council strongly protests against the appointment of Mr. W. J. Gunning, as Commissioner, to represent them on the Wollongong Harbour Trust, he, Mr. Gunning, not being one of their body or a ratepayer.”

I am further to respectfully request that you would annul the said appointment of Mr. Gunning, and appoint in his stead one of the aldermen belonging to the Council.

I have, &c.,
HENRY STUMBLES,
Council Clerk.

No. 15.

J. B. Nicholson, Esq., M.P., to The Colonial Treasurer.

Dear Sir, Legislative Assembly, N.S.W., Sydney, 25 January, 1894.

In case I cannot see you to-day, as yesterday, I desire to say the appointment alluded to in the enclosure is most unfair and unjust to the ratepayers of North Illawarra. Mr. Gunning is not a resident of that municipality, and consequently has not the slightest claim to the position. Your action, or that of the Ministry, is most unpopular, and is generally censured by ratepayers of North Illawarra. I trust, therefore, that you will reconsider the matter, and give the commissionership to one of the Council's nominees. This I consider to be the only fair way to do.

I have, &c.,
J. B. NICHOLSON, M.L.A.

No. 16.

The Under Secretary for Finance and Trade to J. B. Nicholson, Esq., M.P.

Sir, The Treasury, New South Wales, Sydney, 29 January, 1894.

I am directed by the Colonial Treasurer to acknowledge receipt of your letter of the 25th instant, with reference to the appointment of Mr. W. J. Gunning to the Wollongong Harbour Trust Board to represent the Council of the Municipal District of North Illawarra, and to inform you in reply that such appointment cannot now be interfered with. Mr. See desires me to add, however, that the appointment in question was made before your letter (addressed to the Colonial Secretary) reached him.

I have, &c.,
F. KIRKPATRICK,

No. 17.

J. B. Nicholson, Esq., M.P., to The Under Secretary for Finance and Trade.

Sir, Parliament House, Sydney, 30 January, 1894.

In your communication just now to hand, *re* Government appointment of Commissioner for the representation of North Illawarra on the Wollongong Harbour Trust, you state that the appointment was made prior to my letter being received by the Premier. I certainly don't know when my letter was received, but I do know that it was written here at the House, and forwarded in the usual manner several days before Mr. Gunning contested the seat he held before, so that it is scarcely likely that Mr. Gunning would have contested a seat had he already got an appointment. The statement is simply ridiculous, and, I think, the appointment ought yet to be cancelled.

Yours, &c.,
J. B. NICHOLSON, M.L.A.

1894.

NEW SOUTH WALES.

FISHERIES ACT, 1881.

(AMENDED REGULATION UNDER.)

Presented to Parliament pursuant to Act 44 Vic. No. 26, sec. 9.

Chief Secretary's Office, Sydney, 15th March, 1894.

His Excellency the Governor, with the advice of the Executive Council, has been pleased, in accordance with the provisions of the "Fisheries Act, 1881," to make the subjoined amended Regulation relating to priority among netters.

GEORGE R. DIBBS.

PRIORITY AMONG NETTERS.

14. The right of first shooting and hauling a net on any fishing-ground shall belong to the licensed fisherman who first arrived on the ground with his boat and net ready for shooting; and the next turn shall belong to the licensed fisherman who arrived next after such first-mentioned person, and so on in order of arrival. An unlicensed fisherman shall not be entitled to shoot a net on any fishing-ground until every licensed fisherman, then being on the ground with boat and gear ready for shooting, shall have had his turn. Two or more turns may be taken at the same time if the water to be fished permits of double-banking, but no net shall be shot round an inner net within a boat's length of the cork-line of such net.

1894.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

AUSTRALIAN HARDWOOD BLOCKS.
(PAPERS RESPECTING.)

Ordered by the Legislative Assembly to be printed, 7 June, 1894.

[Laid upon the Table of the House in answer to Question No. 10, of 6th June, 1894.]

Question.

(10.) AUSTRALIAN HARDWOOD BLOCKS:—MR. STEVENSON asked THE SECRETARY FOR PUBLIC WORKS,—

(1.) Has his attention been called to a paragraph in the *Sydney Morning Herald* of the 18th May, giving an account of a paper read at the Royal Society by Mr. Walter A. Smith, M.I.C.E., which states that if Australian hard woods were used in London street pavements, instead of soft woods, a saving of about £11,000 would result in every mile of road, during a period of twenty-one years, besides providing a better pavement than that now in use?

(2) With a view of bringing our Australian hardwood blocks, for street-paving at home, before the authorities in England, would he have a copy of the paper laid upon the Table of this House?

ANSWER.

SCHEDULE.

NO.	SCHEDULE.	PAGE.
1.	Letter from the Chairman of the Engineering Section of the Royal Society of New South Wales	1
2.	Paper by Mr. W. A. Smith, read before the Royal Society of New South Wales, on Australian hard woods for London pavements	2
3.	Excerpt from the Minutes of Proceedings of the Institution of Civil Engineers.....	6
4.	The Government Analyst to the Medical Adviser to the Government	8

No. 1.

R. Hickson, Esq., to The Under Secretary for Public Works.

Dear Sir,

The Society's House, Sydney, 7 June, 1894.

Referring to the question put by Mr. Stevenson, M.L.A., in the House of Assembly, asking that a copy of a paper on wood-blocking, read by Mr. W. A. Smith before the Engineering Section of the Royal Society, be laid on the Table of the House, I have the honor to forward herewith this paper, and place the same at the disposal of the Honorable the Minister for Works, to make whatever use of he may think fit.

I also forward a paper sent by Mr. Smith to the Institute of Civil Engineers, London, on the same subject.

As Mr. Smith makes some strong adverse comments on laying wood-blocks with cement joints (comments with which, I may add, I entirely concur), I forward herewith copy of report from the Government Analyst, Mr. Hamlet, on the subject.

I have, &c.,

ROBT. HICKSON,

Chairman, Engineering Section of the Royal Society.

No. 2.

Paper by Mr. W. A. Smith, read before the Royal Society of New South Wales, on Australian Hard Woods for London Pavements.

THE recent depression, so severely felt in every form of commercial enterprise throughout the Australian Colonies, has made every colonist who has the welfare of Australia at heart to consider in what manner the export trade of the colonies can be strengthened and increased.

Without touching on the question of freetrade and protection, it is evident that the future stability of the colonies will depend, in a great measure, on the establishment of foreign markets for Australian products, and not least in importance among these products for export should be the different Australian hard woods for structural purposes. Some efforts have been made to bring these timbers under notice in England and America, but so far these efforts have produced very poor results. The object of this short paper is to compare the paved-wearing surfaces of roads and streets constructed of yellow deal or pine, which are the timbers generally used in England, with those constructed of Australian hard woods, and if these comparisons could only be brought under the notice of European engineers, and ratepayers, it is highly probable that the result would be beneficial to Australia.

It is assumed that the paving of roads and streets with wood blocks is the best and most economical system known to engineers at the present time for providing a durable wearing surface that will withstand, for a lengthened period, the heavy traffic of cities and towns; and in support of this assumption, the following is a description of the more recent pavements laid down in London and elsewhere, and criticism thereon by English engineers.

In a paper read by Mr. L. H. Isaacs, F.R.I.B.A., before the Society of Arts, on the 15th December last, Sir Benjamin Baker being in the chair, it was stated that the present system of constructing wood pavements in many of the London districts, consisted of laying a concrete foundation 6 inches thick, composed of one part Portland cement to six parts clean sharp river ballast, with a rendered surface on which to lay the blocks. The blocks are of Baltic red-wood or Swedish yellow deal, 5 inches deep, and pickled in creosote. They are laid in transverse courses, with a $\frac{1}{4}$ -inch joint, which is run in with asphalt to a depth of 1 inch, while the remainder of the joint is made up with cement run in flush with the surface of the blocks. On completion of this the whole surface is tarred and sanded, after which the traffic is turned on. This description agrees with others which have been written within the last four years on the present London system, with the exception that in some recent cases a close joint has been adopted.

Mr. Isaacs quotes from a letter received by him from the "Improved Wood Pavement Company"—which states that during the past four years the increase in the area of wood-paving is very remarkable. From 1872 to 1889 inclusive, this Company laid 1,030,000 square yards, equal to an average of 58,000 square yards per annum; while from 1890 to 1893 inclusive, 520,000 square yards were laid, equal to an average of 130,000 square yards per annum. This year (1893) the Company is paving upwards of 130,000 square yards in the city and surrounding districts of London. In concluding his remarks on wood-paving for London, Mr. Isaacs states that the advantages of wood pavements are:—

1. It is, as yet, absolutely the least noisy of all pavements.
2. It gives the minimum of traction, with the exception of asphalt.
3. It is comparatively clean, as, if properly formed, it should make little or no dirt.
4. In the event of a horse falling on it, he can rise more easily than on a granite or asphalt pavement.

In discussing the above-mentioned paper, Mr. Stevenson remarked that he wished to record his opinion in favour of wood. At South Kensington a census had been taken among drivers of different vehicles upon the subject, when between 80 per cent. to 90 per cent. voted in favour of wood.

The fact that the use of wood was increasing to an immense extent, showed that there was some practical benefit in it.

Mr. Deacon, M.I.C.E., remarked that "wood pavement, if properly gravelled, was delightful in all senses except one, viz., a sanitary sense."

In discussing a paper read by Mr. Strachan, of Chelsea, before the Society of Engineers, in 1890, Mr. Joseph Gordon remarked that the tendency in London was towards silent pavements, for which wood, as a material, was undoubtedly the best.

The foregoing quotations show plainly that wood pavements are fast coming into favour, but as the object of this paper will be served by comparing the London wood pavements, the total length of which is approximately 65 miles, with those of Sydney, the total length of which is 12 miles, in which latter city Australian hard woods have been used, and in order to avoid a one-sided view of the subject, it will be as well to consider, in conjunction with the more favourable criticisms, the following remarks made by English engineers on the demerits of wood as a paving material.

With regard to soft wood, there are two strong objections to its use, viz.:—Its short life under heavy traffic, and its power of absorption. To demonstrate these objections, the following quotations from the two papers before referred to will be of value (soft woods only being considered). Mr. Strachan in his paper recommended the total renewal of blocks every eight years. Mr. Gordon, in discussing Mr. Strachan's paper, gave the life of blocks at Leicester at seven years. Mr. Barber stated that the life of blocks in Hanover Square, London, was eight years. Mr. Lowe said he had a mile of wood-paving in the Edgeware Road which had been down three years, but he did

did not think he could calculate on the pavement being in anything like good condition at the end of the eighth year. From these and numerous other statements by London engineers, it would appear that not more than seven years' life should be calculated upon as the effective life of these pavements.

Looking at the hygienic aspect of a softwood pavement, the following extract from Mr. Isaacs' paper should serve as a warning to the Sydney Council against the introduction of soft woods for the Sydney streets.* Mr. Isaacs remarked that wood pavement has one most serious disadvantage. It offends more than any other pavement against public hygiene. If time would permit, I could quote the opinions given by authorities, both at home and abroad, in proof of this assertion. But I will content myself by asking you to rely on the evidence afforded by my own sense of smell as to this. Let anyone dwell, say, for twenty-four hours by the sea-side, or in the pure air of a rural district, and then travel to town, alighting, for example, at the Victoria Station, the roadways of which, as you know, are paved with wood. What greets him on arrival? The most sickening odour given off by the pavement in question.

You will say this is mainly or entirely due to the circumstance that the wood pavement is under a glass roof on which the rays of the sun at times fall fiercely. But step across the Station yard, and traverse Victoria-street. The same sickening odour follows you. And this leads me to say: "Avoid using wood pavements in narrow streets, or even in comparatively wide streets, when the height of the buildings which abut on the same prevents the free passage of air." Mr. Edmeston, of Paddington, London, had some old blocks tested by Dr. Sedgwick Saunders, who reported them to be saturated with organic matter, chiefly of urine and horse dung, and some blocks had the appearance of a growth of fungi.

After reviewing the conditions under which softwood pavements are constructed in London, the comparative short life of the timbers used, the resulting inconvenience to traffic of a total renewal of blocks every seven or eight years, and the necessary uneven surface and bad condition of the roadway for a year or perhaps two years previous to each renewal, it is a real pleasure to turn to the close-jointed hardwood Sydney pavements, the equal to which we are constantly told by visitors to Sydney is not to be found in any city of the world. It would indeed be a difficult matter to imagine any better pavements than those which have been laid within the last five years, in Macquarie-place, Martin-place, Castlereagh-street, Queen-street, and the southern portion of Newtown Road.

The system of laying these pavements in and around Sydney is very similar to that of other places. If the roadway is being constructed over solid ground, 6 inches of concrete, composed of one part cement to seven parts of Nepean gravel, is laid as a foundation,† but when the roadway passes over made or uncertain ground, it is the practice of the Roads and Bridges Department to put in 9 inches of concrete. The surface of this concrete foundation is rendered with mortar, composed of one part cement to three of clean sharp sand, on which the blocks are laid. The blocks, which are generally of 9 in. x 6 in. x 3 in., are laid, after being tarred, in transverse courses at right angles to the line of traffic, with butt joints.‡ The expansion of blocks is provided against by leaving on each side of the roadway a 2-inch joint between the kerbing and the outer gutter course, and an additional 1-inch joint between two of the other gutter courses. These joints are filled with mastic, and, so far, have given every satisfaction, especially at the broad paving of Queen-street, which, after being open for traffic for eighteen months, has not caused the slightest movement in any one of the kerb-stones through expansion of the wood, whereas in the adjoining pavement at Circular Quay, which was laid with a 3/4-inch cement joint between courses and clay expansion joints, not only have the kerb-stones on either side been pushed out of place by the expansion of the blocks, but the footpaths themselves have been partly destroyed. The pavements laid in Sydney during the last five years seem to be as near perfection as it is possible to get them. They are, generally speaking, well designed, well kept, silent, clean, give good foothold for horses, and, as hardwood blocks when laid in these close-jointed pavements will absorb little or no moisture, there are no bad odours to throw off.

The older pavements of Sydney, *i.e.*, those laid prior to 1839, were carried out most religiously on English lines. They were constructed with lateral joints from 3/4 inch to 1 inch wide, the mistake of which has been discovered and rectified in England as well as here. In some cases cement grouting was used in the joints, which had the effect of dry rotting the blocks, particularly those at Circular Quay. The injurious effect of cement being in contact with timber is very marked after a few years. The author has made many observations in this matter, and in all cases when timber has been embedded in cement concrete for some years dry rot has invariably been found next to the cement. At the Circular Quay pavement every block appears to be more or less affected, while many are almost in a state of collapse. In Gwylt's "Encyclopædia of Architecture" the chemical action setting in between the cement and timber is attributed to the oxygen in cement combining with the carbon in the wood to form carbonic acid gas.

It can be readily understood that this slow chemical action would scarcely be observed in English pavements, even if it existed, to the same degree as it does in Sydney, owing to the short life of the timbers used; for, assuming that the destruction of the timber had fairly commenced in, say, five years after being laid, the pavement at that period of its existence would have lost its regular and smooth surface, and the roadway

* In reporting favourably on the close-jointed system of wood-paving in October last, Mr. Richards, the City Surveyor, stated:—"I am also inclined to think that softer timbers laid in this manner would give good results, and shall, at the first opportunity, put them to the test."

† London experience has shown that this thickness is capable of withstanding a daily yard tonnage of 600 tons, without deterioration.

roadway would not be in a good state of repair, from the ordinary wear and tear of traffic, while the engineer would have arranged in his mind to discard the blocks in two or three years' time, and to relay a new pavement.

(1.) COST OF CONSTRUCTION.

The chief point for comparison in the two systems of street-paving adopted in London and Sydney will therefore resolve into the following:—

To construct a softwood pavement in London at the present time would cost per superficial yard as under:—

	s.	d.
Excavation of Macadam roadway, removal of material, and forming roadway to proposed section	1	2
The supply and laying of 6-inch concrete, rendered on surface with $\frac{1}{2}$ -inch of cement mortar	2	2
The supply and laying of 5-inch yellow deal blocks, including grouting, tarring and sanding	5	6
Supervision and contingencies	0	2
Total cost of 1 sup. yd. softwood pavement	*9	0

To construct a hardwood pavement in Sydney, taking the contract prices at which the wood pavement of Enmore Road has recently been undertaken, the cost would be per superficial yard as follows:—

	s.	d.
Excavation of Macadam roadway and forming road to required section	1	0
Concrete foundation 6 inches thick, with rendered surface... ..	4	5
Supply and laying blocks, including tarring and sanding	7	4
Total cost in Sydney of 1 sup. yd. hardwood pavement	12	9

To construct a hardwood pavement in London would cost per superficial yard as follows:—

	s.	d.	s.	d.
Concrete foundation, including excavation, &c.... ..	3	6		
Forty-eight hardwood blocks (9 in. x 6 in. x 3 in. F.O.B.) in Sydney at £6 15s. per 1,000	6	6		
Freight Sydney to London on 1/7 of a ton at 17s. 6d.... ..	2	6		
Cartage or tramage from Docks to site at, say, 8s. 6d.... ..	3	6		
			12	6
Total cost in London of 1 sup. yd. hardwood pavement			16	0

(2.) COST OF MAINTENANCE.

The maintenance of the London softwood pavements, exclusive of total renewal of blocks, costs, say, $4\frac{1}{2}$ d. per superficial yard per annum,† while maintenance and sanding of the hardwood pavements in Sydney costs 1d. per superficial yard per annum.

(3.) TOTAL COST OF PAVEMENT IN TWENTY-ONE YEARS.

The total cost of a superficial yard of softwood pavement in London for a period of twenty-one years would be:—

	£	s.	d.
First cost	0	9	0
Total renewal of blocks at (say) the end of the seventh and fourteenth years... ..	0	11	0
Maintenance at $4\frac{1}{2}$ d. per annum... ..	0	7	$10\frac{1}{2}$
Interest at 4 per cent. on first cost and two renewals of blocks	0	12	$2\frac{1}{2}$
Total cost in London of 1 sup. yd. softwood pavement for twenty-one years	£2	0	$0\frac{3}{4}$

The total cost of a superficial yard of hardwood pavement in London for a period of twenty-one years would be:—

	£	s.	d.
First cost	0	16	0
Maintenance and sanding at 1d. per annum	0	1	9
Interest at 4 per cent. on first cost	0	13	$5\frac{1}{2}$
Total cost in London of 1 sup. yd. of hardwood pavement for twenty-one years	£1	11	$2\frac{1}{4}$

The

* In support of this price Mr. Strachan gives the cost in Chelsea at 9s. 6d. per superficial yard; Mr. Isaacs gives the cost in Holborn at 8s. 6d.; Mr. Bridgeman (Chairman of Commissioners of City Sewers), at 8s.; while Mr. Norrington gives the cost at 8s. 8d.

† Mr. J. P. Barber, of Islington, states that his experience was that it cost at least $5\frac{1}{2}$ d. to 6d.; while other engineers give the cost of maintenance as low as 3d. per superficial yard per annum.

It is a matter of regret that similar information cannot be obtained with regard to the Sydney traffic. There is, however, no doubt that while the older pavements in this city with wide joints are slippery and uncomfortable to travel over, the pavements laid within the last five years, being watered at night and sanded in the day-time, give perfect foothold for horses, and comfort to occupants of vehicles.

(9.) TRACTION.

It is evident that the traction of vehicles over a wood pavement, with joints between lateral courses, must be greater than on asphalt. Mr. Isaacs states, with regard to a softwood pavement, that "it gives the minimum of traction, with the exception of asphalt," thus giving a softwood pavement, with joints between courses, second place.

It is, therefore, only fair to assume that by using hardwood blocks, with butt joints, the traction is reduced almost to that of asphalt.

(10.) HYGIENE.

Sufficient has been said as to the insanitary condition of London softwood pavements after they have been laid for any length of time to make authorities consider in what manner this evil can be mitigated. In Sydney, fortunately for the inhabitants, this evil does not exist, as hard woods are practically non-absorbent, and the city authorities are careful to have the street surfaces thoroughly cleansed every twenty-four hours. The close-joint pavements are, in consequence, free from dirt, and apparently throw off no bad odours whatever.

The hardwood blocks taken up, after eight to thirteen years' wear, from Sydney streets, show a decrease of perhaps half an inch from their original depth; but beyond this, every block (except those taken from Circular Quay) was in a perfect state of preservation, and, with the exception of the wear from the traffic above referred to, every block which has come under observation is as good as when first laid, or perhaps better, by reason of the lengthened seasoning that they have undergone. The author would respectfully suggest that the sanitary difficulties experienced by the London authorities in connection with softwood pavements in narrow streets might wholly or in part be removed by adopting an Australian hardwood butt-jointed pavement.

In conclusion, the author has endeavoured to show the advantages to be derived by using Australian hard woods instead of Swedish yellow deal, or other soft woods, in street pavements, and it is claimed that these advantages comprise:—

- (1.) Economy.
- (2.) An easier traction.
- (3.) Hygienic advantages only surpassed by the best asphalt pavements.
- (4.) And the convenience of having a roadway laid which would retain a smooth surface continuously for twenty-one years.

Assuming that the engineering and sanitary advantages of these hardwood pavements are admitted by this section of the Royal Society, it is hoped that, as a corporate institution of the Colony, the society will use its influence in bringing this matter to the front, as, should English engineers also be brought to admit the superiority of these timbers, the trade with Australia, when once established, must eventually grow to enormous proportions.

WALTER A. SMITH, M. INST. C.E.,
Divisional Engineer, Public Works Department.

No. 3.

Excerpt from the Minutes of Proceedings of the Institution of Civil Engineers, Vol. CXVI (Session 1893-94), Part II.

ON AUSTRALIAN HARD WOOD FOR PAVEMENTS.

By WALTER ALEXANDER SMITH, M. INST. C.E.

THE object of these notes is to compare the value of Australian hard wood with the softer and inferior timber used in the construction of wood-paved streets in Europe. The author considers that if English engineers were acquainted with the merits of these hardwood timbers, not only for wood pavements, but for structural purposes, advantage would accrue alike to the users at home and the exporters in Australia. The supply of this timber from the coast districts of New South Wales alone is almost inexhaustible; and now that a Forestry Department has been established, and is managed by a staff of scientific men, there is every hope that extensive tracts of country will not in future be denuded of timber, unless they are either brought under cultivation or replanted. The objections urged against the wood-paving of streets, such as the "spreading of joints," the "difficulty of maintaining the roadway in good order," or the "bad odours arising from the pavement after rain or street-watering," have ceased to apply in Australia; and by using hardwood timber with close joints, on level or comparatively level roads, and on gradients up to 1 in 20, with a $\frac{1}{4}$ -inch joint, the wearing-surface of a roadway is capable of sustaining, for a period estimated at twenty-one years, a daily traffic equal to 1,200 tons per yard width of road. In Sydney, which has 12 miles of wood-paved streets, two new thoroughfares, viz., Martin-place and Queen-street, have recently been paved with wood by the Government, under the supervision of the author.

The roadway in Martin-place is almost level. It was, therefore, decided by the Commissioner for Roads, Mr. R. R. P. Hickson, M. Inst. C.E., to adopt the close-joint system. The roadway is 100 feet wide, giving 61 feet for vehicular traffic, with two footways

footways of 18 feet each. It is constructed on made ground, supported on the north side by a brick retaining-wall 18 feet high. The space between this wall and the building-frontage will be divided by the erection of another wall to be built parallel to the retaining-wall and about 4 feet distant from it. The space between the two walls is to be utilised in the laying of cables, water and gas mains, &c., while the remaining 13 feet is to be so arranged as to give light and access to the basements of houses yet to be built.

As a foundation for the pavement, concrete was laid 9 inches thick, composed of five parts of 2½-inch gauge basalt, two parts of clean sharp sand, and one part of cement. The top was then floated over with a ½-inch rendering, composed of three parts of sand to one part of cement, and the entire width was finished at a convexity of 3 inches. On the surface thus prepared, paving-blocks were laid after having been dipped twice in boiling tar and stacked for two days to allow the surplus tar to drain off. The timber used was tallow-wood (*Eucalyptus microcorys*) and red mahogany (*Eucalyptus resinifera*). The surface was then tarred and sanded, and before the traffic was turned on to the road, a thin coating of basalt screenings from the stone-crusher was spread over it, affording an excellent foothold for horses. The curb-stones were of 12-inch by 16-inch blocks of trachyte, while between the curbs and the gutter-courses on each side, 1-inch and ½-inch expansion-joints were left and filled with "mastic."

Queen-street traverses land recently resumed by the Government under the Tramway Extension Act of 1880. Its construction necessitated the removal of a large amount of rubbish and of buildings, the latter including the "Oriental Hotel." It is built on gradients of 1 in 22 and 1 in 24, and has a total width of 130 feet, divided into a road of 100 feet with two footways of 15 feet each. The concrete foundation, curbs and expansion joints were constructed from a specification similar to that under which Martin-place was laid. The blocks, which consisted of turpentine (*Syncarpia laurifolia*), red mahogany, blackbutt (*Eucalyptus pilularis*), and tallow-wood, were also treated in a similar manner before being laid; but, owing to the steepness of the gradients, a ¼-inch batten joint was adopted between the courses, in order to afford a better foothold for horses. It is worthy of mention that while the above contracts were being carried out, it was necessary to remove some of the old blocks from adjoining streets, in order to make proper junctions with the new works; and, in doing so, it was observed that the effect of a cement joint on the timber was most injurious, while an asphalt joint acted as a preservative. Two cases met with are deserving of special attention:—

(a) At one end of Queen-street it was necessary to remove a considerable area of pavement which had been laid six years, in which a cement joint had been adopted, the width of joint being maintained by iron studs projecting ¾ inch from the face of the blocks; here it was found that dry-rot had set in wherever the wood had been in contact with the cement. Different kinds of timber had been used, but every block was more or less affected. On this being observed, other portions of the pavement which had been similarly constructed were examined, but all were found to be in the same state. The author is indebted to Mr. Roberts, of the Sewerage Department, for a microscopical examination of the timber thus affected, which showed no signs of fungoid growth. It is therefore assumed that the dry-rot was a decomposition of the timber brought about by chemical action—such as combination of the oxygen in the cement with the carbon in the wood, forming carbonic acid gas.

(b) At the other end of Queen-street, where blocks were removed which had been laid eight years, in which the joints had been caulked with a mixture of tar, pitch, and basalt-screenings, the timber was found to be in a perfect state of preservation; and, although the road had sustained a daily traffic of approximately 25,000 tons for eight years, it was in almost as good a state as when first laid. The blocks, which were originally 6 inches deep, made a perfect junction with the new 6-inch blocks, the greatest wear observable in the old blocks after eight years' service being ¼ inch.

Taking the average life of deal blocks used in the wood-paved streets in many parts of London at seven years* (after which total renewal is necessary)—assuming also the cost of laying the blocks, exclusive of foundations, to be 5s. 6d. per superficial yard, and the annual cost of maintenance to be 5d. per superficial yard—it may be seen that the cost of a wood-paved road calculated to sustain a daily traffic of 1,200 tons per yard width of road for a period of twenty-one years would be 17s. 9d. per superficial yard. In Sydney, the cost of similar work for an equal period (exclusive of foundations), in which Australian hard woods are used, is only 9s. 9d. for a close-jointed paving; and 10s. 8d. per superficial yard for a paving in which ¼-inch or ⅜-inch asphalt joints are introduced, similar to those adopted by the City Council.

Great inconvenience is experienced by using soft wood on roads carrying very heavy traffic; for, during a period of twenty-one years (which may be taken as the minimum life of Australian blocks) the surface of the road has to be renewed three times; and, for about eighteen months previous to each renewal, the smooth and regular surface of the road is practically destroyed, as the blocks have probably worn down in some cases as much as 2½ inches. Travelling over such a road is noisy and unpleasant, in addition to which the wear and tear of vehicles and horseflesh is increased. But, after a road of hardwood blocks is once laid on a good foundation with close joints, none of these inconveniences are experienced. In Sydney, there are blocks which have been laid thirteen years in one of the busiest streets of the city, which are to-day in a perfect state of preservation, having only worn down ⅜ inch; and, judging from their present condition, there appears to be no reason why these blocks should

* This period is arrived at from a large amount of evidence on the subject, including that afforded by the discussion on "The Construction and Repair of Roads," by George R. Strachan, Assoc. M. Inst. C.E. (Trans Soc. of Engineers, 1889, p. 17).

should not do good service for another ten years. Unfortunately, much of the pavement laid previous to 1883 had a foundation of only 6 inches of concrete with 1-inch joints between the courses; and this has resulted in the foundations giving way and the smooth surface of the pavement being destroyed. Nevertheless, timber blocks in these older streets, although worn down unevenly and much distorted owing to the yielding of the foundations, are, in every case which has come under the author's notice, in a perfect state of preservation.

It is evident from experience gained in Sydney that a properly-laid hardwood pavement will last at least twenty-one years, and probably for a much longer period, before renewal of the blocks is necessary.

No. 4.

The Government Analyst to The Medical Adviser to the Government.

Sir,

Government Laboratory, Sydney, 25 May, 1894.

The specimens of wood-blocks from Circular Quay forwarded to me for analysis have been examined with the following results:—

The blocks were found to consist of ligno-cellulose and the lignin of ordinary hard wood.

Attached to the blocks and permeating the tissue, chiefly on the underside and at the joints, I found traces of decomposed cement consisting of hydrated calcium, silicon and alumina compounds. These compounds gave a decided alkaline character to the woody tissue, and wherever the alkalinity was most marked, there the wood-block had suffered the most from decay, and had become softened. This decomposition, which is one of hydrolysis, brought about by contact with alkaline substances, was more noticeable at the base of the block.

The change or decay of the wood-block, which is known to chemical science as the hydrolysis of cellulose, is, in my opinion, caused by the cement having been allowed to come into contact with the wood.

I have, &c.,

WILLIAM M. HAMLET,
Government Analyst.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

BETTING AND GAMBLING SUPPRESSION BILL.

(PETITION FROM CHARLES STEAD, EX-PRESIDENT OF THE CONFERENCE, CHAIRMAN OF A MEETING OF THE WESLEYAN METHODIST MINISTERS OF SYDNEY, IN FAVOUR OF.)

Received by the Legislative Assembly, 18 January, 1894.

To the Honorable the Speaker and the Honorable Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the Wesleyan Methodist Ministers of the city and suburbs of Sydney,—

RESPECTFULLY SHOWETH:—

That your Petitioners view with alarm the disastrous hold which the practices of betting and gambling on horse-races and public sports have on many of the people of New South Wales. Your Petitioners fear that unless these practices be effectually stopped by legislation they will tend to demoralize large numbers of their fellow colonists, and in a great measure impede the healthy development of the national life of New South Wales. Your Petitioners have considered a copy of the Bill for the suppression of betting and gambling, introduced into your honorable House and read a first time on the 24th day of November, 1893, and they heartily approve of the measure as one of a practical kind. Your Petitioners are confident that if the Bill in question be passed in its entirety by your honorable House, and becomes law, it will effectually put an end to the aforesaid demoralizing practices.

Your Petitioners therefore humbly pray that your honorable House will be pleased to pass the Bill referred to.

And your Petitioners, as in duty bound, will ever pray.

CHARLES STEAD,
Chairman.

A similar Petition was received on 18th January, 1894, from certain residents of New South Wales; 90 signatures.

1894.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

BETTING AND GAMBLING SUPPRESSION BILL.
(PETITION FROM RESIDENTS OF BATHURST IN FAVOUR OF.)

Received by the Legislative Assembly, 1 February, 1894.

To the Honorable the Speaker and to the Honorable Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned residents of Bathurst, in New South Wales,—

RESPECTFULLY SHOWETH:—

That your Petitioners view with alarm the disastrous hold which the practices of betting and gambling on horse-races and public sports have on many of the people of New South Wales, and your Petitioners fear that unless these practices be effectually stopped by legislation they will tend to demoralise large numbers of their fellow colonists, and in a great measure impede the healthy development of the national life of New South Wales.

Your Petitioners have perused a copy of the Bill for the Suppression of Betting and Gambling, introduced into your Honorable House, and read a first time on the 24th day of November, 1893, and they heartily approve of the measure as one of a practical kind.

Your Petitioners are confident that if the Bill in question be passed in its entirety by your Honorable House and becomes law it will effectually put an end to the aforesaid demoralising practices.

Your Petitioners, therefore, humbly pray that your Honorable House will be pleased to pass the Bill referred to.

And your Petitioners will ever pray.

[Here follow 95 signatures.]

BETTING AND GAMBLING SUPPRESSION BILL.
(PETITION FROM CERTAIN RESIDENTS OF SURRY HILLS AND PADDINGTON IN FAVOUR OF.)

Received by the Legislative Assembly, 8 February, 1894.

To the Honorable the Speaker and to the Honorable Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned residents of Surry Hills and Paddington, in New South Wales,—

RESPECTFULLY SHOWETH:—

That your Petitioners view with alarm the disastrous hold which the practices of betting and gambling on horse-races and public sports have on many of the people of New South Wales, and your Petitioners fear that unless these practices be effectually stopped by legislation they will tend to demoralise large numbers of their fellow colonists, and in a great measure impede the healthy development of the national life of New South Wales.

Your Petitioners have considered a copy of the Bill for the Suppression of Betting and Gambling, introduced into your Honorable House, and read a first time on the 24th day of November, 1893, and they heartily approve of the measure as one of a practical kind.

Your Petitioners are confident that if the Bill in question be passed in its entirety by your Honorable House and becomes law it will effectually put an end to the aforesaid demoralising practices.

Your Petitioners, therefore, humbly pray that your Honorable House will be pleased to pass the Bill referred to.

And your Petitioners will ever pray.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

INFLUX OF ASIATICS.
(PETITION FROM CERTAIN RESIDENTS OF THE COLONY, AGAINST.)

Received by the Legislative Assembly, 23 January, 1894.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned residents of the Colony,—

RESPECTFULLY SHOWETH:—

1. That there are already in the Colony large numbers of Asiatics.
2. That these numbers are being largely augmented by the immigration of other Asiatics, many of whom, your Petitioners have every reason to believe, have been imported under contract to work at wages which totally preclude the possibility of white men competing with them.
3. That your Petitioners regard as a serious menace to the welfare of the community the probability of such importation being continued, and alien labour employed in other occupations than those at present followed.
4. That by the "Chinese Restriction Act," passed by your Honorable House in 1888, the principle has been affirmed of checking the influx of inferior and undesirable races, and of preserving the industries of the country to its own people.
5. That the same reasons which induced your Honorable House to restrict the influx of Chinese can be urged with equal force against the influx of other Asiatic people.
6. That the advantages presented by this country and the route to it are daily becoming more familiar to the people of Asia, and that the evil complained of will consequently become more pronounced the longer it is left unchecked.

Your Petitioners, therefore, humbly pray that your Honorable House will take the foregoing premises into early and favourable consideration, and that you will be pleased, during the present Session, to pass such prohibitive or restrictive legislation as will save the country from a danger threatening it alike with the most serious industrial, social, and political consequences.

And your Petitioners, as in duty bound, will ever pray.

(PETITION FROM JOHN BLACK (MAYOR), CHAIRMAN OF A PUBLIC MEETING AT MOLONG, AGAINST.)

Received by the Legislative Assembly, 1 February, 1894.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in
Parliament assembled.

The Petition of the undersigned Chairman of a duly advertised and convened public meeting, held at
Molong this 8th day of November, 1893,—

RESPECTFULLY SHOWETH:—

That the following resolutions were moved, seconded, supported, and carried unanimously:—

1. That this meeting desires to express its sympathy with the Anti-Alien Labour Movement at Bourke, and affirms the desirability of Parliament at once passing an Act for the suppression of this increasing Asiatic evil, and one that is becoming a menace to the well-being of the Colony.
2. That the foregoing resolution be embodied in a petition, and signed by the Chairman on behalf of the meeting, and presented to Parliament by the Member for the district.

Your Petitioners therefore humbly pray that your Honorable House will be pleased to take the foregoing resolutions into consideration, and grant such relief as your Honorable House may deem fit and proper.

And your Petitioners, as in duty bound, will ever pray.

INSPECTION OF SCAFFOLDING.

(RETURN SHOWING.)

Ordered by the Legislative Assembly to be printed, 18 April, 1894.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 15th February, 1894, That there be laid upon the Table of this House a Return showing,—

- “ (1.) The number of reports made by the Inspector of Scaffolding from 1st January to 31st December, 1893.
“ (2.) The number of instances where defective or unsafe material has been condemned as unfit for use, and the names of the employers on whose work it was being used.
“ (3.) The number of instances in which alterations have been made in scaffolding by Inspector's demands or instructions.”

(Mr. Fegan, for Mr. Bavister.)

INSPECTION OF SCAFFOLDING.—RETURN SHOWING.

(1.) The number of reports made by the Inspector of Scaffolding from the 1st January to the 31st December, 1893? Four special reports and twelve monthly lists, specifying the locality and streets in which every inspection was made.

(2.) The number of instances where defective or unsafe material has been condemned as unfit for use, and the names of the employers on whose work it was being used? Not having authority under any statute to condemn “as unfit for use” “defective or unsafe material,” the safety of workmen has been secured as answered in Question 3.

(3.) The number of instances in which alterations have been made in scaffolding by Inspector's demands or instructions? In 250 instances of scaffolding and scaffolding appliances, from 1,350 inspections made during the year 1893.

R. C. LUSCOMBE,
Government Inspector of Scaffolding.

TREATY WITH THE ARGENTINE REPUBLIC.

(DESPATCH RESPECTING.)

Presented to Parliament by Command.

Department of Justice,
Sydney, 7th May, 1894.

HIS Excellency the Governor directs the publication, for general information, of the following Despatch, dated the 12th February, 1894, from the Secretary of State for the Colonies.

T. M. SLATTERY.

(Circular.)

Downing-street,
12th February, 1894.

Sir,

I have the honour to transmit to you, for publication in the Colony under your Government, a copy of an Order of Her Majesty the Queen in Council, dated the 29th of January, 1894 [*The London Gazette*, 30th Jan., 1894, *Extract*], for giving effect to the Treaty between Her Majesty and the President of the Argentine Republic, for the mutual extradition of Fugitive criminals, signed at Buenos Ayres on the 22nd of May, 1889, the ratifications of which were exchanged at Buenos Ayres on the 15th of December, 1893.

I have, &c.,
RIPON.

The Officer Administering
the Government of New South Wales.

ORDER IN COUNCIL.

ARGENTINE REPUBLIC EXTRADITION.

Osborne House, Isle of Wight, 29th January, 1894.

At the Court at Osborne House, Isle of Wight, the 29th day of January, 1894.

Present :

THE QUEEN'S MOST EXCELLENT MAJESTY.

LORD STURWARD.
SIR WILLIAM VERNON HARCOURT.
SIR HENRY PONSONBY.

SIR JOHN COWELL.
SIR PHILIP CURRIE.

WHEREAS by the Extradition Acts, 1870 and 1873, it was amongst other things enacted that, where an arrangement has been made with any foreign State with respect to the surrender to such State of any fugitive criminals, Her Majesty may, by Order in Council, direct that the said Acts shall apply in the case of such foreign State; and that Her Majesty may, by the same or any subsequent Order, limit the operation of the Order, and restrict the same to fugitive criminals who are in or suspected of being in the part of Her Majesty's dominions specified in the Order, and render the operation thereof subject to such conditions, exceptions, and qualifications as may be deemed expedient; and that if, by any law made after the passing of the Act of 1870 by the Legislature of any British possession, provision is made for carrying into effect within such possession the surrender of fugitive criminals who are in or suspected of being in such British possession, Her Majesty may, by the Order in Council applying the said Acts in the case of any foreign State, or by any subsequent Order, suspend the operation within any such British possession of the said Acts, or of any part thereof, so far as it relates to such foreign State, and so long as such Law continues in force there and no longer:

And whereas by an Act of the Parliament of Canada passed in 1836, and entitled "An Act respecting the Extradition of Fugitive Criminals," provision is made for carrying into effect within the Dominion the surrender of fugitive criminals:

And whereas by an Order of Her Majesty the Queen in Council, dated the seventeenth day of November, one thousand eight hundred and eighty-eight, it was directed that the operation of the Extradition Acts, 1870 and 1873, should be suspended within the Dominion of Canada so long as the provision of the said Act of the Parliament of Canada of 1836 should continue in force and no longer:

And whereas a Treaty was concluded on the twenty-second day of May, one thousand eight hundred and eighty-nine, between Her Majesty and The President of the Argentine Republic, for the mutual extradition of fugitive criminals, which Treaty is in the terms following:—

HER Majesty the Queen of the United Kingdom of Great Britain and Ireland, and His Excellency the President of the Argentine Republic, having judged it expedient, with a view to the better administration of justice and to the prevention of crime within the two countries and their jurisdictions, that persons charged with or convicted of the crimes or offences hereinafter enumerated, and being fugitives from justice, should, under certain circumstances, be reciprocally delivered up, have named as their Plenipotentiaries to conclude a Treaty (that is to say):

Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, Her Chargé d' Affaires *ad interim* Mr. George Jenner;

And His Excellency the President of the Argentine Republic, His Excellency Doctor Don Norberto Quirno Costa, Secretary of State for the Department of Foreign Affairs;

Who, after having communicated to each other their respective Full Powers, found in good and due form, have agreed upon and concluded the following Articles:—

ARTICLE I.

The High Contracting Parties engage to deliver up to each other, under certain circumstances and conditions stated in the present Treaty, those persons who, being accused or convicted of any of the crimes or offences enumerated in Article II, committed in the territory of the one Party, shall be found within the territory of the other Party.

ARTICLE II.

Extradition shall be reciprocally granted for the following crimes or offences:—

1. Murder (including assassination, parricide, infanticide, poisoning), or attempt or conspiracy to murder.
2. Manslaughter.
3. Administering drugs or using instruments with intent to procure the miscarriage of women.
4. Rape.
5. Carnal knowledge or any attempt to have carnal knowledge of a girl under 16 years of age, if the evidence produced justifies committal for those crimes according to the laws of both the Contracting Parties.
6. Indecent assault.
7. Kidnapping and false imprisonment, child-stealing.
8. Abduction.
9. Bigamy.
10. Maliciously wounding or inflicting grievous bodily harm.
11. Assault occasioning actual bodily harm.
12. Threats by letter or otherwise, with intent to extort money or other things of value.
13. Perjury or subornation of perjury.
14. Arson.
15. Burglary or housebreaking, robbery with violence, larceny, or embezzlement.

JUZGANDO conveniente Su Majestad la Reina del Reino Unido de la Gran Bretaña e Irlanda, y su Excelencia el Presidente de la República Argentina, á objeto de una mejor administracion de justicia y de impedir la perpetracion de crímenes dentro de los dos países y sus jurisdicciones, que los individuos acusados ó convictos de los crímenes ó delitos mas adelante enumerados, y que hayan huido de la justicia, sean reciprocamente entregados en ciertas circunstancias, han nombrado sus Plenipotenciarios para concluir un Tratado, á saber:

Su Majestad la Reina del Reino Unido de la Gran Bretaña e Irlanda á su Encargado Interino de Negocios en la República, Señor Jorge Jenner;

Y su Excelencia el Presidente de la República Argentina, á Ministro Secretario de Estado in el Departamento de Relaciones Exteriores, Doctor Don Norberto Quirno Costa;

Los cuales, despues de haberse comunicado sus respectivos Plenos Poderes, hallados en buena y debida forma, han convenido y concluido los Artículos siguientes:—

ARTICULO I.

Las Altas Partes Contratantes se comprometen á entregarse reciprocamente, en las circunstancias y condiciones expuestas en el presente Tratado, aquellas personas que, acusadas ó convictas de cualquiera de los crímenes ó delitos enumerados en el Artículo II, cometidos en el territorio de una de las Partes, fueran halladas dentro del territorio de la otra.

ARTICULO II.

La extradicion se concederá reciprocamente por los siguientes crímenes ó delitos:—

1. Asesinato (incluso el asesinato con violencia, parricidio, infanticidio, ó envenenamiento), ó la tentativa ó conspiracion para asesinar.
2. Homicidio.
3. La administracion de drogas ó el empleo de instrumentos con el proposito de procurar el aborto.
4. Estupro.
5. Conocimiento carnal ó las tentativas de tenerlo con una niña menor de diez y seis años, siempre que el testimonio aducido justifique el enjuiciamiento por esos crímenes segun las leyes de las dos Altas Partes Contratantes.
6. Atentado contra el pudor.
7. Robo y secuestro de un ser humano, sustraccion de niño.
8. Rapto.
9. Bigamia.
10. Lesiones ó daño corporal grave hecho intencionalmente.
11. Ataque á las personas del que resulte grave daño corporal.
12. Amenazas, ya sea por medio de cartas ó de otra manera, con lar intencion de sacar dinero ú otros objetos de valor.
13. Perjurio ó tentativas de conseguirlo.
14. Incendio voluntario.
15. Robo, ú otros crímenes ó sus tentativas cometidas con fractura, robo con violencia, hurto y malversacion de valores publicos ó particulares.

16. Fraud by a bailee, banker, agent, factor, trustee, director, member, or public officer of any Company, punishable with imprisonment for not less than one year by any law for the time being in force.

17. Obtaining money, valuable security, or goods by false pretences; receiving any money, valuable security, or other property, knowing the same to have been stolen or unlawfully obtained, the value thereof exceeding 1,000 dollars or £200 sterling.

18.—(a.) Counterfeiting or altering money, or bringing into circulation counterfeited or altered money.

(b.) Knowingly making, without lawful authority, any instrument, tool, or engine adapted and intended for the counterfeiting of the coin of the realm.

(c.) Forgery, or uttering what is forged.

19. Crimes against bankruptcy law.

20. Any malicious act done with intent to endanger the safety of any person travelling or being upon a railway.

21. Malicious injury to property, if such offence be indictable.

22. Piracy and other crimes or offences committed at sea against persons or things which, according to the laws of the High Contracting Parties, are extradition offences, and are punishable by more than one year's imprisonment.

23. Dealing in slaves in such manner as to constitute a criminal offence against the laws of both States.

The extradition is also to be granted for participation in any of the aforesaid crimes, provided such participation be punishable by the laws of both Contracting Parties.

Extradition may also be granted at the discretion of the State applied to in respect of any other crime for which, according to the laws of both the Contracting Parties for the time being in force, the grant can be made.

ARTICLE III.

Either Government reserves the right to refuse or grant the surrender of its own subjects or citizens to the other Government.

ARTICLE IV.

The extradition shall not take place if the person claimed on the part of Her Majesty's Government, or the person claimed on the part of the Government of the Argentine Republic, has already been tried and discharged or punished, or is still under trial in the territory of the Argentine Republic or in the United Kingdom respectively, for the crime for which his extradition is demanded.

If the person claimed on the part of Her Majesty's Government, or on the part of the Government of the Argentine Republic, should be under examination for any other crime in the territory of the Argentine Republic or in the United Kingdom respectively, his extradition shall be deferred until the conclusion of the trial and the full execution of any punishment awarded to him.

ARTICLE V.

The extradition shall not take place if, subsequently to the commission of the crime, or the institution of the penal prosecution or the conviction thereon, exemption from prosecution or punishment has been acquired by lapse of time, according to the laws of the State applying or applied to.

It shall likewise not take place when, according to the laws of either country, the maximum punishment for the offence is imprisonment for less than one year.

ARTICLE VI.

A fugitive criminal shall not be surrendered if the offence in respect of which his surrender is demanded is one of a political character, or if he prove that the requisition for his surrender has, in fact, been made with a view to try or punish him for an offence of a political character.

ARTICLE VII.

A person surrendered can in no case be kept in prison or be brought to trial in the State to which the surrender has been made, for any other crime, or on account of any other matters, than those for which the extradition shall have taken place, until he has been restored or has had an opportunity of returning to the State by which he has been surrendered. This stipulation does not apply to crimes committed after the extradition.

ARTICLE VIII.

The requisition for extradition shall be made through the Diplomatic Agents of the High Contracting Parties respectively.

The requisition for the extradition of an accused person must be accompanied by a warrant of arrest issued by the competent authority of the State requiring the extradition, and by such evidence as, according to the laws of the place where the accused is found, would justify his arrest if the crime had been committed there.

16. Fraude cometido por un depositario, banquero, agente, comisionado, fideicomisario, director, miembro ó empleado publico de cualquiera Compañia, siempre que sea considerado como crimen con pena no menor de un año por una ley que esté en vigor.

17. El obtener dinero, garantías de valor, ó mercaderías, con pretextos falsos; recibir dinero, garantías de valor ú otros, bienes, sabiendo que han sido robados ó habidos indebidamente, y excedido su valor de mil pesos ó 200^l (doscientas).

18.—(a.) Falsificación ó alteración de moneda, circulación de moneda falsificada ó alterada.

(b.) Fabricación á sabiendas y sin autorización legal de cualquier instrumento, herramienta, ó aparato adaptado y destinado á la falsificación de la moneda nacional.

(c.) Falsificación ó alteración de firmas ó valores, ó circulación de lo falsificado ó alterado.

19. Crímenes contra las leyes de bancarrota.

20. Cualquier acto hecho con intención criminal, y que tenga por objeto poner en peligro la seguridad de una persona que se encuentre viajando en un ferro-carril, ó que se halle en él.

21. Daño hecho con intención criminal á la propiedad, siempre que la ofensa sea procesable.

22. Piratería, y otros crímenes ó delitos cometidos en el mar sobre las personas ó sobre las cosas, y que segun las leyes respectivas de las dos Altas Partes Contratantes, sean delitos de extradición y tengan mas de un año de pena.

23. Trata de esclavos, de manera tal que constituya una ofensa criminal contra las leyes de ambos Estados.

Debe tambien concederse la extradición por la participación en cualesquiera de los precitados crímenes, siempre que esa participación sea punible por las leyes de ambas Partes Contratantes.

Puede tambien concederse la extradición segun lo juzgue conveniente el Estado al que se hiciera el pedido con motivo de cualquier otro crimen que, segun las leyes que esten vigentes á la sazón, dé lugar á ella.

ARTICULO III.

Cada una de las dos Altas Partes Contratantes se reserva el derecho de negar ó conceder la entrega de sus propios súbditos ó ciudadanos.

ARTICULO IV.

La extradición no tendrá lugar si el individuo reclamado por el Gobierno de Su Majestad, ó el individuo reclamado por el Gobierno de la República Argentina, ya hubiese sido enjuiciado y puesto en libertad ó castigado, ó continuará procesado en el territorio de la República Argentina ó en el Reino Unido respectivamente, por el crimen por el que se demande su extradición.

Si el individuo reclamado por el Gobierno de Su Majestad, ó por el Gobierno de la República Argentina, estuviera detenido por cualquier otro crimen en el territorio de la República Argentina ó en el Reino Unido respectivamente, su extradición será aplazada hasta la terminación del juicio y la completa ejecución del castigo que le fué impuesto.

ARTICULO V.

La extradición no tendrá lugar si, despues de cometido el crimen ó de instituida la acusación criminal ó de condenado el reo, surgiera la prescripción, segun las leyes del Estado requeriente ó requerido.

No tendrá igualmente lugar cuando, segun las leyes de cada país, la mas alta pena del delito sea menor de un año de prisión.

ARTICULO VI.

Un criminal fugado no será entregado si el delito por el que se solicita su extradición es de carácter político, ó si dicho criminal probare que el pedido de extradición se ha hecho en realidad con la mira de enjuiciarlo ó castigarlo por un delito de carácter político.

ARTICULO VII.

Un individuo entregado no puede en caso alguno ser detenido ni enjuiciado en el Estado al que se haga la entrega, por otro crimen ó por otros asuntos que no sean aquellos que hayan motivado la extradición, hasta tanto haya sido devuelto, ó haya tenido una oportunidad de regresar al Estado que lo entregare. Esta estipulación no se aplica á crímenes cometidos despues de la extradición.

ARTICULO VIII.

La requisitoria de la extradición se hará por los Agentes Diplomáticos de las Altas Partes Contratantes respectivamente.

La requisitoria para la extradición de un individuo acusado ha de ser acompañada de orden de prisión, dada por autoridad competente del Estado que requiera la extradición, y de aquellas pruebas que, segun las leyes del lugar donde sea hallado el acusado, justificarian su prisión si el crimen hubiese sido cometido allí.

If the requisition relates to a person already convicted, it must be accompanied by the sentence of condemnation passed against the convicted person by the competent Court of the State that makes the requisition for extradition.

A sentence passed *in contumaciam* is not to be deemed a conviction, but a person so sentenced may be dealt with as an accused person.

ARTICLE IX.

If the requisition for extradition be in accordance with the foregoing stipulations, the competent authorities of the State applied to shall proceed to the arrest of the fugitive.

ARTICLE X.

A fugitive criminal may be apprehended under a warrant issued by any Police Magistrate, Justice of the Peace, or other competent authority in either country, on such information or complaint, and such evidence, or after such proceedings, as would, in the opinion of the authority issuing the warrant, justify the issue of a warrant if the crime had been committed or the person convicted in that part of the dominions of the two Contracting Parties in which the Magistrate, Justice of the Peace, or other competent authority exercises jurisdiction: provided, however, that in the United Kingdom the accused shall, in such case, be sent as speedily as possible before a Police Magistrate in London. He shall, in accordance with this Article, be discharged, as well in the Argentine Republic as in the United Kingdom, if within the term of thirty days a requisition for extradition shall not have been made by the Diplomatic Agent of his country in accordance with the stipulations of this Treaty. The same rule shall apply to the cases of persons accused or convicted of any of the crimes or offences specified in this Treaty, and committed on the high seas on board any vessel of either country which may come into a port of the other.

ARTICLE XI.

The extradition shall take place only if the evidence be found sufficient, according to the laws of the State applied to, either to justify the committal of the prisoner for trial, in case the crime had been committed in the territory of the same State, or to prove that the prisoner is the identical person convicted by the Courts of the State which makes the requisition, and that the crime of which he has been convicted is one in respect of which extradition could, at the time of such conviction, have been granted by the State applied to; and no criminal shall be surrendered until after the expiration of fifteen days from the date of his committal to prison to await the warrant for his surrender.

ARTICLE XII.

In the examinations which they have to make in accordance with the foregoing stipulations, the authorities of the State applied to shall admit as valid evidence the sworn depositions or statements of witnesses taken in the other State, or copies thereof, and likewise the warrants and sentences issued therein, and certificates of, or judicial documents stating, the fact of a conviction, provided the same are authenticated as follows:—

1. A warrant must purport to be signed by a Judge, Magistrate, or officer of the other State.
2. Depositions, or affirmations, or the copies thereof, must purport to be certified under the hand of a Judge, Magistrate, or officer of the other State, to be the original depositions or affirmations, or to be true copies thereof, as the case may require.
3. A certificate of, or judicial document stating, the fact of a conviction must purport to be certified by a Judge, Magistrate, or officer of the other State.
4. In every case such warrant, deposition, affirmation, copy, certificate, or judicial document must be authenticated either by the oath of some witness, or by being sealed with the official seal of the Minister of Justice, or some other Minister of the other State; but any other mode of authentication for the time being permitted by the law of the country where the examination is taken may be substituted for the foregoing.

ARTICLE XIII.

If the individual claimed by one of the High Contracting Parties in pursuance of the present Treaty should be also claimed by one or several other Powers on account of other crimes or offences committed upon their respective territories, his extradition shall be granted to that State whose demand is earliest in date.

ARTICLE XIV.

If sufficient evidence for the extradition be not produced within two months from the date of the apprehension of the fugitive, or within such further time as the State applied to, or the proper Tribunal thereof, shall direct, the fugitive shall be set at liberty.

Si la requisitoria se relaciona con persona ya condenada, deberá venir acompañada de la sentencia condenatoria dictada contra la persona condenada por el Tribunal competente del Estado que haga la requisitoria para la extradición.

Una sentencia dictada en rebeldía no ha de reputarse condenatoria; pero á una persona así sentenciada puede tratarse como á persona suelta.

ARTICULO IX.

Si la requisitoria para la extradición está de acuerdo con las precedentes estipulaciones, las autoridades competentes del Estado requerido procederán á la prisión del fugitivo.

ARTICULO X.

Puedo aprehenderse á un criminal fugitivo en virtud de un mandato de prisión, dictado por cualquier Juez de Instrucción ó de Paz, ú otra autoridad competente en cualquiera de los dos países, mediante aquellas pruebas, informes ó denuncias, y aquellos procedimientos, que en la opinión de la autoridad que dé el mandato justificarian análogo mandato si el crimen se hubiera cometido ó la persona hubiera sido condenada en aquella parte de los dominios de las dos Partes Contratantes donde ejerza jurisdicción el Juez de Instrucción ó de Paz, ú otra autoridad competente: bajo la condición, sin embargo, que en el Reino Unido el acusado ha de ser remitido, en tal caso, á la mayor brevedad, á Londres, á disposición de algun Juez de Instrucción. De conformidad con este Artículo, al acusado será puesto en libertad tanto en la República Argentina como en el Reino Unido, si dentro del plazo de treinta días no hubiera hecho una requisitoria para la extradición el Agente Diplomático de su país de acuerdo con las estipulaciones de este Tratado. La misma regla se applicará á los casos de personas acusadas ó condenadas por cualquiera de los crímenes ó delitos especificados en el presente Tratado, y que se hubieran cometido en alta mar abordo de un buque de cualquiera de los dos países que entrase en un puerto del otro.

ARTICULO XI.

Solo tendrá lugar la extradición, en el caso de hallarse suficiente el testimonio, segun las leyes del país requerido, ya sea para justificar el enjuiciamiento en el caso de que se hubiera cometido el crimen en el territorio del mismo Estado, ya sea para comprobar la identidad del preso como la persona condenada por los Tribunales del Estado que hace la requisitoria, y que el crimen por el que se le haya condenado es de aquellos con motivo de los cuales podria, en la época de dicha condena, haberse concedido in extradición por el Estado requerido; y ningun criminal será entregado hasta despues de pasados quince días, contados desde la fecha de su encarcelacion á esperar la órden para su entrega.

ARTICULO XII.

En los exámenes que debon practicar de conformidad con las precedentes estipulaciones, las autoridades del Estado requerido aceptarían como testimonio válido las deposiciones juramentadas ó las declaraciones de testigos tomadas en el otro Estado, ó copia de ellas, y tambien las órdenes de prisión y sentencias allí dictadas y certificados del hecho de una condena ó documentos judiciales que le declaren, con tal que esten, autenticados como sigue:—

1. Una orden de prisión deba parecer firmada por algun Juez, Magistrado, ó empleado del otro Estado.
2. Las deposiciones ó afirmaciones, ó las copias de estas, deben demostrar que certifican, mediante la firma de algun Juez, Magistrado, ó empleado del otro Estado, ser las deposiciones ó afirmaciones originales, ó copias fieles de ellas, segun le requiera el caso.
3. Un certificado del hecho de una condena ó documento judicial que la declare, debe demostrar que está otorgada por algun Juez, Magistrado, ó empleado del otro Estado.
4. En todos los casos dicha órden, deposición, afirmación, copia, certificado, ó documento judicial debe autenticarse, ya sea mediante juramento de algun testigo, ya sea mediante el sello oficial del Ministro de Justicia, ó de algun otro Ministro del otro Estado; pero cualquiera otra manera de autenticar que esté permitida á la sazón por la ley del país donde se practique el exámen, puede sustituirse á las precedentes.

ARTICULO XIII.

Si el individuo reclamado por una de las Altas Partes Contratantes conforme al presente Tratado tambien lo fuere por otra ú otras Potencias con motivo de otros crímenes ó delitos cometidos en sus respectivos territorios, se concederá la extradición al Estado cuya requisición fuere de fecha mas antigua.

ARTICULO XIV.

Si no se exhibiera testimonio bastante para la extradición dentro de los dos meses despues de la fecha en que se aprehendió al fugitivo, ó dentro del nuevo plazo que designe el Estado requerido ó el correspondiente Tribunal del mismo, el fugitivo será puesto en libertad.

ARTICLE XV.

All articles seized which were in the possession of the person to be surrendered at the time of his apprehension shall, if the competent authority of the State applied to for the extradition has ordered the delivery of such articles, be given up when the extradition takes place; and the said delivery shall extend not merely to the stolen articles, but to everything that may serve as a proof of the crime.

ARTICLE XVI.

All expenses connected with extradition shall be borne by the demanding State.

ARTICLE XVII.

The stipulations of the present Treaty shall be applicable to the Colonies and foreign possessions of Her Britannic Majesty, so far as the laws for the time being in force in such Colonies and foreign possessions respectively will allow.

The requisition for the surrender of a fugitive criminal who has taken refuge in any of such Colonies or foreign possessions shall be made to the Governor or chief authority of such Colony or possession by the Chief Consular officer of the Argentine Republic in such Colony or possession.

Such requisition may be disposed of, subject always, as nearly as may be, and so far as the law of such Colony or foreign possession will allow, to the provisions of this Treaty, by the said Governor or chief authority, who, however, shall be at liberty either to grant the surrender or to refer the matter to his Government.

Her Britannic Majesty shall, however, be at liberty to make special arrangements in the British Colonies and foreign possessions for the surrender of Argentine criminals who may take refuge within such Colonies and foreign possessions, on the basis, so far as the law of such Colony or foreign possession will allow, of the provisions of the present Treaty.

Requisitions for the surrender of a fugitive criminal emanating from any Colony or foreign possession of Her Britannic Majesty shall be governed by the rules laid down in the preceding Articles of the present Treaty.

ARTICLE XVIII.

The present Treaty shall come into force ten days after its publication, in conformity with the forms prescribed by the laws of the High Contracting Parties. It may be terminated by either of the High Contracting Parties by a notice not exceeding one year, and not less than six months.

The Treaty, after receiving the approval of the Congress of the Argentine Republic, shall be ratified, and the ratifications shall be exchanged at Buenos Ayres as soon as possible.

In witness whereof the respective Plenipotentiaries have signed the same, and have affixed thereto the seal of their arms.

Done at Buenos Ayres, on the twenty-second day of May, one thousand eight hundred and eighty-nine.

(L.S.) G. JENNER.

ARTICULO XV.

Todo objeto que estén f posesion del individuo que haya de entregarse y que se le tome al tiempo de aprehenderlo, será entregado al efectuarse la extradicion si la autoridad competente del Estado requerido para la extradicion ha ordenado la entrega de dichos objetos; y dicha entrega se hará extensiva no solo á los objetos robados, sino á cualquier otro que pueda servir de comprobante del crimen.

ARTICULO XVI.

Todos los gastos conexos á la extradicion estarán á cargo del Estado que la requiera.

ARTICULO XVII.

Las estipulaciones del presente Tratado se aplicarán á las Colonias y posesiones exteriores de Su Majestad Británica, en cuanto lo permitan las leyes que estén á la sazón en vigor en dichas Colonias y posesiones exteriores.

La requisitoria para la entrega de un criminal fugitivo, refugiado en alguna de dichas Colonias ó posesiones exteriores, será hecha al Gobernador ó autoridad principal de dicha Colonia ó posesion por el Agente principal Consular de la República Argentina en dicha Colonia ó posesion.

Conocerá de dicha requisitoria (aunquándose siempre, en cuanto le sea dado y en cuanto lo permitan las leyes de dicha Colonia ó posesion exterior, á las prescripciones de este Tratado) dicho Gobernador ó autoridad principal, el cual tendrá, sin embargo, la facultad ó bien de conceder la entrega ó de referir el asunto á su Gobierno.

Su Majestad Británica tendrá, no obstante, la facultad de hacer arreglos especiales en las Colonias y posesiones exteriores Británicas para la entrega de criminales Argentinos que se refugien en dichas Colonias y posesiones exteriores, sobre la base, en cuanto lo permita la ley de dicha Colonia ó posesion exterior, de las estipulaciones del presente Tratado.

Las requisitorias para la entrega de un criminal fugitivo que emanen de alguna Colonia ó posesion exterior de Su Majestad Británica serán regidas por las reglas sentadas en los precedentes Artículos del presente Tratado.

ARTICULO XVIII.

El presente Tratado entrará en vigor diez dias de publicado conforme á las formas prescriptas por las leyes de las Altas Partes Contratantes.

Podrá darlo por terminado cualquiera de las Altas Partes Contratantes, previo aviso que no pase de un año y no baje de seis meses.

El Tratado, despues de aprobado por el Congreso de la República Argentina, será ratificado, y las ratificaciones serán cangeadas en Buenos Aires á la posible brevedad.

En fé de lo cual los respectivos Plenipotenciarios lo han firmado, y le han puesto el sello de sus armas.

Hecho en Buenos Aires, á los veintedos dias del mes de Mayo de mil ocho cientos ochento y nueve.

(L.S.) N. QUIRNO COSTA.

And wherens the ratifications of the said Treaty were exchanged at Buenos Ayres, on the fifteenth day of December, one thousand eight hundred and ninety-three.

Now, therefore, Her Majesty, by and with the advice of Her Privy Council, and in virtue of the authority committed to Her by the said recited Acts, doth order, and it is hereby ordered, that from and after the ninth day of February, one thousand eight hundred and ninety-four, the said Acts shall apply in the case of the Argentine Republic and of the said Treaty with the Argentine Republic.

Provided always, and it is hereby further ordered, that the operation of the said Extradition Acts, 1870 and 1873, shall be suspended within the Dominion of Canada so far as relates to the Argentine Republic and to the said Treaty, and so long as the provisions of the Canadian Act aforesaid of 1883 continue in force, and no longer.

C. L. Peel.

1894.

NEW SOUTH WALES.

TREATY WITH PORTUGAL.
(DESPATCH RESPECTING.)

Presented to Parliament by Command.

Department of Justice,
Sydney, 30th May, 1894.

His Excellency the Governor directs the publication, for general information, of the following Despatch, dated the 20th March, 1894, from the Secretary of State for the Colonies.

T. M. SLATTERY.

(Circular.)

Downing-street,
20th March, 1894.

Sir,

I have the honour to transmit to you, for publication in the Colony under your Government, a copy of an Order of Her Majesty the Queen in Council, dated the 3rd of March, 1894 [The London Gazette, 9th March, 1894, *Extract*], for giving effect to the Treaty between Her Majesty and His Majesty the King of Portugal, for the mutual extradition of Fugitive Criminals, signed at Lisbon on the 17th October, 1892, the ratifications of which were exchanged at Lisbon on the 13th of November, 1893.

I have, &c.,
RIPON.

The Officer Administering
the Government of New South Wales.

ORDER IN COUNCIL.

EXTRADITION TREATY WITH PORTUGAL.

Windsor, 3rd March 1894.

At the Court at Windsor, the 3rd day of March, 1894.

Present:

THE QUEEN'S MOST EXCELLENT MAJESTY.

LORD PRESIDENT.
MARQUESS OF RIPON.
EARL SPENCER.MR. GLADSTONE.
SIR WILLIAM VERNON HARCOURT.

WHEREAS by the Extradition Acts, 1870 and 1873, it was amongst other things enacted, that, where an arrangement has been made with any foreign State with respect to the surrender to such State of any fugitive criminals, Her Majesty may, by Order in Council, direct that the said Acts shall apply in the case of such foreign State; and that Her Majesty may, by the same or any subsequent Order, limit the operations of the Order, and restrict the same to fugitive criminals who are in or suspected of being in the part of Her Majesty's dominions specified in the Order, and render the operation thereof subject to such conditions, exceptions, and qualifications as may be deemed expedient; and that if, by any law made after the passing of the Act of 1870 by the Legislature of any British possession, provision is made for carrying into effect within such possession, the surrender of fugitive criminals who are in or suspected of being in such British possession, Her Majesty may, by the Order in Council applying the said Acts in the case of any foreign State, or by any subsequent order, suspend the operation within any such British possession of the said Acts, or of any part thereof, so far as it relates to such foreign State, and so long as such Law continues in force there and no longer:

And whereas by an Act of the Parliament of Canada passed in 1886, and entitled "An Act respecting the Extradition of Fugitive Criminals," provision is made for carrying into effect within the Dominion the surrender of fugitive criminals:

And whereas by an Order of Her Majesty the Queen in Council, dated the seventeenth day of November, one thousand eight hundred and eighty-eight, it was directed that the operation of the Extradition Acts, 1870 and 1873, should be suspended within the Dominion of Canada so long as the provision of the said Act of the Parliament of Canada of 1886 should continue in force and no longer:

And whereas a treaty was concluded on the seventeenth day of October, one thousand eight hundred and ninety-two, between Her Majesty and His Majesty the King of Portugal for the mutual extradition of fugitive criminals, which treaty is in the terms following:—

Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, and His most Faithful Majesty the King of Portugal and of the Algarves, having judged it expedient, with a view to the better administration of justice and to the prevention of crime within their respective territories, that persons charged with or convicted of the crimes hereinafter enumerated, and being fugitives from justice, should, under certain circumstances, be reciprocally delivered up, the said High Contracting Parties have named as their Plenipotentiaries to conclude a Treaty for this purpose, that is to say:

Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, Sir George Glynn Petre, Knight Commander of the Most Distinguished Order of Saint Michael and Saint George, Companion of the Most Honorable Order of the Bath, Her Majesty's Envoy Extraordinary and Minister Plenipotentiary at the Court of His Most Faithful Majesty, &c.; and

His Most Faithful Majesty the King of Portugal and of the Algarves, Dom Antonio Ayres de Gouvêa, Councillor of His Majesty, Peer of the Realm, Bishop of Bethsaida, retired Professor of the University of Coimbra, His Majesty's Minister and Secretary of State for Foreign Affairs, &c.:

Who, having communicated to each other their respective Full Powers, found in good and due form, have agreed upon and concluded the following Articles:—

ARTICLE I.

The High Contracting Parties engage to deliver up to each other those persons who, being accused or convicted of a crime or offence committed in the territory of the one Party, shall be found within the territory of the other Party, under the circumstances and conditions stated in the present Treaty.

ARTICLE II.

The crimes or offences for which the extradition is to be granted are the following:—

1. Murder (including assassination, infanticide, and poisoning), or attempt or conspiracy to murder.
2. Manslaughter.
3. Maliciously wounding or inflicting grievous bodily harm.
4. Assault occasioning actual bodily harm.
5. Counterfeiting or altering money, either metallic or of any other kind representing the first-named, or uttering counterfeit or altered money of any of those kinds.
6. Knowingly making any instrument, tool, or engine adapted and intended for counterfeiting coin.
7. Forgery, counterfeiting, or altering, or uttering what is forged or counterfeited or altered.
8. Embezzlement or larceny.
9. Malicious injury to property, if the offence be indictable.
10. Obtaining money, goods, or valuable securities, by false pretences.

Sua Magestade a Rainha do Reino Unido da Grã-Bretanha e Irlanda, Imperatriz da India, e Sua Magestade Fidelissima o Rei de Portugal e dos Algarves, julgando conveniente para melhorar a administração da justiça e obstar á perpetração de crimes nos seus respectivos territorios, que os individuos accusados ou condemnados por algum dos crimes abaixo indicados, e foragidos da justiça, sejam, dadas certas circumstancias, reciprocamente entregues, nomearam seus Plenipotenciarios para a celebração d'um Tratado com este intuito, a saber:

Sua Magestade a Rainha do Reino Unido da Grã-Bretanha e Irlanda, Imperatriz da India e Sir George Glynn Petre, Commendador da Muito Distincta Ordem de São Miguel e São Jorge, Cavallerio da Muito Nobre Ordem do Banho, seu Enviado Extraordinario e Ministro Plenipotenciario na Corte de Sua Magestade Fidelissima, &c.; e

Sua Magestade Fidelissima El-Rei de Portugal e dos Algarves, a Dom Antonio Ayres de Gouvêa, do seu Conselho, Par do Reino, Bispo de Bethsaida, lente Jubilado da Universidade de Coimbra, seu Ministro e Secretario de Estado dos Negocios Estrangeiros, &c.:

Os quaes, tendo trocado os seus respectivos Plenos Poderes, que acharam em boa e devida forma, convieram e assentaram nos seguintes Artigos:—

ARTIGO I.

As Atlas Partes Contractantes compromettense á reciproca entrega dos individuos que, accusados ou condemnados por crime ou delicto commettido no territorio d'uma das Partes, se acharem no territorio da outra, nos termos e condições estipuladas no presente Tratado.

ARTIGO II.

Os crimes ou delictos pelos quaes ha de conceder-se extradição são os seguintes:—

1. Homicidio voluntario (incluido homicidio com premeditação, infanticidio, e envenenamento), tentativa, ou conluio para assassinar.
2. Homicidio simples.
3. Ferimentos voluntarios ou grave lesão corporal.
4. Aggressão da qual resultasse de facto lesão corporal.
5. Falsificação ou adulteração de moeda, quer seja d'especie metallica, quer d'outra qualqner especie representando aquella, ou introdução na circulação de moeda falsificada ou adulterada de qualqner d'aquellas especies.
6. Fabrico intencional de instrumento, utensilio, ou aparelho appropriado ou destinado ao fabrico de moeda falsa.
7. Falsificação, imitação, fraudulenta ou viciação, e a passagem ou introdução na circulação do que se falsificou, imitou, ou viciou.
8. Descaminho ou furto.
9. Damno voluntario causado em propriedade alheia, se constituir delicto ou crime.
10. Acquisição fraudulenta de dinheiro, fazenda, ou titulos de valor.

11. Receiving money, valuable security, or other property, knowing the same to have been stolen, embezzled, or unlawfully obtained.

12. Crimes against bankruptcy law.

13. Fraud by a bailee, banker, agent, factor, trustee, or director, or member, or public officer of any Company, made criminal by any law for the time being in force.

14. Perjury or subornation of perjury.

15. Rape.

16. Carnal knowledge or any attempt to have carnal knowledge of a girl under 16 years of age.

17. Indecent assault.

18. Administering drugs or using instruments with intent to procure the miscarriage of a woman.

19. Abduction.

20. Bigamy.

21. Child-stealing.

22. Abandoning children, exposing or unlawfully detaining them.

23. Kidnapping and false imprisonment.

24. Burglary or housebreaking.

25. Arson.

26. Robbery with violence.

27. Any malicious act done with intent to endanger the safety of any person in a railway train.

28. Threats by letter or otherwise, with intent to extort.

29. Piracy by law of nations.

30. Sinking or destroying a vessel at sea or attempting or conspiring to do so.

31. Assaults on board a ship on the high seas, with intent to destroy life or to do grievous bodily harm.

32. Revolt, or conspiracy to revolt, by two or more persons on board a ship on the high seas against the authority of the master.

33. Dealing in slaves in such manner as to constitute a criminal offence against the laws of both States.

Extradition is also to be granted for participation in any of the aforesaid crimes, provided such participation be punishable by the laws of both the Contracting Parties.

Extradition may also be granted at the discretion of the State applied to in respect of any other crimes for which, according to the laws of both the Contracting Parties for the time being in force, the grant can be made.

The Portuguese Government will not deliver up any person either guilty or accused of any crime punishable with death.

ARTICLE III.

The Portuguese Government will not grant the extradition of any Portuguese subject, and Her Britannic Majesty's Government will not grant the extradition of any British subject; but in the case of a naturalized subject, this Article shall only be applicable if the naturalization was obtained previous to the commission of the crime giving rise to the application for extradition.

ARTICLE IV.

The extradition shall not take place if the person claimed on the part of the British Government, or the person claimed on the part of the Portuguese Government, has already been tried and discharged or punished, or is still under trial within the territories of the two High Contracting Parties respectively, for the crime for which his extradition is demanded.

If the person claimed on the part of the British Government, or if the person claimed on the part of the Portuguese Government, should be under examination, or is undergoing sentence under a conviction for any other crime within the territories of the two High Contracting Parties respectively, his extradition shall be deferred until after he has been discharged, whether by acquittal, or on the expiration of his sentence, or otherwise.

ARTICLE V.

The extradition shall not take place if, subsequently to the commission of the crime, or the institution of the penal prosecution or the conviction thereon, exemption from prosecution or punishment has been acquired by lapse of time, according to the laws of the State applied to.

ARTICLE VI.

A fugitive criminal shall not be surrendered if the offence in respect of which his surrender is demanded is one of a political character, or if he prove that the requisition for his surrender has, in fact, been made with a view to try or punish him for an offence of a political character.

ARTICLE VII.

A person surrendered can in no case be kept in prison or be brought to trial in the State to which the surrender has been made, for any other crime, or on account of any other matters, than those for which the extradition shall have taken place, until he has been restored, or had an opportunity of returning to the State by which he has been surrendered.

11. Recaptação, de dinheiro, título de valor, ou outra especie de propriedade havendo certeza de ter sido roubada, subtrahida, ou illegitimamente adquirida.

12. Crimes contra a legislação relativa a fallencias.

13. Fraude commetida por depositario, banqueiro, agente, commissario, curador, ou director ou membro ou empregado de companhia que deva reputar-se criminoso em razão de lei vigente.

14. Perjurio ou suborno para perjurar.

15. Violação.

16. Estupro, ou tentativa de estupro, em rapariga menor de 16 annos.

17. Ultrage ao pudôr.

18. Propinação de substancias ou emprego de instrumentos tendentes a produzir aborto.

19. Rapto.

20. Bigamia.

21. Substracção de menores.

22. Abandono de infantes, exposição, ou detenção illegal dos mesmos.

23. Rapto violento e carcere privado.

24. Roubo com arrombamento durante a noite ou arrombamento de domicilio para furtar.

25. Fogo posto.

26. Furto com violencia.

27. Acto voluntario que ponha em risco a segurança d'alguem em trem de via ferrea.

28. Ameaças por carta ou de outra forma, para realizar extorsão.

29. Pirataria segundo o direito das gentes.

30. Submersão ou destruição de navio no mar, tentativa ou conluio para esse fim.

31. Aggressão a bordo de navio no alto mar no intuito de destruir vidas ou causar grave lesão corporal.

32. Revolta ou conluio para revolta levada a effeito por duas ou mais pessoas a bordo de embarcação no mar alto contra a autoridade do capitão.

33. Trafico de escravos realisado por forma que constitua violação das leis d'ambos os Estados.

Será tambem concedida a extradição, pela cumplicidade em algum dos crimes acima ditos, contanto que tal cumplicidade seja punivel pelas leis de ambas as Partes Contractantes.

Poderá tambem conceder-se extradição a arbitrio do Estado reclamado por qualquer outro crime que, segundo as leis então vigentes d'ambas as Partes Contractantes, a ella poder dar lugar.

O Governo Portuguez não concederá a extradição de nenhum individuo culpado ou accusado de crime a quo seja applicavel pena de morte.

ARTIGO III.

O Governo Portuguez não concederá a extradição de qualquer subdito Portuguez, e o Governo de Sua Magestade Britannica não concederá a extradição de qualquer subdito Britannico; mas quando se tratar de um subdito naturalizado só serão applicadas as disposições d'este Artigo no caso de ter sido a naturalisação obtida antes da perpetração do crime que den lugar ao pedido de extradição.

ARTIGO IV.

Não poderá effectuar-se a extradição se o individuo reclamado pelo Governo Britannico ou o individuo reclamado pelo Governo Portuguez já tiver sido julgado e condemnado ou absolvido, ou estiver sujeito ainda a julgamento, no territorio d'alguma das Altas Partes Contractantes em razão do crime pelo qual tiver sido reclamada sua extradição.

Se o individuo reclamado pelo Governo Britannico, ou se o individuo reclamado pelo Governo Portuguez, se achar ainda sujeito a processo, ou estiver cumprindo sentença em virtude de condemnação por outro crime no territorio d'uma das Altas Partes Contractantes, demorar-se-haa a sua extradição até que ou em razão de absolvição profetida, ou por ter cumpido sentença, ou por outro motivo esteja livre.

ARTIGO V.

Não se realisará a extradição se subsequentemente á practica do acto criminoso, ou á instauração do processo criminal, ou á condemnação do reu, resultar isenção de acção criminal ou de punição em razão do tempo decorrido, segundo as leis do paiz ao qual fôr feita a instancia da extradição.

ARTIGO VI.

Um criminoso refugiado não será entregue se o delicto que motivar o pedido de extradição fôr de caracter politico, ou se elle provar que esse pedido foi de facto apresentado no intuito de o processar ou punir por um delicto de caracter politico.

ARTIGO VII.

Um individuo entregue não pode em caso algum ser deido em prisão ou mettido em processo no Estado no qual fôr concedida a extradição por crime ou em razão de factos diversos dos que determinaram a extradição, emquanto não tiver voltado ou tido occasião de voltar ao Estado pelo qual foi entregue.

This stipulation does not apply to crimes committed after the extradition.

ARTICLE VIII.

The requisition for extradition shall be made through the Diplomatic Agents of the High Contracting Parties respectively.

The requisition for the extradition of an accused person must be accompanied by a warrant of arrest issued by the competent authority of the State requiring the extradition, and by such evidence as, according to the laws of the place where the accused is found, would justify his arrest if the crime had been committed there.

If the requisition relates to a person already convicted, it must be accompanied by the sentence of condemnation passed against the convicted person by the competent Court of the State that makes the requisition for extradition.

A sentence passed *in contumaciam* is not to be deemed a conviction, but circumstances may cause a person so sentenced *in contumaciam* to be dealt with as an accused person.

ARTICLE IX.

If any requisition for extradition be in accordance with the foregoing stipulations, the competent authorities of the State applied to shall proceed to the arrest of the fugitive.

ARTICLE X.

If the fugitive has been arrested in the British dominions, he shall forthwith be brought before a competent Magistrate, who is to examine him and to conduct the preliminary investigation of the case, just as if the apprehension had taken place for a crime committed in the British dominions.

In the examinations which they have to make in accordance with the foregoing stipulations, the authorities of the British dominions shall admit as valid evidence the sworn depositions or the affirmations of witnesses taken in the dominions of Portugal, or copies thereof, and likewise the warrant and sentences issued therein, and certificates of, or judicial documents stating the fact of, a conviction, provided the same are authenticated as follows:—

1. A warrant must purport to be signed by a Portuguese Judge, Magistrate, or officer.
2. Depositions or affirmations, or the copies thereof, must purport to be certified under the hand of a Portuguese Judge, Magistrate, or officer to be the original depositions or affirmations, or to be the true copies thereof, as the case may require.
3. A certificate of or judicial document stating the fact of a conviction must purport to be certified by a Portuguese Judge, Magistrate, or officer.
4. In every case such warrant, deposition, affirmation, copy, certificate, or judicial document must be authenticated either by the oath or some witness, or by being sealed with the official seal of the Minister of Justice, or some other Portuguese Minister; but any other mode of authentication for the time being permitted by the law in that part of the British dominions where the examination is taken may be substituted for the foregoing.

ARTICLE XI.

If the fugitive has been arrested in the dominions of Portugal, his surrender shall be granted if upon examination by a competent authority it appears that the documents furnished by the British Government contain sufficient *prima facie* evidence to justify the extradition.

The Portuguese authorities shall admit as valid evidence records drawn up by the British authorities of the depositions of witnesses, or copies thereof, and records of conviction, or other judicial documents or copies thereof: Provided that the said documents be signed or authenticated by an authority whose competence shall be certified by the seal of a Minister of State of Her Britannic Majesty.

ARTICLE XII.

The extradition shall not take place unless the evidence be found sufficient, according to the laws of the State applied to, either to justify the committal of the prisoner for trial, in case the crime had been committed in the territory of the said State, or to prove that the prisoner is the identical person convicted by the Courts of the State which makes the requisition, and that the crime of which he has been convicted is one in respect of which extradition could, at the time of such conviction, have been granted by the State applied to. In Her Britannic Majesty's dominions the fugitive criminal shall not be surrendered until the expiration of fifteen days from the date of his being committed to prison to await his surrender.

ARTICLE XIII.

If the individual claimed by one of the two High Contracting Parties in pursuance of the present Treaty should be also claimed by one or several other Powers on account of other crimes or offences committed upon their respective territories, his extradition shall be granted to that State whose demand is earliest in date.

Não se applicará esta estipulação aos crimes commettidos depois da extradição.

ARTIGO VIII.

O pedido de extradição deverá ser apresentado pelos Agentes Diplomaticos das Altas Partes Contractantes.

Deverão acompanhar o pedido de extradição d'um individuo accusado o mandado de captura expedido pela autoridade competente do Estado reclamante, e documentos que, em face das leis do lugar onde estiver o accusado, bastem para justificar a prisão d'este se ali se tivesse perpetrado o crime.

Se o pedido se referir a individuo previamente condemnado terá de ser acompanhado da sentença condemnatoria proferida contra o criminoso pelo tribunal competente do Estado que requerer a extradição.

Uma sentença de revelia não equivale a uma condemnação; mas dadas certas circumstancias poderá o individuo condemnado á revelia ser tratado como accusado.

ARTIGO IX.

Quando o pedido de extradição fór feito em harmonia com as precedentes estipulações, as autoridades competentes do Estado requerido procederão á captura do refugiado.

ARTIGO X.

Se o refugiado fór preso nos dominios Britannicos terá de comparecer immediatamente perante o Magistrado competente, que deverá inquirir-o e proceder a investigações preliminares de causa, como se a prisão se houvesse effectuado em raz do crime commettido nos dominios Britannicos.

Nas investigações a que tiverem de proceder em conformidade com as precedentes estipulações, as autoridades dos dominios Britannicos deverão admitir como testemunho valido os depoimentos ou asserções juradas de testemunhas tomadas nos dominios de Portugal, ou seus traslados, e pela mesma forma os mandados e sentenças proferidos, e attestados ou documentos officiaes affirmativos de condemnação proferida, contanto que esses documentos sejam legalisados pela forma seguinte:—

1. Um mandado terá de ser firmado pelo Juiz, Magistrado, ou funcionario Portuguez.
2. Os depoimentos e asserções e seus traslados devem vir acompanhados de declarações firmadas por Juiz, Magistrado, ou funcionario Portuguez de como são os depoimentos ou asserções originaes ou seus traslados authenticos, segundo cumprirem.
3. Um attestado ou documento judicial affirmativo de condemnação proferida deverá ser certificado por Juiz, Magistrado, ou funcionario Portuguez.
4. Em cada causa especial estes mandados, depoimentos, allegações traslados, attestados, ou documentos officiaes, tem de ser authenticados ou por juramento de testemunhas, ou pelo applicação do sello official do Ministro do Justica ou de outro Ministro de Portugal; poderá porem substituir a precedente outra forma de legalisação reconhecida por lei vigente na parte dos dominios Britannicos onde se effectuar a diligencia.

ARTIGO XI.

Se o refugiado fór preso nos dominios de Portugal, deverá ser concedida a extradição se do exame a quo proceder a autoridade competente resultar que os documentos apresentados pelo Governo Britannico contem elementos sufficientes *prima facie* para justificar a extradição.

As autoridades Portuguezas considerarão elemento valido as certidões passadas pelas autoridades Britannicas dos depoimentos das testemunhas ou seus traslados, e certidões do sentença condemnatoria ou outros documentos judiciaes ou traslados d'elles: Uma vez que os referidos documentos sejam assignados ou legalisados por uma autoridade cuja competencia seja authenticada com o sello d'um Ministro d' Estado de Sua Magestade Britannica.

ARTIGO XII.

Não se effectuará a extradição se os documentos apresentados não forem bastantes para, segundo as leis do Estado requerido, sejeitar o preso a julgamento se o crime tivesse sido perpetrado no territorio do referido Estado, ou para provar que o preso é o proprio individuo condemnado pelos Tribunaes do Estado requerente, e que o crime por que foi condemnado é d'aquelles pelos quaes ao tempo da condemnação podia o Estado requerido ter concedido a extradição. O criminoso refugiado nos dominios de Sua Magestade Britannica só poderá ser entregue findo o prazo de quinze dias contados da entrada na cadeia para aguardar n'ella a occasião da entrega.

ARTIGO XIII.

Se o individuo reclamado por uma das Altas Partes Contractantes nos termos do presente Tratado fór ao mesmo tempo reclamado por outra ou outras Potencias por outros crimes ou delictos commettidos em seus respectivos territorios, será concedida a extradição ao Estado cuja instancia preceder na data as outras.

ARTICLE XIV.

If sufficient evidence for the extradition be not produced within two months from the date of the apprehension of the fugitive, or within such further time as the State apply to, or the proper Tribunal thereof, shall direct, the fugitive shall be set at liberty.

ARTICLE XV.

All articles seized which were in the possession of the person to be surrendered at the time of his apprehension shall, if the competent authority of the State applied to for the extradition has ordered the delivery thereof, be given up when the extradition takes place; and the said delivery shall extend not merely to the stolen articles, but to everything that may serve as a proof of the crime.

ARTICLE XVI.

All expenses connected with extradition shall be borne by the demanding State.

ARTICLE XVII.

The stipulation of the present Treaty shall be applicable to the Colonies and foreign possessions of both of the High Contracting Parties, so far as the laws for the time being in force in such Colonies and foreign possessions respectively will allow.

The requisition for the surrender of a fugitive criminal who has taken refuge in any of such Colonies or foreign possessions may be made to the Governor or chief authority of such Colony or possession by the Chief Consular authority of the other State in such Colony or possession.

Such requisitions may be disposed of, subject always, as nearly as may be, and so far as the law of such Colony or foreign possession will allow, to the provisions of this Treaty, by the said Governor or chief authority, who, however, shall be at liberty either to grant the surrender or to refer the matter to his Government.

The High Contracting Parties shall, however, be at liberty to make special arrangements in their respective Colonies and foreign possessions for the surrender of criminals who may take refuge therein, on the basis, as nearly as may be, and so far as the law of such Colony or foreign possession will allow, of the provisions of the present Treaty.

Requisitions for the surrender of a fugitive criminal emanating from any Colony or foreign possession of either of the High Contracting Parties shall be governed by the rules laid down in the preceding Articles of the present Treaty.

ARTICLE XVIII.

The present Treaty shall come into force ten days after its publication, in conformity with the forms prescribed by the laws of the High Contracting Parties. It may be terminated by either of the High Contracting Parties at any time on giving to the other six months' notice of its intention to do so.

The Treaty shall be ratified, and the ratification shall be exchanged at Lisbon as soon as possible.

In witness whereof the respective Plenipotentiaries have signed the same, and have affixed thereto the seal of their arms.

Done in duplicate at Lisbon the seventeenth day of October, in the year of our Lord one thousand eight hundred and ninety-two.

(L.S.) GEORGE G. PETRE.

ARTIGO XIV.

Se os documentos apresentados dentro de dois mezes contados da data da captura do refugiado, ou no prazo de tempo que indicar o Estado requerido ou o Tribunal competente d'esse Estado, não forem sufficientes para se conceder a extradição, o preso será posto em liberdade.

ARTIGO XV.

Todos os objectos apprehendidos ao individuo sujeito a extradição e em seu poder ao tempo da captura serão entregues se a autoridade competente do Estado requerido assim o determinar quando se levar a effecto a extradição; e esta entrega abrangerá não só os objectos que houverem sido subtraídos mas tudo que servir para provar o crime.

ARTIGO XVI.

Todas as despesas relativas a extradição serão custeadas pelo Estado que a reclamar.

ARTIGO XVII.

As estipulações d'este Tratado terão applicação ás Colonias e possessões ultramarinas de ambas as Altas Partes Contractantes até onde o permittirem as leis ao tempo em vigor em taes Colonias e possessões ultramarinas.

O pedido de extradição do criminoso que se houver refugiado em alguma d'essas Colonias ou possessões ultramarinas poderá ser apresentado ao Governador ou primeira autoridade da Colonia ou possessão de que se tratar pela principal autoridade Consular do outro Estado existente n'essa Colonia ou possessão.

Estes pedidos poderão ser resolvidos sujeitandoos tanto quanto ser possa, e até onde o permittir a lei da Colonia ou possessão ultramarina, ás disposições d'este Tratado, pelo referido Governador ou primeira autoridade a qual todavia terá a liberdade de deferir a extradição ou de referir o assumpto ao seu Governo.

As Altas Partes Contractantes terão comtudo a faculdade de estabelecer accordos especiaes nas suas respectivas Colonias e possessões ultramarinas para a extradição de criminosos que se houverem refugiado n'ellas, tomando por base, tanto quanto possível e até onde o permittir a legislação da Colonia ou possessão, as disposições d'este Tratado.

Pedidos d'extradição d'um criminoso que emanarem de Colonia ou possessão ultramarina d'uma das Altas Partes Contractantes serão regalados pelas prescripções extradas nos precedentes Artigos d'este Tratado.

ARTIGO XVIII.

O presente Tratado entrará em vigor dez dias depois da sua publicação official segundo as formas prescriptas na legislação das Altas Partes Contractantes. Poderá em qualquer tempo dal-o por findo uma das Altas Partes Contractantes communicando á outra com a anticipação de seis mezes a intenção de assim fazer.

O Tratado será ratificado, e trocadas as ratificações em Lisboa no mais curto prazo possível.

Em testemunho do que os respectivos Plenipotenciarios o assignaram e lhe pizeram o sello das suas armas.

Feito em duplicado em Lisboa aos dezeseite dias do mez de Outubro, do anno de nosso Senhor Jesus Christo de mil oitocentos e noventa e dois.

(L.S.) A. AYRES DE GOUVÊA.

And whereas a Protocol relative to the said Treaty was signed at Lisbon on the thirtieth day of November, one thousand eight hundred and ninety-two, which Protocol is in the terms following:—

The stipulations of the present Treaty do not apply to extradition between British and Portuguese India, which is reserved for ulterior negotiation.

Done in duplicate at Lisbon, the thirtieth day of November, in the year of our Lord one thousand eight hundred and ninety-two.

Her Britannic Majesty's Envoy Extraordinary and Minister Plenipotentiary.

GEORGE G. PETRE.

And whereas the ratifications of the said Treaty and Protocol were exchanged at Lisbon on the thirteenth day of November, one thousand eight hundred and ninety-three.

Now, therefore, Her Majesty, by and with the advice of Her Privy Council, and in virtue of the authority committed to Her by the said recited Acts, doth order, and it is hereby ordered, that from and after the nineteenth day of March, one thousand eight hundred and ninety-four, the said Acts shall apply in the case of Portugal, and of the said Treaty and Protocol with His Majesty the King of Portugal.

Provided always, and it is hereby further ordered, that the operation of the said Extradition Acts, 1870 and 1873, shall be suspended within the Dominion of Canada so far as relates to Portugal and to the said Treaty and Protocol, and so long as the provisions of the Canadian Act aforesaid of 1886 continue in force, and no longer.

(Extract from the London Gazette of Friday, March 9, 1894.)

1894.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

FARMERS' AND SETTLERS' ASSOCIATIONS.

(PETITION FROM GUNNING FRANCIS PLUNKETT, PRESIDENT, AND JOHN LOUIS TRÉFLÉ,
SECRETARY, IN FAVOUR OF CERTAIN RESOLUTIONS.)

Received by the Legislative Assembly, 17 May, 1894.

The humble Petition of the undersigned, representing the Farmers' and Settlers' Associations of the Colony,—

To the Honorable the Speaker and Members of the Legislative Assembly, in Parliament assembled,—
RESPECTFULLY SHOWN,—

That the following resolutions were agreed to by delegates assembled together on two separate occasions at Cootamundra and Junee, representing the aforesaid Farmers' and Settlers' Associations:—

Central Leases.

1. That this Conference affirms the policy that the whole of the State land in the Central Division should be left open to *bonâ fide* settlement, under conditions that will be just to each industry and to all citizens, and a safeguard against abuse by persons who traffic in land.

Leasing.

2. That in the opinion of this Conference the system of conditional purchase be continued, and provision also be made for the leasing of land, with the right of purchasing a portion during the currency of lease of twenty-eight years.

Finality of Selection.

3. That the best way of bringing about finality of selection is to limit the area which shall be alienated to any holder; and this Conference is of opinion that a stringent condition should be imposed upon all future holders that, if they transfer, they shall sell only to residential buyers, always provided that this law shall have no retrospective effect.

Mining on Private Property.

4. That this Conference is of opinion that a Mining on Private Lands Bill should be passed into law, and would urge on the Government the desirableness of at once taking steps to insure the passing of such a measure.

The Prices of Special Areas.

5. That in the opinion of this Conference the 18th clause of the Land Act of 1889 gives the Governor power to modify by proclamation the terms and conditions now being enforced upon special area selectors of country lands, and that he be petitioned through the Government either for a reduction of the price per acre or a reduction of the annual instalment on the same by 50 per cent., or such percentage as, on revaluation by the Land Board, is found to be competent to meet individual cases.

Limitation of Special Areas.

6. That in the opinion of this Conference the system of special areas outside of suburban lands be abolished, and within the suburban radius only the area to be limited and prices not raised.

The Ballot System.

7. That in cases where a ballot is taken, and applications are lodged for a conditional purchase and conditional lease in virtue thereof, both applications should be balloted for.

Non-forfeiture of Selections.

8. That no selectors' lands be forfeited on account of non-payment of instalments on their conditional purchases, so long as they pay interest on such instalments and the principal due to the Government on such selection, to have an operation of not more than five years at a time.

Elective Land Boards.

9. That the composition of the Land Boards be as follows:—Chairman, to be appointed by the State; his two colleagues, to be elected by the electors of the Land District.

Breeding Grounds for Rabbits.

10. That this Conference directs the attention of the Minister for Lands to the necessity for immediate dealing with the reserves, which are now breeding grounds for rabbits and other vermin.

Abolition of Auction Sales.

11. That in the opinion of this Conference the system of auction sales be abolished outside town and suburban lands.

Transferred Conditional Purchases and Leases.

12. That no additional conditional purchase or conditional lease should be allowed in virtue of a conditional purchase which has been transferred, this to apply retrospectively.

Suburban Lands.

13. That in the opinion of this Conference, with a view to encourage settlement on suburban lands, small holdings be established on residence and improvement qualifications with the right of purchase in the future.

Forty-sixth Clause.

14. That this Conference affirm the decision arrived at by the Wagga Wagga Conference last year, that clause 46 of the Land Act of 1839, which permits the exchange and surrender of land, should be repealed.

Interest.

15. That in the opinion of this Conference those who are at present unable to pay their interest on conditional purchases should be allowed an extension of time.

Survey.

16. That delay in survey is detrimental to the interest of settlement

Reserves.

17. That reserves not required for public purposes be revoked and that the reserves required be withdrawn from leases and placed under proper control.

Stock Acts.

18. That in the opinion of this Conference the various Acts relating to live stock should be consolidated, in order to avoid the complications at present continually arising; that provision should be made for stockowners to make their annual returns to one office only and to pay their assessments to one officer only; that provision should be made for stockowners to record their votes for the election of directors by proxy or some other method; that circumulative votes be abolished; that stock boards throughout the Colony should work in unison in the destruction of noxious animals.

Roads.

19. That a more convenient system be devised by the Minister for Lands in the arranging and the laying out of the surveyed roads of the Colony than at present obtains.

Railways.

20. That in the opinion of this Conference the Railway Commissioners should not be expected to pay interest on loan capital expended on railway construction, but that they should be expected to pay only working expenses; that rents and receipts from lands should be set apart as a sinking fund and security for such loan money.

Local Government.

21. That in the opinion of this Conference it is desirable that a Local Government Bill should be passed by Parliament.

National Bank.

22. This Conference is of opinion that the establishment of a National Bank would be of great benefit to the Colony.

Private Townships.

23. That the Government should repurchase private townships near railway lines if two-thirds of the residents of the districts petition for such.

Protection.

24. That the policy to be adopted by the Farmers' and Settlers' Association of New South Wales be protection, and that it be embodied in the platform of the Association.

Central Division.

25. That in view of Mr. Copeland's public utterances in his capacity as Minister for Lands, that his intended Land Bill would provide for throwing open half the leases in the Central Division, this Conference reaffirms the resolution of two previous Conferences, that the whole of these leases should terminate in June, 1895.

Land Bill.

26. That in the opinion of this Conference it is not desirable that the present Government should introduce any amending Land Bill until an appeal be made to the country by a general election.

And your Petitioners therefore pray that you will be pleased to take the foregoing resolutions into your favourable consideration before dealing with the land or other laws of this Colony, and your Petitioners, as in duty bound, will ever pray.

GUNNING FRANCIS PLUNKETT,
President.

JOHN LOUIS TRÉFLÉ,
Secretary.
