PARRAMATTA (See "SEWERAGE").	
PATENTS (See "INTERNATIONAL PATENTS AND TRADE MARKS ARRANGEMENTS BILL"):—	
OFFICE, EXAMINER OF:—	
Motion made (<i>Mr. Wilks</i>) for papers relating to change of working, 215.	
PATENTS LAW AMENDMENT ACT:—	
Additional Regulations, laid on Table, 24.	
PATENTS LAW AMENDMENT BILL:—	
Assent to (<i>Session 1896</i>) reported, 2.	
PAYTEN, MR. (See "CIVIL SERVICE").	
PENSIONS (See "OLD AGE PENSIONS"; also "CIVIL SERVICE").	
PERMANENT ARTILLERY (See "MILITARY").	
PETITIONS:—	
Referred to Select Committee, 91, 219, 241.	
Read by Clerk, 214.	
To appear at Bar of House, 185, 435.	
PHARMACY ACT OF 1897:—	
Regulations under, laid on Table, 445.	
PHARMACY BILL:—	
Motion made (<i>Mr. Brunker</i>) for Message to Council, requesting that Bill be proceeded with, 59;	
returned from Council with amendments, 114; Assembly disagrees to one and agrees to	
remainder of Council's amendments, 140-1; Message to Council, 148; Council does not insist	
on its amendment disagreed to, 170; Assent reported, 173.	
PIDDINGTON, ALBERT BATHURST, ESQUIRE, M.P.:—	
Appointed by Mr. Speaker a Temporary Chairman of Committees for the Session, 7.	
PILLIGA (See "RAILWAYS").	
PILOT SERVICE:—	
SYDNEY AND NEWCASTLE:—	
Motion made (<i>Mr. Dick</i>) for Return respecting Vessels and Services of Pilots, 308; Return to	
Order, laid on Table, 392.	
PITT STREET (See "TELEPHONES").	
POINTS OF ORDER:—	
Reported from Committees, 403, 483, 512.	
RULINGS OF SPEAKER:—	
That motion for adjournment of House in reference to appointment of Select Committee or Royal	
Commission on the financial clauses of the Commonwealth Bill anticipated consideration of	
that Bill, and was out of order, 169.	
That the Franchise Extension Bill did not necessarily involve expenditure, and therefore did not	
require a Message from the Governor, 181.	
That discussion on Motion of Adjournment in reference to Administration of Land and Income	
Taxes must be confined to the subject of the Notice, 190.	
That motion to take 3 ^o of the Crown Lands Bill as matter of urgency before other business was	
in order, 256.	
That it be left to the House to decide whether the motion for the suspension of the Standing	
Orders to take 3 ^o of Crown Lands Bill as matter of urgency, was irregular, 257.	
That Totalisator Bill did not originate any tax or impost or appropriate revenue, and therefore	
did not require to be recommended by Message from Governor, 290.	
That Totalisator Bill did not contain provisions beyond the Order of Leave, 290.	
That motion relating to Reappraisal of Conditional Purchases and Leases would anticipate	
debate on Order of the Day already on the Paper, 309.	
That Liquor Traffic Local Option Bill was properly included amongst the Government Orders of	
the Day, having been introduced by a Minister, 317.	
That amendment, on motion, in reference to construction of railways through private land to	
apply betterment principle was not relevant, 328.	
That the Standing Orders only permitted the postponement of Orders of the Day, not being	
Government Orders (on Government days), from one sitting day to another, 341.	
That motion for adjournment in reference to the state of the roads of the Colony anticipated	
discussion on the Estimates or in Committee of Ways and Means, and was out of order, 363.	
That while upholding the ruling of the Chairman of the Committee of Supply against allowing a	
discussion on the constitution of the Works Committee or their fees or travelling expenses on	
the Vote "Parliamentary Standing Committee on Public Works" the items being fixed by	
statute the conduct of business of the Committee could be criticised in relation to another	
item, 403.	
That motion for adjournment of House relating to making of Dams and Weirs by the Water	
Conservation Branch of the Public Works Department was out of order, the matter having	
been fully discussed in Supply, 471.	
That Chairman was incorrect in ruling that the omission of the word "intestate" in the 12th line	
of the Probate Duties Bill was in order on the ground that it did not increase the area of	
taxation, because the effect would be an augmentation of the tax, 483.

	VOL.	PAGE.
S		
SPEAKER (continued) :—		
RULINGS OF (continued) :—		
That motion to take 3 ^o of the Crown Lands Bill as matter of urgency before other business was in order, 256.		
That it be left to the House to decide whether the motion for suspension of the Standing Orders to take 3 ^o of Crown Lands Bill as matter of urgency was irregular, 257.		
That Totalisator Bill did not originate any tax or impost or appropriate revenue, and therefore did not require to be recommended by Message from Governor, 290.		
That Totalisator Bill did not contain provisions beyond the Order of Leave, 290.		
That motion relating to Reappraisal of Conditional Purchases and Leases would anticipate debate on Order of the Day already on the paper, 309.		
That Liquor Traffic Local Option Bill was properly included amongst the Government Orders of the Day, having been introduced by a Minister, 317.		
That motion to "read Orders of the Day" was obsolete in House of Commons and opposed to Standing Order 211, 274.		
That amendment on motion in reference to construction of Railways through private land to apply betterment principle was not relevant, 328.		
That the Standing Orders only permitted the postponement of Orders of the Day, not being Government Orders (on Government Days), from one sitting day to another, 341.		
That motion for adjournment in reference to the state of the roads of the Colony anticipated discussion on the Estimates or in Committee of Ways and Means, and was out of order, 363.		
That while upholding the ruling of the Chairman of Committee of Supply against allowing a discussion on the constitution of the Works Committee, or their fees, or travelling expenses on the Vote "Parliamentary Standing Committee on Public Works," the items being fixed by statute, the conduct of business of the Committee could be criticised in relation to another item, 403.		
That motion for adjournment of House relating to making of Dams and Weirs by the Water Conservation Branch of the Public Works Department was out of order, the matter having been fully discussed in Supply, 471.		
That Chairman was incorrect in ruling that the omission of the word "intestate" in the 12th line of the Probate Duties Bill was in order, on the ground that it did not increase the area of taxation, because the effect would be an augmentation of the tax, 483.		
That the decision of the Chairman of Committees, that a Member was not entitled in discussing the principles of the City and North Sydney Railway Bill on a proposed amendment in the Short Title, was correct, 512.		
That subject of motion of adjournment of House in reference to Sunday Trading had been discussed on a previous motion, 518.		
That the Minister in moving the reference of the Rosehill to Dural Railway to the Public Works Committee had complied with the Act 519.		
DISSENT FROM RULING :—		
Motion made (<i>Mr. Copeland</i>) for, in reference to opinion given respecting consideration in Committee of Draft Bill of Adelaide Convention, and negatived, 72.		
SPECIAL ADJOURNMENT (See "ADJOURNMENT").

STAMP DUTIES (AMENDMENT) BILL :—		
Message from Governor, 457; Ordered (<i>Mr. Reid</i>) that Bill be brought in founded on Resolution of Ways and Means, No. 10, presented and read 1 ^o , 465; read 2 ^o , committed, reported with amendments, 483; Order of the Day postponed, 473; Motion made (<i>Mr. Brunker</i>) for adoption of report, amendment moved to recommit, and amendment moved (<i>Mr. Rose</i>) to add words to amendment and negatived, amendment to recommit, passed, recommitment, reported 2 ^o with further amendments, Report adopted, 497; read 3 ^o , passed, and sent to Council, 499.		
STAMP DUTIES BILL :—		
Received from Legislative Council and on motion (<i>Mr. Gould</i>) read 1 ^o , 400; Order of the Day postponed, 451, 492.		
STAMP AND PROBATE DUTIES BILL :—		
Ordered on motion of <i>Mr. Reid</i> that Bill be brought in founded on Resolutions of Ways and Means (Nos. 4 and 5), Bill presented and read 1 ^o , 395; Order of the Day postponed, 448; Order of the Day discharged, Bill withdrawn, 459.		
Petition presented from Australian Mutual Provident Society against, 426	2	1243
STANDING ORDERS :—		
Sessional Order appointing Committee, passed, 13.		
Suspended as a matter of urgency to enable Bill to pass through all its stages in one day, 36-7, 302, 427-8.		
Suspended as matter of urgency to pass 3 ^o of Crown Lands Bill before other business, 257.		
Suspended to pass Bill through all its stages in one day, 378.		
Motion to suspend as a matter of urgency interrupted at 8 o'clock, 458.		
Motion made (<i>Mr. Schey</i>) for instruction to Committee to frame rule in reference to Limitation of Speeches, 147; Report brought up, 295	1	687
Motion made (<i>Mr. Cann</i>) to refer question of balloting for Select Committees to Committee; amendment moved (<i>Mr. Hogue</i>), to except Committees on Private Bills and negatived—		
Motion agreed to, 197-8; Report brought up, 295	1	687
Motion made (<i>Mr. Neild</i>) to amend Standing Order No. 161, so as to make any decision of <i>Mr. Speaker</i> a ruling within the meaning of the Standing Order, and negatived, 337.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

R E P O R T

OF THE

MINISTER OF PUBLIC INSTRUCTION

FOR THE YEAR

1896.

Presented to Parliament, pursuant to Act 43 Vic. No. 23, sec. 36.

Printed under No. 5 Report from Printing Committee, 27 May, 1897.

SYDNEY: WILLIAM APPLGATE GULLICK, GOVERNMENT PRINTER.

1897.

1896.

REPORT OF THE MINISTER OF PUBLIC INSTRUCTION.

To His Excellency The Right Honorable HENRY ROBERT, VISCOUNT HAMPTDEN, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

May it please your Excellency,—

I have the honor to submit to your Excellency the Report of the Department of Public Instruction for the year 1896.

SCHOOLS.

In 1896 there were 2,574 schools, containing 2,785 departments, as compared with 2,563 schools and 2,776 departments open in 1895. During the year, 85 schools were established, comprising 8 Public, 40 Provisional, 26 Half-time, 3 House-to-house Schools, and 8 Evening Schools. In addition to these, 17 schools were reopened, 41 Provisional, 9 Half-time Schools, and 1 House-to-house School were raised to the rank of Public Schools, and 23 Half-time Schools and 1 House-to-house School to the Provisional rank; while 26 Public and 20 Provisional Schools were reduced to Half-time or House-to-house Schools. Ninety-one of the schools in operation during the whole or some portion of 1895 do not appear on the list of schools open in 1896, and of those actually in operation in that year 67 were closed before the last quarter. The number of schools open at the close of 1896 was 2,502, containing 2,713 departments.

The following table shows the classification of the schools open in 1896 :—

1. <i>High Schools</i> :—						Schools.	Departments.
Unclassed	5	5
2. <i>Public Schools and Half-time Schools</i> :—							
In Class	I	40	120
"	II	36	106
"	III	26	59
"	IV	62	88
"	V	127	129
"	VI	198	198
"	VII	185	185
"	VIII	335	335
"	IX	860	860
"	X	193	193
Unclassed	133	133
3. <i>Provisional Schools</i> :—							
Class	I	}	310	310
"	II						
"	III						
4. <i>House-to-house Schools</i> :—							
Unclassed	44	44
5. <i>Evening Public Schools</i> :—							
Unclassed	20	20
Total	2,574	2,785

Of the 16 applications for the establishment of new schools which remained under consideration at the close of 1895, 9 were granted and 7 were declined. In addition to these, 192 applications were received during 1896, namely, 27 for Public Schools, 106 for Provisional Schools, 41 for Half-time Schools, 8 for House-to-house Schools, and 10 for Evening Schools. Of these, 97 were granted, 75 were declined, and 20 were under consideration at the end of the year. The total number of children to be accommodated in the new schools when established is 2,030.

The number of applications dealt with, and the action taken with regard to them, is shown in the following table:—

Applications for the establishment of Schools.

Schools.	Number received.	Number granted.	Number declined.	Number still under consideration.
Public Schools	28	11	10	7
Provisional Schools	116	53	54	9
Half-time Schools	46	30	13	3
House-to-house Schools... ..	8	4	4	...
Evening Public Schools... ..	10	8	1	1
Total... ..	208	106	82	20

Full details respecting these applications will be found in Appendices I, II, III, IV, V.

The number of schools in operation in 1881, the first full year during which the Department was under Ministerial control, as compared with the number open in 1896, is given in the following table:—

Schools.	Number of Schools or Departments in operation.		Increase. 1881-1896.
	1881.	1896.	
High Schools	5	5
Superior Schools	58	249	191
Primary Public Schools	1,042	1,660	618
Provisional Schools	246	310	64
Half-time Schools	93	497	404
House-to-house Schools	44	44
Evening Schools	57	20	37*
Total	1,496	2,785	1,289
Seats provided	98,721	239,354	140,633

* Decrease.

In addition to the schools established and maintained under the Public Instruction Act, the following State supported or aided schools are still in operation, namely, the Sydney Grammar School, the two Industrial Schools, and the School for the Deaf and Dumb and the Blind.

School

School Premises and Sites.—The number of school sites acquired during the year was 87. Of these, 63 were Government grants, 20 were resumed under the Public Works Act, 51 Vic. No. 37, and 4 were purchased. The cost of the purchased sites amounted to £1,910 12s., and the sum of £234 13s. 3d. was paid on account of those resumed. In the case of 7 of the latter no claim was made by the original holders for compensation. The balance to be paid on the others, when all claims have been settled, is £360 8s. 9d. Full particulars as to the sites will be found in Appendix XX.

Buildings.—At the close of 1896, existing school premises afforded room for 239,354 pupils. Of the school-places counted in 1895, 3,453 were lost in 1896 by the closing of schools and by the giving up of old buildings. The net increase was 1,421. Taking the building-work done in the last two years, it may be observed that, in 1896, 22 new schools and residences were erected under the supervision of the Department's professional officers, as compared with 47 built in 1895; while the additions numbered 16, as compared with 21; the premises repaired, 261, as compared with 408; and the places provided, 2,383, as compared with 4,244 for the same period. The number of small school-buildings and residences erected under the Inspectors' supervision was 78, as compared with 110 put up in 1895; 19 school-buildings were enlarged, as against 32 in 1895; the number of places provided was 2,771, as compared with 4,268; and the buildings repaired numbered 855 in 1896, as against 1,253 in the previous year.

At the close of 1896 the following additional works were in progress:—36 new buildings and 20 additions, the whole to provide for about 2,913 children. Three new weather-sheds were in course of construction, as well as 14 teachers' residences. Repairs and improvements were being carried out in 208 existing buildings.

Full particulars respecting the building-work completed in the year, and that in progress at its close, are given in the following tables:—

Works completed.

The amount expended on Public School sites, buildings, furniture, repairs, rents, and rates during the last five years is shown below. The total expenditure on these items since 1880 is £2,624,800.

1892	£157,679
1893	112,856
1894	73,791
1895	104,397
1896	56,752

School Attendance.—The returns for the year show a considerable improvement in school attendance, the gross enrolment at Primary schools being 251,821 pupils, as compared with 245,904 in 1895, an increase of 5,917. Deducting 12 per cent. on account of multiple enrolments, the number of individual pupils under instruction was 221,603, an increase over the preceding year of 5,207. A corresponding increase is shown in the average daily attendance, which exceeds that of 1895 by 2,213.

The gross aggregate enrolment and the aggregate enrolment of distinct pupils for the last five years appear below :—

Years.	Gross Aggregate Enrolment.	Corrected Aggregate Enrolment of Distinct Pupils.	Increase.	
			Gross Enrolment.	Corrected Enrolment.
1891	233,719	205,673	11,855	10,432
1892	239,864	210,641	5,645	4,968
1893	238,951	210,277	413*	364*
1894	234,392	206,265	4,559*	4,012*
1895	245,904	216,396	11,512	10,131
1896	251,821	221,603	5,917	5,207

* Decrease.

In addition to the 221,603 pupils enrolled in schools under the Public Instruction Act, there were 1,296 in attendance at other State-aided Schools, namely :—

The Sydney Grammar School	...	458
The Industrial Schools	...	729
The School for the Deaf and Dumb and the Blind	...	109

Total 1,296

Estimating

Estimating the mean population of the Colony for 1896 at 1,287,755, the population between 6 and 14 years of age was 242,391. Of this number, 191,860, or 79·1 per cent., attended State Schools, and 50,531, or 20·9 per cent., received instruction in Private Schools or at home, or else remained altogether untaught. From the latest returns of Private Schools' attendance it is estimated that the total enrolment was 52,000. As of this enrolment 39,200 pupils were between the ages of 6 and 14, it will be seen that of the total statutory school population of 242,391, 231,060, or 95·3 per cent., were enrolled at State and Private Schools, while 11,331, or 4·7 per cent., were taught at home, had left school after satisfying the standards of the Act, or remained untaught. In addition to pupils of the statutory school age, 19,752 under 6 years of age, and 24,087 over 14 years, were also enrolled for school attendance—31,039 at State Schools, and 12,800 at Private Schools. Thus, of 341,009 children in the Colony between the ages of 4 and 15 years, 222,899 attended State Schools, and 52,000 attended Private Schools; while the remainder, 66,110, received instruction at home, had completed their education, or were untaught.

The average quarterly enrolment was 197,025, and the average attendance 142,192. In the first half of the year 148,862 pupils, and in the second half 160,444 pupils, attended the ordinary day-schools 70 days or more. The percentage of the quarterly enrolment attending the compulsory number of days was, in the first half-year, 75·8 per cent., and in the second, 81·2 per cent.

The percentages of the net yearly enrolment attending 70 days or more in each half-year, since 1891, are as follow :—

Year.	70 days or more in first half-year.	70 days or more in second half-year.
1892	67·7	71·5
1893	66·2	66·1
1894	69·1	75·8
1895	67·1	72·0
1896	67·1	72·4

The enrolment and average attendance are shown in the following tables :—

(a) *Quarterly Enrolment and Average Attendance for 1895 and 1896.*

Quarters.	Number enrolled.		Average Attendance.			
			Number.		Percentages.

1893	210,277	186,327	128,322	61.02	68.86
1894	206,265	181,678	130,089	63.06	71.60
1895	216,396	192,075	139,978	64.68	72.87
1896	221,603	197,025	142,192	64.16	72.17

The main facts relative to school attendance may be summed up thus:—231,060, or 95.3 per cent. of the statutory population, were enrolled for school attendance; 191,860, or 79.1 per cent., at State Schools; and 39,200, or 16.9 per cent., at Private Schools. Of the school population between 4 and 15 years—274,899, or 80.6 per cent., were at school; 222,899, or 65.4 per cent., at State Schools; and 52,000, or 15.2 per cent., at Private Schools. 221,603 children attended schools under the Public Instruction Act; 191,256 being of the statutory school age, and 30,347 either above or below it. The mean quarterly enrolment was 197,025, or 88.9 per cent. of the year's enrolment; and the average attendance was 142,192, or 72.1 of the quarterly enrolment. Of the average enrolment, 75.8 per cent. attended school 70 days or more in the first half-year, and 81.2 per cent. in the second half-year. The percentage of the population enrolled quarterly and the corresponding percentage in average attendance in 1896 were respectively 15.3 and 11, as compared with 15.1 and 11 in 1895.

Compulsory clauses of the Act.—55,603 children between the ages of 6 and 14 years were reported as failing to complete the minimum attendance of 70 days during the first half of the year; but in 768 cases only was the law set in motion. The parents of 3,811 were cautioned, while in the remaining cases satisfactory explanations were furnished, or the circumstances were not such as to render any action necessary.

For the second half-year, the number between the compulsory ages who did not attend 70 days was 44,962. In 523 cases legal action was taken, and cautions were sent to parents in 2,369 cases.

The Inspector-General of Police continues to afford every assistance in connection with the working of the compulsory clauses; but until the vital defects in the provisions of the Act, which have been brought under notice from year to year, are remedied, the full benefits which may be reasonably looked for from compulsory education will not be attained.

SCHOOL FEES.

It was found necessary to authorise legal action for the recovery of arrears of school fees in 484 cases, but debts to the amount of £2,489 were cancelled. Free education was granted in the case of 28,420 pupils. The amount of fees collected and paid into the Consolidated Revenue was—for Primary Schools, £72,289 8s. 11d.; and for High Schools, £2,576 3s. 6d.; making a total of £74,865 12s. 5d. These figures show an increase of £2,176 10s. 10d. upon the amount paid in Primary Schools in 1895, but a falling off as regards High Schools of £630 10s. 6d.

INSPECTION.

Some changes were made during the year in the *personnel* of the staff of Inspectors. After a long and honourable career of forty-two years, during thirty of which he held office as Inspector, Mr. J. W. Allpass retired from the Public Service on 30th June last. His position in the Metropolitan District was filled by the appointment of Mr. H. Skillman, who had previously been attached to the Sub-metropolitan District. By the distribution amongst other Inspectors of the schools formerly under Mr. Skillman's supervision, it was found possible to defer for the present the question of the appointment of a successor to that officer.

Later in the year Mr. J. Waterhouse, M.A., relinquished charge of the Lithgow section in order to take up the position of Head Master of the Sydney High School for Boys, his place at Lithgow being filled by the appointment of Mr. G. H. Hunt, principal teacher of Ryde Superior School, to act as Inspector temporarily. Subsequently Mr. John Dettmann was appointed as an Inspector of Schools, and relieved Mr. Hunt.

The staff now comprises a Chief Inspector, a Deputy Chief Inspector, 9 District Inspectors, and 24 Inspectors. Out of a total of 2,780 schools, exclusive of High Schools, 2,763 were examined. Of the 17 schools not inspected, 15 were closed before the Inspectors' visits to their neighbourhood, and the remaining 2 were opened too late in the year to afford an opportunity for their inspection.

The subjoined table will show how the schools were apportioned, and the amount of inspection done in each district:—

District.	No. of Inspectors.	No. of Schools.	No. of Schools inspected.	No. of Schools not inspected.	No. of Pupils examined.
Armidale	4	356	356	...	12,513
Bathurst	3	260	259	1	10,389
Bowral	3	253	257	1	11,019
Goulburn	4	390	391	8	11,362
Grafton	3	326	326	...	11,725
Maitland	3	245	244	1	16,739
Metropolitan	4	208	206	2	48,408
Sub-metropolitan	2	153	153	...	11,867
Wagga Wagga	4	331	329	2	12,739
Wellington	3	244	242	2	8,107
Totals	33	2,780	2,763	17	154,868

The inspected and the uninspected schools stand thus :—

	Public.	Provisional.	Half-time.	House-to-house.	Evening.	Total.
Inspected	1,907	301	493	44	15	2,763
Uninspected	1	6	5	5	17
Totals	1,908	310	498	44	20	2,780

Course of Secular Instruction.—The table given below shows the results obtained by examination :—

Subject.	Estimated Proficiency.		
	Total number Examined.	Number Passed.	Percentage up to or above Standard.
Reading—			
Alphabet	10,807	8,132	75
Monosyllables	35,522	29,330	82
•Easy Narrative	48,633	41,803	85

Totals	154,868	132,228	85
Writing—			
On Slates... ..	60,939	51,348	84
In Copy-books and on Paper	93,439	81,218	86
Totals	154,378	132,566	85
Dictation	122,291	96,943	79
Arithmetic—			
Simple Rules	91,452	70,321	76
Compound Rules... ..	38,323	27,399	71
Higher Rules	23,456	16,662	71
Totals	153,231	114,382	74
Grammar—			
Elementary	31,833	23,738	74
Advanced	31,450	23,338	74
Totals	63,283	47,076	74
Geography—			
Elementary	29,523	22,756	77
Advanced	33,769	26,177	77
Totals	63,292	48,933	77
History—			
English	62,424	45,096	72
Australian	12,981	9,443	72
Scripture and Moral Lessons... ..	149,306	115,558	77
Object Lessons	147,788	115,803	78
Drawing	148,896	119,114	79
Music	141,593	112,772	79
French	2,549	1,920	75
Euclid	8,609	6,466	75
Algebra	3,183	2,505	78
Mensuration	6,546	4,427	67
Latin	2,902	2,095	72
Trigonometry	88	67	76
Needlework	55,475	49,287	88
Drill	146,738	120,642	82
Natural Science	7,059	5,608	79

These results show that the proportion of passes, as compared with the work of 1895, is 1 per cent. higher in reading, writing, arithmetic, grammar, drawing, and drill; 2 per cent. in mensuration; 3 per cent. in dictation, music, and trigonometry; 4 per cent. in French; 5 per cent. in algebra; and 7 per cent. in Scripture. In English history, object lessons, and natural science the percentage is the same for both years, while in geography, Euclid, Australian history, Latin, and needlework there is a slight falling off.

The following table summarises the progress in efficiency made in the different classes of schools during the past five years:—

Class of Schools.	Percentage up to or above the Standard.				
	1892.	1893.	1894.	1895.	1896.
Public	95	95	96	97	97
Provisional... ..	77	84	88	82	86
Half-time	81	84	87	89	89
House-to-house	76	78	80	91	95
Evening Schools	92	100	100	93	93
All Schools... ..	90	92	93	94	95

It will be noted that Provisional and House-to-house Schools have improved 4 per cent. as compared with 1895, the percentages in the case of Public, Half-time, and Evening Schools showing no alteration.

HIGH SCHOOLS.

The total enrolment at these schools was 577, and the average daily attendance 431, as against 603 and 468 respectively for 1895. The attendance at each school is shown below:—

School.	Total enrolment.	Average quarterly enrolment.	Average daily attendance.
Sydney (Boys)	169	119	109.8
" (Girls)	212	165	152.1
Maitland (Boys)	91	69	62.8
" (Girls)	72	54	48.4
Bathurst (Girls)	33	24	18.9
Totals	577	431	392.0
Totals for 1895	603	468	430.1

395 pupils, or 91 per cent. of the average quarterly enrolment, were present at the annual examination, the percentage of results averaging over 70 per cent. At the University Examinations these schools took a good position, as will be seen from the table following:—

School.	No. of Passes Junior Examination.	No. of Passes Senior Examination.	No. of Passes Matriculation Examination.
Sydney (Boys)	26	2	18
" (Girls)	29	6	14
Maitland (Boys)	15	3	15
" (Girls)	11	2	6
Bathurst (Girls)	3
Totals	84	13	53

Of those who qualified for matriculation, 24 did so at the junior and 6 at the senior examinations. Medals were awarded High School pupils at the junior examination in English, physics, arithmetic, and geometry, while Miss Jessie Bowmaker and Miss Grace Mitchell, pupils of Sydney High School for Girls, distinguished themselves by coming out equal for the Fairfax prize for general proficiency.

In June last Mr. Joseph Coates, who had been Head Master of the Sydney High School for boys since its establishment in 1884, was compelled, in consequence of ill-health, to retire under the provisions of the Public Service Act, and was succeeded by Mr. John Waterhouse, M.A. I regret to state that, shortly after his retirement, Mr. Coates's illness had a fatal termination.

The total expenditure on High Schools was £6,579 3s. 3d., a slight decrease on that of the previous year, and the amount received from fees £2,576 3s. 6d. The actual cost to the State was, therefore, £4,002 19s. 9d., or at the rate of £6 18s. 9d. per head of the total enrolment, as against £5 14s. 2d. in 1895.

State Scholarships and Bursaries.—At the examinations held under the Scholarship and Bursary scheme, 110 candidates were successful. Of these, 25 males and 32 females obtained scholarships for High Schools and Superior Schools; 23 males and 18 females, bursaries for High and Superior Schools; 2 males, bursaries for the Sydney Grammar School; and 6 males and 4 females, University Bursaries.

Of the 57 successful competitors for Scholarships, 16 boys and 16 girls have since attended the Sydney High Schools, 8 boys and 10 girls the Maitland High Schools, 5 girls the Bathurst High School, and 1 boy and 1 girl attend Superior Schools. Of the 43 who succeeded in gaining State School Bursaries, 13 boys and 11 girls attend the Sydney High Schools, 10 boys and 5 girls the Maitland Schools, 2 girls Bathurst High School, and 2 boys the Sydney Grammar School.

This year the whole of the University Bursaries available were awarded. Nine were obtained by High School pupils, 5 boys and 4 girls; and one by a pupil of Fort-street Model School.

The total number of candidates examined for admission to the High Schools was 774; of these 753, or 97·2 per cent., were successful.

SUPERIOR SCHOOLS.

Two schools—Cootamundra and Hay—were added to the list of Superior Schools, thus making the total 100, comprising 249 departments. The number of pupils enrolled for the December quarter of the year was 70,144, the average attendance being 51,974.

Superior Schools were very successful at the University Examinations, having passed 302 candidates, viz., 4 seniors and 298 juniors. Other Public Schools not classed as superior obtained 57 junior passes.

These

These give a total of 355, 36·1 per cent. of the aggregate number. If the High Schools be added, the passes from schools under the Department represent 44·7 per cent. of the whole. Superior School pupils obtained medals in English history, geography, algebra, and physiology.

EVENING PUBLIC SCHOOLS.

Ten applications for the establishment of Evening Schools were received; 8 were granted, 1 was refused, and 1 had not been finally dealt with at the close of the year. The total number of schools in operation was 20, but 5 collapsed before the end of the year. On 31st December there were only 15 schools in existence, having an enrolment of 482, with an average attendance of 263.

TECHNICAL EDUCATION IN PUBLIC SCHOOLS.

Drawing.—148,896 pupils were examined in this subject, of whom 119,114, or 79 per cent., satisfied the standard. In 203 departments in the Metropolitan and Sub-metropolitan districts visited by the Superintendent of Drawing, 42,548 pupils were present at examination. 76·6 per cent. of these were found to reach the standard, being 4 per cent. better results than in 1895. The Superintendent remarks that “as the standard of work has been raised, this improvement is even more satisfactory than appears on the surface.” Detailed information upon this subject will be found in Appendix XIII.

Manual Training.—Eight workshops were in existence in 1896, which afforded instruction to the pupils of 23 schools. The total enrolment of these classes, including students in training, was 622. Of these 466 presented themselves for examination and 391 passed. When the new Technical College buildings at Bathurst have been completed, instruction in manual training will be available for the schools in that important centre.

Cookery.—The number of schools in operation in 1895 was increased by one in 1896, making a total of 15, with an enrolment of 1,302 pupils. Of this number 1,166 presented themselves for examination, of whom 1,143, or 98 per cent., were successful.

Needlework.—55,475 female pupils were examined in needlework, of whom 49,287, or 88 per cent., passed the standard. In the Metropolitan district 84 schools, representing 14,000 children, were examined by the Directress, who reports that “in the upper classes especially the results have been most satisfactory—the marks gained after close and searching tests ranging from very fair to excellent.” [See Appendix XV.]

PUBLIC SCHOOL SAVINGS BANKS.

Nine new Banks were opened during 1896, and two were closed. The total number in operation at the end of the year was 639. The amount deposited was £11,467 10s. 5d., and the sum withdrawn £11,106 9s. 3d., showing, as compared with 1895, an increase of £313 10s. 5d. in deposits, and in withdrawals of £213 9s. 10d.

The

The total amount to the credit of the School Banks on 31st December was £6,671 2s. 8d., an increase on the previous year in the amount to the credit of children of £361 1s. 2d.

The amount withdrawn for deposit to the credit of pupils in the Government Savings Bank was £2,303 16s. 3d.

Since the establishment of these Banks in 1887 the deposits have totalled £111,542 2s. 7d., and the withdrawals £104,877 19s. 11d. Of this latter sum, £30,298 12s. 6d. was withdrawn for the purpose of being placed to the credit of children's own accounts in the Government Savings Bank.

TEACHERS.

Four thousand four hundred and forty-two teachers of all classes were actually employed at the end of the year, being 35 fewer than for the corresponding quarter of 1895. While there was an actual increase of 17 in the number of principal teachers and assistants, there was a large falling off in the number of pupil-teachers and students in training. Two thousand seven hundred and ninety-four were classified teachers, 546 unclassified but certificated for small schools, 51 were training-school students, 959 pupil-teachers, 67 work-mistresses, and 25 High School teachers. Of the whole number 52·5 are males and 47·5 females; and of the teachers in charge of schools or departments, 70·2 per cent. are males and 29·8 females. As regards assistants, the percentages are 30·6 males and 69·4 females.

The following table gives full information respecting the several classes into which teachers are divided:—

	I A.		I B.		II A.		II B.		III A.		III B.		III C.		Unclassified.		Totals.		Grand Total.
	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.	
Principal Teachers	41	1	81	1	296	4	144	7	630	123	194	81	74	65	265	234	1,725	521	2,246
Mistresses of Departments	31	...	40	...	134	...	2	...	2	1	...	210	210

Work-mistresses	67	67
High School Teachers...																12	13	25
Total Teachers of all ranks																	2,332	2,110	4,442

Of the total number of classified teachers 7·7 per cent. are in Class I, 36·3 per cent. in Class II, and 56 per cent. in Class III. Only 16 per cent. of our teachers are unclassified, and the majority of these had, before appointment, served four years at least as pupil-teachers.

The teachers whose connection with the Department ceased during the year numbered 216. Of these 157 resigned, 28 retired under the Public Service Act, 13 were transferred to other Departments of the Service, 5 were dismissed, and 13 died.

During 1896, 446 applicants for appointment to the office of pupil-teacher were examined, of whom 127 were accepted. Of those awaiting employment, 221 were appointed to schools.

Fort-street Training School.—The number of students in training was 26. Sixteen held full scholarships, 9 half-scholarships, and 1 attended at his own expense.

Instruction was given during the year in professional subjects, in the principles and practice of teaching and class management and in manual training. The examination with a view to the classification of the students was held in December and resulted as follows:—

II A. with Honors.	II A.	II B.	III A.	Total.
1	4	12	5	22*

* Two students failed to complete examination through illness, 1 was dismissed from training for misconduct, and 1 (non-scholar) did not compete.

The results of the examination in manual training were:—

Honors.	First Grade.	Second Grade	Total.
4	10	11	25

At the beginning of the year, Reuter E. Roth, Esq., M.R.C.S., Eng., was appointed Lecturer in Elementary Anatomy, Physiology, and Hygiene. The students have shown a deep interest in the lectures given, and at an examination held in November under the auspices of the St. John's Ambulance Association, 24 of their number were successful in qualifying for the "first aid" certificate.

Hurlstone Training School for Female Students.—Twenty-nine students were in residence, of whom 15 held full scholarships, 10 half scholarships, and 4 attended at their own charge.

In addition to the usual professional subjects instruction was given in needlework, cookery, drill, calisthenics, and physiology (including "first aid" to the wounded). Twenty-seven students attended a special examination, held in connection with the St. John's Ambulance Association, and all obtained certificates.

The

The results of the examination for classification, held at the end of the year, are given below :—

II A, with Honors.	II A.	II B.	III A.	Total.
2	3	19	1	25*

* Four non scholars did not compete.

Teachers' Examinations.—The total number of examinees of all classes during 1896 was 2,444. The percentage of passes of teachers was 60·3, and of pupil-teachers 85·8. The total number of pupil-teachers reported on was 566, as against 624 in 1895. The male and female examinees who obtained the highest number of marks at the first class pupil-teachers' examination for admission to training were Mr. William Colin McLintock, of Balmain Superior School, and Miss Elizabeth Harriet Pender, of the Public School, Bolwarra. Each of them will be presented with the Jones Memorial Medal.

In the following table the results of the several examinations are given in detail :—

Persons examined.	Results.		
	Passed.	Failed.	Total.
Teachers and Assistant Teachers	243	175	418

High School Candidates	728	21	749

Teachers' Mutual Assurance Association.—During 1896, 2 teachers joined the Association, and 6 died. For the last 10 years the average death-rate has remained at 1·2 per cent.; and the average amount paid annually by each member has been £1 1s. 9d., or at the rate of £1 10s. 6d. per cent. on the sum payable at death.

An

An alteration in the rules has been made by which candidates under 40 years of age may join the Association on more favourable terms than formerly; while the premiums for candidates above 40 years of age have been reduced by one-half. There is no legacy duty payable, nor have nominees of deceased members to wait for proof of will, payment being made on proof of death.

LOCAL SUPERVISION.

Three sub-districts were formed during the year, and a Public School Board appointed in the case of each. The number of persons so appointed was 14. In addition, 43 members were added to Boards already in existence. The total number of Boards in operation was 288. On 53 of these, ladies to the number of 115 held seats. The resignations of 31 members were accepted, and 15 were reported as deceased, or having left the locality.

SCIENTIFIC AND TECHNICAL EDUCATION.

The Superintendent reports (see Appendix XIX) that "there have been in the aggregate more enrolments, a substantial increase in the average attendance, and a marked improvement in the quality of the passes at the December examination." A comparison of the enrolments is given in the following table:—

	1895.	1896.
Sydney Technical College	3,458	3,302
Suburban classes	550	578
Country classes	2,252	2,285
Classes connected with Public Schools	811	954
	7,071	7,119

Deducting from the total enrolment all cases where students joined more than one class, the number of individual students was 5,396, a decrease of 62 as compared with 1895. The average weekly attendance was 3,718, an increase over the previous year of 226.

The total number of classes in operation was distributed as shown below:—

	Under salaried Teachers.	Teachers paid fees only.	Total.
Sydney Technical College	56	3	59
Suburban classes	14	10	24
Classes in country towns	88	9	97
Classes from Public Schools	20	20
	178	22	200

The students examined at the close of the year numbered 2,576, of whom 1,822, or 70·7 per cent., were successful; in 1895 there were 2,651 examined, of whom 1,788, or 67·4 per cent., passed. At the technological

technological examinations of "The City and Guild of London Institute," held in this Colony in April last, 30 students of the Technical Colleges were examined, of whom 23 passed. Two candidates in plumbing and one in iron and steel manufacture obtained second-class honours.

The teaching staff comprises 84 persons, viz., 13 lecturers in charge of departments, 5 resident masters in charge of branch schools, 36 teachers, 17 assistant teachers, and 13 teachers in charge of classes remunerated by pupils' fees only. As in former years, lectures upon technical subjects have been delivered by the officers of the Department in the various centres of population.

The new Technical College buildings at Newcastle were officially opened in February, 1896, and in November last the foundation-stone was laid of a Technical College for Bathurst. It is expected that the latter building will be ready for the reception of students before the end of 1897.

In June last Mr. J. H. Maiden, F.L.S., who had held the dual office of Superintendent of Technical Education and Curator of the Technological Museum, was, on the recommendation of the Public Service Board, transferred to the Directorship of the Botanic Gardens, and Dr. R. N. Morris, Examiner under this Department, was appointed Superintendent of Technical Education, still, however, retaining his position as Examiner.

The Technological Museum was visited by 226,010 persons—23,640 fewer than in the previous year. The appended table gives the attendance in detail.

	1895.	1896.
Technological Museum, Sydney	118,967	99,952
Branch Museum, Newcastle	56,174	58,443
" Goulburn	28,031	24,211
" Bathurst	27,338	19,840
" West Maitland	19,140	23,564
	249,650	226,010

The total expenditure on technical education during 1896, including £3,838 16s. 6d. spent on the Technological Museums, amounted to £24,814 16s. Of this sum £21,203 15s. 11d. was a Parliamentary grant, and £3,611 0s. 1d. represents the fees paid by students.

PUBLIC SCHOOL CADET FORCE.

For the last quarter of 1896 the total enrolment of the Cadet Force was 3,164. The amount expended for cadet purposes was £3,139 7s. 5d., as against £3,864 11s. 3d. in 1895.

Details of the year's work appear in Appendix XVIII.

The

FINANCE.

The sum available for expenditure under the Public Instruction Act was £661,585 14s. 5d., made up as follows:—

	£	s.	d.
Balance from 1895	735	13	7
Amount received from Treasury on account of Vote for 1895-6	332,823	0	0
Amount received from Treasury on account of Vote for 1896-7	320,000	0	0
Amount received from Loan Vote—(Land)	1,657	0	10
Amount received from Loan Vote—(new buildings)	5,000	0	0
Amount of Minister's salary	1,370	0	0
	<u>£661,585</u>	<u>14</u>	<u>5</u>

The total outlay was £651,307 0s. 4d., namely, £56,752 7s. 6d. on school premises, £549,312 4s. 4d. on maintenance of schools, and £45,242 8s. 6d. on administration, &c. £526 16s. 8d., the unexpended balance of 1894 account, was refunded to the Treasury, leaving a balance at the end of the year of £9,751 17s. 5d.

General Statement of Expenditure for 1895.

I. On School Premises:—

	£	s.	d.
For sites, new buildings, additions, repairs, &c., including High Schools £518 10s. 6d.	56,752	7	6

II. On Maintenance of Schools, &c.:—

	£	s.	d.
1. Teachers' salaries and allowances in Primary Schools	514,857	5	10
Other maintenance expenses in such schools	25,144	7	9
2. High School salaries and maintenance expenses	6,060	12	9
State Scholarships and Bursaries	3,249	18	0
3. Administration, including Training Schools and enforcement of school attendance	45,242	8	6
	<u>594,554</u>	<u>12</u>	<u>10</u>
	<u>£651,307</u>	<u>0</u>	<u>4</u>

The amount of school fees collected and paid into the Consolidated Revenue was £74,865 12s. 5d., namely, £72,289 8s. 11d. from Primary Schools, and £2,576 3s. 6d. from High Schools. Deducting this sum from the total expenditure, there will remain £576,441 7s. 11d. as the net school expenditure derived from State funds.

The total expenditure during the last five years is shown in the following table:—

	1892 Expenditure.	Per- centage of total expen- diture.	1893. Expenditure.	Per- centage of total expen- diture.	1894. Expenditure.	Per- centage of total expen- diture.	1895. Expenditure.	Per- centage of total expen- diture.	1896. Expenditure.	Per- centage of total expen- diture.
I. SCHOOL PREMISES AND ARCHITECT'S EXPENSES:—

Totals	763,395 2 3	100.00	715,219 9 7	100.00	661,054 15 5	100.00	701,826 13 6	100.00	651,807 0 4	100.00

* Including Minister's salary.

Owing to changes effected by the Public Service Board, the item "general management" was charged from 1st July last with the salaries of officers in the building and Examiner's branches which previously had been included under other headings. It will be seen from the detailed statement appearing hereafter that there is a corresponding decrease in the items "Architect's expenses" and "Examiner's Branch."

The subjoined table exhibits the number of schools, the number of pupils, and the State expenditure for each of the last five years:—

Year.	Number of Schools.	Number of Pupils.	The State Expenditure.					
			On School Premises.	On Maintenance of Schools, including Administration, &c.	Total.	Less School Fees.	Net State Expenditure.	
			£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.

Information is furnished in the following summaries respecting educational establishments connected with this Department, but not carried on under the provisions of the Public Instruction Act:—

THE SYDNEY UNIVERSITY.

Four hundred and fifty-four students, including 75 women, attended lectures during 1896. The total number qualified for Matriculation was 295, of whom 96 passed the ordinary Matriculation Examination, 135 the Junior Public Examination, 21 the Law Matriculation Examination, 33 the Senior Public Examination, and 10 the Entrance Examination for Medicine and Science. The number actually admitted to Matriculation was 82.

At the Senior Public Examinations, 143 candidates presented themselves, and 109 passed. At the Junior Examination, 965 were successful out of 1,481.

The degrees conferred during the year were 108, viz.:—M.A., 6; B.A., 58; LL.B., 7; M.D., 2; M.B., 17; Ch.M., 11; B.Sc., 1; M.E., 1; and B.E., 5.

The University Staff consisted of 14 Professors and 33 Lecturers, of whom 7 Professors and 5 Lecturers are paid out of the Challis Fund; and 4 Teachers from the P. N. Russell Fund.

The year's expenditure was £31,559 15s., of which sum £11,400 was granted by the Government. £3,665 7s. was derived from private foundations for the payment of scholarships, bursaries, prizes, &c., and for books for the Fisher Library. The total income for the year was £31,345 19s. 7d.

THE SYDNEY GRAMMAR SCHOOL.

The total enrolment of pupils for 1896 was 458, of whom 165 were under and 293 over the statutory age of 14 years. One hundred and fifty-one new pupils were admitted, 85 being under and 66 above 14 years of age. The mean quarterly enrolment was 378, and the average attendance 363·5. The

The income and expenditure for the year were as follows :—

<i>Income.</i>			
From State grants	£1,500 0 0
„ School fees	6,550 0 0
„ Special prizes, &c....	113 3 2
Balance due to Commercial Bank			182 15 5
			<hr/>
			£8,345 18 7
<i>Expenditure.</i>			
By balance due to Bank	£480 5 4
„ expenditure	7,865 13 3
			<hr/>
			£8,345 18 7

The cost per pupil in average attendance was £22 19s. 2¼d., being £1 2s. 0½d. less than in 1895. The expense to the State was £4 2s. 6½d. per head, as against £4 4s. 6d. in the previous year.

THE PUBLIC LIBRARY.

The total number of volumes in the Library at the end of 1896 was 115,908. During the year new books to the number of 5,525 were added, and 14,208 books sent out on loan to country libraries. 174,130 persons visited the reading rooms as against 156,388 in the previous year; 161,124 the newspaper room as compared with 171,894 in 1895; and 80,928 visits were paid to the Lending Branch, an increase of 146 over the number in 1895. The total number of visits, therefore, paid to the institution during the year was 416,182, being 7,118 more than were paid in 1895.

Thirty-one persons were employed on the staff of the institution. The expenditure for the year was :—

On buildings, repairs, &c. (under Government Architect)	£198 0 0
On books, periodicals, newspapers, binding	1,904 0 0
On salaries	4,294 0 0
On maintenance	772 0 0
			<hr/>
			£7,168 0 0

THE AUSTRALIAN MUSEUM.

The number of visitors to the Museum was—On week-days, 83,351; on Sundays, 34,494; total, 117,845. Twenty-seven persons were employed in the institution. The Trustees report that the year's expenditure was as given below :—

On salaries and allowances...	£4,311 0 6
On specimens (purchase, collection, and carriage)	232 15 7
On books and binding	199 17 11
On catalogues	411 18 10
On cases and bottles	461 14 5
Expedition to coral reef	44 6 0
Miscellaneous	233 0 7
			<hr/>
			£5,894 13 10

NATIONAL

NATIONAL ART GALLERY.

During the year 215,602 visits to the Gallery were registered, being a daily average of upwards of 592. The attendance on Sundays averaged 1,581, on week-days, 427. Thirty-six additional students were admitted, making the total number 248. Five persons were permanently employed, with three extra assistants on Sundays and holidays.

The following is a statement of the year's expenditure :—

For works of art purchased	...	£963	14	9
For maintenance (frames, freight, repairs, insurances, &c.)	...	1,061	11	7
For salaries	1,112	3	0
		<hr/>		
		£3,137	9	4

NEW SOUTH WALES INSTITUTION FOR THE DEAF AND DUMB
AND THE BLIND.

The number of inmates during the year was 109 as compared with 94 for 1895. Of these 82 were under and 27 were over 14 years of age. The new admissions were 27, 25 of whom were under and 2 over 14 years. Three inmates were discharged—2 under 14 years, and 1 over that age. The income was :—

From State grants	£675	0	0
From other sources	3,776	7	6
		<hr/>		
		£4,451	7	6

The expenditure for the year was as follows :—

For maintenance	£1,820	11	9
For salaries and wages	2,091	4	10
		<hr/>		
		£3,911	16	7

INDUSTRIAL SCHOOL FOR GIRLS, PARRAMATTA.

The enrolment for the year was 175, of whom 41 were under and 134 above the age of 14 years. There were 55 new admissions—26 under and 29 over 14 years old. Fifty-six inmates were discharged during the year, as follows :—

To Boarding-out officer	13
As apprentices	19
On attaining age of 18 years	19
By order of Governor-in-Council	3
To Benevolent Society	2
		<hr/>
		56

The number remaining in the institution on 31st December was 124. Compared with 1895, there were an increase of 4 in the enrolment and an increase of 4 and 9, respectively, in the new admissions and the discharges.

The

The expenditure for the year was :—

	£	s.	d.
For maintenance	1,654	9	7
For salaries	930	12	1
	<hr/>		
	£2,585	1	8

Calculated on the enrolment, the cost per inmate was £14 15s. 5d. A comparison with the figures of 1895 shows that a saving has been effected in the cost per head of 2s. 8d.

I regret to have to record the death, in June last, of Mr. C. H. Spier, who had successfully managed the institution as superintendent for over seven years. The vacancy thus caused was filled by the appointment of Mr. Thomas Edwards Dryhurst.

The health of the inmates during the year, as well as their general conduct, has been very satisfactory. The Superintendent reports :—“ There was an increase in the number of girls apprenticed, and I find, upon careful inquiry, that in nearly every case the apprentices are giving satisfaction to their mistresses. The industrial work undertaken was of a comprehensive and useful character. The laundry work included 169,791 pieces or articles of clothing, which were washed and ironed or mangled; of these, 63,339 consisted of articles for the officers and students of Hurlstone College, of an estimated value of £361 12s. 2d. The articles dealt with for the officers and inmates of the institution numbered 136,432, and the estimated value of the work done was £1,033 6s. 8d.

The work of the sewing classes included plain sewing, cutting-out, dressmaking, darning, and patching for the inmates. The estimated value of the work was £119 17s. 2d.”

NAUTICAL SCHOOL-SHIP “SOBRAON.”

In this institution, 554 boys were enrolled, 316 of these being under and 238 over 14 years of age; the new admissions numbered 174, 96 of whom were below and 78 above the age stated. The number discharged was 223, made up as follows :—

For apprenticeship	171
On attaining 18 years of age	9
Transferred to Boarding-out Officer	17
Transferred to ship “Neotsfield”	2
Transferred to Industrial School	1
By order of the Governor-in-Council	23
	<hr/>
	223

Three hundred and thirty-one boys remained on the “Sobraon” at the end of the year. As compared with 1895, an increase of 20 is shown in the enrolment, of 69 in the discharges, and a decrease of 11 in the number of new admissions.

The

The total expenditure was £8,967 17s. 5d., viz. :—

	£	s.	d.
For maintenance	6,087	17	1
For salaries	2,880	0	4
	<hr/>		
	£8,967	17	5
Deducting parents' contributions to the Treasury	385	5	0
	<hr/>		
Net cost to the State ...	£8,582	12	5

Calculated on the net expenditure, the cost to the State per head of the enrolment was £15 9s. 10d., which is £2 10s. 5d. less than the cost per inmate in 1895.

The most noteworthy event of the year was the loss to the ship of Captain Neitenstein's services as Commander and Superintendent, owing to his promotion to the Comptrollership of Prisons. That gentleman's connection with the N.S.S. "Vernon," and subsequently the N.S.S. "Sobraon," had extended over twenty-three years, for nearly eighteen of which he had filled the position of Commander with signal ability and success. Mr. W. H. Mason, who for very many years had been associated with Captain Neitenstein as Lieutenant, was promoted to the Commandership, Mr. F. A. Stayner, the chief schoolmaster, being appointed to succeed Mr. Mason as Lieutenant.

The boys are reported to have behaved well during the year, and none have absconded. Their health has been excellent, and there have been no deaths. The enrolment for 1896 was larger than that for any previous year.

J. GARRARD,

Minister of Public Instruction.

Department of Public Instruction,

Sydney, 10th April, 1897.

APPENDIX XII.

THE CHIEF INSPECTOR'S REPORT, WITH ITS ANNEXES.

In view of the fact that during 1896 a great number of families left New South Wales for Western Australia and South Africa, it is a matter of satisfaction that an increase in the number of schools and scholars is reported. Of the 2,558 schools in operation in 1895, 91 were closed during that year or were allowed to lapse at its close, so that 2,467 were carried on to 1896. These, with the 102 new schools brought into operation, give 2,569 schools, representing 2,780 departments, as the record for 1896. The net increase for the year is 11 schools, but only 9 departments, as 2 infant departments were closed. The Armidale and Grafton districts have progressed, the South Coast district has retrograded, and the other districts have been practically stationary, as regards the number of schools.

The following is the return of schools for the last five years :—

Year.	Public.	Provisional.	Half-time.	House-to-house.	Evening.	Total.
1892	1,708	348	341	85	15	2,497
1893	1,700	347	369	90	9	2,515
1894	1,667	302	449	71	14	2,503
1895	1,685	317	483	57	16	2,558
1896	1,698	310	497	44	20	2,569

Arranged in classes according to the average attendance at the end of the year, they are :—

	Class I.	II.	III.	IV.	V.	VI.	VII.	VIII.	IX.	X.	Small Unclassified.	Total.
1892	38	34	21	54	117	195	222	315	665	283	553	2,497
1893	38	37	24	53	116	205	208	322	724	227	561	2,515
1894	38	36	23	64	116	209	206	311	762	209	520	2,503
1895	39	36	27	64	124	198	214	370	796	165	525	2,558
1896	40	36	26	62	127	198	185	335	860	193	507	2,569

At the close of 1895 there was accommodation for 237,933 pupils. During 1896, after providing for the loss caused by closing schools and abandoning old buildings, 1,421 additional places were supplied, raising the total accommodation to 239,354 places. As the highest quarterly enrolment was 198,621, it is clear that in the aggregate the accommodation is ample. In spite of all care, cases of overcrowding will occur. In country districts the fluctuations of population are so great that it is imperatively necessary that most of the school buildings are of a temporary or make-shift character. The large number of small communities of only five or six families too often places the fate of a school in the hands of one or two parents. It not unfrequently happens that the removal of only one family imperils the continuance of the school, while the removal of two compels closing. Sometimes the reverse occurs. One or two new families come into a district, and the school-room that had hitherto been large enough becomes overcrowded.

The following table shows the accommodation in each district :—

District.	Number of places at end of 1896, reckoned at 8 square feet for each child.	Number of places at end of 1896, reckoned at 100 cubic feet of air space for each child.
Armidale	19,703	17,959
Bathurst	16,803	16,704
Bowral	19,536	18,702
Goulburn	19,741	17,251
Grafton	19,111	18,923
Maitland	25,579	27,202
Metropolitan.....	56,121	67,840
Sub-metropolitan.....	17,349	16,174
Wagga Wagga	24,406	24,408
Wellington	14,473	14,591
Totals.....	232,822	239,354

The buildings generally are in good condition, and are well supplied with desks, forms, and other appliances. The Department has steadily become more liberal in its grants to small country schools, especially in the way of providing verandahs and water supply. Of course, this does not stop grumbling. The demands for expenditure are often unreasonable. It not unfrequently happens that for a school so small that the cost of its maintenance is barely warranted, applications are made for fencing, weathersheds, and other improvements that would cost a considerable sum. Many requests are made for fencing in the grounds of bush schools on the plea that children from a distance will then ride to school, and leave their horses in the play-ground. Not only is it unreasonable to ask the State to incur expenditure for such convenience, but horses should not be allowed on school play-grounds, at any rate while children are about. Where there is a real want for horse accommodation the parents interested usually have a working-bee, and put up a small stock-yard.

The water supply, especially in the Plains districts, gives a lot of trouble. Rain falls so infrequently that sufficient storage cannot be provided except at very great expense, and the smallness of the schools and the uncertainty of their duration put that out of the question. Every year water has to be purchased for many schools. It is surprising how eagerly wells or underground tanks are desired. Worse means for supplying schools could not be suggested. All underground water stores are liable to pollution, so, though the water is cool, it is a prolific source of disease. The iron tanks usually supplied are certainly objectionable, as the water they contain becomes heated, but they can be cleaned one by one, and thus the water kept comparatively pure.

The lighting and ventilation of school buildings receive very careful attention, and little fault can be found with those erected in recent years. All that can be done to make the schools and their surroundings healthy and pleasant is done.

Great expense has been incurred to secure a perfect cleaning of the urinals and water-closets. Many plans have been tried, and those patented by O'Brien have so far proved the best. It must, however, be borne in mind that the flushing apparatus is severely tried at our large schools. In many municipalities the pan system is enforced, but as usually carried out is not suitable for schools.

The difficulties arising from the fewness of teachers' residences are increasing. As pointed out in former reports, the doubt as to the permanency of many of our schools prevents the Department from erecting dwellings, and too often there is not a house of any kind that the teacher can rent. The new arrangements made by the Public Service Board in valuing the vested residences have caused much discontent. There is hardly a teacher who is satisfied that his house is worth the rental put upon it.

Teachers as a rule are good tenants, and keep the school premises in good order. Although the planting of trees and flowers is not so general, nor prosecuted with the same enthusiasm and diligence as when a bonus was given, there are still hundreds of school-grounds that are made beautiful by the labours of the teacher and his pupils. As in former years, the Inspectors have been charged with the duty of looking after the erection of small school buildings and the execution of minor repairs and improvements. This practice ensures both promptness and economy. The-

The work done under the supervision of the Inspectors consisted of :—

	£	s.	d.		
77 new schools	} total cost...	4,014	10 8		
19 additions to schools					
1 new residence.....				224	0 0
3 weathersheds				27	0 0
855 buildings repaired				6,346	17 10

Enrolment and Attendance.

The gross enrolment of pupils at all schools in 1896 was 251,821.

Deducting 12 per cent. for multiple enrolments, the number of individual pupils on the books of the schools was 221,603.

The following table gives the enrolment and average attendance for each quarter of 1896, together with the rates of increase or decrease :—

Quarter.	Enrolment in 1895.	Enrolment in 1896.	Increase for 1896.	Average daily attendance for 1895.	Average daily attendance for 1896.	Increase in average attendance for 1896.	Percentage of increase of enrolment.	Percentage of increase of average attendance.
March	191,778	195,982	4,204	136,526·8	137,619·3	1,092·5	2·1	0·8
June	191,780	196,948	5,168	141,229·5	141,080·3	*149·2	2·6	*0·1
September	194,113	198,621	4,508	140,227·5	145,763·8	5,536·3	2·3	3·9
December.....	190,630	196,550	5,920	141,930·8	144,306·9	2,376·1	3·1	1·6
Average	192,075	197,025	4,950	139,978·6	142,192·5	2,213·9	2·5	1·6

* Decrease.

The percentage for each quarter was :—

Quarter.	Enrolment.	Average Attendance.	
		Number.	Percentage.
March	195,982	137,619·3	70·2
June	196,948	141,080·3	71·6
September.....	198,621	145,763·8	73·3
December.....	196,550	144,306·9	73·4
Year's average.....	197,025	142,192·5	72·1

Compared with 1895, there is an increase in the gross enrolment of 5,917, on the average quarterly enrolment of 4,950, and on the average daily attendance of 2,213·9.

These results would have been much better but for the heat-wave that swept over the Colony in January, just as the schools were beginning the year's work.

Of the children who failed to attend school for the seventy days each half-year, as prescribed by law, it was found necessary in the first half-year to caution the parents or guardians of 3,811, and in the second half those of 2,369. Prosecutions in the case of 1,291 children were authorised. The Department has been warmly supported by the police, but in too many cases the magistrates give too much heed to such plausible but unsatisfactory pleas as "taught at home," "attend night-school," "sick," and dismiss cases where exemplary punishment should be inflicted.

The defects in the Public Instruction Act, as regards compulsion, to which attention has been so frequently invited still exist. They are :—

- (1.) To place the onus of proof of age and distance from school upon parents.
- (2.) Provision to deal with children of school age found loitering about the streets, wharfs, or parks during school hours.
- (3.) Authority to obtain the names and addresses of all children of school age.
- (4.) Power to enforce the registration of all private schools, and to compel the teachers of the same to furnish accurate returns of enrolment and attendance.
- (5.) Legal definition of what constitutes a day's attendance at school.

Complaints are sometimes made to the Department and in the newspapers as to the number of children roaming about the streets. Although there is some ground for these complaints the Department is powerless under the existing law to remedy the evil.

School Fees.

The collection of school fees is one of the most troublesome duties that devolve upon the teacher, and is the one that most frequently brings him into conflict with the parents. The fact that the Legislative Assembly has passed a resolution affirming the principle of free education has led many persons to refuse to pay until compelled by legal action. They then become incensed against the teachers, who have merely obeyed the instructions of the Department.

The total amount of fees collected and paid into the Consolidated Revenue was £74,865 12s. 5d., as compared with £73,319 12s. 1d. in 1895. Cautions to pay were issued during the year to 1,940 debtors, and it was found necessary to prosecute in 484 cases, with the result that the sum of £223 8s. 3d. was recovered.

Free education was granted to 28,420 pupils, an increase of 2,369 free scholars upon the returns of 1895. In addition to the grants for free education the sum of £2,849 6s. 4d., arrears of fees, was cancelled during the year. In all these cases full inquiry was made, and concessions were granted only in necessitous cases.

Inspection.

Several changes were made in the Inspectoral Staff during the year. Mr. Allpass retired, and his place was not filled up. This loss of an Inspector's services necessitated the abolition of an inspectorial district and a redistribution of schools. Mr. W. Dwyer was granted leave of absence for nine months, and Mr. Waterhouse was in July transferred to the Head-mastership of the Sydney High School. Mr. Dettmann, the Officer Commanding the Cadet Force, was deputed to take up Mr. Dwyer's work, and on the transfer of Mr. Waterhouse was appointed Inspector. Mr. Dettmann's long and eminently successful career as a teacher marks him as specially qualified for the important work now placed in his hands.

Mr. G. Hunt, a I A teacher, was appointed Acting Inspector for a period of four months. The retirement of so old and valued an officer as Mr. Allpass demands more than a passing notice. Mr. Allpass was brought from England by the National Board of Education in 1855, and for over eleven years rendered distinguished service in the Peel, Mudgee, and Fort-street Schools, helping materially to build up our educational system. On the introduction of the Public Schools Act in 1867, Mr. Allpass was chosen as one of the first Inspectors under the Council of Education. He discharged the important duties of Inspector of Schools for nearly thirty years with marked zeal and efficiency. His unflinching industry, his promptitude in dealing with business, his matured judgment and clear-headedness, won for Mr. Allpass the confidence of his official chief, while his unvarying kindness to teachers, and sympathy with their work, gained for him the esteem and affection of all placed under his supervision.

The

The inspections continue to be of the most thorough and searching character. In the case of every school the Inspector has to inquire into and report upon its material condition, the organisation and discipline, its moral tone, the subjects and methods of instruction, the proficiency of the pupils, and the character and competency of the teacher. It is the duty of the Inspector to see that every school is adequately provided with working appliances, and that the teacher takes proper care of the school buildings and their equipment.

While there is a steady improvement in the school furniture, and the supply of books is ample, it is a matter for regret that the need for strict economy does not admit of a liberal supply of maps, diagrams, and pictures. Pictures of trees, flowers, and animals, of natural scenery, of manufactures and industries, of magnificent buildings of historic places, tend to make a school attractive, to stimulate inquiry, and to cultivate a love for the beautiful and grand.

The teachers of some of the metropolitan schools have at their own cost, or by the aid of school concerts, done much to meet this longfelt want. In this praiseworthy object they have received substantial help from Mr. Woodhouse, the superintendent of drawing. The Model School at Fort-street sets a good example in this respect.

Its walls are decorated with splendid photographs, illustrating the natural features of the Colony. The features of organisation, for which the teacher is responsible, are in nearly every instance reported upon in terms of commendation. The school-rooms are scrupulously clean, the grounds are kept clear of rubbish and litter, and the school stock is well preserved. Of course, there are exceptions; but this is not surprising in so large a service. Notwithstanding the great importance that is attached to the accuracy, neatness, and regularity with which teachers keep their school records and furnish their returns, and the explicit directions given for their guidance, as well as the clearly-expressed penalties for errors or falsification, there are still some found who give trouble by their neglect or carelessness; and during last year three teachers, who narrowly escaped dismissal, were severely punished for falsification of records and returns.

In the classification and occupation of pupils steady improvement is manifest. Faults that have been described in former reports are gradually disappearing, and the provisions of the Standard of Proficiency are more faithfully observed. This standard has now been in force for several years, and is found to work well. It has tended to secure a very desirable uniformity as regards the subjects of instruction; it opposes an effectual barrier to errors of classification; it requires a systematic study and arrangement of lessons; and it furnishes the Inspector with a safe means of comparing different schools. The proficiency required is admittedly high, but is not unattainable; and those teachers whose pupils satisfy its conditions deservedly rank high in their profession.

It is pleasing to note that the Inspectors are unanimous in testifying to the good disciplinary condition of our schools. The importance of this cannot be overestimated, for let a school be well-ordered and well-governed, there is some guarantee that it will be well and efficiently taught. The government is usually mild, more dependence being placed on moral suasion and personal influence than on punishment. It is in this particular that the teacher may most truly be said to make the school. If the teacher is orderly in his own habits, upright, just, and firm in his dealings with his pupils, he will have little trouble in governing; but if he is lax in his habits, fitful in temper, wanting in moral fibre, or partial in his decisions, no amount of severity will secure the order and attention indispensable to success in school-work. The regulations as to corporal punishment are faithfully observed by most teachers. Well-founded complaints are rare; but when a teacher has been proved to have punished without cause, or with undue severity, he has been severely dealt with. Sometimes teachers are called upon to deal with cases of misconduct of pupils away from the school premises. Doubtless, a sound whipping administered to the offenders would in most instances have a very salutary effect; but the teacher who inflicts it runs great risk of being prosecuted at the Police Court. Teachers have no legal authority outside the school premises, though the influence of a good disciplinarian is always sufficiently far-reaching to secure orderly conduct on the part of the pupils when going to or returning home from school, a willing obedience to law, and a due consideration for the views and feelings of others.

The number of pupils examined was 154,868, an increase of 1,752 over the return for 1895. The increase would have been greater but that the Inspectors were instructed not to give notice of their visits. Of the 2,780 schools in operation during some portion of the year, 2,763 were fully inspected; the 17 not inspected were either closed early in the year or were opened after the Inspector's visit to the locality in which they are situated. The reduction in the staff, and the increase in the number of schools and pupils, render second inspections impossible, except in special cases.

The following are the details of inspection:—

Year.	No. of schools.	No. of schools inspected.	No. of schools not inspected.	No. of pupils examined.	No. of Inspectors.
1894	2,719	2,695	24	142,405	34
1895	2,771	2,757	14	153,116	34
1896	2,780	2,763	17	154,868	33

The particulars for each district stand thus:—

District.	No. of Inspectors.	No. of schools.	No. of schools inspected.	No. of schools not inspected.	No. of pupils examined.
Armidale.....	4	356	356	12,513
Bathurst.....	3	260	259	1	10,389
Rowral.....	3	258	257	1	11,019

In reviewing the above table it must be borne in mind that the standard provides for the ordinary Public School course and for the instruction in the Superior Public Schools. The

The ordinary course is followed in all schools, and every pupil must be examined in the prescribed subjects. The aim of the ordinary course is not to teach much, but to teach thoroughly. It is regarded as of primary importance that every child should read fluently, spell correctly, write legibly, and calculate accurately. In this light the table just given affords satisfaction; high and steadily-improving results are shown in reading, writing, dictation, and arithmetic.

A decided advance is exhibited in the results of the examination for certificates of exemption. 14,767 pupils were examined, and 8,800, or 59 per cent., passed. The best results, 72 per cent., were gained in the Maitland District; the lowest, 48 per cent., came in the Tamworth District.

Several of the Inspectors report that the issue of these certificates leads to the withdrawal of pupils from school at too early an age, but I think that the careful and thorough teaching that the examination demands more than outweighs the evil referred to. Besides, the mere possession of the certificate proves that the pupil has received a good elementary education.

In reading, the best work is done in the middle and lower classes. In the upper classes there is a tendency of some teachers to devote too much time to the derivation and meanings of words and consideration of the subject-matter. No doubt one object of the reading lesson is the communication of general knowledge, but this must not be indulged in to the neglect of such points as the cultivation of a clear ringing enunciation, proper emphasis, fluency, and expression. The fifth classes read the special book prescribed for English at the Junior Examination, but this course has its drawbacks. Sometimes the book appointed is not suitable for school use, and too often the words of Shakespeare and Milton are repeated with no more attempt at elocution than infants display in repeating tables or the alphabet. Writing, as a rule, is carefully taught. Some allowance must be made for the teachers of small country schools which contain several classes, including a large proportion of infants. There is a danger here that the pupils at writing will be left to themselves while the teacher is occupied with the other classes, but the practice of netaught, slovenly writing cannot be permitted. To show what can be accomplished by a careful teacher, it may be mentioned that in a recent competition the highest prize, a gold medal, was won by a pupil of a small country school where there is only one teacher. A good many children suffer in their handwriting from having no copy-books, sometimes for long intervals. The parents are often too poor to provide the necessary 2d., or are too indifferent to the child's welfare to do so. Teachers in the country often report that they cannot procure suitable books, and hence have been compelled to supply them themselves.

In some of the large schools it has become the practice to work sums upon paper instead of on slates. Though this is a decided improvement, especially as a matter of cleanliness, a habit of scribbling will be cultivated unless very great care is taken. Distinct improvement is noticeable in the teaching of arithmetic. The passes now reach 76 per cent. in the lower grades and 71 in the higher. Teachers now give more care to the exposition of principles and to the selection of properly graduated exercises. Mental arithmetic is more regularly taught, but too great attention is given to purely mechanical questions. In every class short practical questions calculated to make the children think before the result can be recorded should be given at every lesson. It would be well for our teachers to give more problems bearing upon square and cubic measure and measures of capacity. I have had complaints from parents that children attending good schools could not assist them in such matters as areas of land, length of fencing, contents of tanks, quantities of farm produce, &c.

There is nothing calling for special remark in any of the other subjects, except, perhaps, object lessons. Though the lessons are well given, and are made to play an important part in the intellectual training of our pupils, I should like to see more variety in the selection of subjects, and greater originality in the way in which they are presented. Even in the lower classes children may learn the explanation of the mechanical phenomena of nature, and applications of the same principles in invention, as, for example, gravitation in falling bodies, the part it plays in the pump and the pendulum; cohesion in mud, clay, glue, paste, mortar, and cement; capillary attraction in lamp-wicks, sponges, sugar, the sap in plants; the applications of lifting by the lever, pulley, inclined plane, wedge, and screw; heat in the sun, combustion, friction, steam, cooking, clothing, &c.; the phenomena of light, electricity, magnetism; the explanation of such mechanical devices as spectacles, telescopes, photographic cameras, the telegraph, the dynamo. To these should be added lessons on the laws of health, the necessity for fresh air, pure water, wholesome food, and due attention to sanitation. The time has arrived when such books as Walker Object Lessons may be relegated to the dust-heap with Mavor's Spelling Book and other school-books of a bygone age.

Infant Schools and Kindergartens.

Our Infant Schools form a prominent and highly popular and efficient branch of our educational system. The young children are not only taught the three R's well, but they are trained to observe and reflect. Those who pass through the Infant Schools usually make more rapid progress through the primary departments than those who have not been so privileged. In many Infant Schools the characteristic features of the Kindergarten have been introduced, and its leading principles pervade all of them. That this is nothing new may be seen from the following extract from the Report of the National Board of Education for the year 1856:—

"In the lowest department, called the Babies' School, children are received whose ages range from 2 to 5 years, provided they are able to talk. Here their *formal* instruction may be said to commence, and the methods adopted are those which experience has proved to be best suited to develop and strengthen the dawning intellect. An attempt has been made to introduce, with the modifications necessary to the peculiar circumstances of the school, the system of F. Froebel, the originator of the Kindergarten. It has not been deemed expedient to adopt Froebel views in their integrity, many of his notions being impracticable with Australian children. But his fundamental principle of mingling employment with instruction, and combining amusement with both, has been successfully observed. This department is very popular with the parents, because their children are therein afforded opportunities of healthful exercise and recreation. They also receive that moral training that their tender years permit."

All our Training School students receive thorough training in the theory and practice of Kindergarten work.

Superior Public Schools.

These now number 100, 2 having been added during the year. These schools, which are scattered all over the Colony, continue to do very good work. At practically no cost to the State they bring the foundation of a secondary education within reach of the intelligent children of the masses, and enable boys and girls who could not under any circumstances attend the High Schools or the Grammar Schools to qualify for such examinations as the Junior of the University of Sydney. In the fifth classes of these schools the Inspectors examined 5,451 pupils in the advanced subjects. The satisfactory results reported by the Inspectors are corroborated by the University. At the University Examinations of the year, 368 Public Schools passed the Junior and 5 the Senior, gaining 26 Matriculation passes. At the Honors Matriculation Examination, held in November, 19 passed.

The schools deserving honorable mention are:—

Fort-street	71	Bowral	8
Grafton	17	Burwood	8
Stanmore	17	Rathurst	7
Newcastle	12	Parramatta South	7
Glen Innes	9	Chatsworth Island	6
Cleveland-street	9	Crown-street	6
Newtown	9	Leichhardt	6
Paddington	9	Pallina	5

The Model School at Fort-street occupies the proud position of topping the list for the whole Colony.

High

High Schools.

The number of High Schools in operation in 1896 was the same as for the previous year. The one at Bathurst, though very efficiently conducted, is so poorly supported that its closing at an early date is inevitable. In June last, Mr. Joseph Coates, who had been Head Master of the Sydney Boys' School, retired from active work in consequence of impaired health. All connected with the Department learned with sorrow that Mr. Coates died about three months after his retirement. Mr. Coates, though a very strict disciplinarian, was always popular with boys, and, as long as his health stood, was a very efficient teacher. Mr. J. W. Waterhouse, M.A., was selected to fill the vacancy caused by Mr. Coates' retirement. Mr. Waterhouse for several years conducted the East Maitland High School with great success, and more recently filled the position of Inspector of Schools.

The attendance is given below:—

School.	Total Enrolment.	Average Quarterly Enrolment.	Average Daily Attendance.	Fees received.
Sydney (Boys)	169	119	109·8	£ 785 8 0
(Girls)	212	165	152·1	1,154 9 6
Maitland (Boys)	91	69	62·8	299 5 0
(Girls)	72	54	48·4	223 13 0
Bathurst (Girls)	33	24	18·9	113 8 0
Total.....	577	431	392	2,576 3 6
The figures for 1895 were.....	603	468	430·1	3,206 14 0

Scholars and Bursars.—The number of Scholars and Bursars in attendance at each High School during December quarter is given below:—

School.	Scholars.	Bursars.
Sydney (Boys)	33	25
(Girls)	43	24
Maitland (Boys)	22	26
(Girls)	24	9
Bathurst (Girls).....	10	3
Totals	132	87

Each school was represented at the University Examinations. The following table shows the number of passes:—

School.	Junior.	Senior.	Matriculation.
Sydney (Boys)	26	2	18*
(Girls)	29	6	14†
East Maitland (Boys)	15	3	15‡
West Maitland (Girls)	11	2	6§
Bathurst (Girls)	3
Totals	84	13	53

* Of these 13 matriculated at the Junior, and 1 at the Senior Examination.

† Of these 6 " " " 1 " " "

‡ Of these 3 " " " 3 " " "

§ Of these 2 " " " Examination. " "

The following particulars may prove of interest:—

Number of candidates who attended Entrance Examinations in 1896...	774
Number of Scholarships awarded.....	57
Number of Bursaries awarded	43

Cookery Instruction.

The number of Cookery Schools in operation during the year was 15, an increase of 1 over the number for 1895. In the country, Orange, Bathurst, Albury, Bowral, Armidale, and Glen Innes were substituted for West Maitland, Goulburn, and Lisnore; while in the Metropolitan District, Rockdale was opened, and Redfern West, Balmain, and Blackfriars were closed. 1,302 girls attended the Cookery classes; of these 1,166 were examined at the end of a term of instruction, and 1,143 passed the applied tests. The examinations were conducted by committees of ladies, who most generously came to the aid of the Department. Day after day, in the case of Newcastle for a whole week, these ladies attended at the school and watched the work of the girls with the most scrupulous care. The various committees not only reported upon the work of the pupils, but made very valuable suggestions which have been adopted, and are embodied in the scheme now in operation.

The eight teachers of cookery were included in the grading by the Public Service Board in June last. Since then, Miss Story, the senior teacher, has been transferred to the Technical College, and her place on the Public Schools staff taken by Miss Lance, the next in rank. To fill the vacancy Miss A. B. Wright, who has graduated at the Sydney Technical College and at the Glasgow Training School of Cookery, was appointed.

The following is a list of the schools in operation during the year:—

Place.	Remarks.	Place.	Remarks.
Hurlstone Training College...	Open all the year.	Tamworth	Closed April, 1896.
Parramatta Industrial School	" "	Orange.....	Closed August, 1896.
Fort-street	" "	Albury.....	" "
Petersham	" "	Armidale.....	" "
Paddington.....	" "	Bathurst ..	Opened September, 1896.
Rockdale.....	" "	Bowral.....	" "
Newcastle ..	" "	Glen Innes ..	" "
Wagga Wagga	Closed April, 1896.		

For the future, it has been decided to have two Cookery terms in the year, to be concurrent with each school half-year, instead of three terms as hitherto. The course of lessons has also been raised to twenty-one, and several dishes not previously in the list—such as the preparation and cooking of poultry—have been included. By this means the programme has been improved and rendered more suitable to ordinary family requirements.

Manual Training.

Manual training classes have been formed in connection with the Boys' High Schools at Sydney and Maitland, and with the Public Schools, Fort-street, Cleveland-street, Crown-street, Blackfriars, Sussex-street, and the schools at Goulburn, Maitland, and Newcastle. All the male students, also, are required to pass through the course. During 1897, on the completion of the Technical College buildings at Bathurst, similar classes will be formed in that important town. Teachers agree in testifying to the good effect the manual training has upon the boys; the boys themselves like the work, and the parents are beginning to see that the knowledge and dexterity acquired by the boys can be turned to good account at home. The various Boys' classes had a total enrolment of 622; of these, 466 attended the annual examination, and 394 passed.

Drill.

Drill.

The duties of the staff of the Cadet Force have been arranged so as to bring the officers more into direct contact with the regular school-work. The officers visit schools in accordance with an approved programme, and give model lessons in military drill, physical and rifle exercises. For the benefit of teachers these lessons are supplemented by instruction classes on Friday evening. The scheme now in operation secures that every boy attending schools in the populous districts passes through a full course of military setting-up drill.

In carrying out this scheme it was decided to locate an instructor at Newcastle, to give lessons in the schools about Newcastle and Maitland. Captain Mulholland was appointed, and his work has been most favourably reported upon by the Inspectors.

Nor are the girls overlooked. Suitable drill and physical exercises have been arranged for them, and they show the benefit of such training by the decrease in the number of round and stooping shoulders, by their more erect and graceful carriage, and by a general improvement in health.

Particulars about the Cadet Corps will be found in a separate report.

School Libraries.

The movement for establishing school libraries is spreading. Mr. Inspector Kevin, who has been specially active in this work, was in January last transferred to the Dungog District, and there has prosecuted the matter with such enthusiasm that 71 libraries, with over 5,000 books, have been opened. Several other Inspectors and a number of teachers have warmly taken up the cause, with such success that hundreds of schools can now boast of a library. The Model School again sets a good example by having a well-selected library of over 2,000 volumes.

The good done by these libraries cannot be overestimated. Viewed from the school standpoint, they will give the children more practice in reading; this will lead to wider knowledge, a more extensive vocabulary, and increased power of expression.

Schools Athletic Associations.

The Public Schools Athletic Association has met with conspicuous success during the year, and vigorously-conducted branches have been formed at Glen Innes, Tamworth, Armidale, Newcastle, Maitland, and in the Hawkesbury District. These associations have done a vast amount of good in many ways, and have deservedly met with much popular support. The distinguishing feature of the year is the impetus given to swimming in nearly all the schools in the Sydney and Newcastle Districts. Swimming clubs have been formed. Girls have taken up the matter as warmly as the boys. These clubs have 10,000 members. The scholars visit the baths under the supervision of the principal teacher or an assistant, and receive instruction from an expert. The advantages to be derived from this clean, healthy, and valuable exercise are generally admitted, and nothing connected with school work has met with such universal approbation as the encouragement given by the Department to swimming. Apart from the benefits to be derived from a reasonable indulgence in athletics, these sports make a pleasing break in the monotony of many children's lives, and a judicious variation of monotony conserves energy and postpones age.

Teachers.

The number of teachers employed in the Department's service on the 31st December last was 4,442, a decrease of 35 on the record for 1895. There is an actual increase of 6 teachers, but there are fewer pupil-teachers by 41. The reduction in the number is caused chiefly by the change of small Public and Provisional Schools to Half-time, and the withdrawal of pupil-teachers from sixth-class schools that had ceased to maintain the required average of fifty. The unanimity with which the Inspectors bear testimony to the uniformly good character and conduct, loyalty, zealous and efficient discharge of duty of this large body of public servants is a matter for congratulation. I am pleased to be in a position to endorse this testimony. Every year I pay surprise visits to schools in town or country, and I very rarely find occasion to censure. During last September I visited 22 schools on the northern rivers, and in only 1 had I had occasion to find fault. The position of a teacher is a trying one—one that in a special degree causes his words and actions to be misunderstood and misrepresented. Not unfrequently a teacher makes enemies by his faithful observance of the Department's regulations. Sometimes he has to endure discomfort that only those who have lived long in the bush can understand. Still the position is honorable and important; and, though in the lower grades the pay is small and the promotion slow, it is not without its advantages. A teacher thoroughly in earnest, imbued with a love for his work, will find great encouragement and pleasure in teaching. He will be looked up to and respected, and cannot fail to reap his reward. During the year several of our young trained teachers have been tempted by the offer of higher salaries to leave for Westralia and Queensland, and others have been transferred by the Public Service Board to other branches of the Civil Service in our own Colony. This transfer, carrying with it a higher salary, has caused a spirit of unrest and dissatisfaction among those of about the same standing who remain with us.

I view with pleasure the formation of a Teachers' Institute, and the large measure of success that so far has attended its operations. The more teachers are brought into contact with each other, the higher their mental condition will be raised, and the better will be the work done in our schools.

Nearly all the teachers returned as unclassified have been trained as pupil-teachers; a large number sat at the examination in June last, and will be awarded classifications from the 1st January, 1897. These young people, possessing high attainments and good practical skill, have raised many of our small bush schools to a high standard.

No material alteration has been made in the curricula of the Training Schools. Fort-street was attended by 26, and Hurlstone by 29 students. The students have been attentive to instruction, diligent in study, and with two exceptions, most anxious to win an honorable record. One student, for attempted copying at the examination, was expelled and reduced to the rank of pupil-teacher. As a reward for distinguished merit those students who at their final examination gain a classification of 2A with honors, will be awarded a scholarship at the University if they pass the Matriculation Examination.

The position of Principal of Hurlstone, vacated by Miss Everitt, was conferred upon Miss J. Nicoll, who had been Assistant since the establishment of the college. Miss E. Mallarky, a former student, holding a 2A classification, as well as University degree, was appointed Assistant. Both appointments were confirmed by the Public Service Board, and the ladies have proved themselves worthy of their promotion.

Technical Education.

By the rearrangement of the various branches of the Civil Service this Department lost the services of Mr. J. H. Maiden, who was transferred to the position of Director of the Botanic Gardens. Mr. Maiden had been Superintendent for over three years, and Curator of the Technological Museum for seventeen years. The Museum is really his own creation. In Mr. Maiden I had a most loyal, conscientious, and able colleague, and much of the success that has attended the operations of the Technical Education Branch is due to his indefatigable industry and eminent qualifications. The Public Service Board placed Dr. Morris, the permanent Examiner of the Department, in charge of the Technical Education Branch, combining the two offices of Examiner and Superintendent of Technical Education. The work of the Technical College and its branches is carried on with unabated vigour and success, and the results, as disclosed by the examinations, are of a very gratifying character. Full details will be found in the Superintendent's report.

Appended are the usual yearly reports furnished to me.

F. BRIDGES,
Chief Inspector of Schools.

ANNEX A.

INSPECTOR DAWSON'S REPORT.

THE schools in my section of the Metropolitan District for the year 1896 numbered 19 Public and 6 Evening Public Schools, the former comprising 48 departments.

The quarterly enrolments and average attendances at these schools were:—March quarter, 16,761 and 12,325; June quarter, 16,757 and 12,172; September quarter, 16,901 and 12,686; December quarter, 16,471 and 12,375.

As a whole, the schools provide sufficient accommodation for the attendance, but there are several schools whose power of accommodation is fully taxed, and a few which require additional space. Extensive additions have been made to the schools at Crown-street and Neutral Bay, and a new Girls' Department is contemplated at Leichhardt.

During the year no school was permanently closed; two new Evening Public Schools were opened. All schools were fully inspected once during the year, and were visited besides for incidental inspection, and some for "ordinary" inspection.

The whole number of pupils present at examination was 13,383. The percentage of passes in the important subjects was:—Reading, 83; Writing, 83; Dictation, 86; and Arithmetic, 69.

The schools are all carefully organised and effectively disciplined. The teachers, 312 in all, have been faithful and laborious servants of the public.

J. DAWSON,
Inspector.

Sydney, 14th January, 1897.

ANNEX B.

INSPECTOR THOMPSON'S REPORT.

At the beginning of 1896 the schools at Balmain, Petersham, and St. Peter's were transferred to other inspectors, while those at Albion-street, Camperdown, Pyrmont, Paddington, and Waverley were placed under my supervision. During the year an Evening Public School was opened at Pyrmont, but that at Plunkett-street was closed in February, on account of the small attendance of pupils. I have now, therefore, under my charge 22 Public and 3 Evening Public Schools.

Accommodation, &c.

The material condition of the school buildings in this section of the Metropolitan District is satisfactory, and the accommodation provided may be regarded as generally sufficient for ordinary requirements.

Additions have been made at Gardener's Road and St. Leonard's North, and the Boys' School at Glebe is being enlarged.

Attendance.

The gross enrolment of pupils during the year was 20,601. The multiple enrolment amounted to 3,184. The actual enrolment was, therefore, 17,417. The annual average attendance was 10,930.6. The several quarterly enrolments and average attendances were as follow:—March quarter—Enrolment, 15,393; average attendance, 10,911.8. June quarter—Enrolment, 15,322; average attendance, 10,768.6. September quarter—Enrolment, 15,274; average attendance, 11,188.8. December quarter—Enrolment, 14,864; average attendance, 10,828. During the latter half of the year the average attendance reached nearly 73 per cent. of the enrolment.

Inspection.

All schools and departments (with the exception of Plunkett-street Evening, which was [suddenly] closed early in the year) received regular inspection. The total number of pupils examined was 12,409.

No department was below the required standard of 50 per cent. of maximum marks obtainable.

One department was up to that standard, and the rest were above it. Thus the proficiency of the pupils was of a decidedly satisfactory character on the average.

As a whole, the schools were well organised, the government judicious and effective, the teachers earnest in the discharge of the responsibilities and duties of their office.

W. F. THOMPSON,
Inspector.

27th January, 1897.

ANNEX C.

71.

ANNEX C.

INSPECTOR WILLIS'S REPORT.

DURING the year 1896 there were under my supervision 25 schools, viz., 22 Public Schools, 2 Evening Schools, and the school on board the Training Ship "Solraon." These schools comprise in all 55 departments.

In this section the enrolment of pupils numbered 18,336, and the annual average attendance was 11,002.

Allowing 8 square feet per child, the existing school-rooms afford, for the accommodation of the pupils, an aggregate of 15,131 places, while at the rate of 100 cubic feet of air-space per child, 17,798 places are provided.

Regarded generally, the buildings are in every way suitable for school purposes, and are in good repair.

One of the Evening Schools was closed before the examination of its pupils could be arranged for, but the other 54 departments were fully inspected. Of these, 1 just reached the minimum marks necessary to gain a pass, and the other 53 departments were marked above standard. All but 2 of these 54 departments were found to be skilfully organised, judiciously governed, and effectively taught.

The aggregate number of pupils examined was 13,606. These examinees did good work in reading, writing, dictation, music, and drawing; but in English grammar, advanced arithmetic, and mensuration less than 60 per cent. of those examined were successful. In the other 11 subjects the majority of the examinees did satisfactory work.

The Teachers of all ranks employed in this section during the year numbered 267. Of these 22 were Principal Teachers, 29 were Mistresses, 130 Assistants, 74 Pupil-teachers, and 12 Work Mistresses. These Teachers have performed their school duties successfully during the year just closed, and there is no doubt that their labours will be productive of at least as good results in the year 1897.

18 January, 1897.

M. WILLIS,
Inspector.

ANNEX D.

INSPECTOR SKILLMAN'S REPORT.

IN the beginning of 1896, 27 schools (comprising 48 departments) in the Metropolitan District were placed under my supervision.

The school buildings then provided places for 11,833 pupils. During the year, additions capable of seating 231 children have been completed at Hurstville West and Kogarah. There is now sufficient accommodation for 12,064 pupils.

The quarterly enrolments and average attendances were—March quarter, 11,010 and 7,816; June quarter, 10,973 and 7,662; September quarter, 10,882 and 7,836; December quarter, 10,907 and 7,909 respectively.

All the schools were fully inspected. Forty-four were found to be above the standard, 3 satisfied it, and 1 (La Perouse) failed to gain the minimum percentage of marks required.

The number of passes in the more important subjects were:—Reading, 83 per cent.; writing, 82 per cent.; dictation, 74 per cent.; and arithmetic, 69 per cent.

8,042 pupils were present at inspection, of these 882 underwent the special examination for certificates, but only 414 were successful.

It is to be hoped that an improvement in this respect will be shown in 1897.

In the schools under my supervision are employed 202 teachers of all ranks.

They work well and conscientiously, and I have no fear of any retrogression during the ensuing year.

28th December, 1896.

H. SKILLMAN,
Inspector.

ANNEX E.

DISTRICT INSPECTOR W. DWYER'S REPORT.

THE number of schools in operation during the past year was 121, comprising 153 departments, of which 135 are Public, 4 Provisional, and 14 Half-time.

These were all duly examined, and the results, as compared with the standard, show a state of efficiency in almost every respect, fully satisfactory, the proportion up to and above standard being about 93 per cent.

The number of places available, according to the usual standards of measurement, is—floor-space 17,422 and air-space 17,161; and the number of pupils enrolled last quarter was 14,178.

The accommodation provided is, therefore, adequate in amount, and distributed in fair accordance with present requirements.

A new school, now 7th class, was opened at South Bankstown in April last.

The total number of pupils present at examination was 11,867, and their proficiency in all the subjects of instruction is above the standard, and reaches, in most cases, a high estimate. The details are fully set forth in the tabulated statements already furnished.

The entire teaching staff of the district comprises 262 persons, of whom 128 are principal teachers, 14 mistresses of departments, 58 assistants, 57 pupil-teachers, and 5 work-mistresses. Only 19 teachers and 4 pupil-teachers are unclassified.

Having been absent on leave from February to October, I am not in a position to speak, from personal observation, of the condition of most of the schools, or of their management; but, judging from the few (11) which, on my return, reverted to me for inspection, and from the estimates of the Inspector (Major Dettman) who took my place, and of Mr. Inspector Pitt, I feel no hesitation in asserting that both the one and the other are as efficient and promising as could, under their various circumstances, be reasonably expected.

Mr. Inspector Pitt's report is forwarded herewith.

Sydney, 16th January, 1897.

WM. DWYER,
District Inspector.

ANNEX F.

INSPECTOR PITT'S REPORT.

THE schools under my supervision for the year 1896 were 72 Public Schools, 3 Provisional Schools, and 12 Half-time Schools. One school, the Cornwallis Public School, closed very early in the year, and was not inspected. With this exception, all schools under my charge were fully inspected. Two owing to inefficiency were submitted to re-inspection. The Pitt Town Co-operative Settlement Public School after regular inspection in June last was closed owing to the withdrawal of the settlers. A new school has been erected under my supervision at Kooree, lately called Blood Tree, at a cost of £30. Two schools are now being erected under the direction of the Architect at Beecroft and Arcadia, and are expected to be brought into operation at an early date.

Accommodation.

Accommodation.

The accommodation provided for the pupils in this section is ample, and suitable in character. At the close of this year the sitting-room shows material increase, and now affords adequate accommodation for upwards of 9,649 pupils. This is accounted for by the transfer of 16 schools from the Kogarah section.

Attendance.

The table hereunder sets forth the total enrolment, the average attendance, a percentage of attendance, school fees collected, and the number of free pupils for each quarter of the year.

Quarter.	Enrolment.	Average Attendance.	Percentage.	School fees collected.	Free pupils.
March	6,961	4,931.4	70	£ s. d. 618 0 7½	1,112
June	7,225	5,168.6	71	717 16 3	1,196
September	6,958	5,174.4	70	642 2 0	1,148
December	6,868	5,097.8	70	718 9 0	1,140

Inspection.

Every school in operation, with the exception of one, was fully inspected and incidentally visited when practicable. The Girls' Industrial School at Parramatta was minutely inspected, with results of a highly pleasing character.

The Teaching Staff.

The teachers, as a body, are respectable, loyal, and intelligent. The pupil-teachers are well conducted, studious, and intelligent.

Summary.

- (a) A new school was opened during the year, two Public Schools were closed.
 (b) The works carried out during the year, and in progress under Architect's supervision —

Erection of school at Beercroft.	£ s. d.
Erection of school and residence at Arcadia	429 7 11
Penrith Superior Public—Improvements, &c.	132 17 6
Penrith „ „ Drainage, &c., works.....	130 0 0
Arcadia Public—Clearing and fencing site	48 17 6
Carlingford „ Painting and repairs	39 15 0
Kingswood „ Verandah and fencing, 5s. 6d. per rod	40 0 0
Pitt Row „ Painting and repairs	69 0 0

(c) Minor improvements and repairs have been carried out under the Inspector's supervision to the extent of £70 during the year.

The schools, as a whole, are well organised, the government judicious and effective. The teachers earnest in the discharge of the responsibilities and duties of their office, and the prospects for the incoming year hopeful and encouraging.

Parramatta, 15th January, 1897.

CHAS. JNO. PITT.

ANNEX G.

DISTRICT INSPECTOR BRADLEY'S REPORT.

At the beginning of the year, consequent upon reductions and changes in the general staff of Inspectors, 16 schools were transferred from the Muswellbrook section of the Maitland District to the Quirindi Section of the Armidale District, and 5 of the outlying schools on the western limits of the Armidale District were transferred to the Wellington District. Twenty new schools, all of the smaller kind, have been established within the year; but eight similar schools that were open during 1895 were closed for 1896 through paucity of attendance. The net increase for 1896 will thus be 23, and the total number of schools in operation for the whole or some portion of the year was 356.

The work of improvement in connection with the erection of the smaller school buildings, and in additions and repairs has been carried on by the Inspectors with assiduity, no less than has been previously recorded; but, as the need for such improvements has, owing to former efforts, become less frequent, so the expenditure thereon shows proportionate decrease. Fifteen new school-houses have been erected and two have been enlarged; while repairs and improvements, more or less extensive, have been effected in connection with 67 school-buildings, and 16 teachers' residences. These works, with others arranged for, and approaching completion at the end of the year, involve a total expenditure of £1,478 13s. 8d.

The increase in the seating accommodation at the end of the year amounts to 738 at 8 square feet, and 530 at 100 cubic feet per child, and the gross accommodation stands at 19,703 and 17,959 at the same rates of allowance per pupil. The accommodation thus provided is ample in its relation to the gross enrolment, but there are some individual cases of overcrowding, the most important being that of Armidale where the provision of increased room has become a somewhat pressing necessity.

Each school in the several sections of the District has received one full inspection during the year, but owing to the increase in the work of each inspector, the extensive areas to be traversed, and the restrictions imposed as to travelling expenses, only 5 have received a second or "ordinary" inspection. The condition of the schools inspected, taking all features of their management into account, is about on a par with that of last year. During 1895, 9 per cent. of the schools failed to meet "standard" requirements, 4 per cent. just satisfied them, and 87 per cent. exceeded them. For the year just ended the corresponding percentages are 11, 3, and 86. In the matter of attainments alone, it is pleasing to note improvement in all of the more important subjects of instruction. Only in French, mensuration, Latin, and needlework are the percentages of passes lower than for the previous year, while in every other subject some measure of progress has been achieved.

Of the more advanced pupils 1,008 were examined for exemption certificates, and 608, or 60 per cent., passed. The percentage of passes in the several sections of the district is as follows:—

Armidale Section.....	60 per cent.
Glen Innes Section	67 „
Quirindi Section	58 „
Tamworth Section	48 „

I am afraid that the disparity exhibited in these results is more the outcome of a want of uniformity in the examinatory tests applied than of differences in the attainments of the pupils. With closer regard to the instructions issued relative to the conduct of these certificate examinations, I feel satisfied that more even results would have to be recorded.

In

In all, 12,513 pupils were present at the regular examinations, a number 256 in excess of the record for last year. The following table shows the estimated proficiency of the pupils in the various subjects of instruction, and also the relation of the results to those of 1895 :—

Subjects.	Estimated Proficiency.			
	Total Number Examined.	Number Passed.	Percentage up to or above Standard.	Relation to Results of 1895.

Drill	11,857	9,914	84	+ 2
Natural Science	214	207	97	+ 1

The teaching strength of the District comprises 300 principal teachers and mistresses of departments, 38 assistants, 2 work-mistresses, and 65 pupil-teachers—405 in all. Of these, 83 are unclassified, but more than half of the number have served as pupil-teachers, are well qualified in point of attainments and training, and almost without exception do satisfactory work. Few causes of complaint have arisen during the year, and, as a body, the teachers maintain the high character for worthy conduct, industry, and efficiency formerly given.

The reports of the several Inspectors are forwarded herewith.

J. D. BRADLEY,
District Inspector.

ANNEX H.

INSPECTOR BLUMER'S REPORT.

Ninety-three schools have been in operation in the Tamworth Section of the Armidale District during the whole or some portion of the year. One has been permanently closed on account of small attendance, and 8 are new schools. Three more are expected to open early next year.

Applications for establishment of schools were granted in the following 9 cases :—Big Leather, Gulf Creek, Mosquito Creek (Provisional), Emu Creek and Moona, Kingstown and Toryburn, Mulla Creek and Limbri (Half-time). Six applications were declined, viz. :—East Tamworth (Public), Bullin Burra, Diamond Mines, Moore Creek, Mt. Drummond, Spring Creek (Provisional). An application for Half-time Schools at Mt. Palmer and Cooringoora is now under consideration.

Existing schools fully meet the present educational requirements of the District. As fresh land is being selected in various localities, however, it is expected that other schools will be needed before long.

During the year new buildings were erected at Bingara Upper, Derra Derra, Gulf Creek, Mosquito Creek, Sam's Flat, Sandholes, and Rockmore, and the school-room at Doctor's Creek was enlarged. These works were carried out by the Inspector. Under the supervision of the Clerk of Works, a residence was built at Mungindi, and necessary steps were taken for the erection of a residence at Moree, and the enlargement of schoolrooms at Duri and Warialda. Repairs to premises have been executed as circumstances demanded.

The aggregate accommodation provided (5,397 places) is more than sufficient for the total number of pupils (5,405) enrolled for the year. In a few individual cases, however, the school-rooms are barely large enough, but action has been taken to remedy this defect wherever the present attendance is likely to be maintained.

Every school was fully inspected, and incidental visits were paid as opportunities offered. The great amount of time occupied in visiting remote places in connection with applications for schools rendered ordinary inspections impossible.

Of the schools in operation, 84 per cent. were up to or above standard. It must be borne in mind, however, that 13 per cent. were formally reported as below standard solely on account of the absence of any class higher than a Second—in each instance a matter quite beyond the teacher's control.

The schools most worthy of mention in regard to general efficiency are, in order of merit:—Tamworth Boys', Tamworth Girls', Manilla, Walcha, Moree, Warialda, West Tamworth. Of 238 pupils examined for exemption certificates 116 passed.

In general, the school buildings are in fair repair and suitably equipped, the records well kept, and the lesson guides carefully constructed.

Discipline continues to be one of the most satisfactory features of the schools. Although corporal punishment is seldom inflicted except in extreme cases, the pupils are, as a rule, orderly, obedient, and diligent. In many schools, however, their manners are capable of considerable polish.

The actual work of instruction is carried on with increased zeal and efficiency. More attention is paid than formerly to reading, writing, arithmetic, and dictation, the results in these most important subjects being higher than those for any previous year. This improvement has been effected without detriment to the other subjects of instruction.

A course of lessons in cookery given in Tamworth during the latter portion of the previous year met with such success that it was decided to extend the privilege to another lot of girls. This was done with results that evoked the highest encomiums from all who had an opportunity of forming an opinion of the practical value of the work.

As a body, the teachers are diligent in the discharge of duty, and are respected members of society. Neglect of duty on the part of two of the number, however, met with prompt punishment.

In conclusion, the increased educational wants of the district have been fully met by establishment of new schools; the efficiency of the schools is quite as high as in any former year; the outlook for 1897 is most encouraging.

L. BLUMER,
Inspector.

Tamworth, 29th December, 1896.

ANNEX I.

INSPECTOR BEAVIS' REPORT.

THE year 1895 closed with 89 schools in operation in the Glen Innes Section. In January, 1896, 1 school—Oban Provisional—was transferred to the Armidale Section, but was compensated for by Yallaroi Public, transferred from the Tamworth Section; at the same time Kulki Provisional School was reopened at the new site (Cherry-tree Hill). In March, the Black Swamp Public School was re-established in the new building, erected to replace that which had been destroyed by fire. Four new schools have, during the year, been brought into operation, viz., Clairville (opened as a Provisional School, but since converted to Public), Glen Elgin House-to-house, Stannum (The Gulf) Provisional, and Weean Provisional. It was found expedient to change the name of one school—Clairvaux (now Reddestone) Public. The Darby's Branch Provisional School has recently been ranked as Public; and Bolivia, which commenced the year as Half-time, with Castle Rag, is now carried on as Provisional.

The 95 schools on my list for the year, taking the latest classification, include 68 Public, 17 Provisional, 9 Half-time (one closed), and 1 House-to-house.

Three schools have been closed on account of small attendance, viz., Castle Rag Half-time, Vivier Provisional, and Stannum Provisional; the last-named had not from the first a satisfactory attendance, the population of the locality having migrated before the school came into operation. It is probable that 3 other schools will not be re-opened in January, but a new Provisional School is to be established at Yarrow Creek; and by the removal of the Willow Grove building to a new site at Bakkulla, practically another new school will be provided. Thus, 89 schools will, in all likelihood, commence work in 1897, and this number will be slightly increased during the year.

The improvement of school accommodation has been continued, though the expenditure has been less than in 1895; the bulk of it has been bestowed on the smaller school-buildings. Under my supervision 4 new buildings have been erected, and to each an enclosed verandah has been added as a substitute for a weather-shed; verandah additions have been provided in connection with other small schools, and the cases are now rare in which there is no outside shelter for the pupils; indeed where such convenience has not been supplied the prospects of the schools do not warrant the expenditure. All the schools are reasonably equipped with furniture, books, and apparatus, and some are well provided; the supply of maps, &c., is not too liberal, but this defect is gradually being overcome.

The seating accommodation shows a net gain for the year of 50 places, and is still considerably in excess of the enrolment of pupils. The average attendance is 75 per cent. of the enrolment.

Every school has been regularly inspected, and three ordinary inspections were made when wet weather rendered it undesirable to proceed with full inspections. It is to be regretted that present exigencies will not allow of ordinary inspections being systematically incorporated as formerly with each year's work. There is no question of the beneficial effect of such visits in securing efficient management, and in giving the teachers practical assistance. Notwithstanding this defect, the general efficiency of the schools is creditable. Of 95 schools fully inspected, 81 were above the standard, 7 up to, and 7 below it, thus 88 schools (93 per cent.) were in different degrees satisfactory—2 per cent. more than in 1895. The schools of highest general efficiency were Glen Innes, Inverell, and Deepwater in town centres; and among the smaller schools, Elsmore, Little Plain, and Oakwood. In several other instances the marks awarded were highly satisfactory. 3,430 pupils were examined (last year 3,362), and in most of the subjects of the school course slight improvement has been recorded. 175 pupils, out of 260 specially examined (67 per cent., or 6 per cent. more than in 1895), passed the test for exemption certificates. 148 pupils who had previously gained certificates were present at regular inspections.

In June an examination in music, under the auspices of Trinity College, London, was held in Glen Innes. The examinees (14) were, with one exception, pupils of the local Public School, and all but one passed creditably. Nine pupils of the Glen Innes Boys' School were successful at the University Junior Public Examination.

A four months' course of plain cookery has just been concluded at the Glen Innes Public School under the superintendence of Miss A. Kirby. Forty-nine girls from local schools took advantage of the instruction, and at a practical examination conducted by a committee of ladies at the close of the term only 1 pupil failed.

Children's libraries on a small scale have been instituted at 2 schools, Gunn Flat and Emma-ville. Such useful and attractive aids to school work might with advantage be established in connection with every school. In many localities, however, the means for providing and periodically supplementing the necessary stock of books are not readily available.

The favourable seasons of the past two years have had a noticeable effect on the school gardens. In several instances the school-ground is the most attractive spot in the neighbourhood. The interest in tree-planting has somewhat waned, but the work has not been neglected.

The teachers continue to hold a high reputation for zeal and integrity. During the present year no serious well-founded complaint has been preferred against any teacher in this section.

Summary

The educational requirements of the section have been satisfactorily met. The number of schools in operation remains about the same as for 1895. The efficiency of the schools has been well maintained, and slight, though tangible, progress has been recorded in every branch of school organisation and management.

W. BEAVIS,
Inspector.

Glen Innes, 30th December, 1896.

ANNEX J.

ANNEX J.

INSPECTOR PARKINSON'S REPORT.

At the close of 1895 there were 83 schools in the Quirindi Section of the Armidale District. The Half-time Schools at Milchomi and Cashel did not reopen this year; five schools situated on the Barwan and Namoi Rivers were transferred to the Wellington District; and four others in the valley of the Peel River were placed under the supervision of Mr. Blumer, of Tamworth. These changes reduced the number of my schools to 72. On the other hand, 16 schools were transferred from the Maitland District to my section; 5 new schools opened during the year; 3 House-to-house Schools became Half-time; and 3 schools, closed in 1895, reopened. The total number of schools in operation during the year has therefore been 99. The Public School at Wingen, the Provisional School at Willala, and the Half-time Schools at Brigalow Creek and Cuttabri have been closed; so that at the present time I have supervision of 95 schools. The Half-time Schools last named are to reopen in January, 1897, and a new House-to-house School is to commence work in the same month at Nowley. During the year applications for a Half-time School at Ellerston, near Moonan Brook, a House-to-house School at Barry, near Nundle, a Provisional School at Yarrari, near Gunnedah, and a Public School at Borambil Creek, near Quirindi, have been declined. Schools will in all probability be required at the two places last named, and from one or two other localities applications may be received. I shall, therefore, commence next year with 98 schools, with a likelihood of the number increasing to upwards of 100.

At the close of 1895 the buildings provided seats for 5,092 pupils, or places for 4,527. By the closing of 6 schools, the burning of 2 others, and the transfer of 9 to the Inspectors at Tamworth and Dubbo, these numbers were diminished by 903 and 729 respectively. On the other hand, the erection of one new school-room, the enlargement of another, the leasing of 8 others, and the transfer of 16 from the Maitland District, added 1,088 seats, or 823 places. So that reckoning 100 cubic feet for each pupil there is now accommodation provided for 4,621 pupils. The enrolment for the last quarter of the year has been 4,142; there is, therefore, more than sufficient room for all children in attendance. The old buildings at Gunnedah are still doing duty; but with this exception, the school-rooms and residences are fairly suitable, and in good condition. During the year repairs have been effected at 14 schools and 8 residences, at a cost of £225 7s. 9d., and the Chief Clerk of Works has carried out improvements at Narrabri. He is also supervising additions at Wee Waa, and the erection of a teacher's residence at Stewart's Brook.

Last May the school-room at Tippiereenah, near Narrabri, was burnt down; and in November that at Walhallow, near Quirindi, shared a similar fate. It seems hardly credible that these fires could have been caused wilfully, and yet in the first case the Coroner's jury returned a verdict of arson against some person unknown, and in the second case a boy has been committed for trial.

Most of the playgrounds at the larger schools have been planted with trees, and a few teachers still keep flower-gardens; but there is little progress to report in this direction for the past year.

Ninety-nine schools were in operation during the year, and each received a regular inspection. Eighty-eight schools proved to be above standard, 1 was up to standard, and 10 were below. That is, 90 per cent. of the schools either met or exceeded standard requirements—1 per cent. in advance of last year. Of the 99 schools examined, 9 gained upwards of 70 per cent. of marks, 45 schools reached between 60 and 70 per cent., 35 ranged between 50 and 60 per cent., and 10 were below 50 per cent. The most efficient schools were Gunnedah Superior, Quirindi Superior, West Narrabri, Narrabri Boys' Superior, Blandford, Quipolly, Narrabri Girls' Superior, Scone, and Boggabri.

In reading, writing, and arithmetic, 3,274 pupils were examined, and 38 in French—the numbers in other subjects ranging between these figures. From 90 to 100 per cent. of pupils were up to or above standard in reading, writing, Australian history, Scripture, object lessons, drawing, needlework, drill, and natural science. In arithmetic, geography, music, French, Euclid, Algebra, and Latin, the passes were from 80 to 90 per cent. In dictation, grammar, and English history, from 70 to 80 per cent. of pupils satisfied standard; while in mensuration, the passes were only 59 per cent. In the few schools where this subject is required, the teachers have been advised to give special lessons regularly, and not to simply take a few minutes spasmodically from an arithmetic lesson. The results for the year are fully equal to those obtained the previous year, and in two of the most important subjects, reading and arithmetic, an improvement is noticeable. For exemption certificates, 201 pupils passed out of 343 examined—that is, 58 per cent. Last year the percentage of passes was 51. Arithmetic and dictation are still responsible for the failures.

There are 109 teachers now working in this section of the District—50 principal teachers, 10 assistants, and 19 pupil-teachers. Twenty-eight teachers in charge of schools are unclassified, but 13 of these have been pupil-teachers. Complaints against teachers are at all times rare, but this year there have been fewer than ever. The teachers are throughout the District spoken of with respect, and their work appears to be highly valued.

The library movement is spreading. Last year 14 schools had libraries, and the number of volumes was about 1,600. There are now 41 schools with libraries, and they contain 3,470 volumes. The teachers furnish quarterly reports, stating the number of volumes in the library, the average number issued weekly, the condition of the books, and whether in their opinion the libraries are proving useful or not. With one exception, they are unanimous in asserting that great good is being done.

To summarise, I have had supervision of 99 schools during 1896. All were inspected, and 90 per cent. satisfied or exceeded the standard.

The buildings provide ample accommodation for the children in attendance, and are in a good state of preservation.

The teachers are respectable, industrious, and efficient, and they are doing good work.

H. PARKINSON,
Inspector.

Quirindi, 23rd December, 1896.

ANNEX K.

DISTRICT-INSPECTOR McCREDIE'S REPORT.

THE year 1895 closed with 253 schools on my general list, but one of them, Bogan Gate Half-time, did not reopen. Seven new schools, 4 in the western and 3 in the eastern section of the District, were added during the year, and another school was transferred to the former section from the Wagga Wagga District, making the total number of schools in operation 260. At the end of the year, however, this number had been reduced to 247, through the closing of 13 schools from various causes.

Early in 1896 applications for Provisional Schools at Tallwood, near Forest Reefs, and Eldorado Gully, near Ophir, were declined; but a school at the latter place was subsequently granted, and arrangements have been completed for opening it.

Another application for a Provisional School at Milker's Flat, on the Macquarie River, about 17 miles from Bathurst, has just been inquired into and reported upon.

Besides these applications, all in the central section of the District, there were a number of others in the Forbes and Lithgow Sections, information respecting which is furnished in the reports upon those divisions.

In addition to substantial improvements and repairs to school buildings effected under the supervision of the Chief Clerk of Works, 4 small buildings were erected and 75 schools and 7 residences repaired, under the direction of the Inspectors, at a total cost of about £516. Other works sanctioned and now in progress under these officers will entail an additional expenditure of £704.

There

There were only a few schools in which the accommodation proved inadequate for the attendance, and in these cases action was promptly taken either to provide a suitable class-room or to extend the school building.

The total number of places provided in all schools is 16,803, at 8 square feet of floor-space, and 16,704 at 100 cubic feet of air-space per child, the increase for the year being 151 and 182 places, respectively.

The actual enrolment for the year was 15,321 pupils, and the average attendance 9,612.5. The amount received for school fees was £5,204 18s. 6d., and the arrears owing on 31st December was £171 7s. 4½d.

All schools, with one exception, were fully inspected, and ten received a second special visit. The total number of inspections was 269. Garland Provisional, the uninspected school, was closed early in the year, before it could be visited for the purpose of inspection.

Ninety-five per cent. of the schools inspected satisfied or exceeded the standard in efficiency, the percentage being the same as for last year.

The number of pupils present at inspection was 10,339, being an increase of 136 upon the number examined in 1895. In the higher classes, 838 pupils were examined for exemption certificates, and 534, or 60 per cent., passed, the percentage again being identical with that for the previous year.

Viewed in comparison with the results for 1895, the percentages of passes indicate a slight retrogression in Australian history, Scripture, Euclid, Algebra, Latin, and mensuration, and an advance in all other subjects except music and arithmetic, in which they remain unchanged.

At the last Junior Public Examination there were 7 successful candidates from Bathurst Superior Public, 4 from Forbes Superior Public, 4 from Lithgow Superior Public, 2 from Blayney Public, 1 from Milltown Public, and 1 from Rockley Public.

During the year cookery classes were established at Orange and Bathurst, two terms of instruction being given in the former and one in the latter town. The classes were well attended, the progress of the pupils was satisfactory, and the school in both towns was deservedly popular, its success and popularity being largely due to the tact, energy, and skill of Miss Monro, the teacher in charge. At the end of each term of instruction an examination of the pupils was conducted under the supervision of a committee of ladies. The kind assistance so cheerfully and willingly rendered by the members of each committee, the keen interest evinced by them in the young folks' practical demonstration of their knowledge of the culinary art, and the satisfactory reports furnished upon each pupil's work at the close of the examination, were very gratifying and encouraging.

The number of teachers of all ranks employed in the several classes of schools in the District is 325. This number comprises 210 principal teachers, 8 mistresses of departments, 47 assistants, 58 pupil-teachers, and 2 work-mistresses.

W. McCREDIE,
District Inspector.

ANNEX L.

INSPECTOR THOMAS'S REPORT.

The year 1895 closed with 85 schools in operation in the Forbes Section of the Bathurst District, but under certain rearrangements made during the vacation, only 84 of them reopened.

New schools at Billy's Look-out and Platina opened early in January, so that I commenced the year with 86 schools on my list, viz. :—

Public	50
Provisional	10
Half-time	24
House-to-house	2

During the year new Half-time Schools were established at Canangles and Edinboro, and the Wattle Grove Half-time School was transferred from the Young Section of the Wagga Wagga District. On the other hand, the Half-time Schools at Blossom Vale, Eulimore Creek, Mayview, Murrin, Wangan Vale, and Yamma, and the Provisional School at Billy's Look-out have been closed. Thus, I conclude the work of the year with 82 schools in operation, viz. :—

Public	53
Provisional	7
Half-time	20
House-to-house	2

Applications for the establishment of new schools have been fewer than usual, and have as yet added only 2 schools to my list. This circumstance tends to show that the existing schools fairly meet the requirements of the district.

The following is a list of applications received, and dealt with during the year :—

Canangles and Edinboro.....	Half-time	Granted ; schools are now in operation.
Mumbidge.....	Provisional	Declined.
Bourimbla	Provisional	Deferred till early next year.
Bucobra and Gumble	Half-time	Deferred, at residents' request, until 1897.
Namama	Provisional	Deferred till 1897.
Pinnacle Reefs	Provisional.....	Under consideration.
Murrin	Provisional	Granted ; will open in 1897.

In several portions of my District large areas of Crown land will shortly be thrown open for selection. This will result in applications for new schools and in improved attendances at schools now struggling for existence. The scant rainfall (if not actual drought) of the last two summers has made itself felt in many of the outlying schools, and to it may be attributed the closing of so many of the small schools in my District.

Eighty-nine schools of all classes were in operation during some part of 1896, and all received a full inspection. Two of them being found considerably below the standard, received a second inspection later in the year, and showed a marked improvement.

Only one ordinary inspection was made, but incidental visits in connection with repairs, inquiries, &c., were frequent.

Of 82 schools in operation a full year at the time of inspection, 79 were up to or above standard requirements ; and of 7 new schools, 5 were in a similar state of efficiency. Thus, out of 89 schools inspected, 84 satisfied the standard, a percentage of 94. The percentage for 1895, on similar lines, was 93.

The total number of pupils examined at the 89 regular inspections, after making due allowance for schools reinspected was 2,912. This number is slightly under that of last year, when 3,006 were examined.

The numbers examined in the more important subjects were :—

Reading	2,912, of whom	2,560	passed.
Writing	2,871,	2,618	"
Arithmetic.....	2,739,	2,230	"
Dictation	2,307,	1,730	"
Grammar	935,	737	"
Geography.....	935,	737	"
History	922,	637	"

Comparing

Comparing the percentages of passes in 1896 with those of 1895, it will be noticed that the results are remarkably close, thus:—

	1895.	1896.
Reading.....	89 per cent.	88 per cent.
Writing.....	91 "	91 "
Arithmetic.....	81 "	81 "
Dictation.....	77 "	75 "
Grammar.....	78 "	78 "
Geography.....	77 "	78 "
History.....	67 "	69 "

238 pupils were examined for exemption certificates, of whom 156, or 65 per cent., were successful. In 1895, 61 per cent. were successful.

Four pupils of the Forbes Superior Public School passed the Junior University Examination, two of them acquitting themselves very creditably. In schools with 4th and 5th classes the highest results were achieved at West Wyalong, Parkes, and Forbes, in the order named. In schools with no class higher than 3rd, Cargo and Engowra stand out beyond the rest. Amongst Provisional Schools, Cagong came out best; and amongst Half-time Schools, Gum Springs, Galwary Creek, and Derriwang.

The organisation and discipline of the schools call for no special comment. Few gave cause for complaint, and where imperfections were noticed they arose more from want of experience than from carelessness and neglect. Hints and suggestions were received in excellent spirit, and will, I am sure, be carried out to the best abilities of those concerned.

Careful attention has been paid during the year to the material condition of the school premises, particularly in the matter of water supply. The scanty rainfall has necessitated the purchase of water in many instances, and the outlook for the summer is very unfavourable, as creeks, dams, and springs are giving out. In no case, however, has the Department's aid in this particular been withheld.

Under my own supervision 31 schools have in one way or another been repaired during the year at a cost of £137 8s. 4d., while improvements and repairs to residences have been effected at a cost of £50 2s. 6d. There are, in addition, several important contracts still in progress, involving an outlay of £163 16s. 6d.

Two school buildings were erected under my direction at a cost of £44 10s., and two others are in course of erection at a cost of £176 10s.; weather-sheds are also in course of erection at Wyalong and Wyalong West.

In addition to these minor contracts, more important works have been carried out at Wyalong and Wyalong West by the Chief Clerk of Works, and this officer has contracts in hand at Forbes, Parkes, and Mount Hope. When all existing contracts are completed, the material condition of the school premises in my District may be considered very satisfactory.

At the close of 1895 I estimated the number of available seats at 5,205, on the basis of 8 square feet per child, and at 4,957 on the basis of 100 cubic feet per child. After balancing losses of seats by schools closed, against gains from new schools, additions, &c., I find that the number of available seats has increased by 44 on the former and by 45 on the latter basis of calculation. The numbers now stand at 5,249 and 5,002 respectively.

Summary.

No. of schools in operation during 1896.....	89
No. of schools fully inspected.....	89
Percentage of schools satisfying standard.....	94 per cent.
No. of pupils examined.....	2,912
Enrolment, December quarter.....	3,995
Average attendance, December quarter.....	2,775.1
Accommodation provided.....	5,249
No. of teachers and pupil-teachers employed.....	97
Total fees for the year.....	£1,434 13s.
Amount of fees in arrear.....	£68 5s.
No. of free pupils, December quarter.....	361

The full statistics upon which this report is based have already been supplied.

Forbes, 30th December, 1896.

W. GEO. THOMAS,
Inspector.

ANNEX M.

INSPECTOR DETTMANN'S REPORT FOR 1896.

With the exception of High Schools every class of school recognised by the Department was represented in the District in 1896.

The only Evening Public School, that at Lithgow, was closed in June owing to the want of sufficient attendance, and for the same reason the Half-time Schools at Bell and Mount Wilson, the House School at Ganbenang, and the Provisional School at Garland ceased to exist.

The following new schools were established, namely, Dargan's Creek Public (to meet the requirements of a railway-construction camp), a Provisional School at Three Brothers and a Half-time School at Royals.

These changes left the District with 99 schools at the close of the year, although as many as 104 schools were in operation during the year.

Of these 104 schools, all but one, Garland Provisional, were fully inspected, the non-inspection of this school being accounted for by its being closed in February, before the Inspector's visit to the neighbourhood.

Most of the schools of this District appear to be permanently placed, as comparatively few changes in the location of schools have been made for several years.

From the returns furnished from time to time by the teachers, it would appear that there are not many families living out of reach of the schools, and further that those who are able to avail themselves of the means of education provided by the State make good use of the advantages thus afforded.

My limited connection with the District prevents me from writing from a personal knowledge of the facts, but, so far as I can judge, I am convinced that the people generally are well satisfied with what the State is accomplishing in its efforts to spread the benefits of primary education.

The school buildings are in a fairly good state of repair, and are kept in a clean and serviceable condition by the teachers, who in many instances take a pride in the appearance of the school premises.

Improvements and general repairs were effected where necessary, and several new school-rooms provided.

The highest enrolment of pupils in the schools was reached in the last quarter.

The figures for this quarter were 4,525 on roll, with an average attendance of 3,185.3.

The efficiency of the schools as disclosed by the inspection reports was very satisfactory, no fewer than 99 of the 103 schools inspected being above the standard, and only 3 being below it.

The

The teachers are to be congratulated on these results, which could not have been obtained without intelligence and capable teaching and continuous and painstaking efforts on their part.

There are 117 teachers of all grades employed in the District. Of these, 80 are in charge of schools, 2 are mistresses of departments, 11 assistant-teachers, 1 a work-mistress, and 23 are pupil-teachers.

I believe the district is in good working order, and should continue to produce satisfactory results.

JOHN DETTMANN,
Inspector.

ANNEX N.

DISTRICT-INSPECTOR JOHNSON'S REPORT.

At the beginning of this year, 51 schools were transferred to this from adjoining Districts, and 28 others were transferred from this District to others, so that the number of schools was thus increased by 23. There were also 3 new schools opened during the year, and 5 others closed on account of small attendance. There are now 255 schools in the District, and of these 87 are in the Wollongong Section, 78 in Crookwell Section, and 90 in Bowral Section. They are classified as follows:—192 Public, 24 Provisional, 30 Half-time, and 9 House-to-house Schools.

New school-rooms were erected at Mount Kembla, Jerrara, and Wedderburn, and others are being erected at Marshall Mount, Avondale, Miranda, Piedmont, and Wetherell Park, and a teacher's residence at Cecil Park. Additions were made to the school-rooms at Bombo, Gerringong, Yalwal, Dapto, and Buxton, and a residence was erected at Picton. Repairs and improvements, more or less extensive, were effected to 78 school-rooms and 27 residences.

The school-rooms of the District provide accommodation for 20,259 pupils, which is ample for the enrolment, and, with one or two exceptions, each school-room fully meets the requirements of the locality in which it is situated.

All the schools of the District, except Yerriyong Provisional in the Wollongong Section, were inspected once during the year. This school was unexpectedly closed in June last.

Of the 257 schools inspected, 240 were above the standard, 5 reached it, and 12 were below that mark. These last are small bush schools, in charge of the less skilful class of teachers. The necessarily small income, poor accommodation, and many discomforts attending life in those outlying districts, prevent skilled teachers from willingly accepting appointment to such localities. Yet in comparison with the ordinary bush school of twenty years ago, those of the present day are doing really good work. It is only when compared with the highly efficient city or town school that they can be regarded as in an unsatisfactory condition. Of course, through various causes, some of these small schools sometimes fall very low in efficiency, but in all such cases the Department takes the necessary action to set matters right.

There were 11,019 pupils present at the inspections of the schools of this District this year, and of this number, 926 were examined for exemption certificates, but only 493 passed. When it is considered that the teachers are fully aware of the nature and extent of these examinations, the results are rather disappointing. It is to be hoped that during the coming year much higher results will be secured. The percentages of passes in the various subjects of instruction are not so high this as last year.

Bowral Boys', Mittagong Primary, Liverpool Boys', and Kiama Infants' obtained the mark "Good," and Nowra Primary and Wollongong Boys' "Excellent," for general efficiency.

Though in most schools the discipline is highly satisfactory, yet in a few it is defective through the government not being sufficiently watchful, and in consequence inattention, carelessness, and copying prevail. In such schools satisfactory progress is impossible. A teacher may be industrious, and his methods perfect, yet without attention, care, and independent work on the part of his pupils, his labour will be in vain.

Mental arithmetic is still a weak subject in many schools. The pupils are not taught to work out the questions in an intelligent manner, but are allowed to guess at the answers. Defective mental arithmetic, neglect to teach thoroughly the various tables, and copying are the main causes of the frequent failures in slate arithmetic. Few teachers test their own work in a thorough and systematic manner, but take it for granted that their pupils understand and retain all that has been told to them, and hence they are really ignorant of the amount of knowledge possessed by them.

Cookery classes were conducted at Bowral Public School during the last term of the year. These were attended by 60 girls, 36 of whom were pupils of Bowral Girls' School, 21 came from Mittagong School, and 3 from Berrima. At the close of the term the girls were examined by a committee of ladies, who expressed themselves as being highly pleased with the results.

There are 236 teachers, 40 assistant-teachers, and 68 pupil-teachers at present employed in the schools of this district.

Good work has been done during the past year, and equally satisfactory results may be looked for during the year now entered upon.

Bowral, 8th January, 1897.

W. H. JOHNSON,
District Inspector.

ANNEX O.

INSPECTOR MCLELLAND'S REPORT.

In consequence of a rearrangement of the boundaries of this section at the beginning of the year, 16 schools were transferred to the Braidwood Section, and 9 to Bowral, while 27 schools from the Arncliffe Section of the sub-metropolitan district were added to my list. In view of those alterations it was decided in July last to change the Inspector's head-quarters from Nowra to Wollongong.

No new schools have been opened, but Yerriyong Vale Provisional and Carrarawell Half-time were closed on account of failing attendance. There are now in operation at the end of the year 87 schools, classified as follows:—Public, 79; Provisional, 6; Half-time, 2; total, 87. A new school is to be established at Far Meadow, near Berry, and the Provisional School at Yerriyong Vale will be reopened after the summer vacation. This portion of the Colony is fully supplied with the means of education.

New buildings have been erected during the year at Mount Kembla and Jerrara, and others are in progress at Marshall Mount, Avondale, and Miranda. A large class-room has been built at Dapto, and another is going up at Woonona. Additions are also being made to the existing buildings at Bombo, Gerringong, and Yalwal, and tenders have just been accepted for erecting a new school and residence at Far Meadow. The works at Miranda, Far Meadow, and Yalwal are being carried out under my own supervision, the others under the supervision of the Clerk of Works. Various improvements and repairs have been effected at 37 schools and 15 residences, at a cost of £218 10s. 9d. More elaborate works have also been completed by the Chief Clerk of Works at a considerable number of schools.

Existing schools provide sitting-room for 9,692, and air-space for 9,371 pupils. Collectively, the accommodation is ample; but in a few special cases it is insufficient, and steps have already been taken for the purpose of enlarging the buildings to the extent required.

With the exception of Yerriyong Vale Provisional, closed somewhat unexpectedly during the midwinter vacation, all the schools in operation during the year were fully inspected. Of these, 83 exceeded, 2 were up to, and 3 fell below standard requirements. It is not to be inferred, however, that only 3 schools were found in an unsatisfactory state at the regular inspection. Speaking broadly, it may be advanced that where a school fails to obtain "Fair" for general efficiency there is something wrong with the teaching; and, as a matter of fact, a good many teachers have been called upon

for

for explanation of results [that seemed to indicate careless or unskilful methods of instruction. A certain amount of mechanical teaching is unavoidable in elementary schools; but it seems to me that too many teachers bring the mechanical frame of mind to all their work. They do not seize the opportunities offered in the more favourable subjects, of stimulating the imagination of their pupils, of cultivating in them a healthy, intelligent curiosity. The absence of thoughtful and interesting treatment of such subjects as geography, history, object lessons, composition, and the subject-matter of reading lessons, is very noticeable in some schools. The force of these criticisms is strengthened by the good results obtained by cultured, well-informed teachers—men whose ideas are not bounded by the range of three or four text-books.

Of the 514 pupils examined for exemption certificates, only 254 were successful—barely 50 per cent. Surely teachers themselves cannot be satisfied with this result. In only 10 schools did the passes exceed 50 per cent., and only 4 schools obtained a proportion exceeding 60 per cent. The tests applied were not severe, and it is therefore clear that a large number of the failures must be attributed to want of thoroughness in the teaching.

In regard to organisation and discipline, there is little fault to be found. The schools as a rule are kept scrupulously clean, and the internal arrangements are usually of a kind to ensure systematic work. In some cases more care and thought are desirable in the construction of time-tables and programmes. One important reform is now pretty general. Most of the teachers have succeeded in persuading their pupils that spitting on the slates as a means of cleaning them is neither effective nor picturesque. In the Wollongong School water-bottles have been permanently fixed to the desks. The pupils supplied the bottles, and the teachers the hooks from which they are suspended. In other cases every second ink-well is filled with water—a good plan where the ink-wells can be spared. The water-bottle system is the best however. The bottles hang below the front ledge of the desk, and are in no danger of breaking or spilling. In the majority of schools the behaviour of the pupils leaves little to be desired. The order rarely falls below good, and is sometimes excellent. So long as the pupils know anything about the subject in hand, they work with spirit. When they have been badly taught, they become discouraged or disgusted at their successive failures in answering the questions put to them. Then they become bored, and their faces express very plainly that they are tired of many things, inspectors among the rest. Later on, the teacher explains matters by declaring that no sympathy existed between examiner and children.

The work of the year has been satisfactory on the whole. A fair number of schools obtained high marks for general efficiency, and of these, Wollongong Boys', Nowra Primary, Helensburgh, and Kiama Infants' deserve special mention.

The teachers as a body perform their duties faithfully, if not always with the best results, and they almost invariably command the respect of the communities in which they live. There are 39 pupil-teachers on my list, and 24 of these sat for examination at the end of the year. The teachers' reports upon them were mostly of a favourable character, but only a few received special praise for aptitude in teaching. In no instance has the slightest fault been found with their moral character.

In conclusion, I may express the hope that the coming year will prove to be one of successful effort in removing, to a large extent, the obstacles in the way of durable and effective instruction.

H. D. McLELLAND,
Inspector.

Wollongong, 26th December, 1896.

ANNEX P.

INSPECTOR SMITH'S REPORT.

At the close of 1895 there were in the Crookwell Section of the Bowral District 60 schools, comprising 26 Public, 10 Provisional, 16 Half-time, and 8 House-to-house Schools.

At the beginning of 1896 there were transferred from Goulburn District to this section 11 Public, 2 Provisional, and 2 Half-time Schools, and from the Yass District 1 Half-time School, named Grassy Creek. Two new schools were opened during the year, named Forest Creek Provisional and Junction Point Half-time. Two Half-time Schools were closed, named Clonilton and Graham.

The following changes in the classification of schools were made:—Brewer's Flat and Meglo Provisional were reduced to Half-time, and Merryvale and Myanga Creek House-to-house raised to half-time. Pejar Public was closed for the last six months, but will be reopened early in 1897. The new year will therefore commence with 78 schools—37 Public, 10 Provisional, 24 Half-time, and 7 House-to-house Schools.

The accommodation in this section is more than sufficient for all the children attending the State schools. Reckoning 8 square feet, or 100 cubic feet, per child, there are 3,803, or 3,272 seats, provided respectively, whereas the enrolment for the December quarter was only 2,199 pupils.

Repairs and improvements under my own supervision have been carried out at 11 different schools, at a cost to the Department of £55 0s. 6d. The Public School at Wowagin was removed to a more central site, and enlarged for the sum of £57 15s. Extensive improvements under the supervision of the Architect were also carried out at Laggan and Taralga Public Schools. The repairs at Fullerton Public (£20) are not yet finished.

All the schools in this section received at least one regular inspection, and Laggan Public two inspections.

The number of pupils examined in the various subjects and the percentages up to or above standard are shown hereunder:—

Subject.	No. of Pupils examined.	Percentage.
Reading	1,597	87
Writing	1,597	91
Dictation.....	1,183	72
Arithmetic.....	1,597	70
Grammar.....	514	39
Geography.....	514	78
English History.....	514	68
Scripture.....	1,387	89
Object Lesson.....	1,516	82
Drawing.....	1,516	63
Music.....	1,333	59
Euclid.....	16	100
Needlework.....	525	71
Drill.....	1,481	79

The results of the examinations are, perhaps, not quite as satisfactory as they were last year, in consequence of the addition of such a large number of small schools.

The discipline, so far as the good behaviour of the children in school is concerned, is still good. Only one charge was preferred against a teacher, and this could not be substantiated. No improper use of the cane has been reported. The organisation, especially of schools managed by trained teachers, is decidedly very fair, and of the small schools tolerable.

Gullen Flat, Pejar, and Taralga Publics were below the prescribed standard; and also the Junction, Pomeroy, Streamville, Williams' Creek Provisional and Benbengoe and Byalla Half-time Schools.

Forty-seven out of 105 candidates passed for certificates of being sufficiently educated.

The

The number and the classification of the teachers and pupil-teachers employed are stated below :—

Class II A	1
„ II B	1
„ III A	23
„ III B	14
„ III C	3
	42
Assistants „ III A	2
Pupil-teachers, 1st Class	1
	45
Unclassified	22
	67

Crookwell, 31st December, 1896.

JOHN LESLIE SMITH,
Inspector.

ANNEX Q.

DISTRICT-INSPECTOR COOPER'S REPORT.

THERE were 372 schools in this District at the end of 1895. Some of these lapsed through diminished attendance, but, by transfer of schools from other Districts and the opening of new schools, the total number on the list at the close of the year showed an increase of 10 schools. The total number is now, therefore, 382, grouped as follows :—

Section of District.	Schools or Departments.		No. of Places, allowing for each Pupil.		Highest Quarterly Enrolment.
	1895.	1896.	8 square feet.	100 cubic feet.	
Goulburn	98	98	5,375	4,919	4,221
Braidwood	94	94	4,757	3,973	3,137
Bega	99	108	5,573	4,777	4,148
Yass	81	82	4,036	3,582	3,072
Totals	372	382	19,741	17,251	14,578

During the year 16 new schools were erected under the supervision of myself and the Inspectors stationed at Braidwood, Bega, and Yass, at a cost to the Department of £740. These afford the prescribed cubic space for 407 children. The aggregate school accommodation, as shown by the foregoing table, is ample for the children enrolled, and is very fairly distributed. There are now few overcrowded schools. Eighty-eight schools and 9 residences were repaired, entailing an expenditure of £486. At present the material condition of the schools is very good. So far as the teachers' responsibility on this point is concerned, I am pleased to be able to report that those who are under my own supervision have, for the most part, evinced a commendable desire to raise their schools to a satisfactory state of efficiency. In some cases, however, there has been evidence of a want of appreciation of the benefits which children derive from familiarity with the order, neatness, and beauty of well-kept and tastefully-planted school-grounds.

Attendance of Pupils and Payment of Fees.

	Goulburn.	Braidwood.	Bega.	Yass.	Totals.
Mean quarterly enrolment	1896 4,160	3,065	4,102	3,066	14,393
	1895 4,118	2,689	3,688	2,961	13,456
Mean average attendance	1896 3,293	2,138	3,004	2,171	10,606
	1895 3,019	1,954	2,591	2,093	9,657
Mean enrolment of free pupils	1896 690	429	521	551	2,191
	1895 552	248	354	397	1,551
Fees received	1896 £1,479	£1,019	£1,469	£1,055	£5,022
	1895 £1,384	£906	£1,296	£1,061	£4,647

Comparing the mean enrolment and mean average attendance, the regularity of attendance for the past two years appears as indicated hereunder :—

	1896	1895.
Goulburn Section	79 per cent.	73 per cent.
Braidwood „	69 „	72 „
Bega „	73 „	70 „
Yass „	70 „	70 „
Whole District	73 „	71 „

While there was marked improvement in the Goulburn Section, and some improvement in the District as a whole, there was slight deterioration in respect to this point in the Braidwood and Bega Sections.

Inspection.

There were 399 schools or departments in operation during the whole of 1896, or some portion of it. Of that number, 391 schools underwent regular inspection, and 16 were subjected to ordinary inspection. Of the 8 small schools that were not regularly inspected, 3 were in the Braidwood, 4 in the Bega, and 1 in the Yass Section. These schools were not inspected, because at the time of the Inspectors' visits to the localities in which they were situated they were not open. The following table shows the number of schools inspected in each section of the District, as well as the number of pupils examined, for the past two years :—

	1896.			Pupils Examined.	1895.			Pupils Examined.
	Regular	Ordinary.	Totals.		Regular	Ordinary.	Totals.	
Goulburn Section	99	+ 12 =	111	3,333	102	+ 5 =	107	3,324
Braidwood „	100	+ 1 =	101	2,326	99	+ 11 =	110	2,211
Bega „	109	+ 0 =	109	3,287	100	+ 8 =	108	2,973
Yass „	83	+ 3 =	86	2,416	85	+ 0 =	85	2,371
Totals	391	+ 16 =	407	11,362	386	+ 24 =	410	10,879

General Efficiency of the Schools inspected.

Section of District.	Class of School.	Above Standard.	Up to Standard.	Below Standard.	Totals.	Percentage up to or above Standard.	
						1896.	1895.
Goulburn	Public	51	1	1	53	98	98
	Provisional	9	0	0	9	100	100
	Half-time	30	5	1	36	97	97
	House-to-house	1	0	0	1	100	100
	Totals	91	6	2	99	98	98
Braidwood	Public	36	0	2	38	95	93
	Provisional	11	1	2	14	85	84
	Half-time	44	0	4	48	91	92
	Totals	91	1	8	100	92	92
Bega	Public	50	16	3	69	95	94
	Provisional	10	3	0	13	100	77
	Half-time	23	3	1	27	94	95
	Totals	83	22	4	109	96	93
Yass	Public	48	0	0	48	100	96
	Provisional	20	2	0	22	100	100
	Half-time	10	1	2	13	84	83
	Totals	78	3	2	83	97	95
Grand Totals.....		343	32	16	391	95	94

In respect to satisfying the standard of 50 per cent. for organisation, discipline, and attainments, these results are high, and show a slight improvement on those of 1895.

Proficiency of Pupils examined.

In the subjoined table, the proficiency of the pupils in the several subjects of the school course is indicated :—

subjects.	Numbers Examined in—		Percentage of Passes.				Percentage of total Passes.	
	1896.	1895.	Goulburn.	Braidwood.	Bega.	Yass.	1896.	1895.
Reading.....	11,362	10,579	95	88	97	85	91	90
Writing—

Scripture	11,098	10,610	97	97	88	67	88	86
Object Lessons	11,164	10,801	88	95	90	93	91	93
Drawing.....	11,062	10,604	91	89	91	87	90	88
Music.....	10,133	9,383	97	71	86	57	89	75
French	109	99	100	100	96	99	90
Euclid	433	444	81	100	85	100	91	95
Algebra	164	163	78	100	76	100	85	94
Mensuration	437	439	87	72	73	100	81	81
Latin	162	151	78	100	93	100	88	99
Trigonometry	13	15	70	69	100
Needlework	3,998	3,770	99	100	99	100	99	99
Drill	11,105	10,647	86	97	88	83	88	84
Science	294	282	85	100	89	89	88

These results may, I think, be accepted as fairly satisfactory, although the mark for a "pass"—50 per cent. of the maximum—cannot be regarded as high.

Exemption Examination.

During the regular inspections, 998 children were examined for exemption certificates, with results as under:—

Section of District.	Examined.	Passed.	Percentage of Passes.	
			1896.	1895.
Goulburn	325	213	65	63
Braidwood	185	108	53	58
Bega	280	188	67	58
Yass	208	99	47	47
Totals	998	608	60	59

In the Goulburn Section there were 239, in the Braidwood Section 96, and in the Yass Section 79 pupils who had previously obtained certificates. The general results are about the same as those reported for 1895; and inasmuch as they indicate that 40 per cent. of the pupils examined failed to meet the very reasonable standard requirements, they cannot be taken as fully satisfactory. The failures occurred chiefly in arithmetic, and give evidence of a want of thorough grounding in the elementary rules, and of too strict an adherence to mere routine work.

Superior Schools.

The work done in these schools has been, for the most part, productive of good results. The fifth class pupils of the schools of this class under my personal supervision were examined, as in former years, on paper, in all subjects in which that course is practicable, and in certain subjects the questions were set on the lines of the University Public Junior examinations—as contemplated by the Regulations. The senior boys and girls of the Goulburn Schools attended a year's course of lectures on experimental physics, given at the local Technical College by Mr. A. J. Sach, F.C.S. They were accompanied to the lectures by the regular teachers, on whom devolved the duty of revising with the pupils the substance of each lecture, an arrangement which, for the past four years, has been productive of excellent results. At the end of November the pupils underwent a written examination, and acquitted themselves very creditably.

Kindergarten.

For six and a half years selected Kindergarten occupations have formed a distinctive feature of the instruction given in the infants' classes of the Goulburn and Queanbeyan Schools. These classes have numbered nearly 800 pupils each quarter, and the beneficial effects of this admirable method have well repaid the teachers for the earnestness and zeal with which they have laboured to give the little ones entrusted to their care the advantages of a system of instruction at once rational and pleasing. During the year the Goulburn Superior Public School received a certificate and medal awarded at the World's Fair, Chicago, for excellent exhibits of Kindergarten work, needlework, and school exercises. The Kindergarten exhibits were prepared by Miss E. de Courcy's pupils, and the needlework and exercise books were forwarded by girls under the care of Miss E. J. Rushforth.

Manual Training Class.

The Public School Manual Training Class, in connection with the Goulburn Technical College, comprising 55 boys from the Goulburn Schools, has made excellent progress under Mr. Thomas Wilkie. Admission to this class is eagerly sought for by the lads who are eligible for entrance to it, and the training received therein cannot but prove beneficial to those who are privileged to enjoy it.

Discipline.

No features of our schools are, I think, more deserving of praise than the order, good conduct, and general discipline of the pupils. There has been very little cause during the year to note defects under this heading, and in respect to this point the schools of the District may be regarded as in a satisfactory condition.

Teachers.

The total number of teachers of all grades in the District at the end of 1895, was 393—an increase of 13 for the year. They were distributed as follows:—

Section.	Teachers.		Mistresses.	Assistants.		Classified.	Unclassified.	Pupil Teachers.		Totals.
	Males.	Females.		Males.	Females.			Males.	Females.	
Goulburn	50	22	6	3	12	77	16	6	12	111
Braidwood	50	22	4	55	21	1	7	84
Bega	78	14	1	1	4	79	19	2	9	109
Yass	49	26	5	53	27	2	7	89
Totals	227	84	7	4	25	264	83	11	35	393

With few exceptions, the teachers are careful and circumspect in their personal conduct, and imbued with a proper sense of the honourable and responsible nature of their calling. As a body, they are intelligent, skilful, and trustworthy.

Summary.

The educational wants of the District are well provided for, the results of inspection evidence the fact that the schools are affording a sound education to a large proportion of the available children, and the prospects of the present year are hopeful.

Reports from the Inspectors in charge, respectively, of Braidwood, Bega, and Yass Sections are appended hereto.

Goulburn, 4th January, 1897.

D. J. COOPER,
District Inspector.

ANNEX R.

INSPECTOR NOLAN'S REPORT.

At the close of 1895 my list contained 94 schools, 1 of which was not reopened. At the beginning of the current year 16 schools, transferred from the Nowra Section, were placed under my supervision; on the other hand, 8 schools were transferred from Braidwood to the Bega Section. During the year 1 new school was established, and 8 schools were permanently closed on account of small attendance. The present year closes with 94 schools.

As stated in former reports, the population of the greater portion of this section is of an unsettled character. Many rural settlements, formerly able to maintain a school, are now almost deserted, the general tendency of the residents being to gravitate to the larger townships; hence the difficulties in dealing with applications for the establishment of small schools, and the inadvisableness of

of erecting costly buildings. Where, however, the settlement is likely to be permanent, steps have been, or are being, taken to supersede the old make-shift buildings by others of a more substantial character. Arrangements are also being made to supply spacious verandahs, which, besides affording shelter, also furnish lavatory accommodation. Speaking generally, the existing schools meet the requirements of the District, and they are well distributed. During the coming year a few small schools will be required to meet the extension of settlement; but, on the other hand, others being unable to maintain the minimum attendance will probably be closed. The gross enrolment for the year was 3,796, and the average daily attendance was 2,189. The 4,757 seats now available afford more than ample accommodation.

Under Inspectorial supervision 2 new buildings were erected, at a total cost of £183 12s., and 19 schools were improved, at a cost of £69 10s. A new building, to cost £125 10s., is near completion at Nerriga. The undermentioned works, now in hand, are being carried out under the supervision of the Chief Clerk of Works:—

Burrill, new building	£134	7	6
Milton, painting and repairs	23	4	0
Bell's Creek, painting and repairs	130	0	0

Active steps will be taken during the ensuing year to improve several of the existing buildings. Of 103 schools open during the whole or some part of the year, 100 received regular inspection. Three Half-time Schools having been closed prior to my visit to their respective localities, were not inspected. After a rigid examination, 8 schools were found to be below, 1 up to, and 91 above, standard requirements. The corresponding results for 1895 were 8 below and 91 above standard. A comparison shows that an equal standard has been maintained during the two years. There were 2,326 children present at examination. Of 185 pupils examined for exemption certificates, 108 passed the prescribed test; 96 who obtained certificates in former years were found to be still regular school attendants. The majority of the schools are reasonably well equipped, and the departmental property is carefully guarded. Much more attention, however, needs to be paid to the ornamentation of the premises. The disciplinary condition is of a satisfactory character, and the moral tone is pleasing. The results of the instruction may be regarded as satisfactory, more especially in view of the many drawbacks incidental to country schools. School banks are in operation at 5 schools, with fair success. Several teachers are taking active steps in the formation of school libraries. With but rare exceptions the teachers are zealous in the discharge of their important duties. They uphold the dignity of their profession, and their local influence is of a salutary character. The pupil-teachers continue to give satisfaction to all concerned in their training.

W. NOLAN,
Inspector.

Braidwood, 26th December, 1896

ANNEX S.

INSPECTOR SHEEHY'S REPORT.

THE boundaries of this portion of the Goulburn District have been extended by the establishment of schools at Ledgerton and Uriarra, on the western side of the Murrumbidgee River, and at Godfrey's Creek, which is situated about midway between Burrowa and Cowra. The Yass Section now includes most of the counties of Murray, King, Harden, Buccleugh, and Cowley, together with portions of Argyle, Monteagle, and Clarendon.

At the end of 1895 there were 81 schools under my supervision. Cooba Creek, Nangus, and Cavan Half-time, in which the attendance had greatly diminished, were not opened after the Christmas vacation. Warham, which had been worked with the latter, was converted into a Provisional School. At the commencement of the March quarter, Brawlin Public was transferred to the Inspector at Young, and Cooradigbee Provisional was continued for a few weeks only, on account of paucity of attendance, through the removal of some of the residents from the locality.

In the course of the year new Provisional Schools were opened at Godfrey's Creek and Mulligan's Flat, and Half-time Schools at Grassy Creek and Talmo. The schools at Kenny's Creek and Waggallalah, which had been closed, were reopened as Half-time, the former to be worked with Grassy Creek, and the latter with Berebangalo, reduced from Provisional to Half-time rank. Bookham Public, which was discontinued for a few months, was made the companion school of Talmo.

In consequence of increased attendance, Galong Provisional, which had been enlarged, was converted into a Public School, and Kenny's Creek and Yammalree Half-time were converted into Provisional Schools. From the Wagga Wagga District, Jones' Creek Half-time was added to my list, to be worked in place of Yammalree with Bongongolong; and Grassy Creek, which had been opened in conjunction with Kenny's Creek, was transferred to the Inspector at Crookwell. After these changes the schools in operation in this section numbered 82, viz. :—

Public	48
Provisional	22
Half-time	12

In January new schools will be opened at Ledgerton and Uriarra.

From the residents of seven localities applications for the establishment of new schools were received and inquired into. The result is given hereunder:—

Locality.	Kind of School applied for.	Result.
Gundaroo Road, near Murrumbateman	Provisional	Declined.
Kangiarra Creek	"	"
Cade's Creek	Half-time	"
Jerrawa	Evening Public	"
Ledgerton	Half-time	Granted.
Uriarra	"	"
Talmo	"	"

Inspection.

The number of schools open during the year, or some portion of it, was 84. Except 1 Provisional School, which was in operation for a few weeks only in the month of January, all were fully inspected, and 1 received a second regular inspection. Opportunities occurred in connection with special visits to make in addition three ordinary inspections. Of the 83 schools examined, 2 were below, 3 up to, and 78 above the standard (50 per cent. of possible marks). The efficiency of the different classes of schools is shown in the following table:—

Schools.	Below Standard.	Up to Standard.	Above Standard.	Total.
Public	0	0	48	48
Provisional	0	2	20	22
Half-time	2	1	10	13
Totals	2	3	78	83
Totals in 1895	4	3	78	85

Organisation.

Except where the buildings were erected by the residents, the schools generally are in a satisfactory state of repair, and are provided with tanks. All are adequately supplied with working materials. In the majority of them the lesson guides are suitable, and show that care and judgment are bestowed on their construction. One exception was of a very pronounced character, and was suitably dealt with.

Discipline.

The discipline is, on the whole, healthy. Good order is maintained. The pupils are, as a rule, mannerly, and exhibit a becoming demeanour. There is an improvement in the regularity and punctuality as compared with last year. The attendance, however, at several schools was very much affected during the December quarter by the absence of pupils whose services were utilised in connection with shearing and harvesting.

Proficiency.

The number of pupils examined, and the percentage of passes in each subject, are given below:—

Subjects.	Number Examined.	Number Passed.	Percentages.	
			1896	1895.
Reading	2,416	2,067	85.5	80.2
Writing	2,269	2,169	95.5	93.8
Dictation	2,000	1,381	69.0	70.4
Arithmetic	2,281	1,967	86.2	80.6
Grammar	982	732	74.5	58.7
Geography	977	768	78.6	66.4
History—English	987	647	64.5	54.5
" Australian	125	123	98.4	100.0
Scripture	2,416	1,629	67.4	62.5
Object Lessons	2,415	2,256	93.4	87.6
Drawing	2,223	1,951	87.7	87.3
Music	2,416	1,392	57.6	50.1
Euclid	84	84	100.0	100.0
Algebra	23	23	100.0	100.0
Mensuration	27	27	100.0	68.4
Latin	31	31	100.0	100.0
Needlework	961	961	100.0	99.2
Drill	2,416	2,017	83.4	75.5

In most subjects the percentages show satisfactory progress since last inspection.

Of 208 pupils who were presented for exemption certificates, 99 passed the necessary examination. Seventy-nine pupils holding certificates were present at inspection, and 48 of these were enrolled in 4 schools.

Teachers.

There were 75 teachers in charge of schools, 5 assistants, and 9 pupil-teachers employed in this section at the end of the year. Their classifications are given in the subjoined table:—

	II A.		II B.		III A.		III B.		III C.		Un-classified.		Totals.		Grand Total
	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	
Teachers in charge	6	0	3	0	17	2	7	8	3	4	13	12	49	26	75
Assistants	0	1	0	0	0	1	0	0	0	1	0	2	0	5	5
Totals	6	1	3	0	17	3	7	8	3	5	13	14	49	31	80

Pupil-teachers.

Class I.		Class II.		Class III.		Class IV.		Probationers.		Totals.		Grand Total.
Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	
1	3	0	0	0	0	1	3	0	1	2	7	9

The teachers as a body are earnest and painstaking in the discharge of their duties, and desirous to carry out suggestions where improvements are required.

Accommodation.

At the end of last year the number of seats reckoned at 100 cubic feet of air space for each pupil was 3,642. Of these, 300 were lost by the closing of 4 schools, the giving up of 3 old buildings, and the transfer of 2 schools from this section. By the erection of 6 new school-rooms, the re-opening of 2 schools, an addition to a school-building, and the transfer of a school to my list, 240 new seats were provided. Hence the present sitting accommodation consists of 3,582 places. This is sufficient, except in the case of 2 small schools, which were built by the residents.

New buildings erected during the year:—

School.	Cost.	Places at 8 square feet of floor space.	Places at 100 cubic feet of air space.	Supervised by	Remarks.
Lerida Public	£ s. d. 73 0 0	40	32	Inspector ...	Erected to replace old building.
Nurung Public	52 17 0	40	32	"	"
Watson's Reef Public	88 0 0	59	57	"	"
Mulligan's Flat Provisional...	20	11	Residents...	Erected where no school existed before.
Grassy Creek Half-time	27	19	"	"
Talmo Half-time	15	8	"	"

Under the supervision of the Inspector the school-building at Griffiths' Flat was enlarged and renovated at a cost of £31 2s. Repairs, &c., were effected to 33 schools and 5 teachers' residences. The former cost £130 18s. 4d., and the latter £43 4s. 6d.

The following works are in progress:—Improvements to 3 schools and 4 residences, to cost £11 6s. and £70 9s. 6d. respectively.

Summary.

Three new schools have been opened, 2 others are fit for occupation, and 3 new buildings to replace old ones have been erected. There is an improvement in the general efficiency of a large number of schools, and 94 per cent. of the whole are above the requirements of the standard. The means of education are well distributed, and the prospects for 1897 are satisfactory.

Yass, 31st December, 1896.

P. F. SHEEHY,
Inspector.

ANNEX T.

INSPECTOR DURIE'S REPORT.

At the close of 1895 there were in the Bega section of the Goulburn District 99 schools, made up as follow:—69 Public, 10 Provisional, and 20 Half-time. At the beginning of 1896 there were transferred from Braidwood to Bega section the following seven schools:—Bateman's Bay and Mogo Public, Buckenbour Provisional, and Snaphook, Moggendoura, Burry, and Mosquito Bay Half-time; while later in the year Pleasant View Half-time was similarly transferred. During 1896 the following new schools have been opened:—Cooper's Glen and Pericce Provisional, and Glen Allan, Curry Flat, Green Cape, and Wombayn Half-time; while Avoca and Walaga Lake Public, and Bournda South, Quinburra, Dangelong, and Boco Half-time have been closed, on account of insufficient attendance. The following changes have been made during the year in the status of schools:—Killarney Swamp and Wapengo Provisional, Wandella and Fox Half-time have been raised to Public; Oakvale, Snowy River, and Bournda North have become Provisional, and Burrembooka, Maharatta, Garfield, and Stony Creek Public have been reduced to Half-time. Two Public Evening Schools were in operation during the year, viz., at Mumbulla and Bombala; the former, after a very brief existence, lapsed; the latter, which started about the middle of November, is still in operation. The schools existing at the close of 1896 consist of 69 Public, 14 Provisional, 24 Half-time, and 1 Public Evening School; total, 108.

The total enrolment of pupils in all schools for the year was 5,033, and the average attendance 3,041.9. The following table shows the attendance for 1895 and 1896:—

Quarter.	Enrolment.		Attendance.		Percentage.	
	1895.	1896.	1895.	1896.	1895.	1896.
March	3,717	4,102	2,507.8	2,975.1	67.4	72.5
June.....	3,698	4,148	2,603.5	2,890.1	70.4	69.6
September	3,658	4,064	2,461.2	3,089.3	67.4	76.0
December	3,686	4,095	2,795.3	3,062.8	75.8	74.7

It will thus be seen that, while in 1895 the attendance was 70.2 per cent. of the enrolment, it reached 73.2 per cent. in 1896, an improvement of 3 per cent. for this year.

During the year I made 109 regular inspections. Four schools were not so inspected. These were Avoca and Panpong Public, and the Evening Public Schools at Mumbulla and Bombala. Of the Public Schools, Avoca was closed before the end of February, and Panpong School was not in operation when I paid the locality my visit of annual inspection; in fact, it has been closed, pending the appointment of a teacher, since the middle of August. The Evening School at Mumbulla was in operation for only a portion of September quarter, and Bombala Evening School opened on 11th November. I made an incidental inspection of the latter school a few nights after its opening. No ordinary inspections were made during the year.

The following table shows the comparative condition of the schools inspected in 1895 and 1896. It will be seen that the results are on the whole higher for this year:—

Schools.	Below Standard.		Up to Standard.		Above Standard.	
	1895.	1896.	1895.	1896.	1895.	1896.
	per cent.	per cent.	per cent.	per cent.	per cent.	per cent.
Public	6	4	20	24	74	72
Provisional.....	22	...	33	3	45	77
Half-time	4	4	23	11	73	85
All	7	4	22	20	71	76

At the close of 1896 there were employed in the schools of this district 109 teachers, viz., 81 males and 28 females. These are classified as follows:—

Class 1 B	2	Pupil-teachers—	
„ 2 A	8	Class 1	2
„ 2 B	7	„ 2	2
„ 3 A	45	„ 3	0
„ 3 B	10	„ 4	6
„ 3 C	7	Probationer	1
Unclassified	19		
Total	98	Total.....	11

Grand total, 109.

The teachers have maintained their high character for industry and trustworthiness, and are on the whole held in high esteem by the residents.

Summary.

1. The schools during 1896 have slightly improved in efficiency and regularity of attendance.
2. The education requirements of the district are well supplied.
3. The outlook for 1897 is encouraging.

Bega, 31st December, 1896,

P. DURIE,
Inspector.
ANNEX U.

ANNEX U.

DISTRICT INSPECTOR LOBBAN'S REPORT.

THE year 1896 closed with 319 schools or departments in operation in the Grafton District, viz., Public, 225; Provisional, 55; Half-time, 34; House-to-house, 4; and Evening Public, 1. There were 74 Public Schools, 16 Provisional Schools, 10 Half-time Schools, 4 House-to-house Schools, and 1 Evening Public School in the Grafton Section; 81 Public, 16 Provisional, and 8 Half-time Schools in the Port Macquarie Section; and 70 Public, 23 Provisional, and 6 Half-time Schools in the Lismore Section.

During the year 4 schools were closed through diminished attendance in the Grafton Section, 1 in the Port Macquarie Section, and 2 in the Lismore Section. On the other hand, 8 new schools were established in the Grafton Section, and 2 others that had been closed were reopened; 1 new school was established in the Port Macquarie Section, and 3 were reopened; and 3 new schools were established in the Lismore Section, and 2 were reopened. At the end of 1895 there were 307 schools in operation, so that the progress of the year 1896 is shown by an increase of 12 schools.

All works carried out in the Grafton Section were under Inspectorial supervision. A portion of the improvements in the other sections were supervised by the Department's Clerks of Works. In the Grafton Section 3 new school-buildings were erected by the Department, and 4 others, built by the parents, were given rent-free. In the Port Macquarie Section 1 new school-house was put up; and 5 schoolrooms were built in the Lismore Section.

Some old buildings were replaced by new ones; and 4 school-houses were enlarged. By these means 127 additional seats were provided, giving available places at the end of the year for 5,763 scholars; 5,636 seats were provided at the end of 1895. There is now adequate accommodation in most schools for the number of children in ordinary attendance. Those that are too small are either in process of enlargement, or steps are being taken to enlarge them. In old settled districts like the Grafton and Port Macquarie Sections, rapid increase of population is not expected; yet considerable progress in the way of settlement in both is being made. This is especially the case in the Grafton Section, where rich gold reefs are now being developed. Dairying has taken firm root on the Richmond and Clarence, and this industry will tend to the concentration of settlement in these districts.

No new residences were erected in the Grafton or Port Macquarie Sections; but one was built in the Lismore Section under the Architect's supervision. A large amount of time, after office hours, had to be devoted by the Inspectors to the preparation of plans and specifications for the works they had to carry out. Under Inspectorial supervision 9 new school-houses were built, 6 were enlarged, and 127 buildings were repaired or improved at a total cost of £2,021 7s., viz., Grafton, £847 10s. 9d.; Port Macquarie, £504 1s. 11d.; and Lismore, £699 14s. 4d. These sums do not include the expenditure under the Architect in the Port Macquarie and Lismore Sections. The Department's property throughout the District is well preserved and in good order. Considering the extent and population of the District, the expenditure on buildings and repairs has been small. Strict economy was practised by the Inspectors in the use of the funds placed at their disposal. It is gratifying to be able to add, however, that the Department's property has never been in a more satisfactory condition than it is at present.

All the schools in operation during any part of the year (326) received a regular inspection, and 6 of them underwent an ordinary or second regular inspection also. There were 11,725 pupils present at examination—63 more than in 1895. The number would, no doubt, have been greater had the practice followed last year, of notifying the dates of inspection to the teachers been continued. In the schools of the Grafton Section, 4,024 scholars were examined; 3,734 in the Port Macquarie Section; and 3,967 in the Lismore Section. There were 14 schools below the standard; 7 up to standard; and 305 above the standard: viz.—Grafton Section, 1 below, 2 up to, and 106 above; Port Macquarie 8 below, 4 up to, and 104 above; and Lismore, 5 below, 1 up to, and 95 above. It is thus seen that 96 per cent. of the schools were up to or above the standard. This is the best record the district has made. It may be added that of those below standard, some were not a year in operation, while others had not Third Class, without which the standard cannot be reached. The Chief Inspector examined the upper classes in the Boys' and Girls' Schools at Grafton, and also in the schools at Smithtown, Frederickton, East Kempsey, West Kempsey, and Taree. He also visited and incidentally inspected a large number of schools in the lower grades in the Grafton and Port Macquarie Sections. Mr. Board inspected all the schools in his own section, and 4 in the Grafton Section.

The following table shows the number of scholars examined in the three sections respectively, and the number of passes in each subject; with the percentage of passes for 1895 given for the purpose of comparison:—

Subjects.	Grafton.		Port Macquarie.		Lismore.		Total.		Per cent. 1896.	Per cent. 1895.
	Examd.	Passed.	Examd.	Passed.	Examd.	Passed.	Examd.	Passed.

Natural Science	64	52	87	80	50	44	201	176	87	93

On the whole these results may be considered satisfactory. Arithmetic is the least effectively taught of the more important subjects, only 74 per cent. having satisfied or exceeded the standard. The great defect is in dealing with the compound rules and reduction. The country is now flooded with cheap arithmetic books, and these are relied upon in many cases to supply the necessary questions for solution. The subject is best taught in schools where the teachers frame their own questions and give much attention to mental arithmetic. In the better schools the higher classes do not use slates at all, their work being done on paper. The writing is fairly satisfactory in most schools; in a few it is very good. As a rule, the girls write better than the boys. Reading is carefully taught in most schools, and 91 per cent. of the pupils examined passed. Much care is bestowed upon spelling; and

81 per cent. of the pupils passed in dictation. More attention, however, needs to be given to derivation and word-meanings. Grammar does not appear to be so thoroughly taught as in former years, and in some schools the treatment of the lessons in geography is very crude. Most of the schools are well organised, and the discipline, as a whole, is of a healthy character.

Pupils from 12 schools were successful at the University examinations—1 senior and 42 juniors having passed. In this examination the Grafton Boys' School stood out prominently with 17 passes, including 6 matriculants; while Chatsworth Island Public, with 6 passes, deserves honorable mention.

During the year, 896 pupils were examined for exemption-certificates, but only 499, or 55 per cent. passed. In Grafton Section 320 were examined, and 233, or 72 per cent., passed; in Port Macquarie Section 266 were examined, and 92, or 34 per cent., passed; and in Lismore Section 310 were examined, and 174, or 56 per cent., passed. These results are decidedly unsatisfactory, when it is remembered that no pupil is required to undergo this examination who has not been four half years in the Third Class.

A considerable impetus has of late years been given to the study of English composition in the schools on the Clarence River by the valuable prizes offered each year by the Caledonian Society for the best essay on a subject connected with Scottish history, written by a Public School pupil in the presence of the District Inspector and the Secretary of the Society. This year three prizes were offered:—(i) A complete set of the Works of Sir Walter Scott; (ii) Separate editions of the Works of Shakespeare, Moore, and Wordsworth; (iii) Life and Works of Robert Burns, 1896 edition—all elegantly bound. Thirty pupils entered for the competition, and all did creditably. The subject was "Flodden Field." The first prize was won by Clarence Northcott, Ulmarra Public School; the second by Ida Garven, Grafton Superior Public School; and the third by Julia Farlow, Superior Public School, Maclean.

The attendance throughout the year was very fairly satisfactory. The highest enrolment in each section was reached in the September quarter:—

Grafton Section.—Enrolment, 5,173; average daily attendance, 3,889.6; 75 per cent.

Port Macquarie Section.—Enrolment, 4,922; average daily attendance, 3,581.2; 73 per cent.

Lismore Section.—Enrolment, 5,103; average daily attendance, 3,886.5; 76 per cent.

The regularity of attendance during September quarter was, it is seen, 1 per cent. better in the Lismore than the Grafton Section, and 3 per cent. better than in the Port Macquarie Section. For the other quarters the percentages were:—

Grafton	March, 73 per cent. ; June, 76 per cent. ; December, 74 per cent.
Port Macquarie	" 68 " " 72 " " 71 "
Lismore	" 69 " " 76 " " 74 "

From these figures, it appears that the regularity of attendance for the whole year is best in the Grafton Section, and worst in the Port Macquarie Section. Year by year the regularity of attendance in the Lismore Section continues to improve, as the enrolment of pupils increases, and it is not improbable that next year this section will stand first both in enrolment and average daily attendance. Legal action in connection with the compulsory clauses of the Act had to be resorted to in very few cases. This satisfactory state of affairs is largely due to the judicious and effective action of the teachers, in whose hands this matter now practically rests.

There were 1,876 free pupils on the rolls at the end of the year, viz., 675 in Grafton Section; 586 in Port Macquarie Section; and 615 in Lismore Section. None were granted free education who could reasonably be expected to pay school fees. A large number of persons who hoped to be able to pay, found after a time that they were unable to do so, and as they had not obtained free education, they were obliged to apply to the Department to cancel their debts, which in the aggregate amounted to a considerable sum. At the end of the year the arrears of fees amounted to £131 19s. 9d., viz., Grafton, £22 2s. 9d.; Port Macquarie, £65 8s. 9d.; and Lismore, £44 8d. 3d. It is probable that a considerable proportion of these amounts may be regarded as bad debts. Very few parents were summoned on account of failing to pay school fees; but when they were, verdicts were obtained, and the debts were promptly paid. More hopeful prospects are now in view, and it is confidently anticipated that the free list will be considerably less in 1897.

Most of the school banks continue to flourish. There were 21 in operation at the end of the year in Grafton Section, with 689 depositors on the books, having £157 9s. 3d. to their credit. In the Port Macquarie Section, there were 20 banks, with 393 depositors, having £91 17s. 6d. to their credit. In the Lismore Section there were 15 banks.

Several of the school grounds present a pleasing appearance, while others are bare and uninteresting. Some of the residences have quite a home-like aspect, in consequence of the thoughtfulness of the teachers in planting flowers and fruit-trees, and cultivating gardens. Pretty flower-beds impart a charm to the otherwise uninteresting surroundings of many of the small schools in the bush, taught by female teachers. This does not apply, generally, to schools similarly situated, but under the charge of male teachers. The school-grounds at Chatsworth Island are the best kept in the Grafton Section, and everything about the premises gives evidence of the teacher's care of the Department's property.

The Public School Boards continue to take an intelligent interest in the supervision of the schools in their respective Districts. Valuable assistance has been rendered by many of them in systematically supervising works in progress in connection with school-buildings; the result of their frequent inspections being satisfactorily-completed contracts.

The school staff at the end of the year consisted of 296 teachers, 4 mistresses, 26 assistants, 61 pupil-teachers, and 1 work-mistress, viz. —

Grafton Section.—97 teachers, 2 mistresses, 10 assistants, 28 pupil-teachers, 1 work-mistress.

Port Macquarie Section.—106 teachers, 6 assistants, 17 pupil-teachers.

Lismore Section.—93 teachers, 2 mistresses, 10 assistants, 16 pupil-teachers.

They are classified as follows:—

I B.		II A.		II B.		III A.		III B.		III C.		Nil.		Class I.		Class II.		Class III.		Class IV.		Probationers.	
M.	F.	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.
4	1	47	5	15	1	95	27	30	8	9	5	47	32	5	8	2	4	12	5	10	14	0	1

The only work-mistress in the District is employed in the Girls' department of the Grafton Superior Public School. Most of the unclassified teachers have been trained as pupil-teachers, and will, in due course, be examined for classification. The teachers as a body are studious, industrious, and trustworthy, and conduct themselves in such a way as to command the respect of the people among whom they dwell. Many of the young ex-pupil teachers in out-of-the-way places are doing excellent work, and to them is due very largely the improved condition of the lower grades of schools. The pupil-teachers continue to maintain the reputation they have won for diligence and good conduct. There were very few failures at the yearly examination. Reviewing the year's operations there is much ground for encouragement. Many of the schools are presided over by able and capable teachers, and in nearly every school an honest attempt is made to do good work. The success of the schools depends upon the teachers, and it is gratifying to know that many of them aim at a high ideal, and realise that the training of character is as much a portion of their duty as the culture of the mind.

Grafton, 11th January, 1897.

A. LOBBAN,

District Inspector.

ANNEX V.

ANNEX V.

INSPECTOR WRIGHT'S REPORT.

Of the 116 schools under my charge during the year, 3 were schools temporarily closed during 1895, and reopened in 1896, and 1, Kundibakh Provisional, was a new school. Only 1 school, Nullenbullah Half-time, was closed during the year, so that there are now 115 schools in operation, viz. :—

81 Public.
16 Provisional.
18 Half-time.

The establishment of 4 new schools has been sanctioned, viz., Provisional Schools at Macleay Entrance and Mungay Creek, and 2 Half-time Schools on Five Day Creek, and these will be opened early in 1897.

Accommodation.

There is now accommodation in existing schools for 6,911 pupils, allowing 100 cubic feet for each child, or for 7,021 pupils, giving to each pupil 8 square feet of floor space. The gross enrolment for the year was only 5,932, and the highest quarterly enrolment 4,922; so that ample provision for the requirements of the District has been made.

Inspection.

All the schools (116) open during the year were fully inspected, and 108 (93 per cent.) were found to be up to or above the requirements of the standard. These results are 7 per cent. better than those obtained last year, and may be regarded as very satisfactory. The schools which received the highest marks for efficiency were Taree Superior Public and Wingham Public.

Teaching Staff.

At the end of the year there were 129 teachers employed, viz., 106 principal teachers, 6 assistant teachers, and 17 pupil-teachers. Of the principal teachers, 78 have classifications ranging from I B to III C, and 28 are unclassified. The teachers generally are zealous and earnest, and are held in high esteem as teachers and citizens.

School Property.

A number of school-houses, residences, &c., have been repaired during the year, and most of the premises are now in good order, and present a pleasing appearance. The school property is in most cases carefully attended to by the teachers, who generally prove satisfactory tenants.

Summary.

The educational requirements of this section are adequately met, the teachers are capable, and the work done is sound and progressive. The prospects for the coming year are satisfactory.

Port Macquarie, 2nd January, 1897.

STEWART WRIGHT,
Inspector.

ANNEX W.

INSPECTOR BOARD'S REPORT.

At the close of 1895 there were 96 schools in operation in this section. In the course of the past year new Provisional Schools have been opened at Jasper, Norton's Gap, and Wollumbin. The school at Riley, which was closed at the end of 1894, was reopened as Provisional in July, 1896; and the school at Tucki Tucki, closed in June, 1895, was reopened as Provisional in November, 1896. In all, 101 schools have been in operation during the whole or portion of the past year; of these, Brunswick Public School was closed in June last, and Drighlington Half-time School in October, leaving 99 in operation when the year closed. These are classified as follows :—Public, 70; Provisional, 23; Half-time, 6.

Tabulam Provisional School was closed during the first half of the year, but was reopened in July last. During the year the Provisional Schools at Condong and Durambah have been converted into Public Schools, and the Half-time School at Kyogle into a Provisional School. A Provisional School is about to be established at Keerong, near Lismore.

The area included in this section is now well provided with schools, which are distributed so as most conveniently to meet the requirements of the population. Where it has been found necessary school buildings have been removed and re-erected in positions where they better suit the needs arising from changes of settlement. The number of applications for new schools has been much smaller than in previous years; but, on the other hand, the demand for the enlargement of existing school buildings has increased. It is in this direction that the necessities of the near future must be chiefly met, as the trend of new settlement is towards parts of the District already provided with small schools rather than to more outlying portions. From this cause additional accommodation has had to be provided at Riley's Hill and Byron Creek, and additions to New Italy and Nunulgi schools will be completed during the present vacation. The number of seats provided at the end of 1895 was 5,734; by the erection of new school buildings and additions the number has been increased to 5,886, while the maximum quarterly enrolment has increased from 5,029 to 5,103.

In the course of the year new school buildings have been erected at Alstonville, White Swamp, and Pearce's Creek, to replace old ones, and repairs have been carried out as they were found to be necessary. Attention has been specially directed towards increasing the comfort of the smaller schools by the addition of verandahs, the supply of lavatories, and the internal lining of weather-board buildings. The erection of a new school at Alstonville and a teacher's residence at Byron Creek was carried out under the Architect at a cost of £421 7s. 6d. All other buildings and repairs have been under the Inspector's supervision. Completed works of this kind have cost £669 14s. 4d., and works now in progress will involve an expenditure of £564 13s. 8d. Excepting two or three buildings which will receive attention early in the coming year, the school premises in this Section are in good condition, and are well provided with teaching requisites.

All the schools in operation during the year received a regular inspection; two were regularly inspected a second time, and two ordinary inspections were made. The results of inspection show that the efficiency of the schools in 1895 has been maintained during 1896, the average general efficiency being 62.6 per cent. in both years. Of the 101 schools inspected, 5 were below standard, 1 up to standard, and 95 above standard. The results of examination in the various subjects of instruction show a general similarity to those of last year, the most noticeable variations being an advance of 4 per cent. in writing and dictation, of 2 per cent. in arithmetic, and a decline of 2 per cent. in grammar and English history. Greater attention has been given to the teaching of writing during the past year, and with the adoption of more skilful methods of treating the subject, a further advance is looked for. English history gives the least satisfaction, the passes in this subject being only 70 per cent. This is due in varying degrees to the fact that the treatment of the subject frequently embraces nothing more than the barren details supplied by the text-book prescribed for Third Classes, without being supplemented and illustrated from the larger knowledge of the subject, which it is essential the teacher

teacher should possess, and also to insufficient discrimination between what is of primary, and what is of merely secondary importance in historical events. The importance of the use of maps in the teaching of history needs to be more fully recognised.

During the year, 310 pupils were examined for exemption-certificates, and 174 passed, the percentage of passes being the same as in 1895.

The organisation and discipline of the schools are generally satisfactory; school libraries are being gradually extended, and the playgrounds, as a rule, are kept in good condition.

The total number of teachers in this section is 121, classified as follows:—Class II, 22; Class III, 57; unclassified, 26; pupil-teachers, 16; of the unclassified teachers, 17 have been trained as pupil-teachers. The teachers, as a body, are much respected, and the generally satisfactory character of the past year's work is due to earnestness and industry, with which they have discharged their duties.

Lismore, 2nd January, 1897.

P. BOARD,
Inspector.

ANNEX X.

DISTRICT INSPECTOR T. DWYER'S REPORT.

At the beginning of the year the following changes were made in regard to the distribution of the schools of this District, viz., 17 schools on the Upper Hunter were transferred to Armidale; one was placed in Wellington District, 20 schools were taken from the Sub-metropolitan District and added to this, and 13 schools of the Maitland Section were transferred to Dungog.

The number of schools in operation during some portion of the year was 245, comprising:—

197 Public Schools and departments.
20 Provisional.
21 Half-time.
4 House-to-house.
3 Evening Public.

Total..... 245

In the Maitland Section one small school, Murray's Run Half-time, was closed at the end of June for want of attendance. The school buildings in that locality have been taken down, and re-erected at Yango. The West Maitland Evening Public School was closed a few weeks ago. Three small schools were erected and opened during the year in places wherein no schools previously existed, viz., Luskiutyre Public, Maison de Dieu Provisional, and Manobali Provisional. A new class-room for Rix Creek was completed at the close of last year. Forty-three school buildings underwent repairs under my supervision, at a cost of £265 3s. 3d., and 13 teachers' residences were improved, under the same supervision, at an outlay of £193 7s. 3d. It has been decided to establish a Public School at Dalwood, and to erect a new school-room at Cox's Gap.

The number of schools in operation at the close of 1896 was:—

197 Public Schools and departments.
20 Provisional Schools.
21 Half-time Schools.
4 House-to-house Schools.
1 Evening Public School.

Total..... 243

Existing schools are centrally situated, and afford more than ample floor-space for the highest average attendance during any part of the year. The total floor-space for 1896 for the whole district is 25,579, and the total number of cubical spaces for the same period 27,202, as against 24,240 and 26,612 respectively in 1895.

Tree-planting and the cultivation of flower-gardens in the Maitland Section have almost been discontinued, except in the case of the following schools, in which considerable attention is still given to arboriculture and gardening, viz., Aberlcon, Bolwarra, Denman, Homeville, Horseshoe Bend, Hinton, and Largs. The organisation and discipline of the schools of this District continue to be very satisfactory. In a few schools, however, errors of a serious nature were found in the rolls, the admission registers were incomplete, daily report books were not posted for several days, and lesson registers were in arrear. In one school that record was found unposted for three consecutive months: Drill in the schools of this section, which are visited by Captain Mulholland, shows marked improvement since that gentleman's appointment.

The instruction of the pupils was, on the whole, very fairly imparted by such teachers as regularly and carefully prepared their work, while in the case of several who teach from imperfect knowledge, who have to use text books, even on the day of inspection, defective teaching and poor results were invariably met with.

The work of inspection for the year is shown hereunder:—

Section of District.	Regular Inspections.	Ordinary and second regular Inspections.	Total Number of Inspections.	Number of Pupils Examined.
Maitland	85	8	93	4,438
Newcastle	61	0	61	9,361
Dungog	98	23	121	2,940
Total.....	244	31	275	16,739

Every school in the whole district, except one small Evening Public, had a regular inspection. That Evening Public School was closed before the visiting Inspector had time to examine it. With reference to the proficiency of the inspected schools, it is found that in Maitland Section 96 per cent. of these schools succeeded in satisfying or exceeding the standard, 100 per cent. in Newcastle Section, and 95 per cent. in Dungog, the percentage for the whole District being 97 as against 94 for 1895.

The following schools sent up successful pupils to the Junior University Examination, held in Juno, 1896:—

Carrington, 1 passed; Denman, 1 passed; Maitland West, 2 passed; Mulbring, 1 passed; Newcastle, 12 passed; Wallsend, 1 passed; Wickham, 3 passed; St. Ethel's, 1 passed. That makes a total of 22 successful pupils from 8 schools. In 1895, 28 passed from 5 schools.

The number of pupils examined for exemption-certificates in the Maitland Section was 708, of whom 509, or 72 per cent., passed. In Newcastle Section the number examined was 850, and 461, or 54 per cent., passed.

The proficiency of the pupils in each subject of instruction, and the percentage of those who satisfied or exceeded the standard are shown in the following table :—

Subjects.	Number Examined.	Percentage.	Subjects.	Number Examined.	Percentage.
Reading—			Geography—		
Alphabet	1,889	78	Elementary	3,397	78
Monosyllables	3,159	80	Advanced	3,538	73

Total	16,739	83	Object Lessons	16,539	79
Dictation	13,308	83	Drawing	16,634	81
Arithmetic—			Music	15,935	82
Simple Rules	10,604	76	French	251	77
Compound Rules	3,497	79	Euclid	961	69
Higher Rules	2,601	74	Algebra	266	80
Total	16,702	75	Mensuration	408	76
Grammar—			Latin	258	77
Elementary	3,638	79	Needlework	7,247	80
Advanced	3,302	77	Drill	15,642	80
Total	6,940	79	Natural Science	172	87

Compared with last year, compound rules are better by 10 per cent. ; higher rules and French have advanced 9 per cent. ; Australian history is better by 6 per cent. ; advanced grammar by 5 per cent. ; alphabet, algebra show an advance of 4 per cent. ; Latin is better by 3 per cent. ; English history, scripture, drawing, mensuration, and drill show an improvement of 2 per cent. ; simple rules, euclid, and elementary grammar are 1 per cent. better ; needlework is not so good by 5 per cent. ; object lessons, advanced geography, and writing on slates have fallen 3 per cent. ; easy narrative and ordinary prose are worse by 2 per cent. ; writing in books, natural science, and elementary geography have declined 1 per cent. The results in dictation were inadvertently omitted from last year's report. For this year the percentage is 83, which should be considered very satisfactory.

The total number of teachers, assistants, work-mistresses, and pupil-teachers employed in this district during the year is 475. With very few exceptions, they have devoted their full energy in the discharge of their official duties, and no serious complaint has been made against any of them during the year. Several gained promotion by examination, and a few gained an advance in grade under Article 103 of the Regulations. Their classification at the end of 1896 is shown in the following table :—

	I A.		I B.		II A.		II B.		III A.		III B.		III C.		Un. classified.		Total.		Grand Total.
	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.

	I.		II.		III.		IV.		Probationers.										
	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.									
Pupil-teachers	7	52	2	9	13	7	26	15	4	2							52	85	137
Work-mistresses																	10	10	
Total Teachers of all ranks																	287	238	475

Summary.

Four new schools were opened during the year ; the sum of £930 18s. 11d. was expended by the Inspectors in improving schools and residences. With the exception of one small Evening Public School, every school in the district had a regular inspection, and 31 had ordinary and second regular inspections. The work of the year has been faithfully performed, and the primary schools of the Maitland District are in a creditable state of efficiency.

East Maitland, 5th January, 1897.

T. DWYER,
District Inspector.

ANNEX V.

INSPECTOR FLASHMAN'S REPORT.

THE schools under my supervision during the past year included 61 departments. The Infants Department at Carrington was closed, and an Evening School at Hamilton opened during the year.

The enrolment of pupils has been in excess of that of previous years, and was as follows :—

March quarter	12,297
June quarter	11,965
September quarter	12,319
December quarter	12,147

The accommodation provided in the schools is for 13,924 pupils.

It

It has been found necessary to increase the accommodation at Wallsend Boys' and Lambton Infants' Departments; this will be undertaken at once, and when completed no school in the district will be compelled to use weather-sheds for teaching purposes.

Many of the schoolrooms and teachers' residences have been repaired either under my own supervision or that of the Clerk of Works.

My experience has taught me that but very few teachers appear to take sufficient interest in their homes or home surroundings to induce them to make any improvements which might be called permanent. A teacher's garden is the exception, and not the rule, while the many little conveniences to be found in the homes of most householders are altogether absent. I can account for this only by the fact that, taking the teachers as a body, they appear to be very unsettled; the younger teachers expect soon to be removed to more important positions, and those holding good appointments hope the day is not far distant when they will be promoted to the Sydney District. Very few teachers have any desire to make a permanent home in this section.

I regret to report that, in nearly every instance, the school-gardens have been neglected. Since the bonus for gardening has been withdrawn the interest in this matter has been allowed to decline, and now very few schools have anything but posts and rails, which indicate where once the garden was. This is very much to be regretted, as I have found that the children generally took considerable interest in the school-garden when encouraged by their teachers.

Flowers, as schoolroom decorations, are not as common as desirable, especially in Boys' and Infants' Departments. A few girls' schools are always found to be gay and attractive with these "gifts of Nature."

All the schools were inspected during the year. The organisation of most of them was found to be of a very satisfactory character. The rooms are generally clean, neat, and attractive. The lesson documents were drawn, and the records complete and accurate.

In most cases the discipline is mild and effective. I have had very few complaints from parents respecting undue corporal punishment. The work of the schools is conducted in a methodical, cheerful manner; the pupils willingly obey the wishes of their teachers, and appear happy and contented in their school-life.

The attainments of the pupils, as ascertained at the inspection of the schools, were found to be in most cases most satisfactory. The standard requirements were reached in all cases, and in a few schools high results were obtained.

Arithmetic has received more intelligent treatment at the hands of the teachers, and, as a consequence, the results have been of a higher order than those of former years.

As a rule, dictation is well taught; more than half the fourth and fifth classes of the district obtained the mark "Excellent" for this subject, while several others obtained "Very good."

As a general rule, the writing in copy-books of the upper classes is good; but I cannot say the same for the writing of miscellaneous exercises, such as composition and reproduction on paper. These exercises are very frequently done badly by children whose copy-books are well done. From what I have observed, a pupil, during a writing lesson, will take a quarter of an hour to write a single line in his copy-book. The consequence is he is not accustomed to write rapidly, and when he is required to do so his writing is frequently disgraceful.

With the exception of two schools, I have not been satisfied with the results obtained in geometry. When it is remembered that the requirements in this subject are small, and that the classes which receive instruction in this branch are generally taught by teachers who are known to have good mathematical acquirements, it is surprising how few classes, as a whole, can be found which are able to do more than barely satisfy the standard. In most classes a small number generally do well; but the majority fail almost completely in working even the simplest proposition.

The teaching of drawing has much improved in very many of the schools, although I am not yet satisfied that the subject receives as much intelligent treatment as its importance deserves.

There were 850 examined for "exemption certificates"; 461 only succeeded in obtaining them. In most cases arithmetic was the weak subject.

In July last Captain Mulholland was appointed Drill Instructor to the schools of this section. The result of this action has been to rouse considerable interest in the instruction of drill in all the schools. It has been arranged for the Captain to visit all the schools at least once a quarter, and the larger schools more frequently. Provision has been made for the instruction of the senior boys in shooting, and the military authorities have consented to the use of their targets at Newcastle, Lambton, and Wallsend. A parade of all schools will be held once a quarter. It is hoped by these means to place the instruction of drill in a more favourable condition than it has been in the past. Ample provision has also been made for the instruction of the girls and infants. I have arranged that as many pupil-teachers as possible shall be present during the Captain's lessons, so that these young teachers may acquire some knowledge as to how they should conduct their lessons when the special instructor is absent.

I am pleased to report that Captain Mulholland has entered with considerable enthusiasm into the duties of his new office, and has succeeded in winning the confidence and respect of both teachers and pupils.

Two years ago a Public School District Athletic Association was formed. This was an exceedingly popular movement, and nearly all the leading teachers entered with considerable zest into the movement, while the enthusiasm among pupils and parents was most encouraging. The annual sports meeting was attended by at least 20,000 persons, and proved a great success in every sense of the word.

During the year classes for manual training of lads from the schools have been conducted under Mr. Jones, as teacher. Eighty lads have been in regular attendance at these classes; the pupils take considerable interest in their work, and from the teacher's report I gather that considerable progress has been made by most of them.

Sixty of the students were, under my supervision, subjected to a written examination at the close of the year's work; the result of this examination is not yet known.

The Cookery Class has been in active operation the whole of the year. 180 girls have received instruction, with very satisfactory results. This class is still very popular among parents. I have always more applicants than I can find places for. The teacher is painstaking, enthusiastic, and effective.

At the close of the year there were employed in this section 34 principal teachers, 25 mistresses, 72 assistants, 93 pupil-teachers, and 8 work-mistresses, making a total of 232 teachers of all grades.

Very few principal teachers have sought to improve their classification by examination during the year. Most of the mistresses hold a classification of II A; they seem to be quite satisfied with their status, for I am not aware of a single instance of any preparation being made to secure a higher grade.

All the pupil-teachers were examined during the year, and most of them gained promotion.

A competitive examination of male applicant pupil-teachers was held in September last. Fifty-one were examined, and 15 selected; all of these were superior lads, who displayed considerable literary ability as well as skill in the management of a class and the giving of a lesson.

The work of instruction has gone on smoothly during the year. A few of the most successful teachers have been rewarded with promotion, while many have good cause to be thankful for their success.

Newcastle, 1st January, 1897.

C. O. FLASHMAN,
Inspector.

ANNEX Z.

INSPECTOR KEVIN'S REPORT.

I took charge of this section of the Maitland District on the 1st February, and found under my supervision the following schools :—

Public	67
Provisional	15
Half-time.....	14
House-to-house	3
Evening Public	1
Total.....	100

Of these, however, 3 were not in actual existence—Strathisla, Invergordon, and Dunkirk—though being in course of erection, of which the first-named only was finished and is now working. The aid promised by the Department was withdrawn from the other 2, as the promoters seemed to take no interest in their final success. The year closes with schools, viz. :—

Public	69
Provisional	12
Half-time	14
House-to-house	3
Total.....	98

Of these, all were regularly inspected, 7 received a second or reinspection, and 16 an ordinary inspection, while a large number were visited incidentally. Bulga Evening Public which was closed abruptly and before my time of visiting did not receive an inspection of any kind.

A few unimportant changes took place during the year, but, as a whole, the District remains as in 1895, except that 13 schools were transferred from the Maitland Section at the beginning of the year.

Buildings.

Only 1 new school building—Strathisla Provisional—was erected during the year. No residences, and only one weather-shed—Tea Gardens Public. A large number, however, received repairs in various directions, including painting, fencing, water supply, &c., and their condition generally received proper attention. The total expenditure under my own supervision was £267 7s. 8d. As a whole, the buildings are in fair order.

Organisation.

Under this head matters are generally satisfactory, though a few of the buildings are very unsuitable and need superseding. The accommodation is sufficient and comfortable, and the supply of materials is adequate. The lesson guides are complete and generally skilful, and the records, except in three or four instances, are neatly and correctly kept.

Discipline.

This is healthy, as a whole, but in a few schools (of the smaller class) there is decided room for improvement. The pupils are quiet, well-behaved, and attentive to their work, and generally give little trouble. Drill has received fair attention during the year, but, owing to much rain and many hot days, it was impossible to give it the attention it deserves.

Inspection.

As has already been stated, all schools on my roll were regularly inspected except 1—a small Evening Public—and the results generally were satisfactory. The reading, writing, and arithmetic, however, show a falling off on last year's averages; the result, at least in two of the subjects, probably of the pupils meeting a new Inspector. In the other subjects there is little or no difference. All the schools, except 5, were up to or above the standard. A large number of pupils were examined for exemption certificates, and of those who passed but only a small percentage have left school.

Instruction.

This part of the teachers' public duty has been carried out earnestly and industriously during the year, except in the case of the schools re-inspected. These, however, were found to be in a satisfactory state at the second visit. I am quite in accord with the wisdom of withdrawing notice of the Inspector's intended visit of inspection.

The course of instruction is complete, except in three or four cases where singing is omitted, and the methods of instruction are, as a whole, skilful and intelligent. Teachers, however, would do better if they would carefully and systematically prepare their school-work.

The subject of school libraries was taken up by me early in the year, with the result that 71 have been opened—on most occasions with great *clat*—and the sum of £246 18s. cheerfully and willingly subscribed to purchase suitable books, of which there are now 5,000 in circulation. The movement everywhere is most popular, and in no instance have I heard a voice raised against these most useful institutions. I am glad to see the movement is spreading to other districts, and I hope the words of encouragement from the Chief Inspector, in last year's report, will be the means of giving vigorous and permanent life to the scheme. It certainly deserves more countenance and support from all quarters than has fallen to its lot in the past. The teacher, however, is, in almost every case, the life of the movement, and if his or her interest flags its doom is sealed.

The teachers and pupil-teachers were duly examined at the prescribed times; their conduct and attention to duty have been quite satisfactory as a body, and they are individually and collectively respected in their respective spheres of action, and as citizens.

To sum up—

Summary.

- (a) The means of education are sufficient and properly distributed.
- (b) The organisation and discipline are satisfactory; and
- (c) The instruction is well regulated, and carried on faithfully.

On the whole, therefore, the year's work has been a successful one, and I see no reason why next year's should not be at least equally satisfactory.

The usual statistics have already been forwarded.

Dungog, 26th December, 1896.

J. KEVIN,
Inspector.

Every school in the District, with the exception of Memagong Provisional (which was closed before it could be tested), received a regular inspection. The results of inspection are summarised in the subjoined table:—

Subjects.	Estimated Proficiency.			
	Total Number Examined.	Number Passed.	Percentage up to or above Standard.	
Reading—			In 1895.	In 1896.
Alphabet	133	101	80	76
Monosyllables	672	619	89	92
Easy narrative	943	886	90	94
Ordinary prose	1,297	1,258	92	97
Totals	3,045	2,864	90	94
Writing—				
On slates	1,212	1,165	95	96
In copy-books and on paper	1,819	1,793	98	99
Totals	3,031	2,958	97	98
Dictation	2,394	1,917	73	80
Arithmetic—				
Simple rules	1,637	1,404	83	86
Compound rules	634	452	72	71
Higher rules	647	470	72	73
Totals	2,918	2,326	78	80
Grammar—				
Elementary	580	469	84	81
Advanced	730	542	64	74
Totals	1,310	1,011	74	77
Geography—				
Elementary	290	210	81	72
Advanced	1,033	785	75	76
Totals	1,323	995	77	75
History—				
English	1,270	929	72	73
Australian	232	180	83	78
Scripture and moral lessons	2,531	2,068	83	82
Object lessons	2,939	2,498	86	85
Drawing	2,930	2,751	93	94
Music	2,805	2,334	80	83
French	48	38	78	79
Euclid	143	109	69	76
Algebra	52	38	52	73
Mensuration	101	69	64	68
Latin	51	29	56	57
Trigonometry	20	11	50	55
Needlework	1,163	1,094	94	94
Drill	2,842	2,533	87	89
Natural science	105	94	85	89

An examination of these figures will show that steady progress has been made, for about 80 per cent. of the subjects taught are in a more satisfactory condition than during last year. The schools which secured the best results at the regular inspections were:—Koorawatha, Hillmont, Springdale, and Barmedman. Pupils from the following passed the Junior Examination of the University, viz., Koorawatha, 3 passes; Grenfell, 3; Cowra, 3; Cootamundra, 3; Barmedman, 1; and Young, 1.

The teaching staff of the District is classified as follows:—

1 B	2
2 A	13
2 B	8
3 A	34
3 B	5
3 C	7
Unclassified (the majority of these formerly served as pupil-teachers)	24
Pupil-teachers	20
Total	113

A good percentage of the teachers have improved in efficiency. Complaints against them have been rare, and for the most part either unfounded or exaggerated. As a body, they are exemplary in conduct, zealous, and capable.

Summary.

1. The schools are liberally distributed, are mostly in good repair, and provide accommodation beyond existing requirements.
2. With one exception (already explained) they were submitted to a regular inspection.
3. The instructional results show a distinct advance.
4. The foregoing circumstances indicate a good record for 1897.

CHAS. J. W. FRIEND,
Inspector.

Young, 31st December, 1896.

ANNEX Z 3.

INSPECTOR PEARSON'S REPORT.

The year 1895 closed with 92 schools. Four of these—Boomanómana Provisional, Blowering West Provisional, Onkey Farm, and Tarramia Half-time—were not reopened, whereas Barooga and Bulgandra Provisionals were established in January; thus the year 1896 commenced with 90 schools, classified as—Public, 53; Provisional, 17; Half-time, 18; House-to-house, 2.

During the year Bulgandra, Finley, and Upper Bago Provisionals were raised to the rank of Public, Walbundrie Half-time converted to Provisional, and the following new schools established:—Manus Provisional, Handley, Mount Airy, and South Humula Half-time. At

At the close of the year 1896 the schools in operation were:—Public, 56; Provisional, 16; Half-time, 20; House-to-house, 2; total, 94.

When the new school at Burrumbuttock North is established, and the authorised enlargements to Borrigan, Finley, and Mulwala completed, it may be said the means of education, both as regards amount and distribution, will be adequate. The total number of schools and departments open during 1896, or any portion thereof was 94. All of these were regularly inspected. In addition, 3 ordinary inspections were made, thus raising the total to 97 inspections.

Seventy-nine schools, or 84 per cent., exceeded standard limits, 12 were below, and 3 just up to the standard, whereas last year the numbers were 78, or 85 per cent., 14, and 0 respectively.

The percentage of passes appears 1 per cent. less than last year. This is in a measure accounted for by the establishment of small schools, some of which were inspected soon after opening. Of the 12 schools that failed to reach the standard, 7 had not been in operation a full year at time of inspection.

The following subjects show an improvement:—Dictation, geography, scripture, drawing, music, French, mensuration, Latin, needlework, and natural science, whereas writing, arithmetic, grammar, object lessons, Euclid, and algebra are slightly lower, and in the case of reading, history, and drill no alteration on last year's results.

A perceptible improvement generally in organisation and discipline has been shown, and gives evidence of careful attention to the directions given at previous inspections. However, several cases were noted where serious discrepancies existed between lesson registers, time-tables, and programmes, thus showing that the latter guides have not been faithfully followed. I have reason to believe these defects will not exist next year.

The schools' books, I regret to say, are not in a flourishing condition, notwithstanding the attempts of the teachers to popularise them.

The results of examinations for exemption certificates were unsatisfactory. Of the 162 pupils examined, only 94, or 58 per cent., were successful, the majority failing in arithmetic. This poor result is probably owing, in a measure, to faulty classification.

On the whole, the school-rooms and premises present a neat and well-ordered appearance; in many cases well arranged and attractive gardens beautify the grounds. The schools of highest efficiency are, in order of merit—Albury Boys', Albury Girls', Germanton, Major's Plains, Urana, How-long, Corowa, Tumbarumba, Shepard's-town, Wagra, Wondalga, Albury Infants', and Gerogery. Only two schools, Yambula and Albury, were represented at the University Examination, the former being eminently successful, considering the smallness of the school. During the year a cookery class of 60 pupils was opened in Albury. The pupils were regular and attentive, and displayed great interest in this very important branch. The result of the examination test was highly gratifying, and it is hoped another class will be formed during the ensuing year.

The teaching staff at the end of the year consisted of:—Principal teachers, 82; mistresses, 2; assistants, 5; pupil-teachers, 14; total, 103. With but very few exceptions the teachers are earnest, painstaking, and zealous, and exert a beneficial influence in their respective centres.

School accommodation, allowing 8 square feet per child:—

Accommodation existing at commencement of 1896.....	5,592
Additional accommodation provided	426
Accommodation lost by closing, &c.	321
Accommodation existing at end of 1896	5,697

The December enrolment was 3,578, hence ample accommodation is provided.

Excellent buildings—school and residence—were erected by Architect at Tumumwal at a cost of £1,270; the former, which replaces the old, affords a total accommodation for 124.

New buildings erected by Inspector or supplied by residents:—

Names.	If new.	Seats.	Cost.
Finley.....	Formerly conducted in School of Arts.	30	£ s. d. 63 10 0
Bulgandra, commenced last year, opened this ...	New	21	45 0 0
Barooga, ..	"	30	57 19 6
Mount Airy	"	15	Residents.
South Humula	"	28	"
Manus.....	Old, reopened	21	"

The sum of £227 3s. 8d. has been expended in connection with repairs and improvements to 32 schools, and £165 8s. 2d. in repairing 6 residences.

A new school building is in course of erection at Burrumbuttock North. This will cost £57 10s., and afford accommodation for 30 children. The work of extending Finley is in hand, and will give additional seats for 17 pupils. The contract price is £41 10s. 6d.

The efficiency of the schools, generally speaking, has been maintained, the means of education are sufficient, and well distributed. All schools were regularly inspected, and it is expected the work of 1897 will be at least as satisfactory as the past.

F. PEARSON,
Inspector.

Albury, 28th December.

ANNEX Z4.

INSPECTOR MCKENZIE'S REPORT.

THE schools in this section are sufficient in number, well distributed, and satisfactorily meet the requirements of the residents.

At the close of 1895 there remained 65 schools in operation. Six new schools have since been established, and 1 reopened. There have been, therefore, 72 schools in operation during the year 1896, including 50 Public, 6 Provisional, 10 Half-time, 1 Evening, and 5 House-to-house Schools.

New schools were opened at Elindale, Hill Plain, Lynwood, North Deniliquin, Tomara, and Warangesda. A school was promised at Bungabil; and applications from Barham, Ballygrogan, Bringagee, Box Valley, and Wycott; Duhwilly, North Borellan, and Tolarno were declined.

A new school and residence at Mossiel and a new class-room at Hillston were taken over by the Department early in the year. A new class-room was erected at Mathoura, and a new residence at Boohgal. A residence is in course of erection at Mathoura; and extensive repairs and improvements have been sanctioned at Broken Hill, Moama, Carrathool, and Whitton.

Under the Inspector's supervision repairs and improvements were carried out in 40 schools and 13 residences; 6 small school buildings were erected, and 2 others are in progress.

Most of the school buildings are now in good repair, and the accommodation is ample. The gross enrolment for the year was 7,428, and the average attendance 4,114, while existing buildings provide floor-space for 7,065 pupils, and statute accommodation for 7,407.

All

All schools but 1 were fully inspected, and, as a rule, the premises were found to be well kept, the supply of furniture and school material sufficient, and the condition of the schools as regards organisation, discipline, and instruction, satisfactory. Of 71 schools inspected, 65 were above standard and 6 below, those taking highest rank being Alma, Broken Hill, Broken Hill North, Deniliquin, Hay, and Silverton.

Only 3 schools secured passes in the University Examinations, viz. :—Hay, 2 Juniors ; North Broken Hill, 2 Juniors ; and Wentworth, 1 Junior.

There are Savings Banks in all the principal schools, and arboriculture receives a fair amount of attention. The gardens at Hay and Balranald deserve special mention.

The total number of teachers of all ranks employed in the section at the end of the year was 122 ; and of the teachers generally it may be said that they are diligent and conscientious in the discharge of their duties, and have earned the respect of both pupils and parents.

A. D. McKENZIE,

Inspector.

Marrickville, 4th January, 1897.

ANNEX Z 5.

DISTRICT-INSPECTOR LONG'S REPORT.

THE divisions of the District for inspectoral supervision have remained unchanged, and consist of the Mudgee Section, under Mr. Inspector J. P. Rooney ; the Dubbo Section, under Mr. Inspector J. W. E. Baillie ; and the Central, or Wellington Section, under myself.

At the close of the former year there were 235 schools in the District. Eleven have been closed, 12 new ones opened, and 6 added from other Districts. During the year, or for part of it, there were 244 schools in operation—90 in the Mudgee Section, 70 in the Dubbo, and 84 in the Wellington. The number in existence at the end of the year was 240.

The buildings in which these schools are conducted suffice for 14,473 pupils at the regulation allowance of floor-space, and, therefore, provide ample accommodation, the enrolment for the last quarter being 11,150, and the average attendance 7,889·7. They are in good condition, and are provided with all necessary appliances.

During the year, under Inspectors' supervision, 8 school buildings and 2 weather-sheds have been erected, and 58 schools and 17 residences enlarged or repaired, at a total cost of £996 6s., which is little more than half the sum expended during the preceding year. More extensive works have been carried out under the Department's Architect.

All the schools were fully inspected during the year, excepting 2 small ones, 1 in the Mudgee Section, which was open for 6 days only, and 1 in the Wellington Section, which was closed before it could be visited. The total number of inspections effected was thus 242—89 in the Mudgee Section, 70 in the Dubbo, and 83 in my own. Of the 242 schools inspected, 231, or 95·5 per cent., were found to be in a creditable condition in regard to general efficiency, exceeding the number for the former year by '5 per cent. Of the 11 schools returned as below standard, some were in operation but a short time at the date of inspection, and in the case of others the attendance had been affected by causes beyond the teacher's control, such as epidemics and protracted drought. The number of schools whose efficiency reaches or exceeds standard affords evidence of commendable skill and diligence on the part of the teaching staff of the District.

The organisation almost invariably shows careful effort to comply with the prescribed system, and due appreciation of the salutary influence of neat and pleasing surroundings. In this connection, the attention bestowed in many instances on improving the appearance of school-grounds by planting trees, ornamental shrubs, and flowers, is deserving of commendation. Occasionally defects are met with in the classification of pupils, or in designing the course of instruction, but these are almost invariably traceable to inexperience. Errors in records, excepting, perhaps, the lesson register, are very rare.

The methods of government are, as a rule, appropriate, intelligent, and effective, and the discipline is, therefore, rarely otherwise than satisfactory. Occasionally we encounter a teacher so wanting in aptitude for his position, in diligence, or in mental perception, as to make fear of physical pain the sole means for influencing the immature intelligences committed to his charge, but such cases are fortunately exceptional. The pupils are uniformly of neat and well-dressed appearance, while their behaviour, attention, and general deportment are most pleasing. It is to be regretted that the effect of the training which produces this extends in so many cases to the school boundary only. The very regrettable cause, doubtless, is that outside associations tend to counteract the teacher's worth. Possibly this adverse influence will diminish with the decrease in the number of homes under the government of those who have not had the advantage of correct educational training.

The number of pupils examined at the inspections of the year was 8,107. The percentages of passes in the several subjects taught are higher than those for the former year in every subject excepting sewing, and range from 97·5 in natural science to 71·5 in grammar. The percentages of pupils up to or above standard in those most important subjects, viz., 87·7 in reading, 88·7 in writing, and 81·4 in arithmetic, are very satisfactory, especially in regard to writing, for in many country schools there are special difficulties to contend with in the teaching of this subject. The general result of the teaching for the year may, therefore, be regarded as satisfactory, and creditable to those entrusted with it.

During the year 614 pupils were examined for exemption certificates, under section 35 of the Act, and of these 410—or rather less than 67 per cent.—passed. A large proportion of those who did not, failed in arithmetic only, owing to inability to work questions involving ordinary applications of the rules in which they were tested. Easy questions of this kind frequently proved too much for pupils who could work sums in much more advanced rules. Such failures have, however, had the effect of directing attention to the necessity for improved methods of teaching the subject in several respects.

The number of teachers employed in the District is 282, including 55 who are unclassified, and 34 pupil-teachers. Their classifications and positions are given in the statistical returns for the year. With few exceptions, they are well fitted for their respective positions, and perform their duties with diligence and success, while they have gained the esteem of those amidst whom they are stationed. In some few cases there is observed a certain carelessness in details of personal deportment, which suggests defective appreciation of the responsibilities of the position voluntarily undertaken, and which must impair usefulness and success. The warning and advice given in such cases are, however, so far as my own observation extends, received in a spirit which indicates that proper effort will be made to remedy the errors referred to.

The pupil-teachers have displayed commendable aptitude, diligence, and usefulness, and, with one exception, have gained fully satisfactory reports.

In conclusion, it may be stated that the schools of the District are sufficient for its present requirements ; that their material condition and efficiency are satisfactory ; and that the general result of the year's work shows a gratifying measure of success in regard to the objects for which the Department exists.

The reports of the officers associated with me in the charge of the District are forwarded with this.

GEORGE ED. LONG,

District Inspector.

Waverley, 8th January, 1897.

ANNEX

ANNEX Z 6.

INSPECTOR ROONEY'S REPORT.

At the close of 1895 there were 93 schools in the Mudgee Section of the Wellington District.

Owing to insufficient attendance, the Half-time Schools at Kelgoola, Nulla Mountain, Springfield, Spring Flat, and the House School at Oxley's Peak were not reopened at the beginning of the year.

The Half-time School building at Piambong was destroyed by fire early in January, and has not been rebuilt. A few days afterwards the Half-time School at Rats' Castle closed, the school population having decreased to 6 in number.

Schools established.

New schools have been established at Barragon and Dexter Springs.

A new school, superseding an old rented building, has been erected at Menah.

A Provisional School has just been completed at Genowlan Shale-mine.

Schools converted.

Capertee Provisional was converted into a Public School early in the year, and Tara Public, after being closed for seven months, was reopened as Provisional in the month of November.

At the beginning of the year Budden Provisional School was placed under my supervision, having been transferred from the Maitland District.

Eight school buildings and 9 residences received substantial repairs.

A weather-shed was erected at Pinnacle Swamp.

The erection of new schools and the repairs of schools and residences were carried out under my supervision.

Under the supervision of the Architect, a residence is in course of erection at Burrindulla, and repairs are being effected at Cudgegong.

All the Public, 7 out of 11 of the Provisional, and 10 of the Half-time Schools are vested in the Department.

At the end of 1896 there were in operation in this section of the District 54 Public, 11 Provisional, 22 Half-time, and 2 House-to-house Schools: total, 89.

Accommodation.

The schools in the Mudgee Section give accommodation for 3,877 pupils, or 383 more than were enrolled for any quarter of the year. The material condition of all the Public Schools is good, but 1 Provisional and 6 Half-time schools are conducted in inferior non-vested buildings.

Twenty-four school playgrounds have ornamental trees. In 19 cases the trees are flourishing, and show that they have been well attended to by the teachers. In this respect the following schools deserve special mention:—

Bayly.	Lawson's Creek,
Cudgegong,	Mudgee.
Cullenbone,	Kylstone,
Eurunderee,	Willstree.

Enrolment and Attendance.

The total enrolment for the year was 4,199. Of this number, 380 were returned as pupils of more than one school.

The average daily attendance was 2,572.3, being a decrease of 59.2 on that for 1895. The decrease is accounted for by the removal of families of miners to other districts.

The amount of school fees received for the year was £1,307 14s. 3d., being an increase of £67 3s. 10½d. on the previous year.

The fees in arrear at the end of December amounted to £33 16s. 4½d.

There were at the end of the year, in the schools of this section, 377 free pupils, being an increase of 35 on the previous year.

Inspection.

Excepting Rats' Castle Half-time, which was closed in January, all schools received a regular inspection: 3 schools received ordinary inspection. During the year 2,737 pupils were examined. Out of 174 examined for exemption certificates, 150 passed the required test.

The attainments of the pupils show improvement in reading, dictation, arithmetic, grammar, history, and algebra. Music is badly taught in the majority of the schools.

I am of opinion that a marked improvement in writing would take place if the Department would issue a series of copy-books, supplying them to the schools either free or at a low price. At present the way the pupils have of obtaining copy-books, especially in remote places, is very unsatisfactory.

Teachers.

Under my supervision there are 84 teachers and 11 pupil-teachers. Of the teachers, 2 are in the first class, 18 in the second, 54 in the third, and 10 unclassified. Of the last-mentioned, 6 have served as pupil-teachers.

Only one complaint against a teacher was made during the year. The teachers are well-conducted, and the great majority of them have gained the esteem of the people of the localities in which they live.

Summary.

(a) This portion of the Wellington District is amply provided with the means of education.

(b) The material condition of the schools is good.

(c) The organisation and discipline are satisfactory.

The results of the year's work give much cause for satisfaction, and there is reason for believing the good work will be carried on during the coming year.

JOHN P. ROONEY,
Inspector.

Mudgee, 31st December, 1896.

ANNEX Z 7.

INSPECTOR BAILLIE'S REPORT.

During the year 1896 there were in operation in the Dubbo Section of the Wellington District 70 schools, viz., 48 Public, 14 Provisional, 3 Half-time, and 5 House-to-house.

At the close of the year the schools in operation were:—

Public Schools	48
Provisional Schools	14
Half-time Schools	2
House-to-house Schools	4
Total	68

A

A Provisional School was established at Durrulume. Belar Creek was reopened as a Half-time School, and worked with a new school at Mobla, at the beginning of the year; but the numbers attending during the first quarter warranted the conversion of Belar into a Public and Mobla into a Provisional. The Provisional School at Ironburks, closed through small attendance in 1895, was reopened. Collie and Coradgeric, worked as House-to-house Schools, were converted—the former into a Public and the latter into a Provisional. Ford's Bridge, worked with Gumbalie as a Half-time School, was converted into a Provisional School. Boogaldie, reopened as a Provisional, was converted into a Public School.

The following schools were closed through diminished attendance:—Raby Provisional, Gumbalie Half-time, Belleroy and Terembone, and Furlewaugh, Sand Creek, and Ulamabri House-to-house.

Schools transferred.—The undermentioned schools were transferred from this section:—Louth Public, Tilpa and Kallara Half-time, and in lieu thereof, Walgett, Collarendabri, Come-by-Chance, Pilliga Public Schools and Kercargo Provisional were added.

Timbriungie School (closed since April, 1893) was destroyed by fire on the night of the 25th May last.

Applications for the establishment of new schools at Dulla Dulla and Ramperdell are under consideration.

Improvements, including additions, painting, and repairs, have been effected at 24 schools, and 2 teachers' residences, at an outlay of £383 13s. 6d., under the Inspector's supervision, and 3 schools, at a cost of £330 10s. 6d., under the Architect's.

The works that have been authorised, but are incomplete, include additions and improvements to Belarbigill, Baradine, Belar Creek, Mundooran, Collie, Dubbo, and Narromine Schools, and additions, including wash-house, bathroom, &c., to the teachers' residences at Byrock and Brocklehurst.

The water from the town supply has been laid on to the school and teacher's residence at Dubbo at the small outlay of only £20 15s.

The accommodation at the end of 1895 provided floor-space for 5,400 pupils. At the end of 1896 there was accommodation for 5,804 pupils—giving an increase of 404 seats.

Enrolment and Average Attendance.

The enrolment and average attendance for the four quarters ending March, June, September, and December were:—

	Enrolment.	Average Attendance.
March quarter	3,900	2,409·3
June „	4,033	2,757·1
September quarter	4,033	2,882·7
December „	4,004	2,793·4

The highest enrolment any quarter last year was 3,760.

Total amount of school fees received for the year, £1,533 17s. 11d. Total amount in arrear, £44 12s. 4½d. Number of free pupils, 235.

Inspection, Instruction, and Discipline.

All the schools received a regular inspection, and several incidental inspections as opportunities offered.

Of the 70 schools inspected, 64 were above standard and 6 below. Eleven schools either reached or exceeded 75 per cent., and of these Dubbo Boys and Dubbo Infants' rank first and second respectively.

The Dux medals generously given by S. Phillips, Esq., M.P., to the Dubbo School, were, after a very close contest, won by Lavinia Cameron and Harold Wilson, and were presented at the breaking-up for the Christmas vacation, by G. Taylor, Esq., J.P., Chairman of the School Board.

Of the 3,105 pupils examined, 226 were examined for exemption certificates, of whom 118 passed a percentage of only 52. Arithmetic is still the weak subject in these examinations, and will continue so until it is thoroughly taught in the lower classes. Pupils who can work very fairly difficult questions in the higher rules blunder over questions in proportion and practice, requiring a little thought.

The order and discipline have been well maintained, and range from very fair to excellent, the demeanour is pleasing, the appearance bright and cheerful, and the conduct good. It is highly gratifying to observe that cleanliness is a special feature, both as regards teachers, pupils, and schools.

Drill is well taught at all the larger schools, and at all the smaller schools under the supervision of ex-pupil-teachers.

Teaching Staff.

The teachers as a body are earnest and zealous in their work, steady, sober, and industrious; the pupil-teachers are studious, smart, and intelligent, and bear excellent characters.

Classification of Teaching Staff.

Teachers—	
Class I B	2
„ II A	11
„ II B	6
„ III A	22
„ III B	10
„ III C	5
Unclassified	24
Total	80

Of the unclassified teachers, 9 are ex-pupil-teachers, who will present themselves for examination as soon as they are permitted to do so, in accordance with the Regulations, and one is an ex-student of the Training College.

Pupil-teachers—	
Class 1	4
„ 2	3
„ 3	2
„ 4	2
Total	11
Work-mistress, Dubbo Superior School	1
Total of all grades	92

Good work has been done during the year, and there is every indication of equally good work being effected during the ensuing year.

Dubbo, 31st December, 1896.

J. W. E. BAILLIE,
Inspector.

ANNEX

ANNEX Z 8.

REPORT OF THE PRINCIPAL OF THE TRAINING SCHOOL, FORT-STREET.

The enrolment of students for the year 1896 was 26, classified as follows :—

16 with full scholarships.
9 with half scholarships.
1 with non-scholarship.

Course of Study.

Physiology, with special reference to school hygiene, was added to the curriculum at the beginning of the year. Dr. R. E. Roth was appointed lecturer, and his efforts in the direction of practical useful instruction in this subject were much appreciated by the students and several head-masters and assistants who were privileged to attend his classes. At an examination held in November, under the auspices of the St. John Ambulance Association, 24 students were successful in qualifying for the "first aid" certificate issued by that body.

The complete course of study is given below :—

Latin.—Cicero pro Sestio ; Arnold's Composition.

French.—First and Second French Course ; First French Reader (Macmillan) ; Polyeuete (Corneille).

English.—Meiklejohn's Book of English ; Julius Caesar ; Shakespeare's Tragedies and the Elizabethan Historical Drama ; Smith's Specimens of English Literature.

English History.—From 1789 to present time.

Mathematics.—The work prescribed for honor papers, matriculation examination.

School Management.—Theory and History of Education ; Practical School Management ; Public Instruction Act and Regulations ; the Kindergarten principle.

Natural Science.—Anatomy, Physiology, School Hygiene.

Music.—Sutton's Theory of Music ; Four-part Songs ; Stainer's Harmony ; Voice Training.

Drawing.—Practical, Plane, and Solid Geometry ; Perspective.

Drill.—Squad, company, and battalion drill ; manual and firing exercise ; physical drill, with and without rifle.

Practical Training.

Each student was employed for six weeks, at different periods of the year, in the general work of teaching, and during the last half of the year further practical experience was gained by each being entrusted with the management of a small school. A school of the 10th Class, comprising infants and pupils of second and third classes, was established in the Practising School, and each student in his turn took charge of this school for about a week, and was held responsible for the organisation, discipline, and progress of the pupils. Lectures on the principles and practice of teaching and class management were delivered regularly during the session, and specimen, test, and criticism lessons were given every week.

Staff.

The staff for the year 1896 consisted of the Principal ; J. D. St. Clair Maclardy, M.A., Lecturer in Languages and Mathematics ; J. Finney, B.A., Lecturer in English and English History ; Dr. Roth, Lecturer in Physiology ; Hugo Alpen, Music Master ; F. W. Woodhouse, Drawing Master ; W. Powrie, Teacher of Manual Training ; Q.M.-S. Smith, Teacher of Drill.

Manual Training.

Each student received two hours' instruction per week in the manual training workshop. This branch of technical education was very popular with the Session of 1896, and Mr. Powrie, the teacher, has again succeeded in obtaining highly satisfactory results.

Honors.	First Grade.	Second Grade.	Total.
4	10	11	25

Examinations.

The Chief Inspector visited the Training College frequently during the year, and examined the students quarterly. The examination to test the students' practical skill was held early in December. The final examination was held in the third week of December. The results are given below :—

II A with Honors.	II A.	II B.	III A.	Total.
1	4	12	5	22

One student was disqualified for infringement of rules of examination. The non-scholar did not compete ; and two students failed to complete their examination through illness.

Drill.

The excellent scheme of drill introduced at the beginning of 1895 has been productive of the best results. The outgoing students showed a lively interest in this important section of school-work. Regular target practice was obtained at the Rundwick Rifle Range. Twenty-six passed the annual examination in drill.

Health and Conduct.

The health of the students has been good, and their conduct, with few exceptions, satisfactory.
Training College, Fort-street, 22nd January, 1897.

J. W. TURNER.

ANNEX Z 9.

REPORT OF THE PRINCIPAL OF HURLSTONE TRAINING COLLEGE.

Enrolment of Students.

15 full scholarships.
10 half scholarships.
4 non-scholarships.

Of these, 25 attended the final examination, the non-scholarship students being excluded according to a new regulation.

Course

Course of Study.

Latin.—Cicero Pro Sestio; Arnold's Composition.
 English.—Shakespeare's Julius Cæsar; Meiklejohn's Book of English; Shakespeare and the Shakesperian Dramatist.
 Arithmetic.—Theory and Practice.
 French.—Corneille's Polyeucte; Macmillan's Third Year.
 Algebra.—Smith's Smaller Algebra.
 Geometry.—Mackay's Euclid, Book I.
 English History.—1789 to 1870.
 School Management.—Public Instruction Act; the Regulations; the Records; Gladman's School Method; Kindergarten System; Practising School Work.
 Music.—Sutton's Theory of Music; Stamer's Harmony; Part Songs; Practice in Conducting Music Lessons.
 Drawing.—Plane and Solid Geometry; Model Drawing, Freehand and Perspective.
 Needlework.—Cutting out and Setting work; making one garment.
 Reading.—Macaulay's Essays; Julius Cæsar; Dowden's Shakespeare.
 Physiology.—Lectures by Dr. Roth; Ambulance work; First Aid to the Injured.
 Drill.—Calisthenics; Free Exercises; School Drill; Practice in Teaching Drill.
 Natural Science.—Chemistry and Physics.

The Teaching Staff.

The teaching staff for 1896 consisted of:—J. A. Nicoll, Principal; E. M. Mallarky, B.A., Assistant; Jessie Douglas, Teacher of Drawing; Elizabeth Banks, Teacher of Kindergarten; Maude Lance, Teacher of Cookery; J. D. St. Clair-Maclardy, M.A., Lecturer on Classics and Mathematics; Hugo Alpen, Lecturer on Music; A. Paul, Drill Instructor; Reuter Roth, M.D., Lecturer on Physiology; J. Taylor, B.A., LL.B., Lecturer on Physics and Chemistry.

Practical Training.

Each student had four weeks' actual teaching besides specimen, criticism, and test lessons. The Practising School, conducted by Miss S. H. Nicholls, is of valuable assistance in this branch.

Material Condition.

During the year 1896 all books not required under the present conditions have been exchanged for new books, which form a valuable addition to the library.

The interior of the house has been thoroughly renovated. The two wings hitherto quite separate have been joined by a covered bridge, which is a great convenience, and adds to the appearance of the premises. A telephone has been also added to the establishment, and has proved to be of great use. Many beautiful busts and casts have been sent from the Technical College.

Examinations.

Quarterly examinations were held by the Chief Inspector throughout the year.

The final examination was not completed till the 23rd December, therefore the results are not yet published.

The needlework examination was held in June, and the results were most gratifying.

Twenty-seven students attended a special examination for St. John's Ambulance Association, conducted by Dr. Vandeleur Kelly, and all the students passed, and gained certificates.

A special examination in geometrical drawing was held in June, and 17 students passed.

Remarks.

During the year 1896, Miss Storey, Teacher of Cookery, was transferred to the Technical College, and Miss Lance was appointed to Hurlstone in her place. The general health of the students have been exceptionally good, and their conduct has been most satisfactory. One student was ill during the first part of the year, but her health was restored after one month's leave of absence.

J. A. NICOLL.

APPENDIX XIII.

REPORT ON DRAWING.

The results of my inspections of 89 schools and 203 departments (of which 9 schools and 23 departments are sub-metropolitan) are as follows:—

	Up to Standard.	Below Standard.	Total.	Passes, 1896.	Passes, 1895.	Average Class-mark, 1896.	Average Class-mark, 1895.
Boys	10,259	3,469	13,728	74·8	71·0	7·17	7·07
Girls	8,763	3,666	12,429	75·0	68·8	7·05	6·91
Infants	13,593	3,798	16,391	82·9	76·0	7·31	7·23
Totals.....	32,615	10,933	42,548	76·6	72·5	7·17	7·0

It will be observed that the number of passes has considerably increased, while the average class-mark has slightly improved in each case. As the standard of work demanded has also risen, these improvements are even more satisfactory than appears on the surface. The total number examined is an increase of nearly 20 per cent. above the number in 1894.

Model-drawing and Geometry.

Suitable models are much needed in many schools. Teachers do not use much judgment or forethought in providing such as might easily be obtained, nor, do I think, is much thought given previously to the arrangement of a systematic and graduated course of instruction in this subject or in freehand.

Practical geometry is more generally taken up, but the want of suitable instruments is a common cause of unsatisfactory work. I have done all I can to further the study of scale-drawing (as being very useful and less hampered by this want), and have given many introductory lessons in it. Fortunately, though less attractive than model-drawing, practical geometry is of much greater importance, while its teaching puts a smaller strain on the powers of observation, resourcefulness, and common sense of the teacher.

Infants.

I am glad to note a decided improvement in the work of these classes. By using the Kindergarten method in the lowest classes, and equally-spaced lines in one direction in the middle, the great need of an intermediate step between the work of the lower and upper classes is supplied with good result.

results. There is still an apparent loss of energy in the teaching of form to the infants, through its not being kept up in the other departments, as it has to be reacquired when practical geometry is taken up. There is also great laxity in the use of terms (such as "straight," "perpendicular," &c.), which makes oral teaching less useful than it should be, a precise common language between teacher and pupil being the first desideratum.

High Schools.

At the Boys' High School the subject is an optional one. Only 9 take it, these being instructed at the classes in the Technical College. Taking the circumstances into consideration, the work at the Girls' High School is good, the teacher being most thorough and energetic.

Examinations.

The results of the examinations of 220 teachers, 52 training students, 677 pupil-teachers, and 363 applicant pupil-teachers in all subjects are given in the following table. The figures show the number examined and the percentage of passes:—

	Blackboard.		Freehand.		Model.		Geometry.		Perspective.	
	No. exd.	Pass.	No. exd.	Pass.	No. exd.	Pass.	No. exd.	Pass.	No. exd.	Pass.
Ap. P. Trs.	363	62.8
P. Trs.	120	82.5	158	65.8	390	42.3
Tg. Sts.	1	...	4	25.0	52	50.0	3	33.3
Trs.	29	62.0	83	45.7	31	54.8	62	51.6	15	60.0

It should be noted that of the training students two-thirds of the female students passed and only one-third of the male students. I think some change might be beneficially introduced into the curriculum for the training students in the direction of providing more instruction in teaching methods and tests of their ability to teach.

Model-drawing continues to be the weak point with the pupil-teachers, while in the schools it is hardly ever taught with success. These two facts are connected, for while the head-teachers have rarely any real grasp of the subject, it is to them that the pupil-teachers look for instruction, and by them that the subject is generally taught.

Incidental Visits.

The large increase in the number of classes and pupils makes it impossible to pay incidental visits to more than one-tenth of the departments, and I think it is a question for consideration whether more of my time should not be given to such visits to the schools and to the Training Schools rather than to the exhaustive inspections carried out at present.

Much more attention should be paid to collective class-teaching, and with more opportunity of paying extra visits I could give the matter the attention it deserves.

FREDERIC W. WOODHOUSE,
Superintendent of Drawing.

Sydney, 11th January, 1897.

APPENDIX XIV.

REPORT ON SINGING.

I HAVE visited and examined all the schools in the Metropolitan District (including those which during the past year have been added to it) in vocal music and theory. I have also, as often as time permitted, visited and given specimen lessons in such schools as seemed to require my assistance.

I have noticed with pleasure a greater refinement in singing in a fair number of schools. There is also a distinct advance in better and purer enunciation—a matter to which I have often earnestly directed the attention of the teachers. Much, however, remains to be improved in this subject.

The chief aim of our teachers ought to be to teach the children to read music at sight, acquire a good, clear tone of voice, and to enunciate properly.

In the reading at sight, fair, steady progress is being made, as even in the younger classes I test their ability by writing simple and sometimes harmonised passages on the board, increasing the difficulties in the higher classes. I notice here that in a good many schools the children sing the pitch of notes correctly enough, but are often weak in keeping time. I have directed the teachers' attention to this, which seems to me almost a characteristic fault of Australian singers.

The general results may be classed from "fair to very fair"; in fact, in most schools the latter mark applies.

The best singing I found in Fort-street Girls' Department (all classes), Kogarah Girls' Department (higher classes), and Fort-street and Cleveland-street Boys' Schools; yet the class which pleased me most during the year's examination was lower second class, Boys' Department, Paddington Superior Public School.

HUGO ALPEN,
Superintendent of Music.

APPENDIX XV.

REPORT ON NEEDLEWORK.

DURING the past year I have examined and reported upon 84 schools in and about the Metropolitan District. In all, 13,871 pupils were present at examination. The above numbers do not include the examinations of needlework I have attended for Public School exhibitions, or for prizes and awards at public competitions.

It is gratifying to note that the work of this large industrial branch of the Department continues to progress rapidly and well. In upper classes especially the results have been most favourable, the marks gained after close and searching tests ranging from very fair to excellent. This conclusively proves that the instruction imparted by work-mistresses is sound and progressive, and that the standard is closely adhered to.

The certificates of merit and medals awarded during the year by the judges of the Chicago Exposition to the Public Schools for the excellence of their various needlework exhibits act as a powerful incentive to further efforts, and also add the ready assurance that the system and standard of needlework adopted by the Department of Public Instruction for New South Wales is well appreciated and thoroughly maintained. By its means the individuality of school-girls is brought out and developed; it teaches them to embellish their homes; it inculcates habits of neatness and industry; it adds to the comfort of domestic life, and, therefore, proves itself a boon to the community at large.

Mixed

Mixed Schools.

Mistresses, teachers' wives, Infant School mistresses, and assistants in charge of needlework in mixed schools have obtained, with few exceptions, the same good results as formerly, many schools, on examination, ranking higher than the required standard.

The recognition extended by the ladies of the Local Board in many suburbs to the pupils for proficiency in needlework is highly to be valued, as, in effect, it fosters industry and incites to emulation.

The dressmaking lessons given in these mixed schools are much appreciated by parents, especially in suburban schools.

The small specimen squares worked with coloured cotton in lower classes prove an attractive, prominent, and fundamental feature of instruction among young children. It is pleasing to notice the anxiety and ambition of these small pupils as they proceed, also the painstaking manner with which they endeavour to embellish their work with various fancy stitches.

Pupil-teachers.

In my incidental visits to schools I find that the pupil-teachers are attentive to the instruction of work-mistresses, anxious to excel, and evince the same proficiency in the art of needlework and design as formerly.

In many schools pupil-teachers receive their needlework lesson from the work-mistress at the usual sewing lesson. This is an undoubted advantage, as it affords much varied and useful experience in cutting and setting, also in the management and control of sewing classes. This experience proves of good service at the close of their apprenticeship as pupil-teachers.

Dressmaking.

Dressmaking, in all schools I have visited and examined, is still a special subject with work-mistresses, and is carried out and made general in all Metropolitan schools, work-mistresses having acquired the practical knowledge necessary to impart this instruction.

In many large schools where no special work-rooms are provided it is almost impracticable to give the lesson, as the fitting-on attracts attention, and disturbs the quiet and order of the other classes.

Method and Discipline.

Method and discipline in sewing classes are still well maintained and time economised in giving out and receiving needlework. Work-aprons and needle-books, self-made and well furnished, are provided by the girls for sewing lessons, many most artistic devices showing culture, skill, and independence. Head-mistresses take interest and pleasure in the work of sewing classes, and this stimulates the pupils in their efforts to excel.

Throughout the schools I have visited and examined I am able to testify to the unremitting care and application given to needlework instruction during the past year, also to the support and interest taken in this subject by head-mistresses, teachers in charge of schools, and others.

ANNIE DADLEY,

Directress of Needlework.

20th January, 1897.

APPENDIX XVI.

CHIEF CLERK OF WORKS' REPORT.

In preparing the report of the work done by this branch for the past year, I have divided the expenditure into two parts, as the first half-year was under the direction of Mr. W. E. Kemp, the late Architect for Public Schools, while the second half was under myself, appointed as Chief Clerk of Works, and the work done is represented as follows:—

1st January to 30th June.

No.	Name.	Accommodation.	Cost.
9	School-buildings	970	£ s. d. 4,134 5 0
10	Residences	3,596 18 6
1	Weather-shed	12 0 0
5	Addition to residences	837 0 0
13*	Additions to schools	917	4,065 10 1
130	Sundry works	3,861 0 4

* Two cases not affording additional accommodation.

1st July to 31st December.

No.	Name.	Accommodation.	Cost.
1	School-building	92	£ s. d. 354 15 0
2	Residences	813 11 6
1	Weather-shed	45 0 0
2	Additions to residences	239 10 6
5	Additions to schools	404	978 8 10
122	Sundry works	4,407 14 1

It will be seen by the foregoing that the school accommodation has been increased this year by 2,333, at a cost of £9,562 18s. 11d., which works out to about £4 0s. 3d. per head.

In addition to the works completed, contracts are now in progress amounting to £20,497 18s. 5d., and are as follows:—

No.	Name.	Accommodation.	Cost.
12	School buildings	1,190	£ s. d. 3,529 13 11
11	Residences	4,247 11 4
1	Weather-shed	59 11 0
3	Additions to residences	364 16 6
11*	Additions to schools	580	4,080 4 5
83	Sundry works	8,216 1 3

*Three cases not providing accommodation.

It will be seen that the schools in course of erection, which will probably be occupied within the first six months of the new year, will give further increased accommodation for 1,770 pupils.

The following works have also been carried out:—Technical Colleges, £3,086 11s. 3d.; Industrial School, £133 7s. 6d.

In addition to the above, plans and specification were prepared and a contract entered into for the erection of a building for a Technical College at Bathurst, for the sum of £6,123. This building was placed under the supervision of the Government Architect, and will be completed some time during next year.

The changes made by the Public Service Board brought about quite a new condition of things in this branch of the Department's work. The original staff consisted of an architect, chief draftsman, 3 senior draftsmen, 3 junior draftsmen, 3 clerks, and 6 clerks of works; the whole of this staff was abolished on the 31st June last; since then the work has been carried on by Chief Clerk of Works, with two draftsmen kindly lent by the Government Architect. One commenced work 5th July, and the other 23rd October; one clerk, who was transferred from the position of Reader's Assistant at the Government Printing Office, 12th December; and 6 clerks of works. The cost of the present staff for the last six months has been £990 10s., exclusive of the 2 draftsmen, as against £2,219 10s. for the first six months.

30th March, 1897.

J. C. WIGRAM,
Chief Clerk of Works.

APPENDIX XVII.

BOARD OF EXAMINERS' REPORT, 1896.

I HAVE the honor to submit the report of the Examining Branch for 1896.

The number of individual examinations upon which reports have been furnished during the year 1896 is 2,672, as against 2,497 in the previous year. The following details show how this total was made up:—

1. Applicant Pupil-teachers.....	281
2. Pupil-teachers	638
3. Teachers	557
4. Training Students.....	79
5. High School Candidates	1,117
Applicant Pupil-teachers:—	
Passed	88
Failed	174
Completed Music or Drawing only.....	19
Total examined 1896, 281.	
" 1895, 206.	
Percentage of passes, 41·2, as against 36·8 in 1895.	
Pupil-teachers—Candidates for Training—	
Males—	
Passed	47
Failed	20
Females—	
Passed	116
Failed	43
Retired from examination	4

Failed	42
Percentage of passes	96·2
„ for 1895	93·3

During the year the Board of Examiners has ceased to exist. This Board from September, 1889, till June, 1896, had control of all departmental examinations, and rendered excellent service. The work now devolves on the Examiner, who is helped by five assistant Examiners. These gentlemen perform this duty in addition to other services.

Nothing else has occurred calling for any special reference in this report.

R. N. MORRIS,
Examiner.

APPENDIX XVIII.

REPORT ON PUBLIC SCHOOLS CADET FORCE.

At the end of 1896, the Cadet Force numbered 3,164, and there appears to be a general revival among the teachers of interest in this important branch of the Public School curriculum, notwithstanding that no camp has been held for the last five years, and the strict economy exercised has limited the few attractions for the Force.

Except the monthly battalion parades, supplemented by the weekly drills at the various schools, and the target practices, the only attraction is the annual rifle meeting at the end of each school year, at which all city and country corps, which have prepared by the regular target practice, are invited to take part in competing for the Cadet Challenge Shield, presented by the Department of Public Instruction, and for other trophies presented by the Department and Sydney citizens. This event, together with the preparatory practices in their own Districts, does much towards training the lads and giving them a taste for the use of firearms, which may be very essential to them later on in life, when Australia takes her place amongst the nations.

Shooting is interfered with by the limited number of carbines fit for shooting purposes, and by the small quantity of ammunition.

It gave general satisfaction to see the Under Secretary, Chief Inspector, and Deputy Chief Inspector on the range at the Annual Shield Competition taking an active personal interest in the meeting. The Honorable J. Garrard, Minister of Public Instruction, in a few happy words, presented each winner with his prize. It is worthy of note that Mr. Garrard is the first Minister to visit the ground on an occasion like this. The meeting for 1896 took place on Friday, 18th, Saturday, 19th, and Monday, 21st December, and at this event 40 teams, representing 520 cadets, took part. The shooting was of high character generally ; in many cases excellent.

The cadets used the Braendlin carbine at ranges of 200 and 300 yards. The Challenge Shield went to Orange, which school has won it yearly since 1889.

Messrs. A. Hordern & Sons' 5-guinea gold medal for the individual championship of the Cadet Force was won by Cadet Wilkins, of Dubbo.

In addition to the Challenge Shield, about £50 in money and trophies were shot for.

Many country cadets stayed with city friends, but about 150 others were accommodated during the meeting at the Royal Agricultural Society's buildings, Moore Park, kindly placed at their disposal as in previous years, while the Military authorities considerably supplied blankets for the lads. Special arrangements for supervising the lads at camp were made, but the conduct throughout the meeting was excellent.

The results of the meeting show that a large number of boys would be ignorant of the use of firearms without the facilities given them by the cadet movement, and that these facilities, while disseminating great taste for and knowledge of the rifle, cost the State but little. In passing, I might state that some inquiries were made a short time ago as to the antecedents of New South Wales volunteers, and it was found that a large number were at one time Public School cadets.

Drill is a favourite subject with lads, and is taught in accordance with the Standard Military Text-book, under school conditions, the drill rifle taking the place of the sterner weapon ; and the lads who are physically fit are instructed in the use of this weapon, which is found most suitable. 1,300 of these rifles were purchased to meet the requirements of the new standard in drill, but more are yet needed. Excellent opportunities are afforded teachers for acquiring a knowledge of the various departments of drill in classes held for the purpose by the Cadet Staff at the Girls' High School.

Several important changes were made during the year in the Cadet Staff by the Public Service Board—Major Dettmann being graded an Inspector of Schools, Colonel Paul, Senior Staff Officer of Cadets ; the other members of the Staff being Captain Mulholland, Sergeant-major Murphy, and Quartermaster-sergeant Smith ; while the Chief Clerk (Jno. Beale) was transferred to the Accountant's branch. Captain Mulholland was placed at Newcastle to instruct the schools in that district.

The Cadet office and storeroom were removed to the Inspectors' quarters, as increased accommodation was required for the Department of Labour and Industry. This arrangement was most satisfactory, as the Cadet office and armoury adjoin each other.

New Cadet corps are being formed, chiefly by teachers, who develop as successful drill instructors, and take interest in the subject.

A large number of Cadet corps competed for the prizes in the liberal programme of the Public Schools Athletic Association, which held its annual meeting at the Sydney Cricket Ground, on the 18th and 19th September last, and at the conclusion of the meeting the competing corps gave an exhibition of attack and defence movements. The judges of these events were Staff drill-sergeants, who spoke in the highest terms of the lads' proficiency in the various drill evolutions. Infantry and physical drill events are prominent features in the branch associations in the country districts.

Cadet teams competed in the Military Tournament in various parts of the Colony, the Redfern Superior Public School cadets securing high honors for the second time at Newcastle, while the Auburn lads were successful at Clarendon, thus showing that boys can hold their own when pitted against the Military, which speaks volumes for the quality of the drill.

Drill

Drill Inspection.

All metropolitan, and many sub-metropolitan schools, were inspected in drill during the year, and detailed reports of inspection, furnished through the School Inspectors, as to results, which were generally very satisfactory, some schools attaining a high standard.

Sydney High Schools.

These institutions received a suitable course of instruction through weekly visits by a member of the Staff—the boys, company drill and physical drill, with and without arms, and the girls a complete course of calisthenics. These schools were fully inspected during the year.

The Fort-street and Hurlstone Training Colleges.

The students were fully posted in drill requirements of the standard for the different school classes, and were given every opportunity for teaching the subject to the pupils attending the Practising Schools. The year was concluded by an examination of the students, practically and theoretically, which examination showed most satisfactory results.

In conclusion, I feel assured that our teachers are fully seized with the importance of drill as an aid to discipline and the physical development of their pupils, and that there is a steady growth of desire with them to acquire a knowledge of drill, and impart it to their pupils.

A. PAUL, Lieut.-Colonel,
Senior Staff Officer.

ANNEX A.

CADET CORPS BRANCH.—DEPARTMENT OF PUBLIC INSTRUCTION.

RECEIPTS AND DISBURSEMENTS FROM 1ST JANUARY TO 31ST DECEMBER, 1896.

RECEIPTS.		DISBURSEMENTS.

E. & O.E.

Account Branch, Department of Public Instruction,
Sydney, 17th March, 1897.

A. E. BASSAN,
Accountant.

APPENDIX XIX.

REPORT ON TECHNICAL EDUCATION WITH ANNEX.

The enrolment of students for the year is shown in the following table. The numbers for 1895 are given for purposes of comparison:—

	1895.	1896.
Sydney Technical College	3,458	3,302
Suburban Classes	550	578
Country Classes	2,252	2,285
Classes connected with Public Schools ..	811	954
	7,071	7,119

Deducting from the total enrolment all cases where students have joined more than one class, the number of individuals entered was 5,396. The average weekly attendance of individual students throughout the year was 3,718.7.

TEACHING STAFF.

The teaching staff consists of 84 persons, distributed as follows:—

- 13 Lecturers in charge of Departments.
- 5 Resident Masters in charge of Branch Colleges or Schools.
- 36 Teachers.
- 17 Assistant Teachers.
- 13 Teachers in charge of classes, and remunerated by fees of pupils only.

A large and convenient room has been erected for the sheep and wool classes. The sanitary engineering classes have been located in a new building, and the plumbing workshop has also been extended.

The classes at Newcastle were removed to the new college, which had been erected during the previous year. It was officially opened on 20th February by the Minister, Mr. Garrard. A building has been erected at the Sydney Technical College for the old No. 1 engine, and the Watt engine. In the basement, refrigeration chambers have been provided, which will be used when opportunity offers for giving instruction in refrigeration. A contract has been accepted for the erection of the Technical College buildings at Bathurst. It is expected that the buildings will be ready for occupation by the end of the present year.

Applications for the services of the travelling lecturer in geology continue to be numerous. Sixty-three lectures were delivered, in addition to the visits paid to mining centres for giving useful hints to practical miners. The lecturer in agriculture also visited the agricultural districts, delivered lectures, and gave practical instruction. Special courses of lectures were also given on "fruit-growing."

Examinations for Master Plumbers' and Drainers' licenses have been conducted throughout the year. The Water and Sewerage Board has offered two gold medals to be competed for annually, one of which is for the honors pass in sanitary engineering, and the other for honors in advanced plumbing. In addition to the annual prizes awarded by the Department, a large number of private prizes was given by persons who take special interest in the work of Technical Instruction.

Agriculture.

Agriculture.

The agricultural classes have been well attended, and the number of students has exceeded that of previous years.

The enrolment was as follows.—Sydney, 197; Hunter's Hill, 19; and Hornsby, 8. A special course of lessons was given at Murrurundi, and at Toongabbie; the attendance being 28 and 25 respectively. Lectures were also delivered at Tilba-Tilba, Cobargo, Mangrove District, Auburn, and Glenhaven. Visits to orchards, bee-farms, &c., for practical out-door-work, have been arranged as often as possible. The want of a farm connected with the college is a serious drawback to this portion of the work. Much attention has also been paid to the science of dairying, fruit-preserving, syrup-making, the study of fungus and insect pests, and the means of checking them.

Veterinary Science and Farriery.

Classes have been held during the year, and good work has been done. The enrolment for the year was 33, with an average weekly attendance of 29.

Sheep and Wool Department.

The day classes in this department have been well attended, and many applied for admission for whom no space was available. The day students as usual attended the wool sales with the lecturer. The night-class was also full during the year. The students in both classes made satisfactory progress.

Chemistry.

The classes have had a large enrolment throughout the year. The number exceeded that of any previous year. Sixty-three students entered the practical, and 54 the theoretical classes. In addition to these, 6 came for instruction on Saturday mornings, whilst 21 attended during the day. Some of these desired only special instruction, such as fat-testing, &c. The conduct of the students has been most exemplary, and good progress was made by the majority of them.

Pharmacy.

The enrolments for the year show a slight increase on that of former years. Great difficulty arises owing to the mixed educational attainments of the students, many are not professionally employed, and follow various employments. To teach these with chemists' apprentices, so that all may profit, is a difficult task. The classes give promise of large numbers next year.

Geology, Mineralogy, and Mining.

The roll for this year shows a considerable increase on the previous year. In the mineralogy classes admission had to be refused to those who applied late in the term, in consequence of limited accommodation. The work during the year has been very satisfactory, and it is evident that most of the students attending the classes come to obtain such instruction as would be useful for mining purposes. Many students left after receiving the information they required for their particular object. The field work for students has been carried on regularly, and principally near Sydney. The accommodation was insufficient during the past year, but has been increased for the coming one.

Applied Mechanics.

This class has maintained its usual average of students. Very fair work has been done, but it is not up to the standard, mainly from the fact that the students so far have not passed through the physics class. With the increase of students in that class, a large number will be grounded in theory and ready to pass on to the applied mechanics. This will enable them to pass through the elementary course quickly, so as to take up more advanced work. The attendance has been very regular, and the attention good. The note-books kept by the students show that interest has been taken in the lectures given.

Mechanical Drawing.

There has been a great increase in the number of students in this class, the accommodation being taxed to meet the demand for admission, so much so, that additional nights are needed to overtake the work. With bench room for only 54, and an enrolment of 95, the students do not get the advantages they would with smaller classes. Some excellent work has been done. More models for practical work are required. A few additions have been made during the year by gifts of machinery and patterns from engineering friends who take interest in the classes.

Fitting and Turning.

The full roll has been maintained throughout the year, and good work has been done. Numbers of students have been refused admittance through the lack of accommodation. Several of the day students, who attend three days a week, have given their services on two other days, assisting in repairs and other work in the college. The night students have also given assistance. They are making a triple-expansion engine for the college, on which some excellent work is being done.

Blacksmithing.

The students have made fair progress. Very few of them follow the trade, but many join in order to learn enough smithing to be useful on a farm. With the limited number of hours for teaching this subject, the progress is somewhat slow.

Boiler-making.

The enrolment was good in this class, and useful work has been done; templating has been well studied, this being the branch the students wish principally to learn. Two hours each week only are available for practical work, and not very much can be done in the time. Some very good specimens are to be seen in the shape of small boilers, worked out in correct proportions.

Ironfoundry.

This class has not been satisfactory, the attendance being poor, though various attempts have been made to improve matters. The students are often detained at their respective workshops at night, and this reduces the average attendance. The work performed has been very good. The system introduced this year, of making castings in lead, has been much appreciated by the students.

Pattern-making.

This class has been thoroughly reorganised, and a new teacher appointed. The lines indicated in the syllabus have been followed, and already improvement is evident. The students will be more closely associated with the foundry, as they will be expected, after making a pattern, to observe the stages it passes through before a casting of it is obtained.

Slide Rule.

This class was placed under the Engineering department early in the year, and with the alteration of class nights, a larger attendance is expected. The subject is an important one, and is useful to every mechanic.

Electrical

Electrical Engineering.

Both the elementary and advanced classes have been well attended; an additional class in the latter has been formed. The syllabus was revised at the end of last year, with a view of preventing overlapping with the physics course. The oil engine has been utilised in driving the alternate current dynamo and exciter, and it is now belted directly to them. Two of the best modern types of alternating current arc lamps have been added to this portion of the plant, and have been successfully lighted directly from the alternator. The electric motor has been belted to the stamper battery, a line erected connecting the generator with the motor, and the transmission of power demonstrated. The number of instruments has been increased by the addition of some standard apparatus of the highest class. A portion of the oil engine room has been partitioned off and prepared for use as an accumulation or secondary battery-room.

Physics.

The total number of enrolments for the year, exclusive of High School classes, was 139. This shows a large increase over last year, when the aggregate enrolments did not exceed one-third of the present number. The attendance at the classes has been satisfactory throughout. The department has been moved to new quarters, and the change has resulted in a greatly-increased efficiency of working.

Very little new apparatus has been purchased during the year. Two or three pieces were required for experiments with the Röntgen Rays.

It has been decided not to carry on the Saturday morning classes next year, but to hold some extra week evening classes instead. A successful beginning has been made with the practical class; 13 students were enrolled for the third term. It is intended to extend this work in the future. The syllabus of applied physics has been reduced and made more general in character. A special course of lessons was given for the benefit of the senior boys of the High School in addition to the regular classes. The medal for physics at the Junior Public Examination was awarded to a member of this class.

Mathematics.

There has been a satisfactory increase in the attendance of this department, chiefly in the geometry and trigonometry classes. The average nightly attendance for the present year is 21, and for last year 13. The total enrolment for this year is 137; for 1895 it was 108. The students have been earnest and painstaking.

Sanitary Engineering.

The attendance during the year has been satisfactory. The increased accommodation afforded by the new building has been of great benefit to the students, and better work has been accomplished. Lectures on the design and principles of plumbing have been delivered at Sydney, Newcastle, and Maitland, which were well attended. Several students, who availed themselves of these lectures, have continued their studies and taken the higher branches of sanitary engineering. The examinations conducted by this department have already been referred to. The practical plumbing classes have made good progress. The students are all engaged in the plumbing trade, and by means of the instruction received at the College become more thoroughly and more rapidly proficient than they otherwise could. A large number of journeymen attend for special lessons in lead-burning and lead roofwork. The valuable medals offered by the Water and Sewerage Board and Messrs. Danks and Sons have caused a spirited competition during the whole year. The department of practical sanitation is doing good work.

Architecture.

The attendance at these classes has not been up to the standard of previous years, and the majority of those who did attend were beginners.

One reason for this decline is that many of the senior students have obtained employment in other countries, in some instances at a high rate of wages. Some of the drawings executed by the students are of a very high class. Many conveniences have been supplied during the year, such as drawers, presses, &c., which, together with the proposed additions to the curriculum of trades-drawing and day-classes, offer inducements for a larger attendance.

Building Construction.

This class was placed under the Lecturer in Architecture in June, and the attendance has been very good throughout the year, averaging about 90 per cent. of the enrolment.

Carpentry and Joinery.

These classes are progressing satisfactorily. During the year there has been an increase of students in the trade. The general conduct of the students has been very good.

Art Department.

This year the classes show a decrease in numbers. It was not to be expected that the rate of increase of the last few years would be maintained. The regulation providing that students shall not sit for examination, without due attendance at the classes, prevented them from taking up additional subjects during the last term of the year. A satisfactory rearrangement of class-rooms was made at the beginning of the year. One room is now available as a students' art gallery. This contains, from time to time, all the best work of the students, and is useful for showing to visitors the scope of the instruction.

Freehand and Model Drawing.

The class of work is of an improved character. The attendance on Saturday mornings is particularly good, and the day classes are generally better than the evening classes.

Plant Drawing.

In consequence of increased enrolments two lessons become necessary instead of one each week.

China Painting.

The attendance and work show an improvement. The day class was divided into two sections during the last term. Most of the students of this class will in future combine china painting with design.

Life Class.

There has been a steadily-increasing attendance. A new dais has been added to the fittings of the room, which is now all that could be desired. A number of students during the last term attended the National Art Gallery for the purpose of studying the best works there. Next year all students will be required to follow this practice.

Geometry and Perspective.

These classes do not make the headway they should, considering their technical usefulness. These subjects have been embodied in other courses as necessary for a diploma, and this will no doubt add to the enrolment.

Modelling

Modelling Class.

The work has proved to be better than that of previous years. A better classification of the course of study has been made, and a higher standard of execution has also been aimed at. Antique and ornamental modelling now embrace two separate courses. Some excellent life studies have been executed by senior students. Increased facilities for study will be made during the ensuing year. Good behaviour has prevailed through the three terms.

Industrial Art.

The subjects in this department comprise house painting, graining and marbling, signwriting decoration, and design.

The attendance has been good throughout the year. The students have been attentive, industrious, and efficient. Instruction on the lines laid down in the syllabus has been given.

Cookery.

The numbers for the early part of the year were high. The students were fewer during the second term; 130 enrolled in the last term. The class is in good order.

Dress-cutting.

In consequence of the change of teacher, the attendance fell off, but before the end of the term the number increased from 45 to 75. All the pupils were well behaved and industrious. Only 18 presented themselves for examination.

Lithography.

In this case a complete course of instruction has been given in accordance with the provisions of the syllabus. The College calendar for 1897 (in three paintings) is entirely the work of the students. In this work alone there is a complete course of instruction from the graining of stones to the finished printed copies. In the Photo-lithography class the whole course has been covered.

Manual Training—Students in Training.

The students' attendance has been good, and their progress satisfactory. Generally they have evinced great interest in their work, some indeed having advanced beyond the prescribed standard. More time has been devoted to drawing with beneficial results. The prospects of future good work are hopeful.

Boys' Classes.

The enrolment of these classes has fallen off. The progress under the circumstances has been satisfactory, while the conduct of the boys has been excellent. Useful work has been done. As a part of the class instruction, lessons were given in repairing school furniture.

The classes at Crown-street, Blackfriars, and Sussex-street have been in operation during the year, and the course laid down has been followed with a fair measure of success.

Geology.

The Travelling Lecturer in Geology reports:—During the year I delivered sixty-three lectures in various parts of the Colony. I pursued a somewhat different method to that of previous years, and found that by keeping to the towns I could command very large audiences; but while information was no doubt diffused in this way, more practical results came from visiting mining camps and small parties of working miners. The instruction given in this way, I have reason to know, was productive of much good. I include instruction of this kind and practical demonstrations under the heading of lectures.

Applications for lectures continue to increase, and I may state here that the reappointment of an assistant would go a long way to enable me to meet these applications.

Original Work.—As the result of a visit to the slopes of Mount Kosciusko in January and February, I made some important observations on the so-called glaciation of the Australian Alps. During this tour I visited a number of mining camps, and noted auriferous reefs at heights of from 5,000 to 6,000 feet above sea-level. During the year I did a considerable amount of work on the composition and distribution of the gems and precious stones of this Colony. Part of this work is embodied in an essay issued by the Royal Society, and for which the Society awarded me its prize and medal.

I prepared for the Press a work entitled "Geology for Australian Students." This book is illustrated with more than 200 figures, which are for the most part drawn by myself, and reproduced from my own photographs. I have also written a handbook for miners entitled "Useful Minerals, and how to tell them."

A very large correspondence has been kept up with *bona-fide* prospectors and working-men. This I have always considered as a most important method of imparting information, continuing the interest awakened by lectures. I have had to abandon it entirely, the services of my assistant being dispensed with.

While visiting the country between Wilcannia and Milparinka I discovered positive evidence that the artesian water of the west is derived from triassic and not from cretaceous rocks. This is in keeping with my previous discovery that the Coonamble artesian well was in triassic strata.

I am pleased to be able to add that my estimate of Wyalong gold-field is being fully borne out, and that the experiment I made of taking an assay plant to that field in its beginnings has been productive of the very best results.

NEWTON.

Freehand and Model Drawing.—The annual enrolments and attendance of students compare favourably with those of previous years. Satisfactory work was obtained from both classes. A smaller number of students presented themselves at the annual examinations this year, which is attributed to the regulation compelling them to attend two terms before they are eligible.

Mechanical, Geometrical, Perspective, and Architectural Drawing.—The teaching has been in strict accordance with the syllabus. The attendance during the early part of the year was not good, likely due to the fact that numbers of probable students were then out of work. Public lectures have been delivered on several occasions. The annual exhibition of students' work and presentation of prizes was held in the Town Hall, and was well attended. Visitors were afforded an opportunity of judging the character of the work done at the classes. The exhibits comprised examples of work from all the classes. The accommodation and equipment are all that could be desired.

ASHFIELD.

The classes have not increased during the year, but the prospects for the coming year are more hopeful. The accommodation and stock of appliances are sufficient for present purposes.

NORTH SYDNEY.

The classes continue to be popular, and a fair number attend for freehand and model drawing. Few apply for instruction in geometrical and perspective drawing. The regular attendance shows that the students are interested in their work.

Shorthand draws a good many pupils, and classes in this subject have been conducted with success.

ARNcliffe.

ARMIDALE.

During the first and second terms the depressed state of business, and lack of suitable rooms, rendered the enrolment small, but afterwards, with improved accommodation, the number on the roll almost doubled. The students have made good progress during the year.

PETERSHAM.

The attendance was much better than it was during the previous year.

The number enrolled for freehand did not approach that of former years, which may be accounted for by the leave of absence granted to the assistant teacher for a period of twelve months. In the first-year model drawing class the students were very regular in their attendance. This enabled them to go through a good course. It is a matter of regret that many of the more capable students did not avail themselves of the opportunity of sitting for examination. Very few passed through the second year's course. The plane and solid geometry class was well attended; the younger students took more interest in the subject. Perspective, as usual, did not command many pupils. Only persons who are compelled to learn this branch of drawing seem to take it up. Plant drawing has been taught during the year, involving a greater variety of work. This subject appears to command increasing interest. Antique drawing is the great aim of the students, but they are not permitted to study this section unless they have passed in the more elementary courses. The work executed by the students is very creditable. Painting from still life seems to have a great attraction, on account of the fascinating influence of colour.

Few entered for mechanical drawing, and it is difficult to understand why. Good work has been done in the architectural drawing class.

The attendance at the dresscutting and dressmaking classes was very small for the first three months, having only 6 on the roll, increasing afterwards to 19. The students made good progress.

Many students attended the shorthand class.

The general progress and the conduct of the students have been very satisfactory. An exhibition of student's work, in conjunction with the annual meeting, was held in June last, at which the Premier, the Hon. G. Reid, presented the prizes and certificates to the successful pupils. The exhibits were highly spoken of.

BATHURST TECHNICAL COLLEGE.

The total number of students enrolled in the various classes was as follows:—

Agriculture	10	Mineralogy	6
Botany	17	Mechanics.....	8
Book-keeping	47	Physics	11
Chemistry—		Freehand and Model Drawing.....	58
Practical	15	Geometrical and Perspective Drawing	27
Theoretical	5	Shorthand	17
Public Schools.....	175		
Geology	26	Total enrolment	467
Mathematics	45		

The total number of individual students was 303, being greater than in 1895, although the aggregate enrolment is slightly less.

There has been no change in the staff of the college during the year. An afternoon class was started in model drawing, and also a day class in botany. With these exceptions all the classes had been in operation in the preceding year.

The art classes have been well supported throughout the year, the enrolment being large and the attendance regular. Good work has been done, and marked progress made by many students.

The shorthand class has been fairly attended, and some students give promise of becoming expert writers.

Most of the classes under the resident science master have been well attended. As usual, the book-keeping and mathematics classes have proved most attractive. At both these good work has been done. A fair number has worked through a complete set of books by double entry, and all have learned to make entries and post ledgers in a business like manner.

The chemistry class consisted of regular students, several coming from the Public Schools, in order to obtain more advanced teaching than that given in the school course.

Junior Chemistry.—The class consists of the pupils from fifth classes at the Superior Public Schools who attend at the Technical College once a week for a lesson in science. The enrolment was very large, but a considerable number attended only during the latter part of the session, consequently they were not competent to sit for the annual examination. The attention shown by the students was very good. The lessons were fully illustrated by experiments.

Physics and mechanics were fair classes, but several promising students left Bathurst towards the close of the year, so that they were unable to present themselves for examination.

Geology and Mineralogy.—The evening classes in geology and mineralogy were small throughout the year. It is a matter of regret that so little interest is shown in these important subjects. Several young students have, however, made a promising beginning in geology.

Agriculture.—The agricultural class was very limited for the greater part of the year—so much so that it appeared doubtful whether it could be continued. Some new students joined towards the close of the year, and these are likely to continue. The establishment of a model farm at Bathurst will, it is believed, stimulate others to join the class. It is often difficult for farmers to come into Bathurst in the evening, after a hard day's work, and therefore only very earnest students have sufficient energy to do so regularly. All the practical farmers who have attended the class state that they have derived great benefit.

The botany class has been better attended, and several students have worked well. The lessons are always illustrated by fresh plants.

The conduct of the students has been uniformly good throughout the year.

Apparatus, &c.—The stock of plaster casts for the drawing classes is very complete and in good order. When the new college is being fitted up, considerable additions will be necessary for the chemistry and physics classes.

GRANVILLE.

The year's work was inaugurated by a lecture on "Paris," by Mr. H. Lord, Teacher of Agriculture, with lantern illustrations. The annual meeting of the school was held on 15th May, when the prizes and certificates won at the previous examinations were presented by the Hon. Jacob Garrard, Minister of Public Instruction, who also delivered an address on the advantages of technical education. Both these meetings were largely attended. During the first term classes were held in the following subjects:—Agriculture, applied mechanics, dresscutting, geometrical, mechanical, and model drawing, mathematics, and shorthand. The dresscutting class was closed at the end of the first term. The other seven classes were continued throughout the year. The total number of individual students enrolled was 136, as compared with 125 in 1895.

The students attending classes taught by the resident teacher visited the following places of interest:—Messrs. Brown and Brown, ironworks, Pymont, the Sydney Technical College workshops, Messrs. Murray Bros., woollen mills, Parramatta, Lake Illawarra smelting works, Dapto, and the Prospect Waterworks.

The

The enrolments in the agriculture classes for the year were :—Elementary, 45 ; advanced, 22 ; making a total of 67, compared with 59 last year. The course, as prescribed in the syllabus, has been followed, with slight modifications in favour of subjects of local or of special interest to the students. Arrangements were made for the students to accompany the Sydney class in their twenty-one outings, to gardens, orchards, bee-farms, poultry-farms, &c. In addition to these, six other outings were arranged to orchards, bee-farms, gardens, &c., of local students. On these occasions students did a large amount of practical work, such as pruning, grafting, budding, underground draining, gardening, handling bees, &c. They were also shown how to break in and train a horse for the plough, saddle, or harness.

The progress made by the students has been very marked. This has been ascertained by regular class examination papers.

GOLBURN.

As far as the number of students is concerned the Technical College has had a successful year. The total number of individuals attending the classes, exclusive of Public School pupils, has been 186. The enrolment has been as follows :—

Practical chemistry	5	Book-keeping	18
Theoretical	10	Shorthand	21
Physics	16	Carpentry.....	70
Geology.....	19	Wood-turning	19
Mineralogy	1	Fretwork	12
Freehand drawing	45	Carving.....	15
Model drawing	14	Physics—Public School pupils.....	192
Geometrical drawing	14	Manual training	74
Perspective drawing	1		
Mechanical drawing	2	Thus making a grand total of...	563
Arithmetic	15		

The accommodation consists of three rooms, one for science classes, one for art and commercial subjects, and one for wood-working classes.

The Public School physics class was so large that it was taught in two sections.

The appliances for teaching are fair, but additional scientific apparatus will soon be necessary. The conduct of the students has been uniformly good, and the majority has shown an eager desire to profit by the instruction given. Many of the art students become tradesmen, thus bringing their knowledge into practical use. A Technical College certificate forms the best of testimonials for a lad seeking employment, as it is recognised that a mechanical or a practical scientific training is useful in almost any walk of life. The science classes have been well attended. The students generally have been too young and inexperienced to pass the examinations after but one year's preparation.

The subjects treated in the art classes have been freehand, model, geometrical, and perspective drawing. The students have attended regularly, and careful work has been done. It is now desirable to have classes in plant drawing and still life.

With the erection of a new college an increased number of students might be looked for. The attendance during the past year shows an improvement. The existing carpentry workshop is unsuitable for present requirements ; it is stifling in hot weather, and bitterly cold in winter. The size is inadequate for the number of students. A large amount of work has been done. Many of the adult students prefer to make articles for themselves, and thus acquire general skill.

The turning class is also full on week-nights ; students, as a rule, are not able to attend on Saturday morning for this work.

NEWCASTLE.

During the year (the first at the new college) the work of the classes has been satisfactory, and their numerical strength fairly maintained, despite the influence exercised by the unfavourable condition of the district, disturbed as it was by labour troubles in the earlier part of the year. Instruction has been given in chemistry (theoretical and practical), mineralogy, geology, metallurgy (chiefly assaying), coal-mining (in Newcastle and four outlying townships), freehand, model, geometrical, perspective, antique, and mechanical drawing, boiler-making, carpentry, plumbing, mine surveying, steam and steam-engine, dressmaking, modelling in clay, and shorthand.

The individuals enrolled numbered 556.

The exodus of young men from the district to New Zealand coal-fields, West Australia, and South Africa materially affected the enrolment.

The conduct of the students in the class-rooms won the entire approval of the teachers, and the attendance, with a few exceptions, has been most regular.

The accommodation for the classes generally is suitable to their requirements, but the appliances could, in many instances, be largely supplemented with advantage.

The carpentry class has since its formation been growing in popularity. The numbers have increased each term, and the interest of the students has been well maintained throughout.

Manual Training.—In this class, notwithstanding many difficulties attending its commencement, the full course has, almost without exception, been fully completed by all the pupils who attended throughout the year. So far no difficulty has been experienced in maintaining a full roll. The boys have been attentive to the instruction given and regular in attendance.

The coal-mining classes began well, but the strike during the second term very severely affected the attendance. Despite this serious drawback, the third term showed an enrolment of 63 students, 40 of whom presented themselves for examination in December. The new Coal Mines Act provides that the Manager and Under Manager must respectively hold a first and second class certificate of competency. This should prove an incentive to the more intelligent miners of the district to avail themselves of the instruction given in the coal-mining classes.

The attendance at the mine-surveying class has been good, some of the students having been present 95 per cent. of the total lectures. The passing of the Coal Mines Regulation Act this year will have the effect of securing extra students, as the number of surveyors required under the new Act is doubled.

The metallurgy class has been well attended ; several practical gold and silver miners, with others interested in metal-mining, have received useful instruction.

The mechanical drawing class has maintained a very satisfactory attendance. At the completion of the last term there were 30 individual students. The result of the tuition given has been very gratifying to the teacher, as well as useful to the students.

The plumbing class is still doing well. The result of the 1895 examinations was very satisfactory, as all the students who went up for examination passed, two securing "Honours passes" in advanced plumbing.

The progress of the students attending the art classes has been satisfactory. The accommodation is ample. The appliances are suitable and sufficient, with the exception of the antique casts ; full-length figures are required to teach figure drawing. The present set comprises nothing but busts. The conduct of the students has been excellent. A steady increase in the enrolment has taken place since the opening of the classes in February, some of the students coming from places 15 or 16 miles away. It is encouraging to find so many enrolling for the advanced subjects.

There

There were only 37 students in the dressmaking classes during the year; the increase of fees seems to have been the cause of the falling off. The accommodation is very good. The students were well conducted, very anxious to learn the system, and therefore took a great interest in their work. The great advantage in the system is becoming known, and many more will in future take the opportunity of learning.

The shorthand class was fairly well attended. The number on the roll varied from 27 to 33. The conduct of the students was all that could be desired. The attendance for the third term was not so good. The prospects for the next year are very favourable.

WEST MAITLAND.

The individual enrolment for the West Maitland Technical College and District Technical School was 590. This is an increase over last year. The enrolment in the various classes has been :-

Art classes	578
Architectural drawing, building, construction, &c.	35
Mechanical drawing	22
Carpentry and joinery, &c.	45
Manual training	85
Practical plumbing ..	15
Scientific dresscutting and dressmaking	12
Shorthand	35

At the West Maitland Technical College the accommodation for the trades classes (carpentry and joinery, wood-carving, turning, and practical plumbing), also the manual training and modelling classes is satisfactory, but the success of the remainder is greatly impeded in the summer by the intolerable heat of the class-rooms. With the ceiling within the reach of a person of ordinary height, the gas alone warms up the room unpleasantly, but the greatest discomfort is felt when the sun has shone on the roof during the whole day. As a consequence, the students attend irregularly during the beginning and end of the year, affecting materially the course of study.

The classes generally are well provided with appliances. The conduct of the students throughout has been unexceptionable. The progress of the classes compares favourably with that of previous years. The coal-miners' strike unsettled some of the adult students, compelling them to seek work elsewhere, leaving younger men in the majority, but a lad who has had the advantage of the present-day system of education frequently makes a better student than an adult with more practical skill but neglected education. Altogether the future prospects of the classes are brighter and more promising. The district is gradually recovering from the effects of the 1893 flood, and many agriculturists have experienced quite a prosperous year. The coal-mining industry is also coming to the front. In one mine alone there are 250 men employed, and probably next year there will be a strong desire for a coal-mining class.

In May last the Hunter River Agricultural Association again offered a series of prizes for the advancement of technical education. The competition in the various classes was satisfactory, and a creditable display of students' work was made. In the district classes the work has been carried out in accordance with the calendar.

The manual training classes have been very satisfactory during the year, and good progress has been made. One additional class (from Homeville) has been formed. The attendance throughout has been good, and no trouble has arisen from late attendance, as heretofore. The conduct of the students has been excellent, and the accommodation is sufficient, except in the case of the High School workshops, where the space is limited. The technical classes held at night and on Saturdays have maintained the average attendance. In the case of the fretwork class the numbers have fallen, as anticipated, seeing that no permanent results were likely to follow. The work has lately been confined to two nights in the week, as it was found that better results could be obtained by concentrating the work (owing to the variety of subjects taught) to the evening, when both the teacher and assistant were present.

A first and second years' course of wood-turning and a first year's course of wood-carving have been arranged, as the absence of definite courses was found detrimental. The conduct of the students has been good, and the attendance regular. Generally speaking, it may be said that the classes have been highly successful and very beneficial to those instructed.

The plumbing class has maintained a good average, considering the continued dulness of the building trade in the district. It still remains popular. The future prospects are bright, and an increase in the enrolment is expected next year.

Several of the students attending the shorthand class are deserving of praise, for they have worked assiduously and systematically throughout the three terms.

The Seam classes have been fairly successful as regards the attendance and progress. Some of the most promising students, however, found it necessary to leave the district, owing to the lack of employment.

CLARENCE TOWN, MORPETH AND HINTON, AND SINGLETON.

Very successful classes have been held at these places. A large number of Public School teachers took advantage of these classes, which helped to maintain a good average attendance.

Since the oversight of the work of this branch was transferred to me I have watched the attendance of all the classes, and have visited most of the country centres. It is encouraging to find so many young men attending the evening classes after having spent a hard day at their various trades.

The teachers enter into their work with earnestness, which has a corresponding influence upon the students.

TECHNOLOGICAL MUSEUMS.

This year just closed unmistakably bears out the fact that the Technological Museums have grown in public favour, and maintained their prestige for imparting commercial and scientific knowledge. This is shown by the large correspondence conducted during the year, by the number of visitors to this and country museums, and by the varied donations. Public School teachers have largely availed themselves of the offer to determine specimens for them, and many botanical, mineral, and entomological specimens have been received for that purpose and reported upon. Although entailing much extra work the method is one whereby much valuable information is disseminated. The personnel of the scientific staff has undergone some changes. Mr. J. H. Maiden, who had held the position of Curator since the formation of the Museum, was transferred on the 1st of July to the directorship of the Sydney Botanic Gardens, and on the 1st of October Mr. W. W. Froggatt, the Entomologist, was transferred to the Department of Mines and Agriculture.

With so great a reduction in the scientific staff, less work has, of course, been attempted in the way of reclassification of specimens, but the agricultural courts have been thoroughly overhauled and rearranged. Mr. Baker has placed on exhibition and named a collection of Australian fungi, the first brought together in the Colonies, and these, together with the European and American models of funguses, form a unique collection in our vegetable products section. A start has been made at modelling types of the principal genera and natural orders of Australian flora. We have a good collection of exotics, but it has always been felt that the indigenous vegetation should also be represented, and without doubt this addition to the exhibits will be appreciated by teachers and students in botany. The timber collection has received particular attention from Mr. Baker, and some corrections in old labelling have been made, also the determination of the true origin of a number

of dubious species. A new style of labelling has also been introduced, giving full information of the economic purposes to which each species is best adapted. Specimens of the timbers with bark and label attached are being sent to the country museums.

A valuable collection of sandarachs (pinc-tree exudations) has been got together from all parts of the Colony, and will be described during the coming year. A still has been erected at the College for the use of the Museum, for the extraction of oils, so that the industry in this connection will be placed eventually on a purely scientific basis, so far as this Colony is concerned, and already the results obtained promise to be of value. Consequent on the reduction of the scientific staff, previously referred to, there has been very little time for original research in museum hours. However, Mr. H. G. Smith and Mr. Baker have succeeded in doing some original work. Mr. Baker has read the following papers before the Royal and Linnæan Societies respectively :—

1. "The occurrence of a true Manna on grass," *Andropogon annulatus*, F.
2. "Two new *Prostantheras* from New South Wales."
3. "Botany of the Rylstone and Goulburn River Districts."
4. "New descriptions, with figs., of 6 species of *Acacia*."

Mr. Smith has read the following :—

1. The chemistry of the Manna on grass.
2. On the constituents of the sap of the Silky Oak (*Grevillea robusta*).
3. On aromadendron or aromadentric acid from the turbid group of *Eucalyptus* kinds.
4. The dyeing properties of aromadendron and of the tannins of *Eucalyptus* kinds.

The research work on two or three, possibly new Colonial industries, was begun, and I hope to have some of them completed by the end of this year.

The collections on the ground floor have been much augmented during the year by many valuable collections and individual specimens. The fine collection of coal-tar products, lately received, cannot, however, at present be displayed, owing to the want of show-cases for that purpose; this is also true of the collections of decorative colours, bronzes, &c.

The mineral collections on this floor have been considerably increased and improved. The massive, tested specimens of iron have been repainted and relettered, thus increasing their educational value, as well as their appearance.

Much of Mr. Smith's time has, during the year, been taken up by the other portion of his duties, viz., the chemical investigation of the vegetable products of the Colony, and some success has attended this portion of his work, as the results obtained are likely to be of commercial use as well as of scientific value.

In the wool section of the animal products the total number of fleeces and samples received were 338, which is a little less than usual, owing, no doubt, to the effects of the very bad season. The specimens were mostly of a high-class order, coming from most of the best strains of the present day, and to give some idea of the quality of the work done, it is only necessary to say that a large number of fleeces and samples were reported upon,—many of these reports being reproduced in the pastoral journals published in the various Australian Colonies.

Several photographs of different breeds of sheep were added, and give a more finished look to the various courts, the most notable being that of "President," presented by the breeder, the Hon. Jas. Gibson, Bellevue, Tasmania.

Two collections of tallow of various brands and wools were prepared for the Imperial Institute, London, and Philadelphia (U.S.) Museum. There was also a special request from the Committee of the Murrumbidgee Pastoral Association that this Department should take charge of their wool-scouring test; this was done. Many teachers from different schools applied for, and were supplied with, a series of wool samples and photographs of machinery for object lessons. The twelve new wall-cases have been filled.

The attendance of visitors at the Technological Museums for the year 1896 was 226,010, viz. :—

Sydney	99,952
Newcastle	58,443
Goulburn	24,211
West Maitland	23,564
Bathurst	19,840

I am pleased to mention that the students in training at the Fort-street and Hurlstone Colleges continue to use very largely the collections to illustrate their object-lessons.

During the year 3,804 specimens have been added to the Museum, amongst the principal donations being :—A very interesting collection of native products from Tonga, received through the Rev. J. E. Moulton, consisting of kava, rope, fibre, arrowroot, &c. A representative collection of Tasmanian timbers, from the Launceston Technical School, in exchange for one sent from this Museum. Very good samples of tobacco-leaf from the Australian New Hebrides Company. A large collection of vegetable products, fibres, and timbers from the Botanical Gardens, Sydney. A "gingal," a clumsy-looking smooth-bore gun, used by two men, picked up at Tien-Chuan-Tye after the last battle between the Japanese and Chinese; a Manchu lady's pipe, and leather shoes worn by labourers at Manchuria, presented by Mr. George Fawcett, of Newchang, China, once a resident of Sydney. An old relic in the shape of a pump, originally used on the old Tank Stream in the early days of Sydney, presented by Mr. R. G. Brownlow, Waverley. Specimens of Australian fungi, presented by Mr. D. A. Porter, of Tamworth.

The following gentlemen have kindly presented valuable specimens of timber :—Clive Armstrong, Rylstone; J. V. De Coque, Sydney; John L. Bruce, Technical College; Owen Blacket, Technical College; Tait and McDiarmid, Mudgee; A. R. Crawford, Walcha; D. A. Porter, Inverell; Needlewood Pipe Company, Sydney; C. W. Darler and W. Trickett, Shea's Creek; H. J. Rumsey, Barber's Creek.

A very valuable collection of aniline and vegetable dyes, lead, pigments, iron, capsules, drugs, &c., was transferred to this Museum from the Department of Mines and Agriculture.

Exchanges outward.—Specimens of New South Wales timbers have been sent to the following :—The Government Technical School, Launceston, Tasmania; Commissioners appointed by the Government of Cape Colony to report on the agriculture of Australia; the National Society of Agriculture, Santiago, Chili; the Minister of Foreign Affairs, St. Petersburg, Russia; the Minister for Agriculture, &c., Germany; the Minister de Fomento, Madrid, Spain; Nederlandsch Landbouw Comité, The Hague, Holland; the Minister for Foreign Affairs, Brussels; Botanic Gardens, Sydney; Julius Levy, Sydney; A. H. Yabsley, Sydney; Dickson and Tregarthon, Sydney; Learmonth, Dickenson, & Co., Sydney; Arthur Griffith, M.L.A., Sydney.

BRANCH MUSEUMS.

I much regret to report that no visits of inspection have been paid to our local museums, as it was thought inadvisable for any officer to leave Sydney pending the inquiries of the Public Service Board, and during the last six months no one could be spared.

At the latter end of the year the Albury Free Industrial Museum was taken over by the Department, and now becomes the Albury Technological Museum, and will, of course, be carried on on similar lines to our other local museums.

R. N. MORRIS,
Superintendent of Technical Education.

113

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

AUSTRALIAN MUSEUM.

(REPORT OF TRUSTEES FOR THE YEAR 1896.)

 Presented to Parliament pursuant to Act 17 Vic. No. 2, sec. 9.

Printed under No. 9 Report from Printing Committee, 1 July, 1897.

To HIS EXCELLENCY THE GOVERNOR AND EXECUTIVE COUNCIL,—

The Trustees of the Australian Museum have the honour to submit to Your Excellency their Forty-third Annual Report.

1. There have not been any changes in the membership of the Board during the year.

2. The Museum continued open to visitors during the usual hours, viz., from 2 to 5 p.m. on Sundays and from 10 a.m. to 5 p.m. on all week-days, except Mondays, which were reserved for cleaning purposes, and except one day closed for repairs. On Monday afternoons the collections have, as usual, been accessible to students and schools for teaching purposes, on application being made to the Curator. The total number of visitors recorded is shown in Appendix VI. The average was 316 on week-days and 663 on Sundays. The slight decrease on week-days is accounted for by a portion of the Museum having been closed to the public during some months for repairs.

3. The Trustees have been able during the past year to make a few important purchases. The remains of the Elephant "Jumbo" were acquired from the New South Wales Zoological Society; the skin has been preserved and put into store, there being at present no facilities for setting it up; the skeleton has been mounted and forms a conspicuous object among the Osteological Collections. A Leopard skin and skeleton have also been purchased from the same Society. Other noticeable acquisitions by purchase were:—some ancient Peruvian Urns; the Bower or "Playground" of one of the Bower Birds; a collection of Insects, including many typical specimens; and some casts of Fishes.

4. Although no Collecting Expeditions—with the exception mentioned in a later paragraph—have been organised, some of the members of the Museum Staff have, at various times, been able to collect specimens, many of which are of value to the Museum. The Curator had an opportunity of visiting the Wombeyan Caves, Yaralumla, and other places in the interior, from which he procured much interesting material.

5. The most important presentation was the well-known "Dobroyde" Collection of Australian Birds and Eggs, made by Messrs. Ramsay, and containing many type specimens. This was purchased by the Government of New South Wales from Mr. J. S. Ramsay and has been delivered to the Trustees. Another valuable donation is a piece of Meteoric Iron weighing over 44 lb. found on the Nocolche Holding, near Wanaaring, New South Wales, and presented to the Museum by Mr. Geo. J. Raffel. This will be known as the "Nocolche" Meteorite. Steps are being taken to have a few slices cut and polished which will be available for exchange. The semi-fossil remains of a Dugong having been discovered in the excavations for a canal at Shea's Creek, near Sydney, were presented to the Museum. This is the first instance of the discovery of Dugong remains so far south. The British Government and the governments of several foreign countries having been asked for representative collections of current coins for the Numismatological Department of this Museum, favourable replies, with series of coins, have been received from the British, German, Austro-Hungarian, and Hawaiian Governments. Mr. W. A. Horn has presented the Museum with a selection from the collections of the "Horn Expedition" including some of the type specimens, and with a copy of the published Reports of the Expedition.

The Government Architect has lent to the Trustees a very fine collection of New South Wales Marbles, prepared by Mr. W. Roberts, of Bathurst, and it is hoped that a selection from these will be allowed to remain permanently in the Museum.

6. A commencement has been made at the works for extension of the Museum buildings, for which a sum of £6,000 was voted by Parliament in 1895. Under the direction of the Government Architect the old ant-eaten roof has been removed, and a new roof, built of steel, wood, and copper, has been constructed. While this was in progress a thorough inspection of the building was made to ascertain the extent of the ravages of the "white ant," with the result that it was found necessary to renew the floor and some of the cases in the Ethnological Hall. During the progress of these works portions of the Museum were necessarily closed to the public.

7. The Local Committee of the "Funafuti Coral Reef Boring Expedition, of the Royal Society of London," in charge of Professor W. J. Sollas, LL.D., F.R.S., having offered to allow one of the officers of the Museum to accompany the expedition, Mr. Charles Hedley was selected for the purpose, and left Sydney with the expedition in H.M.S. "Penguin," Captain Mostyn Field, R.N., on 1st May, and after a residence on the island for two and a half months, returned to Sydney on 22nd August. During his stay on Funafuti he succeeded in amassing an interesting collection, particularly of Invertebrate and Ethnological objects, together with much valuable scientific information. The collections are now in process of description by the Scientific Staff of the Museum, and the results will be published in the order in which the study of the various groups is completed.

8. The Trustees regret to announce the death, on 10th June, 1896, of Mr. F. A. A. Skuse, who held the position of Entomologist in this Museum. Mr. W. J. Rainbow has been appointed his successor.

9. The Publications issued during the year are:—Records of the Australian Museum, Vol. II, No. 7, completing the volume. Memoirs of the Australian Museum, III, Part 1, containing the first of the Reports on the Funafuti Expedition.

10. Full information with respect to the Museum will be found in the Appendices attached to this Report, viz.:—

- I.—Curator's Report.
- II.—Reports of Scientific Assistants.
- III.—Secretary's Report.
- IV.—Statement of Receipts and Expenditure.
- V.—Attendance of the Trustees.
- VI.—Attendance of Visitors and summary for fifteen years.
- VII.—Return of Specimens acquired during 1896.
- VIII.—Donations.
- IX.—Exchanges.
- X.—Return of information supplied to the Public.
- XI.—Additions to the Library.
- XII.—Publications of the Australian Museum.
- XIII.—Museum Staff.

The Common Seal of the Museum was hereunto affixed by order of the Board, this 6th day of May, 1897.

(L.S.) JAMES C. COX, M.D.,
Chairman.

S. SINCLAIR,
Secretary.

APPENDIX I.

CURATOR'S REPORT FOR 1896.

["The degree of civilisation to which any nation, city, or province has attained is best shown by the character of its Public Museums, and the liberality with which they are maintained."—G. BROWNE GOODE, M.A.]

Sydney, 4th January, 1897.

To the Trustees of the Australian Museum.
Gentlemen,

I have the honour to hand you the following Report dealing with the work of the Australian Museum during the past year, and the condition of the Collections in your charge:—

General Condition.—A somewhat more increased state of prosperity than has existed during the last few years may, I think, be evinced by our power, to some extent at least, to resume purchases, not certainly from an increase in income but from a decrease in expenditure brought about by a rigid general exercise of economy on the part of the Secretary and myself.

A more anxious twelve months than the last it would in all probability be impossible to pass through again, in consequence of the renewed discovery of the depredations of *Termites*. A forecast of this trouble was made in the 1895 Report, and now that it is practically over, for a time at least, one only realises the amount of unlooked for, and what should have been unnecessary work on the part of nearly the whole Staff, to say nothing of the anxiety borne by the executive officer. It involved the closing and cleaning of all the cases in the central portion of the Upper Main Hall, and disorganisation of the wings attached; the emptying of various cases in the Main Hall; the closing and entire disarrangement of the Ethnological Hall and contiguous galleries—a state of confusion to some extent still existing; and, worst of all, the undoing of previously completed good work. With these exceptions the general condition of the Museum is as satisfactory as during last year.

Award.—From the Commissioners of the World's Columbian Exposition at Chicago, an award of three Bronze Medals and three Certificates of Merit was received.

Fire Appliances.—Through the abolition by the Public Service Board of the Inspecting Officer of the Metropolitan Fire Brigade, the supervision of the fire appliances now devolves on your officers.

Staff Duties, &c.—I have again much pleasure in testifying to the general attention of the whole Staff to their duties during the past year.

After a very brief illness, Mr. Frederick A. A. Skuse, your Entomologist, died on June 10th.

Four additions were made to the Staff. In July, Mr. W. J. Rainbow was temporarily employed to take up the duties of the late Mr. Skuse, and was confirmed thereto on September 3rd. Mr. F. P. Clark, who was appointed clerk in the place of the late Mr. W. H. Hill, commenced his duties on January 2nd, and has in every way realised the favourable expectations I had formed of him. In consequence of the withdrawal of Attendant Robert Grant from warding duties to attend to the collections removed from the Upper Main Hall, it became necessary to obtain the services of an additional temporary attendant. On the recommendation of the Government Architect (W. L. Vernon, Esq.), Edward Francis was selected for this purpose in July last, and has continued to perform his duties with diligence. In April, Joseph Spencer was temporarily appointed Messenger in the place of G. Sparks, who resigned, and was subsequently confirmed in his appointment. During the year the number of Special Constables was increased by the swearing-in of Attendant F. Kippax, and Night-watchman J. W. Pidgeon. On the application of Professor T. P. Anderson Stuart, M.D., A. Cronin was temporarily appointed, without salary, on January 1st, to gain instruction in articulation and taxidermy on behalf of the University Anatomical Museum, to which he was recalled at the end of the following March. Mr. Cronin proved a very apt pupil under the tuition of the Articulator (Mr. H. Barnes) and the Taxidermist (Mr. J. A. Thorpe); indeed, his assistance at that time was most opportune. During March last, Mr. Leslie King applied to be allowed to attach himself to the Museum Staff, without salary, to gain experience in the preparation of Natural History specimens. He has so continued to the close of the year, and it affords me gratification to say that his services were eminently useful, and, I am under the impression, of advantage to himself. I have also had the advantage of assistance from another volunteer, Mr. W. Stalkartt, who joined in September under similar conditions. He has worked steadily since then with the Taxidermist and Mr. J. Jennings—chiefly the latter—and his help has been of great assistance at a time when we were overburdened with work.

I earnestly desire to call your attention to the inadequate scale of remuneration received by the Staff individually, in comparison with that prevailing in some of the Service Departments. Taking the Department of Public Instruction, with which we are affiliated, for example, we see that whilst only four of my professional assistants are in receipt of £215 per annum, there are in the Ministerial office of the Department (exclusive of the Chief Clerk, Cashier, and Record Clerk) no less than twelve ordinary clerks, with salaries ranging from £250 to £350 per annum. It must not be overlooked that the Scientific Assistants are, by educational status and scientific attainments, entitled to rank as professional men, and yet there exists the above glaring anomaly. With regard to the skilled mechanics, we find practically the same state of things, for both in the Technical Education Branch and Technological Museum the skilled workmen are paid at a proportionately higher rate than three out of the six occupying a similar position with us. In the National Art Gallery the attendants are also paid at a higher rate than those similarly situated in the Australian Museum.

The Museum still remains much under-manned—a fact brought under your notice in previous Reports. An additional Carpenter and an Assistant Taxidermist are required, and a permanent labourer is a desideratum. I advocate the separation of Mr. North's duties into two—he retaining the Birds, whilst the Anthropology, Ethnology, and Numismatics should be handed over to another officer, to be appointed. A Curator's Mechanical Assistant would be a decided advantage, for it must be remembered that I am endeavouring (I cannot say I have satisfactorily succeeded) to discharge a dual duty—that of Curator and an Assistant (Palaeontologist). As a result the palaeontological work does not progress in the same ratio with the other sections. I regard the position of Curator of such an institution as this, as one carrying with it the necessity of engaging in original research. As matters are at present constituted this is an impossibility.

Public

Public Service Board of 1895.—By a notification in the Estimates of Expenditure for 1896-7 (foot-note, p. 184), it appears that "the Australian Museum does not come under the provisions of the Public Service Act of 1895."

Care of the Collections.—The same distribution of work in the care of the Skin Collection existed as detailed in my Report for 1895. It affords me great pleasure to state that constant watchfulness on the part of Attendant Grant, and the Taxidermist (Mr. J. A. Thorpe), when his many duties permitted him, had the effect of reducing the existence of insect life amongst the Mounted and Skin Collections to almost *nil*. I am confident that the Australian Museum will now compare favourably in this respect with any other.

Cleaning Duties.—The two additional male Attendants referred to in last year's Report were duly appointed, and these, with the temporary hand already referred to, have enabled the cleaning duties to be much more thoroughly carried out.

Space.—As foreshadowed in my last year's Report, the erection of the two additional wall-cases in the Main Hall fills not only the space that can be devoted to the Mammalia, but also completes the wall-casing of that part of the building, unless it be by the partial removal of the glass screen at the public entrance, which in my opinion occupies far too much space. Similarly with the erection of the wall-cases in the central portion of the Upper Main Hall, already authorised and in progress, this portion of the Museum will be cased to its utmost capacity. There only remains the upper narrow unused gallery over the portion just referred to, which is thoroughly well adapted for exhibition purposes. Of this I have obtained an independent professional opinion. I have on a previous occasion suggested to you that this gallery would accommodate itself to the Fish Collection, and it is to be hoped that an appropriation for this purpose will be obtained during the coming financial year.

Duplicates.—Through some extensive additions to the Entomological Collection, duplicates are now available in that section. In consequence of the rearrangement of the skeletons I have been able to relegate some mounted Osteological specimens to this category. Otherwise matters of this nature remain much as they were.

Structural Matters.—In my last year's Report I expressed the hope that the construction of the new roof would be proceeded with early in the year. After much delay, arising from circumstances over which you had no control, it was commenced in April and completed at the end of July. The contract was let to Messrs. McIntyre & Co., of Paddington. As a preliminary step it was necessary to close to the public the whole of the upper floor of the Museum, to denude the central portion of the Upper Main Hall of all its cases, and afford safe storage for their contents. This, I am happy to say, was safely accomplished, and the property so removed was placed in the care of Attendant R. Grant, who discharged his special duties to my entire satisfaction. Hardly had this commenced when the work in connection therewith revealed the presence of *Termites* in the flooring and joists of the Main Hall, necessitating the partial clearing of some of the Osteological cases. This led to a general survey of the entire building by the Government Architect's Officers and the Contractor's staff; and here, I think it is not out of place to express our indebtedness to Mr. Thomas Barnet, Assistant Architect, and Mr. G. Anderson, foreman to Messrs. McIntyre & Co., for their indefatigable exertions in the almost hopeless task of eradicating this troublesome and insidious pest. It was found that from the Main Hall the insects had made their way through the masonry joints into and under the floor of the Ethnological Hall, and had as completely destroyed the wood-work of that structure as of the roof. It was ultimately decided to replace the floor with a new one, and asphalt the ground beneath it; but to accomplish this the whole of the wall cases had to be drawn out in sections, after being stripped of their contents. The work was commenced in September and finished in November, but the re-arrangement of the specimens will not be completed for some time.

With the view of throwing more light into the north end of the Upper Main Hall, occupied by the Australian Birds, the galvanized iron ceiling of the Geological Hall was pierced in two places to utilise some disused windows in the wall of the former that had become blocked by the latter, with beneficial results.

A new low retaining-wall was built along a portion of the fence separating your Grant from that of the Sydney Grammar School Trustees, and the area between this and the Museum south end was deepened and drained, to obviate traces of damp that began to appear in this portion of the building.

New louver shutters were provided to the north and south wings of the main roof—repairs long wanted.

The old bath-room existing in the basement was dismantled, and refitted as an additional store-room for Ethnology.

The whole of the air-ways beneath the general structure were cleaned and white-washed by labour engaged for the purpose, whilst the private lavatories and that attached to the Board Room were ventilated.

It was mentioned in the 1895 Report that the sum of £6,000 had been placed on the 1895-6 Estimates to provide a new Spirit Room and Workshops, the latter to form a portion of the basement of the future south wing. After much unnecessary delay, work was commenced on this much-needed improvement shortly before the close of the year. The contractors are Messrs. Wall and Sons, of Newtown.

Portions of the Museum exterior, especially along the College-street frontage, are very much in want of cleansing; the outer face of the stone is scaling off, and the pointing requires renewing. In addition, the Corinthian capitals require wiring-in to prevent the resting of pigeons; and the wood-work of all the doors and windows, back and front, needs re-painting.

New Cases.—The expenditure under this head was again much and inconveniently delayed in consequence of the late passing of the Appropriation Act for 1896-7. The two new wall-cases in the Main Hall have already been referred to. They were erected by Messrs. T. Jones & Co., and have been devoted to the display of the Quadrumana. The same firm built a fine stand for the skeleton of the Asiatic Elephant "Jumbo," so constructed that the intended glass cover can be added when funds are available; and a small separate case to contain the model of the head of a *Neobalena marginata*.

An extra glass shelf was supplied to the whole of the Invertebrate wall-cases (except the Insecta) which has enabled an expansion of the Collections under Mr. T. Whitelegge, to be made.

New cabinets for study and store purposes were provided—one each for the Entomologist, Conchologist, Osteologist, and Invertebrate Zoologist; and fifty additional covered trays for general purposes.

Numerous

Numerous alterations to old stored movable cases were made by the carpenters (referred to under that heading), and brought into use.

The balustrade and intermediate flat cases in the Invertebrate Gallery are in want of new locks, and until such are provided the cases cannot be regarded as secure; an undue amount of responsibility is thus also thrown on the Attendants.

Collecting and Field Work.—No organised collecting was attempted, again in consequence of lack of funds. During February, I visited the Wombeyan Caves to investigate a reported discovery of fossil bones, and obtained a small series of specimens. This deposit occupies a small depression on the side of a limestone hill. The bones are all small and much comminuted, being those of Marsupialia, Rodentia, and Chiroptera. To the researches of Dr. R. Broom, late of Taralga, the deposit has yielded the remains of six extinct animals,* the type specimens of which he has generously presented to the Museum. During October, I visited Cunningham Creek, near Harden, to investigate the reported discovery of large fossil bones. My proceedings are recorded in a part of our Records now being issued. At the close of the year I proceeded, in company with Mr. John Mitchell, of Narellan, to Yarralumla, near Queanbeyan, to examine a deposit of Silurian fossils described many years ago by the Rev. W. B. Clarke.† The search did not repay our expectations. The deposit consists of a few small patches of mudstone with Brachiopoda and Trilobites, indicative of the Bowring Series, and containing limestone nodules, chiefly Corals.

The Local Committee of the Funafuti Coral Reef Boring Expedition of the Royal Society (London), in charge of Professor W. J. Sollas, LL.D., F.R.S., having suggested to you that one of your officers should be deputed to accompany the Expedition, Mr. Charles Hedley was selected for the purpose. Mr. Hedley left Sydney in H.M.S. "Penguin," under the command of Captain Mostyn Field, R.N., on May 1st, arriving at Funafuti on May 21st. He remained on the island two and a half months, leaving in the same vessel. On the return voyage to Fiji the island of Nukulailai was touched at, where scientific investigations were renewed for two days. Mr. Hedley finally reached Sydney on August 22nd. During his stay on Funafuti he succeeded in amassing an interesting collection, particularly of Invertebrate and Ethnological objects, together with much valuable scientific information. Too much credit cannot be awarded to Mr. Hedley for his praiseworthy efforts under very trying difficulties.

The establishment of the post of Collector is much to be desired. No systematic additions to the general collection can be made until this is done.

Exchanges.—I am happy to be able to state that we are now in a much better position to effect exchanges than we have been for some time past, notably in the Insecta, but still much remains to be desired, amongst the Minerals and Rocks in particular. The difficulty in obtaining the latter appears to be one of our weak points, and arises from the fact that we have never possessed a Geological Collector, and from the want of a connection amongst the mining community. The principal exchanges effected during the year were:—Ethnology, from the South Australian Museum; Post-Tertiary Fossils, from the Wanganui Museum, and to that institution Minerals, Reptiles, and Gold-nugget Models; "Challenger" Mollusca from the British Museum (Nat. Hist.); Minerals, Birds, Fossils, Mollusca, Crustacea, &c., from the Museo de la Plata, and to it Minerals, Echinodermata, Reptilia, &c.; British Minerals, from the Kelvin Grove Museum, and to it Marsupialia, Birds, and Reptilia; Minerals and Insecta to and from the Musée Coloniale, Noumea; Deep-sea Mollusca from the Indian Museum, Calcutta, in exchange for Mammalia; Mammalia, Ethnology, Birds, &c., from the Pietermaritzburg Museum; Mammalia, Skeletons, &c., from the United States National Museum, and to it Reptilia, Fish, Birds, Mollusca, and Minerals; photographs of "Cook Relics" to the Bishop Museum at Honolulu; mounted Mammalia to the Western Australian Museum; and Australian Stone Weapons and New Guinea Shell Ornaments to the Florence Museum.

Presentations.—These on the whole have flown in copiously. The more important were:—Types of the "Honey-ants" of the Horn Central Australian Exploring Expedition, and a further collection of Birds of the same from Professor W. Baldwin Spencer, M.A., on behalf of himself and Mr. W. A. Horn, Adelaide; the Nocoleche Meteorite, from Nocoleche Station, near Wanaaring, weighing 44 lb. 3 oz, the gift of Mr. G. J. Raffel; Stalactites from Jenolan Caves, collected by Mr. Jeremiah Wilson; Stalagmites from Wombeyan Caves, from the Department of Mines and Agriculture; Queensland Cattle Ticks in all stages of development, from Mr. C. J. Pound; the "Dobroyde" Collection of Australian Birds and Eggs; Dugong skeleton from Shea's Creek, Alexandria, from the Engineer-in-Chief for Harbours and Rivers; Hawaiian Current Coinage in duplicate from the Hawaiian Government; Prussian Current Coinage in duplicate from the Imperial German Chancellor; Austro-Hungarian Current Coinage from the Austro-Hungarian Government; and British "Jubilee" Coinage from the Secretary of State for the Colonies.

Purchases.—The more important were; (1) Pottery of ancient type from Peruvian excavations; (2) Bower of Newton's Bower-bird (*Prionodura newtoniana*); (3) Co-types of Skuse's Diptera; (4) Australian Coleoptera; (5) Carcase of the Asiatic Elephant "Jumbo," &c.

Publications.—Only one new publication was issued during the year, but three others are in hand. That published in December is the first part of Memoir iii, which is to be devoted to the elaboration of Mr. Hedley's Funafuti collections. It comprises the General Account, Birds, and Rock-specimens. The second part is now in the printer's hands and will contain descriptions of the Insecta, Arachnida, and Crustacea. The MS. of the third part is well advanced and will embrace Mammalia, Pisces, and Reptilia. A further portion of the "Records" is also in course of printing and almost ready for publication. A second edition of Dr. E. P. Ramsay's Catalogue of the Australian Birds, Part I, Accipitres, now out of print, is in preparation, and will be published during the current year.

Information Disseminated.—Portions of our collections have been freely used by inquirers. Mr. Hedley calls attention to the number of students who availed themselves of the facilities now presented for naming local Shells; Mr. North the interest in the Nest-group Collection, and Ornithological assistance given to many, both personally and by letter; whilst Mr. Rainbow has been actively employed in exhibiting the cabinet Insects. Demonstrations to the Burwood Ladies' College were given by

* Proc. Linn. Soc. N.S. Wales, 1896, p. 48.

† Quart. Journ. Geol. Soc., IV, 1848, p. 63.

by Mr. Hedley and myself. The King's School, Parramatta, was supplied with named collections of minerals and shells. On the application of the Director the birds in the Botanical Gardens were examined and named by Mr. North. The Biological Laboratory at the University was supplied with certain duplicates to fill gaps in the teaching series, and the Geological Laboratory with a large number of rock fragments and unlocated minerals for analytical purposes. A full return under this head will be found in *Appendix X*.

Spirit Room.—Mr. Whitelegge continued his investigations of the Spirit Room stores, and completed the fishes preserved in tanks. There only remains to be examined now a large assortment of all classes in bottles and jars.

Taxidermist.—In the interval between Mr. Skuse's death and the temporary employment of Mr. Rainbow, the Taxidermist (Mr. J. A. Thorpe) took charge of the Entomological Collection. In connection with the new roof, he superintended the removal, cleaning, and re-arrangement of nearly the whole of the specimens in the Upper Main Hall, amounting to several thousands, in which he was ably assisted by the Carpenters, Attendant Grant, and other members of the Staff. During this work the large Fish (23 in number) suspended from the uppermost gallery, were removed, cleaned, restored, and rehung; also the Turtles and Tortoises, 55 in number. The occasion of transferring the Monkeys and Lemurs to the newly-erected cases was taken advantage of to thoroughly clean, and in some instances remount and restore the specimens, to the number of 71. Eight Cetaceans and Sirenians, 50 Carnivora, and 69 Chiroptera underwent the same process. In the workshop, 53 Mammal skins were prepared, and 60 mounted, and 10 groups set up. Amongst the Birds, 130 skins were prepared, 55 skins mounted, 8 groups, and 10 nest groups set up. Five Fish and 5 Reptiles prepared, 4 mounted, and 1 Crustacean.

Articulators (Messrs. H. Barnes and H. Barnes, jun.).—The well known Asiatic Elephant "Jumbo" died at the gardens of the Zoological Society on January 18th. After much labour on the part of the whole Mechanical Staff the hide and bones were conveyed to the Museum, and after three months close application the skeleton was erected at the entrance to the Osteological portion of the Main Hall. It now forms one of the most notable objects in the Museum, and is one of the happiest efforts amongst the many fine exhibitions of his skill on the part of Mr. H. Barnes. Thirty-five skeletons were macerated and cleaned, and eighteen were mounted.

Formatori (Messrs. H. Barnes and H. Barnes, jun.).—Thirty moulds were prepared during the year, and forty-seven casts or reproductions taken. Amongst these the most notable was the "Nocoloche" Meteorite.

Photographers (Messrs. H. Barnes and H. Barnes, jun.).—Forty-eight negatives were taken, and 248 prints were thrown off.

Carpenters (Messrs. R. Barnes and B. Lucas).—The principal work performed in the carpenter's shop was the preparation of specimen stands in all branches; renovation of several old cases from store; six slopes for the interior of Palæontological table cases; tables for Rat Kangaroo group, Dugong, and Turtles and Tortoises; tank for reception of Elephant skin; stand for carved tree; and general Museum repairs. Valuable assistance was lent by Messrs. Barnes and Lucas in the preparation and mounting of the Elephant skeleton, and the heavy work arising from the moving of cases consequent on roof and floor renovation. During the current year their duties will be increased by the supervision of the fire appliances.

Smiths (Messrs. B. Lucas and R. Barnes).—I am glad to be able to report that we are now doing our own blacksmith work. The whole of the ironwork necessary for the support of six large Cetaceans and Sirenians, and for the Elephant, was made on the premises, besides small jobs too numerous to mention.

Printer (Attendant F. Kippax).—The printing of labels, foreshadowed in the 1895 Report, is now an accomplished fact, 2,868 having been produced during the year. The Pearl Platen Printing Press has proved a great success. The labels were distributed as follows:—Mammalia, Reptilia, &c., 741; Aves, 520; Entomology, 77; Conchology, 55; other Invertebrates, 441; Ethnology and Palæontology, 519; Mineralogy, 515.

Mammalia.—The work of rearrangement mentioned in the 1895 Report was continued, and with the addition of the Chiroptera, Carnivora, and Quadrumana, it is now complete with the exception of the permanent labelling. The want of space prevented the mounting of the Asiatic Elephant skin, which is much to be regretted. It reposes at present in a specially-constructed tank, and there for some time to come it must remain. Opposite the main entrance have been grouped together, as the most convenient and appropriate place from their contiguity to the other Mammalia, the large Cetacea and Sirenia so far as the space would permit, including the Dugong (*Halicore dugong*), the Manatee (*Manatus americanus*), the Sulphur-bottomed Whale (*Balaenoptera huttoni*), Dolphin (*Delphinus delphis*), Lesser Sperm Whale (*Cogia breviceps*), and the Pigmy Whale (*Neobalena marginata*). These were partly taken from store and partly from other parts of the Museum, where they were inappropriately placed. The Monkeys and Lemurs were arranged in the two new wall cases, thus bringing these important groups into their proper systematic position. The whole of the Mammal Skins have now been sorted, and the duplicates selected and marked. The group series was increased by the addition of a Rat Kangaroo (*Aepyprymnus rufescens*), with its form, or so-called "nest," a realistic group, presented by Mr. R. Crossley, of Bowring. The model of the head of a Pigmy Whale (*Neobalena marginata*) now occupies a separate case, and is so displayed to much better advantage than formerly. The Registrations in this section amounted to 144.

Aves.—In my Report for 1895 I referred to the filling of the new wall-cases at the north end of the Upper Main Hall. Those at the south end, previously only partially occupied, have now been fully used by an extension of the Foreign Birds. This has effected a very marked improvement in the disposition of the skins in the older cases, in consequence of a gain of space. The most important addition ever made to the Ornithological Collection was received shortly before the close of the year—the celebrated "Dobroyde" Collection of Australian Birds and Eggs, brought together by the Messrs. Ramsay, of Dobroyde, Ashfield. It will, I feel sure, be a matter of gratification to my predecessor (Dr. E. P. Ramsay) to feel that the gatherings of so many years by himself and brothers, have, through the liberality of the Government of New South Wales, found a resting-place in the Institution over which

which he presided so long. It will be one of Mr. North's especial duties during the current year to pass this fine series through our Registers. In addition to the types of the "Horn Expedition" Birds, referred to in last year's Report, a further series has been liberally presented by Mr. W. A. Horn. After much delay, for which the Australian Museum is in no way responsible, the first part of Mr. North's valuable article, "List of the Insectivorous Birds of New South Wales" (illustrated), prepared at the request of the Honorable the Secretary for Mines and Agriculture, appeared in the *Agricultural Gazette*; and as the plates for the second part are now ready, it is to be hoped the publication will be completed without delay. Mr. North's attention has been latterly taken up with the preparation of a second edition of Part I, Accipitres, of Ramsay's "Catalogue of Australian Birds," &c. The Registrations amounted to 604.

Reptilia and Batrachia.—The principal work of the year under these headings was the revision of the collection of Chelonians, indigenous and exotic. At the Asylum for the Insane, Gladsville, two large examples of the Galapagos Tortoise (*Testudo nigrita*), were living. The female died last year, and was generously presented by the Medical Superintendent, Dr. Eric Sinclair. This will be mounted during the current year, both as a skeleton and a partial skin and cast. An additional large table was placed in the Upper Main Hall, on which were arranged the larger Turtles and Tortoises. The two Luths (*Dermatochelys coriacea*) were raised on standards above the others, and now form marked objects of interest. Last year was fertile in the addition of several examples of that peculiar little Lizard, the "Thorny Devil" (*Moloch horridus*), by presentation. The Registrations amounted to 245.

Pisces.—Consequent on the clearing of the central portion of the Upper Main Hall for the operations of the roof contractor, the Sharks and other large Fish had to be removed. I took advantage of this to have the duplicates withdrawn, thereby affording room for the better display of the remainder. A portion of Mr. Waite's time was occupied in the elaboration of the fishes brought from Funafuti by Mr. Hedley. The former's suggestion with regard to coloured casts of fishes is one I have had in my mind's eye for some time, but it cannot be carried out as long as our Mechanical Staff remains in its present limited condition. The Registrations numbered 198.

Osteology.—A thorough rearrangement of the Skeletons was commenced early in the year by Mr. Waite, with the view of bringing them into systematic order. This was completed with the exception of the Marsupialia, Monotremata, Aves, Reptilia, and Pisces, when duties of another nature compelled him to relinquish for a time this very important work. It will be resumed and completed early this year. Amongst the additions to the cases were several of the late Dr. Gray's types of Cetacea that had for many years remained overlooked in store. With the view of exhibiting some skulls and crania of Ungulates, a series of iron collars with movable hooks was devised to encircle the Corinthian pillars of the Main Hall; on these the specimens were hung. The Registrations numbered 64.

Insecta, &c.—Until the collection passed into the hands of Mr. Rainbow, its condition, for reasons it is unnecessary to mention, caused me much anxiety; but I feel confident that, with the attention I know he will bestow on it, the state of the specimens will soon be all that can be desired. His opinion that a large amount of re-registration is required, I can quite bear out—in fact, this was one of the chief desiderata to which his attention was called on taking up his duties. Another essential matter that will need Mr. Rainbow's consideration in the near future will be the renovation and rearrangement of the Coleoptera of the exhibited collection, at present in a very indifferent state. The additions in this section, 12,484, are larger than in any other, owing chiefly to the purchase of two collections—one of Coleoptera, the other the co-types of Mr. Skuse's Diptera, and large collections made by Dr. E. P. Ramsay. This increase has enabled me to place our duplicate series in this branch on a much better footing than it has been for some time past. The Insecta and Arachnida from Funafuti, an entirely new geographical area to us, were systematically worked out. An important donation was received from Mr. Henry Deane, M.A., the type specimen of *Actinopus formosus*, Rainbow, the first recorded occurrence of the genus in Australia. Another interesting presentation consisted of examples of the Queensland Cattle Tick (*Boophilus bovis*) in various stages of development, by Mr. C. J. Pound.

Mollusca.—In the early part of the year Mr. Hedley devoted some time to the examination of the Conchological stores, as forecast in the 1895 Report, and had succeeded in bringing together the greater portion of the unexhibited foreign Land Shells, when he was detailed for duty with the Funafuti Expedition. On his return he prepared a general account of the structure of the Atoll that is now published. His work for the current year will largely consist of a description of the Ethnology of Funafuti, and this will be followed by an account of the Mollusca. The Registrations amounted to 689.

Invertebrata (exclusive of Insecta, &c., and Mollusca).—Good progress was made in perfecting the exhibited portion of the Invertebrata, particularly the Entozoa, Leeches, Gephyrea, and Planarian Worms. Over 300 specimens of Crustacea from Funafuti were determined and described, and the manuscript is ready for the printer. Mr. Whiteleggo is now engaged investigating the Echinodermata from the same atoll. Further experiments with formol as a preservative were also made. The principal acquisition was a series of deep-sea Echinoderms from Prof. R. Koehler, of Lyons. The Registrations numbered 258.

Ethnology and Anthropology.—The additional room added to the Ethnological Hall, and referred to in my last year's Report, was opened on 14th January. The re-arrangement of this section on something approaching a systematic plan, or at any rate as near as the limited space will allow, had steadily progressed, thanks to the exertions of Mr. J. Jennings, up to the discovery of *Termites* in the floor of the Hall, when the latter was closed to the Public, and the whole collection dismantled. Up to that date, the manufactures of the Australian Aborigines, the Australian and New Zealand Stone Implements, and those from some of the Pacific Islands, the ancient Peruvian and Arizona Pottery, a series of Egyptian Mummy-heads, decorated Skulls and Skull-masks, and New Guinea Bead and Shell Ornaments, had been placed in such a condition as to render comparative study possible. The fine collection of Aboriginal Carved Trees was also added to. A valuable addition to the Peruvian Pottery was obtained by purchase, on very advantageous terms. Through the kindness of Mr. J. N. Brooks we were able to at last obtain an example of the mysterious "hand" imprints, so freely scattered over the Aboriginal Rock-shelters of the Colony, from Wollombi. The most valuable addition, however, was a fine collection of objects from Funafuti Atoll, brought by Mr. Hedley. The Registrations numbered 569.

Historical.

Historical.—A number of old documents, certificates of award, &c., were framed and exhibited—the first in the Ethnological Hall, the second at the public entrance. The “Cook Collection” was enriched by the addition, on loan from Mrs. Johnston of Homebush, a kinswoman of the circumnavigator’s, of his punch-bowl. The Registrations numbered 2.

Numismatics.—Good progress has been made in the classification and display of the Australian Tokens by Mr. J. Jennings, and a commencement made with the Silver Coins, when the work was brought to a standstill by the cause already explained in a preceding paragraph.

I am happy to report that my efforts to increase this branch of our collections have met with marked success. Through the good offices of their respective Consuls in Sydney or Melbourne, the Imperial German Government, the Austro-Hungarian Government, and that of the Hawaiian Islands have presented complete sets of their current coinage. The Secretary of State for the Colonies (Right Hon. Joseph Chamberlin, M.P.) was pleased to forward on behalf of H.M. Government, a set of the “Jubilee” coinage. In connection with this presentation we have to thank Sir Saul Samuel, K.C.M.G., Agent-General in London, for his good offices in the matter. The Registrations numbered 219.

Mineralogy and Chemistry.—Dr. Cooksey’s attention was for some time turned to the colouring and arrangement of the crystallographic models, each face receiving a colour that is retained to express the same crystal surface throughout each system. Four hundred of these have been so treated, and the work will be continued during the current year.

The valuable and very complete series of N. S. Wales Marbles, over 300 slabs, prepared by Mr. W. Roberts, District Inspector of Works at Bathurst, was lent by the Government Architect towards the close of the year, and forms an attractive exhibit. It is to be sincerely hoped that a selection from these will be secured, as we have ample room for their display in contiguity to the British Ornamental Stones already on view.

The most important donation was that of the “Nocolecho” Meteorite, presented by Mr. G. J. Raffel. In due course Dr. Cooksey will describe this in the “Records.” At present a preliminary chemical analysis only has been made. The meteorite was entrusted to Professor H. A. Ward, of Rochester, New York State, to be cut and polished and portions etched.

A chemical analysis was made of the few rocks brought from Funafuti by Mr. Hedley, and the results published in Part I of Memoir III.

I desire to impress on our Mineralogical well-wishers that an increase in the National Collection entirely depends on their generous help, particularly in the acquisition of Australasian specimens. We stand greatly in need of minerals and rocks from West Australia and New Zealand.

The Registrations amount to 529, and several specimens were chemically analysed.

Palæontology.—In consequence of the large amount of supervision I felt called on to exercise during the past twelve months, the work in my own section has fallen far short of that accomplished last year. The number of specimens registered amounted to 1,069, whilst to the exhibited collection were added 555. Of these 402 were Vertebrates, and 153 Invertebrates. The former consisted of Post Tertiary Bird, Monotreme, and Marsupial remains, with type casts and large specimens for the wall cases. The whole of the large specimens distributed over the floors of the hall were supplied with permanent printed labels. Two additional table cases were fitted with slopes for the reception of Marsupial remains, and in consequence of the sloping shelf in the wall cases cutting off light from the lower portions, I caused it to be removed and a narrow shelf erected in its place. This work was performed by our own Carpenters.

The most important addition was the presentation by Mr. C. W. Darley, Engineer-in-Chief for Harbours and Rivers, of the Dugong remains found in excavating the canal at Shea’s Creek, Alexandria. Dr. R. Broom, late of Taralga, presented the types of his new Marsupials from the Wombeyan Caves, and Mr. J. W. Wilson and Party, the *Dipropodon* bones from their claim at Cunningham Creek.

Library.—An additional book-case was placed in the Library, but there is no further room. The additions comprise 399 volumes, and many parts or pamphlets. During the year the books were carefully gone over and checked. Binding was effected, but it is still much in arrear from want of funds.

I have, &c.,

R. ETHERIDGE, JUNR.,
Curator.

APPENDIX II.

REPORTS OF SCIENTIFIC ASSISTANTS.

To the Curator.

Sir,

I have the honour of submitting to you the Report for 1896.

Mammals.

At the date of the last Annual Report it was mentioned that the Marsupials had been placed in order. Since that time all the other Mammalian Orders have been thoroughly worked through and are now in admirable condition. They still require, however, uniform labels—a matter which will receive attention as opportunity offers.

The duplicate mammals have been placed in a more satisfactory condition than for many years past, and MS. catalogues have been compiled.

In overhauling the collections in spirits, two species of *Perameles* were discovered, not hitherto represented in the exhibited collection; this omission was at once rectified.

I take this opportunity of acknowledging with much pleasure the gratuitous services rendered by Mr. Leslie King; but as the collections assigned to my care are so large and varied, the need of a permanent assistant is greatly felt and renders much work, other than that of a mechanical character, out of the question.

The acquisitions during the year were	101	Specimens.
There were re-registered from old collection	43	„
	144	„
Total Registrations	144	„

Reptiles and Batrachians.

During the past two years the gallery devoted to the Reptiles and Batrachians has been a source of much trouble.

As previously mentioned, in 1895 the roof was found to be defective, owing to the ravages of "white ant," and all progress was stayed. The condition was renewed the following year, when a new and permanent roof was supplied. During the whole period of renovation, including the time occupied in re-decorating the interior, the collections were withdrawn and were inaccessible.

The principal work undertaken in this department was the identification of the Chelonians, of which we have a tolerable collection; previously they were almost all unnamed and in but indifferent condition. Diagrams and descriptive labels were also prepared uniform with those previously supplied for the Lizards, Frogs, and Fishes.

Tables have been specially prepared to accommodate the mounted Crocodiles and larger Chelonians, which reptiles are now shown to good advantage.

By the kindness of Dr. Sinclair, of Gladsville, we have received one of the gigantic Galapagos Tortoises lately living in the Hospital gardens. This should provide material for an interesting communication, could the necessary time be found for its examination.

The acquisitions during the year were	240	Specimens.
There were re-registered from old collection	5	„
	245	„
Total Registrations	245	„

Fishes.

The damage to the Museum roof previously alluded to was also operative in disorganising the Fish Collection. The larger sharks and rays have been rehung to advantage, and the smaller mounted, and spirit specimens also have received necessary attention.

A few casts of Australian fishes were purchased during the year, and personally I should much like to see the present collection of stuffed fishes gradually replaced by nicely coloured casts. This, considering that the casts of snakes are being produced on the premises, could be done without cost other than that of the material.

The closing weeks of the year were devoted to an examination of the material collected on the Funafuti Atoll by Mr. Charles Hedley.

The acquisitions during the year were	182	Specimens.
There were re-registered from old collection	16	„
	198	„
Total Registrations	198	„

Skeletons.

After the Mammalian Gallery, that devoted to the skeletons received the largest share of attention, and I was generously assisted by two volunteer workers—Messrs. Leslie King and W. Stalkartt.

The large collection of human crania, mainly from the Australian Continent and the Pacific Islands, was first dealt with; and in this connection you kindly assisted me in cases of difficult identification. Many unsuspected cranial treasures were uncarthed, among which may be specially mentioned the artificially distorted skulls of the Mallicollo (New Hebrides) islanders. Many of these still retaining the painted clay mask, were passed over to the Ethnological Department.

Among the more notable Osteological preparations of the year the skeleton of the Indian elephant stands first. The Australian "Jumbo" was for many years a familiar feature of the Sydney Zoological Gardens, whence it was received when deceased.

The acquisitions during the year were	61	Specimens.
There were registered from old collection	3	„
	64	„
Total Registrations	64	„

Yours, &c.,

EDGAR R. WAITE.

To the Curator,—

Sir,

I have the honour to hand you herewith the Reports for the year 1896, of the Sub-departments under my charge.

Birds.

The birds, nests, and eggs determined and registered during the year numbered 664 Specimens.

The specimens enumerated above are only those determined and registered, for the most important addition yet made has been received during the year. This consists of the well known "Dobroyde Collection," containing several thousand skins and eggs—the result of forty years collecting—which has been recently transferred to the custody of the Trustees by the Government of New South Wales.

Although the Australian Ornithological and Oological Collections in the Museum probably surpass any other in the world, there are a few gaps still to be filled, principally from Central and West Australia.

Another small but important collection of bird skins from Central Australia was presented by Mr. W. A. Horn, through Professor W. Baldwin Spencer, of the University of Melbourne. This addition contains the types of the bird described by me in the "Zoology of the Horn Expedition," published this year.

The exceedingly dry weather in the winter and early spring months has again been the means of the Museum securing several inland species that had been driven to the coastal districts. Chief among these may be mentioned *Emblema picta*, a North-western and Central Australian species, obtained for the first time in New South Wales at Campbelltown, of which several specimens were presented by Mr. A. M. N. Rose. Occasional donations have also been made by the Trustees of the Zoological Gardens, Moore Park, and the Director of the Botanic Garden. By exchange the collections have been enriched by a small series of skins received from the Museo de la Plata, Buenos Ayres, and by a number of European Birds' eggs from the Athens Museum, Greece. Skins from the Antipodes, Snares, and Solitary Islands have also been received from Mr. Travers.

During the year the following additions to the Group Collection have been prepared by the Taxidermist:—*Zonæginthus bella*, *Lalage tricolor*, *Acanthiza nana*, *Chthonicola sagittata*, *Acanthorhynchus tenuirostris*, *Pomatostomus temporalis*, *Petroica goodenavii*, *Acrocephalus australis*, *Lichmera australasiana*, and *Merula vinitincta*. This portion of the bird gallery, in addition to illustrating the life history of each species and being useful to the student, proves the most popular with the general public. The collections at the present time are in a good state of preservation, but owing to recent accessions an assistant to the Taxidermist is much required to give his undivided attention to the mounted and skin collections.

From lists prepared the printer has struck off about 500 labels, the greater part of which have been affixed to the specimens. Several collections of birds and eggs have been determined for private individuals, and in some instances exchanges have been made. Information too, has been given to many persons during the year, either personally or by letter. Small collections of birds were sent in exchange to the Smithsonian Institution, Washington, and the Kelvingrove Museum, Glasgow.

In connection with the work of this sub-department the following papers have been published:—

On the seasonal changes in the plumage of *Zosterops caerulea*. Rec. Austr. Mus. Vol. II. No. 7. Jan. 1896.

Aves of the Horn Expedition to Central Australia. Part II. Zoology. Febr., 1896.

Notes on *Chlamydodera orientalis*. Vict. Nat. Vol. XII. No. 9. Jan., 1896.

Notes on the nesting of *Calyptorhynchus banksi* and *Erythrodryas rosea*. Vict. Nat. Vol. XII. No. 11. March, 1896.

A List of the Insectivorous Birds of New South Wales. Part I. *Agricultural Gazette*, N.S.W. June, 1896.

Birds from Funafuti. The Atoll of Funafuti. Aust. Mus. Mem. No. III, Part I. Dec., 1896.

Plates for Part II of The Insectivorous Birds of New South Wales are now ready. Towards the close of the year I was engaged in preparing a second edition of Dr. Ramsay's "Catalogue of the Australian Birds in the Australian Museum." Part I. Accipitres.

Ethnological.

The following are the accessions to the Ethnological Collection, received during the year:—

The acquisitions during the year were	551	Specimens.
There were re-registered from old collection	18	"
Total Registrations	569	"

Considerably over the average number of Ethnological specimens have been added during the year. Mr. Hedley brought back with him from Funafuti a large and interesting collection of articles used by the Ellice Islanders at the present time, also models of those in use in bygone days. Food-substances too were not forgotten, or various plants and flowers used either in their manufactures, or for the decoration of their persons. As Mr. Hedley is now engaged in writing the Ethnological portion of the Funafuti Memoir, in which the articles brought back by him are fully described, it is unnecessary to make any reference here to those worthy of special mention.

The principal acquisitions by exchange are various articles used by the natives of South Africa, received from the Pietermaritzburg Museum, Natal, and spears, &c., from Central Australia, sent by the South Australian Museum, Adelaide.

During the year a small but valuable collection of Peruvian pottery was obtained by purchase. By presentation the collection has been enriched by a number of specimens, among which may be mentioned an impression of an aboriginal hand on rock obtained by Mr. Jas. N. Brooks in a cave-shelter at Wollombi; a long conical seed-crusher from the Lachlan District, presented by the Rev. J. Milne Curran; and a bull-roarer and quartzite spear-heads, presented by yourself. The principal donations of Aboriginal food substances have been received from the late Baron Ferdinand von Mueller, F.C.M.G.; Mr. Charles Moore, F.Z.S., late Director of the Botanic Garden, Sydney; and Mr. F. M. Bailey, F.L.S., Colonial Botanist, Brisbane.

Owing

Owing to the ravages of the "white ants" it was found necessary to close the Ethnological Hall in September. This has greatly retarded the progress of the proper display of the exhibits, commenced by Mr. J. Jennings, under your supervision, last year. Nevertheless, since the closing of the hall to the public, a new floor has been substituted for the old one affected by the *Termites*, and a number of specimens have been arranged in the cases. During the year the room at the end of the gallery on the upper floor, used as a store-room, has been utilized for the display of stone axes, quartzite spear-heads, mika knives, &c. Arranged against the north wall of this room are a number of tree-trunks, with Aboriginal carvings on them. In the table-cases, on the upper floor, dilly-bags, necklets, belts, and various articles ornamented with teeth and shells have been properly arranged and labelled during the year.

Numismatical and Historical.

The acquisitions to the Numismatical Collection are both numerous and valuable, and far exceed the aggregate number of specimens registered in previous years. This is chiefly owing to the requests made by yourself, through the Minister for Education, to the British and various foreign Governments for donations of the current issue of coins of each country, and which have been responded to in a most liberal manner. Newly minted gold, silver, and bronze coins have been presented by the British Government, through the Right Honorable Joseph Chamberlain, M.P., Secretary of State for the Colonies. Worthy of special mention in this donation are the gold five-pound and two-pound pieces, and a set of Maunday money. A similar donation of freshly struck coin has been received from His Highness the Chancellor of the German Empire, through Herr Pelldram, Imperial General Consul for Germany in Sydney. This includes twenty, ten, and five mark gold pieces, and various other silver, nickel, and copper coins current at the present time. Another valuable presentation of coins was made by the Minister of Finance in Austria, through Mr. J. Mergell, Austro-Hungarian Consul in Sydney. The Hawaiian Government has also presented the silver coinage of the country, through Mr. W. E. Dixon, Hawaiian Consul-General for Australasia.

Although commercially not of the same face value, but possessing as much interest for Numismatists as the above, is a collection of Australian, Tasmanian, and New Zealand copper tokens, current in the early days of the colonies, presented by Dr. Long.

Three bronze medals were received through the New South Wales Commission of the Chicago Exposition of 1892-3, and one from the Corporation of the City of London, struck in commemoration of the opening of the Tower Bridge by His Royal Highness the Prince of Wales, K.G., on behalf of Her Majesty Queen Victoria, on the 30th June, 1894. Altogether, 219 numismatical specimens were registered during the year.

Only two Historical specimens were added to the collection, neither of which call for special comment.

I am, &c.,

ALFRED J. NORTH.

To the Curator,—

Sir,

I have the honour to hand you herewith the Annual Report of the Entomological Section for 1896.

Insecta and Arachnida.

The number of additions to the collection registered during the year amount to 12,484 specimens, representing a wide range of species, and are included in 1,361 entries.

The year's acquisitions include a large number of interesting and valuable specimens. Of those purchased the most important is a collection consisting chiefly of Coleoptera and Diptera, from the widow of Mr. F. A. A. Skuse, my predecessor, and a collection of Coleoptera from Mr. F. Arthur, of Cranbrook, Penrith.

The specimens collected during the year, mainly by Dr. E. P. Ramsay, consist chiefly of Coleoptera, and these when mounted and worked out will form a valuable addition to our duplicate collection, and be of great value as a medium of exchange. A small but interesting collection of insects was made by Mr. Hedley during his visit to Funafuti, in the Ellice Group; these have been worked out. The collection of Arachnida obtained upon the island, although scarcely representative of that branch of fauna, was much larger than the former. These have also been worked out, and papers dealing with and elucidating the collections are now in hands of the printer.

The specimens obtained by exchange are chiefly from La Plata (per Museo de La Plata), consisting wholly of Coleoptera, and from New Caledonia and New Hebrides (per Musée Colonial, New Caledonia), and consist chiefly of specimens of Coleoptera and Lepidoptera. A small but valuable collection of Coleoptera and Lepidoptera was received during the year from Mr. C. French, Melbourne.

The number of specimens received as donations has been very large. Of these the most noteworthy is a collection of Honey Ants and Spiders (co-types) from Central Australia, the result of the Horn Exploring Expedition, presented by Professor Baldwin Spencer and Mr. W. A. Horn. Liberal contributions to our cabinets have also been made by Mrs. Burnell, Mr. W. S. Dun, Mr. W. D. Campbell, and Mr. D. A. Porter. Mr. Henry Deane, M.A., has also presented the Museum with the type specimen of *Actinopus formosus*, Rain.; this is an exceedingly valuable donation, the specimen being the first of its genus recorded from this Continent.

The new Invertebrate gallery was completed and opened to the public in October, 1895, since when it has been visited and used by many students of natural history; in addition to this the cabinet collection has at all times been open to those desirous of obtaining names and information.

Many

Many specimens of the old collection not having been numbered, it will be necessary when revising and remounting to re-register them; this, although a task that will involve much time and labour, is absolutely necessary, because, under present conditions, it is impossible to say whether they have ever been registered; and not only is this so, but in some instances collections have been entered *in globo*. Such entries are of little value, as no indication is made as to whether they contain representatives of all branches of the Insecta, or whether on the other hand, they consist of specimens of only one or two orders.

In January, 1896, my predecessor, Mr. F. A. A. Skuse, published in "Records of the Australian Museum," vol. ii, No. 7, two short papers—one entitled, "Description of a Dapanoptera from Australia," with a figure; and "Stephanocircus, Sk.: a Rejoinder." A posthumous contribution from the same author—"Additional Localities for *Peripatus leuckartii*"—is at present in the press.

The duties appertaining to the office of Entomologist were discharged by Mr. Skuse up to June, 1896, when the position was rendered vacant by the death of that gentleman. In July, next succeeding, I was employed to temporarily keep the collection in order, and acted in that capacity until the commencement of September, when the permanent appointment was conferred on me. Upon taking charge of this section, my first duties were, acting upon your instructions, to rearrange and revise the cabinet collections, and a commencement in this direction has been made. Owing to the work involved by the Funafuti collection and other departmental duties, the task of rearrangement had to be temporarily suspended, but the work will be proceeded with without delay.

Close application and unremitting attention to the cabinets and exhibition cases have had the effect of preventing the specimens contained therein suffering from the raids of museum pests.

I have, &c.,

W. J. RAINBOW.

To the Curator,—

Sir,

I have the honour to hand you herewith my Report on the Conchological Section for the year 1896.

Mollusca.

Comparatively little improvement was this year effected in the Conchological Section, owing to its custodian being detailed for duty in other directions. From the middle of April to the conclusion of the year, only routine duty, such as registering receipts and arranging exchanges, could be performed. In fulfilment of the design expressed in last year's Report, several weeks were devoted to the examination and re-arrangement of stored specimens. A considerable amount of foreign Land-shells had been roughly, that is generically, stored when office work was interrupted.

In the field, a fairly representative collection was gathered of the Mollusca of Funafuti, for the examination of which time has not, at this date, yet been found.

The exhibits have remained almost untouched during the year. Reliable locks for the cases continue to be the greatest need of the Section.

It is gratifying to observe that young naturalists avail themselves of the collection displaying local shells. Almost every day enthusiastic beginners can be seen at the cases, with a note-book and a pocket-full of shells, intent on the study of Conchology.

By your instructions a named series of a hundred species was furnished, for teaching purposes, to the King's School, Parramatta.

The registered acquisitions to the Collections amounted to 631 species, which, though less than last year's increment, includes numerous substantial additions. From the British Museum were obtained by exchange a most valuable series of specimens dredged by H.M.S. "Challenger." Other deep sea Mollusca were similarly obtained from the Indian Museum. A collection from West Australia, presented by Mr. F. H. Moore, included several rarities. The Rev. W. T. Whan gave a useful series of localised Victorian shells. Author's types of a recently described species, *Australium moniliferum*, Hedley and Willey, were obtained from Dr. Arthur Willey; and from the Governor of British New Guinea was received that large and handsome Papuan snail shell, figured and described as *Thersites septentrionalis* in "Records of the Australian Museum," vol. iii, No. 1.

The acquisitions during the year amounted to 2,195 specimens, registered in 639 entries.

I have, &c.,

CHARLES HEDLEY.

To the Curator,—

Sir,

I have the honour of submitting my Report for the year 1896.

Marine Invertebrata.

The additions received and registered in 258 entries during the past year are classified as follows:—

Tunicata	28
Vermes and Polyzoa	56
Crustacea	389
Echinodermata	96
Coelenterata	34
Miscellaneous	4
Total	607

The principal acquisitions consist of a series of deep sea Echinoderms received, in exchange, from Dr. E. Koehler; a small collection of Sponges, Echinoderms, Crustacea and Worms dredged at Camden Haven, N.S.W., and presented by Dr. J. C. Cox; a number of well-preserved English specimens from Plymouth, presented by Captain Meryon, R.N.; also the large collection made by Mr. C. Hedley, at Funafuti,

Funafuti, the Crustacea alone amounting to over 300 specimens. These have been worked out, and in addition to many rare forms hitherto not represented in the collection five new species were described. The work of overhauling, classifying, and cataloguing the larger spirit specimens begun in 1895 has been continued and completed so far as the fishes are concerned; there yet remains the somewhat large collection of specimens in bottles, which will be attended to as soon as convenient. A considerable amount of time has been devoted to the exhibits; family and generic labels have been printed and placed in the cases. The authentic type specimens have been distinguished by the authorised small orange disc, and the Australian exhibits by a magenta one.

An additional shelf has been erected round the whole of the wall cases, thus providing about one-fourth more exhibition space, which was largely utilised.

The Entozoa have been sorted out, mounted, and placed in the cases. There are now about seventy species represented, including fourteen of the late Mr. Gerard Krefft's types.

The Leeches, Gephyrean, and Planarian Worms have also been mounted and placed on view.

The latter part of the year has been devoted to working out the material from Funafuti, the Crustacea have been gone through, and the examination of Echinodermata is now in progress.

Further experiments have been conducted with regard to formol as a preservative. In March last a number of specimens of *Physalia* was killed by adding a 10 per cent. solution of formol to the vessel containing them, and as soon as fixed diluting with sea water to 1 per cent. Two specimens were afterwards transferred to a 1 per cent. solution of formol in fresh water and placed on exhibition. These latter, after nine months, exhibit a slight fading, whilst those left in the 1 per cent. formol in sea water remain unchanged, and are now as bright and fresh looking as immediately after fixation.

I have, &c.,
T. WHITELEGGE.

To the Curator,—

Sir,

I have the honour of submitting to you the Report of my Section for 1896.

Minerals.

The improvement of the exhibited collection has been the chief object of care, and to this end many formerly hand-written labels have been replaced by printed ones, more especially in the case of the larger division and class labels; and additional specimens have been gradually added, to fill, as far as possible, the gaps in the Australian collection.

In order to simplify and increase the instructiveness to the public of the collection of crystal models, the colouring of these has been undertaken, and about half (400) of them are so far finished. Each of the crystallographic surfaces has received a distinctive colour, which is adhered to as far as possible throughout the same system, and to which reference is made on the label. This work is necessarily very tedious and consumes a great amount of time, but the instructive value seems to me to be so greatly increased that the result is well worth the time and trouble spent upon it. The labels for the first or isometric system have already been printed and attached to their corresponding models. The plan adopted is the following:—

The symbols used by both Miller and Naumann are given for each crystallographically different surface on the model, the colour of which is stated in brackets. Each surface with its corresponding symbol, therefore, can be easily distinguished by the visitor.

The large collection of marbles, prepared by Mr. Roberts, Public Works Inspector of Western New South Wales, and exhibited first at Parliament House, has been kindly lent by Mr. W. L. Vernon, Government Architect, and has been placed at the western end of the Geological Hall, on the ground floor. It forms a fine representative series of New South Wales marbles, and a selected number of them mounted would be a very valuable addition to our own collection of foreign specimens.

The specimens registered during the year were obtained as follows—

The acquisitions were	430 Specimens.
There were re-registered from old collection	99 "
Total Registrations	529 "

Foremost among the donations stands the "Nocoleche" Meteorite, which is a mass of meteoric iron weighing just over 44 lb. It was presented by Mr. Geo. J. Raffel. At the present moment it is with Prof. H. A. Ward, of Rochester, N. York State, who has undertaken to cut and polish it. Other valuable donations were a series of stalactites from the Jenolan Caves, collected by Mr. Jeremiah Wilson, and a number of large stalagmites and calcite specimens from the Wombeyan Caves, presented by the Mines Department, a selected number of which have been mounted and placed on view in the wall-cases of the Mineral gallery.

By exchange with the Kelvingrove Museum, Glasgow, the Musée Colonial, New Caledonia, the Museo de la Plata, and the Institute of Mines, St. Petersburg, we have obtained a number of beautiful specimens, some of which are entirely new to our collection.

Of the minerals and rocks collected you have contributed practically the whole number. The examination and analyses of the rock specimens brought by Mr. Hedley from Funafuti, and published in December last, occupied a considerable amount of time, but were carried on simultaneously with other work.

Four complete analyses and several partial ones were carried out during the year.

I am, &c.,
T. COOKSEY.

Musée Colonial, Nouméa. (45) Insects—109 specimens. Minerals—23 specimens.	Insects—46 specimens. Minerals—15 specimens.		
Museo de la Plata. (32) Mammals—2 specimens. Birds—27 specimens. Mollusca—17 specimens. Insects—545 specimens. Crustacea, &c.—17 specimens. Fossils—11 specimens. Minerals—12 specimens. Skeletons—12 specimens.	Mammals—1 specimen. Reptiles—27 specimens. Fishes—1 specimen. Echinodermata, &c.—42 specimens. Minerals—30 specimens.		

APPENDIX X.

RETURN OF INFORMATION SUPPLIED TO THE PUBLIC, 1896.

Name.	Details.	Name.	Details.
Mr. W. Affleck, M.L.A.	Re a Caterpillar-like formation on branches of Silver-wattle.	Mr. Johnston.....	Re Venomous and Innocuous Snakes.
Mrs. Aiken	Re Horse's Tooth.	Mr. A. P. Kemp	Re Birds and determining Eggs, Reptiles and Fishes; names of Birds; Caterpillars of a Noctuid Moth.
Mr. F. Alexander	Re the method of determining the sexes of Fishes.	King's School, Parramatta.	Determination of a Collection of Birds' Eggs.
Mr. H. C. Bell	Determination of young <i>Psychida</i> .	Mr. R. Leath	Determination of <i>Eunice aphroditois</i> .
Mr. P. G. Black.....	Determination of <i>Cermatia smithii</i> ; information re Shell-dealers in London.	Mr. W. H. C. Macintosh	Names of Aboriginal places around Sydney.
Hon. Miss Brand and Party from Government House.	Showing and Explaining Ornithological Cabinet and Exhibition Collections.	Mr. J. H. Maiden	Names of <i>Chelonian</i> in Botanic Gardens.
Mr. J. S. Bray	Determination of Snake.	Mr. W. A. Metcalf ...	Re Life History of <i>Zeuzera eucalypti</i> .
Mr. J. Brazier	Determination of <i>Anthera eucalypti</i> .	Mr. H. J. M'Cooley ...	Determination of <i>Heteropoda</i> .
Mr. H. Y. L. Brown...	Re supposed Fossils from Cambrian Rocks of South Australia.	Rev. D. M'Lennan.....	Naming Minerals, Rock Specimens, and a Collection of Permo-Carboniferous Fossils.
H. E. Sir T. F. Buxton, Governor of South Australia.	Showing and Explaining Ornithological Collections.	The Hon. the Minister for Mines, Sydney.	Concerning the proposed introduction of <i>Bubo virginianus</i> into Australia.
Mr. A. J. Campbell ...	Determining Specimens of <i>Sericornis</i> from the Kent Group, King Island, Victoria, and New South Wales.	Hon. J. Norton, LL.D., M.L.C.	Determination of <i>Harpalis pulcher</i> .
Mr. W. D. Campbell...	Determination of <i>Mantis</i> sp.; references to illustrations of the Cetacea; naming Lizards and Snake.	Dr. John Paterson ...	Re Mounted Collection of Australian Birds.
Mr. W. S. Campbell...	Determination of <i>Oriolus viridis</i> .	Mr. C. Puckey	Determination of Tooth of <i>Orca gladiator</i> .
Sir Astley Cooper and Party.	Showing and Explaining Ornithological Cabinet and Exhibition Collections.	Mr. N. Reid	Naming Shell from Lower Marine Series of the Permo-Carboniferous.
Misses Creed	Showing Ornithological Cabinet Collection.	Mr. A. Reuben	Determination of 152 specimens of 41 species of Birds' Eggs, and making lists.
Hon. Dr. J. M. Creed, M.L.C.	Re Baleen; determination of a species of <i>Isodes</i> .	Mr. H. H. Rice.....	Re Parrots.
Hon. W. P. Cullen, LL.D., M.L.C.	Determination of <i>Panesthia</i> sp.	Mr. Thomas Rigg	Determination of <i>Eristalia tenax</i> ?
Daily Telegraph (Reporter and Artist from).	Information re <i>Dorippe callida</i> and other Crustacea.	Mr. B. C. Rodd.....	Determination of Moth, <i>Spilosoma obliqua</i> .
Prof. T. W. E. David...	Particulars of Museum progress during 1895.	Mr. A. M. N. Rose ...	Re a Four-legged Chicken.
Department of Fisheries	Determination of <i>Salmo salar</i> ; <i>Elacate nigra</i> .	Mr. H. C. Russell	Re Sand.
Mr. G. Dillberg	Determination of Titaniferous Iron Ore.	Mr. D. H. Soutar	Re Personal Relics of Captain Cook, and Colours of Naval Uniform of the end of the 18th Century.
Mr. Hugh Dixon	Re 2 Weevils infesting Orchids; re Vine-moth Caterpillar and Predatory Bug.	Mr. R. M. Stewart.....	Re Ticks and Exhibiting Slides of Mounted Specimens.
Rev. P. Dowling	Naming Mineral "Crocoite."	Stock and Station Journal.	General Information regarding the Museum Collections.
Mr. G. Doyle.....	Determining Birds' Eggs and making list of same.	Mr. Stoddart.....	Addresses of Shell-dealers in London.
Mr. W. S. Dun	Re determination of a Bone.	Dr. Sturt.....	Showing Ornithological Cabinet Collections.
Mr. H. J. Elvery	Determination of 16 species of Birds' Eggs.	Technological Museum	Determination of Lizards, Snakes, and Fish; naming Shells; determination of a Tertiary Plant, <i>Eucalyptus pluti</i> , M'Coy.
Rev. Walter Fielder ...	Naming Shells.	Mr. Thurston.....	Re Duck.
Mr. Fitz	Determination of <i>Notechis scutatus</i> , Peters.	Town and Country Journal.	Determination of <i>Phascogale penicillata</i> ; <i>Isodes hydrosauri</i> ; Moth's Eggs; <i>Bu-prestida</i> .
Mr. C. H. Fitzhardinge	Determination of <i>Eudoxyia eucalypti</i> .	Mr. Tucker and Co. ...	Determination of <i>Heterostoma sulcidens</i> .
Mr. J. J. Fletcher.....	Re the supposed extinct land, known as "Gondwana Land," of Suess; re Frog.	Visitor.....	Re Insects and Exhibiting Gallery Collection.
Mr. W. W. Froggatt...	Giving information on <i>Agaristida</i> ; assisting in naming a collection of Australian Beetles; informing him of names of Moths and showing collection.	Visitor.....	Naming Fish.
Mr. R. R. Gurley	Re British Dictyonemata.	Visitor.....	Re American Reptiles.
Viscountess Hampden..	Showing and Explaining Ornithological Cabinet and Exhibition Collections.	Mr. J. H. Whitley ...	Re Composition of a Black Silicate of Iron, Alumina, and Magnesia with Titanic Acid.
Mr. H. F. Handley ...	Determination of <i>Schizorhina australasie</i> .	Mr. Wills	Showing concealed portions of Carved Figures in Ethnological Hall.
Mr. R. L. Jack	Re Fossils from Lat. 23°, near Queensland and South Australian border; additional information re former; naming Permo-Carboniferous Fossils.	Mr. J. Wilmot	Re Specimen containing Carbonate of Iron and Lime in Quartz.
		Mr. Wimble	Re Raven.
		Mr. A. E. Witherby...	Determination of <i>Charocampa celerio</i> .
		Mr. T. C. Wollaston...	Re Opalised bones of an Sauropterygian Reptile from White Cliffs, N.S.W.

	Part 1 contains—Report of the Director. Part 2 contains— Potable Waters of Eastern United States, by W. J. McGee. Natural Mineral Waters of the United States, by A. C. Peale. Results of Stream Measurements by F. H. Newell The Laccalinic Mountain Groups of Colorado, Utah, and Arizona, by Whitman Cross. The Gold-Silver Veins of Ophir, California, by Waldemar Landgren. Geology of the Catalin Belt, by Arthur Keith. Tertiary Revolution in the Topography of the Pacific Coast, by J. S. Diller. The Rocks of the Sierra Nevada, by H. W. Turner. Pre-Cambrian Igneous Rocks of the Unkar Terrane, Grand Canyon of the Colorado, Arizona, by Charles D. Walcott, with Notes on the Petrographic Character of the Lavas, by Joseph Paxson Siddings. On the Structure of the Ridge between the Taconic and Green Mountain Ranges in Vermont, by T. Nelson Dale. The Structure of Monument Mountain, in Great Barrington, Massachusetts, by T. Nelson Dale. The Potomac and Roaring Creek Coalfields in West Virginia, by Joseph D. Weeks.		8272	— Bulletin. Vol. xv for 1895. 1 vol. 4to. Washington, 1896	
8299	— Fifteenth Annual Report, 1893-91. J. W. Powell, Director. 1 vol. 8vo. Washington, 1895. Presented	Presented	8103	UNITED STATES NATIONAL MUSEUM. Report of the Board of Regents of the Smithsonian Institution for year ending June, 1893. Report of the U. S. National Museum under the direction of the Smithsonian Institution for the year ending June, 1893. 1 vol. 8vo. Washington, 1895. Presented	Presented
	Contains:— Preliminary Report on the Geology of the Common Roads of the United States, by N. S. Shaler. The Potomac Formation, by Lester Frank Ward Sketch of the Geology of the San Francisco Peninsula, by Andrew C. Lawson. Preliminary Report on the Marquette Iron-bearing District of Michigan, by Charles Richard Van Hise and William Shirley Bayley; with a chapter on the Republic Trough, by Henry Lloyd Smith. The General Relations of the Granitic Rocks in the Middle Atlantic Piedmont Plateau, by G. H. Williams. The Origin and Relations of Central Maryland Granites, by C. B. Keyes			Contains— Report of the Assistant Secretary. The Poisonous Snakes of North America, by Leonhard Stejneger. Chinese Games with Dice and Dominoes, by Stewart Culin. The Onyx Marbles: Their origin, composition, and use, by George P. Merrill. The Cowbirds, by Charles Bendire. Primitive American Armour, by Walter Hough. The Weapons and Wings of Birds, by Frederick A. Lucas. Notes on the Ethnology of Tibet, by Wm. Woodville Rockhill. Two Persopolitan Casts in the U. S. National Museum, by Cyrus Adler. Museum Collections to illustrate Religious History and Ceremonials, by Cyrus Adler. If Public Libraries, why not Public Museums? by Ed. S. Morse.	
8294-96	— Sixteenth Annual Report, 1894-95 Charles D. Walcott, Director. Parts 2, 3, 4. 3 vols. 8vo. Washington, 1895. Presented	Presented	8104	— Proceedings. Volume XVII, 1894. 1 Vol. 8vo. Washington, 1895. Presented	Presented
	Part 2, Papers of an Economic Character, contains:— Geology and Mining Industries of the Cripple Creek District, Colorado, by Whitman Cross and R. A. F. Penrose, Jr. A Geological Reconnaissance across Idaho, by Geo. H. Eldredge The Geology of the Road building Stones of Massachusetts, by Nathaniel Southgate Shaler. Economic Geology of the Mercury Mining District, Utah, by J. Edward Spur, with introduction by S. F. Emmons. The Public Lands and their Water Supply, by Frederick H. Newell. Water Resources of a portion of the Great Plains, by Robert Hay.			Contains:— The Relationship of the Lacertine Genus <i>Anniella</i> , Gray, by G. Baur. Scientific Results of Explorations by the U. S. Fish Commission Steamer "Albatross." No. XXXIII. Descriptions of two new Flounders, <i>Gastropsetta frontalis</i> and <i>Cyclosetta chittendeni</i> , by A. Barton Bean. Description of a new species of Rockfish, <i>Sebastes brevispinus</i> , from Alaska; by Tarleton H. Bean. Description of a new species of Fish, <i>Ilekeria gilli</i> ; by Tarleton H. Bean. Description of <i>Gobionides brasssoneti</i> , a fish new to North America, from the Gulf of Mexico, by Tarleton H. Bean and Barton A. Bean. Description of Nests and Eggs of some new Birds, collected on the Island of Aldabra, North-west of Madagascar by Dr. W. L. Abbott, by Charles E. Bendire. The Pterylography of certain American Goatsuckers and Owls; by Hubert Lyman Clark Notes on the Geographical Distribution of Scale Insects; by T. D. A. Cockerell. Monograph of the Genus <i>Gauchaum</i> , Gray (<i>Rangia</i> , Desmoulins); by William Healy Dall. A Revision of the Fishes of the sub-family <i>Sebastesinae</i> , of the Pacific Coast of America; by Carl H. Eigenmann and Charles H. Beeson An Analysis of Jadeite from Mogooing, Burma; by Oliver C. Farrington. On the Nomenclature and Characteristics of the Lampreys, by Theodore Gill The Nomenclature of the <i>Myliobatrachidae</i> or <i>Aetobatrachidae</i> ; by Theodore Gill. The Nomenclature of the Family <i>Pavillidae</i> or <i>Cyprinodontidae</i> ; by Theodore Gill The Differential Characters of the <i>Salmonidae</i> and <i>Thymallidae</i> ; by Theodore Gill On the Relations and Nomenclature of <i>Stizostedion</i> or <i>Luciopeca</i> ; by Theodore Gill On the Botherothoracine Insects of the United States; by L. O. Howard. A Review of the Fossil Flora of Alaska; by F. H. Knowlton Notes on Reptiles and Batrachians collected in Florida, 1892-93, by Einar Lannberg. Notes on the Anatomy and Affinities of the <i>Cercobidae</i> and other American Birds; by Frederick A. Lucas. Overlaying with Copper by the American Aborigines, in Old T. Murray. Description of a New Species of Cotton Rat, <i>Sigmodon merina</i> from New Mexico; by Edgar A. Mearns. On the Formation of Stalactites and Gypsum Incretations in Caves; by George P. Merrill. The Formation of Sandstone Coarctions; by George P. Merrill. Notes on some Eruptive Rocks from Gallatin, Jefferson and Madison Counties, Montana; by George P. Merrill. Notes on a Blue Mineral, supposed to be Ultramarine, from Silver City, New Mexico, by R. L. Packard Descriptions of two New Species of Crabs from the Western Indian Ocean; by Mary J. Rathbun. Descriptions of a New Genus and two New Species of African Fresh-water Crabs, by Mary J. Rathbun. Notes on the Crabs of the Family <i>Inachidae</i> in the U. S. National Museum; by Mary J. Rathbun. Descriptions of a new Genus and four new Species of Crabs from the Antillean Region; by Mary J. Rathbun. Diagnosis of a New Genus of Trogons (<i>Heterotrogon</i> based on <i>Haploiderma vittatum</i> of Shelley; by Charles W. Richmond.	
8409-11	— Bulletins, Nos. 128, 129, 131, 132, 133, 134. 3 vols. 8vo. Washington, 1894-95. Presented	Presented

UNITED STATES NATIONAL MUSEUM. Proceedings, Volume XVII, 1894 (continued).			SMITHSONIAN INSTITUTION. Miscellaneous collections (continued).		
Contains:—			As follows:—		
Descriptions of twenty-two New Species of Birds from the Galapagos Islands, by Robert Ridgway.			Vol. x. No. 190. Queries relative to Tornados.		
Descriptions of some New Birds from Aldabra, Assumption, and Gloriosa Islands, collected by Dr W. L. Abbott, by Robert Ridgway.			No. 234. Questions relative to the Food Fishes of the United States. No. 235. Instructions for observations of Thunderstorms. No. 236. Circular relative to Heights. No. 237. Directions for Constructing Lightning Rods. No. 238. List of the Institutions, Libraries, Colleges, and other Establishments in the United States in correspondence with the Smithsonian Institution, 1872. No. 243. List of Foreign Correspondents of the Smithsonian Institution. 4th ed., 1872. No. 245. Check List of Publications of the Smithsonian Institution, 1872. No. 257. Systematic Index.		
Additional Notes on the Native Trees of the Lower Wabash Valley, by Robert Ridgway.			Vol. vi. No. 230. Arrangement of the Families of Mammals, by Theodore Gill, 1872. No. 247. Arrangement of the Families of Fishes, by Theodore Gill, 1872. No. 256. Monographs of the Diptera of North America. Part iii, by H. Loew. No. 261. Directions for Collecting and Preserving Insects, by A. S. Packard, 1873.		
Distribution of the Land and Fresh-water Mollusks of the West Indian Region, and their Evidence with regard to past changes of Land and Sea; by Charles Torrey Simpson.			Vol. xii. No. 181. Review of North American Birds in the Museum of the Smithsonian Institution. Part i, by S. F. Baird, 1864-1872.		
The Shells of the Tres Marias and other localities in California; by Robert E. C. Stearns.			Vol. xxxix. No. 514. A Catalogue of Scientific and Technical Periodicals (1885 to 1882), together with Chronological Tables and Library Check-List; by Henry Carington Bolton, 1885.		
Description of a New Lizard, <i>Verticaria baldingi</i> , from California; by Leonhard Stejneger.			Vol. xxxi. No. 501. Synoptical Flora of North America. The Gamopetalas. A second edition of Vol. i, part 2 and vol. ii, part 1, collected; by Asa Gray, 1885.		
Notes on a Japanese Species of Reed Warbler, by Leonhard Stejneger.			Vol. xxvii. No. 658. Index to the Literature of the Spectroscope, by Alfred Tuckerman, 1883. No. 659. A table of Specific Gravity for Solids and Liquids. (Constants of Nature. Part vi.) New edition, by Frank Wigglesworth Clarke, London, 1888.		
Description of <i>Uta mearnsi</i> , a New Lizard from California; by Leonhard Stejneger.			Vol. xxxiii. No. 543. Bulletin of the Philosophical Society of Washington. Vol. vi, 1883 (1884). No. 592. Vol. vii, 1884 (1885). No. 636. Vol. viii, 1885 (1886). No. 661. Vol. ix-x, 1886-1887 (1888).		
Notes on Butler's Garter Snake; by Leonhard Stejneger.			Vol. xxxiv. No. 630. Transactions of the Anthropological Society of Washington. Vol. iii, 1883-85, 1886. No. 663. Index to the Literature of Columbia, 1801-1837; by Frank N. Trapagen, 1888. No. 664. Bibliography of Astronomy for 1887; by William C. Winlock, 1883. No. 665. Bibliography of Chemistry for 1887; by H. Carington Bolton, 1888. No. 708. The Toner Lectures, Lecture x, a Clinical Study of the Skull; by Harrison Allen, 1890. No. 741. Index to the Literature of Thermodynamics; by Alfred Tuckerman, 1890. No. 764. The Correction of Sextants for Errors of Eccentricity and Graduation; by Joseph A. Rodgers, 1890. No. 785. Bibliography of the Chemical Influence of Light; by Alfred Tuckerman, 1891. No. 843. The Mechanics of the Earth's Atmosphere. A collection of Translations by Haviland Abbe, 1891.		
On the Specific Name of the Coach Whip Snake, by Leonhard Stejneger.			Vol. xxxv. No. 852. Appendix. No. 854. Smithsonian Geographical Tables; prepared by H. S. Woodward, 1894.		
Description of a New Salamander from Arkansas; by Leonhard Stejneger.			Vol. xxxvii. No. 856. An index to the Genera and Species of the Foraminifera; by Charles Davies Sherborn. Part i, A to N, 1893.		
The Box Tortoises of North America; by W. F. Taylor.			Vol. xxxviii. No. 969. The Varieties of the Human Species, Principles and Method of Classification; by Giuseppe Sergi, 1884. No. 970. Bibliography of Aceto Asceic Ester and its Derivatives; by Paul H. Seymour, 1894. No. 971. Indexes to the Literatures of Cerium and Lanthanum; by W. H. Mudge, 1895. No. 972. Index to the Literature of Didymium, 1842-1893; by A. C. Langmuir, 1891.		
Notes on Mammals of Balistan and the Vale of Kashmir, presented to the National Museum by Dr. W. L. Abbott, by Fred. W. True.			8414 ACADEMY OF NATURAL SCIENCES OF PHILADELPHIA. Proceedings, 1895. 1 vol. 8vo. Philadelphia, 1896. Presented		
Notes on some Skeletons and Skulls of Porpoises of the Genus <i>Prodelphinus</i> , collected by Dr. W. L. Abbott in the Indian Ocean; by Fred. W. True.			C 14 — Proceedings, 1896. Part 1. Presented		
Diagnosis of New North American Mammals; by Fred. W. True.			8174 AMERICAN MUSEUM OF NATURAL HISTORY. Bulletin, Vol. VII, 1895. 1 vol. 8vo. New York, 1895. Presented		
On the Rodents of the Genus <i>Sminthus</i> in Kashmir; by Fred. W. True.			C 10 — Memoirs, Vol. I, Part 2. Presented		
Diagnosis of some described Wood Rats (Genus <i>Neotoma</i>) in the National Museum; by Fred. W. True.			C 13 — Annual Report for the year 1895. Presented		
Descriptions of New Species of Starfishes and Ophiurians; by A. E. Verrill.			8425 AMERICAN NATURALIST. A monthly journal devoted to the Natural Sciences in their widest sense. Vol. XXX. 1 vol. 8vo. Philadelphia, U.S.A., 1896. Purchased		
Discovery of the Genus <i>Oidhamia</i> in America; by Charles D. Walcott.			8412 AMERICAN ORNITHOLOGISTS' UNION. The Auk, a Quarterly Journal of Ornithology. New Series, Vol. XIII. 1 vol. 8vo. New York, 1896. Presented		
Notes on the Invertebrate Fauna of the Dakota Formation; by Charles A. White.			C 19 AMERICAN ANTIQUARIAN SOCIETY. Proceedings. Vol. X, Index. New Series. Vol. IX, Part I. C 19 ACADEMY OF SCIENCE, ST. LOUIS. Transactions. Vol. VII. Nos. 1, 2, 3. Presented		
Scientific Results of Explorations by the U.S. Fish Commission Steamer "Albatross"—No. xxviii. On <i>Cetomacridae</i> and <i>Rondeletidae</i> , two New Families of Bathybal Fishes from the North-western Atlantic; by G. Brown Goode and Tarleton H. Bean. No. xxix. A Revision of the Order <i>Heteromi</i> . Deep Sea Fishes; by G. Brown Goode and Tarleton H. Bean. No. xxx. On <i>Harricotta</i> , a New Type of Chimæroid Fish from the deeper waters of the North-western Atlantic; by G. Brown Goode and Tarleton H. Bean. No. xxxi. Descriptions of New Genera and Species of Crabs of the Family <i>Lithodidae</i> ; by James E. Benedict. No. xxxii. Report on the Crustacea of the Order <i>Stomatopoda</i> ; by Robert Payne Bigelow. No. xxxiii. Descriptions of two New Flounders, <i>Gastropsettia frontalis</i> and <i>Cyclosetta chittendeni</i> ; by Barton A. Bean. No. xxxiv. Report on <i>Mollusca</i> and <i>Brachiopoda</i> , dredged in deep water, by William Healy Dall.			8358 AMERICAN PHILOSOPHICAL SOCIETY. Held at Philadelphia, for promoting useful knowledge. Transactions. Vol. IV. New Series. Exchange		
C 7 — Bulletin, No. 48. Presented			8134 BOSTON SOCIETY OF NATURAL HISTORY. Memoirs, being a New Series of the Boston Journal of Natural History. Vol. IV. 1 vol. 4to. Boston, 1886-93. Presented		
8178-92 SMITHSONIAN INSTITUTION. Miscellaneous collections. 15 vols. 8vo. Washington. Presented					
As follows:—					
Vol. i. No. 57. Psychometrical Table: for determining the elastic force of aqueous vapour and the relative humidity of the atmosphere, by James H. Coffin, 1856. No. 148. Directions for Meteorological Observations and the Registry of Periodical Phenomena. 1855.					
Vol. ii. No. 27. On recent improvements in the Chemical Arts, by Prof. Jas. O. Booth and Campbell Morfit, 1852. No. 34. Directions for Collecting, Preserving, and Transporting Specimens of Natural History. 3rd ed., 1850. No. 49. Catalogue of North American Reptiles in the Museum of the Smithsonian Institution. Part I.—Serpents, by S. F. Baird and C. Girard, 1853. No. 53. Portraits of North American Indians, with Sketches of Scenery, &c., painted by J. M. Stanley, deposited with the Smithsonian Institution, 1852. No. 115. Extracts from the Proceedings of the Board of Regents of the Smithsonian Institution in relation to the Electro-magnetic Telegraph. 1858. No. 187. Circular to Officers of the Hudson's Bay Company, 1860. No. 189. Circular in Reference to the Degrees of Relationship among Different Nations, 1860.

APPENDIX XII.

PUBLICATIONS OF THE AUSTRALIAN MUSEUM UP TO THE END OF 1896.

I.—CATALOGUES.

1. Catalogue of the Specimens of Natural History and Miscellaneous Curiosities in the Australian Museum, by G. Bennett. 1837. Svo. pp. 71. (Out of print.)
2. Catalogue of Mammalia in the Collection of the Australian Museum, by G. Krefft. 1864. 12mo. pp. 133. (Out of print.)
3. Catalogue of the Minerals and Rocks in the Collection of the Australian Museum, by G. Krefft. 1873. Svo. pp. xvii-115. (Out of print.)
4. Catalogue of the Australian Birds in the Australian Museum, by E. P. Ramsay, Part I, Accipitres, 1876. Svo. pp. viii-64, and Supplement, 1890. Part II, Striges, 1890. Svo. pp. 35. Part III, Psittaci, 1891. Svo. pp. viii-110. Part IV, Halcyones, 1894. Svo. pp. viii-24.
5. Catalogue of the Australian Stalk and Sessile-eyed Crustacea, by W. A. Haswell. 1892. Svo. pp. xxiv-324, with 4 plates.
6. Catalogue of the Library of the Australian Museum. 1883. Svo. pp. 178. Wrapper, with two supplements. (Out of print.) New edition. Part III, Pamphlets.
7. Catalogue of a Collection of Fossils in the Australian Museum, with Introductory Notes, by F. Ratte. 1883. Svo. pp. xxviii-160.
8. Catalogue of the Australian Hydroid Zoophytes, by W. M. Bale. 1884. Svo. pp. 198, with 19 plates.
9. Descriptive Catalogue of the General Collection of Minerals in the Australian Museum, by F. Ratte. 1885. Svo. pp. 221, with a plate.
10. Catalogue of Echinodermata in the Australian Museum, by E. P. Ramsay, Part I, Echini, 1885. 2nd edition, 1890. Svo. pp. viii-54, with 5 plates.
11. Descriptive Catalogue of the Medusæ of the Australian Seas. Part I, Scyphomedusæ. Part II, Hydromedusæ, by R. von Lendenfeld. 1887. Svo. pp. 32 and 49.
12. Descriptive Catalogue of the Nests and Eggs of Australian Birds, by A. J. North. 1889. Svo. pp. iv, v-407, with 21 plates.
13. Descriptive Catalogue of the Sponges in the Australian Museum, by R. von Lendenfeld. 1888. Svo. pp. xiv-260, with 12 plates.
14. Catalogue of the Fishes in the Australian Museum. Part I, Palaichthyan Fishes, by J. Douglas Ogilby. 1888. Svo. pp. 34.
15. Catalogue of the Marine Shells of Australia and Tasmania, by J. Brazier. Part I, Cephalopoda, 1892. Svo. pp. 20. Part II, Pteropoda, 1892. Svo. pp. 22. Part III, Gasteropoda (Murex), 1893. Svo. pp. 32.
16. Catalogue of Australian Mammals, with Introductory Notes on General Mammalogy, by J. Douglas Ogilby, 1892. Svo. pp. xvi-144.

II.—MONOGRAPHS.

1. Australian Lepidoptera and their Transformations, by the late A. W. Scott, with Illustrations by his daughters, Mrs. Morgan and Mrs. Forde. Edited and revised by A. S. Olliff and Mrs. Forde. Vol. II, Parts 1, 2, 3, and 4.

III.—MEMOIRS.

1. History and Description of the Skeleton of a new Sperm Whale in the Australian Museum, by W. S. Wall. 1851. Svo. pp. 66, with plates. Reprint 1887.
2. Lord Howe Island: its Zoology, Geology, and Physical Characters. 1889. Svo. pp. viii-132, with 10 plates.
3. The Atoll of Funafuti, Ellice Group; its Zoology, Botany, and General Structure, based on Collections made by Mr. C. Hedley. Part I., 21st Dec., 1896. Svo. pp. 86.

IV.—GUIDES.

1. Guide to the Australian Fossil Remains in the Australian Museum. 1870. Svo. (Out of print.)
2. Guide to the Contents of the Australian Museum. 1883. Svo. pp. iv-56. (Out of print.)
3. Guide to the Contents of the Australian Museum. 1890. Svo. pp. 156.

V.—MISCELLANEOUS PUBLICATIONS.

1. List of old Documents and Relics in the Australian Museum. 1884. Reprinted with additions, 1890. Svo. pp. 4.
2. Descriptive List of Aboriginal Weapons, Implements, &c., from the Darling and Lachlan Rivers, by K. H. Bennett, F.L.S. 1837. Svo. pp. 8. (Out of print.)
3. Notes for Collectors. 1887. Svo. pp. 43.
4. Hints for Collectors of Geological and Mineralogical Specimens, by F. Ratte, pp. 26, with a plate.
5. Hints for the Preservation of Specimens of Natural History, by E. P. Ramsay. 1891. 4th Edition, pp. 32.

VI.—RECORDS.

- Records of the Australian Museum, Vol. I., 1890-91. Svo. pp. 202. 30 plates.
Vol. II., 1892-96. Svo. pp. 112. 23 plates.

May be obtained from the Attendants at the Museum, or from Messrs. Angus and Robertson, Castlereagh-street, Sydney; Messrs. Turner and Henderson, Hunter-street, Sydney; Mr. E. W. Cole, George-street, Sydney, Book Arcade, Melbourne, and Rundle-street, Adelaide; Messrs. Melville, Mullen, and Slade, Melbourne; Messrs. R. Friedlander and Son, Berlin; Messrs. Kegan, Paul, Trench, Trübner, & Co., Paternoster House, Charing Cross Road, London.

[Exchanges of Serials, Works, Reports, and other Publications are earnestly solicited on behalf of the Museum Library.]

APPENDIX XIII.

LIST OF THE MUSEUM STAFF, 1896.

No. at end of 1895.	No. at end of 1896.	Name and Office.	Date of appointment to present position.	Date of first appointment in the Museum.
1	1	Robert Etheridge, Junr., Curator	1 Jan., 1895	18 April, 1887
2	2	Sutherland Sinclair, Secretary	11 Sept., 1882	
3	3	Edward P. Ramsay, Consulting Ornithologist, Collector, &c.	1 Jan., 1895	22 Sept., 1874
4	4	Thomas Whitelegge, Scientific Assistant	1 July, 1887	27 Aug., 1883
5	Frederick A. A. Skuse do do (deceased)	15 Oct., 1890	
6	5	Alfred J. North do do	1 Aug., 1891	22 Nov., 1886
7	6	Thomas Cooksey do do	9 May, 1892	
8	7	Edgar R. Waite do do	17 April, 1893	
9	8	Charles Hedley do do	1 Jan., 1896	1 April, 1891
.....	9	W. J. Rainbow do do	3 Sept., 1896	July, 1896
10	10	John Jennings do do (temporary)	16 Sept., 1895	
.....	11	F. T. Clark, Clerk	1 Jan., 1896	
.....	12	Joseph A. Spencer, Messenger	7 April, 1896	
11	13	Henry Barnes, Articulator, Photographer, &c. ...	15 March, 1896	
12	14	John A. Thorpe, Taxidermist	5 June, 1869	
13	15	Robert Barnes, Carpenter	— 1866	
14	16	Benton Lucas, Assistant Carpenter and Smith ...	10 May, 1887	1 March, 1883
15	17	Henry Barnes, Junr., Assistant Articulator, &c. ...	1 Oct., 1888	— 1878
16	18	Michael O'Grady, Attendant	— 1854	
17	19	Richard Hillsdon, do	1 Jan., 1888	12 Sept., 1887

1897.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

NATIONAL ART GALLERY OF NEW SOUTH WALES.

(REPORT OF THE TRUSTEES FOR THE YEAR 1896.)

Printed under No. 2 Report from Printing Committee, 6 May, 1897.

Report for the Year 1896.

In presenting their Annual Report for the year 1896, the Trustees desire to emphasize the value to the National Art Collection of the first enlargement of the Gallery, as sanctioned by the Honorable the Minister of Public Instruction, the contract for which is now approaching completion.

Some idea may now be formed of the architectural scheme for the complete Gallery, and the Trustees congratulate the Colony upon the good taste and appropriateness of its design.

Contracts for a continuation of the plan will, the Trustees understand, be shortly entered upon.

The attendance of visitors during the year is recorded as 215,602, the daily average being 427 on week days (312) and 1,581 on Sundays (52).

Thirty-six (36) additional students have been admitted during the year, giving a total of 248 registered.

Country Loan Collections.—On 20th February the Honorable Mr. Garrard, Minister of Public Instruction, assisted by Mr. Du Faur, President of Trustees, officially opened at Newcastle the Third Country Collection, consisting of twenty-four Oil Paintings and eleven Water-colour drawings, contributed by the Trustees and Members of the Art Society of New South Wales. Encouraging results in the direction of Art culture are recorded in each of the three country centres to which pictures have been sent, viz.:—Bathurst, Goulburn, and Newcastle.

The "Third Interchanges" of pictures with the National Galleries of Victoria and South Australia were effected in April, public interest in these interchanges being fully sustained.

In November, with the sanction of the Honorable Mr. Garrard, a first interchange of four (4) pictures was effected with the National Gallery of Queensland.

The Trustees have to deplore the loss of their esteemed colleague, the Honorable Sir George Innes, who was appointed to the Trust in 1892.

Particulars of purchases and presentations during the year are annexed hereto.

E. DU FAUR,
President.

List of Works purchased by the Trustees in 1896, at a cost of £963 14s. 9d.

OIL PAINTINGS.

"The Cry of the Mothers"; F. P. Mahony. "The Bride"; Arthur Burrington. "Portrait Study"; J. Longstaff. "Summer Evening"; D. Davies. "A Bush Idyll"; G. Lambert. "Mid-day"; S. Long. "Waiting"; Gordon Coutts. "A Southern Headland, Tas."; W. C. Piquenit.

WATER-COLOUR DRAWINGS.

"Maiden Meditation"; A. J. Hanson. "The Close of Day"; A. J. Hanson. "Queenie"; Mary Stoddard, jun. "Bad Hay Weather, Westmoreland"; Paul Naftel. "A Sketch, N. Wales"; Paul Naftel. "Entrance to Sydney Harbour"; Conrad Martens. "New Zealand Landscape"; F. C. Terry. "Study of Aboriginal Female"; B. E. Minns. "A Surveyor's Camp"; A. Streeton.

BLACK AND WHITE.

Engraving, "Changing Pastures," after Rosa Bonheur. Charcoal Studies, "2 Heads"; J. Wolinski.

MODELLING.

Plaster Bust, "Aboriginal Boy"; N. Illingworth.

MISCELLANEOUS.

*83—

[550 copies—Approximate Cost of Printing (labour and material), £1 8s. 0d.]

MISCELLANEOUS.

Specimen of Chinese Embroidery, from the Palace of the Empress Dowager at Peking. 16 feet x 3 feet.

PRESENTATIONS to the Gallery in 1896.

Pencil drawing, "Lily". Presented by W. A. Inman.

Water-colour drawing, "Lung Arno, Florence". Presented by Mrs. R. R. Armstrong and other ladies.

Brown Circular Tile, from the famous Porcelain Tower of Nanking. Presented by E. Molloy, Nanking.

ADDENDA.

Five persons were permanently employed, with three extra attendants on Sundays and holidays. The Gallery was open on 364 days in the year.

Year's Expenditure to 31st December, 1896.

1897.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

THE PUBLIC LIBRARY OF NEW SOUTH WALES.
(REPORT FROM TRUSTEES FOR 1896.)

Printed under No. 2 Report from Printing Committee, 6 May, 1897.

The Trustees of the Public Library of New South Wales to The Minister for
Public Instruction.

Sir,

Sydney, 10 February, 1897.

The Trustees have the honor to submit their Report for the year 1896, being their Twenty-sixth Annual Report.

1. The Board have to record with regret the death of Mr. John Stewart on July 30th, 1896, after twenty-three years' service, commencing on April 20th, 1873, and of the Hon. Sir J. G. L. Innes, Kt., who died in London on October 26th, having served on the Board since February 11th, 1879.

In January Sir William Windeyer went to England on leave of absence, and the Board placed on record their high sense of the value of his services to this Library.

There have been twelve meetings of the Board during the year, the average attendance being five.

2. The general collection of books has been increased by 5,525 volumes, and after allowing for 116 struck off the Lending Branch stock as worn out or lost, the total number now in the Library is 115,908, details of the classification of which are given in Appendix A.

3. The Reference Library was open for 359 days, and the attendance reached 174,130, being an increase of 17,742 over that of the previous year. The Lending Branch was open for 349 days, and the total number of borrowers' visits reached 80,928, showing a small increase of 146. The attendance at the Newspaper Room fell off from 171,894 to 161,124. The average daily attendance at the Library for the year was 1,167. Details are given in Appendix B.

4. In the Lending Branch the borrowers numbered 6,061, which is a decrease of 89 on the previous year. In Appendix C will be found details of the classes of books taken out by borrowers, showing for each class—(a) the number of volumes available at the end of the year; (b) the number issued during the year; (c) the daily average of volumes issued; (d) the ratio between volumes and issues. These figures show that fiction forms 11·7 per cent. of the volumes in the Lending Branch and 28·3 per cent. of the total issues; and that each volume of fiction was borrowed, on an average, 8·5 times during the year.

5. The figures given in Appendix D serve to show to what extent and in what directions the public avail themselves of the contents of the Library on Sundays.

*25—A

[900 copies—Approximate Cost of Printing (labour and material), £8 19s.]

6.

6. The number of Country Libraries applying for the loan of boxes of books has increased from 91 to 107; and 172 boxes, containing 14,208 volumes, were sent out, as against 164 boxes, with 12,893 volumes, in the previous year. Two more boxes were equipped during 1896, 268 new volumes added to the stock available for loan in this way, and 85 volumes were withdrawn, leaving the total 6,131 volumes.

The Trustees are of opinion that the Country Libraries which benefit by this system of exchange may fairly be asked to make a yearly contribution to a fund which will by degrees equip a number of new boxes with the best modern literature of all classes, until there shall be at least enough boxes to supply all applicants, and thus ensure a rapid circulation of about 10,000 volumes among 150 centres throughout the Colony.

A yearly contribution of £5 from each Country Library would thus provide about 1,500 volumes each year, which rate of increase would soon make it possible for every Library to borrow 400 volumes per annum, at an average cost to themselves of 3d. per volume—the State paying all costs of transit.

7. The donations for the past year comprise 1,504 volumes and pamphlets, of the value of £417 6s. 6d., of which 356 were placed among the duplicates, but are valuable for exchange purposes; and also 76 newspapers supplied regularly from Great Britain and British Colonies for the use of the Newspaper Room. Appendix G contains the names of the principal donors. Under the Copyright Act 256 volumes and pamphlets, to the value of £29 11s. 1d., have been received, as well as 272 newspapers and periodicals published in New South Wales.

8. The Newspaper Room is now supplied with newspapers from different parts of the world, and is evidently appreciated by the large number of respectable men who frequent it every day. The Trustees would reiterate the remarks of their last Report as to the unsuitability of the old iron building which is being used for a Lending Branch and Newspaper Room.

9. The practice of lending special collections of text-books to groups of students in country districts has been continued with encouraging results, and is much appreciated by the students and the University Extension Board.

10. Steady progress has been made with the preparation of catalogues. A Supplement containing the books added to the Library in the years 1893–95 is now ready for the Printer, and a very complete Index to the same will be finished within three months. A Supplement for the year 1896 has been issued in quarterly parts by our own staff, and these parts are now combined in one alphabet, and ready with the Index for printing in one volume. The type of this Supplement will be kept standing, and the quarterly slips printed during this year will be combined with it at the end of 1897 to form a two years' Supplement, and so on till a large five years' Supplement shall have been put together. An Index covering the whole of the 60,000 books received from 1869 to 1892 will, we hope, be ready for printing by the middle of this year. The cataloguing of the books in the Lending Branch has been steadily kept up to date.

11. This Library was represented at the Library Conference held in Melbourne in April last by the Principal Librarian. An Australasian Library Association was formed, and it was decided that the first general meeting of the Association should be held in Sydney about Easter of this year. With this end in view the Hon. Dr. Norton, M.L.C., Professor MacCallum, and Mr. H. C. L. Anderson were elected the Executive Officers for 1897. A further communication with regard to this proposed meeting will be addressed to you.

12. The Officers of the staff are efficient and diligent, and are generally zealous in working to make themselves fit for any duties that may be assigned to them.

13. The question of providing more accommodation is becoming a pressing one, for within a short time all the available space in this Library will be occupied.

During the past year the work connected with administering the Copyright Act of 1879 has been transferred to the Library, and a considerable amount of space has been taken up by the necessary Registers and Exhibits. The officer entrusted with editing the Historical Records of New South Wales has also been transferred to the Library Staff, and a further encroachment on the rooms hitherto assigned to special students has been found necessary. The Trustees feel it their duty to urge the

the advisability of considering at once how the further accommodation which will be necessary in the near future is to be provided. The splendid site which was bought for this Library with a special Parliamentary grant has not yet been devoted to any other purpose, and it is a question for immediate attention whether the difficulty should not be boldly faced by using the site as originally intended, and removing the Reference Library, together with the Lending Branch and Newspaper Room which must disappear in a short time to make room for the proposed Parliamentary buildings, to a central position where they would be more accessible, and their general usefulness thereby largely increased. The Trustees are of opinion that it is both impracticable and inexpedient to attempt to enlarge the present building with any hope of providing suitable accommodation for the work now being done at the Lending Branch, or for the prospective requirements of a National Library for New South Wales.

14. *Expenditure for 1896.*

From the Parliamentary Votes for the year 1895-6 (£7,640), and the current financial year ending June 30th, 1897 (£7,176).

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

UNIVERSITY OF SYDNEY.

(REPORT FOR 1896.)

Printed under No. 2 Report from Printing Committee, 6 May, 1897.

REPORT of the Senate of the University of Sydney for the year ending
31st December, 1896.

1. The Senate of the University of Sydney, in pursuance of the provisions of section 22 of the Act of Incorporation, 14 Victoria No. 31, has the honor to transmit the account of its proceedings during the year 1896, for the information of His Excellency the Governor and the Executive Council.

Matriculation.

2. The number of persons who qualified themselves for Matriculation in 1896 by passing one of the various University Examinations was 295. Of these, 96 passed the ordinary Matriculation Examination, 135 the Junior Public Examination, 21 the Law Matriculation Examination, 33 the Senior Public Examination, and 10 the Entrance Examination for Medicine and Science. The number of students actually admitted to Matriculation, with a view to proceeding with the curriculum in one of the several Faculties, was 82.

Annual University Examinations.

3. The numbers of students who attended and passed the annual examinations in December, 1895, and March, 1896, after attending the prescribed courses of lectures, are shown in the following table:—

	Faculty of Arts.	Candidates.	Passed.
First-year examination	86	65
Second-year examination	56	39
Third-year examination	67	57

In addition to the students passing through the regular curriculum, 43 evening students and students of special subjects passed examinations in individual subjects.

	Faculty of Law.	Candidates.	Passed.
Intermediate examination	15	12
Final examination...	10	7
	Faculty of Medicine.		
First-year examination	31	23
Second-year examination	24	22
Third-year examination	24	21
Fourth-year examination	19	12
Fifth-year examination	19	18
	Faculty of Science.		
First-year examination	3	3
Second-year examination	1	1
Third-year examination	1	1
	Faculty of Science.—Department of Engineering.		
First-year examination	10	7
Second-year examination	10	9
Third-year examination	7	5

Attendance at Lectures.

4. The following table shows the numbers of students attending lectures in the several faculties:—

Faculty of Arts (day), 158; (evening), 71; total	229
Faculty of Law	45
Faculty of Medicine	136
Faculty of Science	9
" Department of Engineering	35
Total	454

Included are 64 women who attended in the Faculty of Arts, 8 in Medicine, and 3 in Science; total, 75.

* 22—A

[550 copies.—Approximate Cost of Printing (labour and material), £12 6s.]

Degrees

Degrees conferred.

5. The following degrees were conferred after examination:—

Master of Arts (M.A.):—Arthur Henry Garnsey, B.A.; Alfred John Griffith, B.A.; Godfrey William Millard, B.A.; John Frazer Sydney Russell, B.A.; Joseph Henry Smairl, B.A.; John Stonham, B.A.

Bachelor of Arts (B.A.):—Ernest Robert Abigail, Maud Edith Anderson, Edwin Charles Arnold, John a'Beckett Darvall Barton, Ada Beardmore, Charlotte Maud Bertie, Reginald Austin William Black, William John Bloomfield, Theophilus Robert Bowmaker, Nelson Leopold Boxall, Henry John Wolverton Brennand, Cecil Thomas Hawkes Broderick, Henry James Sidney Brook, Mary Jane Bruce, Edith Annie Bunting, Pollie Bushnell, Lily Comyn Byrne, Hilda Caro, Michael Alphonsus Casey, James Robert Castling, Montague Charles Lyttelton Chubb, Peter Joseph Clines, Wallace Clubb, Stella Maud Campbell Crawford, Jennie Cumming, Agnes Marianne Harrison Davis, Horace De Lissa, Samuel Beaumont Davison, Edith Lucy Doust, James Cooke Elphinstone, Lucy Isabel Flavelle, Henry James Clifton Foreman, Ambrose William Freeman, Henry Halloran, John Harold Hammond, John Alfred Hedberg, Thomas James, Mary Eleanor Johnston, James M'Dowall, James M'Kay, Alexander Duncan M'Laren, Gregan M'Mahon, Reginald William H. Maffey, James W. Miller, Ernest Meyer Mitchell, Hortense Henriette Montefiore, Arthur Frank Macquarie Mullens, Florence Jane Murray, Mabel Alicia Noakes, Henry Stuart Osborne, Catherine Agnes Phillips, John James Galton Reidy, Donald Grant Stewart, Kenneth Ffoulkes Swanwick, Elizabeth Ironside Taylor, Septimus Thornton, George Washington Waddell, Alfred Henry Yarnold.

Bachelor of Laws (LL.B.):—Francis Stewart Boyce, Spencer Joseph St. Clair Butler, Francis Louis Verhuist Coffey, Joseph Cuthbert Kershaw, Edric Sydney Scarvell, James Ernest Walker, Harrie Dalrymple Wood.

Doctor of Medicine (M.D.):—Aeneas John McDonnell, M.B., Ch.M.

Bachelor of Medicine (M.B.):—Harold Graves Bennetts, Frederick Francis Ormond Bode, Edmund Henry Burkitt, William Aloysius Conlon, Aubrey Joseph Clarence Crawley, George Henry Baring Deck, Norman John Dunlop, John Charles White Halliday, Lawrence Herschell Levi Harris, Alexander Kethel, Llewellyn Bentley Lancaster, Walter Cecil McClelland, Guy Dixon Menzies, Arthur Charles O'Connor, Erskine Hugh Robison, Stratford Sheldon, Robert Blakeway Wade, Frederic Sobieski Wladimir Zlotkowski.

Master of Surgery (Ch.M.):—Harold Graves Bennetts, Aubrey Joseph Clarence Crawley, Norman John Dunlop, John Charles White Halliday, Lawrence Herschell Levi Harris, Walter Cecil McClelland, Guy Dixon Menzies, Arthur Charles O'Connor, Erskine Hugh Robison, Stratford Sheldon, Frederic Sobieski Wladimir Zlotkowski.

Bachelor of Science (B.Sc.):—John Macpherson.

Master of Engineering (M.E.):—Civil Engineering—John Job Crew Bradfield.

Bachelor of Engineering (B.E.):—Civil Engineering—Moreton John Godden Colyer, William Francis Hole, Basil Sawyer, John Morris Simeon Woore. Mining Engineering—Henry Twynam.

Ad eundem Degree.

6. The following *ad eundem* degree was conferred in accordance with the provisions of the "*Ad Eundem* Degrees Act," 44 Victoria No. 22:—

Doctor of Medicine (M.D.):—Francis Alexander Bennet; M.D., Aberdeen.

7. The total number of degrees conferred during the year was thus 108, divided as follows:—M.A., 6; B.A., 58; LL.B., 7; M.D., 2; M.B., 17; Ch.M., 11; B.Sc., 1; M.E., 1; B.E., 5.

8. The degrees conferred by the University from its foundation to the end of 1896 are:—M.A., 256; B.A., 851; LL.D., 23; LL.B., 57; M.D., 37; M.B., 108; Ch.M., 75; B.Sc., 24; M.E., 3; B.E., 37. Total, 1,471.

Honours at Degree Examinations.

9. The following honours were awarded at Degree Examinations:—

Faculty of Arts—M.A. Examination.

Philosophy and French Literature—Class II:—J. Stonham, B.A.

B.A. Examination.

Latin—Class I:—E. M. Mitchell. Class II:—Florence J. Murray. Class III:—Maud E. Anderson.

Greek—Class I:—E. M. Mitchell.

French—Class I:—Hortense H. Montefiore. Class III:—Mary E. Johnston.

English—Class I:—Ada Beardmore, Edith A. Bunting, Edith L. Doust. Class II:—Lily C. Byrne.

History—Class I:—Edith L. Doust and A. H. Yarnold, equal; Florence J. Murray. Class III:—H. J. C. Foreman. Class I (evening):—W. J. Bloomfield.

Mathematics—Class I:—D. G. Stewart. Class II:—K. ff. Swanwick. Class III:—E. M. Mitchell.

Logic and Mental Philosophy—Class I:—K. ff. Swanwick, Elizabeth I. Taylor. Class II:—W. J. Bloomfield, Ada Beardmore, and Agnes M. H. Davis, equal.

Geology and Palæontology—Class II:—Hortense H. Montefiore, H. J. S. Brook, C. G. W. Officer.*

Faculty of Law—LL.B. Examination.

Class II:—J. E. Walker, B.A.; F. S. Boyce, B.A.; J. C. Kershaw, B.A.

Faculty of Medicine—M.B. and Ch.M. Examination.

Class II:—G. H. B. Deck and J. C. Halliday, equal; W. C. McClelland, R. B. Wade, W. A. Conlon.

Faculty of Science—B.Sc. Examination.

Physics—Class II:—T. P. Strickland.*

Department

* Not passing through the regular course for the Degree.

Faculty of Science—Department of Engineering—M.E. Examination.
Civil Engineering—Class I:—J. J. C. Bradfield, B.E.

B.E. Examination.

Civil Engineering—Class II:—W. F. Hole, J. M. S. Woore, E. W. Hedgeland.*

10. The following Scholarships were awarded:—

(a) At the Matriculation Examination.

Bowman Cameron Scholarship for General Proficiency—R. C. Teece.
Cooper Scholarship, No. II, for Classics—Gained by R. C. Teece, but awarded to B. P. McEvoy,
R. C. Teece being the holder of two Scholarships.
Barker Scholarship, No. II, for Mathematics—R. W. Hawken, *prox. acc.* G. A. Waterhouse.
Lithgow Scholarship for Modern Languages—G. G. Nicholson.
Freemason's Scholarship for General Proficiency—R. C. Teece.
Horner Exhibition for Mathematics—R. W. Hawken, *prox. acc.* G. A. Waterhouse.

(b) At the First Year Examination in Arts.

Cooper Scholarship, No. III, for Classics—D. P. Evans-Jones.
George Allen Scholarship for Mathematics—F. G. Griffiths.

(c) At the Second Year Examination in Arts.

Cooper Scholarship, No. I, for Classics—H. E. Whitfield.
Barker Scholarship, No. I, for Mathematics—S. D. Chalmers.

(d) At the B.A. Examination.

Frazer Scholarship for History—Edith L. Doust and A. H. Yarnold, *æq.*; Florence J. Murray,
prox. acc.

(e) At the Intermediate Examination in Law.

G. Wigram Allen Scholarship for General Proficiency—J. H. Hammond.

(f) At the First Year Examination in Medicine.

Kenwick Scholarship for General Proficiency—W. F. Burfitt, B.A.

(g) At the Third Year Examination in Medicine.

John Harris Scholarship for Anatomy and Physiology—J. Macpherson, B.A.

(h) At the First Year Examination in Science.

Levey Scholarship for Chemistry and Physics—W. G. Woolnough.

(i) James King, of Irrawang, Travelling Scholarship—G. E. Smith, M.D., Ch. M.

Prize Compositions.

11. The awards made for Prize Compositions were:—

Wentworth Medals for English Essays—subject: "The Historical Novel." Prize for Graduates
—J. S. Griffith, B.A.; Prize for Undergraduates—H. S. Dettmann.
Professor Anderson's Medal for the best essay on a philosophical subject—"The Ethics of
Socialism"—D. Cowan, B.A.

First Classes at Annual Examinations.

12. The following students were placed in the first-class in Honours at the annual examinations
other than the final examinations for degrees:—

Faculty of Arts.

First-year Examination:—Latin—Isabel M. Fidler, D. P. Evans-Jones, N. G. Pilcher. Greek—
D. P. Evans-Jones, F. G. Griffiths. French—Isabel M. Fidler, N. G. Pilcher. German—
N. G. Pilcher. Mathematics—F. G. Griffiths, W. G. Forsyth, W. G. Woolnough (Science).
Second-year Examination:—Latin—H. E. Whitfield, H. S. Dettmann. Greek—H. E. Whitfield,
H. S. Dettmann. German—H. S. Dettmann. English—H. S. Dettmann. Mathematics—
S. D. Chalmers. Logic and Mental Philosophy—D. Wallace, H. E. Whitfield. History—
Elsie I'A. Bloomfield, S. D. Chalmers, W. W. Monahan, J. E. F. Penman.

Faculty of Medicine.

First-year Examination:—Chemistry—W. F. Burfitt, B.A. Physics—W. F. Burfitt, B.A.,
W. E. Harris. Biology—W. F. Burfitt, B.A.

First and Second-year Examinations:—Organic Chemistry—E. Ludowici, F. P. Sandes.

Third-year Examination:—Passed with high distinction—J. Macpherson, B.A.

Faculty of Science.

First-year Examination:—Physics—W. G. Woolnough. Chemistry—W. G. Woolnough.

Faculty of Science—Department of Engineering.

First-year Examination:—Applied Mechanics and Descriptive Geometry—G. A. Peckey.

Annual Prizes.

13. Annual Prizes were awarded as follows:—

University Prize for Physiography—G. Harker. Norbert Quirk Prize for Mathematics—S. D.
Chalmers. Professor Anderson's Prizes for Logic and Mental Philosophy—Second Year—
D. Wallace. Third Year—K. H. Swanwick, Elizabeth I. Taylor, *prox. acc.* Professor
Haswell's Prizes for Zoology—W. G. Woolnough, W. F. J. Burfitt, B.A., *prox. acc.* For
Laboratory Notes—H. G. Holmes, W. J. Durack, W. E. Harris, *æq.* Professor Mac-
Callum's Prizes for English Essays—First Year—W. G. Forsyth; Second Year—H. S.
Dettmann; Third Year—Ada Beardmore. Professor Wood's Prize for History—Elsie
I'A. Bloomfield. Collie Prize for Botany—W. F. Burfitt, B.A. Slade Prizes, Practical
Chemistry—N. Reid; Practical Physics—W. G. Woolnough. Smith Prize for Physics—
W. F. Burfitt, B.A. Professor David's Prize for Geology—W. A. Shortland. Dr. Dixon's
Prize for Materia Medica—J. Macpherson, B.A. Dr. Wilkinson's Prize for Pathology—
G. P. Dixon.

Bursaries.

14. The following bursaries were awarded, each consisting of a payment to the student of £50 per annum, or in the case of a half bursary, £25 per annum, for three years, together with exemption from the payment of lecture fees:—

Maurice Alexander (one half).	Burdekin.
Levey and Alexander.	J. B. Watt Exhibition.
John Ewan Frazer.	Walker No. I (one half).
William Charles Wentworth No. I (one half).	Walker No. III (one half).

The number of students permitted to attend lectures without paying fees was 56, including 25 State Bursars and 16 holders of University bursaries. The payments to bursars amounted to £795, and to scholars £893.

18 students of State Training Schools attended at a reduced scale of fees.

Public Examinations.

15. The Junior Public Examination was held in June in Sydney and at the following local centres:—

New South Wales.—Adelong, Albury, Allynbrook, Araluen, Armidale, Ballina, Barmedman, Bathurst, Bega, Bellingen, Blayney, Bourke, Bowral, Braidwood, Broken Hill, Camden, Campbelltown, Carcoar, Casino, Chatsworth Island, Cobar, Cooma, Cootamundra, Cowra, Deniliquin, Dubbo, Dungog, Forbes, Glen Innes, Goulburn, Grafton, Grenfell, Gundagai, Hay, Hornsby Junction, Inverell, Junee, West Kempsey, Kiama, Lismore, Lithgow, Maitland East, Manilla, Moruya, Mount Victoria, Mudgee, Murrumburrah, Narrabri, Newcastle, Nowra, Orange, Parramatta, Port Macquarie, Rylstone, St. Albans, Seone, Singleton, Tamworth, Tenterfield, Tumut, Wagga Wagga, Wentworth, Windsor, Wingham, Wollongong, Yass, Young.

Queensland.—Brisbane, Bundaberg, Charter's Towers, Ipswich, Maryborough, Rockhampton, Toowoomba, Townsville, Warwick.

There were 1,481 candidates, and 935 were successful.

16. The Senior Public Examination was held in November concurrently with an examination for Matriculation Honors and Scholarships, in Sydney and at the following local centres:—

New South Wales.—Armidale, Bowral, Braidwood, Grenfell, Lithgow, East Maitland, Parramatta.

Queensland.—Brisbane, Ipswich, Maryborough, Rockhampton, Toowoomba, Townsville.

There were 143 candidates, of whom 109 were successful.

17. The prizes for general proficiency in the Senior and Junior Examinations were awarded as follows:—

Seniors.

John West Medal and Grabame Prize Medal—

Eleanor Elizabeth Bourne, *proxime accesserunt*, William Rowall Horn, Henry Montagu Stephen, Reginald Norman Robson.

Fairfax Prize for female candidates—

Eleanor Elizabeth Bourne.

Juniors.

University Prize for Boys—

Roy Noel Teece.

Fairfax Prize for female candidates—

Jessie Bowmaker, Grace Mitchell Bruce, *aq.*; Jessie I. Stewart and Elsie A. H. Mills, *proxime accesserunt*.

18. Two examinations of candidates for the Civil Service were held during the year. At these there were 139 candidates, of whom 57 passed. These examinations will no longer be conducted by the University, as it is understood that the Public Service Board intend to hold periodical examinations for admission to the Public Service.

19. Three Law Examinations were held, similar and equal to that prescribed for Matriculation, for candidates for Articles of Clerkship with Solicitors. At these there were 36 candidates, and 21 passed.

Senate.

20. The Senate held eleven ordinary meetings, five special meetings, in addition to the annual commemoration, and five meetings of the Conjoint Board consisting of the Senate of the University and the Board of Directors of the Prince Alfred Hospital.

The attendances of the various Fellows were as follows:—

MacLaurin, the Hon. H. N., M.A., M.D., LL.D., M.L.C., Chancellor ...	22
Backhouse, His Honor Judge, M.A., Vice-Chancellor ...	22
Anderson, H. C. L., M.A. ...	19
Barton, Edmund, M.A. ...	6
Butler, Professor, B.A. ...	20
Cobbett, Professor, M.A., D.C.L. ...	17
*Cullen, the Hon. W.P., M.A., LL.D., M.L.C. ...	5
†Gurney, Professor, M.A. ...	15
‡Jones, P. Sydney, M.D. ...	21
†Knox, Edward W. ...	16
†Liversidge, Professor, M.A., LL.D.
¶Manning, the Hon. Mr. Justice, M.A. ...	1

§Scott, Professor, M.A. ...	2
Stuart, Professor T. P. Anderson, M.D. ...	18
Teece, Richard, F.I.A., F.F.A. ...	17
†Windeyer, the Hon. Sir William C., M.A., LL.D.

Thirty-one

* Elected June 20, 1896.

† Absent on leave.

‡ Ceased to be an ex-officio member in October

¶ Resigned, May 4, 1896.

§ Elected an ex-officio member in November.

21. Thirty-one meetings of Sub-Committees of the Senate for finance, by-laws, and other matters, were held during the year, the attendances of members being as follows:—The Chancellor (The Hon. Dr. MacLaurin), 30; the Vice-Chancellor (His Honor Judge Backhouse), 27; Professor Cobbett, 4; the Hon. Dr. Cullen, 2; Professor Gurney, 9; Mr. E. W. Knox, 19; the Hon. R. E. O'Connor, 1; Mr. Alexander Oliver, 1; the Hon. Sir Arthur Renwick, 13; Professor Scott, 1; Mr. C. B. Stephen, 10; Mr. H. C. Russell, 6; Professor Stuart, 4; and Mr. R. Teece, 6.

Chancellor.

22. Early in the year, the Chancellor (the Hon. Sir William Windeyer) was granted six months' leave of absence from the meetings of the Senate in consequence of a projected absence from the Colony for a time, and in the month of October a communication was received from him stating that as he had resigned his office as a Judge of the Supreme Court of New South Wales, and intended to remain in England longer than was certain when he left Sydney, he thought it right to resign his office as Chancellor of the University.

In accepting his resignation, the Senate unanimously passed the following resolution:—

“That the Senate desires to place on record its great regret on account of the necessity which has arisen for the resignation of the office of Chancellor by Sir William Windeyer, and also an expression of its thanks for the services rendered by him to the University during his tenure of office.”

At the same time, the Senate granted him further leave of absence from its meetings for six months.

The election of a successor to Sir William Windeyer in the office of Chancellor resulted in the unanimous appointment of the Hon. Henry Norman MacLaurin, M.A., LL.D., M.D., M.L.C.

Vice-Chancellor.

23. The appointment of the Hon. Dr. MacLaurin as Chancellor having left a vacancy in the office of Vice-Chancellor, the Senate, at its meeting in November, unanimously elected His Honor Alfred Paxton Backhouse, Esq., M.A., District Court Judge, to that office for the remainder of the Academic year.

Resignation and election to vacancy in Senate.

24. In the month of May the Senate received with regret a communication from Mr. Justice Manning resigning his seat on the Senate in consequence of his inability to attend the meetings of the Senate through ill health.

A Convocation of Electors to fill the vacancy thus created was held on the 13th of June, a ballot being taken on the 20th of June, which resulted in the election of the Hon. William Portus Cullen, M.A., LL.D., M.L.C.

Deans of Faculties.

25. In accordance with the usual practice for the Biennial Election of Deans of the several Faculties, the Senate received recommendations from the various Faculties as to the branches of learning the Professors of which should be *ex-officio* Fellows of the Senate under the provisions of the Act 24 Victoria No. 13, and should be elected to the office of Dean for a period of two years.

Acting upon these recommendations an amended by-law referring to *ex-officio* memberships was made and approved by the Governor in Council, and the following were appointed in November to be Deans of Faculties and *ex-officio* Members of the Senate for a period of two years:—

Faculty of Arts	Professor Scott, M.A.
Faculty of Law	Professor Cobbett, M.A., D.C.L.
Faculty of Medicine	Professor Stuart, M.D.
Faculty of Science	Professor Liversidge, M.A., LL.D.
Acting-Dean during Professor Liversidge's absence ...	Mr. H. C. Russell, B.A., C.M.G.

Convocation.

26. A meeting of Convocation of the University was convened by the Vice-Chancellor in response to a requisition, and was held on the 18th of September, when the following resolutions were passed:—

1. That Fellows of the Senate hereafter elected should hold office for a period of five years only, but should be eligible for re-election on the expiration of their term of office.
2. That the elected Fellows now in office should retire in rotation within the next five years, but should be eligible for re-election.
3. That the voting at contested elections of Fellows should be taken by letter.

These resolutions are still under the consideration of the Senate.

Leave of Absence.

27. Leave of absence from the meetings of the Senate, for a period of three months, was granted in November to Mr. E. W. Knox, in consequence of his expressed intention of leaving the Colony for that period.

Leave of absence for the first Term of 1897 has been granted to Dr. Max, Assistant Lecturer in French and German, in consequence of ill-health.

Leave of absence was also granted for two Terms, without salary, to Mr. F. Lloyd, B.A., LL.B., Assistant Lecturer in Latin, and to Mr. J. P. Hill, Demonstrator in Biology. Mr. J. B. Peden, B.A., is acting as Assistant Lecturer in Latin during Mr. Lloyd's absence, and arrangements are being made whereby the Demonstrator in Biology in the University of Edinburgh will probably be appointed as Mr. Hill's substitute during his absence.

Staff

Staff Appointments, &c.

28. In September a vacancy occurred in the Lectureship in Midwifery and Diseases of Women through the death of Dr. Chambers, who had filled the office with ability from the year 1883.

In accordance with a previous resolution of the Senate, separate Lectureships were established in Midwifery and Gynæcology respectively, and after applications had been publicly invited, Mr. James Graham, M.D., was appointed to the former Lectureship, and Mr. Joseph Foreman, L. et L. Mid. R.C.P. (Edin.), M.R.C.S. (Eng.), to the latter.

In the month of March Mr. George Lathrop Murray, M.B., Ch.M., was appointed Demonstrator in Anatomy for the year 1896.

Mr. A. W. Jose was appointed Secretary for the University Extension Board for the year 1896. Mr. J. C. Dibbs has been reappointed Auditor of the University for the years 1897 and 1898.

Russell Donation.

29. The Senate has to report with gratitude the receipt of a munificent gift from Peter Nicol Russell, Esq., lately of Sydney, but now resident in England, to endow the Department of Engineering, which will henceforth be called by his name. The offer was made to the Senate through Mr. Russell's representative, Sir W. P. Manning, and a Deed of Gift was drawn up embodying the following conditions:—

1. That the Department of Engineering at present existing in the University, together with such additions as may be made thereto, shall be called the P. N. Russell School of Engineering.
2. That the University shall, out of the income to be derived from the sum of £50,000, afford both practical and theoretical teaching in the following subjects, in so far as such subjects relate to the School of Engineering, viz.:—Mechanical Engineering, Surveying, Mining, Metallurgy, Architecture, and such further instruction as the Senate of the University may deem necessary to give effect to the intention of Mr. P. N. Russell in connection with the P. N. Russell School of Engineering.
3. The University shall apply the income of the Fund in the maintenance of the P. N. Russell School of Engineering, but shall not charge such income with any proportion of the cost of the existing buildings, nor with the expense or any proportion thereof of service by ordinary attendants, nor with the expense of any proportion thereof of the Professorships of Mathematics, Chemistry, Physics, Geology, or the Challis Chair of Engineering.

Other conditions of the Deed of Gift relate to the mode of investment of the principal sum, and provide that any unused surplus of income shall be added to the principal sum, and invested as if it formed a part of the original donation.

The principal sum has been invested in New South Wales Funded Stock, and the following Lecturers have been placed on the Foundation, in accordance with the terms of the Deed of Gift:—

Assistant Lecturer in Mechanical Engineering and Drawing ...	Mr. S. H. Barraclough, B.E. (Syd.), M.M.E. (Cornell).
Lecturer in Surveying ...	Mr. G. H. Knibbs, L.S., F.R.A.S.
Lecturer in Mining ...	Mr. Edward F. Pittman, A.R.S.M.
Lecturer in Metallurgy ...	Mr. Wm. F. Smeeth, M.A., B.E., F.G.S., A.R.S.M.
Lecturer in Architecture ...	Mr. John Sulman, F.R.I.B.A.
Mechanical Instructor ...	Mr. Henry Blay.

University Extension.

30. The report of the University Extension Board, presented to the Senate in the month of December, shows that courses of lectures were delivered at Armidale, Blackheath, Camden, Cootamundra, Goulburn, Maitland, Mosman, Newcastle, Tamworth, and Waverley. The average attendance was forty. The operations of the Board were limited on account of the smallness of the grant which the Senate was able to make for University extension, and several applications for courses of lectures had to be declined through lack of funds necessary to defray the expenses of the appointment of lecturers.

Jubilee of Lord Kelvin.

31. In response to an invitation from the University and City of Glasgow, the Chancellor (Sir William Windeyer) and Professor Liversidge, who were both in Europe at the time, were appointed as delegates to attend the Jubilee of the Right Hon. Lord Kelvin as Professor of Natural Philosophy in that University.

At the celebration the honorary degree of Doctor of Laws was conferred upon Professor Liversidge.

Queensland Examinations.

32. The University, at the request of the Queensland Department of Public Instruction, conducted an examination of candidates for exhibitions to Universities granted by the Government of Queensland, and also an examination of teachers seeking admission into Class 1 under that Department.

Accounts.

33. The annual statements of receipts and expenditure, and statements showing the position of the various trust funds of the University at the 31st of December, duly certified by the auditor, Mr. J. C. Dibbs, are appended to this report.

H. E. BARFF,
Registrar.

1897.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

SYDNEY GRAMMAR SCHOOL.

(REPORT FOR THE YEAR 1896.)

Presented to Parliament pursuant to Sydney Grammar School Act of 1854, secs. 10 and 16.

Printed under No. 11 Report from Printing Committee, 15 July, 1897.

The Chairman of the Board of Trustees to The Minister of Public Instruction.

Sir,

Sydney Grammar School, 5 May, 1897.

The Trustees of the Sydney Grammar School, in compliance with the provisions of their Act of Incorporation, have the honor to submit the following Report of their proceedings and of the progress of the School during the year 1896, for the information of His Excellency the Governor and the Executive Council.

Sir William Windeyer was elected Chairman of the Trustees, and acted in that capacity until 12th October last, when, having ceased to be a Trustee of the School through his resignation of the office of Chancellor of the University of Sydney, Mr. A. J. Cape was elected Chairman in his place for the remainder of the current year.

Mr. E. W. Knox was elected Vice-Chairman. The Honorable Dr. McLaurin, having been elected to the Chancellorship of the University of Sydney, took his seat as an Official Trustee.

The percentage reduction in the salaries of the Masters, referred to in the last year's Report, was discontinued during the year.

Mr. W. H. Savigny, B.A., Oxford, was appointed to an Assistant Mastership in the School.

During the year a modification of the Swedish Drill was introduced into the School, under the supervision of Dr. Roth, with satisfactory results.

The high standard of the School, both in teaching and discipline, is still maintained, the Head Master and the other Masters associated with him continuing to perform their duties to the entire satisfaction of the Trustees, and always evincing the greatest interest in the welfare of the boys.

The Reports founded upon the examination of the School in December last are submitted herewith.

With the sanction of the founders, it was decided that the Wigram Allen Prize Fund should for the future be applied towards establishing two prizes—one for proficiency in Mathematics, and the other for proficiency in Natural Science.

The average number of boys at the School during the past year was 378.

An account of the Income and Expenditure of the School during the year 1896, duly certified by Mr. James Clegg Taylor, the School Auditor, accompanies this Report.

I have, &c.,

ALFRED J. CAPE,
Chairman.

REPORT ON THE EXAMINATIONS, DECEMBER, 1896.

UPPER SCHOOL.

A.—LANGUAGES.

1. *Latin*.—The knowledge of Latin is distinctly sound : the scope of teaching is increasing in width : there is greater facility in dealing with unprepared work. Relatively, the best work was done in the two lowest Forms.

2. *Greek*.—The work at the head of the School is probably better than it has been for many years past : in the Lower Divisions good work has been done, in many cases with very poor material.

3. *English*.—The results show a vastly-improved average, while there has been special development in the teaching of English History. On the Commercial side, though there has been no improvement in the material, the distinctive work, especially in composition, shorthand, and mechanical style, has distinctly improved.

4. *French*.—In the upper Forms the teaching has been more stimulating and suggestive ; the work shows improvement in composition and unseen translation, and the standard is now eminently satisfactory : in the middle Forms an advance has been made by the introduction of an author, which has infused far more vitality into the work, whilst not impairing the general efficiency of the teaching of grammar : in the lower Forms the use of a more compact and methodical grammar has proved a signal success, and made the contact with the Lower School closer and the continuous progress more effective.

5. *German*.—In the Highest Division the general standard is not as high as in previous years, though the highest work is as efficient as before ; but in the Second Division the standard has been well maintained, and some excellent work sent in : in the two Lower Divisions, whilst the material is promising and the knowledge sound, the amount of work submitted has been too small to enable the higher Forms to maintain their present standards without special exertion. The work in both languages is characterised by more vitality, the stock of knowledge is larger, and the efficiency of the teaching in all the Divisions has been most praiseworthy.

B.—MATHEMATICS AND NATURAL SCIENCE.

The chief changes in Mathematics during the year are the introduction of Dynamics into the work of the First Division and the greater attention given to deductions in Geometry in the Lower Divisions. It is hoped that a decided stimulus will be given to the general mathematical work of the School by the training in reasoning and original thinking thus afforded. The larger volume and better quality of this form of work is noticeable in Divisions Ic to VI inclusive, with the possible exception of Division II.

In the Divisions below the first there is no sign of any special brilliance, but on the other hand the general level of these Divisions is especially high, and the standard attained is above that of previous years. This generally higher level of attainment in the Lower Divisions is a very good augury for the future.

Natural Science has been taught in each Form of the Upper School. In Form VI the subject taken was Chemistry, in the two lowest Forms Elementary Physics and Chemistry. In the Commercial Form advantage was taken of the fact that it was not necessary to make such a thorough study of any one subject, to cover a wider field by taking up in succession Physical Geography, Physics, and Chemistry. The examiners were particularly pleased with the Geology papers sent in by Form IV.

Attention is drawn to the fact that the Trustees have divided the Wigram Allen Prize into two, one to be called the Wigram Allen Prize for Mathematics, and to be awarded to the best mathematician in the School, and the other to be called the Wigram Allen Prize for Natural Science, and to be awarded to the boy in the Upper School who at the Christmas Examination shows the greatest proficiency in Science.

LOWER SCHOOL.

The result of the examinations is on the whole distinctly satisfactory. In English there is a noticeable improvement on the literary side in the work of the lower Forms, while the History and Geography are specially good. The Latin accidence was good throughout, but the upper Forms are weak in composition : these boys are, however, comparatively young. In French the accidence is good, and it is hoped that the new text book to be introduced next year will produce increased facility in composition.

The Mathematical results are perhaps the most satisfactory of all, especially those in Euclid and Algebra. The Handwriting is satisfactory, and shows a distinct advance on last year.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

EDUCATION.

(REPORT OF THE SUPERINTENDENT OF THE NAUTICAL SCHOOL-SHIP "SOBRAON" FOR THE YEAR ENDED 30TH APRIL, 1897.)

Printed under No. 18 Report from Printing Committee, 7 October, 1897.

The Commander and Superintendent, N.S.S. "Sobraon," to The Under Secretary of Public Instruction.

Nautical School-ship "Sobraon,"

Sir,

Sydney, N.S.W., 30 June, 1897.

I have the honor to submit, for the information of the Minister of Public Instruction, my Annual Report concerning the Nautical School-ship "Sobraon" during the year ended 30th April, 1897, as provided for under the 14th clause of the ship's regulations.

This being the first occasion on which such has been my privilege, I should like to preface my remarks by reference to the great loss caused this Institution by the removal of Captain Neitenstein's services to a higher position. That gentleman gave so many years' (some twenty-three) earnest work and devoted service to the purpose of perfecting a system, mainly originating from his own practical experiences, that the responsibilities of his successor, relieved as they are from the necessity for alteration in regard to the fundamental principles pursued, none the less become most onerous in providing for what has been the guiding aim of the Institution for so many years, viz., progress and against retrogression.

PART I.

THE BOYS ON THE SHIP.

2. The present Report is the thirtieth one of the Institution's work. Established in 1867, it has lived through many troubled times and adverse criticisms, expanding and progressing, until now it holds pride of place as being the oldest of any reformatory agency in Australasia.

The period with which I have to deal has been productive of much activity. The admissions were slightly lower than those of the previous year, being 171; but, on the other hand, both the discharges (246) and the total enrolment (578) show substantial increases, being the highest yet recorded.

Comparison being made in regard to cost with that of any former year proves satisfactory, the result being £20 15s. 3d. per head, computed against the daily average on board; and this is obtained without any impaired efficiency in the matter of providing requisites, and with a smaller available daily average. It is also inclusive of increased cost in providing for apprentices' outfits and conveyance by rail or steamer, which, until within the last twelve months, formed a charge against the employers. This amounts to some £340, and, by practising strict economy, is included in the reduced rate.

The boys are decidedly healthier, better fed, clothed, and housed, and participate in more extended privileges than obtained when the cost was 100 per cent. higher; this is directly attributable to the application of practical experience gained over a lengthy period and applied to the best advantage.

3. The same immunity from sickness which has always characterised the vessel still holds good, the last twelve months completing thirty years with the small proportion of twelve deaths amongst over 3,600 inmates. Some cases of skin eruption, and a few of pneumonia during the winter months, attributable to neglect and the want of nourishing food prior to reaching the ship, were the passing ailments which leave the sick-bay untenanted at the present juncture.

4. Table "B" furnishes an index to the antecedents of those admitted, and shows that the small number of eighty-two only were without some recorded instance of State restraint; forty-one had been previously under institutional control; fifty-six before a police court bench—eleven upon three occasions, five had been four times dealt with, and four recorded five and six previous appearances.

Of those given as not having been previously convicted, the majority admit that such freedom is more due to leniency granted them than to any absence of wrong-doing on their part. It necessitates much careful training and supervision to eradicate the evil tendencies which obtain an influence over the actions of such lads, and it is only by not permitting any laxity to creep in, that such instincts are prevented from obtaining the mastery.

Taking these facts into consideration, and making due allowance for bad and vicious early impressions and surroundings, renders my being able to give the youngsters credit for general good behaviour all the more gratifying. There is a decidedly healthy tone pervading the vessel, much of which is due to the force of good example obtained from the boys themselves, who, by meritorious conduct, attain the position of petty officers and materially assist in creating a spirit of emulation and encouragement amongst their shipmates.

The system of rewards and privileges, worked to its fullest extent, soon makes it evident to all joining the ship that their own personal comfort and well-being are mainly regulated by their behaviour; and the deprivation of such advantages, by loss of classification, forms a far more effective mode of punishment than resorting to corporal chastisement, the necessity for which is thus reduced to a minimum.

I am again able to claim exemption from loss by absconding, and this, without finding it necessary to in any way restrict the utmost freedom and liberty in dealing with the lads.

Nothing of the objectionable prison aspect is visible about the vessel, and that such is appreciated and rendered unnecessary is borne out in the total absence of anything approaching riots or disturbances, usually brought about by injudicious treatment, giving rise to resentment on the part of those subjected to methods which grate upon ideas of fair play and freedom.

5. The following estimate gives a fair insight into the method adopted in utilising the industrial labour of our juvenile crew:—

	£	s.	d.
Sailmakers' Work.—Making 100 hammocks, at 3s.	15	0	0
" 60 clothes-bags, at 4s.	12	0	0
" 20 dumb-bell bags, at 4s.	4	0	0
" 70 pudding-bags, at 1s.	3	10	0
" 2 mast coats, at 10s.	1	0	0
" 3 tarpaulins, at 10s.	1	10	0
" hammock clues, lashings, &c.	10	0	0
General repairs, awnings, sails, hammocks, bags, tents, screens, covers, hose, fenders, man-ropes, &c.	200	0	0
Carpentry.—General repairs, decks, boats, pumps, and ship	120	0	0
Glazing and joinery work	30	0	0
Tailoring.—Making and repairing clothes, lanyards, &c.	120	0	0
Painting.—Ship and boats	180	0	0
Masts, yards, and booms	20	0	0
Shore premises	10	0	0
Riggers' Work.—Tarring, scraping, setting up rigging, repairs to boats' gear, fenders, and general seamen's work	200	0	0
Gardening.—Planting, mowing, keeping trees, plants, &c. in order	50	0	0
Cooking.—Preparation of meals, stewarding, waiting, &c.	250	0	0
Musicians' Work.—Keeping instruments clean and in order, copying music, services of band when playing out	120	0	0
Laundry.—All work done by boys, each of whom washes his own clothing (8 pieces) weekly, besides blankets, serge, hospital clothes, &c.—180,000 pieces, at 1d.	750	0	0
Photography.—Applied to records and recreative purposes, lantern	100	0	0
General Work.—Coaling ship weekly	52	0	0
Washing and cleaning decks daily	150	0	0
Lamp trimming and cleaning	60	0	0
Cleaning and keeping in order boats, play-ground, dormitory, sheds, swimming bath, ship's hull, rifles, swords, aviaries, landing-places, hold, storerooms, &c.	150	0	0
Work on steam-launch and water supply	100	0	0

Total value of industrial labour (apart from value of school work,
drill, keeping watch, and other training) £2,709 0 0

6. It will thus be seen that little opportunity is given for idleness, but much useful employment is at all times available, and the above statement certainly does not over-estimate the value of such work. When it is understood that a large vessel such as the "Sobraon" has to be daily kept clean in regard to decks, paint and glass work; at frequent intervals painted in-board and out, also aloft, together with a large fleet of boats, it will follow that no lack of occupation for all exists.

Half our complement of lads is available daily for such work, the others being handed over to the charge of our staff of teachers, under whose tuition the time is well spent. The age upon admission unfortunately forms no guide to the educational attainments of our lads, with whom truancy has been a prominent failing. Many instances occur in which boys of 15 and upwards are deficient in the most rudimentary knowledge; this soon, however, gives way to a more satisfactory condition of things under the regular attendance exacted and subject to the ship's advantages. No boy leaves for apprenticeship prior to being able to read and write.

Notwithstanding such grave drawbacks being added to by the constant change in our numbers, the general standard is well sustained by the Chief Schoolmaster, Mr. A. Thompson, assisted by Messrs. Leer and Humphries, the result of whose effectively applied joint labours have been productive of the following very satisfactory report from the pen of one of the most exacting, and, at the same time, impartial, Metropolitan Public School Inspectors, viz., Mr. M. Willis:—"Organization, fair to very fair; discipline, excellent; demeanour and general conduct of pupils, excellent. Regarded generally, this school is skilfully managed, and zealously and effectively taught. The pupils enter heartily into their work, and most of them are making satisfactory progress. M. WILLIS, Inspector."

Out of a possible 10 marks, the average obtained for all subjects was 7·7, or over 75 per cent.

Since the date of the last report, the school has been deprived of Mr. Stayner's services as Chief Schoolmaster, owing to his well-merited promotion, after rendering much effective work in raising the tone and standard to a high class. His duties have been taken up by a gentleman well qualified to maintain and extend the good work handed over to him.

7. The boys not told off for school or as a working division form the drill contingent, and derive much benefit therefrom; the constant change and variety of procedure not permitting any sameness or monotony

monotony to take place. The direct outcome of these exercises is shown in the much improved physique and smart martial bearing, all tending to personal habits previously foreign to the class from which we recruit, and forming the best foundations for the practical work to be entered upon after leaving here. Every boy on board the ship goes through some physical exercise daily, and instruction is also given in that most necessary of accomplishments, viz., swimming. The spacious bath at Cockatoo Island is well patronised, both for instruction and recreation, and all boys must be able to master the art of keeping themselves afloat before apprenticeship.

It must be admitted that the majority of city lads coming on board are fair swimmers, and to these the bath is a great privilege.

Our photographic camera has been turned to good account, and, under the skilful manipulation of Mr. E. Mason, many pleasing pictures have been produced, showing various drill squads, gymnasium, and shore premises. The magic lantern has also been provided with a number of interesting slides from this source. Results bear testimony to considerable artistic skill and painstaking labour on the part of the officer named, who cheerfully gives his leisure to the treatment of this interesting and useful work.

8. The small number of officers which constitutes our staff is supplemented by a number of deserving and trustworthy boys, who attain their positions as petty officers by obtaining special marks for meritorious behaviour, awarded by the various officers. These lads render material service in supervising and dealing with a large number of inmates, and, by force of good example, furnish the most practical service by influencing the new-comers for good. Such lads have to earn their privileges before promotion, and that they value them, is proved by the rare necessity for deprivation owing to misconduct.

9. It is a universally recognised fact that in all large institutions an important consideration is wholesome recreation and relaxation from duty. The "Sobraon" has always been well to the front in providing many safety-valves of this kind. The numerous clubs are well patronised, and retain all their proficiency. The athletic, swimming, cricket, and vocal representatives all vie with one another for prominence; and, as entry or membership rests with the various committees formed from amongst themselves, a large amount of activity and animation prevails at all meetings. The cricket season has given our team many opportunities for displaying its prowess against outside schools, upon all of which occasions, whether victors or vanquished, the friendliest and most creditable of spirits has been maintained.

The pictures have been added to, and a valuable collection of birds' eggs lends attraction to the museum. The ship's library and recreation hall still draw full attendances every evening. For the latter a number of new games have been very recently acquired. The dumb creation find the ship a veritable ark of refuge, all kinds of birds and animals being represented, and receive the utmost attention and care at the hands of the youngsters.

Weekly visits and excursions also serve to relieve any sense of restraint, and, although these are of the most frequent occurrence, not a single instance has taken place in which any abuse of confidence was shown.

PART II.

THE SECOND STAGE.—APPRENTICESHIP.

10. A wise provision of the Industrial Schools Act, under which this vessel carries on its work, is that providing an outlet through the medium of apprenticeship for boys, who, after being subject to the many reforming influences and firm discipline on board, can, at the discretion of the Superintendent (who remains their legal guardian until 18), be trusted to advance a step further towards qualifying for fitness to earn their own livelihood. This can, as a general rule, be done after an average period of from sixteen to eighteen months' detention here.

It might occur to many that with each boy leaving the vessel a portion of responsibility is removed from the Superintendent, and although correct as regards the Home training-ships, it is not so with the "Sobraon." On the contrary, this is just where the largest amount of anxiety and work commences, for, as it is clearly impressed upon each lad on leaving that at all times, and whenever in need of advice or counsel, he must look to the Superintendent as the person ready and willing to assist; so also, from a different standpoint, does the master refer to the boy's guardian.

Were these parties alone to be dealt with the responsibilities would be sufficiently heavy, but it is not so unfortunately. The most disturbing element of all comes from a source which is both dangerous and unfair. I refer to the relatives, who, after having in the most unmistakable manner exemplified their unfitness to have charge or inability to act up to their parental responsibilities, still desire to avail themselves of the services of their offspring, when rendered useful, for selfish ends.

The majority of these people are most plausible, and upon sentimental grounds readily obtain the sympathy of well-meaning people who are impressed with the seemingly unnatural desire on the part of the Superintendent to keep relatives in ignorance of their children's whereabouts.

After close upon twenty years' experience in the working of this rule, I venture to affirm that almost without exception, the success or failure of our apprentices depends upon the boy being kept from the influence of those who formerly exercised such to so little profit.

I attach much weight to this matter, as it is one that is most vital in its effect, and is constantly to the front.

To those who disagree with me, I would ask their perusal of Tables B and E, Class 4. That there are some exceptions I grant, but they are very few, and can well be left to the person held responsible for results to deal with.

11. During the time that boys are undergoing instruction at the hands of their masters they, as an equivalent for services rendered, receive board and lodging, all necessary clothing, and, in addition to a small sum as pocket money, a deposit of wages is every month placed to the joint credit of the Superintendent and boy, the total amount of which is handed to the youth upon completion of his term.

No less a sum than £11,727 has been paid in cash to boys in this way, within the space of seven years.

I regret to say that such money frequently, solely through mercenary motives, awakens parental interest in our protégés.

As the after and permanent good result of the ship's training constitutes the main object to be successfully achieved, it is most pleasing to be able to state that amongst 402 apprentices, the number receiving unfavourable reports was only 30, the other 372 being successes. This gives the very favourable average of 92.5 per cent.

In

In considering this result the Institution is entitled to receive consideration for something beyond the bare figures advanced, satisfactory as they are. I refer to the class with which we deal, and for this purpose I would invite attention to Tables "B" and "E" of Appendix, where it will be seen that up to the time of committal to the ship, not only have the lads been regarded as incorrigibles by those dealing with them, but in the majority of cases their earliest impressions and surroundings have been of the vilest and most undesirable description.

Then again, is it not worth considering what, under conditions where no such training as the ship's might be available, would be the lot of these lads? Most certainly the fate of other criminally tainted unfortunates, who become the habitual occupants of our police courts and goals, forming not only a standing menace to all respectable persons, but also a continuous charge upon the community.

Surely the cost of reformation at some £30 per head, is cheaply accomplished, in turning such into reputable and law-abiding citizens.

These boys are far more sinned against than sinning, and, at the age at which the present Act hands them over to the ship's care, can be rendered amenable for good under kindly but firm management.

Table "B" will show that numbers of those dealt with here have previous records to the extent of from three to six police court appearances.

The number apprenticed during the last twelve months is considerably in excess of any former year, notwithstanding which fact I have at the present time applications awaiting attention as boys qualify. This is practical testimony to the good esteem in which our lads are held, and many masters after finding themselves well served for a lengthy term favour us in providing desirable employment for others.

There is one most important matter which should receive consideration in any proposed amending legislation which may be introduced, and that is the method of dealing with those who prove failures when apprenticed. Fortunately they are but few in number, but the present plan of returning some of these boys, at times young men of 17 and upwards, is altogether wrong.

Such subjects form the worst of examples, both to other lads at service and even more so to those with whom they come into contact when returned to the ship. Boy-like, they are regarded by many of their comrades as subjects to be lionised, in view of their seniority in years and having been able to defy recognised authority and restraint, they also representing not too truthfully the causes leading to cancellation of indentures and posing as subjects for sympathy and condolence.

Within a small compass such as the ship it is a matter of impossibility to keep these boys distinct, and although the supervision is thorough, it cannot overcome the force of bad example always present with these boys.

What is needed, and has been wanted for years, is a small but secure establishment for the reception of this class, together with other lads of 16 and upwards, who should be provided with plenty of work and drill without any of the special indulgences and privileges applying to the "Sobraon."

They could attend school and be permitted relaxation, and after a time they would probably become more desirous of profiting by any opportunity for earning an honest livelihood.

I feel sure that were it known such an establishment was available, that fact alone would cause many boys to hesitate regarding doing any thing to forfeit a good situation, with such an alternative as going to a much less attractive institution than the one they had left.

To be just and effective in its working it would be necessary to place a certain amount of discretionary power in the hands of the Superintendent, who, from his previous knowledge of the boys and later confidential reports, would be the best able to decide as to whether the cause of failure was attributable to the boy or owing to want of firm, but kindly management on the master's part.

Even with our few failures the apprentice is not in many instances the defaulting party to the contract and frequently upon being reapprenticed, receives a very satisfactory report.

As in other matters, many worthy persons are absolutely devoid of fact, and as this is a requisite equally with sympathetic consideration in dealing with the boys, its absence proves fatal to success.

12. The contents of a few recent reports from employers and the police, will point to the grounds for claiming good accruing from the ship's training, and may be of interest.

Mr. R. W. Burstal, J.P., Manager, Bank of New South Wales, Temora, writes:—"I beg to forward my half-yearly report upon this apprentice, and have much pleasure in stating that his conduct is in every way satisfactory. I have found him honest, truthful, obedient, willing, and respectful. His health has been good; he is growing very fast, and at the same time putting on condition. If this youngster is a fair sample of the boys turned out from the 'Sobraon,' you have every reason to be proud of your system, which must be the means of saving many young lives from complete wreck."

Dr. E. S. Stokes, M.B., of Crookwell, writes:—"Will you kindly send me a form of application for another apprentice from your ship? The present boy I have is very satisfactory. He is scarcely strong enough for the out-door work, and I have placed him inside. This work I find more suitable for his tastes. He is very willing and intelligent, and should turn out well."

Mr. W. Dolan, of Warren:—"Regarding the boy, I can say nothing but what is good of him. He is about the best boy I ever knew. He is very obedient, and a good boy to work, and very attentive to his work, and is progressing well. He is very honest and upright; in fact, I have taken to him so much, I will be quite sorry when his time is up."

Mr. P. J. Shoppee, of South Hythe:—"Would you be good enough to place on record the good behaviour of this lad? He is a very active lad, and, properly handled, will get through a fair amount of work. He is very anxious to try and please. B. is a first-class young fellow, and the greatest disappointment to him is to miss his turn to visit the ship."

Mr. W. G. Killen, of Dunoon, writes:—"I have much pleasure in stating that he is going along all right, and conducting himself very well."

Mr. F. Beedle, of Myrtle Vale, Bective:—"In respect to the boy, he is a willing and obedient lad."

Mr. D. Timbs, of Albion Park:—"I can recommend W. R. as a good lad, since being in my employ. I always found him very obedient, a straightforward young fellow, and always agreeable to work as a farmer. He is the best boy in the land."

Mr. Samuel McCaughey, J.P., of Coonong, Narrandera (our largest New South Wales squatter), writes:—"I am very glad to be able to inform you that the two boys with me are making themselves very useful, and are obedient, and conduct themselves to my entire satisfaction. I have paid the full amount of their wages into the Savings Bank."

Mr. M. Riley, of Greenridge, Casino:—"You will be pleased to learn that the boy arrived here safely. His quiet disposition and respectful demeanour have made him a general favourite already."

Mr.

Mr. J. W. Selwin, of Bective :—"I have much pleasure in stating that he is in good health, and his conduct has been good."

Mrs. L. Pether, of Bruncker Place :—"David is a good boy; I am well satisfied with him."

Mr. J. F. Creswick, of Oxley Station, *via* Hay :—"I am very well pleased with him. He is willing, obliging, and civil, and I will do all I can to advance him."

Mr. William Warbrick, of Lavender Bay :—"The boy having now finished his time, I have much pleasure in informing you he has behaved well, and conducted himself in a most exemplary manner, and I must say that I part with him with feelings of regret, and sincerely wish him every success in the life he may choose to follow, and feel sure that with the lessons and training that he has received at your hands, and those under you, he should in every way prove a credit to the ship."

Mr. Edmund Ross, J.P., of Ballina :—"The youth under engagement is a good lad, and gives general satisfaction."

Mr. J. D. Recce, J.P., of Tilba Tilba :—"I purpose applying to you for another lad. I feel it my duty, as far as I can, to assist your efforts in the reformation of these poor lads; in fact, I view the whole scheme as a noble institution. You will, I know, be pleased to learn that J.N. acted upon your advice, and wrote to me. The result is, he returned to my employ, and is a good, useful, and trustworthy fellow. We are proud of him; he is our confidential, and often sits at our table with us. He will write to you. G. is a good, steady, young man, and keeps himself highly respectable."

Mr. A. J. Ison, of Piallaway :—"The boy is still attending school, and I am pleased to state that his conduct is first-class. He is quiet and obedient, and I am satisfied with his ways."

Mr. E. Terry, of Rudd's Point :—"As my apprentice. His time has now expired, but he has made arrangements to stay on with me, as he does not care to go back to Sydney."

Mr. A. Pether, of Kiandra :—"The lad sent by you to my mother, is giving much satisfaction. Would you kindly forward me the necessary papers to obtain a lad."

Mr. Hugh McMaster, of Bundella :—"The lad arrived safely. I am very pleased indeed with him."

Mr. S. Elliott, of Macleay River :—"The boy has conducted himself well."

Mr. J. Hickey, of Coonamble :—"I am very much pleased with his appearance, and think he will make a good lad."

Mr. H. T. Whitty, of Mulwala :—"I beg to state that my apprentice has conducted himself well, and has given me satisfaction. His time will expire on the 8th June next, and I believe he purposes staying on with me."

Mr. G. Bull, of Kempsey :—"I have to inform you the lad has conducted himself well. I am satisfied with him."

Mr. G. H. Johnson, of Mullamuddy :—"I received your letter regarding the boy. I wish to inform you that I am well satisfied with him. He works very well, and is obedient in all I ask him to do, and I must thank you very much for sending me such a good boy. I must say his conduct is very good. I want another boy, if you will send me one as good as him."

Mr. Gilcreest, of Forbes :—"Replying to your question, I have to say that my apprentice has conducted himself satisfactorily."

Mr. K. W. Spark, of Bex Hill :—"The boy arrived safely, and will, I believe, give satisfaction, as he appears willing and smart."

Mr. W. F. Sinclair, of Queanbeyan :—"The boy's conduct has been good."

Mr. G. Timbs, of Albion Park :—"My apprentice is a very good boy."

Mr. John Kelly, of Shellharbour :—"The boy is in good health, and doing very well; in fact, I have no complaints to make."

Mr. Portlethwaite, of Grenfell :—"The general conduct of our apprentice, I have much pleasure in stating, is very satisfactory; and that we are well satisfied with him, and trust he will continue to act in the future as he has done in the past, whilst he remains in our employ."

Mr. Phillip Denning, of Forbes :—"I beg to state the boy is behaving very satisfactorily. He is obedient and willing in performing his duties."

Mr. M. Links, of Nyngan :—"The boy has behaved himself very well."

Mr. Peter Links, of Cowra :—"My apprentice has, I must say, conducted himself very well since in my service."

Mr. W. Bourke, of Upper Bomby :—"The lad continues to conduct himself well, proving very industrious. He is now a fine, sturdy, young man, weighing nearly 12 stone, although short in stature."

Mr. L. D. Scott, of Moparaba :—"I am pleased to state my apprentice has conducted himself well, and given satisfaction. I quite expect a continuance of good behaviour, as he appears to be well satisfied with his home, and is not at all likely to mix with any bad company."

Mr. E. Blow, of Kiama :—"I beg to inform you that my apprentice has conducted himself in a satisfactory manner during the time he has been in my service."

Mr. J. MacGregor Dunn, J.P., of Lismore :—"I have the pleasure to report, as my apprentice, as follows :—He has conducted himself to my entire satisfaction. He has grown considerably, and seems to like his work."

Mr. William Argue, of Wyrallah :—"He still continues a good, obedient boy, and is giving every satisfaction."

Mr. J. M. Lett, J.P., of Adaminaby :—"These boys are doing well, contented, and happy. W. has become a really good lad. He is quite contented and happy, and always eager to please his mistress. If you will give me the names of anyone about here who has one of your boys I will visit them. I take almost as great an interest in these poor waifs as you do yourself. As Chairman of the Board here, I have never, during fifteen years, had one of these boys before me."

Mr. P. J. Shoppee, of South Hythe :—"I have the honor to state that both boys have conducted themselves admirably. I have no fault whatever to find; they are both excellent boys."

Mr. Frank Bevan, of Wollongong :—"I have very much pleasure in stating that my apprentice has conducted himself in a very creditable manner. I find him a very willing, good, working lad."

Mr. P. B. Fenwick, J.P., of Kunopia :—"I have the honor to report that my apprentice has conducted himself entirely to my satisfaction. He is a very good, obliging, hard-working lad, and reflects great credit on the institution from which he came. The amount of money now standing to his credit is £8 11s. 7d."

Mr.

Mr. E. Heffernan, of Moggendoura:—"Re my apprentice, I beg to inform you that his conduct has been excellent during the time he has been with me. I have paid 15s. in the Savings' Bank to his and your credit, and I have requested him to write to you, which he will do first opportunity. There is another boy with me, who was at one time on the 'Vernon,' and served his time with Mr. R. Heffernan. He is a very steady and trustworthy young fellow."

Mr. W. D. Boles, of Kiama:—"Re my apprentice, I may state that I am very pleased with the lad. He has always been most obedient and willing to do his work, and appears to be quite contented with his home."

Mr. J. B. Pearson, of Winton:—"My apprentice has conducted himself well. I find him willing and obedient. He is well in health, and seems to be satisfied with his home."

Mr. G. Nowland, of Quirindi:—"C.R. is behaving and working very well. I have paid £2 in the bank for him."

Mr. James Ross, of Exeter:—"I must say the lad has conducted himself very well. There is £1 13s. deposited in his name in the bank."

Mr. F. J. Mears, of Winton:—"I beg to inform you that his conduct has been satisfactory. He is growing fast, and seems thoroughly healthy. He also seems very willing, and has a good adaptability to any kind of work."

Mr. J. A. Magill, of Tamworth:—"I must say I am very pleased with the boy. He seems a good, willing, boy to work and I hope I will have no trouble with him; in fact, I do not think I will."

Mr. J. Somerville, of Jasper's Brush:—"My apprentice's time is up with me, and I must say he has been a very good boy, and has done what I told him during the four years he has been with me."

Mr. D. Orman, of Bective:—"My apprentice has conducted himself very well, and I am very well satisfied with him."

Mr. J. Robinson, of Young:—"I beg to inform you that the lad has conducted himself well since he has been in my service, and I will be willing to employ him when his term of apprenticeship expires. The sum of £9 10s. is now deposited in your name and his."

Mr. G. Embley, of Winton:—"I have much pleasure in telling you I am much pleased with my lad; he seems to be a very good boy."

Mr. R. Bryen, of Grannaile:—"They are two good boys. I am well pleased with them. I will get the boys to write to you."

Mr. K. C. Cummings, of Woodlands:—"He has been very good, and conducted himself in like manner, and I think will continue so until the end of his time, which is next September, he says. Then he intends going to his mother in Goulburn for a holiday, but he will return to me after so doing. That is what he says himself."

Mr. J. F. Hadden, of Albion Park:—"His conduct is very good. He is very willing to do any kind of work I put him at. He seems anxious to learn everything about farm work. I am well satisfied with him. I have asked the boy to write to you, and he is doing so."

Mr. C. B. Manusu, of Mundooran:—"The boy has conducted himself very well. I have instructed him to write to you, which he has done."

Mr. W. C. Stewart, of Warneton:—"I have the honor to inform you that my apprentice is well-behaved, and has given satisfaction. J.W.P. came back to me the other day, and will be staying till the maize is harvested."

Mrs. C. M. Lawson, of Adelong Crossing:—"Just a few lines to tell you that I am very well pleased with my boy. He is a very good and willing little fellow. He likes his home well. I do not think I will have any trouble with him."

Mr. E. M'Reynolds, of Yass:—"In reply to your circular re my apprentice, I beg to state that he is doing well, and giving satisfaction. The amount to credit is £2."

Mr. J. H. M'Donough, of Fig Tree:—"The boy has behaved himself very well since I got him. I cannot complain of him in any way."

Mr. J. Jacob, of Moonbi:—"My apprentice has conducted himself very well. I am very well satisfied with him, and I thank you very much for sending me a good boy."

Mr. E. Butler, of Barmedman:—"Mr. Maddisson asked me to inform you that, as far as can be judged, E. seems to be a good lad; and I am to thank you for the trouble you have taken in the matter. The boy speaks very highly of his treatment on board the 'Sobraon.' He is now, I know, in a good home, so that I trust there will be no reason on either side to regret his having been sent here."

Mr. G. N. Magill, of Moree:—"Just a line to let you know of the boy. He is getting along very well—willing, smart, and obedient, and if he only continues so, I will be much pleased. I will get the boy to write to you soon. He is getting fat, and looking first-rate."

Mr. A. Pike, of Hillsdale:—"Re my apprentice, I am very pleased with him. I shall get him to write to you often."

Mr. J. Giles, J.P., of Nowra:—"I beg to say S.M. has behaved himself well. He has written you."

Mr. Macdonald, of Mudgee:—"The apprentice has conducted himself very well during the time that he has been in my service. I have requested him to write to you, and hope that he will do so, and give a satisfactory account of himself."

Mr. F. J. Smyth, of Tintenbar:—"I have much pleasure in informing you about the boy I have got, as he gives me every satisfaction, is well behaved, and very obedient. There is a youth living at one of my neighbours. He came off the 'Vernon,' and what I hear of him is, that he is a very good and respectable boy."

Mr. H. Saunderson, of Riverstone:—"In answer to your inquiry, I have much pleasure in informing you that the boy's conduct has been very good since he has been with me. I have requested him to write to you himself. E. has never given me the least trouble since he has been with me. I find him a very willing lad, and very respectful. Wishing you every success with those under your care."

Mr. P. J. Brady, of Manilla:—"In reference to the boy apprenticed to me, he is getting on very well. I have paid his wages up to the 19th February. The boy has written to you about three weeks ago, and received a reply to the same. I think I can get situations for a few more boys."

Mr. Collier, of Jandra:—"A few lines in regard to A.A. We are well pleased with him. He is very civil, obedient, and always ready and willing. He seems to be contented."

Mr.

Mr. Martin, of Hamilton:—"He has grown stout and much stronger, and is working very satisfactorily. I would deem it a favour if you would drop a line to him. It would be an encouragement for him to write regularly to you."

Mr. A. F. H. Stephen, of the Audit Department:—"I have been requested by my sister, who is ill at my house, to reply to the above. Young L. has proved honest, industrious, and good tempered, and has given every satisfaction. He will be requested to write to you."

Mr. T. Ditchfield, of Erda Vale:—"He has been very good. Amount, £6 14s. in wages."

Mr. J. W. Selwin, of Winton:—"In compliance with your request, I had an interview with Mr. F. Beadle, in reference to the conduct of his apprentice, and I am pleased to report that he is well, shows an intelligent idea of the various duties he has to perform, and up to the date of my interview has given entire satisfaction."

Mr. J. J. Gray, of Alstonville:—"I am now living at the Richmond River, and I have brought C.C. with me. He is all right, and doing very well. He likes this place."

Mr. A. S. Jackson, of Kellyville:—"I am in receipt of yours of the 2nd instant. I am very well satisfied with the boy's behaviour. He is always very obliging, and seems anxious to learn; and I think in time, if he sticks to farming, will turn out a good hand."

Mr. P. B. Eddy, of Eddy Park:—"The boy is still in my employ, and will remain with me while he continues to do as he has done in the past."

Mr. J. Jacob, of Moonbi:—"I am penning you these few lines to let you know that my apprentice suits me very well, and I thank you very much for choosing me such a good boy. If he had been one of my own he could not behave better. I am very well satisfied with him."

Mr. J. Gilbert, of Botany:—"I must inform you that my apprentice has behaved himself very well, and I have no fault to find with him. I send him regularly to school, and try to do my duty to him as a master. He is writing to you himself."

Mr. H. Gadsby, of Nyngan:—"I may state that the boy is in good health, and quite satisfied, as I am also."

Mr. H. Bruniges, of Merewether:—"My apprentice is a good lad, and all that I could desire. He is well conducted, and very willing to do as he is told. He attends his church regularly."

Mr. J. Broadhurst, of Ashfield:—"I have to report that D.E. has conducted himself very well. I have asked him to write to you."

Mr. J. Hickey, of Coonamble:—"The lad is giving me every satisfaction. He has grown to be a fine, strong, young man. I will get him to write to you by next mail. I am sending down by next mail an application for another apprentice. The lad Mr. F. S. Caswell got from the ship seems to be giving his master every satisfaction. Mr. Caswell speaks very well of him. The lad F., whom I got from the ship several years ago, and who served about three years with me, has just gone to Sydney for a trip after again being in my employ."

Captain H. Olive, of Australian Club:—"The apprentices have conducted themselves well. E. has deposited £20 16s. 6d., C. £7 18s., H. 5s. I am directing the lads to write to you. V.R. has finished his time, and I no longer control his money matters. I am sending C. on board to you with a note."

Mr. V. H. Cooke, of Tomingley:—"The boy arrived safely last Friday; I was there to meet him as promised. He is as right as can be, quite at home, and contented. I think he will make a good lad, as he seems willing and active. I will do my duty to him. The boy C. my father has at Parkes is a very smart, good boy, and I think far above the average boys of his age. He is quite happy there, and has a really good home. Much obliged for your favour in sending the boy as you did."

Captain Rugg, of Mr. Dangar's fine ship "Neotsfield":—"I was very pleased to get a letter from you the other day, but I have been so busy, or would have answered it before. My boys have turned out very well, and I am proud of them. I have no doubt I shall want two more boys on my next voyage, and I will come to you for them."

Mr. H. Prior, J.P., of Bathurst:—"The boy has conducted himself very well. His conduct has been very good."

Captain F. W. Neitenstein, J.P., of Mosman:—"I beg to say that my apprentice is behaving satisfactorily. He is a smart, honest lad, truthful, and possesses wholesome instincts. He has been with me some eight months, and I should hardly know what to do without him. Ten shillings is the amount to his credit, and to this must be added 3s. of his pocket-money, which he has voluntarily deposited. I will request him to write to you."

Mr. J. W. Selwin, of Bective:—"I have much pleasure in forwarding my quarterly report, re my apprentice E.H., to inform you that he has enjoyed excellent health, is happy and contented, and has been a good lad."

Mr. W. Martin, of Winton:—"I have much pleasure in reporting that I am satisfied with the lad apprenticed to me, and he seems to be satisfied with his place. He has had good health ever since arrival, and attends church and Sunday school every Sunday. I gave him 20s. for pocket-money, and 'Christmas box' on Christmas Day. He will write himself by this mail."

Mr. W. Cooke, of Laurel Hill:—"I have been requested by my two sons to inform you that they are prepared to enter into an agreement with you for a lad each, something like young P. that you sent me some time ago."

Mr. P. B. Fenwick, J.P., of Kunopia:—"I may mention whilst writing, that my boy R., whom I have now had two years, is all that one could desire, and does the Institution the greatest credit."

Mr. R. Bryen, of Gramiailla:—"He is a splendid boy; I have been highly pleased with him all through. I want you to send me another boy, about 15 years of age. Kindly send me one like D."

Mr. J. M. Carbury, of Gobarralong:—"I have a letter from the boy, and he says that owing to his mother being old, and not having anybody to help her, that he cannot return to me. He was a really good boy whilst with me, and I am very sorry that he cannot come back. I expect to be in Sydney in the course of a couple of months, and will call on you and procure another boy, if you have any that you can recommend."

Mr. T. Ditchfield, of Erda Vale:—"I must say that I am very well pleased, and he has conducted himself very well."

Constable R. Fraser, of Somerton:—"W., who is in the employ of Mr. W. Martin, of Winton. The boy's character is good; he is in good condition, and well treated. No complaints have been made by boy or master. Wages, £1 7s. Constable

Constable Fraser reports in similar terms of fourteen other boys in the same district. Their wages are all paid up.

Senior-constable Penlington, of Milton, reports of A.:—"His character has been very good. Receipt for bank-book is enclosed."

Mr. Inspector T. Parker, of Grafton, reports:—"The boys you sent to Southgate are doing well."

Mr. Superintendent Read, of Sydney, reports of eighteen boys, located in the Metropolitan district, as, without exception, bearing excellent characters.

Senior-constable Gracey, of Oxley, reports on the boy L., that "he is of exceptionally good character, is very bidable, and intelligent. The boy speaks highly of Mr. Creswick as a master."

Constable Langley, of Maude:—"The apprentice C. is a good worker, and well conducted, and gives great satisfaction. The boy says that he is kindly treated, and well satisfied with his home. His bank-book shows wages paid up to date."

Constable J. Hanney, of Smithtown:—"The boy S. suits Mr. Plummer well. The boy likes his place and master, and states he is thoroughly satisfied."

Constable Baker, of Quirindi, reports apprentices O'D. and R. having good characters, being well treated, and wages paid to date.

Senior-constable Moroney, of Garah:—"The boy R.'s character and health good, and well treated; no unpleasantness exists between master and apprentice; wages, £8 14s. 4d."

Senior-constable H. W. King, of Boggabri:—"Apprentices R. and C.'s character, condition, and treatment all good; wages 2s. and £4 7s. respectively."

Senior-constable F. Gardiner, of Moonbi:—"Boys R., C., H., M., W., R., T., and M.'s characters, condition, and treatment all very good. Wages paid."

Sergeant W. McCabe reports visiting apprentice S. "Found him well conducted, in good health, and has been well treated. Wages paid £16 12s."

Constable W. G. Carvett, of Carroll:—"Apprentice T.'s character good, in good health, is well treated. Both the boy and his employer expresses their satisfaction with each other. Wages to date £1, deposited in Savings Bank at Carroll; no arrears."

Constable Fox:—"Apprentice S. was given a good character by his employer. He is in good health, and says he is well treated. Wages £1 9s."

Senior-constable Byren, of Murwillumbah:—"Apprentice R., also his master, Mr. Ingram, were seen by the constable. The boy bears a very good character, and is well treated by his master. All wages have been paid up. Apprentice M. and his master, Mr. J. White, were also visited. This boy bears a very good character, and is well treated by his master. Wages £2."

Senior-constable Harris, of Uralla:—"Visited apprentice N., whose character is very good. Wages, £4 10s., all paid to date."

Sergeant Tippett, of Lismore, reports, regarding apprentices G., A., A., and H.:—"All receiving good characters. Wages £11 16s., 10s., £7 10s., and £1 10s. No complaints from either masters or boys."

Constable Brennan, of Lismore, reports, regarding apprentices B., C., R., B., and H.:—"All are receiving good characters. Wages £7, £1 7s., £1, and 12s. No complaints."

Senior-constable E. H. Thompson, of Ballina, furnishes a return regarding the conduct of twelve apprentices in his district:—"Character, condition, and treatment of each boy is good. Wages are all paid, and no unpleasantness exists between masters and boys."

Constable E. West, of Glen Innes:—"Apprentice L., with Mr. A. Wesley, of Glen Innes. His character is very good; he is well satisfied with his master, as also his master is well satisfied with him. All wages are paid up, amounting to £1 15s."

Senior-constable F. McRae Steele, of Deepwater:—"Apprentice C. states that he is well treated by his master, that he has plenty of clothing, is well fed, and well satisfied with his place. His master states he is well conducted. Wages, £1 18s."

Constable E. Randall, of Glen Innes:—"Apprentice W. bears a good character, looks well, and appears to be very comfortable. Wages, £1 18s."

Constable John Furneaux, of Manilla:—"Boys W. and S. The characters and condition of the boys are good, and they say they are well treated, and have good homes. The wages are fully paid up. No unpleasantness exists between boys and master."

Constable Scannell, of Moree:—"I have this day visited the boy S. at the residence of Mr. H. R. Murray. The boy is well conducted, bears a good character, and he informed the constable that he is well treated. Mr. Murray states that the boy is obedient and attentive to his work, and is giving satisfaction. £18 9s. 5d. is now to the credit of the boy and the Superintendent."

Senior-constable J. Byrne, of Werris Creek:—"Inspected the apprentice M., who is most reliable, honest, and in every respect well conducted. He is in good condition, and well treated and clothed."

Constable J. Bath, of Mullvala:—"He saw Mr. Whitty, who states that the boy has finished his time. He has been very well satisfied with the boy, and has him now employed on the station."

Constable W. Collis, of Yerong Creek:—"Mr. Rossler states that the character of the boy S. is very good. He has £5 12s. 6d. in the bank. From the constable's own observation he believes this boy to be one of the best that he ever saw come from the 'Sobraon.'"

Senior-constable Costello, of Jindera:—"The senior-constable would state, from his own personal knowledge of the boy, his character, condition, and treatment is all that would be desired. Wages amount to £9 14s."

Constable Pritchard, of The Rock:—"The boy T. states he is well treated by Mr. Westendorf, who speaks highly of the boy's character. The lad T. says he will remain with his master after his time is up."

Constable J. A. Fergusson, of Corowa:—"Sobraon' apprentice McL. is looking well, and receives very good treatment. He likes his place, and his master is well pleased with him. He is, in fact, a very good boy. Wages, £3 7s."

Senior-constable Walsh, of Junee:—"Visited S. He is given a good character by his master, is in good health, and states he is well treated and clothed. Wages, 19s."

Constable W. J. Madden, of Junee:—"Visited the boy B. at the residence of Mr. Thompson, who speaks highly of the boy; states that he is industrious, well behaved, and gives every satisfaction. Wages, £1 1s."

Senior-constable

Senior-constable Anderson, of Urana:—"Visited Coonong Station, and interviewed the two apprentices, H. and R., who stated that they were well cared for, had a good and comfortable home, and have each a good supply of clothing. They also speak in the highest terms of Mr. McCaughey's kindness to them, and in return Mr. McCaughey gives the boys an excellent character. Wages, £2 14s. and £1 1s."

Constable Wisbey, of Gundagai:—"Visited D., with Mrs. Lawson, of Adelong Crossing, and find that the boy is very well behaved, is well treated and cared for. The boy states he is well satisfied with his place. All wages due to the 20th instant have been paid."

Constable Laidman, of Grafton:—"Apprentice M., who is with Mr. Gulliford, of Southgate. This boy bears an excellent character, and is treated as if he were one of the family. He looks very well. Wages paid. Apprentice W., who is with Mrs. Coulter, H.W., who is with Mr. Leeson, and B., who is with Mr. W. Smith, all receive excellent characters. The wages in each instance are paid. No unpleasantry of any sort exists between masters and boys."

Constable Betson, of Byron Bay:—"C., K., and F. are all given good characters by their masters."

Constable Middleton, of Glen Innes:—"Visited the boy apprenticed to Mr. M. H. Fitzhardinge, solicitor, of Glen Innes. E's. master gives him a very good character, and is perfectly satisfied with him. The wages due to the boy, to date £1 13s., have been paid into the Savings Bank."

Constable W. J. Maroney, of Inverell:—"Visited apprentice F. and his master, Mr. C. F. Travers. F. is a good, trustworthy lad. He is healthy and well cared for, and is well pleased with Mr. Travers' treatment of him. Wages, £3 10s. Apprentice H., with Mr. P. B. Eady, is a hard-working, quiet, and well-behaved lad, and gave every satisfaction to Mr. Eady. He is strong and perfectly healthy, and has the appearance of having been well cared for. He has £26 6s. 10d. to his credit in the Government Savings Bank."

Constable Kane, of Guyra:—"Saw Mr. Ensor at his residence, Ben Lomond, and was informed that the boy R. bears a first-class character. He is very well treated, and looks in the best of health. Wages paid up, £13 18s."

Sergeant M'Donnell, of Bathurst:—"The character, condition, and treatment of the boy R. is good. Mr. Boyd speaks of this apprentice in the highest terms."

Constable Colin M'Rae, of Orange, reports of apprentices "T., C., that they are well behaved, and that they are well treated by their employers."

Sergeant W. Parker, of Warren:—"Apprentice J., with Mr. Dolan, is of good character, well fed and clothed, and kindly treated. £1 4s. in the bank."

Senior-sergeant Francis, of Coonamble, reports of apprentices C., P., Q., M., and G.:—"Characters and condition are good. They are well treated; wages amount to £7 3s., £5 6s., £8 14s., and £3 10s."

Constable J. E. Williams, of Peak Hill:—"Apprentice McP. told the constable he was well treated and liked his master; received his pocket-money. Mr. Wier said he could answer for the boy's character. He was a good, obedient boy, and gave general satisfaction. As far as the constable could learn, there seems to be mutual satisfaction between master and boy."

Senior-constable E. Rainford, of Parkes, reports regarding apprentices B., C., and R.:—"All three boys are receiving good characters, are well cared for, and have good homes."

Senior-Constable Slack, of Cobbora:—"Apprentice J.H. bears a most excellent character. He is well treated and clothed, and has never had a complaint to make. The Cobbora police see him almost every week. His employer, Mr. Bourke, speaks very highly of him. His wages, amounting to £9, are paid into the Savings Bank."

Constable T. C. Dixon, of Forbes:—"Apprentices D., L., and H. are all reported by their masters as having good characters, and giving every satisfaction. Their wages have been placed to their credit, up to date."

Constable F. W. Dolman, of Mudgee:—"Apprentices J., F., H., M., and O'N. are all well satisfied with their masters, and state that they are well treated. The masters state that these apprentices are good boys. There are no arrears of wages due to either of the above apprentices."

Sergeant Roberts, of Grenfell:—"The boy is in the best of health, states he is kindly treated, and has nothing to complain of. His employer gives him an excellent character. All wages due have been paid up."

Constable Minter, of Trundle:—"A.K., in the employ of John M'Inerney, bears a good character."

Senior-constable J. Bentley, of Mundooran:—"Apprentice M'N. bears a very good character. His employer, Mr. Manus, states that he is a good boy."

Constable J. Robertson, of Central Kempsey:—"Apprentice S. is in good health. He is very willing to work, and his master states that he has no complaint whatever to lodge against the boy."

Constable J. Canney, of Smithtown:—"D. has a very good character, is well cared for, and states he is well satisfied."

Constable A. Aden, of Dungog:—"Re the 'Sobraon' boys W., J.P., and H.P., all three boys received good characters."

Senior-constable R. Brown, of Hamilton:—"Saw Mr. Martin, also apprentice S. The boy is of excellent character, is well treated, and quite satisfied with his position."

Senior-constable Robinson, of Merewether:—"Apprentice L. has a very good character, and is well treated."

Constable Grigor, of Riverstone:—"Apprentices G. and E. receive excellent characters. They look healthy, clean, and tidy, and state their treatment is all that they could desire."

Constable J. C. Tomkins, of Rous Hill:—"Apprentice W. bears an excellent character. Mr. and Mrs. Jackson speak very highly of the boy."

Senior-sergeant Sykes, of Berrima, reports of twelve apprentices, "that they are all receiving good characters; are well treated; their wages range from £14 12s. to £1."

Constable R. C. Bray, of Albion Park, reports of eight apprentices in his district:—"All boys are receiving good characters, and have no complaints; wages range from £15 7s. to 10s."

Constable E. R. Williams, of Kiama, reports on ten apprentices in his district, that they are all favourably reported on; their wages range from £17 7s. to £1 6s.

Senior-sergeant Bragg, of Moruya:—"Re apprentices McE. and G., the masters, Messrs. Heffernan, state both boys to have good characters. They are well treated and cared for."

Senior-constable Kennedy, of Crookwell :—"Apprentice A., who is with Dr. E. Stokes, receives an excellent character from his master. The boy states that he is well treated, happy, and contented."

Senior-constable J. Willis, of Yass, reports that he has seen the lad Q., and his master, who gives him a first-class character. The boy appears very healthy and contented, and states he is well treated, and would not like to leave his master. The lad's master states that since he received him he has never once given him cause to complain. Bank pass-book shows £3 paid to date.

Apprentice G. writes :—"I am very glad to say that my master is a man having plenty of influence with the squatters; and, if everything goes well with me, I might have a chance of getting a situation with one of them when my time is finished. I met the boy C., and he told me he would write to you, and let you know how he is getting along with his master. As my career is just about to start, I have not much to tell you until I write again. With many thanks for getting me such a good situation. I remain, yours sincerely, J. G."

H.H. writes :—"Dear Sir,—I received your last and welcome letter with much pleasure. I went to the show both days, and my master gave me half-a-crown. How I got half-a-crown was: my master gave me 6d. to get in the gate with. I was carrying exhibits, and the gate-keeper let me in for nothing. I told my master, and he gave me 2s. for being honest. He thought I would keep the 6d., and say nothing about it. I like my master and mistress. I am saving up my pocket-money, and I have got 1s. 4d. in three weeks, instead of 6d. I remain, yours sincerely, H.H."

D. McF. writes :—"Dear Captain,—I am glad to tell you I have a kind master, and am quite content with my place. I go to school every day, and try to get on as well as I can. I am treated as one of the family. I hope the boys are all quite well. Remember me kindly to all the officers, and I hope they are quite well, likewise yourself. I remain, yours obediently, D.McF."

H.C. :—"Dear Sir,—I am very glad to tell you that I am getting along with my work splendidly. All the people are pleased with me, and I am pleased with them. I can lift a big can of milk, and put the harness on the horse, and know they are right. I remain, yours sincerely, H.C."

My former pantry-boy, R.A. writes :—"Dear Captain,—I write to thank you for getting me this nice situation. I am very comfortable, and my work is not too much; yet it is sufficient to keep me occupied all day. I have to attend to the house now. At first, when I came, I had the stables and yard to attend to. I learned to groom a horse, and milk a cow, mind poultry; but as the weather here is extremely cold in winter, I shall be glad not to have that to do. Again thanking you for all your kindness. I am, dear sir, respectfully yours, R.A."

Apprentice S. :—"Dear Sir,—I received your kind letter, and I was very glad to hear from you. I hope Mr. Stayner is quite well, and Mr. Robilliard, and Mr. Wood, also all the boys on board are quite well, as it leaves me at present. Mr. Beedle is a very nice gentleman; and I like my place very well, and they are kind to me. You must excuse a short letter this time. Your obedient servant, E.S."

An apprentice, now employed by a well-to-do tradesman, who was at one time an inmate of the Institution :—"Dear Sir,—I now take the pleasure of writing you these few lines, hoping to find you in good health. I am getting on well up here. My master and mistress are very good to me. I go for a ride nearly every Sunday afternoon. I saw the boy S. up here, and I was speaking to him about the 'Sobraon.' This is all I have to say this time. I remain, yours truly, E.M.J."

C.R. writes :—"Dear Captain Mason,—Just a few lines to let you know I am getting on well. I have learned a lot of farm work—ploughing, harrowing, &c.; and I hope some day to have a farm of my own. I can ride well, and often have fresh horses. I can gallop, and jump logs. I hope to see you all when I go to Sydney. I hope O. and C. have not forgotten me; I have got their keepsakes yet. This is all the news this time. Yours truly, C.R."

Apprentice A.L. :—"Dear Captain,—The time is slipping away like lightning. It only seems as if I was on the ship last month, but yet it is nine months ago. My master received your circular to-day, and I suppose you will have a report from him of the behaviour and conduct of myself. You could not have got me a better situation. If any boy says that they have a good master, I'll say that I have better. My master sold his farm, 1,300 acres. I don't think living in town is as good as living out in the bush, for we live at the bottom of a big mountain, Big Ben. I will try and send you down one of my photos. I read in the *Sydney Mail* about the ship nearly going ashore. The boys I know of here are seven in number. I remain your obedient servant, A.L. P.S.—Thank the fore-castle men from me, for it was them taught me one of the rules of good manners, 'cleanliness.'"

E.L. writes :—"Dear Sir,—Just a few lines to let you know how I am getting on at my place. I like it very well. I could not get a better master anywhere. Would you kindly remember me to boys S., D., and M. I remain your obedient servant, E.L."

Apprentice L.A.S. :—"Dear Sir,—Having just secured an opportunity of writing to you, I do so with the utmost pleasure. I am very sorry I never wrote to you before this, but, never mind, I will try and write to you as regular as I can. I am getting on first-rate up here. I am very glad you got me this situation, and I'll never forget you as long as I live. My master is very good to me, and takes me shooting with his eldest son. Remember me to Mr. Dermody and Mr. Wadling and Mr. Stayner. Yours truly, L.A.S."

J.J.R. writes :—"Dear Sir,—I now have the pleasure of writing you a few lines, hoping to find you in the best of health, as it leaves me at present, also all the officers and boys. I like my place and master very well, and I thank you for getting me such a good situation. We milk forty-five cows. I drive the milk-cart and sometimes plough a little. I help to cut greenstuff for the cows and we draw two big loads every evening. I am very sorry for not writing before. Your affectionate friend, J.J.R."

Apprentice J.T. :—"Dear Captain,—I write you these few lines, hoping they will find you in good health. I like my place very much indeed. My master is very kind to me, also my mistress. They are like mother and father to me. A gentleman was coming up with me and he said he would like a good boy, so I told him the boy B. was a good lad, and he said he would send down for him. I will do all in my power to please my master. I hope Mr. Stayner, Mr. Thompson, Mr. Leer, and Mr. Humphries are quite well. I thank you, sir, for getting me such a nice place. Your obedient servant, J.T."

Apprentice A.S. :—"Dear friend,—Just a few lines to let you know how I am getting on. Mr. Dunstan wishes me to write to you. I am very sorry that I did not write before this. I hope all the boys and officers are all in the best of health, as Mr. Dunstan and I are at present. I like my place very well, and I am glad I got it. I am very sorry that the ship had drifted out of its place; I hope no one got hurt. I have nothing serious to tell you this time. This is all. Trusting to hear from you, I remain your true friend, A.S."

H.S.A.

H.S.A. writes:—"Sir,—I am glad to inform you that I am satisfied with my new home. I like my master and mistress very well, and I hope I will be able to please them in every way. I have learnt to ride and drive well. There is a young man up here that was on the 'Vernon.' His name is J.C. Please remember me to all my comrades. I send my best wishes to the officers on board. I remain, Apprentice H.S.A."

Apprentice G.M. writes:—"Dear Sir,—I received your letter and the two cards which were sent to me from home. I was very thankful to S. for the letter which he wrote to me, and to know that he had not forgotten me. My work for the present is to husk corn—a thing which I am not a very smart hand at. It also makes my hands rather sore, but that has to be put up with, like a good many other things in this world. On New Year's Day I went to the Highland gathering, and enjoyed myself first-rate. I remain, yours sincerely, G.M."

13. The above are a few cases promiscuously taken from many hundreds in similar terms, and will, I think, serve to prove even to the most sceptical that the short period of detention on board this vessel is fully justified by profitable after-results. The boys' letters number many hundreds, and as each merits, and receives, an immediate acknowledgment, it can be understood the duty is not a light one. Free and unrestricted correspondence between boys and the Superintendent assists materially in giving satisfaction to all parties, and I always feel it my duty to strongly discountenance anything likely to interfere with this.

It has been a matter of great regret to me that the customary visits of inspection formerly made by Captain Neitenstein and myself have not been possible this year, owing to changes in our staff not permitting absence from the ship. Nothing proves more encouraging to our lads than a friendly visit, showing as it does that although many miles distant from their former home a practical interest is evinced in their welfare. I have made many such visits in past years, and can testify to the utility of bringing masters and boys into pleasant relationship with one another after some slight misunderstanding, which will always arise, but gives way readily under the mediation of one recognised as anxious to conserve the best interests of both parties.

It is also desirable to see the class of home and nature of surroundings applying to those whom we desire to in every way safeguard.

14. Thanks to that most kind-hearted of gentlemen, Mr. Inspector-General Fosbery, the invaluable services of his capable metropolitan officers, and that fine body of inspectors and staff constituting the country constabulary, have been again enlisted in carrying out the supervisory work of this Institution. This means a lot of work; each one of some 400 lads and their respective masters being visited and interviewed, wages amount checked, and in many instances arrears collected and paid to credit. This is productive of miles of travel and long hours of additional duty, cheerfully rendered by the police, to whose tactful, intelligent, and sympathetic ability, ably directed from headquarters, is largely due what constitutes the real success of the institution, viz., the permanent reform of our juvenile delinquents.

The full share of credit due to the police is often, I fear, overlooked. Having been the direct means of bringing the boys under the ship's influences, they afterwards act not only as guardians, but as friendly advisers all through apprenticeship, and later, as the majority of lads remain in the country, there is no one more conversant with their progress than the local constabulary, who have a knowledge of all in their district.

PART III.

THIRD STAGE.—EX-APPRENTICES.

15. This is the period when, having attained their 18th year, they pass beyond my legal guardianship and become free agents regarding their future mode of life. Few forsake the country districts, where they command lucrative employment for the experience gained during previous years.

16. During the thirty years that the Institution has carried on its work it has dealt with 3,600 boys. Their terrible antecedents being such as described under Table "E," and only coming here after all previous treatment had failed, surely it would be unreasonable that reformation should be looked for in all such subjects.

17. Surprisingly few reach our goals, as will be noticed from the results of an annual return furnished to me from all the goals in the Colony. The total number of ex-inmates thus dealt with is 45, made up as follows:—12 convicted during apprenticeship, 20 during a period extending over twenty-seven years, 4 discharged (being 18 years of age) after a brief detention on board, 7 discharged to relatives on petition and free from the ship's control, and 2 transferred to another institution at a juvenile age. This percentage, as applied to the 3,600 dealt with, is small indeed.

18. Upon completion of the period covered by apprenticeship, not only is the young man capable of turning his knowledge gained to advantage, but he obtains a sum of money, being wages earned, as a tangible result of his service. Since May, 1890, up to that month in this year, boys have received close upon £12,000 in cash payments, with quite a similar sum now to the credit of others in the Government Savings Bank. This is altogether apart from the cost defrayed by their masters in providing board, lodging, and clothes. One of the most pleasing features of the ship's work to those engaged on the staff is the absolute absence of any animus on the part of the boys towards those who have exercised authority over them; not only do the many hundreds of letters received point to such being the case, but the boys, upon becoming free agents, look upon a visit to their former floating home as one of the most enjoyable ways of spending a Sunday. Since January twelve months we have received 579 such visits, and many gratifying assurances have been conveyed to me upon these occasions. A fine, well set-up, young fellow, who left the "Vernon" eighteen years ago, writes and derives much satisfaction in informing me that he is again under the leadership of his old chief as a warder in one of the principal goals, and also has occupied several positions in the Government Service. He is a single man, supporting an aged mother residing near the ship.

A.J.S. writes from the Nambucca River:—"Dear Sir,—Just a few lines to let you know that I am still in the land of the living, and flourishing. I suppose you must think by this time I have forgotten all about the past, but it is not so, and I shall always hold you in high esteem and the good old ship 'Vernon.' You made a man of me, whereas I would have been a scapegrace if I was not sent there to reform. In the last letter I wrote I was leaving the tug 'Volunteer.' I was in work two hours after and built a butcher's shop on a piece of land here, and then went farming. In two months' time I was sent for to go back again, and I am still in her and thought a lot of by the captain. I am going to be married in three months'

months' time. We have had very dirty weather down here, but it seems to be settling up a little. Dear Sir, it is a long time since I saw you on the ship, but if things go as I anticipate I will visit you with my young wife within a few months. I conclude with sincere affection to Captain Neitenstein and all hands. Long live the 'Sobraon,' and all her officers; may she flourish. I remain your sincere scholar and friend, H.H."

H.H. was apprenticed five years ago in the Macleay River district, where I upon two occasions visited him, and received excellent reports. He is a pleasant, deserving lad, and I have just succeeded in obtaining employment for him at one of our leading clubs.

J.J.N. left us six years ago. Returned on board, and has expressed his gratitude for what the ship has done for him; he has over £40 to his bank credit.

Seven well set up, smart young men, who were former inmates, now occupy leading positions in the Permanent Force Band, and frequently visit the ship, and have a chat about old times.

D.J.W. left the ship over thirteen years ago. Now owns his own farm at Attunga. He is known as a steady, respectable man, and does not forget the ship's training.

A.E.R. came on board with his master, who gives him an excellent character, and promises to still find him employment. I had pleasure in handing him bank-book and cheque amounting to £28 12s.

R. was profuse in his thanks for what had been done for him.

W.D. is a prosperous tradesman, employing several men in his lucrative business. He employs one of our lads, and writes, enclosing a photo., at the same time reporting having seen ex-inmates C. and R., who are both doing well, and send kind messages.

J.W. This was a pronouncedly hard case on arrival at the ship. He has served three years with credit, and writes to me stating his intention of remaining in the country, which I had advised in a previous letter.

J.A.B. comes on board to inform me he has shipped in a vessel to America, and would value a reference for the time he had been with me.

J.S.H. writes from London, where he arrived in Mr. Dangar's fine ship "Neotsfield." He reports other boys than himself as being well, and giving satisfaction, that the owner had paid them a visit, and presented them with 10s. each. He asks to be kindly remembered to all officers and boys, and states that he is looking forward to visiting the "Sobraon" upon their return to Sydney.

R.R. left the ship seventeen years ago; is now married; and writes regarding his doings; also expressing pleasure at hearing of Captain Neitenstein's promotion.

W.J.R. left the ship twelve years ago; married; writes congratulating officers on their promotion.

P.V. left the ship fifteen years back, writes congratulating Captain Neitenstein upon his promotion. A very steady, respectable fellow.

A highly respectable, steady young man, who received an excellent report from his master, is now carrying on a business of his own.

P.L. is a smart, respectable fellow; now employed by Messrs. O'Brien and Roberts, and earning £2 10s. per week; frequently spends a Sunday with us.

C.W., who is one of three brothers, sent to the ship fourteen years back, is now married, and owns a fine farm in the Gerringong district, recently valued at £1,000. This property he has just let to advantage; and is about to pay a visit to his elder brother, now in West Australia. He came on board to say "good-bye," and states that the ship was the making of him. His farm was originally taken up as a selection, cleared with his own labour, and is now a valuable property.

K.R.G. is a highly respectable, deserving young man, who has obtained an excellent character since he left the ship ten years back; he has been employed for a considerable time at the Ice Works, Darling Harbour; and now wishes to go afloat. I gave him a letter to Captain Eddie, Shipping-master.

R.V. has been ten years with Mr. Thorburn in the South Coast district. Recently visited the "Sobraon" for the first time, and was greatly pleased. He was formerly on the "Vernon," and commented upon the great improvements pertaining to the new ship. Steady, respectable, and deserving.

J. A. is a very competent blacksmith, who has served some years at the trade. He recently visited and presented the ship's aviary with a parrot. States his intention of visiting West Australia, where he thinks he can do well at his trade.

A comparison between the antecedents and previous history of some of these lads with what now applies to their condition of life may prove of interest:—

J.F.B. sent to the "Vernon" in 1889, after having been twice previously before a police court and discharged, remained aboard that ship for some months and was then discharged, on petition, to his relatives, in opposition to the recommendation of the Superintendent. Again committed to the ship in April, 1890, in a neglected, dirty condition. Apprenticed from the "Vernon" in August, 1891, served over five years with credit, and obtained an excellent character from his employer, who has now taken another apprentice from the "Sobraon." He came from Mudgee to Sydney, and spent Christmas Day on board this ship with a younger brother. He is now a presentable and highly respectable young man, and intends to return to the country.

G.R. sent to the "Vernon" in October, 1891, for frequenting bad company, and after serving a sentence in gaol for larceny. Apprenticed in January, 1893; served his full time with Mr. Forster, of Riverstone, who gives him a four-years' reference of a highly satisfactory nature. Visited recently with his bank-book, showing £24 to his credit. A steady, industrious, and civil young man.

C.M., whose father was a highly respectable man, sent here in January, 1884, from the Redfern Police Court. Three previous gaol sentences. Apprenticed in March, 1885, over twelve years ago, to Mr. Kinnear, of the Clarence River, where I visited him on two occasions, and found him to be acquitting himself most creditably. He is now a fine young man, who admits he has much to thank the ship for. Visited us the other day and informed me he was married, had one of a family, and is in steady employment, at 9s. per diem, with Government contractors. He is one of our greatest successes, having previously been quite beyond the control of his parents.

J.D. was a lad who had been boarded-out by the State Children's Relief Department upon several occasions. In each instance he absconded. As a last resource he was sent here in September, 1893, and after a time I obtained him a situation on the Richmond River, where he still remains. Under date the 11th April I received a letter from him, acknowledging a cheque obtained as wages earned prior to his coming to the ship, and thanking me for obtaining him the good situation which he now holds, and where he gives his employer every satisfaction. Mr. Ross, J.P., of Ballina, in speaking to me of this lad, gives him the best of characters.

D.G.

D.G. was the son of a well-to-do Yorkshire manufacturer; proving troublesome at home in England he was sent out to Newcastle as an apprentice in a ship, from which he ran away. He was picked up by the police and sent on board the ship in July, 1886. He left, under engagement to Messrs. Lysaght Bros., with whom he remained for some years, the latter portion of which time he earned £4 per week at piece-work. A few Sundays back he came on board, accompanied by his little daughter of 2 years of age, who was a picture of neatness, and spent some time with me, conversing about old times and his future prospects. He now forms one of the most desirable class of colonists that could be wished for.

A.McG., sent here from the Central Police Court in March, 1887, ten years ago, as being the companion of thieves, for housebreaking and larceny. Left the ship in May, 1888. Has been steadily employed for a period of seven years with one of our best known steam-ferry proprietors, during which time I have seen him weekly, and know him to be regarded as one of the most reliable and civil of employees. He paid me a visit last week, and told me he was next in turn to obtain charge of a steamer. He is in receipt of £2 per week, which money he places to his bank credit.

R.McM., sent from the Redfern Police Court under the following conditions:—"Sleeping in a sewer and under houses; in the habit of committing thefts in the neighbourhood of Darlington and Golden Grove, and beyond his parents' control." Left the "Vernon" in December, 1886, served his apprenticeship as a printer with Messrs. Else Brothers, at Wingham, on the Manning River, where I on two occasions visited him, and always received an excellent report from his employers. He is now a good compositor, earning a respectable livelihood in that occupation with one of our leading houses. He paid me a visit within the last few days, and is a pleasant and intelligent young man, as much so as any reared under more auspicious surroundings.

J.J., sent from the Central Police Court in September, 1888, for stealing poultry. Now a well-to-do tradesman. Spent last Sunday afternoon on board, well dressed, and very respectable.

A.C., sent from the Central Police Court in July, 1882; could neither read nor write; habitually wandering from home. Left in September, 1884, and served apprenticeship with credit at Camden Haven. Now owns his own dray, with which he makes a good living. Paid his first visit to the "Sobraon" a few Sundays back, and expressed his admiration for the present inmates' surroundings.

19. I have also been favoured on occasions with pleasing acknowledgments from the parents of boys who have derived marked benefit from the ship's efforts towards reform. A mother writes:—"I hope God will abundantly bless you for your kindness to my dear boy, and I can see you have brought a wonderful change in him. I hope he will never forget your kindness. I will leave him to do all you wish him to do. I remain, Sir, yours respectfully, N.B."

Another mother writes:—"I am more than grateful to you for your extreme kindness to me in sending my son's letter for perusal, and I feel fully happy and contented now about my son's welfare. When I look at everything, perhaps you are right at my not knowing his whereabouts at present, as it might make the boy grieve. Dear Sir, I hope all the boys on the ship are well, and may all my good wishes visit them, also the officers, not forgetting yourself. Trusting to your kindness to remember me to my son when next you write. Yours sincerely, F.C."

I wish many other relatives would as sensibly recognise the good being done for their children, and abstain in the same judicious way from unwisely interfering with them. I receive a fair number of such letters.

20. It would occupy too much space to report fully of the numerous inquiries made regarding the facilities for placing boys voluntarily on board the "Sobraon," but of such I receive a very large number from many respectable parents whose children prove refractory, and who would be glad of an opportunity to place them under wholesome restraint. It may, however, be well to quote a few such letters:—

"Dear Sir,—I have a son of which I can do no good at all. I am writing to know if I could put him in your charge. I would willingly pay £1 per month towards his keep. He will not go to school. I have given him every chance. I find my best remedy is to put him on board the 'Sobraon.' Hoping this will succeed, I remain, &c., G.J."

"Dear Sir,—Will you kindly let me know if you could take a boy of 9 on the 'Sobraon' without conviction. He is perfectly unmanageable, having got into a set of larrikins in the neighbourhood. I have had to remove him from three schools, the last the C.E.G. School, N. Sydney, as he will not go to school or do anything but prowl about the bush. He has been well caned by his father, master, and myself. In fact, we have done everything in our power. Now, I have his clothes locked up, but he goes away all the same without. We are gentle people, so would not like him to be convicted, although we feel very urgent measures must be taken now to save his life being ruined. One night lately he stayed out all night, sleeping in an empty house. If you would kindly let me know if you could arrange to take him, and for as long as you think advisable, we would be glad to pay whatever you think fair for the arrangement. I feel sure no boarding-school would suit, as he seems bent on running away. He could not from a ship. Yours, &c., A.J.B."

"Dear Sir,—Would you kindly inform me your terms and arrangements for young boys, as I have a young boy of 10 years, who has given me a great deal of trouble of late. He has missed eight days at school during the last quarter. He has got with a crowd of bad boys, and I have lost all control over him of late. I am a nurse, and am not always at home. Kindly inform me if you will take a fee, and the lowest, as I would like him to be kept away from the other boys. I would like him to be kept under strict supervision. His father two years ago was inspector of railways. Kindly inform me at your earliest convenience. Yours, &c., B.E.W."

It must be remembered that prior to reaching this Institution our boys have been a source of trouble to all having contact with them, and it is only when recognised as incorrigibles by every one else that we take them in hand. Very many of our inmates have formerly proved failures from other homes and institutions.

PART IV.

MISCELLANEOUS.

21. Prior to entering upon, and at the conclusion of, our daily proceedings, prayers are said.

On Sundays (weather permitting) the boys are landed and marched to their respective churches in Balmain.

I have also to thank the Incumbent of St. John's and his *locum tenens*, the Rev. D. Hudson, and the Rev. J. Fitzpatrick; also the lady workers, Mrs. Ford and the Misses Hughes and Maguire, who, at considerable

considerable personal inconvenience, brave the elements to visit the vessel, and, by kindly Christian efforts, minister to the spiritual welfare and instruction of the lads, many of whom have been entirely ignorant of any such matters.

22. It has been my desire to keep closely in touch with all similar institutions to the one under my charge, and I receive all the latest reports from England, the Continent, and the United States.

Information regarding our doings is being constantly asked for by the other colonies, which I am always pleased to supply.

Visits for this purpose have been paid me by representative officers from Victoria, South Australia, Queensland, New Zealand, and Tasmania. The desire to establish a somewhat kindred institution to the "Sobraon" seems to be gaining ground in more than one of these centres.

The ship also has received frequent visits during the past twelve months from our Ministerial Head, the Hon. J. Garrard, M.P.; the Under Secretary, Mr. J. C. Maynard; and the principal officers of the Public Instruction Department; all of whom take the keenest and most practical interest in the ship and her inmates.

As many distinguished visitors from all parts of the world visit and inspect the "Sobraon," it may not be amiss to quote a few of the impressions formed under observation, and recorded in the official visitors' book.

Upon a recent visit the following entry was made by Messrs. W. Rigg, Dugald Thomson, James Storey, and S. J. Law, M's.P.:—"Ship is a credit to the country." "Had no conception of the magnitude and success of the Institution." "Discipline and general conduct of boys excellent." "An object lesson in discipline."

Mr. S. T. Whiddon, M.P.:—"Well satisfied with all I have seen."

Major Loveday, who is connected with the penal establishments in New Zealand, writes:—"I cannot speak too highly of the whole system adopted in the general management, discipline, and cleanliness of every part of the ship, as also those of the boys. The band is excellent, and reflects great credit on the bandmaster, who must have taken great pains to bring the boys to such a state of perfection. * * *

Messrs. H. Wells, C. Brockhoff, and S. J. Horstmann, of London, Melbourne, and Brisbane respectively:—"Have enjoyed the visit immensely. A similar vessel would be of advantage to Queensland."

Mr. W. H. Wilks, M.P.:—"Compelled to repeat that I still enjoy the highest opinions of this Institution. It holds the same general excellence as when under Captain Neitenstein."

A gentleman entitled to be considered as an authority, namely, Mr. E. Fosbery, J.P., Inspector-General of Police:—"I have been greatly gratified and interested in examining the system followed in this school, and its successful results."

Lieutenant R. S. Sieveking, R.N., accompanied by Lieutenant J. F. Whitmarsh, Royal Marines, H.M.S. "Mildura," and Mr. F. Raphael:—"I have now visited this ship three or four times, and each time I am more delighted with the cleanliness of the ship, also the discipline, which is quite equal to a man-of-war; with all this the boys seem very happy." "I can only say that I fall in most heartily with Lieutenant Sieveking's remarks. The physical drill was excellent, and would do credit to a newly-passed squad of recruits of an English regiment." "I extend hearty congratulations to the musical director on his excellent training, and to the whole training-ship on its work."

A large party of the principal school inspectors were accompanied on board by the Under Secretary, Mr. Maynard. They consisted of the Chief Inspector, Mr. F. Bridges, Messrs. J. McCredie, M. Willis, J. W. Baillie, F. Pearson, S. S. Smith, W. G. Thomas, W. Dwyer, H. Skillman, J. Dawson, and W. Guille: their comments were as follows:—"The visitors wish to express their entire satisfaction with the excellent order and discipline maintained amongst the boys on board the ship. They were also extremely well pleased with the arrangement for accommodation, instruction, and amusement of the boys. The proficiency of the pupils was satisfactory, and the singing of the English glees was particularly good. The general management reflects the greatest credit upon the captain and officers of the ship." "The visitors who on this occasion had the advantage of seeing the N.S.S. 'Sobraon' were very much struck with its arrangement and with the excellent order prevailing, which is evidently the result of a firm and kind discipline. Everything about the ship gives the impression of management of a high order. The captain and his officers are to be complimented on the results achieved. They are doing a noble work for the Colony."

Captain F. W. Neitenstein, J.P., Comptroller-General of Prisons:—"Glad to revisit the old ship; everything in good order. Perfect discipline. A clean bill of health, and boys cheerful and bright looking. Observe several alterations, especially in drill, since I left, which are decided improvements and show progress."

Dr. C. F. Warren, R.N.:—"The results obtained are excellent. The boys look happy and healthy, and everything connected with the health and sanitation of the ship is perfect."

Captain Francis Hixson, R.N., President, Marine Board:—"Found the ship very clean; boys appear comfortable and happy, notwithstanding the mishap of last evening." (Ship broke adrift).

On another occasion Captain Hixson visited, in company with the officers of the Naval Brigade and Mr. W. Cruickshank, C.E., and made the following entry:—"The ship and the discipline of the boys is a credit to the officers. The benefit of the Institution will be felt in the Colony in years to come. We should be glad to hear of provision being made to draft some of the boys into the R.N."

Major-General G. A. French, Commanding the Military Forces of New South Wales, accompanied by Mr. T. A. Dibbs, J.P., and others. The General made the following complimentary entry:—"On board for several hours, visited every part of the ship, and was much impressed with the cleanliness and good order apparent in every part. The physical drill was performed excellently; the manual exercises were carried out capitally. I feel assured that the systematic drill and discipline daily enforced must have a most beneficial effect on the future life of the boys."

Sir Charles Lilley, late Chief Justice of Queensland, accompanied by Mr. M. A. H. Fitzhardinge, J.P., writes:—"I have derived the greatest possible pleasure from my visit. I am sure the value of the discipline on board this ship cannot be overestimated. The feeling which it must create among the boys of the value of good character in life must prove a powerful safeguard in their future life, wherever it may be passed."

The Hon. F. H. Piessé, M.P., Commissioner of Railways, and Director of Public Works, Perth, Western Australia, writes:—"I have had great pleasure in making a complete inspection of the ship, and am surprised to find such an admirable and useful institution. The discipline is excellent, and the training received by the boys should fit them for almost any occupation in after life. * * *

Mr.

Mr. T. A. Coghlan, late Commissioner, Public Service Board :—" Everything on board is a tribute to the excellence of the system followed. The ship is a true reformatory."

Messrs. S. Phillips and W. F. Schey, Ms.'P. :—" Exceedingly pleased with everything I have seen on the ship." " An excellent institution, excellently conducted."

Mr. George Steward, Under Secretary, Tasmania :—" Am delighted with all I have seen ; have spent one of the most profitable afternoons in my official life in the direction of cognate institutions."

These visits do much to encourage the youngsters by showing that there are numbers of influential people who evince an interest in their doings. They also serve to relieve the monotony of the ordinary everyday procedure ; frequently they also prove of service in the matter of enlisting sympathetic help to our boys when placed at service in the interior of the Colony, where a kindly word of encouragement proves invaluable at a time when they feel their isolation from former companionship.

23. I would take this opportunity of returning my grateful thanks to the numbers of ladies and gentlemen who have been instrumental in rendering assistance in the form of contributions to the boys' amusement during the past year, viz. :—The Honorable Jacob Garrard, M.P., Minister of Public Instruction, Mr. J. C. Maynard, J.P., Under Secretary, His Honor Judge Fitzhardinge, Mr. E. Fosbery, J.P., Mr. F. Bridges, Chief Inspector, Dr. Morris, LL.D., Mr. T. A. Dibbs, J.P., Messrs. Horsfall and McCaughey, Messrs. Baker and Rouse, Mesdames Smith and Gollan, the fruit-growers of Dural, Messrs. Abel and Company, the Committees of the Anniversary, Balmain, Drummoyne and Hunter's Hill, and New South Wales Yacht Club Regattas.

24. The ship was honored with a visit from His Excellency the Governor and Viscountess Hampden, accompanied by Captain Ferguson, A.D.C., who were received on board by the Honorable J. Garrard, M.P., and expressed pleasure at what was seen.

25. Two very unpleasant events have been experienced which I think it well to mention, although the latter of these is outside the period under review. Both caused me considerable anxiety. The first took place during a sudden and heavy squall, in which the ship's moorings parted, and the result was that we nearly drifted ashore. The second was a terrific blow of cyclonic violence from the N.E., which caused considerable damage to movable goods on board, but during which the ship fortunately only dragged her anchors slightly. On both occasions the boys behaved in the most creditable manner, obeying implicitly and without fear or confusion all orders. The circumstances were quite exceptional, and such as I trust it may never be my experience to undergo again.

26. I cannot close my report without bringing under notice the loyal and efficient service rendered me by my capable and painstaking staff of officers. Without any exception, I have found them deserving of the highest encomium, willing and ready to give cheerful service whenever the ship's duties required it.

The institution sustained a severe loss in the removal of her worthy Commander, Captain Neitenstein, to which I before referred. A second loss was the withdrawal of a specially-qualified and popular officer, Mr. Stayner, who made a most reliable Lieutenant. Both these officers now fill more responsible positions, and their promotions have caused an opportunity for rewarding most of the staff after lengthy service, which fact, apart from my own advancement, is very pleasing to me.

I feel sure that the Institution will not be allowed to deteriorate by the removal of previous valued officials, inasmuch that the aim and desire of those taking up their duties will be to fully sustain the high standard attained in its work by their predecessors.

I have, &c.,
W. H. MASON,
Commander and Superintendent.

EDUCATION.

(RETURN RESPECTING THE PUBLIC SCHOOL CADET CORPS.)

Printed under No. 20 Report from Printing Committee, 21 October, 1897.

Question.

11. DR. ROSS *asked* THE MINISTER OF PUBLIC INSTRUCTION,—
 (1.) The number of Cadet Corps in the Colony in connection with our Public Schools?
 (2.) The number in each corps?
 (3.) The name of the school to which the corps belongs?

Answer.

- (1.) Ninety-four.
 (2.) See Return appended.
 (3.) See Return appended.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

FISHERIES OF THE COLONY.
(REPORT OF COMMISSIONERS OF FISHERIES FOR YEAR 1895.)

Presented to Parliament, pursuant to Act 44 Vic. No. 26, sec. 69.

Printed under No. 17 Report from Printing Committee, 26 August, 1897.

Report of the Commissioners of Fisheries for New South Wales on the Fisheries of the Colony, for the year ending the 31st December, 1895.

Sir,

In submitting our Report on the Fisheries of this Colony for the year 1895, we have to record the resignation of Dr. Edward Pearson Ramsay, F.R.S.E., LL.D. This vacancy has been filled by the appointment of F. Farnell, Esq., M.P.

The composition of the Board otherwise remains unchanged, the Hon. W. R. Campbell, M.L.C., and J. R. Hill, Esq., whose terms of office expired in October, having been reappointed.

Finance.

The revenue of the Department has suffered a reduction of £150 19s. 11d.

This is attributable to the smaller number of fishermen's and fishing-boat licenses which were applied for during the year, also to a diminution in the amounts received from rents on arcas leased for the purpose of oyster-culture—deposits on applications—deed fees and transfer fees on leases, fines and forfeitures.

Oysters.

We are again able to report a marked improvement in the supply of oysters which have been taken from the beds and deposits under lease for the purpose of oyster-culture during the year, the total number of bags removed being 9,413, showing an increase of 1,327 upon that of last year, whilst the quantity imported from Queensland was 2,103 as against 1,536, showing an increase of 567; from New Zealand, 4,981 as against 5,137, showing a small decrease of 156.

The following figures show the quantities taken from the principal leased areas:—Clarence River, 26 bags as against 69 bags for previous year; Richmond River, 254 as against 400; Tweed River, 153 as against 138; Camden Haven, 969 as against 749; Hastings River, 239 as against 216; Manning River, 1,948 against 1,843; Wallis Lake, 2,140 against 2,012; Port Stephens, 737 against 465; Hunter River, 589 against 302; Hawkesbury River, 864 against 660; Bellinger River, 166 against 166; Evans' River, 166 against 192; George's River, 27 as against 12; Shoalhaven River, 112 as against 250; Clyde River, 803 against 405; Bermagoe River, 50 as against 24; Narrawillie Creek, 18; Brisbane Water, 115; Port Hacking, 20; Pittwater, 17.

*31—A

[697 copies.—Approximate Cost of Printing (labour and material), £10 7s. 3d.]

It

It will be observed that there has been an increase in the output from the Clyde River of 398 bags; Camden Haven, 220; Hunter River, 287; Port Stephens, 272; Hawkesbury River, 204; Manning River, 205; and Wallis Lake, 88.

We have still to contend with a few lessees who follow out a systematic robbing of oysters from the Crown lands not under lease; using their leased areas as a depository for their spoil, and forwarding the oysters to market in bags branded in accordance with the provisions of the Oyster Fisheries Act.

For this unsatisfactory state of affairs we must hold ourselves blameless, having submitted a remedy for it in 1890, when we saw what would come of the defects in the existing law; and, if our suggestions had been carried out, these depredations could not have been carried on. Seeing that there was no chance of immediate new legislation, we invited the Honorable the Chief Secretary to have section 15 of the Oyster Fisheries Act repealed, but no action was taken. If this had been done it would have helped materially in protecting the Crown lands from the ravages of pilferers, and thus saved the unleased areas from being denuded of oysters.

The worm disease has, we are pleased to note, greatly diminished. Some of the lessees have done much to stamp out the pest, especially in the Hunter River, which was, without doubt, the worst infested river in the Colony. Some have simply let it take its course, to the detriment of their own interests and those of others in the vicinity.

It was reported to us during the year that the worm pest had made its appearance in the Manning River. Notice was sent to the lessees informing them; fortunately, the statement proved to be greatly exaggerated.

At the close of the year a number of applications were received from lessees for renewal of their leases under section 4 of the Oyster Act, which were granted. This gives them a fresh tenure for fifteen years.

There are no arrears of rent for oyster leases in consequence of the system at present in vogue of not allowing the rents to accumulate.

There is good reason for believing that there will be an increase in applications for oyster leases during the coming year, as the spawning has been good, some of the foreshores showing young oysters in abundance.

Lessees should guard their own interests to prevent diseased shells being transhipped to waters for the purpose of forming a hard bottom on any lease, as, although the shelly bottom may be made, the disease is transferred to that particular bed.

The oyster deposits in the Colony, more especially in the Northern Division, have materially improved,—indeed, to such an extent as to lead us to hope that, in the near future, oysters from the parts referred to will be as plentiful in the market as heretofore.

So far as oyster-culture is concerned, the lessees, with few exceptions, do not carry on oyster-culture, simply contenting themselves with taking oysters from the areas, without the slightest thought or intention of cultivating or replenishing the supply. The lessees who cultivate oysters to the best of their ability not only benefit themselves, but, in their honest endeavours to carry out the provisions of the Oyster Fisheries Act, improve the public estate. Some of the lessees have expended considerable sums in laying down stones and wood for the collection of spat, and removing the oysters upon their attaining a moderate size to the fattening beds, to mature for market. Other lessees expend large sums in having their deep water-beds kept clear, by having men to work the dredge without the netting, thus keeping the oysters free from mud; if the disease is bad, they work the dredge with the net on, and when the oysters are put into the boat those that are diseased are put aside, and the clean ones put back in the water. The diseased oysters are taken to the shore and put out of the range of the water, to kill the worm and its eggs before being replaced on the beds. This has been largely done on the Hunter River with satisfactory results.

The spawning season has, generally speaking, been fair; but in the Tweed and Richmond Rivers, Camden Haven, Manning River, and Wallis Lake, Port Stephens, Hunter and Clyde Rivers it has been very good. We have received specimens of stones, &c., from the Camden Haven, Wallis Lake, Hunter and Clyde Rivers, which show the prolific fall of spat which has taken place there, the specimens being literally covered with young oysters. It is most pleasing to note that the Hunter River oyster beds are in a fair way to being restored to their former condition, as the spawning has been more general than it has been for some years past.

Inland Waters.

The returns from Moama and Koondrook, two principal centres on the Murray River from which Victoria draws her chief supply of freshwater fish, show a substantial increase of 12,758 lb. over the amount sent during the previous year. There were 2,413 lb. of this class of fish sent to the Woolloomooloo Markets during the year, which arrived in splendid order, and sold at very satisfactory prices, paying the catchers well for their labour. Attention may be drawn to the way in which some of the fish were sent to market, there being such carelessness evinced in the packing that the value of the fish has been much depreciated, and the fishermen thus lose a large portion of the benefits arising from their labour.

We note with regret the number of Murray cod which have been sent to market in full roe, and think the time has come for restrictions to be placed upon the fish being caught at those periods when the spawning is at hand.

We have maintained the closures in the rivers adjacent to various inland towns, making the closure against the use of nets to extend as a rule for a distance of 5 miles on each side of the towns.

The benefits accruing from these closures are very evident, and demonstrate the desirableness of continuing the system of protecting the breeding grounds as much as possible.

The Victorian authorities having taken in hand the matter of protecting the Murray River, in conjunction with this Colony, have issued a proclamation prohibiting any person having in their possession during certain months Murray cod, perch, or bream in Victoria. This will help this Colony in its desire to protect the fish in these waters, and the difficulty experienced in the past with the Victorian fishermen will be avoided.

During the year numbers of fish have died in the upper parts of the Hunter River. Many of the affected fish, on being examined, were found to be suffering from the worst of all diseases which fish are liable to take, viz., *Saprolegnia ferox*.

Fishing Industry.

The fish forwarded direct to the Woolloomooloo Market during the year has been 39,030 baskets, showing a decrease of 3,252 baskets; still there is no actual falling off in the supply, the returns hereunder showing that there were received in addition in the market 137,037 dozen fish, whereas in the previous year there were only 105,331 dozen, an increase of 31,706 dozen.

There has been also an increase in the amount realised from the sale of fish at the Woolloomooloo Markets, the total amount paid being £26,950 9s. 7d., as against £25,367 15s. 2d. for the previous year, an increase of £1,582 14s. 5d.

At Hudson's Market, situated at Redfern, in close proximity to the Eveleigh Railway Station, a very large amount of fish were received, viz., 26,416 baskets, as against 20,000 received during the previous year, an increase of 6,416, while the amount realised reached £8,251. This illustrates the importance of a more central market being established, more especially for the convenience of the dealers and others who supply the eastern suburbs. This market has the advantage of being close to the station, and having a frontage to the railway line, the fish being delivered at its doors.

From M'Fadyen's Market, situated at Redfern, near the Eveleigh Railway Station, we are not in a position to give very full returns, but from the limited information at our disposal, there appears to have been a fair quantity received, the sale of which came to £2,100; therefore, with this and the other two markets, the fish sold realised the satisfactory total of £37,302 9s. 7d.

It is impossible to estimate the amount realised on the sale of fish other than that quoted, as in the city and suburbs a large quantity is sold, for which no record can be obtained. It is stated that from Botany and George's River alone over 3,000 baskets were so sold, and throughout the Colony quantities of fish are disposed of, both fresh and salt water, sent away by train. Referring to the undermentioned list, an idea may be obtained of the amount taken at some of our fishing stations and sent to Sydney, viz.:—Clarence River, 2,300 baskets; Wallis Lake, 2,600; Port Stephens, 7,800; Lake Macquarie, 13,850; Tuggerah Lake, 10,300; Brisbane Water, 2,592; Hawkesbury River, 4,160; Sydney Harbour, 10,500; Botany and George's River, 9,000; Lake Illawarra, 9,252; Shoalhaven River, 2,000; Sussex Inlet, 1,240; Bateman's Bay, 700; Bermagoe, 1,100; Tathra, 60; Merimbula, 200; Eden, 45—giving a total of 77,699 baskets. This does not include fish sent direct from the fishing-grounds to the country by train.

Newcastle has received 3,640 baskets of fish, caught in the Hunter River and tributaries, giving the very handsome total of 81,339 baskets, and as each basket contains about 70 lb. weight, this shows that not less than 5,693,730 lb. of fish were caught for Sydney and Newcastle alone.

There has been an increase in the supply of nearly all kinds of fish, more especially the finer kinds, viz. :—There were received in Woolloomooloo Market 5,802 dozen of schnapper, as against 4,711 during last year, an increase of 1,091 dozen; of black bream 20,076 dozen were received, as against 9,453, an increase of 10,623 dozen; of flathead 11,520 dozen, as against 9,021, being an increase of 2,499 dozen; of whiting 10,812 dozen, as against 8,181 dozen, being an increase of 2,631 dozen; of soles and flounders 2,802 dozen, as against 1,746 dozen, being a small increase of 1,056 dozen.

There has been a considerable increase in the quantity of fish seized and condemned as unfit for food from January to December, being 1,621 baskets, as against 1,076 of the previous year. It will be noticed that during the month of July there were no less than 219 baskets condemned, as against 29 of the same month of last year, and 1 in May, as against 28 of the corresponding month of the previous year; these fish were seized during the cool weather, having been forwarded from our most distant fisheries. From April to September, 786 baskets were condemned as unfit for food. During the hot months 835 baskets were found unfit for consumption, and condemned. Out of these numbers were included fish which arrived from waters in close proximity to Sydney, as well as those received from distant fisheries.

During the month of March shoals of herrings, almost identical with the English pilchard, visited our coast. In the month of September shoals came into our harbour when an effort was made to secure them, and when caught they were sold at the markets at a very small price. No attempt was made to cure them on a commercial basis. One of the fish agents, as an experiment, cured about forty dozen, and his efforts proved a success. The fish were so plentiful that one fisherman who shot his gar-fish net, 90 fathoms in length, could not land it on account of the vast quantity of fish he had surrounded. He was obliged to hold down the cork lines to allow very many to escape, and by this means landed 90 baskets. Each basket of such fish would weigh 80 lb.; this would give his catch as 7,200 lb.

Another species of the herring, class *Clupea sardiniaca*, were also observed passing our port, and a fair quantity caught. The same may be said of these as with the pilchards: no effort was made to procure any for curing. The value of these fish in an economic point of view is without doubt considerable. Besides the two species referred to, there are others which pass in a northerly direction in the winter months in enormous shoals. The fish mentioned are of great value commercially, especially the anchovies, and might be utilised to an unlimited extent in many ways. The application of a little capital and intelligent management would make the herrings, and probably the anchovies, a profitable industry.

We have been informed that the herring appeared to the south in March, whereas they did not appear to have passed our harbour till September. To get complete data of the movements of the herring is hardly possible at present. The masters of vessels trading along the coast, as well as the pilots and others, might be asked to take an interest in this matter and report the vicinity and the movements of the shoals. [See Appendix, page 13.]

We have continued our usual practice in keeping certain waters closed from the use of net fishing, and most gratifying results have followed. The figures quoted largely refute the assertion generally made by fishermen and others that the maintenance of substantial portions of the coastal waters from the operations of fishing nets is destroying the trade and depriving the fishermen of the means of earning a living. We are, however, satisfied that if the waters were not closed the fish supply would soon become exhausted. A great increase in the quantity of smoked fish prepared in the Colony on sale in the city and suburbs is noticeable, and it is fair to assume that the business just begun will increase materially during the coming year. The foundation for an export trade has been laid, and it is to be hoped that some of our full flavoured fish, such as mullet, tailer, cod, mackerel, trevally, and jew-fish, will be introduced with advantage to fish consumers in other parts of the world. There is a general desire expressed by professional fishermen that they should be allowed to sell their own fish in the market under the supervision of an Inspector.

There has been a great increase in the number of men who gain a living by selling fish; a large number of these are foreigners. The prices they obtain are probably about 40 per cent. over the cost; and complaints are frequently made consequently about the retail cost of fish. The proportion of profit to the net fishermen is not commensurate with their labour and outlay, for with market dues and auctioneer's fees their remuneration is not a fair share of what the fish realise.

Coops are used largely by foreigners for keeping their crayfish alive. Nearly the whole of this trade has fallen into the hands of aliens. They have well equipped boats, are persevering, and have established crayfishing grounds on many parts of the coast, especially at Port Stephens. We are of opinion that it is desirable that protection should be afforded the crayfish fisheries. We would have recommended close seasons had the law permitted us to do so.

We have pleasure in acknowledging the receipt of some fine specimens of trout which had been caught in the waters of the Colony, clearly proving that our endeavours in the past to acclimatise this species of fish have been marked with success.

A cormorant, the natural enemy of the trout, caught a splendid specimen at the Prospect Dam, weighing 10 ounces, and 11 inches in length, and one taken from a drain leading from the reservoir was found to be full of milt. During November, H. Copeland, Esq., M.L.A., presented a fish that had been caught stranded in the water at Bibbenluka by H. E. Edwards, Esq., measuring 15 inches in length, and 9½ in girth, the latter gentleman also, in December, reported having caught two trout in the Coolumbuka River, weighing 11 and 8 lb. respectively.

We issued instructions during the year for the Inspectors to carefully note and report the period in which they noticed roe in any one kind of fish, in order that something might be determined as to the seasons in which the fish showed in spawn.

It was reported during December that a number of flounders were observed in the harbour in full roe, and in the same month a female schnapper was caught at the South Reef filled with a very fine advanced roe, which alone weighed between 3 and 4 lb., and the fish weighed 20 lb. when cleaned.

In August a garfish which had been taken from the waters of Port Jackson was in the same condition.

The Inspector stationed at Lake Macquarie reported large bream in full roe during September and October, and the officer at Port Stephens noticed the same in mullet and garfish.

Bream were also caught in George's River during August containing roe.

We cannot conclude our Report without expressing regret at there being no new legislation for the fisheries, although in 1890 we drew special attention to the defects of the Acts which we had to administer, and at the same expressed a hope that the Bill we then submitted would be passed into law, leaving us to administer a very defective Act for so lengthy a period, and contrary to the wishes and advice of the Commissioners.

JAMES C. COX, M.D.,
President.

APPENDICES.

COMMISSIONERS of Fisheries for New South Wales:—

James C. Cox, M.D., President.

Jas. R. Hill, Esq.

Hon. W. R. Campbell, M.L.C.

Camden Haven.

Camden Haven cannot be classed as a fish-producing water, on account of there being no certain communication with Sydney, the traders there being sailing craft only. It is strange that while there is no trade done with fresh fish there is no attempt at curing, for there are fish to be caught in abundance; and, moreover, the finer kinds are very plentiful. No doubt the time will come when this place will be used by fishermen.

Oysters.—As usual it has kept up its supply, and from reports to hand it is shown that there has been a good fall of spat on all of the beds there.

Manning River.

Has kept up a very constant supply of fish throughout the year, which was shipped to the metropolis in baskets during the cooler months, and in boxes packed in ice during the warm weather.

The oyster supply has been exceedingly good, and shows an improvement on the previous year, the lessees evidently being aware of the fact that it is essential for them to look well to their leases, and by so doing obtain a greater output.

Wallis Lake.

This place bids fair to rank as foremost amongst our fisheries on account of its wonderful productiveness in both fish and oysters. As regards fish, the output has been very good, but we are of opinion that fish of the finer kinds are on the decrease, it is our intention to recommend that an Inspector be placed there to prevent the ruthless destruction of small and adult fish by the indiscriminate use of nets of any size mesh. The fish arrive from the Lake once and sometimes twice a week by a small steamer, and unless this boat gets caught in bad weather—the fish invariably arrive in good order. With the supervision we propose giving it, we are certain that the supply of fish will increase very much, and will thus be a great boon to the Lake fishermen, and add to the value of the place as a fish-producing water.

Oyster Fisheries.—The oyster fisheries are in a most thriving condition, as most, if not all the forshores are well stocked with oysters, and upon every one, or upon any stone or shell, may be seen a vast quantity of spat. The fall of spat has in our opinion been greater during the last year than any previous one, which no doubt means that the supply of oysters will increase considerably during the ensuing period. Through the splendid prospects of a good supply of oysters setting in, we have had applications for a number of additional areas there, which will give fresh life to oyster culture, and a considerable increase to the revenue. There is one bed, known as the Cutting Bed, which is worthy of notice, being very productive. It is no doubt a unique oyster lease.

Clarence River.

This river has kept up a continuous supply of fish to Sydney throughout the year, which arrived in the market in fair order. In the warmer months, although ice was freely used, it did not prevent a quantity going bad; but, taken all through, the loss has not been very large; and perhaps if a little more care had been used in the packing, the loss would have been reduced to a minimum.

Oysters.—The oysters have not yet recovered from the worm disease, but it is thought it is now decreasing very much.

Bellinger and Macleay Rivers.

Have produced a fair amount of fish, considering the very uncertain mode of transit on account of the bad bars at their entrance frequently causing loss to the catchers, who, having caught their fish, find the steamer cannot cross out, thus leaving them on their hands; and through there being no local demand the fish are thrown away.

The oysters have done well in these waters, and from the large fall of spat which has taken place there is every prospect now of a large output being the result.

Lake Macquarie.

Lake Macquarie has again resumed the premier position with regard to the take of fish during the year. Last year the catch was 11,574 baskets; this year it is 13,850: thus showing a substantial increase of 2,276 baskets of fish. As there was an average number of seventy fishermen working, it gives 197.46 baskets each man for the year, unless we deduct the share each of the twenty-six boats used receives; this will reduce the catch to 141.26 baskets each.

We attribute this increase, in a great measure, to the strict supervision over the closed waters.

During the month of October the whole of the closed waters of this lake were thrown open to net-fishing for thirty days, and in the channel entrance no less than eighteen boats were at work the first night of its opening, and made a catch of 250 baskets of fish, consisting mostly of the finer kinds.

Examination of the closed waters after the expiration of the month showed that they had been almost denuded of fish, and it was some few weeks before the supply returned to its normal state.

Sharks have been caught in large numbers during the latter part of the year, they being induced, no doubt, to enter the lake after the salmon which appeared in very large shoals.

Very large quantities of prawns have been caught here; but as there was little or no sale for them, the catching was discontinued. All prawns for market had to be cooked before shipment.

Large quantities of schnapper have been caught in the net, on one occasion no less than thirty-nine baskets being obtained in one haul.

The closed waters are, according to reports, again abounding with fish. In the open waters fish are not reported to be plentiful by the Inspectors.

The line-fishermen are reported to have made large catches during the year, though it is impossible to state the quantities caught.

Blubber has been exceedingly plentiful, and has caused trouble to the fishermen.

Tuggerah Lakes.

Tuggerah Beach Lakes have produced considerably less fish this year than last. In 1894, 13,888 baskets of fish were caught, and this year 8,071 baskets, showing a decrease of 5,817 baskets.

We deemed it advisable to remove Inspector Gordon from Sydney to take permanent control of these waters, and stop any illegal fishing that might occur in the closed waters at the entrance.

The line fishermen have made many good catches during the past twelve months in and about the channel entrance.

We regret to note that the bar at the mouth of Wyong Creek is causing great trouble, it being with the greatest difficulty that the fisherman can get over it without damaging their boats. The only remedy to this would be by having a small channel cut to admit of boats passing in and out—indeed, we would like to see the channel made deep enough to allow the small steamer which at present carries the fish from the mouth of the creek to Wyong, going about the lake to pick up the fish from different points. This would be a great boon to the fishermen, as it would save them unnecessary travelling, and would also be appreciated by excursionists.

Hawkesbury River.

There has been a very considerable falling off in the catch of fish during the year, as the total is given as 4,160 baskets, as against 5,740 baskets caught during the previous year, showing a decrease of 1,580 baskets. The supply fell off greatly during the month of May, and not till towards the end of the year was there any recovery.

There is no doubt that from the continued dry weather, quantities of fish have worked well up the river, far away from where the net-men of this place would think of going.

Mullet, bream, and whiting, were the principal fish caught. The line-fishers are reported as having made good catches.

Sharks have been very numerous again during the year, especially at Cowan Creek, where they were found to be more plentiful.

Port Jackson.

These waters still continue to produce large quantities of fish and prawns, yet there have not been as many net-boats at work as in previous years. The decrease in fishing-boats have been among those which used nets of a large size mesh, but there has been no diminution in the number of the small mesh-nets, more especially the sunk nets—the most destructive net to fish life; and by reference to the Bill submitted to the Government in 1890, it will be seen that special provision was made to do away with this class of net.

The tributaries have been closed against net-fishing with the usual good results, as will be seen by Inspector Gordon's Report in Appendices. It was decided to close almost all the remaining portion of the harbour during the winter months, viz., waters westward of a line drawn between Parsley Point and George's Head, and from the Spit upwards in Middle Harbour. The result of this has been highly satisfactory, and also saved the continuous use of the nets beforementioned.

The whole harbour being closed against the taking of prawns during the months of June, July, August, and September, also saved the destruction of immature fish.

The line-fishermen have, as usual, caught a great quantity of fish, and we must say that they also destroyed large numbers of small fish.

Although the reward for the destruction of sharks is still open, the calls upon it are not very large; yet we have the satisfaction of knowing that a number of very large man-eaters have been caught, some of which measured 14 feet.

The chief shark catcher is W. Proctor of Chowder Bay.

We still have to draw attention to the polluted state of the Parramatta River and other parts of the harbour where the refuse of tanneries, tweed and other factories are helping to fill the water with a large accumulation of filth, causing the water to throw off noxious and poisonous gases which destroy every vestige of insect and vegetable life intended by nature as food for the fish.

Botany and George's River.

These waters have produced about 9,000 baskets of fish during the year, thus keeping up their reputation, the principal fish caught being mullet, black-bream, blackfish, jewfish, garfish, and whiting. During the year the fish were very plentiful in closed waters, whilst in the open they were very scarce. This tends to show the value of the system of closure.

Finding the fish were so plentiful in the waters we preserved, it was decided to open George's River, which had been closed with Woronora River for a period of two years, from October instead of allowing it to run its full term, viz., to end of July, 1896.

We deemed it advisable, however, to keep the waters of Woronora River closed for the full term.

The line-fishermen have as usual met with very great success throughout the year. We have no means of stating what the actual catch has been, which has no doubt been large, when it is stated that there are no less than 400 boats used for the purpose of line-fishing.

Prawns.—The catch has not been quite so large as taken during the previous year, the falling off having taken place at Lady Robinson's Beach.

Sharks.—Have been more than plentiful in the bay and up the river.

Fisheries Inspectors' Reports.

Sir,

Fisheries Office, Nelson's Bay, Port Stephens, 7 January, 1896.

I have the honor to submit the following Report on the condition of the Port Stephens fisheries for the year 1895:—

The output of fish has been about 7,800 baskets, or an increase of something like 1,300 baskets as compared with previous year. Now, it would appear to anyone unacquainted with these waters that the fishing industry has a bright prospect before it; but, in point of fact, the industry is dead. Certainly some good hauls of fish have been made in the vicinity of the Heads, but they have been travelling fish—either fish that periodically make their exit from the Lakes, or fish approaching from seaward. The great bulk of the fish have been captured in Myall and Smith's Lakes, and it is a rarity now to see a mullet jump in the local waters here.

The distance the fish have to be conveyed from Myall and Smith's Lakes makes the industry in those waters prohibitive to everybody save to those who own small steam launches. There are two such launches employed on the Lakes during the winter months, and one only during summer time. The owners of these launches convey their own fish to Nelson's Bay for transhipment to a somewhat larger vessel; but I have been told that after all expenses are paid very little "grist" remains.

The advent of prawns in the Myall Lake is generally about two month's later than the River Hunter. During the first three months of the year prawn fishing was in full swing, when a rise in the Lake put a stop to the industry.

About 600 bags of oysters have been despatched from the Port Stephens beds. I regret to say that the mud and worm disease is as bad as ever, and that no attempts at eradication have been made by the lessees. Since the advent of the disease, and the disastrous floods which denuded the bed of the river Karuah of its oysters, the oysters have never reappeared in the Karuah.

With regard to the crayfishing industry I have very little to report, as I have no knowledge of the quantities taken during the season; but from observation, and from what I can gather from all sources, it would appear that the grounds have been over-fished and need a rest for a year or two.

I have, &c.,

H. LAMAN,

The Acting Secretary, Sydney.

Acting Assistant Inspector of Fisheries.

Sir,

4 January, 1895.

I have the honor to submit my Report on the waters under my supervision for the year 1895.

Lake Macquarie yielded a great many more fish this year than it did the previous one; but, I must say, I expected a great deal more, for enormous shoals of bream and whiting travelled up the channel to the Lake during the winter months, and not one-fourth of them have been caught. One great drawback to the supply of fish was the exceptionally dry winter. The bottom of the Lake at that period of the year could be seen almost anywhere, and, as the nets used were diver nets, fish could see their way of escape, as soon as they found themselves enclosed, by merely swimming over the cork line. Notwithstanding this fact, two of the largest catches of fish of the species named below that can be remembered by fishermen of Lake Macquarie were obtained by W. Clouten. They were thirty-nine baskets of all schnapper caught on the 2nd July, and eighty baskets of bream caught on the 30th July, both hauls being made within a stone's throw of each other at Wangi Wangi Point. The river and other portions of the Lake were thrown open to the use of fishing nets during October after having been closed for two years. This proved a great harvest to fishermen. Eighteen boats' crews worked in and about the river, where no less than 250 baskets of fish of all kinds were caught on the first day, a great many of them being very large sand whiting. Towards the end of the year salmon came into the river from sea by myriads. These were accompanied by numbers of large sharks. Over a dozen of them were caught with line and hook off the bridge here at night by residents, the largest being 10 feet long. Prawns were very plentiful again this year, but they are of no use for market, as, when cooked, all are found to contain inside some black substance resembling mud. It does not spoil the flavour of the prawn, but they will not sell. A great many are caught by anglers for bait. Amongst those prosecuted for breaches of the provisions of the Fisheries Act were three persons convicted of fishing in closed waters and two others convicted for exploding dynamite to destroy fish. They were fined the minimum penalty, which was afterwards reduced to £3 and costs each. The total number of baskets of fish sent to market and direct to different country towns from Lake Macquarie was 13,850.

I have, &c.,

F. ALDRICH,

MR. F. W. SMITHERS,

Acting Secretary,

Department of Fisheries, Sydney.

Assistant Inspector of Fisheries, Swansea.

Sir,

13 January, 1896.

I have the honor to forward to you my Annual Report of the fisheries of the Parramatta River, which were under my supervision till December, 1895.

There has been a great improvement in the quantity of fish in the Parramatta River this last few months, all the bays being alive with mullet. This I attribute to the closing of Sydney Harbour against net-fishing and prawners during the winter months, and I think this should be done every year. In the winter fish will carry long distances; but in the summer, when fish will not keep, there can always be a supply of fresh-caught fish from Sydney Harbour.

Tuggerah Lakes.

Since 1 December I have been stationed at Tuggerah Lakes.

These lakes are in a very low condition, there having been no Inspector stationed here for two years, and only occasional visits having been made by Inspectors from Sydney.

The low condition of these lakes is due, in a great measure, to the fishermen using great lengths of net, the nets being set and hauled in the entrance from the sea, thereby stopping and frightening the fish away which would otherwise have come into the lakes.

The channel entrance is also almost closed, and will close altogether unless there comes a heavy fall of rain to wash the entrance out. Since I have been stationed here I have seen large shoals of fish come to the entrance, but could not get over, there being not sufficient water to allow them to get in.

In all the creeks there are large quantities of small fish, a large percentage of them being bream from 2½ to 4 inches long.

There

There is a large quantity of blubber in these lakes, which has been the only protection the fish have had lately, the men having to let the blubber out of the net before they get the net half-way in to shore, and a good many fish escape along with the blubber.

There have been several boats left these lakes lately, which must show that the fish are decreasing. The take for the month of December has only been 528 baskets.

The Secretary, Department of Fisheries.

I have, &c.,

CHARLES GORDON,

Assistant Inspector of Fisheries.

Sir,

Hawkesbury River, 9 January, 1896.

I have the honor to submit herewith my annual report on the Net, Line, and Oyster Fisheries of the Hawkesbury River, the district under my supervision.

The total quantity of net and line fish caught and sent to market during the past year is 4,160 baskets, which is a serious falling off of quantities caught in former years.

The kinds of fish caught with the net are principally mullet, bream, whiting, perch, blackfish, whilst the line fishermen contribute jewfish and flathead, and also a few schnapper. Line fishing is also largely carried on by picnic parties.

I beg to state that Cowan Creek, and also the lower Hawkesbury River, is again infested with sharks, whilst turtle are also seen, but difficult to capture.

I beg to state, for your information, that the net fish above enumerated are fairly plentiful during the present time, but that a great scarcity of fish was experienced during the whole of the winter months, when most of the fishermen were compelled to seek employment elsewhere.

I would again respectfully urge upon the Commission the necessity of entirely banishing or abolishing the gar-fish nets, which nets are alone responsible for the great destruction of small and immature fish.

Of the oyster fisheries of the Hawkesbury River, which not many years ago gave employment to several hundred persons on this river, there are still a few oyster leases in existence, but no oyster culture has ever taken place, or ever attempted at the Hawkesbury River.

I beg also to state that there is still some worm disease in the oysters, but this disease is now mostly confined to low water oysters; and it is therefore not a serious obstacle to oyster culture. But the whole object of an oyster lessee is to pilfer all he can get off Crown land not under lease.

The total quantity of oysters shipped during the past year, and said to have come off the leased areas, is 963 bags.

Of this quantity, 100 bags may be said to be New Zealand laid oysters, and not the product of this river.

The Secretary, Department of Fisheries.

I have, &c.,

P. SMITH,

Assistant Inspector.

Sir,

George's River, 6 January, 1896.

I have the honor to submit the following report of the fisheries under my supervision during the year ending 31st December, 1895.

Closed Waters.—In the closed waters of George's and Woronora Rivers throughout the year, mullet and jewfish were in great abundance, while whiting, bream, and other fish were plentiful. Looking from the Como Railway Bridge during the winter months the whiting and bream could be plainly seen lying about the bars and flats. From about the end of September, during every hard blow, the fish would travel, the hard-gut mullet leaving in fine shoals. The anglers obtained some very nice catches of black bream, flathead, and jewfish about the Railway Bridge, Jewfish Point, and other places.

Open Waters.—From the beginning of the year to the latter part of May, fish (principally mullet) were very plentiful, and some very large hauls were made at Kurnell and La Perouse beaches, and during February and March some nice lots of sea garfish also were caught about the Heads and Kurrannulla Beach, but during June, July, and August fish of all descriptions were very scarce, many of the boats and crews leaving for waters both north and south. Others pulled their boats up, and went to work on shore, as they could not catch enough fish to pay for wear and tear of gear. From the beginning of October the fish began to improve in quantity, and about the end of the year were plentiful, in fact, the fisherman say they have seldom seen them more so, but owing to them laying wide and the vast quantities of blubber, they were unable to make any large hauls. Although the George's River was opened to net-fishing on 10th December the fishermen, owing to the blubber, did not work it regularly, but up to the end of the year about thirty hampers of sand whiting and seventy of mullet and blackfish were taken out of these waters. I may state that I cannot account for the scarcity of trumpeter-whiting during the year; and I think it is a good number of years since they were so scarce. In former years, during May and June, they were nearly always to be found about the mouth of the river, but this year they have almost entirely disappeared.

Prawns.—This has been another very prosperous season for prawns. From January to the end of May, and from September to the end of the year, they were very plentiful about the Salt-Pan Creek and Cook's River. At Lady Robinson's Beach during February and March they were in great abundance, as many as thirty hampers being killed in one haul.

Oyster Fisheries.—The oyster fisheries of my district are still in a very bad state and show no signs of improvement, the foreshores being kept bare by the public and oyster pilferers. The mud or worm disease is still prevalent, and has now reached the mangrove leases. I saw some few oysters from leases Nos. 2,250 and 2,258, and three or four in each dozen are very bad, but those that have escaped are in splendid condition.

In conclusion I would like to draw your attention to the great quantities of sharks that now infest these waters. They range from 5 to 12 feet in length, and travel miles up the river, a large one, measuring 10 feet in length, being caught in a net, about 7 miles above the railway bridge. In my opinion it is the mullet that attract these monsters so far up these waters as they are to be often seen breaching after these fish about the river and bay.

Chief Inspector of Fisheries, Sydney.

I have, &c.,

J. D. GRANT,

Assistant Inspector Fisheries, George's River.

Sir,

Sir,

Wollongong, 20th January, 1896.

I have the honor to submit my annual report on the fisheries of the Illawarra District.

Lake Illawarra still keeps its reputation as a most prolific fishery, the output for 1895 showing an increase of 2,063 baskets on that of the previous year.

Seven thousand two hundred and thirty-seven baskets were railed to Sydney to meet the metropolitan supply, and 2,015 were consumed by the inhabitants between Kiama, which is 6 miles to the south of the fishery, and Helensburgh, which is 20 miles to the north.

In addition to these, 248 boxes of prawns were taken, which is an increase of 151 on the previous year.

The varieties caught consisted of bream, blackfish, mullet, flathead, jewfish, and a few perch and whiting.

The supply of bream was much larger than last year, and the quality of the fish much better. During November and December large schools of bream were observed outside and some worked into the lake, of these it was noticed that they were full roed, while fish of the same variety in the creeks and the lake itself were in that condition as early as August and September.

The supply of mullet and garfish was not so good as in previous years, but unusual quantities of the young of the former fish have been noticed this year, and the fishery is well stocked with young fish of the varieties caught. Large shoals of sea garfish have been seen outside, but no attempt made to take them.

No prawns were taken between April and October as they took off during those months, but they were fairly plentiful in November and December.

The channel is fairly well stocked with oysters and no disease exists. Tom Thumb Lagoon and Para Creek are well stocked with young mullet, bream, and whiting. The oyster deposits in the former place are in fair condition.

In September and October outside fishermen reported to me, and I myself saw from the beach at the entrance, immense schools of pilchards at sea. They lay off the coast between Five Islands and Barr's Point for several weeks. No effort was made to capture any.

The crayfish which abound in the reefs of the coast have, as usual, not been worked. I am sure they exist in large and payable quantities.

I regret having to report that, owing to a defect in the "Sunk Nets Act," I failed to get a conviction in a case in which I prosecuted certain fishermen for using a net which, although not a sunk net within the meaning of the Act, is a net when in use equally damaging to the fishery, and is a sunk net morally although not legally.

The net I refer to was 552 yards long, 6 feet deep in the wings, and 40 feet in the centre, the lead lines were twice as thick as the lead lines of an ordinary hauling-net, and the lead twice as heavy, and fixed about 18 inches apart. The corks were further apart than in the ordinary hauling-net, and insufficient to float the net if shot in water deeper than the depth of the centre of the net. The wings were hung on the half instead of a third as usual.

It was shot about 500 yards from the shore into deep water, and hauled ashore by means of hauling-ropes about 500 yards long, which were attached to windlasses. While being hauled the cork line was under the surface and the lead lines scraped the bottom. When in using this net, if hauling is stopped, the cork lines of the centre float, because the water of the lake is so shallow that the leads do not draw on them, but if the net were hauled in sufficiently deep water the whole would sink.

The extraordinarily deep centre of the net forms a purse as soon as the net is hauled, but the purse not being attached to the net, and the cork line of the centre floating when the hauling is stopped was, in the opinion of the Magistrate, sufficient to take the net out of the definition of a sunk net as contained in the Act.

On the first occasion the net was used about 100 baskets were taken in one haul, and it is now a usual thing to take 40 and 50 baskets in a haul.

In the opinion of the most experienced fishermen on the lake, the continuance of the use of such nets will have a ruinous effect on the fishery, the area covered by the net and ropes being so great, and the effect of the scraping the bottom, being calculated to frighten the ground fish away from the place.

I may say that with reference to the extension of the Sunk Net Act to the fishery, I took action in the representation made to me by nine of the resident fishermen, representing thirty-four other fishermen, who was convinced that the use of such nets would spoil the fishing in a very short time.

I have, &c.,

The Secretary, Department of Fisheries.

D. W. BENSON.

HERRINGS FOUND ON THE COAST

1. Blue Sprat—*Spratelloides robustus*, Ogilby. In shoals. December to May.
2. Maray—*Etumeus jacksoniensis*, Macleay. Appearance uncertain, in shoals. Autumn and winter. Possibly abundant outside.
3. River Herring—*Potamalosa antiqua*, Ogilby. Abundant; all eastern rivers.
4. Sandy Sprat—*Hyperlophus spratellides*, Ogilby. Estuaries.
5. Silver Sprat—*Hyperlophus glycyis*, Ogilby. In shoals. Outer beaches. Autumn.
6. Pilchard—*Clupanodon neopilchardus* (Steindachner). In shoals. Outside. Winter. Rarely entering bays.
7. Herring—*Kowala castelnaui*, Ogilby. In shoals, principally outside. Winter.

ANCHOVIES.

1. Southern Anchovy—*Engraulis antipodum*, Gunther. In shoals. Autumn.

1897.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

FISHERIES OF THE COLONY.

REPORT OF COMMISSIONERS OF FISHERIES FOR YEAR 1896.)

Presented to Parliament, pursuant to Act 44 Vic. No. 26 sec. 69.

Printed under No. 17 Report from Printing Committee, 26 August, 1897.

Report of the Commissioners of Fisheries for New South Wales on the Fisheries of the Colony, for the year ending the 31st December, 1896.

Sir,

In submitting our Report on the Fisheries of the Colony for the year 1896, we have the honor to state that the constitution of the Board remains unchanged.

Finance.

The departmental revenue shows a small increase over that of 1895.

In the number of fishermen's licenses there has also been a slight increase in the issue for the same period. The following substantial increase has also taken place in the amount paid as deposit on lease applications for the purpose of oyster-culture, viz., £577, as against only £65 the previous year, thus showing an increase of £612.

The sum paid for deed fees, although not in the same ratio, presents a very gratifying result, being £98 in the past year as against only £8 in 1895.

Rents paid on leased areas, however, mark a small decrease from the previous year, as we have received the sum of £1,345 15s. in payment thereof, whereas the previous year produced £1,395 10s. This decrease of £49 15s. is to some extent accounted for by the cancellation of a number of areas for non-payment of rent. We anticipate an increase in the rentals for 1897, which we think will be highly satisfactory.

Official Staff.

We have to report a substantial reduction in our staff during the year. The estimate for salaries alone was £2,338; but, in June, the Public Service Board, acting in some measure upon our recommendation, reduced these by £562. Mr. Lindsay Thompson, Secretary and Chief Inspector, with a salary of £470 was retired, and Mr. Smithers, the Travelling Inspector, was appointed to his position at a salary of £300, and the position formerly held by Mr. Smithers was not filled. Mr. O'Meagher, the Accountant, whose salary was at the rate of £180 per annum, was transferred to another Department.

*50—A

[537 copies—Approximate Cost of Printing (labour and material), £6 15s. 6d.]

Messrs.

Messrs. H. Laman and R. Seymour were also retired. The former, who was Customs Officer at Port Stephens, supervised the fishing there, and for which duty he received the sum of £50 per annum. We feel the loss of this officer, as he was always most attentive and painstaking in the performance of the duties entrusted to him. Mr. Seymour, Inspector of Nuisances in Sydney, was also allowed £50 for his services in attending the Fish-markets at Woolloomooloo, and in keeping a check on the sale of small fish and those that were unfit for consumption, and also furnishing returns weekly of the quantity of fish sold at the market, with the prices realised.

The loss of these two officers has been keenly felt by us, as not only is Port Stephens left without supervision, but we are also deprived of the returns from Woolloomooloo Markets, robbing our Report of much useful information generally shown in the Appendices.

Oyster-culture.

The beds and deposits under lease for oyster-culture are in a very satisfactory state, and show that oyster-culture during 1896 has been well attended to by the many persons who have taken up areas for that purpose.

We report an increase of 2,874 bags in the supply taken from the leased areas throughout the Colony during the year. The take has been 12,287 bags, as against 9,413 for the previous year.

The enumeration of the take from the various oyster fisheries on our coast is as follows:—From the Tweed River, 573 bags as against 153 last year; Richmond River, 580 bags as against 254; Evans River, 454 bags as against 166; Clarence River, 43 bags as against 26; Bellinger River, 322 bags as against 166; Hastings River, 481 bags as against 239; Camden Haven, 669 bags as against 969; Manning River, 1,205 bags as against 1,948; Wallis Lake, 1,859 bags as against 2,140; Port Stephens, 1,136 bags as against 737; Hunter River, 1,231 bags as against 589; Brisbane Water, 26 bags as against 115; Hawkesbury River, 1,488 bags as against 864; Pittwater, 15 bags as against 18; George's River, 265 bags as against 27; Shoalhaven River, 176 bags as against 112; Jervis Bay, 38 bags; Narrawillie, 15 bags as against 18; Clyde River, 1,704 bags as against 803; Bermagui, 14 bags as against 50.

We are able to report a decrease in the number of bags of oysters imported during the year, as 5,629 bags were received as against 6,776 of the previous year, Victoria having sent 65 bags; Queensland, 3,276; South Australia, 228; and New Zealand, 2,060.

TABLE showing the approximate quantity of Oysters taken from the areas under lease in the Colony for the last nine years.

Year.								Bags.
1888	9,184
1889	6,914
1890	6,092
1891	4,727
1892	7,428
1893	5,542
1894	8,086
1895	9,413
1896	12,287

In reference to the foregoing detailed comparison of annual returns, it is noteworthy to observe the marked improvements in the take from the leased areas in the Colony, and this can be traced to the greater care bestowed on holdings by the lessees. We have only to refer to the tabulated list from 1893 to the year of this Report in the Appendices to be convinced, not only that oyster culture is not waning, but also that it is steadily growing, and all things seem to indicate a great and successful future for this bivalve of succulent fame. The remarkable increase seen between the 9,413 bags of 1895 and the 12,287 bags of 1896 needs no trumpeting; it speaks volumes for itself.

The spawning has, in general, been most satisfactory all along the coast.

Some of the fisheries have been very heavily depleted through the ravages of the worm disease, more particularly at the Hunter River. At this place the lessee has adopted the drastic plan of putting men on to dredge up the oysters and shells, and place them on the shore to kill both the worm and its eggs.

There has been during the year an exceptional demand for lengths of foreshore for oyster culture, and great care has been exercised in recommending the issue of leases only to desirable persons, and the Report of the current year will show with what result.

Fishing.

Fishing.

We are unable to furnish a record of the quantity of fish received at the Woolloomooloo Market during the past year, as it had been deemed advisable to dispense with the services of the officer whose duty it has hitherto been to provide such returns, and also owing to the rearrangement of the rules regulating the disposal of the fish. Various officers have, however, been constantly visiting the Market, and, in response to inquiries made from time to time, we have been informed that the volume of fish received has, to a small extent, decreased, owing to the alteration of the old rules. You will thus see that those now in force are militating against the progress of this centre of distribution.

We have to draw your attention to one improvement, and that is the introduction of marble tables, upon and from which the fish are exposed for sale. You will recollect that heretofore the fish were sold by the auctioneers from the floor, but a few marble tables have now begun to supersede the old system, and from these the agents now sell the fish. There is much to be said for this innovation. While successful in the direction of cleanliness, the increased expense in connection with them is anything but a financial success.

Hudson's Market.—This centre is fast assuming the premier position in the amount of business passing through it; and this is to be accounted for, to a very great extent, by the fact that it is situated on the railway line, and fish from the various waters abutting on the railway line are thus enabled to be placed directly on the market, without incurring the expense of cartage, which, as you are aware, is a consideration of no small moment to all concerned.

The method of disposal is from wooden tables, and the system has been found to answer admirably; and fishermen, in a great measure, take advantage of the central distributing position of this market, and patronise it to a great extent, followed likewise by the hawkers and dealers. There appears to be a greater degree of interest in this market, and more pains seems to be taken to make things move without friction; and this, in our opinion, is a factor not to be lost sight of in matters of this kind.

We have obtained information from this market which shows that the sale of fish realised the sum of £7,659 10s. 3d.

McFadgen's Market.—This market's returns also show a substantial increase, 8,616 baskets having been sold during the past year, which realised the sum of £6,031, whilst for those sold during 1895 only £2,100 was obtained. This increase will be admitted as highly satisfactory.

The prices realised are to be accounted for by the fact that the fish received from Botany are, for the most part, in the pink of condition, thus commanding high figures.

The fish marketed from both Botany and George's River present so evenly saleable an appearance that they are sought after with growing appreciation.

Fish Acclimatisation.

In the course of the year just terminated, we completed the purchase of a considerable quantity of trout ova from the Wellington Acclimatisation Society of New Zealand, part of which was the variety known as brown trout, and the rest from the rainbow, the latter fish being well known for its hardiness and adaptability to higher temperatures, and is, in consequence, as you will see latter on in this Report, in considerable demand in the warmer parts of the Colony.

The whole of the two shipments were received by us in splendid condition, and, on their arrival, were, as expeditiously as possible, removed to the hatching-house, at Prospect; and the hatching, we are pleased to say, was carried out with most gratifying results.

Distribution.—As soon as the fry were in condition to be moved, they were first placed in the rills and ponds, till they increased in size and strength sufficient to warrant their final dispersion throughout the Colony; and this has been carried out, in our opinion, most successfully in every respect to the following places:—Hastings River, Lawson, Adaminaby, Tarana, South Creek, St. Mary's, Peel River, Collector, Forbes, Wallerawang, Burrowa, Muswellbrook, Carcoar, Orange, Hartley, Severn River, Quirindi, Dubbo, Moki River, Buckley's Crossing, Bathurst, Wollondilly River, Manning River, Murrumbidgee, Teralga, Paterson, Glanmure, Macdonald River, Bell River, Page River, Beardy River, Lithgow, Joadga Creek, Maitland, Singleton, Mudgoe, Tumut, Nimitybelle, Upper Queanbeyan River, Upper Murray River, Rylestone, Tumut, Bendemeer, Apsley River, Glen Innes, Tumbarumba, Armidale, Abercrombie River, Ben Lomond, Waterloo Creek, Hill Top, Illawarra Line, Berry, Umarella, Jindabine, Woolbrook, Snowy River, George's River, Albury, Gundagai, Marulan, Moonbi, Walcha, Crookwell, Kelso, Uralla, Clarence Town, Llangothlin, Queanbeyan, Uriarra, Goodradigbee, Michelago, Bungendore, Captain's Flat, Tarago, Bredalbane, Bombala, Matherson, Glanmire, Deepwater, Raglan, Tuena, Aberbaldie, Wellington, Blaxland Platform.

We

We placed a number of the fry in the rearing-ponds, and the progress made in their growth has far exceeded our expectations, as we have now some very fine fish wonderfully well developed, proving their adaptability to all circumstances.

The introduction of the rainbow trout is, in our opinion, a matter of no small moment on account of its hardy nature, as already stated, and the high perfection it attains in waters of a comparatively high temperature. We anticipate a great future, as a result of our efforts in this direction, with this variety of fish.

At the request of the Government of Queensland we hatched at our hatchery some 20,000 ova, and towards the close of the year the fry were duly forwarded to Warwick in safety.

We have, during the year, received a number of reports either of trout having been seen or caught, and in the Appendices will be found an interesting letter from Mr. Burnside, who caught fish at Bibbenluke.

We wish to record our sincere thanks to the Commissioners of Railways for again so materially assisting us in our distribution of the young fish by carrying them free of charge, and also by granting a free pass to the officer in whose charge they were.

Inland Fisheries.

The Returns.—During the year 9,420 lb. of fish were sent to Victoria from Moama and Koondrook, as against 64,076 lb. in 1895. The returns from both these centres on the Murray River, which form Victoria's principal supply of fresh-water fish, show a decrease, which, in our opinion, is caused through overnetting, which was carried on to such an extent that we considered it necessary to have the whole of the River Murray closed against the use of fishing-nets from October to February inclusive, whilst the Victorian authorities issued a proclamation proclaiming a close season from the 1st July to the 15th October.

The steps taken have, in our opinion, been the means of thus protecting a vast number of fish, more especially during the spawning season of the Murray cod and perch.

Although the closures were made as stated, we notice fish were sent to Victoria, notwithstanding, during the months named, thus proving that supervision is required.

It is our intention to make some important closures during the coming year, if provided with sufficient staff to give effect to our decisions by exercising the requisite oversight.

Wallis Lake.

We have to record a most satisfactory increase of both fish and oysters in the waters of this lake, and in order to continue to protect this important fishery, we considered our best course would be to send Inspector Massingham to supervise, and this was done with most satisfactory results.

The present year will, we hope, show a corresponding increase for our next Report.

Port Stephens.

Here, unfortunately, we have but little to record, as owing to the lack of supervision, caused by the withdrawal of Inspector Laman, the fishing grounds have been at the mercy of one and all, and with results which can be better imagined than described.

You cannot fail to see how disastrous is the course followed, and there is no need for further comment—the facts speak but too loudly for themselves—though we of course see that owing to the limited funds available nothing else could be done.

Tuggerah Lakes.

Tuggerah Beach Lakes still continue to keep up with Lake Macquarie in the quantity of fish caught, taking no less than 11,422 baskets, as against 8,071 the previous year.

We deemed it essential to have a small area resumed at the lakes' entrance, in order that the Inspector could reside there to more effectually supervise the lake entrance, channel, and flats, as the officer will be located upon the part which requires the most supervision, in order to effectually preserve the fisheries of this important lake. We have experienced a large amount of trouble in keeping the entrance clear, and eventually it was found absolutely necessary to employ labour to cut a channel through the sand bank which unfortunately made right across the entrance, thus stopping the inflow of the sea, and was found to be acting most detrimentally upon the fishing.

The line fishermen have not had the same good catches as hitherto. This may be accounted for by the entrance blocking up.

Hawkesbury

Hawkesbury River.

The supplies from this direction are about the same as last year, and as the closing of the waters against the use of fishing nets appears to have led to the increase of the fish, we decided, towards the close of the year, to open them to net-fishing, with the single exception of Cowan Creek, where we trust the fish will be protected, and we look forward to being able to report more extensively of these waters at the close of the coming year.

The line fishermen have again been most successful, but we have no means of ascertaining the quantities caught by them, but we are satisfied that the total catch has been large.

Port Jackson.

The fish supply has been maintained from these waters. Nearly 120 licensed fishing boats have been in use procuring the same for market. Contrary to the course pursued last year of closing the tributaries of the harbour against net-fishing we, during the summer months, had the proclamation closing the various parts of the harbour rescinded with satisfactory results, as the markets were well supplied with fish freshly caught during the summer which was a great boon to consumers.

We regret, however, to have to record again the unnecessary destruction of small fish by the line fishermen, who seem to be regardless of the damage they are doing in the waters.

Prawns.—These waters have produced a large quantity of prawns during the year, and the market has been well supplied. There is, in our opinion, great destruction caused to young fish-life by the prawn fishermen, who continue to use what is termed a "sunk net," which net is a most destructive implement of fishing, for nothing escapes it.

Sharks.—Again a number of these have been caught in the harbour, and a reward of 5s. is paid for those measuring from 8 feet to 10 feet, and 10s. for those over 10 feet. The measurement is taken from end of snout to tip of tail.

Unfortunately line fishermen, "sunk nets," &c., are not the only foes with which we have to contend in our efforts to conserve the young fish. We have yet to discover how to effectually nullify, if we cannot do away with, the continual increase of sewerage matter which flows into the harbour from the various tannerics and other noxious trades, thereby polluting the water and causing great destruction to fish-life.

Botany Bay and George's River.

These waters have again produced over 12,000 baskets of fish for the year, and, as a rule, the class of fish has been the same.

The reputation of these waters has been well kept up, as, we think, is deserved.

A very large number of boats with both lines and nets are constantly at work here, and all seem to get a fair harvest of all varieties with the exception of sea mullet which has not been caught in anything like the quantities gathered in previous years. These fish came in large shoals, but kept too wide for the fishermen.

The closures enforced as reported last year with beneficial results are being continued.

We had the proclamation prohibiting the catching of prawns during the months of June to September extended to these waters with most beneficial results, thus preventing the continuous working of the prawn net by fishermen who were unable to work them in Port Jackson on account of the proclamation being in force there.

The line fishermen have as usual destroyed an incalculable number of small fish, which could be prevented if we had different Regulations.

Lake Illawarra.

Last year's encouraging report on this lake has, to a small extent, been lowered this year as the catch of fish has been 8,386 as against 9,252 of the previous year, and for which decrease there is no accounting for, as certainly the fish were plentiful in the lake.

The sand formed a bank right across the entrance which interfered, to a small extent, to the fishermen following out their calling until the residents, with the aid of the fishermen, undertook to make an opening; and they were fortunate in their efforts.

Shoalhaven River.

As with last year, there is little of importance to note, the fish supply being about the same.
Oysters.—The supply has certainly increased.

Jervis Bay, Berrewhere.

Of these waters we have nothing of note to report, as the production of fish and oysters has been about the same as the previous year.

Numbers of fishermen come from other parts to these waters during the cool months and send their catch to Sydney by rail from Nowra, a distance of 92 miles.

Fisheries Inspectors' Reports.

Sir,

Sydney, 4 February, 1896.

I have the honor to inform you that, in accordance with your request, I proceeded to Bibben-luke River, with a view to report on its capabilities as a trout stream, as to the present condition of the trout already therein, and also to catch some of them in the orthodox way, viz., with an artificial fly or minnow and rod and line.

Owing to the protracted drought—there having been little or no rain for two years—the river is lower than it has been for many years, and is also very full of weeds and generally in a dirty condition. There are, however, several big, deep holes, in which the fish are at present. It is well adapted for trout, as the bed consists of gravelly stretches, rocky runs and stickles, with big, rocky, deep pools, alternating in a most suitable manner. The banks are lined in places with splendid willows, the roots of which and the overhanging banks providing excellent cover and protection for the fish; the bed, also, in places consists of large boulders and rocks, which also provide excellent shelter, and I am of opinion that with from 1 foot to 2 feet more water (which is, I am informed, its usual summer level), this river would be a most excellent river for trout. There appears to be abundance of food for the fish in the shape of flies and their grubs (which latter live in the weeds), water spiders, beetles, and many other sorts of water insects, which I saw but did not examine closely. There is also a small blackfish, which I was told was the Victorian blackfish, sometimes called the marble trout. I also saw large eels, which no doubt feed on the trout-spawn and fry; but, on the other hand, the large trout will feed on the young eels, and so balance matters. There appears to be few black cormorants about; but Mr. Edwards wages perpetual war against them, shooting them whenever he gets a chance.

With regard to the fishing, I succeeded in catching with a fly three fish weighing 3 lb. each. The only time the fish seem to be on the feed is from 5 p.m. till dark, and perhaps all night; and even then it greatly depends on the weather, as out of the five evenings during which my visit lasted only two were any good for fishing, and on those two evenings I caught the fish. On the other evenings there was either a cold sea-mist with an easterly wind, or a southerly gale, both of which conditions of the weather were equally successful in putting the fish down, not a sign of a fish being seen, although I spent the whole of one day and the morning of another wandering up and down the river for 2 or 3 miles. I tried with the Devon and Chantom minnows, and with a Haleyon spinner (all very deadly in Great Britain and Tasmania), but had no success, principally because the weeds were too thick, and the current not strong enough in the present low condition of the river. I have, however, no doubt that fish up to 5 lb. and over will some day be caught there with these and other lures besides the fly, especially when the river has been in flood and the weeds washed away. On opening one of the last fish caught I found it was a
hen

hen fish, with the ova well defined, there being two strings of ova, from 6 inches long and $1\frac{1}{2}$ inch broad and 1 inch thick. The two other fish showed no signs of either ova or milt. I am told that 10 miles higher up, the river leaves the basalt plains or downs and enters the hills, and there becomes a rocky, quick-running stream, with dark-coloured water; and that the small fish have been seen travelling up towards these hills, no doubt to take up their quarters in the stronger-running waters. I did not see any small fish except fry, about $1\frac{1}{2}$ to 2 inches long; and I cannot say whether they were trout or not, as I had no means of catching them. I, however, saw one small dead fish, about 4 inches long, which was undoubtedly a trout.

The recent very hot weather has no doubt killed a few fish, as I saw four dead fish, all about $2\frac{1}{2}$ to 3 lb. in weight; and, as you are aware, Mr. H. T. Edwards caught and sent down three fish of varying sizes, all of which were caught in the shallows, having no doubt been sickened by the hot, shallow water.

In conclusion, I consider there is a great future for the trout and trout-fishing in the Bibbenluke and surrounding rivers, especially if an annual supply of from 500 to 1,000 yearlings were put in these for the next few years. I would also recommend that an expert be sent to the district to strip the fish artificially next spawning season (I believe about August and September); or, should that be impracticable, that Mr. Edwards be asked to try and do so, and that full details of the methods usually followed be supplied to him for his guidance and assistance. The ova so obtained could be treated on the spot, or brought to Sydney to be hatched at the Prospect Dam hatchery.

Mr. H. T. Edwards told me that three kinds of trout had been placed in the river; but the ones I caught were all brown trout, of the same kind as those I have caught in the Tasmanian rivers.

I have, &c.,

C. K. BURNSIDE.

The Commissioners of Fisheries of New South Wales.

Sir,

I have the honor to submit my annual report of the fisheries of Tuggerah Beach Lakes for the year 1896.

The fish supply of these lakes for the year just ended has been quite equal to former years, although at the beginning of the year the entrance became silted up, thus to a certain extent stopping the fish from getting either in or out; then when rain came the waters in the lakes rose and covered all the landing, so that the fishermen could not land their nets.

The fishermen made three attempts to open the lake, but failed. It was then taken by contract by P. Flanagan for the sum of £10, and he succeeded in opening the lake on the 1st August, thus lowering the water in the lake, and enabling the fishermen to work again.

I am sorry to say that through the absence of any heavy rainfall the entrance is silting up again. I think that some steps might be taken to try and keep the entrance to these lakes open, seeing that they contribute so largely to the general supply of fish.

I may mention one peculiar instance of fish-travelling which I saw. On February 27th there was a heavy sea on, and at high water, when the sea was washing over the bank, the fish (bream) would come over and would lay stranded till the next sea came and washed them further into the lake. At that time three fishermen caught twenty-three baskets of those fish as they lay stranded waiting for the next sea to carry them into the lake. On that occasion there must have been many hundreds of baskets came into the lakes.

The average number of men working has been about seventy and thirty-five boats, but the men shift about very much. The total catch sent by rail for the year has been 1,142 baskets. This is exclusive of the quantity which are smoked, which would fully make up to 1,000 baskets per month as the catch of the fishermen.

C. GORDON.

Sir,

Blakehurst.

I have the honor to submit the following report of the fisheries under my supervision during the year ending 31st December, 1896:—

Woronora River.—These waters were closed to net-fishing the greatest part of the year, and during that time fish of all varieties were very plentiful. From the early part of June to the latter part of September it was thrown open, and during that time upwards of 1,000 baskets of mixed fish were killed. From the beginning of November, during hard southerly and westerly winds, a large lot of hard-gut mullet left these waters.

George's River.—These waters were open to net-fishing all the year, and with the exception of the month of June and July there was a good supply of fish. During these months there was a heavy freshet in the upper part of the river, which brought the fish down about the mouth, the boats catching from ten to twelve baskets (principally black-bream) at a haul. This freshet also killed great numbers of jewfish, and I have seen dozens of soles floating on the surface; but they mostly recovered as soon as the freshet abated, although numbers were left dead along the shores. The catch of sea-mullet this season was very small; not that there were not plenty of fish travelling, but they kept on the rocks or in the middle of the bay, and out of the reach of the fishermen.

The supply of fish for the year would, to give a rough estimate, total about 12,000 baskets; about 3,000 from that quantity were used for local consumption.

I would beg to draw your attention to the quantities of red bream and whiting, not weighing more than 4 oz. and 2 oz. respectively, that are killed by pleasure parties by line, as many as 20 dozen being killed in a day by a party of three. Frequently you can count from ten to twenty boats' crews catching these fish.

Prawns.—The principal ground for prawns in this district is Lady Robinson's Beach, which failed to uphold its reputation this season, very few being caught. From Cook's River there was a medium supply, while in Saltpan Creek and other parts of the river they were very scarce.

Oyster

Oyster Fisheries.—The oyster fisheries about the upper parts of the river and in the deep water are still in a bad state with the worm disease, and though it has shown signs in the oysters about the mangroves at the mouth of the river it does not seem to spread. During the year there were six applications for oyster areas about the mangrove flats, about 6,000 yards being applied for. The oysters collected from the various leases amounted to 287 bags, the removal of which I have reported.

The following persons have been convicted for breaches of the Fisheries Act during the year, viz., W. Smith, J. Brown, J. Martin, W. Hannan, H. Sweetman, R. Keep, J. Douglass, junr., J. Douglass, senr., Thomas Douglass, and E. Douglass. I also seized an illegal net, but could find no owner.

I have, &c.,

J. D. GRANT,

Assistant Inspector, George's River.

Sir,

Wollongong, 20 March, 1897.

I have the honor to submit my annual report on the fisheries in my district for the year ending 31st December, 1896.

There have been forwarded from Lake Illawarra to the metropolitan market 6,661 baskets of fish and eight baskets of prawns, 1,725 baskets of fish being consumed locally.

I have to report a decrease in the output for 1896, showing a falling off of 856 baskets on that of the previous year.

The principal varieties caught were bream, blackfish, mullet, flathead, jewfish, garfish, tarwhine, and whiting.

The supply of bream has continued good, large quantities being caught. During July, August, and September these fish were very scarce, but during the summer months they were caught in large quantities up to the end of the year.

The supply of mullet and blackfish has been good. Several large shoals of hard-gut mullet worked into the lake during the month of February. Large quantities of young bream and mullet have been noticed in the creeks and bays of the lake from 2 to 6 inches in length. During the month of June very large schools of young fish from 1 to 12 inches in length were noticed in the entrance and flats in the lake adjacent to the entrance; these fish worked in from the sea. Several of the best hauling grounds have weeded up, and are in consequence of no value for hauling purposes, but there is no doubt they will be of great value for breeding grounds and protection of young fish.

Prawns this year have not been worked, only eight baskets being forwarded to the metropolis for the year. The channel is fairly well stocked with oysters, and no disease exists.

Large shoals of fish have been noticed coasting along in a northerly direction at sea during the schooling season. No means were taken to identify the different varieties the fish belong to.

Crayfish as usual has not been worked.

Tom Thumb Lagoon and Para Creek are fairly well stocked with fish. The proclamation closing Tom Thumb Lagoon from the use of fishing nets expired during the year, and it was found necessary, in consequence of overnetting, to close these waters for a further period of twelve months.

The deposits of oysters in these waters are in fair condition; no disease exists.

I have, &c.,

D. W. BENSON.

Sir,

Hawkesbury River.

I would herewith most respectfully beg to forward my annual report on the fisheries and oyster fisheries of the Hawkesbury for the year 1896.

Of the net fisheries, I beg to report that during the earlier part of the year fish were moderately plentiful; but during the winter months any kind of fish were then very scarce in all the lower parts of the Hawkesbury River and tributaries.

In the winter months the shoals of fish, consisting of mullet, bream, perch, Jewfish, and prawns, will travel then many miles to the upper part of the Hawkesbury River, and unless they are driven down by a freshet, will remain in deep holes until the approach of summer.

During the past year far more attention has been paid to prawn-fishing than formerly, and I may state that this river has produced a considerable quantity.

I would also beg to report that line fishermen have seriously diminished the supply in Cowan Creek, probably by the great number of picnic and fishing parties, and the indiscriminate destruction of small fish by the use of the fly-hook; and unfortunately the law cannot reach this kind of fisherman.

The total quantity of fish and prawns sent by railway and steamer during the year was 6,890 baskets, but of which many were not full.

Of the oyster fisheries of the Hawkesbury River, I beg to state that this once important industry is now in a very neglected condition.

Of the many areas held in the Hawkesbury River for oyster-culture, or for the more plentiful production of oysters, I would beg to state that not the slightest attempt has been made on any one lease to increase the oyster production, which could in many instances be done with a little labour and industry.

It appears to me, as I have pointed out on former occasions, that the possession of an oyster lease is only a license for stealing oysters and in getting them to market, which advantage a person has not if not a lessee.

The total quantity of oysters shipped during the past year, and said to have come off the several leased areas, is 1,158 bags.

I have no hesitation on stating that, in my opinion, the production of oysters in this river, under a different system of leasing and enforcing oyster culture, could be increased to a wonderful extent in each year's output.

I have, &c.,

P. SMITH,

Assistant Inspector.

Sir,

Sir,

Forster.

I have the honor to submit report of the net and of oyster fisheries of Wallis Lake during the period of my supervision, viz., from July 14th to December 31st, 1896.

The supply of fish during that period has been fairly good. During the months of July and August some exceptionally good hauls of jewfish were made by the Italian fishermen. Mullet, bream, and blackfish were also well represented.

During November and December, whiting, bream, and flathead were taken in fairly large quantities. Of the latter there is abundance in the lower waters, and provide remarkable good sport for the angler. I have been informed that in former years schnappers were in the lake in quantities, but the floods appear to have driven them all out. At present there are very few, only an odd one being taken at intervals.

Owing to the very extensive area of shallow water in this district, and the disadvantage under which the fishermen laboured with the short nets, the provisions of the Fisheries Act Amendment Act of 1894 has been extended to the waters of Wallis Lake. This Act allows nets up to 300 fathoms to be used which I think should meet all the requirements of the fishermen, and also be of considerable benefit to the fisheries, inasmuch as fewer hauls over the same ground will require to be made, and the fish less harassed and disturbed.

Owing to the want of proper supervision, I found on arrival that some of the fishermen had neglected to take out licenses; they, however, on being cautioned applied for them at once. I was also informed that some of their nets were illegal; the owners, however, took good care to keep them out of my sight, knowing that I had no boat to go after them.

On being supplied with a boat I made a seizure of two illegal nets, which were both confiscated. The number of licenses issued for the local men was 22 and licensed fishing-boats 7. These men are chiefly residents who pursue their calling all the year round, but during the winter months the number is augmented by Italians from the waters of Port Jackson and Botany. The output of fish for the period above mentioned was 1,697 baskets which is conveyed to the metropolis in ice-chests by steamer making irregular trips.

With reference to schnapper-fishing, little is carried on except for local requirements. A departure, however, will shortly be made in this direction, in the form of a well-boat, built and fitted out expressly for purpose of fishing the deep-sea grounds and conveying the catch to Sydney. It is to be hoped the enterprising builder and owner will meet with every success.

Oyster Fisheries.

Of these fisheries it is gratifying to note that the present condition and future prospects are very encouraging, and the areas are entirely free from disease of any description. All the principal beds are heavily stocked with both mature and immature oysters. As evidence of the future prospects of the oyster fisheries, as anticipated by the number of applicants for leases, I may state that I have measured and reported upon twenty-one applications, comprising 5,800 yards of foreshore, thus making the total length of foreshore under lease and applied for 19,380 yards. Some of these areas applied for are fairly well stocked with oysters fit for market, while others have been applied for as reserves for the purpose of catching spat for removal to more suitable grounds. Up to the present no deep-water deposits have been discovered in these waters; for some reason (as yet to me unaccountable) the spat does not appear to sink, or if it does it does not live; but between high and low water mark in suitable places the deposits of spat is heavy, everything being literally covered with young oysters. Some endeavours have been made in a cultivation of oysters by laying down shells sent from Sydney—these shells are thoroughly bleached before being laid down—also by separating the clusters and removing oysters which would otherwise become covered in mud and sand; this latter is caused by the action of the water at half and low tide, and is a constant source of labour to the lessees. One enterprising lessee has placed stakes at intervals, with branches interlaced on the outer boundaries of his areas, in order to catch the spat which would otherwise escape from his own layings.

The output of oysters since the 14th July has been 946 bags to Sydney, and for local consumption 4, making a total of 950 bags: but this number does not by any means represent the capabilities of the district, for immense quantities more might be obtained if a more remunerative market were found, and I think here is an opening for a new enterprise, viz., by shipping oysters to the London or American market during the months of May, June, July, and August, this being the period when oysters are out of season, and consequently very scarce in those markets. The method to be adopted would be to shell them and place them in jars or cans, and place them on board steamers in their refrigerating chambers. This would be a matter which in all probability the Fresh Food and Ice Co. would take in hand. By this means the surplus stock of oysters could be disposed of, and should (if put upon the market in a proper time) realise top prices. It would also give an impetus to the cultivation of oysters in the inlets, and perhaps also lead to the development of the numerous oyster deposits along the coast of the Colony.

I have, &c.,

JAMES MASSINGHAM,
Assistant Inspector.

1897.

—
LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

THE ANNUAL REPORT
OF
THE POSTMASTER-GENERAL,
FOR THE YEAR
1896.

Printed under No. 16 Report from Printing Committee, 19 August, 1897.

SYDNEY: WILLIAM APPELATE GULLICK, GOVERNMENT PRINTER.

1897.

[2s. 3d.]

*137—

[525 copies.—Approximate Cost of Printing (labour and material), £79 8s. 0d.]

THE POSTMASTER-GENERAL TO HIS EXCELLENCY THE GOVERNOR.

ANNUAL REPORT FOR THE YEAR 1896 ON THE POST OFFICE, MONEY ORDER OFFICE, GOVERNMENT SAVINGS BANK, AND ELECTRIC TELEGRAPH DEPARTMENT.

MY LORD,

I have the honor to transmit to your Excellency the Annual Report for the year 1896 on the Department under my ministerial control.

REVENUE AND EXPENDITURE.

The following Statement shows the Revenue and Expenditure for the year 1896, as compared with 1895:—

	1895.				1896.						
	£	s.	d.	£	s.	d.	£	s.	d.		
<i>Revenue.</i>											
Postage	465,184	4	6				499,759	15	10		
Less amount transferred to Stamp Duties as the approximate value of Postage Stamps used as Duty Stamps during the year...	24,000	0	0				24,000	0	0

Fuel and light	2,311 12 5	2,084 3 2
Total	£30,898 16 2	£27,114 19 5

* Estimated.

The interest on the cost of construction of Electric Telegraph Lines is estimated at £35,579, and the interest on the cost of buildings owned by the Government, and used as Post and Telegraph Offices in various parts of the Colony, is estimated at £32,182.

Adding the expenditure on account of the services of the Postmaster-General from the Votes of other Departments, and the interest on the cost of buildings and construction of telegraph lines, the expenditure properly chargeable to the Department under my control for the year 1896 was £967,346 19s. 7d., or £133,406 15s. 4d. in excess of the revenue for the same period.

It should, however, be mentioned that while all the legitimate charges against the Post Office are brought to account in the foregoing statement, the Department performs a number of services for the public and for other Government Departments, for which no monetary credit is taken. These services include the conveyance by post of petitions to the Governor, the Executive Council, and Members of either House of Parliament, newspapers under seven days old, returns under the "Land and Income Tax Assessment Act of 1895," letters and packets for the purpose of carrying out the provisions of the "Census and Industrial Returns Act," and returns of births, deaths, and marriages, all of which are by law exempt from postage; also all mail matter on Her Majesty's Service, the postage properly chargeable on which is thought to be not fully covered by the annual vote of £31,000 for this purpose; the supply of shipping and weather intelligence by telegraph; the performance by Postmasters and other officers in various districts of the Colony of the duties of Electoral Registrar, Deputy Electoral Registrar, Registrar of births, deaths, and marriages, Meteorological Observer, &c.; and the maintenance of the electric light at Parliament House, Circular Quay, Cowper's Wharf, and the Jenolan Caves.

It is impossible to accurately appraise the value of these services, but it will be understood from the nature of them that they entail a considerable amount of expenditure on the Department, probably not less in the aggregate than £50,000 per annum.

INTERCOLONIAL POSTAL AND TELEGRAPHIC CONFERENCES.

A special Ministerial Postal and Telegraphic Conference was held at Sydney on the 17th, 18th, and 20th January, 1896, when the various Australasian Colonies were represented as follows :—

<i>New South Wales</i> :	Hon. JOSEPH COOK, M.P., Postmaster-General, New South Wales, who acted as President of this Conference.
<i>New Zealand</i> :	Hon. W. P. REEVES, New Zealand.
<i>Queensland</i> :	Hon. A. J. THYNNE, M.L.C., Postmaster-General, Queensland.
<i>South Australia</i> :	} Hon. J. A. COCKBURN, M.D., M.P., Minister for Education and Agriculture, South Australia.
<i>Tasmania</i> :	
<i>Victoria</i> :	Hon. J. GAVAN DUFFY, M.P., Postmaster-General, Victoria.

The subjects that received consideration were the proposed cable communication across the Pacific Ocean to America, and the proceedings connected with the invitation for tenders for the new contract for the Federal Mail Service to Europe, *via* Suez.

In

In regard to the proposed Pacific Cable, the Honorable Sir Saul Samuel, K.C.M.G., C.B., Agent-General for the Colony of New South Wales, and the Honorable Duncan Gillies, Agent-General for the Colony of Victoria, were nominated as representatives of the Australasian Colonies on the Commission to be appointed by the Imperial Government for the purpose of fully considering the subject. These Representatives, on all important points, were to consult the Agents-General for the other Australasian Colonies; and it was provided that any scheme submitted by this Commission should be subject to the approval of the Governments of the respective Australasian Colonies.

The conditions of tender for the new contract for the Federal Mail Service received a large amount of attention (necessarily of a confidential character); not only at the Ministerial Conference, but by means of correspondence both before and after that event. A report of the proceedings of this Conference having been laid before Parliament, it is not needful to make further allusion to it in this Report.

In November, 1896, another Intercolonial Conference was held at the General Post Office, Sydney. *President*:—The Honorable Joseph Cook, M.P., Postmaster-General of New South Wales.

All the Colonies of Australasia were represented except New Zealand.

The Conference opened its session on Saturday, the 14th, and concluded its business on the 19th November, 1896.

The Conference was mainly convened for the purpose of considering two matters, viz. :—

1. The business connected with the tenders for the Federal Mail Service, copies of which tenders had been forwarded to the Governments of the respective Australian Colonies by the Imperial Government.
2. The question of representation at the Universal Postal Union Congress to be held at Washington in May, 1897.

But it was determined to take advantage of the meeting for the consideration of other matters deemed to be of sufficient Intercolonial urgency and importance.

As the proceedings of this Conference have also been laid before Parliament it is not necessary to further allude to them in this Report, except in regard to the Federal Mail Service, on which subject it will be useful to record herein the position of the matter.

At the Intercolonial Conference held in Sydney in January, 1896, it was agreed to sanction the calling of tenders by the London Post Office.

On the 7th July, 1896, the London Post Office received tenders.

On the 24th July, 1896, the Right Honorable the Secretary of State for the colonies forwarded to the colonies copies of the tenders received.

The existing contracts provide a weekly service by the Peninsular and Oriental Steam Navigation Company and the Orient Company, each on alternate weeks.

The subsidy to each company is £85,000 per annum, or £170,000 in all, of which the British Post Office pays £95,000, and the Australian Colonies, £75,000. The former collects and *retains* the sea transit charges at Postal Union Rates, viz. :—

On letters, 15 francs per kilogramme (5s. 6d. per lb.).

On other articles, 1 franc per kilogramme (4½d. per lb.).

on correspondence forwarded to the colonies by other countries making use of the service.

The colonies, in like manner, collect and *retain* the charges for sea conveyance on the homeward correspondence of New Zealand and other places not parties to the Federal Service.

New Zealand is charged—

On letters, 12s. per lb.

On packets, 1s. per lb.

On newspapers, 6d. per lb.

12s. per lb. on letters is equivalent to nearly 3d. (2·9) per single-rate letter.

The subsidy paid by the contracting colonies (£75,000) is apportioned on the basis of population.

In addition to the Australian service, the Peninsular and Oriental Company have the contracts for the India and China mails, weekly to Bombay and fortnightly to China, for which they are paid £265,000 per annum. Under

Under existing arrangements the Indian mails every alternate week are carried by the Australian steamers between Brindisi and Aden, where they are transhipped to or from the Bombay boat.

The China and Singapore mails are also carried in the Australian (Peninsular and Oriental) steamers to and from Colombo and Italy.

Contract time between—

Brindisi and Adelaide (P. and O. steamers) 780 hours.
 Naples and Adelaide (Orient steamers) ... 780 ,,

The original time allowed to the Orient Company was 768 hours, but on the extension of the contract, or from May, 1895 (since which the steamers have called at Colombo both ways), the time was extended to 780 hours.

The only tenderers for the new service were the Peninsular and Oriental Steam Navigation Company and the Orient Company, the present contractors.

The former provide, as at present, for the India, China, and Australian service, viz., weekly mail to Bombay, and fortnightly to both Australia and China (Shanghai). They submitted alternative tenders for mails *via* Marseilles and Brindisi.

The Orient Company's tender provides, as now, for a through service between Naples and Australia (Adelaide), calling at Colombo both ways.

Both tenders were for a seven years' contract and the following is a summary of them :—

Peninsular and Oriental Tender No. 1, £310,000.

	From Marseilles.	From London.
	hours	hours
Marseilles to Bombay (weekly)	342	370
Marseilles to Shanghai (fortnightly)	782	810
Marseilles to Adelaide (fortnightly)	732	760

Peninsular and Oriental Tender No. 2, £330,000.

	From Brindisi.	From London.
	hours	hours
Brindisi to Bombay (weekly)	302	352
Brindisi to Shanghai (fortnightly)	736	786
Brindisi to Adelaide (fortnightly)	686	736

Showing a difference of £20,000 between the amounts of the two tenders.

Present Cost of P. and O. Services.

India and China	£265,000	
Australia	85,000	
		£350,000
Carriage of parcels to and from Thames		3,550
		£353,550
Saving in cost of present contracts <i>via</i> Brindisi		£23,550
Saving in cost <i>via</i> Marseilles		43,550
and Italian transit charges (say)		30,000
Total saving on present cost <i>via</i> Marseilles... ..		£77,550

Present Contract Time—

Brindisi to Adelaide	780 hours
Time as per tender No. 2	686 ,,
Saving in time <i>via</i> Brindisi	94 hours

It will be seen that a saving of £50,000 a year (£20,000 difference in tender, and £30,000 the estimated payments for Italian transit) might be effected by adopting the Marseilles route for the P. and O. Company's service. This, however, would involve twenty-four hours loss of time, which the Imperial Post Office thinks would not be acceptable to the public in the United Kingdom, India, and the colonies.

Orient Company's Tender—

The Orient Company's tender (£85,000) is the same as present contract, but there will be 60 hours' saving of time, viz.:—

Present contract—Naples to Adelaide	780 hours
Specified in tender, ,, ,,	720 ,,
Saving	60 hours

While the time specified by the P. and O. Company between Brindisi and Adelaide is 686 hours (28 days 14 hours), the Orient Company require 720 hours between Naples and Adelaide. After

After a lengthy negotiation by cablegram, involving a discussion relating to the coloured labour question, which will be found more fully particularised in the Conference proceedings, it was determined to transmit the following cablegram to London:—

“FEDERAL MAIL TENDERS.—In view of your cables on the subject, and our desire to secure continuance of Federal Mail Service, there appears no alternative but to consent acceptance tender P. & O. as well as Orient Company, as suggested by Imperial Government. Conference in consenting urges negotiations to secure following modifications.—

1. Term of contracts—five years.
2. Duration of voyage—672 hours for both Companies between Naples, Brindisi, and Adelaide.
3. Time of departure from Adelaide—Saturday, 2:30 p.m.
4. Steamers to enter Princess Royal Harbour, Albany, until Fremantle Harbour approved by Admiralty Surveyors, after which steamers to enter latter harbour.

The following is the text of the reply received through the Colonial Office on the 17th March last:—

Sir,

Treasury Chambers, 28 January, 1897.

I am directed by the Lords Commissioners of Her Majesty's Treasury to acquaint you for the information of the Secretary of State, in continuation of previous correspondence, on the subject of the Eastern and Australian Mail Service, that the Postmaster-General has now accepted tender No. 2 of the Peninsular and Oriental Steam Navigation Company for a seven years' contract, by the Brindisi route, and also the tender of the Orient Company for the same period, the European port of departure in their case being Naples.

The total subsidy under the Peninsular and Oriental contract will be £330,000 per annum, and under the Orient Company's contract, £85,000 per annum.

The Postmaster-General will have the right, without additional payment, to send mails by all the Peninsular and Oriental Company's services during the term of the contract, whether such services are specifically referred to or not.

The Indian Post Office will have the right to commence the sorting work between Port Said and Aden, if the development of the service should require it; but the number of additional men to be carried gratuitously is limited to five sorters and five packers.

The directors of the company undertake to employ more than one steam launch, when necessary, both at Aden and Bombay.

They will interpret as favourably as possible to the wishes of the colonies the qualification which they have felt obliged to introduce into the condition relating to the substitution of Fremantle for Albany as the port of call in Western Australia, and to the entrance of Princess Royal Harbour, so long as the steamers call at Albany.

The Orient Company will also be ready to enter the inner harbour whenever practicable, and to substitute Fremantle for Albany as the port of call, as soon as they can be satisfied that Fremantle Harbour is safe.

This company has further agreed to reduce the time of transit between Naples and Adelaide to 696 hours, and will endeavour in practice to give an earlier arrival at Adelaide and Naples, than is prescribed by the contract.

The dates of departure from Bombay and Adelaide are not yet arranged, but will form the subject of further negotiation between the Postmaster-General and the two companies.

I am, &c.,

E. W. HAMILTON.

The Under-Secretary of State, Colonial Office.

On the 1st March, 1897, a Conference of Ministers was held at the General Post Office, Melbourne, when the undermentioned gentlemen, representing the colonies, were present, viz.:—

The Hon. R. J. SEDDON, M.P., Premier and Postmaster-General of New Zealand.

The Hon. J. COOK, M.P., Postmaster-General of New South Wales.

The Hon. A. J. THYNNE, M.L.C., Postmaster-General of Queensland.

The Hon. J. GAVAN DUFFY, M.P., Postmaster-General of Victoria; also representing Tasmania and Western Australia.

The Hon. R. J. Seddon was elected as President, and the following business was transacted, viz.:—The Hon. J. Gavan Duffy was chosen as the Delegate and Ministerial Representative of the colonies at the Washington Postal Union Congress, I, as Postmaster-General of New South Wales having previously declined to be nominated for the position. The President undertook to inform the Right Honorable the Secretary of State for the colonies, in terms of memorandum of the 11th December, 1896, that the Hon. J. Gavan Duffy, Postmaster-General of Victoria, had been appointed. It was also resolved that the Premiers of the respective colonies should furnish the Hon. J. Gavan Duffy with the necessary credentials, and that Mr. James Smibert, late Deputy Postmaster-General of Victoria, should accompany the Hon. J. Gavan Duffy as Postal Official. It was further resolved that five hundred pounds (£500) should be the sum fixed to defray the expenses of the Ministerial Representative, and that the sum of three hundred pounds (£300) be approved to defray the expenses of Mr. James Smibert, Postal Official, accompanying

accompanying the Hon. J. Gavan Duffy. The whole amount to be found, in the first instance, by the Colony of Victoria, and afterwards the other colonies to pay their share on the basis of population. The Conference also expressed its great satisfaction that the Pacific Cable Commission, which met in London, had decided to recommend the adoption of the proposals formulated at the Sydney Conference, and, in view of the great importance to the Empire of the construction of the cable, expressed the hope that means may, at an early date, be found for its speedy realisation.

INLAND SERVICE.

The new postal routes opened during the year 1896, as shown in the annexed return, amounted to 1,124 miles, viz. :—

Postal Line.	No. of times per week.	Postal Line.	No. of times per week.
<i>In the Western Country.</i>		<i>In the Southern Country—continued.</i>	
From Caloola to Caloola Creek	3	West Blowering to Yellowin	2

Murrumburrah and Garangula	6	3			

The extent of postal route traversed in the Colony up to the 31st December, 1896, was 34,083 miles, as compared with 33,693 miles traversed in 1895—

	1895.	1896.
On horseback	10,675 miles	10,258 miles.
By coach	19,545 "	20,309 "
By railway	2,581 "	2,624 "
By tramway	68 "	68 "
By steamer	824 "	824 "

The extension of mail route by railway during 1896 was as follows :—Jerilderie to Berrigan, 22 miles ; Parkes to Bogan Gate, 21 miles.

The number of miles travelled in the year 1896 was 9,773,500, being an increase of 435,500 on the mileage of the previous year.

The number of Post Offices established was 44, viz. :—Arcadia, Badgery's Creek, Ballimore, Binnie Creek, Bogan Gate, Bonnyrigg, Boppy Mountain, Bugaldi, Burragate, Comara, Congewai, Cookamidgera, Corndale, Crabbe's Creek, Crow Mountain, Cugong, Curban, Dargan's Creek, Dignam's Creek, Double Peak, Eltham, Kinnatown, Lakesland, Leura, Lower Bucca, Mallan, Marrana Creek, Mila, Moonan Flat, Mount Wilson, Nicholson's, Pipeclay Creek, Tallagandra, Terra Bella, The Albert, Tomooroma, Tooraweenah, Turill, Upper Bucca Bucca, Wagonga, Wahroonga, Wamboyne, Wedderburn, and Yantabulla.

The number of Post Offices discontinued was 11, viz. :—Bulgandramine, Bull Ridge, Bumble, Darke's Forest, Deep Creek, Harris-street, Kinnatown, Little Bendigo, Nicholson's, Sixteen Mile Tank, and Yandarlo. It

It was found desirable to change the designations of the following Post Offices, viz.:—Bungwall Flat to Bungwahl, Croki to Jones' Island, Hillgrove West to Metz, Landsdown to Lansdowne, and Upper Lansdown to Upper Lansdowne.

In the Appendix will be found a list of the 1,503 Post Offices in the Colony on the 31st December, 1896. In addition to these there are three travelling Post Offices which run between Sydney and the northern border of the Colony at Jennings, between Sydney and Albury on the southern border, and between Sydney and Dubbo in the West.

206 changes of Postmasters occurred during the year.

Receiving Offices were established at the following places:—Avery's Creek, Back Creek, Barooga, Baryulgil, Bennett's Flat, Bielsdown, Boggy Camp, Boney's Rocks, Bonnyrigg, Boyd, Buddabuddah, Burrumundra, Caloola Creek, Carlisle, Cell's Field, Chilcott's Grass, Collingwood, Conley's, Darke's Forest, Daroobalgie, Deep Gully, Dinoga, Dondingalong, Duranbah, Five Islands, Gill, Gordonville, Gunnary Creek, Hellman's Tank, Isabella, Lavadia, Mackay, Moongulla, Mowabla Tank, Naranghi, Nirrim, North Araluen, Pee Dee, Quinn's, Quorroolong, Redlands, Roslyn, St. Leonards, Swan Creek, Tarban, Tartna Point, The Peak, Tilbuster, Tucklan, Turee Vale, Upper Bingara, Upper Gloucester, Wakool Crossing, Wang Wauk, Warrumbungle, Wectangerra, West Blowering, Willanthry, Wrightville, and Yellowin.

The Receiving Office at Reeves was re-established.

The names of the following Receiving Offices were changed, viz.:—Doroughby Grass to Doroughby, Hannah Bay to Anna Bay, and Mackay to Yuelba.

The Receiving Offices at the following places were converted into Post Offices, viz.: Arcadia, Badger's Creek, Ballimore, Binnie Creek, Bonnyrigg, Boppy Mountain, Burragate, Bugaldi, Comara, Cookamidgera, Corndale, Crabbe's Creek, Crow Mountain, Cugong, Curban, Dignam's Creek, Double Peak, Eltham, Lakesland, Leura, Mallan, Marrana Creek, Mila, Moonan Flat, Mount Wilson, Nicholson's, Pipe Clay Creek, Tallagandra, Terra Bella, Tomooroma, Toorawcenah, Turill, Wagonga, Wahroonga, Wamboyne, and Yantabulla.

The Receiving Offices at the following places were discontinued, viz.:—Ashley, Beggan Beggan, Ben Lomond, Bob's Range, Cangai, Cobark, Coramba Battery, Currowan, Eulomogo, Forest Vale, Great Southern Colliery, Greenwood, Hawke's Nest, Lochiel, Mangargool, Peacock Creek, Possum Power, Seelands, The Fens, The Weir, Turee Creek, Wallan Billan, Wilga Vale, and Wyan.

In the Appendix will be found a list of the Receiving Offices in existence at the close of the year, 503 in number.

Appendix A.

Appendix A contains a return of the Government Buildings for the transaction of the Postal, Money Order, Savings Bank, and Telegraph business, and particulars of the premises rented or otherwise provided for the purpose. Government Buildings at the following places were completed and occupied during the year 1896, viz.:—Anmandale, Bungendore, Camperdown, Coolamon, Enngonia, Five Dock, Glen Innes, Homebush, Lawrence, Minmi, North Parramatta, Robertson, St. Peters, and Wyalong.

During the year 1896, 2 pillar letter-receivers were removed to different sites, and 72 were withdrawn; 111 small iron letter-receivers were placed, and 3 were withdrawn. One galvanized iron and 2 wooden newspaper-receivers were erected.

On the 31st December the number of letter-receivers erected in the Colony (both large and small) was 1,232, and the number of newspaper-receivers, 28.

The number of licenses for the sale of postage stamps issued in 1896 to persons other than postmasters or receiving-office-keepers was 116, the number transferred 61, and the number cancelled, 65.

On the 31st December, 1896, the number of locked private letter-boxes let at the General Post Office was 1,226, besides 77 allotted to Public Departments, for which no fees are paid.

The system is now in operation at the following offices, viz.:—Adelong, Albury, Armidale, Ashfield, Ballina, Balnain, Balranald, Bathurst, Bega, Berrigan, Bingara, Bombala, Bourke, Bowral, Braidwood, Broken Hill, Burwood, Casino, Cobar, Condobolin, Cooma, Coonamble, Cootamundra, Coraki, Cowra, Deniliquin, Dubbo, East Maitland, Emmaville, Forbes, George-street North, Glen Innes, Goulburn, Grafton, Granville, Grenfell, Gulgong, Gunnedah, Hay, Haymarket, Hillgrove, Hillston, Inverell,

Inverell, Jerilderie, Junee, Kempsey, Kiama, King-street, Lismore, Maclean, Manly, Marrickville, Moree, Moruya, Moss Vale, Mount Victoria, Mudgee, Murwillumbah, Muswellbrook, Narrabri, Narrandera, Newcastle, Newtown, North Sydney, Nymagee, Orange, Pambula, Park-street, Parramatta, Queanbeyan, Rozelle, Scone Silverton, Singleton, Tamworth, Taree, Temora, Tenterfield, Uralla, Urana, Wagga Wagga, Walgett, Wentworth, West Maitland, Wilcannia, Wollongong, West Wyalong, Wyalong, and Young.

Six private posting-boxes have been constructed on private premises for the use and at the expense of the occupants, under the system introduced in August, 1886. The fee charged for the clearance of these boxes varies from £3 to £5 per annum, according to the daily number of clearances effected.

The number of persons employed in connection with the Postal and Electric Telegraph Department for the year 1896 was as follows:—1 Postmaster-General, 1 Deputy Postmaster-General, 1 Chief Clerk, 1 Chief Electrician and Engineer-in-Chief of Telegraphs, 1 Chief Accountant and Controller, Money Order Office and Government Savings Bank.

Ministerial Division.—1 inland mail clerk, 1 appointment clerk, 1 inspector for irregularity and missing and dead letter branch, 1 correspondence clerk, 1 record clerk, 1 clerk in charge of stores, 46 clerks, 1 chief messenger, 8 indoor messengers, 4 storemen, 2 detectives, 3 constables.

Money Order and Government Savings Bank Division.—1 accountant, 1 examiner, 1 teller, 74 clerks, 5 indoor messengers.

Account and Cash Division.—1 accountant, 1 distributor of stamps, 1 cashier, 18 clerks.

Mail Division.—1 chief inspector and superintendent, 1 assistant superintendent, 1 senior inspector, 7 inspectors, 46 clerks, 1 shipping clerk, 1 assistant shipping clerk, 1 clerk and translator, 2 relieving officers, 1 medical officer, 1 Chinese interpreter, 17 mail guards, 123 sorters, 17 stampers, 1 overseer of letter-carriers, 78 letter-carriers, 17 junior letter-carriers, 60 mail-boys, 17 assistants, parcel post branch, 2 custodians of mails, 1 custodian of mail-bags, 1 assistant in bag-room, 2 bag turners, 1 bag-maker, 1 letter-carriers' timekeeper, 1 mechanic, 1 carpenter, 1 caretaker, 1 assistant caretaker, 1 officekeeper, 1 tower attendant, 6 cleaners, 15 female servants, 1 manager of stables, 1 farrier, 1 striker and assistant, 8 grooms, 1 foreman of mail-cart drivers, 12 mail-cart drivers, 3 lift attendants.

Telegraph Division.—1 station manager, 2 assistant station managers, 1 check clerk, 1 electrician, 1 assistant electrician, 2 testing officers, 1 receiving clerk, 34 clerks, 27 booking clerks, 2 cadets (electrician's branch), 174 operators, 5 junior operators, 4 messengers' overseers, 11 monitors (despatch branch), 153 messengers, 4 cadets, 1 mechanic, 5 fitters, 1 probationer (mechanical branch), 1 inspector of lines (city and suburbs), 1 assistant line repairer, 8 batterymen.

Telephone Branch.—1 manager, 1 mechanic, 20 fitters, 1 exchange foreman, 1 line foreman, 6 monitors, 1 matron, 69 switch attendants (55 male and 14 female), 1 junior assistant, 1 cleaner and messenger.

Electric Light Branch.—1 chief engineer, 4 engineers, 12 assistant engineers.

Branch, Suburban, and Country Offices.—1,503 postmasters (435 official, 1,068 non-official), 8 telegraph station masters, 107 postal assistants, 94 junior postal assistants, 52 temporary postal assistants, 265 operators, 56 junior operators, 25 non-official station masters and telephone operators, 16 mail-guards, 2 assistant guards, 1 sorter, 171 letter-carriers, 187 junior letter-carriers, 46 mail-boys, 381 telegraph messengers, 9 cadets, 53 switch attendants, 2 telephone fitters, 3 batterymen, 45 line-repairers, 4 construction overseers, 4 carpenters, 50 temporary line-repairers, 35 labourers, 503 receiving office keepers.

Total, Head Office	1,192
„ Branch, Suburban, and Country Offices ...	3,622
„ Number of Mail Contractors	830
„ „ Porters	101
Total number of persons employed,	5,745

These may be subdivided into—

Persons whose whole time is occupied in the service;	{	Principal officers	36
		Clerks	250
		Post and telegraph masters	443
		Assistants at Post Offices	228
		Operators	500
		Subordinate officials	1,709
and			3,166
Persons whose time is only partially em- ployed in the service.	{	Sub or non-official postmasters, telephone operators, and Receiving Office-keepers	1,596
		Assistants to non-official postmasters and other sub- ordinate officials	52
		Mail contractors and mail porters	931
			2,579
		Total	5,745

The removals from the Service numbered twelve. One of these—a letter-carrier—received a sentence of eighteen months' imprisonment for stealing letters; another—a postal-assistant—was sentenced to six months' imprisonment for removing the postmark from a stamp and uttering the same; and a third—a telegraph messenger—was fined £1, with an alternative of imprisonment, for embezzling portion of a savings bank deposit. The remainder were dismissed for the following offences:—A post and telegraph master for irregularities resulting from drink; another post and telegraph master for a deficiency in his accounts; two mail-boys, a telegraph messenger, and a cleaner, for drunkenness; and two letter-carriers and a telegraph messenger, for unsatisfactory conduct.

Twenty-one deaths occurred, viz.:—C. H. Lawson, clerk, mail division; Miss M. J. Davies, post and telegraph mistress, Hunter's Hill; A. J. Flanders, post and telegraph master, Ulmarra; F. Boland, post and telegraph master, Cannonbar; P. E. M'Guinness, postal assistant, Walgett; Miss C. E. Davies, junior assistant, Hunter's Hill; H. Corbett and W. Buchanan, operators, Head Office; S. W. Moseley, operator, Deniliquin; R. Dennis, junior operator, Parkes; E. St. A. Kingsford, telephone operator, Port Macquarie Heads; C. J. H. Burgis, sorter; W. J. Mason, letter-carriers' overseer; W. Smith, letter-carrier, Woollahra; T. J. Wilshire, letter-carrier, Yass; G. E. Wilton, letter-carrier, Goulburn; W. Timbrell, letter-carrier, Newcastle; H. Nicholls, junior letter-carrier, Dubbo; W. Neilan, telegraph messenger; J. Norquay, line-repairer, Milton; and W. J. Cracknell, indoor messenger.

Ninety-six resignations took place. The services of eight officials no longer required were dispensed with, and an operator forfeited his office owing to bankruptcy.

Seven officers retired from the Service, viz.:—W. J. H. Hayes, operator, Cowra; Miss H. J. North, post and telegraph mistress, Edgecliff; W. G. Ledsam, post and telegraph master, Junee; E. Doust, post and telegraph master, Paterson; and J. F. Tyter, post and telegraph master, Kiama, who were allowed pensions under the Civil Service Act, 1884; T. W. Harris, post and telegraph master, Raymond Terrace, who received a gratuity under the Public Service Act of 1895; and W. H. Ore, line-repairer at Mudgee, who has since been reappointed to the Service in another capacity.

Independently of the retirements referred to above, the services of 193 officers were dispensed with in connection with the grading of the Department by the Public Service Board. These consisted of:—1 superintendent, mail branch, 30 clerks, 15 post and telegraph masters, 7 postal assistants, 20 junior postal assistants, 3 parcels and store assistants, 45 temporary postal assistants (postmasters' wives), 23 operators, 19 junior operators, 1 overseer of sorters, 5 letter-sorters, 2 mail guards, 11 stampers and sorters, and 11 letter-carriers.

Several of these being over 60 years of age, and contributors to the Superannuation Fund, were allowed the pensions to which they were entitled under the Civil Service Act, 1884; others received the gratuities provided for in the Public Service Act of 1895; while the larger proportion of the remainder have been reappointed to fill vacancies which have occurred since the Department was graded.

The

The Postal Inspectors in 1896 travelled a distance of 58,396 miles, and inspected the postal route appertaining thereto, visiting 720 offices, 219 of which were visited more than once during the year.

An important alteration took effect from the 1st December in the Northern Railway time-table, necessitating considerable changes in the mail arrangements in the Northern districts of the Colony. Previously the mails from Brisbane (Queensland) and intermediate places reached Sydney at 11 p.m. daily (Sundays excepted), but from the date named they arrived at 11 a.m. daily (Sundays excepted). The hours of the second and third deliveries by letter-carrier in the city were changed from 11.30 a.m. and 2.30 p.m. to 11 a.m. and 1.30 p.m. respectively, and a regular delivery was afforded on Saturdays at 1.30 p.m., instead of, as formerly, only when the English mail arrived on that day. These changes involved a slight alteration in the hours of clearance of the city letter-receivers.

The rates of postage on letters transmitted to and from Post and Receiving Offices within the respective districts mentioned hereunder was fixed at 1d. per $\frac{1}{2}$ oz., or fraction thereof, from the dates named :—

Within a radius of 13 miles of Parramatta	from the 15th February.
"	"	"	Katoomba " 1st March.
"	"	"	Moss Vale " 15th March.
"	"	"	Hay " 16th May.
"	"	"	Deniliquin " 15th August.

In August the regulations providing for the transmission of notices of meetings at the rate of 1d. per 2 oz., or fraction thereof, were amended, so as to allow of the objects of such meetings being inserted in writing in the case of notices posted within the Colony for delivery therein.

Amended regulations have been introduced in connection with the receipt and delivery of parcels, hours of attendance of Officials at Post and Telegraph Offices, "Late Fee" letters, &c.

FOREIGN SERVICE.

As was mentioned in my report for 1895, the contracts with the Peninsular and Oriental, and Orient Steam Navigation Companies for the Federal Mail Service to Europe, *via* Suez, were extended to the 31st January, 1898, and that with Mr. James Huddart for a monthly steam service between Sydney and Vancouver, British Columbia, was renewed for a further term of 3 years, expiring 25th May, 1899.

The arrangement made with the New Zealand Government in 1892 for the conveyance of mails, once every four weeks, to and from Sydney and San Francisco, *via* Auckland, by contract packets of the Union Steamship Company of New Zealand, for the sum of £4,000 per annum, has been renewed for a further period, expiring in November, 1897.

The Mail Service performed by the Peninsular and Oriental Steam Navigation Company during the year 1896 was as follows :—

Received.

Name of Steamer.	Date of departure of Mails from England.	Date of arrival of Mails at Sydney.	No. of days occupied in transit of Mails between London and Sydney.	Name of Steamer. ---------------------------	-----------

The

The subsidy paid for the year 1896 to the Peninsular and Oriental and Orient Steam Navigation Companies for the Federal Ocean Mail Service *via* Suez was £170,000. The contribution of the United Kingdom was £95,000.

The amount paid by each contributing colony, on the basis of population, was as follows:—

New South Wales	£27,075	5	0
Victoria	25,078	10	0
Queensland	9,747	3	4
South Australia	7,577	1	8
Tasmania	3,407	16	8
Western Australia	2,114	3	4
Total	£75,000	0	0

The following return shows the number of letters, packets, and newspapers despatched and received by the various ocean mail routes during the year 1896, as compared with similar information for the year 1895:—

Year.	Route.	Despatched.						Received.

The following statements for the year 1896 show the approximate net cost to the Colony of the Suez, San Francisco, and Vancouver Mail Services.

Statement showing the approximate net cost to New South Wales, for the year 1896, of the mail service, *via* Suez, per the vessels of the Orient and the Peninsular and Oriental Steam Navigation Companies:—

<i>Dr.</i>	£	s.	d.	£	s.	d.
To New South Wales proportion of Colonial share of subsidy for carriage of mails	27,075	5	0			
Transit of mail-matter through European Countries, &c.	3,563	9	2			
Overland transit of mail-matter through Australian colonies; cost of advising arrival of mails in London, exchange on remittances, &c.	1,556	12	7			
				32,295	6	9
<i>Cr.</i>						
By Estimated share of contributions from non-contracting colonies, &c.	1,210	0	0			
Estimated share of transit rates on mail-matter from European Countries, &c.	575	0	0			
Estimated postages collected in the Colony	20,000	0	0			
				21,785	0	0
Estimated net cost to the Colony				£10,510	6	9
The estimated net cost for 1895 was				£12,438	6	2

Statement

Statement showing the approximate net cost to New South Wales, for the year 1896, of the San Francisco Mail Service, per the vessels of the Union Steamship Company of New Zealand (Limited) :—

<i>Dr.</i>	£	s.	d.	£	s.	d.
To Payment to New Zealand for carriage of mails ...	4,000	0	0			
Cost of land and sea transit of mail-matter for places beyond the United States of America, and of advising arrival of mails in London		25	0	6		
				4,025	0	6
<i>Cr.</i>						
By Estimated postages collected in the Colony, &c.				2,380	0	0
Estimated net cost to the Colony				£1,645	0	6
The estimated net cost for 1895 was				£2,122	18	9

Statement showing the approximate net cost to New South Wales, for the year 1896, of the Sydney-Vancouver Mail Service, per vessels of Mr. James Huddart :—

<i>Dr.</i>	£	s.	d.	£	s.	d.
To Payment to Mr. James Huddart for the carriage of mails	9,106	13	4			
Cost of land and sea transit of mail-matter to places beyond Canada		80	0	0		
				9,186	13	4
<i>Cr.</i>						
By Contributions from non-contracting colonies, &c.	689	16	8			
Estimated postages collected in the Colony		780	0	0		
				1,469	16	8
Estimated net cost to the Colony				£7,716	16	8
The estimated net cost for 1895 was				£9,040	12	11

PARCEL POST.

A direct exchange of parcels between this Colony and Malta was established on the 1st January, 1896, at the rate of 1s. 6d. for the first 2 lb., or fraction, and 9d. for each additional lb.; and in June arrangements were completed for a similar exchange with Hawaii, at the rate of 1s. per lb.

Through the medium of the United Kingdom, parcels may now be sent to Venezuela (Caracas, Carupano, Ciudad, Bolivar, Cumana, La Guaira, La Vela de Coro, Maracaibo, and Puerto Caballo), Paraguay, Cape Verde Islands (St. Vincent and Santiago), Portuguese West Africa (Ambriz, Benguela, Cabenda, Loanda, Mossamedes, and St. Thomas'), and Bolama in Guinea.

From the 1st October the rates of postage on parcels for the United Kingdom were reduced from 1s. 6d. for the first 2 lb. to 1s. for the first lb., and from 9d. to 6d. for each additional lb.; and consequent on this change a corresponding reduction was made in the rates on parcels forwarded to other countries through the medium of the United Kingdom.

Revised rates were also introduced in connection with parcels transmitted to Hong Kong, China, Corea, Macao, Siam, Japan, Ceylon, and Mauritius (*via* Ceylon).

Under an arrangement concluded in 1892 for a direct exchange of parcels between this Colony and India by the steamers of the Peninsula and Oriental Steam Navigation Co., the postage rate of 1s. per lb. was apportioned equally between New South Wales, India, and the company performing the service; but as one of the provisions of the extended contract for the Federal mail service was that parcels to and from Australia and the United Kingdom and intermediate places should be conveyed by contract packets free of special charge, a reapportionment of the postage was agreed to, and took effect from the 1st February, 1896, the Colonial and Indian inland share being each increased to 4½d. per lb., while 1d. per lb. was allowed to India for sea-transit by non-contract vessels, the remaining 2d. per lb. being credited to the British Post Office on parcels *from* India and to New South Wales on parcels *to* India, in consideration of the sea-transit provided by the Federal mail service maintained by Great Britain and the Australian Colonies.

Letters,

Letters, Letter Cards, Post Cards, Packets, Newspapers, and Parcels posted and received in the Colony during 1896 as compared with 1895.

* The number of articles, other than newspapers, exempt from postage, being comparatively small, a separate account has not been kept of them, and they are, therefore, included under the head of articles subject to postage.
 NOTE.--The numbers of ordinary letters and packets, and newspapers, are calculated on the basis of returns furnished by Postmasters during two months of the year, and therefore must be accepted as approximate only. For all other items, the actual numbers dealt with during the year are given.

DEAD LETTER BRANCH.

The following return shows the number of Letters, Post Cards, Packets, and Circulars dealt with in this Branch, either by the return to writers, discovery of persons addressed, or otherwise, during the year 1896 :—

	Letters.	Post Cards.	Packets.	Circulars.
INLAND.				
Returned to senders.....	196,293	2,028	125,365	134,830
Destroyed in accordance with Section 32 of 31 Vic. No. 4.....	28,164	588	16,395	40,606
INTERCOLONIAL.				
Originally addressed to other colonies :—				
Returned to senders, or otherwise disposed of.....	19,216	306	3,600	1,854
Destroyed in accordance with Section 32 of 31 Vic. No. 4.....	4,187	90	321	1,074
Returned to other colonies as unclaimed.....	19,764	470	953	2,436
FOREIGN.				
Originally addressed to other countries :—				
Returned to senders, or otherwise disposed of.....	5,430	74	900	164
Destroyed in accordance with Section 32 of 31 Vic. No. 4.....	1,357	26	79	20
Returned to other countries as unclaimed.....	8,496	276	4,048	826
Total number dealt with.....	282,907	3,858	151,661	181,870

Included in the above return were 2,908 registered letters, all of which had been posted originally within the Colony. A considerable number of these bore the names and addresses of the senders on the envelopes, and were returned intact accordingly. The others were opened to obtain the required information. They were found to contain, besides correspondence and valuable articles of jewellery, such as watches, rings, brooches, and chains, the sum of £2,391 14s. 5d. in coin, notes, cheques, money orders, and stamps. In 1,210 unregistered letters were found valuable enclosures, representing £3,575 13s. 3d.

922 registered letters, originating in places beyond the Colony, were returned unopened, as follows :—128 to London, 578 to other countries, and 216 to the other colonies.

Of 339 packets, containing merchandise, jewellery, &c., received, owing to the addressees having declined to pay the surcharges, or as a result of the directions having become detached or mutilated irreparably in transit, 47 only were applied for and delivered. The articles not otherwise disposed of are sold by public auction, in conformity with the Postage Act, and the proceeds paid into the Consolidated Revenue.

1,254 letters were posted unaddressed, 894 of which (including 16 containing valuable enclosures amounting to £143 13s. 3d.) were returned to the writers. The remainder afforded no adequate indication as to the whereabouts of the senders.

Out of 12,042 letters and packets passed on to the Dead Letter Office during the course of the year with insufficient directions, the addresses of a large proportion were rectified and the articles forwarded accordingly. The residue were returned to the senders or were otherwise dealt with, as required by law. 7,854 letters were refused by the addressees, chiefly on account of surcharges.

1,126 Chinese letters imperfectly addressed were dispatched to their intended destinations through the assistance of the Chinese interpreter. In addition to these, 752 addressed to members of this nationality were returned as unclaimed by the same instrumentality.

A sum of £204 0s. 10d., contained in registered letters, which had been received during the year 1895 and had remained unclaimed for twelve months, was remitted to the proper authorities.

It is estimated that 180,000 newspapers were forwarded to the Branch during the year. These were disposed of in accordance with the regulations.

About 451 per cent. of the total number of letters posted in the Colony during 1896 were unclaimed.

DELIVERY BY LETTER-CARRIERS.

The number of letters, &c., delivered by the Letter-carriers attached to the head office during the years 1895 and 1896 was as follows:—

	1895.	1896.
Unregistered letters	8,783,948	9,810,440
Registered letters	77,349	84,724
Books, &c.	166,312	239,871
Newspapers	1,482,604	1,420,662

REGISTRATION BRANCH.

The number of Registered Letters which passed through the General Post Office in 1896 was 737,772, against 683,898 in 1895, the increase in number being 53,874.

MAILS RECEIVED AND DESPATCHED.

The following return shows the number of Mails received at and despatched from the General Post Office during the years 1895 and 1896.

Year.	Received.		Despatched.		Total number of Mails which passed through the office.
	Inland.	Foreign.	Inland.	Foreign.	
1895	229,759	9,127	216,952	10,930	466,768
1896	242,467	10,786	219,776	11,186	484,215
Increase	12,708	1,659	2,824	256	17,447

RECORD BRANCH.

The number of written communications received from the public during 1896, intimating changes of address, or requesting letters, &c., to be forwarded, was 27,000, against 26,463 in 1895.

The number of communications addressed to the Department relating to the extension and improvement of the service, to irregularities connected with the performance of mail contracts, and to the transmission of letters, telegrams, &c., and recorded in the year 1896, was 47,772, against 47,704 in 1895.

POSTAGE

POSTAGE STAMPS, STAMPED ENVELOPES, &c.

The following return shows the number, description, and value of Postage Stamps, &c., issued at the General Post Office during the years 1895 and 1896:—

Number.		Description.	Value.		Increase in issue for 1896.		Decrease in issue for 1896.

In

In February, an improved 1½d. post-card was introduced, the change of design consisting in the removal of the waratah from the face of the card, and the substitution of an emblematic waratah and leaves, for the words "One hundred years," in the stamp denoting the value.

In August, a similar alteration of design was made in the 1d. post-card, the size of which was reduced to the limits provided for by the regulations of the Universal Postal Union.

In May, arrangements were made for the transmission within the Colony and to the Australasian Colonies, of private post-cards, impressed with a 1d. stamp.

In October, an amended form of letter-card was introduced, differing from the former pattern by the omission from the stamp of the words "One hundred years," and by the alteration of the inscription relative to the places to which the card may be transmitted, so as to read as follows:—

"This card may pass through the post to any place within New South Wales, to the Australasian Colonies, and Fiji."

The sale of sets of obliterated "O.S." postage stamps at £2 per set, was discontinued from the 18th March.

INLAND MAIL CONVEYANCE.

In the year 1896 the average cost per mile of the Inland Mail Conveyance was about 3½d., against 4½d., the price per mile paid during the previous year.

The number of contracts in existence on the 31st December, 1896, for the conveyance of inland mails was 958, and the number of mail services in respect of which no formal contracts were executed, 306.

MONEY ORDERS.

Money Order Offices were established during the year 1896 at the following places, viz., Barber's Creek, Koorawatha, Mullumbimby, Neville, Shooter's Hill, Walla Walla.

The offices at Brunswick, Cannonbar, Harris-street, and Kunopia were abolished, and the name of the office at Bungwall Flat was changed to Bungwahl.

The number of Money Order Offices in the Colony on 31st December, 1896, was 626.

The number of money orders issued was 402,677 (exclusive of 4,326 certificates of transfer used by Postmasters in connection with transmitting fees for private letter-boxes, &c., &c.), and the value £1,313,594, against 406,235 of the value of £1,269,200, the difference showing a decrease of 3,558 in the number, and an increase of £44,394 in the amount, as compared with 1895.

The number of money orders paid was 407,716, and the value £1,427,520, against 380,292 of the value of £1,247,235 in 1895, being an increase of 27,424 in the number and £180,285 in the amount.

The amount of revenue received as commission on money orders issued was £15,288 15s. 3d., being £425 14s. 9d. more than the amount collected in 1895.

Appendix D.

A comparative return showing the various countries where the money orders issued in New South Wales were made payable, and also the money order issues of other countries payable in New South Wales, will be found in the Appendix.

Appendix A.

In the information contained in Appendix A will be found a detailed statement of the business transacted and revenue collected at each office in the Colony.

From the 1st March, the regulation prohibiting the transmission of money orders by telephone was repealed, and provision was made for telegraphic money orders being issued and paid at money order offices connected by telephone with the telegraph system, subject to stringent conditions to prevent abuse.

POSTAL

POSTAL NOTES.

During the year 1896, 891,291 postal notes, of the value of £322,653 18s., were supplied to Postmasters for sale to the public; of these, 835,011 were issued and paid in New South Wales, having a value (with stamps affixed) of £304,234 11s. 4d.; 40,134 notes, value £16,363 11s. 6d., of other colonies were also paid, making a grand total of 875,145, of the value of £320,598 2s. 10d., paid in New South Wales.

The number of notes issued in this Colony and paid in other Colonies was 52,206, of the value of £20,411 13s. (including postage stamps to the value of £158 3s. affixed thereto).

The amount of revenue collected as poundage was £7,838 17s. 4d., an increase of £1,522 5s. as compared with 1895.

The following table contains particulars of the postal notes paid in New South Wales during the year 1896:—

Issuing Colony.	Denomination of Notes.														Total Number	Value of Stamps affixed.		Total value of Notes and Stamps.

GOVERNMENT SAVINGS BANK.

The following branches were opened during the year 1896, viz.:—Capertee, Dapto, Mandurama, Rous Mill, Tarana, Wallabadah, and Walla Walla.

Four branches were closed, viz.:—Brunswick, Cannonbar, Harris-street and Kunopia.

During the year 43,255 new accounts were opened and 34,572 accounts were closed. The number of accounts remaining open at the close of the year was 140,386.

The number of deposits received was 307,689, and the amount £2,110,579 0s. 3d., being an increase of 11,333 in the number and £83,554 15s. 7d. decrease in the amount on the business of the previous year. The interest added to depositors' accounts was £128,629 11s. 4d.

The number of withdrawals was 197,374, and the amount £1,987,943 6s. 3d., being an increase of 6,768 in the number and of £152,943 6s. 7d. in the amount on the business of the previous year.

The balance at the credit of depositors at the close of the year was £4,372,965 4s. 10d., being an increase of £251,265 5s. 4d. on the previous year.

The average amount of each deposit was £6 17s. 2½d., and of each withdrawal £10 1s. 5¼d.

The average balance at the credit of each depositor at the close of the year was £31 2s. 11¾d.

The following return will show the annual progress of the Government Savings Bank system from 1st January, 1887, to 31st December, 1896:—

Year.	Number of Deposits.	Interest added to Depositors' Accounts	Amount of Deposits.	Number of Withdrawals.	Amount of Withdrawals.	Balance at Credit of Depositors.

Appendix A.

In the information contained in Appendix A is given a detailed statement showing the business transacted at each branch in the Colony. A statement of the Liabilities and Assets, with the Auditor-General's certificate thereon, will be found in the Appendix.

Appendix E.

The rate of interest on all deposits in the Government Savings Bank was fixed at 3 per cent. per annum from the 1st July, the rate previously allowed being 4 per cent. on moneys remaining at the credit of depositors for the full period of twelve months from the 1st January in each year, and 3 per cent. in all other cases.

ELECTRIC TELEGRAPHS.

The following return shows the lines of Electric Telegraph constructed and the cost of construction, also the lines dismantled, during the year 1896:—

	Dismantled Line.	Constructed.		Cost of Construction.
		Line.	Additional Wire.

Additional Line (wire) erected	182 72
Total extent of wire erected during year	2,101 67
Less wire dismantled	80 40
Actual increase	2,021 27
			£	49,095 6 0

The total cost of the whole extent of Telegraphic communication in the Colony on 31st December, 1896—30,820 miles 62 chains—was £889,475 11s. 10d.

Telegraph Offices were opened at Woonona (in lieu of the Telephone Office previously existing there) and Lue (Railway Station). The offices at Cannonbar, Emu Plains (Railway Station), and Kinchela Creek were converted into Telephone Offices.

The names of the public Telephone Offices opened and closed are given under the heading of Telephone Branch.

The

The following Return shows the extent of line and wire in use, and the number of offices in existence on the 31st December, 1896; also the number and value of telegrams which passed over the lines during the year:—

LENGTH OF LINE AND WIRE.

Miles of line	12,418
Miles of wire	30,820
Number of Offices*	856

* Includes 169 Public Telephone Offices and 221 Railway Telegraph and Telephone Offices.

Western Australia	49,782	578 4 3	74 19 1	37 10 9	690 14 1
Totals	3,409,549	32,400 0 0	4,200 0 0	2,571 0 0	39,171 0 0

The receipts by the Cable Company and by the South Australian Government in respect of the Australasian traffic being in excess of the amounts guaranteed (£227,000 and £37,552 respectively), in connection with the reduced rates the Colonies were not called upon to contribute anything towards these guarantees for the twelve months ended 30th April, 1897.

In

In March an amendment was made in the regulations for the transmission and delivery of telegrams so as to provide for messages being forwarded to and from certain stations at a prescribed hour on Sundays, Christmas Day, and Good Friday, at double the usual rates for ordinary telegrams.

In May, Texas (Q.), and in October, Parragundy, (N.S.W.), were added to the list of "Border" stations, between which and all stations in the neighbouring colony telegrams may be transmitted at the inland rate of 1s. for the first ten words, and 1d. for each additional word.

The charge for telegrams to and from Hillgrove and Hillgrove West was fixed at 6d. for the first ten words, and 1d. for each additional word, from the 1st June.

The following Statement shows the Australasian Telegraph business transacted with Europe and the East during the year 1896:—

Colony.	Forwarded.		Received.		Total.

TELEPHONE BRANCH.

During the year a general reduction of fees and other charges in connection with the different services of the Telephone system was made.

The charge for connection with the Central Telephone Exchange, which formerly was the same for private residences as for business establishments, namely, £12 per annum where the line did not exceed one mile in length, was reduced to £9 for business places and £5 for private residences. The extra charge for lines exceeding one mile in length was fixed at £1 per half-mile, in lieu of £1 per quarter-mile. For joint use by several persons of the same number at the Exchange the fee (in addition to the one ordinary subscription) for each extra set of instruments was reduced from £3 10s. to £3. The fee for extension lines connecting with the Exchange lines was fixed at £3, instead of £5, for distances not exceeding one mile, and for each additional half-mile up to three miles at £1, in lieu of £1 per quarter-mile; while the charge for extension bell and switch, or other apparatus used, was reduced from £1 to 10s.

In the case of Suburban Telephone Exchanges the fee—£2 for the first four miles and 10s. for each additional mile—for the use of the trunk wire connecting with the Central Exchange was abolished, the charge for business establishments, namely, £10, otherwise remaining unaltered, except where the line exceeded one mile in length, in which case the charge was reduced from £1 for each additional quarter-mile to £1 per half-mile up to three miles. These reductions also apply to private residences, the primary charge for which was likewise reduced, namely, from £6 to £5.

For connections with Country Exchanges the fee was reduced from £10 to £8 for business establishments, and from £6 to £5 for private residences, where the line was not over one mile in length, and for each additional quarter-mile from £1 to 10s.

An uniform charge (irrespective of distance) of 6d. for the first three minutes, and an equal amount for every additional three minutes, was levied for the use of Public Telephones (Bureaux) within the city and suburbs, the rate formerly charged being double this amount for the use of lines over three miles in length.

The rent for private telephones supplied by the Department to replace instruments the property of subscribers was reduced from £2 to £1 10s., and for each set of magneto telephones from £2 10s to £2 per annum.

As

As regards private telephone lines, it was formerly the practice to charge a license fee of £1 per annum for the first four miles and 10s. per annum for every additional mile up to a maximum of £7. Under the regulation as altered payment of a license fee is not required unless the line crosses the boundary of the licensee's own land, or runs along or across a railway, public road, or track, when a fee of £1 per annum (payable in advance) is charged, irrespective of the length of the line.

The fees in connection with private telephone lines were also reduced in other respects.

The foregoing reductions for the most part came into operation on the 1st May, 1896, and from the returns given below it will be seen that they have been followed by a considerable expansion of the Telephone system.

During the year ended 31st December, 1896, there were added to the number of subscribers :—

To the Central Exchange	522
„ Branch Suburban Exchanges	549
„ Country Exchanges	132
Total	1,203

The following return shows the number of lines connected with the Telephone system at the close of the year :—

<i>Exchanges.</i>	No. of Lines.
Central, Sydney	2,432
Branch, Suburban	1,179
Country	363
Telephone Bureaux	17
Extension Lines—City and Suburbs	642
„ „ Country	36
Private Lines—City and Suburbs	280
„ „ Country	156
Total	5,105
Total number of Telephones in use	5,459

The length of lines opened during the year was 68 miles and 72 chains, and additional wires erected 1,771 miles and 36 chains, the cost of construction being £16,052 18s. 9d.

In addition to the Central Exchange at the General Post Office, Exchanges are now open in the following Suburbs:—Ashfield, Balmain, Burwood, Edgecliff, Hunter's Hill, Kogarah, Manly, Newtown, North Sydney, Parramatta, Petersham, Randwick, Rookwood, and Waverley; and at Bathurst, Broken Hill, Cobar, Goulburn, Newcastle, Wagga Wagga, and West Maitland in the country.

Telephone Bureaux for the use of the Public, on payment of a small fee, are now open at the General Post Office, Sydney, Ashfield, Balmain, Burwood, Cobar, Edgecliff, Hunter's Hill, Kogarah, Manly, Newtown, North Sydney, Parramatta, Petersham, Randwick, Redfern Railway Station, Rookwood, Rozelle, and Waverley.

Public Telephone Offices were opened during the year at Cannonbar, Emu Plains (Railway Station), and Kinchela Creek (in lieu of the Telegraph Offices previously existing at these places), Bangalow, Barrington, Cullen Bullen, Daviesville, East Raleigh, Ganmain, Leura, Parragundy, Rocky Hall, Thurgoona, Tomakin, Uralgurra, Wagonga, Windeyer, Woolgoolga Jetty, and Woomargama; and at Chatswood, Manildra, St. Leonards, Summervale, and Walla Walla Railway Stations.

The Telephone Office at Woonona was converted into a Telegraph Office.

Arrangements have been made for utilising the facilities of the Telephone system in conjunction with the Electric Telegraph, in the case of messages forwarded to and from subscribers to Telephone Exchanges, who in consideration of the payment of the prescribed fees, may forward and receive telegrams by telephone, through the Exchange with which they are connected.

CONSTRUCTION OF TUNNELS IN THE CITY OF SYDNEY.

This work has been continued, by the construction of a tunnel, from the corner of Moore-street and Castlereagh-street along Castlereagh-street to the corner of King-street; thence to the north-east corner of St. James' Church, where it terminates.

On the western side of George-street a tunnel has been constructed from the corner of Clarence-street and Barrack-street, along Clarence-street to King-street, down King-street to Kent-street, and along the latter street to Liverpool-street, where it terminates.

ELECTRIC LIGHT.

General Post Office.

The electric light has been extended to a number of the principal rooms and the colonnade.

Electric motors have been fitted to drive the Telephone Exchange magneto generators.

Some considerable alterations have been effected in the engine-room, increasing it in size, while extra driving power has been provided.

Jenolan Caves.

The electric light has had necessary alterations effected which enable the three series of caves, the Right, the Left, and the Lucas, to be simultaneously illuminated, affording great satisfaction to the visitors who thus have every opportunity of getting an excellent view of these caves.

Circular Quay.

Additional arc and series incandescent lamps have, during the year, been erected on the eastern side of the quay and in the naval drill sheds.

On the western side a number of poles and lamps were taken down and re-erected in other positions to suit the extensive wharfage improvements recently made in that quarter.

Cowper's Wharf.

An improvement in the lighting at this station has been effected by the erection of three (3) additional arc lamps (Brookie-Pell) of 2,000 candle-power each.

I have the honor to be,

My Lord,

Your Lordship's most obedient Servant,

JOSEPH COOK,

Postmaster-General.

Postal and Electric Telegraph Department,

General Post Office, Sydney, 31st July, 1897.

APPENDIX A.

APPENDIX B.

LIST of Receiving Offices on 31st December, 1896.

Aberglasslyn	Cattia Creek	Greghamstown	Moorebank
Agnes Banks	Cave Creek	Gregra	Moparrabah
Alfred Town	Cawdor	Greig's Flat	Morago
Altcar	Cell's Field	Gulf Creek	Morrisset
Amaroo	Central Raleigh	Gullen Flat	Mororo
Angledale	Central Tilba	Gumble	Morton
Anna Bay	Central Wattagan	Gunnary Creek	Mosquito Island
Annangrove	Chanticleer	Gurrundah	Mountain Home
Apple Tree Flat	Chectam's Flats	Gwyune	Mount Allen
Arable	Cherry-tree Hill	Hadley	Mount Aubrey
Argalong	Chilcott's Grass	Half-way Creek	Mount Kenway
Armatree	Chinderah	Halton	Mount Pleasant
Armidale Gully	Clare	Harold's Cross	Mount View
Avencl	Clareval	Hazelbrook	Mount Wayo
Avery's Creek	Cloverley	Hellmann's Tank	Mount Werong
Back Creek	Cochran Creek	Hillas Creek	Mowabla Tank
Backwater	Cocomingla	Hillerman's	Mulbring
Barooga	Collinroobie	Hopefield	Mullenderree
Baryulgil	Collerina	Hughstonia	Mundarlo
Bawden Bridge	Collingullie	Huon	Mundawaddera
Belgrave	Collingwood	Ingebyra	Muumurra
Bellawongarah	Comborah	Ingleadow	Munyabla
Belle Vue	Conley's	Inglewood	Murrangang
Belooth	Cooba	Inveralochy	Murrah
Bena	Coolalie	Ironbong	Murrayville
Benandarah	Coolamon Plains	Isabella	Murrulebale
Bendick Murrell	Cooradigbee	Jackson's Water Holes	Muskgrove
Beni Creek	Corona	Jaunter	Myalla
Bennett's Flat	Countegany	Jilliby	Myall Creek
Bereen	Cowan's	John's River	Myall Plains
Bermagui South	Cowper	Junction Point	Nana Creek
Bielsdown	Craig Lea	Kamandra	Nanama
Bilambil	Cranebrook	Kangaroo Camp	Nanangroe
Billy's Look Out	Cronulla Beach	Karangi	Nangus
Bindogandra	Cullerin	Karcela	Naranghi
Bingleburra	Cullumbung	Katoomba South	Narrabeen
Binneguy	Culparlin	Kelly's Creek	Neimer
Birriwa	Cumbalum	Killabakh Creek	Nemingha
Black Swamp	Cundle Flat	Kilrush	New Cryan
Blanket Flat	Cundumbul	King's Plains	Newlands
Bobeyan	Curracabark	Kingsvale	New Mollyan
Bobin	Curra Creek	Kinross	New Park
Bo Bo	Dapper	Kundibakh	Nirrim
Bocoble	Darke's Forest	Lallarook	Noorong
Bocconoc	Daroobalgie	Lamb's Creek	Noraville
Bogan Gate	Deep Gully	Langwell	North Araluen
Boggy Camp	Diemunga	Lankey's Creek	North Bourke
Bolaro	Dilga	Larbert	Norton
Bolton Vale	Dingo Creek	Laurel Hill	Norway
Boney's Rocks	Dinoga	Lavadia	Numulgi
Bongongo	Dondingalong	Leconfield	Oakey Creek

APPENDIX C.

AMENDED Articles in the Agreement respecting the exchange of Parcels between New South Wales and Ceylon.

Article 1.

There shall be a regular exchange of parcels between the Post Office of New South Wales and the Post Office of Ceylon, by means of the usual mail service performed by the steamers of the Peninsular and Oriental and the Orient Steam Navigation Companies.

Article 3.

Prepayment of parcels postage shall be compulsory, at the rate of 10d. or the equivalent thereof per lb., each country to retain the postage collected by it, and to defray any charge for the "sea" transit of its parcels despatched.

Article 16.

By each country retaining its own postage collections the necessity for the preparation of accounts is obviated.

Article 17.

(Omitted.)

Article 16.

(Re-numbered 17.)

In ordinary correspondence affecting the preparation, transmission, or correction of invoices, &c., or relating to the disposal of parcels, the offices of exchange shall be the mediums, but in matters involving questions other than detail, the offices of correspondence shall be the offices of the Postmaster-General, Sydney, and the Postmaster-General, Colombo.

Article 19.

(Re-numbered 18.)

NEW SOUTH WALES.

POSTAL AND TELEGRAPHIC CONFERENCE,
1896.

REPORT OF THE DELEGATES

TO THE

INTERCOLONIAL CONFERENCE,

HELD AT THE GENERAL POST OFFICE, SYDNEY,

IN NOVEMBER, 1896.

Printed under No. 2 Report from Printing Committee, 6 May, 1897.

SYDNEY: WILLIAM APPLIGATE GULLICK, GOVERNMENT PRINTER.

1897.

POSTAL AND TELEGRAPHIC CONFERENCE, 1896.

Report of the Delegates to the Intercolonial Conference,

HELD AT THE GENERAL POST OFFICE, SYDNEY,
IN NOVEMBER, 1896.

President :—The Honorable Joseph Cook, M.P., Postmaster-General of New South Wales.

All the Colonies of Australasia were represented except New Zealand.

The Conference opened its session on Saturday, the 14th, and concluded its business on the 19th November, 1896 :—

The Conference was mainly convened for the purpose of considering two matters, viz. :—

1. The business connected with the tenders for the Federal Mail Service, copies of which tenders had been forwarded to the Governments of the respective Australian Colonies by the Imperial Government.
2. The question of representation at the Universal Postal Union Congress to be held at Washington in May, 1897.

But it was determined to take advantage of the meeting for the consideration of other matters deemed to be of sufficient Intercolonial urgency and importance.

The result of the deliberation of the Conference is shown by the following proceedings and resolutions, viz. :—

FEDERAL MAIL SERVICE.

In regard to this matter it was decided to despatch the following cablegram to the Right Honorable the Postmaster-General, London, viz. :—

FEDERAL MAIL TENDERS.—In view of your cables on the subject, and our desire to secure continuance of Federal Mail Service, there appears no alternative but to consent acceptance tender P. & O. as well as Orient Company, as suggested by Imperial Government. Conference in consenting urges negotiations to secure following modifications :—

1. Term of contracts—five years.
2. Duration of voyage—672 hours for both Companies between Naples, Brindisi, and Adelaide.
3. Time of departure from Adelaide—Saturday, 2.30 p.m.
4. Steamers to enter Princess Royal Harbour, Albany, until Freemantle Harbour approved by Admiralty Surveyors, after which steamers to enter latter harbour.

JOSEPH COOK,
President of Intercolonial Conference,
Sydney, 19/11/96.

PROPOSED UNIVERSAL POSTAL UNION CONGRESS AT WASHINGTON IN MAY, 1897.

It was resolved as follows :—“That a Minister controlling an Australasian Post Office—accompanied by Mr. James Smibert, Deputy Postmaster-General of Victoria, as postal expert—attend the Washington Congress as Representative of Australasia”; and in regard to the Report of the Permanent Heads as to certain of the subjects that are likely to be discussed at the Congress in question, the following resolution was arrived at, viz. : “That the Report be adopted, subject to such addition and amendments as may be forwarded by the Colonies previous to the departure of the Australasian Delegate for Washington.”

The

The Conference concurred in the Report submitted (after revision at the request of the Conference) by the Permanent Heads on certain matters of Inter-colonial urgency and importance, which will be found detailed in the annexed Report of the Proceedings. In two matters, viz.:—The proposed exclusion of Articles of Merchandise, other than samples, from transmission by packet post; and the intention to levy certain charges on Intercolonial newspapers forwarded to Queensland, the Government of that Colony (through the Honorable A. J. Thynne) has been asked to reconsider its determination.

Appended to this Report will be found:—

Minutes of Proceedings of the Conference.

Signed on behalf of Queensland,

A. J. THYNNE.

Signed on behalf of West Australia,

E. H. WITTENOOM.

Sydney, 20th November, 1896.

POSTAL AND TELEGRAPHIC CONFERENCE.

MINUTES OF PROCEEDINGS.

SATURDAY, 14 NOVEMBER, 1896.

THE Conference was opened at the General Post Office, Sydney, at 10.15 a.m., when the undermentioned gentlemen, representing the Colonies, were present, viz. :—

Queensland :	{ Hon. A. J. THYNNE, M.L.C., Postmaster-General, Queensland. JOHN McDONNELL, Esq., Under Secretary and Superintendent of Telegraphs.
South Australia :	{ Hon. J. A. COCKBURN, M.D. (Lond.), M.P., Minister for Education and Agriculture, South Australia. Sir CHARLES TODD, K.C.M.G., Postmaster-General, South Australia.
Victoria :	{ Hon. J. GAVAN DUFFY, M.P., Postmaster-General, Victoria.
Tasmania :	
New South Wales :	{ Hon. JOSEPH COOK, M.P., Postmaster-General, New South Wales. S. H. LAMPTON, Esq., J.P., Deputy Postmaster-General, New South Wales.
Western Australia :	Hon. E. H. WITTENOOM, M.L.C., Minister for Mines, West Australia.

Moved by the Hon. J. GAVAN DUFFY, and seconded by the Hon. Dr. COCKBURN,—“That the Hon. Joseph Cook, M.P., be President of this Conference.” Carried.

Moved by the Hon. Mr. DUFFY, M.P., and seconded by the Hon. Mr. THYNNE,—“That Mr. James Dalgarno perform the duties of Secretary to this Conference.” Carried.

It was determined, without formal motion, that the Conference being of a confidential character, it was not expedient that the Press should be present, at all events so far as the Federal Mail Service is concerned.

The Hon. Mr. COOK laid before the Conference the following telegram, dated 6th November, 1896, that had been received from the Hon. the Premier of New Zealand, viz. :—

“Postal Conference. As general elections take place beginning of next month, exceedingly regret it will not be possible for any Minister to attend. I note that only Federal Mail Service tenders and Washington Congress representation and subjects will be dealt with, and I presume that another conference for general business will be held about usual time next year. I have not formed any definite opinion *re* Washington representation, but think that one representative, or perhaps two, should suffice. I shall be pleased to learn your own views, and what proposals likely to be made by other Colonies. Subjects for consideration by Washington Congress have already been discussed with your office, but I will send full list by post. Regret my absence from Wellington prevented my replying earlier.

R. J. SEDDON, Postmaster-General.”

The following telegram, dated 11th November, 1896, from the Hon. Sir P. O. Fysh, K.C.M.G., Treasurer and Postmaster-General, Tasmania, was also read :—

“Regret that continued sitting of Parliament and irregularity of steamer sailings both prevent my being present on Saturday.”

The Hon. J. GAVAN DUFFY intimated that he had been requested by the Tasmanian Government to act as the representative for that Colony.

The PRESIDENT delivered his opening address, thanking the Conference for his election, and indicating that in following out the intention when summoning the Conference the business would consist—

- (1) Of the matter of the Federal Mail Service.
- (2) Of the question of representation at the Universal Postal Union Congress at Washington.

A letter from the Berne Bureau dated 5th October, 1896, relating to the business for the proposed Washington Congress, which letter had only just reached the Colony, was read.

The PRESIDENT laid upon the Table lists of subjects (Appendix A) that would be likely to engage attention at the Washington Congress, and also of some matters considered urgent affecting intercolonial postal and telegraphic interests; whereupon it was moved by the Hon. Dr. COCKBURN, seconded by the Hon. Mr. DUFFY, and carried,—“That the lists of subjects to be dealt with by the Conference, read by the President, be referred to the Permanent Heads, who are requested to add to the list any other matters of sufficient importance and urgency, to be included in the list, and as soon as the list has been prepared that a copy of the subjects for discussion should be sent round to each delegate.”

It was determined without formal motion that the Ministerial delegates should at once proceed to consider, in Committee, the matter of the Federal Mail Service.† The whole of the other gentlemen (including the shorthand-writer) withdrew.

Later on it was decided to adjourn the Conference until Thursday, at 10 a.m.

J. DALGARNO,
Secretary.

JOSEPH COOK,
President.

THURSDAY,

THURSDAY, 19 NOVEMBER, 1896.

THE Conference was opened at the General Post Office, Sydney, at 2:50 p.m., when the undermentioned gentlemen, representing the Colonies, were present, viz.:—

Queensland :	{ Hon. A. J. THYNNE, M.L.C., Postmaster-General, Queensland. JOHN McDONNELL, Esq., Under Secretary and Superintendent of Telegraphs.
South Australia :	{ Hon. J. A. COCKBURN, M.D. (Lond.), M.P., Minister for Education and Agriculture, South Australia. Sir CHARLES TODD, K.C.M.G., Postmaster-General, South Australia.
Victoria :	{ Hon. J. GAVAN DUFFY, M.P., Postmaster-General, Victoria.
Tasmania :	
New South Wales :	{ Hon. JOSEPH COOK, M.P., Postmaster-General, New South Wales. S. H. LAMBTON, Esq., J.P., Deputy Postmaster-General, New South Wales.
Western Australia :	Hon. E. H. WITTENOOM, M.L.C., Minister for Mines, West Australia.

Minutes of the proceedings of the 14th instant were read and confirmed.

Mr. LAMBTON brought up Reports of the Permanent Heads relating to (1) the Federal Mail Service; (2) Universal Postal Union Congress; and (3) to other urgent and important matters selected by them for consideration of the Conference. [*Appendices C, D, E.*]

The Conference then proceeded to consider in detail (2) Report as to the Universal Postal Union Congress.

After debate it was moved by the Hon. E. H. WITTENOOM, and seconded by the Hon. A. J. THYNNE:—"That the report be adopted subject to such addition and amendments as may be forwarded by the Colonies previous to the departure of the Australasian delegate for Washington."

(3) Report of the Permanent Heads as to matters of importance and urgency was then read by Mr. Lambton, and discussed.

After revision of the Report (with consent of the three Permanent Heads who signed it), it was moved by Hon. A. J. THYNNE, and seconded by the Hon. J. A. COCKBURN,—"That the Report, as revised, be adopted." Carried.

The Conference next dealt with that portion of the Report signed only by Sir Charles Todd and Mr. Lambton, relating to certain action proposed to be taken by the Queensland Postal Department. After discussion, it was moved by Hon. J. GAVAN DUFFY, and seconded by Hon. J. A. COCKBURN,—"That the Queensland Government be asked to reconsider proposal to rescind, so far as that Colony is concerned, so much of article 12 of the Australasian Convention as relates to the admission of merchandise to the packet post, and the charges intended to be levied by Queensland on intercolonial newspapers." Carried. Hon. Mr. Thynne not voting.

The PRESIDENT then conveyed to Hon. Mr. Thynne the resolution so passed.

The question of representation at the Universal Postal Union Congress was then introduced by the President, and after some discussion it was resolved, on the motion of the Hon. J. GAVAN DUFFY, seconded by Hon. J. A. COCKBURN,—"That a Minister controlling an Australasian Post Office—accompanied by Mr. James Smibert, Deputy-Postmaster-General of Victoria, as postal expert—attend the Washington Congress as Representative of Australasia."

It was resolved, on the motion of Hon. E. H. WITTENOOM, seconded by Hon. A. J. THYNNE,—"That the thanks of the Conference be tendered to the Hon. Joseph Cook for his services as President and for his hospitality during the stay of the Delegates in the Colony."

On the motion of Hon. J. A. COCKBURN, seconded by Hon. J. GAVAN DUFFY, Mr. Dalgarno was thanked for his services as Secretary to the Conference.

The PRESIDENT handed the following draft of a cablegram to the Postmaster-General, London, as the result of the Ministerial consideration of the Federal Mail Service matter, and directed that it be at once transmitted to London, which instruction was immediately carried out.

COPY OF CABLEGRAM SENT TO POSTMASTER-GENERAL, LONDON.

"*Federal Mail Tenders.*—In view of your cables on the subject, and our desire to secure continuance of Federal Mail Service, there appears no alternative but to consent acceptance tender P. and O. as well as Orient Company, as suggested by Imperial Government. Conference, in consenting, urges negotiations to secure following modifications:—

- "1. Term of contracts, five years.
- "2. Duration of voyage, 672 hours for both Companies between Naples, Brindisi, and Adelaide.
- "3. Time of departure from Adelaide, Saturday, 2:30 p.m.
- "4. Steamers to enter Princess Royal Harbour, until Freemantle Harbour approved by Admiralty Surveyors, after which steamers to enter latter Harbour.

"Sydney, 19/11/96.

"JOSEPH COOK,
"President of Intercolonial Conference."

The meeting then adjourned *sine die*.

Confirmed—

J. DALGARNO,
Secretary.

JOSEPH COOK,
President.

Précis re Federal Mail Service, showing action taken from 1st April, 1896, to 12th November, 1896.

At the Conference held in Sydney in January, 1896, it was agreed to sanction the calling of tenders by the London Post Office.

On the 7th July, 1896, the London Post Office received tenders.

On the 24th July, 1896, the Right Honorable the Secretary of State for the Colonies forwarded to the Colonies copies of the tenders received, and intimated that by the time they reached Australia a cablegram would be sent indicating the views entertained by Her Majesty's Government of these tenders.

The following are main features of the offers received as compared with present contracts:—

Orient Steam Navigation Company.

	Time allowed for transit of mails from Naples to Adelaide and <i>vice versa</i> .		Time allowed for transit of mails right through from London to Adelaide and <i>vice versa</i> .		Amount of subsidy.
	In days.	In hours.	In days.	In hours.	
Present contract	32½	730	34½	835	£85,000
Proposed contract	30	720	32½	775	85,000

Twenty-four hours additional allowed on the homeward trips during the prevalence of the S.W. monsoon.

Peninsular and Oriental Steam Navigation Company.

	Time allowed for transit of mails from Brindisi to Adelaide and <i>vice versa</i> .		Time for transit of mails right through from London to Adelaide and <i>vice versa</i> .		Time allowed for transit of mails from Marseilles to Adelaide and <i>vice versa</i> .		Time for transit of mails right through from London to Adelaide and <i>vice versa</i> .		Amount of subsidy.
	In days.	In hours.	In days.	In hours.	In days.	In hours.	In days.	In hours.	
Present contract	32½	780	31½	830	34½	826	35½	854	£85,000
Proposed contract	28½	686	30½	736	30½	732	31½	760	*

Twenty-four hours additional allowed on the homeward trips during the prevalence of the S.W. monsoon.

On the 12th September, 1896, His Excellency the Governor received the following cablegram, dated 10th September, from the Right Honorable the Secretary of State for the Colonies, namely:—

"Most confidential. Postal arrangements which Her Majesty's Government propose. To accept tenders Orient and P. and O., *via* Brindisi, as providing only means of obtaining whole of service required. P. and O. *via* Marseilles nearly one day longer would not be satisfactory to public in this Country or Colonies. Answer as soon as possible whether your Ministers agree to proposals of Her Majesty's Government. Hope it possible by negotiation to obtain something, cannot make further concession with respect to length of time on voyage. Her Majesty's Government before accepting tender propose to cause inquiry to be made as to this point, consequently it is of the utmost importance that everything relating to postal arrangements should be kept secret until arrangements concluded."

Some confidential telegraphic communication then transpired between the Colonies concerned and an informal Conference was held in October, at Melbourne, between the Postmasters-General New South Wales and Victoria (The Honorables J. Cook and J. Gavan Duffy), which resulted in the despatch of a cablegram from His Excellency the Governor of South Australia, to the Right Honorable the Secretary of State for the Colonies as follows:—

"Ocean mails. Employment of black labour by one of the tenderers causing great difficulty. Hope to be able to give definite reply by the middle of November."

On the 28th October, 1896, His Excellency the Governor of South Australia forwarded to His Excellency the Governor of New South Wales the following cablegram from the Right Honorable the Secretary of State for the Colonies, namely:—

"Postal arrangements. Should be recollected that President of Intercolonial Conference, Sydney, informed Imperial Post Office last March that Colonies accept conditions as to employment of coloured labour, and in reply was informed tenders would be called at once. Difficulties not understood. Tenders have been before Colonies more than six weeks, and as already explained my telegram of 10th September practically there is no alternative measure if federal service is to be maintained. Immediate decision therefore urgently required."

On the 12th November, 1896, His Excellency the Governor of New South Wales received the following cablegram from the Right Honorable the Secretary of State for the Colonies, namely:—

"Your Ministers should clearly understand Her Majesty's Government cannot undertake, under any circumstances, to be parties to contract from which any class of British subjects is specifically excluded."

APPENDIX

* Note.—No price is given for the Australian portion of the service, it being included in the sums of £310,000 and £330,000 asked for the services by the respective routes *via* Marseilles and *via* Brindisi.

APPENDIX A.

PROPOSALS FOR CONSIDERATION AT THE INTERNATIONAL POSTAL UNION CONGRESS TO BE HELD AT WASHINGTON IN 1897.

New South Wales Proposals.

That provision be made in Article 16 of the Vienna Principal Convention for preventing the circulation of indecent or obscene matter through the post.

To amend Article 11 of the Convention, so as to enable official correspondence for Union countries to be transmitted without postage stamps, provided such correspondence bears an indication thereon that the postage has been paid, such as an impression "Postage paid."

Further consideration of proposal of Hobart (1892) Conference to amend clause 34 of the detailed Regulations, so that the statistics required under that clause be less voluminous than at present.

That in lieu of subsection 2° §3 of Article 4 of the Vienna Principal Convention, the following be substituted, viz.:—

For sea transits.	Letters or Post-cards.	Other articles.	
Not exceeding 2,500 miles	3 francs	20 centimes	} Per kilogramme.
Between 2,500 and 5,000 miles	6 "	40 "	
" 5,000 and 7,500 miles	9 "	60 "	
" 7,500 and 10,000 miles... ..	12 "	80 "	
Over 10,000 miles	15 "	1 franc	

That subsection 2° of §4, Article 4, be suppressed.

That the necessary amendments be made in Article 5, §2, subsection 1°; Article 17, §4 and §5; and §4 of detailed Regulations 24 and 25 respectively, in order to bring same into conformity with the changes proposed.

Question of introducing uniformity of practice amongst Union Administrations in connection with the demonetisation of stamps.

To add to Union Regulation 15, so that the name and address of sender be furnished in connection with inquiries for missing registered articles.

To reduce territorial transit rates chargeable under sub-section 1°, paragraph 3, Article 4, of Vienna Principal Convention.

New Zealand Proposals.

That practically autonomous Colonies, forming units of voting groups, be formally described in the regulations as separate administrations of the Union for all purposes except voting.

That the former practice of making out acknowledgments of delivery at offices of posting, and attaching them to registered letters, be reverted to. [*See Regulation 9, of Vienna Convention.*]

That travellers' cards be defined in Article 18 of the detailed Regulations, separately from prices current.

That names of ships be allowed to be inserted in shipping advices.

That complimentary and seasonable inscriptions on Christmas, birthday, Easter, and such like cards be allowed under printed paper regulation (No. 18).

That provision be made whereby the United States of America territorial rates on Australasian mail matter may be reduced to at least the ordinary Postal Union charges.

Western Australian Proposals.

Indemnity for the loss of a registered article. Article 8 of the Convention, clause 1, should be amended to read "is entitled to an indemnity not exceeding 50 francs."

The scope of detailed Regulation 19 might be enlarged to include small packets of merchandise other than "valueless" samples, as is the practice with British Possessions and Intercolonially.

Queensland Proposals.

Omission of subsection 1, paragraph 2, Article 5, so as to allow all correspondence to be dealt with under paragraph 1 of the same article.

Amendment of clause 2, Article 26 of the Convention and detailed Regulation 39, so as to allow more time for the careful consideration of important proposals to amend the Convention and Regulations.

Victorian Proposals.

Re non-payment of postage on French official correspondence posted in the Colonies. [*Vide Article 5, of Vienna Convention, re unpaid letters, page 6.*]

Re union sea transit rates. [*Vide Article 4, of Vienna Convention, page 4.*]

Re revision of Article 27, of Postal Union Convention (page 17), through accession of Cape Colony to the Postal Union.

MATTERS LIKELY TO BE BROUGHT FORWARD BY OTHER UNION COUNTRIES.

By British Post Office.

Re admission of private postcards for circulation within the Union.

Respecting the transmission of papier-mache moulds (casts) serving as stereotypes for the printing of a newspaper, through the post at the rates of postage applicable to "printed papers." [*See Union Regulation 18, paragraph 1.*]

By Luxemburg and United States of America.

Re introduction of a universal postage stamp.

By Egypt and R. G. Raveli.

Re introduction of a reply-paid envelope.

By Berne Bureau.

Re vote of British South Africa. (Article 27 of Vienna Convention to be modified.)

NEW SOUTH WALES' LIST OF INTERCOLONIAL SUBJECTS FOR CONSIDERATION AT CONFERENCE.

Proposed reduction of territorial transit rates charged by one Australian Colony to the other.

Queensland's proposal for a reapportionment of postage on parcels exchanged between that Colony and New South Wales, Victoria, and South Australia.

New South Wales regulations amended, so as to permit of objects of meetings being inserted in notices thereof.

Queensland's intention to transfer to the parcel post, packets containing merchandise.

Re Colonial share of postage on single-rate parcels from Foreign Countries, *via* the United Kingdom.

Proposed reduction of Intercolonial Telegraph Rates.

(a) Proposed reduction of Colonial charges for commission on Money Orders to the United Kingdom.

(b) Question of allowing the use of postage stamps for small remittances to and from United Kingdom and Australia, and the reduction of charges on British and Intercolonial stamps.

Respecting apportionment of expenses of future Conferences.

APPENDIX B.

LIST OF MATTERS OF IMPORTANCE AND URGENCY SELECTED BY PERMANENT HEADS FOR CONSIDERATION AT CONFERENCE:—

1. Letter Bills, proposed form of.
2. Books, Catalogues, &c., being allowed to contain anything beyond address.
3. Australian Convention, Revise of.
4. Postal Guides, Uniformity of.
5. Commission on Money Orders to England, &c.
6. Postal Union Congress.
7. Telegraph Code, Alteration of.
8. Code Addresses.
9. Reply-paid Telegrams.
10. Expenses of future Conferences.
11. Austro-German proposal for uniform rates of Postage on Parcels up to 11 lb.
12. Reduction and apportionment of Postage on Parcels between Great Britain and Australasia.
13. As to whether the addition in writing of the "Objects of the Meeting" should be permitted in the case of Notices of Meeting transmitted by post at packet rate.
14. Reduction of Intercolonial Telegram Rates.
15. Money Order Telegrams.
16. Parcel Post Convention with France.
17. Proposal of Queensland to rescind, so far as that Colony is concerned, so much of Article 12 of the Australasian Convention as relates to the admission of merchandise to the Packet Post.
18. Consideration of Mr. Jules Renard's letter respecting telephonic communication between the capitals of Australia.
19. Universal Reply Letter-cards.
20. Re-arrangement of the division of Postage on Intercolonial Parcels.
21. Intercolonial Newspapers (charge on).

APPENDIX C.

No. 1.—OCEAN MAIL SERVICE.

HAVING been instructed by Honorable Ministers assembled in Conference to report generally upon the tenders now before them, submitted by the British Post Office, for the Federal Mail Service, and also as to the possibilities of providing an alternate service in the event of it being considered undesirable to agree to the acceptance of the P. and O. Company's tender, we have the honor, respectfully, to report as follows:—

I. PRESENT SERVICE.

The present contracts provide a weekly service by the Peninsular and Oriental Steam Navigation Company and the Orient Company, each on alternate weeks.

The subsidy to each company is £85,000 per annum, or £170,000 in all, of which the British Post Office pays £95,000, and the Australian Colonies, £75,000. The former collects and retains the sea transit charges at Postal Union rates, viz. :—

On letters, 15 francs per kilogramme (5s. 6d. per lb.).

On other articles, 1 franc per kilogramme (4½d. per lb.).

on correspondence forwarded to the Colonies by other countries making use of the service.

The Colonies, in like manner, collect and retain the charges for sea conveyance on the homeward correspondence of New Zealand and other places not parties to the Federal Service.

New Zealand is charged—

On letters, 12s. per lb.

On packets, 1s. per lb.

On newspapers, 6d. per lb.

12s. per lb. on letters is equivalent to nearly 3d. (2·9) per single-rate letter.

The subsidy paid by the contracting Colonies (£75,000) is apportioned on the basis of population

In addition to the Australian service, the Peninsular and Oriental Company have the contracts for the India and China mails, weekly to Bombay and fortnightly to China, for which they are paid £265,000 per annum.

Under existing arrangements the Indian mails every alternate week are carried by the Australian steamers between Brindisi and Aden, where they are transhipped to or from the Bombay boat.

The China and Singapore mails are also carried in the Australian (Peninsular and Oriental) steamers to and from Colombo and Italy.

Contract time between—

Brindisi and Adelaide (P. and O. steamers) 780 hours.

Naples and Adelaide (Orient steamers) 780 „

The original time allowed to the Orient Company was 768 hours, but on the extension of the contract, or from May, 1895 (since which the steamers have called at Colombo both ways), the time was extended to 780 hours.

II. TENDERS FOR NEW SERVICE.

The only tenderers are the Peninsular and Oriental Steam Navigation Company and the Orient Company, the present contractors.

The former provide, as at present, for the India, China, and Australian service, viz., weekly mail to Bombay, and fortnightly to both Australia and China (Shanghai). They submit alternative tenders for mails *via* Marseilles and Brindisi.

The Orient Company's tender provides, as now, for a through service between Naples and Australia (Adelaide), calling at Colombo both ways.

Both tenders are for a seven years' contract.

The following is a summary of the tenders:—

Peninsular and Oriental Tender No. 1, £310,000.

	From Marseilles, hours	From London, hours
Marseilles to Bombay (weekly)	342	370
Marseilles to Shanghai (fortnightly)	782	810
Marseilles to Adelaide (fortnightly)	732	760

Peninsular and Oriental Tender No. 2, £330,000.

	From Brindisi, hours	From London, hours
Brindisi to Bombay (weekly)	302	352
Brindisi to Shanghai (fortnightly)	736	786
Brindisi to Adelaide (fortnightly)	696	736

Present Cost of P. and O. Services.

India and China	£265,000
Australia	85,000
	£350,000
Carriage of parcels to and from Thames	3,550
	£353,550
Saving in cost of present contracts <i>via</i> Brindisi	£23,550
Saving in cost <i>via</i> Marseilles	43,550
and Italian transit charges (say)	30,000
Total saving on present cost <i>via</i> Marseilles... ..	£73,550

Present

Present Contract Time—

Brindisi to Adelaide	780 hours
Time as per tender No. 2	686 "
Saving in time <i>via</i> Brindisi								94 hours

It will be seen that a saving of £50,000 a year (£20,000 difference in tender, and £30,000 the estimated payments for Italian transit) might be effected by adopting the Marseilles route for the P. and O. Company's service. This, however, would involve twenty-four hours loss of time, which the Imperial Post Office thinks would not be acceptable to the public in the United Kingdom, India, and the Colonies. It is therefore proposed that the higher tender for the Brindisi route shall be accepted. In this we quite concur.

Orient Company's Tender—

The Orient Company's tender (£85,000) is the same as present contract, but there will be 60 hours' saving of time, viz. :—

Present contract—Naples to Adelaide	780 hours
Specified in tender, "	"	"	720 "
Saving								60 hours

While the time specified by the P. and O. Company between Brindisi and Adelaide is 686 hours (28 days 14 hours), the Orient Company require 720 hours between Naples and Adelaide. The time, in our opinion, should be reduced to 672 hours, or 28 days by both routes. There can be no doubt the P. and O. Company, with their new boats, could easily accomplish this.

POSSIBLE ALTERNATIVES.

We take it for granted that there is no question as to the acceptance of the Orient Company's tender, and that the only thing desired is to ascertain whether there would be any means of arranging a satisfactory service other than the P. and O., to alternate with the Orient Company.

Table A.

We attach a statement, in which particulars are given of every other steam service now running which could possibly be made available for the conveyance of mails to Great Britain, and from Great Britain to the Colonies.

Assuming that the Orient Company's day of departure from Sydney is altered, as it no doubt will be under the proposed accelerated rate of speed, and that such day will be Wednesday from Sydney and Friday from Adelaide, the first question is whether any other service can be utilised for the despatch of mails on the alternate week and on the same day of the week, as it is obvious that any satisfactory weekly service should provide for each mail leaving Adelaide, and being due in London on the same day of the week.

Unfortunately, none of the other lines would give a fortnightly service, all being either four-weekly, calendar monthly, or at irregular intervals, so that, even if it were possible to provide a service to alternate weekly with the Orient, it would be necessary to utilise two of the other lines of steamers for the purpose of maintaining the weekly service.

Dealing first with the Suez route, we will suppose that the Orient's day of departure from Adelaide be Friday, the 13th instant, the following will show how the steamers would leave Adelaide :—

Messageries Maritimes on Monday, 9th.
 Orient on Friday, 13th.
 North German Lloyds on Saturday, 14th.
 The following week there would be no mail steamers.
 The third week the Orient would leave on the 27th.
 The fourth week there would be no mail steamers.
 The fifth week the Messageries Maritimes on Monday (December 7th).
 Orient on Friday, 11th.
 North German Lloyds on Saturday, 12th (December).
 The only other steamers, in addition to the above, would be an occasional one by Lund's Line.

A mail will leave Sydney, *via* San Francisco, on Monday, November 23rd, the dates for closing mails being :—

Adelaide, Thursday, 19th.
 Melbourne, Friday, 20th.

This service would, of course, be useless to Western Australia.

Further, the San Francisco Service as at present carried out would not alternate with the Orient even on its four-weekly date (Orient, say, Friday, 13th November, 'Frisco, Monday, 23rd November). Moreover, the time occupied from the Colonies would be longer even in the case of New South Wales and Queensland than by the Suez line, and still longer in the case of Victoria and the western colonies.

With regard to the Vancouver line. If that were made four-weekly and to alternate fortnightly with the 'Frisco and Orient, a fairly good alternate service might be arranged; but it is hardly necessary to point out that the Vancouver service, as now carried on—whatever its future may be—is not sufficiently satisfactory to rely upon as an important link in the regular weekly service with Great Britain.

Supposing that the Colonies should succeed in making satisfactory arrangements for a service alternating with the Orient Company, the London Post Office will have to make provision for the alternate weeks outwards. This they would probably do by agreement with the P. & O. Company, in which case that Company's steamers, which would be utilised as now for carrying the Indian and China mails between Aden and Brindisi, would leave Adelaide on the return voyage on the alternate mail day, and there is no doubt that the bulk of the correspondence for England would be marked by the public to be forwarded by those steamers, and the Colonies would be compelled to so forward the correspondence and

and pay the British Post Office transit rates to be mutually agreed upon—probably the Postal Union rates, namely, 5s. 6d. per lb. for letters and postcards and 4½d. per lb. for other articles, besides a special rate on parcels, possibly 2d. per lb., which, under the new contracts, will be included as ordinary mail matter. The Colonies would, therefore, still *pro tanto* be paying a line of steamers employing coloured labour.

It will thus be seen that out of all the steamers plying between here and Great Britain, which could possibly be made available for conveyance of mails, the services *via* 'Frisco and the Messageries Maritimes are the only ones that could be made to fairly alternate with the Orient, and the question occurs to us in this connection, whether it would be politic to make use of foreign steamers for the conveyance of mails, and whether it is not likely that as much objection would be taken to our mails being sent by foreign steamers as is now taken to sending them by British ships which employ coloured labour.

The Messageries steamers really afford the quickest transit of any on the list, and are even quicker than the P. & O. and Orient under the latter's present contracts, but according to existing time-tables they run almost side by side with the Orient, and even if the time-tables of one or other were changed so as to alternate fortnightly there would still be the double objection, namely, that of sending mails by foreign steamers and by foreign steamers which employ—as the Messageries do—coloured labour.

Having now dealt with what appear to be possible lines that *could* be made available for an alternate service with Great Britain, we propose offering a few observations on the other lines enumerated in the list, given in table A, taking them in numerical order.

- (1.) *Queensland Royal Mail Line*.—It will be seen that this would only provide a forty-seven days homewards and fifty-two days outwards service to and from Sydney, and on that ground alone would be unsatisfactory. It is, moreover, only four-weekly, and is only used, even by Queensland, for European mails to and from her extreme Northern ports.
- (2.) *Canadian-Australian Line*.—Calendar monthly. Already dealt with.
- (3.) *Union Company's Line, via San Francisco*.—Four-weekly. Already dealt with.
- (4.) *Messageries Maritimes Line*.—Four-weekly. Already dealt with.
- (5.) *North German Lloyd's Line*.—Four-weekly. Already dealt with.
- (6.) *Lund's Blue Anchor Line* seems altogether out of the question, the intervals and dates being too uncertain, and evidently, without a very much larger payment than the poundage upon letters, would not be likely to bind themselves to either a fixed day fortnightly or four-weekly, especially during the wool seasons. They are, moreover, principally cargo boats, and although they give their time as about forty days from Sydney or Melbourne, we are inclined to think that their actual time must be very much longer. Another objection is that it is uncertain whether they call regularly at Melbourne or Adelaide, and they do not call at any European port *en route*; and in any case if it were decided to utilise their services as mail-carriers, some contract or agreement would have to be made binding them to regular intervals, to a very much shorter service—which the present steamers could not perform—and, of course, to calling regularly at Melbourne and Adelaide.
7. *Aberdeen White Star Line, via Albany and the Cape*.—This only gives a calendar monthly service, and therefore could not possibly alternate with a four-weekly one, unless their time-tables were wholly rearranged; moreover, the time occupied—some forty-nine days home and forty-four out—would be quite unsuitable for present requirements. Of course, they do not touch at any European port.
8. *The Gulf Line* appears so uncertain, and the time occupied so long—about forty-nine days home and fifty-five out—that nothing more need be said in reference thereto, and the same remarks apply to the
9. *Port Line*; also to the
10. *Transaal Line*, no fixed dates of departure being observed in the case of the latter, and the time occupied being about sixty days.
11. *Shaw-Savill and Albion Company's Line*, of which line the "Gothic" is the principal steamer.—This line, as far as mainland Colonies are concerned, would not be sufficiently expeditious, even if it were possible to alternate their four-weekly trips with any other, which, of course, could not be done. Moreover, they only run eleven trips a year (see table), and call at a colonial port (Hobart) outwards only, returning to England by Cape Horn.
12. *New Zealand Shipping Company's Line*.—This is a forty-eight and forty-five days' service, which, as in other cases, would alone preclude its use as a mail line. They also call at Hobart one way only, returning to England by the Horn.

Of course we assume that the payments, either at Union rates or at any other rates, that would be offered, would not be sufficient to induce any of these steamers to leave at suitable fixed dates, or to go out of their course to land the mails at an Italian or other European port.

Should it be determined to accept the tenders of both Companies as proposed by the London Office, we concur, as already stated, in the opinion of that office that the European port for the P. and O. Company should be Brindisi, as the acceleration provided for thereby will, in our opinion, fully warrant the extra cost of calling at that port.

Table B

We append a Table (marked B .), showing what would be the effect in regard to the arrivals and departures at England and Australia under the accelerated time-table, supposing the day from Adelaide were made Friday. This would, in our opinion, be on the whole the most convenient day, although possibly Saturday from Adelaide, which it is understood Western Australia desires, might do nearly as well. It is, however, intimated in the English despatches that an attempt is to be made to obtain a still further acceleration in speed, and of course until the precise number of days and hours to be allowed for the sea voyage is fixed it will not be possible to advise definitely as to what should be the day of the arrival and departure at either end.

We

We conclude our Report by submitting the following statement, which shows what would be the probable financial result of accepting the Orient tender, and paying poundage rates, namely, 12s. per lb. of letters, 1s. per lb. of books and packets, 6d. per lb. of newspapers, and 2d. per lb. of parcels, on mails forwarded by the P. & O. or other steamers.

Dr.			
To Colonial share of subsidy to Orient Company		£37,500	
„ Estimated payments to P. & O., or other Company, at above rates ...		28,000	
„ Transit of mails of Contracting Colonies through European Countries, &c.		11,000	
„ Overland transit of mail matter through Australian Colonies ...		3,000	
		£79,500	
Cr.			
By Estimated postages that would be collected in the Colonies		£52,000	
„ Estimated amount of Australian land transit rates on mails from Europe, &c.		2,500	
„ Estimated receipts from non-contracting Colonies, &c.		1,500	
		£56,000	
Approximate net cost per annum to contracting Colonies			23,500
The present net cost per annum is about			£31,500
Approximate saving... ..			£8,000

The poundage rates mentioned above are, in the case of letters, in excess of the postage being, with European transit rates added, equal to about 3½d. per single-rate letter, and although the present saving would be, approximately, as stated, the loss would increase with the growth of correspondence, whereas the reverse would be the result in the case of fixed subsidies.

S. H. LAMBTON.

APPENDIX D.

No. 2.—UNIVERSAL POSTAL UNION CONGRESS.

WE submit the following Report and recommendations in reference to the Universal Postal Union Congress to be held at Washington in May, 1897 :—

The Australasian Colonies, on joining the Universal Postal Union (1st October, 1891), became entitled to representation at its Congresses and Conferences—that is to say, the whole of the Australasian Colonies are considered as one “country,” they may send one or several delegates if desired, all of whom may join in the debates, but have collectively only one vote at the Congress.

Briefly stated, the conditions under which the Colonies joined the Union were that Australasia should have one joint vote, and that, pending the next quinquennial meeting, no alteration in the maritime transit rates or reduction in postal charges should be made.

At the Postal and Telegraphic Conference held in Brisbane, in March, 1893, the following resolution was carried, viz. :—That, in the opinion of this Conference, one representative should be sent from Australasia on behalf of all the Colonies to represent them at the Postal Union Congress.”

At the New Zealand Postal and Telegraphic Conference, in March, 1894, the question of the appointment of a delegate to attend the Postal Union Congress at its next meeting was discussed, but a decision was postponed. And at the Hobart Conference, in February, 1895, a motion was carried that the question of electing a delegate to the Postal Union Congress be deferred until next Conference.

In May last a circular letter was received from the Berne Bureau, requesting, by the 30th June, particulars of the subjects which the Australasian Colonies desired to submit to the forthcoming Congress.

As Australasia is only one territory in the Postal Union, it follows that the Colonies must be unanimous, and with that object a list of subjects which it is proposed to bring forward was prepared and the views of the different Colonies invited. The replies received showed that there was little chance of arriving at unanimity by correspondence, and it was decided to postpone the matter until the next Inter-colonial Conference. At the same time the Bureau was informed that it was not possible to forward a list of proposals such as asked for until the Colonies had met in conference and endeavoured to come into agreement on the subjects which they proposed to bring forward. It was stated that the Conference would probably take place about September or October (but for various reasons it could not be convened until the present month); and a hope was expressed that it would not then be too late to include the Australasian subjects in the list, which it was understood was being prepared by the Berne Bureau. In reply, the Bureau points out that the date mentioned for our proposals will be too late to include them in the principal book, but suggests that they be collected and form a supplement, and forwarded to the Union Administrations, or distributed to the delegates at the time of the opening Session of the Congress.

We respectfully recommend that in view of the many important questions affecting the Colonies that will be discussed at the Washington Congress in May next, the Colonies should be represented thereat, and that the delegate should be accompanied by at least one postal expert, and be instructed on the following subjects :—

1. *Reduction of territorial transit rates chargeable under sub-section 1°, paragraph 3, Article 4, of Vienna Principal Convention.*

We consider that the following rates, namely, 2 francs per kilogramme (8½d. per lb.) for letters and post-cards, and 25 centimes per kilogramme (1½d. per lb.) for other articles, for the territorial transit through each intermediate country, is much too high, and we suggest that these rates be reduced to—

1 franc per kilo. (4½d. per lb.), and
10 centimes per kilo. (¾d. per lb.), respectively,

which would even then be somewhat higher in the case of letters and post-cards than is now charged by Australian Colonies on forward mails.

2. *Reduction of sea transit rates.*

That in lieu of sub-section 2° §3 of Article 4 of the Vienna Principal Convention, the following be substituted, namely :—

For sea transits:	Letters or Post Cards.	Other Articles.
Not exceeding 2,500 miles ...	3 francs ...	20 centimes
Between 2,500 and 5,000 miles ...	6 francs ...	40 centimes
Between 5,000 and 7,500 miles ...	9 francs ...	60 centimes
Between 7,500 and 10,000 miles ...	12 francs ...	80 centimes
Over 10,000 miles ...	15 francs ...	1 franc

} Per kilogramme.

That sub-section 2° of §4 of Article 4 be suppressed.

That the necessary amendments be made in Article 5 §2, sub-section 1°; Article 17, §4 and §5; and §4 of Detailed Regulations 24 and 25, respectively, in order to bring the same into conformity with the changes proposed.

3. *Question of alteration of surcharges provided for in Article 5.*

We recommend the omission of the following words in sub-section 1 of paragraph 2, “25 centimes per single rate for letters,” as there is no country in the Union now availing itself of the right to make this charge on letters for Union countries, although the surcharge provided for in this Article is made on other articles.

4. *Re indemnity for the loss of registered articles, Article 8 of the Convention, clause 1.*

We think it desirable that in the interests of the countries where the system of indemnity is recognised, the Article should be amended by the insertion of the words “Not exceeding” after the word “indemnity,” and before “50 francs.” At the same time we may call attention to the fact that the Australasian Colonies have, in almost all cases, declined to accept responsibility in regard to registered articles.

5. *Prepayment of postage on official correspondence.*

We recommend that Article XI of the Convention be amended so as to enable official correspondence for Union countries to be transmitted without postage stamps, provided such correspondence bears an indication thereon that the postage has been paid, and name of country, such as an impression, "Postage paid, New South Wales."

6. *Circulation of indecent or obscene matter by post.*

We recommend that provision be made in Article XVI of the Vienna Principal Convention for preventing the circulation of indecent or obscene matter through the post.

7. *Proposed amendment of Clause 2, Article 26 of the Convention, and Detailed Regulation 39 so as to allow more time for the careful consideration of important proposals to amend the Convention Regulations.*

The time allowed under the Convention no doubt meets all the requirements of European countries to consider and reply to any propositions, but is insufficient in the case of Australasian Colonies, which have to consult each other before coming to any conclusion, and before replying to Berne.

We, therefore, suggest that longer time should be allowed than that provided for in Article 26, and we further suggest that only proposals of an urgent character should be submitted for consideration between two consecutive meetings of Congress.

8. *Question of reduction of United States territorial transit rates on Australasian mail-matter.*

The United States Post Office at present charges for the transmission of closed mails between San Francisco and New York—

- 6 francs per kilogramme for letters (2s. 2d. per lb.).
- 2 francs per kilogramme on other articles (8½d. per lb.).

The ordinary Union territorial transit rates are—

- 2 francs per kilo. on letters (8½d. per lb.).
- 25 centimes per kilo. on other articles (1½d. per lb.).

Reductions were urged at the Brisbane (1893) and Wellington (1894) Conferences, and communications were addressed to the Postmaster-General at Washington, who stated in reply that the present special charges do not cover actual cost of transit, and in a later letter, that no reduction could be made pending further legislation. In view, however, of the fact that these rates are almost prohibitory (being the highest levied by any Union country), and tend to discourage the transmission of mails by the San Francisco route, we recommend that the representative at Washington should bring this matter before the Postal Union Congress, and urge that the rates be reduced.

Notwithstanding that substantial reductions have been made in French and Italian territorial rates, those of United States of America remain unaltered.

9. *Regulation IX—Acknowledgment of Delivery.*

1. "Articles for which the sender requires an acknowledgment of delivery must be marked very clearly with the inscription 'Avis de reception,' or be stamped with the letters A.R.
2. Acknowledgments of delivery must be prepared by the offices of destination on a form in accordance with, or analogous to, the pattern A annexed, and sent by those offices to the offices of origin, whose duty it is to deliver the acknowledgments to the senders of the articles to which they relate. Acknowledgments of delivery must be drawn up in French, or must bear a sublineary translation in that language."

Under Detailed Regulation 9 to the Lisbon Convention (1885) forms of acknowledgment of receipt of registered articles were prepared by the offices of origin, but for some reason not known here the practice has been altered in the Vienna Convention so that the offices of delivery of registered articles are required to prepare such forms. (See Regulation 9.)

In 1893 Bulgaria made a proposal to amend Regulation 9 so as to revert to the former practice, but on being submitted to the vote of Union offices the proposal was rejected.

We suggest that the former practice of making out acknowledgments of delivery at offices of posting and attaching them to registered letters be reverted to.

10. *Question of adding to Union Regulation 15, so that the name and address of sender be furnished in connection with inquiries for missing registered articles.*

We are of opinion that no instruction on this subject is necessary to the delegate.

11. *Travellers' Cards—Article 18.*

After the words "address cards" in paragraph 1, Article 18, Detailed Regulations, we recommend that the words "travellers' cards" be inserted, so as to agree with sub-paragraph H, of paragraph 4, which introduces travellers' cards.

12. *Question of complimentary and seasonable inscriptions being allowed on Christmas, Easter, Birthday, and such like cards.*

In 1893, at the instance of the British Post Office, the question whether "words added by hand on so-called 'Christmas' or 'New Year's' cards, such as 'For John, with Aunt Mary's love,' 'To dear Mary from Cousin Jane,' &c.," may be considered as dedications in the sense of letter "1" of paragraph 4 of Article 18 of the Detailed Regulations to the Principal Convention was submitted to an interpretative vote of Postal Union Offices. The question was resolved in the negative—nineteen offices out of thirty offices which voted declaring against the proposal.

Cards of the class referred to are exchanged between the Australasian Colonies and the United Kingdom, and it has been arranged that they shall also be exchanged between the colonies and such other Union Administrations as may so agree with the London Office.

We advise that the question be again considered at the forthcoming Congress with a view to these inscriptions being allowed.

13. *Question of enlarging the scope of Detailed Regulation 19 so as to include small packets of merchandise.*

We recommend that paragraph 1 of these Regulations be amended so as to admit small packets of merchandise, not exceeding 1 lb. (not necessarily samples), being allowed to pass at printed paper rates, as is the practice in British possessions and in the Colonies.

14. *Detailed Regulation 32.*

We advise that Regulation 32, paragraph 5, be amended by inserting after the words "British Colonies of Australasia" the following words:—" (New South Wales, Victoria, New Zealand, Queensland, South Australia, Tasmania, Western Australia, and Fiji)."

15. *Question of amending Clause 34 of the Detailed Regulations, so that the statistics required under the clause be less voluminous.*

The statistics required under clause 34 of the Detailed Regulations of the Union are, in our opinion, of an unnecessarily voluminous character, and entail a large amount of clerical labour; and we suggest that the Australasian delegate be instructed to press for an amendment in the direction of simplicity.

16. *Question of introducing uniformity of practice amongst Union Administrations in connection with the demonetization of stamps.*

We recommend that a copy of the statement laid before the New Zealand Conference in 1894 be forwarded to the delegate, with an intimation that Australasia favours such a system as would provide for all stamps which have been sold to the public being accepted in payment of correspondence irrespective of the date of issue.

17. *Question of names of ships being allowed to be inserted in shipping advices.*

This question has been raised by the New Zealand Post Office, and we bring it forward accordingly.

Sub-section (1), paragraph 3, detailed regulation 18, permits the indication in manuscript, in advices of the departures of ships of the dates of those departures, and we consider that this necessarily allows the insertion in such advices of the names of the ships; but should there be any doubt in the matter we advise that the question be brought forward for decision at the Washington Congress.

18. *Question of French Consular correspondence posted in Australia addressed to the French Government being forwarded unstamped.*

This question has been the subject of considerable correspondence. Whilst it may be argued that the Consular officers are strictly within their rights in claiming the transmission of their letters unpaid, seeing that the Union Convention permits of unpaid letters being forwarded through the post subject to a charge of double the deficient postage on delivery, we consider that the spirit of the Convention is overridden, and the practice operates to the detriment of the Colonies, which have to pay for the carriage of the correspondence by sea and land, and are, therefore, entitled to the postage.

The object of the provision in the Union Regulations in allowing unpaid letters to be sent is to avoid public inconvenience and to meet urgent necessities, but is discouraged by a charge of double the deficient postage to be collected from the addressee. This deterrent does not, however, apply in the case of correspondence of the nature referred to where the charges marked by the office of posting are waived on delivery.

As pointed out by the London Office in a letter dated 4th October, 1895, the practice complained of is "one which it is considered difficult to defend, and which is contrary to the views and practices of this country, and indeed of almost all countries of the civilised world."

As an illustration of how this provision operates, it would be possible for the French Consul at Melbourne to post for transmission by the Messageries Maritime steamers a quantity of correspondence weighing 1 kilo. unpaid—not only would Victoria be deprived of the postage, but she would have to pay the French Government 15 fr., or 12s., for the sea transit to Marseilles.

We strongly urge that the Australasian delegate be instructed to represent the unfairness of the practice complained of.

Whilst advising, as we have done, the reduction of the Union territorial and sea rates, we strongly advise that no reduction of the postage rates be agreed to as affecting the Australasian Colonies. It must be borne in mind that these Colonies have to pay large subsidies for their mail services to ensure speed and regularity, which subsidies are not nearly covered by the postages at present rates.

In conclusion, we have to report that the first Book of Proposals to be submitted to the Washington Postal Congress only came to hand whilst the Conference was sitting. The proposals are in French, and very voluminous, and we have not had time to consider them. Further proposals have yet to arrive, and so soon as they reach us, and have been translated, it will probably be necessary to hold another meeting to enable us to confer and report to Ministers what other instructions may be required for the Australasian delegate in regard to the whole of the proposals, many of which will, no doubt, be of an important character, requiring careful consideration.

General Post Office, Sydney,
17th November, 1896.

S. H. LAMBTON.
C. TODD.
JOHN McDONNELL.

APPENDIX B.

No. 3.—INTERCOLONIAL MATTERS.

WE have the honor to submit the following report on intercolonial matters remitted to us by Ministers :—

1. *Proposed new form of intercolonial letter-bill.*

Appendix.

We submit for adoption new forms of letter-bill 1 and 2 for use intercolonially.

2. *Question of allowing on the face of covers of books, catalogues, &c., anything beyond the name, occupation, and address of senders and addressees.*

We recommend that no objection be raised to any printed matter being allowed on the covers of articles entitled to pass at book rate, provided that a clear and conspicuous space be left for the address of the article.

3. *Question of revising the Australasian Postal Convention.*

We do not think it would lead to any good result if a revision were attempted at this sitting.

We recommend that the matter be allowed to stand over until another opportunity offers for giving attention thereto.

4. *Question of having Postal Guides on uniform lines.*

In compliance with the request contained in a resolution of the Hobart Conference of 1895, the Postmaster-General of South Australia has submitted a specimen of a proposed uniform Postal Guide. We advise that copies be sent to the Postal Departments of the other Colonies for consideration and report.

5. *Question of reducing the commission on Money Orders to the United Kingdom.*

We consider that the commission on Money Orders to the United Kingdom should be reduced and made uniform throughout the Australasian Colonies, and recommend for the consideration of the other Postal Administrations the following rates, namely :—

	s.	d.
Not exceeding £1	0	6
Between £1 and £2	1	0
" £2 " £4	1	6
" £4 " £6	2	0
" £6 " £8	3	0
" £8 " £10	4	0

We further advise that the above rates be extended to Cape Colony, which country has intimated its desire for a reduction in the present charges.

6. *Postal Union Congress.*

This matter has been dealt with in special report relating to the Washington Congress.

10. *Question of apportioning between the Australasian Colonies the cost of future Conferences.*

Whilst we consider this to be a question more for Ministers than ourselves to deal with, we respectfully venture to express the opinion that the practice of the colony in which the Conference is held bearing the expense is the more desirable one. The first departure from the above practice was in the case of the Hobart Conference of 1895; but the circumstances were exceptional.

As it has been decided that these Intercolonial Conferences are to be held every year, the expenses need not, in our judgment, be necessarily very great.

11. *Question of the Colonies adopting a single sum, in lieu of existing rates, as their share of postage on parcels received via the United Kingdom, from European countries.*

The present Colonial share of postage on parcels from certain foreign countries via the United Kingdom is,—

	s.	d.
Not exceeding 2 lb	0	9
Between 2 lb. and 7 lb.	2	3
Between 7 lb. and 11 lb.	3	9

We recommend that, in lieu of these rates, the Colonies accept a sum of 2s. 6d. per parcel, light or heavy, up to 11 lb. in weight, as their share of postage on parcels received from countries which may adopt the principle of a uniform postage per parcel.

12. *Respecting the reduction and apportionment of postage on parcels exchanged between the United Kingdom and Australasia.*

This matter has recently been settled by correspondence. The rates of postage have been reduced to 1s. for the first lb., and 6d. for each additional lb. to 11 lb., the Colonial share thereof being 7d. and 3d. respectively.

13. *Question of allowing the "Objects of the Meeting" to be stated in writing in Notices of Meetings transmitted by post at packet rate.*

We recommend that this be allowed intercolonially.

15. *Money Order Telegrams.*

We recommend that the proposal of New Zealand to introduce the Telegraph Money Order System between that Colony and Australia and Tasmania be agreed to. Our experience of the system which is now in force between the Australian Colonies and Tasmania does not lead us to anticipate that any serious risk would be incurred by extending it to New Zealand.

We advise that the usual money order commissions be charged, plus the cost of a ten word telegraph message to the paying office, and another to the payee.

16. *Parcels Post Convention with France.*

In 1894 the London Office forwarded to the several Colonial Offices copies of a draft Convention and detailed regulations, prepared by France, for an exchange of parcels with Australia.

The proposed Convention and regulations relating thereto were considered at the Hobart (1895) Conference, and the Permanent Heads made the following report and recommendations, viz :—

“31. Parcel Post Convention with France.

“In July last the London Post Office informed the Colonies that the French Post Office desired a direct exchange of parcels between France and Australia by the French Mail Steamers (Messageries Maritimes), and, the proposal having been approved of by the Home Authorities, forwarded a draft Convention and regulations for the consideration of the Colonies.

“We have considered the draft submitted, and recommend that its provisions be agreed to, but that the following suggestions be made :—

“Article 6. That no fee for portorage and for the execution of Customs formalities be collected in the Colonies from the addressees of parcels from France.

“Article 14. That the introduction of the system of acknowledgment of delivery of parcels remain in abeyance until the system be adopted generally.

“Regulation 2. That the postage progress pound by pound, instead of in steps of 2 lb., 7 lb., 11 lb., as more consistent with the Colonial and English practice.

“Regulation 6.—3. That the Customs declaration forms be drawn up in the English language, and bear a sublineary translation in French, as is done with Postal Union forms.

“Regulation 8.—3. That the provision that mails ‘be landed, as far as possible, at the Custom House’ be omitted as unnecessary, as Customs work is done at the Post Offices.

“That it be provided that the cost of receptacles be shared equally between the countries of exchange.

“Regulation 12. That in lieu of this a simple regulation providing for the preparation of a quarterly account, and for the payment of the balance due as early as possible after the same has been ascertained be substituted.”

And at a meeting held in Adelaide, in July, 1895, of representatives from the Postal Departments of New South Wales, Victoria, and South Australia, the matter received further attention, and was reported on as follows :—

“The London Office, in a letter dated 22nd April, 1895, submits a proposal from the French Office suggesting an addition to Article 1, as follows :—

“2. The Post Offices of the two countries shall later on be at liberty, if their regulations allow, to mutually fix rates and conditions for insured and ‘collection’ parcels.

“We see no objection to this addition, as it is purely permissive, and does not impose new conditions.

“Article 10.—We advise that this Article, which provides for indemnity up to 15 or 25 francs in the case of loss of, or damage to, parcels, be expunged. We find that in the Report of Permanent Heads submitted to the Hobart Conference, a recommendation to the above effect was omitted, although the Australasian Offices were unanimously in favour of omitting the clause in question.”

The recommendations of the Hobart Conference were communicated to the London Office, and a reply was received from that Office, stating that the principal suggestions of such Conference had been communicated to the French Post Office, and intimating :—

Articles 6 and 14.—That as these Articles are purely permissive, no alteration of the Convention is necessary.

Regulation 2.—That the French Post Office has no objection to the postage rates on parcels from Australia progressing pound by pound, and pointing out that if the postage on parcels exchanged between the United Kingdom and Australia be reduced (as has since been done), a similar reduction will, under Article 3 of the draft Convention, have to be made in the postage on parcels exchanged between France and Australia.

Regulations 6 and 8.—That in view of the explanations furnished, these regulations might stand as printed.

Regulation 12.—This regulation has been amended to meet the views of the Colonies.

Cost of Receptacles.—An assurance is given that there will be no difficulty in making satisfactory arrangements on this subject.

These proposals met with the concurrence of the Sydney and Adelaide Offices. The latter Office communicated with the other Colonies on the subject, and it was ultimately decided that the matter be considered at this Conference.

We recommend that the draft Convention as amended be agreed to, and that the Colonial share of postage on parcels from France be fixed at 2s. 1d. (2 francs 50 centimes) up to 3 kilogrammes (7 lb.), and 3s. 1d. (3 francs 70 centimes) between 3 and 5 kilogrammes (11 lb.); and the postage on parcels from Australia to France, Algeria, and Corsica might be :—

	To France.		To Algeria and Corsica.	
	s.	d.	s.	d.
Not exceeding 1 lb.	3	6	3	8½
Between 1 lb. and 2 lb.	3	0	3	11½
Between 2 lb. and 3 lb.	4	0	4	2½
Between 3 lb. and 4 lb.	4	3	4	5½
Between 4 lb. and 5 lb.	4	6	4	8½
Between 5 lb. and 6 lb.	4	9	4	11½
Between 6 lb. and 7 lb.	5	0	5	2½
Between 7 lb. and 8 lb.	5	3	5	5½
Between 8 lb. and 9 lb.	5	6	5	8½
Between 9 lb. and 10 lb.	5	9	5	11½
Between 10 lb. and 11 lb.	6	0	6	2½

19. *Universal Reply Letter-cards.*

The sale of reply post-cards in the Australasian Colonies is very limited, and it is evident that the great body of the public prefer to transact their correspondence by means of ordinary sealed letters (employing their own material for the purpose), which permits them to communicate at greater length than would be possible by means of letter-cards.

It is probable that a larger number of reply letter-cards would be received from Union countries than would be despatched hence, which would entail loss of revenue on the Colonies; but even were the number of reply letter-cards in both directions to be equal, the general or an extensive use of reply letter-cards by the public of the Colonies would cause a diminution of postal receipts.

For these reasons we are not favourable to the exchange of reply letter-cards with Postal Union countries.

Letter-card System.

We are not favourably impressed with the letter-card system, unless the postage can be made equal to letter rate. The revenue suffers by conveying them at a lower rate, and the postal departments are put to the expense of manufacturing the cards. Moreover the rates in the Colonies are not uniform being as follows:—

New South Wales and New Zealand	1½d. each
Victoria and Queensland	2d. „

The system is not in operation in South Australia, Tasmania, or Western Australia.

20. *Re-arrangement of the division of postage on intercolonial parcels.*

Queensland proposes that, as regards parcels exchanged between New South Wales, Victoria, Queensland, and South Australia, the postage of 8d. for the first pound, and 6d. for each additional pound should be equally divided, namely:—Despatching Office, 4d. for first pound, 3d. each additional pound; Receiving Office, 4d. for first pound, 3d. each additional pound; but that the division of postage on parcels exchanged between the above-named Colonies and New Zealand, Tasmania, and Western Australia should remain as at present, “because in their case a sea rate has to be paid, and the number of parcels exchanged is small in both directions.”

It is the practice, in exchanges of parcels between British Colonies, to allow each office of despatch a sufficient sum to cover cost of transmission to destination, and to equally divide the balance of postage between the two offices of exchange. This is the principle at present in operation between the Australasian Colonies, the postage on parcels exchanged being divided as follows, namely:—

Despatching office, 5d. for first lb.; 4d. each additional lb.

Receiving office, 3d. for first lb.; 2d. each additional lb.; the additional 2d. per lb. allowed to the office of despatch being intended to cover cost of transmission by sea or rail to destination.

The Sydney, Melbourne, and Adelaide offices have been in correspondence on the subject, and we would point out that one of the objects of the Australasian Colonies for some years past has been to secure uniformity between themselves in postal matters, but the adoption of the Queensland proposal would disturb the uniformity in division of postage at present existing between the Colonies, and establish two entirely different modes of apportioning such postage. After considering the matter we advise that a decision be deferred.

TELEGRAPH MATTERS.

7. *Telegraph Code, Alteration of.*

The use by New South Wales, Victoria, South Australia, and Queensland of a code which differs from that in use in New Zealand, Western Australia, and the rest of the world (America only excepted) is undesirable.

The adoption of the uniform code, as fixed by the International Telegraphic Bureau, is preferable. The Colonies are further bound by their membership with that bureau to adopt this code.

The only objection to the alteration is the risk of error on the first introduction of a new code. It is considered that the change can be made with a minimum of inconvenience by dating it from the first of July next.

We therefore recommend its adoption from that date.

8. *Code Addresses.*

We recommend,—(1) That code addresses be not adopted intercolonially, except in the case of Tasmania and New Zealand, which for this purpose are international.

(2) That in connection with international messages code surnames be not accepted.

9. *Reply-paid Telegrams.*

No report to make.

11. *Reduction of Intercolonial Telegraph Rates.*

We refrain from making any recommendation. We would, however, suggest for the consideration of Ministers that in the event of an alteration of the rates being made, it should be on the basis of the International principle of counting addresses and signatures, as recommended at the Conferences held in Adelaide and Sydney, in 1890 and 1891, respectively.

18. *Consideration of Mr. Jules Renard's letter respecting Telephonic Communication between the capitals of Australia.*

This is a matter that requires careful consideration. The first cost would be more than double Mr. Renard's estimate for connecting Brisbane, Sydney, Melbourne and Adelaide, and the charge that would have to be made for conversation would be so large as to be almost prohibitory. The population of the Colonies is not sufficiently developed to enable an expensive work of this nature to be carried out so as to be remunerative at a reasonable charge to the public.

The line from Brisbane to Sydney alone would cost £41,750, or presuming that the existing poles could be used (which is impracticable) the estimate might be reduced to £24,250.

Even making no allowance for maintenance of the line or for working expenses, the interest and sinking fund on a 15 years' purchase is 10 per cent. of the capital cost (really £9 12s. 8d. per cent.) Therefore, for the line to be justifiable, a revenue of £4,175 will require to be guaranteed on the Brisbane and Sydney line alone. It must also be borne in mind that telephonic communication between the capital cities of Australia would materially interfere with the telegraph revenue.

We are, therefore, not prepared to recommend Mr. Renard's proposal for favourable consideration.

S. H. LAMBTON.
C. TODD.
JOHN McDONNELL.

General Post Office,
Sydney, 19 November, 1896.

REPORT BY PERMANENT HEADS OF NEW SOUTH WALES AND SOUTH AUSTRALIA ONLY.

17. *Intention of Queensland to rescind, so far as that Colony is concerned, so much of Article 12 of the Australasian Postal Convention as relates to the admission of merchandise to the packet post; and*

21. *Charges intended to be levied by Queensland on Intercolonial newspapers.*

These two subjects are brought forward, as Queensland has notified its intention of withdrawing from those provisions of the Australasian Convention which refer to the transmission, intercolonially, of small packets up to 1 lb. in weight, and of requiring all such packets containing merchandise, other than samples, to be sent by parcel post only. The great objection we see to this is that it restricts the sending of small packets to those offices only to which the parcel post system extends, and besides this, whilst small packets can now be sent at 1d. per 2 oz., the public would have to pay a minimum postage of 8d., however small the value and weight of the packet. The reasons assigned by Queensland for this action are; that "there are obvious objections to the exchange of merchandise intercolonially as packets." "In most instances," it is stated, "the enclosures in such packets are dutiable, and as the declaration of value is not compulsory, it is often difficult to correctly assess the value of the goods enclosed, for Custom's purposes. It is also considered that dutiable articles can be more readily dealt with if confined to one channel, and the use of the packet post limited, as in the case of the Universal Postal Union, to *bonâ fide* samples and patterns having no value beyond their mere use as trade samples or patterns. There is also a serious objection to the transmission of articles of value by packet post because such packets cannot be traced."

The present practice of permitting articles of value to be exchanged by packet post between the Australasian Colonies has been in operation for many years past, and to deprive the public of a privilege which they have so long been permitted to enjoy, and in its place to substitute a system which (to them) will, in most instances, be more troublesome and costly, will no doubt be looked upon as a hardship and give cause for complaint. Moreover, the policy of the times seems to be to grant increased postal facilities to the public where practicable instead of curtailing those already existing.

The maximum weight of an Intercolonial packet is 1 lb., the postage being at the rate of 1d. per 2 oz., whereas the minimum postage on an Intercolonial parcel is 8d. It will thus be seen that the Queensland proposal is of a very restrictive character, as packets containing articles of trifling value, often sent as presents, on which no Customs duty would perhaps be payable, and which can now be forwarded for 1d. or 2d., will, in future, if the Brisbane office adheres to its determination, be subject to a postage of 8d., which seems unreasonable.

Moreover, it is thought that the Australasian Postal administrations will be put to considerable trouble in examining the contents of packets addressed to Queensland for the purpose of ascertaining whether merchandise is enclosed therein, and in taking the necessary action where such is enclosed to transfer such articles to the parcel post. Further, the uniformity in postal matters for which the Colonies have so long been labouring will again be retarded.

With regard to subject No. 21, Queensland intimates its intention to charge $\frac{1}{2}$ d. per 2 oz. in lieu of $\frac{1}{2}$ d. per 10 oz. (as at present fixed by the Australasian Convention) on newspapers for other Colonies, and to surcharge at double the deficient postage those addressed to Queensland which are not prepaid at the higher rate; also to exclude from transmission at the rate of 1d. per lb. bulk parcels of newspapers.

We regret that the Queensland Post Office has seen fit to withdraw from the Convention in respect of these matters, as we consider the existing rates are fairly reasonable. It is well known that nearly all of the daily and all the weekly newspapers considerably exceed 2 oz. in weight, and we think it would be unwise to impose so high a rate upon them.

We therefore advise that Queensland be asked to reconsider these questions.

We also take this opportunity of bringing under Ministers' notice the fact that the Queensland Post Office has further notified that from the 1st January, 1897, newspapers received from other Colonies will not be delivered if they contain any advertisements relating to sweeps, consultations, or indecent advertisements.

S. H. LAMBTON.
C. TODD.

General Post Office,
Sydney, 19 November, 1896.

REPORT OF THE PROCEEDINGS.

SATURDAY, 14 NOVEMBER, 1896.

The Conference met at 10.15 a.m.

The Hon. Mr. COOK was elected President, and Mr. DALGAENO Secretary.

It was agreed, without formal motion, that the Press should not be admitted, at least while the mail tenders were being considered.

The Hon. Mr. COOK, in returning thanks for his election as President, gave a hearty welcome to the Delegates, and said the questions they had to decide were of particular importance. First, there was the question of the acceptance of tenders for the conveyance of mails to and from England; and the other matter was the very important question of whether they should be represented at the Washington Congress or not. He confessed that on looking into this last matter it had assumed more importance in his mind than it did before. However, before they finished they would decide whether they would be represented, and, if so, how many ought to go. To his mind, the main question was that of the mail tenders—that was by far the most important matter to settle. The question was whether the Colonies should submit to the terms and conditions offered in the tenders or not, and perhaps it would be as well to at once consider it. He was exceedingly glad to see the Delegates present, and hoped to try and make their stay as pleasant as possible.

THE WASHINGTON CONGRESS.

The Hon. Mr. COOK read and laid upon the Table lists of subjects it was proposed to bring before the Congress at Washington. [*See Appendices A and B.*]

Sir CHARLES TODD: There will be a further list from Berne.

The Hon. Dr. COCKBURN: Is it too late now to make suggestions?

Mr. LAMBTON explained that all suggestions should have been sent in in time to reach Berne by 1st October; but it having been pointed out that this could not possibly be done, a reply was received from Berne, stating that the suggestions from Australasia would be placed in the form of a supplementary agenda paper and circulated amongst the Delegates.

The Hon. Dr. COCKBURN: Do we send in our separate proposals?

Mr. LAMBTON: Oh no; it is for the Ministers here to decide what are to be the subjects for consideration, and how the representative is to vote on them.

The Hon. Mr. COOK: I was going to suggest that perhaps we might refer these matters to the permanent heads for report, to consider this special list of eight proposals, and such others as they can find they can deal with in the absence of the permanent heads of other Colonies.

The Hon. Dr. COCKBURN: Those of urgency.

The Hon. Mr. COOK: Any question they find they can deal with.

Mr. LAMBTON produced the agenda paper of the Washington Conference (just received) and explained it had not yet been translated.

The SECRETARY read a letter from Berne, dated 5th October, forwarding a portion of the agenda paper.

The Hon. Mr. WITTENOOM said he would like to see included the question of the adoption, inter-colonially, of a uniform telegraphic code.

Mr. LAMBTON: I have it here.

The Hon. Mr. WITTENOOM: We have the international system in West Australia.

The Hon. Mr. COOK: The matter is referred to here, "Telegraph Code, alteration of."

The Hon. Mr. WITTENOOM: Each Delegate should be placed in possession of a copy of the subjects we are asked to consider.

The Hon. Mr. COOK: That will be done when the permanent heads bring in their report.

The Hon. Mr. WITTENOOM: And in the meantime we can ascertain the views of our Governments, where the questions are not ones of mere detail.

The Hon. Dr. COCKBURN: Mr. Wittenoom means to have beforehand, as soon as possible, some idea of the subjects to be reported upon by the permanent heads, and asks that, as soon as they have decided, you send round to each of us a list of the matters that will be discussed, and if any of us wish to communicate with our Governments we can do so.

The Hon. Mr. COOK: Yes, that is right.

The Hon. Dr. COCKBURN then moved,—“That the list of subjects to be dealt with by the Conference read by the President be referred to the permanent heads, who are requested to add to the list any other matters of sufficient importance and urgency to be included in the list, and as soon as the list has been prepared that a copy of the subjects for discussion be sent round to each Delegate.”

The Hon. Mr. DUFFY seconded the motion, which was carried.

It was decided, without formal motion, that the Ministerial Delegates should go into committee to consider the question of the mail tenders; and the other members of the Conference and shorthand-writer withdrew.

On the motion of the Hon. Mr. WITTENOOM, seconded by the Hon. Mr. DUFFY, the Conference then adjourned till Thursday at 10 a.m.

THURSDAY,

THURSDAY, 19 NOVEMBER, 1896.

The Conference resumed at 2:50 p.m.

The minutes of the previous sitting were read and confirmed.

The Hon. Mr. Cook: We had better proceed first to have the report of the permanent heads.

Mr. Lambton, upon being called on by the Chairman, submitted the reports from the permanent heads on the questions of the ocean mail service, the Washington Congress, and the list of matters of importance and urgency selected by them for the consideration of the Conference, as per Appendix B.

The Hon. Mr. Cook: We had better deal with the Washington proposals first, I think. Shall we take the proposals *seriatim* or not?

The Hon. Mr. DUFFY: *Seriatim*.

Mr. Lambton then proceeded to read the report on representation at the Washington Postal Union Congress in May, 1897.

On section 2, "Reduction of Sea Transit Rates," being read,—

The Hon. Mr. DUFFY asked: What would the effect be as regards Australia?

Sir CHARLES TODD: It will be to our advantage.

The Hon. Dr. COCKBURN: Our sea transit rates are for mostly over 3,500 miles, and those remain at the maximum rate.

Sir CHARLES TODD: We would still gain. It is all in our favour.

The Hon. Dr. COCKBURN: It is practically raising the rates.

Sir CHARLES TODD: No; it will reduce the rates for the shorter distances.

On section 4, "Re indemnity for the loss of registered articles," being read,—

The Hon. Mr. DUFFY said: That does not affect us.

Mr. LAMBTON: It affects Queensland.

The Hon. Mr. Cook: This clause limits the amount payable.

The Hon. Dr. COCKBURN: It commits us up to that limitation. Why should we bother about this?

Sir CHARLES TODD: Some countries admit the principle, and we may all be forced into it ultimately, and compelled to recognise it.

The Hon. Dr. COCKBURN: Is not the time when they seek to enforce this the time to make the stipulation? It could be construed into a precedent.

The Hon. Mr. WITTENOOM: Does not this proposal come from West Australia?

Mr. LAMBTON: And Queensland and New Zealand, too.

On section 5, "Use of stamp,—Postage paid," being reached,—

The Hon. Dr. COCKBURN remarked: We insist on stamps in all cases.

Sir CHARLES TODD: Some Colonies do not.

The Hon. Mr. WITTENOOM: You do not collect anything on them in your colony?

Sir CHARLES TODD: Oh, yes, we do! We send in our accounts, but in some Colonies payment is made by a lump sum.

After the reading of the recommendations of the permanent heads of departments had been concluded,—

The Hon. Mr. Cook asked: Is there anything to take exception to in that Report?

The Hon. Mr. WITTENOOM moved,—"That the Report be adopted, subject to such additions and amendments as may be forwarded by the Colonies previous to the departure of the Australasian Delegate for Washington."

Seconded by the Hon. Mr. THYNNE, and carried.

The Hon. Mr. WITTENOOM asked whether any letter had been received from the Postmaster-General of Western Australia, embodying any suggestions he had to make to this Conference.

Mr. LAMBTON: Yes; and they have been included and provided for.

The Hon. Mr. DUFFY: Have you dealt with the Victorian suggestions?

Mr. LAMBTON: Yes.

Mr. LAMBTON then read a further report from the permanent heads on matters of importance and urgency for consideration by the Conference. (*See Appendix.*)

Section 16, "Parcel Post Convention with France,"

The Hon. Mr. DUFFY: What would be the effect of this monetarily?

Mr. LAMBTON: We have no Convention now.

The Hon. Mr. DUFFY: Is there any prospect of anything being done under it?

Mr. LAMBTON: Yes.

The Hon. Mr. Cook: I understand Mr. Duffy wants to know, has France agreed to the proposal?

Mr. LAMBTON: Yes, practically.

Section 7, "Alteration of Telegraph Code"

The Hon. Mr. Cook: I understand there are only eleven letters different in the International code and the code we use.

Sir CHARLES TODD: Eleven, and figures as well. New Zealand, Tasmania, West Australia, and the Cable Co. use the International code.

The Hon. Mr. WITTENOOM: Could not the change be made on the 1st of March?

The Hon. Dr. COCKBURN: Let it stand at the 1st July.

Section 22, "Electric Light and Power Regulations."

The Hon. Mr. DUFFY: We want an Act first. We cannot have regulations before an Act is passed.

The Hon. Mr. Cook: Victoria already has an Act dealing with the matter. The best plan seems to me for each colony to get its Act first, and then try and frame regulations.

The Hon. Mr. DUFFY: We could not well alter our regulations in any material particular just as we are starting the thing.

Sir CHARLES TODD: We should have uniform regulations.

The Hon. Mr. DUFFY: I do not see you can do anything till you have passed your Acts.

The Hon. Mr. WITTENOOM: No harm can come from suggesting draft regulations.

The Hon. Mr. THYNNE: If the electrical men here draft regulations they could submit them to Mr. Cook.

The Hon. Dr. COCKBURN: Leave out the request for uniformity.

The Hon. Mr. DUFFY: Our electrical man is not represented at all. It is intended to submit the matter to those present.

The

The Hon. Mr. THYNNE: We hope to have our Act through this Session, and regulations ready to put in force; but we want to have a standard set, with the help of the other colonies. If this be done, it will greatly assist those colonies which have no Acts yet.

The Hon. Mr. WITTENOOM: If the electrical experts draft a set of regulations, we can submit them to our electrical representatives.

The Hon. Mr. THYNNE: They could be sent to each Government.

The Hon. Mr. WITTENOOM: It seems to me a very reasonable proposal. Let it stand.

The Hon. Mr. COOK: The object to be gained is uniformity of action. Mr. Duffy objects.

The Hon. Mr. DUFFY: We have our Act, and are not on the same plane.

The Hon. Mr. WITTENOOM: The draft regulations would be only permissive. We are not bound to accept them.

The Hon. Dr. COCKBURN: Let the experts go on with it.

The Hon. Mr. WITTENOOM: It seems to me we would get a basis to go on.

Mr. LAMBTON read a report, signed by himself and Sir Charles Todd, Mr. McDonnell dissenting, on the subject of the proposal of Queensland to rescind, so far as that Colony is concerned, so much of Article 12 of the Australasian Convention as relates to the admission of merchandise to the packet post, and proposed charge on intercolonial newspapers.

The Hon. Dr. COCKBURN: I would like to see the provision about prohibiting newspapers with advertisements relating to sweeps carried out everywhere.

The Hon. Mr. WITTENOOM: It seems a pity to break away from the uniformity.

The Hon. Mr. DUFFY: I do not know what the Queensland representative has to say in support of the clause about newspapers.

The Hon. Mr. COOK: What about packets?

The Hon. Mr. DUFFY: It is intercolonial newspapers I am thinking of more. I do not see any excuse for the proposal.

The Hon. Mr. THYNNE: It makes a considerable difference to us. The Australasian Postal Convention was accepted by different Colonies with varying conditions. Victoria, as a result, treats magazines as newspapers.

The Hon. Mr. DUFFY: You are trying to shut out the *Town and Country*, *Australasian*, and *Leader*.

The Hon. Mr. THYNNE: We are forced to take this action to protect ourselves. Victoria is not bound by the Convention of 1894, and that Colony treats magazines and catalogues as newspapers. The other Colonies are flooding us with these books at newspaper rates.

The Hon. Mr. WITTENOOM: Is your Government going to insist on this?

The Hon. Mr. THYNNE: I understand so.

The Hon. Mr. COOK did not think it would make much difference to Queensland to yield on the points in question. The distinction sought to be made in regard to small packets was most invidious, and the reasons assigned for it were, in his opinion, most inadequate. When they were trying to establish better relations between the Colonies, a small amount of money should not be allowed to enter into their considerations. He strongly urged that Queensland should reconsider these matters.

The Hon. Mr. DUFFY moved,—“That the Queensland Government be asked to reconsider the proposal to rescind, as far as that Colony is concerned, so much of Article 12 of the Australasian Convention as relates to the admission of merchandise to the Packet Post, and also the charges intended to be levied by Queensland on intercolonial newspapers.”

Seconded by the Hon. Dr. COCKBURN and carried.

The Hon. Mr. COOK: I convey the resolution to you, Mr. Thynne, with the greatest heartiness.

The Hon. Mr. THYNNE: Undoubtedly I will bring the matter under the consideration of my colleagues; but still I would like to see the other Colonies give an example of better federal spirit.

The report of the permanent heads on the matters of urgency and importance to be considered by the Conference, after discussion and with consent, was, as revised, adopted.

The Hon. Mr. DUFFY moved,—“That a Minister of the Crown, controlling a post office if possible, to be accompanied by Mr. James Smibert, Deputy Postmaster-General of Victoria, as postal expert, attend the Washington Congress as representative of Australasia.” Mr. Smibert was retiring at the end of the year, and having done a great deal of good work in regard to postal matters not only for Victoria, but for the whole of Australasia, it would be a graceful wind-up to his career.

Seconded by the Hon. Dr. COCKBURN and carried.

The Hon. Mr. WITTENOOM: What about the election of delegate?

The Hon. Dr. COCKBURN: That will be arranged by the different Governments.

The Hon. Mr. WITTENOOM: I suppose the initiatory steps will be taken by the New South Wales Government?

The Hon. Dr. COCKBURN: Yes.

The Hon. Mr. WITTENOOM said: As the youngest and newest delegate to the Postal Conference he found the privilege had fallen to him to propose a vote of thanks to the President, who had so well conducted the business of the Conference. Important issues had been raised, which would have effects in after times in the Colonies connected with them, and their deliberations had been carried on in such a manner that those issues would be creditable to the different Colonies. The utmost good feeling had prevailed, and he was gratified to find the amicable manner in which the various matters had been approached. They had to express their thanks for the hospitable and generous manner in which the Government of this Colony, through Mr. Cook, had treated them. They had been enabled to combine business with pleasure, and they would all remember with pleasure their visit to Sydney, which was well known for its hospitality. He trusted Mr. Cook would be long spared to continue in his present position and to preside over many another Conference. He moved,—“That the thanks of the Conference be accorded to Mr. Cook.”

Seconded by the Hon. Mr. THYNNE and carried.

On the motion of the Hon. Dr. COCKBURN, seconded by the Hon. Mr. DUFFY, a vote of thanks was passed to Mr. Dalgarno for his services as Secretary, and those Ministers hurriedly left to catch the Express for Melbourne.

The Honorable Mr. COOK then intimated to the Secretary that the Ministers had drafted a cablegram to The Right Honorable the Postmaster-General, London, *re* Federal Mail Service, and desired its immediate transmission.

1897.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MAIL CONTRACTS FOR THE YEARS 1897 AND 1898,
(RETURN RESPECTING.)

Printed under No. 22 Report from Printing Committee, 18 November, 1897.

Question.

1. MR. AFFLECK *asked* THE POSTMASTER-GENERAL, -

- (1.) What was the total amount for mail contracts, as accepted last month for 1898, per annum, for the Southern, Northern, and Western Districts?
- (2.) How much of that total amount is paid to the Railway Commissioners for the said mails on the railway?
- (3.) The same information with regard to the above Questions for the year 1897?

Answer.

	£	s.	d.
(1.) Western Districts	8,712	10	7
Southern „	13,311	5	3
Northern „	11,163	15	7
Suburban „	361	0	0
Total	33,548	11	5

(2.) The answer to the question of how much of the above sum is paid to Railway Department is "none," but the total amount paid to that Department for the carriage of all mails is about £68,000 per annum.

	£	s.	d.
(3.) Western Districts	6,433	4	0
Southern „	6,122	18	0
Northern „	7,161	7	9
Suburban „	208	0	0
Total	19,925	9	9

In addition to the contracts recently arranged, the amounts of which are given in reply to question No. 1, there are a number of contracts (entered into last year) which have a currency of one or two years, from the 1st January next; and, similarly, the contracts entered into last year (the amounts of which are given in reply to question No. 3) form only a portion of those in existence on the 1st January, 1897. If the Honorable Member desires information as to the total annual amounts of mail contracts for the years 1897 and 1898, I will be glad to supply it so soon as the particulars are available for the latter year.

1897.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

AUSTRALIAN MAIL SERVICE.

(CONTRACTS WITH THE PENINSULAR AND ORIENTAL AND ORIENT STEAM NAVIGATION COMPANIES.)

Printed under No. 19 Report from Printing Committee, 14 October, 1897.

Minute for Executive Council.

Postal and Electric Telegraph Department,
General Post Office, Sydney, 17 September, 1897.

I TRANSMIT herewith copies of the agreements recently entered into between Her Majesty's Postmaster-General and the Peninsular and Oriental and Orient Steam Navigation Companies, for the conveyance of the East India, China, and Australian mails, for a period of seven years, from the 1st February, 1898, and request authority, in accordance with the provisions of the 42nd section of the Postage Act of 1867, to assent to the terms and conditions of the contracts, so far as they are applicable to the Australian mails.

The principal features of these contracts are:—The total subsidy under the Peninsular and Oriental contract is £330,000 per annum, the proportion payable in respect of the Australian mails being assessed at £85,000 per annum, and the subsidy payable to the Orient Company is likewise £85,000, making a total of £170,000 per annum, of which it is proposed that the Imperial Government shall pay £95,000 and the Australian Governments £75,000 per annum, apportioned amongst them on the basis of population, the sea transit rates collected from either countries and colonies making use of the service, together with any fines that may be inflicted, being credited in similar proportions to the Imperial and Colonial Governments, namely, 19-34ths to the former, and 15-34ths to the latter.

The contracts provide for a fortnightly service by the Peninsular and Oriental Company's vessels between Brindisi and Adelaide, 686 hours being allowed for the voyage in each direction, and for an alternate fortnightly (together making a weekly) service by the Orient Company's vessels between Naples and Adelaide, for which 696 hours are to be allowed in each direction; allowance of extra time being made in each case during period of monsoon.

Power is reserved to Her Majesty's Postmaster-General to require the vessels employed in the service to call at Fremantle, instead of Albany, Western Australia, also to substitute for Brindisi or Naples another Continental port, or a port in the United Kingdom, and (in the case of the Peninsular and Oriental Company's contract) to modify the service by increasing or decreasing the frequency of the communication, or extending or curtailing the route, in any of which cases the period of transit, and the subsidy may be increased or diminished, as may be determined.

The Companies are responsible for the loss or damage of any parcel or any registered postal packet, to the extent of £1 and £2 respectively.

The contracts, although determinable on the 31st January, 1905, by either party giving two years' previous notice to the other, may be continued after that date until the expiration of a notice of like duration given by either party at any time.

JOSEPH COOK.

The Executive Council advise that the approval of the Government be given to the contracts entered into with the Peninsular and Oriental and Orient Steam Navigation Companies, as herein specified.—
ALEX. C. BUDGE, Clerk of Council. Min. 97-45, 21/9/97. Confirmed, 28/9/97. Approved.—
HAMPDEN, 21/9/97.

[Enclosures.]

THE PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY AND HER MAJESTY'S
POSTMASTER-GENERAL.—EAST INDIA, CHINA, AND AUSTRALIA MAILS.

CONTRACT.

ARTICLES OF AGREEMENT under seal made and entered into this Twenty-fifth day of May One thousand eight hundred and ninety-seven between the Most Noble Henry Duke of Norfolk Earl Marshal and Hereditary Marshal of England K.G. Her Majesty's Postmaster-General (hereinafter called the "Postmaster-General" in which term his successors in the office of Her Majesty's Postmaster-General for the time being shall be included) on behalf of Her Majesty of the one part and the Peninsular and Oriental Steam Navigation Company whose office is situate at 122 Leadenhall-street in the City of London (hereinafter called "the Company" in which term their successors and permitted assigns shall be deemed to be included) of the other part.

These

*337—A

These presents witness that in consideration of the matters hereinafter appearing it is hereby agreed and declared between and by the parties hereto and the Postmaster-General (as to the covenants agreements and stipulations hereinafter contained on his part) doth hereby covenant and agree with the Company and the Company (as to the covenants agreements and stipulations hereinafter contained on their part) do hereby covenant and agree with the Postmaster-General in manner following (that is to say) :—

INTERPRETATION OF TERMS.

Interpretation of terms.

1. For all the purposes of this Agreement—

The term "Mails" means and includes all bags boxes baskets or other packages of letters and other postal packets including parcels (each parcel not exceeding the maximum weight of 11 lb.) without regard either to the country or place to which such packages may be addressed or to the country or place in which they may have originated and also all empty bags boxes baskets or other receptacles and all stores and other articles used or to be used in carrying on the Post Office service.

The term "postal packet" means any article for the time being transmissible by post and includes a parcel.

The term "parcel" means a parcel within the meaning of the Post Office (Parcels) Act 1882.

The term "mail-ship" means a vessel provided for the conveyance of mails under this Agreement.

The term "Adelaide" means the signalling station (known as "Adelaide Semaphore") at or off the port of the City of Adelaide in South Australia.

The term "the Admiralty" means the Commissioners for the time being for executing the office of Lord High Admiral of the United Kingdom.

SERVICES TO BE PERFORMED

Company to convey mails on Mail Routes.

2.—(1.) Subject to the provisions of this Agreement the Company shall during the continuance of this Agreement at their own costs and charges in all respects convey by means of mail-ships all mails which the Postmaster-General or any of his officers or agents shall from time to time and at any time or times require to be conveyed—

(a) between Brindisi and Bombay and

(b) between Brindisi and Shanghai and

(c) between Brindisi and Adelaide and

(d) between all other ports from which the mail-ships shall start or at which they shall call or arrive under the provisions of this Agreement or for the purposes of the Company.

(2.) All such mails shall be conveyed at the respective intervals of time and on the three several routes specified in the First Schedule hereto (which routes are hereinafter referred to as "Mail Routes").

(3.) For the purpose of this Clause of this Agreement the postal authorities of the several Possessions or Colonies of India Ceylon Western Australia South Australia Victoria New South Wales the Straits Settlements and Hong Kong and their respective officers and agents shall unless and until the Postmaster-General shall give notice to the Company to the contrary be deemed the agents of the Postmaster-General.

Mode of conveyance.

3.—(1.) Subject to the provisions of this Agreement one of the mail-ships shall at such intervals as are specified in the First Schedule hereto in the case of each Mail Route put to sea from the port or place of departure on each of the said Routes at such day and hour as the Postmaster-General shall from time to time appoint or so soon after such day and hour as the mails are embarked on board such mail-ship and the mails conveyed by such mail-ship shall be delivered at the several ports or places of call and at the port or place of destination on the said Route in the order indicated in the said Route and shall be delivered at the port or place of destination on the said Route at such day and hour as the Postmaster-General may from time to time appoint.

(2.) The days hours and times of departure and arrival in this Clause referred to may be appointed by the Postmaster-General either by a time-table or time-tables to be from time to time approved by him or in such other manner as he shall think fit.

(3.) With respect to Mail Route No. 3—

(a.) The Company shall use the Princess Royal Harbour at the Port of Albany whenever the use of such harbour is practicable.

(b.) The Company shall (if requested by the Postmaster-General so to do) substitute the port of Fremantle in Western Australia for the port of Albany as a port of call under this Agreement as soon as the mail-ships can use the port of Fremantle with safety and cargo-work and coaling can be carried on at such port in all states of the weather Provided that whenever the mail-ships call at Fremantle such an additional number of hours shall be added to the period of transit applicable to Mail Route No. 3 as hereinafter provided as shall be agreed upon between the Postmaster-General and the Company or failing agreement to be settled by arbitration.

Mail-ships on Mail Route No. 3 to ply between the United Kingdom and Brindisi and between Adelaide Melbourne and Sydney.

4.—(1.) Subject to the provisions of this Agreement each of the mail-ships employed on Mail Route No. 3 shall on every outward voyage start from a port in the United Kingdom and after the due delivery at Adelaide of the mails intended to be delivered at that port continue her voyage to Melbourne and thence to Sydney and (subject as aforesaid) each of such mail-ships shall on every homeward voyage commence her voyage at Sydney (calling at Melbourne on the route to Adelaide) and after due delivery of the mails at Brindisi (either by the same mail-ship or by some other mail-ship to which such mails shall have been transferred) continue her voyage to a port in the United Kingdom whether any mails may or may not be required to be conveyed in any such mail-ship from or to the United Kingdom or to or from Melbourne or Sydney on any such voyage.

(2.) The times at which the mail-ships shall start from or arrive at the port of departure or arrival in the United Kingdom Melbourne and Sydney and the rate of speed of the mail-ships between the United Kingdom and Brindisi and between Adelaide Melbourne and Sydney shall be fixed by the Company at their discretion but not so as to affect the period of transit between Brindisi and Adelaide hereinafter referred to.

Period of transit on Mail Route No. 3.

5.—(1.) Subject to the provisions of this Agreement all mails to be conveyed under the provisions of this Agreement upon Mail Route No. 1 shall be conveyed in either direction between Brindisi and Bombay within a period of 302 hours (hereinafter referred to as the "period of transit").

(2.) The period of transit shall include 3 hours allowed for a stoppage at Aden and there shall be a stoppage at Aden on both the outward and homeward voyages for that time and no less.

(3.) During the prevalence of the south-west monsoon the period of transit from Bombay to Brindisi shall be extended by 24 hours.

Period of transit on Mail Route No. 2.

6.—(1.) Subject to the provisions of this Agreement all mails to be conveyed under this Agreement on Mail Route No. 2 shall be conveyed—

From Brindisi to Shanghai within a period of 736 hours and from Shanghai to Brindisi within a period of 742 hours (each of which periods is hereinafter referred to as the "period of transit").

(2.) The periods of transit shall respectively include the following times allowed respectively for a stoppage at each of the following ports (that is to say) :—

At Aden 3 hours.

At Colombo 24 hours.

At Penang 6 hours.

At Singapore 24 hours.

At Hong Kong (on outward voyage) 24 hours.

At Hong Kong (on homeward voyage) 30 hours.

(3.) During the prevalence of the north-east monsoon the period of transit from Brindisi to Shanghai shall be extended by 48 hours and during the prevalence of the south-west monsoon the period of transit from Shanghai to Brindisi shall be extended by 24 hours.

Period of transit on Mail Route No. 3.

7.—(1.) Subject to the provisions of this Agreement all mails to be conveyed under this Agreement on Mail Route No. 3 shall be conveyed in either direction between Brindisi and Adelaide within a period of 636 hours (hereinafter referred to as the "period of transit").

(2.)

(2.) The period of transit shall include the time allowed for all stoppages of the mail-ships at the intermediate ports and the mail-ships shall stop on both the outward and homeward voyages at Albany (or Fremantle) for 6 hours and no less and at Colombo for such period as may be necessary for the purpose of delivering receiving transferring transshipping or exchanging mails and in no case less than the period (not exceeding 24 hours) appointed by the Postmaster-General in that behalf.

(3.) During the prevalence of the south-west monsoon the period of transit from Adelaide to Brindisi shall be extended by 24 hours.

8.—(1.) Each period of transit shall be deemed to commence so soon after the time appointed by the Postmaster-General for the departure of the mail-ship from the port or place of departure or after the completion of the embarkation of the mails intended to be thereby conveyed (whichever shall last happen) as having regard to practical considerations the anchor of such mail-ship can be weighed or the mail-ship can be loosed from her moorings and each such period of transit shall be deemed to have been completed when the mail-ship has arrived and been anchored or moored in some position at the port or place of destination from which the mails can be conveniently disembarked.

Calculation of periods of transit.

(2.) In any case in which any outward or homeward voyage may be performed by more than one mail-ship the period of transit shall be reckoned from the commencement of the voyage of the mail-ship by which the first part of the conveyance shall be performed to the completion of the voyage of the mail-ship by which the last part of the conveyance shall be performed.

(3.) As regards Mail Route No. 1 the period of transit from Bombay to Brindisi shall be deemed to commence when the small steamships hereinafter mentioned with the mails on board arrive alongside the mail-ship by which the voyage is intended to be performed and the period of transit from Brindisi to Bombay shall be deemed to be completed when the said small steamships arrive alongside the mail-ship by which the voyage has been performed.

(4.) The times of commencement and completion of each period of transit shall be ascertained and recorded and all calculations in connection therewith shall be made by officers of the Postmaster-General in pursuance of arrangements to be from time to time made by him for the purpose and the decision of the Postmaster-General as to all questions relating to periods of transit shall be final and conclusive.

9. Should it be deemed by the Postmaster-General his officer or agents requisite for the public service that any mail-ship should at any time or times delay her departure from any port from which the mails are to be conveyed under this Agreement beyond the time appointed for her departure therefrom the Postmaster-General or any of his officers or agents shall have power to order such delay (not however exceeding 24 hours) by letter addressed to the master of any such mail-ship or any person acting as such and such letter shall be deemed a sufficient authority for such detention and in any such case such addition shall be made to the period of transit during which such detention shall take place as the Company may prove to be equal to the delay caused by such detention.

Power to delay departure of mail-ships.

10.—(1.) The Company shall be at liberty to convey on any Mail Route all or any of the mails hereby agreed to be conveyed in one and the same mail-ship or by branch mail-ships over any part of the Mail Routes on any outward or homeward voyage and the time-table on the Mail Routes shall be so arranged that the services shall be in correspondence both on the outward and homeward voyages.

Power to Company to convey mails in the same mail-ship or in branch mail ships. Time-tables on the mail routes to correspond.

(2.) Notwithstanding anything in the last preceding sub-clause the mails shall be conveyed on Mail Route No. 2 by one and the same ship in both directions between Colombo and Hong Kong and such ship shall call at the several ports or places between Colombo and Hong Kong mentioned in the First Schedule hereto in relation to the said Route.

(3.) Provided nevertheless that the provisions hereinbefore contained as to the conveyance of mails upon each of the Mail Routes and in particular as to the periods of transit shall not in any case be in anywise altered or affected by or in consequence of the exercise by or on the part of the Company of any power contained in this Clause or otherwise by the operation of this Clause.

CHARACTER OF MAIL-SHIPS AND CONDITIONS OF MAIL SERVICE.

11. Every mail-ship shall be a good substantial and efficient steamship of adequate power and speed and supplied with first-rate appropriate steam-engines and shall be in all respects suited to the performance of the services herein agreed to be performed within the respective times herein stipulated and shall be provided and kept by the Company seaworthy and in complete repair and readiness to the satisfaction of the Postmaster-General.

Character of mail-ships.

12. Every mail-ship shall be always properly and sufficiently equipped in all respects so as to render her constantly efficient for the said services and safe for the conveyance of mails and shall be manned with legally qualified and competent officers with appropriate certificates granted pursuant to the Act or Acts in force for the time being relative to the granting of certificates to officers in the merchant service and also with competent engineers and a sufficient crew of able seamen and other men and with a competent and registered surgeon.

Equipment and manning of mail-ships.

13. Every mail-ship and the equipment officers engineers and crew thereof shall be subject at all times to the inspection of the Postmaster-General or of such person or persons as he shall at any time or times authorise to make such inspection.

Inspection of mail-ships and their equipment officers &c.

14.—(1.) If the Postmaster-General shall at any time consider any mail-ship unfit for service under this Agreement he may require the Company to show cause why such mail-ship should not be withdrawn from the service and unless the Company shall forthwith show cause to the contrary to the satisfaction of the Postmaster-General he may declare such mail-ship to be unfit for service under this Agreement and after such declaration shall have been made the Company shall not employ such ship in the performance of this Agreement.

Power to declare mail-ship unfit.

(2.) In order to determine whether the Postmaster-General shall be justified in declaring any mail-ship unfit for service or whether the Company shall be able to show cause to the contrary a special examination may be made of the hull and machinery of any such mail-ship by such person or persons as may be appointed for that purpose by the Postmaster-General.

15.—(1.) The Company shall at their own cost and to the satisfaction of the Postmaster-General provide the following accommodation for the mail service (that is to say) :—

Mail and sorting rooms.

- (a.) They shall provide on each of the mail-ships a separate room or rooms for the convenient and secure deposit of the mails under lock and key.
- (b.) Until the Postmaster-General gives notice to the contrary they shall provide between Port Said and Bombay on each of the mail-ships employed on Mail Route No. 1 the following accommodation for the purpose of sorting and making up the mails namely on the uppermost deck a separate and convenient room of such dimensions as the Postmaster-General may from time to time reasonably require and in the fore part of the main-deck such additional space to be well ventilated and lighted as may be required.
- (c.) Until the Postmaster-General gives notice to the contrary they shall provide between Penang and Hong Kong on the uppermost deck of each of the mail-ships employed on Mail Route No. 2 a separate and convenient room of such dimensions as the Postmaster-General may from time to time reasonably require for the purpose of sorting and making up the mails.

(2.) Every such room shall be provided by the Company with all such furniture lamps fittings and other conveniences as shall be necessary or convenient for the purpose of sorting and making up the mails and all such furniture lamps fittings and other conveniences shall be from time to time cleansed and kept in repair and the oil for the lamps shall be supplied by the servants and at the cost of the Company.

(3.) The services of the crew of every mail-ship shall from time to time be given in the conveyance of the mails between the mail-room and the sorting room or rooms.

16.—(1.) The Company shall receive and allow to remain on board each of the mail-ships on her voyage between Port Said and Bombay and also while stopping at Aden and whether such mail-ship shall be with or without mails on board an officer of the Indian Post Office to take charge of and sort and make up the mails.

Mail-ship to convey officer of Post Office between Port Said and Bombay and Penang Singapore and Hong Kong

(2.) The Company shall receive and allow to remain on board each of the mail-ships on her voyage between Penang and Singapore and between Singapore and Hong Kong an officer of the Post Office to take charge of and sort and make up the mails.

(3.) A suitable first-class cabin with appropriate bed bedding and furniture shall at the cost of the Company be provided and appropriated by them for the exclusive use and accommodation of every such officer as in this Clause mentioned and every such officer shall be victualled by the Company as a chief cabin passenger without any charge either for his passage or victualling.

Mail-ship to convey sorting officers between Port Said and Bombay.

17. The Company shall also receive and allow to remain on board each of the mail-ships on her voyage between Port Said and Bombay and also while stopping at Aden and whether such mail-ship shall be with or without mails on board in addition to any officer in charge of the mails such number (not exceeding thirty) of officers of the Post Office as shall be reasonably required for the purpose of sorting and making up the mails and shall without any charge provide suitable accommodation and victualling for such additional officers either as chief cabin passengers or as fore cabin passengers at the option of the Postmaster-General.

Mail officers to be conveyed on shore.

18. At each port or place where the mails are to be delivered and embarked the officer having charge of mails shall whenever and as often as by him shall be deemed necessary for the public service be conveyed on shore and also from the shore to the mail-ship either with or (if such officer shall consider it necessary for the purposes of this Agreement) without the mails in a suitable and seaworthy boat of not less than four oars to be furnished with effectual covering for the mails and properly provided manned and equipped by the Company.

Landing and embarkation of mails.

19.—(1.) The Company shall at their own cost land deliver and embark the mails at all ports or places at which the mails are to be landed delivered and embarked and shall accordingly at their own costs provide suitable means and proper assistance for and shall be responsible for the due landing delivery and embarkation of the mails.

(2.) The Company and all commanding and other officers of the mail-ships and all agents seamen and servants of the Company shall at all times punctually attend to the orders and directions of the Postmaster-General his officers or agents as to the mode time and place of landing delivering and embarking the mails and shall at all times protect the mails to the utmost of their power.

(3.) The Company shall provide at Aden and at Bombay such small steamships as may be required for landing embarking and transshipping the mails with due despatch at each of the said places and such steamships respectively shall be so constructed as to be able at all states of the tide to land and embark the mails at Aden and at Bombay and the Company shall at all times keep such steamships in complete repair and ready for landing and embarking the mails accordingly at such places respectively.

Masters of mail-ships to take charge of mails when required.

20.—(1.) The master or commander of each of the mail-ships shall whenever required by the Postmaster-General his officers or agents so to do without any remuneration other than the subsidy payable to the Company under this Agreement take charge of the mails conveyed or intended to be conveyed by such mail-ship and shall adopt all necessary measures and precautions for the safety of the mails to the satisfaction of the Postmaster-General his officers and agents.

(2.) Each of such masters or commanders shall make the usual declaration or declarations required or which may hereafter be required by the Postmaster-General in such and similar cases and furnish such journals returns and information to and perform such services as the Postmaster-General his officers or agents may require.

(3.) Every such master or commander or officer duly authorised by him having charge of mails shall himself immediately on the arrival of the mail ship at any port or place deliver all mails for such port or place into the hands of the Postmaster of such port or place or of such other person at such port or place as the Postmaster-General shall authorise to receive the same and shall in like manner receive all the return or other mails to be forwarded in due course.

Additional conveyance of mails by Company.

21.—(1.) The Company shall during the continuance of this Agreement (in addition to the services hereinbefore contracted to be performed by them and without any payment other than the subsidy hereinafter specified) convey by any steamship of the Company performing any service undertaken by the Company for their own purposes all mails which the Postmaster-General or any of his officers or agents shall from time to time require to be conveyed.

(2.) The mails shall be conveyed by any such steamship as in this clause mentioned to and be delivered at any port or place to which such steamship shall sail and for which such mails are intended.

(3.) Provided that (except as regards the payment for the services to be rendered by the Company under this Clause) nothing contained in this Agreement shall impose on the Company with respect to the embarking delivering and conveyance of any mails which are to be conveyed by the Company under this Clause any obligations in excess of those now imposed by the law of England on the master of a vessel with respect to the embarking delivering and conveyance of letters received by him on board his vessel.

Company to undertake sanitary and quarantine arrangements.

22. The Company shall undertake and make all necessary and proper arrangements in connection with any statutory regulations of the Local Government Board relative to public health or in connection with quarantine which may be required in respect of the mail-ships or any other steamships of the Company carrying mails under this Agreement and no deduction shall be made from the subsidy payable under this Agreement nor shall the Company be otherwise liable for or by reason of any delay in the landing embarkation delivery or conveyance of any mails arising from the observance of any such regulations or the imposition of quarantine.

Explosives.

23.—(1.) Nothing in this Agreement shall exempt the Company or any mail-ship or other steamship of the Company from the operation of any Act of Parliament Order in Council bye-law or other provision of the law in relation to explosives.

(2.) The Company shall not convey in any mail-ship any article which in the opinion of the Postmaster-General is likely to endanger the mails.

Company to be responsible for loss or damage of parcels or registered postal packets.

24. The Company shall be responsible for the loss or damage of any parcel or of any registered postal packet of any kind conveyed or tendered for conveyance under this Agreement (unless such loss or damage be caused or occasioned by act of God the Queen's enemies pirates restraints of princes rulers or people jettison barratry fire collision or perils or accidents of the seas rivers and steam navigation) and in the event of any such loss or damage (except as aforesaid) the Company shall be liable to pay to the Postmaster-General in respect of each parcel or registered postal packet so lost or damaged (subject to the proviso hereinafter contained) such sum of money as shall be equal to the amount which may have been awarded and paid by the Postmaster-General at his sole option and discretion (and though not under any legal obligation) to the sender or addressee of such parcel or registered postal packet as compensation for the loss or damage thereof. Provided that such sum shall not in any case exceed £1 per parcel or £2 per registered postal packet.

Company not to convey letters other than the mails.

25. The Company shall not nor shall any master or commander of any mail-ship receive or permit to be received on board any mail-ship for conveyance thereby any letters other than those which are required or expressly permitted to be carried under this Agreement and any such letters as are not required by law to pass through the Post Office nor shall the Company or any such master or commander receive or permit to be received on board any mail-ship for conveyance thereby any mails on behalf of any colony or foreign country without the consent of the Postmaster-General and the entire postage of all mails conveyed by any mail-ship under this Agreement shall in all cases (as between the Postmaster-General and the Company) belong to the Postmaster-General and shall be absolutely free from all claims or demands whatever of or by the Company under or by virtue of this Agreement or otherwise.

MODIFICATION OF SERVICES.

Power to Postmaster-General to alter times of departure and arrival.

26. If at any time or times the Postmaster-General shall for any reason whatever desire to alter the particular days times or hours of departure from and arrival at the terminal ports of departure and destination respectively on each of the Mail Routes he shall (subject and without prejudice to the provisions of Clause 10 hereof) give to the Company three calendar months' notice in writing of such desire.

Power to Postmaster-General to substitute another European port or a port in United Kingdom for Brindisi.

27.—(1.) If at any time the Postmaster-General shall deem it necessary or expedient in the public interest to substitute for Brindisi as the port or place for the commencement and termination of the respective outward and homeward services under this Agreement another port on the Continent of Europe or in the United Kingdom the Company shall on receiving reasonable notice from the Postmaster-General to that effect convey the mails to and from such other port or place in substitution for Brindisi and this Agreement shall in respect of the services to be rendered by the Company be read and construed as if the name of such other port or place on the Continent of Europe or in the United Kingdom appeared throughout the same in lieu of the word Brindisi.

(2.) In the event of such substitution as hereinbefore mentioned the several periods of transit shall be respectively liable to be increased or diminished to such an extent as shall be agreed upon between the Postmaster-General and the Company or failing such agreement as shall be determined by arbitration and the subsidy payable hereunder shall be liable to be increased or diminished in such manner as (having regard to all the circumstances of the case and particularly to any expense or loss incurred or to any risk run by or any advantage accruing to the Company in consequence of such substitution) shall be agreed upon between the Postmaster-General and the Company or failing agreement shall be determined by arbitration.

28.—(1.) If at any time or times the Postmaster-General shall deem it necessary or expedient in the public interest that all the mails to be conveyed upon all the Mail Routes shall be conveyed from the United Kingdom by way of the Cape of Good Hope or Cape Horn instead of by way of the Suez Canal the Company on receiving reasonable notice from the Postmaster-General to that effect shall in lieu of the services hereinafter contracted to be performed convey the mails by means of mail-ships by way of the Cape of Good Hope or Cape Horn from and to such port in the United Kingdom as may be agreed upon between the Postmaster-General and the Company or in default of agreement be determined by arbitration to and from the terminal ports or places upon each of the outward Mail Routes serving as far as practicable the several places or ports of call on each Mail Route.

Power to Postmaster-General to substitute Cape route for route via Suez Canal.

(2.) In such case the mails shall be conveyed at such rates of speed and on such other conditions as may be agreed upon between the Postmaster-General and the Company and in default of agreement may be determined by arbitration.

(3.) All the provisions of this Agreement with reference to the services to be performed by the Company shall (so far as the same are applicable) apply to the embarking conveying landing and delivery of the mails under the provisions of this Clause.

(4.) The Postmaster-General shall not in respect of the substituted service in this Clause mentioned make any additional payment to the Company unless by reason of the performance of such substituted service and on no other account the Company shall sustain a loss of general revenue or incur expenses exceeding the expenses incurred in the conveyance of the mails to and from Brindisi under the provisions of this Agreement.

(5.) Should any such loss or additional expenses as last aforesaid be incurred or sustained by the Company the Postmaster-General shall pay to the Company in addition to the said subsidy such sum of money as may be agreed upon between him and them or failing such agreement as shall be determined by arbitration and upon such arbitration due regard shall be had to the respective interests of the Company and the Postmaster-General in the performance of the voyage or voyages of any mail-ship by which the mails shall have been conveyed under the provisions of this Clause.

29. The powers conferred upon the Postmaster-General by the last two preceding Clauses may be exercised in relation to a temporary or a permanent change of route or of port (as the case may be) and in the case of a temporary change may be exercised as often as the Postmaster-General deems it expedient and the Postmaster-General may in his notice requiring the change specify the period during which such change shall take effect or require such change to be made until further notice and at the expiration of the time limited by the Postmaster-General or upon receiving reasonable notice from the Postmaster-General to that effect (as the case may be) the Company shall revert to the original route or port (as the case may be).

Mode of exercise of powers under the last two preceding Clauses

30.—(1.) If at any time or times the Postmaster-General shall desire to modify (otherwise than as aforesaid) the services hereby agreed to be performed (as for example to increase or decrease the frequency of the conveyance of the mails between any of the ports or places to or from which the mails are to be conveyed under this Agreement or to extend the conveyance of the mails to any other ports or places not specified in this Agreement or to discontinue the conveyance of such mails to or from any port or place specified in this Agreement) he shall be at liberty so to do on giving reasonable notice to the Company and from and after the expiration of any such notice the modified services thereby required to be performed shall be accordingly performed by the Company in lieu of the services hereby agreed to be performed and in any and every such case if such notice cause an increase of the services hereby agreed to be performed the Postmaster-General shall in respect of such increase pay to the Company in addition to the subsidy hereinafter specified such sum of money as may be agreed upon between the Postmaster-General and the Company or failing such agreement as shall be determined by arbitration or if such notice cause a decrease of the services hereby agreed to be performed the Postmaster-General shall in respect of such decrease deduct from the said subsidy such sum of money as may be agreed on as aforesaid or failing such agreement as shall be determined by arbitration.

Power to modify services.

(2.) The particular days times and hours of departure from and arrival at any ports or places or of other services (if any) which may be appointed under this Clause shall for the time being be deemed to be the days times and hours of departure and arrival of the mail-ships and of other services under this agreement and shall be observed and kept by the Company accordingly.

ADMIRALTY CLAUSES.

31. During the continuance of this Agreement the several stipulations and agreements specified in the Second Schedule hereto shall be binding on the Company as regards the mail-ships plying on Mail Routes 1 and 2.

Clauses in Second Schedule to bind Company.

32.—(1.) Subject to the provisions of the Subvention Agreement between the Admiralty and the Company dated 3rd April 1894 or of any subsequent Subvention Agreement the Admiralty shall at any time during the continuance of this Agreement if they shall consider it necessary for the public interest so to do have power and be at liberty to purchase all or any of the mail-ships at a valuation or to charter exclusively for Her Majesty's service at a rate of hire to be mutually fixed and agreed on by them and the Company or in case of difference to be determined by arbitration and every or any difference as to the amount of valuation or hire or rate of hire so to be paid shall be determined by arbitration.

Power to Admiralty to purchase or charter the mail-ships

(2.) In the case of such purchase or hire the services hereby contracted to be performed shall be performed by other steamships of the Company of a similar description to the mail-ships purchased or hired if the Company can in due and proper time furnish such steamships.

(3.) In the event of the Company being allowed by the Postmaster-General to continue to perform only a portion of such services there shall be paid to the Company such annual sum of money as shall be agreed upon between the Postmaster-General and the Company and in case of their differing as to the amount the difference shall be determined by arbitration.

SUBSIDY AND DEDUCTIONS.

33. In consideration of the covenants and agreements herein contained and on the part of the Company to be observed and performed and of the due and faithful performance by the Company of all the services under this Agreement there shall be payable to the Company during the continuance of this Agreement (out of such aids or supplies as may from time to time be appropriated by Parliament for that purpose) a yearly subsidy or sum after the rate of £330,000 per annum or (in the event of any such default or failure or other event as hereinafter mentioned) so much of the said subsidy or sum as shall remain payable in respect of any year after making such deductions therefrom (if any) as hereinafter in that behalf mentioned in respect of any such default or failure or other event.

Subsidy.

34. There shall be forfeited and paid by the Company to the Postmaster-General the following sums in the following events that is to say—

Payments or deductions.

(1.) If the Company shall fail to commence the performance of the services hereby agreed to be performed on the 1st February 1898 or on such subsequent day as the Postmaster-General may appoint the Company shall forfeit and pay the sum of £100 for every complete period of 24 hours which shall elapse before the Company shall commence the performance of such services.

Provided that—

- (a) the amount which shall become payable by the Company in respect of such default as aforesaid so far as the same shall relate to any one of the Mail Routes shall not in the aggregate exceed the sum of £20,000; and
- (b) the payment by the Company of the aforesaid amount shall not prejudice the right of the Postmaster-General to insist on any payment or deduction to which he may be entitled in respect of the same default under the provisions hereinafter contained.

(2.) On each occasion when the Company shall fail to provide a mail-ship in accordance with this Agreement at Brindisi Bombay Shanghai or Adelaide ready to put to sea at the appointed time or if any mail-ship provided by the Company as aforesaid shall not in fact put to sea and proceed on her voyage at the appointed time the Company shall forfeit and pay—

- (a) the sum of £500 in case such default occurs at Brindisi Bombay or Shanghai and the sum of £250 in case such default occurs at Adelaide; and
- (b) a further sum of £100 in case such default occurs at Brindisi Bombay or Shanghai and a further sum of £50 in case such default occurs at Adelaide for every successive complete period of 24 hours which shall elapse before such mail-ship shall actually put to sea and proceed on her voyage in pursuance of this Agreement.

(3.)

(3.) On each occasion when the mails shall not be conveyed in either direction between Brindisi and Bombay Brindisi and Shanghai and Brindisi and Adelaide within the respective periods of transit hereinbefore specified the Company shall forfeit and pay the sum of £100 for every complete period of 12 hours (in the case of voyages between Brindisi and Bombay and Brindisi and Shanghai) or of 24 hours (in the case of voyages between Brindisi and Adelaide) by which the said respective periods of transit hereinbefore provided shall be exceeded.

Provided that no such payment as in this sub-clause mentioned shall be made if the Company shall prove to the satisfaction of the Postmaster-General that such default arose wholly or in part from any cause or causes altogether beyond the control of the Company.

Provided also that if by reason of any law or regulation against Sunday labour in any port or place from or at which a mail-ship shall start or call under this Agreement any mail-ship employed or about to be employed in any service under this Agreement shall be delayed then and in every such case no such payment as in this sub-clause mentioned shall be made in respect of any default in the conveyance of any mails under this Agreement caused by such delay.

(4.) The aggregate amount of the sums payable under sub-clause (2) and under sub-clause (3) of this Clause respectively in relation to any one voyage shall in the case of payments under sub-clause (2) never exceed by more than £1,000 and in the case of payments under sub-clause (3) never exceed by any amount that part of the subsidy for the current year which shall be applicable to the voyage.

(5.) Each and all of the said several sums of money hereinbefore stipulated to be paid by the Company to the Postmaster-General in the event of failure or default of the Company as aforesaid shall be due and payable as stipulated ascertained or liquidated damages and not by way of penalty and (except as aforesaid) from whatever cause or causes such failure or default may have arisen and although no loss shall be or may have been sustained by reason or in consequence of such failure or default and every such sum shall at the option and discretion of the Postmaster-General be either deducted by him from any moneys then payable or which may thereafter become payable to the Company under this Agreement or be recovered as a debt to Her Majesty with full costs of suit.

(6.) The payment of or liability to pay any sum hereinbefore mentioned shall in no way prejudice the right of the Postmaster-General to treat as a breach of this Agreement the failure in respect of which such sum shall become payable by the Company as aforesaid.

35. If and whenever the Postmaster-General gives notice to the Company that he no longer requires them to provide accommodation for the sorting and making up of the mails on Mail Routes No. 1 and No. 2 and to receive and convey Officers of the Post Office for the same purpose there shall be deducted from the said subsidy—

(a) If and so far as such notice relates to Mail Route No. 1 the sum of £7,500.

(b) If and so far as such notice relates to Mail Route No. 2 the sum of £1,000.

36. All accounts between the Postmaster-General and the Company in relation to the said subsidy and any deductions therefrom as hereinbefore provided shall be made out and settled quarterly up to and as soon as conveniently may be after the 31st day of March the 30th day of June the 30th day of September and the 31st day of December in each year and the amount of balance (if any) which shall be due to the Company on each such quarterly account shall be paid by the Postmaster-General at the General Post Office London out of such aids or supplies as aforesaid upon the settlement of each such account and for the purposes of such accounts the said subsidy shall be deemed to accrue from day to day subject to the liability of the same to the several deductions aforesaid.

TERM OF AGREEMENT AND INCIDENTAL PROVISIONS.

37. This Agreement shall come into operation on the 1st day of February 1898 and shall continue in force until the 31st day of January 1905 inclusive and shall then determine if notice in writing to that effect shall have been given twenty-four calendar months previously to the said last-mentioned date either to the Company by the Postmaster-General or to the Postmaster-General by the Company and if not so determined this Agreement shall continue in force after such last-mentioned date until the expiration of a notice of a like duration given by either party at any time.

38.—(1.) If on the determination of this Agreement any mail-ship shall or ought to have started or shall start on any voyage in conformity with this Agreement or any other steamship of the Company shall have started on a voyage with mails on board such voyage shall be continued and performed and the mails be delivered and embarked during and at the completion of the same and all the provisions of this Agreement be observed as if this Agreement had remained in force with regard to any such ship and services and with respect to such ship and services this Agreement shall be considered as having terminated when such ship shall have reached her port or place of destination and such services shall have been performed.

(2.) In respect of any such voyage as in this Clause mentioned the Company shall not be entitled to receive any payment or compensation over and above the subsidy payable under this Agreement on the day when this Agreement (otherwise than as to any such voyage) determines.

SUPPLEMENTAL PROVISIONS.

39. It shall be lawful for the Postmaster-General at any time and from time to time to delegate any of the powers vested in him by virtue of these presents to such person or persons as he shall think fit.

40. The Company shall not assign underlet or dispose of this Agreement or any part thereof without the consent of the Postmaster-General signified by an instrument in writing.

41. In case this Agreement or any part thereof is assigned underlet or otherwise disposed of and in case of any great or habitual breach on the part of the Company their officers agents or servants of this agreement or of any covenant matter or thing herein contained it shall be lawful for the Postmaster-General if he shall think fit and notwithstanding there may or may not have been any former breach of this Agreement by an instrument in writing to determine this Agreement without any previous notice to the Company and the Company shall not be entitled to any compensation in respect of any such determination, and such determination shall not deprive the Postmaster-General of any right or remedy to which he would otherwise be entitled by reason of such breach or any prior breach of this Agreement. Provided that in case within seven days after service as aforesaid on the Company of a notice determining this Agreement the Company give notice in writing to the Postmaster-General that they dispute the sufficiency of such breach to justify the Postmaster-General in determining this Agreement such dispute shall be referred to arbitration and in such case this Agreement shall notwithstanding such notice of determination continue in force unless and until an award shall be made to the effect that such breach or breaches was or were sufficient to justify the Postmaster-General in giving such notice of determination as aforesaid.

42. The Postmaster-General will use his good offices with the Governments of the Australian Colonies with a view to secure that the Company shall not be compelled to pay in respect of any mail-ship calling at any port or place in any of the said Colonies any port or light dues or other charges of a public nature other than or in excess of the dues or charges for the time being payable at the like port or place in respect of any other vessel of a like character whether employed in the conveyance of mails or not.

43. The Schedules to this Agreement shall be deemed to be part of this Agreement in all respects as if the same had been incorporated therein.

44.—(1.) Any notice to terminate this Agreement if given by the Postmaster-General shall be served by being left at or forwarded by post to the Company at their office or last known place of business in London and any such notice if given by the Company and any other notices given by the Company shall be served by being sent by post to the Secretary of the Post Office at the General Post Office London.

(2.) All notices or directions (other than any notice to terminate this Agreement) which the Postmaster-General his officers or agents are hereby authorised to give to the Company their officers servants or agents may at the option of the Postmaster-General his officers or agents either be delivered or sent by post to the master of any mail-ship or to any other officer or agent of the Company in charge or management of any mail-ship or be left for or forwarded by post to the Company at any office or place of business of the Company and any notices or directions so given left or sent by post shall be binding on the Company.

Deduction in case sorting accommodation and conveyance of Sorting Officers not required.

Accounts.

Commencement and duration of Agreement.

Voyages commenced when Agreement determines to be completed.

Postmaster-General may delegate his powers. Company not to assign &c. Agreement. Power to Postmaster-General to determine Agreement summarily on breach.

Postmaster-General to use his good offices with the Australian Colonies in respect to port dues. Schedule to be part of Agreement. Notices.

45. In pursuance of the provisions contained in an Act of Parliament passed in the 22nd year of the reign of King George the III intituled "An Act for restraining any person concerned in any contract commission or agreement made for the public service from being elected or sitting and voting as a Member of the House of Commons" no Member of the House of Commons shall be admitted to any share or part of this Agreement or to any benefit to arise therefrom contrary to the true intent and meaning of the said Act. No Member of Parliament to benefit by Agreement.

46. This Agreement shall not be binding until it has been approved by a resolution of the House of Commons. Agreement to be approved by House of Commons.

BOND.

47. And lastly for the due and faithful performance of all and singular the covenants conditions provisocs clauses articles and agreements hereinbefore contained which on the part and behalf of the Company are or ought to be observed performed fulfilled and kept the Company do hereby bind themselves and their successors unto our Sovereign Lady the Queen in the sum of £60,000 of lawful money of the United Kingdom to be paid to our said Lady the Queen her heirs and successors by way of stipulated or ascertained damages hereby agreed upon between the Postmaster-General and the Company in case of the failure on the part of the Company in the due execution of this Agreement or any part thereof. Bond clause.

In witness whereof the Postmaster-General hath hereunto set his hand and seal and the Company have hereunto affixed their Common Seal the day and year first before mentioned.

The Schedules hereinbefore referred to :—

THE SECOND SCHEDULE.

1. The Company shall and will when and so often as they or the masters of the mail-ships shall be required in writing so to do by the Admiralty the Secretary of State for India or the Secretary of State for the Colonies or by any officers or agents acting under their authority (such writing to specify the rank or description of the person or persons to be conveyed and the accommodation to be provided for him or them) receive provide for victual and convey to from and between any of the ports or places to from and between which any of the mail-ships are to proceed in the performance of this Agreement (in addition to any officers of the Post Office employed in connection with the mails conveyed or to be conveyed under this Agreement) Government passengers.

- (a) Any number of naval military or civil officers in the service of Her Majesty not exceeding eight in any one ship with or without their wives and children as chief cabin or first-class saloon passengers (together with their servants male and female who are to have the same accommodation as that provided for the servants of other passengers or of officers of the Company)
- (b) Any number of non-commissioned and warrant officers not exceeding four in any one ship with or without their wives and children as fore cabin or second-class passengers and
- (c) Any number of seamen marines soldiers or artificers in Her Majesty's service not exceeding ten in any one ship with or without their wives and children as third-class passengers to be always provided with effectual protection from rain sun and bad weather and not exposed on deck without such competent protection and to have hammocks or bunks (subject to the approval of the Admiralty) placed between decks.

2.—(1.) The passengers who shall be conveyed in pursuance of the last preceding clause (who are hereinafter designated "Government passengers") with their families shall be treated in no respect whether as regards food cabin or other accommodation or aught else in a way inferior to that in which ordinary passengers of the same class are treated or to that required by the regulations of Her Majesty's Transport Service. The messing of the second-class and the victualling of the third-class naval adult passengers shall include in each day one half gill of spirits. Their accommodation.

(2.) The several classes of passengers shall mess in separate places and medical attendance medicine and medical comforts mess utensils and fittings cooking utensils articles for table use and mess places' fuel lights, requisite articles of bedding and all other necessaries shall be provided for them in like manner as for ordinary passengers of the like classes respectively.

3. The passage money for Government passengers and their families and servants respectively shall unless otherwise agree between the Admiralty and the Company be the same as that charged by the Company for ordinary passengers of the same class and shall include all the particulars mentioned in the last preceding Clause and if and whenever any alteration of rates for ordinary passengers shall be made by the Company the Admiralty shall be immediately apprised of such alteration. Passage money.

4. Returns of the embarkation and disembarkation of all Government passengers shall be furnished to the Director of Transports immediately after the departure and arrival of each mail-ship. Returns to be furnished.

5. Payments for passage money for Government passengers shall be applied for by invoices according to a form to be obtained from the office of the Director of Transports and shall be made only upon such applications and upon the production of the orders for the passage together with a certificate under the hand of the commanding officer specifying the number of third-class passengers (men women and children) conveyed with the ages and sexes of the latter and stating the periods during which they have been respectively regularly supplied with provisions while on board and also a certificate under the hand of each first and second class passenger of his or her having being landed at the place of destination and of his or her having been properly accommodated and messaged during the voyage and specifying the dates from and to which they were messaged computed from the first to the last dinner meal. Payments how made.

6. The Company shall convey for every Government passenger free of charge the quantity of baggage (whether such quantity shall be estimated or ascertained by bulk or weight) to which he is entitled under the Government Regulations for the time being in force and freight shall be payable for any extra baggage of a Government passenger after the same rate as the freight payable according to the regulations of the Company for the time being for extra baggage of an ordinary passenger of the same class but the same must be paid by the passengers themselves. Baggage.

7. The passage money for the wives families and servants of commissioned and civil officers when not ordered to be conveyed at the public expense shall be paid to the Company by the officers themselves. Wives and families.

8. In all cases where an officer in the naval military or civil service of Her Majesty who may not be entitled to a passage at the public expense shall require a passage on board any of the mail-ships the Company shall be bound to provide when they have room in such mail-ship a passage for such officer in preference to any non-official passenger not already booked and shall charge no higher rate for such passage than is chargeable for an ordinary passenger. Officers in Her Majesty's service to have preference to other passengers.

9.—(1.) The Company shall receive on board each of the mail-ships and shall convey on behalf of the Admiralty—

- (a) Any small packages which may be ordered for conveyance and also
- (b) (On receiving from the British naval officer in command of any naval station two days' previous notice) any naval or other stores not exceeding at any one time in any one mail-ship 10 tons weight or 15 tons of 40 cubic feet each in measurement. Admiralty packages to be conveyed. (2.)

(2.) The Company shall convey and deliver such small packages and stores at the lowest rates of freight charged by the Company for private goods of a similar character or description and shall give immediate notice to the Admiralty of any alteration of such rates of freight and shall in all cases be responsible for the custody and safe and speedy delivery of such packages and stores.

HER MAJESTY'S POSTMASTER-GENERAL AND THE ORIENT STEAM NAVIGATION COMPANY.—
AUSTRALIAN MAILS.

CONTRACT.

ARTICLES OF AGREEMENT under Seal made and entered into this 25th day of May 1897 between the Most Noble Henry Duke of Norfolk Earl Marshal and Hereditary Marshal of England K.G. Her Majesty's Postmaster-General (hereinafter called the "Postmaster-General" in which term his successors in the office of Her Majesty's Postmaster-General for the time being shall be deemed to be included) on behalf of Her Majesty of the first part the Orient Steam Navigation Company Limited whose registered office is at No. 13 Fenchurch-avenue in the City of London (hereinafter called "the Company" in which term their successors and permitted assigns shall be deemed to be included) of the second part and the Law Guarantee and Trust Society Limited whose registered office is situate at 49 Chancery-lane in the county of London of the third part.

These presents witness that in consideration of the matters hereinafter appearing it is hereby agreed and declared between and by the parties hereto and the Postmaster-General (as to the covenants agreements and stipulations hereinafter contained on his part) doth hereby covenant and agree with the Company and the Company (as to the covenants agreements and stipulations hereinafter contained on their part) do hereby covenant and agree with the Postmaster-General in manner following that is to say:—

INTERPRETATION OF TERMS.

Interpretation
of terms.

1. For all the purposes of this Agreement—

The term "mails" means and includes all bags boxes baskets or other packages of letters and other postal packets including parcels (each parcel not exceeding the maximum weight of 11 lb.) without regard either to the country or place to which such packages may be addressed or to the country or place in which they may have originated and also all empty bags boxes baskets or other receptacles and all stores and other articles used or to be used in carrying on the Post Office service.

The term "postal packet" means any article for the time being transmissible by post and includes a parcel.

The term "parcel" means a parcel within the meaning of the Post Office (Parcels) Act 1882.

The term "mail-ship" means a vessel provided for the conveyance of mails under this Agreement.

The term "Adelaide" means the signalling station (known as "Adelaide Semaphore") at or off the port of the City of Adelaide in South Australia.

SERVICES TO BE PERFORMED.

Company to
convey mails
once a fortnight
each way
between Naples
and Australia.

2.—(1.) Subject to the provisions of this Agreement the Company shall once in every fortnight during the continuance of this Agreement at their own costs and charges in all respects convey *via* the Suez Canal and by means of mail-ships in each direction between Naples and Adelaide and between all other ports from which the mail-ships shall start or at which they shall call or arrive under the provisions of this Agreement or for the purposes of the Company all mails which the Postmaster-General or any of his officers or agents shall from time to time and at any time or times require to be conveyed.

(2.) For the purposes of this clause of this Agreement the postal authorities of the several Possessions or Colonies of Ceylon Western Australia South Australia Victoria and New South Wales and their respective officers and agents shall unless and until the Postmaster-General shall give notice to the Company to the contrary be deemed the agents of the Postmaster-General.

Mode of
conveyance.

3.—(1.) Subject to the provisions of this Agreement one of the mail-ships shall once in every fortnight upon such days at regular intervals and at such hours respectively as the Postmaster-General shall from time to time appoint (either by a time-table or time-tables to be from time to time approved by him or otherwise as he shall think fit) and immediately after the mails are embarked put to sea from Naples and proceed (*via* the Suez Canal) to Adelaide and one of the mail-ships shall at like periods and times and in like manner put to sea from Adelaide and proceed (*via* the Suez Canal) to Naples and each of such mail-ships shall on each outward and homeward voyage respectively proceed to call at and start from the following intermediate ports or places namely Colombo and Albany (or Fremantle).

(2.) The Company shall use the Princess Royal Harbour at the Port of Albany whenever the use of such harbour is practicable.

(3.) The Company shall (if requested by the Postmaster-General so to do and upon reasonable notice) substitute the Port of Fremantle in Western Australia for the Port of Albany as a port of call under this Agreement as soon as the mail-ships can use the Port of Fremantle with safety and cargo-work and coaling can be carried on at such port in all states of the weather Provided that whenever the mail-ships call at Fremantle such an additional number of hours shall be added to the period of transit hereinafter referred to as shall be agreed upon between the Postmaster-General and the Company or failing agreement be settled by arbitration.

Outward mail-
ships to start
from the United
Kingdom and
proceed to
Melbourne and
Sydney and
homeward mail-
ships to start
from Sydney
call at Melbourne
and proceed to
United
Kingdom.

4.—(1.) Each of the mail-ships shall on every outward voyage from Naples to Adelaide as aforesaid start from a port in the United Kingdom and after the due delivery at Adelaide of the mails intended to be delivered at that port continue her voyage to Melbourne and thence to Sydney and each of the mail-ships shall on every homeward voyage commence her voyage to Naples at Sydney (calling at Melbourne on the route to Adelaide) and after the due delivery of the mails at Naples continue her voyage to a port in the United Kingdom whether any mails may or may not be required to be conveyed in any such mail-ship from or to the United Kingdom or to and from Melbourne or Sydney on any such voyage.

(2.) The times at which the mail-ships shall start from or arrive at the port of departure or arrival in the United Kingdom Melbourne and Sydney and the rate of speed of the mail-ships between the United Kingdom and Naples and between Adelaide Melbourne and Sydney shall be fixed by the Company at their discretion but not so as to affect the period of transit between Naples and Adelaide hereinafter referred to.

(3.) The Company shall be at liberty at their option to continue the outward voyage of any mail-ship beyond and after calling at Sydney to Newcastle (New South Wales) and to commence the homeward voyage of the said mail-ship from Newcastle aforesaid provided she calls at Sydney.

(4.) In the event of any accident or delay which would if any voyage of any mail-ship were continued beyond Adelaide or Melbourne respectively prevent such mail-ship from starting on her return homeward voyage from Adelaide at the time appointed for that purpose in pursuance of the provisions of this Agreement the Company shall be at liberty to terminate the outward voyage of such mail-ship at Adelaide or Melbourne (as the case may be) and forthwith to commence the homeward voyage of such mail-ship at the same place as the circumstances of the case may require.

(5.) In any such case as is mentioned in the last sub-clause the Company shall bear the cost of conveying to Sydney or to Melbourne and Sydney (as the case may be) all parcels on board the mail-ship intended for those places and also the cost of the necessary conveyance from Sydney or Melbourne to Adelaide of any parcels from Sydney or Melbourne intended to be conveyed by the mail-ship on her homeward voyage.

5.—(1.) Each entire voyage of each of the mail-ships in either direction between Naples and Adelaide shall be completed within a period of 696 hours (hereinafter called "the period of transit"). Period of transit.

(2.) The period of transit shall include the time allowed for all stoppages of the mail-ships at the intermediate ports and the mail-ships shall stop on both the outward and homeward voyages at Albany (or Fremantle) for six hours and no less and at Colombo for such period as may be necessary for the purpose of delivering receiving or exchanging mails and in no case less than the period (not exceeding 24 hours) appointed by the Postmaster-General in that behalf.

(3.) During the prevalence of the south-west monsoon the period of transit from Adelaide to Naples shall be extended by 36 hours.

6.—(1.) Each period of transit shall be deemed to commence so soon after the time appointed by the Postmaster-General for the departure of the mail-ship from Naples and Adelaide respectively or after the completion of the embarkation of the mails intended to be thereby conveyed (whichever shall last happen) as (having regard to practical considerations) the anchor of such mail-ship can be weighed or the mail-ship can be loosed from her moorings and each such period of transit shall be deemed to be completed when the mail-ship has arrived and been anchored or moored in some position at the port or place of destination from which the mails can conveniently be disembarked. Calculation of periods of transit.

(2.) In any case in which any outward or homeward voyage between Naples and Adelaide may by reason of accident or other necessity be performed by more than one mail-ship the period of transit shall be reckoned from the commencement of the voyage of the mail-ship by which the first part of the conveyance shall be performed to the completion of the voyage of the mail-ship by which the last part of the conveyance shall be performed.

(3.) The times of commencement and completion of each period of transit shall be ascertained and recorded and all calculations in connection therewith shall be made by officers of the Postmaster-General in pursuance of arrangements to be from time to time made by him for such purpose and the decision of the Postmaster-General on all such questions shall be final and conclusive.

7. Should it be deemed by the Postmaster-General his officers or agents requisite for the public service that any mail-ship should at any time or times delay her departure from any port from which the mails are to be conveyed under this Agreement beyond the time appointed for her departure therefrom the Postmaster-General or any of his officers or agents shall have power to order such delay (not however exceeding 24 hours) by letter addressed to the master of any such mail-ship or any person acting as such and such letter shall be deemed a sufficient authority for such detention and in any such case an equivalent addition shall be made to the period of transit during which such detention shall take place. Power to delay departure of mail-ships.

CHARACTER OF MAIL-SHIPS AND CONDITIONS OF MAIL SERVICE.

8. Every mail-ship shall be a good substantial and efficient steamship of adequate power and speed and supplied with first-rate appropriate steam-engines and shall be in all respects suited to the performance of the services herein agreed to be performed within the respective times herein stipulated and shall be provided and kept by the Company seaworthy and in complete repair and readiness to the satisfaction of the Postmaster-General. Character of mail-ships.

9. Every mail-ship shall be always properly and sufficiently equipped in all respects so as to render her constantly efficient for the said services and safe for the conveyance of mails and shall be manned with legally qualified and competent officers with appropriate certificates granted pursuant to the Act or Acts in force for the time being relative to the granting of certificates to officers in the Merchant Service and also with competent engineers and a sufficient crew of able seaman and other men and with a competent and registered surgeon. Equipment and manning of mail-ships.

10. Every mail-ship and the equipment officers engineers and crew thereof shall be subject at all times to the inspection of the Postmaster-General or of such person or persons as he shall at any time or times authorise to make such inspection. Mail-ships and their equipment &c. to be subject to inspection.

11.—(1.) If the Postmaster-General shall at any time consider any mail-ship unfit for service under this Agreement he may require the Company to show cause why such mail-ship should not be withdrawn from the service and unless the Company shall forthwith show cause to the contrary to the satisfaction of the Postmaster-General he may declare such mail-ship to be unfit for service under this Agreement and after such declaration shall have been made the Company shall not employ such ship in the performance of this Agreement. Power to declare mail-ship unfit for service.

(2.) In order to determine whether the Postmaster-General shall be justified in declaring any mail-ship unfit for service or whether the Company shall be able to show cause to the contrary a special examination may be made of the hull and machinery of any such mail-ship by such person or persons as may be appointed for that purpose by the Postmaster-General.

12. The Company shall at their own cost and to the satisfaction of the Postmaster-General provide on each mail-ship a separate room or rooms for the convenient and secure deposit of the mails under lock and key and the services of the crew of every such mail-ship shall from time to time be given in the conveyance of the mails to and from such mail room or rooms. Room for deposit of mails to be provided in each mail-ship.

13.—(1.) The Company shall at their own cost land deliver and embark the mails at all ports or places at which the mails are to be landed delivered and embarked and shall accordingly at their own cost provide suitable means and proper assistance for and shall be responsible for the due landing delivery and embarkation of the mails. Landing and embarkation of mails.

(2.) The Company and all commanding and other officers of the mail-ships and all agents seamen and servants of the Company shall at all times punctually attend to the orders and directions of the Postmaster-General his officers or agents as to the mode time and place of landing delivering and embarking the mails and shall at all times protect the mails to the utmost of their power.

14.—(1.) The master or commander of each of the mail-ships shall whenever required by the Postmaster-General his officers or agents so to do (without any remuneration other than the subsidy payable to the Company under this Agreement) take charge of the mails conveyed or intended to be conveyed by such mail-ship and shall adopt all necessary measures and precautions for the safety of the mails to the satisfaction of the Postmaster-General his officers and agents. Masters of mail-ships to take charge of mails when required.

(2.) Each of such masters or commanders shall make the usual declaration or declarations required or which may hereafter be required by the Postmaster-General in such and similar cases and furnish such journals returns and information to and perform such services as the Postmaster-General his officers or agents may require.

(3.) Every such master or commander or officer duly authorised by him having charge of mails shall himself immediately on the arrival of the mail-ship at any port or place deliver all mails for such port or place into the hands of the Postmaster of such port or place or of such other person at such port or place as the Postmaster-General shall authorise to receive the same and shall in like manner receive all the return or other mails to be forwarded in due course.

15. The Company shall undertake and make all necessary and proper arrangements in connection with any statutory regulations of the Local Government Board relative to public health or in connection with quarantine which may be required in respect of the mail-ships and no deductions shall be made from the subsidy payable under this Agreement nor shall the Company be otherwise liable for or by reason of any delay in the landing embarkation delivery or conveyance of any mails arising from the observance of any such regulations or the imposition of quarantine. Company to undertake sanitary and quarantine arrangements.

16.—(1.) Nothing in this Agreement shall exempt the Company or any mail-ship from the operation of any Act of Parliament Order in Council by-law or other provisions of the law in relation to explosives. Explosives.

(2.) The Company shall not convey in any mail-ship any article which in the opinion of the Postmaster-General is likely to endanger the mails.

17. The Company shall be responsible for the loss or damage of any parcel or of any registered postal packet of any kind conveyed or tendered for conveyance under this Agreement (unless such loss or damage be caused or occasioned by act of God the Queen's enemies pirates restraints of princes rulers or people jettison barratry fire collision or perils or accidents of the seas rivers and steam navigation) and in the event of any such loss or damage (except as aforesaid) the Company shall be liable to pay to the Postmaster-General in respect of each parcel or registered postal packet so lost or damaged (subject to the proviso hereinafter contained) such sum of money as shall be equal to the amount which may have been awarded and paid by the Postmaster-General at his sole option and discretion (and although not under any legal obligation) to the sender or addressee of such parcel or registered postal packet as compensation for the loss or damage thereof Provided that such sum shall not in any case exceed one pound per parcel or two pounds per registered postal packet. Company to be responsible for loss or damage of parcels or registered postal packets.

Company not to convey mails except pursuant to Agreement.

18. The Company shall not nor shall any master or commander of any mail-ship receive or permit to be received on board any mail-ship for conveyance thereby any letters other than those which they are required or expressly permitted to carry under this Agreement and any such letters as are not required by law to pass through the Post Office nor shall the Company or any such master or commander receive or permit to be received on board any mail-ship for conveyance thereby any mails on behalf of any colony or foreign country without the consent of the Postmaster-General and the entire postage of all mail conveyed by any mail-ship under this Agreement shall in all cases (as between the Postmaster-General and the Company) belong to the Postmaster-General and shall be absolutely free from all claims or demands whatever of or by the Company under or by virtue of this Agreement or otherwise.

MODIFICATION OF SERVICES.

Power to alter times of departure and arrival.

19. If at any time or times the Postmaster-General shall for any reason whatever desire to alter the particular days times or hours appointed for the departure from and arrival at Naples and Adelaide respectively of the mail-ships he shall give to the Company three calendar months' notice in writing of such desire.

Power to Postmaster-General to substitute Cape route for route via Suez Canal.

20.—(1.) If at any time or times the Postmaster-General shall deem it necessary or expedient in the public interest that the mails shall be conveyed between the United Kingdom and Adelaide Melbourne or Sydney by way of the Cape of Good Hope or Cape Horn instead of by way of the Suez Canal the Company as soon as reasonably practicable after receiving notice from the Postmaster-General to that effect shall in lieu of the services hereinbefore contracted to be performed convey the mails by means of the mail-ships by way of the Cape of Good Hope or Cape Horn (at the discretion of the Company) between Plymouth or such other convenient port or place in the United Kingdom as may be agreed upon between the Company and the Postmaster-General and Adelaide Melbourne or Sydney calling at Albany (or Fremantle).

(2.) In such case the mails shall be conveyed between the United Kingdom and Adelaide Melbourne or Sydney at such rates of speed (and on such other conditions) as may be agreed between the Postmaster-General and the Company or in default of agreement may be determined by arbitration.

(3.) Subject to the provisions of this clause all the provisions of this Agreement with reference to the services to be performed by the Company shall (so far as the same are applicable) apply to the embarking conveying landing and delivery of the mails under the provisions of this Clause.

(4.) The Postmaster-General shall not in respect of the substituted service in this Clause mentioned make any additional payment to the Company unless by reason of the performance of such substituted service and on no other account the Company shall sustain a loss of general revenue or incur expenses exceeding the expenses ordinarily incurred in the conveyance of the mails to and from Naples under the provisions of this Agreement.

(5.) Should any such loss or additional expenses as last aforesaid be sustained or incurred by the Company the Postmaster-General shall pay to the Company in addition to the subsidy hereinafter mentioned such sum of money as may be agreed upon between him and them or failing such agreement as shall be determined by arbitration and upon such arbitration due regard shall be had to the respective interests of the Company and the Postmaster-General in the performance of the voyage or voyages of any mail-ship by which the mails shall have been conveyed under the provisions of this Clause.

Power to Postmaster-General to substitute another Continental port or a port in United Kingdom for Naples.

21.—(1.) If at any time the Postmaster-General shall deem it necessary or expedient in the public interest to substitute for Naples as the port or place for the commencement and termination of the respective outward and homeward services under this Agreement another port on the Continent of Europe or in the United Kingdom the Company shall on receiving reasonable notice from the Postmaster-General to that effect convey the mails to and from such other port or place in substitution for Naples and this Agreement shall in respect of the services to be rendered by the Company be read and construed as if the name of such other port or place on the Continent of Europe or in the United Kingdom appeared throughout the same in lieu of the word Naples.

(2.) In the event of such substitution as hereinbefore mentioned the period of transit between Naples and Adelaide shall be liable to be increased or diminished to such an extent as shall be agreed upon between the Postmaster-General and the Company or failing agreement as shall be determined by arbitration and the subsidy payable hereunder shall be liable to be increased or diminished in such manner as (having regard to all the circumstances of the case and particularly to any expense or loss incurred or to any risk run by or any advantage accruing to the Company in consequence of such substitution) shall be agreed upon between the Postmaster-General and the Company or failing agreement shall be determined by arbitration.

Mode of exercise of powers under the two last preceding Clauses.

22. The powers conferred upon the Postmaster-General by the two last preceding Clauses may be exercised in relation to a temporary or a permanent change of route or of port (as the case may be) and in the case of a temporary change may be exercised as often as the Postmaster-General deems it expedient and the Postmaster-General may in his notice requiring the change specify the period during which such change shall take effect or require such change to be made until further notice and at the expiration of the time limited by the Postmaster-General or upon receiving reasonable notice from the Postmaster-General to that effect (as the case may be) the Company shall revert to the original route or port (as the case may be).

Power to Company to substitute Brindisi for Naples.

23. The Company may at any time on giving three calendar months' previous notice in writing of their desire so to do substitute Brindisi for Naples as the port or place for the commencement and determination of the outward and homeward voyages of the mail-ships and from and after the expiration of such notice the Port of Brindisi shall for all the purposes of this Agreement be substituted for the Port of Naples and the several provisions of this Agreement shall be read and construed as if the word "Brindisi" appeared throughout the same in lieu of the word "Naples."

SUBSIDY AND DEDUCTIONS.

Subsidy.

24. In consideration of the covenants and agreements herein contained and on the part of the Company to be observed and performed and of the due and faithful performance by the Company of all the services under this Agreement there shall be payable to the Company during the continuance of this Agreement (out of such aids or supplies as may from time to time be appropriated by Parliament for that purpose) a yearly subsidy or sum after the rate of £85,000 per annum or (in the event of any such default or failure as hereinafter mentioned) so much of the said subsidy or sum as shall remain payable in respect of any year after making such deductions therefrom (if any) as hereinafter in that behalf mentioned in respect of any such default or failure.

Payments or deductions.

25. There shall be forfeited and paid by the Company to the Postmaster-General the following sums in the following events (that is to say):—

(1.) If the Company shall fail to commence the performance of the services hereby agreed to be performed on the 1st day of February 1898 or on such subsequent day as the Postmaster-General may appoint the Company shall forfeit and pay the sum of £100 for every complete period of 24 hours which shall elapse before the Company shall commence the performance of such services.

Provided that the amount which shall become payable by the Company in respect of such default as aforesaid shall not in the aggregate exceed the sum of £20,000.

(2.) On each occasion when after the Company have commenced the performance of the services hereby agreed to be performed the Company shall fail to provide a mail-ship at Naples or Adelaide ready to put to sea in accordance with this Agreement at the appointed time or any mail-ship provided by the Company as aforesaid shall not in fact put to sea and proceed on her voyage at the appointed time the Company shall forfeit and pay the sum of £250 and also the further sum of £50 for every successive 24 hours which shall elapse until such mail-ship shall actually put to sea and proceed on her voyage in pursuance of this Agreement.

Provided that the aggregate amount of the sums payable as last aforesaid shall not exceed by more than £1,000 that part of the said subsidy for the current year which shall be applicable to the voyage in respect of which default shall have been made and provided further that the provisions of this sub-clause shall not apply to such services as may be required under Clause 20.

(3.) On each occasion when the mails shall not be conveyed from Naples to Adelaide or from Adelaide to Naples within the period of transit hereinbefore specified the Company shall forfeit and pay a sum of £100 for every complete 24 hours by which the time actually occupied in the conveyance of such mails from Naples to Adelaide or from Adelaide to Naples (as the case may be) shall have exceeded the period of transit hereinbefore prescribed in that behalf

Provided

Provided that—

- (a) the aggregate amount of the sums payable in respect of any such default or failure as in this sub-clause mentioned shall not exceed that part of the said subsidy for the current year which shall be applicable to the voyage which has been performed or which ought to have been performed in the conveyance of such mails; and
- (b) no such payment as in this sub-clause mentioned shall be made if the Company shall prove to the satisfaction of the Postmaster-General that such default arose wholly or in part from any cause or causes altogether beyond the control of the Company.

(4.) Each and all of the said several sums of money hereinbefore stipulated to be paid by the Company to the Postmaster-General in the event of failure or default of the Company as aforesaid shall be due and payable as stipulated ascertained or liquidated damages and not by way of penalty and (except as aforesaid) from whatever cause or causes such failure or default shall have arisen and although such failure or default may have arisen wholly or in part from any cause or causes beyond the control of the Company and although no loss shall be or may have been sustained by reason or in consequence of such failure or default and every such sum shall at the option and discretion of the Postmaster-General be either deducted by him from any moneys then payable or thereafter to become payable to the Company under this Agreement or be recovered as a debt to Her Majesty with full costs of suit.

(5.) The payment of or liability to pay any sum hereinbefore mentioned shall in no way prejudice the right of the Postmaster-General to treat as a breach of this Agreement the failure in respect of which such sum shall become payable by the Company as aforesaid.

26. All accounts between the Postmaster-General and the Company in relation to the said subsidy and any deductions therefrom as hereinbefore provided shall be made out and settled quarterly up to and on or as soon as conveniently may be after the 31st day of March the 30th day of June the 30th day of September and the 31st day of December in each year and the amount or balance (if any) which shall be due to the Company on each such quarterly account shall be paid by the Postmaster-General at the General Post Office London out of such aids or supplies as aforesaid upon the settlement of each such account and for the purposes of such accounts the said subsidy shall be deemed to accrue from day to day subject to the liability of the same to the several deductions aforesaid and all such payments shall be received by the Company in full satisfaction and discharge of all claims and demands by them for or on account of the services hereby contracted to be performed and for or on account of all and every other the covenants and agreements herein contained and on the part of the Company to be kept observed and performed or any damages losses or expenses which may be sustained by the Company in respect thereof. Accounts.

TERM OF AGREEMENT AND INCIDENTAL PROVISIONS.

27. This Agreement shall come into operation on the 1st day of February 1898 and shall continue in force until the 31st day of January 1905 inclusive and shall then determine if notice in writing to that effect shall have been given twenty-four calendar months previously to the said last-mentioned date either to the Company by the Postmaster-General or to the Postmaster-General by the Company and if not so determined this Agreement shall continue in force after such last-mentioned date until the expiration of a notice of a like duration given by either party at any time. Commencement and duration of Agreement.

28.—(1.) If on the determination of this Agreement any mail-ship shall or ought to have started or shall start on any voyage with the mails on board in conformity with this Agreement such voyage shall be continued and performed and the mails be delivered and embarked during and at the completion of the same and all the provisions of this Agreement be observed as if this Agreement had remained in force with regard to such mail-ship and services and with respect to such mail-ship and services this Agreement shall be considered as having terminated when such mail-ship shall have reached her port or place of destination and such services shall have been performed. Voyages commenced when Agreement determined to be completed

(2.) In respect of any such voyage as in this clause mentioned the Company shall not be entitled to receive any payment or compensation for the same over and above the subsidy payable under this Agreement on the day when this Agreement (otherwise than as to any such voyage) determines.

SUPPLEMENTAL PROVISIONS.

29. It shall be lawful for the Postmaster-General at any time and from time to time to delegate any of the powers vested in him by virtue of these presents to such person or persons as he shall think fit. Postmaster-General may delegate his powers.

30. The Company shall not assign underlet or dispose of this Agreement or any part thereof without the consent of the Postmaster-General signified by an instrument in writing. Company not to assign Agreement.

31. In case this Agreement or any part thereof is assigned underlet or otherwise disposed of and in case of any great or habitual breach on the part of the Company their officers agents or servants of this Agreement or of any covenant matter or thing herein contained it shall be lawful for the Postmaster-General if he shall think fit and notwithstanding there may or may not have been any former breach of this Agreement by an instrument in writing to determine this Agreement without any previous notice to the Company and the Company shall not be entitled to any compensation in respect of such determination and such determination shall not deprive the Postmaster-General of any right or remedy to which he would otherwise be entitled by reason of such breach or of any prior breach of this Agreement. Provided always that in case within seven days after service as aforesaid on the Company of a notice determining this Agreement the Company give a notice in writing to the Postmaster-General that they dispute the sufficiency of such breach to justify the Postmaster-General in determining this Agreement such dispute shall be referred to arbitration and in such case this Agreement shall notwithstanding such notice of determination continue in force unless and until an award shall be made to the effect that such breach or breaches was or were sufficient to justify the Postmaster-General in giving such notice of determination as aforesaid. Power to Postmaster-General to determine Agreement summarily on breach.

32. The Postmaster-General will use his good offices with the Governments of the several Australian Colonies with a view to secure that the Company shall not be compelled to pay in respect of any mail-ship calling at any port or place in any of the said Colonies any port or light dues or other charges of a public nature other than or in excess of the dues or charges for the time being payable at the like port or place in respect of any other vessel of a like character whether employed in the conveyance of mails or not. Postmaster-General to use his good offices with the Australian Colonies in respect to port dues.

33.—(1.) Any notice to terminate this Agreement if given by the Postmaster-General shall be served by being left at or forwarded by post to the Company at their registered office and any such notice if given by the Company and any other notice given by the Company shall be served by being sent by post to the Secretary of the Post Office at the General Post Office London. Notices.

(2.) All notices or directions (other than any notice to terminate this Agreement) which the Postmaster-General his officers or agents are hereby authorised to give to the Company their officers servants or agents may at the option of the Postmaster-General his officers or agents either be delivered or sent by post to the master of any mail-ship or to any other officer or agent of the Company in the charge or management of any mail-ship or be left for or forwarded by post to the Company at any office or place of business of the Company and any notices or directions so given left or sent by post shall be binding on the Company.

34. In pursuance of the provisions contained in an Act of Parliament passed in the 22nd year of the reign of King George the Third intitled "An Act for restraining any person concerned in any contract commission or agreement made for the Public Service from being elected or sitting and voting as a Member of the House of Commons" no Member of the House of Commons shall be admitted to any share or part of this Agreement or to any benefit to arise therefrom contrary to the true intent and meaning of the said Act. No Member of Parliament to benefit by Agreement.

35. This Agreement shall not be binding until it has been approved by a Resolution of the House of Commons. Agreement subject to approval of House of Commons.

BOND.

BOND.

Bond.

36. And lastly for the due and faithful performance of all and singular the covenants conditions provisoes clauses articles and agreements hereinbefore contained which on the part and behalf of the Company are or ought to be observed performed fulfilled and kept the Company do hereby bind themselves and their successors and the said Law Guarantee and Trust Society (Limited) do hereby bind themselves and their successors jointly and severally unto our Sovereign Lady the Queen in the sum of £20,000 of lawful money of the United Kingdom to be paid to our said Lady the Queen Her heirs and successors by way of stipulated or ascertained damages hereby agreed upon between the Postmaster-General and the Company in case of the failure on the part of the Company in the due execution of this Agreement or any part thereof.

In witness whereof the Postmaster-General hath hereunto set his hand and seal and the Company and the Law Guarantee and Trust Society (Limited) have hereunto affixed their respective common seals the day and year first before written.

AUSTRALIAN MAIL SERVICE.

(FURTHER PAPERS RESPECTING THE RENEWAL OF CONTRACTS FOR THE.)

Printed under No. 2 Report from Printing Committee, 6 May, 1897.

The Agent-General of New South Wales to The Honorable the Premier and
Colonial Treasurer, Sydney.

Sir,

5 February, 1897.

I have the honor to enclose herein, for your information, a copy of a letter which I have received from the Colonial Office, transmitting a copy of a letter from the Lords Commissioners of the Treasury, reporting the acceptance of tenders for the Australian Mail Service.

You will observe that it is stated that Mr. Secretary Chamberlain has communicated this information by telegraph to the Governors of the Australian Colonies.

I have, &c.,

SAUL SAMUEL.

[Enclosures.]

Sir,

Downing-street, 2 February, 1897.

I am directed by Mr. Secretary Chamberlain to transmit to you, for your information, a copy of a letter from the Lords Commissioners of the Treasury, reporting the acceptance of tenders for the Australian Mail Service.

2. Mr. Chamberlain has communicated this information by telegraph to the Governors of the Australian Colonies.

I am, &c.

JOHN BRAMSTON.

The Agent-General for New South Wales.

Sir,

Treasury Chambers, 28 January, 1897.

I am directed by the Lords Commissioners of Her Majesty's Treasury to acquaint you, for the information of the Secretary of State, in continuation of previous correspondence, on the subject of the Eastern and Australian Mail Service, that the Postmaster-General has now accepted tender No. 2 of the Peninsular and Oriental Steam Navigation Company for a seven years' contract by the Brindisi route, and also the tender of the Orient Company for the same period, the European port of departure in their case being Naples.

The total subsidy under the Peninsular and Oriental contract will be £330,000 per annum, and under the Orient Company's contract £85,000 per annum.

The Postmaster-General will have the right, without additional payment, to send mails by all the Peninsular and Oriental Company's services during the term of the contract, whether such services are specifically referred to or not.

The Indian Post Office will have the right to commence the sorting work between Port Said and Aden, if the development of the service should require it; but the number of additional men to be carried gratuitously is limited to five sorters and five packers.

The Directors of the Company undertake to employ more than one steam-launch when necessary both at Aden and Bombay.

They will interpret as favourably as possible to the wishes of the Colonies the qualification which they have felt obliged to introduce into the condition relating to the substitution of Freemantle for Albany as the port of call in Western Australia, and to the entrance of Princess Royal Harbour so long as the steamers call at Albany.

The Orient Company will also be ready to enter the inner harbour whenever practicable, and to substitute Freemantle for Albany as the port of call as soon as they can be satisfied that Freemantle Harbour is safe.

This Company has further agreed to reduce the time of transit between Naples and Adelaide to 696 hours, and will endeavour in practice to give an earlier arrival at Adelaide and Naples than is prescribed by the contract.

The dates of departure from Bombay and Adelaide are not yet arranged; but will form the subject of further negotiation between the Postmaster-General and the two Companies.

I am, &c.,

E. W. HAMILTON.

The Under Secretary of State, Colonial Office.

1897.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

DEPARTMENT OF LANDS.

(SEVENTEENTH ANNUAL REPORT.)

Printed under No. 17 Report from Printing Committee, 26 August, 1897.

To The Hon. J. H. Carruthers, Esq., M.P., Secretary for Lands.

Sir, Department of Lands, Sydney, 2 August, 1897.

I have the honor to submit for your information the seventeenth Annual Report of the business of the Department for the year 1896.

In the report for last year an explanation was made of the salient provisions of the Crown Lands Act of 1895, but the opportunity had not presented itself of referring very fully to transactions under it, inasmuch as the Act had only been in operation a few months. As, however, the present report deals with a period twelve months later it is possible to speak somewhat definitely as to the operations of the measure; and it is, perhaps, sufficient to say that its various provisions have met with the fullest appreciation from the several classes of persons whose interests and requirements were kept constantly in view during its framing.

The several transactions are shown elsewhere in chapters specially devoted to them, and are illustrated by schedules containing full details, but it is convenient to refer here to such of the matters as suggest themselves as being of special interest.

From the time the Act of 1895 passed until the close of 1896 2,692 homestead selections were advertised, containing an aggregate area of 614,798 acres, and of these 1,338 blocks, containing 409,176 acres, were applied for. During the same period 653 settlement leases, representing an area of 2,243,012 acres, were thrown open, and of these 337 were applied for, containing an area of 960,511 acres. The demand for land under these tenures was most spirited, as the following illustration will show:—

For 43 blocks, Land District of Corowa,	20,338 applications were made.
60 " " Urana,	11,584 " "
85 " " Wagga Wagga,	5,181 " "
8 " " Walgett,	1,892 " "
20 " " Warren,	1,388 " "
36 " " Deniliquin,	1,262 " "
25 " " Narrabri,	1,095 " "
54 " " Moree,	916 " "

And in the following Land Districts practically every block thrown open was taken up:—Albury, Balranald, Barmedman, Bombala, Brewarrina, Condobolin, Coonamble, Cootamundra, Corowa, Deniliquin, Forbes, Glen Innes, Grenfell, Moree, Mudgee, Narrandera, Urana, Wagga Wagga, and Walgett.

Conditional purchases and conditional leases show a conspicuous decline, a fact no doubt traceable in a large measure to the new condition of residence to which additional conditional purchasers are now subject, the Act of 1895 having enjoined that where the original conditional purchase had been transferred, the transferee may add to his holding only on condition that he resides on the land for a specified term.

A special feature in connection with conditional purchases was the reappraisal of such as had been selected within special areas, at a price of, and over, 30s. per acre. A large number of applications for reappraisal were made, with the result that, as in the valuation, the present depreciated value of the land was taken into account, and not the original value only, the prices were considerably reduced. The same result followed the reappraisal of the Western Division pastoral and homestead leases and occupation licenses.

The improvement lease is one of the new tenures introduced by the Act of 1895, and 166 leases of this character were disposed of, containing nearly 2,000,000 acres. In connection with these should be mentioned the proposals which the Minister submitted to Parliament to allow holders of expiring pastoral leases in the West Bogan country to convert their leases into scrub leases, thus insuring the Crown estate against a most serious deterioration, while at the same time affording the pastoral occupants an opportunity of recovering from the disadvantageous position in which they had come to find themselves.

In pursuance of the Minister's policy endeavours have been (and are being) made to make land available for settlement, in furtherance of which the Act of 1895 gives very necessary powers of withdrawing land from pastoral lease. The area actually withdrawn in 1896, taken with the area in connection with which a preliminary notice of intention to withdraw was issued during that year, amounted to about 300,000 acres. Associated with these—having regard to the object of having available for settlement continuous, as opposed to isolated, blocks of country—are the exchanges which the Crown makes of its lands for the lands held by private persons in fee-simple or under conditional purchase. Such exchanges have been found to be mutually very beneficial, inasmuch as both the Crown and the landowners are enabled to collect into large blocks scattered portions, which individually may be too small or too inconveniently situated to be of advantage either to the *bonâ fide* settler or to the landowners themselves.

With regard to Legislation, two Acts of large importance were passed during 1896—the Crown Lands (Homestead Selections and Settlement Leases) Act, 59 Victoria No. 26, and the Conditional Purchasers Relief Act, 60 Victoria No. 2.

The former gave an applicant for a homestead selection or settlement lease the privilege of entering into occupation of the land applied for during the interval between the date of application and its confirmation by the Local Land Board, after which latter date the title would, of course, in any circumstances be assured.

The object of the Conditional Purchasers Relief Act is explained by its title. Under this Act conditional purchasers, all of whom started with an obligation to pay off their balance of purchase money and interest by annual instalments of 1s. per acre, may obtain a reduction to 9d. or to 6d. per acre, according as the state of the account may admit of a reduction to an annual amount which would liquidate the debt within at least sixty-six years from the date the first instalment was due. These concessions are, however, limited (except in very special cases) to holders actually in residence on their lands, it being beyond the scope of the Act to render financial assistance to large proprietors.

The same Act, by a few words, cured an anomaly which had been existing since 1885 in connection with conditional purchases made under the Act of 1875, or made earlier and brought under its provisions. Under that Act, although the instalment payable was 1s. per acre, interest was charged at the rate of 5 per cent., while in connection with conditional purchases made since 1885 the Crown Lands Act of 1884 required interest at only 4 per cent. The latter Act provided that holders of the earlier conditional purchases might bring them under the provisions of the Act of 1884, but, except in a proportion of cases, this was not done, it being evident that the larger and poorer class of selectors were not aware what the law offered them, as it is inconceivable how a reduction from 5 to 4 per cent. was not sought when it could be had for the mere asking.

The

The Conditional Purchasers Relief Act also liberalised the provisions under which conditional purchases might be converted into homestead selections, making it possible for conversion to take place notwithstanding that payments due to the Crown in connection with the conditional purchase were in arrear, and provided, further, that any money paid as principal on the conditional purchase should form a fund out of which the homestead selection rent would be taken until the fund was exhausted.

It may be mentioned that the administration of the Acts relating to the Church and School land was transferred to this Department from the Department of Public Instruction, and that the Land Board District of Cooma was amalgamated with that of Goulburn, with the latter town as the centre. The Land District of Milton, formerly included in the Board District of Cooma, was at the same time transferred to the Metropolitan Board District.

Judicial Decisions.

During the year the Supreme Court decided several matters affecting the administration of the Crown Lands Acts; an abridged report of the various decisions is given hereunder:—

The Land Appeal Court has no power under the Rabbit Act of 1890 at the request of a party to state a special case for the opinion of the Supreme Court.

Hill, Clark, & Co. (Dalgety & Co., respondents).—In this case the point was whether, in a case arising under the Rabbit Act of 1890, and coming before the Land Appeal Court on appeal, that Court had the same power under that Act as it had under the Crown Lands Acts to refer, at the request of one of the parties to the case, a question of law for the decision of the Supreme Court. It was contended that the Court had not jurisdiction, even if it had the power to state a case on its own motion, and this view was upheld by the Supreme Court. (N.S.W.L.R., XVII, 282.)

Procedure prior to notification of forfeiture of a conditional purchase.

Attorney-General v. Walters.—This case is important from a Departmental point of view, the main question being whether the proper steps had been taken preliminary to the declaration of forfeiture of a certain conditional purchase; but as the Crown has taken steps to appeal to the Privy Council from the decision of the Supreme Court any further reference to the case will be postponed until the Privy Council has delivered judgment. (N.S.W.L.R., XVII, p. 105.)

Assessment of value of land applied for under Section 63, Crown Lands Act of 1884.

Henry Deane and the Crown Lands Acts.—In this case Henry Deane applied under section 63 of the Crown Lands Act of 1884 to have a reservation of 100 feet from high-water mark within his property rescinded, and to be allowed to purchase the land. The section referred to speaks of the "fair value" of the land. The Metropolitan Land Board assessed this value at £400, but the Minister for Lands, thinking it too low, referred the matter to the Land Appeal Court by whom it was referred back to the Land Board. At the re-hearing the Land Board found the fair value to be £900. Against this decision Deane appealed to the Land Appeal Court, but that Court upheld the Board's decision. Thereupon, Deane appealed to the Supreme Court, the question submitted to that Court being whether the Land Appeal Court was right in holding that in estimating the value of the land its value to the adjoining owner (by reason of such ownership) was a proper basis upon which to ascertain such fair value. The Court held that the assessment had been made on an erroneous basis and upheld the appeal. The Chief Justice said, "If the Land Appeal Court is right, it comes to this: that if a person has a block of land subject to a reservation of 100 feet, and if there are expensive improvements on his own land, and he asks to put the provisions of section 63 in force, the Crown can say to him 'If this 100 feet of land is fenced off and sold it will not fetch much; but inasmuch as you have access to it through your land, and it is of considerable value to you, you must pay the value it is to you'—that is to say, he has to pay the additional value which is given to the land by reason of its having an access through his own land, and he has to pay for the betterment which his own land gives to this land. It seems to me that you cannot get the fair value in that way. We lay down no
general

general rule, but one way the fair value could be ascertained would be by supposing that the land were fenced off, and then considering what would be the fair market value of the strip of land fenced off. But I do not mean to say that would be the only proper way, nor am I to be taken as laying down any general rule." (N.S.W. L.R., Vol. XVII, p. 287.)

Land reserved from sale and lease under section 101, Crown Lands Act of 1884, within a Leasehold Area, on revocation reverts to the Leasehold, and is not available for Conditional Purchase.

Millicent M. Harvey and Crown Lands Acts (Minister for Lands respondent).—This was an appeal against a decision of the Land Appeal Court in upholding the disallowance of the appellant's conditional purchase application. In November, 1889, two forfeited conditional purchases on the Eenaweona leasehold area were reserved from sale and lease of any kind pending legislation. This reservation was revoked in March, 1890, and in March, 1895, Millicent M. Harvey applied for a conditional purchase of one of the portions. The Land Board disallowed the application, holding that the land reverted to the leasehold area and was not available. The Land Appeal Court confirmed the decision of the Land Board, and applicant then appealed to the Supreme Court which held that sufficient reason, within the meaning of section 13, Crown Lands Act of 1889, had been shown for the disallowance of the application. (N.S.W.L.R., Vol. XVII, p. 264.)

The holder of the maximum area of land that may be Conditionally Purchased, acquired before the Crown Lands Act of 1895 came into force, is disqualified from making application for an Original Conditional Purchase.

W. H. Hunt and the Crown Lands Acts.—In August, 1895, W. H. Hunt, whilst holding a conditional purchase of 640 acres and a conditional lease of 1,920 acres, acquired before the Crown Lands Act of 1895 came into force, applied for an original conditional purchase of $441\frac{1}{4}$ acres. The Land Board disallowed this application, on the ground that at date of application Hunt owned a total area of 2,560 acres, and was, therefore, prohibited from making the original conditional purchase applied for. On appeal to the Land Court this decision was upheld. Hunt, thereupon, appealed to the Supreme Court, which tribunal decided that the holder of the maximum area of land that may be conditionally purchased is disqualified from making an original conditional purchase. (N.S.W.L.R., Vol. XVII, p. 271.)

Question whether land covered by an application to convert a pre-lease into a conditional lease under section 52, Crown Lands Act of 1884, reverted to a leasehold area on withdrawal of application to convert.

William Nott, Senior.—On the date the Crown Lands Act of 1884 came into operation, W. Nott held a pre-emptive lease of 1,920 acres on what became, on the 11th July, 1885, the leasehold area of Youie pastoral holding, and within ninety days after the commencement of the said Act he applied, under section 52 thereof, to convert this pre-emptive lease into a conditional lease. The Local Land Board, when dealing with the application (in November, 1885, *i.e.*, after the leasehold area came into existence) recommended a modification in the form of the lease, which Nott refused to accept, and his application was subsequently withdrawn. In the year 1890, Nott applied for a conditional purchase and conditional lease on the resumed area of Youie pastoral holding, and his applications were, in due course, confirmed. In 1894, he converted part of the conditional lease into an additional conditional purchase, and, by virtue of this new conditional purchase, applied for a conditional lease of part of the land formerly held by him as pre-emptive lease, and within the leasehold area of Youie pastoral holding. The Local Land Board disallowed this application for a conditional lease, on the ground that the land applied for was not available, forming, as it did part of a leasehold area. Nott, having unsuccessfully appealed to the Land Appeal Court, took his case to the Supreme Court, contending that the land applied for forming part of a pre-emptive lease which he had applied for under section 52, Crown Lands Act, 1884, and did not form part of the leasehold area, as the division of the holding was not notified till the 11th July, 1885, at which date Nott's application under section 52 of the Act of 1884 was pending. The Court held that the land referred to did form part of the leasehold area, and, consequently, was not available for conditional lease. (N.S.W.L.R., Vol. XVII, p. 255.)

Decision of the Land Appeal Court on a technical point does not estop the Minister from intervening as a party to the case.

James Nott.—In this case James Nott applied for a conditional purchase and conditional lease of land within a leasehold area, and when the cases came before the Local Land Board Messrs. Kilgour and Ralfe, the pastoral lessees, applied to be heard in opposition. This request was refused on the ground that they had not lodged a caveat. Subsequently Nott's applications were confirmed by the Land Board, and Messrs. Kilgour and Ralfe appealed to the Land Appeal Court against the confirmation. On this appeal the Minister was represented. The Land Appeal Court held that Messrs. Kilgour and Ralfe had no *locus standi* and dismissed their appeal. Subsequently the Minister, under the provisions of section 59 of the Crown Lands Act of 1895, referred the case to the Land Appeal Court. That Court, however, upheld an objection by Nott that the Minister was estopped from again litigating what had already been adjudicated upon. The Minister thereupon brought the matter before the Supreme Court, which held that as the Land Court had merely dealt with a technical objection the matter was not *res judicata*. (N.S.W.L.R., Vol. XVII, p. 276.)

The holder of a maximum area of conditionally purchased and conditionally leased land is not debarred in all cases from holding a settlement lease.

Robert Maguire and the Crown Lands Acts.—This was a special case stated by the Land Appeal Court, the question for decision being whether R. Maguire, the holder of 2,560 acres under conditional purchase and conditional lease, could hold in addition a settlement lease of 4,317 acres, which he had applied for on the 19th December, 1895. The reference involved an interpretation of the disqualification provisions of section 41 as viewed in connection with subsection 1 of section 24 of the Crown Lands Act of 1895.

The matter was referred by the Coonamble Land Board to the Land Appeal Court, which decided that the maximum area permitted by law to be applied for as a settlement lease for grazing was the maximum area prescribed for settlement for grazing by section 24, subsection 1, of the Crown Lands Act of 1895, and not the area proposed in the particular farm applied for; also that he was not disqualified by section 41 of the Act of 1895 from making the application. The question for the decision of the Supreme Court was—was the Land Appeal Court right in deciding that the maximum area permitted by law to be applied for as a settlement lease for grazing was the maximum area prescribed for settlement lease for grazing by section 24, subsection 1, of the Crown Lands Act of 1895, and not the area of the particular farm applied for? The Court held that Maguire was not disqualified from applying for the settlement lease in question, and that he was entitled to hold this land in addition to the area already held by him.

Land formerly within a reserve from sale is not available for conditional purchase until after the expiration of sixty days from the date of revocation.

William Bolton and the Crown Lands Acts.—This was also a special case stated by the Land Appeal Court for the consideration of the Supreme Court. William Bolton applied on the 17th October, 1895, for a conditional purchase of 277 acres. Of this area 217 acres were comprised within a reserve from sale which had been notified on the 22nd December, 1865, and revoked on the 14th December, 1895. The Local Land Board disallowed the application in respect of the 217 acres on the ground that, as the application was made before the expiration of sixty days from the date of the revocation of the reserve the land was not available for conditional purchase. Against this decision Bolton appealed to the Land Appeal Court, which sustained the appeal. The case was then stated for the Supreme Court and it was decided that the application was invalid.

Where an inferior Court of Record, after entering upon an inquiry, merely rejects evidence improperly, a mandamus will not lie to compel it to receive the evidence.

Ex parte the Minister for Lands, the Rosehill Racecourse Company (Limited).—On the 3rd January, 1890, a special lease, under Section 90 of the Crown Lands Act of 1884, was, by notice in the *Gazette*, granted to G. B. Rowley of land at Kensington (now known as the Kensington Racecourse), the object of the lease being described in the *Gazette* as "recreation." In August, 1894, the lease was transferred to the Rosehill Racecourse Company. Representations having
been

been made that the land was being used for pony racing, and not for recreation in the wider sense of the term, the Minister referred the case to the Land Board to inquire whether the land was being put to the purposes for which the lease had been granted. The finding of the Land Board was that, in their opinion, the conditions of the lease had been fulfilled, and that the purposes for which it was used were strictly within the term "recreation." The Minister then referred the Land Board's decision to the Land Appeal Court, by whom the case was returned to the Land Board to take further evidence, but subsequently the Land Appeal Court, on the case coming before it again, decided to take the evidence itself. At the time of making a formal application for the lease, and prior to the lease being granted, Rowley had written to the Under Secretary for Lands letters, in which he urged the granting of the lease, stating that "he was prepared to spend some thousands of pounds in turning a desert into a park to form a cricket, archery, and bowling grounds, pleasure gardens, and places of amusement for the people, and in every way give the residents of the surrounding locality a beautiful pleasure ground, second to none in Sydney"; that his proposal was "to level and clear the land, planting and beautifying same, also to form cricket, archery, football, and lawn tennis grounds, tea gardens, pavilions, &c."

When the case was before the Appeal Court the Crown endeavoured to have these letters put in as evidence to show what the agreement was between Rowley and the Crown, but the Court ruled that the documents were inadmissible. The Minister then obtained a *rule nisi* calling upon the Land Appeal Court to show cause why a mandamus should not issue to compel that Court to admit the documents in evidence; but the Supreme Court discharged the rule, their decision being that a mandamus does not lie to compel an inferior Court of Record to receive evidence which that Court may (even improperly) have rejected, the rejection of evidence in the case in question not being a refusal to exercise jurisdiction.

Information Bureau.

This branch, the inauguration of which was mentioned in the Report for 1895, still continues to afford good evidence of its usefulness.

It has now developed into a recognised distributing centre from which Crown Lands offices and District Survey offices, in addition to the general public, are supplied with lithographs, pamphlets, and all other information relating to Crown lands that are made available for selection under the various forms of tenure created by the Crown Lands Acts.

Leaflets have been prepared and printed during the year giving in a concise form the salient characteristics of the three main systems of alienation, namely, conditional purchases, homestead selection, and settlement lease. These have been found to be of great assistance and the requests for copies, (which are issued free of charge) have been very numerous.

The institution of the *Lands Department Weekly Gazette* has also proved both popular and useful. For Departmental purposes alone the advantages of possessing a *Gazette* which deals solely with notifications issued in connection with the Department are considerable, whilst the general public who subscribe to this issue, in preference to the ordinary *Gazette*, experience much the same advantages in avoiding matter in which they may not happen to be particularly interested.

Two editions of a pamphlet containing full descriptive particulars of the various lands that have been thrown open throughout the Colony for homestead selection and settlement lease were prepared and issued during the year. A good demand exists for these publications and it is intended to continue the publication of two editions each year.

The preparation of monthly sheets and pamphlets has also been continued. These publications which are descriptive of areas that have been notified in the *Gazette* during each month as about to be thrown open in the near future, are exhibited at all the more prominent railway stations, Land Agent's offices, post offices, District Survey offices, and afford a good medium for keeping the general public well acquainted with the latest movements in connection with Crown lands.

Advertisements

Advertisements have also been prepared every week for the Press in connection with lands intended to be set apart for homestead selection and settlement lease, and paragraphs have also been furnished giving such particulars as would prove interesting to the general public of the applications received each Lands Office Day, and of the progress of land settlement. 1,976 letters were written during the year in answer to inquiries, and although no attempt is made to answer questions of a legal nature, every effort is used to advise people, both clearly and fully. Personal inquiries to the number of about 5,000 were made at the Bureau during the year.

Inquiry Branch.—This branch which was established in July, 1887, mainly to act as a medium through which the public might ascertain particulars as to the progress of matters in which they were interested, has now been incorporated with the Information Bureau. Solicitors, Banks, private land agents, and financial companies avail themselves largely of the advantages which this branch affords, more particularly in connection with searches against conditional purchases and leases. This information is required as a preliminary to the transfer of these purchases or leases so that the parties interested may be assured that no forfeiture is impending, or that no other defects exist which might in any way jeopardise the title. A small fee is charged for particulars of this kind, which produced last year a revenue of £326 12s. 3d., involving about 13,000 searches. In addition to these about 2,500 inquiries on general matters were lodged and duly replied to, and a large number of personal inquiries were answered verbally.

The Map Sales Branch. This branch has also been brought under the same management as the Information Bureau and the Inquiry Branch.

The work of the staff consists in receiving lithographs of the various maps published by the Department, such as those of counties, towns, parishes, &c., and in distributing the necessary supplies to Crown Land Agents, District Survey offices, and other Departments. During 1896, 44,739 lithographs were received into stock and 37,314 distributed. Another part of the work consists in the sale of maps to the public, and during the year 3,449 lithographs were sold producing a revenue of £265 6s. 6d.

Rabbit Branch.

The negotiations that had been entered into with the Queensland Government during the preceding year for the erection of an additional barrier fence, extending from Mungindi to the Namoi River, near Narrabri, upon the understanding that half the cost of the undertaking should be borne by the sister colony and the remaining half by the Government of New South Wales and the landowners who would be benefited by its erection, were brought to a satisfactory issue early in the year under review.

It had originally been intended that the fence should take a south-easterly course from Mungindi and terminate at the Namoi River, in the vicinity of Narrabri; but as it was found that a considerable portion of the projected line of route would traverse country liable to frequent inundations, it was subsequently decided to take advantage of higher ground that would be met by following a more westerly course, so that the fence now runs almost due south from Mungindi to the Namoi River.

Tenders were at once invited for the netting required, with the result that the offer of Messrs. Lysaght Brothers and Company (Limited) to supply 105 miles of galvanised wire-netting 42 inches wide, 1½ inch mesh, 16 gauge, at £30 10s. per mile was accepted. Deviations applied for by the owners of certain holdings during the progress of the work, had the effect of adding considerably to the length of the fence, necessitating the purchase of an additional 10 miles of netting.

With a view to accelerate the progress of erection, the line was divided into three sections. The first and second of which have already been completed, and the third should be finished during the first month of the ensuing year.

By the connection of this barrier fence with that which has been erected by the Queensland Government for a considerable distance along the northern boundary of this Colony, the encroachments of the pest on our neighbour's territory will receive a further check, while a large area of country in this Colony, east of the new line, will reap the benefit of the protection that it affords.

The

The total length of barrier fences erected by the Crown will, on the completion of this line, exceed 1,150 miles, while the aggregate length of wire-netting fencing that has been erected by the State and by private individuals amounts to no less than 16,760 miles.

The reports that have been received from time to time from the rabbit-infested area regarding the prevalence of the pest have been of a somewhat spasmodic character. Districts that at one part of the year have been described as only lightly infested have, at a subsequent period, been stated to be badly infested.

It must unfortunately be admitted that, in spite of all obstacles, the wave of rabbits still continues to flow towards the east, and country which formerly was regarded as likely to enjoy a permanent immunity from their depredations is beginning to show indications of these pests.

Phosphorised pollard during any season, and poisoned water during dry seasons, are apparently the most efficacious means of extermination; while the pit-trap, when placed at frequent intervals along lines of netting fences, has probably been the most effective appliance for capturing rabbits alive.

Although the offer of a reward for an effective scheme for the extermination of the rabbit pest has long since been withdrawn, no less than fifty-two schemes have been submitted during the past year. The prospect of the discovery of some method that will ensure finality in the work of rabbit extermination would still however appear to be as remote as ever.

Advantage has been taken in several instances during the year of the provisions of subsection (ii) of the 20th section of the Rabbit Act, to apply for contributions towards the cost of rabbit-proof fences that have been erected on boundaries common to public and private lands.

The requisite authority from the Minister, under the 41st section of the Act, to keep live rabbits in their possession was granted to the undermentioned persons, viz:—A. Symmons, at places in Sydney, not yet decided upon; Hon. Rupert Carrington, at Mornaling Station; Thompson, Manning, and Jeremy, at Quarantine Ground, Randwick; J. H. Patterson, at Gol Gol Station, Balranald; Charles Martin, at the University, Sydney; J. McGarvie Smith, at Denison-street, Woollahra; and Frank Tidswell, at Nugal Lodge, Randwick.

In response to representations made on behalf of the landowners interested, advantage has been taken of the provisions of the 31st section of the Act to proclaim the iguana* a natural enemy of the rabbit, and to prohibit the capture, killing, or disposal of that animal in the Land District of Boorowa.

Last year, in accordance with the desire of a majority of the landowners concerned, the simultaneous and continued destruction of rabbits was made compulsory over a limited area in the counties of Urana and Denison. This has not been without beneficial results, and a desire has been expressed that similar experiments may be made in other localities.

Steps, therefore, are now being taken to extend the operation of the compulsory clauses of the Act to a more extensive area, and the results will be watched with interest as being calculated to furnish data for arriving at a settlement of the question as to whether the principle of compulsory destruction should become the policy of the State.

With the exception of a small strip of country situated in the Land Districts of Condobolin and Hillston, no addition has been made to the area of the proclaimed rabbit-infested districts.

During the past year applications have been made for bringing other districts within the scope of the 12th section of the Act; but owing principally to these proposals not meeting with the support of the smaller class of settlers who might be called upon to contribute to the cost of making fences erected in such districts rabbit-proof, the approval of the Department has been withheld.

As the outcome of the Conference convened by the Minister in April last for the purpose of obtaining a specific expression of opinion regarding the best means to be adopted for the checking and suppression of the rabbit-pest, a Rabbit Bill was drafted, based upon the resolutions submitted by the Delegates as the result of their deliberations.

Animals

* The Lace Lizard (*Crotalus Toxicus*, Shaw).

Animals Infectious Diseases Act.

The provisions of the Animals Infectious Diseases Act of 1888 have been more extensively called into operation during the past year than in any similar period since the measure was introduced, no less than 15 licenses, to introduce and propagate microbes and inoculate animals therewith, under the 6th and 7th sections of the Act, having been issued, as against 7 only for 1895; and this is accounted for by the increased activity in the work of inoculating sheep against anthrax.

Labour Settlements.

Pitt Town.—The labour settlement at Pitt Town became defunct on the 17th of June last, on which date the dissolution of the Board of Control and the revocation of the settlement area and its conversion into a casual labour farm were notified in the *Government Gazette*.

A Select Committee, which was appointed to inquire into the causes of the abandonment of the Pitt Town settlement, has not yet completed its investigations; so that further comment on a question which, perhaps, may be regarded as being still *sub judice* would be inexpedient at the present time.

Wilberforce.—An announcement was recently made by the Chairman to the effect that the funds at the disposal of the Board are exhausted; but in the absence of any information respecting the settlement, it may, perhaps, be assumed that matters are generally progressing favourably, and that the settlers have reached that stage where further aid from the State is no longer essential.

It has been decided that the question of the issue of leases to the Boards of Control, and of sub-leases to the settlers, in accordance with the provisions of the "Labour Settlements Act," remain in abeyance "until such time as steps have been taken to amend the law, with the object of securing homestead titles at a fair rent to settlers of this description."

Bega.—The progress made by this settlement continues to be satisfactory, so far as can be gathered from the reports of the two local members of the Board and other communications; and if the general acceptance, without protest, of recent reductions in the weekly allowances for maintenance to little more than a nominal amount may be regarded as a criterion, the settlement should shortly be in a position to support itself.

The whole of the settlement area has been surrounded with a substantial post-and-wire fence, and wire netting attached thereto.

The community consists of twenty families, but their number will shortly be augmented by the enrolment of additional settlers with their families, for whose introduction provision has been made by the subdivision of that portion of the area which has so far been used for the agistment of stock.

The settlers have each been supplied with a sufficient number of fruit-trees to plant an acre of ground, and supplies of seed for their kitchen gardens have also been distributed, the planting and sowing of which have been carried out under the direction and supervision of experienced officers, whose services had been courteously placed at the disposal of the Board of Control by the Secretary for Mines and Agriculture; and it is not unreasonable to anticipate a successful issue to this experiment under the conditions that now obtain.

Expenditure.

The total expenditure for all services in 1896 amounts to £341,049 6s. 11d., made up as follows:—For services paid from Consolidated Revenue Votes, &c., £326,848 6s. 7d.; for services paid from Loan Votes, £13,873 11s. 4d.; and for the Church and School Lands Branch, transferred from the Public Instruction Department, £327 9s.

The total expenditure in 1895 was £320,308 7s. 9d.; so that the expenditure in 1896 shows an increase of £20,740 19s. 2d. Taking, however, the expenses of the Department, purely in connection with the administration of the Land Laws, the

total for 1895 was £300,086 12s. 8d., as against £298,524 0s. 4d. for 1896, showing a decrease of £1,562 12s. 4d. The large increase above referred to will be seen on reference to Schedule III to be occasioned mainly by an excess of expenditure in 1896 over 1895 in connection with the following, viz. :—Special services, £8,652 11s. 2d. ; and payments from Loan Votes, £13,323 11s. 4d. ; for the improvement of and the acquisition of sites for public cemeteries and public parks and recreation reserves, the increase of £10,306 3s. 11d. is accounted for by the fact that the financial year was altered in 1895, estimates having been voted for six months to the end of June, and thereafter from the 1st July to the 30th June following.

As to the Loan Expenditure, the statement (Schedule III) speaks for itself, scrub clearing, erection of buildings, and Hay irrigation works being responsible for the increased expenditure in this direction.

It will be seen that the decrease on account of salaries, exclusive of the Land Appeal Court and Church and School Lands Branch, was £14,302 10s. 3d., representing mainly the transfers, retirements, and reductions in the salaries of officers graded by the Public Service Board as from the 1st July, which amounted to £24,743 per annum. The decreased expenditure on account of salaries alone being £14,302 10s. 3d., and the decrease on all services, including salaries, in connection with the administration of the Land Laws being only £1,562 12s. 4d., shows that expenditure for contingencies has increased by £12,739 17s. 11d. The various items making up this sum will be seen on reference to the comparative statement. The largest increases are £5,882 5s. 8d. for appraisement and inspection fees ; £2,338 0s. 8d., for travelling expenses, including equipment and forage allowances ; and £2,095 0s. 7d., for fees for attendance at Local Land Courts. These, however, can be more than accounted for—firstly, by the employment of special experts to carry out the inspection and appraisement of pastoral and homestead leases, and resumed areas held under occupation licenses in the Western Division, made under the provisions of the Crown Lands Act of 1895, and for the appraisement of value of conditional purchases within special areas, in connection with applications under section 36 of that Act ; secondly, by the additional expenses in connection with the foregoing for fees to members of Local Land Boards, for their travelling expenses, and those of chairmen, deposition clerks, district surveyors, witnesses, and others ; and thirdly, by the payment of an annual travelling allowance to thirteen forest inspectors, transferred from the Department of Mines and Agriculture on the 1st July. It is pointed out that the rates of travelling allowances in the majority of cases were less than they were in 1895, and had it not been for the employment of the inspectors and special appraisers referred to, and the transfer of the foresters, travelling expenses would have shown a decrease instead of an increase.

Referring to the salaries of Crown Land Agents and assistants, 64 officers were graded by the Public Service Board under the Department of Justice, and their salaries are being paid by that Department.

The number of accounts registered during the year was 9,840, and the separate payments made on account of them by cheques drawn in the Account Branch numbered 18,315.

Schedules I to VII and XCVI show respectively the revenue and receipts ; expenditure for all services ; comparative statement of expenditure in 1895 and 1896, respectively ; salaries paid in the year ; the strength of the staff and the annual rate of salaries as on the 31st December, 1895 and 1896, respectively ; travelling expenses and fees in connection with Local Land Board meetings ; revenue and expenditure for the years 1886 to 1896, inclusively, showing the percentage of the latter to revenue ; and cost of measuring classified areas by licensed surveyors.

The Land Appeal Court.

During the year 1896 the Court heard and disposed of 642 cases, comprising 435 appeals and 207 references. Of these cases, 369 were dealt with in Sydney and 273 at the various sittings in the country. The Court held sittings in Sydney on 14 different occasions, and in the country as follows :—Albury, 1 ; Deniliquin, 1 ; Dubbo, 3 ; Hay, 1 ; Tamworth, 2 ; Wagga Wagga, 3 ; Young, 1.

At

At the close of the year 1895 four (4) cases were under reference to the Supreme Court, viz. :—

No. 3,545,	<i>in re</i>	Wm. Nott.
„ 3,683	„	Jas. Nott.
„ 3,696	„	M. Harvey.
„ 3,592	„	Goldsbrough, Mort, & Co. v. Pratt.

All of these have since been disposed of. The decision of the Land Appeal Court was sustained in Nos. 3,545 and 3,696, and overruled in No. 3,683 and 3,592.

During 1896 the Land Appeal Court was asked to state special cases for the decision of the Supreme Court in eleven instances, two of which, however, were not proceeded with. The remaining nine were duly stated and forwarded to the Prothonotary.

The following are the nine cases referred to :—

No. 3,768,	Dalgety & Co. ;	Hill, Clark, & Co.
„ 3,781,	<i>in re</i>	W. H. Hunt.
„ 3,853,	„	Hy. Deane.
„ 3,880,	„	Wm. Bolton.
„ 3,884,	„	Robt. Maguire.
„ 3,926,	„	Gardiner.
Nos. 4,135 and 4,136,	<i>in re</i>	H. E. Colless.
„ 4,137 and 4,138,	„	I. E. Colless.
No. 4,182	„	J. Dennis.

In Case 3,768, which is a case under the Rabbit Act, the Supreme Court held that it had no jurisdiction to hear the case. In Cases Nos. 3,781, 3,884, and 4,182, the Land Appeal Court's decision was confirmed, and in Cases Nos. 3,853, 3,880, 3,926, and 4,135 to 4,138, it was reversed. These last four cases are practically one, and leave has since been obtained to appeal to Her Majesty's Privy Council against the ruling of the Full Court.

Auction Sales.

Town Lands.—During the year 1,447 lots, comprising an area of 601 acres 1 rood 25½ perches, were offered for sale, of which 488 lots, containing 188 acres 3 roods 1½ perches, were sold, realising the sum of £5,739 11s., or an average of £30 8s. 1¾d. per acre.

Suburban Lands.—719 lots, containing an area of 2,863 acres 1 rood 29¾ perches, were offered for sale, of which 244 lots, comprising 688 acres 2 roods 5 perches, were sold, realising £3,702 19s. 6d., or an average price of £5 7s. 6¾d. per acre.

Country Lands.—The lots offered in connection with these lands amounted to 971, representing an area of 29,084 acres 2 roods 1¼ perches. 325 lots containing 11,214 acres 3 roods 6 perches were sold, realising £25,751 8s. 10d., or an average of £2 5s. 11d. per acre.

It will thus be seen that the total area of all classes offered for sale during 1896 amounted to 32,549 acres 1 rood, 16½ perches, comprised within 3,137 lots, and that the total area sold was 12,092 acres 0 roods, 12½ perches, embracing 1,057 lots, the amount realised being £35,193 19s. 4d.

A comparison of the transactions under this class of sales for the years 1895 and 1896, is supplied in the following Schedule :—

	Year.	No. of lots offered.	Area offered.			No. of lots sold.	Area sold.			Amount realised.			Average price per acre.		
			a.	r.	p.		a.	r.	p.	£	s.	d.	£	s.	d.
Town ...	1895	2,564	1,017	0	21½	745	289	0	36¼	9,926	17	0	34	6	5
	1896	1,447	601	1	25½	488	188	3	1½	5,739	11	0	30	8	1¾
Suburban ...	1895	1,149	5,114	3	26¾	261	868	2	25¾	4,863	9	0	5	12	0
	1896	719	2,863	1	29¾	244	688	2	5	3,702	19	6	5	7	6¾
Country ...	1895	1,403	57,342	2	1	485	19,989	3	25½	42,217	9	4	2	2	3
	1896	971	29,084	2	1¼	325	11,214	3	6	25,751	8	10	2	5	11

From this Schedule it will be observed that the total area offered only amounted to about 50 per cent. of the quantity offered in 1895. Though large decreases appear both in the area offered, and the area sold, as compared with the previous year, yet the average price per acre has been well maintained. It will also be seen that about 31 per cent. of town lands, 24 per cent. of suburban lands, and 39 per cent. of country lands, offered, were sold, as compared with 28 per cent., 17 per cent., and 35 per cent. respectively, in 1895.

It may further be remarked that the revenue derived from these sales during 1896 is the lowest for many years past. In the years 1887, 1888, 1892, and 1893, the revenue derived from this source was £235,098, £273,612, £310,716, and £223,375, respectively. Further details will be found in Schedule XXXII.

After Auction Sales.

During the year 586 applications were received, 95 of which were refused, while 537, comprising 627 lots were granted.

An area of 1,867 acres 0 roods 11½ perches was thus sold, the amount realised in connection therewith being £9,604 1s. 5d. The average prices obtained per acre were as follows:—For town lands, £20 15s. 4½d.; for suburban lands, £4 19s. 10¾d.; and for country lands within population areas, £2 15s. 5¼d. Further details will be found in Schedule XXXIII.

Forfeiture of Auction Purchases.

For non-payment of the balance of the purchase money within the specified time 225 lots were forfeited during the year, representing an area of 194 acres 2 roods 22 perches, and the deposits paid in connection therewith, amounting to £1,934 1s. 3d., were accordingly forfeited to the Crown. Further particulars will be found in Schedule XXXIV.

In cases where purchasers of Crown land are entitled to the improvements existing thereon the value of the improvements is added to the upset price of the land, and, subsequently, remitted. In this way a sum of £929 18s. 3d. was refunded and other payments which had been made in excess, to the amount of £179 12s. 6d., were also refunded during the year.

Homestead Selections.

As the setting apart of areas for homestead selection under the provisions of the Crown Lands Act of 1895 did not commence till late in 1895, the year under review may be looked upon, practically, as the first during which land could be acquired under this tenure, and the year's transactions show a very satisfactory result.

From Schedule XXIII it will be seen that no less than 1,187 blocks, comprising an area of 362,874 acres 1 rood 24 perches, were applied for during the year.

Including the applications outstanding at the close of the year 1895, the Local Land Boards dealt with 1,299. Of these 1,037, for an area of 300,217 acres 3 roods 17 perches, were confirmed, whilst 262 were either disallowed or withdrawn. The number of applications outstanding at the end of the year was 250.

From Schedule XXIV it will be seen that the number of homestead selections current on the 31st December, 1896, was 1,100, comprising an area of 324,842 acres 2 roods 22 perches.

From Schedule LXXXI it will be observed that 1,335 blocks, containing an area of 347,639 acres 15 perches, were notified during the year as set apart for homestead selection.

During the year twenty-two applications were made to convert conditional purchases into homestead selections. These applications included 44 conditional purchases, the area represented being 5,547 acres 2 roods 20 perches. The total number of conditional purchases, so converted, since the Crown Lands Act of 1895 came into operation, to the 31st December, 1896, is 47, the area comprised being 6,874 acres 2 roods 20 perches. For further details see Schedule XXV.

Conditional

Conditional Purchases.

As predicted in the Report for the year 1895, the transactions in regard to this class of holding have been on a much more limited scale than in former years. This restriction in the amount of business is largely due to the extension of the term of residence in connection with conditional purchases, and to the fact that intending settlers of limited means have availed themselves of the more favourable terms for acquiring homesteads afforded by the Crown Lands Act of 1895.

The area applied for during 1896 was 199,449 acres 3 roods 37 perches under 1,279 applications, whilst in the preceding year the area was 253,431 acres, and the number of applications 1,751.

From Schedules VIII and IX and the subjoined Summary it will be seen that of the applications received, 765 were for original conditional purchases, 492 for additional, and 22 for non-residential conditional purchases. The distribution of these applications in the various divisions into which the Colony is divided was as follows:—Eastern Division, 848 applications for 85,283 acres 2 roods 14 perches; Central Division, 430 applications for 113,506 acres 3 roods 23 perches; and Western Division, 1 application for 659½ acres.

Particulars relating to the number of applications received during the year for land within special areas, and for ordinary lands, also respecting the number and area of conditional purchases applied for from 1862 up to the present time, are furnished in Schedule X.

1895	631	102,365	0 0	10,230	10 0	643	94,218	3 0	9,421	13 0	19	1,233	2 0	250	14 0	453	55,593	3 12	10,322	19 9	1751	253,431	0 12	30,231	19 6
1896	526	71,747	0 0	7,174	14 0	403	83,474	2 20	8,403	11 0	10	1,079	3 0	215	19 0	331	43,113	2 1	8,134	12 0	1270	190,449	3 37	23,028	16 0

Of the applications made during the year, 546 were confirmed, for an area of 79,839 acres 2 roods 19 perches, and 239 were disallowed. Including the applications that were outstanding on the 1st January, 1896, the total number confirmed during the year was 1,059, for an area of 151,935 acres 1 rood 9 perches, and 355 were disallowed. (For further details, see Schedule XI.)

The incomplete conditional purchases current at the end of the year numbered 147,742, and embraced an area of 20,212,812 acres 1 rood 31½ perches, and the number of conditional purchases for which deeds of grant had been issued numbered 23,387, the total area so alienated being 2,773,065 acres 0 roods 15 perches. (See Schedule XXII.)

Four hundred and forty-three conditional purchases, representing an area of 54,689 acres 0 roods 12 perches, were forfeited during the year, as against 513, containing 63,532 acres 3 roods 35 perches, for the preceding year. From the subjoined statement, extracted from Schedules XVIII and XIX, it will be observed that of the total forfeitures only 72 were due to non-payment of balance, interest, or instalment of purchase money.

No.	Area.	Reasons of Forfeiture.
72	a. r. p. 7,296 2 20	Non-payment of balance, interest, or instalment of purchase money.
371	47,392 1 32	Non-fulfilment of conditions.
443	54,689 0 12	

Under the provisions of the Crown Lands Act Amendment Act of 1891, forfeiture was conditionally waived in 250 instances, and absolutely waived in 505.

Extensions of time for payment of instalments were granted to the holders of 4,214 conditional purchases, the total area represented being 530,695 acres.

The provisions of Section 28, Crown Lands Act of 1895, by virtue of which resident conditional purchasers are enabled to obtain suspension of payment of instalments for a period of twelve months, have been largely availed of during the year. Applications were complied with in respect of 2,027 conditional purchases containing 348,217 acres, and 353 applications were refused.

As the Conditional Purchases Relief Act only came into operation on the 14th July, 1896, the transactions thereunder were necessarily small. Up to the end of the year, relief was granted in connection with 344 applications, representing 887 conditional purchases, the difference between the original amount of annual instalments payable and the reduced amount being £2,658 16s. 9d. (For details, see Schedule XIV.)

	Number of Applications.	Number of Conditional Purchases.	Original Amount of Annual Instalment.	Reduced Amount of Annual Instalment.	Difference between Original and Reduced Amount.
			£ s. d.	£ s. d.	£ s. d.
Ordinary Conditional Purchase ...	298	832	6,679 14 6½	4,299 2 8	2,380 11 10½
Special Area Conditional Purchase...	46	55	1 084 0 4½	805 15 6	278 4 10½
Totals	344	887	7,763 14 11	5,104 18 2	2,658 16 9

From Schedule XV it will be seen that 639 certificates of conformity were issued in connection with conditional purchases under the repealed Acts.

Schedules XVI and XVII furnish details in reference to transfers received and dealt with during the year. 9,039 transfers were received, and 8,620 were dealt with. The conditional purchases so transferred numbered 16,509; but it will be observed that a large proportion of these must have been transferred more than once, as the number of conditional purchases actually affected was only 11,264.

Stamp duty to the amount of £5,761 8s. was paid in connection with 3,165 transfers.

Under the provisions of the 44th section of the Crown Lands Act of 1895, 12 conditional purchases, containing 2,172½ acres, and 4 conditional leases, containing 1,870 acres, were validated during the year. (*Vide* Schedule XX.)

Particulars of instructions issued to, and reports received from, conditional purchase inspectors will be found in Schedule XC.

The total number of instructions issued during the year was 14,507, and the number of reports received was 11,644.

It was not found necessary during 1896 to resume any land from conditional purchases or conditional leases on account of its being auriferous.

Special Areas.

One hundred and twenty special areas, embracing an area of 32,811 acres 2 roods 39 perches, were proclaimed during the year, as compared with 212, containing an area of 62,294 acres, proclaimed in 1895; 82 of these special areas included 30,199 acres 2 roods 20 perches of country lands, and the remainder, 38, containing 2,612 acres 0 roods 19 perches, comprised lands within population or suburban areas. (For further particulars, see Schedule LXXX.)

The

The decrease in the number of special areas proclaimed is primarily due to the fact that since the Crown Lands Act of 1895 came into operation, lands of more than ordinary value can be disposed of either as special areas or as homestead selections.

From Schedule XII it will be observed that of a total available area of 160,567 acres 2 roods 10½ perches of suburban or population area lands, 109,942 acres 1 rood 32 perches have been selected, and that of an area of 989,903 acres 1 rood 2 perches of country lands, no less than 799,278 acres 1 rood 38 perches have been selected. The area still available for selection on the 31st December, 1896, was 241,249 acres 3 roods 22½ perches.

The transactions in each of the Land Board Districts is set forth in the appended summary, taken from Schedule XII:—

Land Board District.	Class of Land.	Quantity of Land Available.			Area selected.			Area unselected.		
		a.	r.	p.	a.	r.	p.	a.	r.	p.

Schedule XIII supplies details relating to appraisements under the provisions of the 36th section of the Crown Lands Act of 1895 of the value of special area conditional purchases. In view of the large number of applications for appraisement made it was found impossible to dispose of them all during the year; but of 2,723 applications lodged, the Local Land Boards had dealt with 2,703 on the 31st December, 1896.

The total area covered by the applications to appraise was 597,011 acres 2 roods 17½ perches, and the values have been finally determined in respect of 520,515 acres 0 roods 14 perches. The capital value of the latter area prior to appraisement was £1,044,763 2s. 10½d., but as determined by appraisement is only £745,660 15s. 0½d., thus showing a reduction in capital value of £299,102 7s. 10d., which necessarily carries with it a proportionate diminution in the amount of the annual instalments payable. It may be stated that prior to the appraisement the annual instalments payable in respect of the 520,515 acres 0 roods 14 perches referred to amounted to £52,269 12s. 2d., whereas under the recently appraised values they will only amount to £37,283 0s. 11½d., thus showing an annual loss of £14,986 11s. 2½d. It is anticipated that the appraisement of the balance of the area covered by the applications will also result in a reduction in the capital value.

The

The appended summary will serve to show the transactions in each of the Land Board Districts:—

SUMMARY.

Land Board District.	Total Number of Applications Received.	Area.			Total Number of Applications dealt with by L.A.B. to 31st December, 1896.	Area.			Cases in which Values have been Finally Determined.

Improvement Purchases.

The area of land within proclaimed gold-fields applied for to purchase, in virtue of improvements, under section 46 of the Crown Lands Act of 1884, shows a very slight advance on the previous year. The number of applications received during 1896 was 152, the number approved was 102, whilst 22 were refused, and 12 allowed to lapse. The area alienated amounted to 32 acres 3 roods 23¼ perches, comprised within 85 lots, the price realised being £1,047 14s.

Two applications under section 2 of the Land Act Amendment Act of 1875 for country lands, embracing 433½ acres, were also approved, the price paid being £569 12s. 6d. Further particulars will be found in Schedule XXXV.

Special Purchases.

The transactions in connection with this class of alienations include applications for rescission of water frontage reservations (section 12, Act of 1861, and section 63, Act of 1884), for permission to reclaim and purchase land (section 64, Act of 1884), for the purchase of small, isolated areas, &c. (section 66, Act of 1884), for permission to close and purchase unnecessary roads (section 67, Act of 1884), and also for the granting of Crown lands in lieu of land resumed for roads (section 42, Act of 1889).

The number of applications received during the year was 106, of which 3 were under section 63, Act of 1884; 29 under section 64, Act of 1884; 24 under section 66, Act of 1884; and 50 under section 67, Act of 1884.

The area alienated amounted to 262 acres 0 roods 4 perches, the purchase money received being £4,032 15s. The area disposed of in the year 1895 under those sections was 538 acres 0 roods 28¼ perches, the sum realised being £4,720 12s. 7d.

Under the 42nd section, Act of 1889, 21 cases were completed during the year, the area granted being 55 acres 0 roods 5 perches.

Further details will be found in Schedule XXXVI; but the Summary hereunder presents the year's transactions in a condensed form for reference:—

Section 12, Act 1861...	Area sold.			Purchase money.		
	a.	r.	p.	£	s.	d.

Surrenders and Exchanges.

That the provisions of section 47, Act of 1895 (which permit the holders of purchased lands exchanging the same for Crown land with a view to consolidating their estates) are in active operation, will be seen on reference to Schedule XXXVII, no less than 177 applications having been received, or 46 in excess of the previous year. The number of applications refused or withdrawn was 56, and the cases outstanding at the close of the year amounted to 315. In explanation of the large number of applications outstanding, it may be stated that in many of these cases, owing to the magnitude of the transactions and the important interests involved, protracted negotiations are necessary, and several counter proposals have often to be submitted to the applicants before a proper basis of exchange can be agreed upon for reference to the Local Land Board.

During the year 45 cases, representing an area of 213,900 acres, were finally completed, and the surrenders accepted by the Governor-in-Council. (*See* Schedule XXXVII.)

Deeds of Grant.

The number of deeds of grant prepared during the year was 2,168, representing an area of 296,438 acres 1 rood 33 $\frac{3}{4}$ perches. These figures show a decrease when compared with 1895, during which year the deeds prepared reached a total of 2,634, representing an area of 299,788 acres 1 rood 8 $\frac{3}{4}$ perches. The work involved in some of the large exchanges made has, however, been of a very complicated and difficult nature. (For further details, *see* Schedule XXXVIII.)

Volunteer Order Applications.

During the year, 12 of these applications were received, 8 being for land within the Albury Land District, 1 for land in the Gunnedah District, 1 for land in the Gundagai District, and 2 for land in the Murrurundi District. Two applications were refused, and 4, representing an area of 200 acres, were granted.

The number of these applications received in the year 1895 was 4.

Settlement Leases.

From Schedule LXXXII it will be seen that the settlement-lease areas notified during the year 1896 contained 481 farms, embracing an area of 1,719,391 acres 1 rood 10 perches.

The number of leases applied for during the year was 314, the area embraced being 1,012,389 acres, representing an annual rental of £10,937 13s. 5d. Applications for 259 farms, containing 717,798 $\frac{1}{2}$ acres, were confirmed, and applications for 112 farms were outstanding at the close of the year. (For further particulars, *see* Schedule LVII.)

After confirmation of an application, a lease is executed and issued. From Schedule LVIII it will be observed that the number of leases so executed and issued since the Crown Lands Act of 1895 (the Act that created this form of lease) came into operation, to the 31st December, 1896, is 198, covering an area of 542,778 $\frac{1}{2}$ acres, and producing a revenue of £6,760 12s. 9d., or within a fraction of an average rate of 3d. per acre.

The popularity of this class of holding is evidenced by the fact that of 653 farms notified for settlement since the Act of 1895 operated, no less than 384, or nearly 60 per cent., have been applied for, although some of the areas notified towards the close of the year did not become available till 1897.

Annual Leases.

The area held under annual lease at the close of the year 1896 was 5,873,263 acres 0 roods 7 perches, comprised within 9,588 leases, producing an annual revenue of £40,753 15s. 7d.

Nine hundred and nineteen leases lapsed during the year, the area being 715,082 acres, and the rental £4,485 3s. 10d. The cancellations numbered 117, the area covered being 63,917 acres 3 roods 32 perches, to which a rental of £460 16s. 6d. was attached (Schedule LXX).

The following table shows the number, area, and rental of the leases in existence in each Division of the Colony at the end of 1896:—

Division.	Number.	Area.		Rent.		
		a.	r. p.	£	s.	d.
Eastern	8,410	4,987,079	0 17	32,579	2	7
Central	1,073	819,882	3 30	7,651	13	6
Western	75	86,301	0 0	522	19	6
	9,588	5,873,263	0 7	40,753	15	7

It may be mentioned that the leases in existence at the close of the year 1895 showed an increase, both in respect of the number of leases and the area leased, when compared with the year 1894, and the past year shows a further advance on the year 1895, the leases current at the end of that year being 8,924, covering an area of 5,564,303 acres 1 rood 27 perches, and producing an annual revenue of £39,510 14s. 6d. Schedule LXXI supplies further details of current leases.

The number of applications disposed of during the year amounted to 2,275, of which 1,799 were granted, and 476 either disallowed or withdrawn. Some of these applications were lodged prior to 1896. The area leased in satisfaction of the applications granted was 1,179,593 acres 1 rood 20 perches, the rental derived therefrom being £7,019 6s. 11d. (*Vide* Schedule LXVIII.)

The area offered for lease by auction during 1896 was 65,102 acres 1 rood 37 perches, of which 8,689½ acres were sold, the annual rent realised being £254 10s. (Schedule LXIX.)

The following table gives particulars of the applications made, the area applied for, and the area leased by auction during the past five years. Further details will be found in Schedules LXVIII and LXIX:—

Year.	Applications made.	Area applied for.		Area leased by auction.		
		a.	r. p.	a.	r.	p.
1892	2,578	1,768,807	0 0	3,357	2	0
1893	2,130	1,390,212	1 13	10,709	0	0
1894	1,779	1,018,615	0 0	11,042	0	0
1895	2,444	1,458,627	2 0	6,929	3	0
1896	1,928	1,072,830	0 35½	8,689	2	0

Though the number of applications and the area applied for during the year show a considerable decrease when compared with the year 1895, yet the revenue derived from the leases granted shows a substantial increase, the amount being £7,019 6s. 11d. as against £6,459 14s. 5d.

Conditional Leases.

The number of applications received in 1896 was 736, for an area of 335,101 acres 1 rood 30 perches. This, when compared with previous years' transactions, is significant. Evidently the residence condition imposed by the Crown Lands Act of 1895, and the more popular forms of tenure introduced by that Act are, in a great measure, responsible for the diminution in the number of applications made.

Full

Full details regarding the applications received during 1896 will be found in Schedule XXVI; and a summary of those received annually since 1885, the year in which this class of holding was introduced, is shown hereunder.

Year.	Number.	Area.			Deposits.		
		a.	r.	p.	£	s.	d.
1885	3,816*	2,517,045	0	15*	21,225	7	6
1886	2,500	1,207,953	0	8	10,066	5	6
1887	2,228	1,242,380	0	0	10,353	3	4
1888	2,623	1,424,753	1	25	11,872	18	11
1889	3,470	1,569,949	3	30	13,082	18	4
1890	5,466	3,056,774	2	26	25,489	7	2
1891	3,952	2,177,810	0	15	18,140	17	10
1892	2,692	1,171,971	1	18	9,769	5	1
1893	1,800	715,611	0	34	5,943	8	4
1894	1,338	528,612	2	30	4,409	9	10
1895	1,120	478,301	3	20	3,985	1	8
1896	736	335,101	1	30	2,783	7	5

* This includes 1,994 applications, made under 54th section of the Act of 1884, representing an area of 1,198,617 acres 0 roods 30 perches.

During the year 859 applications were dealt with, 604 being confirmed, for an area of 211,236 acres, and 255 disallowed. Of the applications confirmed, 196 were made during 1896, and embraced an area of 63,121½ acres; and of the applications disallowed, 163 were lodged during that year. Further particulars will be found in Schedule XXVII.

Three thousand and ten transfers were passed during 1896, the number of leases affected being 2,043, representing an area of 1,500,295 acres 2 roods 10 perches. (*See* Schedule XXVIII.)

Under the provisions of section 25 of the Act of 1889, there were 227 conversions of conditional leases into additional conditional purchases. In 92 instances the whole of the leases were converted, whilst in 135 cases only partial conversions were effected. The total area so converted amounted to 49,464½ acres, to which a rental of £657 3s. 7d. had been attached. (*See* Schedule XXX.)

The rents fixed by the Local Land Boards in 812 cases were approved by the Minister, and no references to the Land Appeal Court were considered necessary.

Extension of time for the payment of rent was granted in 256 cases, the amount thus deferred being £2,800. In 205 cases forfeiture was provisionally, and in 396 cases absolutely, waived during the year.

During the year, 812 leases, containing 298,087 acres 3 roods 20 perches, were gazetted as approved, the rental attached thereto being £3,034 13s. 10d. The total number of gazetted leases in existence at the end of the year was 21,992, containing 12,486,321 acres 2 roods 34 perches, producing an annual revenue of £150,361 9s. 3d. By the addition of the applications in hand on the 31st December, 1896, on which, however, action had not been completed, the number of leases would be increased to 23,407, the area to 13,260,052 acres 0 roods 17 perches, and the annual rental to £156,809 2s. 8d. Further details will be found in Schedule XXXI.

Two hundred and eighty-eight leases were gazetted as forfeited during the year. These embrace an area of 102,320½ acres, and the rental attached thereto was £1,204 6s. 5d. (*Schedule* XXIX.)

Since December, 1885, an area of 9,988 acres 0 roods 57 perches has been cancelled, out of 19 leases, on account of the land being auriferous.

Pastoral Leases.

The pastoral leases current on 31st December, 1896, were 784 in number, containing a total area of 52,706,670 acres, and returning an annual rental of £319,259 17s. 8d. Of these leases, 476 were situated in the Central and 308 in the Western Division. The appended Schedule gives the area leased in each Division and the rental obtained. (For further details, *see* Schedule XXXIX.)

No. of Leases.	Division of Colony.	Area.	Rent.		
		acres.	£	s.	d.
476	Central	14,060,891	152,767	2	8
308	Western	38,645,789	166,492	15	0
784		52,706,670	319,259	17	8

No forfeitures occurred during the year. (Schedule XLVI.)

An area of 100,250 acres was withdrawn from pastoral lease for public purposes during the year. This area was distributed over 95 leaseholds, and the sum of £3,395 14s. 2d. was refunded to the lessees on account of rent paid in advance upon the area so withdrawn. (Schedule XL.)

Seventy-one pastoral leases were transferred during the year; of these, 39 were situated in the Central and 32 in the Western Division. (Schedule XLI.)

As pointed out in the Report for the year 1895, the number of accepted applications for reappraisal of pastoral leases in the Western Division under section 9 of the Crown Lands Act of 1895 was 263. In 146 instances the reappraisements have been completed and new rates determined, and action is well advanced in respect of the remainder. The completed cases cover an area of 20,454,431 acres, which formerly produced a rental of £79,803 1s. 3d. per annum; the rental, as determined by the reappraisements, amounts to £55,551 13s. 2d., thus showing a reduction of £24,251 8s. 1d., or at the rate of 30 per cent. The average rate per acre, according to the original rental, was 93d., whilst under the recently appraised rental the average rate is 65d. (*See* Schedule XLIV.)

At the close of the year 1895, 18 applications, under section 8 of the Crown Lands Act of 1895, for the attachment of resumed areas to their respective leasehold areas were outstanding, and during the year under review 15 applications, covering an area of 1,945,945 acres, were lodged, thus making a total of 33 requiring action. Five applications, embracing a total area of 897,617 acres, were approved, and 3 for an area of 368,082 acres were refused. (For further details, *see* Schedule XLII.)

The names and numbers of the pastoral leases that expired during 1896 will be found in Schedule XLVIII, and details of those which will expire in 1897 will be found in Schedule XLVII.

One pastoral lease, containing 54,200 acres, and situated in the Western Division, was sold by auction during the year.

In order to meet the demand for land for closer settlement it has been found necessary to take advantage of the provisions contained in sections 3 and 6 of the Crown Lands Act of 1895 for withdrawing land from pastoral lease in the Central and Western Divisions, and the various Local Land Boards have been asked to inquire and report on the expediency of withdrawing from certain of these pastoral leases such lands as are suitable for settlement in smaller areas. The number of cases referred to the Boards during the year was 67, the approximate area that could be withdrawn being estimated at 1,151,007 acres.

The area actually gazetted as withdrawn during the year 1896 was 176,200 acres, and the preliminary notification of the intention to withdraw was gazetted in respect of five other holdings, the approximate area that could be withdrawn therefrom under the law being estimated at 121,484 acres. Particulars of the holdings affected by these proposals will be found in Schedule XLIX.

The

The subjoined Schedule gives the names of certain pastoral leases situated in the Central Division which have been declared scrub land under the 35th section of the Crown Lands Act of 1889, and brought under the West Bogan agreement:—

No. of Pastoral Leases.	Name of Pastoral Leases.
41	Balgay.
205	Woodlands.
226	Orange Plains.
385	Thorndale.
437	Canonbar (part of.)
471	West Bogan No. 7.
698	Budgery.

Occupation Licenses.

The licenses in force during 1896 numbered 1,693, covering an area of 40,210,241 acres, and returning an annual rental of £113,409 17s. 8d. (Schedule XXXIX.)

It will be observed from the Table appended that the licenses current during the year show an increase when compared with those held in 1895, but the acreage and rental both show decreases.

Current on 31st December, 1895.				Current on 31st December, 1896.			
Division.	No.	Area.	Rent.	Division.	No.	Area.	Rent.
		acres.	£ s. d.			acres.	£ s. d.

Total	1,626	40,817,284	123,728 8 8	Total	1,693	40,210,241	113,409 17 8

The sales of occupation licenses show a marked improvement on previous years. Of 205 licenses, containing 2,968,315 acres, which were offered for sale by auction or tender, 104, embracing an area of 1,478,202 acres, were disposed of. The number and area of those sold in 1895 was 26, containing 361,773 acres. (For further details, see Schedule XLIII.)

Seventeen preferential occupation licenses were not renewed for 1896. Of these, 9 were situated in the Eastern and 8 in the Central Division; whilst of ordinary occupation licenses, 36 were not renewed, 11 of which were within the Eastern, 21 within the Central, and 4 within the Western Division. (See Schedule XLVI for further details.)

Thirty-six preferential and 75 ordinary occupation licenses were transferred during the year. (See Schedule XLI.)

An area of 1,280,690 acres was withdrawn from 392 occupation licenses during the year for purposes of alienation, reservation, &c.; and as the rent is paid in advance, the withdrawal of this area necessitated the refund to licensees of the sum of £6,245 15s. (See Schedule XL.)

Under the provisions of section 81 of the Crown Lands Act of 1884, the license fees in respect of 26 resumed areas were reappraised and gazetted during the year. The names of the areas affected and other details in connection with such reappraisements will be found in Schedule XLV.

The applications received for the attachment of resumed areas to leasehold areas have been referred to when dealing with the subject of pastoral leases, and all details are shown in Schedule XLII.

In connection with the reappraisements under section 9 of the Crown Lands Act of 1895 of occupation licenses in the Western Division, it is pointed out that of 144 applications received, action has been completed and new rates determined in respect of 93. The completed cases represent an area of 12,985,099 acres, which formerly produced a revenue of £26,538 3s. 5d. per annum; the rental, as determined by the reappraisements, amounts to £15,838 1s. 4d., thus showing a reduction on the former

former rental of £10,700 2s. 1d, being a decrease of 40 per cent. The average rate per acre, according to the original rental, was 49d., whilst under the recently appraised rental the rate is 29d. (For details, *see* Schedule XLIV.)

The appraisements under section 4 of the Crown Lands Act of 1895 of the preferential occupation licenses, embracing the leaseholds in the Central Division which expired during the year 1895, were carried out during the year under review. (For details respecting the areas and rentals, *see* Schedule L.)

Homestead Leases.

The number of homestead leases in existence on the 31st December, 1896, was 1,246, containing an area of 10,429,261 acres, and producing a rental of £68,685 12s. 1d.

As pointed out in previous Reports, these leases are only granted in the Western Division, and are situated within the Land Board Districts of Bourke, Hay, and Moree. The Bourke District is credited with 809 leases, embracing 6,876,422 acres, yielding a rental of £44,981 8s. 9d., the average rate per acre being 1.56d.; Hay, with 314 leases, containing 2,534,564 acres, yielding a rental of £14,949 18s. 8d., the average rate per acre being 1.41d.; and Moree, with 123 leases, containing 1,018,275 acres, producing a rental of £8,754 4s. 8d., the average rate per acre being 2d. (Further details will be found in Schedule LVI.)

The number of applications lodged during the year was 89, as against 106 in the year 1895.

In view of the large area held under this form of tenure, the remoteness from settlement of that now available, and the limited extent of land which, in its natural state, would attract small settlers, a decrease in the number of applications must be looked for, although there is still a very large extent of country available for homestead lease.

The details furnished in the subjoined Schedule will afford a means of comparing the number of applications, area applied for, &c., during the last twelve years. (For full particulars, *see* Schedule LI.)

Year.	No. of Applications.	Area applied for.	Deposits lodged.
		acres.	£ s. d.
1885	391	3,823,235	15,880 2 11
1886	121	1,141,963	4,758 3 7
1887	128	1,198,286	4,992 17 2
1888	141	1,332,691	5,511 15 7
1889	238	2,187,837	9,113 19 9
1890	310	2,620,959	10,920 13 3
1891	191	1,515,629	6,278 2 1
1892	176	1,214,447	5,648 16 6
1893	135	870,044	3,582 10 4
1894	110	692,515	2,885 9 7
1895	106	613,723	2,557 3 7
1896	89	605,146	2,521 8 10

The number of homestead leases granted during the year was 79, representing an area of 459,453 acres and a rental of £1,383 4s. 3d., as against 76, containing 515,821 acres, and returning a revenue of £2,340 15s. 3d., granted in 1895. The average rental per acre of the area leased in 1896 was 7d., as against 1.08d. obtained from the leases granted in 1895.

Twenty-five applications were either refused or permitted to be withdrawn, and 78 were outstanding at the close of the year. (For fuller details, *see* Schedule LII.)

Forty-two leases, embracing an area of 314,331 acres, and representing a rental of £1,374 9s. 8d., were forfeited during the year. (Further particulars will be found in Schedule LIII.)

In connection with the reappraisements of the rentals of homestead leases, under section 9 of the Crown Lands Act of 1895, referred to in the Report for the year 1895, it may be mentioned that action was completed during the year in 260 cases only; consequently it cannot be definitely stated at present to what extent the revenue derived from these leases will be affected. From Schedule LV it will be observed

observed that the area reappraised during 1895 was 2,404,623 acres, the rental being determined at £12,837 12s. 1d., as against £16,889 19s. 2d. under the original appraisal, thus showing a reduction of nearly 25 per cent. The average rental per acre, as reappraised, so far as this area is concerned, is 1.28d., whilst the original average rental was 1.68d. per acre.

From Schedule LIV it will be seen that 197 transfers were completed during the year, and 52 were outstanding.

Special Leases.

The applications received for special leases show a very slight increase on the year 1895, being 275 as against 269. As 270 applications were pending on the 31st December, 1895, the total number requiring action during the year was 545. Of these, 275 were dealt with, 108 being declined, withdrawn, &c., and 167 granted. The granted leases represent an area of 5,540 acres 3 roods 38 perches, the annual rental produced being £1,992 5s. 6d. The applications pending at the close of the year numbered 286. (Further details will be found in Schedule LX.)

Forfeitures of these leases were not so numerous as in the previous year, the number forfeited during 1896 being only 12, embracing an area of 491 acres 3 roods 12 perches, with an annual rental of £184 10s., as against 33, containing 872 acres 1 rood 31 perches, and producing a revenue of £489 12s. 8d., in the year 1895. (For full details, see Schedule LXI.)

Including the leases which terminated by effluxion of time on the 31st December, 1896, the number of leases current on that date was 675, comprising an area of 19,026 acres 3 roods 39 $\frac{3}{4}$ perches, and producing an annual rental of £15,085 12s. 2d. Fifty-four leases, covering an area of 607 acres 0 roods 6 $\frac{1}{2}$ perches, expired by effluxion of time during the year. (For further details, see Schedules LXII and LXIII.)

These leases are granted under the provisions of sections 89, 90, and 92, of the Crown Lands Act of 1884, and section 46 of the Crown Lands Act of 1895, for the various purposes specified hereunder:—

Under section 89—

Floating docks, jetties, piers, and wharfs below high-water mark.

Under section 90—

Accommodation house.	Gravel (to obtain).	Ships (building or repairing).
Accommodation paddock.	Grazing.	Skindrying and packing.
Agriculture.	Guano (to obtain).	Slaughter-houses.
Bakery.	Inn.	Smelting-works.
Ballast (to obtain).	Irrigation.	Smithy.
Bathing places.	Landing-places.	Stables and accommodation
Bee and Poultry Farm.	Lime-kilns.	paddocks.
Boats (building and repairing).	Limestone (to obtain).	Store.
Boiling-down works.	Loam (to obtain).	Sugar-cane growing.
Brick earth (to obtain).	Machinery (erection of).	Storage purposes.
Brick-kiln.	Mail stations in sparsely-populated	Tanks.
Bridges.	districts.	Tanneries.
Dams.	Pipe-line.	Tobacco growing.
Drainage.	Punt-houses.	Vegetable garden.
Eucalyptus (cultivation of).	Quarries.	Village settlement.
Explosives (sites for storage of).	Railway station and depôt.	Wattle growing.
Factory.	Recreation.	Well.
Ferries.	Saw-mills.	Wharfs (above high-water mark).
Fisheries.	Sericulture.	Wool-washing establishments.
Freezing works.	Shells (to obtain).	Working mineral springs.

Under section 92—

Irrigation works and tramway purposes.

Under section 46, Crown Lands Act of 1895—

Business purposes.
Erection of buildings.

Artesian Well Leases.

During the year two artesian well leases were gazetted as approved, representing an area of 20,480 acres, with a rental of £56 per annum. The total number of these leases current at the close of the year 1896 was 35, comprising an area of 357,923 acres, with an annual rental of £996 10s. 4d.

Improvement

Improvement Leases.

This class of holding was created by the Crown Lands Act of 1895, the object sought to be accomplished being the occupation and improvement of large tracts of vacant Crown land and abandoned holdings that could not be profitably occupied under the ordinary forms of tenure provided by the Principal Act, owing to their being of inferior quality or covered with scrub or heavy timber, or subject to some natural or other disadvantage.

These leases are disposed of either by tender or by auction, the inducement offered being long tenure and nominal rentals. Stringent improvement conditions are however imposed; consequently, on the expiration of the leases, the land will have improved in value and be better adapted for closer settlement.

The results so far are encouraging. From Schedule LIX it will be seen that during the year 124 leases, aggregating 1,230,207 $\frac{1}{4}$ acres, were sold by auction, the annual rental realised being £1,488 18s. 4d.; and tenders were accepted of 42 others, containing an area of 631,715 acres, and representing an annual rental of £913 2s. 7d. As no leases were disposed of in 1895, the number of improvement leases in existence on the 31st December, 1896, was 166, embracing an area of 1,861,922 $\frac{1}{2}$ acres, producing a revenue of £2,402 0s. 11d., or an average of $\frac{3\frac{1}{2}}{100}$ of a penny per acre.

Scrub Leases.

The number of applications received during the year 1896 was 19, for an area of 537,428 acres, and in addition to these there were 10 applications, covering an area of 37,040 acres, outstanding at the close of 1895, making a total of 29 requiring action during the year. Of these, 8 were disallowed or withdrawn, and 7 were granted, embracing an area of 20,241 acres, the rental derived being £30 11s. 11d. per annum.

The only feature deserving of notice in connection with these leases is the large area covered by the applications as compared with previous years. The area applied for in 1895 was only 54,702 acres, and the total area held under this tenure on the 31st December, 1896, was 215,455 $\frac{1}{2}$ acres. The increase in area is due to the fact that applications have been made to convert certain of the pastoral leases, situated to the west of the Bogan River, into scrub leases under the terms of the "West Bogan Agreement."

The terms of the "West Bogan Agreement" are briefly as follows:—A pastoral lease within the country affected by scrub may be converted into a scrub lease with a term of twenty-eight years; the minimum annual rental not to be less than 10s., nor the maximum more than £1 per section of 640 acres. The land is to be thoroughly cleared of all scrub and noxious undergrowth, and kept so cleared until it be resumed. Within the first four years of the lease, 2s. 6d. per acre is to be expended in clearing, 1s. per acre being expended within the first year, the right to resume one-third of the land on the expiration of twelve years from date of commencement of the lease, and another third on the expiration of twenty years, is reserved to the Crown in the event of the land being required for closer settlement. Authority is given to inspect and hold inquiries as to fulfilment of conditions and to insist on compliance with the terms of the agreement. The lessee is not to have tenant right or ownership in the improvements effected under the agreement, but is to have tenant right in other improvements if of a permanent, fixed, and substantial character, and necessary for the profitable occupation of the land.

No forfeitures occurred during the year, nor did any leases expire; but 9 which expired in 1895 were extended for a further term under the provisions of section 26 of the Crown Lands Act of 1895.

The number of leases current at the end of the year was 37, containing an area of 215,455 $\frac{1}{2}$ acres and returning an annual rental of £333 6s. 9d.

Full details will be found in Schedule LXIV.

Leases of Inferior Lands.

Two leases, representing an area of 23,000 acres, and producing a rental of £23 19s. 2d., were granted during the year, whilst 8 leases were declared forfeited, the area and rental being respectively 147,139 acres and £184 13s. 11d.

The number of leases current at the close of the year was 35, containing an area of 364,336 acres, and returning a rental of £261 2s. 1d. per annum. (Schedule LXV.)

Residential Leases.

The transactions in connection with these leases show a slight decrease when compared with the year 1895. The applications received during the year numbered 56, and these, added to 53 outstanding at the close of 1895, gave a total of 109 under action during 1896. In the year 1895 the number of applications received were 68. Thirteen applications were either disallowed or withdrawn, and 17 were granted for an area of 216½ acres, at a rental of £22.

The forfeitures for the year numbered 10, representing an area and rental of 93 acres and £16 10s. respectively.

The number of leases current at the close of the year was 176, covering an area of 1,706 acres 3 roods 12½ perches, and producing an annual revenue of £261 13s. 5d. (For further particulars, see Schedule LXVI.)

Snow Leases.

Eight of these leases, embracing an area of 35,620 acres, were granted during the year, at a rental of £181 1s. 1d., and one of 5,930 acres, which returned a rental of £24 14s. 2d., was forfeited.

The leases current on the 31st December, 1896, were 25 in number, containing an area of 112,670 acres and producing an annual rental of £774 8s. 4d. (Schedule LXVII.)

Dedications—Reserves—Resumptions.

The number of reserves from sale notified during the year was 1,275, embracing an area of 4,001,315 acres, and the reserves from sale revoked numbered 1,794, representing an area of 3,853,460 acres. (Schedules LXXV and LXXVI.)

Reserves from lease and license, annual lease, &c., notified in 1896 were 299 in number, comprising 1,142,438 acres. The revocations of similar reserves during the year reached a total of 376, the area contained therein being 381,644 acres. (Schedules LXXVII and LXXVIII.)

The dedications for religious and public purposes during the year were 184 in number, representing an area of 3,185 acres 3 roods 23½ perches. Particulars as to the respective purposes for which these lands were dedicated will be found in Schedule LXXIX.

During the year 1896 the area resumed under the provisions of the 105th section of the Act of 1884, and of the 41st section of the Act of 1889, was 5,178 acres 2 roods 35½ perches. Full particulars of the land so resumed may be found in Schedule LXXIV.

Newcastle Pasturage Reserve.

There are 598 holdings under the Newcastle Pasturage Reserve Act on which the payment of purchase money is still proceeding. During the year the balances on 62 purchases were paid, making the total number of holdings fully paid up 302, representing a capital value of £19,216 19s. Further particulars are contained in Schedule LXXIII.

Cases of Trespass on Crown Land.

Five hundred and twenty-four cases of trespass on Crown lands were reported during the year; and as 441 cases had not been dealt with at the end of 1895, the total number requiring action during the year was 965. From Schedule LXXXIII it will be observed that 644 cases were dealt with in various ways, leaving a balance of 321 on which action had not been completed at the close of the year.

Applications for permission to Ringbark.

During the year, 175 applications were received, covering an area of 1,134,214 acres, the fees lodged in connection therewith amounting to £489. Of the applications received prior to 1896, 57 were granted, also 85 of those received during the year, making a total of 142, representing an area of 1,025,226½ acres. During the year 11 applications were disallowed, and at the close thereof 86 were outstanding. (For further details respecting these transactions, see Schedule XCI.)

Permissive Occupancies.

Permissive occupancies are so designated inasmuch as the tenure is merely permissive, and terminable at the pleasure of the Minister. They are issued for a variety of purposes, principally for the occupation of small areas of Crown lands on which to erect structures of a temporary nature, such as jetties for small boats, boat-sheds, buildings, &c. Rentals are paid on specified dates, and the occupation carries no right of purchase.

On the 31st December, 1896, 518 permissive occupancies were in existence, the area included being 4,394 acres 1 rood 11 perches, and the rental derived £1,233 14s 9d. (For further details, see Schedule LXXII.)

Cases dealt with by Local Land Boards.

During the year under review, 22,067 cases were considered by the Local Land Boards, of which 2,308 were adjourned. A comparative statement for the past five years is appended, and further details will be found in Schedule LXXXIX.

1892	35,316 cases considered ;	2,567 cases adjourned ;	1,731 days occupied.
1893	30,910	2,830	1,449½
1894	25,988	2,055	1,438
1895	21,436	1,970	1,236½
1896	22,067	2,308	1,697

Correspondence.

The number of documents received and registered in the Head Office during the year was 125,038, representing an increase of 6,812 as compared with 1895. (Schedule XCII.)

During the year, 161,161 printed and manuscript letters, schedules, parcels, &c., were despatched, in addition to which 2,976 telegrams were sent and 163 circulars were issued. (See Schedule XCIII.)

115,690 letters were received at the various Local Land Board offices during the year, as against 120,362 received in 1895; 114,038 manuscript and printed letters, parcels, &c., were despatched. Further particulars will be found in Schedule XCIV.

Church and School Lands.

By proclamation dated 28th August, 1896, the administration of the Church and School Lands Dedication Act was transferred to the Secretary for Lands, and on the 2nd September the staff of officers dealing with these lands, and all records, &c., were removed to the Lands Department.

These lands can only be disposed of by leasing, and are dealt with under the provisions of the Church and School Lands Dedication Act of 1880, and the Church and School Lands Mining Acts of 1888 and 1889. The leases granted are principally for agricultural, pastoral, and mining purposes.

From

From Part A of Schedule LXXXIV it will be seen that the number of pastoral leases granted under the Church and School Lands Dedication Act of 1880, current on the 31st December, 1896, was 329, comprising an area of 244,071 acres 1 rood 7 perches, and returning a rental of £5,835 11s. 7d. per annum.

From Part B of Schedule LXXXIV it will be observed that the agricultural leases current on that date numbered 328, containing an area of 10,453 acres 3 roods 32 perches, the revenue derived being £1,738 1s. per annum.

In view of the contemplated legislation in regard to these lands, the ordinary transactions relating to pastoral and agricultural leases have been on a very restricted scale. From Schedule LXXXVII it will be seen that no leases were offered at auction, and that only 15 leases were let by tender, 14 being agricultural leases, containing an area of 40 acres 0 roods 17 $\frac{1}{2}$ perches, and 1 being a pastoral lease of 76 $\frac{3}{4}$ acres, the total rental derived being £13.

The applications lodged during the year for mineral leases numbered 16, covering an area of 970 acres. Of these 1 was declined, leaving 15 in course of action; 1 lease of 40 acres was granted for a rental of £10 per annum. The number of these leases current on the 31st December, 1896, was 6; the area included 284 acres 0 roods 1 perch; and the rental derived, £82 18s. 8d. (See Part A of Schedule LXXXV.)

For gold leases, 25 applications were received. Including the applications outstanding at the close of the year 1895, the number requiring action was 66. Of these 4 were declined or withdrawn, and 45 were granted, leaving 17 on which action had not been completed. The 45 leases that were granted comprised an area of 238 acres 2 roods, the rental obtained being £239. The leases cancelled during the year numbered 14, containing 81 acres, and 2 leases comprising 7 acres expired.

The gold leases current on the 31st December, 1896, numbered 106, the area included being 619 acres 3 roods 29 perches, and the rental obtained £678 16s. (For further details, see Part B of Schedule LXXXV.)

The leases current on the 31st December, 1896, which were granted for building and similar purposes, for specified periods, numbered 44, representing an area of 27 acres 2 roods 8 $\frac{3}{4}$ perches, the rental derived being £554 15s. (See Schedule LXXXVI.)

Three leases of a miscellaneous character, containing 28 acres 1 rood 28 perches, and returning a rental of £10 15s., were also current at the close of the year. (Schedule LXXXVIII.)

Cost of Survey.

Particulars as to cost of the various classes of measurements effected during the year 1896 by licensed surveyors paid on fees will be found in Schedule XCVI.

Chief Surveyor.

The Report of the Chief Surveyor and Director of Trigonometrical Survey is appended hereto.

WM. HOUSTON,
Under Secretary for Lands.
