* This return is from 1st January, 1896, to 31st July, 1896. Cooma office amalgamated with Goulburn, 1st August, 1896.

SCHEDULE XCV.

APPROXIMATE Statement of Area of Land Alienated and Unalienated in the Colony on 31st December, 1896.

	acres.
1. Area alienated in all forms prior to 1862	7,146,579
2. Area alienated by auction and after auction selection (including sales under deferred payments) from 1st January, 1862, to 31st December, 1896	11,025,208
3. Area alienated by improvement and special purchase during the same period	2,798,411
4. Area alienated by conditional purchase during same period for which deeds have issued	2,773,065
5. Area alienated under Volunteer Land Regulations of 1867, to 31st December, 1896, for which deeds have issued.....	167,945
6. Area alienated by all other forms during same period, including lands dedicated	785,650
Area alienated up to 31st December, 1896.....	21,696,858
7. Estimated area of unalienated land in the Colony on 31st December, 1896	173,941,422
*Estimated area of Colony, 310,372 square miles; or,	198,638,080
8. Area under incomplete conditional purchase up to 31st December, 1896, exclusive of forfeitures, lapsings, cancellations, disallowances, and voidances	20,212,812
9. Area comprised in homestead selections confirmed prior to 31st December, 1896, including conversions under section 20, Crown Lands Act of 1895	331,717

* Area computed from recent compilation of the map of the Colony (includes Lord Howe Island, 5 square miles).

Report of The Chief Surveyor to The Under Secretary for Lands.

Sir,

Department of Lands, Survey Branch, Sydney, 15 March, 1897.

I have the honor to submit for your information the Annual Report of the service performed in this branch of the Department during the year 1896.

Permanent Field Staff.

The permanent field staff attached to the Department comprised 59 officers, viz., 13 district surveyors, 35 salaried surveyors, and 11 assistant surveyors.

Retirement.

Mr. P. R. Donaldson, who filled the position of District Surveyor in the Grafton Board District, retired from the Public Service about the middle of the year.

Promotions.

Mr. R. M'Donald, District Surveyor at Armidale, was promoted to the position of Chairman of the Forbes Local Land Board.

Mr. E. MacFarlane, District Surveyor in charge of the Bourke Board District, was promoted to the position of Chairman of that District.

The three vacancies thus occurring on the list of district surveyors were filled by the promotion thereto of Mr. D. M. Maitland to Armidale, and Messrs. T. W. Conolly and E. Ebsworth, who for some time had been acting as district surveyors, to Bourke and Grafton respectively.

Transfers to Permanent Staff.

Two licensed surveyors and 4 assistant surveyors, previously employed on the temporary staff, were transferred to the permanent establishment.

Temporary Salaried employment.

One of the assistant surveyors on the permanent staff was employed the whole year on special duties, and was remunerated as a temporary salaried surveyor.

Reductions in staff.

Consequent on uniting the two Board districts of Goulburn and Cooma, the service of one of the district surveyors was dispensed with, under the report of the Public Service Board, thus reducing the number of district surveyors to 13.

The services of one of the salaried surveyors were also dispensed with under the Board's report.

Service performed for Commissioners for Taxation.

The District Surveyors were appointed District Commissioners under the Land and Income Tax Act of 1895, in order to conduct the assessment of lands liable to taxation; this business is still proceeding.

The services of Mr. Surveyor Perdriau, who is attached to the Metropolitan district, were at request of the Commissioners and by authority, appropriated for about eleven weeks in connection with assessment of waterside properties about the city of Sydney and environs.

Contract surveyors.

Ninety-eight licensed surveyors were employed in carrying out surveys under contract. In many cases only partial employment could be afforded owing to the falling off in survey work.

Inspection of contract surveys.

Thirty-eight reports on examination of surveys performed by licensed surveyors under contract were received, the results of the inspections being satisfactory (except in three instances), and showing that the surveys had been carried out in conformity with the departmental survey regulations.

Licenses under the Real Property Act.

The Board for granting licenses under the Real Property Act to surveyors held three meetings. One hundred and one renewals of the licenses were issued; first licenses were also granted in two cases, making the total number 103. The annual fee of £1 ls. was paid in each case, except in two instances which were specially exempted from payment.

Investigations for the Registrar General.

Twenty-five applications for certificates of title under the Real Property Act were referred to this Department by the Registrar-General for report as to any objection to the issue thereof. After the investigations had been made, the Registrar-General was apprised of the result in each case.

BOARD OF EXAMINERS FOR LICENSE TO SURVEY CROWN LANDS.

The system adopted in 1895, by which all the colonies of the mainland co-operated in the holding of concurrent and identical examinations for qualification of survey, has been continued; and, although no examination was held in March, a representative of the Board of this Colony, Mr. T. F. Furber, F.R.A.S., acted in conjunction with the Boards of the other colonies in preparing papers for examinations held in Melbourne, Adelaide, and Perth. Similar joint action was taken in preparing for an examination held at Sydney, as well as in the other Australian capitals in September last.

At the meeting held in September, this Board examined 12 candidates, of whom the following were successful, viz.:—

Henry Walter Small,
Robert David FitzGerald,
Robert Derwent Dixon,

Charles John Easton,
Robert Paul Atkins.

TRIGONOMETRICAL SURVEY.

The weather during the past year has been more favourable for survey than during 1895. Mr. J. Brooks, F.R.A.S., F.R.G.S., Surveyor-in-charge of Field Operations, used the 18-inch alt-azimuth at Dromedary, Mumbulla, and Tathra Stations; at the two first mentioned, astronomical observations were made for determining latitude and azimuth; at Tathra, the latitude and longitude were determined in 1887, and on this occasion the instrument was used to observe azimuth, thus completing the requirements for a geodetic station. At these stations, 1,160 horizontal angles were measured; and 239 stars were observed for latitude, 231 stars for azimuth, and 30 stars for time.

At Wandellow, Bunga, and Merimbula Stations a 10-inch instrument was used by Mr. Brooks, and 814 horizontal and 412 vertical angles were measured.

The magnetic declination as indicated by compass on a 6-inch theodolite was noted at five stations.

Reserves were measured by Mr. Brooks for protection of the stations at Wandellow, Mumbulla, Bunga, Bouruda, Bermaguy, and Merimbula.

Mr. Gregson's service.

The services of Mr. Surveyor Gregson, using a 10-inch theodolite, comprised the completion of observations at Jillamatong and Coolumburra, and the full series of observations at Currock-billy, Milo, Dampier, and Slapup Stations; also additional observations which were needed at Umaralla, Berlang, and Wyanbene Stations, and he commenced work at Wadbilliga; he thus measured 3,104 horizontal and 704 vertical angles, and noted 775 readings for magnetic declination.

Ten reserves for protection of stations were measured and marked, and five connection surveys were effected, by Mr. Gregson.

Preliminary work.

Mr. Healy, piling overseer, formed 37 new stations in the counties Harden, Buccleuch, Wynyard, Bland, and Clarendon, and connection surveys were made for all.

Mr. Gordon, piling overseer, formed 26 new stations under unusual difficulties in the counties Beresford, Cowley, and Wallace; connection surveys were also made for descriptions of stations, and where the stations are on Crown lands reserves were defined for their protection.

It may here be mentioned that amongst other duties Mr. Brooks marked standard lengths in the basement of the building used for head offices at Sydney, to be used for testing the steel bands and chains used in survey; and he also devised the apparatus for use in connection therewith.

TRIGONOMETRICAL

TRIGONOMETRICAL COMPUTING BRANCH.

Field books of angles at the following stations have been received, viz. :—Newstead, Dromedary, Mumbulla, and Tathra, observed at with 18-inch theodolite; and at Tomboyc, Jillamatong, Coolumburra, Currockbilly, Wandera, Comerang, Wandellow, Milo, Berjang, Wyanbene, Dampier, Slap-up, and Umaralla, taken with a 10-inch theodolite. The details of these observations have been reduced and entered in the record books, and the computations generally have been carried as far forward as the progress of the field work would permit.

Further work was done in the computation of the meridian series from the Lake George base, southerly to the Victorian border, and the results entered in the record books. The final adjustment of the triangulation of the county St. Vincent has been made, the whole being now co-ordinated. There has been provisional computation to fix stations in the counties of Dampier and Georgiana required for immediate map construction.

The astronomical observations of latitude and azimuth at stations Tianjara, Warden Head, Durras, and Newstead have been reduced; and the field-books of like observations at Dromedary and Mumbulla have been received.

Observations for determining the values of divisions of the levels used in the altitude and astronomical observations have been reduced, as well as those to determine the value of a revolution of the micrometer used in the latitude observations.

A map is appended showing the extent of the main triangulation at the end of the year.

The departmental stock of surveying and scientific instruments has been maintained in good condition. It was found necessary to send several theodolites, which had done several years' service, to the makers, Troughton and Simms, for renovation; the work has been well done. Also several aneroid barometers, which were in unserviceable condition, have been renovated and put into excellent order. And several arithmometers (for which there is a considerable demand) have been fitted with improved gearing, and other minor repairs effected. The stock of arithmometers is but sufficient to meet requirements, many of these instruments have been in use for long periods, and it is to be expected that continuous wear must have its due effect, and consequently additions to the stock will soon be needed; inquiries have therefore been instituted as to the best improved form of instrument.

DETAIL SURVEY FOR SEWERAGE OF SYDNEY AND ENVIRONS, AND COUNTRY TOWNS.

On the recommendation of the Public Service Board, the Detail Survey Branch was transferred to the Department of Public Works, on the 31st July.

As in the year 1895, seven surveyors were engaged upon the field work up to the time of transfer.

Of the work completed the greater portion was in the Lower Hunter District, at Newcastle, West Maitland, Waratah, and Merewether. In the environs of Sydney, Granville was commenced, and progress made at Drummoyne.

During the period mentioned the completed work was satisfactory, the number of separate holdings or tenements surveyed for the seven months being 1,715.

A standard traverse connected with the trigonometrical survey, embracing the populous parts of the Municipality of Granville was run, the cost being 1s. 6½d. per chain, for about 10¼ miles; this is lower than the average cost of similar survey, except that of Lambton and Waratah, which cost 1s. 3d. per chain.

With the advance of the survey into the less populous parts of the Newcastle environs, it was not to be expected that the low prices per tenement of the new work could be maintained, the cost for 1896 being 13s. 8d. per tenement, as compared with 12s. 7d. for 1895, and 10s. 7d. in 1894.

The area covered by new work for the seven months was 1,448 acres, against 2,683 acres in 1895 and 1,341 acres in 1894. Revision of survey for second edition of maps covered 1,033 acres.

Computed on an area basis also, the cost was slightly higher than in 1895, though lower than in any previous year, being 16s. 2d. per acre against 14s. 10½d. in 1895, £1 5s. 2d. in 1894, and £1 1s. 8d. in 1893.

In revisional surveys for second editions of lithographs, and immediately prior to the publication of first editions, 757 new tenements were fixed, as well as 1,450 material alterations over fifty-seven sheets.

The distribution of the work of the Detail Survey effected is indicated in the following tabular statement, which does not include revisional surveys prior to publication of first editions:—

New Surveys.			Surveys for Second Editions.		
Municipalities.	No. of Sheets.	No. of Tenements.	Municipalities.	No. of Sheets.	No. of Tenements.
Canterbury.....	3	7	Balmain.....	9	130
Drummoyne.....	17	211	Camperdown.....	3	69
Granville.....	12	206	Leichhardt.....	4	177
Merewether.....	10	531	Newtown.....	2	36
Waratah.....	22	351	Paddington.....	1	16
West Maitland.....	7	409	Petersham.....	1	27
			Sydney.....	9	124
			Waverley.....	1	36
			Woollahra.....	3	42
Totals.....	71	1,715	Totals.....	33	657

Incidental to the survey, a large number of details were fixed, which cannot well be enumerated in any tabular statement, such as the Sydney Hospital, additions to Parliament Houses, Supreme Court, and Registrar-General's Office, Fernhill and Waratah railway stations, bridge over Parramatta River, Waratah Court-house, and public school, wharfs, &c.

The standard levels of Granville, and detail levels over twenty-two sheets of survey in Waratah, were determined.

In

In addition to the completed work above mentioned, there was additional field-work, but particulars were not to hand at the date of transfer to the Works Department.

With regard to office work effected, one plan of standard survey and 78 plans, or sheets, of detail survey were drawn and completed; 34 plans were revised preparatory to the publication of second editions of the lithographs; additional particulars prior to first publication were placed on 16 plans; and the detail levels were noted upon 30 plans.

Fifty-four sheets of Sydney and Suburbs, and 2 of Newcastle, were traced ready for the production of lithographs.

The plans, &c., in the Branch were used to a large extent by officers in connection with the assessments for land taxation purposes, 1,377 plans and 54 field-books having been referred to by them; in addition to which, the public largely availed themselves of the information given, frequent references being made especially in connection with surveys under the Real Property Act.

Four maps are supplied, showing in blue tint the area surveyed during the first seven months in 1896, and, in red, the area surveyed prior to that date.

MISCELLANEOUS CHARTING BRANCH.

The business of this Branch has, on the whole, exceeded that performed in 1895. There has been a decrease in some items; in others, the increase has been mainly due to negotiating exchanges of land under the Crown Lands Act of 1895. One thousand two hundred and twenty papers relating to cases of this kind were dealt with; during the previous year there were 755.

The area scheduled for auction has been 46,950 acres, as against 51,105 acres in 1895.

The number of plans and tracings charted has been 2,921, at a cost of £204; in 1895 the number was £3,410.

The character of this work has changed since the Act of 1895 came into operation. The greater number of the plans now represent large subdivisions made in anticipation of Homestead Selection or Settlement Lease, instead, as formerly, of single portions in smaller areas measured for Conditional Purchase or Lease.

The number of miscellaneous papers dealt with shows an increase, the numbers being 8,506 and 9,356 for 1895 and 1896 respectively.

As a result of inquiry by the Public Service Board, the work connected with the proclamation of boundaries for Municipalities, Police, District Court, Petty Sessions, Licensing, and Circuit Court Districts was transferred from the Electoral Office to this Department. The work has been assigned to this Branch, and will require the whole attention of one draftsman for some time to come; for all the Police and various Court District boundaries require revision and adjustment to eliminate errors and discrepancies in descriptions, and for making the various boundaries coincident as far as may be desirable. This revision has been in hand for several months past; and as a preliminary, 95 illustrative diagrams have been prepared.

The important business of disposing of expiring pastoral leaseholds has received careful attention. Out of 241 leaseholds, the leases of which expired not later than the end of 1896, 188 have been fully dealt with (90 of these in 1895). Action is now proceeding on all leaseholds of which the leases expire between the end of 1896 and the end of 1898.

More progress was expected than has been attained with the compilation of the new register of reserves. This has frequently been laid aside to give attention to matters of more pressing importance.

It is anticipated that the work of this year will fully occupy the present staff.

COMPILING BRANCH.

Miscellaneous Division.—The compilation of county maps has received a large share of attention. Eight new maps have been completed, and of eleven other counties, first editions have been prepared.

The compilation and drawing of the new Colony map have been completed during the year, and the map brought up to date with the exception of part of sheet 6; and sheets 1, 2, 3, 4, and 7 have been photo-lithographed on the same scale with satisfactory results. The four remaining sheets will be photo-lithographed shortly, when the whole of the proofs will be revised and sent on for printing of a complete edition with as little delay as possible.

The area of the Colony computed from this map is 310,372 square miles—which includes Lord Howe Island, 5 square miles. The area of the Colony previously estimated was 310,700 square miles.

New compilations of the following county maps have been completed:—Narromine, Forbes, Harden, Leichhardt, Gregory, Hunter, Buccleuch, Windeyer. Maps of the following have been charted up and prepared for new editions:—Bland, Cunningham, Barrona, Ularara, Evelyn, Perry, Wynyard, Camden, Cook, Yungnulgra, Flinders, Northumberland, and St. Vincent.

Compilations of the following county maps were in hand at the end of the year:—Ashburnham, Bathurst, Roxburgh, Finch, Dampier, Georgiana, Baradine, Wellington, and Gresham. Standard maps in hand for charting up:—Urana, Cooper, and Denison.

Maps of the villages of Warratta, Blandford, Wrightville, and Fifield have been compiled and drawn; and maps have been prepared from surveyors' plans of the villages of Hermidale, Harrington, Cumborah, Reefton, Mount Allen, Ponto, Tichborne, and environs of Barmedman.

A map of the Metropolitan Land Board District has been completed.

Twenty-nine plans representing 295½ miles of feature and connection surveys have been charted.

A considerable quantity of minor miscellaneous work has also been done.

Parish Map Division.—The work for the year comprises 224 new compilations of parish maps, and 93 standard maps charted for new editions.

It should be mentioned that both Divisions of the Compiling Branch (especially the Parish Map Division) have been short-handed during the latter half of the year, draftsmen having been sent to country offices to meet the exigencies of departmental business.

LITHOGRAPHIC BRANCH.

A large number of plans of areas for settlement under the new forms of tenure provided by the Act of 1895 have been lithographed. Two hundred and ninety separate lithographs have been prepared and printed for issue simultaneously with proclamations of the settlement areas. The bi-chromate gelatine process has been continued with satisfactory results as regards both expedition and economy.

With reference to the sheets of Detail Survey required for sewerage works, which are under the heading of miscellaneous, it may be noted that on the completion of the sheets now in process of printing the lithography of this series of maps will almost cease. The Public Works Department, now charged with the Detail Survey, has decided to dispense, as far as possible, with lithographing sheets of new surveys.

The following returns show the details of lithographic operations for the year:—

Counties.

County maps show measured areas, roads, reserves, features, and all other information which is capable of delineation on a scale of 2 miles to an inch; they are published at 5s. per copy.

Twelve county maps were lithographed during the year, comprising 1,900 printed copies:—

Barrona	Dudley	Harden
Camden† (1 mile to an inch)	Dudley*	Northumberland
Cook† (1 mile to an inch)	Gregory	St. Vincent
Cunningham	Gregory*	Yungnulgra.

† Published at 10s. per copy.

Of these maps, those indicated by the asterisk are on the scale of 8 miles to an inch, which are printed for use in this office, but not for publication.

Towns.

Town maps show the general design, measured lands and names of purchasers thereof, reserves, and dedications within town and suburban limits. They are usually photo-lithographed from compilations prepared at this office or from the surveyors' original plans to the scale of 4 or 8 chains to an inch, and sold at 1s. per copy.

Fifteen town maps were lithographed during the year, comprising 1,400 printed copies:—

Barmedman	Cookamidgera	Ponto
Blandford	Cumborah	Stockinbingal
Campbelltown	Dubbo	Telcraree
Carroll	Harrington	Tichborne
Collarendabri	Hermidalo	Wallace.

Parishes.

Parish maps are compiled to a scale of 20 chains to an inch for office use, and then, with few exceptions, reduced to 40 chains scale for publication and sale at 1s. per copy.

Three hundred and twenty-four parishes were lithographed during the year, comprising 25,315 printed copies.

Auction Sale Plans.

Lithographs of all lands measured for auction are printed for use at auction sales.

One hundred and ninety-eight plans were lithographed during the year, comprising 16,968 printed copies.

Miscellaneous.

This class of work principally comprised the following items, viz.:—36 sheets of the detail survey for sewerage purposes in the cities of Sydney and Newcastle and municipalities of Newtown, Balmain, and Marrickville; 350 classified area plans, mainly for homestead selection and settlement lease purposes; 27 maps in connection with scrub clearing operations in the West Bogan Country; 10 maps of Land Board Districts; 13 maps showing parts of travelling stock routes, Jerilderie to Tocumwal and Narrandera to Wagga Wagga, for clearing purposes; maps of New South Wales showing railways with coach routes; also maps showing Land Districts, &c., in connection with new editions of Crown Lands Acts; and eight maps illustrating Annual Report of the Department of Lands for 1895.

Four hundred and fifty-two miscellaneous maps were lithographed during the year, comprising 76,765 printed copies.

Other Departments.

Maps, plans, and diagrams have been printed for the Departments of Chief Secretary, Public Works, and Railway Commissioners, comprising maps of New South Wales, City of Sydney, Port Jackson; Detail Survey maps of the municipalities of Alexandria, Randwick, Woollahra, and Waverley (18 sheets); diagrams of plain beam bridges (8 sheets); military map of the country between George's River and Broken Bay, &c.

Thirty-seven maps, plans, and diagrams for other Departments were lithographed during the year, comprising 15,269 printed copies.

Official Forms.

These forms comprise circulars, decisions, forms, and memoranda required for use at head-quarters and at country offices.

One hundred and thirty-five official forms were lithographed during the year, comprising 71,472 printed copies.

Contracts for lithography have been completed in value to the amount of £874 1s. 10d.

ROADS BRANCH.

The Roads Branch inquires into applications for survey and opening of roads through alienated land and Crown land held under lease, and deals with correspondence relating to roads and streets matters in general, *e.g.*, complaints of obstruction of roads, objections to proposed roads, and claims to compensation. The plans of roads are examined, catalogued, and approved in the district offices, and then forwarded to this branch, where proceedings are taken for proclamation under the Public Roads Act, or for resumption under the Crown Lands Act of 1889. Afterwards the roads are charted upon office plans and maps, and fully noted copies of the plans are furnished to the Department of Public Works and to the Registrar-General.

Land Boards' appraisements of compensation consequent on the opening of roads are dealt with, and action taken in respect of granting Crown land or unnecessary roads in lieu of land resumed.

Plans of streets surveyed for alignment on the applications of Municipal Councils are examined, catalogued, and approved in District Survey Offices, then forwarded to this branch, where the cases are prepared to conform with the requirements of the 128th section of the Municipalities Act.

Applications for permission to erect public gates under Act 39 Victoria No. 10 are considered and dealt with.

Applications under section 67 of the Crown Lands Act, 48 Victoria No. 18, for purchase of unnecessary roads, receive preliminary consideration, and when purchase has been completed all maps and office plans are noted.

During the year 478 applications for survey of roads and streets were received and dealt with; also 323 surveyors' reports (exclusive of reports transmitting plans of surveys); 282 road plans, showing 491 miles of road surveyed; 14 alignment plans, showing 74 streets as marked for alignment of carriage-ways and foot-ways; 45 applications for permission to erect 80 public gates; 59 applications for purchase of 113 unnecessary roads; and 454 objections and claims with regard to road and street surveys.

Information has been furnished for 3,509 letters, in reply to communications and inquiries from members of the public, with regard to roads and streets matters. There were 7,306 papers registered during the year, which, together with 709 papers relating to roads registered in other branches, make a total of 8,015 papers received and dealt with. In 116 cases action has been taken to grant Crown land or unnecessary roads in compensation for land resumed under 42nd section of the Crown Lands Act of 1889.

During the latter half of the year on the recommendations of the Public Service Board the work of examination and approval of road and alignment plans was transferred to the District Survey Offices, and the staff of the branch reduced. There are now 5 draftsmen less than prior to August, 1896.

OCCUPATION DRAFTING BRANCH.

Miscellaneous business in connection with clearing scrub in the West Bogan country has been carried out by this branch; also investigations with regard to the withdrawal of land from leasehold areas for settlement purposes in the Central and Western Divisions.

Notifications of withdrawals from 7 leasehold areas in the Central Division were published in the *Government Gazette*, covering an area of 174,400 acres.

Maps have been prepared for the Public Works Committee showing the tenure of lands within 20 miles on each side of the proposed railways from Nevertire to Warren, and from Manilla to Tamworth.

Particulars were furnished with regard to homestead leases in force within 20 miles on each side of the proposed railway from Condobolin to Broken Hill.

The year's work shows a slight increase in the number of surveys dealt with under the 143rd and 52nd sections. Seven cases have been completed representing the survey of 62½ miles of holding boundaries and dividing lines, towards the cost of which the sum of £83 1s. 6d. has been collected from the pastoral lessces.

A comprehensive index to the field-books of old surveys is now in course of compilation, which, when complete, will put this section of the records on a satisfactory basis.

Adjustments in connection with areas of occupation licenses and pastoral leases affected by withdrawals or reversions show a decrease. 829 cases have been dealt with; during the year 1895 the number was 1,095. In 144 instances a thorough investigation of the area under review was found to be expedient.

One hundred and thirty-four cases have been investigated as to proposed withdrawal of land from leasehold areas for settlement purposes under the Act of 1895.

Two hundred and seventy-two homestead, improvement, and other leases have been charted, and 380 plans noted

One hundred and seventy-five tracings and lithographs have been prepared for appraisalment and other purposes.

Eighty-five new occupation licenses have been charted on office maps.

Fifty-seven plans of abandoned resumed areas have been charted up and forwarded to the District Surveyors for report as to best means of disposal.

Two hundred and fifteen blocks of vacant Crown lands proposed to be offered by auction or tender for occupation license have been dealt with.

MISCELLANEOUS CONTRACT BRANCH.*

There were 3,727 lithographs and tracings prepared and issued from this branch (being 379 less than in the previous year); these are chiefly illustrative of tracts of country for settlement under the provisions of the Act of 1895; also maps (12) showing 300 miles of travelling stock reserve; maps (219) illustrative of exchange proposals; standard tracings (379) of plans of roads and streets; and plans (60) for notation purposes.

There were 475 maps and plans noted by this branch to relieve the Deeds Branch.

The total number of applications dealt with is 1,606; 1,161 were dealt with in 1895.

On the whole a larger amount of work has been done than in 1895.

CORRESPONDENCE AND RECORD BRANCH.

The duties carried out in this branch are shown hereunder:—

Papers received from other branches and dealt with	12,626
Papers, plans, tracings, &c., received by post	988
Instructions issued to surveyors	1,329
Reports received from surveyors and recorded	1,196
Letters written and despatched	1,010
Memoranda, tracings, plans, &c., sent to surveyors	5,609
Minutes written to the Under Secretary	790
Ministerial decisions noted	460
Telegrams written and despatched	141

Recording all leave taken by Survey Branch in the head office and country offices.
Three clerks are employed in this branch.

PLAN RECORD BRANCH.

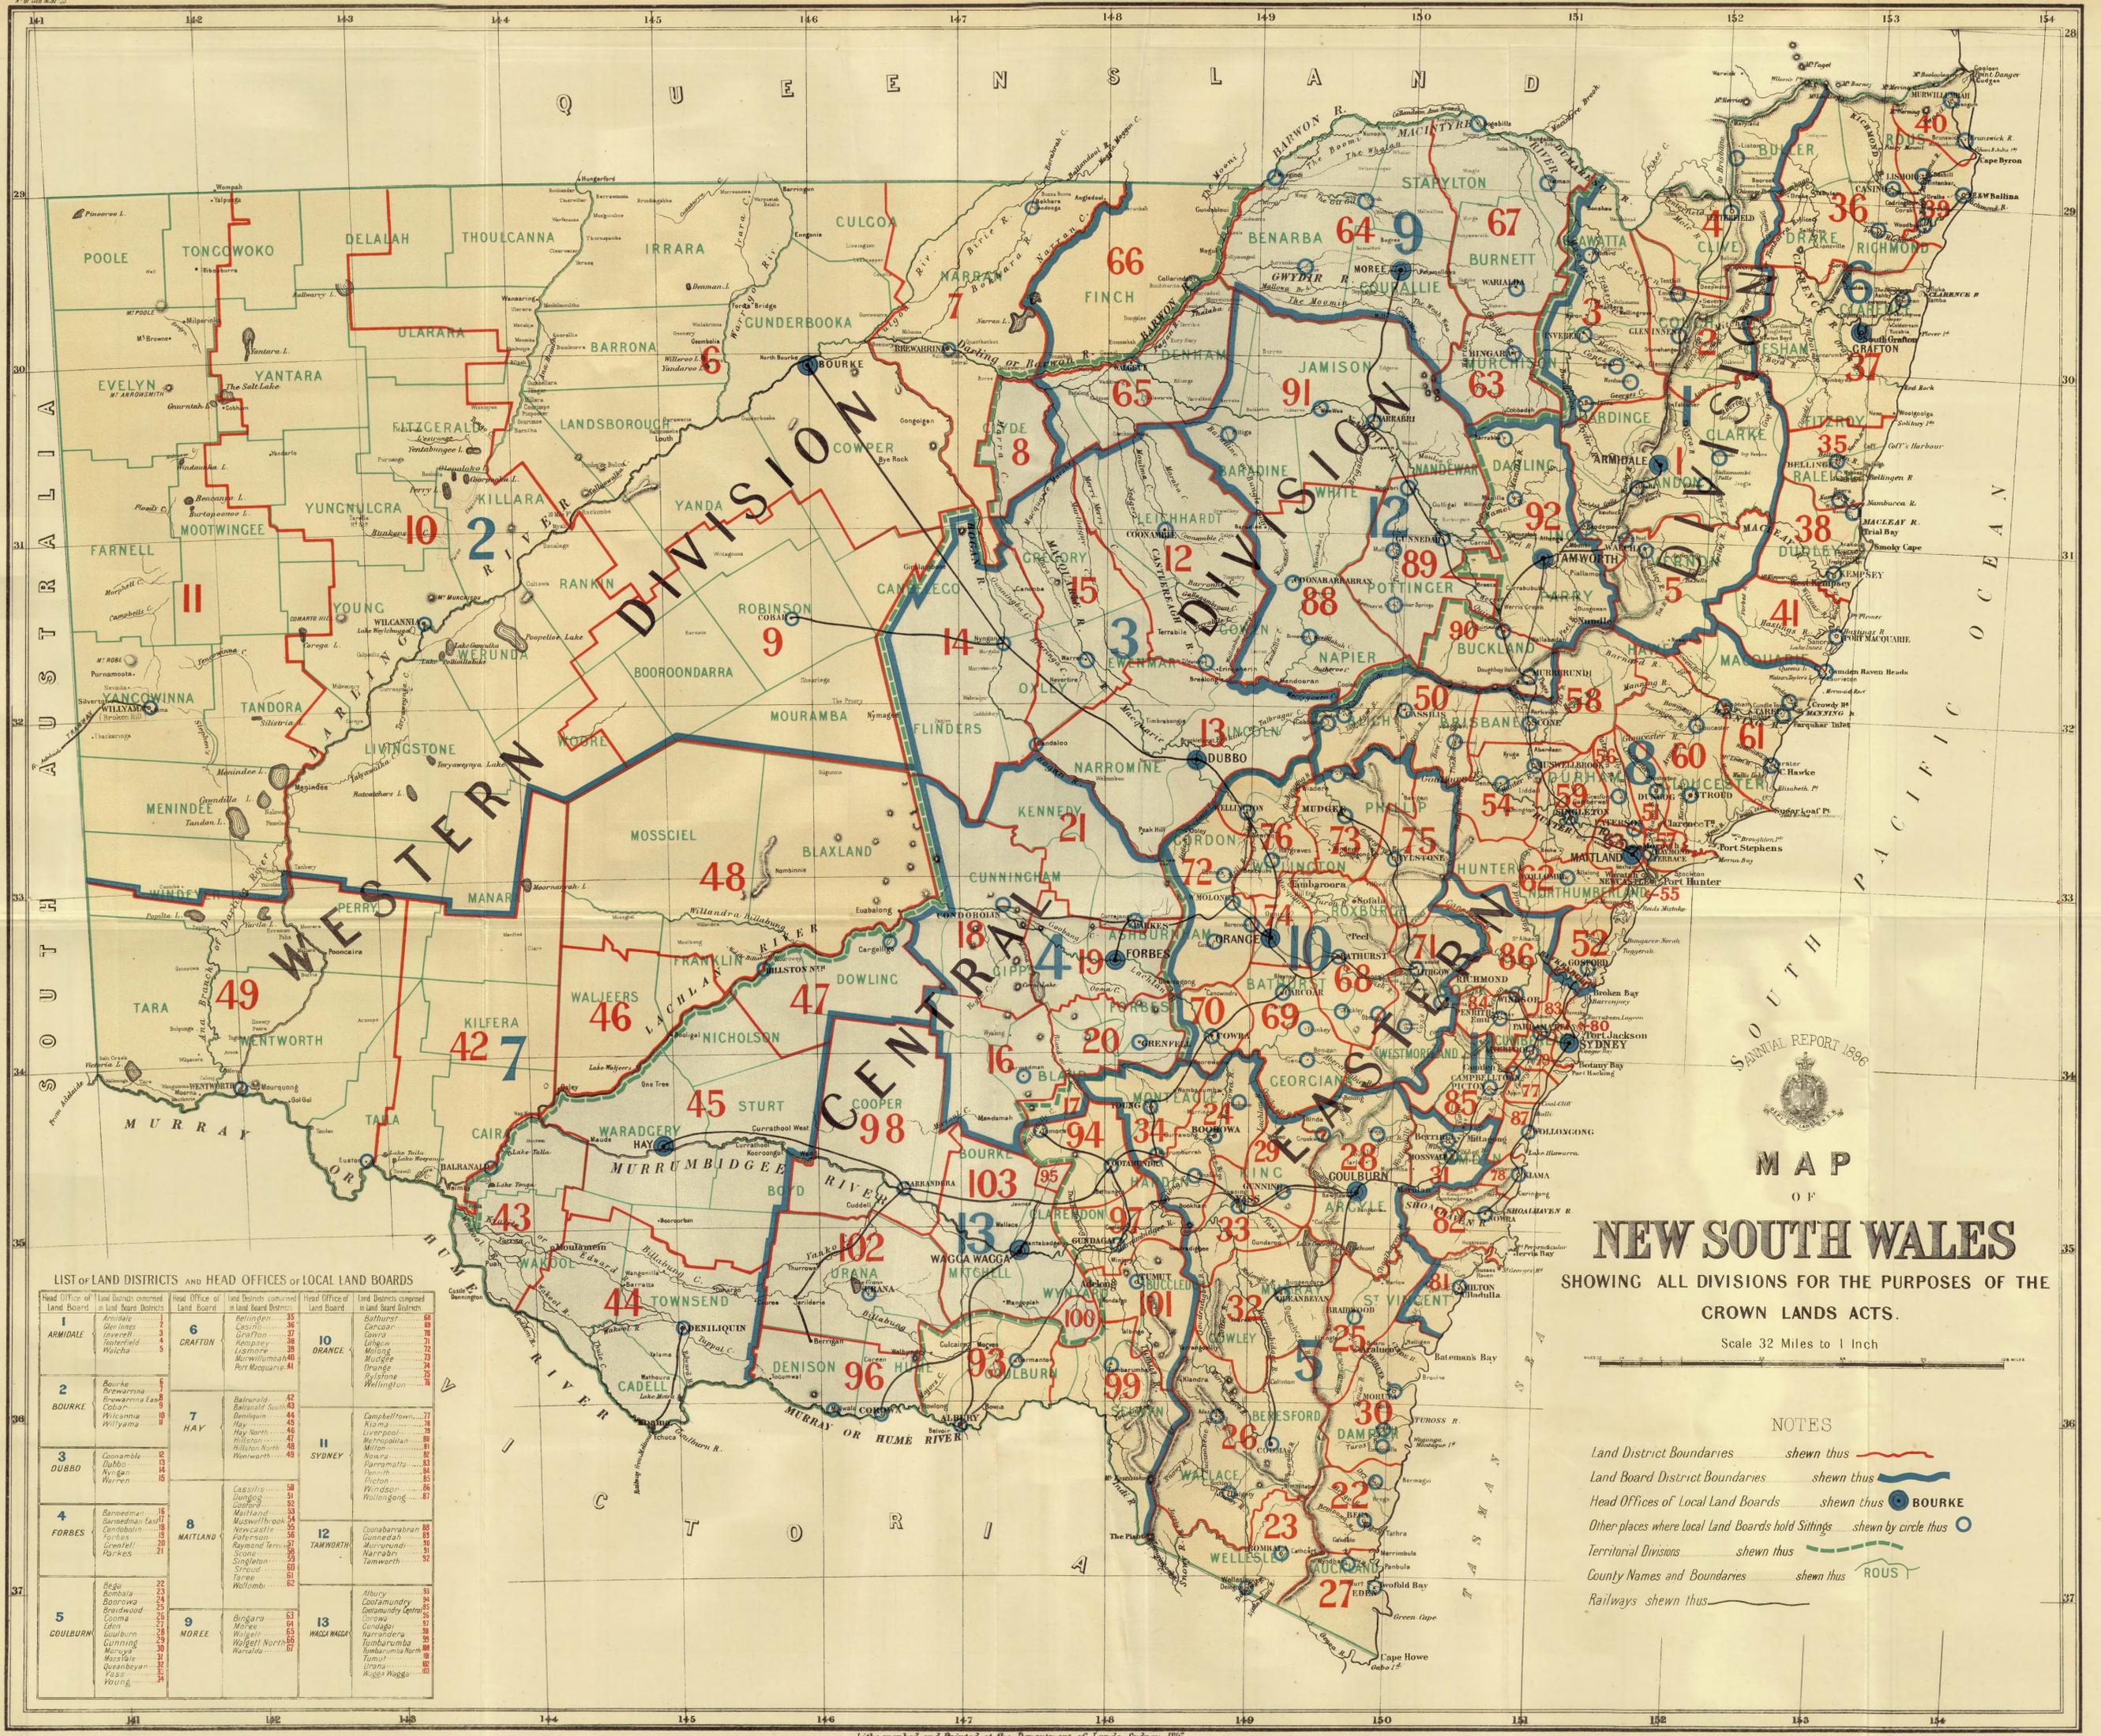

Approximate number of plans entered in books at end of year	274,068
Approximate number issued to and returned from officers in Metropolitan District Survey Office, Head Office, and Mines Department	133,260
Cancelled maps received	752
Plans sent to plan-mounter	5,640
Issued to Inquiry Branch... ..	724
Exhibited at counter	6,268
Surveyors' field-books in custody	6,700
Despatched to District Survey Offices	13,766
Returned from District Survey Offices	15,593
Applications from District Survey Offices (registered)	2,696
Memoranda returning plans from District Survey Offices (registered)	1,298
Draftsmen's memoranda to District Survey Offices for plans	1,330
Certified copies of plans received from District Survey Offices	2,900

PLAN-MOUNTING BRANCH.

The work performed comprises:—Plan-mounting, 16,719 pieces; rollers, varnishing, corners, lists, and miscellaneous, 1,834 pieces; binding, 864 pieces; parcels post, 890 pieces; altogether 20,307 pieces. The total for the previous year was 17,977 pieces. The increase is due partly to the requirements of the Land Tax Department, and partly to the demand for mounted lithographs in connection with the West Bogan scrub-clearing.

E. TWYNAM,
Chief Surveyor.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

REPORT FROM THE SELECT COMMITTEE

ON

CONSOLIDATION OF THE LAND LAWS;

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES NO. 8. WEDNESDAY, 12 MAY, 1897.

32. CONSOLIDATION OF THE LAND LAWS:—Mr. Carruthers moved, pursuant to Notice,—
(1.) That a Select Committee be appointed to inquire into and report on the Consolidation of the Laws relating to Crown Lands.
(2.) That such Committee consist of Mr. Copeland, Mr. Chanter, Mr. Moore, Mr. Ashton, Mr. Hayes, Mr. Millen, Mr. Gormly, Mr. Watson, Mr. Macdougald, and the Mover.
Debate ensued.
Question put.
The House divided.

Ayes, 56.

Mr. Cook,	Mr. Moore,	Mr. Wilks,
Mr. Neild,	Mr. Bavister,	Mr. James Thomson,
Mr. Young,	Mr. Morgan,	Mr. Watkins,
Mr. Lonsdale,	Mr. Lyne,	Mr. Gillies,
Mr. Brunker,	Mr. Thomas Fitzpatrick,	Mr. Law,
Mr. Affleck,	Mr. Cann,	Mr. Gormly,
Mr. Carruthers,	Mr. Molesworth,	Mr. J. O. J. Fitzpatrick,
Mr. Sydney Smith,	Mr. Watson,	Mr. McFarlane,
Mr. Dacey,	Mr. McGowen,	Mr. Edden,
Mr. Sleath,	Mr. Hogue,	Mr. Ewing,
Mr. Anderson,	Mr. Lec,	Mr. O'Sullivan,
Mr. Fegan,	Mr. Wright,	Mr. Mackay,
Mr. Garrard,	Mr. Smailes,	Mr. Carroll,
Mr. Gould,	Mr. Harris,	Mr. Ferguson.
Mr. Mahony,	Mr. Newman,	<i>Tellers,</i>
Mr. Rigg,	Mr. Millard,	
Mr. Travers Jones,	Mr. Bull,	Mr. Black,
Mr. Chaunter,	Mr. Griffith,	Mr. Hawthorne.
Mr. Simeon Phillips,	Mr. McLean,	
Mr. Wheeler,	Mr. Parkes,	

Noes, 8.

Mr. Miller,
Mr. Wood,
Mr. McLaughlin,
Mr. Keily,
Mr. A. B. Piddington
Mr. Ashton.
Tellers,
Mr. Hurley,
Mr. Perry.

And so it was resolved in the affirmative.

VOTES NO. 11. WEDNESDAY, 19 MAY, 1897.

- * * * * *
1. CONSOLIDATION OF THE LAND LAWS:—Mr Speaker informed the House that he had received from Mr. Copeland a letter, stating that, for the reasons therein given, he desired to resign his position as a Member of the Select Committee appointed to consider the subject referred. Whereupon, Mr. Carruthers moved, That Mr. Copeland be discharged from attendance upon the said Committee.
Debate ensued.
Question put and passed.

VOTES NO. 76. TUESDAY, 30 NOVEMBER, 1897.

4. CONSOLIDATION OF THE LAND LAWS:—Mr. Carruthers, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee for whose consideration and report this subject was referred on 12th May, 1897; together with Appendix.
Referred by Sessional Order to the Printing Committee.

 CONSOLIDATION OF THE LAND LAWS.

 REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 12th May, 1897, "to inquire into and report on the Consolidation of the Laws relating to Crown Lands," have agreed to the following report :—

Your Committee having held eight meetings and examined the following witnesses, viz., Mr. Thomas C. J. Foster, Barrister-at-Law, and Messrs. H. A. G. Curry, C. J. Saunders, W. H. Capper, R. H. De Low, J. R. Yorke, J. E. O'Dwyer, E. A. Bronsdon, J. P. McGuanne, and E. C. Landers, Officers of the Lands Department (whose evidence will be found appended hereto) beg to report as follows :—

1. That the Bill attached to this Report, and marked "A," is, according to the evidence, a true and faithful consolidation of the law relating to Crown Lands, and the Committee accordingly recommend the Bill as such to the Legislative Assembly.

2. That it has undergone careful revision by Mr. T. C. J. Foster, Barrister-at-Law, acting in conjunction with experienced officers of the Lands Department.

3. That no amendment of the law has been made, and the only alterations of verbiage which your Committee have sanctioned have been made as follows :—

Clause 108, sub-clause 3 ("Provided the Board may issue a final and, if necessary, dispense with the first certificate) before the expiration of ten years from the date of application for any such additional conditional purchase if the condition of residence attaching to such additional conditional purchase has been fulfilled before the expiration of such ten years."

Your Committee are of opinion that this is only declaratory of the law, and is in every way desirable, being in accord with the accepted interpretation and administration of the law.

Clause 135, sub-section 4, the words "*from and after*" are altered in the Bill to read "*on and after*," and the same alteration has been made in clause 253, sub-clause 4. This is a verbal alteration only, avoiding an existing ambiguity.

Clause 261, sub-clause (b), the words "*one sum*" have been substituted for the words "*one instalment*"; and in sub-clause (d) of the same clause the words "*from the date of the lease*" have been added.

In neither case is the law altered, but the verbiage is improved.

J. H. CARRUTHERS,
Chairman.

No. 3 Committee Room,
Legislative Assembly,
30th November, 1897.

PROCEEDINGS OF THE COMMITTEE.

WEDNESDAY, 30 JUNE, 1897.

MEMBERS PRESENT:—

Mr. Carruthers,		Mr. Hayes,
Mr. Watson,		Mr. Chanter,
	Mr. Macdonald.	

Mr. Carruthers called to the Chair.

Entries from Votes and Proceedings appointing the Committee, and referring to the resignation of Mr. Copeland as a Member of the Committee, read by the Clerk. Committee deliberated.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

WEDNESDAY, 10 NOVEMBER, 1897.

MEMBERS PRESENT:—

Mr. Ashton,		Mr. Moore,
	Mr. Hayes.	

In the absence of the Chairman, Mr. Ashton called to the Chair, *pro tem*. Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

WEDNESDAY, 17 NOVEMBER, 1897.

MEMBERS PRESENT:—

Mr. Carruthers in the Chair.		
Mr. Ashton		Mr. Hayes,
Mr. Gormly,		Mr. Chanter,
Mr. Moore,		Mr. Macdonald.

Thomas C. J. Foster (*Barrister-at-law*) called in, sworn, and examined.

Witness produced copy of Crown Lands Consolidation Bill, as revised by him; also, table showing how every section of every existing Act is dealt with by the Consolidation Bill.

[Adjourned till to-morrow at 3 o'clock.]

THURSDAY, 18 NOVEMBER, 1897.

MEMBERS PRESENT:—

Mr. Carruthers in the Chair.

Mr. Hayes,		Mr. Gormly,
Mr. Moore,		Mr. Ashton.

Thomas C. J. Foster, re-called and further examined.

Harris Adam Gray Curry (*Chief Inspector, Lands Department*), called in, sworn, and examined.

Witness withdrew.

[Adjourned till Tuesday next at 2 o'clock.]

TUESDAY, 23 NOVEMBER, 1897.

MEMBERS PRESENT:—

Mr. Carruthers in the Chair.

Mr. Hayes,		Mr. Moore,
Mr. Gormly,		Mr. Macdonald.

Charles James Saunders (*Inspector of Land Boards and District Survey Offices*), called in, sworn, and examined.

Witness withdrew.

William Henry Capper (*Clerk-in-charge of Conditional Sales Division, Lands Department*), called in, sworn, and examined.

Witness withdrew.

Robert Henry De Low (*Clerk-in-charge of Lease Division, Lands Department*), called in, sworn, and examined.

Witness withdrew.

John Richard Yorke (*Clerk-in-charge of Conditional Sales Branch, Lands Department*), called in, sworn, and examined.

Witness withdrew.

James

James Edmund O'Dwyer (*Clerk-in-charge of Miscellaneous Branch, Lands Department*), called in, sworn, and examined.

Witness withdrew.

Edward Arnold Bronsdon (*Clerk-in-charge of Alienation Branch, Lands Department*), called in, sworn, and examined.

Witness withdrew.

John Percy M'Guanne (*Clerk-in-charge of Miscellaneous Leases Branch, Lands Department*), called in, sworn, and examined.

Witness withdrew.

Edwin Canrobert Landors (*Clerk-in-charge of Occupation Branch, Lands Department*), called in, sworn, and examined.

Witness withdrew.

[Adjourned till To-morrow at 3 o'clock.]

WEDNESDAY, 24 NOVEMBER, 1897.

MEMBERS PRESENT:—

Mr. Carruthers in the Chair.

Mr. Hayes,		Mr. Gormly,
Mr. Moore.		Mr. Watson,
Mr. Ashton.		

Thomas C. J. Foster recalled and further examined.

Mr. Foster asked to be supplied with a copy of the evidence.

Resolved (on motion of Mr. Moore), That Mr. Foster be supplied with a copy of the evidence.

[Adjournment till To-morrow, at 3:15 o'clock.]

THURSDAY, 25 NOVEMBER, 1897.

MEMBERS PRESENT.—

Mr. Carruthers in the Chair.

Mr. Gormly,		Mr. Hayes,
Mr. Ashton,		Mr. Moore,
Mr. Macdonald,		Mr. Chanter,
Mr. Watson.		

Committee considered Draft Bill.

[Adjourned till Tuesday next at 2:30 o'clock.]

TUESDAY, 30 NOVEMBER, 1897.

MEMBERS PRESENT:—

Mr. Carruthers in the Chair.

Mr. Ashton,		Mr. Moore,
Mr. Chanter,		Mr. Macdonald,
Mr. Gormly,		Mr. Hayes.

Thomas C. J. Foster recalled, and further examined.

Witness withdrew.

The Chairman submitted copy of the Crown Lands Consolidation Bill finally revised.

Ordered to be appended. [*Appendix A*].

Chairman then submitted Draft Report.

Same read, amended, and agreed to.

Chairman to report to the House.

1897.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

CONSOLIDATION OF THE LAND LAWS.

WEDNESDAY, 17 NOVEMBER, 1897.

Present:—

MR. ASHTON,
MR. CHANTER,
MR. GORMLY,

MR. HAYES,
MR. MACDONALD,
MR. MOORE.

THE HON. JOSEPH HECTOR CARRUTHERS IN THE CHAIR.

Thomas C. J. Foster, sworn and examined:—

1. *Chairman.*] You are a barrister of the Supreme Court of New South Wales? Yes.
2. You have been entrusted with the work of finally revising the Crown Lands Consolidation Bill? Yes. T. C. J. Foster.
3. How long have you been engaged upon the work? A little over three months.
4. Have you been engaged upon it pretty constantly? Upon an average, ten hours a day. The work ^{17 Nov., 1897.} has been very severe, and has extended into the night.
5. Before you took up this work you had a fair amount of practice in the Land Court? Yes. I have had general experience in my profession, and I have had experience in the Land Court.
6. You have made yourself conversant with our land laws? Yes.
7. And you have acted as counsel for the Crown in many of the Lands Department cases? Yes.
8. When you took the work of revision in hand, there was in existence a fair draft consolidation? Yes.
9. You hand in a copy of the Bill as revised by you? Yes.
10. Do you feel prepared to give the Committee the assurance that this Bill is a fair consolidation of the existing law? Yes, I can do that. Of course, there are some typographical errors in it, because we rather rushed the Government Printer; but I shall have them altered.
11. Have you followed any well-established principle in carrying out the work of consolidation? Yes, generally. I may say that I took the Bill originally laid before the House, and went through it carefully, revising and correcting where I thought necessary, and checking all the clauses. Then I collaborated with Mr. Curry. Without his first Bill I do not know what amount of time would have been required for the work of consolidation. What he had done was most valuable, and, he being so thoroughly conversant with the land laws, knew what sections naturally ran together. Since then we have practically worked together, comparing notes at the end of each day. We have altered the shape of the original Bill considerably. In the first place, we have expanded the saving clauses. We found that there were several tenures created under the existing Acts, and that certain disqualifications and limitations applied to, perhaps, three or four of them, and we thought it better that these should each be referred to under a heading dealing with some particular tenure, so that any one who wanted to ascertain the law relating to that tenure would find it all in the same place. This remark applies particularly to the provisions relating to the alienation of land, and creating tenures by conditional purchase, conditional lease, sale, and so on. To each of these tenures certain conditions apply, and these conditions are put under the various headings of the tenures, so that if you want to know anything in regard to any particular method of alienation, you may find it all under one heading. To this arrangement, however, there are one or two exceptions, namely, where land reverts to a leasehold, upon the forfeiture of different tenures, and in regard to the ownership of improvements. The provisions relating to these matters were found to be too long

T. C. J. Foster. long to repeat in connection with every tenure, and they have been put under a miscellaneous heading, some of them being dealt with under the heading of "Ownership of Improvements," and others under the head of "Reverters."

17 Nov., 1897.

12. You have generally acted upon the plan of making each part of the Bill a full statement of the law relating to the subject matter of that part, repeating provisions where it is necessary to repeat them? Yes.

13. Have you avoided everything that might be called an amendment of the law? We have made amendments in the law in two instances, if indeed they can be termed amendments, and to them I wish to direct the attention of the Committee. One of these new provisions refers to additional conditional purchases made since the coming into force of the Act of 1895. It was found that there was really no provision for the issue of a certificate of conformity in regard to such conditional purchases. The only provision came under the Act of 1884, section 36, which allowed a like certificate as was issued on an original conditional purchase to be issued upon fulfilment of conditions; but additional conditional purchases made since the Act of 1895 carry a ten years residence, which, however, is cut down in various ways. We had to provide for this. Therefore, I have printed in the Bill, in *italics*, so that the attention of the Committee may be drawn to it, a provision which I think meets the case. The Act of 1884 said:—

A like certificate may be granted by such Board upon application of the holder of any additional conditional purchase when such Board shall be satisfied, after like inquiry, that all conditions applicable thereto, except that of payment of balance of instalments, have been duly complied with.

In regard to additional conditional purchases made before 1st June, 1895, the Bill provides:—

And a like certificate may be granted by such Board upon the application of the holder of any additional conditional purchase made before the first day of June, one thousand eight hundred and ninety-five, or any additional conditional purchase made out of a conditional lease applied for before the first day of June one thousand eight hundred and ninety-five, so soon as such Board is satisfied, after due inquiry, that all conditions applicable thereto, except payment of the balance of instalments, have been duly complied with, and notwithstanding that five years from the date of confirmation of the application for such additional conditional purchase may not have expired.

That provision embodies the provisions of section 36 of the Act of 1884, section 22 of the Act of 1889, and section 29 of the Act of 1895. Where a man has taken up an additional conditional purchase since the passing of the Act of 1895, if he is the person who has fulfilled the conditions on the original conditional purchase, his ten years of residence are reduced by a period not in any case amounting to more than five years. That would leave him really only five years of residence to perform; but even that condition of residence is reduced, or rather, as the Act terms it, it is waived. The Act says that the condition of residence is waived, so long as the person who took up the original conditional purchase still holds it with the additional conditional purchase. The result is, that if an original conditional purchaser has taken up an additional conditional purchase since the passing of the Act of 1895, he has no residence to perform, provided he still keeps the original conditional purchase. We had to deal with this case, and we therefore inserted the provision which is shown in *italics*.

And like certificates may be granted by such Board in respect of any additional conditional purchases applied for after the first day of June, one thousand eight hundred and ninety-five, or after the commencement of this Act, when such Board is satisfied, after due inquiry, that all conditions applicable thereto, except payment of the balance of instalments, have been duly complied with.

III. Provided that the Board may issue a final (and if necessary dispense with the first) certificate before the expiration of ten years from the date of application for any such additional conditional purchase if the condition of residence attaching to such additional conditional purchase has, by virtue of the provisions of section 84 of this Act been fulfilled before the expiration of such ten years.

I think this amendment was really necessary. I found the matter being talked about, and it seemed to be necessary either to leave it alone or to allow a determination to be come to in regard to it through the medium of a decision of the Land Court, when, perhaps, it might be more easily done in this way. The provision which I have inserted prevents any difficulty arising, and really only carries out the provisions of the Act of 1884, by expanding them to apply to selections taken up under the Act of 1895.

14. *Mr. Moore.*] This provision will not alter the existing law, that if conditions of residence have been fulfilled they will be waived? No; it alters nothing. It provides for the granting of a certificate, without making a double certificate necessary.

15. *Mr. Macdonald.*] And without making it necessary for a man to wait ten years? Yes.

16. *Mr. Moore.*] Are all the amendments of the existing law printed in *italics*? No; the next one is not.

17. But there are only two amendments, material or immaterial? Yes; that I am aware of. The next amendment is on page 60. Section 96 of the Act of 1884, says:—

Every lease shall be liable to forfeiture if any rent be not paid within the prescribed period, or upon breach of any condition annexed to such lease.

18. These are tremendously vague terms;—what is the meaning of the words, "liable to forfeiture"? There is nothing in the Act to say what they mean, and I could find no decisions interpreting them. What I gathered was, that if there were forfeiture the same proceedings would be taken in regard to leases as are taken in regard to conditional purchases. Clause 187 of the Bill provides that—

Every lease (whether granted before or after the commencement of this Act) shall be liable to forfeiture if any rent be not paid within the prescribed or allowed period —

I have added the words "allowed period," because certain conditions arise which allow a man to have his time extended.

or upon breach of any condition annexed to such lease; but —

These are the new words—

no forfeiture of any lease under this Act, or the Acts 1861–1896, shall take effect until the expiration of thirty clear days after notification by the Minister of such forfeiture in the *Gazette*.

That provision shows what the words, "liable to forfeiture," mean.

19. *Mr. Ashton.*] What is that provision an expansion of? It is an expansion of section 96 of the Act of 1884.

20. *Chairman.*] Those are the only amendments you have made? Yes; so far as I am aware.

21. Are there any other points you would like to refer to? Yes; there is another matter to which I should like to draw the attention of the Committee, and it has to do with validations. The Committee will

will know that at various times defects have been discovered—generally in view of legal proceedings—which have invalidated some conditional purchase, or series of conditional purchases, and Parliament has passed Acts validating these conditional purchases. In my opinion, and I state it broadly as a lawyer, I do not think validating Acts ought to be incorporated into a Consolidation Bill, because they are of no use for any purpose, except to show title in particular persons. If hon. members look at the saving clause, they will see that no harm can possibly be done by the repeal of these Acts. I have, however, put them into this Bill as a tentative measure, their provisions being embodied in clauses 307 to 327, and in clause 331. These provisions have been inserted under a heading which does not interfere with anything else in the Bill, but they are only inserted tentatively, because I wanted to ask the Committee if any useful purpose would be served by keeping them, and whether they feared that harm might be done by repealing them.

T. C. J.
Foster.
17 Nov., 1897.

22. *Mr. Macdonald.*] When you speak of their repeal I suppose you mean their omission? I have here a table showing how every section of every existing Act is dealt with by the Consolidation Bill. For instance, a short Act was passed to declare the meaning of the words "report of the Land Board." Under section 43 of the Act of 1889 extensions of pastoral leases could be granted upon the Land Board making a report as to the improvements, and it seemed to be the intention that because there were improvements upon the pastoral lease, the lessees should have a right to an extension of not more than five years. To declare the meaning of these words, the Crown Lands Act of 1889 Declaratory Act was passed.

23. *Mr. Hayes.*] That Act is now dead? Yes; its operation is exhausted, and the Act has been omitted from the Consolidation Bill because of that.

24. *Mr. Macdonald.*] It is not necessary to repeal that Act because it is already dead? The idea seems to be to clear the Statute Book, and to wipe away every unnecessary Act, and that being so, this Act should be repealed. Then again, the Crown Lands Purchases and Leases Validation Act validated a tremendous number of conditional purchases and leases, and to it were attached schedules containing the names of the persons holding these conditional purchases and leases. No practical purpose, however, can be served by keeping that Act alive. If you look at the saving clause of the Bill, you will find that it is a larger saving clause than even the Interpretation Act which was passed the other day. I consulted the Honorable C. G. Heydon on this matter and he said, "I advise you to look at the English Statutes Revision Acts." I found that those Acts went a little further than the Interpretation Act, and I said, "We will save everything, so that no one can be hurt." It will be seen, by looking at the saving clauses of the Bill, that the repeal of any Act shall not revive anything not in force or existing at the time, or affect the previous operation of any enactment repealed, or anything "duly done, suffered, or commenced, or contracted to be done," or affect the validity, invalidity, or consequences of anything already done or suffered. So that if a person has had his selection validated, you cannot go behind the validation. The repeal of the Validating Act does not affect anything that has been done under it. Therefore, I think that these Acts, having served their purpose, should be repealed. They are now of about as much use as an old Appropriation Act.

25. *Mr. Ashton.*] I find that you have treated section 36 of the Act of 1895, which deals with the reappraisement of special areas, as a lapsed section? Yes.

26. Upon the same principle as that upon which you have omitted the Declaratory Act, to which you have referred? In the table which I have handed in (*Exhibit B*), I say in regard to this section—

Partly operation exhausted; all rights are preserved in saving clause. The Act, 60 Victoria No. 2, still further reduces the annual payments.

If a man does not apply to have his annual payments reduced, they go on as before, but he can still apply for their reduction under the Conditional Purchasers Relief Act.

27. In clause 68, the Government is empowered to proclaim special areas, which it shall be lawful to conditionally purchase

at such prices (not being less than 30s. per acre).

Now a man may hold a special area for 22s. 6d. an acre; but there would be nothing to show how that price was arrived at. It seems to me that there may be a want of clearness in regard to this matter?

28. *Mr. Hayes.*] I notice that in many places—for instance, in clause 52, section J,—you refer to sections of existing Acts and to sections of the Consolidation Act. For instance, you say:—

Crown lands set apart under section 10 of the Crown Lands Act of 1895, or section 46 of this Act,

People in the country may think that these are separate provisions? The provisions are identical. In the section which you have quoted however, the land was set apart under section 10 of the Act of 1895, not under section 46 of this Act.

THURSDAY, 18 NOVEMBER, 1897.

Present:—

MR. GORMLY,
MR. ASHTON,

MR. MOORE,
MR. HAYES.

THE HON. JOSEPH HECTOR CARRUTHERS IN THE CHAIR.

Thomas C. J. Foster recalled and further examined:—

29. *Chairman.*] Have you anything to add to your evidence of yesterday? There is, perhaps, one matter to which I should draw the attention of the Committee, and that is the definitions that are given in the Bill of the terms, "Leasehold Area" and "Resumed Area." The only definition of those terms in the existing law occurs in section 4 of the Act of 1884. That section says:—

"Leasehold area" means that portion of a pastoral holding for which a pastoral lease may be granted under this Act.

T. C. J.
Foster.
18 Nov., 1897

T. C. J.
Foster.
18 Nov., 1897.

In clause 3 of the Bill I have expanded that definition, but always in accordance with judicial decision and the language of the Acts themselves. Where the Act says that such and such a piece of land shall revert to the leasehold area, it has been held in many decisions that that land becomes part of the leasehold area, although it was not "that portion of a pastoral holding for which a pastoral lease could be granted." For instance, take the case of a reserve within the external boundaries of a leasehold area. When that reserve is revoked the land reverts to the leasehold area, but it was not a "portion of a pastoral holding and for which a pastoral lease may be granted." Then, again, part of the Act of 1895 deals with the attachment of resumed areas to leasehold areas. The resumed area thus attached becomes leasehold area, though it is not a "portion of a pastoral holding for which a pastoral lease may be granted." I do not think it is going outside the work of consolidation to declare the meaning of a term like this. I have expanded the interpretation given in the Act of 1884 to read:—

"Leasehold area" means that portion of a pastoral holding for which a pastoral lease may have been granted under the Acts 1854-1896, or lands of which a pastoral lease may have been granted under such Acts, or may be granted under this Act.

That deals with the case of land which may be added to the leasehold area by a reverter of any kind.

Or lands within an expired pastoral lease in the Central Division, unless and until such lands have been notified as, or otherwise become, a resumed area; or a resumed area in the Western Division on, and during, attachment to leasehold areas.

Until something is done with an expired pastoral lease it remains leasehold area.

30. *Mr. Hayes.*] Is there any danger of going too far? Well, the definition might be allowed to stop at the words "granted under this Act." The same correction might be made in the new definition of the term "Resumed Area." Of course the Courts have been accustomed to give their decision without this expansion of the original definition.

31. *Chairman.*] Have you been careful to bring the Bill into line with the decisions that have been given by the Supreme Court in interpreting the existing law? Yes; where there is a decision which has not already been dealt with by Act of Parliament. In going through a long line of Supreme Court decisions, I found that in nearly every instance the Legislature had subsequently taken the matter up, and had amended the Law. In one instance, however, in regard to these decisions I have done what, according to the books, is true consolidation, and, following the decision *in re Baldwin*, 12 N.S.W. L.R., I say:—

A conditional purchase made under the provisions of section 22 of the Crown Lands Alienation Act of 1861, shall not be deemed to be an original conditional purchase within the meaning of this section.

These conditional purchases under section 22 of the Act of 1861 were made generally by pastoral lessees holding a grant. They had a small grant which they were allowed to extend to 320 acres. *In re Baldwin* the Court held that such a conditional purchase was not an original conditional purchase, so as to give the power to make additional conditional purchases. This case has not been provided for in the existing Act, and, according to the authorities, consolidation means bringing into line all the cases which have not been dealt with by the Legislature. I have put in this provision to show that such a conditional purchase cannot give the right to take up an additional conditional purchase. I might also mention that there is now a Bill before the House, which makes some amendments in the existing law, and which may cause the recasting of some of the clauses in the Consolidation Bill. Another thing to which my attention was drawn is this: The consolidation Bills already before the House appear to have consolidated the registration Acts, and in this Bill we have a reference to the registration Acts under the head of "Transfers." I shall have to alter that provision.

32. You have paid attention to the Interpretation Act which has been passed? Yes; the Interpretation Act is responsible for nearly the whole of the saving clause appearing in the Bill. Another matter I have to mention is this: If you take section 36 of the Act of 1884—and all these Acts have to be read together—you will find that after talking about giving a certificate in connection with an original conditional purchase, it says:—

And a like certificate may be granted by such Board upon application of the holder of any additional conditional purchase when such Board shall be satisfied after like inquiry that all conditions applicable thereto, except that of payment of balance of instalments have been duly complied with.

In clause 108, in a provision printed in italics, which refers to additional conditional purchases taken up after the passing of the Act of 1895, I say:

And like certificates may be granted by such Board in respect of any additional conditional purchases applied for after the 1st day of June, 1895, or after the commencement of this Act when such Board is satisfied after due inquiry that all conditions applicable thereto except payment of the balance of instalments have been duly complied with.

That provision does not go any further than the provision of the Act of 1884. Under the Act of 1895 an additional conditional purchaser has ten years' residence to perform where there is no reduction or waiver. The Act allows him to get certificates for the additional conditional purchase at the end of five and of ten years just as he gets a certificate for the original conditional purchase. The Act of 1884 says that "like certificates may be granted," so that the provision in clause 108 goes no further than the provision in the Act. There is also a proviso which deals with what may be called an omitted case. A man by reason of a reduction may be able to fulfil his conditions in less than ten years. If five years were taken off by reason of previous residence, he would be entitled to his certificate within five years; but there is no provision in the Act which says that he shall get that certificate. The Act only makes provision for two certificates—one at the end of five years and one at the end of ten years. This matter was not provided for because, I suppose, it was unforeseen.

33. *Mr. Ashton.*] Do you think there is any possibility of an amendment of the law having crept in inadvertently in the course of the literary transcriptions and alterations which have been made necessary by the work of consolidation? I think not; and I may say that I am sure not. Every possible care has been taken in checking the work, not once but several times. When I took part of a section out of an Act I marked that part, in order to be able to check my work, and in this way I am able to see what has been left out and what alteration has been made.

34. You are positive that in changing the language of the existing Acts you have brought about no change of meaning? Yes.

35. *Mr. Hayes.*] These changes of language have only been made in a few cases? Yes. They were necessary where several provisions were taken from different Acts, and were put together in order to make one sentence.

36. *Mr. Gormly.*] In the work of consolidation, I suppose you have taken into consideration the decisions of the Court in regard to the meaning of various parts of the Acts? Yes; but I have not felt justified in altering the language of the Bill to make the language conform to any decision.

T. C. J.
Foster.

18 Nov., 1897.

37. You have taken these decision into consideration, but you have adhered as strictly as you could to the wording of the existing Acts? Yes.

38. *Mr. Ashton.*] We are not to understand that you have made any change in the verbiage of any clause in consequence of any decision by the Court? No; I have not taken notice of any decision in that way, except of that *in re Baldwin*. These decisions interpret the verbiage of the existing Acts, but I did not consider myself justified in changing that verbiage so as to make it more clearly conform with the interpretation put upon it. If I had attempted to do that I might have been making new law.

39. *Mr. Gormly.*] You have, so far as possible, adhered to the language of the existing Acts? Yes.

Harris Adam Gray Curry, called in, sworn, and examined:—

40. *Chairman.*] What are you? I am Chief Inspector in the Lands Department.

41. How long have you been in the Department? About twenty-five years.

H. A. G.
Curry.

18 Nov., 1897.

42. What positions have you held there? Various positions in most of the branches of the Department. I have been in charge of a sub-branch in connection with improvement purchases; I was head of the conditional lease branch; I was at one time examiner of declarations, and I have acted as Under Secretary.

43. You have been a member of one or two Commissions? Yes.

44. When acting for the Under Secretary, you have attended to the business before Parliament? Yes.

45. You were in attendance at the House during the passing of the Act of 1895? Yes.

46. To you has been largely committed the first drafting of many of the Land Bills? Yes.

47. They have gone from you to the Parliamentary Draftsman? Yes; but I must not overlook the important part the Under Secretary plays in such matters.

48. You have made the land laws of the Colony your study? Yes, very largely.

49. You have an oversight of the briefs and statements of cases which go to the Land Appeal Court? Yes.

50. You have had large general experience in regard to the legal interpretation of the Crown Lands Acts and in drafting Bills, and you have had great practical experience of the operation of the law? Yes.

51. I suppose that experience has been of a general character, affecting conditional purchases, leases, auction sales, pastoral leases, reclamations, and all the miscellaneous work of the Department? Yes.

52. You have for a long time been engaged upon the work of consolidating our land laws? Yes.

53. For how long? The work has been taken up at odd times.

54. Have you been engaged upon it for twelve months? I have done it chiefly at night. The work has extended over twelve months.

55. You have devoted many hours in each week to it? Yes.

56. You have made many revises? Yes; there have been a very large number of revises.

57. The draft Bill which has been laid upon the Table of the House is your work? Yes.

58. Did you revise any portion of it with the Parliamentary Draftsman? Yes.

59. How many clauses? About ninety.

60. You have been collaborating with Mr. Foster in the final revision? Yes.

61. You have been in consultation with him almost daily? Yes.

62. Have you been careful to see that the consolidation fairly expresses the law as it now stands upon the Statute book? Yes.

63. You have heard Mr. Foster's evidence? Yes.

64. Have you anything to add to it in respect to any amendment which may possibly have crept into the consolidation? I heard what Mr. Foster had to say in regard to the certificate of conformity in connection with additional conditional purchases, and I agree with him that you can hardly call the provision in the Bill an amendment of the law. The provision simply says that when a man has fulfilled the conditions of his conditional purchase he shall get a certificate, and that seems to have been the accepted law from the very first.

65. That is the practice now? Yes.

66. There is nothing illegal in this practice? No; the provision in the Bill does not alter the conditions of the tenure; it simply says that when they are fulfilled (and the fulfilment is a matter for the Board to determine) the conditional purchaser shall be entitled to his certificate. It prevents postponement and delay in the granting of the certificate, that is all. I do not think it ought to be regarded as an amendment.

67. It really only puts into express language what is implied by the wording of the existing Acts, and what is the actual practice? Quite so.

68. It does not alter the accepted law? No.

69. Is there any other point you wish to speak on? No; I do not think so. A good many of the provisions of the Acts have been distributed; but we came to think that this would be rather an advantage. In the first draft, particular provisions, dealing with the disqualification of applicants and other matters, were kept together; but, looking further into the matter, this arrangement seemed to place some clauses so remote from specific chapter dealing with different holdings—say, settlement leases—that we thought it better to alter it. We thought that it might not occur to a man, who was looking up any particular chapter, to search through an earlier part of the Bill in order to ascertain if there were not certain disqualifications and limitations applying to him. It was thought better to make the different chapters as complete as possible, even at the expense of repeating several provisions.

70. You have made no verbal or other alterations which would bring the Bill into conflict with the decisions of the courts? No.

71. You have been careful to preserve the existing law, even where a manifest absurdity exists; for instance, although there is an evident omission in section 11 of the Act of 1895, you have left that omission in the Bill? Yes; the idea has been to exactly reflect the existing law. We have not added to any man's obligations, or relieved any man of his obligations.

72. Are you able to say that the work of administration would be materially lightened if this consolidating Bill were passed? Yes; I feel sure that it would.

- H. A. G. Curry.
18 Nov., 1897.
73. Would the bulk of the enactments be lessened? I think so, though I have not counted the exact number of clauses in the Consolidating Bill. The operation of a good part of the existing law is exhausted, and we have left out of the Draft Bill all exhausted provisions. It is only the living part of the law that we have embodied in the Bill. Putting aside some validating clauses (as to the advisability of retaining which there is some difference of opinion, and which we have inserted tentatively), every provision whose operation has been exhausted has been left out of the consolidating Bill.
74. I notice that in the later part of the Bill the cross-heads are not so numerous as in the earlier part;— have you not found that cross-heads lead to a better understanding of a measure? Yes; I like cross-heads myself.
75. Have you consulted with many of the officers of the Department in regard to this measure? Yes; very freely. I have accepted from them all the assistance I could get.
76. Has any suggestion been made by them which you would like to mention? No; a large proportion of the suggestions have been in the way of amendment. There was a disposition to point out defects which it was thought it might be within the scope of this Bill to remedy.
77. You have been careful to keep within the province of pure consolidation, and you have avoided all amendments? Yes; I am not conscious that there is any provision in the Bill which deserves to be called an amendment of the law. Of course, in any consolidating Bill, there must be some literary handling of the wording of the Acts which are being consolidated. But if the law now is A, B, C, this Bill does not make it A, B, or A, B, C, D. The Bill does not alter the law. Wherever the language of the existing Acts could be adhered to it has been adhered to as closely as possible. A provision in one Act may be qualified by a later Act, and may be further amended by a still more recent Act. It would be impossible to follow these provisions word for word without the result being very crude and confused. If one Act says a man can do A, and another Act says he cannot do A, but may do B, and a further Act says he cannot do B, but may do C, it would be sufficient to say simply that he can do C. This, however, while expressing the law, may involve an alteration of the actual text of the law. The language of the existing Acts has, however, been followed as closely as possible.
78. *Mr. Ashton.*] Do you think there is any reasonable probability of an amendment of the law having been made inadvertently in the course of these literal alterations? I do not think so. Our great aim has been to avoid making any amendment of the law.

TUESDAY, 23 NOVEMBER, 1897.

Present:—

MR. HAYES,	MR. MOORE,
MR. GORMLY,	MR. MACDONALD.

THE HON. JOSEPH HECTOR CARRUTHERS, IN THE CHAIR.

Charles James Saunders, called in, sworn, and examined:—

- C. J. Saunders.
23 Nov., 1897.
79. *Chairman.*] What position do you hold in the Lands Department? I am Inspector of Land Board and District Survey Offices. I was Chief Draftsman of the Department for eight years, and I had charge of one of the divisions of the Reserves Branch under the old administration.
80. How long have you been in the Lands Department? Twenty-three years.
81. Are you well acquainted with the working of the Crown Lands Acts? Yes. The different positions which I have held have brought me into contact with the administration of the Crown Lands Acts.
82. The office you now hold is one of the highest in the Department? It is.
83. You were associated with Mr. Curry in the work of assisting the Minister with the Crown Lands Bill of 1895? Yes.
84. And you have given assistance in connection with many amending Acts since? Yes.
85. What particular portions of the land law are you specially acquainted with? At the present time my special responsibility is in connection with exchange applications; but in the position of Inspector I have constantly under my notice difficulties that arise in connection with the decisions of the Appeal Court, or in other ways, as the procedure of the local offices has to be altered from time to time to harmonise with the law.
86. You have to do with the settlement provisions of the law? Yes; with all new areas coming forward for survey and classification.
87. You are well acquainted with the operation of the law affecting conditional purchases and settlements; and you have a great deal to do with the law affecting pastoral leases? Yes.
88. Have you gone through the Consolidation Bill which has been revised by Mr. Foster? Yes.
89. Carefully? Yes.
90. Did you go through the earlier drafts? Mr. Foster and Mr. Curry consulted me from time to time in order to get my views on various points, and to know what I thought upon different matters which they were embodying in the consolidation.
91. Not only have you gone through the Bill since it was referred to this Committee, but you were previously engaged in connection with this revision? Yes; I was consulted from time to time as points arose upon which it was thought I might have some special knowledge.
92. After your examination of the Bill can you give the Committee the assurance that it is only a fair representation of the existing Crown Lands Acts? I think it is a very fair representation of them.
93. Have you detected any amendment of or any departure from what you consider the existing law? No. There were two or three alterations which I desired to have made, but they were declined by Mr. Foster and Mr. Curry as going beyond the scope of consolidation.
94. Is there any other statement you desire to make? I should like to point out that it would be advisable to have new schedules prepared in lieu of the present schedules, describing the territorial divisions of the Colony. The existing descriptions are out of date.
95. Any description submitted must be accompanied by the assurance that there is no alteration of boundaries? Yes, I understand that. Of course the Minister may, by virtue of his own authority, cause alterations to be made in the boundaries of these divisions, but it would be more consistent to publish correct descriptions with the consolidation.

William

William Henry Capper, called in, sworn, and examined:—

96. *Chairman.*] What are you? I am Clerk-in-charge of the Conditional Sales Division, Department of Lands.
97. How long have you been in the Lands Department? Since 1873.
98. Have you had a good experience of the operation of the Crown Lands Acts? Yes, particularly with regard to conditional sales.
99. You have had to do with all the conditional sales alienations, and with the litigation arising out of and affecting the law relating to them? Yes.
100. Have you gone through the Draft Consolidation Bill, revised by Mr. Foster? Yes.
101. More especially with regard to the provisions affecting conditional sales? Yes, particularly with regard to the provisions affecting conditional sales, auction purchases, special sales—including rescissions of reservations and reclamations—and homestead selections after they have been applied for.
102. As a result of your examination of the Bill, can you give the Committee the assurance that it is a fair consolidation of the existing law in regard to these matters? Yes.
103. You have satisfied yourself as to that? Yes.
104. Have you carefully analysed the Bill to see that it contains nothing that may be called an amendment of the law? Yes.
105. Have you found anything omitted? The only matter that I brought under the notice of Mr. Foster and Mr. Curry was the question of the issue of certificates by the Minister, as provided for in the Act of 1895.
106. Certificates of what? Certificates of abandonment. The reason why I brought the matter under their notice was that the Minister had given a decision that this particular provision did not apply to selections made before the Act of 1895. I think it was intended to apply to all selections. Under the Act of 1884, a selector whose selection has been forfeited cannot take up another selection unless he gets a certificate of abandonment from the Land Board. The Local Land Boards in some instances refuse these certificates. When the Bill of 1895 was before the House, an amendment was put in—I think to give the Minister power to take the merits of any such case into consideration. After the Bill had become law, however, the matter was brought under your notice, and you decided that the provision in question did not apply to selections made and forfeited before the Act of 1895.
107. Are there any other points? No.
108. There is nothing you would like to add? No.
109. Nothing has been omitted from the Bill, and there is no amendment of the existing law? There is no amendment of the existing law, but under the head of "auction sales" there is an alteration—I do not know whether it is not really too small to be considered by the Committee—to which I invite attention. The old law provides that we must advertise for two months, and that we must not advertise for more than three months. That is a very absurd provision, because, very often after we have advertised a sale for two months, we have to postpone it. We cannot postpone it beyond a month, because the law says that we must not advertise for more than three months. That means that we have to withdraw the whole sale, and advertise it again for another two months. The question is whether this provision should not be omitted. It would simply be the omission of an absurdity.
110. *Mr. Macdonald.*] But it has not been omitted? Yes.

W. H.
Capper.

23 Nov., 1897.

Robert Henry De Low, called in, sworn, and examined:—

111. *Chairman.*] What are you? Clerk-in-charge of the Lease Division, Department of Lands.
112. As Clerk-in-charge of that division, to what particular business do you specially attend? I have to do with the granting of pastoral leases, occupation licenses, the making and undoing of reserves, annual leases, snow leases, scrub leases, improvement leases, inferior leases, special leases, the appointment of trustees for cemeteries and parks, and general grants for public purposes.
113. You have a particular acquaintance with the law which specially relates to those matters? Yes.
114. You have had the conduct of the Department of many cases in which the law has been tested? Yes.
115. I suppose you are thoroughly acquainted with the operation of the law, and its interpretation in regard to all these matters? Yes.
116. How long have you been in the Lands Department? Since 1874.
117. Have you gone through the Draft Consolidation Bill which is before the Committee? Yes.
118. Have you carefully studied it? Yes; and particularly those parts of it which embody the provisions with which the administration of which my Department is concerned.
119. As the result of your study of the Bill, can you give the Committee the assurance that the measure is a fair consolidation of the existing law;—does it amend the law at all? I think it is a very fair consolidation.
120. Have you detected any amendments of the law in it? No material amendments. In one place I notice that a few words have been introduced to make the law clearer.
121. The introduction of those words does not alter the meaning or the intention of the law? No.
122. Is there any omission? No.
123. Do you think that the administration in your Department under this Bill would be different from the work of administration under the existing Acts? There would be a difference only in point of simplicity.
124. It would be simpler to work under the Consolidation Bill? Yes.
125. In that respect, would the consolidation be of such benefit to the people who come to see you, and who write to you on land matters? In my opinion it would be of great benefit to them.
126. I suppose you find, in your work, that great complaints are made about the difficulty of understanding the law as it now stands? Yes, because the provisions bearing upon any particular point are distributed through so many Acts.
127. Some of them are, therefore, liable to be overlooked? Yes.
128. *Mr. Macdonald.*] What are the new words you say have been introduced? The words, "For grazing purposes" have been introduced into clause 199, sub-clause 1. They make the intention of section 85 of the Act of 1884 much clearer.

R. H. De Low.

23 Nov., 1897.

R. H. De Low. 129. *Chairman.*] Are you satisfied that these words preserve the intention and the operation of the existing law? Yes. The 85th section of the Act of 1884 has, as a heading, "Annual leases for pastoral purposes."

23 Nov., 1897.

130. It has been the universal practice of the Department to refuse annual leases, except for grazing purposes? Yes.

131. Annual leases are never applied for, except for grazing purposes? No.

132. *Mr. Hayes.*] Has the Department made any objection where people have desired to cultivate land held under annual lease? Whenever it becomes known that a man is cultivating the land he holds under annual lease, the Department calls upon him to take out a special lease for cultivation purposes.

133. *Chairman.*] Is there any other matter to which you would like to call our attention? No.

John Richard Yorke, called in, sworn, and examined:—

J. R. Yorke.

134. *Chairman.*] What are you? I am Clerk-in-charge of the Conditional Sales Branch.

23 Nov., 1897.

135. You are under Mr. Capper? Yes.

136. How long have you been in the Lands Department? About twenty-one years.

137. Are you well acquainted with the land laws? Yes; I have had a good deal of experience in connection with them.

138. Is it necessary that you should be especially acquainted with the law relating to conditional purchases? Yes.

139. Have you gone through the Consolidation Bill, now before the Committee? Yes; but more particularly with regard to the provisions affecting conditional purchases and homestead selections.

140. Do you find it a fair representation of the existing law? I think that it is. I have checked it with the existing law, and I have not been able to find that anything which ought to be included has been left out. It appears to me a very good representation of the existing acts.

141. Have you noticed any amendment or alteration of the law? In some cases it has been necessary to alter the wording slightly. For instance, you might have three sections of different Acts embodied in one clause of the Bill. In such a case, alteration of the verbiage would be necessary.

142. But is there any alteration of the law—any innovation? No, I think not. I think that the Bill fairly represents the existing law.

143. Do you wish to add anything? No. I have had an opportunity during the compilation of the Consolidating Bill to point out anything that I thought might be altered, and the alterations which I have suggested have been made.

144. Your examination of the Bill has not been confined merely to the few days during which it has been before the Committee; you examined the various rough drafts that were made? Yes; I have had an opportunity of doing so, and alterations have been made from time to time, so that I am not aware of anything in the Bill which now requires alteration.

145. *Mr. Macdonald.*] When you speak of alterations, you mean alterations of language, not alterations of meaning? Yes; there have been no alterations of the meaning of the law.

146. *Chairman.*] Can you give an instance of what you mean? Well, clause 109, which relates to the issue of a certificate in connection with a non-residential conditional purchase originally read—

The Local Land Board may, on the production to such Board . . . of evidence satisfactory to such Board that the conditions of improvements applicable to such conditional purchase have been duly fulfilled.

The revised clause, however, reads:—

The Local Land Board may, on the production to such Board . . . of evidence satisfactory to such Board that all conditions (except payment of the balance of instalments) applicable to such conditional purchase, have been duly fulfilled.

147. The clause now literally embodies the existing law? Yes.

148. It does not amend the existing law? No; the clause was altered to make it more fully conform with the existing law. Then in connection with clause 183, a similar alteration has been made to take into account the provisions of the Mining Act of 1889 as well as those of section 45 of the Act of 1884.

James Edmund O'Dwyer called in, sworn, and examined:—

J. E. O'Dwyer.

149. *Chairman.*] What are you? Clerk-in-charge of the Miscellaneous Branch, Department of Lands.

23 Nov., 1897.

150. How long have you been in the Department? Twenty-one years.

151. What work are you particularly engaged upon? My work is connected with homestead selections, settlement leases, special areas, reserves, dedications, and revocations thereof.

152. Are you well acquainted with the Crown Lands Acts? Yes, I hope so.

153. You have a good deal to do in the final stages with a great many of the complex questions arising under the land laws? Yes.

154. You have had a great deal of preliminary work to do in connection with these cases, and, I suppose, you have watched the decisions which have been given? Yes.

155. You know all the doubtful points under the existing law, so far as one can? Yes.

156. Have you gone through the revised copy of the Consolidation Bill? Yes.

157. Carefully? Yes. I devoted particular attention to those provisions which affect my particular work, and I went generally through the whole Bill.

158. You satisfied yourself that the Bill is a fair representation of the Crown Lands Acts? Yes.

159. Are there any amendments of the law made by it? So far as I can see it makes no amendment of the law; but there are some things which I think might be done with improvement, and without amending the law.

160. Will you give us an instance of what you mean? Well, clause 10, sub-clause *b*, contains this provision—

By declaring lands held under lease or license . . . which may be situated within any division, or partly within two divisions, to be wholly within any one division.

It seems to me that the wording of that clause might be improved.

161. What would you suggest? I think it would be better if it were provided that lands partly within two divisions might be declared wholly within one division, and that lands within one division might be declared to be in another division.

J. E.
O'Dwyer.

23 Nov., 1897.

162. Do you think that can be done under the law as it now stands? I think it can.

163. You are not sure about it? I should like to see it stated a little more explicitly. The clause as it stands simply says that land within one division may be declared to be within one division.

164. You think that the language may be made clearer? Yes.

165. Is there anything else? I think that the word "from" in clause 135, sub-clause 4—"a date from and after"—might be replaced by the word "on."

166. Is there anything else? I think that the marginal note of clause 148 requires alteration. As you will see by the cross heading, the clause refers to "residence by deputy before grant," whereas the marginal note reads "Homestead selections without residence before grant." Then again, in regard to the marginal note of clause 149—"dispensation of requirements of residence in certain cases"—it is not that the clause provides for a dispensation of the requirements of residence, because there must still be residence in a hamlet or village, but that the requirements of separate residence are dispensed with. Further on, clause 261, sub-clause *b*, speaks of a "payment being made in one instalment." The word "instalment" should obviously be altered to the word "sum" or "amount."

Edward Arnold Bronsdon, called in, sworn and examined :—

167. *Chairman.*] What are you? I am Clerk-in-charge of the Alienation Branch, Department of Lands.

E. A.
Bronsdon.

23 Nov., 1897.

168. How long have you been in the Department? For twenty-one years.

169. Have you had considerable experience in connection with the working of the Lands Acts? Yes.

170. Have you made yourself conversant with these Acts? Yes.

171. Have you gone through the Consolidation Bill now before the Committee? Yes, and more especially the clauses dealing with the subjects coming under my supervision.

172. You find the Bill a fair representation of the law as it stands? Yes.

173. Have you discovered any omissions? No.

174. Have you discovered anything that may be termed an amendment of the law? No; the only point I am in doubt about has reference to exchanges. Section 46 of the Act of 1889 makes it imperative for the Land Board to inquire into exchange cases; but that section was, to some extent, modified by section 47 of the Act of 1895. The question is whether it was really repealed by it. I do not know that clause 181 quite expresses the intention of the Act.

175. Is there any other point? This is a point which I brought under the notice of Mr. Curry. Clause 177 (*a*) speaks of "Crown lands to which no way of access is attainable." Those words are correctly copied from the existing Act, but would it not be better if the Committee made the clause to read, "Crown Land to which no road of access exists." That is what is meant. We have power to make a road of access to any land.

176. Is there anything else? I do not think there is anything else I could suggest which would not amount to an amendment of the present law. I have gone carefully through the Bill at each stage, and I think that it correctly embodies the existing law.

John Percy McGuanne, called in, sworn, and examined :—

177. *Chairman.*] What position do you hold in the Lands Department? I am Clerk-in-charge of the Miscellaneous Leases Branch.

J. P.
McGuanne.

23 Nov., 1897.

178. How long have you been in the Department? For twenty-one years.

179. What is your particular work? I have to deal with annual leases, special leases, residential leases, settlement leases, snow leases, scrub leases, trespass matters, and so on.

180. Have you gone through the Draft Bill now before the Committee? Yes.

181. Do you think that, so far as these subjects are concerned, its provisions fairly represent the existing law? Yes.

182. Have you any suggestions to make to the Committee? Nothing of very great importance. Clause 261, sub-clause *d*, says that

The lessee shall fence the farm within five years from the date of issue of the lease.

The words "from the date of issue of the lease" have been added. In the leases, a copy of which I have here, the words "from the execution of these presents" are used. Clause 266 requires revision, and I believe its arrangement is to be altered. Then clause 267 contains a proviso which I think is unnecessary :—

Provided that leases may be granted at a reduced rental to contractors of public works for purposes connected with the construction of such works during the term of contract.

At one time a minimum rental of £10 was insisted upon by law, but that minimum was done away with by the Act of 1895; and, inasmuch as there is now no minimum, it is not necessary to have this proviso. When the application is for a special lease it is the province of the Land Board to make the assessment, but that is provided for in another clause.

Edwin Canrobert Landers, called in, sworn, and examined :—

183. *Chairman.*] What are you? I am Clerk-in-charge of the Occupation Branch.

E. C. Landers.

23 Nov., 1897.

184. How long have you been in the Lands Department? Over twenty-five years.

185. Are you well acquainted with the laws relating to the occupation of Crown lands? Yes.

186. Have you gone through the Draft Consolidation Bill? Yes.

187. Do you think it a fair representation of the existing law? Yes.

188. There are no omissions and no amendments? No. The Bill is a fair embodiment of the existing Acts.

WEDNESDAY,

WEDNESDAY, 24 NOVEMBER, 1897.

Present:—

MR. MOORE,
MR. WATSON,

MR. HAYES.

MR. GORMLY,
MR. ASHTON.

THE HON. JOSEPH HECTOR CARRUTHERS IN THE CHAIR.

Thomas C. J. Foster re-called and further examined:—

T. C. J.
Foster.
24 Nov., 1897.189. *Chairman.*] You have heard the evidence given by previous witnesses? Yes.

190. Do you wish to supplement the evidence which you have already given? Yes; I think there might be some misunderstanding in regard to the answer given by me to Question 17.

The next amendment is on page 60. Section 96 of the Act of 1884 says:—

"Every lease shall be liable to forfeiture if any rent be not paid within the prescribed period, or upon breach of any condition annexed to such lease."

18. These are tremendously vague terms;—what is the meaning of the words, "liable to forfeiture"? There is nothing in the Act to say what they mean, and I could find no decisions interpreting them. What I gathered was, that if there were forfeiture the same proceedings would be taken in regard to leases as are taken in regard to conditional purchases. Clause 187 of the Bill provides that—

"Every lease (whether granted before or after the commencement of this Act) shall be liable to forfeiture if any rent be not paid within the prescribed or allowed period——"

I have added the words "allowed period," because certain conditions arise which allow a man to have his time extended.

"or upon breach of any condition annexed to such lease; but ——"

These are the new words—

"no forfeiture of any lease under this Act, or the Acts 1861-1896, shall take effect until the expiration of thirty clear days after notification by the Minister of such forfeiture in the *Gazette*."

What I really meant to say was that the words "by the Minister" are new words. The other words are in the existing Act, because section 136 of the Act of 1884 says—

No forfeiture of any purchase or lease under this Act or any Act hereby repealed shall take effect until the expiration of thirty clear days after notification of such forfeiture in the *Gazette*.

The following words of clause 187 are, however, an expansion of the provision of the existing law:—

But nothing in this Act shall require the notification of forfeiture of any annual lease or occupation license, the renewal rent or license fee of which shall remain unpaid on the 31st day of December.

That is the expansion I referred to in my previous evidence. I am not at all certain, however, that these words should be put into what is merely a Consolidation Bill.

191. *Mr. Ashton.*] The insertion of the words "by the Minister" is not a serious alteration; but the insertion of the other words which you have read is a doubtful amendment? Yes.

192. Until a forfeiture is declared by the Minister it does not take effect—in fact, it does not take effect until some time afterwards? Not until thirty clear days afterwards.

193. Then, to insert the words which you have read would bring about a serious disturbance of the existing law? Well, by a curious anomaly, an annual lease, in the first instance, is not an annual lease at all, but a lease for a shorter period.

194. *Mr. Hayes.*] Do you suggest the omission of the words you have read? Yes; I think they might be omitted. If a man wants to renew an annual lease, he has to apply for a renewal in September. The Act of 1884 provides that the rent of all new leases must be paid on or before the 30th September. The rent is then paid for the ensuing year. If a lessee does not pay the rent, there is this provision for forfeiture. Of course the lessee already in possession would still have a period of three months to run, namely, until the end of the year; but no one would be able to do anything with the land until the 31st December. The lessee might have paid his rent up to the 31st December; but, having applied for and obtained a new lease, he might not have paid the rent due for it on or before the 30th September. Under these circumstances a new applicant could not apply for the lease until January, and the whole of January would have to be lost, because the lease would not commence until the end of the month.195. *Mr. Moore.*] Are not these words an amendment of the existing law:—No forfeiture of any lease under this Act or of the Acts 1859-1896 shall take effect until the expiration of thirty clear days after notification by the Minister of such forfeiture in the *Gazette*.

? No; they are taken from section 136 of the Act of 1884. The words "by the Minister" have been added.

196. In the clause you speak of the Act of 1859? That is quite correct. What we have to look at are the schedules of the previous Acts. The interpretation clause shows what Acts are meant.

197. By the term "the Acts 1859-1896" you mean the Acts from 1859 to 1896 inclusive? Yes; we shall have to alter that to read 1897, because there is a new Land Bill before the House, and the Public Trust Act which has been embodied in the Bill is an 1897 Act.

198. It is not necessary for an annual lease to do anything more than lapse? The Clause makes provision for the case in which a man holding an annual lease obtains a renewal, for which he does not pay before September of the year previous to that for which he has obtained the renewal. The original lease runs on to the 31st December; but the renewed lease ought to be forfeited.

199. *Chairman.*] Have you adopted the alterations which were suggested by various witnesses yesterday? Yes; for instance, Mr. De Low drew attention to the fact that I had inserted the words "for grazing purposes" in clause 199, and I have now omitted those words. Exception was taken to the wording of clause 177:

Crown lands to which no way of access is obtainable.

But I have made no alteration there, because that is the wording of the existing Act. It was also suggested that the word "instalment" clause 261—"the payment being made in one instalment"—should be altered to the word "sum." I have adopted that alteration, although the clause as it stands embodies the literal wording of the Act of 1895.

200. It was suggested that the words "from and after" sub-clause 4, of clause 135, should read "on and after"? Yes; the words "from and after" mean that the date upon which the blocks referred to in the clause are available for selection must not be taken into consideration.

201. *Mr. Ashton.*] Then the word "after" would have the same meaning as the words "from and after"? *T. C. J. Foster.* Yes. I think you will find by referring to the Acts Shortening Act, and by taking the usual interpretation of time, that that is the meaning of the words "from and after." There is a doubtful matter in clause 55. That clause includes the words

Or unless (notwithstanding the non-obtaining of such certificate).

Parliament knew what its intention was when it passed the Act, and for my part I do not know that any harm will be done by leaving out the words I have quoted. There was a certificate of abandonment under the Act of 1884, and also under section 40 of the Act of 1895; but a decision was given by the Minister that this certificate only applied to conditional purchases taken up after the passing of the Act of 1895. I propose to omit from clause 55 the words:

Or unless (notwithstanding the non-obtaining of such certificate) such person has previously obtained the written approval of the Minister to make another original conditional purchase as aforesaid.

202. Those words have been added? Yes; and I do not know that any harm would be done by leaving them out. If conditional purchasers before the Act of 1895 have this right, they would still have it after we repealed the Act of 1895, because all their rights are reserved by the saving clause.

203. *Chairman.*] Are there any other points? Another matter to which my attention has been drawn is the new interpretation clause which we have thought it advisable to add. We have put into that clause definitions of the terms "residential conditional purchase" and "non-residential conditional purchase." These terms were never defined before. The first time that the word "non-residential conditional purchase" was used was in the Conditional Purchasers' Relief Act. Three synonymous terms have been used in the various Acts—"a conditional purchase under the Act of 1884," a "conditional purchase without residence," and "a non-residential conditional purchase," which last is the term everybody uses, and which I have used throughout the Bill, because it is a commonly-accepted term for which we have Parliamentary sanction. All additional conditional purchasers have to comply with conditions of residence; except those belonging to one class, namely, additional conditional purchasers who have taken up their land by virtue of an additional lease applied for before the Act of 1895. It was suggested in the Lands Office that there being no definition of the term "non-residential conditional purchase," a man who had a purchase of this kind might say, "I have a non-residential conditional purchase, because I have no conditions of residence to comply with." With regard to the definition of "Minister" contained in the interpretation clause, I wish to strike out all the words after the word "thereof." These words were put in because of the Public Trust Act, which was incorporated in the Bill; but I do not think they are required. I wish to add the words "assistant Crown lands agent" to the definition of "land agent." Those words are contained in the existing Act. Another alteration, which should be made, is the insertion of the word "by" in clause 336. The clause should read:

Or by depasturing stock thereon.

The word "by" is in the original Act. It has been omitted from the clause.

204. *Mr. Moore.*] Do you not think that in place of the term "Acts 1859-1884" and similar terms, which are apt to mislead people, it would be better to use the words "Acts 1859 to 1884 inclusive" or similar words? I think the phrase used in the clause is a short and convenient one, and its meaning is fully explained in the interpretation clause. The words "of age" should be inserted after the words "sixteen years" in the last line of clause 198.

205. *Chairman.*] What about the validating provisions? I do not know that I can say anything more about them than I have already said. I saw the Chief Justice upon the subject, and he said, "I would not put in any validating Act unless it altered some section of some other Act. If it did that I would make the Bill conform to that alteration, otherwise I would not incorporate any validating Act." I do not think that provisions of validating Acts ought to be incorporated in the Bill, and I think they ought to be repealed. I do not think their repeal would affect anything done under them. So far as I remember, I have attended to all the suggestions which were made yesterday.

TUESDAY, 30 NOVEMBER, 1897.

Present:—

MR. MACDONALD,
MR. ASHTON,
MR. MOORE,

MR. GORMLY,
MR. CHANTER,
MR. HAYES.

THE HON. JOSEPH HECTOR CARRUTHERS IN THE CHAIR.

Thomas C. J. Foster recalled and further examined:—

206. *Chairman.*] I understand that you wish to add to your evidence? I wish to inform the Committee that I have seen the Hon. C. G. Heydon in reference to the alterations which have been made in the Bill, and his opinion is that they are advisable and justifiable. *T. C. J. Foster*

207. Was it his opinion that they were fairly within the scope of consolidation? Yes.

30 Nov., 1897.

208. You pointed out to him the passages where the actual text of the existing Acts had been departed from? Yes.

209. Was he of opinion that the alterations which have been made are not alterations of the law? Yes.

210. He considered them to be thoroughly within the scope of consolidation? Yes.

211. And he recommended their adoption? Yes.

212. *Mr. Hayes.*] They do not amend the law in any respect? No. Mr. Heydon went rather carefully into the question of the advisability of incorporating the provisions of the Validating Acts, and he said that he considered that upon the whole we had adopted the wisest course in incorporating them, and that there were some instances in which it appeared that the whole force of these Acts was not yet exhausted. I produce the last revised copy of the Consolidation Bill, in which all the suggestions of the Committee have been attended to.

213. This represents your final revision of the Bill? Yes.

214. You have made provision for the continuance of the proclamations under the Acts 1859-1897? Yes.

215. And you have considered all the other points which were raised? Yes.

CROWN LANDS CONSOLIDATION BILL.

APPENDIX.

A.

[Appended by the Committee.]

TABLE showing the sections of the Acts dealt with in this Consolidation and the Corresponding Clauses in the Bill:—

Section of Act.	Clause of Bill.	Remarks.
CROWN LANDS ACT OF 1884 (48 Vic. No. 18).		
1	Short title. Commencement and Divisions of Act.
2	Repeals.
3	67.	
4	3, 272.	
5	4.	
6	5, 6.	
7	7, 132.	
8	9, 10.	
9	11.	
10	12, 13, 14.	
11	16, 17, 20.	
12	21.	
13	22.	
14	18, 21, 23, 42.	
15	25.	
16	15.	
17	28.	
18	Repealed by Crown Lands Act of 1889.
19	Repealed by Crown Lands Act of 1889.
20	26.	
21	52	Ss. i. As to that portion requiring the right of lease to be exercised within ninety days is exhausted by operation of time; ss. ix is repealed by the Act of 1889.
22	51, 55, 182.	
23	61.	
24	65, 66, 67, 68, 72, 97 ...	S. 18 of the Act of 1889 altered the area of special areas which could be conditionally purchased.
25	71.	
26	72.	
27	73.	
28	73.	
29	Repealed by the Act of 1889.
30	74.	
31	74.	
32	50, 82, 83.	
33	90, 91.	
34	Obsolete. All declarations of fulfilment of conditions were repealed by s. 32 of the Act of 1895. The portion relating to the Crown lands agent is provided under the Act of 1889 more fully.
35	97, 98, 100.	
36	107, 108, 109, 110, 111, 112.	
37	113.	
38	119.	
39	116.	
40	114.	
41	Repealed by Act of 1889.
42	67, 68.	The area of conditional purchases in special areas was extended by s. 18 of the Act of 1889.
43	Omitted	Superseded as to residence by s. 30 of the Act of 1895 as to residence, fencing, and improvements by s. 26 of the Act of 1889. The last clause is impliedly repealed by s. 30 of the Act of 1895.
44	Omitted	S. 32 of the Act of 1895 abolished all declarations of fulfilment of conditions.
45	183.	
46	161.	
47	50, 57, 65, 66, 67, 72, 89, 90, 92, 97, 109, 126.	Ss. v. is altered by 52 Vic. No. 7, s. 6, making the fencing date, not from the survey, but from the confirmation of the application.

Section of Act.	Clause of Bill.	Remarks.
48	67, 69	The portion as to report, survey, confirmation, &c., is superseded by s. 13 of the Act of 1889.
49	Repealed by Act of 1889.
50	Repealed by Act of 1889.
51	90	The proviso as to residence is superseded by the larger provision of s. 30 of the Act of 1895.
52	Operation exhausted.
53	Repealed by Act of 1889.
54	Operation exhausted.
55	Repealed by Act of 1889.
56	Repealed by Act of 1889.
57	80.	
58	81.	
59	Repealed by Act of 1889.
60	77.	
61	164, 168, 177, 277.	
62	164, 167.	
63	168.	
64	171, 173.	S. 54 of the Act of 1895 supersedes this as regards payments on completion of the reclamation.
65	168, 171.	
66	177.	
67	Repealed by No. 5 of 1897.
68	169, 178	As regards reclamations this section is superseded by the provisions of s. 54 of the Act of 1895.
69	Repealed by the Act of 1889.
70	Operation exhausted.
71	Operation exhausted.
72	Operation exhausted.
73	Operation exhausted.
74	Operation exhausted.
75	Operation exhausted.
76	Operation exhausted.
77	Operation exhausted.
78	189, 240, 242	Ss. II, v, and VII are the only portions having any operative power, the remainder of the section is either repealed as ss. VIII, or the operation is exhausted, or it is superseded by the Act of 1895.
79	Repealed by Act of 1889.
80	240, 242.	
81	246.	
82	189, 205, 214, 215, 220, 221, 223, 224.	
83	Repealed by Act of 1889.
84	211.	
85	199, 201.	
86	Repealed by Act of 1889.
87	Repealed by Act of 1889.
88	Repealed by Act of 1889.
89	266.	
90	266.	
91	344.	
92	268.	
93	193.	
94	194.	
95	195.	
96	120, 187.	
97	Operation exhausted.
98	184.	
99	205, 239.	
100	Repealed by Act of 1889.
101	274, 276.	
102	276, 278, 301.	
103	274, 277.	
104	290.	
105	290.	
106	291, 292, 293, 296.	
107	278.	
108	190, 191.	
109	274.	
110	Repealed by Act of 1889.
111	334.	
112	285.	

Section of Act.	Clause of Bill.	Remarks.
113	286.	
114	287.	
115	288.	
116	289.	
117	122, 125.	
118	127, 229, 245.	
119	128.	
120	130.	
121	64, 141, 213.	
122	49.	
123	62, 140, 210.	
124	60, 61, 197, 198, 209.	
125	115, 129, 228.	
126	102, 188.	
127	342.	
128	196.	
129	340.	
130	Repealed by s. 55, Act 1895.
131	335.	
132	337.	
133	336.	
134	338.	
135	118, 156.	
136	121, 163, 187.	
137	8.	
138	307... ..	Validation.
139	339.	
140	Repealed by Act of 1889.
141	332.	
142	185.	
143	222, 247.	
144	186.	
145	345.	Power to make regulations.

CROWN LANDS TITLES AND RESERVATIONS VALIDATION ACT OF 1886 (50 Vic. No. 21).

1	308... ..	Short title and interpretation.
2	309.	
3	310.	
4	311.	
5	312.	
6	313.	
7	314.	
8	315.	
9	316.	

CONDITIONAL PURCHASES AND LEASES VALIDATION ACT (50 Vic. No. 34).

1	317.	
2	318.	
3	319.	
4	320.	
5	321.	
6	Short title.

CROWN LANDS (AUCTION SALES BALANCES) ACT OF 1887 (50 Vic. No. 39).

1	164, 167.	
2	Short title.

CROWN LANDS AMENDMENT ACT OF 1887 (51 Vic. No. 11).

1	Short title, &c.
2	Superseded by Act of 1889.
3	Superseded by Act of 1889.
4	19.	

CONVERSION INTO MINING CONDITIONAL PURCHASES VALIDATION ACT OF 1888 (51 Vic. No. 29).

1	182.	
2	Short title.

Section of Act	Clause of Bill.	Remarks.
CROWN LANDS FURTHER AMENDMENT ACT (52 Vic. No. 7).		
1	Short title.
2	Operation exhausted.
3	Operation exhausted.
4	89, 92	The proviso is superseded by s. 33 of the Act of 1895.
5	Declarations of fulfilment of conditions were abolished by s. 32 of the Act of 1895.
6	90, 92	Same remarks apply to this as to the previous section.
7	
8	
9	90.	
10	
11	91.	
12	Repealed by Act of 1889.
13	92.	
14	93, 28.	
15	92.	
CROWN LANDS ACT OF 1889 (53 Vic. No. 21).		
1	Commencement and short title.
2	Repeals.
3	23, 28, 74	Substitution—the necessary amendments have been made in the sections.
4	Interpretation.
5	16	Saving clause protects any previous acts of the land board.
6	44, 168.	
7	28.	
8	29, 31, 32, 35, 36, 37, 38, 40, 41, 43.	
9	24, 39.	
10	52, 54, 322.	
11	48, 72, 161, 270.	
12	75, 76, 78, 96, 218, 220, 226.	The provision as to impounding is superseded by s. 55 of the Act of 1895.
13	75.	
14	80.	
15	75, 76.	
16	93.	
17	94	Declarations of fulfilment of any conditions were abolished by s. 32 of the Act of 1895.
18	68, 72, 97.	
19	52, 67.	
20	72.	
21	55, 223	The operation is exhausted of the greater part of this section.
22	97, 98, 107, 108	The declarations mentioned were abolished by s. 32 of Act of 1895.
23	91, 93, 332.	The first part of this section is superseded by s. 33 of 1895.
24	95, 227	Declarations of fulfilment of conditions were abolished by s. 32 of 1895.
25	52, 67, 70	The last part of the section dealing with the term of conditional leases is altered by s. 35 of the Act of 1895.
26	69, 72, 90, 92.	
27	77.	
28	96.	S. 45 of the Act of 1895 renders the provision with regard to minimum rental or fee unnecessary.
29	96, 231, 240, 242	Nearly the whole of this section has expired by effluxion of time; portion of ss. (c) is incorporated in the Bill, and the provision as to the issue of the lease.
30	192, 205, 239.	
31	240, 242.	
32	279, 304.	
33	199, 200, 301.	
34	187, 198, 209, 210, 214, 215, 217, 220, 221, 223, 224, 225, 228, 229, 233, 235.	

Section of Act.	Clause of Bill.	Remarks.
35	189, 250, 251.	
36	265.	
37	238.	
38	201.	
39	52, 54, 206, 239, 274, 275, 276, 278, 290.	
40	10, 11, 272, 276, 278.	
41	290.	
42	333.	
43	187, 240, 242, 246, 301 ...	Part relating to roads repealed by Act 5 of 1897. The operation as to extension of pastoral leases in Central Division is exhausted; as to Western Division the section is repealed, and provided for in s. 7 of the Act of 1895.
44	164, 301.	
45	203.	
46	180... ..	Partly superseded by s. 47 of the Act of 1895.
47	60, 86, 197.	
48	248.	
49	343.	
50	341.	
51	Omitted	Saving clause covers this.
52	247... ..	Power to make regulations, &c.
CROWN RENTS ACT OF 1890 (54 Vic. No. 11).		
...	Operation exhausted, repealed in Schedule.
CROWN LANDS ACT AMENDMENT ACT OF 1891 (55 Vic. No. 1).		
1	Short title.
2	328.	Interpretation.
3	328.	
4	331.	
5	331.	
6	330.	
7	48.	
CROWN LANDS ACT OF 1889 DECLARATORY ACT (57 Vic. No. 27).		
...	As the operation, so far as the report of the Board in s. 43 of the Act of 1889 is exhausted, this Act has served its purpose, and the operation is exhausted.
CROWN LANDS PURCHASES AND LEASES VALIDATION ACT (57 Vic. No. 9).		
6	324, 325, 326, 327 ...	The remaining sections apply to particular cases only, and are simply evidence of title, and have no place in a Consolidating Act.
7	327.	
RESERVES DECLARATORY ACT (58 Vic. No. 16).		
1	280.	
2	281.	
3	282.	
4	283.	
5	284.	
6	278.	
7	Special validation of Eliza Ann Notts' conditional purchase saving clause.
8	Short title.
CROWN LANDS ACT OF 1895 (58 Vic. No. 16).		
1	Commencement and short title.
2	Interpretation.
3	241.	
4	240, 246, 301.	
5	240, 301.	
6	244.	
7	204, 216, 232, 242.	
8	243.	

Section of Act.	Clause of Bill.	Remarks.
9	Operation exhausted.
10	46, 52.	
11	53.	
12	47.	
13	135.	
14	136, 143.	
15	147, 301.

No. , 1897.

A BILL

To consolidate the Laws relating to Crown Lands.

BE it enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Legislative Council and Legislative Assembly of New South Wales in Parliament assembled, and by the authority of the same, as follows :—

1. This Act may be cited as the "Crown Lands Consolidation Act, 1897," and is divided into Parts, Divisions, and Subdivisions, as follows :—

PART I.

GENERAL AND PRELIMINARY—s. 1-49.

DIVISION I.—Repeals and savings—s. 2.

DIVISION II.—Interpretation—s. 3.

DIVISION III.—Dealings with Crown lands—ss. 4-8.

DIVISION IV.—Divisions and land districts—ss. 9-11.

DIVISION V.—Land agents—ss. 12-14.

DIVISION VI.—District surveyors and other officers—s. 15.

DIVISION VII.—Constitution, jurisdiction of, and procedure before local land boards—ss. 16-26.

Chairman may deal with certain matters not in open court—s. 27.

DIVISION VIII.—Right of appeal to land court—s. 28.

DIVISION IX.—Land appeal court—ss. 29-43.

DIVISION X.—Determination of rents, values, &c.—ss. 44-45.

DIVISION XI.—Classification and survey of Crown lands—s. 46.

What deemed Crown lands under Mining Act—s. 47.

DIVISION XII.—Conflicting applications—Ballot—s. 48.

DIVISION XIII.—Illegal contracts a misdemeanour—s. 49.

PART II.

CONDITIONAL PURCHASES AND CONDITIONAL LEASES—ss. 50-134.

DIVISION I.—Conditional purchases—residential and non-residential—s. 50.

DIVISION II.—Land open to or exempt from conditional purchase or conditional lease—ss. 51-54.

Classified areas—s. 53.

Lands exempt from conditional lease—s. 54.

DIVISION III.—Qualifications, disqualifications, and limitations as to conditional purchases and conditional leases—ss. 55-64.

Limitations as to original conditional purchases—s. 55.

Limitation as to number of holdings—s. 56.

Limitation as to non-residential conditional purchases—s. 57.

Limitation as to area—s. 58.

Persons not natural-born or not naturalised—s. 59.

Married women—s. 60.

Minors—s. 61.

Rights and liabilities of minors—s. 62.

Good faith in applicants—s. 63.

Certain contracts void—s. 64.

DIVISION IV.—What areas may be purchased or leased—ss. 65-67.

Conditional purchases within special areas—s. 68.

Conditional leases—s. 69.

Preferent right of purchase in virtue of conditional lease—s. 70.

DIVISION V.—Applications for conditional purchases and conditional leases—ss. 71-76.

Land to be marked and described—s. 71.

Application—s. 72.

Receipt for deposit—s. 73.

Caveats against applications—s. 74.

Confirmation or disallowance of conditional purchase or conditional lease applications—s. 75.

Withdrawal of application—s. 76.

DIVISION VI.—Rules of measurement—s. 77.

DIVISION

Crown Lands Consolidation.

8

DIVISION VII.—Title to conditional purchases and conditional leases
—ss. 78–81.*Commencement of title—s. 78.**Trespass and impounding—s. 79.**Errors of description—s. 80.**Encroachments—s. 81.***DIVISION VIII.—Conditions—ss. 82–115.***Residence on conditional purchases and conditional leases—ss. 82–87.**Residence by married women—s. 86.**Residence by minors—s. 87.**Fencing and improvements—ss. 88–91.**Condition of improvements—s. 92.**Enclosing of roads or water-courses—s. 93.**Ring fences—s. 94.**Suspension of conditions—s. 95.**Rent and term of conditional leases—s. 96.**Payment of purchase money—ss. 97–101.**Overdue payments on conditional purchases or conditional leases—s. 102.**Reduction of payments—ss. 103–105.**Suspension of payment of instalments upon conditional purchases—s. 106.**Certificate of fulfilment of conditions of a conditional purchase—ss. 107–113.**Conditions attach on devolution of purchase—ss. 114–115.***DIVISION IX.—Forfeitures—ss. 116–121.***Forfeiture for breach of conditions—ss. 116.**Forfeiture for want of good faith—s. 117.**Forfeiture for false statements—s. 118.**Forfeiture for non-payment—s. 119.**Operation of forfeiture when forfeiture takes effect—s. 121.***DIVISION X.—Transfers of conditional purchases and conditional leases—ss. 122–130.****DIVISION XI.—Subdivision of conditional purchases—s. 131.****DIVISION XII.—Conversion of conditional purchases into mining conditional purchases—s. 132.****DIVISION XIII.—Conversion of conditional purchases and leases into homestead selections—ss. 133, 134.****PART III.****HOMESTEAD SELECTIONS—ss. 135–160.***Homestead selection areas—s. 135.**Disqualifications—s. 136.**Limitation as to number of holdings—s. 137.**Limitation as to area—s. 138.**Persons not natural-born or not naturalised—s. 139.**Rights*

- Rights and liabilities of minors—s. 140.*
Certain contracts void—s. 141.
Good faith in applicants—s. 142.
Applications for homestead selections—s. 143.

Withdrawals—ss. 189, 190.

Reserve from sale not a withdrawal—ss. 191, 192.

Ringbarking by lessees—ss. 193-195.

Promise of lease—s. 196.

Disqualifications as to married women and minors—ss. 197, 198.

DIVISION

DIVISION II.—Annual leases—ss. 199–202.

DIVISION III.—Artesian well leases—ss. 203, 204.

DIVISION IV.—Homestead leases—ss. 205, 236.

Lands exempt from homestead lease—s. 206.

Limitation as to number of holdings—s. 207.

Limitation as to area—s. 208.

Persons not natural-born or not naturalised—s. 209.

Rights and liabilities of minors—s. 210.

Pastoral and homestead leases not to be held in combination—s. 211.

Good faith in applicants—s. 212.

Certain contracts void—s. 213.

Applications for homestead leases—s. 214.

Area of homestead leases—s. 215.

Term of homestead leases—ss. 216–217.

Commencement of title—s. 218.

Trespass and impounding on homestead lease—s. 219.

Applications, how dealt with—s. 220.

Non-acceptance of homestead lease—s. 221.

Survey of homestead lease—s. 222.

Conditions of homestead lease—ss. 223–226.

Suspension of conditions—s. 227.

Cases of death, lunacy, &c.—s. 228.

Transfer and sub-letting of homestead leases—s. 229, 230.

Miscellaneous provisions re homestead leases—ss. 231–234.

Surrender of homestead leases—s. 235.

Forfeiture of homestead lease for want of good faith—s. 236.

DIVISION V.—Improvement leases—s. 237.

DIVISION VI.—Leases of inferior lands—s. 238.

DIVISION VII.—Pastoral leases—ss. 239–245.

Lands exempt from pastoral lease in Central or Western Division—s. 239.

Pastoral leases in the Central Division—s. 240.

Power of withdrawal from Central Division pastoral leases—s. 241.

Pastoral leases in the Western Division—s. 242.

Attachment of resumed area to leasehold area in Western Division—s. 243.

Power of withdrawal from Western Division pastoral leases—s. 244.

Transfers of pastoral leases—s. 245.

DIVISION VIII.—Occupation licenses—s. 246.

DIVISION IX.—Survey of leasehold and resumed areas—s. 247.

DIVISION X.—Residential leases—s. 248.

DIVISION XI.—Scrub leases—ss. 250–252.

DIVISION

DIVISION XII.—Settlement leases for agriculture and grazing—*ss.* 253-264.

Settlement lease areas—s. 253.

Limitations as to number of holdings—s. 254.

Limitation as to area—s. 255.

Persons not natural-born or not naturalised—s. 256.

Good faith in applicants—s. 257.

Applications for settlement leases—s. 258.

Commencement of title—s. 259.

Trespass and impounding—s. 260.

Issue of settlement leases—ss. 261-263.

Forfeiture of settlement lease for want of good faith—s. 264.

DIVISION XIII.—Snow leases—*s.* 265.

DIVISION XIV.—Special leases—*ss.* 266-271.

PART VI.

CITIES, TOWNS, AND VILLAGES, RESERVES, DEDICATIONS.—
ss. 272-300.

DIVISION I.—Proclamation of cities, towns, and villages, &c.—*s.* 272.

DIVISION II.—Alteration of designs of cities, towns, &c.—*s.* 273.

DIVISION III.—Reserves—*ss.* 274, 275.

DIVISION IV.—Revocation of reserves—*ss.* 276-279.

DIVISION V.—Reserves declaratory—*ss.* 280-284.

DIVISION VI.—State forests—Timber reserves—Licenses—Permits—
ss. 285-289.

DIVISION VII.—Dedications—*s.* 290.

DIVISION VIII.—Trustees may be appointed—*ss.* 291-299.

Trustees to report to Minister—s. 297.

Inspection of books and documents—s. 298.

Land may be entered upon—ss. 299-300.

PART VII.

MISCELLANEOUS—*ss.* 301-345.

DIVISION I.—Ownership of improvements—*s.* 301.

DIVISION II.—Tenant-right in improvements—*s.* 302.

DIVISION III.—Forfeited lands containing improvements subject to
tenant-right or ownership—*s.* 303.

DIVISION IV.—Reverters—*s.* 304.

DIVISION V.—General power of validation of purchases and leases—
s. 305.

DIVISION VI.—Validation of conditional purchases and leases in
special cases—*ss.* 307-327.

DIVISION VII.—Reversal of forfeitures—*ss.* 328, 329.

DIVISION VIII.—Waiver of forfeiture—*s.* 330.

DIVISION IX.—Reversals of forfeitures prior to the fourteenth day of
October, one thousand eight hundred and ninety-one—*s.* 331.

DIVISION X.—Boundary fences—*s.* 332.

DIVISION

- DIVISION XI.—Resumption for canal, &c.—s. 333.
 DIVISION XII.—Roads of access—s. 334.

 DIVISION XIX.—Acts of Surveyor-General—s. 341.
 DIVISION XX.—Copies of documents to be evidence—s. 342.
 DIVISION XXI.—Suits by the Crown—s. 343.
 DIVISION XXII.—Royalty on coal from mineral leases—s. 344.
 DIVISION XXIII.—Regulations—s. 345.

DIVISION I.—Repeals and Savings.

2. On and after the day when this Act takes effect the Acts mentioned in Schedule I hereto are repealed to the extent therein expressed :

Provided that such repeal shall not—

- (a) revive anything not in force or existing at the time at which the repeal takes effect ; or
- (b) affect the previous operation of any enactment so repealed or anything duly done, suffered, or commenced, or contracted to be done under any enactment so repealed ; or
- (c) affect the validity, invalidity, or consequences of anything already done or suffered under any enactment so repealed ; or
- (d) affect any right, title, privilege, obligation, liability or disability acquired, accrued, or incurred under any enactment so repealed ; or
- (e) affect the right to exercise any power conferred, or the obligation to fulfil any duty imposed by any enactment so repealed, in respect of anything duly done, suffered, or commenced to be done or omitted to be done, or in respect of any right, privilege, obligation, liability, or disability, acquired, accrued, or incurred before the commencement of this Act under any enactment so repealed ; or
- (f) affect any penalty, forfeiture, or punishment incurred in respect of any offence committed against any enactment so repealed ; or
- (g) affect any investigation, legal proceeding, or remedy in respect of any such right, title, privilege, obligation, liability, penalty, forfeiture, or punishment as aforesaid ; or
- (h) affect any notice, proclamation, reservation, dedication, or setting apart, published, issued, or made before the commencement of this Act ;
- (i) require the re-establishment, or re-definition of the boundaries of any land district established before and existing at the commencement of this Act ;
- (j) require the reappointment of the president or any other member of the land appeal court, or the registrar of such court, or any chairman of any land board, or any member of such board, or any district surveyor, or land agent, or other officer appointed before, and holding office at, the commencement of this Act ;

(k)

(k) affect any appointment, order, rule, application, affidavit, or award made, or any summons or writ issued, or any warrant granted, or any notice or certificate given under the said Acts or any of them before the commencement of this Act; and any such investigation, legal proceeding, or remedy may be instituted, continued, or enforced, and any such penalty, forfeiture, or punishment may be imposed and enforced, as if this repealing enactment had not been passed.

And any notice or proclamation made under the Acts 1859-1897 and not revoked before the commencement of this Act shall be deemed to have been sufficiently made for all purposes of this Act.

And any appointments made and not revoked before the commencement of this Act, and the establishment or definition of the boundaries of any land district made, and not revoked or altered before the commencement of this Act, shall be deemed to have been sufficiently made, established, or defined for all purposes of this Act.

And all regulations made and forms prescribed under any Act in force on the day when this Act takes effect and hereby repealed shall be deemed to have been made under this Act, and shall be and continue in force until amended, cancelled, or superseded after the commencement of this Act.

DIVISION II.—Interpretation.

3. In this Act, unless the context necessarily requires a different meaning the expression—

“Acts 1859-1881” means any or all of the enactments passed during, or at any time between, the years one thousand eight hundred and fifty-nine and one thousand eight hundred and eighty-one, and set out in the Second Schedule (B) to this Act.

“Acts 1859-1884” means any or all of the enactments passed during or at any time between, the years one thousand eight hundred and fifty-nine and one thousand eight hundred and eighty-four, and set out in the First and Second Schedules (A) and (B) to this Act.

“Acts 1859-1889” means any or all of the enactments passed during, or at any time between, the years one thousand eight hundred and fifty-nine and one thousand eight hundred and eighty-nine, and set out in the First and Second Schedules (A) and (B) to this Act.

“Acts 1859-1897” means any or all of the Acts passed during, or any time between, the years one thousand eight hundred and fifty-nine and one thousand eight hundred and ninety-seven, and set out in the First and Second Schedules (A) and (B) to this Act.

“Acts 1875-1897” means any or all of the enactments passed during, or at any time between, the years one thousand eight hundred and seventy-five and one thousand eight hundred and ninety-seven, and set out in the First and Second Schedules (A) and (B) to this Act.

“Acts 1884-1889” means any or all of the enactments passed during, or at any time between, the years one thousand eight hundred and eighty-four and one thousand eight hundred and eighty-nine, and set out in the First Schedule (A) to this Act.

“Acts 1884-1897” means any or all of the enactments passed during, or at any time between, the years one thousand eight hundred and eighty-four and one thousand eight hundred and ninety-seven, and set out in the First Schedule (A) to this Act.

“Board”

- “Board” or “Land Board” means the local land board of the district in question, and includes land appeal court in any case where an appeal or reference to that Court has been made.
- “Conditional purchase” excludes special purchase, or purchase by auction, or purchase by virtue of improvements, but includes an original and an additional conditional purchase.
- “Crown Lands” means lands vested in Her Majesty and not permanently dedicated to any public purpose or granted or lawfully contracted to be granted in fee simple under this Act or the Acts 1859–1897.
- “City, Town, or Village”—A city, town, or village declared to be so by proclamation of the Governor in the Gazette.
- “Frontage” means abuttal on or frontage to the sea-coast or to any lake, inlet, river, creek, stream, water-course, road, or intended or designed road prescribed as a boundary.
- “Governor” means Governor with the advice of the Executive Council.
- “Land Agent” means any person duly appointed to the office of Crown land agent, assistant Crown land agent, or acting Crown land agent.
- “Land Appeal Court” means the land appeal Court as constituted under the Acts 1884–1897.
- “Land office day” means any day notified as such in the Gazette upon which land agents are required to attend at their land offices for the purpose of receiving applications for sale or lease of Crown lands.
- “Lease” includes any unexpired engagement, contract, or promise of a lease.
- “Local newspaper” means newspaper published or circulating in the particular district or place in reference to which the expression is used.
- “Leasehold area” means that portion of a pastoral holding for which a pastoral lease may have been granted under the Acts 1884–1897, or may be granted under this Act.
- “Be declared a lunatic” include a person who has become an “insane patient” within the meaning of the “Lunacy Act of 1878,” and the Acts amending the same.
- “Minerals” means and includes coal, kerosene shale, and any of the following metals, or any ore containing the same, namely:—Gold, silver, copper, tin, iron, antimony, cinnabar, galena, nickel, cobalt, platinum, bismuth and manganese, and any other substance which may from time to time be declared a mineral within the meaning of this Act by proclamation of the Governor published in the Gazette.
- “Minister” means the Minister for Lands or other Minister charged with the administration of this Act or any part thereof.
- “Non-residential conditional purchase” means an original conditional purchase exempt from any condition of residence, and any additional conditional purchase made by virtue thereof.
- “Oath” means affirmation, promise, and declaration in every case where an affirmation, promise, or declaration is by law allowed instead of an oath.
- “Occupation license” includes preferential occupation license.
- “Prescribed” means prescribed by this Act, or any regulation made thereunder.
- “Population boundaries or area” includes lands within areas as defined by proclamation in the Gazette, with boundaries distant not more than ten miles from the nearest boundary of any city, town, or village.

- “Public purpose” means and includes, in addition to any purpose specified in any section of this Act, any purpose declared by the Governor, by notification in the Gazette, to be a public purpose within the meaning of such section.
- “Regulations” means regulations made under the authority of this Act.
- “Representatives” means the executors or administrators of the person with reference to whom the word is used, and includes all persons in whom the estate or interest of such person is vested.
- “Residential conditional purchase” means an original conditional purchase applied for under the Acts 1859–1896 or this Act, subject to a condition of residence or any additional conditional purchase made by virtue thereof, whether a condition of residence has attached or attaches to such additional conditional purchase or not.
- “Resumed area” means that portion of a pastoral holding for which a pastoral lease may not have been granted under the Acts 1884–1897, or may not be granted under this Act.
- “Scrub” means any tree, undergrowth, plant, which the Governor may, by notification in the Gazette, declare to be scrub within the meaning of this Act.
- “Series” or “the same series,” when used in connection with conditional purchases or conditional leases, means an original conditional purchase, whether taken up before or after the commencement of this Act, under the Acts 1859–1897 or this Act, and any additional conditional purchases, which may have been or may be made by virtue thereof, and any conditional leases which may have been or which may be granted by virtue of any of such conditional purchases.
- “Vacant land” means land not alienated by or held under any lease or promise of lease or license from the Crown.

DIVISION IV.—Dealings with Crown lands.

No dealing with Crown lands except under this Act.
Sec. 5, Act 1884.

4. Crown lands shall not be sold, leased, dedicated, reserved, or dealt with except under and subject to the provisions of this Act, and nothing in this Act shall affect the provisions of any Act regulating mining on Crown lands, or shall affect the prerogative of the Crown in respect to any lands reverting by escheat or forfeiture to Her Majesty otherwise than under the provisions of this Act or the Acts 1859–1896.

Provisions as to grants, leases, &c.
Sec. 6, Act 1884.

5. The Governor on behalf of Her Majesty may grant, dedicate, reserve, lease, or make any other disposition of Crown lands but only for some estate, interest, or purpose authorised by this Act and subject in every case to its provisions.

Crown grant not to be in trust.
Sec. 6, Act 1884.

6. No Crown grant issued after the commencement of this Act shall be expressed or purport to be in trust for private persons or purposes.

Minerals reserved in all grants.
Sec. 7, Act 1884.

7. All grants of land issued under the authority of this Act or the Acts 1884–1897 shall contain a reservation of all minerals in such land and shall contain such other reservations and exceptions as may by the Governor be deemed expedient in the public interest: Provided that whenever it shall be found that land alienated under this Act or under the Acts 1859–1897 contains any mineral, and such land has been alienated subject to the minerals being reserved to the Crown, the Governor may permit the owner of such land to remove such mineral upon payment of such royalty and upon such conditions as may be prescribed.

8. Every grant and registration copy of such grant issued under this Act or under the Acts 1859–1897 shall, for the purpose of enabling the Crown to proceed by way of scire facias for the repeal of any such grant issued improvidently or inadvertently or in violation of the provisions of any of such Acts as aforesaid, be deemed to be a record of the Supreme Court notwithstanding anything in the Real Property Act or any Act amending the same to the contrary.

Proceeding by way of scire facias.
Sec. 137, Act 1884.

DIVISION V.—Divisions and land districts.

9. For the purposes of this Act New South Wales shall consist of Three Divisions, namely:—The Eastern Division—the Central Division—and the Western Division—and the boundaries of each Division shall, subject to any alteration which may have been made under the provisions of the Acts 1884–1897, and subject to the provisions of section *ten* of this Act, be as set forth in the Third Schedule (C) hereto.

Establishment of Divisions.
Sec. 8, Act 1884.

10. The Governor may from time to time, by proclamation in the Gazette, alter the boundary of any division—

Alterations of divisions.

(a) so as to avoid the severance of any existing conditional purchase or lease or other lawful holding whatsoever ;

Sec. 8, Act 1884.

(b) by declaring lands held under lease or license, cities, towns, villages, and suburban lands attached thereto, or measured portions, which may be situated within any division or partly within two divisions, to be wholly within any one division.

Sec. 40, Act 1889.

And upon the publication of such proclamation the boundary as altered thereby shall be deemed to be the true boundary of the division referred to in such proclamation.

11. The Governor may, within each division, by proclamation in the Gazette—

Land districts.

(a) establish and define or alter the boundaries of land districts ;

Sec. 9, Act 1884.

(b) declare lands held under lease or license, cities, towns, villages, and suburban lands attached thereto, or measured portions, which may be situated within any land district, or partly within two or more land districts, to be wholly within any one land district; and upon such proclamation the boundaries of such land districts shall be deemed to be sufficiently altered and defined for the purposes of this Act.

Sec. 40, Act 1889.

DIVISION VI.—Land agents.

12. (i) The Governor may appoint a land agent either for each land district or for several adjoining land districts, who shall perform the duties imposed on him by this Act or the regulations.

Land agent.
Sec. 10, Act 1884.

13. It shall be the duty of every land agent to forward to the Colonial Treasurer all moneys received by him by virtue of this Act, or the Acts 1884–1897, or the regulations, in the prescribed manner, and in all other respects to conform to the regulations, and to carry out the instructions given by, or by direction of, the Minister.

Duties of land agents.

14. Any land agent shall, by virtue, and during his tenure of office be deemed for the purposes of this Act and the regulations thereunder, or the Registration of Deeds Act to be a Commissioner of the Supreme Court for taking affidavits; but any declarations required by this Act or by the regulations may be made before the land agent or any justice of the peace or commissioner for taking affidavits for the Colony of New South Wales.

Land agent a commissioner for affidavits.
Sec. 22, Act 1889.

(ii) The Minister may at any time in the absence of any such agent appoint a person to act for him.

Acting land agents.
Sec. 10, Act 1884.

All things done by an acting land agent within the scope of his authority shall be of the same efficacy as if done by the land agent.

DIVISION

DIVISION VII.—District surveyors and other officers.

Appointment, &c.,
of district staff of
officers.

Sec. 16, Act 1884.

15. For every land district the Governor may appoint a district surveyor and such other officers as he may think necessary for the purposes of this Act: Provided that whenever required by the Minister such officers shall perform the duties connected with their respective offices in and for any land district, in addition to that for which they have been appointed.

DIVISION VIII.—Constitution and jurisdiction of and procedure before local land boards.

Local land boards.

Sec. 11, Act 1884.

Land boards may be
authorised to deal
with matters outside
their own district.

Sec. 5, Act 1889.

16. There shall be a local land board for every land district or for several land districts:

Provided that the Minister may from time to time direct any local land board to deal with any matter, question, or inquiry that has arisen or shall arise, without regard to the land board district or land district in which the land forming the subject of such matter, question, or inquiry may be situated. And the said land board shall have as full power and jurisdiction to deal with the matter as if the land aforesaid were situated within that board's proper land board district or land district.

Number of members
of land board.

Sec. 11, Act 1884.

17. (i) The members of a local land board shall not exceed three in number, and shall be appointed by the Governor.

One of such members shall be the chairman, who shall be appointed in like manner, and shall be paid such salary as Parliament may sanction.

Every other member of the board shall be paid such fee for each sitting as may be prescribed.

Vacancies.

Sec. 14 (viii), Act
1884.

18. The resignation, removal from office, insolvency, or absence from three consecutive meetings of the board of any member of the board without leave of the Minister shall cause a vacancy therein, and the Governor may appoint a person to supply such vacancy.

Suspension, removal,
&c., of chairman of
local land board.

Sec. 4,

51 Vic. No. 11.

Acting chairman.

19. The Governor may suspend or remove the chairman of any local land board and appoint some other person in his place, or in the event of any chairman being suspended or being unable to act from any cause whatever, the Governor may appoint some other person as acting chairman, who while so acting shall have and exercise all the powers and authority and be subject to all the obligations applicable to the office of chairman.

Penalty.

Sec. 11, Act 1884.

20. Any member of a local land board who sits or acts in any way as a member of such board in any case in which he is or has been directly or indirectly interested shall be liable to a penalty not exceeding *five hundred pounds*.

Quorum.

Chairman's votes.

Sec. 12, Act 1884.

21. A majority of the members of any local land board shall constitute a quorum, and the chairman shall, if present, preside at all meetings of the board, and have an original vote on any question brought before or referred to such board:

Provided that the chairman shall have a casting vote on any question on which the votes are equal.

Acting chairman
in absence of
chairman.

Sec. 14, subsec. (viii).

In the absence of the chairman the members present at any meeting of the board shall appoint one of their number to act as chairman at such meeting, or any adjournment thereof, who shall, while so acting, have all the powers and authority of the chairman.

Duties and powers of
local land boards
under Acts repealed
by Act of 1884.

Sec. 13, Act 1884.

22. In addition to the matters hereinafter required, or permitted to be made the subject of adjudication, appraisalment, valuation, inquiry, or report by local land boards, it shall be the duty of every such

Crown Lands Consolidation.

such board, and it shall have full power and authority to hear, examine, and report to the Minister or the land appeal court upon—

- (a) any matter referred for report to such board by the Minister or the land appeal court, which under the provisions of the Acts 1859–1881 might have been the subject of any claim for compensation, or of arbitration, appraisal, inquiry, or complaint;
- (b) any complaint or question as to the non-fulfilment of any condition of residence or improvement by a conditional purchaser under any of the said Acts;
- (c) any allegation or complaint that land conditionally purchased under any of the said Acts has been so purchased by the applicant in violation of any of the provisions thereof: Provided that nothing herein contained shall refer to any land for which a certificate of completion of the conditions of residence and improvements or grant has already issued.

23. For the purpose of regulating the procedure of local land boards under this Act, and of empowering such boards to give full effect to the meaning and intent thereof, the following provisions shall be applicable to and be carried out by such boards—

- (I) Every such board shall have power to hear and determine all complaints and other matters brought before it, and shall conduct all inquiries sitting as in open Court, and shall take evidence on oath, and its procedure while so sitting shall be the same as the procedure before a court of petty sessions. General powers and procedure of local land boards. Sec. 14, Act 1884. Sec. 3, Act 1889. Local land board to sit as in open Court.
- (II) The chairman of every such board shall be a justice of the peace by virtue of his office, and shall have and may exercise the like powers and authorities as are possessed by a court of petty sessions to summon and compel the attendance of witnesses to give evidence on any matter before the board, and to produce all deeds and documents in their possession or under their control relating to such matter. And all witnesses so summoned to attend shall be entitled to the like allowances for attendance and travelling expenses as witnesses attending a district court are by law entitled to. Power to compel attendance of witnesses. Expenses of witnesses.
- (III) Every party to a proceeding before such board shall have the same right to be heard by counsel, attorney, or agent, and to enforce the attendance of witnesses before such board, and to examine such witnesses as upon summary proceedings before justices. Parties may be heard by counsel, attorney, or agent.
- (IV) The chairman shall give the decision of the board (when unanimous) in open court, but if not unanimous the board shall decide by vote (retiring for that purpose if it thinks fit). The decision shall then be given by the chairman as aforesaid, and no member shall comment upon or question such decision. Upon an appeal to the land appeal court as hereinafter provided any member of the board may assign in writing such reasons for his opinion as he may deem necessary, which shall be transmitted through the chairman to such court. Decision of board, how given.
- (V) Any person not authorised in that behalf by the Minister desirous of prosecuting any complaint before such board shall do so by lodging with the land agent a notice in the prescribed form verified by a statutory declaration setting forth the grounds of such complaint, and shall at the same time deposit with such land agent the sum of ten pounds as security for any costs which may be awarded against him by such board: Complaint by other than authorised persons.

Provided

Provided that should the board be of opinion that the sum of ten pounds will be insufficient to meet the probable expenses in any case, it may demand such further sum as may be deemed necessary, and should such sum not be deposited with the land agent within such time as the board may specify such complaint shall not be proceeded with.

When the board gives a decision in favour of the complainant, he shall be entitled to a refund of the sum so deposited, and it may award such expenses for witnesses and such costs to the successful party as to it may seem reasonable, and such expenses and costs shall be recoverable in the manner prescribed by the Acts regulating the procedure in courts of petty sessions.

Reference to land appeal court.

(VI) The local land board, instead of giving any decision or adjudication in any case within the jurisdiction of such board, may after taking evidence refer such case with the evidence for decision by the land appeal court, which shall have power to deal with the case so referred in all respects as if it had been brought before it in the first instance.

Signature of summonses, documents, &c.

(VII) Any member of the board may sign summonses, and the chairman shall sign certificates and other documents given or issued by the board, and immediately after adjudication or decision upon any case shall (if required) forward all papers connected with the case, together with any report required thereon, to the Minister or the land appeal court.

Witness may be summoned and examined on oath. Sec. 9, Act 1889.

24. (I) In any case it shall be lawful for the chairman of any land board to summon and compel the attendance of any person whose evidence such board may desire to hear, and to examine him, or allow him to be examined, upon oath, and to cause his examination to be reduced to writing and signed by him, and require him to produce any document relating to the matter in question in his possession or control.

What questions may be put.

(II) No question put to any witness before any land board shall be deemed to be unlawful by reason only that the answer thereto may expose him to any forfeiture or penalty under the Acts 1859-1897 or this Act: Provided that no examination, or any answer thereto, shall be admissible in evidence against the witness in any criminal proceeding other than a prosecution against him for perjury, or for giving false answers, or making false declarations.

Witness failing to appear before land board may be summarily fined.

(III) If any person who has been summoned as aforesaid by the chairman of the local land board, or subpoenaed as a witness in any proceeding before such board, and who has had payment or tender of his reasonable expenses made to him neglects to appear; or if any person summoned, subpoenaed, or examined as a witness in any such proceeding refuses to be sworn, or to make affirmation, promise, or declaration in lieu of an oath, or prevaricates in his evidence, or refuses to answer any lawful question, or to produce any document in his possession or control relating to the matter in question, which he has been summoned or subpoenaed to produce, or which is then in his possession or control, or to sign his examination when reduced into writing, it shall be lawful for the chairman to commit such offender to gaol for any time not exceeding three months, or to impose on any such offender a fine not exceeding one hundred pounds; and in default of immediate payment thereof to commit the offender to gaol for any time not exceeding three months unless the fine be sooner paid.

In any of the cases aforesaid a warrant in the form contained in the Fourth Schedule (D) heretoshalland may be issued by such chairman, and shall be good and valid in law without any other warrant, order,

or

or process whatsoever; and the sheriff, his deputy, and all officers of the police force, and gaolers, to whom the same is addressed, shall obey the same.

(iv) Where any person who has been duly summoned or subpcnaed to attend as a witness before the local land board, and who has had payment or tender of his reasonable expenses made to him, fails to appear in obedience to his summons or subpcna, the chairman, upon proof of such person having been duly served with such summons or subpcna, and upon proof also that such person's non-appearance was without just cause or reasonable excuse, may issue a warrant in the form or to the effect of the Fifth Schedule (E) hereto to bring such person before the local land board to give evidence.

Witness failing to appear before land board may be brought before board by warrant.

25. In any case where a local land board, pursuant to the provisions of this Act or the Acts 1884-1897, and subject to the provision for appeal hereinafter provided for, shall make any adjudication or award, and to give effect to such adjudication or award shall make any order for the payment of money, whether as compensation, costs, appraised value, or otherwise howsoever, such order shall be under the hand of the chairman, and may be enforced by distress and sale of the goods and chattels of the person ordered to pay such money in manner prescribed by the regulations, or the same may be recovered in a summary way before any two justices of the peace by the person to whom such money is ordered to be paid.

Orders of local land board how enforced.
Sec. 15, Act 1884.

26. Any question of lapse, voidance, or forfeiture, whether arising under this Act or under the Acts 1859-1897 may be by the Minister referred to the local land board, and the decision thereon of the said board after due investigation in open court shall, unless appealed from in the prescribed manner, be final.

As to lapse, voidance, and forfeiture.
Sec. 20, Act 1884.

Chairman may deal with certain matters not sitting in open court.

27. The chairman shall have power, on behalf of a local land board, to deal with applications (whether made before or after the commencement of this Act) for—

Attendance before Board not required for formal application.
Sec. 37, Act 1895.

- (a) permission to inclose a road or water-course wholly or in part;
- (b) suspension of the condition of fencing attaching to a conditional purchase, conditional lease, or homestead lease, or extension of the period within which the condition shall be fulfilled;
- (c) exemption from fencing any portion of the boundary of a conditional purchase, conditional lease, or homestead lease;
- (d) exemption to the members of one family in pursuance of section seventeen of the Crown Lands Act of 1889 or section *ninety-four* of this Act, from any condition of fencing or improvement, other than the erection of a ring fence; and for prescribing the character of such fence and fixing or extending the term within which the fence shall be erected;
- (e) such other formal orders as may from time to time be prescribed.

The chairman may deal with any such application as aforesaid, not sitting in open court, and after having given notice to the parties concerned; and where he does not grant the application the same shall afterwards be dealt with in due course by the local land board; and he may in any case, instead of dealing with an application as aforesaid, bring the same before the local land board.

DIVISION

DIVISION IX.—Right of appeal to Land Appeal Court.

Procedure on appeal
to land appeal court.
Sec. 17, Act 1894.
Secs. 3 and 7, Act
1889.
Sec. 39, Act 1895.

28. Either party to any proceeding, dispute, or claim before a local land board, and any caveator as hereinafter provided, may appeal from the adjudication, decision, recommendation, determination, or award of such board to the land appeal court at any time within twenty-eight days after the same has been given by giving written notice of such appeal to the chairman of the board, and to the other party to the proceeding (if any), and depositing with such chairman the sum of five pounds as security for the costs of the appeal. And every such notice shall state the grounds of appeal.

DIVISION X.—Land appeal court.

Land appeal court to
consist of three
members.
Sec. 8, Act of 1889.
Sec. 2, 55 Vic. No.
26.

29. (I) There shall be a land court, which shall be a court of record and have an official seal; and the said court shall be designated the Land Appeal Court.

The said court shall consist of three members, one of whom shall be the president.

Judicial notice of
seal and signatures.

(II) All courts of law and equity shall take judicial notice of the seal of the land appeal court, and of the signature of the president, acting president, registrar, or deputy registrar, when attached to any document issuing out of the said court.

Removal of land
appeal court
members.
Sec. 8, Act 1889.

(III) It shall be lawful for the Governor to remove any member of such land appeal court for inability or misbehaviour, provided that twenty-one days at least before the removal of such member of the land appeal court he shall have notice of the intention to remove him, and he shall thereafter and before removal have the opportunity of being heard before the Governor and the Executive Council in his defence.

The president and each member appointed after the commencement of this Act shall be appointed by the Governor.

Salaries.

30. There shall be paid to the president of the land appeal court the annual salary of two thousand pounds, and to each of the other members of that court (to be designated commissioners of the land appeal court) the annual salary of one thousand pounds, and such salaries are hereby charged on the Consolidated Revenue Fund, which, to the extent required for the payment thereof, is hereby permanently appropriated.

Registrar and officers
of land appeal court.
Sec. 8, Act 1889.

31. It shall be lawful for the Governor to appoint a registrar of the land appeal court and other necessary officers, who shall be paid such salaries as may from time to time be approved.

The registrar shall have the custody of the official seal of the court and of its records, and shall sit in the court, and keep and sign minutes of the court's proceedings, and make reports of the court's decision in each case to the Minister. The registrar shall have power to seal with the official seal, and to sign and issue in the name of the court, subpoenas, summonses, certificates, orders, notices, and other documents; and the registrar shall perform the various matters and things in respect of which powers are hereinbefore conferred upon him, or which by any regulation in that behalf made as hereinafter provided he may be ordered to do.

Deputy registrar.

Any duties imposed or powers conferred upon the registrar as aforesaid may, in his absence or inability to act, be discharged or exercised by any person provisionally appointed as deputy registrar by the president or acting president of the land appeal court.

Who to preside.
Sec. 8, Act 1889,
subsec. (1).

32. (I) The president shall preside at all meetings of the court, but in his absence, through illness or other sufficient reason, any member may be authorised by the Governor to temporarily act as president,

president, who, while so acting, shall have and exercise all the powers and authorities, and be subject to all the obligations applicable to the office of president. In the absence, through illness or otherwise, of any member, the Governor may appoint any person to temporarily act as member.

(II) A majority of the members of the land appeal court shall constitute a quorum.

33. Any member who sits or acts in any case in which he is or has been directly or indirectly interested shall be liable to a penalty not exceeding five hundred pounds.

34. The Minister may refer to the land appeal court any decision or recommendation of a local land board (whether made or given before or after the commencement of this Act), whereby the rights, interests, or revenues of the Crown may have been, or may hereafter be injuriously affected, and may likewise refer any case where it may appear that a local land board has failed or neglected to duly discharge its duty according to law, or that a local land board has exceeded such duty.

Any such reference shall be duly made, if and when a notice in writing that the Minister has referred the case to the land appeal court is given to the registrar of the said court, and no provision of this Act in respect of the lodging of appeals shall apply to the giving of such notice; but the land appeal court shall deal with the matter of such reference in the same way, and the rights and liabilities of the Crown in respect of such reference shall be the same as if such reference were an appeal by the Crown.

Nothing in this section contained shall affect any remedy by writ of prohibition, or mandamus, or in the nature of a mandamus, which the law now allows to the Crown or any person against a local land board.

35. The land appeal court shall have power to hear and determine all appeals, and all matters referred to such court by the Minister, or by a local land board under the provisions of subsection (VI) of section *twenty-three* of this Act, or subsection (VII) of section fourteen of the Crown Lands Act of 1884, and to make such orders for payment of costs incurred in such appeals or proceedings as such court may think fit; and such appeals and matters shall, after the prescribed notice has been given to the parties, and at such times and places as the land appeal court may appoint, be heard and determined in open court; and all parties may be heard by counsel, attorney, or agent, but no fresh evidence shall be adduced before such court, except with the sanction of such court.

36. The Crown may without having lodged a caveat, appeared before the local land board, given notice of appeal, or taken any preliminary step other than may be prescribed by the regulations or by rules of the land appeal court appear as a party in all proceedings in which its rights, interests, or revenues may be concerned.

37. In all cases in which the land appeal court makes any order or award for the payment of money, whether as costs or otherwise, the said order or award shall, save as herein provided, be conclusive upon the parties, and have the force of a judgment of the Supreme Court at common law; and the party in whose favour any such order or award may have been finally or ultimately made may obtain a certificate of the amount due thereunder, which certificate shall be conclusive evidence of the facts therein stated, and he shall, upon production thereof to the prothonotary, be entitled to have judgment entered up thereon, without any judge's order to that effect, and to have execution for such amount and costs issued and enforced in the same way as may be done upon judgments at common law; provided that, in any case in which a deposit has been made by an appellant, the same shall be available in payment or part payment of any sum which he may be ordered to pay, and the surplus, if any, shall be returned.

Decision final.
Sec. 8, Act 1859,
subsec. (v).

38. The decision of the land appeal court upon any appeal shall, subject to the provisions of section *forty-four* of this Act, be final and conclusive.

Witness may be
summoned and
examined on oath.
Sec. 9, Act 1889.

39. (1) In any case it shall be lawful for the president, or in his absence any member, of the land appeal court to summon and compel the attendance of any person whose evidence such court may desire to hear, and to examine him, or allow him to be examined, upon oath, and to cause his examination to be reduced to writing and signed by him, and require him to produce any document relating to the matter in question in his possession or control.

What questions may
be put.

(II) No question put to any witness before the land appeal court shall be deemed to be unlawful by reason only that the answer thereto may expose him to any forfeiture or penalty under the Acts 1859-1897 or this Act: Provided that no examination, or any answer thereto, shall be admissible in evidence against the witness in any criminal proceeding other than a prosecution against him for perjury, or for giving false answers, or making false declarations.

Process of land
appeal court.
Subsec. (vii), sec. 8,
Act 1889.

40. Any subpoena, summons, or other process issuing out of the land appeal court shall have the same force and effect as if issued out of the Supreme Court in any matter pending therein; and the land appeal court shall have the same powers of dealing with witnesses who fail to appear when called, or refuse to answer questions, or otherwise misconduct themselves, and for repressing disorders, or punishing contempts committed in in the face of the said court, as are possessed by the Supreme Court or any judge thereof upon the hearing of any cause or matter within the jurisdiction of the said court. Any warrant to apprehend and to detain and bring before the land appeal court, or to keep in any gaol, prison, lock-up, or other place of detention, any person liable upon the order of the land appeal court to be so dealt with, shall be valid and sufficient if it be in the form appropriate thereto contained in the Sixth Schedule (F) to this Act or the effect thereof; and the sheriff, his deputy and assistants, and all officers of the police force, and gaolers to whom the same is addressed shall obey the same: Provided that no such warrant shall be issued against a person who fails to appear as a witness when called, unless it be proved to the satisfaction of the land appeal court that he has been duly served with a summons or subpoena, and that payment or tender of his reasonable expenses have been made to him.

Case may be
returned to the land
board.
Subsec. (iv), sec. 8,
Act 1889.

41. If in any case it appears to the land appeal court that any evidence tendered before such court, or that further evidence, ought to be taken before the local land board, or that the case is incomplete, it may be remitted to the board for such action as the land appeal court may direct; and the board shall take such action, and may uphold, reverse, alter, or amend its previous decision in any way that may be considered necessary. The land appeal court shall have power to remit to the board any case in which an order has been made by the land appeal court with directions to the board to enforce or carry out such order, and in any such case the board shall be empowered and bound to act accordingly.

Rehearing.
Subsec. (vi), sec. 14,
Act 1884.

42. The land appeal court may return to the local land board for revision, rehearing, or further consideration any case or matter which to such land appeal court may appear to have been improperly or insufficiently considered or determined by such board.

Appeal to Supreme
Court.
Subsec. (v), sec. 8,
Act 1889.

43. Whenever any question of law arises in a case before the land appeal court, the land appeal court shall, if required in writing by any of the parties within the prescribed time and upon the prescribed conditions, or may of its own motion, state and submit a case for decision by the Supreme Court thereon, which decision shall be conclusive. Every such case shall purport to be stated under this section, and shall state the names of the persons who are parties to the appeal, reference, or other proceeding, and shall be transmitted to the prothonotary

prothonotary of the Supreme Court to be dealt with as to the setting down of the case for argument, and the hearing of the same, and its return with the decision of the Supreme Court thereon, as the judges, or any two of them, may direct. The Supreme Court, for the purposes of this section, may consist of two judges only, and shall have power to deal with the costs of, and incidental to, any case stated under this section as it may think fit.

DIVISION XI.—Determination of rents, values, &c.

44. (I) Whenever any rent or license fee, or the price of any Crown land (other than of land to be sold or leased by auction, by tender, or by conditional purchase, or except as provided in sections one hundred and thirty-five, one hundred and forty-seven, two hundred and fifty-three, and two hundred and sixty-one of this Act) is to be determined, or whenever this section is expressly referred to in connection with the determination of any value, an appraisement of the same shall be made by the local land board, and any such appraisement may be appealed against in the prescribed manner.

Determination of rents, values, &c.
Sec. 6, Act 1889.

(II) On receipt of any appraisement not so appealed against, the Minister shall either accept the same or, within one month, refer it to the land appeal court with a statement of his reasons for so doing.

(III) The land appeal court shall, both in cases of appeal and reference, determine the amount of such rent, fee, or price, and the amount so determined shall be final and conclusive: Provided, however, that, if it appears to the Minister that further consideration or inquiry is necessary, he may return the case to such land appeal court for such purpose, and the determination of the land appeal court thereupon shall be final and conclusive.

45. (I) In any appraisement or reappraisement under this Act or under the Acts 1884–1897, the rent or license fee of the holding in respect of which such appraisement or reappraisement is made shall be assessed, irrespective of the unexhausted value of improvements then existing on such holding, and effected or owned by the lessee.

Appraisement or reappraisement of rent or license fee of holding.
Sec. 53, Act 1895.

(II) The unexhausted value means the fair cost of making the improvement, less depreciation in value from use or otherwise.

DIVISION XII.—Classification and Survey of Crown Lands.

46. (I) For the purpose of effecting a proper classification of Crown lands, the Governor shall have power, after such inquiry and report as may be deemed expedient, to declare by notification in the Gazette that the Crown lands comprised within any tract or area to be described in the notification shall be set apart for holdings (whether by way of purchase, lease, or otherwise) of the kinds which are specified in the notification; and thereupon the Crown lands comprised within the tract or area so described shall cease to be available, and any lands within the tract or area which may thereafter become Crown lands shall not become available for the purpose of any application for a holding of a kind not specified in the notification, except as hereinafter provided.

Power to classify Crown lands.
Sec. 10, Act 1895.

(II) For the purpose of effecting a proper survey and subdivision of Crown lands, the Governor shall have power to declare by notification in the Gazette that the Crown lands comprised within any tract or area to be described in the notification shall not be available for the purposes of any application until a further notification has been published in the Gazette; and thereupon the Crown lands comprised within the tract or area so described shall cease to be available, and any lands within the tract or area which may thereafter become Crown lands

Power to withhold Crown lands until survey effected.
Sec. 10, Act 1895.

lands shall not become available for the purposes of any application, until such further notification has been published, or, if such further notification specify a future date, then until such date.

Notifications may be amended.
Sec. 10, Act 1895.

(III) Any notification under this section or section ten of the Crown Lands Act of 1895, may in the like manner be corrected, amended, modified, or revoked, whether as to the whole or any part thereof; and it shall be sufficient for the purposes of any such notification if the description of lands is in any form of general description:

What shall not be affected by notification.
Sec. 10, Act 1895.

- (IV) Provided that no such notification shall affect—
- (a) the reservation or dedication for public purposes of any Crown lands; or
 - (b) the granting or renewing of occupation licenses and annual leases, unless the same be expressly excluded; or
 - (c) any lease in existence at the date thereof.

What deemed Crown lands under Mining Act.

Crown lands set apart to be deemed Crown lands for purposes of Mining Act.
Sec. 12, Act 1895.

47. All Crown lands comprised in any tracts or areas which have been set apart for certain specified kinds of holdings under sections ten, thirteen, or twenty-four of the Crown Lands Act of 1895, or which may be set apart for certain specified kinds of holdings under sections forty-six, one hundred and thirty-five, or two hundred and fifty-three of this Act; shall be and be deemed Crown lands for the purposes of the Mining Act, 1874, and any Act amending the same.

DIVISION XIII.—Conflicting applications—Ballot.

Priority of conflicting applications to be determined by ballot.
Secs. 11, Act 1889; and 38, Act 1895.

48. (I) When any applications lodged with the land agent at the same time are, or appear to the land agent to be, conflicting (whether severally or collectively), he shall determine by ballot in the prescribed manner the priority of the applications, and shall thereafter transmit such applications to the chairman of the local land board.

Sec. 38, Act 1895.

(II) Where the land agent has omitted to hold a ballot, or has held a ballot but not in the prescribed manner, the local land board may direct the land agent to hold a ballot or a fresh ballot as the case may be.

Ibid.

(III) Applications for conditional purchases and conditional leases of the same series shall, for the purposes of any ballot, be deemed to form together a single application for the whole of the land comprised within the said applications taken conjointly.

Sec. 18, Act 1895.

(IV) In the case of homestead selections a conflicting application from a person intending to personally perform the obligation of residence shall in all cases have priority over any application for a homestead selection with residence by deputy before grant.

Sec. 7, 55 Vic. No. 1.

(V) The fact that two or more applications for conditional purchases or conditional leases included in any ballot for priority have, before or after the commencement of this Act, been made by different applicants for the benefit of one and the same person shall be prima facie evidence that none of such applications has been made bona fide and for the applicant's sole use and benefit.

Sec. 11, Act 1889.

(VI) Any applicant shall be at liberty, either before or immediately after the ballot, to withdraw his application, and thereupon to receive from the land agent a refund of any moneys paid to such agent in connection therewith; but an application for a conditional purchase or conditional lease or homestead selection, which upon a ballot being had, has before or after the commencement of this Act been determined to have priority over all other applications included in such ballot, shall not be withdrawn without the approval of the local land board.

Sec. 7, 55 Vic. No. 1.
Sec. 22, Act 1895.

Sec. 11, Act 1889,
and 38, Act 1895.

(VII) Conflicting applications shall be dealt with by the local land board in the order of their priority as determined by ballot, and on their respective merits.

DIVISION

DIVISION XIV.—Illegal contracts a misdemeanour.

49. If any person knowingly and with intent to defeat or evade or commit any fraud upon the provisions or purposes of this Act shall induce or make use of any other person to make any conditional purchase or homestead selection, or to execute any will, or to enter into any contract, lease, or agreement declared by this Act to be illegal, or to become the purchaser, selector, lessee, or licensee of any land otherwise than for the use, benefit, and advantage of such purchaser, selector, lessee, or licensee, the person so offending shall be guilty of a misdemeanour, and shall be liable to be imprisoned and kept to hard labour for any term not exceeding two years and not less than three months.

The provisions of this section, so far as they apply to homestead selections, shall apply only until the grant thereof.

Illegal contract a misdemeanour.
Sec. 122, Act 1884;
22, Act 1895.

PART II.

CONDITIONAL PURCHASES AND CONDITIONAL LEASES.

DIVISION I.—Conditional purchases—residential and non-residential.

50. A conditional purchase may be made with or without a condition of residence: Provided that in the case of a non-residential conditional purchase the deposit price and annual instalments shall be double such as would be required in the case of a residential conditional purchase.

Conditional purchase with or without residence.
Sec. 32, Act 1884.
Secs. 47, Act 1884;
29, Act 1895.

DIVISION II.—Land open to or exempt from conditional purchase or conditional lease.

51. All Crown lands not hereinafter exempted from conditional sale shall be open to conditional sale, and all Crown lands not hereinafter exempted from conditional lease shall be open to conditional lease under and subject to the provisions and conditions of this Act.

What land open to conditional purchase and conditional lease.
Sec. 22, Act 1884.

52. The Crown lands hereinafter specified shall be exempt from conditional sale. And for the purposes of this section it shall be immaterial whether the proclamation, dedication, reservation, setting apart, notification, lease, or application herein mentioned in connection with any such lands was made under this Act, or under the Acts 1859–1897.

What lands exempt from conditional purchase.
Sec. 21, Act 1884.

- (a) Lands held under any lease, other than annual lease, or than occupation license. Sec. 10, Act 1889.
- (b) Lands held under conditional lease except by the conditional leaseholder having a preferent right of purchase as specially provided by this Act or the Acts 1884–1897, or which is the subject of a valid application for conditional lease. Sec. 21, Act 1884.
Sec. 19, Act 1889.
- (c) Lands comprised within leasehold areas. Sec. 21, Act 1884.
- (d) Lands under lease or lawful occupation for mining purposes, and lands of which a lease under any Act in force for the time being relating to mining has been applied for. *Ibid.*
- (e) Lands within the Western Division unless within special areas, or unless held as a conditional lease by the applicant for the additional conditional purchase, and not otherwise exempt from conditional sale. Sec. 25, Act 1889.
Sec. 21, Act 1884.
- (f) Lands reserved or set apart for town or suburban lands or for village sites, and lands within population areas, except as provided in section *sixty-eight* of this Act. Sec. 21, Act 1884.

(g)

- | | |
|--------------------------------|--|
| <i>Ibid.</i> and 39, Act 1889. | (g) Lands reserved from sale generally, or from conditional sale specifically, or dedicated, reserved, or set apart for any public purpose other than as aforesaid. |
| 21, Act 1884. | (h) Lands in proclaimed gold-fields within areas reserved from conditional sale. |
| Sec. 10, Act 1895. | (i) Crown lands which by virtue of a notification made under section ten of the Crown Lands Act of 1895, or section <i>forty-six</i> of this Act, are not available for the purposes of any application. |
| Sec. 10, Act 1895. | (j) Crown lands set apart under section ten of the Crown Lands Act of 1895, or section <i>forty-six</i> of this Act, for holdings other than conditional purchases. |

Classified areas.

Additional conditional purchases in classified areas.

Sec. 11, Act 1895.

53. A notification that Crown lands are set apart for holdings of any kind shall not operate to prevent the lands situated within the tract or area so set apart being or becoming available for the purpose of an application for an additional conditional purchase, or a conditional lease of a series of which the original conditional purchase was made before the date of the notification in any case where—

- (a) the application is made not later than forty days after the date of the notification—and
- (b) the applicant has been for six months previously and still is in bona fide residence on some conditional purchase or conditional lease of the same series at the date of the notification:

Provided that—

- (c) the area which may be added to any series by all such additional conditional purchases and conditional leases shall not exceed the area sufficient, in the opinion of the local land board, to enable the holder thereof by agriculture or by agriculture combined with any other ordinary pursuits to maintain his home thereon, and shall not, in any case, exceed the area which may be taken under this Act; and
- (d) that such additional conditional purchases and conditional leases shall be taken so as to conform to the general design of the subdivision, if any, of such tract or area.

Crown lands exempt from conditional lease.

What lands exempt from conditional lease.

Secs. 10 and 39, Act 1889.

54. Crown lands belonging to any of the classes hereinafter specified shall be exempt from conditional lease.

- (a) Lands exempt from conditional purchase.
- (b) Lands reserved from lease generally.
- (c) Lands reserved from conditional lease specifically.
- (d) Lands within a special area.

DIVISION III.—Qualifications, disqualifications, and limitations as to conditional purchases and conditional leases.

Limitations as to original conditional purchases.

Cases in which a second selection may not be made.

Sec. 22, Act 1884, and 40, Act 1895.

55. No person who, on or after the first day of January, one thousand eight hundred and eighty-five, and before the first day of June, one thousand eight hundred and ninety-five, has made an original conditional purchase shall make another original conditional purchase, unless he has previously obtained a certificate from the local land

land board of fulfilment of all the required conditions (except payment of balance of purchase money), or that having made such conditional purchase bonâ fide and solely in his own interest he had been compelled through adverse circumstances to vacate or abandon the same, or unless (notwithstanding the non-obtaining of such certificate) he has previously obtained the written approval of the Minister to make another original conditional purchase as aforesaid.

The mere fact that forfeiture of a conditional purchase has before or after the commencement of this Act been notified shall not bar the issue of the certificate of abandonment referred to. Sec. 21, Act 1889.

Limitation as to number of holdings.

56. (I) No person who, on or after the first day of June, one thousand eight hundred and ninety-five, has applied, or who, after the commencement of this Act, applies for an original conditional purchase, and has obtained or obtains a title thereto in pursuance of such application, shall be qualified to apply for another original conditional purchase; and no person who, on or after the first day of June, one thousand eight hundred and ninety-five, has applied or who after the commencement of this Act applies for a homestead selection or a settlement lease, or an original homestead lease, and has obtained or obtains a title thereto in pursuance of such application, shall be qualified to apply for an original conditional purchase; unless he has previously obtained a certificate as prescribed that he was compelled by adverse circumstances to abandon or to surrender the holding first applied for, or unless (notwithstanding the non-obtaining of such certificate) such person has previously obtained the written approval of the Minister to apply for an original conditional purchase as aforesaid. The privilege of selecting, &c., when exhausted. Sec. 40, Act 1895.

(II) For the purposes of this section title in pursuance of an application shall be taken to have been obtained—in the case of a homestead selection, settlement lease, and original conditional purchase—when the application has been confirmed by the local land board, and in the case of a homestead lease when the approval of the issue of the lease has been notified in the Gazette, and a valid notice of non-acceptance has not been duly given:

(III) Provided that if the holding first applied for were a settlement lease or an original homestead lease, the disqualification enacted by this section shall cease to operate upon the expiration of the term of the lease by effluxion of time, or if the lease has been forfeited, surrendered, or otherwise sooner determined, then upon the expiration of the period which the term of the lease would have had to run, but for such forfeiture, surrender, or other sooner determination.

(IV) The mere fact that forfeiture of a conditional purchase has before or after the commencement of this Act been notified shall not bar the issue of the certificate of abandonment referred to. Sec. 21, Act 1889.

Limitations as to non-residential conditional purchases.

57. (I) No person who has made a conditional purchase, whether before or after the commencement of this Act, shall be permitted to make or to hold a non-residential conditional purchase. Non-residential selection. Sec. 47, Act 1884.

(II) No person shall be permitted to make a second or subsequent non-residential conditional purchase (whether the first purchase was made before or after the commencement of this Act) except by way of additional conditional purchase.

(III) No person who has, before or after the commencement of this Act, made a non-residential conditional purchase shall be permitted to make any other conditional purchase whatsoever.

Limitation

Limitation as to area.

Disqualifications by reason of area already held.
Sec. 41, Act 1895.

58. No person shall be competent to apply for an original conditional purchase, who—

- (a) owns at the date of application; or
 - (b) owned at any time previous to the date of application, and fraudulently divested himself of the ownership thereof by transfer, conveyance, assignment, or otherwise, or purported so to do, in order to evade the foregoing provision;
- an area of land granted in fee simple, or conditionally purchased, or conditionally leased from the Crown, which area, added to the area of the holding applied for, exceeds as a total area the maximum area permitted by law to a conditional purchase.

Persons not natural born or not naturalised.

Persons not natural-born or naturalised.
Sec. 41, Act 1895.

59. A person who is not a natural-born or naturalised subject of Her Majesty shall not be qualified to apply for an original conditional purchase, unless he has resided in New South Wales for one year, and at the time of making such application has lodged a declaration of his intention to become naturalised within five years from the time of making such declaration.

If such person shall fail to become so naturalised within the period aforesaid, he shall absolutely forfeit all land the subject of his application, together with all the improvements thereon.

Married women.

Married women.
Sec. 47, Act 1899.

60. (I) Any married woman who is, under an order for judicial separation made by any court of competent jurisdiction, living apart from her husband, may, out of moneys belonging to her for her separate use, conditionally purchase, or conditionally lease land, and such land shall form part of her separate estate, and she shall have the same powers of dealing with and disposing of the same, both at law and in equity, as if she were a femme sole, and her husband shall not be entitled to any interest in such land as tenant by the courtesy or jure mariti.

Sec. 47, Act 1899.

(II) Except as aforesaid, a married woman shall not be entitled to conditionally purchase or conditionally lease Crown land under this Act.

Sec. 124, Act 1894.

(III) No married woman shall be capable of holding any conditional lease, except as separate estate, by virtue of any law in force protecting the property of married women:

Sec. 47, Act 1899.

(IV) Provided that nothing herein contained shall disentitle a married woman from holding any conditional purchase or conditional lease which may have devolved upon her under the will or intestacy of any deceased holder:

(V) And further provided that if any conditional purchase has, before or after the commencement of this Act, been made by an unmarried woman and she afterwards marry, she may continue to hold the same, and may make any additional conditional purchase or conditional lease during her coverture by virtue of any such conditional purchase or purchases.

Minors.

Minors.
Secs. 23 and 124, Act 1894.

61. (1) No person under the age of sixteen years shall be a conditional purchaser of Crown lands, but any person of or above that age (if under no legal disability except that of age) may be a conditional purchaser of such lands, and may hold a conditional lease by virtue

virtue of a conditional purchase; but a minor of any age may hold a conditional lease by way of inheritance:

Provided that no person under the age of twenty-one years shall make a non-residential conditional purchase. Sec. 47, Act 1884.

Rights and liabilities of minors.

62. Any person between the ages of sixteen and twenty-one years who after the passing of this Act shall become the owner of a conditional purchase or conditional lease, and shall during his ownership, either personally or by an agent, enter into any agreement for or in relation to the performance of any work or rendering of any services on such conditional purchase or conditional lease or in relation thereto, or to the loan of money or the sale or purchase of goods and chattels of any description whatsoever, or shall in like manner enter into any agreement connected with the occupation, management, or general purposes of such conditional purchase or conditional lease not being in violation of the provisions of this Act, shall be subject to the same liabilities and have the same rights in respect of such agreement as if he were of the full age of twenty-one years. Minor holding conditional purchase or conditional lease liable on agreement. Sec. 123, Act 1884.

Good faith in applicants.

63. Every application for a conditional purchase or conditional lease, is hereby required to be made in good faith; and an application shall be taken to be made in good faith when the sole object of the applicant in making the application is to obtain the land or a lease thereof, as the case may be, in order that he may hold and use the land for his own exclusive benefit according to law. Good faith in applicants. Sec. 42, Act 1895.

Certain contracts void.

64. Every devise, contract, lease, agreement, or security made, entered into, or given before, at, or after the date of any application to make a conditional purchase, or conditional lease, with the intent or having the effect of enabling any person other than the applicant to acquire by purchase or otherwise the land applied for, shall be illegal and absolutely void both at law and in equity. Devise, contract, lease, or security void in certain cases. Sec. 121, Act 1884.

DIVISION IV.—What areas may be purchased or leased.

65. In the Eastern Division no application for an original residential conditional purchase shall be received for less than forty or for more than six hundred and forty acres, and in that Division no application for an original non-residential conditional purchase shall be received for less than forty or more than three hundred and twenty acres. What areas may be originally purchased. Secs. 24 and 47, Act 1884.

66. In the Central Division no application for an original residential conditional purchase shall be received for less than forty or more than two thousand five hundred and sixty acres, and in that Division no application for an original non-residential conditional purchase shall be received for less than forty or more than three hundred and twenty acres. Sec. 24, Act 1884.

67. Any holder of an original conditional purchase in the Eastern or Central Division may by application made before, at, or after the confirmation of the application relating to the original conditional purchase or any additional conditional purchase of the series make additional conditional purchases of Crown lands adjoining the original or any prior additional conditional purchase or each other, and for the purposes of this section it shall be immaterial whether the original What areas available for additional conditional purchase. Secs. 42, 47, 48, Act 1884; 19 and 25, Act 1889.

original or prior additional conditional purchase were made under this Act, or under the Acts 1859-1897, or partly under one and partly under any other, provided that—

- Sec. 24, Act 1884. (a) No additional residential or non-residential conditional purchase in any Division shall be of a less area than forty acres.
- Sec. 42, Act 1884. (b) In the Eastern Division an original residential and additional residential conditional purchases shall not (subject to the provisions of section *sixty-nine* of this Act as to additional purchases of land comprised in conditional leases), exceed in the whole six hundred and forty acres; and in that Division an original non-residential and additional non-residential conditional purchases shall not exceed in the whole three hundred and twenty acres.
- Sec. 47, Act 1884.
- Sec. 42, Act 1884. (c) In the Central Division an original residential and additional residential conditional purchases shall not exceed in the whole two thousand five hundred and sixty acres; and in that Division an original non-residential and additional non-residential conditional purchases shall not exceed in the whole three hundred and twenty acres.
- Sec. 3, Act 1884. (d) No application to make any additional conditional purchase of Crown lands whatever by virtue of any holding under the Acts 1859-1897 shall be entertained or dealt with otherwise than in accordance with the provisions of this Act.
- Sec. 31, Act 1895. (e) The payment to the Crown of the balance of purchase money due upon any conditional purchase or the issue of a grant in respect thereof shall not prevent additional conditional purchases being made, and conditional leases being granted, in the same way as if the said balance had not been paid, or the said grant had not issued; and it shall be immaterial whether the payment of the said balance or the issue of the said grant took place before or shall take place after the commencement of this Act.
- (f) A conditional purchase made under the provisions of section *twenty-two* of the Crown Lands Alienation Act of 1861 shall not be deemed to be an original conditional purchase within the meaning of this section.

Conditional purchases within special areas.

Conditional purchases in special areas.

Secs. 24 and 42, Act 1884, 18; Act 1889.

68. (I) The Governor may, by proclamation in the Gazette, set apart from time to time, in the Eastern, Central, and Western Divisions any areas of Crown lands, not being within pastoral or homestead leases, to be called special areas, which it shall be lawful to conditionally purchase in such areas as may be notified in the proclamation not exceeding three hundred and twenty acres in the Eastern, or six hundred and forty acres in the Central or Western Division, at such prices (not being less than thirty shillings per acre), deposits, and instalments as may be notified in the proclamation.

Special areas within suburban or population boundaries.

Sec. 18, Act 1889.

(II) The Governor may also, by proclamation in the Gazette, set apart as special areas any lands within the suburban or population boundaries or population areas of any cities, towns, or villages, and such lands (without cancellation or revocation of such boundaries or areas) shall be open to conditional purchase on or after such dates, and in such areas, and subject to the payment of such prices, deposits, and instalments, and subject to the fulfilment of such conditions as to residence, improvements, fencing, or otherwise as may be specified in the proclamation. Any conditions so set forth shall have the force of law, and any breach thereof shall render the conditional purchase liable to forfeiture in accordance with this Act.

(III) Additional conditional purchases may, in special areas within the Eastern, Central, and Western Divisions, be made by holders of conditional purchases, such purchases, original and additional, not exceeding the maximum areas as aforesaid. Additional conditional purchases. Sec. 42, Act 1884.

(IV) The Governor may at any time revoke or modify any proclamation, whether made before or after the commencement of this Act, of any special area, or of any conditions applicable thereto, and any such revocation or modification shall take effect on proclamation in the Gazette. Revocation or modification. Sec. 18, Act 1889.

(V) Before any special areas are declared to be open for conditional purchase, the same shall be surveyed, and shall, subject to the provisions of section seventy-seven of this Act, be taken in portions as measured. Survey before selection. Sec. 18, Act 1889.

(VI) The provisions of this section shall extend to special areas which may be in existence at the commencement of this Act.

Conditional leases.

69. (I) Any applicant for an original or additional conditional purchase, or any holder of an original or additional conditional purchase applied for after the first day of January, one thousand eight hundred and eighty-five, or after the commencement of this Act, in the Eastern or Central Division (not being a non-residential conditional purchase within either Division or a conditional purchase within a special area within the Eastern Division) may obtain a conditional lease, or additional conditional leases, to comprise an area not exceeding three times the area thereof: Application for conditional lease. Sec. 48, Act 1884; 26, Act 1889.

Provided that the total area of land conditionally purchased and conditionally leased shall not exceed one thousand two hundred and eighty acres in the Eastern, or two thousand five hundred and sixty acres in the Central Division: Total area.

Provided also that the local land board, if the area applied for under such lease be not available, may allot the applicant a lesser area, not being less than forty acres in any case.

(II) In estimating the area which may be conditionally purchased and conditionally leased, all conditional purchases of the same series, and all land held by conditional lease by virtue of such conditional purchases shall be included, and the land which may be leased shall adjoin the land so conditionally purchased or conditionally leased.

Preferent right of purchase in virtue of conditional lease.

70. (I) The holder of any conditional lease in respect of which no forfeiture has, before or after the commencement of this Act been incurred, may at any time apply for the whole or part of the land comprised under such lease as an additional conditional purchase or purchases, subject to all the provisions of this Act as to the making of applications, available land, area, deposits, measurement, and (unless where otherwise provided in subsection (d) of section *eighty-four* of this Act) all other conditions applicable to ordinary residential additional conditional purchases except that nothing in this Act shall be held to render any such additional conditional purchase invalid by reason only that the land may be situated in the Western Division. Conversion of conditional leases into additional conditional purchases. Sec. 25, Act 1889.

(II) Provided that the land so purchased shall not, with any conditional purchases of the same series, exceed one thousand two hundred and eighty acres in the Eastern or two thousand five hundred and sixty acres in the Central or Western Division.

(III) And in all such cases the remaining area of such conditional lease may be held at a proportionate part of the rental thereof, although

although such lease may, when taken with the land conditionally purchased, exceed one thousand two hundred and eighty acres in the Eastern, and two thousand five hundred and sixty acres in the Central or Western Division.

(IV) A refund of the rental shall not be granted until after confirmation of the application for the additional conditional purchase, but, when granted, shall be calculated from the date of such application.

DIVISION V.—Applications for conditional purchases and conditional leases.

Land to be marked and described.

Unmeasured land to be marked before application.
Sec. 25, Act 1884.

71. (I) When the land to be applied for as a conditional purchase is unmeasured land the intending applicant shall before lodging his application mark some corner of such land in the prescribed manner, and shall in his application describe such land in such manner as to permit of its identification by the description.

(II) If the land applied for has not a frontage it must be situated at a reasonable distance from a frontage.

Description of measured and improved land.

(III) When such land is measured land the applicant shall so describe it.

(IV) And whenever the land so applied for contains improvements the applicant shall state that fact in his application and shall describe the nature and position of such improvements.

Application.

Tender of application.
Sec. 26, Act 1884.

72. (1) Every application for an original conditional purchase shall be tendered by the applicant in person, on some land office day, and every application for an additional conditional purchase may be tendered by the applicant in person, or by any duly authorised agent on some land office day to the land agent.

Declaration fee and deposit to be lodged with application.
Sec. 26, Act 1884.
Sec. 11, Act 1889.
Sec. 20, Act 1889.

(II) With the application there shall be lodged with the land agent a declaration made by the applicant in the prescribed form, or, in the case of an application for an additional conditional purchase, a declaration made by the applicant or his duly authorised agent in the prescribed form, together, in any case, with a fee in accordance with the prescribed scale for the survey of the area applied for, and—

Sec. 26, Act 1884.

(a) a deposit at the rate of two shillings per acre in the case of a conditional purchase other than a non-residential conditional purchase, or other than a conditional purchase within a special area;

Sec. 47 subsec. (III), Act 1884.

(b) a deposit at the rate of four shillings per acre in the case of a non-residential conditional purchase not being within a special area; and

Sec. 24, Act 1884.
Sec. 18, Act 1889.
Sec. 47, Act 1884.

(c) in the case of a conditional purchase within a special area, such deposit as may have been notified in the proclamation of the special area, provided that in any case the deposit in connection with a non-residential conditional purchase shall be double such as would be required in connection with a residential conditional purchase of the same land.

Conditional lease.
Sec. 25, Act 1889.
Sec. 11, Act 1889.

(III) Applications for conditional leases or additional conditional leases shall be made in the prescribed manner. With any application for a conditional lease a deposit of twopence per acre of the area applied for, and a survey fee according to a prescribed scale, shall be paid to the land agent.

(IV)

(iv) Where a conditional purchase is held absolutely by a corporation, company, or partnership, any application for an additional conditional purchase or for any conditional lease or any prescribed declaration in respect thereof may be made by any officer of such corporation or company or officer or member of such company or partnership duly authorised for the purpose.

Application by officer of corporation.
Sec. 20, Act 1889.

(v) When the transferee of any land conditionally purchased before or after the commencement of this Act (or in the case of a corporation, company, or partnership, being such transferee, any officer of such corporation or company, or any officer or member of such company or partnership) has made or shall make a statutory declaration showing that the transferee holds such land by way of mortgage or security only, the owner (subject to such mortgage or security) of the said land, or such transferee, may make an application in the prescribed manner for an additional conditional purchase or conditional lease to be registered in the name of the transferee, subject to the conditions of the additional conditional purchase or conditional lease being fulfilled by the aforesaid owner.

Application for additional conditional purchase may be made by mortgagor.
Sec. 20, Act 1889.

With any such application by the owner as aforesaid the written consent of the transferee shall be tendered to the land agent.

Any land purchased or leased under this provision shall be subject to the same equity of redemption as the land by virtue of which the same may be purchased or leased.

(vi) If any person makes a false statement in any such declaration as aforesaid as to any of the matters contained therein, he shall forfeit all moneys paid by him in respect of the land applied for, and all right and title to such land. And any conveyance, transfer, mortgage, or disposition of such land made by such person shall be null and void if taken with notice or knowledge of such false statement.

Declaration by applicant.
Sec. 26, Act 1884.

(vii) If the declaration in connection with an additional conditional purchase is made by an agent of the applicant, and if such agent wilfully makes a false statement in such declaration, he shall be liable to the penalties in that behalf made and provided; and the forfeitures provided in this section shall be held to have been incurred by the person for whom such agent has acted.

Declaration by agent.
Sec. 20, Act 1889.

Receipt for deposit.

73. (i) The applicant who shall have duly complied with all prescribed requirements shall be entitled to a receipt from the land agent for the deposit paid by him.

Receipt for deposit.
Sec. 27, Act 1884.

(ii) The land agent shall enter the particulars of all such applications, deposits, and declarations in a register to be kept by him in the prescribed manner, and shall thereupon transmit such applications to the local land board, together with all documents relating thereto, to be dealt with as hereinafter provided.

Applications to be transmitted to local land board.
Sec. 28, Act 1884.

(iii) A list of all such applications so transmitted to the local land board shall be kept by such land agent in the prescribed manner, and be exhibited by him for public inspection in some conspicuous part of his office.

(iv) All applications so transmitted shall be dealt with by the said board sitting as in open Court on a day of which at least fourteen days notice shall be given in the prescribed manner.

Caveats against applications.

74. (i) Any person claiming a right to land applied for as a conditional purchase may in the prescribed manner and within the prescribed time lodge a caveat with the local land board setting forth objections

Caveats against applications.
Sec. 30, Act 1884;
sec. 3, Act 1889.

objections against the confirmation of any such application, and shall at the time of lodging the same, deposit with the board the sum of ten pounds, to be dealt with by the board as hereinafter provided.

(II) All applications in respect of which caveats have been so lodged shall be dealt with at a meeting of the board, holden after the prescribed notice thereof has been given to the applicant and the caveator, at which meeting the board sitting as in open Court shall hear and determine the grounds of objection set forth in the caveat, and if the caveator be not present, or if the board consider that the objections are not sustained, it may order the deposit of the caveator or any part thereof to be paid to the applicant by way of compensation, or may make such other order in the premises as it may deem just.

(III) The board may upon such terms as it may deem fit postpone the hearing of any application under caveat to some day of which the prescribed notice shall be given to the applicant and the caveator.

Sec. 31, Act 1884.

(IV) Unless the caveator gives the prescribed notice of appeal to the land appeal court, and with such notice deposits the sum of five pounds with the local land board, the adjudication of such board shall be final and conclusive, but if such notice has been duly given and such deposit made, the appeal shall be heard and determined by the land appeal court.

Confirmation or disallowance of conditional purchase or conditional lease applications.

Confirmation,
modification, or
disallowance of
application.

75. (I) Upon receipt from the land agent of any application for a conditional purchase or conditional lease, the chairman of the land board may refer the same to the district surveyor.

Sec. 13, Act 1889.

(II) If the land therein described is unmeasured, and appears to be available, and to be capable, as applied for, of being measured in a proper form, the district surveyor shall cause the same to be measured. But if the land is not, or is only partly, available, or if any other objection appears to exist, the district surveyor shall so report.

Sec. 13, Act 1889.

(III) The board shall thereafter deal with the application, either by disallowing it, or permitting its withdrawal, or directing the survey of such land as may be proposed to be allotted, and for this purpose may, subject to the provisions of this Act, allot land in a modified or different position from that applied for.

Sec. 12, Act 1889.

(IV) If land be allotted in satisfaction thereof of a less area than, or in a different position from, that applied for, such of the land described as may not be allotted, shall, at the date of confirmation of the application, revert to the lease or license under which the land may have been held.

Sec. 13, Act 1889.

(V) Any allotted lands which are not described in the original application shall, so far as the withdrawal of the same from such lease or license is concerned, be deemed to have been applied for on the date of the confirmation.

(VI) When the land has been measured, if no sufficient objection exist, and the local land board be satisfied that the application has been made in good faith, as defined in section sixty-three of this Act, the board shall, in open court, confirm such application as made or modified, subject to payment as prescribed of any necessary extra deposit.

Sec. 13, Act 1889.

(VII) The chairman shall, within the prescribed time thereafter, issue a certificate of such confirmation.

Sec. 13, Act 1889.

(VIII) The board, in open court, may, for sufficient reason, with or without a report from the district surveyor, and either before or after measurement of the land, disallow any application, wholly or in part.

(IX)

(IX) The local land board shall disallow an application for a conditional purchase or conditional lease made after, or pending at, the commencement of this Act, unless it be satisfied that the application is made in good faith as defined in section *sixty-three* of this Act. Sec. 42, Act 1895.

(X) In any case where the local land board is satisfied that an application for any conditional purchase or conditional lease as aforesaid has been made otherwise than in good faith, it may declare that any moneys lodged with such application shall be forfeited to the Crown, and the same shall be forfeited accordingly : Sec. 42, Act 1895.

(XI) Provided always that the local land board shall not disallow an application for an additional conditional purchase as not having been made in good faith, merely because the original conditional purchase is subject to a mortgage. Sec. 42, Act 1895.

(XII) On the disallowance or modification of any application for a conditional purchase or conditional lease, the land ceasing to be affected thereby shall be held to have been available from the date of such application, and any application made and not disposed of before such disallowance or modification as aforesaid shall be dealt with as if the prior application had not been made. Sec. 15, Act 1889.

Withdrawal of application.

76. (I) If any application for a conditional purchase or conditional lease has not been confirmed within six months from the date of such application, the applicant shall on giving, within one month after the expiration of such six months, the prescribed notice of withdrawal to the chairman, be entitled to withdraw the same and to receive a refund of moneys paid by him in respect thereof, unless the land board is of opinion that the application was not made in good faith, or that the delay in obtaining confirmation was improperly caused or contributed to by the applicant. Applications may be withdrawn. Sec. 15, Act 1889.

(II) Where an application cannot be granted, except subject to modification, or where other sufficient reason may, in the opinion of the board, exist, the applicant may before or within twenty-eight days after confirmation withdraw his application, subject to the approval of such board. Sec. 15, Act 1889.

(III) In any case of withdrawal the board may deduct from the moneys deposited such amount as may be deemed necessary to defray the cost of survey and the expenses of dealing with such application. Sec. 15, Act 1889.

(IV) The whole of the lands described in the application shall, at the date of approval of its withdrawal, revert to the lease or license from which the land may have been taken. Sec. 12, Act 1889.

(V) On the withdrawal of any application for a conditional purchase or conditional lease, the land ceasing to be affected thereby shall be held to have been available from the date of such application, and any application made and not disposed of before such withdrawal as aforesaid shall be dealt with as if the prior application had not been made. Sec. 15, Act 1889.

DIVISION VI.—Rules of measurement, &c.

77. Measured Crown land, upon being applied for as a conditional purchase or conditional lease, shall be taken in portions as measured, and if the area applied for, or any part thereof, is part of a measured portion, such portion may on approval by the local land board be subdivided, and the applicant shall pay the cost of survey for such subdivision, provided that in either case the limitations and provisions as to form of measurement of unmeasured land hereinafter contained shall, as far as practicable, be held to apply to applications for Measurement of land applied for under conditional purchase or conditional lease. Sec. 27, Act 1889.

for

for measured land. For the purposes of this section land measured originally for conditional lease under the fifty-second section of the Crown Lands Act, 1884, may be held by the local land board to be measured or unmeasured.

- (I) No land shall be considered to be measured until the plan of the measurement has been approved by the district surveyor, or an officer duly authorised by the Minister in that behalf, of which approval the signature of the district surveyor, or such duly authorised officer on such plan shall be prima facie evidence: Provided that, where lands have been measured in pursuance of the provisions of the Acts 1859-1884, and the plan of such measurement has been approved or accepted by the then surveyor-general, or some other officer, such lands shall, for the purpose of any of such Acts, or this Act, be considered measured lands.
- (II) Any land applied for as an original conditional purchase, if unmeasured and having no frontage, shall be measured in the form of a rectangle, the length of which shall not exceed twice the width; and if having frontage shall be measured with a breadth of frontage not exceeding one-half of the depth, and all such measurements shall have the boundaries, other than the frontage directed to the cardinal points. And any additional conditional purchase or conditional lease shall not, together or in combination with any original or previous additional conditional purchase or lease, have a greater breadth of frontage or length than as hereinbefore provided for an original conditional purchase of an area equal to the aggregate area of such original and additional conditional purchases or conditional leases; but whenever it appears necessary or desirable, the local land board may alter or modify the boundaries of any land applied for, or direct a measurement of the land as applied for, notwithstanding that such measurement may exceed the limitations or provisions of this section.
- (III) The intervention of any road, not being a frontage or intended frontage road, between an original conditional purchase and any additional conditional purchase or conditional lease shall not be an objection to the measurement of the land applied for, and in every such case the additional purchase or purchases or conditional lease shall be measured as herein provided. But no additional conditional purchase or conditional lease shall be allowed of land not on the same side of any frontage road or water-course or other prescribed frontage as the purchase or purchases by virtue of which such additional conditional purchase or conditional lease is applied for, unless all the available land on that side has been exhausted. In the latter case such additional conditional purchase or purchases or conditional lease may be measured on the opposite side of such frontage as hereinbefore provided:

Provided that whenever it appears desirable to the local land board or the Minister, Crown lands may be measured across any frontage road, or intended or designed frontage road, and the boundaries of portions having frontages may be made approximately at right angles with the frontage and may be so applied for, and may be otherwise modified, although such modification may have the effect of altering the frontage or depth of any portion or the direction of any other boundaries thereof as hereinbefore prescribed, and the boundaries of portions having no frontages may be modified in like manner, and necessary roadways, trigonometrical stations, and sites for and sources of water supply may be excluded from any measurement.

DIVISION

DIVISION VII.—Title to conditional purchases and conditional leases.

Commencement of title.

78. (I) The title to any conditional purchase or conditional lease applied for after the commencement of this Act shall commence from the date of application therefor, if valid. Commencement of title to conditional purchase or lease. Sec. 12, Act 1889.

(II) Any such application shall withdraw such of the lands therein described as may be available for the purpose from any annual lease or occupation license under which they may be held.

(III) The land agent shall, within one week of the receipt of any such application, notify the same through the post to the holder of any annual lease or occupation license within which the land applied for or any part thereof may be situated.

Trespass and Impounding.

79. No person occupying land under a conditional purchase or conditional lease, or in virtue of an application for a conditional purchase or for a conditional lease shall— Trespass by stock on unfenced lands. Sec. 55, Act 1895.

(a) bring an action for trespass committed by stock upon the said land, whether before or after the commencement of this Act; or

(b) impound any stock trespassing upon the said land, unless the said land or the portion thereof trespassed upon was, at the date of the trespass, enclosed with a fence reasonably sufficient to keep out stock:

Provided always that nothing in this section contained shall apply to any trespass wilfully caused, or refer to any conditional purchase for which a grant has been issued at the date of such trespass.

Errors of description, &c.

80. (I) No error or uncertainty in the description of land conditionally purchased either before or after the commencement of this Act shall invalidate the purchase in any case where the local land board is satisfied that the land occupied by the conditional purchaser is the land intended to be described in his application. Error in application or declaration or description not to invalidate purchase. Sec. 57, Act 1884

(II) And if the board notifies to a conditional purchaser the description of the land purchased by him as finally approved by the board such notification shall be conclusive evidence that the land therein described is the land conditionally purchased.

(III) No error, uncertainty, omission, or misdescription in any application for a conditional purchase or conditional lease, or in any declaration made in connection with any such application, shall invalidate the application in any case where the local land board is satisfied that such error, omission, uncertainty, or misdescription was not wilful, and made with intent to deceive. 14, Act 1889.

(IV) The board shall have full power to authorise the correction of any error or omission in any application or declaration, so as to bring the same into conformity with the statutory requirements.

(V) The provisions of this subsection shall apply only to applications made after the first day of December, one thousand eight hundred and eighty-nine, or after the commencement of this Act, and to applications and declarations made before but not finally disposed of on the first day of December aforesaid.

Encroachments.

Power of adjustment where encroachments made on exempt lands.
Sec. 58, Act 1884.

81. In any case where any portion of land purchased is found to encroach upon or be included within an area reserved or exempt from sale, or to encroach upon or be included within other land purchased, the title of the holder of or the claim of the applicant for any such purchase shall not be prejudiced or affected further than to the extent of the encroachment on or inclusion within such area if the residue be not less than forty acres.

DIVISION VIII.—Conditions.

Residence on conditional purchases and conditional leases.

Residence to mean continuous and bona fide living on land.
Sec. 29, Act 1895.
Sec. 32, Act 1884.

82. Residence for the purpose of the condition of residence on a conditional purchase shall be taken to mean continuous and bona fide living on the land as the holder's usual home, without any other habitual residence.

Term of residence.
Sec. 32, Act 1884.
Sec. 29, Act 1895.

83. The holder of any conditional purchase (other than a non-residential conditional purchase) applied for after the first day of June, one thousand eight hundred and ninety-five, or after the commencement of this Act, shall hold the same, subject to a condition of residence, until the expiration of ten years from the date of the application for the conditional purchase, and the conditional purchaser shall, within three months from the date of confirmation of his application by the local land board, commence and thereafter continue to reside on his conditionally purchased land for the prescribed term :

Provided that—

- (a) when a conditional purchase has been transferred bonâ fide by way of mortgage, the condition of residence may be performed by the owner subject to such mortgage ; and
- (b) when the beneficial owner of a conditional purchase dies, or is declared a lunatic, the condition of residence shall be suspended until the conditional purchase has been transferred or conveyed, and no longer.

Residence on additional conditional purchases and conditional leases.
Sec. 30, Act 1895.

84. The condition of residence defined in the preceding section shall attach to every additional conditional purchase or conditional lease applied for after the first day of June, one thousand eight hundred and ninety-five, or after the commencement of this Act, and it shall be immaterial whether the original conditional purchase of the series was made under this Act, or under the Acts 1859–1897. The said condition shall not be taken to have been performed by the performance of the condition of residence which attached to the original conditional purchase, or any prior additional conditional purchase of the same series :

Provided that—

- (a) if the person fulfilling the condition of residence has, before the commencement of the term of such residence, continuously resided upon some purchase or lease of the same series, the term of residence shall be reduced by the period during which residence was previously carried on, but not so as in any case to be reduced to less than five years ; and
- (b) conditions of residence attaching to any number of purchases or leases of the same series may be performed concurrently ; and
- (c) a person residing upon any purchase or lease of a series shall, for the purposes of any conditions of residence, be taken to be residing upon every purchase or lease of the series ; and

(d)

- (d) an additional conditional purchase if made out of a conditional lease applied for before the first day of June, one thousand eight hundred and ninety-five, shall not be subject to any condition of residence. Sec. 30, Act 1895.

85. The performance of the aforesaid condition of residence in respect of an additional conditional purchase or a conditional lease shall be waived so long as the person, upon whom the performance of the said condition would for the time being devolve, is the person who applied for the original conditional purchase of the series and for the said additional conditional purchase or conditional lease. But this provision as to waiver shall not operate where the applicant for the additional conditional purchase or conditional lease—

- (a) has taken up a full area; or
 (b) is the owner of a full area; or
 (c) has owned a full area at any time previous to the date of application, and has divested himself of the ownership thereof by transfer, conveyance, assignment, or otherwise, or purported so to do in order to obtain the benefit of the foregoing provision.

In the construction of the foregoing provision a full area shall be taken to mean an aggregate area of conditional purchases and conditional leases, whether of the same or different series, amounting to two thousand five hundred and sixty or more acres in the Central Division, or one thousand two hundred and eighty or more acres in the Eastern Division, or one thousand nine hundred and twenty or more acres if the said conditional purchases and conditional leases are some in one Division and some in another Division.

Residence by married women.

86. (I) If any conditional purchase has been or is made by an unmarried woman, and she has married or marries prior to the completion of the term of residence required for her conditional purchase, it shall be a sufficient compliance with this Act or the Acts 1884–1897 (so far as residence is concerned) if she has resided or resides for the remainder of such term, either upon her conditional purchase or upon any conditional purchase held by her husband, for which his term of residence may not at the time have been completed. Residence by married women. Sec. 47, Act 1889.

(II) Or the husband may complete any term of residence required for his conditional purchase upon any conditional purchase held by his wife for which her term of residence may not at the time have been completed.

(III) In either case notice as prescribed shall be forwarded to the chairman of the land board on the conditional purchaser's intention so to reside.

Residence by minors.

87. In all cases where a minor has before or after the commencement of this Act, conditionally purchased land adjoining land held as a conditional purchase or conditional lease by the parent or parents of such minor, such minor may, up to the age of twenty-one years if a male, or twenty-four years if a female and unmarried, continue to reside with his or her parents on such adjoining land on making a declaration in the prescribed form to the local land board of the intention of such minor so to reside. Residence by minors. Sec. 47, Act 1889.

(II) Such residence, if continuous and bonâ fide, shall be deemed to be a fulfilment of the conditions of residence within the meaning of this Act.

(III) For the purposes of this section the word "adjoining" shall be deemed to include lands separated by roads or creeks or by conditional purchases or leases held by any child of the same parent.

Fencing

Fencing and improvements.

Residential
conditional purchases
Condition of fencing
or improvements.
Sec. 33, Act 1895.

88. (I) Every conditional purchase (other than a non-residential purchase) and every conditional lease shall be subject, at the option of the purchaser or lessee, and without any application in that behalf to a condition of fencing, or in the alternative, to a condition of improvement.

(II) The provisions of this section shall apply to any existing conditional purchase or conditional lease, the application for which has been confirmed within two years before the first day of June, one thousand eight hundred and ninety-five.

Non-residential
conditional
purchases.
Conditions of
improvements and
fencing.

Sec. 47, Act 1884.
Sec. 4, 52 Vic. No. 7.

89. (I) Every non-residential conditional purchase shall be subject to a condition of improvement as well as to a condition of fencing:

(II) Provided that the holder of any such conditional purchase may at any time within two years after the confirmation of the application apply to the Chairman of the Local Land Board in the prescribed form for permission to substitute other improvements wholly or partly in lieu of fencing: And any such application may be approved or refused by such Board, subject to appeal to the Land Appeal Court.

Secs. 33, 51, Act
1884.

90. The following provisions shall apply in respect to the condition of fencing:—

Original and
additional con-
ditional purchase
one holding.

Sec. 26, Act 1889.

(I) The fence shall be erected on the exterior boundaries of each conditional purchase and conditional lease, or on the exterior boundaries of the conditional lease and the conditional purchase by virtue of which it has been granted; provided that all conditional purchases of the same series, and all conditional leases granted in virtue thereof, shall, for all purposes of fencing, be deemed to be one holding, and it shall be sufficient if the fence be erected on the exterior boundaries of such holding so as to enclose the whole area.

Sec. 51, Act 1884.

(II) The fence shall be a substantial one, and shall be prescribed by the local land board; but such board shall not prescribe any fence likely to be a harbour or shelter for rabbits or such other animals as may have been or may be declared by the Minister by notice in the Gazette to be vermin.

Local Land Board to
determine kind of
fence.

Sec. 33, Act 1884.
Sec. 9, Act 52 Vic.
No. 7.

(III) Where a condition of residence attaches to the conditional purchase or conditional lease the holder of the conditional purchase or lease shall maintain the fence in good repair and condition during the entire period of the term of residence.

Maintenance of
fences.
Secs. 33 and 51, Act
1884.

(IV) Subject to the provisions of the next succeeding subsection the fence shall in the case of a non-residential conditional purchase be erected within one year from the date of confirmation of the application for such purchase, and in the case of any other conditional purchase or any conditional lease the fence shall be erected within three years from the date of confirmation of the application for the purchase or lease.

Period for fencing.
Sec. 47, Act 1884;
sec. 6, 52 Vic. No. 7.

Sec. 33, Act 1895.

(V) Upon sufficient cause the board (or the chairman pursuant to the provisions of section *twenty-seven* of this Act), may on application extend the period within which the condition of fencing shall be fulfilled.

Extension of period.
Sec. 33, Act 1884;
37, Act 1895.

91. The board (or the chairman, pursuant to the provisions of section *twenty-seven* of this Act), on the application of the purchaser or lessee may grant him an exemption from fencing—

Exemption from
fencing from tage to
river, creek, &c.
Sec. 33, Act 1884.
Sec. 37, Act 1895.

(a) any part of his land which has frontage to a permanent river, creek, or other natural boundary held by the chairman or board to be sufficient; or

(b)

- (b) any boundary line fenced by the holder or occupant of adjoining land with a fence, which in the opinion of the board or chairman is of a sufficiently useful and substantial kind; or
- (c) any boundary line in any case where a fence although not erected upon the actual boundary line is, in the opinion of the board or chairman, a sufficient boundary fence.

And any exemption granted under this section shall not involve the making of other improvements in lieu of fencing.

Condition of improvements.

92. Where the holder of a conditional purchase (other than a non-residential conditional purchase) or a conditional lease elects to perform a condition of improvement instead of a condition of fencing, or where in the case of a non-residential conditional purchase permission is granted (or is not applied for or is applied for and not granted) to substitute improvements in lieu of fencing, the following provisions shall apply:—

- (i) In the case of residential conditional purchases the improvements, including any fencing, shall within, and at the expiration of, three years from the date of confirmation of the application, be of the value of at least six shillings per acre, but shall not be required to be of a greater value than three hundred and eighty-four pounds; and within, and at the expiration of, five years from the date of confirmation of the application shall be of the value of, at least, ten shillings per acre, but shall not be required to be of a greater value than six hundred and forty pounds.

- (ii) In the case of a non-residential conditional purchase, the purchaser shall, within five years after the confirmation of the application for the conditional purchase, expend a sum not less than one pound per acre upon permanent improvements other than for the boundary fencing:

Provided that where the land board grants permission to substitute other improvements in lieu of fencing, such improvements (including any fencing) of the value of at least thirty shillings per acre shall be made within five years from the date of confirmation of the application for the conditional purchase.

- (iii) The improvements, including any fencing, shall be of a fixed, permanent, and substantial character, and necessary for the beneficial occupation of the land.
- (iv) The area embraced by any original conditional purchase, and any additional conditional purchases made by virtue thereof, and any conditional leases whatsoever granted by virtue of such conditional purchases, may, for all purposes of improvements, be held to be one holding, notwithstanding that one, or more, of such conditional purchases or leases may have been made or granted under the Acts, 1859-1897.

Enclosing of roads or water-courses.

93. (i) Where in any case the unfenced sides of lands, whether held by different persons and under different conditions or not, are separated by a road or water-course, the board (or the chairman pursuant to the provisions of section *twenty-seven* of this Act), on application being made to the chairman in the prescribed form and within the prescribed time, may grant permission for such road or water-course to be wholly or in part inclosed, provided that gates or suitable

suitable substitutes such as the board or chairman may consider necessary and direct, shall be erected or made so as not to unnecessarily interfere with any traffic, or, to any large extent, divert the natural flow of water.

Sec. 14, 52 Vic. No. 7. (II) Any such gate may on application to, and approval of, the Minister who may administer the Public Gates Act be made a public gate within the meaning, and subject to the provisions of that Act. And nothing in the Public Gates Act shall be held to have prevented or to prevent the foregoing provision from having its full effect and operation.

Sec. 14, 52 Vic. No. 7. (III) Upon complaint being made in the prescribed form to the chairman of the local land board, such board may, for any sufficient reason, cancel any permission granted under this section, and may order any fence, gate, or other structure on any road or water-course to be removed by such persons, and within such periods as such board shall determine.

Sec. 14, 52 Vic. No. 7. (IV) Nothing in this section shall exempt the holder of any conditional purchase or conditional lease from being required to make other improvements in lieu of fencing :

Sec. 23, Act 1889. (V) Provided that the Land Board on application as prescribed by the holder of the land may exempt him from making improvements in addition to the fencing erected or to be erected on the land.

Ring-fences.

One or more conditional purchases may be enclosed by ring-fence.
Sec. 17, Act 1889.
Sec. 37, Act 1815.

94. (I) Where conditional purchases (other than non-residential conditional purchases) or conditional leases adjoin so as to form one block, or are separated only by road or creeks, and such conditional purchases or conditional leases are held by members of one family, standing in the relation of parents and children, it shall be lawful for the board (or the chairman, pursuant to the provisions of section *twenty-seven* of this Act), upon a joint application made within the prescribed time and in the prescribed manner by the holders of the land, to exempt such holders from any condition of fencing or improvements in connection therewith further than the erection of a ring-fence of a character to be prescribed by such board or chairman on the external boundaries of the lands so as to enclose them as one holding.

(II) The board or chairman may, notwithstanding anything to the contrary in this Act, accept any such application, wholly or in part, and the board may disallow any such application, wholly or in part: Provided that such board or chairman shall, in connection with any accepted application, fix the term (and may upon application as prescribed extend the term) within which the fence shall be erected, such term being determined as far as practicable with due regard to the respective dates of commencement of the purchases or leases.

(III) If the ring fence be not erected within the term allowed, each and every purchase or lease shall be liable to forfeiture by notice in the Gazette.

Suspension of conditions.

Suspension of condition in case of illness, drought, flood, or other sufficient cause.
Sec. 24, Act 1889.
37, Act 1895.

95. (I) If the holder of any conditional purchase or conditional lease, applied for before or after the commencement of this Act, is through illness, drought, flood, or other sufficient cause prevented from fulfilling any conditions of residence, fencing or improvements attaching thereto, the board, after inquiry in open Court (or in the case of fencing, the chairman may, pursuant to the provisions of section

section *twenty-seven* of this Act), on application as prescribed, suspend for a specified period not exceeding six months any or all of such conditions, or the Board may refuse the application for suspension.

(II) On the expiration of such specified period the holder shall commence and continue to reside thereon for a period which (when taken with the period during which he may have resided thereon since the date of his obligation to do so) shall complete the full term prescribed by the Act under which the conditional purchase or conditional lease was made, and shall, during the term extended as aforesaid or otherwise, complete any other conditions, subject upon default in either case to forfeiture.

Rent and term of conditional leases.

96. (I) Every conditional lease shall be subject to a provisional rental of twopence per acre, pending determination of the rent in accordance with this Act. Rent and term of conditional leases. Sec. 28, Act 1889.

(II) The rents of all conditional leases applied for after the commencement of this Act shall be paid annually in advance not later than one day prior to a date corresponding to the date of application. And the rents of all conditional leases applied for before the commencement of this Act shall be paid annually in advance before the recurring dates of commencement of such leases. Sec. 12, Act 1889.

(III) Subject to payment of rent and fulfilment of any prescribed conditions, all conditional leases (whether granted before or after the commencement of this Act) shall have a term of twenty-eight years from the respective dates of their commencement; and, subject to the provisions of the next succeeding subsection, the rent of any conditional lease granted before the commencement of this Act shall be deemed to have been, and the rent of any conditional lease granted after the commencement of this Act shall be, determined for the whole term of the lease. Sec. 35, Act 1895. Sec. 29, Act 1889.

(IV) At the expiration of the first period of fifteen years of any such conditional lease the rent of the land may, on the application of the lessee, or on a reference by the Minister, be redetermined in accordance with the provisions of section *forty-four* of this Act.

(V) The Governor may, upon application in the prescribed manner, give, by notification in the Gazette, tenant right in improvements to the last holder of a conditional lease which has before or after the commencement of this Act been forfeited or surrendered, and shall give such tenant right to the last holder of a conditional lease which has expired.

Payment of purchase money.

97. (I) Every holder of a conditional purchase, the application for which shall be made after the commencement of this Act, shall at the end of the third year after the date of his application pay to the land agent an instalment on his purchase and Conditions for payment of residue of purchase money. Secs. 35, Act 1884, 22, Act 1889.

(II) Thereafter shall pay in like manner a like instalment annually during a period until the balance together with interest at the rate of four per centum per annum thereon shall have been paid :

(III) Three months grace shall be allowed for the payment of the first and for each and every instalment, provided that in the case of any moneys not being duly paid the provisions of section *one hundred and two* of this Act shall apply. Sec. 38, Act 1884.

(IV) In the case of a conditional purchase (other than a non-residential conditional purchase or a conditional purchase within a special area), each instalment shall be one shilling per acre, and the balance, after payment of the first instalment, seventeen shillings per acre. Sec. 35, Act 1884.

(V)

Sec. 47, Act 1884.

(v) In the case of a non-residential conditional purchase (if not within a special area) each instalment shall be two shillings per acre, and the balance, after payment of the first instalment, thirty-four shillings per acre.

Secs. 24 and 47,
Act 1886.
Sec. 18, Act 1889.

(vi) In the case of a conditional purchase within a special area, each instalment shall be at such rate as has been or shall be notified in the proclamation of the special area, provided that the instalment in the case of a non-residential conditional purchase shall be double the instalment which would be payable in the case of a residential conditional purchase.

Secs. 35, Act 1884,
and 22, Act 1889.

(vii) After the last payment of such instalments and interest the conditions of payment shall be deemed to have been duly fulfilled :

Sec. 35, Act 1884.
Sec. 22, Act 1889.

98. The conditional purchaser may pay off the whole or any portion of such instalments at any time after a certificate has been granted to him to the effect that all the conditions applicable to the conditional purchase, except payment of balance of instalment, have been duly complied with.

99. Payment of interest and balance of purchase money in respect of conditional purchases applied for before the commencement of this Act shall be paid in accordance with and subject to the provisions of such Acts as may be applicable thereto.

Conversion of
holding under
repealed Act as
regards unpaid
balance.
Sec. 35, Act 1884.

100. Any holder of a conditional purchase made before the first day of January, in the year one thousand eight hundred and eighty-five, and not brought under the instalment system, may, by writing addressed to the land agent, apply to convert his holding so far as regards the balance unpaid of his purchase money into a holding under the conditions of payment prescribed by this Act.

Reduction in the
rate of interest on
repealed Act con-
ditional purchases.
60 Vic. No. 2, sec. 5.

101. The rate of interest payable on the balance of purchase money for the time being unpaid upon conditional purchases applied for before the first day of January, in the year one thousand eight hundred and eighty-five, and subject to the provisions of section eight of the Lands Acts Amendment Act, 1875, but not brought under the provisions of section thirty-five of the Crown Lands Act of 1884, shall be reduced to four per centum per annum, such reduction taking effect as from the first day of January, in the year one thousand eight hundred and ninety-six.

Provided always that—

- (a) the aforesaid reduction in the rate of interest shall not operate in respect of any interest which may have accrued before the date hereinbefore mentioned for the taking effect thereof in any case ;
- (b) nothing in this section contained shall affect the provisions of section forty-eight of the Crown Lands Act of 1895, or section *one hundred and two* of this Act.

Overdue payments on conditional purchases or conditional leases.

Overdue moneys to
bear interest accruing
day by day.
Sec. 49, Act 1895.

102. Any sums which shall become payable to the Crown as purchase money or interest, or rent, or otherwise (in connection with any conditional purchase or conditional lease applied for before or after the commencement of this Act) shall from and after the due date for the payment thereof bear interest at the rate of ten per centum per annum, and such interest shall be considered as accruing due day by day. Nothing in this section contained shall be construed so as to prevent or to compel the enforcement of any forfeiture, or the acceptance of any overdue sums together with interest as aforesaid, and the acceptance by or on behalf of the Crown of any purchase money or part thereof in respect of any conditional purchase or of interest

Sec. 126, Act 1884.

interest or rent or other payment under any lease, shall not be held to operate as a waiver by the Crown of any forfeiture accruing by reason of the breach of any condition annexed by law to the estate or interest of a conditional purchaser or of a lessee.

Reduction of payments.

103. Subject to the provisions hereinafter contained, the Minister may reduce the rate of one shilling per acre per annum payable in respect of a conditional purchase (whether applied for before or after the commencement of this Act) to ninepence per acre per annum, or (if the case so admit) to sixpence per acre per annum, and where the rate shall have been reduced under this Act (or the Act sixtieth Victoria number two) to ninepence per acre per annum, may further reduce the rate to sixpence per acre per annum; and in any such case any annual payments in respect of the said conditional purchase accruing due after the date fixed for the operation of the reduction may be made at the reduced rate as determined by the Minister.

Reduction of annual payments on conditional purchases.
60 Vic. No. 2, s. 2.

The rate of annual payments in respect of a conditional purchase within a special area (whether the value of such conditional purchase has been determined by appraisal or not) may, subject to the provisions hereinafter contained, be reduced to three-fourths or one-half of the rate payable previous to the first reduction under this Act, or the Act sixtieth Victoria number two:

The like within special areas.

Provided always that the Minister shall in every such case so determine the rate that the annual payments, as reduced, will extinguish the balance of purchase money, together with the interest thereon within the period of sixty-six years from the date when the instalment of purchase money first succeeding the deposit became due.

104. Before any reduction is made by the Minister in respect of any conditional purchase, an application for such reduction shall be made in the prescribed manner by the holder of the conditional purchase, or if the same is held by way of mortgage, then by the person who holds subject to the mortgage, and shall be accompanied by a declaration and fee as prescribed;

Conditions precedent to a reduction.
60 Vic. No. 2, s. 3.

And a reduction shall not be made to any applicant whose home and place of abode is not established on a holding of which the conditional purchase in respect of which the reduction is applied for forms part.

A holding for the purposes of this section shall mean a continuous block, or portions separated by roads or watercourses, and may include land held in fee simple and conditional purchases or conditional leases of the same or different series.

Provided that the conditional purchases (included in such holding) in respect to which the reduction may be made shall not exceed an area of one thousand two hundred and eighty acres in the Eastern Division, or two thousand five hundred and sixty acres in the Central or Western Division:

Provided that nothing herein shall prevent the Minister from making a reduction (subject to such conditions as he may deem expedient) in any case where he is satisfied that the applicant, although not resident as hereinbefore required, holds the land *bonâ fide* for his sole use and benefit, and is not in a position to pay the instalments at the original rate, and is not the holder under any tenure of a greater total area in this Colony than is necessary for the maintenance of a family, such total area not exceeding in any case one thousand two hundred and eighty acres in the Eastern Division, or two thousand five hundred and sixty acres in the Central or Western Divisions:

Provided further that this reduction under the last proviso shall not run with the land, but shall attach only as a concession to the applicant personally.

Reductions may be cancelled in certain events.

60 Vic. No. 2, sec. 4.

105. In any case where the Minister is satisfied, with or without a report from the Local Land Board, that the holder for the time being of the conditional purchase, in respect of which a reduction has been granted under this Act or the Act sixtieth Victoria number two (or, if the same is held by way of mortgage, then that the person who holds, subject to the mortgage) has ceased to keep his home and place of abode thereon, or that the declaration accompanying the application for the reduction contains any false statement, the Minister may direct that payments at the rate obtaining previous to any reduction shall be resumed; and in any such case payments at the said rate shall be resumed from and after such date as the Minister may specify for that purpose.

Suspension of payment of instalments upon conditional purchases.

Suspension of payment of instalments.

Sec. 28, Act 1895.

106. (i) The holder of a conditional purchase (whether applied for before or after the commencement of this Act), may, in case of temporary inability to pay the instalments of purchase money thereon as they fall due, apply to the Minister in the prescribed manner that the condition of payment attaching thereto may be suspended; and the Minister may, either with or without reference to the local land board, upon the conditional purchaser paying the prescribed fee to cover expenses incurred by the Crown in consequence of the aforesaid application, suspend the said condition for one year under any one suspension.

(ii) During the period of any such suspension, interest on the balance of purchase money, calculated at the rate of four per centum per annum, shall be added to the balance of the purchase money owing, unless the conditional purchaser pays such interest on the date at which an instalment of purchase money would otherwise be payable.

(iii) The Minister shall not grant suspension of the condition of payment unless he is satisfied that the holder of the said conditional purchase, or if the same has been transferred by way of mortgage, that the owner thereof subject to such mortgage, is in residence upon the said conditional purchase, or upon some purchase or lease of the same series, and is the holder or owner thereof (as the case may be), *bond fide* for his sole use and benefit.

(iv) Suspension of the condition of payment shall be deemed to be determined:—

- (a) Upon the conditional purchase being transferred; or
- (b) Upon the holder or owner ceasing to reside upon the series;

or

- (c) Upon an instalment of the purchase money being paid.

(v) Upon the expiration of the period of suspension, payment of instalments, as prescribed by the Acts 1875–1897 or this Act, as the case may be, shall be resumed, and no sums paid by way of interest as aforesaid shall be taken to form part of the balance of purchase money.

Certificate of fulfilment of conditions of a conditional purchase.

Certificates of conformity.

Conditional purchases under Acts 1884–1889.

Sec. 36, Act 1884.

107. (i) With respect to a residential conditional purchase applied for under the Acts 1884–1889, the local land board shall if such board after due inquiry at the expiration of the term of residence prescribed by such Acts is satisfied that all conditions applicable to such conditional purchase except payment of the balance of instalments of purchase money have been duly complied with issue a certificate to that effect.

(ii)

(II) And a like certificate may be granted by such board upon the application of the holder of any additional conditional purchase made before the first day of June, one thousand eight hundred and ninety-five, or any additional conditional purchase made out of a conditional lease applied for before the first day of June, one thousand eight hundred and ninety-five, so soon as such board is satisfied after due inquiry that all conditions applicable thereto except payment of the balance of instalments have been duly complied with, and notwithstanding that five years from the date of confirmation of the application for such additional conditional purchase may not have expired.

108. (I) With respect to original residential conditional purchases applied for after the first day of June, one thousand eight hundred and ninety-five, or after the commencement of this Act, the local land board shall hold inquiries after the expiration of five and ten years from the date of the application, whether all conditions applicable to the conditional purchase except payment of the balance of instalments have so far been duly complied with, and if the board be satisfied of such compliance it shall issue certificates to that effect; and such certificates shall be designated the first and second certificates respectively.

(II) And like certificates may be granted by such board in respect of any additional conditional purchases applied for after the first day of June, one thousand eight hundred and ninety-five, or after the commencement of this Act when such board is satisfied after due inquiry that all conditions applicable thereto except payment of the balance of instalments have been duly complied with:

(III) Provided that the board may issue a final (and if necessary dispense with the first) certificate before the expiration of ten years from the date of application for any such additional conditional purchase if the condition of residence attaching to such additional conditional purchase has been fulfilled before the expiration of such ten years.

109. The local land board may, on the production to such board, by the holder of a non-residential conditional purchase (whether applied for before or after the commencement of this Act) of evidence satisfactory to such board that all conditions (except payment of the balance of instalments) applicable to such conditional purchase have been duly fulfilled, grant to him a certificate to that effect, notwithstanding that such conditions have been fulfilled within five years from the date of confirmation of the application for such conditional purchase.

110. Any certificate issued under the Acts 1884-1897 or under this Act shall be transferable subject to the prescribed conditions, and when it is a certificate that all conditions applicable to the conditional purchase have been fulfilled shall be *prima facie* evidence of the title of the holder thereof to the land therein described subject to the fulfilment of the prescribed conditions of payment.

111. No certificate shall be issued by the board before the expiration of thirty days from the date of publication in the Gazette of notice of its intention to issue the same within which period any person may lodge in the prescribed form and manner a caveat against such issue, and every such caveat shall be disposed of by the board before issuing such certificate in manner provided in section *seventy-four* of this Act for dealing with caveats:

112. Upon satisfactory proof being adduced that an original certificate issued has been lost or destroyed, the board may after the prescribed notice in the Gazette and in the prescribed manner, issue to the person entitled thereto a fresh certificate.

Certificate necessary before grant.
Sec. 37, Act 1884.
Sec. 29, Act 1895.

113. Subject to (and not before) the issue—
- (a) in respect of cases under sections *one hundred and seven* and *one hundred and nine* of this Act, of a certificate of fulfilment of conditions;
 - (b) in respect of cases under section *one hundred and eight* of this Act, of the second or a final certificate of fulfilment of conditions;

and upon payment of the balance of instalments, stamp duty, and deed fee, a grant in fee simple of the land shall be issued upon application.

Conditions attach on devolution of purchase.

Applicability of conditions to representatives of conditional purchasers.
Sec. 40, Act 1884.

114. The conditions and obligations imposed by, and all other the provisions relating to, conditional purchasers contained in this Act shall be equally applicable and attach to persons deriving title through or under such conditional purchasers, and to all persons upon whom title shall devolve or be cast by operation of law; but this section shall be read subject to the provisions contained in sections *eighty-three*, *one hundred and fifteen*, and *one hundred and twenty-nine* of this Act relative to cases of death, lunacy, insolvency, or judgment debt of a conditional purchaser.

Cases of death or lunacy of conditional purchaser.
Sec. 125, Act 1884.

115. If any conditional purchaser shall die or be declared a lunatic before the fulfilment of the prescribed conditions of residence and fencing his conditional purchase may, together with any conditional lease or right of conditional lease attached thereto (if any), be held by his representatives or their assigns, subject to the fulfilment by them of all unfulfilled conditions, except the condition of residence, but in trust for and for the benefit of the persons rightfully entitled, provided that in respect of any conditional purchase applied for after the first day of June, one thousand eight hundred and ninety-five, or after the commencement of this Act the condition of residence shall, in accordance with subsection (b) of section *eighty-three* of this Act, be suspended until the land has been transferred or conveyed, and no longer.

Sec. 29, Act 1895.

DIVISION IX.—Forfeitures.

Forfeiture for breach of conditions.

Forfeiture for non-fulfilment of conditions of fencing and residence or improvements.
Sec. 39, Act 1884.

116. If the local land board or the land appeal court shall, in the case of any conditional purchase or conditional lease applied for under the Acts 1884-1897 or under this Act, report to the Minister that after due inquiry held by such board or court the conditions of residence or fencing or improvements attached to such conditional purchase or conditional lease have not in the opinion of such board or court been, or are not being, duly fulfilled by any conditional purchaser or lessee or his representatives, such Minister may declare the conditional purchase or lease to be forfeited, and any payment made in respect of such purchase or lease shall in such case be forfeited to Her Majesty.

Forfeiture for want of good faith.

Forfeiture for want of good faith.
Sec. 43, Act 1895.

117. (1) In any case where an application for a conditional purchase or conditional lease has been confirmed, after the first day of June, in the year one thousand eight hundred and ninety-five, or after the commencement of this Act, and it appears to the satisfaction of the local land board—

- (a) that the application was not made in good faith; or
- (b) that the land is not held or used for the exclusive benefit of the purchaser, lessee, or apparent owner thereof,

the Governor shall have power to forfeit, by notification in the Gazette, the purchase, or lease in question, together with all moneys paid thereon.

(11)

(11) Nothing in this section contained shall affect any person acquiring any interest in a conditional purchase or conditional lease after the same becomes capable of being transferred, unless he has, before acquiring such interest, had notice of a violation of the provisions of section *sixty-three* of this Act, or of section forty-two of the Crown Lands Act, 1895, as the case may be, or of the intention to institute an inquiry as to such violation.

Not to apply to transferee without notice.

Forfeiture for false statements.

118. If it be proved by inquiry before the local land board that any statement in writing or any statutory declaration or evidence on oath has been made or given for the purpose of misleading any officer, authority, or person in the exercise of his duty or office under this Act, or under the Acts 1884-1897, or that any such statement, declaration, or evidence wilfully misrepresents facts, or that any fraudulent attempt has been made to prove that the conditions of this Act or the Acts 1884-1897 have been complied with, then and in any such case the Minister may declare any conditional purchase or leasehold in connection with which such statement, declaration, or evidence was made or given to be forfeited, together with all moneys paid on account of or in connection with such conditional purchase or lease: Provided that no forfeiture shall be held to affect any transferee unless declared within twelve months after the local board has issued a certificate in accordance with the provisions of this Act or the Acts 1884-1897 that the conditions attaching to such conditional purchase have been fulfilled.

Liability to forfeiture for misleading statement, &c.
Sec. 135, Act 1884.

Forfeiture for non-payment.

119. In default of payment of any instalment or interest (in respect of any conditional purchase applied for under this Act or the Acts 1859-1897) within the period allowed for payment, the conditional purchase may be declared by the Minister to be forfeited, and upon such declaration being published in the Gazette, the conditionally purchased land in respect of which such payment is due shall revert to Her Majesty and become Crown lands for the purposes of this Act, and any payment made in respect of such purchase shall in such case be forfeited to Her Majesty.

Forfeiture on default of payments on conditional purchase.
Sec. 38, Act 1884.

120. In default of payment of any rent on any conditional lease, applied for before or after the commencement of this Act, on the day when such payment shall have fallen due, the conditional lease may be declared by the Minister to be forfeited, and upon such declaration being published in the Gazette, the conditional lease in respect of which such payment is due shall become forfeited.

Forfeiture on default of payment on conditional lease.
Sec. 96, Act 1884.

Operation of forfeiture.—When forfeiture takes effect.

121. Every forfeiture of land conditionally purchased, whether under this Act or the Acts 1859-1897, shall be deemed to operate as a forfeiture of all additional conditional purchases held in virtue of such first-mentioned lands as well as of all conditional leases or rights attached to the lands so forfeited, and whenever any land is so forfeited such land shall become Crown land and may be dealt with as such; but no forfeiture of any conditional purchase or conditional lease shall take effect until the expiration of thirty clear days after notification of such forfeiture in the Gazette.

Forfeited lands.
Sec. 136, Act 1884.

DIVISION X.—Transfers of conditional purchases and conditional leases.

Transfers to be in prescribed form.
Sec. 117, Act 1884.

122. All transfers of conditional purchases shall be notified to the land agent in such form as may be prescribed.

Notice of liability to forfeiture or avoidance.
Sec. 43, Act 1895.

123. Any person who, before the issue of a certificate of conformity in respect of a conditional purchase, whether made before or after the commencement of this Act, takes a transfer or conveyance thereof, or of any interest therein, shall be held to have taken the same with notice and knowledge of all facts and matters by reason of which such conditional purchase may be liable to be forfeited or declared void.

Transfers of original purchases.
Sec. 29, Act 1895.

124. An original conditional purchase applied for after the first day of June, one thousand eight hundred and ninety-five, or after the commencement of this Act, may be transferred at any time after, and shall not be transferred before, the issue of a certificate by the local land board, after the expiration of five years from the date of application for such purchase, that all conditions applicable to the conditional purchase, except payment of balance of instalments, have so far been duly complied with.

Original and additional purchases.
Sec. 117, Act 1884.
Sec. 29, Act 1895.

125. Original conditional purchases, together with any additional conditional purchases made in virtue thereof, may be transferred in the prescribed manner—

(a) (when the original conditional purchase in virtue of which such additional conditional purchases were made was applied for before the first day of June, one thousand eight hundred and ninety-five) on completion of the residence required on such original conditional purchase ;

(b) (when the original conditional purchase in virtue of which such additional conditional purchases were made was applied for after the first day of June, one thousand eight hundred and ninety-five, or after the commencement of this Act) after the issue of the certificate mentioned in the previous section :

Provided that original conditional purchases and additional conditional purchases made in virtue thereof shall not be transferred separately until all the conditions applicable to the whole area, except that of payment of balance of purchase money or of instalments thereof, have been duly fulfilled.

Non-residential purchases.
Sec. 47, Act 1884.

126. The estate or interest of a non-residential conditional purchaser shall be incapable of being transferred, alienated, mortgaged, encumbered, or pledged until after the issue of the certificate of conformity by the local land board, but subject to the payment of instalments due on the land purchased may devolve or be transferred by operation of law.

Conditional leases.
Sec. 118, Act 1884.

127. The holder of a conditional lease may transfer his right of ease in the prescribed manner ; but a conditional lease shall not be transferred except with the land in virtue of which it was granted.

Effect in law of transfer.
Sec. 119, Act 1884.

128. Every transfer of land conditionally purchased, if made by a person not under legal disability, shall, subject to the provisions and conditions of this Act, be deemed to pass to the transferee the whole estate and interest, whether at law or in equity, of the transferor of such land as effectually to all intents and purposes as if a conveyance or assignment under seal of such estate and interest to such transferee had been duly executed by such transferor ; but this enactment shall be subject to the conditions following, namely :—

(i) The equities of all persons claiming any estate or interest in any such land by matter prior to the date of execution of any such transfer shall not be affected by this section, but shall be capable of assertion and enforcement as if this Act had not been passed.

(ii)

- (II) No transfer shall have the effect hereinbefore expressed, unless such transfer has been made, executed, and lodged in accordance with the regulations.
- (III) No such transfer shall prejudice or affect any conveyance or assignment, or any other assurance under seal relating to land conditionally purchased, if such conveyance, assignment, or assurance shall have been previously registered, as by law required, in the office of the general registry of deeds in Sydney.

129. Any sale, transfer, or other disposition whatsoever of the estate, right, title, or interest of any conditional purchaser by an official assignee or other lawful authority upon the insolvency of such purchaser, or by a Sheriff or Registrar of a District Court, or any other person by virtue of or under the authority of any writ of execution or other process of any Court, or by the trustees of any deed of assignment for the benefit of creditors, or by any person under any decree or order of any Court shall pass to a purchaser or to any other person only such estate, right, title, or interest as the conditional purchaser himself was entitled to at the date of sequestration, writ, process, decree, order, or assignment respectively, and subject to all conditions remaining unfulfilled at such date.

Cases of insolvency
or judgment debt.
Sec. 125, Act 1884.

130. The effect given to duly registered deeds and instruments affecting lands, hereditaments, and other property by the eleventh section of the Registration Act, seventh Victoria number sixteen, shall be deemed to be annexed and to be incident to all transfers within the meaning of this Act, if duly registered under the said Registration Act, after the prescribed registration or record thereof in the books of the Department of Lands shall have been duly effected.

Priority.
Sec. 120, Act 1881.

DIVISION XI.—Subdivision of Conditional Purchases.

131. Any conditional purchase (whether made before or after the commencement of this Act) of not less than one hundred acres may, upon application by the holder at any time after the issue of a certificate of conformity in respect thereof, be subdivided into portions which shall in no case be less than forty acres each.

Subdivision of
conditional
purchases.
Sec. 34, Act 1895

The application shall be accompanied by the prescribed deposit which shall be available for the payment of the costs of any survey and report which may be required; and the applicant shall surrender such land as may be necessary for providing roads of access to the subdivided portions, which land shall thereupon become Crown land free from any claim of the conditional purchaser thereto.

The local land board shall settle the line or lines of subdivision so as to conform to any regulations which may be made in that behalf, and shall determine the portion of the subdivided conditional purchase, to which any conditional lease acquired in virtue of the conditional purchase before the subdivision thereof shall be attached, but so that the conditional lease shall be attached to such portion thereof as the applicant proposes not to transfer.

After subdivision the balance of purchase money payable in respect of any portion of the subdivided conditional purchase may be paid up and a grant thereof issued, as if such portion were a separate conditional purchase.

No portion measured off in any such subdivision as aforesaid shall be capable of being separated by transfer, devolution, or otherwise from the residue of such portions, until a grant of such first-mentioned portion has been issued.

DIVISION

DIVISION XII.—Conversion of conditional purchases into mining conditional purchases.

Conversion of certain conditional purchases into mining conditional purchases.
Sec. 7, Act 1884.

132. The right of any holder of a conditional purchase made under sections thirteen, twenty-one, or twenty-two of the "Crown Lands Alienation Act of 1861" to convert such purchase into a conditional purchase for mining purposes, in accordance with any regulations in force for the time being made under the said Act, may be exercised subject to the terms and conditions contained in such regulations as if this Act or the Acts, 1884–1897, had not been passed.

51 Vic. No. 29.

And all regulations made prior to the commencement of this Act, purporting to authorise such conversion, shall be deemed to have had the force of law, and any conversion effected or sanctioned in pursuance, or purporting to be in pursuance thereof, or any conversion approved or permitted by any Secretary for Lands or other person on his behalf, shall be deemed to have been and to be valid.

DIVISION XIII.—Conversion of conditional purchases and leases into homestead selections.

Conversion of conditional purchases and leases into homestead selections.
Section 6, Conditional Purchasers' Relief Act.

133. Any conditional purchase, together with any conditional lease held by virtue thereof, or any conditional purchases or conditional purchases and conditional leases (whether of the same or different series, and although including more than one block) held by the same person (whether such conditional purchases or leases were applied for wholly or partly before or after the commencement of this Act), may be converted into a homestead selection, subject to the general provisions of this Act in that behalf, and to the following provisions:—

- (a) Application for conversion shall be made to the Minister in the prescribed form, and the conversion shall be subject to the approval of the Minister.
- (b) If the land included in the application is the subject of any mortgage or charge, an application by the mortgagor shall not be valid without the consent in writing of the person having the mortgage or charge.
- (c) The applicant shall be at the date of application, and shall have been for at least six months preceding that date in bonâ fide residence, within the meaning of section *eighty-two* of this Act, on the land included in his application.
- (d) No conditional purchase or conditional lease in respect of which a liability to forfeiture has been incurred shall be converted into a homestead selection while that liability to forfeiture continues.
- (e) It shall be immaterial whether the land was wholly or in part applied for before, or shall be applied for after, the commencement of this Act, or whether in the case of a conditional purchase a certificate of due compliance with the conditions applicable has or has not been issued: Provided that no purchase or lease applied for after the first day of January, one thousand eight hundred and eighty-five, or after the commencement of this Act, shall be converted into a homestead selection unless or until the application for such purchase or lease has been confirmed.
- (f) An application for conversion shall not be approved unless payment has been made for such improvements on the land as are by any enactment directed to be paid for.

(g)

- (g) The fact that the area may exceed one thousand two hundred and eighty acres shall not be a bar to conversion, provided that the area does not exceed one thousand two hundred and eighty acres in the Eastern or two thousand five hundred and sixty acres in any other Division, unless the Minister (who may refer to the local land board for report) is satisfied that a larger area is necessary for the maintenance of a family.
- (h) After approval of conversion, the Governor may issue a homestead grant of the land.
- (i) All moneys paid as interest on land held under conditional purchase, or as rent on land held under conditional lease, shall be taken to have been paid for the occupation or use of the land while the land was held under conditional purchase or conditional lease; but all moneys paid by way of purchase money on land held under conditional purchase, and not applied, as in the next subsection mentioned, towards the payment of interest as aforesaid, shall be credited towards the rent of the homestead selection.
- (j) In respect of any conditional purchase converted into a homestead selection, interest on the balance of purchase money owing on such conditional purchase shall be paid up to the date of the issue of the homestead grant, but may be taken (wholly or in part) out of any moneys paid by way of purchase money as aforesaid.
- (k) Notwithstanding anything in section *one hundred and fifty-three* of this Act, the Governor shall have power from time to time to waive the condition of residence attaching to any homestead selection converted into such under the provisions of this Act in any case where the land was, on the fourteenth day of July, one thousand eight hundred and ninety-six, held *bonâ fide* by way of mortgage or security: Provided that no one waiver shall operate over a longer period than one year, and during the period of waiver the annual rent shall be three-and-a-half instead of two-and-a-half per centum per annum of the capital value of the land.
- (l) Upon the forfeiture to the Crown of any land held under a homestead grant issued under the provisions of this section in any case where at the date of application for conversion the land was held by way of mortgage or security, the Governor may, for any reason which he may deem sufficient, grant tenant right in the improvements on such land to the last holder of the mortgage or security.

134. (I) The annual rent of the homestead selection from the date of issue of the grant shall be two and one-half per centum of the capital value of the homestead selection. Rent of homestead selections.
60 Vic. No. 2, s. 7.

(II) Such capital value for the first ten years period, which shall commence from the date of issue of the grant shall be taken to be—

- (a) in the case of a conditional purchase (whether a residential or a non-residential conditional purchase) not being within a special area, one pound per acre;
- (b) in the case of a conditional purchase within a special area, at the price of the conditional purchase;
- (c) in the case of a conditional lease, the sum represented by capitalising the annual rent of the lease on a two-and-a-half per centum basis;

or, if the applicant make request in his application for an appraisalment, or at the direction of the Minister, the capital value of the whole land included

included in the application shall be determined by appraisement; and any such appraisement shall, so far as procedure is concerned, be subject to the provisions of section *forty-four* of this Act:

Provided that no appraisement shall be made of land which has been appraised within the previous two years.

PART III.

HOMESTEAD SELECTIONS.

Homestead Selection Areas.

Homestead selection
areas.
Sec. 13, Act 1895.

135. The Governor may, subject to the provisions of and under the power conferred by section *forty-six* of this Act, set apart any tract of Crown lands for disposal by way of homestead selection.

Any tract which has been so set apart (or any tract set apart under the Crown Lands Act of 1895 for disposal by way of homestead selection, and not already dealt with as required by that Act) shall be dealt with as follows:—

(I) A subdivision shall be made thereof into blocks, no one of which shall be more than one thousand two hundred and eighty acres in area, and the standard to be adopted in regulating the area of each such block shall be that the selector thereof may, by agriculture or by agriculture combined with any other ordinary pursuits, be enabled to establish and maintain his home thereon.

Any subdivision, whether made before or after any notification under this Act, may be taken to be a subdivision within the meaning of this section, and one or more measured portions may by notification under this section constitute a block.

(II) A valuation of the said blocks shall be made according to the capabilities and situation of the land, and in making such valuation due regard shall be paid to the tenure of the holding and to the intention of these provisions that the selector may be enabled to establish and maintain his home thereon.

(III) The value to an incoming tenant of any improvements on any such block may be appraised by the Minister after inquiry and report by the local land board in the prescribed manner, and such appraisement shall, as between the Crown or the owner of the improvements, as the case may be, and any person selecting the said block, be conclusive evidence of the value of the improvements at the date of the appraisement.

(IV) A notification by the Minister shall be published in the Gazette, and in a local newspaper, giving particulars of the said blocks and of their respective areas and values, and of appraised value of any improvements thereon, and specifying a date on and after which the said blocks shall be available for selection.

The value and area specified in the said notification, in respect of any block, shall be taken to be the capital value and area thereof for all purposes of the rent hereinafter provided.

- (v) The Minister may also notify that special conditions as to drainage, irrigation, the clearing, cutting, preservation, or planting of timber, or such other matters as require to be regulated in the public interest, will be made conditions of a homestead selection of any such block, and will be inserted in the grant of any such block when issued.

Any such notification under this or the preceding subsection or subsection (iv) or (v) of section thirteen of the Crown Lands Act of 1895 may be corrected, amended, modified, or revoked by notice in the Gazette.

- (vi) The setting apart of any tract of Crown lands for disposal by way of homestead selection and the notification required by this section may, whenever it is deemed expedient, be effectuated by one and the same notification in the Gazette, and in any such case any preliminary notification shall be deemed to have been unnecessary.

Disqualifications.

136. Every person shall be disqualified from being an applicant for a homestead selection if—

- (a) such person is under the age of sixteen years; or
 (b) such person is a married woman not living apart from her husband under a decree for judicial separation; or
 (c) such person is subject to any legal disability other than non-age or coverture, or to any disqualification specially mentioned in this Act.

Married women
 minors.
 Sec. 14, Act 1895.

Limitation as to number of holdings.

137. No person who, on or after the first day of June, one thousand eight hundred and ninety-five, has applied, or who after the commencement of this Act applies, for a homestead selection, and has obtained or obtains a title thereto in pursuance of such application shall be qualified to apply for another homestead selection; and no person who, on or after the first day of June, one thousand eight hundred and ninety-five, has applied, or who after the commencement of this Act applies for an original conditional purchase, or a settlement lease, or an original homestead lease, and has obtained or obtains a title thereto in pursuance of such application, shall be qualified to apply for a homestead selection unless he has previously obtained a certificate as prescribed that he was compelled by adverse circumstances to abandon or to surrender the holding first applied for, or unless (notwithstanding the non-obtaining of such certificate) he has previously obtained the written approval of the Minister to apply for a homestead selection.

The privilege of
 selecting, &c., when
 exhausted.
 Sec. 40, Act 1895.

For the purposes of this section title in pursuance of an application shall be taken to have been obtained—in the case of a homestead selection, settlement lease, and original conditional purchase—when the application has been confirmed by the local land board, and in the case of a homestead lease when the approval of the issue of the lease has been notified in the Gazette, and a valid notice of non-acceptance has not been duly given:

Provided that if the holding first applied for were a settlement lease or an original homestead lease, the disqualification enacted by this section shall cease to operate upon the expiration of the term of the lease by effluxion of time, or if the lease has been forfeited, surrendered, or otherwise sooner determined, then upon the expiration of the period which the term of the lease would have had to run, but for such forfeiture, surrender, or other sooner determination.

Limitation

Limitation as to area.

Disqualifications by reason of area already held.

Sec. 41, Act 1895.

138. No person shall be competent to apply for a homestead selection who—

- (a) owns at the date of application ; or
- (b) owned at any time previous to the date of application, and fraudulently divested himself of the ownership thereof by transfer, conveyance, assignment, or otherwise, or purported so to do, in order to evade the foregoing provision, an area of land granted in fee simple, or conditionally purchased, or conditionally leased from the Crown, which area, added to the area of the homestead selection applied for, exceeds as a total area the maximum area permitted by law to a homestead selection.

Persons not natural born or not naturalised.

Persons not natural-born or naturalised.

Sec. 41, Act 1895.

139. A person who is not a natural-born or naturalised subject of Her Majesty shall not be qualified to apply for a homestead selection unless he has resided in New South Wales for one year, and at the time of making such application has lodged a declaration of his intention to become naturalised within five years from the time of making such declaration.

If such person shall fail to become so naturalised within the period aforesaid, he shall absolutely forfeit all land the subject of his application, together with all the improvements thereon.

Rights and liabilities of minors.

Minor may enter into certain agreements.

Sec. 123, Act 1884 ;
22, Act 1895.

140. Any person between the ages of sixteen and twenty-one years who, after the commencement of this Act, becomes the owner of a homestead selection, and during his ownership either personally or by an agent enters into any agreement for or in relation to the performance of any work or rendering of any services on such homestead selection, or in relation thereto, or to the loan of money or the sale or purchase of goods and chattels of any description whatsoever, or in like manner enters into any agreement connected with the occupation, management, or general purposes of such homestead selection, not being in violation of the provisions of this Act, shall be subject to the same liabilities and have the same rights in respect of such agreement as if he were of the full age of twenty-one years.

The provisions of this section shall apply until the grant of the homestead selection.

Certain contracts void.

Devise, contract, lease, or security void in certain cases.

Sec. 121, Act 1884 ;
22, Act 1895.

141. Every devise, contract, lease, agreement, or security made, entered into, or given before, at, or after the date of any application to make a homestead selection, with the intent or having the effect of enabling any person other than the applicant to acquire by purchase or otherwise the land applied for, shall be illegal and absolutely void both at law and in equity.

The provisions of this section shall apply until the grant of the homestead selection.

Good faith in applicants.

Good faith in applicants.

Sec. 42, Act 1895.

142. Every application for a homestead selection is hereby required to be made in good faith ; and an application shall be taken to be made in good faith when the sole object of the applicant in making the application is to obtain the land in order that he may hold and use the land for his own exclusive benefit according to law.

Applications

Applications for Homestead Selections.

143. (I) On and after the date specified in any notification under section thirteen of the Crown Lands Act of 1895, or section *one hundred and thirty-five* of this Act as the case may be, any person, who is not disqualified, may apply for any block so notified as a homestead selection.

Application and confirmation.
Sec. 14, Act 1895.

(II) The application shall be made and lodged in the prescribed manner, and shall be accompanied by a half year's rent in advance and a survey fee according to the prescribed scale; or if the applicant desires to defer the payment of the survey fee, then by one-third of the total amount thereof.

(III) The applicant for a homestead selection shall, upon the day appointed, satisfy the local land board that he or she is qualified, and that the application has been made in accordance with the provisions of this Act.

(IV) The local land board shall confirm the application if so satisfied, unless it permits the applicant to withdraw the same. The local land board shall disallow any application if not so satisfied.

(V) The local land board shall disallow an application for a homestead selection unless it be satisfied that the application is made in good faith, as defined in section one hundred and forty-two of this Act.

Land board may disallow application.

(VI) In any case where the local land board is satisfied that an application as aforesaid has been made otherwise than in good faith, it shall have power to declare that any moneys lodged with such application shall be forfeited to the Crown, and the same shall be forfeited accordingly.

(VII) Every application as aforesaid pending at the commencement of this Act shall be deemed to be within the provisions of this section.

Application pending.

Commencement of title.

144. The title to any homestead selection applied for after the commencement of this Act shall commence from the date of application therefor, if valid, and any such application shall withdraw such of the land therein described as may be available for the purpose from any annual lease or occupation license under which it may be held:

Commencement of title of homestead selections.
59 Vic. No. 26.

Provided that the land agent shall, within one week of the receipt of any such application, notify the same through the post to the holder of any annual lease or occupation license within which the land applied for, or any part thereof, may be situated.

145. Except as against the Crown, any land applied for as a homestead selection after the commencement of this Act, and for which the application is valid, shall be deemed to be land contracted to be granted, and, except as aforesaid, the receipt of the said application shall (if such application is valid) be deemed to be a sale of the said land.

Sec. 22, Act 1895.

Trespass and Impounding on Homestead Selections.

146. No person occupying land under a homestead selection shall—

Trespass by stock on unfenced lands.
Sec. 55, Act 1895.

(a) bring an action for trespass committed by stock upon the said land, whether before or after the commencement of this Act;

or

(b) impound any stock trespassing upon the said land, unless the said land or the portion thereof trespassed upon was, at the date of the trespass, enclosed with a fence reasonably sufficient to keep out stock:

Provided always that nothing in this section contained shall apply to any trespass wilfully caused, or refer to any homestead selection for which a grant has been issued at the date of such trespass.

Conditions

Conditions precedent to the right to a grant.

Conditions to be performed.

Sec. 15, Act 1895.

Sec. 60, Act 1895.

147. The applicant for any homestead selection shall perform, to the satisfaction of the local land board, the following conditions, which shall be taken to be conditions precedent to the right to a grant:—

- (a) He shall within the prescribed time pay the balance (if any) of survey fee; and
- (b) He shall pay the value of the improvements as appraised, and interest on such value at the rate of four per centum per annum, the payment being made in four equal yearly instalments, at the dates and in the manner prescribed; and
- (c) He shall, within three months after the confirmation of his application, commence to live upon the homestead selection, and shall continue to have his home and place of abode there until the issue of the grant: Provided that if the applicant die or be declared a lunatic, this condition may be performed by any member of his family or any other person to be approved by the local land board.

The local land board shall have power to grant leave to the applicant to cease living upon the selection for such necessary causes as may be prescribed, and for such period as may be determined; and

- (d) He shall within eighteen months after the confirmation of his application erect upon the homestead selection and thereafter maintain a dwelling house of not less than twenty pounds in value; and
- (e) He shall at the prescribed date or dates pay an annual rent which, in the case of any application made after the commencement of this Act, shall be computed from the date of application and shall amount to one and a quarter per centum of the capital value of the block; the said rent shall be paid in two equal half-yearly instalments in advance; and
- (f) He shall perform and observe the special conditions (if any) which have been notified by the Minister in the Gazette.

Residence by deputy before grant.

Homestead selections with residence by deputy before grant.
Sec. 18, Act 1895.

148. In any case where the applicant for a homestead selection is debarred by his calling from living on the selection, the condition precedent may, until issue of a grant, be performed by a deputy, to be approved by the local land board; but in every such case—

- (a) The application shall be expressed to be made under the provisions of this section, and the full amount of survey fee shall be paid therewith; and the applicant shall, before his application is confirmed, satisfy the local land board that his calling prevents him living on the selection, and that he ultimately intends to establish his home thereon; and
- (b) A deputy to be approved by the local land board shall perform the condition of living on the selection; and
- (c) The annual rent, until issue of the grant, shall be three and one half per centum of the capital value; and
- (d) The dwelling house to be erected and maintained shall be not less than forty pounds in value; and
- (e) The applicant shall, within three years after the confirmation of the application, have not less than one-tenth of the area of the homestead selection in full tillage, and shall during the fourth and fifth years after the confirmation have one-fifth of such area in full tillage, to the satisfaction of the local land board.

Save

Save as aforesaid, all provisions as to homestead selections shall apply to a homestead selection under this section, and the grant thereof when issued shall be in the same terms as the grant of a homestead selection in other cases: Provided always that a conflicting application from a person intending to personally perform the obligation of residence shall in all cases have priority over any application under this section lodged at the same time.

Residence in hamlet or village.

149. If a number of homestead selectors, embracing at least twenty families, with a view to greater convenience in the establishment of schools and churches, and to the attainment of social advantages of like character, ask to be allowed to settle together in a hamlet or village adjacent to their selections, the Governor may, in his discretion, vary or dispense with the requirements as to residence upon the homestead selection and substitute residence in such hamlet or village, subject to such conditions as he may prescribe.

Dispensation of requirements of residence in certain cases.
Sec. 19, Act 1895.

Inquiry by Land Board.

150. The local land board may at any time inquire as to the performance of any condition attached to a homestead selection (whether the application for such homestead selection was made before or is made after the commencement of this Act); and at the expiration of five years from the confirmation of such application the local land board shall hold an inquiry whether the applicant has, up to the date of the inquiry, duly performed all conditions precedent to the right to a grant.

Local land board to be satisfied of performance.
Sec. 16, Act 1895.

If, upon the final inquiry, the applicant satisfies the local land board that he has, up to the date of the inquiry, duly performed all the said conditions, it shall issue to him a certificate to that effect.

Homestead Grants.

151. The Governor shall issue a grant (to be termed a homestead grant) of the homestead selection (whether applied for before or after the commencement of this Act) to an applicant who has duly obtained a certificate from the local land board; and the Governor may, upon the expiration of five years from the date of the confirmation of the application, issue a grant to an applicant who has failed to obtain the said certificate in any case where the local land board reports that the applicant is nevertheless deserving of the grant.

The grant of a homestead selection.
Sec. 17, Act 1895.

152. Upon the forfeiture to the Crown of any lands held under a homestead grant, the Registrar-General shall make an entry of such forfeiture upon the folium of the register containing such grant, and the holder of the duplicate copy of such grant shall deliver up the same to the Registrar-General for the purpose of being cancelled.

Entry of forfeiture to be made by Registrar-General.
Sec. 17, Act 1895.

No transfer of the lands described in a homestead grant shall be registered by the Registrar-General unless the Minister certifies, in the prescribed form, that all the obligations of the grant have been duly fulfilled up to the date of such certificate, and the registration of such transfer shall be evidence of the fulfilment of all the obligations under the grant up to the date of the aforesaid certificate.

153. (1) The grant of any homestead selection shall contain provisions for—

The obligations under the grant.
Sec. 17, Act 1895.

- (a) The annual payment by the grantee, his heirs and assigns for ever of a perpetual rent, the yearly amount of which shall be two and one-half per centum of the capital value of the homestead selection as fixed under this Act; or, in the case of

a

a homestead selection of land set apart for homestead selection before the commencement of this Act, the capital value, as fixed under the Crown Lands Act of 1895; and

- (b) The performance by the grantee, his heirs, and assigns for ever of an obligation to live upon the homestead selection, having his or their home and place of abode there; and
- (c) Forfeiture to the Crown of the lands granted in case the obligation to live thereon or to pay any sums due as rent be not duly performed.

The grant of a homestead selection may contain provisions to secure the creation and maintenance of channels for drainage or irrigation purposes, and the preservation or planting of trees for timber and shade, and such reservations of rights, powers, minerals, and materials as may appear to the Governor necessary in the public interest.

The obligations to live on the lands granted and to pay rent shall be incidents in perpetuity of the tenure of the lands held under a homestead grant; and the provisions to be inserted in a homestead grant for the purpose of defining the said incidents of tenure and securing the due performance thereof shall be in such form as may be prescribed.

The value of the homestead selection shall for the first period of ten years after the issuing of the grant thereof be the value, as notified in accordance with the provisions hereinbefore contained, or in the case of a homestead selection of land set apart for homestead selection before the commencement of this Act, as notified in accordance with the provisions of the Crown Lands Act of 1895, and for every succeeding period of ten years shall be determined, irrespective of improvements, in accordance with the provisions of section *forty-four* of this Act.

Regulations as to the performance of obligation to reside.

(II) The Governor may from time to time by regulations define the minimum period of living on the land in each year which shall be taken to satisfy the aforesaid obligation, being not less than seven months in every year; and may in the like manner provide for the granting of exemptions from the performance of the aforesaid obligation or for the relaxation thereof in such cases of inability, difficulty, or hardship as are likely to arise, and may attach such conditions to the granting of an exemption or relaxation as may appear desirable to secure the proper user of the land and to carry out the policy of this Act, but no such exemption or relaxation shall be granted for more than one year either retrospectively or in advance.

In any case where, in pursuance of the regulations for the time being in force, an exemption or relaxation has been granted, and the conditions, if any, of such exemption or relaxation fulfilled, a forfeiture shall not be enforced for the non-performance of the obligation to live on the lands granted during the period of such exemption or relaxation.

The Governor shall not have power to discharge, release, or abrogate the obligation to live upon the lands held under any such grant or to pay the rent, and the acceptance of rent shall not of itself constitute a waiver of any forfeiture which may have accrued.

Overdue moneys on homestead selections.

Overdue moneys on homestead selections, Sec. 43, Act, 1895.

154. Any sums which shall become payable to the Crown, whether as rent or interest or otherwise, on any homestead selection applied for before or after the commencement of this Act, and whether granted or ungranted, shall from and after the due date for the payment thereof bear interest at the rate of ten per centum

centum per annum, and such interest shall be considered as accruing due day by day. Nothing in this section contained shall be construed so as to prevent or to compel the enforcement of any forfeiture, or the acceptance of any overdue sums, together with interest as aforesaid.

Forfeitures.

Forfeiture for breach of conditions.

155. If at any time the local land board is not satisfied that the applicant for a homestead selection applied for before or after the commencement of this Act is duly performing any condition, or if upon the final inquiry the board is not satisfied that he has duly performed all conditions as aforesaid, the Governor may, by notification in the Gazette, forfeit the applicant's interest in the homestead selection, and thereupon the applicant's right to continue in occupation shall wholly cease and determine. Forfeiture for non-fulfilment of conditions.

The like notification may be made in any case (whether the homestead selection was applied for before or after the commencement of this Act) where the applicant has failed or fails to duly pay the required rent or the balance (if any) of survey fee.

Forfeiture for false statements.

156. If it be proved by inquiry before the local land board that any statement in writing or any statutory declaration or evidence on oath has been made or given for the purpose of misleading any officer, authority, or person in the exercise of his duty or office under this Act or the Crown Lands Act of 1895, or that any such statement, declaration, or evidence wilfully misrepresents facts, or that any fraudulent attempt has been made to prove that the conditions of this Act or the Crown Lands Act of 1895 have been complied with, then and in any such case the Minister may declare any homestead selection in connection with which such statement, declaration, or evidence was made or given to be forfeited, together with all moneys paid on account of or in connection with such homestead selection: Provided that no forfeiture shall be held to affect any transferee unless declared within twelve months after the issue of the certificate hereinbefore provided by the local board, and the provisions of this section shall apply until the grant of the homestead selection. Liability of, for misleading statement, &c. Sec. 135, Act 1894, and 22, Act 1895.

Forfeiture for want of good faith.

157. (1) In any case where an application for a homestead selection has been confirmed after the first day of June, in the year one thousand eight hundred and ninety-five, or after the commencement of this Act, and it appears to the satisfaction of the local land board— Forfeiture for want of good faith. Sec. 43, Act 1895.

- (a) that the application was not made in good faith; or
- (b) that the land is not held or used for the exclusive benefit of the selector, or apparent owner thereof,

the Governor shall have power to forfeit, by notification in the Gazette, the selection in question, together with all moneys paid thereon.

(II) Nothing in this section contained shall affect any person acquiring any interest in a homestead selection after the same becomes capable of being transferred, unless he has, before acquiring such interest, had notice of a violation of the provisions of section one hundred and forty-two of this Act, or of section forty-two of the Crown Lands Act, 1895, or of the intention to institute an inquiry as to such violation. Not to apply to transferee without notice.

Surrender of homestead selections. Tenant-right on surrender or forfeiture.

Surrender, &c., of a homestead grant and tenant right.
Sec. 21, Act 1895.

158. The holder of an estate in fee-simple in possession in any lands granted under a homestead grant may, with the consent of the Governor, surrender the said lands to the Crown by an instrument in the prescribed form; the surrenderor shall be entitled to tenant right (as the same is hereinafter defined) in improvements existing at the date of such surrender upon the surrendered lands.

Upon the forfeiture to the Crown of lands granted under a homestead grant the Governor (upon application in the prescribed manner) may, by notification in the Gazette grant the last owner of such lands tenant right (as the same is hereinafter defined) in improvements existing at the date of such forfeiture upon the forfeited lands.

Protection of homestead selections.

Protection of homestead selections.
Sec. 23, Act 1895.

159. (I) The owner for the time being of a holding consisting of a homestead selection, whether granted or ungranted (and whether applied for before or after the commencement of this Act) may, in any case where his home is established upon such holding, obtain for such holding protection under this Act by registering with the land agent for the district, or any other prescribed authority, an instrument in the prescribed form; and the land agent or other prescribed authority shall enter such particulars as may be prescribed in a book to be kept by him for the purpose, and such book shall be open to inspection by the public at such times and subject to such conditions as to payment of fees or otherwise as may be prescribed.

(II) Any holding protected under this Act or under the Crown Lands Act of 1895—

- (a) Shall not be sold under any writ of execution issuing out of any Court; and
- (b) Shall not vest in any official assignee or trustee, or be ordered to be conveyed upon the bankruptcy of the owner thereof, or pass by any assignment for the benefit of his creditors; and
- (c) Shall not in any other way be taken from the owner thereof for the satisfaction of any debt or liability under process or constraint of law.

Any transfer, assignment, alienation, conveyance, charge, or incumbrance of a holding protected under this Act, or under the Crown Lands Act, 1895, shall be absolutely void, but nothing herein or therein contained shall affect the validity of any such charge or incumbrance created before the holding, which is the subject thereof, was registered.

(III) Registration shall not have the foregoing effect, if the owner is in insolvent circumstances at the date thereof; and the protection shall cease as to any holding—

- (a) when the owner ceases to live thereon as his home; or
- (b) when he obtains for another holding protection under this Act; or
- (c) when the owner transfers the holding;

(IV) Provided always that nothing in this section contained shall—

- (a) Exempt the holding, or part thereof, or interest therein, from levy or sale for rates or taxes hereafter to be legally imposed; or
- (b) Affect any remedy for any cause of action accruing before the registration, or for any breach of trust, or for any debt for rent, instalments of purchase money, or interest due to the Crown, or any power of forfeiture.

Homestead

Homestead grants out of leases.

160. The holder of any pastoral or homestead lease in the Western Division, or of any scrub lease not being within a pastoral or homestead lease, or of any lease of inferior lands, or of any improvement lease, whether in any case granted before or after the commencement of this Act, whose dwelling-house may be erected on Crown lands, may, at any time during the last year of the term of the lease, apply for the portion of the leasehold which contains such dwelling-house not exceeding six hundred and forty acres in area, as a homestead selection, subject to the provisions hereunder contained:—

Homestead grants
out of certain leases.
Sec. 27, Act 1895.

- (I) The area which may be so applied for shall, before the date of the application for the same, have been improved by the holder of the lease or his predecessors in title with permanent, fixed, and substantial improvements to the value of one pound per acre, and the improvements shall at the date of the application be on the land and be the property of the applicant.
- (II) The application shall be made in the prescribed manner, and the applicant shall, before the grant is issued, pay the full cost of survey.
- (III) The land shall be measured in the same form as if it were an original conditional purchase, and the measurement shall be completed before the application is confirmed, and the Local Land Board shall have the same powers of modification, allotting land, and otherwise, in respect of any such application as it has in the case of applications for conditional purchases.
- (IV) The Governor may thereafter grant to the applicant the land for which the application has been confirmed as a homestead selection, the value of which shall be determined in accordance with the provisions of section *forty-four* of this Act, and be subject to reappraisalment as also hereinbefore provided.
- (V) Upon the issuing of the grant the land granted shall be withdrawn from the lease, but the lease shall otherwise continue in full force and effect.

The holder of a settlement lease may make the like application for a homestead selection out of the land leased, and the foregoing provisions (other than that requiring improvements to the value of one pound per acre) shall apply in any such case, except that the maximum area which may be applied for and granted shall be one thousand two hundred and eighty acres.

PART IV.

MISCELLANEOUS SALES.

DIVISION I.—Improvement purchases in gold-field.

161. Upon application (accompanied by the prescribed survey fee) by the owner of improvements in authorised occupation by residence under any Act in force for the regulation of mining on Crown lands of land within a proclaimed gold-field, the Governor may sell and grant such land to such owner without competition, at a price to be fixed by the local land board not being less than at the rate of—

Improvement
purchases in gold-
fields.
Sec. 46, Act 1884.
and 11, Act 1889.

- Eight pounds per acre for town lands, or
- Two pounds ten shillings per acre for suburban and other lands, or

Two

Two pounds ten shillings for any area less than one acre :
 Provided that such sales be made in accordance with the
 general subdivision of the land, and
 embrace only allotments or portions on which the improvements
 may be, and
 that the areas to be sold shall not exceed—
 one quarter of an acre for town lands, and
 one acre for suburban or other lands :
 Such price shall be exclusive of the value of the improvements.
 For the purposes of this section improvements of value equal
 to the respective minimum rates hereinbefore provided for shall be
 sufficient.

No person shall be permitted to make a subsequent purchase
 within three miles of a prior purchase by him.

Sec. 48, Act 1895.

162. Any sums payable to the Crown in connection with any im-
 provement purchase shall, from and after the due date for the payment
 thereof, bear interest at the rate of ten per centum per annum,
 and such interest shall be considered as accruing due day by day ;
 but nothing in this section shall be construed so as to prevent or to
 compel the enforcement of any forfeiture, or the acceptance of any
 overdue sums, together with interest, as aforesaid.

Sec. 5, of 55 Vic.
 No. 1.

Sec. 136, Act 1884.

163. Any forfeiture hereafter to be declared of an improvement
 purchase applied for under this Act or the Acts 1884–1897 shall be
 notified by the Minister in the Gazette, and shall take effect on the
 expiration of thirty clear days after the date of notification of
 forfeiture in the Gazette.

DIVISION II.—Auction sales.

Sale by auction of
 lands.

Sec. 61, Act 1884.

Sec. 56, Act 1895.

164. (I) Crown lands, not exceeding in the aggregate for the
 whole Colony two hundred thousand acres in any one year, may be sold
 by public auction, at any place which may appear to the Minister to
 be most convenient for the purpose (whether such place be within or
 without the land district in which the lands to be sold are situate), and
 at such times as the Minister shall direct and notify in the *Gazette*,
 not less than two months nor more than three months before the day
 of sale, and the upset prices per acre shall not be lower than for :—

Town lands eight pounds.

Suburban lands two pounds ten shillings.

Other lands one pound five shillings.

But such upset prices may be respectively fixed at any higher
 amounts.

Sec. 61, Act 1884.

Sec. 44, Act 1889.

(II) The value of any improvements (within the meaning of
 section *three hundred and one* of this Act) shall be added to such upset
 price, and when not the property of the Crown shall be refunded to
 the owner, or if it should appear that such improvements were
 made under misapprehension, or for other sufficient reason, the
 Governor (or the Minister, after report by the Land Board) may remit
 or refund the value thereof to the improver or his representatives.

Sec. 61, Act 1884.

(III) Town lands shall not be sold under this section in areas
 exceeding one-half acre.

Suburban lands shall not be sold in areas exceeding twenty
 acres.

Country lands shall not be sold in areas exceeding six hundred
 and forty acres.

(IV) A deposit of not less than one-fourth of the purchase
 money shall be paid by the purchaser at the time of sale, and in case
 the purchaser fails to pay the deposit the land may be again offered by
 the land agent, who shall not accept any bid by the person so failing
 to pay.

(v)

(v) The balance of purchase money shall be paid within three months after the date of sale: Provided that the Minister may make special terms of payment on auction sales of

Town lands,
Suburban lands, and

Lands which may have been or may hereafter be subdivided into areas not exceeding twenty acres:

Provided that in every case a deposit of one fourth of the purchase money shall be paid at the time of sale, and the time allowed for any deferred payments shall in no case exceed five years from the day of sale.

And that all such deferred payments shall bear interest at the rate of five pounds per centum per annum.

After auction sales, &c.

165. The Governor may grant any town or suburban lands or Crown lands within population areas which have been offered for sale at auction and not sold (whether such offering for sale was before or after the commencement of this Act) at the *last* upset price thereof to any person who shall duly apply for the same.

The applicant shall, with his application, lodge a deposit of one fourth of the said upset price, and if the application be approved by the Minister shall pay the balance of the said price, subject to such terms and conditions as were notified in the Gazette in connection with the aforesaid offering at auction.

Overdue payments.

166. Any sums payable to the Crown as purchase money otherwise, on any land sold at or after auction, shall, from and after the due date for the payment thereof, bear interest at the rate of ten per centum per annum, and such interest shall be considered as accruing due day by day.

Nothing in this section contained shall be construed so as to prevent or to compel the enforcement of any forfeiture, or the acceptance of any overdue sums together with interest as aforesaid.

Auction sales or after auction sales may be annulled.

167. On default of payment of any instalment for thirty days after the day when the same shall have fallen due, or on default of payment of any balance of purchase money, when the same shall have fallen due, in connection with any land sold at or after auction (before or after the commencement of this Act), the Minister may, by notice in the Gazette, annul the sale, and the annulling shall take effect as a forfeiture.

On the expiration of thirty clear days after the date of notice in the Gazette as aforesaid, the land, the subject of such sale, shall be forfeited to the Crown and become Crown lands within the meaning and for the purposes of this Act, and the deposit and all payments made in respect of such land shall be forfeited to Her Majesty.

DIVISION III.—Special sales without competition.

Rescission of reservation.

168. The Governor may authorise the rescission of any reservation of water frontage on the sea-coast, or to any bay, inlet, harbour, or navigable river, or of land adjoining such frontage contained in any Crown grant either wholly or to such extent and subject to such conditions and restrictions as he shall think fit.

The

Sec. 63, Act 1884.

The land the subject of such rescission may be granted to the owner of the land contained in such Crown grant on payment in the prescribed manner of the fair value thereof, to be determined in accordance with section *forty-four* of this Act, being not less than for—town lands, eight pounds per acre; suburban lands, two pounds ten shillings per acre; other lands, one pound five shillings per acre:

Sec. 6, Act 1889.
Sec. 61, Act 1884.

Sec. 63, Act 1884.

Provided that nothing in this section shall empower the Governor to grant any land used as a public thoroughfare, or any land set apart and dedicated for any public purpose:

Notice before grant.
Sec. 63, Act 1884.

Provided also that notice for four consecutive weeks shall be given in the Gazette and some local newspaper if any before the issuing of such grant, and that the applicant shall pay all costs of survey, reports, notification, and deed fee incurred in dealing with any application under this section.

Caveats.

Sec. 65, Act 1884.

At any time before the expiration of the four weeks referred to, any person feeling aggrieved may in the prescribed manner lodge a caveat with the local land board setting forth objections against the authorisation of any such rescission as aforesaid, and shall at the time of lodging the same deposit therewith the prescribed sum, and all such applications shall be dealt with as provided in section *seventy-four* of this Act in reference to other caveats.

Payment of purchase money.

Sec. 68, Act 1884.

169. On the approval of any application to purchase made under this Act or the Acts 1884–1897, such approval shall be notified in the Gazette. And if within three months after such notification the applicant shall fail to pay the full amount of purchase money, together with the deed fee and all costs as hereinbefore provided for, the right to purchase such land may be treated by the Minister as having lapsed, and the land itself may be sold by auction, or reserved, or otherwise disposed of pursuant to the provisions of this Act.

Overdue moneys.

Sec. 48, Act 1895.

170. Any sums payable to the Crown shall from and after the due date for the payment thereof bear interest at the rate of ten per centum per annum, and such interest shall be considered as accruing day by day, but nothing in this section shall be construed so as to prevent or compel the enforcement of any forfeiture or the acceptance of any overdue sums together with interest as aforesaid.

DIVISION IV.—Reclamations.

Reclamation of lands by proprietor of adjoining lands.

Sec. 64, Act 1884.

171. The Governor may on the application of any proprietor in fee simple of land having frontage to the sea, or to any tidal water, or to any lake authorise such proprietor to reclaim any land adjoining thereto and lying beyond or below high-water mark:

Provided always that no such reclamation shall be authorised which may interrupt or interfere with navigation:

Provided also that notice of the application to reclaim such land shall be published in the Gazette and some local newspaper, if any, for four consecutive weeks before such authority for reclamation shall be given.

And that the applicant shall pay all costs of survey, reports, notification, and deed fee incurred in dealing with his application.

Caveats.

Sec. 65, Act 1884.

At any time before the expiration of the four weeks aforesaid, any person feeling aggrieved may in the prescribed manner lodge a caveat with the local land board setting forth objections against the authorisation of any such reclamation as aforesaid, and shall at the time of lodging the same deposit therewith the prescribed sum, and all such caveats shall be dealt with as provided in section *seventy-four* of this Act in reference to other caveats.

Basis of appraisal.

Sec. 54, Act 1895.

172. In any case where after the first day of June, one thousand eight hundred and ninety-five, or after the commencement of this

Act,

Act, the Governor has authorised or authorises the reclamation of any land (whether application for such reclamation has been made under the Acts 1884-1897 or under this Act), the local land board shall appraise—

(a) the amount by which the value of the whole holding will be enhanced, by reason of the land to be reclaimed having been reclaimed and being held and enjoyed with the land held in fee simple, and

(b) the amount of the estimated cost of the reclamation ;
and the excess (if any) of such first-named amount over such last-mentioned amount shall, within three months after the notice in the Gazette calling for the same, be paid by the applicant to the Colonial Treasurer; and in default of such payment the authority to reclaim may be declared to have lapsed, and the same shall thereupon become void and of no effect. Term for payment.

173. The applicant shall, within such period as may be allowed for the purpose, complete the reclamation to the satisfaction of the Minister, in the metropolitan land district and elsewhere of the local land board, and upon the due completion thereof a grant of the land so reclaimed shall be issued. Sec. 64, Act 1884.

174. If the reclamation be not completed to the satisfaction of the Minister or local land board, as the case may be, or be not so completed within the aforesaid period, the Minister may, by notification in the Gazette, declare the right to purchase the land, together with all moneys paid thereon to be forfeited, and the same shall become forfeit accordingly; and upon such forfeiture the said authority to reclaim shall become void and of no effect, and any land which may have previously been reclaimed under such authority shall revert to the Crown, freed and discharged from any right or claim of the applicant or any other person in or to the same. Sec. 54, Act 1895.

175. The Governor in giving authority to reclaim (whether the application to reclaim was made under the Acts 1884-1896 or under this Act) may give the same subject to such terms and conditions as may appear desirable in the public interest, and in particular to the conditions— Sec. 54, Act 1895. Special terms and conditions of reclamation.

(a) that the reclaimed lands or any portions thereof may be resumed for public purposes by notification in the Gazette, and that upon resumption the lands shall vest in the Crown, freed and discharged from all private rights, interests, titles, and estates in and to the same; and

(b) that no other compensation shall be payable than the value of any improvements upon the lands resumed, effected with the written approval of the Minister first had and obtained, together with a repayment of the purchase money, and of the cost of reclamation, or if the land resumed be a portion only of the land reclaimed, of a fair proportion of such purchase money and cost as aforesaid ;

and the grant of any land to be reclaimed under any such authority as aforesaid shall embody the terms and conditions subject to which the authority was given, or such of them as require to be so embodied.

176. Any sums payable to the Crown shall, from and after the due date for the payment thereof bear interest at the rate of ten per centum per annum, and such interest shall be considered as accruing due day by day; but nothing in this section contained shall be construed so as to prevent or to compel the enforcement of any forfeiture or the acceptance of any overdue sums, together with interest as aforesaid. Sec. 48, Act 1895. Overdue moneys.

DIVISION V.—Sales in Special Cases.

Sales in special cases.
Sec. 66, Act 1884.

177. Crown lands—

- (a) to which no way of access is attainable, or
- (b) which are insufficient in area for conditional sale, or
- (c) are situated between granted land and a street or road which forms or should form the way of approach to such granted land, or

(d) are encroached on by buildings erected on granted land may be sold after recommendation by the Minister if the land is situated in the metropolitan land district, or the local land board, if the land is situated elsewhere, to the proprietor or proprietors in fee simple of adjacent lands at a price to be determined in accordance with section *forty-four* of this Act, being not less than—for town lands, eight pounds per acre; for suburban lands, two pounds ten shillings per acre; for other lands, one pound five shillings per acre. Purchasers under this section shall, in addition to the price of the land applied for pay the cost of survey report and deed fee incurred in dealing with such applications.

Secs. 61 and 66, Act 1884.

Sec. 68, Act 1884.

Payment of purchase money.

178. On the approval of any application to purchase made under the Acts 1884–1897 or this Act such approval shall be notified in the Gazette. And if within three months after such notification the applicant shall fail to pay the full amount of purchase money, together with the deed fee and all costs demanded for survey and reports incurred in connection with the land applied for, the right to purchase such land may be treated by the Minister as having lapsed, and the land itself may be sold by auction, or reserved, or otherwise disposed of pursuant to the provisions of this Act.

Sec. 48, Act 1895.

Overdue moneys.

179. Any sums payable to the Crown shall, from and after the due date for the payment thereof, bear interest at the rate of ten per centum per annum, and such interest shall be considered as accruing due day by day, but nothing in this section contained shall be construed so as to prevent or to compel the enforcement of any forfeiture, or the acceptance of any overdue sums, together with interest as aforesaid.

DIVISION VI.—Exchanges and Surrenders.

Exchange and surrender.

Sec. 47, Act 1895.

180. (I) The Governor may, on behalf of the Crown, with the consent of the owner, exchange any Crown lands for any other lands of which a grant in fee-simple has been issued or may be called for, and may accept such surrenders and issue such grants as may be necessary for effectuating an exchange.

Sec. 47, Act 1895.

Lands on which purchase money has not been fully paid.

(II) The Governor may accept a surrender of lands, in respect of which a balance of purchase money remains unpaid, if upon payment of such balance, with or without interest thereon, the right to a grant of the said lands in fee-simple will become absolute, and may allot and grant Crown lands in exchange therefor; but in any such case the acceptance of the surrender shall not be taken to affect the aforesaid balance of purchase money, or any right, remedy, or liability in respect thereof, and a grant of the Crown lands allotted in exchange shall not be issued until the aforesaid balance of purchase money, together with interest has been duly paid.

Sec. 47, Act 1895.

(III) When any lands have been surrendered as aforesaid, and Crown lands have been allotted in exchange therefor, such provisions of such Acts, as applied to the surrendered lands in respect of the payment of the balance of purchase money and interest, and of forfeiture upon default shall be deemed to apply to the lands so allotted in the same way as if the lands so allotted were the lands originally purchased.

(IV)

(IV) In any such exchange the lands exchanged shall be of equal area and as nearly as practicable of equal value, or if the Crown lands to be granted or allotted be of greater value the difference of value shall be paid before any grant is issued : Sec. 47, Act 1895.
Sec. 46, Act 1889.
Equality of area and value.

(V) Provided that, if the land applied for by way of exchange is measured land, and is, in the aggregate, less than forty acres in excess of the land surrendered, such excess area may be granted to the surrenderor at a price to be determined in accordance with section *forty-four* of this Act. Sec. 46, Act 1889.

(VI) The Governor may reserve from sale and lease any lands included in an application or proposal for an exchange. Sec. 47, Act 1895.

(VII) The surrenderor shall pay all costs and fees incurred in respect of the surrender and exchange of such land : Sec. 46, Act 1889.

(VIII) Every proposal for surrender and exchange shall (unless refused without reference to the Local Land Board) be notified in the Gazette and in a local newspaper. Sec. 47, Act 1895.

(IX) The local land board shall inquire into and report upon any application or proposal referred to such board by the Minister, and the values of any lands included therein shall be determined in accordance with the provisions of section *forty-four* of this Act, before the exchange is carried out. Sec. 47, Act 1895.

(X) A surrender of lands to the Crown shall be evidenced by an instrument in the prescribed form, which shall, without enrolment in the Supreme Court, re-vest the surrendered lands in Her Majesty, Her heirs and successors according to law ; and an entry of any such instrument shall be made in the register under the Real Property Act in all cases where it may be necessary. Sec. 47, Act 1895.
Evidence of surrender.

(XI) Lands so surrendered shall become Crown lands for the purposes of this Act, but shall not be available for the purposes of any application until a notification to that effect has been published in the Gazette. And such surrendered lands may by notice in the Gazette be added to any adjoining lease or license or conditional purchase or homestead selection (notwithstanding that such lease, license, purchase, or selection may or may not already contain the maximum area prescribed by law), subject to such conditions as to payment of purchase money or rental as may be determined by the Governor and consented to by the lessee, licensee, purchaser, or selector. Sec. 47, Act 1895.

(XII) Any improvements on the surrendered land shall, notwithstanding the surrender, remain the property of the surrenderor, subject to the provisions of section *three hundred and one* of this Act, but the Governor, in any case in which the public interest seems so to demand, may require that any surrender shall be a surrender of the land together with any improvements thereon ; and upon the surrenderor consenting in writing thereto, the said improvements shall, upon the acceptance of the surrender, become the property of the Crown. Sec. 46, Act 1889.
Improvements.
Sec. 47, Act 1895.

(XIII) Any application or proposal for exchange of land lawfully made before the first day of June, one thousand eight hundred and ninety-five, and not refused on its merits or withdrawn, may be completed, subject to all the conditions agreed upon under the original application or proposal, notwithstanding the expiration of the pastoral lease, in virtue of which such application was made. Sec. 47, Act 1895.

181. The Governor may (after inquiry and report by the local land board) acquire, for the purpose of access or approaches to any natural water, tank, or dam, or for a road, or travelling stock route, or camping reserve, or watering place, or for any like purpose, any land of any tenure, either by way of purchase or by granting in fee-simple, or for any less estate, any Crown land of equal value (to be determined Sec. 46, Act 1889.
Acquisition of land for public purpose.

determined in accordance with the provisions of section *forty-four* of this Act) in exchange for such land. And any land so acquired shall thereupon be deemed to be reserved from sale and lease, and may, on revocation of the reserve, be dealt with in accordance with this Act.

DIVISION VII.—Volunteer land order selections.

Volunteer land order selections.
Sec. 22, Act 1884.]

182. Where in any Act relating to the Volunteer Force reference is made to the thirteenth section of the "Crown Lands Alienation Act of 1861" such reference shall, in respect to all claims to free grants of land unsatisfied at the commencement of this Act, be deemed and taken to refer to Crown lands open to conditional sale under this Act.

DIVISION VIII.—Authority to search for gold in alienated land within gold-fields.

Crown land within proclaimed gold-field.
Sec. 45, Act 1884.
Mining Act of 1889.

183. Any Crown land within a proclaimed gold-field which, after the twenty-fifth day of May, one thousand eight hundred and eighty, and before the thirtieth day of September, one thousand eight hundred and eighty-nine, has been sold conditionally, or by auction, or in virtue of improvements, or otherwise, shall be subject to the following condition, namely:—Any person specially authorised in the prescribed manner by the Minister shall be at liberty to dig and search for gold within such land, and should it be found to be auriferous the Governor may cancel, wholly or in part, the sale of such land; and upon the notification thereof in the Gazette, the proprietor shall be entitled to compensation for the value of the land as if it were not auriferous, and of the improvements thereon as appraised by the local board, and such land shall thereupon become Crown land within the meaning of the Mining Act, 1874, or any Act amending the same, and shall be reserved from sale until such reservation be revoked by the Governor: Provided that the person so specially authorised by the Minister to dig and search for gold shall, on the appearance of such notification in the Gazette, be deemed to be the first applicant for a claim or lease of such land, or a portion thereof; and the date of such application shall be reckoned from the day of publication of such notification in the Gazette, but in all other respects as to area, labour conditions, and other matters, such application shall be dealt with subject to the regulations in force for the time being authorising the occupation of Crown lands for gold-mining purposes.

PART V.

LEASES AND LICENSES.

DIVISION I.—General provisions as to leases, &c.

General provisions affecting lessees and licensees.
Sec. 98, Act 1884.

184. The following provisions shall govern all leases and licenses (whether granted before or after the commencement of this Act) and the holders of such leases or licenses, namely:—

- (I) No lease or license other than a special lease shall confer any right to remove material from the leased land, or to sublet such land for other than grazing purposes, or to prevent the entry and removal of material by authorised persons.
- (II) Lessees and licensees may take from land under lease or license to them, not comprised within a timber or forest reserve, such timber and other material for building and other purposes upon the land under lease or license as may be required by them as tenants or licensees respectively.

(III)

(III) No lessee or licensee shall prevent other persons duly authorised in that behalf either from cutting or removing timber or material for building or other purposes, or from searching for any mineral within the land under lease or license: Provided that nothing in this subsection shall apply to a conditional lease as regards the taking or removal of timber or other material for building purposes.

185. For the purposes of any lease or license granted under this Act or the Acts 1884-1897 except a conditional lease it shall be sufficient if the land and the boundaries thereof be defined by a general description, and no such lease or license shall be void by reason of the imperfection of any such description if the land therein described is defined with reasonable certainty.

Sufficiency of general descriptions.
Sec. 142, Act 1884.

186. It shall be lawful for any authorised person who may have marked on the ground any boundary of a leasehold that has been accepted by the Minister, to certify by signature to any plan representing such boundary, that such representation is accurate, and such plan shall thereupon be *prima facie* evidence of such boundary.

Certification of boundaries.
Sec. 144, Act 1884.

Liability to forfeiture.

187. Every lease (whether granted before or after the commencement of this Act) shall be liable to forfeiture if any rent be not paid within the prescribed or allowed period or upon breach of any condition annexed to such lease; but no forfeiture of any lease under this Act or the Acts 1859-1897 shall take effect until the expiration of thirty clear days after notification of such forfeiture in the Gazette; Subject to the provisions of sections *two hundred and forty*, subsection (VII), and *two hundred and forty-two*, subsection (v) of this Act, whenever any land shall be forfeited under this Act, such land shall become Crown land, and may be dealt with as such.

Liability of lessees on non-payment of rent.
Secs. 96 and 136, Act 1884.
Sec. 34, Act 1889.

Sec. 136, Act 1884.
Sec. 43, Act 1889.
Sec. 96, Act 1884.

No forfeiture shall operate to extinguish any debt to the Crown in respect of such rent as aforesaid.

Overdue Rents.

188. Any sums which shall become payable to the Crown, whether as rent or license fee or interest (on any lease or license applied for or granted before or after the commencement of this Act), shall from and after the due date for the payment thereof bear interest at the rate of ten per centum per annum, and such interest shall be considered as accruing due day by day. Nothing in this section contained shall be construed so as to prevent or to compel the enforcement of any forfeiture, or the acceptance of any overdue sums, together with interest as aforesaid. And the acceptance by or on behalf of the Crown of any interest or rent or other payment under any lease or license shall not be held to operate hereafter as a waiver by the Crown of any forfeiture accruing by reason of the breach of any condition annexed by law to the estate or interest of a lessee or licensee.

Overdue sums liable to interest.
Sec. 48, Act 1895.

Sec. 126, Act 1884.
Acceptance of interest or other payment no waiver.

Withdrawals.

189. The Governor may withdraw from any pastoral, homestead, or scrub lease (whether granted before or after the commencement of this Act) any land required for any public purpose including for the purposes of settlement for towns and villages. Upon publication in the Gazette of such withdrawal the lessee shall be entitled to such compensation, for the unexpired term of such lease, and for improvements lawfully made by such lessee upon the land so withdrawn from lease as may be determined by the Minister after appraisalment by the local land board.

Withdrawal in certain cases.
Subsec. 7 of sec. 78, Act 1884.
Sec. 82, subsec. 2, Act 1884.
Sec. 35, Act 1889.

General power of withdrawal.
Sec. 108, Act 1884.

190. The Governor may withdraw from any lease or license (whether granted before or after the commencement of this Act) any land required as sites for towns and villages, or for any public purpose.

Reserve from Sale not a Withdrawal.

Reserves from sale not to take the land out of lease.
Sec. 109, Act, 1884.

191. Crown lands within any leasehold now or hereafter temporarily reserved from sale under the provisions of the Acts 1859-1897, or this Act shall not be deemed to have been or to be withdrawn thereby from such leasehold in respect of the ordinary use of such lands for the purposes of the lease, or to be exempted from reletting on the termination of the existing lease.

Effect of proclamation of cities, towns, &c.
Sec. 30, Act 1889.

192. Lands reserved from sale for towns or villages shall not be deemed by virtue of such reservations to be withdrawn from pastoral or homestead lease; but the proclamations of cities, towns, and villages, and the definition of the limits of suburban lands to be attached thereto, shall be held to withdraw and to have withdrawn such lands from any lease or license within the boundaries of which they may be situated from the date of such proclamation.

Ringbarking by Lessees.

Permission to ringbark.
Sec. 93, Act 1884.

193. Every lessee or licensee of Crown lands desiring to ringbark trees upon his leasehold land or land held under license (whether the lease or license was granted before or after the commencement of this Act) shall obtain a permission to do so from the local land board, and in his application in the prescribed form addressed to the land agent shall describe the boundaries and area of the land upon which he proposes to ringbark.

Sec. 93, Act 1884.

In regard to any land not comprised within a timber or forest reserve the board may, in their discretion, refuse or grant permission for the same, after such inquiry and upon such conditions as to them may seem necessary.

Penalty for unauthorised ringbarking by lessee.
Sec. 93, Act 1884.

Any lessee or licensee who shall without such permission (or a permission granted under the Acts 1881-1897) ringbark trees on a leasehold, or on land held under license, or shall cause or knowingly permit or suffer the same to be done shall, on conviction before any two justices of the peace at the Court of Petty Sessions nearest to such leasehold or land held under license, be liable for the first offence to a penalty of not less than *one* shilling nor more than *ten* shillings for each tree so ringbarked, and for a second or subsequent offence be liable to a like penalty and to the forfeiture of his lease.

Unauthorised ringbarking by persons other than lessee.
Sec. 94, Act 1884.

194. Whosoever shall ringbark trees or strip bark from trees on Crown lands without holding a permission granted under this Act or the Acts 1884-1897, or in violation of any condition thereof, or without a written authority under the hand of the lessee or licensee of such Crown lands shall, on conviction as aforesaid, be liable to a penalty for each tree ringbarked or stripped of not less than *one* shilling nor more than *ten* shillings.

Unauthorised ringbarking—proceedings before justices.
Sec. 95, Act 1884.

195. Every information for an offence under the two preceding sections shall be laid by some officer of police or person specially authorised by the Minister. And if at the hearing of such information any question shall arise whether any person holds a valid permission to ringbark, the burden of proof thereof shall be on the person who claims to hold such permission.

Promise of lease.

Right of lease may be given in evidence in actions.
Sec. 128, Act 1884.

196. In any action or suit brought to recover possession or to recover damages for trespass upon or otherwise in relation to any Crown Lands of which no lease from the Crown shall have issued, it shall

shall be lawful for any party thereto to plead and put in evidence any promise, engagement, or contract from or with the Crown, or its agents, lawfully authorised in that behalf, and such promise, engagement, or contract shall as between the parties, and subject to the provisions of this Act have the same effect as if a lease from the Crown of such lands had been duly issued in pursuance of such promise, engagement, or contract to the party entitled thereunder, and any receipt by or on behalf of the Colonial Treasurer for rent of such lands for the year then current shall, according to the tenor thereof, be *prima facie* evidence that the party therein named is the holder of the lease or promise of lease thereof for the time being.

Disqualifications as to married women and minors.

197. Any married woman who is, under an order for judicial separation made by any court of competent jurisdiction, living apart from her husband, may, out of moneys belonging to her for her separate use, lease land, conditionally or otherwise; and such land shall form part of her separate estate, and she shall have the same powers of dealing with and disposing of the same, both at law and in equity, as if she were a femme sole, and her husband shall not be entitled to any interest in such land as tenant by the courtesy or jure mariti.

Except as aforesaid, a married woman shall not be entitled to lease Crown land under this Act; nor shall any married woman be capable of holding any lease or license, applied for or granted under this Act or the Acts 1884-1897, except as separate estate, by virtue of any law in force protecting the property of married women:

Provided that nothing herein contained shall disentitle a married woman from holding any lease which may have devolved upon her under the will or intestacy of any deceased holder.

198. (i) No minor shall be capable of accepting or holding any lease or license applied for or granted under this Act or under the Acts 1884-1897, except by way of inheritance, or in so far as a minor, not less than sixteen years of age, is permitted to hold a conditional lease by virtue of a conditional purchase: Provided that a minor, not less than sixteen years of age (not being a female), may be a homestead lessee.

DIVISION II.—Annual Leases for Pastoral purposes.

199. (i) The Governor may lease by auction, or tender, or on application made in the prescribed manner, in areas not exceeding one thousand nine hundred and twenty acres, any Crown lands not held under any lease or license, or not reserved from lease generally, or not reserved from annual lease specifically, or not reserved from license.

(ii) Crown lands may be put up to lease at auction at the lands office of the district or let by tender, either on application or otherwise, but no such sale of leases or letting by tender shall take place without one month's notice thereof having been given in the Gazette.

(iii) The amount bid at auction shall be the annual rental of the lease, and there shall be paid at the time of sale a sum proportionate to the number of months between the first day of the month succeeding the date of sale and the thirty-first day of December.

(iv) Any lease offered at auction and bid for, but the price of which shall not be forthwith paid, may be again offered for sale at auction.

(v)

Sec. 85, Act 1884,
subsec. (VI).

(v) A lease of any land which may have been offered for sale at auction and not bid for may be obtained on application to the land agent of the district and payment of the upset price, or may be again submitted to auction, unless the land shall have been previously otherwise dealt with.

Applications for
annual leases.
Sec. 33, Act 1889.

200. Where application in the prescribed manner is made for an annual lease the first applicant shall have a right to an annual lease of the land applied for (subject to modification by the board) on payment of such rent as shall be determined in accordance with the provisions of section *forty-four* of this Act, and any such annual lease shall commence from the date of allotment or approval by the board: Provided that no application for an annual lease made after any of the land applied for shall have been notified in the Gazette for lease by auction or tender shall prevent the land from being let as so notified, and any application for an annual lease may be refused by the Minister in any case where the granting of such lease appears to him to be contrary to the public or general interest.

Sec. 49, Act 1895.

Provisions relating
to annual leases.

Sec. 85, Act 1884,
subsec. (I).

201. All annual leases, whether granted before or after the commencement of this Act, shall be subject to the following provisions:—

(I) Every such lease shall be for the then current year, and shall expire on the thirty-first day of December.

Sec. 49, Act 1895.

(II) The rent for an annual lease shall commence from the first day of the month succeeding the date of the notification in the Gazette.

Of the Minister's approval thereof, or

Acceptance of the tender for the same, or

In the case of an annual lease sold at auction, from the first day of the month succeeding the date of such sale.

The first year of the lease shall expire on the thirty-first day of December then succeeding; and the rent for the first year shall be proportionate to the number of months between the commencement of the lease and the said thirty-first day of December.

Sec. 35, Act 1894,
subsec. (III).

(III) Such leases may be renewed subject to the payment of the annual rent. The Minister may at any time, upon giving three months' notice prior to the expiration of any year for which rent has been paid in advance, increase such rent by any sum not exceeding twenty-five per cent.

Sec. 85, Act 1884,
subsec. (IV).

(IV) The rent of all renewed leases shall be paid on or before the thirtieth day of September in each year for the ensuing year, and in the prescribed manner and time, to the Colonial Treasurer or land agent. And if such rent be not paid the lease will be liable to forfeiture and sale at auction or by tender.

Sec. 85, Act 1884,
subsec. (VIII).

(V) An annual lease shall not exempt the land leased from sale or homestead selection or special or conditional or settlement or other lease.

Annual leases.
Sec. 33, Act 1889.

(VI) The Minister may at any time cancel any annual lease by giving not less than three months' notice in the Gazette or otherwise of his intention to do so, such notice to terminate at the end of the then current year.

Trespass by stock
on unfenced lands.
Sec. 55, Act 1895.

202. No person occupying land under annual lease shall—

(a) bring an action for trespass committed by stock upon the said land, whether before or after the commencement of this Act;
or

(b) impound any stock trespassing upon the said land—
unless the said land or the portion thereof trespassed upon was, at the date of the trespass, enclosed with a fence reasonably sufficient to keep out stock:

Provided always that nothing in this section contained shall apply to any trespass wilfully caused.

DIVISION

DIVISION III.—Artesian Well Leases.

203. Upon application in the prescribed manner (accompanied by a deposit of ten pounds to cover the expenses in dealing therewith) (or in pursuance of any pending application made under the provisions of section forty-five of the Crown Lands Act of 1889) for permission to bore and search for water in any land in the Western Division, held by the applicant under occupation license or annual lease, the Minister may, by notice in the Gazette, set apart an area not exceeding ten thousand two hundred and forty acres in one block on the resumed area.

Protection of
artesian wells.
Sec. 46, Act 1889.

Upon publication of such notice the land therein described shall be held to be temporarily exempt from sale or lease under this Act to other than the applicant, but shall not be withdrawn from the occupation license or annual lease.

Within sixty days after such notice the applicant shall commence to bore and search for water on such land, and shall forward to the Chairman of the land board by registered letter notice verified by statutory declaration of his having done so.

The work of boring and searching as aforesaid shall be continued until water be found, or until it appear to the Minister that the work cannot be pursued with reasonable hope of success or profit.

Within fourteen days after the discovery of water, the licensee or lessee shall, by registered letter, notify the fact to the Chairman of the local land board, and the said licensee or lessee shall, on approval by the Governor, become entitled to a lease for such a term as may be determined, not exceeding the unexpired term of the current pastoral lease of the leasehold area of the pastoral holding.

The rental of such area shall be at the rate then payable upon the land held under such occupation license or annual lease.

If in respect of any application or lease, whether made or granted before or after the commencement of this Act:—

The applicant shall fail to forward any notice prescribed by this Act or the Crown Lands Act of 1889, as the case may be, or

If the Minister shall consider that the application has not been made *bond fide*, or

That reasonable efforts have not been or are not being made to discover water, or

That any water discovered is not sufficiently permanent, or

That the quantity of water is not sufficiently great,

he may withdraw the notice published under this Act or the Crown Lands Act of 1889, as the case may be, or the Governor may cancel the lease granted before or after the commencement of this Act, and upon publication in the Gazette of notice of such withdrawal, or cancellation, the temporary exemption from sale or lease of such land, and the lease thereof, shall be held to be annulled.

Not more than one such area as aforesaid shall be leased under the provision of this section out of each sixty-four thousand acres of an occupation license, and not more than three such areas shall be leased hereunder in respect of one and the same occupation license.

204. Upon the expiration by effluxion of time of the term of any artesian well lease (whether granted before or after the commencement of this Act) the last holder of the lease shall have tenant-right as the same is hereinafter defined in improvements upon the lands theretofore held under the lease: Provided that the value of any successful and useful well or bore for artesian water shall not be taken to exceed the first cost thereof, and no allowance shall be made for any unsuccessful or useless well or bore.

Tenant-right.
Sec. 7, Act 1895.
Sec. 51, Act 1895.

DIVISION

DIVISION IV.—Homestead Leases.

Homestead leases in the Western Division. Sec. 82, Act 1884.

205. In the Western Division the Governor may grant homestead leases within resumed areas or vacant lands.

Lands exempt from homestead lease.

Exemptions from lease.

Secs. 90, Act 1884, and 30, Act 1889.

206. The following classes of lands shall be exempt from homestead lease:—

- (a) Lands within proclaimed cities, towns, and villages, and the defined limits of suburban lands attached thereto.
- (b) Lands under lease or lawful occupation for mining purposes.
- (c) Lands dedicated to any public purpose.
- (d) Lands temporarily reserved from sale for commonage.
- (e) Lands reserved from lease under any of the Acts 1859–1881 until the reservation thereof shall have been revoked under the provisions of this Act.
- (f) Lands reserved from lease generally or reserved specifically from homestead lease before or after the commencement of this Act.

Sec. 39, Act 1889.

Limitation as to number of holdings.

The privilege of selecting, &c., when exhausted. Sec. 40, Act 1895.

207. No person who, on or after the first day of June, one thousand eight hundred and ninety-five, has applied, or who after the commencement of this Act applies, for an original homestead lease, and has obtained or obtains a title thereto in pursuance of such application shall be qualified to apply for another original homestead lease; and no person who, on or after the first day of June, one thousand eight hundred and ninety-five, has applied, or who after the commencement of this Act applies, for an original conditional purchase, or a settlement lease, or a homestead selection, and has obtained or obtains a title thereto in pursuance of such application, shall be qualified to apply for an original homestead lease unless he has previously obtained a certificate as prescribed that he was compelled by adverse circumstances to abandon or to surrender the holding first applied for, or unless (notwithstanding the non-obtaining of such certificate) he has previously obtained the written approval of the Minister to apply for an original homestead lease.

For the purposes of this section title in pursuance of an application shall be taken to have been obtained—in the case of a homestead selection, settlement lease, and an original conditional purchase—when the application has been confirmed by the local land board, and in the case of a homestead lease when the approval of the issue of the lease has been notified in the Gazette, and a valid notice of non-acceptance has not been duly given:

Provided that if the holding first applied for were a settlement lease or an original homestead lease, the disqualification enacted by this section shall cease to operate upon the expiration of the term of the lease by effluxion of time, or if the lease has been forfeited, surrendered, or otherwise sooner determined, then upon the expiration of the period which the term of the lease would have had to run, but for such forfeiture, surrender, or other sooner determination.

Limitation as to area.

Disqualifications by reason of area already held. Sec. 41, Act 1895.

208. No person shall be competent to apply for an original homestead lease who—

- (a) owns at the date of application; or
- (b) owned at any time previous to the date of application, and fraudently divested himself of the ownership thereof by transfer, conveyance, assignment, or otherwise, or purported so to do, in order to evade the foregoing provision,

an

an area of land granted in fee simple, or conditionally purchased, or conditionally leased from the Crown, which area, added to the area of the homestead lease applied for, exceeds as a total area the maximum area permitted by law to a homestead lease.

Persons not natural born or not naturalised.

209. A person who is not a natural-born or naturalised subject of Her Majesty shall not be qualified to apply for an original homestead lease unless he has resided in New South Wales for one year, and at the time of making such application has lodged a declaration of his intention to become naturalised within five years from the time of making such declaration.

Persons not natural-born or naturalised.
Sec. 41, Act 1895.

If such person shall fail to become so naturalised within the period aforesaid, he shall absolutely forfeit all land the subject of his application, together with all the improvements thereon.

No minor shall be capable of accepting or holding any homestead lease (except by way of inheritance) unless such minor is of the male sex, and is of, or over the age of sixteen years.

Sec. 124, Act 1884.
Sec. 34, Act 1889.

Rights and liabilities of minors.

210. Any person between the ages of sixteen and twenty-one years who, after the passing of this Act, shall become the owner of a homestead lease, and shall during his ownership, either personally or by an agent, enter into any agreement for or in relation to the performance of any work or rendering of any services on such lease or in relation thereto, or to the loan of money, or the sale or purchase of goods and chattels of any description whatsoever, or shall in like manner enter into any agreement connected with the occupation, management, or general purposes of such lease, not being in violation of the provisions of this Act, shall be subject to the same liabilities and have the same rights in respect of such agreement as if he were of the full age of twenty-one years.

Minors liable on agreement.
Sec. 123, Act 1884.
Sec. 34, Act 1889.

Pastoral and homestead leases not to be held in combination.

211. No holder of a pastoral lease shall during the currency thereof hold or cause to be held on his behalf or in his interest a homestead lease, nor shall the holder of a homestead lease during the currency thereof hold or cause to be held on his behalf or in his interest a pastoral lease, nor shall any person hold or cause to be held on his behalf or in his interest more than one homestead lease, under penalty in every such case of forfeiture of every lease held by him or on his behalf or in his interest and any rent paid thereon. And for the purpose of this section every owner or part owner of any lease shall be deemed to be a holder thereof: Provided that any *bonâ fide* mortgagee for value may, on application to the Minister, be registered as the holder of more than one homestead lease, subject to such regulations as may be made in that behalf, although such mortgagee is the registered holder of one or more pastoral leases.

What leases not to be held in combination.
Sec. 81, Act 1884.

Good faith in applicants.

212. Every application for a homestead lease is hereby required to be made in good faith; and an application shall be taken to be made in good faith when the sole object of the applicant in making the application is to obtain a lease of the land in order that he may hold and use the land for his own exclusive benefit according to law.

Good faith in applicants.
Sec. 42, Act 1895.

Certain contracts void.

Devise, contract,
lease, security void
in certain cases.

Sec. 121, Act 1884.

213. Every devise, contract, lease, agreement, or security made, entered into, or given before, at, or after the date of any application to make a homestead lease with the intent or having the effect of enabling any person other than the applicant to acquire by lease or otherwise the land applied for shall be illegal and absolutely void both at law and in equity.

Applications for homestead leases.

Applications.

Sec. 82, Act 1884.

Sec. 34, Act 1889.

214. Applications for homestead leases or additional homestead leases may be made in the prescribed manner upon any land office day, and with any such application there shall be lodged a sum equal to one penny per acre for the area proposed to be leased.

Area of homestead leases.

Area which may be
held under
homestead lease.

Sec. 34, Act 1889.

215. The area which may be granted and held under a homestead lease shall not (except as provided in section *three hundred and four* hereof) exceed ten thousand two hundred and forty acres, and shall not, subject to the provisions hereinafter contained, be less than two thousand five hundred and sixty acres:

Any applicant for or holder of a homestead lease, whether applied for before or after the commencement of this Act, may, in virtue thereof, obtain additional homestead leases adjoining the land comprised in the original or any prior additional homestead lease, provided that the total area of such original and additional leases shall not exceed ten thousand two hundred and forty acres.

Provided that an application for an additional homestead lease may be received for less than two thousand five hundred and sixty acres, if such an area is not available, or cannot be taken up without causing the aforesaid maximum area of ten thousand two hundred and forty acres to be exceeded; but in no case shall an application for an additional homestead lease be received for an area less than six hundred and forty acres.

No additional homestead lease shall be granted in virtue of an original homestead lease which, if applied for before the commencement of this Act, was not granted subject to, or brought under the provisions of, the Crown Lands Act of 1889.

Sec. 82, Act 1884.

Where more than one applicant shall apply for the same land, or for any portion thereof, on the same day, the right of lease shall be determined in the manner prescribed by section forty of this Act.

Term of homestead lease.

Term of lease.

Sec. 7, Act 1895.

216. Every homestead lease granted before or after the commencement of this Act shall have a term of twenty-eight years, and the term shall be divided for the purpose of the appraisalment of the rate of rent into four periods each of seven years, and a separate appraisalment shall be made of the rate of rent payable for each of such periods, if the same be a period commencing after the first day of June, in the year one thousand eight hundred and ninety-five or after the commencement of this Act.

Provided always that—

- (a) In the case of a homestead lease granted before the first day of December, in the year one thousand eight hundred and eighty-nine, and not brought under the provisions of section twenty-nine of the Crown Lands Act of 1889, the rate of rent from time to time payable under the Crown Lands Act of 1884 shall be paid until the expiration of such seven-year period of the term of the lease as may have been current on the first day of June, in the year one thousand eight hundred and ninety-five.
- (b)

(b) Nothing contained in this section shall prevent or affect the reappraisal of the rent of a homestead lease in pursuance of section nine of the "Crown Lands Act of 1895," or the coming into operation of any rent so reappraised.

217. The term and periods of any additional homestead lease shall determine at the same respective dates as the term and periods of the original homestead lease, and the surrender or the forfeiture (otherwise than for non-payment of rent) of an original homestead lease shall involve the forfeiture or surrender of all additional leases.

Commencement of title.

218. The title to any homestead lease applied for after the commencement of this Act shall commence from the date of application therefor, if valid, and any such application shall withdraw such of the lands therein described as may be available for the purpose from any annual lease or occupation license under which they may be held.

The land agent shall, within one week of the receipt of any such application, notify the same through the post to the holder of any annual lease or occupation license within which the land applied for, or any part thereof, may be situated.

Trespass and impounding on homestead lease.

219. No person occupying land under a homestead lease, or in virtue of an application for a homestead lease shall—

(a) bring an action for trespass committed by stock upon the said land, whether before or after the commencement of this Act; or

(b) impound any stock trespassing upon the said land— unless the said land or the portion thereof trespassed upon was, at the date of the trespass, enclosed with a fence reasonably sufficient to keep out stock:

Provided always that nothing in this section contained shall apply to any trespass wilfully caused.

Applications, how dealt with.

220. Any application for a homestead lease may, after report by the land board, be refused by the Minister, or the position and boundaries of the land may be altered, varied, or modified.

If land be allotted in satisfaction thereof of a less area than, or in a different position from, that applied for, such of the land described as may not be allotted, or if the application be withdrawn, the whole of the lands described therein, shall revert to the lease or license on notification in the Gazette of the approval of such lease, or of the acceptance of the applicant's refusal thereof.

Any allotted lands which are not described in the original application shall, for the purposes of withdrawal from lease or license, be deemed to have been applied for on the date of notification in the Gazette of approval of the lease.

(II) The local land board shall disallow an application for a homestead lease unless it be satisfied that the application is made in good faith as defined in section *two hundred and twelve* of this Act.

In any case where the local land board is satisfied that an application as aforesaid has been made otherwise than in good faith, it shall have power to declare that any moneys lodged with such application shall be forfeited to the Crown, and the same shall be forfeited accordingly:

Provided

Provided always that a local land board shall not disallow an application for an additional homestead lease as not having been made in good faith merely because the original homestead lease is subject to a mortgage.

Application pending.

(III) Every application as aforesaid pending at the commencement of this Act shall be deemed to be within the provisions of this section.

Non-acceptance of homestead lease.

Non-acceptance of lease.

Sec. 82, Act 1884.

Sec. 34, Act 1889.

221. Should the Minister recommend the issue of a lease (whether applied for before or after the commencement of this Act) in a form other than as applied for, the applicant may, within ninety days after the notification in the Gazette of the approval of the issue of a lease, notify in writing to the local land board his intention of not accepting it, and he shall thereupon be entitled to a refund of the deposit paid, unless, in the opinion of the Minister, the land approved to be leased does not differ materially in form or situation from that applied for, but if the applicant shall have occupied or made use of any land by virtue of his application the Minister may refuse to accept any such notice of non-acceptance. In default of any notice of such intention, or of occupation within the time specified for either purpose, the deposit shall be forfeited.

The acceptance by the Minister of any such notice of non-acceptance shall take effect on notification in the Gazette.

In the event of the non-acceptance of the lease, the land shall revert to the holding from which it was taken.

Survey of homestead lease.

Survey of lease.

Sec. 143, Act 1884.

Sec. 55, Act 1895.

222. The Minister may direct a survey of the boundaries of any homestead lease, and upon such survey being made may demand from the lessee towards defraying the cost of such survey, payment of any sum not exceeding twenty shillings for each linear mile of the boundary so surveyed, and in default of payment of such sum within sixty days after notification of the demand in the Gazette, the lease shall be liable to forfeiture.

Conditions of homestead leases.

Conditions to be fulfilled.

Sec. 82, Act 1884, and sec. 21, Act 1889.

Sec. 34, Act 1889.

Sec. 21, Act 1889.

Sec. 31, Act 1889.

223. Every applicant for a homestead lease shall, within ninety days after the notification in the Gazette of the approval of the issue of a lease, enter into occupation of and commence residence upon the leased land, and shall reside continuously thereon for at least six months of each year of the prescribed term of residence, and such term shall expire five years after the date of application for the lease.

Prior to the date of commencement of residence during any year the lessee shall notify the local land board to that effect; and such notice shall specify the date from which he intends to reside.

Sec. 82, Act 1884.

Sec. 37, Act 1895.

224. Within two years after such entry into occupation the lessee shall fence the outside boundaries of such land with a fence of such a character as may be prescribed by the land board. But for sufficient cause shown the time for completing such fencing may be extended by the land board or by the Chairman of such board pursuant to the provisions of section *twenty-seven* of this Act.

The land board (or the Chairman pursuant to the provisions of section *twenty-seven* of this Act) may grant an exemption from fencing any natural or other boundary of the land held under lease.

Sec. 34, Act 1889.

Sec. 37, Act 1895.

Sec. 34, Act 1889.

225. Any original and additional homestead leases may, for all purposes of residence and fencing, be held to be one homestead lease.

226. The rents of homestead leases applied for after the commencement of this Act shall be paid annually in advance not later than one day prior to a date corresponding to the date of application. Rent shall be charged from the date of application, and pending determination a provisional rent of one penny per acre shall be payable.

Sec. 12, Act 1880.

Suspension of conditions.

227. If the holder of any homestead lease applied for before or after the commencement of this Act shall through illness, drought, flood, or other sufficient cause be prevented from fulfilling any conditions of residence or fencing attaching thereto, the local land board may, on application as prescribed, and after inquiry in open Court (or in the case of fencing the chairman may pursuant to the provisions of section *twenty-seven* of this Act) suspend for a specified period not exceeding six months any or all of such conditions. On the expiration of such specified period the holder shall (if a condition of residence attaches to the lease) commence and continue to reside thereon for a period which (when taken with the period during which he may have resided thereon since the date of his obligation to do so) shall complete the full term prescribed by this Act, and shall, during the term extended as aforesaid or otherwise, complete any other conditions, subject upon default in either case to forfeiture.

Suspension of conditions in case of illness, drought, flood, or other sufficient cause.
Sec. 24, Act 1889.

Cases of death, lunacy, &c.

228. If the holder of any homestead lease applied before or after the commencement of this Act shall die or be declared a lunatic, before the fulfilment of the conditions of residence and fencing attached to such lease, his lease may be held by his representatives or their assigns subject to the fulfilment by them of all unfulfilled conditions except the condition of residence, but in trust for and for the benefit of the persons rightfully entitled. And any sale, transfer, or other disposition whatsoever of the estate, right, title, or interest of any homestead leaseholder by an official assignee or other lawful authority upon the insolvency of such lessee, or by a sheriff or registrar of a district court or any other person by virtue of or under the authority of any writ of execution or other process of any court, or by the trustees of any deed of assignment for the benefit of creditors, or by any person under any decree or order of any court shall pass to a purchaser or to any other person only such estate, right, title, or interest as the lessee himself was entitled to at the date of sequestration, writ, process, decree, order, or assignment respectively, and subject to all conditions remaining unfulfilled at such date.

Cases of death, lunacy, insolvency, or judgment debt.
Sec. 125, Act 1884, and sec. 34, Act 1889.

Transfer and subletting of homestead leases.

229. The holder of a homestead lease (applied for before or after the commencement of this Act) may transfer his right of lease in the prescribed manner, but shall have no power to transfer the same until he shall have fulfilled the condition of residence, but no additional homestead lease shall be transferred apart from the original, or vice versa, unless and until the prescribed condition of residence has been fulfilled. Nothing in this Act or the Acts 1884-1897 shall prevent any homestead lease being transferred by way of mortgage or security, at the risk of the transferee, before the expiration of the term of residence subject to the conditions of the lease being fulfilled by the owner, subject to such mortgage or security.

Transfers.
Sec. 118, Act 1884.
Sec. 34, Act 1889.

230. All agreements for the subletting of a homestead lease (whether granted before or after the commencement of this Act) shall be in writing, and a copy of every such agreement shall be verified and sent

Agreements for subletting.
Sec. 43, Act 1895.

sent to the chairman of the local land board in the prescribed manner. Any subletting which is not effected by an agreement in writing, or in respect of which a copy of the agreement is not verified and sent as aforesaid, may, in the absence of any sufficient explanation, be taken to be evidence that the homestead lease is not held or used for the exclusive benefit of the lessee or apparent owner thereof.

Miscellaneous provisions re homestead leases.

Miscellaneous provisions.
Sec. 29, Act 1889.

231. Upon the application of any homestead lessee the Minister shall cause to be issued to him a lease for the land held by him, which lease shall be in the form prescribed and shall be subject to a fee of twenty shillings.

Tenant right in improvements.
Sec. 7, Act 1895.

232. Upon the expiration by effluxion of time of the term of any homestead lease (whether granted before or after the commencement of this Act), the last holder of the lease shall have tenant right (as the same is hereinafter defined) in improvements upon the lands theretofore held under the lease.

Disposal of lease.
Sec. 34, Act 1889.

233. On any determination of any homestead lease (whether granted before or after the commencement of this Act), the land comprised therein may be leased as a homestead lease by auction or tender, or otherwise disposed of, in accordance with the provisions of this Act.

Homestead selection out of lease.
Sec. 27, Act 1895.

234. The holder of any homestead lease whether granted before or after the commencement of this Act may, subject to the provisions of section *one hundred and sixty* of this Act, apply during the last year of the term of the lease for a portion of the leasehold as a homestead selection, such portion not exceeding six hundred and forty acres in area.

Surrender of homestead leases.

Surrender.
Sec. 34, Act 1889.

235. Any homestead lease (whether granted before or after the commencement of this Act) may be surrendered on giving the Minister not less than twelve months notice.

Forfeiture of homestead lease for want of good faith.

Forfeiture for want of good faith.
Sec. 43, Act 1895.

236. (I) In any case where an application for a homestead lease has been recommended for approval after the first day of June, in the year one thousand eight hundred and ninety-five, or after the commencement of this Act, and it appears to the satisfaction of the local land board—

(a) that the application was not made in good faith; or

(b) that the land is not held or used for the exclusive benefit of the lessee, or apparent owner thereof,

the Governor shall have power to forfeit, by notification in the Gazette, the lease in question, together with all moneys paid thereon.

Not to apply to transferees without notice.
Sec. 43, Act 1895.

(II) Nothing in this section contained shall affect any person acquiring any interest in a homestead lease after the same becomes capable of being transferred, unless he has, before acquiring such interest, had notice of a violation of the provisions of section two hundred and twelve of this Act, or of section forty-two of the Crown Lands Act, 1895, or of the intention to institute an inquiry as to such violation.

DIVISION V.—Improvement leases.

Improvement leases.
Sec. 26, Act 1895.

237. The Governor may, under this section, grant leases of Crown lands, which, by reason of inferior quality, heavy timber, scrub, noxious animals, undergrowth, marshes, swamps, or other similar cause, are

are not suitable for settlement until improved, and can only be rendered suitable by the expenditure of large sums in the improvement thereof. The granting of the leases shall be subject to the provisions hereunder contained:—

- (I) The term of the lease shall not exceed twenty-eight years, and shall commence from the date of the execution of the lease.
- (II) The area included in the lease shall not exceed twenty thousand four hundred and eighty acres.
- (III) The amount bid at a sale by public auction of the lease, or offered by an accepted tender, shall be the yearly rent of the lease; but an upset rent may be placed upon any such lease if offered by auction, and the Governor shall not be bound to accept any tender.
- (IV) The lease may contain such covenants and provisions as to the Governor may seem expedient according to the circumstances of each case, and all such covenants and provisions shall be notified in the Gazette and in a local newspaper before the lease is offered for sale or tenders called for. The lease shall contain covenants and provisions for the improvement of the land leased and for the expenditure of money thereon, for the payment of rent, and for the determination of the lease upon any breach by the lessee of the covenants and provisions thereof.
- (V) Upon the expiration of the term of any improvement lease by effluxion of time the lessee shall have tenant-right (as the same is hereinafter defined) in improvements.
- (VI) The holder of any improvement lease may, subject to the provisions of section *one hundred and sixty* of this Act, apply during the last year of the term of the lease for a portion of the leasehold as a homestead selection, such portion not exceeding an area of six hundred and forty acres. Sec. 27, Act 1895.

DIVISION VI.—Leases of inferior lands.

238. The Minister may, after report by the local land board, lease by auction or tender for a period not exceeding twenty years such vacant lands in the Eastern, Western, or Central Division as in consequence of their inferior character, or isolated positions may not have been held under any tenure, or having been held have been abandoned, subject to the following provisions—

- (I) Such leases shall be subject to such conditions as may be specified in the Gazette notice offering the land on lease.
- (II) No such lease shall be sold by auction, nor shall any tender be accepted until after the expiration of thirty days from the date of such notice, but when sold or granted shall commence from the date of sale or notification of acceptance of tender as the case may be.
- (III) The upset rental shall be determined by the Minister after report by the local land board.
- (IV) The amount bid at auction, or offered by an accepted tender, shall be the annual rental of the lease; and shall be paid, if the lease be sold at auction at the time of such sale, but if upon tender, within sixty days after the notification in the Gazette requiring payment thereof. If the rent be not paid within the time allowed, the lease and any amounts paid may be forfeited by notice in the Gazette. And any lease sold at auction, the price bid for which shall not forthwith be paid, may there and then be reoffered for sale.

(v)

- (v) Tenders shall be made in the form prescribed; and shall describe the land applied for in terms of the notice calling for tenders; and shall be accompanied by a receipt showing that a sum of two pounds has been paid to the land agent or Treasury as a deposit thereon. Such deposit paid by a person, whose tender may be accepted, shall be credited on account of the first year's rent, and the rent for the ensuing year shall in all cases be paid on or before a date corresponding to the date of commencement of the lease.
- (vi) A lease of any such land which may have been offered at auction, and not bid for, may be obtained on application to the land agent, and upon payment of the required upset rent, in accordance with subsection (iii) of this section; or the lease may be again submitted to auction unless the land shall have been previously otherwise dealt with.
- (vii) Upon application being made by any person for the submission of land to lease under this section the Minister may demand such amounts as may seem necessary to cover the expenses of report in connection therewith.
- (viii) If the Minister shall be satisfied, after inspection by an authorised officer and report by the local land board, that the holder of any lease (whether granted before or after the commencement of this Act) has failed, or is failing to fulfil any condition of his lease, such lease, together with any amounts paid, may, by notification in the Gazette, be forfeited.
- Sec. 26, Act 1895. (ix) The Governor may, on application as prescribed, extend the term of any inferior land lease granted under the Acts 1884-1897 to a term not exceeding twenty-eight years, on such terms and conditions as he may think fit, but such term shall be computed from the commencement of such lease under those Acts, and may grant to the last holder thereof tenant-right as defined in this Act.
- Sec. 27, Act 1895. (x) The holder of any lease of inferior lands (whether granted before or after the commencement of this Act) may, subject to the provisions of section *one hundred and sixty* of this Act, apply during the last year of the term of the lease for a portion of the leasehold as a homestead selection, such portion not exceeding an area of six hundred and forty acres.

DIVISION VII.—Pastoral leases.

Lands exempt from pastoral lease in Central or Western Division.

239. The following classes of lands shall be exempt from any pastoral lease in the Central or Western Division:—

Exemption from
pastoral lease.
Sec. 99, Act 1884;
30, Act 1889.

- (a) Lands within proclaimed cities, towns, and villages, or within the defined limits of suburban lands attached thereto.
- (b) Lands under lease or lawful occupation for mining purposes.
- (c) Lands dedicated to any public purpose.
- (d) Lands temporarily reserved from sale for commonage.
- (e) Lands reserved from lease under the Acts, 1859-1881, until the reservation thereof shall have been revoked under the provisions of this Act.
- (f) Lands reserved from lease generally or reserved specifically from pastoral lease before or after the commencement of this Act.

Pastoral

Pastoral leases in the Central Division.

240. The following provisions shall apply to pastoral leases in the Central Division :—
- (i) Rent shall be payable annually in advance before the recurring date of division of the pastoral holding under the Crown Lands Act of 1884. Pastoral leases in Central Division. Rent. Sec. 78, subsec. (11).
- (ii) A pastoral lease in the Central Division may be subdivided upon application by the lessee to the Minister, who may approve of the line of subdivision, or may himself determine such line: Provided that the provisions of this subsection shall not conflict or interfere with the provisions of section *two hundred and forty-one* of this Act. Subdivision. S. 80, Act 1884.
- (iii) The holder of a pastoral lease in the Central Division may surrender his lease after having given the Minister not less than twelve months notice of his intention so to do, and such notice shall specify the date on which the surrender is intended to take effect. Surrender. S. 31, Act 1889.
- (iv) Upon the determination, by effluxion of time, of the extended term of a pastoral lease in the Central Division, and of all periods (if any) added thereto, the holder of the lease shall, if not less than two months prior to such determination he shall have paid a license fee as prescribed, be entitled to occupy the lands theretofore held under such lease under a preferential occupation license, which shall be subject to all the provisions of this Act in respect of occupation licenses, as qualified by subsection (vi) of section *two hundred and forty-six* of this Act. Conversion of pastoral lease into occupation license. S. 4, Act 1895.
- (v) After the expiration, before or after the commencement of this Act, of the term or extended term of a pastoral lease in the Central Division the lands theretofore subject to such lease shall be deemed to have become, or shall become, a resumed area on notification in the Gazette to that effect, in pursuance of section five of the Crown Lands Act of 1895, or of this section, as the case may be, and on such notification, and not before, shall be deemed to have ceased or shall cease to be a leasehold area within the meaning of this Act. Notification that leasehold has become resumed area. S. 5, Act 1895.
- (vi) After the expiration, before or after the commencement of this Act, of the term, or extended term, of any pastoral lease in the Central Division, the lands comprised thereunder, if not subject to and applied for under preferential occupation license, may be offered by auction or tender under occupation license, or otherwise dealt with as vacant lands. Disposal of lands. Sec. 43, Act 1889.
- (vii) Lands held under any pastoral lease in the Central Division which may have been or which may be forfeited or surrendered may be relet under pastoral lease by auction or tender, for the unexpired portion of the forfeited or surrendered term, upon such conditions as to the periods of appraisalment of rent or otherwise as may be determined by the Minister, or may be offered by auction or tender under occupation license, or otherwise dealt with as vacant lands. After forfeiture or surrender of any pastoral lease as aforesaid, the land shall not be deemed to be Crown Lands, and shall not be available as such until after notification (before or after the commencement of this Act) in the Gazette that the same may be so dealt with. S. 43, Act 1889.
- (viii) Upon the application of any pastoral lessee the Minister shall cause to be issued to him a lease for the land held by him, which lease shall be in the form prescribed and shall be subject to a fee of twenty shillings. Issue of lease. Sec. 29, Act 1889.

Power of withdrawal from Central Division pastoral leases.

Withdrawal from
pastoral leases for
settlement purposes,
S. 3, Act 1895.

241. The Governor shall have power to withdraw from pastoral lease in the Central Division any lands held thereunder, whenever he shall deem it expedient so to do for the purpose of providing for settlement by other holdings :

Provided that prior to any such withdrawal being notified as hereinafter provided, the local land board shall make inquiry and report to the Minister with respect to the expediency of the proposed withdrawal, and the portion of the lease to be withdrawn, and, upon such inquiry, the lessee may be a party, without any right of appeal to the Land Appeal Court :

Provided further that the leasehold area shall be divided by the Minister into two parts as nearly equal in area as practicable, and the part from which withdrawals may be made shall be defined, and notice thereof given to the lessee.

The area withdrawn under one exercise of this power shall be in as compact a form as practicable, and the first withdrawal shall not be less than one-fourth, and the aggregate areas to be withdrawn under this power shall not exceed one-half of the area held under such lease on the first day of June, one thousand eight hundred and ninety-five.

Every such withdrawal shall be notified in the Gazette and some newspaper published in the district, and shall take effect four months after the date thereof or at such later date as may be specified for that purpose in the notification ; and copies of such notifications, together with the reasons for the withdrawals therein notified, shall be laid upon the tables of both Houses of Parliament forthwith if Parliament be sitting, and if not, then within eight days after the commencement of the next Session.

Upon any such withdrawal taking effect the pastoral lease shall cease to include the lands so withdrawn, but shall otherwise continue in full force and effect except as hereinafter provided.

The power of withdrawal conferred by this section shall be in addition to, and not in substitution for, the power of withdrawal conferred by section *one hundred and eighty-nine* of this Act.

In compensation for a withdrawal under the power conferred by this section ;—

- (a) a period shall be added to the term of the pastoral lease ; and
- (b) the lands withdrawn may, upon payment of the license fee as prescribed, continue to be occupied in virtue of a preferential occupation license ; and
- (c) the rent for the succeeding years of the pastoral lease shall be reduced in proportion to the area withdrawn ; and
- (d) a proportionate amount of any rent paid in advance shall be credited on account of the first year's license fee for the withdrawn area, or refunded at the request of the lessee.

The period to be added to the term of a pastoral lease in consideration of a withdrawal shall be computed so that the added period shall bear the same ratio to the unexpired period as the area withdrawn bears to the area left.

The method of ascertaining the added period shall be by multiplying together the unexpired period and the area withdrawn, and dividing the product by the area left. And in the foregoing formula —

“Unexpired period” means the number of months which the lease has to run, reckoning from the date of the withdrawal up to the date at which the lease (including all periods previously added) would have expired.

“Added

“Added period” means the number of months by which the term of a pastoral lease is to be extended in consideration for such withdrawal.

“Area withdrawn” means the number of acres included in such withdrawal.

“Area left” means the number of acres left under the pastoral lease at the date of withdrawal.

For the purposes of computation any fractional part of a month shall be reckoned as one month, and any fractional part of an acre shall be disregarded :

Provided always that upon application by the lessee within the time and in the manner prescribed, the rent of the area left shall be reappraised.

The Governor shall notify in the Gazette the length of the period to be added to the term of a pastoral lease in consideration of a withdrawal, and the date at which such added period will expire; and the added period shall determine upon the date so notified; and the Governor shall likewise notify the rate of the rent of the pastoral lease in any case where the rate has been varied, and the rate so notified shall be deemed to have been payable as from the date of withdrawal.

The period added to the term of a pastoral lease in consideration of a withdrawal shall be affixed to the extension (if any) of such lease under section forty-three of the Crown Lands Act of 1889, and the conditions of the lease during any such added period shall be the same as immediately prior to the commencement of such period.

Pastoral leases in the Western Division.

242. (I) Every pastoral lease in the Western Division shall have a term of twenty-eight years, and such term (which shall be deemed to have commenced when the term, as existing before the first day of June, in the year one thousand eight hundred and ninety-five, commenced) shall be divided for the purpose of the appraisement of the rate of rent into four periods each of seven years and a separate appraisement shall be made of the rate of rent payable for each of such periods as may have commenced after the first day of June, in the year one thousand eight hundred and ninety-five, or may commence after the commencement of this Act :

Pastoral and homestead leases in the Western Division.
S. 7, Act 1895.

Provided always that—

(a) In the case of a pastoral lease granted before the first day of December, in the year one thousand eight hundred and eighty-nine, and not brought under the provisions of section twenty-nine of the Crown Lands Act of 1889, the rate of rent from time to time payable under the Crown Lands Act of 1884 shall be paid until the expiration of such seven-year period of the term of the lease as may have been current on the first day of June, one thousand eight hundred and ninety-five.

(b) Nothing contained in this section shall prevent or affect the reappraisement of the rent of a pastoral lease in pursuance of section nine of the Crown Lands Act of 1895, or the coming into operation of any rent so reappraised.

(II) Whenever the rent of a pastoral lease shall be determined notice thereof shall be published in the Gazette, and shall be notified to the leaseholder in the prescribed manner; and if, within the time and according to the manner prescribed, he shall fail to pay into the Treasury the amount notified to be due under such lease his right thereto shall be liable to forfeiture. Pending determination the lessee

Sec. 78, subsec. (v),
Act 1884.

Sec. 29, Act 1889. lessee shall in every case continue to pay the previous rent; but when such determination shall have been made, he shall be entitled to a refund of any sums paid in excess, or shall pay within the prescribed time any difference due to the Crown between the previous rent and the rent as determined.

S. 80, Act 1884. (III) A pastoral lease in the Western Division may be subdivided upon application by the lessee to the Minister, who may approve of the line of subdivision, or may himself determine such line: Provided that the provisions of this subsection shall not conflict or interfere with the provisions of section *two hundred and forty-four* of this Act.

S. 31, Act 1889. (IV) The holder of a pastoral lease in the Western Division may surrender his lease after having given the Minister not less than twelve months notice of his intention so to do, and such notice shall specify the date on which the surrender is intended to take effect.

S. 43, Act 1889. (V) Lands held under any pastoral lease in the Western Division which may have been or which may be forfeited or surrendered may be relet under pastoral lease by auction or tender, for the unexpired portion of the forfeited or surrendered term, upon such conditions as to the periods of appraisement of rent or otherwise as may be determined by the Minister, or may be offered by auction or tender under occupation license, or otherwise dealt with as vacant lands.

After forfeiture or surrender of any pastoral lease as aforesaid, the land shall not be deemed to be Crown lands, and shall not be available as such until after notification (before or after the commencement of this Act) in the Gazette that the same may be so dealt with.

(VI) After the expiration of the term, or extended term, of any pastoral lease in the Western Division, the lands comprised thereunder may be offered by auction or tender under occupation license, or otherwise dealt with as vacant lands.

Tenant right in improvements.

S. 7, Act 1893.

(VII) Upon the expiration by effluxion of time of the term of any pastoral lease in the Western Division the last holder of the lease shall have tenant right (as the same is hereinafter defined) in improvements upon the lands theretofore held under the lease.

S. 27, Act 1895.

(VIII) The holder of a pastoral lease in the Western Division may, subject to the provisions of section *one hundred and sixty* of this Act, apply during the last year of the term of the lease for a portion of the leasehold as a homestead selection, such portion not exceeding six hundred and forty acres.

S. 29, Act 1899.

(IX) Upon the application of any pastoral lessee the Minister shall cause to be issued to him a lease for the land held by him, which lease shall be in the form prescribed, and shall be subject to a fee of twenty shillings.

Attachment of resumed area to leasehold area in Western Division.

Attachment of resumed area to leasehold area.

S. 8, Act 1895.

243. In any case in which—

- (a) the Minister, after inquiry by the local land board, is satisfied that any resumed area in the Western Division (not being within the land districts of Brewarrina, Hay North, or Walgett North) is not, and is not likely to be, required for purposes of settlement before the expiration of the pastoral lease of the leasehold area; and
- (b) the occupation license or annual lease, if any, of the resumed area is not held by a person other than the holder of the pastoral lease of the leasehold area

the Minister may, with the consent of the holder of the pastoral lease by notification in the Gazette, declare that the resumed area shall thenceforward

thenceforward be held under pastoral lease; and the occupation license or annual lease, as the case may be, of the resumed area shall thereupon expire, and any artesian well lease on the resumed area, held concurrently with the pastoral lease, shall be deemed to be surrendered, but not so as in either case to thereby render the improvements on the resumed area the property of the Crown.

The resumed area, or so much thereof as may be available, shall be added to the area held under the existing pastoral lease; and the rent of the area so added shall be fixed in accordance with the following provisions:—

- (i) If the Minister and the lessee so agree, such rent shall be, at the rate per acre, payable for the leasehold area.
- (ii) If the Minister and the lessee do not agree, the rent for the area so added shall be appraised by the local land board in accordance with the provisions of this Act as if it were the rent for a pastoral lease of the resumed area.
- (iii) Any reappraisal of the rent of the pastoral lease shall be of the rent of the lease as including the whole area.
- (iv) Upon default in the due payment for the whole area of any sum due as rent, or added to the rent, the lease of the whole area may be forfeited in accordance with the provisions of this Act.
- (v) The accounts between the lessee and the Crown shall be adjusted, and for the purposes of such adjustment any rent and license fee shall be considered as accruing due day by day.

Any resumed area added to land under pastoral lease in accordance with the provisions of this section or section eight of the Crown Lands Act of 1895 shall be deemed to have been or to be added subject to the provision that the Governor may (by notice in the Gazette) withdraw, without compensation, the whole or any part or parts thereof from pastoral lease whenever he shall deem it necessary or expedient to make the land available under any provisions of this Act. Upon such withdrawal (which shall not take effect until the expiration of six months from the date of notice thereof) the lessee shall (on application within the prescribed time and payment of license fee as prescribed) be entitled to hold the withdrawn area under preferential occupation license; and any improvements upon the withdrawn area (not forfeited or forfeitable to or vested in the Crown) shall be taken to be the property of the lessee for all purposes and subject to the provisions of section *three hundred and one* of this Act.

Power of withdrawal from Western Division pastoral leases.

244. The Governor shall have the same power of withdrawing land from a pastoral lease in the Western Division as by this Act is conferred upon him in respect of pastoral leases in the Central Division, except that:—

Withdrawal for extra-urban settlement in the Western Division.

S. 6, Act 1895.

- (a) The area withdrawn under one exercise of the power shall not be less than one-sixteenth, and the aggregate areas to be withdrawn under this power shall not exceed one-eighth of the area held under the lease, and this power shall only be exercised to withdraw land within ten miles of the boundary of a town containing at least fifty inhabitants; and
- (b) Any period to be added to the term of a pastoral lease in consideration of a withdrawal shall be affixed to the term of the lease as extended by the Crown Lands Act of 1895.

The lessee shall have compensation upon any such withdrawal in the like manner as is hereinbefore provided upon a withdrawal from a pastoral lease in the Central Division, and shall have tenant right in improvements as the same is hereinafter defined upon the land so withdrawn.

Transfers

Transfers of pastoral leases.

Transfers.

S. 118, Act 1884.

245. The holder of any pastoral lease may transfer his right of lease in the prescribed manner.

DIVISION VIII.—Occupation licenses.

Occupation Licenses.

S. 81, Act 1884.

246. Subject to the provisions hereinafter contained the Governor may issue Occupation Licenses. And such licenses shall entitle the licensees to occupy for grazing purposes a resumed area or vacant lands or any portion thereof:—

- (I) The right to occupation licenses for any portions of resumed areas or vacant lands which were not applied for by the runholder under the Crown Lands Act of 1884, or which have been forfeited or surrendered, may be disposed of by auction or tender in the prescribed manner.
- Sec. 43, Act 1889. (II) After the expiration (before or after the commencement of this Act) of the term, or extended term, of any pastoral lease, the lands comprised thereunder, if not subject to and applied for under preferential occupation license, may be offered by auction or tender under occupation license, or otherwise dealt with as vacant lands.
- Sec. 43, Act 1889. (III) Lands held under any pastoral lease which may have been or which may be forfeited or surrendered may be offered by auction or tender under occupation license or otherwise dealt with as vacant lands, after notification in the Gazette (before or after the commencement of this Act) that the same may be dealt with as Crown lands.
- Sec. 81, Act 1884, subsec. (1). (IV) the Minister may at any time direct a fresh appraisalment to be made of any occupation license or preferential occupation license in any Division, and may require the licensee to pay his annual license fee on the basis of such fresh appraisalment after the expiration of any current year during the continuance of the license;
- Sec. 81, Act 1884, subsec. (1). (V) Occupation licenses and preferential occupation licenses shall be in force from the first day of January to the thirty-first day of December in each year, and the rates of license fee shall be published in the Gazette, and if within sixty days thereafter such fees be not paid into the Treasury by the licensee, the Minister may refuse to renew such license.
- Sec. 4, Act 1895. (VI) Where on the determination by effluxion of time of the term or extended term of any pastoral lease in the Central Division, or where on the withdrawal of land from pastoral lease in the Central or Western Division the land shall be obtained under preferential occupation license, the license fee payable in respect of the land held under the preferential occupation license shall be at the same rate as is payable in respect of the resumed area, unless the Minister shall direct an appraisalment of the license fee to be made; or, if there be no resumed area, or if the resumed area be not held under occupation license, then at a rate to be appraised, and, until such appraisalment, and subject to an adjustment of accounts thereupon, at a provisional rate of two pounds per section of six hundred and forty acres. The Governor may, giving not less than three months' notice in the Gazette, refuse a renewal of any such preferential occupation license in the Central Division, or any similar preferential occupation license in that Division granted before the commencement of this Act, and in such case the preferential occupation license shall determine at the end of the then current year, and if the Governor refuse to renew any such preferential occupation license of lands containing

containing improvements, the last holder of the license shall have tenant right (as the same is hereinafter defined) in such of the improvements as were made with the consent of the Crown after the first day of June, one thousand eight hundred and ninety-five, or after the commencement of this Act.

- (VII) Upon the granting of any lease or the sale of any land under occupation license the licensee's right of occupation to the extent of such portion shall thereupon cease, but he shall be entitled to a refund of so much of the license fee paid in advance and to reduction in future rent as shall be proportionate to the area so withdrawn and from the date of withdrawal, and shall be entitled to be paid such compensation for improvements on any portion so withdrawn as may be determined after appraisalment by the Local Land Board.

Sec. 81, Act 1884,
subsec. (IV).

DIVISION IX.—Survey of Leasehold and Resumed Areas, &c.

247. (I) The Minister may direct the survey of the boundaries or portions of the boundaries of any land held under pastoral lease or occupation license.

Survey of leasehold and resumed area and settlement of disputed boundaries.

(II) If such survey be made at the request of the lessee or licensee the Minister may demand from the lessee or licensee the whole or any part of the cost thereof, but if otherwise, any sum not exceeding twenty shillings for each linear mile of the boundary so surveyed, and, in default of payment of such sum within sixty days after notification of the demand in the Gazette, such lessee or licensee shall become liable to the same penalties as attach to non-payment of his rent or license fee.

Sec. 143, Act 1884 ;
52, Act 1889.

(III) If at any inquiry or proceeding before a local land board concerning any application to purchase or lease Crown Lands, any question or dispute shall arise as to the extent or boundary or boundaries of any land comprised in any lease or license, it shall be competent for such board thereupon to inquire into the matter and recommend for the approval of the Minister (subject to appeal) any adjustment of such boundary or boundaries which may appear reasonable; or such adjustment of boundaries may, subject to the ultimate approval of the Minister, be determined by agreement between the parties; and for this purpose the description of any land applied for as aforesaid may be modified to conform with the boundary or boundaries so determined; and any such boundary or boundaries approved by the Minister as aforesaid shall, for the purposes of the Acts 1859-1897, or this Act, be held to be the boundary or boundaries of such pastoral lease or occupation license or other lands applied for.

Sec. 52, Act 1889.

(IV) The Minister may refer to the local land board for inquiry any question or dispute which may have arisen or may arise in respect of the boundaries of any land held under lease or license, and the board shall in due course deal therewith: Provided that in any case the board make such order as it may deem fit touching the cost of such inquiry, and of any survey which may be deemed necessary, which shall be borne by such persons and in such proportions as the board may direct.

Sec. 52, Act 1889.

DIVISION X.—Residential Leases.

248. It shall be lawful for the Governor, on the recommendation of the Warden of any gold-field, to grant leases for periods not exceeding fifteen years of areas not exceeding twenty acres of Crown Land within gold and mineral fields to any holder of a miner's right or mineral license for the purpose of *bonâ fide* residence, upon such terms

Residential lease may be granted to holder of miner's right or mineral license.

Sec. 48, Act 1889 ;
50, Act 1895.

terms and conditions as to rent, cost of survey, term of lease, erection of fences and buildings, and upon such other provisions for the protection of the public interest as may be prescribed.

249. All holders of residential leases, whether granted before or after the commencement of this Act, shall have tenant right in improvements as herein defined.

DIVISION XI.—Scrub Leases.

Scrub-lands may be declared and leased. Sec. 35, Act 1889.

250. The Minister may, upon the recommendation of the local land board, declare by notification in the Gazette, any Crown lands wholly or partly covered by scrub or noxious undergrowth to be scrub-lands; and may, on the recommendation of the local land board (and notwithstanding anything in the Prickly-pear Act contained), grant leases of such lands on application, or sell the same by auction or tender at such times and places and under such conditions and for such terms not exceeding twenty-one years as he may deem desirable.

Lands so declared to be scrub-lands shall not until leased in accordance with this section be withdrawn from any lease or license under which they may at the time be held.

No scrub-lease of lands within the outside boundaries of land held under pastoral lease or homestead lease shall be granted to any person but the holder of such pastoral or homestead lease, in which case such scrub-lease shall not be for a longer term than the unexpired term of such pastoral or homestead lease.

The term of a scrub-lease may be divided into such periods as the Minister shall fix, and the rent for the second or any succeeding period shall be determined in accordance with section *forty-four* of this Act.

Notwithstanding anything in this Act or in the Acts 1884-1897 contained, the Minister may, on the recommendation of the local land board, either before or after granting any such scrub-lease, cause the rental of the remainder of the land held under pastoral or homestead lease to be reappraised and redetermined.

No pastoral or homestead lessee shall hold or cause to be held on his behalf, or in his interest, any scrub-lease, except within the land held under lease by himself.

The applicant for any scrub-lease shall pay the cost of survey thereof, or in the event of his withdrawing his application, all costs of survey, reports, or inquiry incurred in dealing therewith.

251. All leases of scrub-lands, whether granted before or after the commencement of this Act, shall be subject to the general provisions here following—

- (I) Every such lease shall, if granted in pursuance of an application or by tender, commence from the date of the notification in the Gazette of the Minister's approval of the application or acceptance of the tender; and, if sold at auction, shall commence from the date of sale. And the land held thereunder shall (subject to the provision for withdrawal contained in section *one hundred and eighty-nine* of this Act) during the whole currency thereof be unavailable for purchase or lease.
- (II) Rent for the first year of the lease shall together with the cost of survey, be paid within one month from the date of the notice in the Gazette specifying the amount thereof; and the rent shall for succeeding years be paid annually in advance on or before the last day of the current year of the lease.
- (III) Every holder of a scrub-lease shall, as conditions of his lease, be required to take all such steps as the local land board shall

shall from time to time, subject to appeal, direct, for the purpose of destroying such scrub as may be specified in his lease or promise of lease, in and upon the land under scrub-lease, or in and upon any land within the boundaries of the lease, or in and upon any reserves or roads within such boundaries; and when so destroyed to keep such land free from the same; and shall commence to destroy the same within three months after the commencement of the lease. And if rent thereon shall not be paid within the time allowed, or if in the opinion of the Minister, after report by the local land board, subject to appeal, the holder shall have failed to comply with any condition of his lease, the Minister may, by notification in the Gazette, declare such lease to be forfeited; and all improvements on such lands shall be the property of the Crown.

- (iv) Any land held under scrub-lease shall, on the forfeiture or surrender thereof, be added to the lands held under lease or license within the boundaries of which it may be situated, and rent therefor shall be payable at such rate per acre as may be determined by the local land board, and shall form part of the rent payable for such lease or license, which shall be liable to forfeiture if the rent for the added lands be not paid as prescribed.
- (v) If a pastoral lease or homestead lease be held in conjunction with a scrub-lease, neither of such leases shall be transferred separately.
- (vi) The Governor may, on application as prescribed, extend the term of any scrub-lease granted under the Acts 1884–1897 or this Act to a term not exceeding twenty-eight years on such terms and conditions as he may think fit, but such term shall be computed from the commencement of such lease under those Acts. Sec. 26, Act 1895.
- (vii) The Governor may grant to the last holder of any scrub-lease tenant-right as defined in this Act. Sec. 26, Act 1895.

252. The holder of any scrub-lease not being within a pastoral or homestead lease, whether granted before or after the commencement of this Act, may, at any time during the last year of the term of the lease, apply, subject to the provisions of section *one hundred and sixty* of this Act for a portion of the leasehold as a homestead selection, such portion not exceeding six hundred and forty acres in area. Sec. 27, Act 1895.

DIVISION XII.—Settlement Leases for Agriculture and Grazing.

Settlement lease area.

253. The Governor may, subject to the provisions of and under the power conferred by section *forty-six* of this Act set apart any tract of Crown lands to be disposed of by leases under the provisions hereinafter contained. Settlement lease areas. Sec. 24, Act 1895.

Any tract which has been so set apart (or any tract set apart under the Crown Lands Act of 1895 for disposal under settlement lease and not already dealt with as required by that Act) shall be dealt with as follows:—

- (i) A subdivision shall be made thereof into farms, which in cases where the land appears suitable for agriculture, shall not contain more than one thousand two hundred and eighty acres; and in cases where the land appears suitable chiefly for grazing shall not be more than ten thousand two hundred and

forty acres in area ; and the standard to be adopted in regulating the extent of each such farm shall be that the lessee thereof may be able to establish and maintain a home thereon by the use of the land.

Any subdivision whether made before or after any notification under this Act may be taken to be a subdivision within the meaning of this section, and one or more measured portions may by notification under this section constitute a farm.

- (II) A valuation of the said farms shall be made according to the capabilities and situation of the farm, and in making such valuation, due regard shall be paid to the term and conditions of a settlement lease, and to the intention of these provisions that the lessee may be enabled to establish and maintain his home thereon.
- (III) The value, to an incoming tenant, of any improvements on any such farm may be appraised by the Minister after inquiry and report by the Local Land Board in the prescribed manner, and such appraisal shall, as between the Crown or the owner of the improvements, as the case may be, and any person taking such farm, be conclusive evidence of the value of the improvements at the date of the appraisal.
- (IV) A notification shall be published in the Gazette and in a local newspaper, giving particulars of the areas, values and qualities of the said farms, and of the appraised value of any improvements thereon, and specifying a date on and after which leases of the said farms may be applied for; the area and value of any farm as stated in the said notification shall be taken to be the area and capital value thereof for the purposes of the provisions hereinafter contained.
- (V) Any notification under this section or section twenty-four of the Crown Lands Act of 1895 may be corrected, amended, modified, or revoked by notice in the Gazette.
- (VI) The setting apart of any tract of Crown lands for disposal by way of settlement lease, and the notification required by this section may, whenever it shall be deemed expedient, be effectuated by one and the same notification in the Gazette, and in any such case any preliminary notification shall be deemed to have been unnecessary.

Sec. 24, Act 1895.

Limitation as to number of holdings.

254. No person who, on and after the first day of June, one thousand eight hundred and ninety-five, has applied, or who after the commencement of this Act applies, for a settlement lease, and has obtained or obtains a title thereto in pursuance of such application shall be qualified to apply for another settlement lease; and no person who, on or after the first day of June, one thousand eight hundred and ninety-five, has applied, or who after the commencement of this Act applies for an original conditional purchase, or a homestead selection, or an original homestead lease, and has obtained or obtains a title thereto in pursuance of such application, shall be qualified to apply for a settlement lease unless he has previously obtained a certificate as prescribed that he was compelled by adverse circumstances to abandon or to surrender the holding first applied for, or unless (notwithstanding the non-obtaining of such certificate) he has previously obtained the written approval of the Minister to apply for a settlement lease.

The privilege of selecting, &c., when exhausted.

Sec. 40, Act 1895.

For

For the purposes of this section title in pursuance of an application shall be taken to have been obtained—in the case of a homestead selection, settlement lease, and original conditional purchase—when the application has been confirmed by the local land board, and in the case of a homestead lease when the approval of the issue of the lease has been notified in the Gazette, and a valid notice of non-acceptance has not been duly given :

Provided that if the holding first applied for were a settlement lease or an original homestead lease, the disqualification enacted by this section shall cease to operate upon the expiration of the term of the lease by effluxion of time, or if the lease has been forfeited, surrendered, or otherwise sooner determined, then upon the expiration of the period which the term of the lease would have had to run, but for such forfeiture, surrender, or other sooner determination.

Limitation as to area.

255. No person shall be competent to apply for a settlement lease who—

(a) owns at the date of application ; or

(b) owned at any time previous to the date of application, and fraudulently divested himself of the ownership thereof by transfer, conveyance, assignment, or otherwise, or purported so to do, in order to evade the foregoing provision,

an area of land granted in fee simple, or conditionally purchased, or conditionally leased from the Crown, which area, added to the area of the settlement lease applied for, exceeds as a total area the maximum area permitted by law to a settlement lease.

Disqualifications by reason of area already held.
Sec. 41, Act 1895.

Persons not natural-born or not naturalised.

256. A person who is not a natural-born or naturalised subject of Her Majesty shall not be qualified to apply for a settlement lease unless he has resided in New South Wales for one year, and at the time of making such application has lodged a declaration of his intention to become naturalised within five years from the time of making such declaration.

Persons not natural-born or naturalised.
Sec. 41, Act 1895.

If such person shall fail to become so naturalised within the period aforesaid, he shall absolutely forfeit all land the subject of his application, together with all the improvements thereon.

Good faith in applicants.

257. Every application for a settlement lease is hereby required to be made in good faith ; and an application shall be taken to be made in good faith when the sole object of the applicant in making the application is to obtain a lease of the land in order that he may hold and use the land for his own exclusive benefit according to law.

Good faith in applicants.
Sec. 42, Act 1895.

Applications for settlement leases.

258. (I) On and after the date specified in any notification under section two hundred and fifty-three of this Act or section twenty-four of the Crown Lands Act of 1895, any person not disqualified by this Act may apply to the land agent for any farm so notified.

Application for settlement lease.
Sec. 24, Act 1895.
Sec. 24, Act 1895.

(II) The application shall be made in the prescribed manner, and shall be accompanied by one half years rent in advance, and by a survey fee upon the prescribed scale.

The applicant shall satisfy the local land board that he is qualified to make the application, and that the same has been made in accordance with the provisions of this Act.

(III)

(iii) The local land board shall confirm the application, if so satisfied, unless it permits the applicant to withdraw the same; if not so satisfied, it shall disallow the application.

Land board may disallow application.
Sec. 42, Act 1895.

(iv) The local land board shall disallow an application for a settlement lease unless it be satisfied that the application is made in good faith, as defined in section two hundred and fifty-seven of this Act.

(v) In any case where the local land board is satisfied that an application as aforesaid has been made otherwise than in good faith, it shall have power to declare that any moneys lodged with such application shall be forfeited to the Crown, and the same shall be forfeited accordingly.

Application pending

(vi) Every application as aforesaid pending at the commencement of this Act shall be deemed to be within the provisions of this section.

Commencement of title.

Sec. 2, 59 Vic. No. 26.

259. The title to any settlement lease applied for after the commencement of this Act shall commence from the date of application therefor, if valid, and any such application shall withdraw such of the land therein described as may be available for the purpose from any annual lease or occupation license under which it may be held: Provided that the land agent shall, within one week of the receipt of any such application, notify the same through the post to the holder of any annual lease or occupation license within which the land applied for, or any part thereof, may be situated.

Trespass and impounding.

Trespass by stock on unfenced lands.
Sec. 55, Act 1895.

260. No person occupying land under a settlement lease shall—

(a) bring an action for trespass committed by stock upon the said land, whether before or after the commencement of this Act; or

(b) impound any stock trespassing upon the said land— unless the said land or the portion thereof trespassed upon was, at the date of the trespass, enclosed with a fence reasonably sufficient to keep out stock:

Provided always that nothing in this section contained shall apply to any trespass wilfully caused.

Issue of settlement leases.

Settlement leases.
Sec. 25, Act 1895.

261. The Governor may grant to an applicant whose application (whether made before or after the commencement of this Act) has been confirmed by the Local Land Board a settlement lease of the farm applied for.

The term of the lease shall be twenty-eight years, and the lease shall be in the prescribed form, and shall contain provisions to secure:—

Sec. 2, 59 Vic. No. 26.

(a) That the lessee shall pay an annual rent of one and one quarter per centum on the capital value of the farm as fixed under this Act (or where the application is for land set apart for settlement lease before the commencement of this Act on the capital value as fixed under the Crown Lands Act of 1895), and such rent shall be charged from the date of the application for the lease if such application is made after the commencement of this Act;

Sec. 25, Act 1895.

(b) that the lessee shall pay the value of the improvements as appraised, and interest on such value at the rate of four pounds per centum per annum, the payment being made in one sum, or, at his option, in three equal yearly instalments, at the dates and in the manner prescribed;

(c)

- (c) that the lessee shall reside on the farm and make it his *boná fide* residence during the whole term, or if the lease have been transferred by way of *boná fide* mortgage, then that the owner, subject to such mortgage shall so reside;
- (d) that the lessee shall fence the farm within five years from the date of the lease;
- (e) That the lessee shall conform to any regulations made by the Minister relating to keeping the farm clear of rabbits and other noxious animals, and also to clearing the farm of scrub and noxious weeds;
- (f) that the lessee shall not assign or sublet without the Minister's consent;
- (g) that the Governor may forfeit the lease upon breach of any of the conditions, covenants, and provisions therein contained. The lease may also contain such additional provisions, conditions, and covenants as to the Governor may seem expedient in the public interest. Sec. 27, Act 1895.

262. Upon the expiration of the full term of any settlement lease the last holder thereof shall have tenant right (as the same is hereinafter defined) in the improvements thereon.

263. The holder of any settlement lease may, subject to the provisions of section *one hundred and sixty* of this Act apply during the last year of the term of the lease for a portion of the leasehold as a homestead selection, such portion not exceeding an area of one thousand two hundred and eighty acres.

Forfeiture of settlement lease for want of good faith.

264. (I) In any case where an application for a settlement lease has been confirmed after the first day of June, in the year one thousand eight hundred and ninety-five, or after the commencement of this Act, and it appears to the satisfaction of the local land board— Forfeiture for want of good faith. Sec. 43, Act 1895.

- (a) that the application was not made in good faith; or
- (b) that the land is not held or used for the exclusive benefit of the lessee, or apparent owner thereof,

the Governor shall have power to forfeit, by notification in the Gazette, the lease in question, together with all moneys paid thereon.

(II) Nothing in this section contained shall affect any person acquiring any interest in a settlement lease after the same becomes capable of being transferred, unless he has, before acquiring such interest, had notice of a violation of the provisions of section *two hundred and fifty-seven* of this Act or of section *forty-two* of the Crown Lands Act, 1895, or of the intention to institute an inquiry as to such violation. Not to apply to transferee without notice.

DIVISION XIII.—Snow Leases.

265. The Minister may, upon the recommendation of the local land board, lease by auction any Crown lands not being under pastoral or conditional lease, which may be usually covered with snow for a part of each year and unfit for continuous use or occupation. Leasing of snow lands. Sec. 36, Act 1889.

Such land shall be leased in areas of not less than one thousand two hundred and eighty or more than ten thousand two hundred and forty acres, and during the currency of the lease shall be exempt from sale or other lease under the provisions of this Act.

Every such lease shall commence from the day of sale, and shall withdraw the land from any annual lease or license under which it may be held, and rent therefor shall be paid annually in advance not later than the last day of each year of the lease, subject in default to forfeiture, by notice in the Gazette.

No

No right of impounding any stock of the outgoing licensee or lessee shall vest in the holder of a lease under this section until one month after the commencement of such lease.

The prescribed fee for the survey of the land and the first year's rent shall be paid by the purchaser at the time of sale, and upon default the lease may there and then be reoffered for sale.

The lease shall have a term of seven years, and at the expiration thereof the lessee shall have a right of extension for a term of three years, subject to the payment of such annual rental as may be determined in accordance with the provisions of this Act, provided that he shall have notified to the Minister at least twelve months prior to the expiration of such term his intention of claiming such extension.

The Minister may determine any such lease, whether granted before or after the commencement of this Act, by giving the lessee notice to that effect not later than one year prior to the date on which the term shall expire.

Not more than two of any such leases shall be held by, or in the interest of, one person.

Special Leases.

266. The Governor may lease, upon such conditions as he may think fit, for a term not exceeding twenty-eight years—

land situated under the sea or under the waters of any harbour, bay, lake, river, creek, estuary, or navigable stream, which shall be deemed to be Crown lands for the purposes of this section,

for the erection of wharfs, jetties, piers, or floating docks. No such lease of such Crown lands fronting any land held in fee-simple shall be made, except to or with the consent of the proprietor thereof.

No such lease shall be made for the erection of any wharf, jetty, pier, or floating dock, which would interfere with navigation or with the rights of adjoining proprietors.

The intention to make a lease of such land shall be notified in the Gazette for four consecutive weeks, and not less than four times in some local newspaper, if any, before the lease is issued.

267. The Governor may lease Crown lands—

by auction or otherwise, and in areas not exceeding in any case three hundred and twenty acres, for a term not exceeding twenty-eight years,

for any of the purposes hereinafter specified, that is to say, for dams, tanks, irrigation works, wharfs, bridges, punt-houses, ferries, bathing-places, landing-places, saw-mills, brick-kilns, lime-kilns, slaughter-houses, tanneries, wool-washing establishments, quarries, fisheries, building or repairing ships or boats, tramway purposes, obtaining guano, shells, limestone, loam, brickearth, gravel, or ballast, or for an inn, store, smithy, bakery, or mail station in sparsely populated districts, or for business purposes, or for the erection of buildings, or for any purpose declared by the Governor by proclamation in the Gazette to be a purpose within this section. And the Governor may determine the upset rent thereof if let at auction or the annual rent if let by tender, and may annex to any such lease such conditions, reservations, and provisions as he may deem fit: Provided that leases may be granted at a reduced rental to contractors of public works for purposes connected with the construction of such works during the term of contract.

268. Subject to such conditions as may be prescribed, the Governor may make leases of Crown lands, not exceeding three chains in width but without limit of length, for irrigation works, or for forming and maintaining tramways and crossings, and other necessary approaches and

Leases for wharfs,
jetties, &c.
Sec. 80, Act 1884,
46, Act 1895.

Sec. 90, Act 1884,
46, Act 1895.
Leases for special
purposes.

Leases for tramway
and irrigation
purposes.
Sec. 92, Act 1884.

and works in connection therewith. And notice of every application for a lease under this section, and of the purpose for which it is proposed to be made, shall be published in the Gazette for at least four consecutive weeks before the issue of such lease.

269. The term of any special lease (whether applied for before or after the commencement of this Act) may be fixed for or extended to any term not exceeding twenty-eight years. Sec. 46, Act 1895.

270. With any application for a special lease a fee in accordance with the prescribed scale shall be tendered for the survey of the land. Sec. 11, Act 1899.

271. If it should appear to the satisfaction of the Governor that the land comprised in any special lease, whether granted before or after the commencement of this Act, is not used and occupied *bonâ fide* for the purpose for which the same has been made, or that default has been made in any condition, he may declare such lease forfeited, together with any improvements erected on the land and any rent paid in respect thereof.

PART VI.

PROCLAMATIONS OF CITIES, TOWNS, AND VILLAGES, RESERVES, DEDICATIONS.

DIVISION I.—Cities, towns, villages, &c.

272. The Governor may proclaim in the Gazette—
- (a) any city, town, or village; Cities, towns, and villages. Sec. 4, Act 1884.
 - (b) the suburban lands, or any extension of such suburban lands, to be attached to any such city, town, or village, or to any existing city, town, or village; Sec. 30, Act 1880. Sec. 101, Act 1884.
 - (c) population areas; and such population areas may be defined with lines directed to the cardinal points; or with boundaries other than lines directed to the cardinal points; but in any case such boundaries or lines shall be distant not more than ten miles from the nearest boundary of the city, town, or village.

Lands in any proclaimed city, town, village, suburban boundaries, or population areas shall be deemed to have been and to be set apart within the meaning of this Act.

DIVISION II.—Alteration of designs of cities, towns, &c.

273. (I) It shall be lawful for the Governor by notice in the Gazette to correct or alter the name, design, or plan of any city, town, or village, and the limits of any suburban lands attached thereto, or to wholly cancel any such design or plan or limits, and whether such city, town, village, or lands were dedicated or set apart under this Act or the Acts 1859–1897, or Orders in Council; and an abstract thereof shall be laid before Parliament within thirty days after such notification if Parliament be then in session, and if not then within thirty days after the commencement of the then next session. Alteration of plan of town or village. Sec. 107, Act 1884. Sec. 57, Act 1895.

(II) When it is intended to alter or cancel the design or plan or limits of any city, town, or village, or suburban lands in which allotments or portions have been sold, notice of the intention and of the nature of the proposed alteration or cancellation shall be published in the Gazette and in some newspaper circulating in the district, and no such correction, alteration, or cancellation shall be carried into effect until the expiration of three months from the notification in the Gazette of such intention. After

After notice in the Gazette of such intention as aforesaid the Local Land Board shall assess the loss (if any) of value which may be suffered by the holder of any allotment or portion if the proposed alteration or cancellation is carried into effect.

If the intention to alter or cancel the design or plan is afterwards carried into effect, the sum assessed by the Local Land Board shall be the total sum payable by way of compensation to the said holder, and all persons claiming under or through him; and such holder and all persons claiming under or through him shall be barred of any action or suit in respect of the alteration or cancellation of the design or plan or limits or the carrying out thereof other than an action for the sum so assessed as aforesaid: Provided however that compensation for loss of value shall be assessed only in cases where the alteration or cancellation of design or plan if carried into effect will deprive the said holder of access from his allotment or portion to the nearest street or road.

DIVISION III.—Reserves.

274. The Governor may—

- (I) by notice in the Gazette declare what portions of Crown lands shall be reserved and set apart as sites for cities, towns, or villages, and may define the limits of the suburban lands to be attached thereto, and to any existing city, town, or village, and may in like manner declare what portions of Crown lands shall be temporarily reserved from sale pending survey or determination by him of the portion to be set apart for any public purpose, or for commonage, or for population areas, and all lands so declared shall be reserved accordingly until revoked or altered in like manner. Within one month after such declaration, should Parliament be then in session, and otherwise within one month after the commencement of the next ensuing session of Parliament, there shall be laid before both houses of Parliament an abstract of all such reservations. And the Governor may reserve from conditional sale any Crown lands within a gold-field under the meaning and operation of any Act in force for the regulation of mining on Crown lands, and the expression public purpose shall be taken to include any purpose for mining or for removal of minerals.
- (II) by notice in the Gazette, define and set apart routes not exceeding one mile in width through any leasehold or any land held under occupation license for the passage of stock travelling pursuant to the provisions contained in the fifteenth section of the Act forty-first Victoria number nineteen, or any Act amending the same, and may also define and set apart camping places for travelling stock not in any case exceeding one square mile. Such routes and camping places shall be determined in the first instance by the local land board, and the lessee or licensee of any lands within which such routes or camping places are situate shall not be entitled to impound any stock travelling as aforesaid, or to maintain any action for trespass in respect thereof, while such stock shall keep within the boundaries of the said routes or camping places. And a reduction of the rent or license fee by reason of setting apart such routes or camping places may be made in the prescribed manner.
- (III) by proclamation in the Gazette, reserve temporarily from sale any Crown lands within one mile on either side of any railway now or hereafter to be made or projected.

(IV)

Temporary reserves from sale for sites of cities and other purposes.

Sec. 101 of Act of 1884.

Travelling stock routes and camping places.

Sec. 109 of Act of 1884.

Railway reserve.

Sec. 103 of Act of 1884.

(iv) by notice in the Gazette, reserve any land therein described from being sold or let upon lease or license in such particular manner as may be specified in such notification; and the land shall thereupon be temporarily reserved and exempt from sale or lease or license accordingly, and, unless expressly otherwise declared, shall not be reserved or exempt from sale or lease generally.

Reserves from sale or lease or license.
Sec. 39 of Act of 1889.

275. No reservation made before or after the commencement of this Act shall be held to have been or to be invalid by reason of the land being already reserved at the date of such reservation, or by reason of the revocation of any other reservation including wholly or in part the same land.

Sec. 39 of Act of 1889.

DIVISION IV.—Revocation of reserves.

276. The Governor may revoke or alter any reserve of any kind whatsoever or any population area which has been made before or after the commencement of this Act in like manner as such reserve or population area was made (whether by notice or proclamation) in the Gazette: Provided that the Minister may, by notice in the Gazette, revoke or modify any reserve made under the provisions of section thirty-nine of the Crown Lands Act of 1889 or subsection four of section two hundred and seventy-four of this Act, or any reserve made before the first December, one thousand eight hundred and eighty-nine.

Revocation of reserves.
Sec. 101, Act 1884.
Sec. 103, Act 1884.
Sec. 39, Act 1889.
Sec. 102, Act 1884.
Sec. 40, Act 1889.

277. The Governor may, by proclamation in the Gazette, revoke the—

Sec. 103, Act 1884.

- (a) reservation from sale of any Crown lands within one mile on either side of any railway now or hereafter to be made or projected;
- (b) the reservation from sale of any lands within similar limits made under the Acts 1859-1881.

And in such proclamation may prescribe the price, terms, and conditions on which such land may thereafter be sold, and the areas of the portions, and if deemed necessary may by proclamation vary such price, terms, conditions, and areas, the price not being less in any case than for—

town lands, eight pounds per acre,
suburban lands, two pounds ten shillings per acre,
other lands, one pound five shillings per acre;

Sec. 61, Act 1884.

nor the area more than for—

town lands, one half acre,
suburban lands, twenty acres,
country lands, six hundred and forty acres.

278. The revocation, alteration, or modification of any reservation made before or after the commencement of this Act, and whether from sale or lease or license or from lease and license or of any population area shall not take effect until after the expiration of sixty days from the day of publication in the Gazette of the notice of revocation, alteration, or modification: Provided that Crown lands temporarily reserved from sale shall not be sold before the expiration of sixty days after the reservation thereof has been revoked.

58 Vic. No. 16, s.
Sec. 39, Act 1889.
Sec. 40, Act 1889.

279. In any case where any forfeited or other lands have been or shall be reserved from sale and from lease or license, under one notification for any public purpose, it shall be lawful for the Governor, by notification in the Gazette, to revoke any such reservation, or to limit, vary, or modify the same in respect of its extent, character, or effect.

Sec. 32, Act 1889.

DIVISION V.—Reserves declaratory.

Land withdrawn from lease or license shall be deemed to have been reserved.
53 Vic. No. 16.

280. (I) Where land at any time between the first day of January, one thousand eight hundred and eighty-five, and the twenty-seventh day of March, one thousand eight hundred and ninety-five (inclusive of both dates), has been withdrawn from lease, but not reserved from lease generally or in any particular manner, the said land shall, on and after the day when the withdrawal was made, be deemed to have been and to be land reserved from lease generally.

58 Vic. No. 16.

Where land, at any time between the dates aforesaid, has been withdrawn from occupation license, the said land shall, on and after the day when the withdrawal was made, be deemed to have been and to be land reserved from occupation license.

58 Vic. No. 16.

(II) Any notice in the Gazette purporting to have been a cancellation or revocation of a withdrawal from lease or from occupation license as aforesaid shall, on and after the day when the notice was published, be deemed to have been and to be a valid revocation of the reservation from lease or from occupation license (as the case may be) effected by virtue of this section.

Land withdrawn prior to 1 January, 1885, to be deemed reserved from lease and license.

281. (I) Land withdrawn at any time prior to the first day of January, one thousand eight hundred and eighty-five, from lease shall, on and after the day when the withdrawal was made, be deemed to have been and to be land reserved from lease generally; and shall also, on and after the first day of January, one thousand eight hundred and eighty-five, and after the commencement of this Act, be deemed to have been and to be land reserved from occupation license.

58 Vic. No. 16.

(II) Any notice in the Gazette purporting to have been a cancellation or revocation of a withdrawal from lease as aforesaid shall, on and after the day when the notice was published, be deemed to have been and to be a valid revocation of a reservation from lease and license effected by virtue of this section.

Validation of certain reservations.
58 Vic. No. 16.

282. (I) Where the Governor, with or without the advice of the Executive Council, has, prior to the first day of December, one thousand eight hundred and eighty-nine, by notice in the Gazette, reserved or purported to reserve certain land from lease, such land shall, on and after the days when the said reservations were made, be deemed to have been and to be duly reserved from lease generally, and from occupation license.

(II) Any notice in the Gazette purporting to have been a cancellation or revocation of a reservation made or purporting to have been made as aforesaid shall be deemed to have been and to be a valid revocation of the reservation.

Land reserved shall be deemed to have been withdrawn from lease and license.
58 Vic. No. 16.

283. Where at any time before the twenty-seventh day of March, one thousand eight hundred and ninety-five, land then under lease or license has been reserved from lease or occupation license (whether by virtue of the operations of the Act fifty-eighth Victoria number sixteen, or otherwise), the said land shall, on and after the day when the reservation was made, be deemed to have been and to be land withdrawn from any lease other than special or conditional lease, and from occupation license:

Provided that this section shall not have effect in any case where, since the day aforesaid, rent or license fee has been demanded by the Crown, and has been paid by the holder of the lease or license aforesaid in respect of the said land.

Cancellation to operate as a revocation.
58 Vic. No. 16.

284. The cancellation at any time before the twenty-seventh day of March, one thousand eight hundred and ninety-five, by notice in the Gazette, of a reservation of land from lease, or of a withdrawal of land from lease, shall, on and after the day of the publication of the notice, be deemed to have been and to be a revocation of the reservation or withdrawal of the land from lease.

DIVISION

DIVISION VI.—State Forests—Timber Reserves—Licenses—Permits.

285. It shall be lawful for the Governor, by notification in the Gazette, to proclaim any areas of Crown Lands therein described to be State Forests, and in like manner to reserve from sale any such areas as timber reserves, for the purpose in each case of preserving under regulations in that behalf to be made by the Governor the growth and succession of timber trees, and of preventing as far as practicable the destruction and exhaustion of such State forests.

State forests and timber reserves.
Sec. 112, Act 1884.

286. State forests may be subdivided into such blocks as the Minister may think fit. For the purpose of carrying out such subdivision all existing forest and timber reserves may be reserved from sale, lease, or otherwise as the Minister may think proper until so subdivided.

Subdivision of State forests.
Sec. 113, Act 1884.

287. Any State forest or any portion thereof may by notification in the Gazette be dedicated or reserved for a specified period by the Governor for the conservation of timber, and upon publication of such notification such forest or portion thereof shall not during the term of reservation be open to timber or other licenses or permits under the provisions of this Act.

Reserves for timber conservation.
Sec. 114, Act 1884.

288. It shall be lawful for the Governor to frame regulations for the issue of licenses or rights or permits to cut and remove live or dead timber on State forests or timber or other reserves or Crown lands whether held under lease or license or not, and of licenses and permits to dig for and remove from State forests, timber reserves, or Crown lands, whether under lease or not, any gravel, stone, clay, shells, or other materials subject to the following provisions:—

Regulations for State forests and timber reserves.
Sec. 115, Act 1884.

- (I) The rights or licenses to cut timber on a State forest shall be for one or more specified blocks in such forest, and may be sold by auction at such place as may be determined by the Minister, or by tender as the Minister may think fit.
- (II) Such rights or licenses in State forests shall be for a term not exceeding one year, unless in special cases the Minister may think fit to extend such term, but no such extended term shall exceed three years.
- (III) The upset rent shall be not less than ten pounds per annum for each block of six hundred and forty acres, and a proportionate amount for each one hundred and sixty acres in excess of that area. And every holder of a right to cut timber shall, in addition to his rent, pay such royalty according to the class of timber cut at such times and places and subject to such conditions as may be fixed by the regulations.
- (IV) Permits to cut and remove timber on timber reserves may be issued for a year or any less term, not being less than one month, at an annual fee of not less than six pounds, and a proportionate fee for shorter terms. Such permits may also be issued for any specified number of trees at a rate to be fixed by regulations for each tree. General permits may also be issued for the supply of saw-mills for any term not exceeding one year at an annual rate of six pounds, and subject to a royalty according to the scale fixed by the regulations.
- (V) Licenses may be issued to cut piles or props to be used for mining purposes, for the erection of jetties, wharfs, and for other purposes, on such terms and conditions as may be fixed by the regulations.
- (VI) All fees or sums of money, except royalty, payable in respect of any rights to cut timber or in respect of licenses or permits shall be payable in advance.

And

And such regulations may prescribe the forms and conditions to be contained in any such right, license, or permit, and may fix the rents or fees to be payable by the holder of any license or permit where-soever the same shall not have been fixed by this Act, and may provide for the forfeiture of any rights, licenses, or permits for the enforce-ment of rents, royalties, or fees, for the removal of felled timber, for the licensing of sites for saw-mills and the agistment of stock, for the limitation of girth of trees to be felled, for the issue of wattle bark permits, for the marking of logs of felled trees, for the seizure and sale of timber cut without authority or upon which the royalty has not been paid, and for defining the power and privileges conferred by rights, licenses, and permits. And such regulations may also provide for the imposition of penalties and fines for the infringement or viola-tion of any such regulation made under the authority of this Act, but no such penalty shall exceed the sum of *twenty* pounds exclusive of the value of the material taken or destroyed.

Forfeitures may be declared.
Sec. 116, Act 1884.

289. The breach of any condition or obligation, or the failure to perform any act or matter specified in any right, license, or permit issued under the authority of this Act, or the Acts 1884-1897, shall have the effect of forfeiting such right, license, or permit upon a declaration of forfeiture by the Minister.

DIVISION VII.—Dedications.

Dedication of Crown Lands to public purposes.
Sec. 104 Act, 1884, and 41 Act, 1889.

290. The Governor may, by notice in the Gazette, dedicate Crown Lands (whether previously reserved or not) in such manner as may seem best for the public interest for any railway or railway station—public road, canal, or other means of internal communication—public quay or landing place—public reservoir, aqueduct, or watercourse—the preservation of water supply—any purpose of defence—hospital, asylum, or infirmary, public market, or slaughter-house—college, school, mechanics' institute, public library, museum, or other institution for public instruction or amusement—town-hall, court-house, or gaol—permanent common—public health or recreation convenience or enjoy-ment—cricket ground—or racecourse—interment of the dead—use and general purposes of pastoral and agricultural associations—public baths—or for any other public purpose.

Sec. 39, Act 1889.

No dedication made before or after the commencement of this Act shall be held to have been or to be invalid by reason of the land being already reserved at the date of such dedication, or by reason of the revocation of any other reservation including wholly or in part the same land.

Public Trusts Act.

The Governor may, by notice in the Gazette, dedicate land appropriated or resumed for any public purpose and vested in some Minister of the Crown on behalf of Her Majesty under the authority of any statute, or acquired by the Crown by gift or otherwise; and no reservation or dedication made, or purporting to have been made, before the com-mencement of this Act in pursuance of the powers in any statute shall be invalid by reason only that the land reserved or dedicated had been appropriated, resumed, vested, acquired, or given as aforesaid.

Sec. 104, Act 1884.

Upon any such notice as aforesaid being published in the Gazette such lands shall become and be dedicated accordingly, and may at any time thereafter be granted for such purposes in fee-simple.

An abstract of any intended dedication under this section shall be laid before both Houses of Parliament one calendar month before such dedication is made.

All lands heretofore permanently reserved or dedicated or here-after dedicated for any of the purposes aforesaid shall be deemed to be

be dedicated accordingly, and every conveyance, alienation, or disposition thereof, except for the purpose for which such reservation or dedication shall have been made shall be absolutely void as well against Her Majesty as all persons whomsoever:

Provided that in any case in which the Governor shall be of Sec. 105, Act 1884. opinion that the purposes for which any permanent reservation or dedication of Crown lands heretofore or dedication of Crown lands hereafter made have failed wholly or in part, or

That there is any doubt or uncertainty as to such purposes, or

That the trusts annexed to any land dedicated under this Act or permanently reserved or dedicated under the Acts 1859-1897 have failed or cannot reasonably be carried out, or

That it is expedient in the public interest to resume the whole or any part of the land so dedicated or reserved, or

To make an exchange of the whole or any portion of any such land for other land of equivalent value or nearly so to be dedicated or reserved on similar trusts or for like purposes.

Then and in every such case the Governor may direct a notice under the hand of the Minister to be published in the Gazette, which notice shall set forth the mode in which it is proposed to deal with the dedication, reservation, or land in question (hereinafter termed "Proposals"), a copy of which notice shall be laid before both Houses of Parliament within ten days of the publication thereof in the Gazette if Parliament be sitting, and

If not, then within ten days after the beginning of the next ensuing session. If Parliament shall within one month declare by resolution that it does not assent to the proposals set forth in such notice no further action shall be taken in the matter.

If no such resolution be passed, then after the termination of thirty clear days from the date when the notice was laid before Parliament, it shall be lawful for the Governor to direct the proposals so notified to be carried out, and the same shall be carried out accordingly, and for that purpose the Governor may revoke by proclamation in the Gazette any such dedication or reservation wholly or in part, and make any new dedication or reservation sanctioned by such proposals, and issue such grants and execute such exchanges, deeds, assurances, and instruments as the circumstances of each case may require.

The provisions of this section shall be held to apply and to have Sec. 41, Act 1889. applied to Crown Lands which have been or shall be dedicated and granted by the Crown, and to any lands which, after grant by the Crown, shall have been or shall be resumed, purchased, or otherwise acquired by the Crown, and dedicated or granted for any purpose.

Upon revocation under the provisions of this section of any dedication, or grant and dedication, the lands shall forthwith be vested in Her Majesty, her heirs and successors, and shall become Crown Lands within the meaning of this Act.

DIVISION VIII.—Trustees may be appointed.

291. The Governor may appoint trustees (whose appointment Appointment of trustees. shall take effect only upon notification in the Gazette), to be charged Sec. 106, Act 1884. with the care and management of—

lands already or hereafter dedicated,

lands permanently reserved, or

lands already or hereafter resumed under the provisions of the Lands for Public Purposes Acquisition Act,

lands already or hereafter purchased or acquired by the Government

for

Sec. 106, Act 1884. for the recreation, convenience, health, or enjoyment of the inhabitants of any city, town, or district, or for any other public purpose whatsoever.

Grant to trustees. 292. The Governor may confer such estate in such lands, and accompanied by such powers and with such conditions as he may think fit, and as may be included in any grant issued to such trustees.

Governor may vest land in trustees. Sec. 3, Public Trusts Act. The Governor may by notice in the Gazette, and without any deed, grant, or other assurance, vest such lands in such trustees for such estate, and with such powers and subject to such limitations and conditions as he may think fit.

Rules and regulations. Sec. 106, Act 1884. The Governor may make rules and regulations enforceable by penalties not to exceed in any case *twenty* pounds for the management and control of such lands without placing them in trust, which rules and regulations, upon notification in the Gazette, shall have the full force of law.

Appointment of trustees of land temporarily reserved. Public Trusts Act, sec. 1. 293. The Governor shall be deemed to have had and shall have power to appoint, by notice in the Gazette, trustees of land temporarily reserved from sale under section *two hundred and seventy-four*, subsection (1), of this Act or section one hundred and one of the Crown Lands Act of 1884, or otherwise, or under any enactment repealed by that Act, and to remove any trustees so appointed, and fill any vacancies occurring by reason of such removal or by death or resignation, and to make rules and regulations for the management and control of such lands, and impose in those rules and regulations any penalty not exceeding *ten* pounds for any breach of the same.

Limitation of number of trustees. Sec. 106, Act 1884. Sec. 4, Public Trusts Act. In any trust created after the nineteenth day of July, one thousand eight hundred and ninety-seven, or after the commencement of this Act the total number of trustees shall not (except as provided in section *two hundred and ninety-four* of this Act) be less than three or more than seven.

Corporations or Municipal councils may be appointed. trustees. Sec. 2, Public Trusts Act. Sec. 2, Public Trusts Act. 294. (1) The Governor may, by notice in the Gazette, appoint a corporate body as trustees of land set apart, dedicated, or reserved (temporarily or otherwise) for any public purpose before or after the commencement of this Act, and may grant to or vest the said land in such corporate body as aforesaid.

The Governor may, in like manner, appoint the council for the time being of a municipality as trustees of such land as aforesaid, whether the land be within or without the boundaries of the municipality, and may grant to or vest the said land in such council as aforesaid; but the council of a municipality shall not be appointed trustees of land situate either wholly or in part within the boundaries of another municipality.

Validation of past appointments. Sec. 2, Public Trusts Act. (II) No appointment of trustees of such land as aforesaid, and no acts or things done by such trustees; shall be deemed to have been or to be invalid or unlawful by reason only that the trustees so appointed were a corporate body, or were the Council of a Municipality.

Governor may appoint additional trustees. Sec. 4, Public Trusts Act. 295. The Governor may, by notice in the Gazette, appoint additional trustees of any lands set apart or dedicated for any public purpose, or reserved temporarily or otherwise, before or after the commencement of this Act, whether the land is or is not vested in trustees, and whether the number of trustees is greater than, equal to, or less than the number of trustees originally appointed or authorised to be appointed by the statute, document, or notice creating or authorising the creation of the trust; and may grant to, or by notice in the Gazette vest in, the trustees so appointed such estate or interest in the lands as he may think fit.

Sec. 4, Public Trusts Act. In the case of trusts existing on the nineteenth day of July, one thousand eight hundred and ninety-seven, the power hereby conferred

on the Governor shall not be exercised beyond the appointment of one such trustee if the majority of the existing trustees shall object in writing to such additional appointment.

296. The Governor may from time to time remove any trustee or trustees, whether appointed under this Act or otherwise, and fill any vacancies which may occur by reason of such removal, or by death or resignation. Governor may remove trustees. Sec. 106, Act 1884.

The Governor may also, by notice in the Gazette, remove any trustees of any such lands who desire to be discharged from or refuse or become unfit or incapable to act in the trusts, or who shall reside out of the Colony, or who in case of a trust for any local purpose shall reside out of the locality in which the trust lands are situated, and fill any vacancies which may occur by reason of such removal or by death or resignation. The removal of any trustee shall divest the trustee so removed of any estate in the land subject to the trust. Sec. 4, Public Trusts Act.

Trustees to report to Minister.

297. The trustees appointed before or after the commencement of this Act of lands set apart, dedicated, or reserved temporarily or otherwise, before or after the commencement of this Act, and the trustees or other persons having the control and management of land held under trust for schools of arts, mechanic institutes, hospitals, and other institutions receiving aid from the Consolidated Revenue Fund, shall, at such times as the Minister may direct, report to the Minister upon the administration of the trust or institution, and upon such matters in connection therewith as the Minister may from time to time specify, and shall if required furnish him with a statement of revenue received and expenditure made during such period as he may specify. Trustees to report. Sec. 5, Public Trusts Act.

Inspection of books and documents.

298. Such trustees and persons as aforesaid, their servants and agents, shall permit any person authorised in that behalf by the Minister to inspect any books and documents and to audit any accounts relating to the trust or institution; and whosoever obstructs any person in the exercise of the powers conferred by this section shall be liable to a penalty not exceeding *twenty pounds*. Trustees to permit inspection of books and documents. Sec. 6, Public Trusts Act.

Land may be entered upon.

299. It shall be lawful for the Minister, or any person authorised by him, to enter at any time upon land dedicated or reserved for any public purpose and inspect the same, and whosoever obstructs the Minister or any such authorised person in the performance of any duty connected with such inspection shall be liable to a penalty not exceeding *twenty pounds*. Minister may enter and inspect land dedicated or reserved. Sec. 9, Public Trusts Act.

300. Any penalties imposed by sections *two hundred and ninety-three, two hundred and ninety-eight, and two hundred and ninety-nine* of this Act may be recovered before a police or stipendiary magistrate, or any two justices of the peace in petty sessions. Recovery of penalties. Sec. 10, Public Trusts Act.

PART VII.

MISCELLANEOUS.

DIVISION I.—Ownership of Improvements.

- No improvements to bar sale, lease, &c., subject to payment of their value.
Sec. 44, Act 1889.
Sec. 44, Act 1889.
Sec. 22, Act 1895.
301. (I) Improvements within the meaning of this section may include fencing, but shall be such as in the opinion of the Board are of a permanent, fixed, and substantial character, and necessary for the profitable occupation of the land.
- (II) Any improvements made upon any lands, the purchase, selection, or lease or license of which has become forfeited, surrendered, or has expired, before or after the commencement of this Act, or which have been made under colour of any application which may have been or which may be forfeited, disallowed, or withdrawn, shall (except as provided in section *one hundred and eighty* of this Act) be the property of the Crown; but
- Sec. 44, Act 1889. (a) no lease or license which may be renewed or extended shall, whilst any renewal or extension continues, be deemed to have expired within the meaning of this section.
- (b) Nothing in this section shall prevent the accruing or granting of tenant right in improvements in accordance with any provisions of this Act.
- Sec. 102, Act 1884. (III) Improvements effected subsequently to the first day of July, one thousand eight hundred and seventy-six on any land reserved from sale shall, on the revocation of such reservation or withdrawal of the land from lease, become the property of the Crown.
- Sec. 44, Act 1889. (IV) No Crown lands shall be exempt from conditional or other purchase, or from homestead selection, or from any lease or license, by reason only that it contains improvements, but the purchaser, selector, or lessee shall pay for such improvements at their value:
- Sec. 44, Act 1889. Provided that when any land containing improvements shall be let under annual lease or occupation license the lessee or licensee shall not be called upon to purchase such improvements, but may be charged rent or license fee for the use thereof, to be ascertained by auction or tender, or in manner herein provided for the determination of their value.
- Sec. 44, Act 1889. (v) Where the improvements belong to the Crown, their value shall be appraised by the Land Board, subject to appeal, and shall be paid for within such periods and in such amounts as such Board or the Land Appeal Court shall determine, provided that in the case of a homestead selection or a settlement lease the special provisions of sections *one hundred and forty-seven* and *two hundred and sixty-one* of this Act as to the manner of payment shall apply.
- Secs. 15 and 25, Act 1895. (VI) Where the improvements do not belong to the Crown their capital or annual value shall be paid by agreement between the parties, or failing such agreement (and on application by either party in the prescribed manner, accompanied by a deposit of ten pounds to cover the cost of dealing therewith), as appraised by the Land Board, and within such periods and in such amounts as the Board shall determine, subject to appeal under this Act: Provided that in the case of a homestead selection or a settlement lease the special provisions of sections *one hundred and forty-seven* and *two hundred and sixty-one* of this Act as to the manner of payment shall apply.
- Sec. 44, Act 1889. (VII) Any appraisement of improvements, where such improvements have been or are made after the first day of June, one thousand eight hundred and ninety-five, or after the commencement of this Act, with the consent of the Crown, on land held under pastoral lease in the Central Division, or on land held under preferential occupation license in that division, shall be made on the basis of their value to the land taken and to an incoming tenant. (VIII)

(VIII) Before the determination of the value of improvements, such of them as are of a removable nature, may, with the permission of the Board, be removed by the owner, who, upon permission being granted, shall have full power by himself or his agents to enter upon the land within such period as the Board may allow, and to do all things necessary to effect their removal. Sec. 44, Act 1889.

(IX) The value of any improvements on land sold at auction shall be added to the upset price, and when not the property of the Crown shall be refunded to the owner. Sec. 44, Act 1889.

(X) In cases where improvements may have been, or may be made through misapprehension as to the boundaries of land, or for any sufficiently reasonable cause, and the land containing them has been, or shall be purchased, selected, or held under lease or license by the owner of such improvements, it shall be lawful for the Minister, after report by the Land Board, to remit the value to such owner. Sec. 44, Act 1889.

(XI) In any case in which the purchaser, selector, or lessee of land (whether the application for such land was made before or is made after the commencement of this Act) containing improvements has failed, or shall fail, to pay for them within the period allowed, his purchase, selection, or lease shall (together with all moneys paid in connection therewith) be liable to forfeiture by notice in the Gazette. Sec. 44, Act 1889.

(XII) Improvements on lands in the Eastern Division, the pastoral lease of which expired by effluxion of time, shall be deemed to have become the property of the Crown on the expiration of the pastoral lease, but nothing in this Act shall be construed to vest in the Crown (while any renewal of the occupation license hereinafter mentioned continues) any improvements upon land held under a pastoral lease in the Eastern Division, which having expired by effluxion of time has, under the provisions of section thirty-three of the Crown Lands Act of 1889, been converted into a preferential occupation license if the said improvements were not at the date of such expiration forfeited or forfeitable to or vested in the Crown. Secs. 33 and 41, Act 1889.

(XIII) Improvements, whether made before or after the commencement of this Act, on land in the Central Division, the pastoral lease of which expired before or shall expire after the commencement of this Act by effluxion of time or otherwise, shall be deemed to have, or shall become, as the case may be, the property of the Crown on the expiration of the term or extended term of such pastoral lease, and no compensation therefor shall be payable therefor to the outgoing lessee, notwithstanding that, on the expiration by effluxion of time of the extended term of the lease (and of all periods if any added thereto), the lands may be held under preferential occupation license obtained in accordance with the provisions of section *four* of the Crown Lands Act of 1895 or section *two hundred and forty* of this Act, but improvements made after the first day of June, in the year one thousand eight hundred and ninety-five, or after the commencement of this Act, being made with the consent of the Crown, upon any lands within the Central Division, which, at the date of the making of the said improvements, are held under pastoral lease, shall upon the said lands ceasing to be the subject of the pastoral lease, and becoming the subject of a preferential occupation license, be taken to be the property of the licensee for all purposes of this section, but if made without the consent of the Crown shall be the property of the Crown. The consent of the Crown to the making of improvements may be given by such authorities, and shall be evidenced in such manner as may be prescribed. Sec. 43, Act 1889.

(XIV) Improvements made after the first day of June, one thousand eight hundred and ninety-five, or after the commencement of this Act with the consent of the Crown upon any lands within the Central Division which, at the date of the making of the said improvements are Sec. 5, Act 1895.

are held under preferential occupation license, shall be taken to be the property of the licensee for all purposes of this section, but if made without the consent of the Crown, shall be the property of the Crown. The consent of the Crown to the making of improvements may be given by such authorities, and shall be evidenced in such manner as may be prescribed.

Sec. 43, Act 1889.
Sec. 44, Act 1899.
Sec. 33, Act 1899.

(xv) Nothing in this Act shall be construed to vest in the Crown (while any renewal of the preferential occupation license hereinafter mentioned continues) any improvements made before the first day of June, one thousand eight hundred and ninety-five (other than such as may have been forfeited or forfeitable to or vested in the Crown) upon land held under a pastoral lease in the Central Division, an application for an extension of which under the provisions of section forty-three of the Crown Lands Act of 1889 was not made, or if made was not granted, or was withdrawn within the time prescribed by that Act and the Act fifty-seventh Victoria number twenty-seven, if, under the provisions of the Crown Lands Act of 1889 a preferential occupation license was obtained of the land theretofore held under pastoral lease.

Sec. 48, Act 1895.

(xvi) Any sums which shall become payable to the Crown, as payment for improvements, shall from and after the due date for the payment hereof bear interest at the rate of ten per centum per annum, and such interest shall be considered as accruing due day by day. Nothing in this section contained shall be construed so as to prevent or to compel the enforcement of any forfeiture, or the acceptance of any overdue sums together with interest as aforesaid.

Sec. 22, Act 1895.

(xvii) The provisions of this section shall apply to homestead selections until the grant thereof.

DIVISION II.—Tenant Right in Improvements.

Tenant right in improvements.
Sec. 51, Act 1895.

302. Tenant right shall accrue upon the determination of the lease or other holding by reason of which the tenant right is expressed to be conferred, and shall entitle the person in whom for the time being the tenant right is vested to receive the value to an incoming tenant of the improvements from any persons who make a purchase, or take a lease (not being an annual lease) of the land containing the improvements. And in the event of such persons not paying the amount then due and unpaid for the value of such improvements, such amount or so much thereof as remains unpaid for the time being shall be and remain a charge upon the land containing such improvements while in the hands of a purchaser or lessee until payment thereof. The value of the improvements to an incoming tenant shall be appraised by the local land board in the manner prescribed by section three hundred and one of this Act, but shall be calculated on the basis of the value of such improvements to the land purchased or leased, and the payment of the value shall be made by such instalments, and at such dates, as may be prescribed.

The improvements, in respect of which tenant right is conferred by this Act or the Crown Lands Act of 1895, shall in all cases be—

- (a) of a permanent, fixed, and substantial character, and necessary for the profitable occupation of the land; and
- (b) the property of the person claiming to have tenant right in respect thereof;

and improvements which were forfeited or forfeitable to, or vested in, the Crown immediately prior to the accruing of the tenant right shall not be included:

Provided always that—

- (a) the tenant right shall lapse after the expiration of twelve years from the date of its first accruing, and thereafter the improvements

- improvements shall be the property of the Crown; but such lapsing shall not affect any agreement, appraisalment, or order for payment previously made; and
- (b) the holder of the purchase or lease of the land containing the improvements shall be liable to pay any instalments of the value thereof, as appraised by the local land board, which shall accrue due during his holding; and
- (c) the value of any successful and useful well or bore for artesian water shall not be taken to exceed the first cost thereof, and no allowance shall be made for any unsuccessful or useless well or bore.

DIVISION III.—Forfeited Lands containing improvements subject to tenant right or ownership.

303. Where a purchaser or lessee of land shall have paid to the person having tenant right or ownership in improvements, as the case may be, part of the value of the improvements, and the purchase or lease is forfeited, such share of the value of the improvements as is represented by the amount so paid at the time of the forfeiture shall vest in the Crown, and the remaining share of the improvements, or in the case of no such payment having been made, then the whole of the improvements shall continue to belong to the person having tenant right or ownership, as the case may be, and shall be subject to tenant right as defined by this Act or ownership, as the case may be: Provided that if the land be purchased or leased after the forfeiture fresh appraisalment shall thereupon be made of such share of the value of the improvements as are vested in the person having tenant right or ownership, as the case may be.

Forfeited lands containing improvements subject to tenant right or ownership.

Sec. 52, Act 1895.

DIVISION IV.—Reverters.

304. (i) Upon the forfeiture of any conditional or other purchase, or forfeiture or surrender of any homestead selection or of any conditional or other lease, situated wholly or in part within the external boundaries of any pastoral or homestead lease or occupation license, so much of the forfeited or surrendered land as may be situated within such external boundaries shall (subject to the power of the Governor or the Minister to waive or reverse such forfeiture) be added to the land under lease or license, and be included under such lease or license.

Reverters.

Sec. 32, Act 1889.

Sec. 45, Act 1895.

Sec. 22, Act 1895.

(ii) Upon the taking effect of the revocation (of the whole or any part) of any reserve from lease or license situated wholly or in part within the external boundaries of any pastoral or homestead lease or occupation license, so much of the reserve revoked as may be situated within such external boundaries shall (subject to the power of the Governor or Minister to cancel or modify such revocation) be added to the land under lease or license.

(iii) And from the date of forfeiture or revocation taking effect, rent or license fee shall be payable for such unimproved lands at the same rate per acre as for the rest of the lease or license; and in respect of any land which may contain improvements the rent or license fee shall be determined in accordance with the provisions of section forty-four of this Act.

(iv) So much of any such forfeited or surrendered lands, situated within the external boundaries of any reserve from sale, or lease or license, or reserve from conditional purchase, or of any population area, or special area, or suburban lands, or gold-field, or tract or area set apart or classified under the provisions of section forty-six of this Act or section ten of the Crown Lands Act of 1895, shall be added to and form

form part of the same whether held under lease or license or not; and no specific notification of such reservation or addition as aforesaid shall be held to be necessary under this Act: Provided that where lands reserved or set apart as aforesaid are held under lease or license, any lands so added shall be also included under the lease or license, subject to payment as hereinbefore provided. The non-payment within the prescribed time of any sums due as aforesaid shall involve the forfeiture of the lease or license.

Sec. 22, Act 1895.

The provisions of this section shall apply to homestead selections until the grant thereof.

Sec. 45, Act 1895.

305. For the purposes of section thirty-two of the Crown Lands Act of 1889, and of section three hundred and four of this Act:—

(a) The external boundaries of any pastoral lease or occupation license are hereby declared to be and to have been so much of the external boundaries of the pastoral holding duly defined under authority or recognised by the Lands Department as together with the dividing line determined under section seventy-six of the "Crown Lands Act of 1884" form the ambit within which the pastoral lease or occupation license is situated:

(b) The external boundaries of any reserve from sale or lease, or license, or reserve from conditional purchase, or of any population area, or special area, or homestead selection area, or settlement lease area, or suburban lands or gold-field, are hereby declared to have been and to be the boundaries as described in the Gazette:

Provided always that nothing in this section shall affect any conditional purchase or conditional or other lease for which the application was confirmed, approved, or granted before the first day of June, one thousand eight hundred and ninety-five.

DIVISION V.—General power of validation of purchases and leases.

Provision for validation or avoidance of purchases and leases generally.
Sec. 44, Act 1895.

306. Any purchase or lease of Crown lands purporting to have been made or granted before the first day of June, one thousand eight hundred and ninety-five, under the provisions of the Acts, 1859–1897, shall not be held to be void by reason of any breach or non-observance of the provisions of the said Acts, but every such breach or non-observance as aforesaid (if of a nature to affect the validity of the purchase or lease) shall render the same voidable only at the instance of the Crown.

If any such purchase or lease as aforesaid appears to be voidable at the instance of the Crown, the Minister may, in pursuance of section twenty-six of this Act, refer the case to the Local Land Board, which shall investigate the matter and find whether or not the said purchase or lease be voidable; and where the said purchase or lease is found to be voidable, the Governor may, by notification in the Gazette, declare the same to be void, and the same shall thereupon become void to all intents and purposes: Provided always that if the application for such purchase or lease has been confirmed by a Local Land Board, the Minister may, in manner provided in section thirty-four of this Act, refer to the Land Appeal Court the decision of the Local Land Board confirming the same.

If the Crown elects to sustain any such purchase or lease as aforesaid, the Governor may, by notification in the Gazette, declare that the purchase or lease shall cease to be voidable by reason of any breach or non-observance of statutory provisions which may be specified in such notification, and the same shall become valid so far as regards the ground of objection so specified.

Nothing

Nothing in this section contained shall affect—

- (a) any right accrued prior to the date of such purchase or lease;
- (b) any application for a conditional purchase or lease made before the thirteenth day of September, one thousand eight hundred and ninety-four, in reliance on the fact that the questioned purchase or lease was void;
- (c) any proceedings pending on the beforementioned day;
- (d) any remedy by writ of scire facias where a grant has been or shall have been issued for any such purpose as aforesaid.

The provisions of this section shall apply in like manner to purchases, selections, or leases purporting to be made or granted after the first day of June, one thousand eight hundred and ninety-five, or after the commencement of this Act; but the Governor shall not, in any such case, declare that the purchase, selection, or lease shall cease to be voidable, unless notice of the intention to make such declaration shall have lain before both Houses of Parliament for not less than ninety days, without being objected to by specific resolution.

DIVISION VI.—Validation of conditional purchases and leases in special cases.

Validations under the Crown Lands Act of 1884.

307. (I) No conditional or additional conditional purchase made under any of the Acts repealed by the Crown Lands Act of 1884 shall be held to be void—

Validation of certain conditional purchases under former Acts. Sec. 138, Act 1884.

by reason only of the application therefor having been tendered by an agent; or
of more than one such application having been made by the same applicant on the same day; or
of the land having been applied for by a conditional purchaser not residing at the time of the application on the land by virtue of which an additional conditional purchase was made; but nothing herein shall be construed to relieve such conditional purchaser from fulfilment of the complete term of residence required by law.

(II) And no conditional purchase shall be held to be void by reason only of any applicant having, through erroneous or insufficient marking, or definition or description, been allowed to conditionally purchase land extending into or within a different Crown lands district from that in which the same was applied for; or

by reason of the same having been measured with a greater frontage than eighty chains or a less depth than twenty chains or sixty chains as in the said Acts respectively prescribed: Provided that such measurement shall have been duly accepted thereunder.

And in any case in which the land applied for was not open to conditional purchase but the applicant shall have resided upon and made improvements on such land without question by any authorised person for not less than one year after his conditional purchase, then, and in all such cases, the Governor, upon the recommendation of the Minister, may notify in the Gazette once a fortnight for three months the particulars of such conditional purchase, and it shall thereafter be lawful for the Governor on the like recommendation to declare by proclamation in the Gazette such conditional purchase to be valid, and such conditional purchase shall thereupon become and be a valid conditional purchase, but subject to the fulfilment by the holder thereof of all conditions required by law.

And

And no pre-emptive lease which may have been granted under the said repealed Acts, and which may be converted into a conditional lease under the Crown Lands Act of 1884, shall be void or invalid by reason only that it was situated wholly or in part within the area of any previously forfeited pre-emptive lease :

Provided that no validation as herein mentioned shall take effect in any case where the illegality was wilfully committed, or if a conflicting interest has arisen, or if the case has been finally disposed of in a lawful manner.

Validations by the Act 50 Vic. No. 21.

Interpretation.
50 Vic. No. 21.

308. For the purposes of interpretation of the eight following sections, the word "Corporation" means a corporation whether aggregate or sole—"Company" includes all associations and co-partnerships, whether registered under the Acts relating to joint stock companies or not and whether incorporated or not. And such sections shall be deemed to have taken effect on the fourteenth day of October, one thousand eight hundred and eighty-six.

Validation of title of corporations and companies to additional conditional and mineral conditional purchases and conditional leases.
50 Vic. No. 21.

309. The title or claim of any corporation or company, or their assigns, accrued before the date aforesaid, to hold any land as an additional conditional purchase, mineral conditional purchase, or conditional lease under the Acts or regulations relating to Crown lands, in force at the time or times when such title or claim was acquired or intended to be acquired by or on behalf of such corporation or company, shall not be deemed to have been in any way prejudiced or affected by reason only that such corporation or company was not at such time or times a "person" within the meaning of such Acts or regulations. And for the purpose of giving full effect to this enactment, the word "person" and every other word restricted in meaning to an individual whensoever occurring in any such Act or regulation, shall be deemed to have included a corporation or company: Provided always that every act or thing required by such Acts and regulations as aforesaid to be done by a person shall have been done before the aforesaid date by some person on behalf and under the authority of such corporation or company.

Governor and Executive Council may declare certain applications valid.
50 Vic. No. 21.

310. The Governor, by and with the advice of the Executive Council may, by proclamation in the Government Gazette declare that any application for a mineral conditional purchase made before the date aforesaid, or any grant issued by the Crown for land so conditionally purchased shall be valid, and upon the publication of any such proclamation any such mineral conditional purchase or any grant issued as aforesaid prior to the date of such proclamation, shall be valid and effectual to all intents and purposes.

Expenditure on mineral conditional purchases in certain cases.
50 Vic. No. 21.

311. For the purpose of determining the expenditure required by law to be made on portions of land acquired or held as mineral conditional purchases, the intervention of any railway, road, or creek between any such portions shall not be deemed to have prevented such portions from being held as one holding subject to the expenditure in the aggregate of two pounds per acre in mining operations upon any part or parts of the said land, or upon any adjoining lands held and used in connection therewith, pursuant to the twenty-sixth section of the Lands Acts Amendment Act, 1875: Provided always that this section shall only be applicable to cases in which such portions shall be or have been held by one and the same person, corporation, or company, respectively.

As to mineral leases converted into mineral conditional purchases in certain cases.
50 Vic. No. 21.

312. Where any lease for mineral purposes has been converted into a mineral conditional purchase under the Acts or regulations repealed by the Crown Lands Act of 1884, no such mineral conditional purchase

purchase shall be deemed to have been invalid, because the conversion thereof may not have been approved or authorised by the Governor, or because at the date of application to convert, pursuant to sections twenty-seven and twenty-eight of the Lands Acts Amendment Act 1875, the said leases for mineral purposes were within lands reserved from sale: Provided that the Minister shall be satisfied that the reservation from sale is not required in the public interest.

313. No application to convert any mineral lease into a mineral conditional purchase made under the Acts aforesaid shall be held to be invalid, because all the lessees or persons holding interests in such mineral lease were not parties to or did not sign such application to convert: Provided such lessees or persons have since concurred in such application by writing under their respective hands addressed to the Minister, or that the Minister is satisfied that such lessees or persons had or have ceased to hold any interest in the lease the subject of such application.

As to conversion of mineral leases where all parties did not join in application, &c.
50 Vic. No. 21.

314. When any conditional purchase made under sections thirteen, twenty-one, and twenty-two of the Crown Lands Act of 1861, is by section seven of the Crown Lands Act of 1884, declared to be convertible into a mineral conditional purchase, it shall be deemed to be and have been convertible, notwithstanding that the regulations relating thereto under the first-mentioned Act may not have had the force of law.

Conversion of ordinary conditional purchases into mineral conditional purchases.
50 Vic. No. 21.

315. Where a reservation of Crown land from sale made pursuant to any of the Acts repealed by the Crown Lands Act of 1884 has been or shall be revoked by a notification published in the Gazette, and before the expiration of thirty days from the date of publication of such revocation a further reservation of such Crown land or any part thereof from sale has been or shall be made and notified in the Gazette, such last reservation shall not by reason only of its having been made within such thirty days be deemed to have been invalid: Provided that reservations made pursuant to the Acts repealed by the Crown Lands Act of 1884 shall be held to have been revocable under the Crown Lands Act of 1884 and under this Act.

As to the notification and revocation of reserves from sale.
50 Vic. No. 21.

316. Provided that nothing in the eight preceding sections shall affect any proceeding instituted prior to the twenty-fifth day of August, one thousand eight hundred and eighty-six, by any private individual or any cause of action accrued to such individual, or shall affect any additional conditional purchase or mineral conditional purchase already declared void: Provided also that nothing in this section contained shall apply to or save any proceedings at any time instituted by the Crown or in the name of the Crown before the fourteenth day of October, one thousand eight hundred and ninety-six.

Saving clause.
50 Vic. No. 21.

Validations by the Act 50 Vic. No. 34.

317. Notwithstanding anything in section twenty-one subsection (111) of the Crown Lands Act of 1884, where any land conditionally purchased under the Acts in force prior to the passing of such Act is situated wholly or partly within the boundaries of a leasehold area notified under section seventy-six of the said Act, and such land has, after the date of notification of such area, been forfeited for some breach of conditions, no conditional purchase of such land made before the eighteenth day of May, one thousand eight hundred and eighty-seven, under such Act shall be deemed to have been invalid by reason only that the whole or some portion of such land was situated within the boundaries of such leasehold area. And for the purposes of this section the expression "land conditionally purchased" shall be held to include all land held in virtue of such land and forfeited therewith.

Validation of conditional purchases in certain cases.
50 Vic. No. 34.

Validation of certain leases under sec. 48 of Principal Act. 50 Vic. No. 34.

318. No conditional lease of Crown land applied for before the eighteenth day of May, one thousand eight hundred and eighty-seven, under the forty-eighth section of the Crown Lands Act of 1884, shall be held in any of the cases hereinafter specified to have been invalid by reason only that the land as and when applied for was situated wholly or partly within the boundaries of any leasehold area, that is to say:—

Where lease was in conditional purchase forfeited after notification of leasehold area.

(I) Where the land applied for as a conditional lease was at the date of application included wholly or partly in a conditional purchase which had been forfeited after the date of the notification of the leasehold area within the boundaries of which such conditional purchase was situated.

Where lease was in conditional lease so forfeited.

(II) Where the land applied for as a conditional lease was at the date of application included wholly or partly in a conditional lease which had been forfeited after the date of the notification of the leasehold area within the boundaries of which such conditional lease was situated.

Where lease was within pre-emptive lease so forfeited.

(III) Where the land applied for as a conditional lease was at the date of application included wholly or partly in a pre-emptive lease to which a right of conversion into a conditional lease attached and was lawfully claimed, but which pre-emptive lease had been forfeited after the date of the notification of the leasehold area within the boundaries of which such pre-emptive lease was situated.

Validation of certain leases under sec. 52 of Act of 1884. 50 Vic. No. 34.

319. No conditional lease applied for under the fifty-second section of the Crown Lands Act of 1884 shall be held to have been invalid by reason only that the land comprised within such lease was not available for pre-emptive lease at the date of the grant thereof, or for conditional lease in the form applied for or as granted, but in every such case the lease as on or after the eighteenth day of May, one thousand eight hundred and eighty-seven, surveyed and charted and approved of by the Minister for Lands, or any modification thereof to be so approved, shall be deemed to be and to have been the land lawfully available for such lease.

As to applications under sec. 54 of Act of 1884. 50 Vic. No. 34.

320. No application for a conditional lease applied for under the fifty-fourth section of the Crown Lands Act of 1884 shall be held to have been invalid by reason only that the land applied for had, prior to such application being finally dealt with, been included within a leasehold area or the boundaries of such leasehold area.

Saving clause. 50 Vic. No. 34.

321. Nothing in the four preceding sections shall affect any cause of action in respect of which proceedings have been commenced in any court prior to the first day of January, in the year one thousand eight hundred and eighty-seven.

Validations by Section 10, Crown Lands Act of 1889.

Conditional leases in leasehold areas. Sec. 10, Act 1889.

322. No conditional lease which may have been or which may be granted in satisfaction of an application under the fifty-fourth section of the Crown Lands Act of 1884, and no additional conditional purchase made out of such conditional lease shall be held to have been or to be invalid by reason only of the land being situated within the boundaries of a leasehold area.

Validations by Section 31 of the Crown Lands Act of 1895.

Additional conditional purchases by virtue of paid-up original. Sec. 31, Act 1895.

323. All additional conditional purchases and conditional leases, the applications for which were confirmed before the first day of June, one thousand eight hundred and ninety-five, are hereby declared to have been and to be valid, so far as regards any objection to the validity

validity thereof based upon the fact that before the date of the application therefor the balance of purchase money had been paid, or a grant had been issued, in respect of the original conditional purchase, or any prior additional conditional purchase of the same series :

Provided always that the foregoing declaration shall not prejudice or affect any application lodged, or title acquired, before the first day of June, one thousand eight hundred and ninety-five.

Validations by the Act 57 Victoria No. 9.

324. No original conditional purchase existing on the fourth day of March, one thousand eight hundred and ninety-four, shall be held to have been or to be invalid by reason only that it was applied for by or in the name of two or more persons.

Validation of conditional purchases and conditional leases against certain objections.

Sec. 6, 57 Vic. No. 9.

325. No additional conditional purchase existing on the fourth day of March, one thousand eight hundred and ninety-four, shall be held to have been or to be invalid by reason only that it was applied for by virtue of a conditional purchase made under section twenty-two of the Crown Lands Alienation Act of 1861, whether the combined areas of the freehold and the conditional purchases and conditional leases of the series exceed the area limited by the Crown Lands Acts for ordinary conditional purchases and conditional leases or not.

326. No conditional lease existing on the fourth day of March, one thousand eight hundred and ninety-four, shall be held to have been or to be invalid by reason only that it was applied for by virtue of a conditional purchase of land within a special area :

327. Provided that nothing in the three preceding sections shall operate to revive any application, purchase, or lease which, prior to the fourth day of March, one thousand eight hundred and ninety-four, had been, and at date of such passing stood as, disallowed, refused, withdrawn, or forfeited, or to validate any application pending on the fourth day of March, one thousand eight hundred and ninety-four, which had not been confirmed ; or shall affect any proceedings, either at law or in equity, instituted before the thirty-first day of October, one thousand eight hundred and ninety-three.

Proviso.

DIVISION VII.—Reversal of forfeitures.

328. Subject to the provisions hereinafter contained, the Minister shall have power to reverse, whether provisionally or otherwise, any forfeiture which has heretofore been, or may hereafter be notified, declared, or otherwise asserted or enforced, under this Act or the Acts 1859–1897, and for the purposes of this section and the next succeeding section, unless the context otherwise requires, “forfeiture” includes the lapse or voidance of any contract with the Crown under any of such Acts for the purchase, selection, or leasing of Crown lands :—

Validity and effect of reversals of forfeiture.
55 Vic. No. 1.
Sec. 22, Act 1895.

(I) A provisional reversal hereafter to be made of a forfeiture shall be deemed to have suspended, or shall suspend, as the case may be, the operation of the forfeiture, as from the date when such forfeiture has been or shall be notified, declared, or otherwise asserted or enforced ; in any case, where such provisional reversal shall afterwards be revoked, such revocation shall have the same effect as if the provisional reversal so revoked had never been made.

(II) Any absolute reversal of a forfeiture shall be deemed to have related back or shall relate back, as the case may be, to the date when such forfeiture has been or shall be notified, declared, or otherwise asserted or enforced, and shall be

deemed to have had or shall have the same effect as if the forfeiture so reversed had never been notified, declared, or otherwise asserted or enforced.

- (III) In any case where a forfeiture has been or may hereafter be duly notified or declared for any cause other than the non-payment of money the Minister shall, before absolutely reversing such forfeiture, refer to the Local Land Board for inquiry and report as to any fact or circumstance in virtue of which he proposes to make such absolute reversal as aforesaid. And such Board, or the Land Appeal Court, upon an appeal or reference shall inquire into such fact or circumstance and make a report and recommendation thereon to the Minister: Provided that should the Minister decide in any case contrary to the recommendation of the Land Board or Land Appeal Court, as the case may be, he shall, on the day of so deciding, record in writing in the Lands Department his reasons for so doing; and the Minister shall, as soon as practicable, lay upon the table of the Legislative Council and the Legislative Assembly a copy of his decision, together with such reasons as aforesaid.
- (IV) Any reversal of a forfeiture hereafter to be made shall, as soon as practicable, be notified in the Gazette, but the date of such reversal shall be the date of the Minister's approval thereof.

Sec. 22, Act 1895.

The provisions of this and the next succeeding section shall apply to homestead selections until the grant thereof.

329. And no provisional or absolute reversal hereafter to be made of any forfeiture shall defeat any valid application for a conditional purchase, homestead selection, or conditional or homestead lease, which shall have been lodged before the receipt by, or on behalf of, the Minister of a request in writing for such reversal, unless the applicant shall consent in writing to such reversal.

DIVISION VIII.—Waiver of forfeiture.

Waiver of
forfeitures.
55 Vic. No. 1.
Sec. 22, Act 1895.

330. In any case in which a purchase, homestead selection, lease, or license has or shall become liable to forfeiture by reason of the non-fulfilment of any condition annexed by law to such purchase, selection, lease, or license, but in which the Minister shall be satisfied that such non-fulfilment has been caused by accident, error, mistake, inadvertence, or other innocent cause, and that such forfeiture ought therefore to be waived, it shall be lawful for the Minister to declare that such forfeiture is waived, either absolutely or upon such conditions as he may see fit to declare, and the forfeiture shall thereupon be waived accordingly; and when the forfeiture of any conditional purchase, homestead selection, or conditional lease shall have been waived, and the conditions, if any, of such waiver shall have been performed, the holder of any such conditional purchase or homestead selection shall, if otherwise entitled thereto, be entitled to receive a certificate of conformity in respect of the same, notwithstanding that such certificate may have previously been applied for and refused, and the holder of any such conditional lease shall be entitled to make additional conditional purchases of the land comprised within such lease as if no forfeiture thereof had been incurred.

Sec. 22, Act 1895.

The provisions of this section shall apply to homestead selections until the grant thereof,

DIVISION

DIVISION IX.—Reversals of forfeitures prior to the fourteenth day of October, one thousand eight hundred and ninety-one.

331. Subject to the provisions hereinafter contained, the Governor or the Minister, as the case may be, shall be deemed to have had power to reverse, whether provisionally or otherwise, any forfeiture which before the fourteenth day of October, one thousand eight hundred and ninety-one, was notified, declared, or otherwise asserted or enforced, under the Acts 1859–1889. Unless the context otherwise requires, the expression “Forfeiture” includes the lapse or voidance of any contract with the Crown under any of such Acts for the purchase or leasing of Crown lands; and “Minister” means the Minister for the time being charged with the administration of the public lands in accordance with such Acts.

Validity and effect of reversals of forfeiture. 55 c. V No. 1.

Interpretation.

- (I) A provisional reversal made before the fourteenth day of October, one thousand eight hundred and ninety-one, of a forfeiture shall, unless the Governor or the Minister has subsequently done or performed, or shall hereafter do or perform, some act, matter, or thing in assertion and enforcement of such forfeiture, be deemed to have been an absolute reversal thereof, relating back to the date when such forfeiture was notified, declared, or otherwise asserted or enforced, and shall have the same effect as if the forfeiture so reversed had never been notified, declared, or otherwise asserted or enforced.
- (II) Any absolute reversal before the fourteenth day of October, one thousand eight hundred and ninety-one, of a forfeiture shall be deemed to have related back to the date when such forfeiture was notified, declared, or otherwise asserted or enforced, and shall be deemed to have had the same effect as if the forfeiture so reversed had never been notified, declared, or otherwise asserted or enforced.
- (III) Any reversal made before the fourteenth day of October, one thousand eight hundred and ninety-one, of any forfeiture whatsoever shall not be deemed to have been or to be ineffectual by reason only that the same was not published in the Gazette, or that the same was not made by the Governor with the advice of the Executive Council.
- (IV) No provisional or absolute reversal made before the fourteenth day of October, one thousand eight hundred and ninety-one, of any forfeiture which had previously been duly notified or declared shall be deemed to have had the effect ascribed thereto by the preceding subsections as against any application to purchase or lease conditionally or otherwise the lands, or any part of the lands, which were the subject of such forfeiture, if such application was duly made, and was not refused, withdrawn, disallowed, or otherwise finally disposed of before the twentieth day of October, in the year one thousand eight hundred and ninety.
- (V) Any forfeiture, voidance, or annulling asserted or enforced before the fourteenth day of October, one thousand eight hundred and ninety-one, of an improvement or auction purchase, shall not be deemed to have been or to be ineffectual by reason only that the same was not published in the Gazette, or that the same was not made by the Governor with the advice of the Executive Council.

Validation not to prejudice applications for conditional purchase or conditional lease made before October 20th, 1890.

DIVISION X.—Boundary Fences.

Contributories to cost of fencing and maintenance.

Sec. 141, Act 1884.

Sec. 22, Act 1895.

Sec. 10, 52 Vic. No. 7.

Owners of fences made before or after 1 January, 1885, may claim contribution in respect thereto.

Sec. 10, 52 Vic. No. 7.

Sec. 22, Act 1889.

Fencing between adjoining holdings.

Sec. 141, Act 1884.

Sec. 22, Act 1895.

Contributories.

Sec. 141, Act 1884.

Annual leases and leases having less than five years to run.

Sec. 141, Act 1884.

Disputes.

Sec. 23, Act 1889.

Resumption for canal, &c.

Sec. 42, Act 1889.

332. (I) Fencing within the meaning of this Act shall be deemed an improvement common to the land on either side of the line of such fencing.

(II) The side of a reserved, intended, proclaimed, or other road shall not be held to form or be a common boundary-line within the meaning of this section.

(III) For the purposes of this section fencing shall be held to mean or include fencing, whether erected before or after the first day of January, in the year one thousand eight hundred and eighty-five, or after the commencement of this Act, and whether prescribed by the local land board or not, provided it is, in the opinion of such board, of a sufficiently useful and substantial kind, and fences which may under sections eleven or fourteen of the Crown Lands Act Further Amendment Act or sections ninety-one or ninety-three of this Act have been or may be made or treated as boundary fences.

(IV) Whenever land adjoining that which forms a conditional purchase or lease, or a homestead selection (before issue of the grant of such homestead selection), or a homestead lease, has been or shall be alienated or leased by the Crown, conditionally or otherwise, the person who shall fence his land may demand and enforce from the purchaser or homestead selector or lessee of such adjoining land or his alienee a contribution towards the cost of such fencing to the extent of one half of the appraised value thereof, but so far only as such fencing marks a common boundary-line.

(V) And while such fencing is maintained in good repair and condition by such person, every owner, lessee, or occupant of adjoining lands shall be and remain liable as a contributory towards the cost of so maintaining such fence to the extent of one half of the estimated cost thereof.

(VI) No holder of an annual lease under this Act, and no holder of any lease having less than five years to run, shall be liable as a contributory under this section towards the original cost of fencing, but shall be liable as a contributory towards the cost of maintaining such fencing.

(VII) And in all cases of dispute in reference to the erection, completion, or repair of fencing, or to contributions towards the cost or maintenance of fencing upon or between adjoining lands or lands on opposite sides of roads or creeks, the board shall on application as prescribed by any party concerned, determine, subject to appeal, all questions in dispute, appraise all values, estimate all costs, determine the kinds of fencing to be erected within the meaning and for the purposes of this section, and make any order necessary or incident to the settlement thereof; and any such order shall be a sufficient authority and justification for entering upon any of the said lands, and doing such acts as may be necessary for carrying the same into effect.

DIVISION XI.—Resumption for Canal, &c.

333. If at any time it shall be deemed expedient to open a canal, or cutting for irrigation purposes, through any land conditionally purchased or conditionally or otherwise leased or held in fee simple, or under homestead selection, it shall be lawful for the Governor by notification in the *Gazette* to resume so much of the land as may be required for the purpose, and in the like manner to at any time proclaim the same.

No such resumption shall be made until the expiration of one month from notice in the *Gazette* and in one or more newspapers published or circulated in the Land District wherein is situated the land as well as notice by letter to the reputed proprietors or occupiers of the said land, addressed to their last known abode or place of business of the intention to resume, during which time any person feeling aggrieved may address to the Minister any objection he may have thereto.

Subject to the provisions herein contained, a refund shall be granted of any moneys paid on account of the land so resumed; but in any case where the resumed land shall have been held in fee simple, or be a conditional purchase or conditional lease, the value thereof shall be appraised by the local land board, subject to appeal and the provisions of the forty-fourth section hereof; and such value shall be paid by the Crown.

No land shall be resumed under the provisions of this section which may be situated within two hundred yards of any dwelling-house if attached thereto and used in connection therewith, as a yard, garden, orchard, plantation, park, or avenue, unless the owner of such lands consent to the same being so resumed, or the purposes of the resumption cannot be otherwise secured. Any surveyor or other person duly authorised in that behalf may, for all purposes of this section, enter upon any lands proposed or liable to be resumed thereunder, and do all things necessary thereon without obstruction or resistance.

The provisions of this section shall apply to homestead selections Sec. 22, Act 1865. until the grant thereof.

DIVISION XII.—Roads of Access.

334. Every purchaser of Crown lands and every holder of a lease or license shall be entitled to a road of access, and also to free ingress and egress thereby to and from the lands held by him to the nearest reserved or proclaimed road through and over any Crown lands whether under lease or not if no access to the lands held by him by means of a reserved or proclaimed road or track shall be provided. And such road shall not interfere with any buildings, garden, stock, or drafting yards belonging to such lessee or licensee, and shall in every case follow such a direction, and be so marked as to occasion as little damage or inconvenience to the lessee as may be possible. And the Minister shall have power to close any such road upon giving three months notice to that effect in the *Gazette*.

Road of access through leased land. Sec. 111, Act 1884.

DIVISION XIII.—Removal of Trespassers.

335. On information in writing preferred in that behalf by any person duly authorised to any justice of the peace, setting forth that any person is in the unlawful occupation or use of any Crown land, or in the occupation or use of any Crown land in virtue or under colour of any purchase, lease, or license, although such purchase, lease, or license shall have been forfeited or otherwise made void, or although the conditions thereof shall have been broken or unfulfilled, or although such lease or license shall have expired, such justice shall issue his summons for the appearance of the person so informed against before two or more justices of the peace, at the nearest court of petty sessions to such Crown land, at a time to be specified in such summons. And at such time and place such Court, on the appearance of such person, or on due proof of the service of such summons on him, or at his usual or last known place of abode or business, shall hear and inquire into the

Removal of trespassers. Sec. 131, Act 1884.

the subject matter of such information. And on being satisfied of the truth thereof, either by the admission of the person informed against, or on other sufficient evidence, such justices shall issue their warrant addressed to any officer duly authorised in that behalf, requiring him forthwith to dispossess and remove such person or any buildings from such land, and to take possession of the same on behalf of Her Majesty, and the person to whom such warrant is addressed shall forthwith carry the same into execution.

DIVISION XIV.—Penalties for Trespass.

Penalties for trespass or for unauthorised cutting or stripping bark on Crown lands. Sec. 133, Act 1884. Sec. 58, Act 1896.

336. Any person unless lawfully claiming under any subsisting lease or license, or otherwise under this Act, or the Acts 1859–1897, or under any Act in force for the regulation of mining, who shall be found occupying or using any Crown land or land granted, reserved, or dedicated for public purposes, either by residing, or by erecting any hut or building or other structure thereon, or depasturing stock thereon, or by clearing, digging up, or enclosing or cultivating any part thereof, or by cutting or removing timber other than firewood not for sale thereon, or by obtaining stone therefrom, or driving piles or otherwise, or who shall strip or remove or cause to be stripped or removed the bark of any tree thereon, shall be liable on conviction to a penalty not exceeding *five* pounds for the first offence, and not exceeding *ten* pounds for the second offence, and not exceeding *twenty* pounds for the third or any subsequent offence: Provided that it shall not be lawful for the holder of any leasehold under this Act or the previous Acts to obstruct any Government surveyor or other authorised person from entering upon such leasehold whenever such surveyor or other authorised person may require to do so.

DIVISION XV.—Penalties for destroying Improvements.

Penalties on destroying improvements. Sec. 132, Act 1884.

337. If any person wilfully destroys or damages any dam, tank, well, excavation, boring, or other work lawfully constructed, sunk, or made, or in course of lawful construction, sinking, or making for the purpose of impounding or supplying water on any land, whether alienated by or under lease or license from the Crown under this Act or the Acts 1859–1897, such person shall be guilty of felony and be liable to penal servitude for any term not exceeding *ten* years, or to imprisonment with or without hard labour for any term not exceeding *three* years. And if any person wilfully destroys or damages any fencing or improvement other than those before mentioned, lawfully constructed, or made by any holder of a conditional purchase, lease, or license, whether under this Act or the Acts 1859–1897 (which lawfulness the Court shall have power to determine), such person shall be liable to a penalty not exceeding *fifty* pounds, or to be imprisoned with or without hard labour for any term not exceeding *six* months, and to pay in addition such fine by way of compensation to the person injured as the Court may order.

DIVISION XVI.—Removal of Boundary Marks.

Removal of boundary mark to be a misdemeanour. Sec. 134, Act 1884.

338. If any person shall unlawfully and wilfully obliterate, remove, or deface any boundary or survey mark, or any land mark or beacon, made or erected by the authority of the Surveyor-General, or by or under the direction of any authorised Government officer, such person shall be guilty of a misdemeanour.

DIVISION

DIVISION XVII.—Recovery of Penalties.

339. Whenever by any section of this Act, or by any regulation made thereunder, any person is made liable to a penalty or to pay any sum of money, whether as compensation or in any other way, and the mode of recovering such penalty or sum is not therein described, such penalty or sum may be recovered before any two or more justices of the peace in petty sessions in accordance with the Acts in force for the time being regulating summary proceedings before justices. And all sums of money ordered by any such Court to be paid, and all costs and expenses awarded by such Court, may be recovered and enforced by distress and sale of the goods and chattels of the person ordered to pay the same; and in default of sufficient distress, such person shall be liable to be imprisoned with or without hard labour for any term not exceeding *three* months, unless such money, costs, or expenses be sooner paid.

Procedure for recovery of penalties, &c.
Sec. 139, Act 1884.

DIVISION XVIII.—Limitation of Actions.

340. All actions or other proceedings against any officer acting under the provisions of this Act for anything wrongfully done under or against the provisions of this Act, or the Acts 1859-1897, shall be commenced within twelve months after the matter complained of was committed, and not otherwise. And notice in writing of any such action and of the cause thereof shall be given to the defendant one month at least before the commencement of the proceeding. And in every such proceeding the defendant may plead the general issue, and give this Act and the special matter in evidence at any trial to be had thereupon. And no plaintiff shall recover in any such proceeding if tender of sufficient amends shall have been made before the same was commenced, or if a sufficient sum of money shall have been paid into court after such commencement by or on behalf of the defendant, together with costs incurred up to that time. And if a verdict shall pass for the defendant, or the plaintiff shall become nonsuit or discontinue such proceeding, or if upon demurrer or otherwise judgment shall be given against the plaintiff, the defendant shall recover his costs and have the like remedy for the same as any defendant has by law in other cases.

Limitation of actions.
Sec. 129, Act 1884.

DIVISION XIX.—Acts of Surveyor-General.

341. When in this or the previous Acts or any other Act it is provided that certain acts or things shall or may be done, or directions shall or may be given by the Surveyor-General, such acts or things may be done and such directions may be given by any officer duly authorised by the Minister in that behalf.

Acts of Surveyor-General to be done by officer authorised in that behalf.
Sec. 50, Act 1889.

DIVISION XX.—Copies of Documents to be evidence.

342. A copy of any application, letter, document, or instrument of any kind whatsoever relating to any purchase, reservation, dedication, lease, plan, or right to or disposition of land under this Act, or the Acts 1859-1897, and whether of the original or of any press copy thereof, and of any indorsement or memorandum upon the same certified by the officer having the custody thereof to be correct, shall be admissible in evidence in every case in which the original would be admissible, and without proof that the person so certifying is the officer having the custody thereof if he shall state in his certificate that he has such custody.

Copies of documents to be evidence.
Sec. 127, Act 1884.

DIVISION

DIVISION XXI.—Suits by the Crown.

Suits by the Crown
for recovery of rents,
&c.
Sec. 49, Act 1889.

343. It shall be lawful for the Minister for Lands to bring under that name, and as nominal plaintiff on behalf of the Crown, any suit or action for the recovery of arrears of rent or of any other sums which, under the Acts 1859–1897 or this Act, may be due to the Crown. And no such suit or action shall be prejudiced, or abate, or require amendment merely because after the commencement thereof the Minister who brought the same may have gone out of office, or because another Minister may have been appointed, or the office may for the time being be vacant: Provided that costs may be given for or against such plaintiff in the same way as in any ordinary suit or action. And it shall be lawful for the Minister, for the purpose of recovering arrears of rent due to the Crown, to exercise by any duly authorised agent such powers of distress as are now given by law to any landlord.

DIVISION XXII.—Royalty on coal from mineral leases.

Provision for
obtaining royalty on
coal from mineral
lessees.
Sec. 91, Act 1884.

344. The Governor shall, notwithstanding the provisions of the Mining Act of 1874, impose a royalty of not less than sixpence per ton on coal raised from land which may be hereafter leased. And such royalty shall be in addition to or in substitution of any rent payable by such lessee under the said Act, but shall not affect or prejudice any other condition of the lease. And for the purpose of giving effect to the provisions of this section the Governor may make regulations prescribing the time and manner of payment of such royalty, and the manner of enforcing such payment.

DIVISION XXIII.—Regulations.

Power to make
regulations and rules.
Sec. 145, Act 1884;
53, Act 1889; 61,
Act 1895.

345. Whenever in this Act the word “prescribed” is used in connection with any matter referred to in the context, and whenever, in any section of this Act, “regulations” are mentioned in connection with any such matter the Governor may in every such case frame regulations for the purpose of giving effect to the provisions of such section. And, for the purpose of carrying this Act into full effect generally, the Governor may make regulations, which shall, upon being published in the Gazette, be good and valid in law; and for the purpose of regulating proceedings before the Land Appeal Court, it shall be lawful for the Governor to make rules for the time and mode of procedure, and for the general practice of such Court, which shall, upon being published in the Gazette, be binding upon such Court, and upon the parties to any proceedings therein as the rules of the Court of Equity are binding upon that Court and the parties suing therein: Provided that a copy of all such regulations and rules shall be laid before both Houses of Parliament within fourteen days from the publication thereof if Parliament be then in session, or otherwise within fourteen days after the commencement of the next ensuing session.

Crown Lands Consolidation.

121

SCHEDULES.

FIRST SCHEDULE (A).

eight

eight hundred and ninety-three; Walgett, proclaimed twenty-ninth day of December, one thousand eight hundred and ninety-three; and Moree, proclaimed twenty-fourth day of March, one thousand eight hundred and eighty-eight, from the land districts of Balranald, proclaimed fifteenth day of May, one thousand eight hundred and ninety-seven; Hay North and Hillston North, proclaimed twenty-fifth day of February, one thousand eight hundred and eighty-eight; Cobar, Bourke, and Brewarrina, proclaimed tenth day of May, one thousand eight hundred and ninety; and Walgett North, proclaimed second day of January, one thousand eight hundred and eighty-five, generally north-easterly to the boundary dividing the Colonies of New South Wales and Queensland; thence by that boundary, being the twenty-ninth parallel of south latitude, west to its intersection with the one hundred and forty-first meridian of east longitude, being the boundary dividing the Colonies of New South Wales and South Australia; thence by that boundary south to the boundary dividing the Colonies of New South Wales and Victoria, being the left bank of the Murray or Hume River; and by that boundary generally easterly, to the point of commencement.

FOURTH SCHEDULE (D).

(A.)

In the matter of the "Crown Lands Act of 1884" and the "Crown Lands Act of 1889." To the Sheriff of New South Wales, his deputy and assistants, and to all officers of the Police Force of New South Wales, and to the keeper of the gaol, prison, or lock-up at

THESE are to command you the said Sheriff and all officers as aforesaid to apprehend A.B. of and to convey him to the said gaol, &c., and to deliver him to the said keeper, together with this warrant; and you the said keeper to receive him into your custody in the said gaol, &c., and him there safely to keep for the term of [or unless the sum of shall be sooner paid], I, the undersigned, Chairman of the Local Land Board, sitting at , having now here adjudged the said A.B. [to pay a fine of and in default of immediate payment thereof] to be imprisoned for the said term, for that he the said A.B. [here state the offence to the following effect as the case may require] having been duly served with a summons or subpoena to attend and give evidence before the said Board in the matter of [here state the nature of the proceedings], and having had payment or tender of his reasonable expenses duly made to him has neglected to appear, such neglect having been without just cause or reasonable excuse (or) having been duly summoned or subpoenaed (or) examined as a witness on the hearing of a certain matter [here state the nature of the proceedings] has refused to make oath, affirmation, promise, or declaration in lieu of an oath before the said Board (or) has refused to answer a certain lawful question, that is to say [here state the nature of the question] (or) has refused to produce a certain document within his possession or control, that is to say [here state the nature of the document] (or) to sign his examination reduced into writing, &c., &c., being lawfully required by me the said Chairman so to do, and such refusal being without lawful cause or excuse (or) has perjured in his evidence.

Given under my hand this day of 18 at aforesaid.
C.D., Chairman of the Local Land Board.

FIFTH SCHEDULE (E).

(B.)

In the matter of the "Crown Lands Act of 1884" and the "Crown Lands Act of 1889." To the Sheriff of New South Wales, his deputy and assistants, and to all officers of the Police Force of New South Wales.

WHEREAS it has this day appeared to me, the Chairman of the Local Land Board, sitting at that A.B. of having been duly served with a subpoena or summons to attend and give evidence before the said Board in the matter of [here state the nature of the proceedings], and having had tender or payment of his reasonable expenses duly made to him has failed to appear when called, these are to command you forthwith to apprehend the said A.B. and to detain him in custody and bring him before the said Board to give evidence in the said matter.

Given under my hand this day of at aforesaid.
C.D., Chairman of the Local Land Board.

SIXTH SCHEDULE (F).

In the Land Court of New South Wales.

To the Sheriff of New South Wales, his deputy and assistants, and to all officers of the Police force of New South Wales [and to the keeper of the gaol, prison, or lock-up at]:

It having this day appeared to the Land Court sitting at that A.B. of having been duly served with a subpoena or summons to attend and give evidence before the said Court in the matter of [*here state the nature of the proceedings*], and having had tender or payment of his reasonable expenses duly made to him has failed to appear when called. These are therefore to command you forthwith to apprehend the said A.B., and to detain him in custody, and to bring him before the said Court to abide the further order of the said Court.

Given under my hand this day of at aforesaid.
C.D., President.
(or) E.F., Acting-President.

(or) It having this day appeared to the Land Court sitting at that A.B. of has on the hearing of a certain matter [*here state the nature of the proceedings*] refused to make oath or affirmation before the said Court (or) to answer a certain question (or) to produce a certain document within his possession or control (or) to sign his examination reduced into writing (or) &c., &c., being lawfully required by the said Court so to do, and such refusal being without lawful cause or excuse (or) that A.B. of has obstructed the business of the said Court (or) has committed a contempt in face of the said Court (or) &c., &c. These are therefore to command you the said Sheriff and all the said officers as aforesaid to apprehend the said A.B., and to detain and convey him to the said gaol, &c., and to deliver him to the said keeper thereof, together with this warrant; and you the said keeper to receive him into your custody in the said gaol, &c., and him there safely to keep until the said A.B. shall have signified to the Land Court his submission to make the said oath or affirmation (or) &c., and the further order of the said Court in the premises shall have been made known to you under my hand (or) until the term of days from the date hereof shall have expired (or) until a fine of £ shall have been paid (or) until the said A.B. shall have been otherwise discharged in due course of law.

Given under my hand this day of at aforesaid.
C.D., President.
(or) E.F., Acting-President.

1897.

EXCHANGE OF LAND ON YANGA STATION, NEAR BALRANALD.

No. 1.

The Manager of the English, Scottish, and Australian Bank (Limited) to The Under Secretary for Lands.

Sir, The English, Scottish, and Australian Bank (Limited), Sydney, 23 July, 1896.

Referring to the suggested scheme of exchange of lands on Stonehenge, Baan Baa, and Cooma holdings for lands on Yanga, which was laid before you by our Pastoral Inspector on the 21st instant, I have now the honor to furnish more definite information on the subject.

As you are doubtless aware, the Bank are the holders of the undermentioned property in the neighbourhood of the towns of Glen Innes and Narrabri, viz. :—

EASTERN DIVISION.

1,134 acres,	Stonehenge holding, No. 108,	freehold land.
12,508 "	" "	" conditional purchase land.
3,981 "	" "	" " lease "
1,882 "	" "	" " " (non-convertible).

CENTRAL DIVISION.

17,780 acres,	Cooma leasehold area, No. 602,	at a rental of 1½d. per acre per annum.
1,466 "	" "	" conditional purchase land.
2,880 "	" "	" " lease "
12,691 "	Baan Baa leasehold area, No. 628,	at a rental of 2½d. per acre, per annum.
4,172 "	" "	freehold land.
3,188 "	" "	conditional purchase land.
6,794 "	" "	" " lease "

The whole of this land has been fully improved by fencing, ringbarking, water conservation, and buildings at a heavy outlay. It is suitably located for close settlement, and comprises a large area of agricultural land within easy reach of railway communication.

Should the proposal be acceptable to the Minister, the Bank is prepared to enter into negotiations for the exchange of the whole of the foregoing property, and would also surrender the leasehold areas for lands on Yanga, in the extreme west of the Central Division, now held by the Bank under a pastoral lease at a rental of 1d. per acre per annum.

A summary of all the lands available for exchange gives the following results :—

5,306 acres,	freehold land.
17,162 "	conditional purchase land.
13,655 "	lease land.

36,123 acres, total.

In the event of the proposal being finally approved, the Bank will convert the 13,655 acres conditional lease into conditional purchase land.

I enclose a sketch of the Yanga leasehold area, showing the freehold land coloured in red and the 36,123 acres proposed for exchange colored blue.

It may be mentioned that the lands proposed for exchange on Yanga are rabbit infested, destitute of water, within an area of light and capricious rainfall, and essentially grazing country, remote from all railway communication.

The object of the proposal is to consolidate widely-scattered lands, though in doing so it is quite apparent that the Bank is making a great sacrifice.

It would be of extreme convenience if you could advise us at the earliest possible moment whether the Minister was disposed to view the proposal in a favourable light.

I would point out that while the question of exchange remains unsettled, it very seriously hampers the immediate future operations on the properties to be surrendered.

I shall be glad to supply any further information you may require.

With reference to our two applications for exchange of lands on Cooma holding, No. 602, for lands on Baan Baa South, No. 628, I shall be obliged if you will delay dealing with these until the present more comprehensive proposal has received consideration.

I have, &c.,

FLETCHER DIXON,

Manager.

No. 2.

The Under Secretary for Lands to The District Surveyor, Armidale.

OFFICE MEMORANDUM.

28 July, 1896.

A copy of a letter recently received by the Department, in which the English, Scottish, and Australian Bank offers to surrender lands in the Land Board Districts of Armidale and Tamworth in exchange for other lands in the Land Board District of Hay, is enclosed; and as Mr. McDonald has recently reported very fully on the merits of another exchange proposal affecting Stonehenge lands only, and he is, therefore, in possession of all the facts, will he favour me with his views in regard to the Stonehenge lands, i.e., whether acceptance of this surrender is desirable in the public interests, and likely to facilitate settlement.

A rough estimate of the value of these lands should also be supplied, if possible.

C.J.S. (for the Under Secretary).

I presume that the present proposal does not affect the exchange already approved. It would have been more satisfactory if the applicant Bank had furnished a plan illustrating the proposals; but speaking from my general knowledge of the Stonehenge (Graham's Valley) Estate, I may state that the lands comprised therein would undoubtedly attract settlement under the favourable terms afforded by the homestead

homestead settlement provisions. The unimproved value of the land is about 25s. per acre. The improvements consist of fencing, ringbarking, a little cultivation, and the home station improvements at Graham's Valley. The latter are not at all of an extravagant character. I have no knowledge of the Baan Baa or Cooma holdings, but I know the Yanga holding very well. The description of the latter given in the enclosed letter (Aln. 96-7,749) is correct. The country is not suitable for small holdings. The climate is very hot and dry, and the rainfall about 14 inches per year. The altitude above sea level is about 200 feet. At Stonehenge the annual rainfall is about 40 inches; the altitude about 3,800 feet. The summer climate is delightful, but it is very cold in winter.—ROBERT M'DONALD, District Surveyor, 5/8/96.

The Great Northern railway passes within a few miles of Graham's Valley.—R.M'D.

No. 3.

The Under Secretary for Lands to The District Surveyor, Tamworth.

OFFICE MEMORANDUM.

28 July, 1896.

For enclosure,
see No. 1.

A COPY of a letter recently received by the Department is enclosed, in which the English, Scottish, and Australian Bank offers to surrender lands in the Land Board Districts of Armidale and Tamworth in exchange for other lands in the Land Board District of Hay, and is referred to the District Surveyor at Tamworth for early report in regard to the lands within the Cooma and Baan Baa South pastoral holdings, *i.e.*, whether acceptance of surrender of the freehold and selected areas is desirable in the public interests and likely to facilitate settlement; also, whether the lands covered by the existing pastoral leases are likely to be again readily disposed of in the event of the leases being abandoned as now proposed.

A rough estimate of the value of the lands affected should also, if possible, be supplied.

The papers relating to the previous exchange are enclosed; and, as these holdings have only recently been reported on by the District Surveyor, it is thought that he may be in a position to furnish the information now asked for without a further inspection.

C.J.S. (for the Under Secretary).

Reporting from general knowledge, and without inspection, I am of the opinion that the acceptance by the Crown of the surrender by way of exchange, as proposed, of the English, Scottish, and Australian Bank's freehold and selected lands on Baan Baa South and Cooma pastoral holdings, accompanied by the abandonment on the Bank's part of the lands held by it under conditional lease (non-convertible) and pastoral lease, is desirable in the public interests and likely to facilitate settlement. I do not anticipate any difficulty in disposing of the lands held under pastoral lease when they become available in the form of settlement leases. I am unable to furnish a rough estimate of the lands to be surrendered; but, from general knowledge, I believe they comprise lands ranging in value from 20s. to 40s. per acre.—FRED. POATE, District Surveyor, 7th August, 1896.

No. 4.

The Under Secretary for Lands to The District Surveyor, Hay.

30 July, 1896.

For enclosure
see No. 1.

THE enclosed letter from the English, Scottish, and Australian Bank—in which areas within the Land Board Districts of Armidale and Tamworth are placed under offer for surrender, and others in the Land Board District of Hay, are desired in exchange—is referred to the District Surveyor at Hay for preliminary report in regard to the Yanga lands affected.

Taking this holding as a whole, the scheme is not as comprehensive as it might be, nor is the form in which the land is desired without objection; but the Bank's representative has verbally intimated to the Department that the frontage lands have been specially omitted, in order not to interfere with a subsequent application which is intended to be made for the surrender and further consolidation of the Yanga lands only.

The matters for consideration are, therefore:—

- (1.) Whether any objections exist to the alienation of lands in this pastoral holding, as proposed, and if unobjectionable.
- (2.) As regards the form this consolidation should take.

To facilitate consideration of this proposal, the lessees' working plan has been borrowed, and the necessary information shown on enclosed lithograph.

A rough estimate of the value of the lands affected by any scheme recommended by the District Surveyor should be supplied.

C.J.S. (for the Under Secretary).

If possible, a report should be furnished within a month.

Telegram to Under Secretary, asking for appraisal papers, leasehold area of Yanga, 6 August, 1896. Received, 8 August, 1896.

With regard to the exchange proposed, I beg to report that there is no objection to alienate the land sought in this proposal, provided, however, that consolidation be effected in a more compact form. The contemplated supplementary exchange should undoubtedly be dealt with in conjunction with this proposal, to ensure that the lands held by the station and the Crown lands left for future settlement, should be in as compact a form as possible. In any scheme that is considered, the position of the town of Balranald must not be lost sight of, in order that any demand for closer settlement may be met without recourse to resumption. I value the lands sought in this proposal at from 15s. (fifteen shillings) to 25s. (twenty-five shillings) per acre.—W. G. WALKER, District Surveyor, 8/9/96. The Under Secretary for Lands.

The

The District Surveyor does not indicate what form he recommends the consolidation should take, or where would be the most desirable locality in which to aim at consolidation of the Crown lands. The lessees urge that they cannot surrender the block containing the woolshed. They are also extremely anxious to know how far their proposal is acceptable, in order that arrangement may be made in connection with the stock on the holdings proposed to be surrendered. An immediate reply is requested.—C.J.S. (for the Under Secretary), 23/9/96. The District Surveyor, Hay.

Referred to Mr. Surveyor Somerville for immediate report, from his local knowledge, as to what form the consolidation should take, in addition to embracing the numerous measured portions that intersect the station freeholds, which are too small for settlement. It might be advisable to include (with the exception of 640 acres fronting the river) the whole of water reserve 2,114, parish of Kiecla. As he is now close to Yanga station, he should interview the manager, with a view to obtaining information as to the form of the contemplated supplementary exchange.—W. G. WALKER, District Surveyor, Wentworth, 9/10/96. *Very urgent.*

Dealt with by letter No. 96-37, 17th October, 1896.—RICHD. N. SOMERVILLE, Surveyor.

No. 5.

The Under Secretary for Lands to The District Surveyor, Hay.

Hay, 26th August, 1896.

The within reports by the District Surveyors at Armidale and Tamworth are forwarded for your perusal, &c., in connection with papers, Aln. 96-7,485 sent early this month.

For enclosures, see Nos. 1 and 2.

C.J.S. (for the Under-Secretary).

Returned to Head-quarters with my report, No. 96-300, of this date, covering papers, L.B. 96-4,270.—W. G. WALKER, District Surveyor, 8/9/96. The Under Secretary for Lands.

No. 6.

Telegram from Draftsman-in-Charge, Survey Office, Hay, to The Under-Secretary for Lands.

Hay, 9 October, 1896.

Re Yanga exchange, District Surveyor wires from Wentworth that he considered it advisable to refer matter to Surveyor Somerville, who is in locality and will report next week.

J. G. FEWINGS,

Draftsman-in-Charge, District Survey Office.

Inform Bank.—C. J. SAUNDERS, 12/10/96. English, Scottish, and Australian Bank (Limited), Sydney, informed, 12/10/96.

No. 7.

The Acting Under Secretary for Lands to The Manager, English, Scottish, and Australian Bank (Limited).

Sir, Department of Lands, Sydney, 12 October, 1896.

In reply to your personal inquiries I have the honor to inform you that the survey of the lands to be granted on Stonchenge holding is to be made at once, and action is being expedited thereon; and the District Surveyor has referred your proposal for exchange on Yanga holding to the surveyor now in the locality, whose report is expected this week.

Exchange—Stonchenge, No. 103, Eastern Division.

Yanga, No. 76, Central Division.

I have, &c.,

H. CURRY,

Acting Under Secretary

(Per W.H.C.)

No. 8.

Surveyor R. N. Somerville to The District Surveyor, Hay.

Sir, Hay, 17 October, 1896.

In accordance with your instructions, No. 96-61, October 9th, L.B. 96-4,270, I have the honor to report upon the proposed consolidation in Yanga pastoral holding, county Cairn, of lands offered in surrender in Stonchenge, Cooma, and Bann Baa holdings.

I believe it is desired to treat this exchange on its merits without bringing in the question of surrender of any of the Yanga freehold lands. Keeping this in mind, I am of opinion, from a cursory inspection, that the form of consolidation need not be objected to. Applicants have aimed at pure consolidation without respect to country.

The land sought is not suitable for close settlement, none of it is agricultural land, and, taken as a whole, its grazing capacity is low.

In event of the exchange being accomplished, a road should be provided easterly from portion 19, parish Yanga, through the holding.

The station manager is unaware what form the contemplated surrender and exchange of Yanga lands only will take.

I have, &c.,

RICHD. N. SOMERVILLE,

Surveyor.

There

There is no objection to the alienation of the land sought on Yanga holding, nor do I think now that there is any occasion to formulate a design for surrender of freeholds on this holding, having regard to a consolidation of the Crown lands with a view to closer settlement near Balranald. I was under the impression that there were some areas adapted for agriculture, but I now find that the land is purely pastoral. Blocks of at least 5,000 acres would be required for independent holdings; but I understand from Mr. Somerville that even upon blocks of this size, on account of the liability of the land to flood, settlers would be hampered in keeping and moving the stock on and off the lands. As regards the form that the consolidation of the holding should take, I am of opinion that the interests of the Crown are not in any way prejudiced by granting the land in the form shown by blue tint on lithograph, with a slight modification giving the area hatched blue instead of the area edged blue. An amalgamation of the two main areas is, perhaps, desirable; but this will probably come under consideration in the supplementary exchange. At the present time I consider it best, in the interests of the Crown, to retain the Crown lands between the two main areas, and north and east of the proposed consolidated area, in the parishes of Kia and Parker (where blocks of a suitable size and form can be obtained for future settlement), rather than that a connection between the two divisions should be made. If it be considered, however, that the areas should be joined now, I would suggest that the area F, G, H, I, J, K, L, M, N, O, should be substituted for the area A, B, C, D, E, F, although this would result in severing the Crown lands. I am of opinion, too, that the Crown lands west of line G, P, H, to, and inclusive of, travelling stock reserve 3,202, should, in any proposal, be retained for future settlement, as they are more accessible in flood time and nearer to Balranald than the rest of the lands to the east and north of the area. In the supplementary exchange, the lessee should, in the event of the area suggested in substitution for area A, B, C, D, E, F being adopted in the present proposal, be asked to surrender portions 1, 29, 30, and 31, parish of Parker.—W. G. WALKER, District Surveyor (*per J.G.F.*), 19/10/96. The Under Secretary for Lands.

No. 9.

Office Memorandum.

PROPOSED EXCHANGE OF EASTERN AND CENTRAL DIVISION LANDS.

30 October, 1896.

Stonehenge, No. 108, Eastern Division; lease expired.
Baan Baa South, No. 623, Central Division; five years' extension.
Cooma, No. 602, Central Division; five years' extension.
Yanga, No. 76, Central Division; five years' extension.

UNDER separate papers the owners were consolidating their Cooma and Baan Baa South (Central Division) and Stonehenge (Eastern Division) properties; but on the 23rd July last they asked whether the Department would be likely to favourably entertain a scheme for the surrender of all their alienations on the holdings named (together with the pastoral leases covering the Cooma and Baan Baa South properties) in exchange for an equivalent area in Yanga holding, the relative position of the estates affected being indicated on accompanying small Colony map. Approximately the area for surrender and abandonment is:—

	Freehold.	Conditional Purchase.	Conditional Lease.	Lease.
Eastern Division	1,134 acres	12,508 acres	3,981 acres	1,832 acres
Central Division	5,306 „	4,654 „	9,674 „	30,421 „

making a grand total of 68,376 acres, which will be rendered available for settlement should the scheme be adopted.

The District Surveyors have been consulted, and are found to favour such an exchange.

In regard to the Baan Baa South and Cooma Estates, the District Surveyor at Tamworth states that the relinquishment of the station interests there would be likely to facilitate settlement, and that no difficulty need be anticipated in readily disposing of the land under settlement lease provisions. A rough estimate places the value of this country at from 20s. to 40s. per acre.

Regarding the Stonehenge holding, the District Surveyor at Armidale reports that the land comprised therein would undoubtedly attract settlement under the favourable terms afforded by the homestead selection provisions. He estimates the land to be worth about 25s. per acre. Mr. McDonald also has the advantage of knowing the Yanga land, which he states is not suitable for small settlement.

In exchange the applicants seek to attain the land represented by blue tinting on the lithograph to this form the District Surveyor at Hay has no strong objection to offer.

The Crown lands to the west of the line P, G, H he considers should be retained for future settlement. His estimate of the value of this country is from 15s. to 25s. per acre.

The owners have now lodged the usual formal application for the surrender of the station alienations on Stonehenge, Baan Baa South, and Cooma holdings in exchange for an equal area on Yanga holding, and have intimated their willingness to abandon their Baan Baa South and Cooma pastoral leases and to relinquish the improvements on the portions for surrender.

This proposal embraces land in three Land Board Districts, and is the first of the kind which has arrived at the stage of reference to a Land Board. Section 47 requires that the Local Land Board shall inquire into and report upon any proposal, and shall appraise the value of the land included therein. The surrender land is within the Glen Innes and Narrabri Board Districts, while the land applied for in exchange is within the Balranald Board District.

It would perhaps meet the case if the Glen Innes and Narrabri Boards were directed to report as to the surrender of the portions within their respective districts, and to appraise the value of those lands, and also to state whether their acquisition by the Crown would promote settlement; and the Balranald Board were directed to inquire into and report whether the lands sought in exchange could be alienated without prejudice to public interests, and also to assess the value of those lands, the several Boards' reports to be subsequently reviewed by the Minister and the exchange then considered as a whole.

C. J. SAUNDERS.

No. 10.

Office Memorandum.

EXCHANGE OF LAND WITHIN DIFFERENT DISTRICTS.

30 October, 1896.

THE question is, how to get this matter before the Land Board, the special feature of the case being that the proposal refers to lands within three Land Board Districts.

Section 47 of the Act of 1895 does not limit an exchange to lands within the same district; but the Local Land Board is introduced in the following way:—

The Local Land Board shall inquire into and report upon any application or proposal referred to such Board by the Minister, and the values of any lands included therein shall be determined in accordance with the provisions of section 6 of the "Crown Lands Act of 1889," before the exchange is carried out. In any such exchange the lands exchanged shall, as nearly as practicable, be of equal value, or if the Crown lands to be granted be of greater value the difference of value shall be paid before any grant is issued.

The land proposed to be surrendered to the Crown is in the Land Districts of Narrabri and Glen Innes, and the land proposed to be acquired by the lessees is in the Balranald Land District.

The case may be, perhaps, dealt with by one Land Board under the provisions of section 5 of the Act of 1889, which is as follows:—

5. It shall be lawful for the Minister from time to time to direct any Local Land Board to deal with any matter, question, or inquiry that has arisen, or shall arise, without regard to the Land Board District in which the land forming the subject of such matter, question, or inquiry may be situated. And the said Land Board shall have as full power and jurisdiction to deal with the matter as if the land aforesaid were situated within that Board's proper Land Board District or Land District. Provided that anything similarly done by any Local Land Board before the commencement of this Act, either from inadvertence or otherwise, shall have the same effect in law as if done by the Land Board empowered to deal therewith.

But before one Board deals with it finally, it ought to have before it the views of the Land Board with regard to the land within that Land Board's district. Strictly, perhaps, all witnesses should appear before the one Board; but this would be expensive. The Board is not asked to decide, but to inquire and report; and, of course, the real object to be aimed at is to understand that the proposals are fair, both so far as the Crown's interests and those of the parties are concerned.

H. CURRY,

Acting Under Secretary.

The Land Board for the district in which land is to be granted should make the chief inquiry. The other Boards should report on the values, &c., of the lands to be surrendered.—J.H.C., 30/10/96.

No. 11.

The Manager, the English, Scottish, and Australian Bank (Limited), to The Under Secretary for Lands.

The English, Scottish, and Australian Bank (Limited),

Sydney, 30 October, 1896.

Sir,

Following up yesterday's interview of our Pastoral Inspector with the Minister, relative to the proposed exchange of lands on Stonchenge, Cooma, and Baan Baa South, for lands on Yanga holding, I have now the honor to enclose formal application, with schedule attached, for surrender and exchange of the lands in question.

In the event of our proposals receiving final approval, we are prepared to abandon the leases of Cooma No. 602, and Baan Baa South, No. 628, in the Central Division, at the termination of the current year. I presume, however, that the right to run our stock on the country for a few months after that date could be arranged for later on, in order to allow us time to dispose of them to advantage.

Trusting that further steps in the matter, as promised, will now be taken.

I have, &c.,

FLETCHER DIXON,

Manager.

[Enclosure.]

APPLICATION BY THE OWNER TO SURRENDER LAND IN EXCHANGE FOR CROWN LAND.

RECEIVED a deposit of £10 and a provisional survey fee of £62.

The Treasury, Sydney, 30 October, 1896.

J. S. WALFORD,

(pro Treasurer).

IN accordance with provisions of section 47 of the Crown Lands Act of 1895, we, the English, Scottish, and Australian Bank (Limited), being the holders of grants of the lands specified on the back hereof, or the holders of lands specified on the back hereof, in respect of which the only unfulfilled condition is that of payment of balance of purchase money, within Stonchenge, Cooma, and Baan Baa South holdings, Nos. 108, 602, 628, in the Eastern and Central Divisions, hereby apply to surrender the same in exchange for the Crown lands described on the back hereof, situated within Yanga holding, No. 76, Central Division. Particulars of the improvements on the respective areas are set forth in the Schedules appended, and we hereby agree to relinquish the improvements on the portions for surrender.

Signed this 29th day of October, 1896.

THE ENGLISH, SCOTTISH, AND AUSTRALIAN BANK (LIMITED)
(By its Attorney—FLETCHER DIXON),

The Under Secretary for Lands.

George-street, Sydney.

Improvements on lands to be surrendered on Stonehenge, Cooma, and Baan Baa South holdings, Nos. 108, 602, and 028, consisting of fencing, ringbarking, water supply, buildings, &c., £15,000.

On Crown lands applied for in exchange on Yanga holding, No. 76, consisting of fencing and water supply, £500.

PARTICULARS OF CROWN LANDS APPLIED FOR IN EXCHANGE AND OF THE IMPROVEMENTS THEREON.

LAND coloured blue on map forwarded with the preliminary proposal for exchange, dated 23rd July, 1896, being 36,125 acres on the Yanga leasehold area, No. 76, Central Division.

No. 12.

The Under Secretary for Lands to The Chairman, Local Land Board, Armidale.

PROPOSED EXCHANGE—Affecting lands on Stonehenge, Baan Baa South, Cooma, and Yanga Holdings.

3 November, 1896.

The papers relating to the Stonehenge portion of this exchange are enclosed, together with copies of those parts referring to the other holdings affected—the originals in connection with the latter having been sent to the respective Boards of the districts within which the lands are situated.

The Minister wishes these matters to be dealt with concurrently and at the earliest date possible, as it is represented to be a matter of immediate importance to the Bank in connection with the disposal of their stock on the different holdings affected.

The

The Chairman is therefore requested to have the case taken in hand at once for action as directed; and, in order that the Minister may be informed when the case will be dealt with, the District Surveyor should be consulted, and a report supplied under separate letter, stating the earliest date upon which the matter can be heard by the Board.

C.J.S. (for the Under Secretary).

The Under Secretary for Lands informed that the case will be dealt with at Glen Innes on 23rd November, 1896.—E.H.D., 4/11/96.

No. 13.

The Under Secretary for Lands to The Chairman, Local Land Board, Hay.

PROPOSED EXCHANGE—Affecting lands on Stonehenge, Baan Baa South, Cooma, and Yanga Holdings.

3 November, 1896.

THE papers relating to the Yanga portion of this exchange are enclosed, together with copies of those parts referring to the portions under offer for surrender—the originals in connection with the latter having been sent to the respective Boards of the districts within which the lands are situated.

The Minister wishes these matters to be dealt with concurrently, and at the earliest date possible.

The Chairman is therefore requested to have the case taken in hand at once for action as directed; and, in order that the Minister may be informed when the case will be dealt with, the District Surveyor should be consulted, and a report supplied under separate letter, stating the earliest date upon which the matter can be heard by the Board.

C.J.S. (for the Under Secretary).

English, Scottish, and Australian Bank (Limited), informed of reference. Submitted.—A.J.V., Clerk-in-charge, 6/11/96. See telegrams to Under Secretary for Lands and A. Lakeman, Esq., on enclosure, L.B. 96-6,075.—A.J.V., Clerk-in-charge, 7/11/96. To District Surveyor for necessary action.—A.J.V. (for Chairman, Hay), 10/11/96. Form F to Surveyor Somerville. Instructions have this day been issued to Surveyor Somerville. Lithograph P, it is suggested, should be exhibited at Hay, and lithograph Q.—J.G.F. (for District Surveyor), 21/11/96.

No. 14.

The Under Secretary for Lands to The Chairman, Local Land Board, Tamworth.

PROPOSED EXCHANGE—Affecting lands on Stonehenge, Baan Baa South, Cooma, and Yanga holdings.

3 November, 1896.

THE papers relating to the Baan Baa South and Cooma portions of this exchange are enclosed, together with copies of those parts referring to the other holdings affected, the originals in connection with the latter having been sent to the respective Boards of the districts within which the lands are situated.

The Minister wishes these matters to be dealt with concurrently, and at the earliest date possible.

The Chairman is therefore requested to have the case taken in hand at once, for action as directed; and, in order that the Minister may be informed when the case will be dealt with, the District Surveyor should be consulted, and a report supplied under separate letter, stating the earliest date upon which the matter can be heard by the Board.

C.J.S. (for the Under Secretary).

Urgent. Owing to the number of urgent instructions now in hand of a similar nature, I think the earliest time at which this case can be ready for Board action will be the end of February or the beginning of March, 1897. When writing my minute of 7 August, 1896, on papers Alienation 96-S,173, I was under the impression that the lands held by the Bank on Baan Baa South were those indicated on enclosed tracing by red tint; I now notice that the blue-tinted areas are also held in the same interest. The land south-westerly of the railway line is, generally speaking, of an inferior nature.—FRED. POATE, District Surveyor, 9/11/96.

Letter (memoranda) to Under Secretary, indicating that end of February or beginning of March next is the earliest time possible for Board action as to the Baan Baa South and Cooma lands, drawing attention to the supplementary preliminary information from District Surveyor as to general character of lands, &c.—W.F., 10/11/96.

Now for inspection as to character in detail and value in detail of the lands, and for report as to suitability or otherwise for profitable settlement of the Bank's lands on Baan Baa South and Cooma holdings.—WILLIAM FREEMAN, Chairman, 10/11/96.

Mr. Surveyor Sendall, for inspection and report at the earliest opportunity, having in view other instructions of a similar nature now in his hands.—FRED. POATE, District Surveyor, 10/11/96. Heliographs from comprehensive tracing, to illustrate your report, will be forwarded in a few days.—R.S., 13/11/96. Returned to the District Surveyor, with my report of 25 November, No. 96-70.—W. NEVILLE SENDALL, Surveyor, 25/11/96.

No. 15.

The Chairman, Local Land Board, Armidale, to The Under Secretary for Lands.

Sir, Department of Lands, Local Land Board Office, Armidale, 4 November, 1896.

In reply to your letter of the 3rd instant, I have the honor to inform you that necessary action has been taken in regard to proposed exchange of lands on Stonehenge pastoral holding, and the case will be considered by the Local Land Board at Glen Innes on the 23rd instant.

I have, &c.,

F. G. FINLEY,

Chairman.

No. 16.

11

No. 16.

The District Surveyor, Hay, to The Chairman, Local Land Board, Hay.

MEMORANDUM.

7 November, 1896.

If these papers (Yanga Exchange) are transferred to me during the next few days, I can have inspection of the lands made and report furnished in the first week of next month.

W.G.W.

I propose setting case for hearing at Hay (if parties consent and Minister sanctions) on either 12th December or 22nd December, and probably first day would be most convenient. Will case then be ready?—P.T., 7/11/96. The District Surveyor. Yes, case will be ready by 12th December; but as tracing has to be exhibited for a month, it is necessary that I should know definitely before 12th instant where case is to be heard.—W.G.W., 7/11/96.

No. 17.

Telegram from The Chairman, Local Land Board, Hay, to The Under Secretary for Lands.

Hay, 7 November, 1896.

Re proposed exchange affecting lands on Yanga, Stonehenge, &c., will Minister give consent for Yanga lands to be dealt with by Hay, instead of Balranald, Board? Reason, chiefly that I cannot personally attend at Balranald for a considerable time. Case can be dealt with at Hay on 22nd December.

FRED. TROLLOPE,
Chairman.

No. 18.

The Chairman, Local Land Board, Tamworth, to The Under Secretary for Lands.

MEMORANDUM.

Tamworth, 10 November, 1896.

Exchange desired by English, Scottish, and Australian Bank (Limited)—Lands on Stonehenge in Armidale Land Board District, on Baan Baa South and Cooma in Tamworth Land Board District, for Crown Lands on Yanga Holding in Hay Land Board District.

Your instruction in this matter to me was brought under my notice on return from circuit. Yesterday I made preliminary reference to the District Surveyor, and he reports that "owing to the number of urgent instructions now on hand of a similar nature, I think the earliest time at which this case can be ready for Board action will be the end of February or the beginning of March, 1897. When writing my minute of 7th August, 1896, on papers Alienation, 96-8,173, I was under the impression that the lands held by the Bank on Baan Baa South were those indicated on enclosed tracing by red tint. I now notice that the blue tinted areas are also held in the same interest. The land south-westerly of the railway line is, generally speaking, of an inferior nature."

I may state that this land, generally speaking of an inferior nature (the underlining is mine), is about three-fourths* the total area the English, Scottish, and Australian Bank seeks to give in exchange upon their Baan Baa Estate.

The earliest time that the matter may come before the Board is that named by the District Surveyor.

I would respectfully suggest that it is far more important that this matter as a whole should be at every stage very deliberately considered than unduly expedited, as it might be found when too late that the public interest is sacrificed in some respects. The different Boards, and even the different District Surveyors, may have different bases of value, and I am strongly of opinion that one experienced officer of high standing should, after personal inspection of the lands in detail, report on the whole proposal and give evidence before a Board.

I would suggest Mr. Robert McDonald, recently District Surveyor at Armidale, who it appears knows both the Stonehenge and the Yanga lands, should do this. His evidence should be read by each Board, if he inspects, &c., as I suggest.

I am pushed for time—just starting on circuit.

WILLIAM FREEMAN,
Chairman.

No. 19.

Office Memorandum.

YANGA-STONEHENGE, BAAN BAA EXCHANGE.

16 November, 1896.

In reply to directions sent out in regard to the earliest date on which the several Land Boards might be able to deal with their respective parts of the Stonehenge, Baan Baa South, Cooma, and Yanga Exchange, the Chairmen reply as follows:—

Armidale:—The necessary action has already been taken, and the case will be considered by the Board at Glen Innes on the 23rd instant.

Hay:—Should the Minister consent to the case being heard at Hay instead of Balranald, the matter can be dealt with at Hay on the 22nd proximo, but that the Chairman cannot attend at Balranald for a considerable time.

Tamworth:—After consultation with the District Surveyor, the earliest time that the matter may come before the Board at Narrabri is found to be the end of February or beginning of March.

Having regard to the fact that the large area applied for on the Yanga holding is close to the town of Balranald, and there is certain to be some local feeling in the matter, the Chairman's proposal to have the case dealt with at Hay on the 22nd proximo should not, it is thought, be approved of.

The

* This includes conditional leases.—W.F., 10/11/96.

The Minister's original intention in this case was that a special meeting of the Board should be called to consider the case. Probably the Chairman should be so directed now, and asked to name the earliest date upon which the case can be heard at Balranald.

In the case of the Narrabri Board the same course should be adopted, as the Chairman reports that the matter will not be disposed of in the ordinary course before the end of February or March next, and it is necessary that the Tamworth inquiry should be completed before the Balranald inquiry is commenced.

C. J. SAUNDERS.

For approval. Some means of having a meeting of the Narrabri Board should be arranged earlier.—H. CURRY, 16/11/96. Approved.—J.H.C., 16/11/96. Chairmen, Hay and Tamworth, asked by wire, 16/11/96.

No. 26.

18

No. 26.

The Chairman, Local Land Board, Hay, to The Under Secretary for Lands.

Sir,

Deniliquin, 18 November, 1896.

In reference to the hearing of the Yanga exchange case, I have the honor to inform you that I have existing Board meetings at which I have to attend, and which will hold me until the 24th December, 1896, viz.:—at Deniliquin, at Hay, at Hillston, and at Lake Cudgellico.

I have been exceedingly anxious to clear all the outlying districts of work before the extreme heat of the year began.

In this I have not been successful, as I have to travel to Hillston and Cudgellico in December; but if to this is added a journey to Balranald in February, I am afraid that my strength will be over-taxed.

Since the middle of April, I have been incessantly engaged at Board meetings, having, in addition to the ordinary work, dealt with the Western District appraisements and the appraisements of special areas.

I request to be informed if the inquiry into the Yanga exchange case can stand over until March without prejudice to the public interest.

I desire to add that the inquiry is one at which the Chairman should be present.

I have, &c.,

FRED. TROLLOPE.

Chairman.

Balranald Land Board, *in re* Yanga-Baan Baa-Stonehenge Exchange.—The Chairman of the Narrabri Board will endeavour to deal with his portion of the above proposal this month. The Chairman, Armidale, has already arranged for hearing his moiety. Mr. Trollope, Chairman of the Balranald Board, is, however, unable to name a date earlier than March next for the main inquiry, and he asks the Minister to allow the case to stand over until that date, for the special reasons set out in his letter enclosed. It may be remembered that the Bank officials have explained that it is most important that they should know at an early date whether the exchange is likely to be entertained, in order that they may dispose of their stock, and make the most economical arrangements possible for the future working of their station properties.—C. J. SAUNDERS, 20/11/96.

Mr. Trollope was affected by the heat of last summer, and no doubt this has something to do with his wish to avoid having to go to Balranald before March next. It would be desirable to have the case disposed of earlier. Mr. Trollope might be able to suggest some special arrangements as to travelling which the Department might consider.—H. CURRY, Acting Under Secretary, 20/11/96.

Approved.—J.H.C., 24/11/96. Chairman, Hay, asked by wire, 25/11/96.

No. 27.

Telegram from The Chairman Local Land Board, Tamworth, to The Acting Clerk-in-Charge, Land Board Office, Tamworth.

Coonabarabran, 19 November, 1896.

RESPECTING your telegram as to Baan Baa, &c., my answer is "No"; but send all necessary notices to parties to-day.

WILLIAM FREEMAN,

Chairman Land Board.

Notice to Manager, English, Scottish, and Australian Bank sent 17/11/96—*vide* L.B. 96-8890, herewith attached.

No. 28.

The District Surveyor, Hay, to Mr. Surveyor Somerville.

District Surveyor's Office, Hay.

(FORM F.)

MEMORANDUM OF INSTRUCTIONS.

(To be returned with reply).

Subject.	Reply. (If necessary, the reply should be by letter enclosing this instruction).
Mr. Surveyor Somerville is requested, at his early convenience, to inspect the Crown lands comprising the area shown by blue tint on the accompanying heliograph which is proposed to be granted in exchange for other lands without this Board District.	Returned to the District Surveyor in accordance with memo., 1/12/96.—RICHARD N. SOMERVILLE, Surveyor, 2/12/96.
It is desired that the character and value of these lands be fully reported upon, and also as to whether, irrespective of the value of the lands, there is any probability of their being required for closer settlement.	Reissued to Mr. Surveyor Steane.—J.G.F. (for District Surveyor), 3/12/96.
If it should occur to Mr. Somerville, after inspection, that a desirable modification in the form of alienation of the lands can be made, he will be so good as to suggest it. The improvements on the lands should also be reported upon without going into too much detail. J.G.F. (for District Surveyor), 21/11/96.	Dealt with by my report, 96-39, 15th December, 1896.—S. A. STEANE.

No. 29.

A. B. Briggs, Esq., for English, Scottish, and Australian Bank (Limited), to
The Secretary for Lands.

Dear Sir,

Lands Department, 24 November, 1896.

Referring to our interview relative to the Yanga-Baan Baa exchange, I understand that all the papers in connection with this matter are before you, but there is a difficulty about holding a Land Board meeting at Balranald owing to the Chairman's health. I trust, however, that you may see your way to carry out the promise given to dispose of the question at an early date, and would point out that a hearing at Hay would suit us equally well as Balranald.

If I could offer any assistance I shall be glad to wait upon you again.

Yours, &c.,
A. B. BRIGGS.

No. 30.

Telegram from The Chairman, Local Land Board, Deniliquin, to The Under
Secretary for Lands.

Deniliquin, 25 November, 1896.

Re Yanga exchange: Board members could perform duties at Hillston and Cudgellico, as no special cases there occur, in which event I could deal with case at Balranald on 18th December, if Minister will sanction hearing twenty-one days after tracing exhibited.

FRED. TROLLOPE,
Chairman.

The Chairman's recommendation may, it is thought, be adopted, provided the proposed exchange is fully advertised at Balranald. The land applied for by way of exchange is not far distant from that town. The Chairman should perhaps be asked who will act as Chairman at Hillston and Cargellico.—C. J. SAUNDERS, 26/11/96.

For approval. The direction that a tracing should be exhibited for a period of one month is not required by the Act or Regulations, but was conveyed by Circular 93-23. Regulation 286 appears to refer to a public purpose exchange. The General Regulations *re* exchanges are 294 to 302 inclusive.—H. CURRY, Acting Under Secretary, 27/11/96.

Approved.—J.H.C., 27/11/96. Inform Chairman by wire.—E.A.B., 27/11/96. Chairman Local Land Board informed by wire, 27/11/96.

Telegram from The Chairman, Local Land Board Office, Deniliquin, to The Clerk-
in-charge, Land Board Office, Hay.

Deniliquin, 25 November, 1896.

SEND Yanga exchange tracing for exhibition at Balranald by to-morrow night's post. Will hear on 18th December, if Minister sanctions.

FRED. TROLLOPE,
Chairman.

Please prepare notice and attach heliograph to go Balranald to-night's mail. Objections to be lodged on or before 18th December, 1896.—A.J.V., Clerk-in-charge, 26/11/96. Notice prepared and, with heliograph, forwarded to Crown Lands Agent, Balranald.—W.O.R., 26/11/96.

No. 33.

Surveyor Sendall to The District Surveyor, Tamworth.

REPORT on proposed surrender of lands within Baan Baa South and Cooma holdings, counties of Pottinger and White, Land District of Narrabri, Central Division.

Sir,

Narrabri, 25 November, 1896.

I have the honor to report that between the 19th and 22nd November, 1896, in compliance with instructions of the 13th November, No. 96-56, I inspected lands within Baan Baa South, No. 62S, and Cooma, No. 602, pastoral holdings, counties of Pottinger and White, Land District of Narrabri, Central Division, offered for surrender by the English, Scottish, and Australian Bank (Limited), in connection with the Bank's proposal to exchange lands under the 47th section of the Crown Lands Act of 1895.

Other lands offered for surrender are on Stonehenge holding, No. 108, Eastern Division, Land District of Glen Innes, and the lands asked in exchange are on Yanga holding, No. 76, Central Division, Land District of Balranald.

The

The lands within Baan Baa South and Cooma holdings are suitable for settlement, and there would be no difficulty in disposing of them under the provisions of the Crown Lands Act of 1895.

The improvements on portions 16 and 11, parish of Baan Baa, are extensive, comprising homestead, woolshed, yards, outbuildings, and clearing—a total value of about £1,700.

These would probably have to be sacrificed, as they are too costly for the profitable occupation in small areas of land surrounding them.

With this exception, the improvements are not such as should bar selection, being necessary for working the land, and would rather tend to attract settlement, as they enable future tenants to enter immediately after selection into profitable occupation of the country. All these lands are within easy reach of the railway—from half a mile to 6 miles from Narrabri West and Baan Baa Stations.

Enclosed is a schedule giving an estimate of the value of improvements on the lands offered for surrender. It was not considered advisable to spend time inspecting those improvements closely, in view of the fact that if the surrenders are accepted, and the land becomes available for future settlement, they will have to be appraised at their value then to an incoming tenant, and present valuations would be of little use.

The approximate total present value is £5,789.

Following are descriptions of the portions offered for surrender on Baan Baa South and Cooma, which are shown on heliographs accompanying this report, in red colour:—

County of Pottinger, portions 7, 63, 64, 65, parish of Baan Baa, 578½ acres. Within part of portion 65, about 80 acres is a stony and gravelly ridge, good red soil, timbered with box and ironbark, good grazing land; the remainder, and the other portions, 498½ acres, are level chocolate soil, small open plains, and very open box and myall; rich grazing land, and patches fair agricultural. The land is broken by watercourses, and there is permanent water in Tulla Mullen Creek, on portion 65. The timber, except shade trees, is ringed; distance to Baan Baa railway platform, 6 miles. Value, 50s. per acre.

Portions 8, 14, 9, 15, 10, 77, 16, 11, 12, 62, 61, 46, 48, Baan Baa, 1,135 acres. West of Tulla Mullen Creek, about 460 acres; the country is timbered with box, oak, pine, and rosewood; the soil is deep red loam, good grazing and rich agricultural land; the timber has been ringed, and there is a light growth of suckers. The remainder, 675 acres, consists of small open plains and open box and myall country, chocolate, black, red, and grey soils; all rich grazing land, and patches of fair agricultural land; the timber has been ringed, except about half of portion 48, where there is a heavy growth of box timber; there is permanent water in Tulla Mullen Creek at two points, portions 14 and 16; distance to Baan Baa railway platform, 4 to 5 miles. Value, 50s. per acre.

Portion 4, parish Baan Baa, 50 acres, consists of black and chocolate soils, timbered heavily with box, yellow-jacket, and apple; good grazing and fair agricultural land; permanent water Namoi River; 4 miles to Baan Baa railway platform. Value, 40s. per acre.

Portion 5, parish Baan Baa, 320 acres. Open plain and very open box and myall country, ring-barked; black and chocolate soils; rich grazing and patches fair agricultural land; 3 miles to Baan Baa railway platform; value, 50s. per acre.

Portions 51, C.P.L. 2,944, part C.P.L. 2,238, north-east of railway line, parish Baan Baa, 850 acres. All timbered with box, oak, rosewood, and pine; deep red loam soil; good grazing and rich agricultural land; the timber has been ringbarked, and there is a light growth of suckers; 4 miles to Baan Baa railway platform. Value, 50s. per acre.

Portion 78, parish Baan Baa, 160 acres. Consists of red and gray clay soils, timbered with box, oak, rosewood, and myall, ringbarked; good grazing land; distance to Baan Baa railway platform, 4 miles. Value, 40s. per acre.

Portions 54, 55, 59, and 68, parish Baan Baa, 1,520 acres. Small open plains and very open box and myall, some belar west of Tulla Mullen Creek; black and chocolate soils; rich grazing and patches of fair agricultural land; the Tulla Mullen Creek through these portions is a swamp, from 10 to 15 chains wide, generally dry, and good grazing country; the box timber on this is heavier than on surrounding land, and the whole has been ringbarked; from Baan Baa railway platform, 1½ to 4 miles. Value, 45s. per acre.

Portions 56 and 58, parish of Baan Baa, 233½ acres. Nearly all open plain, a little box and myall timber; black and chocolate soils; rich grazing land, and patches fair agricultural; 1½ to 3 miles from Baan Baa railway platform. Value, 50s. per acre.

Portions 69, 70, and 79, parish Baan Baa, 520 acres. About 150 acres light sandy soil; oak, box, pine, gum, and belar timber; poor grazing land; about 100 acres stony and gravelly ridge; ironbark, pine, and scrub; poor grazing land; and about 270 acres open box and myall, and Tulla Mullen Swamp; good grazing; all the country ringbarked, with now a growth of young timber and scrub; ¼ to 1½ mile from Baan Baa railway platform. Value, 30s. per acre.

Part C.P.L. 2,238 South-west railway line, and portion 80, parish of Baan Baa, 1,130½ acres. Box, pine, rosewood, and belar timber; a little ironbark; timber ringbarked, and about 640 acres heavy growth of suckers, the remainder light growth; deep red loam inclining to sandy; good agricultural soil and fair grazing; 2 to 4 miles from Baan Baa railway platform. Value, 35s. per acre.

Portions 87 and 88, parish of Baan Baa, 160 acres. Heavy belar timber; about half grey crab-hole ground and half red soil; good grazing if ringbarked; 2 miles from Baan Baa railway platform. Value, 30s. per acre.

Portions 92 and 94, parish of Baan Baa, 1,200 acres. Box, pine, oak, rosewood, and belar timber; dense scrub of pine, oak, rosewood, and wattle; light sandy and sandy loam soil; fair grazing if ringbarked and scrub cut; and patches of fair agricultural land; about 400 acres ringbarked; heavy growth of suckers and scrub. Baan Baa railway platform 1½ mile. Value, 25s. per acre.

Portions 6, 84, and 85, parish of Baan Baa, 640 acres. Box, oak, pine, rosewood, and belar timber; light scrub and undergrowth; red sandy and sandy loam soil; fair grazing when ringbarked and scrub cut; and patches of fair agricultural land; all ringbarked; light growth of suckers and undergrowth. A waterhole on the south boundary of portion 85 is nearly permanent; a permanent supply could be secured at little cost by a small dam. Distance from railway platform at Baan Baa 1 mile. Value, 30s. per acre.

Portion 95, parish of Baan Baa, 537½ acres. Box, oak, pine, rosewood, and belar timber; pine, oak, wattle scrub, and undergrowth; light sandy and sandy loam soil; fair grazing land if ringbarked and scrub cut, and patches fair agricultural land; 3 miles from Baan Baa railway platform. Value, 25s. per acre.

Portion

Portion 74, parish of Baan Baa, 80 acres. Box, pine, oak, and rosewood timber; light sand and sandy loam; fair grazing when ringbarked, and patches fair agricultural land. Has been ringbarked, but there is now a very heavy growth of suckers. Distance from Baan Baa railway platform, 4 miles. Value, 25s. per acre.

County of White, portions 2, 3, 4, and 19, parish of Gorman, 2,480 acres. About 400 acres open box ridges, a little currajong; red stony soil; good grazing; about 500 acres heavy belar country; black and grey soils; good grazing if ringed; about 1,280 acres box, pine, rosewood, oak, and a little belar; pine, oak, rosewood, and wattle scrub; light sand and sandy loam; fair grazing if ringbarked and scrub cut, and patches fair agricultural land. All this 2,180 acres has been recently ringbarked. The remaining 300 acres is a light sandy and stony ridge timbered with bloodwood, gum, ironbark, and pine, with dense scrub of pine, wattle, currawong, five-corner, and grass-tree; very poor country; not ringbarked; 4 to 6 miles from Baan Baa railway platform. Value, 25s. per acre.

Portions 22 and 23, parish of Tullen Mullen, 2,560 acres, county of Pottinger. About 700 acres, in four areas as shown on heliograph. Box, pine, and rosewood, light pine, wattle and rosewood scrub; red sandy loam; fair grazing country when ringbarked, and fair agricultural land. These areas are ringbarked. The remaining 1,860 acres are mostly light sandy soil, a few patches of sandy loam; timbered with box, gum, pine, oak, and rosewood; dense scrub of pine, oak, wattle, rosewood, and undergrowth; inferior country. Distance from Baan Baa railway platform, 2 to 4 miles. Value, 17s. 6d. per acre.

On Cooma holding, portion 98, parish of Cooma, 506 acres. About 150 acres dense belar and brigalow scrub; black and grey soils; good grazing if timber is killed; 356 acres ironbark, box, and a few brigalows, oak, and pine; sandy and red clay soils; good grazing if timber is killed, and fair agricultural land; all ringbarked. On the 150 acres a heavy growth of young timber, and on the remainder a moderate growth. This is a valuable agistment paddock, being only $1\frac{1}{4}$ mile from Narrabri West railway station. Value, 70s. per acre.

Portions 5 and 6, parish of Cooma, 1,280 acres. About 250 acres dense brigalow; grey and black soil. 150 acres low ground; gum timber; grey soil. 400 acres red sand and sandy loam; box, pine, and oak timber; and 480 acres light loose sand, with gum, apple, box, and pine timber; pine and wattle scrub. The area, except about 400 acres, has been ringbarked, but is now heavily overgrown with suckers, pine and wattle scrub, and undergrowth in a worse condition than unimproved country. There is permanent water in Brigalow Creek at Borah Waterhole. Distance from Narrabri West railway station, 3 to 5 miles. Value, 20s. per acre.

Portions 1 and 2, parish of Blake, 2,560 acres. About 400 acres dense brigalow; grey soil; good grazing if timber is killed. Remainder, light sand and sandy loam soil; timbered with ironbark, box, oak, and pine; pine, wattle, oak scrub, and light undergrowth; fair grazing land; and patches of fair agricultural land. All, except the 400 acres brigalow, has been ringbarked, and there is a moderate growth of suckers. Five miles from Narrabri West railway station. Value, 25s. per acre.

Enclosed is a Schedule containing areas and values of lands offered for surrender, showing an area of 14,155 $\frac{1}{2}$ acres (value, £23,203), on Baan Baa South; and on Cooma an area of 4,346 acres (value, £6,251); a total of 18,501 $\frac{1}{2}$ acres (value, £29,454); average value per acre, 32s.

I have, &c.,

W. NEVILLE SENDALL,

Surveyor.

Time occupied in service.—Field, 3 days; office, 3 days.

[Enclosure.]

To accompany my report to the District Surveyor of the 25th November, No. 96-70.

W. NEVILLE SENDALL,
Surveyor.

No. 34.

Telegram from The District Surveyor, Hay, to The Chairman, Local Land Board, Deniliquin.

Deniliquin, 26 November, 1896.

I UNDERSTAND you propose to hear Yanga on 18th, Balranald. Surveyor Somerville, owing to illness, will be unable to start for Yanga inspection until 7th December. Work will occupy a total of twelve days, including the work in my office; so that the 18th is too early. Somerville is already summoned for Hay Court on 12th December, *re* widening road through Groongal, Wyvern, and Brungagee. Perhaps you can hear this on 7th, by getting Mr. Mair's consent.

W. G. WALKER,
District Surveyor.

No. 35.

Telegram from The Chairman, Local Land Board, Deniliquin, to The Clerk-in-charge, Land Board Office, Hay.

Deniliquin, 27 November, 1896.

PLEASE state if you posted tracing *re* Yanga exchange as directed.

FRED. TROLLOPE,
Chairman.

Informed tracing sent yesterday, and have worded notice to permit of any alteration in date.—A.J.V., 27/11/96. Prepare notice for *Gazette* and papers. Urgent. For Board, Balranald, 21 December, 1896. Instruct Crown Lands Agent alter date on notice to 19th.—A.J.V., Clerk-in-charge, 2/12/96. Mr. Russell. Wire to *Gazette*. Notice to *Balranald Recorder*. Crown Lands Agent informed.—W.O.R., 2/12/96. Let notices issue for 21st December, 1896. Urgent.—A.J.V., Clerk-in-charge, Hay, 2/12/96. Mr. O'Hanlon. Court at Balranald on 21st December, 1896. Notice 3/12/96, to the Manager, English, Scottish, and Australian Bank (Limited) care of A. Lakeman, Esq., Hay, and District Surveyor, Hay.—W.O.H., 3/12/96. Also, Manager English, Scottish, and Australian Bank (Limited) Sydney.—W.O.H., 3/12/96.

No. 36.

Telegram from The Chairman, Local Land Board, Deniliquin, to The Under Secretary for Lands.

Deniliquin, 28 November, 1896.

MR. RODGERSON, Police Magistrate, Hillston, at present away on leave. Will inform you *re* Hillston-Cudgelico Courts when I can hear from him.

FREDK. TROLLOPE,
Chairman.

No. 37.

The District Surveyor, Tamworth, to The Chairman, Local Land Board, Tamworth.

Department of Lands, District Surveyor's Office, Tamworth.

Proposed surrender of Freehold Conditional Purchase and Conditional Lease Lands on Baan Baa South and Cooma Holdings, Land District of Narrabri, in connection with an exchange proposal by the English, Scottish, and Australian Bank, affecting lands on Stonehenge, Baan Baa South, Cooma, and Yanga Holdings.

IN view of Mr. Surveyor Sendall's report, 96-70, of the 25th instant enclosed herewith, it appears that the acquisition by the Crown of the freehold conditional purchase and conditional lease lands on Baan Baa South and Cooma Holdings in the Land District of Narrabri will promote settlement. The description and value of these lands, which are indicated by red tint on enclosed heliographs marked "A" and "B," are fully dealt with in that report.

FRED. POATE,
District Surveyor.

Cost to date, £15 15s., exclusive of Board's expenses.—F.P., Narrabri, 30 November, 1896.

What are the Survey Branch costs to date, including for your attendance and the attendance of Mr. District Surveyor Sendall, in connection with the Board inquiry, for Mr. Sendall's inspection, &c.?—WILLIAM FREEMAN, Chairman, Narrabri, 30/11/96. The District Surveyor.

See above.—F.P., 30/11/96.

No. 38.

Telegram from The Chairman, Local Land Board, Hay, to The Under Secretary for Lands.

Hay, 30 November, 1896.

Re your wire of 27th November, propose Mr. Rodgerston, Police Magistrate, sit as Chairman, with Mr. Witcombe as member, Hillston and Cudgelico.

FRED. TROLLOPE,
Chairman.

Mr. Trollope will not be present at the Hillston and Cudgelico Board's sittings referred to in this telegram, and it is therefore submitted that he be informed the Department has no objection to his proposal that Mr. Rodgerston, Police Magistrate, should act as Chairman under the provisions of subsection 8 of section 14 of the Crown Lands Act of 1854, in his absence on the occasion, with Mr. Witcombe as member. H. L. THOMPSON (in charge Ministerial Branch), 2/12/96.

May be informed.—C. J. SANDERS, 2/12/96. H. Curry, Acting Under Secretary, 3/12/96. Approved.—J.H.C., 4/12/96. Chairman informed, 4/12/96.

No. 39.

Caption to Depositions of Witnesses.

Crown Lands Act of 1894—(Part II, Section 14, Subsection 1).

New South Wales, }
to wit. }

THE examination of Walter Neville Sendall, of Gunnedah, in the Colony of New South Wales, Staff Surveyor; Walter Scott, of Narrabri; Alfred Farrand, of Baan Baa; and Frederick Poate, of Tamworth, in the said Colony: Whereas it hath come before the Board whether the application for surrender and exchange of lands within Baan Baa and Cooma pastoral holdings by the English, Scottish, and Australian Bank (Limited), should be recommended or otherwise; and it hath been found necessary to investigate the said matter on oath, the depositions of the several witnesses are appended hereto. Number of pages of evidence, 14; number of exhibits, 3.

[Enclosure.]

THIS deponent, *Walter Neville Sendall* of Gunnedah, Staff Surveyor, being duly sworn, maketh oath and saith as follows:—

By the District Surveyor: I have just read in open Court my report on the lands proposed to be surrendered by the English, Scottish, and Australian Bank (Limited) on Baan Baa South and Cooma holdings; that report is marked Exhibit C, and its Schedules Appendixes 1 and 2; the report is illustrated by heliograph marked Exhibits A and B; I consider the acquisition of these lands by the Crown will promote settlement. For Exhibit C, see No. 33.

By the Chairman: The values I have given are the values I consider could be easily obtained by the Crown exclusive of the improvements; there are certain of the portions I value higher now than if they had never been ringbarked; they are now marked by a X on Appendix 1; portions 5 and 6, parish of Cooma, county of White, have been damaged by the neglect of the ringbarking after it was done, and are of less value now than before the timber on them was touched; I cannot say what the depreciation is, but I do not consider it much; there was no second growth to speak of remaining on portions 63, 64, 65, and 7; west of the creek it would cost about 6d. per acre to clear the suckers and light scrub—it is only about time now to attend to this new growth; on portion 51, C.P.L. 2,944, and part of C.P.L. 2,238, north-east of the railway, the same remarks will apply; in regard to the part of C.P.L. 2,238, south-west of the railway, it will cost 6d. per acre to remove the suckers; I do not consider there has been any neglect there; portion 80 has been neglected, but the neglect can be remedied for 1s. per acre; the ringbarking has not injured this portion; the ringbarking on portions 92 and 94 is not at the present time an advantage; it has been neglected, and would cost about 1s. per acre to remedy the neglect; all the country south-west of the railway is country on which it is very difficult to kill the timber, and if the ringbarking be neglected it would become worse than its original state, on account of suckers and increase of scrub following the ringbarking; the country south-west of the railway is inferior grazing country in its original state.

What would it carry when fenced and water provided? It is not fit to put sheep on.

It would cost about 3s. per acre to kill the timber entirely on the parts worth ringbarking; on portions 2 and 4, parish Gorman, county White, there are about 300 acres not worth ringbarking; it is practically worthless at the present time; if not fenced off from the body of the scrub by a rabbit-proof fence it would be a harbour for vermin; on portions 22 and 23, parish Tulla Mullen, there are about 500 acres nearly as bad; I would value it at not more than 5s. per acre; the ringbarking on portions 1 and 2, parish of Blake, is now in a state to be attended to by suckering—cost about 6d. per acre; to the best of my belief, some of the box is narrow-leaved and some is round-leaved box, but I cannot now locate them; the part south-west of the railway worth improving would carry a sheep to 2 acres for wool only, when the timber is killed, at a cost of 3s. per acre; I have had no practical experience in grazing, but from what I have read, and from my own inquiries, I judge the net return per sheep to be 3s. to 3s. 6d. per annum.

What would be the gross amount obtained from wool—say, Merino sheep? I could not give an estimate; I think three-fourths of the part south-west of the railway would be worth clearing for cultivation of wheat; with ordinary means of cultivation used in New South Wales, so far as I know it, I believe this country would return 20 bushels of wheat to the acre in fair average seasons; I judge it to be fair average wheat land, as regards soil and climate.

Would you be surprised to learn that the yield for the whole colony is not more than about 13 bushels to the acre? Yes.

By Mr. Farrand: All the sheep I saw on the run, on both sides of the railway line, were in good condition, and some very fat; and I saw sheep on the parts that had suckered heavily.

By the Chairman: Some of the country is suitable for homestead selection, the balance for settlement lease; I am unable to say whether the wheat crops in the Narrabri District are a success or a failure this year.

THIS deponent, *Alfred Farrand*, of Baan Baa, station manager, being duly sworn, maketh oath and saith as follows:—

By the Chairman: I have not been running any sheep on Cooma for the last twelve months; I have been running sheep on the whole of Baan Baa, which comprises about 27,000 acres; I shored about 16,000 last season, and in 1895, 16,000; on an average I run about 20,000 sheep—all dry sheep; I do not breed at all; the bales of wool I send away from Baan Baa would average about 400 lb.; in 1895 I sent away 247 bales, and this year 265; in 1895 the clip averaged 5½ lb. of wool per sheep; the wool realised a gross return of about 3s. 4d. per sheep; this year the clip averaged 6 lb. 14 oz. of wool per sheep; if anything, the price of wool is a little weaker this year than last; the wool has not been sold yet this year; we sell in London; the extra cost of sending it to London is about 4d. per sheep; the gross return I have given is for London; I cannot give an estimate of the cost of production of the wool.

By the District Surveyor: I run from 1,000 to 1,200 cattle on Baan Baa and Cooma—a combined area of about 49,000 acres—as well as the sheep; I also take in a good deal of stock on agistment on Cooma; I receive about £150 per annum for agistment on Cooma without any extra cost; I charge 2d. per head per night; I have about fifty horses on the two stations; during the last twelve months I have sold about 150 fat cattle; last season was a bad season for fattening; I did not send any fat sheep to market during the last twelve months, but I sold 3,000 sheep to Edgeroi as stores, many of which were fats; the year before I sold between 2,000 and 3,000 fat sheep.

By the Chairman: The gross return per head would be about 9s. per head per annum; I breed nearly all the cattle on Baan Baa and Cooma; I have only bought 200 head in six years; I lost from eighty to 100 cattle from starvation and exposure in the winter of 1895; this is the only loss I have had in cattle during the six years I have been on Baan Baa; they would be worth about £2 10s. per head before being starved; I did not make any allowance for this loss in calculating the return per beast.

By

By the District Surveyor: I lost between 2,000 and 3,000 sheep in the winter of 1895, which was an exceptionally bad winter.

By the Chairman: In July, 1895, store sheep were worth about 4s. per head; the whole of the season, from shearing to shearing, was bad.

This deponent, *Frederick Poate*, of Tamworth, District Surveyor, being duly sworn, maketh oath, and saith as follows:—

By the Chairman: The report by Mr. Surveyor Sendall on this proposed surrender was only completed in time to reach me this morning, and I have not had sufficient time to design the area into suitable blocks for settlement; however, after looking into the matter as far as time will permit, I think that from thirty to thirty-five persons can be settled on the area that will become available, in conjunction with reserves and reserves from lease which are no longer required; I mean from thirty to thirty-five separate holders, but it is only an estimate, and after the examination of the Crown lands, about 30,000 acres under lease, it may be necessary to modify this estimate; I have very little knowledge of the land held under lease—certainly not enough to define areas; I would design it for homestead selections and settlement leases—twelve to fifteen of the former, and eighteen to twenty of the latter; on the south-west of the railway it would require 2,560 acres and upwards, and I think it would all go within two years, but I cannot say whether on the basis of Mr. Sendall's values; the station is paying a rental of 2½d. for Crown lands*, and they are surrendering their improvements for an extension of the lease, which means another 2½d. per acre. This capitalised, at settlement-lease rates, viz., 1½ per cent., is £1 13s. 4d. per acre; I am unable to say the charge for loans, on good security, at the present.

Decision of Local Land Board, Narrabri.

Crown Lands Act of 1884—(Part II, Section 14, Subsection 4.)

New South Wales, }
to wit. }

WHEREAS on the 30th day of November, 1896, and on the 2nd day of December, 1896, it became a matter for investigation before us to appraise the values of all the lands in the Cooma and Baan Baa Estates, in the Land District of Narrabri, owned by the English, Scottish, and Australian Bank (Limited), under fee simple, conditional purchase, and conditional lease, in connection with the application of that Bank for the acquirement, by way of exchange, for those lands, and the lands comprising the Bank's estate at Stonehenge, in the Glen Innes Land District, of certain lands within the Yanga pastoral holding, in the Land District of Balranald, sections 6 and 46, Crown Lands Act of 1889, section 47, Crown Lands Act of 1895, and having taken evidence and inquired into the said matter, we appraise the unimproved values of the above stated Cooma Estate and Baan Baa Estate lands, on a freehold basis, at the rates specified in red ink, in Appendix 1 to Exhibit C enclosed, making the total value of the 18,501½ acres, £19,171 4s. 2d.—an average value of £1 0s. 9d. per acre, on a freehold basis.

We report the cost to date as £20 sterling, including £15 15s. for inspection, &c., reported by the District Surveyor, and £4 15s. cost of Board inquiry.

Mr. Alfred Farrand appeared for the English, Scottish, and Australian Bank (Limited), on 30th ultimo.

Given under our hands, at the Court-house, at Narrabri, in the Colony of New South Wales, this 2nd day of December, 1896.

WILLIAM FREEMAN, Chairman.

No. 47.

Extract from *The Riverina Recorder*, 9 December, 1896.

BALRANALD MUNICIPAL COUNCIL.

THE usual fortnightly meeting was held last Monday. Present: The Mayor (in the Chair), Aldermen Greenham, Hartwell, Tyson, and Dowling.

General Business.

Regarding the special Government grant of £80, it was decided to expend the same in lowering the drains in Myall and Court streets and other places.

The Mayor then drew attention to the surrender of station lands on Baan Baa, Cooma, and Stonehenge, the property of the E. S. and A. Bank (Limited), in exchange for lands on Yanga Station. If it were allowed to take place it would mean the locking up for ever of about 30,000 or 40,000 acres of land near the town. Yanga Station already covered over 300,000 acres, and the exchange would considerably increase it.

Alderman

Alderman Tyson thought they were a little premature. The exchange would come before the Land Board, and it could then be opposed.

The Mayor said the Minister had the power to grant the exchange without it going before the Board.

Alderman Greenham said that all objections must be in before the 18th instant; and, on the motion of Alderman Dowling, seconded by Alderman Tyson, it was resolved that Sir J. P. Abbott be written to on the matter.

The meeting then rose.

No. 48.

The District Surveyor, Armidale, to The Chairman, Local Land Board, Armidale.

PROPOSED Exchange—Surrender of land on Stonehenge, Baan Baa South, and Cooma Holdings in exchange for land on Yanga Holding.

District Surveyor's Office, Armidale, 10 December, 1896.

THIS is an application to surrender the whole of the freehold, conditional purchase, and convertible conditional lease land belonging to the English, Scottish, and Australian Bank (Limited), situated on the Stonehenge pastoral holding, No. 108, Eastern Division (Graham's Valley Run) Land District of Glen Innes.

The lands applied for in exchange are situated in the Land District of Balranald, on Yanga pastoral holding.

From the enclosed papers, it appears that, so far as this Land Board District is concerned, all that is required is a report as to the suitability for settlement of the land offered for surrender, and an appraisal of its value.

The portions offered for surrender are specified in the enclosed type-written schedule, marked A, and are tinted red on lithograph "X" herewith.

I have made a general but careful inspection of the area which the Bank proposes to surrender, with the exception of the 3,119 acres in the parishes of Clifton and Fletcher, north of the Beardy Waters, and of portion No. 90, parish of Ben Lomond, the values of which had already been assessed by the Board in connection with the proposed surrender and exchange dealt with on the 20th December, 1895, (Papers L.B. 95-12,619) and of which I only made a cursory inspection.

The country is chiefly of basaltic formation, with occasional granite out-crops. The principal indigenous timber is gum, peppermint, black sally, and a little stringybark, with occasional belts of wattle.

The flats fronting the Beardy Waters, on its south bank, from special area No. 14,418 upwards to a little above water reserve No. 14,408, are in some places over half a mile in width, and consist of rich alluvial soil, nearly the whole of which is fit for the cultivation of maize, pumpkins, &c., or cereals, while the ridges abutting thereon, though steep in places, consist for the most part of good chocolate soil.

Along the course of the Graham's Valley Creek the soil is perhaps hardly of so rich a character as on the Beardy Waters; but the luxuriant crops at present to be seen on the adjoining holdings indicate that the lower portions of it at any rate are thoroughly suited for the cultivation of cereals. Up the creek the flats gradually become smaller.

On the upper portion of the main waters the hills rise abrupt and stony for some distance, until a gently undulating plateau of considerable elevation is reached, which is intersected by numerous small streams of water.

This elevated plateau, forming part of the Ben Lomond tableland, slopes gradually up to the summit of the range, near Mount Kumbie, attaining a height of considerably over 4,000 feet above sea-level.

Nearly the whole of this elevated country, which may be described as gently rolling downs with occasional extensive flats, consists of very rich chocolate soil, fit for the culture of oats, potatoes, hops, and is very well suited for orchard purposes, due consideration being given to the somewhat severe character of the winters on account of the high elevation.

A comparatively large quantity of the area under consideration is steep, much of it is stony; but, without exception, so far as I could see, the soil of the whole is of rich quality and carries a very close sward of natural grasses, and it should easily support a beast to five (5) acres.

One great drawback to a large portion of it, especially the upper part of the Graham's Valley watershed, as regards its adaptability for sheep-grazing, is the large number of springs, which, of course, also militate against it for the depasturage of cattle, although to a considerably less degree than for sheep.

During the summer months it is evidently grazing country of a high order, but I am given to understand that the winters are exceedingly severe.

There is an unfailing supply of water in Beardy Waters, Graham's Valley Creek, Stonehenge Creek, Maybole Creek, and in the numerous springs above mentioned.

During the time at my disposal it was out of my power to attempt any valuation of the existing improvements, which consist of ringbarking, a substantial wire fence of about 35 miles round the external boundaries of the large block, which is subdivided into numerous paddocks, and the homestead, situated on portion 45, parish of Ben Lomond; the value of the latter, however, is not extravagant, being probably under £100.

Besides the large area, of which I have endeavoured to indicate the leading characteristics, there are two much smaller ones, which are included in the proposed surrender.

One of these, portion 90, parish of Ben Lomond, may be passed at present without further comment, as it was included in the proposed exchange before-mentioned (L.B. 95-12,619) and consequently its value has been already appraised by the Board.

The other portion, No. 12, parish of Fletcher, containing 40 acres, is undulating country, embracing good grazing-land; but its principal value, as regards the portions immediately surrounding it, is its unfailing supply of water. It appears possible that some mistake has been made with regard to the offer of this portion for surrender, as an adjoining landowner—A. Henman—claims to have purchased it from the Bank, and now occupies it, having fenced it in with a substantial fence. Should, however, it be found that his claim to it is untenable, and that it still forms a portion of the Bank's estate, I do not anticipate any difficulty would arise in disposing of it.

Very nearly the whole area offered has been ringbarked, only just sufficient for shade and shelter having been retained. The effect of this irremovable improvement has, of course, been taken into consideration by me in estimating the present value of the land, but the removable improvements, as before indicated, I have not attempted to assess.

I should mention that, in consequence of the wholesale ringbarking which has been carried out, timber for fencing or building purposes is exceedingly difficult to procure within a reasonable distance.

In addition to a consideration of the quality of the soil, &c., the most potential factors in deciding on the suitability or otherwise of any area for settlement purposes, are naturally its degree of accessibility to railway station and market, its postal arrangements, and also the amount of facilities afforded for enabling the rising generation to avail themselves of scholastic advantages.

In these respects the area is conveniently situated: Graham's Valley Post Office is within a mile, the Public School of the same name being somewhat further. The distances to the Glen Innes and Glencoe railway stations are respectively about 12 and 8 miles by good roads, a bridle track to the latter being only 2½ miles, while from the upper part of the property, Ben Lomond railway station is distant about four (4) miles by a very fair road. Maybolic Public School is situated within half a mile from the more western part of the holding.

I have made a careful valuation of the whole area offered for surrender with the exception of those already assessed by the Board, and having allowed what I consider to be due weight to each of the various component factors which together determine value, I am of opinion that it may be taken all round at £1 2s. 6d. per acre. I therefore consider that the total value of the 17,623 acres offered for surrender on a freehold basis to be £20,281, made up as follows:—3,293 acres previously appraised at £4,160, and the further area now included in the proposal, viz., 14,330 acres, at £1 2s. 6d. per acre.

The proposed surrender is of a somewhat novel character, not permitting the same person to make an actual comparison of the area offered for surrender with the one applied for in exchange, which, of course, ensures the correctness of their relative valuations as they are then viewed from an identical standpoint; I have, therefore, taken special care in this case to guard against my views being tinged with any bias, dealing, as I do, with only one side of the question in the exchange; but I have no hesitation in stating my opinion that the surrender of the area proposed would be advantageous.

Taken in conjunction with the Crown lands included in the former exchange (blue edging), and the conditional leases (brown tint) which, not being convertible, would revert to the Crown, there would be an area of about 23,000 acres practically in one block available and suitable for settlement.

On account of the quality of the land, its proximity to the railway, and general convenience of access, and despite the drawbacks to which I have drawn attention, I am of opinion that only judicious subdivision would be required to render it attractive to intending landholders under the liberal provisions of the Crown Lands Act of 1895, and that settlement would be advanced by the proposed surrender.

The costs of inspection, report, and office work in connection with this proposal amounts to £7 7s.

I have the honor to invite attention to the Bank's prior application to consolidate their Graham's Valley property, which has been previously alluded to, with regard to which survey has already been effected by direction of the Minister for Lands.

This minor exchange involved the surrender of the portions edged red on lithograph "X" in exchange for those edged blue.

In connection with this minor exchange, the expenses to date in this office amount to £65 5s. including the cost of surveys.

In reference to these surveys the question is submitted whether the expenses should be borne by the Bank in the event of the minor exchange being abandoned in favour of the larger proposal.

The survey fees amounted to £50, and the surveys will not be of much utility if the larger exchange is completed.

The Bank first wrote on 23rd July, 1896, suggesting the larger exchange, and asking if it were likely to be acceptable; and in that letter they requested a stay of proceedings in connection with exchanges on "Cooma" and "Baan Baa South" holdings, but no reference was made to the exchange on "Stonehenge" holding.

The formal application for the larger exchange was not lodged until 30th October, 1896, and at that date the whole of the expenses above mentioned (£65 5s.) had been incurred. It therefore appears that the Crown is fairly entitled to expect payment thereof from the Bank.

D. M. MAITLAND,
District Surveyor.

No. 49.

Caption to Depositions of Witnesses.

Crown Lands Act of 1884—(Part II, Section 14, Subsection 1).

New South Wales, Glen Innes, }
to wit. }

THE examination of Duncan M. Maitland, of Armidale, in the Colony of New South Wales, District Surveyor; and Arthur S. Menzies, of Reedy Creek, in the said Colony: Whereas it hath come before the Board whether the application for surrender and exchange of lands on Stonehenge pastoral holding (and Graham's Valley), No. 109, by the English, Scottish, and Australian Bank (Limited), should be recommended or otherwise, and it hath been found necessary to investigate the said matter on oath, the depositions of the several witnesses are appended hereto. Number of pages of evidence, 2; number of exhibits, 2.

[Enclosure.]

THIS deponent, *Duncan Mearns Maitland*, of Armidale, being duly sworn maketh oath and saith as follows:—I am District Surveyor for the Land Board District of Armidale; I inspected and reported on the land proposed to be surrendered on Stonehenge and Graham's Valley Run, by the English, Scottish, and Australian Bank; I had in my report, Exhibit "A," and plan, Exhibit "B." (*By consent report here read over.*) I inspected on 7th and 8th December.

For Exhibit A,
see No. 48.

By Board: I think the areas available for settlement would range approximately from 250 to 1,280 acres; the most desirable holdings to subdivide the land into would be homestead selections and settlement leases; I believe it would be a boon to the district.

Sworn by the deponent, at Glen Innes, }
this 11th of December, 1896,— }

This

This deponent, *Arthur Stuart Menzies*, of Reedy Creek, being duly sworn, make oath and saith as follows:—I appear for the English, Scottish, and Australian Bank, re the exchange of land on Stonehenge and Grabau's Valley Run; I have heard the District Surveyor's report read, and I agreed with his valuation of the land and description of the country; the land is all ringbarked at an actual cost of 1s. an acre, but the grazing capacity has been improved beyond that amount; the ringbarked timber is suitable for fencing; there is about 100 miles of wire fencing on the land—present value, £30 a mile; there are also about 1,000 acres of cultivation land which originally must have cost £4 an acre to clear; I think the Bank will surrender the whole of the improvements; I value the homestead, yards, &c., at £500.

By District Surveyor: Portion 12, parish Fletcher, is under lease to a man named Henman for three years, with the right of purchase; I believe it was an oversight including it in the exchange; I value it at £1 an acre unimproved.

Sworn by the deponent, at Glen Innes, }

No. 50.

Decision of Local Land Board.

Crown Lands Act, 1884—(Part II, Section 14, Subsection 4).

New South Wales, Glen Innes, }
to wit. }

WHEREAS on the 11th day of December, 1896, it became a matter for investigation before us as to the proposed surrender of lands on Stonehenge pastoral holding, No. 108, Eastern Division, Land District of Glen Innes, county of Gough; and having taken evidence and inquired into the said matter, we report to the Minister and find as follows:—

Firstly: That we have fully considered the application made by the English, Scottish, and Australian Bank (Limited) to surrender lands held by the Bank on Stonehenge pastoral holding, No. 108, Eastern Division, Land District of Glen Innes, in exchange for lands in the Balranald District; and we consider that the acquirement of the lands by the Crown (as shown by pink tint on the District Surveyor's plan, Exhibit "B") would most undoubtedly promote healthy settlement in the locality.

Secondly: That the lands are principally of a nature very suitable for agricultural settlement (as exhaustively set forth and explained in the District Surveyor's report, Exhibit "A"), and it would be rapidly and extensively applied for under the liberal provisions of the Crown Lands Act of 1895 by way of homestead selection and settlement lease.

Thirdly: That the area offered to be surrendered is approximately 17,623 acres; but from the evidence adduced it would appear that portion No. 12, of 40 acres, parish of Fletcher, is not held by the Bank at the present time, and should probably be excluded from the exchange.

Fourthly: We appraise the value of the lands proposed to be surrendered at the sum of £1 2s. 6d. per acre, or a gross total value of £20,241 (exclusive of portion 12 aforesaid).

Fifthly: We further find that the lands proposed to be surrendered are extensively improved by ringbarking, fencing, buildings, and clearing to the extent of about £5,000, and to a large extent those improvements are not of a movable nature; and to prevent settlement on such an extensive area being in any way hampered, we are of opinion that the whole of the improvements should be unconditionally surrendered to the Crown.

Given under our hands, at the Court House, Glen Innes, this 11th day of December, 1896.

F. G. FINLEY, J.P., Chairman.
JAMES MARTIN, J.P., } Members.
HUGH MACDONALD, J.P. }

Forwarded to the Chairman, in connection with the general inquiry set down for hearing at Balranald on the 18th instant. The Narrabri Board's report on the Baan Baa South and Cooma parts of the proposal has already been sent to Hay. Special care should be taken that these papers, together with those referred to in the preceding paragraph, are before the Balranald Board by the 18th instant.—C.J.S. (for the Under Secretary), 14/12/96. The Chairman, at Hay.

No. 51.

Telegram from the Chairman, Local Land Board, Glen Innes, to The Under Secretary for Lands.

Glen Innes, 11 December, 1896.
The Stonehenge-Yanga exchange case dealt with by the Board this day. Report posted, and should reach you to-morrow.
F. G. FINLEY,
Chairman.

No. 52.

The Hon. Secretary, Burrawong Progress Committee, to The Chairman, Local Land Board, Balranald.

Sir,
Burrawong Progress Committee, 14 December, 1896.
On behalf of the Burrawong Progress Committee, I hereby object to the proposed surrender of lands at Cooma, Baan Baa, and Stonehenge in exchange for lands on the leasehold area of Yanga pastoral holding.
W. WEBB,
Honorary Secretary, Burrawong Progress Committee.

GROUND'S OF OBJECTION.

- (1.) That such exchange would be directly against the centralisation of settlement in this district.
- (2.) That it would be detrimental to the progress of the town of Balranald.
- (3.) That it would permanently lock up valuable land suitable for agricultural purposes.
- (4.) That a large area of the proposed land would be taken up by settlers when the leases fall in.

Sir J. P. Abbott, K.C.M.G., M.P., to The Under Secretary for Lands.

Sir,

14, Castlereagh-street, Sydney, 14 December, 1896.

I have the honour to forward you a letter dated the 10th instant from the Town Clerk of the Municipal Council of Balranald, protesting, on behalf of the Council, against the proposed exchange of lands on Yanga Station for land in the district of Narrabri.

All that I ask is that these exchanges may not be sanctioned without a full inquiry being held at Balranald, and an opportunity afforded the Municipal Council of that place to give evidence before the Local Land Board in support of their views against the alienation of these lands.

I also enclose you an extract of the proceedings which took place at a meeting of the Municipal Council, as reported in the local paper of the 9th instant, in reference to the proposed alienation.

I have, &c.,

J. P. ABBOTT.

This case is set down for hearing at Balranald, on 18th instant. It would, perhaps, be well to ask the District Surveyor (by wire) to see that the Council's objections are brought before the Board; and also wire the Council Clerk to lodge the objection, in writing, with that officer, and consult him as to giving evidence before the Board. Sir J. P. Abbott to be informed how the case stands, and of the action proposed.—E. A. BRONSDON, Clerk-in-charge, Alienation Branch, 16/12/96.

For approval.—W. H. CAPPER, in charge Sales Division, 16/12/96. Approved.—H. CURRY, 16/12/96. Wire sent to District Surveyor and Council Clerk, 16/12/96. Honorable Sir J. P. Abbott, M.P., informed, 17/12/96.

[Enclosures.]

Sir,

Municipal Council, Balranald, 10 December, 1896.

I have the honor, by direction of this Council, to draw your attention to the fact that the English, Scottish, and Australian Bank, who own Yanga Station, have applied for an exchange of some land in the Narrabri District for some on the Yanga holding.

We shall be glad if you will kindly interview the Minister with a view to preventing this, as it is of utmost importance to the district, Yanga being the only station within the district that will fall in for many years.

Thanking you in anticipation.

I have, &c.,

H. L. HARBEN,

Council Clerk.

The Honorable Sir J. P. Abbott, M.P., Sydney.

Extract from the *Riverina Recorder*.

GENERAL BUSINESS.

REGARDING the special Government grant of £80, it was decided to expend the same in lowering the drains in Myall and Court Streets and other places.

The Mayor then drew attention to the surrender of station lands on Baan Baa, Cooma, and Stonehenge, the property of the English, Scottish, and Australian Bank (Limited), in exchange for lands on Yanga Station. If it were allowed to take place, it would mean the locking up for ever of about 30,000 or 40,000 acres of land near the town. Yanga Station already covered over 300,000 acres, and the exchange would considerably increase it.

Alderman Tyson thought they were a little premature. The exchange would come before the Land Board, and it could then be opposed.

The Mayor said the Minister had the power to grant the exchange, without it going before the Board.

Alderman Grinham said that all objections must be in before the 18th instant; and, on the motion of Alderman Dowling, seconded by Alderman Tyson, it was resolved that Sir J. P. Abbott be written to on the matter.

The meeting then rose.

Mr. John Hudson to The Chairman, Local Land Board, Balranald.

YANGA, Cooma, Baan Baa South, and Stonehenge.

Sir,

Pine Grange, Lower Edwards, 15 December, 1896.

In response to your notice in the *Recorder* of the 9th instant, I have the honor most respectfully, on behalf of myself and members of my family, to lodge our protest and objections against granting an exchange and surrender of lands, as per margin, for the following reasons:—

First.—The Legislature never intended that lands upon an aggregation of different pastoral holdings should be surrendered and exchanged *in toto* upon one and another holding; but the meaning of clause 46-1889 and clause 47-1895 was to consolidate isolated alienated portions of land upon each pastoral holding.

Secondly.—The granting of this exchange, as applied for, would be nothing more or less than freebooting the public estate.

Thirdly.—There would be no objection to exchange land within the "Yanga pastoral holding" for other lands upon the same holding.

Fourthly.—It would be a national sin and loss to futurity to barter land in this manner, and reviving the "Norman's" method in England in ages past.

Fifthly.—That it would be robbing the future generation of its inheritance and playing into the hands of speculators, who have their abode 16,000 miles from the shores of this continent—in England and Scotland.

Sixthly.—The fact is well known that no shareholders in the "English and Scottish Bank of Australia" reside in this part of the globe.

And lastly, we fervently hope that the Governor-in-Council will not be advised by the Executive to use his power to grant this demand as applied for.

I have, &c.,

JOHN HUDSON.

No. 55.

Surveyor S. A. Steane to The District Surveyor, Hay.

YANGA EXCHANGE—Report upon the proposed exchange by the lessees of Yanga Holding, No. 167, under section 47 of the Crown Lands Act of 1895.

Sir,

Yanga, Balranald, 15 December, 1896.

I have the honor, in compliance with your instructions, No. 96-56, dated 3rd December, 1896, to report that I inspected the lands proposed to be granted to the lessees of Yanga pastoral holding, No. 167, in exchange for land on the Baan Baa South and Cooma holdings, in the Tamworth District, and the Stonehenge holding, in the Armidale District, under the provisions of the 47th section of the Crown Lands Act of 1895.

The land sought for is situated wholly within the Yanga leasehold area, and if, the exchange is effected will make a consolidated area on the Moolpa and Keri Keri boundaries.

I am informed by the representatives of the lessees at Yanga that it is the intention, if possible, at an early date to further consolidate by an inter-change of lands within the holding; so that if any modification were advisable it could be dealt with later, though the area appears very compact in the present design.

I have shown approximately on the sketch herewith the features, timber, creeks, &c.; but owing to the dryness of the past few seasons, the flooded country is not easily traceable. Some of the main box and lignum creeks are indicated.

The land is situated within a radius of from 10 to 24 miles from Balranald—that is, the nearest land sought for is about 10 miles and the furthestmost 24 miles from Balranald. As it is in the leasehold area, the tenure of which runs for about (3) three years, at the expiration of the lease I do not think it will be required for closer settlement.

With regard to the necessary provision for access in the event of the exchange being effected, I have shown in brown tint the tracks that are in use on the holding under sufferance or otherwise. The road granted to J. Davis, under the 111th section, is not accessible during flood, as the lignum and box creeks are impassable; but this applies to a great deal of the country in this locality. The track used by him, *via* portion 28, in the parish of Fisher, is not very much better.

It might be possible to get a direct route from portion 20, in the parish of Yanga, as direct east as possible to Keri Keri, to avoid the box and lignum creeks, the resumption of which might be dealt with in this exchange; great care will be required in its selection.

Another road in the south of the run, leading from Keri Keri, seems very desirable. The traffic at present is not great, but will no doubt increase later on, and it seems desirable to take the opportunity of providing for it. I would suggest a (5) five-chain road along the south boundary to water reserve 2,006, with a 640 acre travelling stock and camping reserve about the position shown, or perhaps a little more central in position. This will involve some exchange, but it can be done in the present exchange better than at a later period.

I append schedules giving in detail information regarding the separate areas with values, &c.

The residents of Balranald, I am informed, are intending to oppose the exchange, on the grounds that the land is required for future settlement. It might perhaps be desirable to have information relative to the present and prospective areas for settlement.

The time occupied in this service has been three days field and one in office.

I have, &c.,

S. A. STEANE.

No. 57.

Extract from the *Riverina Recorder*, 16 December, 1896.

BURRAWANG PROGRESS COMMITTEE.

THE YANGA LAND EXCHANGE.

A SPECIAL meeting of the above body was held at the Yanga school last Monday afternoon. Mr. F. W. Graban occupied the chair, and there were also present Messrs. Brown, Neild, J. Limon, T. Limon, Dawson, Bercsford, Hillerman, Stenning, and W. Webb, honorary secretary.

The chairman briefly explained the object of the meeting, which was to draw members attention to the proposed exchange of Yanga leasehold land with lands in other portions of the colony. He then read to the meeting the verbatim decision given by the Narrabri Land Board. (A copy of this decision appears on the fourth page of this issue).

Several of those present spoke strongly against the proposed exchange, one member pointing out that the Balranald Council were taking steps to prevent the exchange, and were being represented at the forthcoming Land Board meeting on the 21st instant, when the application was to be considered.

Mr. W. Webb then proposed,—“That this meeting expresses its disapproval of the proposed surrender of lands at Cooma, Baan Baa, and Stonehenge, in exchange for lands situate on the leasehold area of Yanga pastoral holding, on the following grounds:—

- “1. That such exchange would be directly against the centralization of settlement in this district.
- “2. That it would be detrimental to the progress of the town of Balranald.
- “3. That it would permanently lock up valuable land suitable for agricultural purposes.
- “4. That a large area of the proposed land would be taken up by settlers when the leases fall in next year.”

The motion was seconded by Mr. Neild and carried unanimously.

On

On the motion of Mr. T. Limon, seconded by Mr. Brown, it was resolved to engage Mr. Malcolm to represent them at the forthcoming Land Board meeting and oppose the exchange.

The Secretary was then instructed to write to Sir J. P. Abbott, M.P., and Mr. J. M. Chanter, M.P.,—the proposed exchange affecting constituents in both districts represented by these gentlemen—requesting, them to use their influence in preventing the proposed exchange taking place.

No. 58.

The Mayor of Balranald to The Chairman, Local Land Board, Balranald.

Municipal Council, Balranald, 16 December, 1896.

Re exchange of land at Cooma, Baan Baa, and Stonehenge for land on Yanga.

On behalf of the Balranald Council, and the District, I beg to lodge an objection to the above, on the following grounds:—

1. That it would prevent settlement in this district.
2. That it would be detrimental to the progress of the town of Balranald.
3. That it would permanently lock up valuable land suitable for agricultural purposes.
4. That a large area of the proposed land would be taken up by settlers when the leases fall in next year.

W. LUTZ,
Mayor.

YANGA exchange. Lodge objections in writing with District Surveyor, and consult him as to giving evidence before Board.

H. CURRY,
Acting Under Secretary for Lands.

No. 61.

Telegram from the District Surveyor, Hay, to Mr. Surveyor S. A. Steane.

Hay, 16 December, 1896.

INTERVIEW Council Clerk at once, and report by next mail upon Council's objections to Yanga exchange.

W. G. WALKER,
District Surveyor.

Dealt with by my report, No. 96-40, 17th December, 1896.—S. A. STEANE.

No. 62.

Telegram from The Chairman, Local Land Board, Hay, to The Under Secretary for Lands.

Hay, 16 December, 1896.

Re exchange of lands, Yanga *cum* Stonehenge *cum* Narrabri lands, please state how far does the Minister desire the Balranald Board to report. Shall we accept the finding of Glen Innes and Narrabri Boards on the lands offered in surrender as far as those findings go; and when we have made our finding as to fact and circumstance, shall we report on the united finding, or shall we confine our report merely to the facts and circumstances of the Yanga lands case set down for hearing on 21st instant?

F. TROLLOPE,
Chairman.

In this case the land for surrender is situated in the Glen Innes and Narrabri Districts, and the reports of the Boards at those places as to the value of the land, &c., have been sent to the Board at Balranald, in which district the land to be granted is situated. It is thought that the intention is for the Balranald Board to report on the whole proposal, accepting, of course, the findings of the other Boards as to the value of the land to be surrendered. The Chairman may perhaps be so advised.—E. A. BRONSDON, Clerk-in-charge, Alienation Branch, 16/12/96.

It is submitted that the Chairman may be advised to furnish a full report upon the whole proposal, excepting, of course, the value of the land to be surrendered.—W. H. CAPPER, in charge Sales Division, 16/12/96.

State that the reports of the Glen Innes and Narrabri Boards might be taken so far as they go, and the Balranald Board should, in addition to their own individual share in the matter, report on the united finding.—H. CURRY, 16/12/96. Wire sent to Chairman, Hay, 16/12/96.

No. 63.

Telegram from The Acting Under Secretary for Lands to The Chairman, Local Land Board, Hay.

Sydney, 16 December, 1896.

REPORTS of Glen Innes and Narrabri Boards may be taken so far as they go ; and Balranald Boards should, in addition to their own individual share in matter, report on united finding.

H. CURRY,
Acting Under Secretary for Lands.

No. 64.

The Acting Under Secretary for Lands to Sir J. P. Abbott, K.C.M.G., M.P.

Sir, Department of Lands, Sydney, 17 December, 1896.

I have the honor to acknowledge receipt of your letter dated 14th instant, covering a communication from the Balranald Municipal Council protesting against the proposed exchange on Yanga holding, and to inform you that the case is set down for hearing at Balranald to-morrow, and the Council Clerk was yesterday advised by wire to lodge objections in writing, and the District Surveyor was instructed to see that the same were brought before the Board.

I have, &c.,
H. CURRY,
Acting Under Secretary,
(Per W.H.C.)

No. 65.

Surveyor S. A. Steane to The District Surveyor, Hay.

REPORT upon the Balranald Council's objection to the Yanga Exchange.

Sir, Yanga, Balranald, 17 December, 1896.

I have the honor, in compliance with your telegraphed instructions received this morning, to report that I interviewed the Mayor and Council Clerk of Balranald with the view of reporting upon the objections raised by the Council in opposition to the Yanga Exchange.

I enclose herewith a copy of the Council's objections, as well as extracts from the local papers giving information with regard to further publication in this matter.

The objection raised by the two bodies referred to, which will in all probability be clearly set before the Board by their representatives, are in most cases beyond dispute if, at the expiration of the lease (approximately August, 1900), land is likely to be in very great demand for settlement.

I was at a disadvantage in being ignorant of the land that is at present available for settlement, and what will be in the immediate future. I believe a large quantity is open on Nap Nap and some on Yanga which has not yet been applied for, but it will be desirable to have full information on this head for the Board. The contention is that Yanga lease falls in in 1900, which will provide the only land about Balranald for some time to come, and that the importation of outside lands to absorb the Crown lands, instead of effecting the exchange locally, and providing for closer settlement near Balranald, will be ruinous to the future prospects of the town and district ; that this will in all probability be a precedent for the further monopoly of Crown lands in this estate by the introduction of lands foreign to the district that are owned by the Yanga lessees.

I think it is evident that it would be more beneficial to the prosperity and progress of the town to have this land occupied by small successful selectors, if it can be shown that they can profitably take it up as stated, than by having it absorbed into the Yanga Estate.

All four objections are in some degree indisputable, though it is somewhat anomalous to class lands as agricultural in a district of 12-inch rainfall without irrigation, as referred to in objection III, and very strong evidence will be required to give weight to objection IV.

I will miss no opportunity of procuring any information relative to the various objections. At the same time it will be desirable to have official information with regard to the present and prospective settlement areas, &c.

I have, &c.,
S. A. STEANE.

Yanga Exchange Report was forwarded by Tuesday's mail.

Forwarded to the Chairman in connection with Yanga Exchange.

TAKING the objections of the Municipal Council seriatim :—

(1.) "That it will prevent settlement in this district."

It will, of course, withdraw from future settlement in this locality 36,124 acres ; but I would submit that the matter must be looked at in a broader light than the benefit of a particular district only.

The area referred to would not accommodate more than about nine settlers on Yanga ; whereas, according to evidence taken before the Tamworth and Armidale Boards, the same area would accommodate fifty-three or fifty-eight settlers on Baan Baa South, Cooma, and Stonchenge Estates.

(2.) "That it would be detrimental to the progress of the town of Balranald."

The remarks to No. 1 objection will apply to this, viz.—the benefit of the few must give way to the welfare of the many.

(3.) "That it would permanently lock up valuable land suitable for agricultural purposes."

The Yanga land must be classed on the whole as grazing land only, and although a large area is withdrawn from future settlement near Balranald, if the exchange is granted it must not be overlooked that land infinitely better adapted for cultivation and agriculture will be released for immediate settlement near Narrabri, Glen Innes, &c.

(4.)

(4.) "That a large area of the proposed land will be taken up by settlers when the lease falls in next year."

The Yanga pastoral lease does not fall in till the 10th July, 1900, and, as I stated before, in reply to objection No. 1, the area is sufficient only in my opinion to accommodate about nine settlers.

The Chairman.

W. G. WALKER, District Surveyor, 19/12/96.

Forward to the Chairmau at Balranald in connection with Yanga Exchange.—A.J.V., Clerk-in-charge, 19/12/96.

No. 66.

The District Surveyor, Hay, to The Chairman, Local Land Board.

MEMORANDUM.

17 December, 1896.

MR. SURVEYOR STEANE'S Report on the land sought in exchange on Yanga holding is forwarded for the consideration of the Board.

The land sought in exchange is shown on lithograph marked "R" by blue tint, and contains about 36,124 acres. Upon lithograph "R" Mr. Steane has indicated approximately the features, timber, creeks, &c.; but at the same time he states that, owing to the dryness of the past few seasons, the flooded country is not easily traceable.

I am of opinion that very little objection can be raised on the ground of consolidation; but I understand further consolidation will be effected by a supplementary exchange.

The land is situated from 10 to 2½ miles from Balranald, and I agree with Mr. Steane that it is not likely to be required for closer settlement.

The only public provision that appears to be necessary is for a road 5 chains wide, as indicated approximately by a red line on lithograph "R," and another road 5 chains wide on the southern boundary of the holding, with a camping reserve of 640 acres. The former road, selected on the best trafficable route, will probably pass over little, if any, of the present freeholds or the proposed grants; but in regard to both roads there is any amount of scope for adjustment of areas on Yanga.

Mr. Steane values the land on Yanga (and details are set forth in schedule marked "A"), *i.e.*, 36,124 acres, at £27,365 2s. 9d. (average value 15s. 2d. per acre); but I am of opinion that, viewing the reported carrying capacity, his values are rather high.

However, having regard to the Board's findings in regard to the land proposed to be surrendered, the exchange is undoubtedly in the interests of the Crown. The Tamworth Board valued the land on Baan Baa and Cooma, *i.e.*, 18,501½ acres, at £19,171 4s. 2d., or an average value of £1 0s. 9d. per acre, and the Armidale Board valued the land on Stonehenge, *i.e.*, 17,583 acres, at £20,241, or an average of £1 2s. 6d. per acre; total, 36,084½ acres, equal to an average value of £1 1s. 10d. per acre, or a total value of £39,412 4s. 2d., resulting in a difference in favour of the Crown of at least £12,000. This is irrespective of improvements, as it is reported that on Stonehenge and Baan Baa South-Cooma there are improvements, mostly of an irremovable nature, valued at £5,000 and £3,788 respectively. Upon Yanga the improvements consist of tanks (6), hut, ringing, and fencing, valued at £1,007.

The lands on Stonehenge are 12 miles from Glen Innes, 8 miles from Glencoe, and 4 miles from Ben Lomond railway stations, and those on Baan Baa South and Cooma, from ½ mile Narrabri West to 6 miles from Baan Baa railway station.

I understand that the Balranald Municipal Council propose to object to the granting of any lands on Yanga, and a report will be furnished as soon as the objections are received.

W. G. WALKER,

District Surveyor.

The cost of Mr. Surveyor Steane's inspection and report is £12 12s., and of this report £1 1s.; total, £13 13s.—W.W.G.

P.S.—The District Surveyor at Tamworth estimated that from thirty to thirty-five new settlers could be accommodated on the Baan Baa South and Cooma lands in conjunction with unnecessary reserves adjoining; and the District Surveyor at Armidale estimated that the areas for settlement on Stonehenge would range approximately from 250 to 1,280 acres (say, about twenty-three new holdings).—W.G.W.

No. 67.

The Acting Under Secretary for Lands to The Manager, the English, Scottish, and Australian Bank (Limited).

Sir,

Department of Lands, Sydney, 18 December, 1896.

I have the honor to acknowledge receipt of your letter of 16th instant, *re* Baan Baa, Cooma, and Stonehenge-Yanga exchange, and to inform you that the papers are at present with the Local Land Board, Hay.

I have, &c.,

H. CERRY,
Acting Under Secretary,
(Per W.H.C.)

No. 68.

Caption to Depositions of Witnesses.

New South Wales, }
to wit. }

THE examination of Samuel Albert Steane, of Hay, in the Colony of New South Wales, Staff Surveyor; Samuel Lindsay, of Yanga, Balranald (station manager); Walter A. Macpherson, of Paika, Balranald (station manager); and Arthur Dennis Donnelly, of Balranald (Crown Lands Agent), in the said Colony:

Whereas

Whereas it hath come before the Board whether the application for surrender and exchange of lands within Baan Baa, Cooma, Stonehenge, and Yanga pastoral holdings, by the English, Scottish, and Australian Bank (Limited) should be recommended or otherwise, and it hath been found necessary to investigate the said matter on oath, the depositions of the several witnesses are appended hereto.

Number of pages of evidence, 19 ; number of exhibits, 3.

[Enclosure.]

Samuel Albert Steane, on oath saith : I am a Staff Surveyor for the Hay Land Board ; I inspected the lands in question on the 11th, 12th, and 14th instant, under unfavourable circumstances, owing to drouthy seasons preventing my arriving at accurate conditions of the peculiar character of the country ; the land is situated at from 10 to 25 miles from the town of Balranald, and the character of the country varies very considerably from low flooded lignum to high red belar country ; the belar country has been partly rung ; a rough estimate of the area is shown in schedule* which I produce ; I also tender my report† in writing ; the lands are situated wholly within the leasehold area of Yanga holding, No. 76, and consist wholly of isolated measured portions as well as scattered unmeasured areas ; the consolidation appears to me to be as effective as possible ; the carrying capacity I have estimated at an average of about 4 acres to a sheep ; the value of the land varies from 10s. to £1 an acre ; owing to the scarcity of rainfall, which has varied from 7½ inches to 20 inches during the past twenty years, it seems impossible to consider these lands agricultural ; the mean value of the lands amounts to 15s. 2d. per acre ; the improvements consist of fencing, water improvements, and ringbarking, which are roughly estimated to be of the value of £1,507 ; I do not consider that the prospects of the land being selected—and by selection I include homestead selection and settlement leases—are very good ; considerable areas of land are available in the vicinity of Balranald ; 15,000 acres are at present designed for subdivision for settlement purposes

To the Board : The land on Yanga asked for has no natural water frontage either to rivers or lakes.

To Mr. Lukeman : There are various isolated blocks available for settlement in the vicinity of Balranald ; they are on the resumed areas, and have been available since the division of the holdings.

By Mr. Robertson : I do not know the land on Canally ; the isolated blocks I refer to average in area from less than 320 acres to 3,000 to 4,000 acres ; I have not seen the land referred to on Yanga under normal conditions.

By Mr. Malcolm : The majority of the country between the two large areas proposed to be given in exchange is mostly low-lying box country ; unless the surrender of the isolated portions was made by the station, the lands applied for could not be put in one block ; a small portion of the land proposed to be obtained, adjoins the resumed area of Yanga ; possibly an area of about 1,600 acres so adjoins ; this is at a distance of about 4 miles from the nearest selector's place ; the land under consideration is fair grazing country, under favourable conditions, and by this I mean sufficient rainfall ; about half the area in question would be suitable for agricultural purposes ; I consider that the land, if let in areas of about 4,000 acres, would be suitable for all the purposes of settlement ; I have been over some of the Yanga resumed area, and from what I have seen I consider it more suitable for settlement than that part of the leasehold under consideration, a great deal of which is flooded and lignum land ; I consider that the drought of the past two years would decidedly retard settlement in this district.

Mr. Lukeman : The two pieces, aggregating 1,713 acres, which adjoin the boundary line of the resumed area, are bound to the resumed area by purchased land.

To the Board : My valuation of the land is made on present conditions ; I have tried to arrive at the normal value of the land ; I have considered the rainfall for the past twenty years ; I estimate the value of the land on a pastoral basis, reckoning the carrying capacity of the land at about 4 acres to the sheep.

Sworn before us, at Balranald, this 21st }
day of December, 1896.— }

S. A. STEANE.

FRED. TROLLOPE, Chairman.
C. E. OSLEAR, P.M., } Members.
J. G. MENON, }

Samuel Lindsay, on oath, saith : I am managing Yanga pastoral holding ; I know the lands sought for on Yanga in exchange for lands in other parts of the Colony ; I do not think any of that land suitable for agriculture ; I consider it purely pastoral land ; the actual carrying capacity of the land, including purchased land, is 6 acres to the sheep in that part of the run ; the purchased land is decidedly better than the Crown lands on the run ; there is still an area of 14,716 acres, available for settlement on the resumed area of Yanga ; a piece of land on Yanga Lake has been available for homestead selection since the 12th November, 1896 ; another block which became available on the same date, was selected on the 10th instant ; if the exchange is completed there will be still 52,978 acres available on the Yanga leasehold area ; on the resumed area of Tala, there are 39,104 acres available for selection ; this area has been available ever since the division of the run ; on the leasehold area of Tala there will be 40,000 acres available ; I have considered the value of the improvements when reckoning the value of the land ; I consider that, on the present prices of wool and stock, such land is not worth more than 5s. an acre for pastoral purposes ; the country is all rabbit-infested, the cost of destruction of which is about 1d. an acre per annum. The average rainfall per annum, computed for nineteen years, exclusive of 1896 and 1889, is 12½ inches ; there is no natural water on any of the land in question ; I value the improvements on that land at £1,150, approximately, which improvements are station property ; if the exchange is carried through, it will tend to consolidate the freehold portions of Yanga.

By Mr. Robertson : The land at present available on the resumed area of Yanga is red soil land, and of the same character as that which is being used for agricultural purposes in that direction ; I consider this land far superior for agricultural purposes than that sought for in the exchange.

By Mr. Malcolm : The resumed area at the time of the division of the runs was 87,406 acres ; I cannot say what land has been purchased by the station ; the resumed area at present available is exclusive of travelling stock reserves, which are approximately of the following measurements, namely : 32 miles in length by 1 mile in width, and 10 miles in length by ½ a mile in width ; there are about nineteen selectors on Yanga now ; the land available still is made up of blocks varying in area from 320 acres to 3,000 and odd acres. I would favour the surrendering of isolated portions for the purpose of consolidation ; the land available for settlement in the large blocks is the kind most sought for agricultural purposes, viz., mallee and pine ridge land ; I believe the cost of rolling the mallee is 4s. per acre ; I do not think the drought for the past two years has retarded settlement on Yanga ; land has been taken up during that time.

By Mr. Lukeman : The land that is now open for selection could be cleared more cheaply than the land sought in exchange, inasmuch as the mallee on the one can be rolled down, but belar cannot.

Sworn before us, at Balranald, this 21st }
day of December, 1896.— }

SAMUEL LINDSAY.

FREDK. TROLLOPE, Chairman.
C. E. OSLEAR, P.M., } Members.
J. G. MENON, }

Walter Macpherson, on oath, saith : I am the manager of Paika Station, and have had sixteen years experience in this district ; I do not consider the land on the belar country good for agriculture ; it is good for grazing, if cleared, for two years ; after two years use I consider it very poor grazing country.

Sworn before us, at Balranald, this 21st }
day of December, 1896.— }

W. A. MACPHERSON.

FREDK. TROLLOPE, Chairman.
C. E. OSLEAR, P.M., } Members.
J. G. MENON, }

Samuel Albert Steane, recalled, saith: I consider the class of settlement would be settlement leases with a minimum area of 4,000 acres; that would provide settlement for about nine selectors, providing the area were available in one block; under prevailing conditions there would not be suitable blocks for nine; it would be very inconveniently shaped for settlement, unless an exchange was effected; I hand in tracing marked "R" as an exhibit.
 Sworn before us at Balranald, this 21st }
 day of December, 1896,—

S. A. STEANE.

FREDK. TROLLOPE, Chairman.
 C. E. OLSEAR, P.M., } Members.
 J. G. MENON,

Arthur Denis Donnelly, on oath, saith: I am Crown Lands Agent, at Balranald; according to the "Pastoral Possessions of New South Wales" the resumed area of Yanga at the time of the division of the runs was, 87,406 acres; since then about 12,099 acres have been absorbed by conditional purchase and 28,601 by conditional lease, leaving an area remaining (inclusive of reserves of all descriptions), totalling 46,706 acres; I submit these figures, however, with great diffidence; they have been hastily computed, and on a doubtful basis, much having to be taken for granted; possibly an error of importance has been made; I know there are several areas of Crown lands of over 1,000 acres in a block available for settlement on the Yanga resumed area; I know of three or four such areas: there may be more.
 Sworn before us at Balranald, this 21st }
 day of December, 1896,—

ARTHUR D. DONNELLY,
Crown Lands Agent.

FREDK. TROLLOPE, Chairman.
 J. G. MENON, Member.

No. 69.

Decision of Local Land Board.

Crown Lands Act of 1884—(Part II, Section 14, Subsection 4).

New South Wales, }
to wit. }

WHEREAS on the twenty-first day of December, 1896, it became a matter for investigation before us whether the application for surrender and exchange of lands within Baan Baa, Cooma, Stonehenge, and Yanga pastoral holdings by the English, Scottish, and Australian Bank (Limited), should be recommended or otherwise; and having taken evidence and inquired into the said matter, we find that the design of the area of lands applied to be given in exchange on Yanga pastoral holding is a suitable design. We appraise the value of the lands in question at 12s. 6d. per acre.

Land Districts of Narrabri, Glen Innes, and Balranald.

We appraise the value of the improvements thereon at £1,150.

On the merits of the application to exchange the lands offered in surrender for those applied for, we report to the Honorable the Minister for Lands, that the alienation of these lands will, to an appreciable extent, be detrimental in the interests of the Balranald District, inasmuch as the area applied for would be sufficient to satisfy the requirements of from seven to ten settlement lessces; but as against this, the area offered in surrender is nearly 100 per cent. more valuable, and will satisfy many applicants for lands. In view of the above, the carrying out of this exchange may be beneficial to the general interest. It is certainly detrimental to this District.

[From the last sentence the Chairman dissents. In his view, the carrying out of this exchange will be highly beneficial in the general interest, and but slightly detrimental to the district of Balranald.]

This sentence does not form part of the Report of the Members.—FREDK. TROLLOPE, Chairman.

Survey costs	£13	13	0
Board costs	6	6	0
Total costs	£19	19	0

Given under our hands, at the Court-house of Balranald, this twenty-first day of December, 1896,—

FREDK. TROLLOPE, Chairman,
 C. E. OSLEAR, P.M., } Members.

 Dealt with in District Survey Office.—J.G.F. (for District Surveyor), 29/12/96. The Chairman, Local Land Board, Hay. The Under Secretary.—A. J. VILES (for Chairman, Land Board, Hay), 29/12/96.

No. 70.

Extract from *The Sydney Morning Herald*, 23 December, 1896.

THE telegram published yesterday from Balranald about a land exchange shows that these transactions are now receiving a good deal of attention. One of the banks, in order to consolidate its property at Yanga, in the Balranald Land District, has offered the Government, in exchange, three pastoral properties about Narrabri and Glen Innes. The Land Board at Narrabri has already held an inquiry into the value of the land in the north, and the Board at Balranald has now held its inquiry about the leasehold area of Yanga. The result is to ascertain the value of the properties proposed to be exchanged, leaving it for the Minister to say whether the transaction ought to be completed. Irrespective of the decision in this case, it is noticeable for the interest of the public. The Municipal Council of Balranald appeared by attorney at the Court, and the Board's finding clearly expressed a local view. The Chairman, who is the official member of the Board, dissented from the last sentence of the report, in which it was declared that though the exchange might be beneficial to the general public, by getting estates, two of which are worth £19,171, in the north, it would be injurious to Balranald by withdrawing an area that would suffice for seven selections. The interests of the town and the squatter are in this instance quite opposed. The town wants to get all the settlement possible in its vicinity; the pastoralist wants to consolidate his holding and keep the area to himself. The Minister will decide. It is also a proof of the growing value of Riverina country when a tract of land in a region considered among the best in the colony is offered in exchange for an area so far westerly as Balranald. It may be expected that the result of this inquiry will affect a number of other transactions. The great financial bodies hold so many squattages in each of the three Divisions that they are likely to take any opportunity of rounding off their belongings in the most advantageous districts by surrendering country in less valuable places. This type of transaction requires the consideration of the Boards, in order to protect the public interest, which is not opposed to any reasonable consolidation of pastoral estates, provided that the State gets the equivalent of all that it gives up.

No. 71.

J. M. Chanter, Esq., M.P., to The Secretary for Lands.

Sir,

Moama, 23 December, 1896.

Re the enclosed letter, on behalf of my constituents I beg to protest against the proposed exchange, and trust you will comply with their wishes. The land on Yanga pastoral holding is wanted for settlement, and would be readily selected if made available.

I have, &c.,

J. M. CHANTER, M.P.

Acknowledged, 29/12/96.

[Enclosure.]

Dear Sir,

Arundle, Harvey's Lake, near Balranald, 16 December, 1896.

At a meeting of the Burrawong Progress Committee, held yesterday, I was directed to write you, asking you to use your influence, and protest against the proposed exchange of land on Yanga pastoral holding, and surrender of land at Cooma, Baan Baa, and Stonehenge. I may state that the above committee have taken action in the matter, and have engaged Mr. Malcolm, of Balranald, to oppose the proposed exchange at the Land Court, to be held in Balranald on the 21st instant, also have wired Sir Joseph Abbott, asking him to use his influence in preventing the proposed exchange taking place.

I have, &c.,

W. WEBB,

Honorary Secretary, Burrawong Progress Committee.

J. M. Chanter, Esq., M.P., Moama.

P.S.—I am forwarding a copy of the *Balranald Recorder*, which will give you an account of our last meeting.—W. W.

No. 72.

Allen Lakeman, Esq., to The Chairman, Local Land Board, Hay.

Sir,

Hay, 23 December, 1896.

I beg to ask for a copy of the depositions in the Yanga exchange, also the decision. Please send them to Mr. S. Lindsay, Manager, Yanga, Balranald, who will forward you amount for copying on receipt of advice as to price.

I have, &c.,

ALLEN LAKEMAN.

There has not been time in this office to supply copy asked for. The papers were forwarded to head office to-day, as requested. Perhaps this matter can be attended to in Sydney.—FRED. TROLLOPE, Chairman (per A.J.V.), Hay, 29/12/96. The Under Secretary.

No. 73.

A. B. Briggs, Esq., Pastoral Inspector for the English, Scottish, and Australian Bank (Limited), to The Chairman, Local Land Board, Hay.

Re Exchange application Yanga-Baan Baa, Cooma, and Stonehenge.

The English, Scottish, and Australian Bank (Limited),

Sir,

Sydney, 30 December, 1896.

Will you kindly supply me with a full copy of the evidence taken at the inquiry into the above case before the Local Land Board at Balranald, on the 21st instant.

I have, &c.,

A. B. BRIGGS,

Pastoral Inspector.

Papers L.B. 96/7,170 were forwarded to Under-Secretary for Lands, 29/12/96.—H.M.C., 4/1/97. Mr. Viles. Perhaps copies can be supplied from head office.—A. J. VILES, for Chairman, Hay, 5/1/97. The Under Secretary. Forward copy of evidence to the English, Scottish, and Australian Bank (Limited), and ask for 13s. 1d. cost of copying.—E.A.B. (for U.S.), 15/1/97. English, Scottish, and Australian Bank (Limited), with copy, 15/1/97. Paid—*vide* receipt 634,955, dated 21st January, 1897.—W. W. CALLINAN, 22/1/97.

No. 74

Office Memorandum.

6 January, 1897.

THE reports of the Land Boards at Glen Innes, Narrabri, and Balranald, in regard to the English, Scottish, and Australian Bank's application for the surrender of lands on Stonehenge, Baan Baa South and Cooma holdings, in exchange for an equal area of land on Yanga holding, are favourable thereto.

The Glen Innes Board report that the acquirement of the lands on Stonehenge would most undoubtedly promote healthy settlement in the locality, the lands being principally very suitable for agricultural settlement under homestead selection and settlement lease provisions. They appraise the value of the land for surrender at £1 2s. 6d. per acre.

The Tamworth Board appraise the unimproved values of the Baan Baa South and Cooma Estate lands at an average rate of £1 0s. 9d. per acre, on a freehold basis. In respect of these lands, the inspecting surveyor states in his evidence before the Board, that their acquisition by the Crown will promote settlement, and the District Surveyor considers that (roughly estimated) from thirty to thirty-five independent persons could be settled on the lands that will become available by the completion of this scheme.

In regard to the Yanga lands, the Balranald Board find the design in which the land is sought by the Bank to be suitable, and they appraise the value of those lands at 12s. 6d. per acre. On the merits of the scheme, the Board by majority (the Chairman dissenting), however, report that the alienation of these

these lands will to an appreciable extent be detrimental to the interests of the Balranald District, inasmuch as the area applied for would be sufficient to satisfy the requirements of from seven to ten settlement lessees. But as against this, the area offered in surrender is nearly 100 per cent. more valuable and will satisfy many applicants for land, the carrying out of the exchange may be beneficial to the general interest, but is certainly detrimental to the Balranald District. From this view the Chairman dissents, as in his opinion the completion of the exchange will be highly beneficial in the general interest, and but slightly detrimental to the district of Balranald.

Submitted, as it is obvious from the reports to hand that the scheme clearly serves the public interests, that action be further proceeded with, and the necessary surveys made.

C. J. SAUNDERS.

I concur in the above suggestion and submit it for the Minister's approval. Special.—Wm. Housron, Under-Secretary, 6/1/97.

I think that a matter of this character requires the utmost care and publicity; and I, therefore, desire that the facts as reported be made public, and the matter may be referred to the Under-Secretary, the Chief Surveyor, and Mr. Curry, to advise fully on the proposals at an early date.—J.H.C., 7/1/97.

Submit in a fortnight after publication of notice in the newspapers.—W.H., 9/1/97. Now re-submitted.—E.A.B., 27/1/97.

No. 75:

Office Memorandum.

PROPOSED acquisition of a total area of about 36,000 acres near Glen Innes and Narrabri in exchange for an equal area near Balranald.

THE Minister for Lands has had under consideration recently the question of exchanging an area of about 36,000 acres of Crown lands on Yanga leasehold, distant about 15 miles from Balranald, for an equal area of private land owned by the English, Scottish, and Australian Bank, partly on Stonehenge holding, situated about 5 miles from the Great Northern railway line, and 12 miles from Glen Innes, and on Cooma and Baan Baa South holdings, which are intersected by the railway line from Narrabri to Werris Creek, and distant about 3 miles and 22 miles respectively from Narrabri. Supplied to the Press, 8/1/97.

The case is a novel one, as it involved consideration by three separate Land Boards, and the Minister is now asked to decide whether the whole exchange is sufficiently in the public interest to warrant its being carried into effect.

The Land Board at Glen Innes has assessed the value of the land to be surrendered in that district at £20,211, or an average value of £1 2s. 6d. per acre, and it has also been estimated that at least thirty families may be established on the surrendered lands.

The Narrabri Board has assessed the value of the surrender lands in that district at £19,171, or an average price of £1 0s. 9d. per acre, and the acquisition of this land, with the adjoining leasehold, will, it is thought, provide sufficient land for the establishment of at least thirty families.

The Balranald Board has assessed the value of the land sought to be acquired by the Bank on Yanga at £22,000, or at the rate of 12s. 6d. per acre. It is also reported that this area would not be more than sufficient for ten settlement lessees.

So far as intrinsic value alone is concerned, the proposal is largely in favour of the Crown; and regarded from a settlement point of view, the surrender lands would provide for the establishment of sixty families as compared with ten on the land desired to be acquired by the Bank. The climate and geographical position of the surrendered lands are more conducive to permanent settlement than that of the lands applied for. The value of the improvements also on the land to be surrendered is considerably in excess of that on the lands applied for.

The Bank of course desires to consolidate its holdings, and is prepared to sacrifice land of greater value in order to attain that object.

The only objection to the proposal comes from Balranald; and after all it is only natural that the residents of this town should regard unfavourably any proposal which would have the effect of alienating Crown lands within a reasonable distance of the town.

Considerable areas of Crown lands are, however, available for settlement in the vicinity of Balranald, and 15,000 acres are being designed for subdivision; and it is hoped at a later date that a consolidation of all the station alienations on Yanga will be made, which will have the effect of bringing into a compact form for settlement the different areas of Crown lands remaining on that extensive holding.

It may be mentioned that the Municipal Councils at Narrabri and Narrabri West are urging the Minister to complete the exchange.

No. 76.

Extract from *The Daily Telegraph*, 9 January, 1897.

LAND FOR SETTLEMENT PURPOSES.

IN keeping with his policy of providing as much land as possible for settlement purposes within easy access of markets, the Minister for Lands (Mr. J. H. Carruthers) has had under consideration recently the question of exchanging an area of about 36,000 acres of Crown lands on the Yanga leasehold, distant some 15 miles from Balranald, for an equal area of private land, owned by the E. S. and A. Bank, partly on Stonehenge holding—situated about 5 miles from the Great Northern railway line and 12 miles from Glen Innes—and on Cooma and Baan Baa South holdings, which are intersected by the railway line from Narrabri to Werris Creek, and distant about 3 miles and 22 miles respectively from Narrabri. The case is a novel one. It involved consideration by three separate Land Boards, and the Minister is now asked to decide whether the whole exchange is sufficiently in the public interests to warrant its being carried into effect. As regards the intrinsic value alone, it is pointed out that the proposal is clearly in favour of the Crown; and, regarded from a settlement point of view, the surrender lands would provide for the establishment

establishment of sixty families, as compared with ten on the land desired to be acquired by the Bank. The climate and geographical position of the surrendered lands are more conducive to permanent settlement than that of the land applied for. The value of the improvements also on the land to be surrendered is considerably in excess of that on the lands applied for. The Bank desires to consolidate its holdings, and is prepared to sacrifice land of greater value in order to attain that object. The only objection to the proposal comes from Balranald, while the Municipal Councils at Narrabri and Narrabri West are urging the Minister to complete the exchange.

No. 77.

Extract from the *Australian Star*, 11th January, 1897.

THE land exchange transaction now pending between the Minister for Lands and the E. S. and A. Bank merits very close scrutiny. The Bank proposes to exchange certain holdings in the vicinity of the Great Northern and the North-Western lines for an equal area of Crown land in the vicinity of the town of Balranald. The several Land Boards assess the Bank's property at more than £1 per acre, while the Crown lands which it seeks in exchange are valued at only 12s. 6d. acre. As there are 36,000 acres involved, the Bank would lose in round figures about 8s. per acre, or a total of about £14,000. By this transaction the Crown would thus appear to be a material gainer. Banks, however, are not run upon such lines, otherwise their doors would be sealed hermetically, and we must look for a gain commensurate with this apparent loss. This is to be found in the fact that the Bank will consolidate its property in the Riverina, for the Crown lands sought adjoin property already belonging to the Bank. Moreover, the new estate is within 15 miles of Balranald, and a great strip of land will pass into private ownership and be closed to the independent settlers, upon whose multiplication and prosperity the town looks for its future fortune. Naturally the people object to seeing the eligible Crown lands of the district swallowed up in this way. But there is more involved. The very Government that meditates this transaction has been loud in proclaiming its desire to resume lands in the vicinity of towns for purposes of "closer settlement," and, what is still more remarkable, it came to power pledged to a system of taxation calculated to burst up "big estates" such as that it now contemplates assisting the E. S. and A. Bank to build up near Balranald. We say nothing of the *bona-fides* of the arrangement, only we want to know whether a Government pledged to "burst up big estates" and to resume land for closer settlement will dare to do this thing, and, if so, whether the already deeply forsworn Labour Party will condone and support this grossly inconsistent act.

No. 78.

The Secretary, Boggabri Progress Committee, to The Secretary for Lands.

Sir,

13 January, 1897.

I have been deputed to inform you that a public meeting of the residents of the town and district of Boggabri was held at the Centennial Hall on Wednesday night, 13th January, instant, and the following resolution was unanimously carried:—

"That the residents of this town and district, in public meeting assembled, respectfully request the Honorable the Minister for Lands to complete the exchanges of land on Baan Baa and Cooma holdings, and also those of Ghoolendaadi holding, near the town of Boggabri."

I am, &c.,

NORMAN JEFFRIES,

Secretary, Boggabri Progress Committee.

THE EXCHANGE OF CROWN LANDS.

Narrabri, Friday.

At a public meeting at Baan Baa last evening in reference to the exchange of Baan Baa and Cooma holdings for land situated in the Balranald district, the following resolution was proposed by Mr. A. P. Starr, seconded by Mr. John Goodyer, and carried unanimously:—"That, in view of the large number of people in this district requiring land, this meeting desires to impress upon the Minister for Lands the great benefit the district would obtain by the proposed exchange of Baan Baa and Cooma holdings being approved of and thrown open for settlement at an early date." Mr. J. V. A. Fox was appointed to interview the Minister for Lands.

No. 82.

Charles Collins, Esq., M.P., to The Under Secretary for Lands.

Sir,

Legislative Assembly, Sydney, N.S.W., 18 January, 1897.

I have the honor to enclose you a letter just received from the Borough Council of Narrabri, urging me to interview you *re* the exchange of land on Baan Baa and Cooma. I am sure it is unnecessary for me to inform you how advantageous it will be to the towns of Narrabri and Boggabri if you will accede to the wishes of the people of the district, and I shall be pleased to hear that you have decided to effect the exchange.

I have, &c.,

CHARLES COLLINS.

Receipt acknowledged.—G.H., 20/1/97.

[Enclosure.]

Council Chambers, Narrabri, 14 January, 1897.

Sir,

At a meeting of this Council the following resolution was unanimously agreed to:—

"That the Minister for Lands be interviewed by the Member for the district, with the view of having an exchange of lands on Baan Baa and Cooma holdings for lands in the Balranald district, effected at once, and that the Minister be asked to throw open the land immediately for settlement."

I am now instructed to respectfully request that you will take the earliest opportunity of waiting on the Minister and lay the views of the Council before him. You are no doubt aware that all suitable land recently thrown open for close settlement in this district has been readily taken up; indeed, so great was the demand, that in the case of the Molly land, eighty applications were lodged for one block. This clearly shows that a large number of people are still waiting for land to be made available for settlement. I may point out that a large part of Baan Baa and Cooma lands are in every way suitable for agricultural purposes, and lying close to the railway line it is decidedly in the interest of the town and district that the present opportunity of acquiring these lands for settlement should be taken advantage of without delay. There can be no doubt that these lands would be eagerly competed for when open for selection by a most desirable class of permanent settlers, whereas at present these lands are occupied for grazing purposes only. According to the evidence given before the Land Boards of Glen Innes and Balranald, the land that would be acquired by the Government under the exchange are capable of supporting sixty families, while under the present occupancy it is only supporting six families. It may also be mentioned that there is no land open for selection between Narrabri and Boggabri.

Trusting you will kindly use every endeavour to have effect given to the Council's resolution.

I have, &c.,

EDWARD GUEST,

Council Clerk.

Charles Collins, Esq., M.P., Tamworth.

No. 83.

The Manager, the English, Scottish, and Australian Bank (Limited), to The Under Secretary for Lands.

Sir,

The English, Scottish, and Australian Bank (Limited) Sydney, 21 January, 1897.

I am in receipt of your favour of the 15th instant, together with a copy of the evidence taken by the Local Land Board, Balranald, in connection with the Yanga-Baan Baa, Cooma, and Stonehenge exchange application, and now beg to inform you that I have paid the sum of 13s. 1d. to the Treasury, as requested by you.

I have, &c.,

S. G. ASHER,

(pro Manager).

Extract from *The Daily Telegraph*, 21st January, 1897.

Narrabri, Wednesday.

THE Borough Council, at a meeting last night, appointed a deputation, consisting of Aldermen Stopford, Collins, and Spencer, in conjunction with Mr. Charles Collins, Member for the district, to wait on the Minister for Lands, to urge the immediate acceptance of the offer of the English, Scottish, and Australian Bank, of Cooma, and the Baan Baa lands in exchange for the Balranald land. The former is eminently suited for agriculture, and would furnish many families with permanent settlement. No land is available for selection between Narrabri and Boggabri.

PROPOSED EXCHANGE OF PASTORAL PROPERTIES.

Glen Innes, Tuesday.

At last night's Council meeting, the proposal of the English, Scottish, and Australian Bank to exchange the Graham's Valley and Baan Baa properties for Government land in the Balranald district was discussed. It was pointed out that the Graham's Valley property, which is 12 miles from Glen Innes, was highly adapted for small homestead holdings, and would settle about forty families. It was decided to urge the Government, through the Member for the district, to accept the English, Scottish, and Australian Bank's offer, and effect the exchange.

LAND EXCHANGES.

DURING last week a deputation, consisting of Messrs. A. Stopford, L. N. McKenzie, and A. E. Collins, waited upon the Honorable J. N. Brunker, to ask that the proposed exchanges of land on the Cooma and Baan Baa holdings, in the Narrabri district, should be completed as soon as possible, and thus render 50,000 acres of land that is in great demand just now open for settlement. Mr. Brunker said he would refer the matter to the Lands Department.

No. 88.

Office Memorandum.

THE YANGA EXCHANGE.

Department of Lands, Sydney, February, 1897.

REFERRING to the Minister's minute of the 7th January last, requesting a report upon the proposed exchange by the English, Scottish, and Australian Bank, of certain lands, viz., about 36,000 acres near Glen Innes and Narrabri, for an equal area near Balranald, with a view to consolidation of the Bank's landed properties at the last mentioned place, under provisions of the Crown Lands Act, the matter has received consideration, and the leading facts of the case are as follows:—

The land near Glen Innes comprises about 17,620 acres of the Stonehenge pastoral holding, chiefly suitable for agricultural settlement, situated about 5 miles from the Northern railway; altitude, about 3,800 feet; average rainfall, about 40 inches; appraised by the Land Board at £1 2s. 6d. per acre on a freehold basis. This tract of country would provide for settlement of thirty or thirty-five families. Total value, £20,240.

The land near Narrabri comprises about 18,500 acres of the Baan Baa South and the Cooma pastoral holdings; this tract of country is adapted chiefly for grazing purposes; situation, on the railway from Werris Creek to Narrabri; altitude, about 100 feet; average rainfall, 24 inches; it is suitable for holdings by homestead selection and settlement lease, and in conjunction with adjoining leasehold to be surrendered would provide for the settlement of from thirty to thirty-five families. The land is valued by the Land Board on a freehold basis at £1 0s. 9d. per acre. Total value, £19,170.

The tract of country near Balranald comprises about 36,125 acres of the Yanga pastoral holding, adapted for grazing; the stock-carrying capacity is estimated at 4 acres to a sheep, the altitude is about 300 feet, and the average rainfall 12 inches. To a large extent the area is broken up by alienated lands, and is thus not favourable in form for settlement in moderate holdings. This land is appraised by the Board at 12s. 6d. per acre. Total value, £22,578.

It is stated that this pastoral country might provide from seven to ten holdings for settlement lease.

The exchange is regarded as favourable to the public interest by the Board at Glen Innes; and there has been movement on the part of the residents to urge the Minister to entertain the proposal.

At Narrabri and Boggabri public meetings have been convened to represent to the Minister the desirableness of the proposed exchange.

The Land Board at Balranald reports that the exchange would be beneficial to the public interest, inasmuch as it would provide for the settlement of many families, whilst the Yanga lands would provide for but seven or ten at the most; the two local members express the opinion that the exchange would be detrimental to the interests of Balranald, in which opinion the Chairman does not concur, but admits that it might be slightly detrimental.

It

It may here be mentioned that the residue of the Yanga pastoral holding contains about 53,000 acres; also that near the town of Balranald there is a tract of country comprising about 15,000 acres now being made available for settlement.

The prominent features of the case are as follows: A banking company, in order to consolidate a pastoral holding, in a part of the country where the natural conditions are suitable only for occupation in large areas, offers to take 36,000 acres of Crown lands, appraised at £22,578—which might provide for settlement of from seven to ten families—in exchange for a like area in parts of the country where the climatic conditions are favourable to agricultural occupation, to which there is access by railway, which may enable the settlement of at least sixty families, and the value of which is appraised at £39,410.

It may be mentioned incidentally that Balranald, a municipality which is on a navigable river, is distant 75 miles from the railway at Hay, and has a population of about 800; Glen Innes and Narrabri, also municipalities, have populations of about 3,000 and 2,500 respectively, and both places have the advantages secured by railway communication.

In view of the circumstances above set forth, we are of opinion that the proposed exchange is in the public interest, and we have no hesitation in advising approval thereof.

E. TWYNAM, Chief Surveyor.
H. CURRY.

But little further information can be given in connection with this matter than is already afforded by the within memoranda and reports. As set out above, the value of the area proposed to be surrendered (36,120 acres), as appraised by the Land Board, is £39,410; while the value of the equivalent area to be granted in exchange is £22,578. This, however, is not the most material point. Looking at the exchange in the light of its probable results to the general community, the fact that sixty-five or seventy families can almost at once be provided for in close settlement is one that cannot be set aside without very strong reasons. If the exchange be abandoned, the utmost that could be done on Yanga in the interests of settlement—at the expiration of the pastoral lease in 1900—would be to provide eight or ten grazing leases on an irregular shaped area lying between or dovetailing with the freehold lands of the pastoral lessee. This area is approximately midway between the towns of Balranald and Moulamein, and if occupied at any time the settlers would no doubt in their ordinary business avocations become more intimately associated with the former than the latter place. The loss of this possible business represents, it is presumed, the detriment to the town of Balranald apprehended by the local members of the Board. It is submitted that on the broad grounds of the public interests the exchange may be proceeded with.—Wm. HORSTON, Under Secretary, 9/2/97.

I now finally approve of this exchange, after having exhausted every means of inquiry open to me to test its merits. The facts may be made public with my decision, as I consider a matter of this kind should be carried through most openly.—J.H.C., 10/2/97.

The Minister's decision should now be conveyed to applicants, who might be urged to convert the conditionally-leased lands affected into additional conditional purchases. The owners might also be asked to state their intentions regarding the selections involved, *i.e.*, whether they wish to have allotted to them land to be held under conditional purchase, or whether they intend converting the selections into freeholds. Should they decide in favour of the former, it will be necessary for them to state willingness to be bound by the provisions of Regulation 297. Payment of £300 towards final costs should also be asked for.—C. J. SAUNDERS, 17/2/96. Mr. Bronsdon.

English, Scottish, and Australian Bank (Limited) and Treasury informed, 19/2/97.

No. 89.

Office Memorandum.

EXCHANGE of 36,000 acres of Crown lands near Balranald for an equal area of private lands near Glen Innes and Narrabri.

THIS exchange proposal has already attracted a considerable amount of attention, and the Secretary for Lands (Mr. Carruthers), after having exhausted every means of inquiry open to him, has finally approved of the exchange being given effect to. (Supplied to the Press.)

The main features of the proposed exchange are as follow:—

A banking company, in order to consolidate a pastoral holding in a part of the country where the natural conditions are suitable only for occupation in large areas, offers to take 36,000 acres of Crown land, appraised at £22,578, which might provide for settlement of ten families, in exchange for a like area in parts of the country where climatic conditions are favourable to agricultural occupation, to which there is access by railway, which may enable the settlement of at least sixty families, and the value of which is appraised at £39,410.

The land near Glen Innes comprises about 17,620 acres, including the Graham's Valley estate, chiefly suitable for agricultural settlement, situate about 5 miles from the Northern railway; altitude, about 3,800 feet; average rainfall, about 40 inches. This tract of country would provide for settlement of about thirty families.

The land near Narrabri comprises about 18,500 acres within the Baan Baa South and the Cooma pastoral holdings. This tract of country is adapted chiefly for grazing purposes. Situation, on the railway from Werris Creek to Narrabri; altitude, about 100 feet; average rainfall, 24 inches. It is suitable for holdings by homestead selection and settlement lease, and in conjunction with adjoining leasehold, also to be surrendered, would provide for the settlement of about thirty families.

The tract of country near Balranald comprises about 36,125 acres of the Yanga pastoral holding, adapted for grazing; the altitude is about 300 feet, and the average rainfall 12 inches. To a large extent the area is broken up by alienated lands, and is thus not favourable in form for settlement in moderate holdings. It is stated that this pastoral country might provide about ten holdings for settlement lease.

The exchange is regarded as favourable to the public interest by the Board at Glen Innes; and there has been a movement on part of the residents to urge the Minister to entertain the proposal.

At Narrabri and Boggabri public meetings have been convened to represent to the Minister the desirableness of the proposed exchange.

The

The Land Board of Balranald reports that the exchange would be beneficial to the general public interest, inasmuch as it would provide for the settlement of many families, whilst the Yanga lands would provide for but ten at the most. The Board, however, by a majority consider that the exchange might be detrimental to the interests of Balranald.

The Barrawang Progress Association also objected to the exchange upon local grounds.

It may, however, be mentioned that a large area of land will still remain in the hands of the Crown, near Balranald, sufficient, it is thought, to meet all legitimate demands for settlement purposes.

It may also be mentioned incidentally that Balranald, a municipality which is on a navigable river, is distant 75 miles from the railway at Hay, and has a population of about 800; Glen Innes and Narrabri, also municipalities, have populations of about 3,000 and 2,500 respectively, and both places have the advantages secured by railway communication.

No. 90.

Extract from the *Evening News*, 15th February, 1897.

THE Minister for Lands is going in for a pretty big swop in the matter of landed estate, about which it is not improbable a good deal will yet be heard. He has for some time past been on the look out for tracts of land suitable for agricultural settlement, and every acre that falls back to him, from lease or otherwise, is eagerly snapped up by intending agriculturists. As a matter of fact, anomalous as it may appear, the demand far exceeds the supply. Hence it is that he has been constrained to favourably entertain a proposal by a Banking Corporation for a deal in acres. The Bank gives him some 36,000 acres near Glen Innes and Narrabri in exchange for a similar area near Balranald. The curious part of the transaction is the fact that the Crown land is valued at much less than the Bank's land. The former is appraised at £22,578, while the latter is estimated to be worth £39,410. On paper, therefore, the Minister gets the best of the deal by £16,822. More than that, the land which the Crown is to receive will settle sixty families, while the Balranald property about to be parted with would settle only ten families. Really this looks almost too good for the Government. Usually when Government undertakes any land or property resumption transaction it gets the worst of the bargain, and neither Banks nor private individuals are in the habit of making sacrifices. In the present case the proposal for the exchange came from the Bank, which has been anxious to complete the transaction. The Minister may be credited with having taken the utmost precautions to safeguard the interest of the public, and the explanation probably is that, land speculation being well killed by the land tax, the exchange suited the Bank for business reasons, even though, according to the most careful calculations, it involved a monetary sacrifice of several thousands of pounds. But the subject is bound to be freely discussed in Parliament.

No. 91.

The Under Secretary for Lands to The District Surveyor, Tamworth.

BAAN BAA SOUTH, COOMA-YANGA EXCHANGE.

17 February, 1897.

THE Minister having approved of this exchange being proceeded with, will the District Surveyor be good enough to prepare the necessary designs, reports, &c., for the re-subdivision of the surrender and other available lands on these holdings for settlement purposes.

Papers, Alienation 96-13,337, are enclosed for perusal, and should be returned as soon as the information *in re* design, &c., has been collated.

C.J.S. (for the Under Secretary).

Mr. Crocker.—Make a copy of this minute and of the District Surveyor's and Mr. Sendall's reports enclosed. Have copy registered, and note L.B. No. thereof hereon.—R.S., 19/2/97. Necessary copies of papers made.—T.C., 26/2/97. And registered, L.B., 97-1,453, on which District Survey Office action towards survey for settlement will proceed. Now returned as requested.—R. SHELTON (for District Surveyor), 2/3/97. The Under Secretary for Lands. To await the return of the Yanga papers, at present with the District Surveyor at Hay.—R.M., 5/5/97.

No. 92.

The Under Secretary for Lands to The District Surveyor, Armidale.

OFFICE MEMORANDUM.

Department of Lands, 17 February, 1897.

THE Minister has approved of this exchange being proceeded with. It will therefore be necessary for the District Surveyor to furnish—

1. Particulars (roughly) of the improvements on the portions for surrender; the statement in regard to each portion to be as far as possible complete in itself
2. Prepare a design for the re-subdivision of the surrender and available Crown lands. Design, &c., should be sent under separate cover.
3. Ascertain, by reference to the Chairman, the cost of the Board's inquiry, including the District Surveyor's attendance.

C.J.S. (for the Under Secretary).

Parish maps of Fletcher, Macintyre, and Ben Lomond noted in District Survey Office, 22/2/97.

The District Surveyor requests that previous reports and a 20-chain tracing of land exchanged (as well as adjacent portions) be prepared, showing all features. Contract draftsman to fill in all writing.—M. A. MACLEAN, Draftsman-in-charge, 22 February, 1897. Mr. Kirke,—Urgent.

Compilation

Compilation at 20 chains to an inch is herewith. I completed it in accordance with verbal instructions.—S.W.K., 1 March, 1897. The Draftsman-in-charge. Tracing sent to head office for six heliographs to be made and returned with tracing. Special, 1/3/97. Six heliographs received, 9 March, 1897.—M. A. MACLEAN, 16/3/97. District Surveyor.

Mr. Surveyor Legge is requested to furnish (1) a report giving the particulars and present value of the improvements existing on each of the surrendered portions; and (2) also to prepare a design for the resubdivision of the surrendered and adjacent available Crown lands into portions suitable for settlement, reporting fully on all points connected with the subject. Although the question of primary importance is the judicious subdivision into suitable portions, irrespective of former surveys, yet fenced boundary lines should be adopted for boundaries in the resubdivision, so far as can be done without sacrificing present requirements. As the area to be disposed of is extensive, it would be advisable to consider any possible requirements that might arise under the 10th section of the Act of 1895. Two heliographs are forwarded herewith for Mr. Legge's use. Separate reports are to be furnished on the subjects indicated.—D. M. MAITLAND, District Surveyor, 17 March, 1897. Mr. Surveyor Legge, Glen Innes.

Reply by my reports, Nos. 97-51 and 52, of April 20th. Instruction 96-171 also attached.—G. H. LEGGE, Surveyor. Will the Chairman be good enough to furnish the cost of the Board's inquiry in this case, as required in paragraph 3 of memorandum of 17/2/97.—D. M. MAITLAND, District Surveyor, 4/5/97. The Chairman. I estimate the cost of dealing with this case before the Local Land Board at Glen Innes at the sum of £5 5s.—F. G. FINLEY, Chairman, Local Land Board, 4/5/97. The District Surveyor.

No. 93.

The Under Secretary for Lands to The Under Secretary for Finance and Trade.

Sir,

Department of Lands, Sydney, 19 February, 1897.
Referring to the application dated 27th October, 1896, lodged by the English, Scottish, and Australian Bank (Limited), for exchange of land within the holdings noted in the margin, I have the honor to inform you that the applicants have been requested to pay into the Treasury the sum of £300 towards costs.

Please report payment.

I have, &c.,
WM. HOUSTON,
Under Secretary,
(per W.H.C.)

Exchange—
Yanga-Stone-
henge, Baan Baa,
Cooma; Central
Division.
Cr. 30 October,
1896.

No. 94.

The Under Secretary for Lands to The Manager, English, Scottish, and Australian Bank (Limited).

Sir,

Department of Lands, Sydney, 19 February, 1897.
Referring to previous correspondence respecting the proposed exchange of land within the holdings noted in the margin, I have the honor to inform you that, in view of the reports of the Local Land Boards, the Secretary for Lands has approved of the exchange being proceeded with, and to request that you will be good enough to convert the conditionally leased lands affected into additional conditional purchases, and to state whether you intend converting the selections into freeholds, and if not, to state your willingness to be bound by the provisions of Regulation 297.

I have further to request that you will pay into the Treasury the sum of £300 towards costs.

I have, &c.,
WM. HOUSTON,
Under Secretary,
(per W.H.C.)

Exchange—
Yanga-Stone-
henge, Baan Baa,
Cooma; Central
Division.
Cr. 30 October,
1896.

No. 95.

The Manager, English, Scottish, and Australian Bank (Limited), to The Under Secretary for Lands.

EXCHANGE: Yanga-Stonehenge, Baan Baa, Cooma; Central Division.

Sir,

The English, Scottish, and Australian Bank (Limited), Sydney, 5 March, 1897.
I have the honor to acknowledge the receipt of your letter, Alienation 97-1,955, of the 19th ultimo, advising me that the Secretary for Lands had approved of the above exchange being proceeded with.

In accordance with your request, applications are being lodged for the conversion of the conditionally leased lands affected into additional conditional purchases; and in reply to your inquiry, I have to state that it is not my intention to convert the selections into freeholds at the present time. I also desire to record my willingness to be bound by the provisions of Regulation 297.

As requested, the sum of £300 has been paid into the Treasury on account of costs in connection with the exchange.

Referring to my application for the exchange of lands within the Stonehenge holding, No. 108, Eastern Division, I have to request that you will allow it to be amalgamated with the Yanga-Stonehenge, &c., exchange.

I have, &c.,
FLETCHER DIXON,
Manager.

No. 96.

The Under Secretary for Finance and Trade to The Under Secretary for Lands.

MEMORANDUM.

English, Scottish, and Australian Chartered Bank (Limited).

THE sum of £300 was credited, 5th instant, being amount required towards costs in connection with application to surrender and exchange land on under-noted holdings:—

Central Division—Stonehenge, Cooma, and Baan Baa South.

S.R.C. (for U.S.)

Treasury, B.C., 6/3/97.

No. 97.

The Under Secretary for Lands to The District Surveyor, Hay.

27 March, 1897.

FORWARDED to the District Surveyor for the preparation of tenders and other preliminary work in connection with the measurement of the area proposed to be granted under this exchange.

It is not possible at the present time to state the actual area applicants will surrender, as a question has recently arisen as to whether they are entitled to convert certain of their conditional leases into additional conditional purchases; but it is thought that the reduction, if any, will be but slight.

The areas affected by the exchange, subject to the conversion of the conditional leases into additional conditional purchases, are—

	Freehold.			Conditional Purchase.			Conditional Lease.		
	a.	r.	p.	a.	r.	p.	a.	r.	p.
On Stonehenge	1,094	0	0	12,508	1	0	3,931	0	0
„ Cooma	Nil.			1,466	0	0	2,880	0	0
„ Baan Baa	4,132	1	0	3,227	3	0	6,794	3	0
Totals	5,226	1	0	17,202	0	0	13,655	3	0

As applicants do not intend converting their selections into freeholds, two balances must be made in survey—i.e., (1) of an area to be granted in exchange for the freehold portions for surrender, and (2) of the area to be allowed in exchange for the selections so affected.

The former may conveniently be confined to the vacant areas interspersing applicants' freeholds, viz., portions 1, 20, 19, 3, 61, 6, &c., parish Impimi, leaving the lands to be allotted in exchange for the selections in as compact a form as possible.

Applications have already been lodged by applicants to convert all their conditional leases into additional conditional purchases, and the District Surveyor will be informed immediately on confirmation of these applications.

The usual statement of costs incurred in District Survey Office should be stated.

C. E. RENNIE,

For the Under Secretary.

English, Scottish, and Australian Bank (Limited) informed, 29/3/97.

No. 98.

The Under Secretary for Lands to The District Surveyor, Hay.

8 April, 1897.

THE Land Board at Gunnedah has now confirmed the additional conditional purchase applications covering the following lands, under offer for surrender to the Crown, viz.:—

On Cooma holding, 2,880 acres previously held under conditional lease.

On Baan Baa holding, 6,014 acres previously held under conditional lease.

The Board has still an additional conditional purchase application to deal with in connection with the latter holding; but it has directed survey of an area of 294½ acres to meet this application, the conversion of the balance, 486½ acres, having been disallowed.

C. E. RENNIE,

For the Under Secretary.

No. 99.

Surveyor G. H. Legge to The District Surveyor, Armidale.

REPORT on the improvements on the surrender lands in the Stonehenge-Yanga Exchange, situated at Graham's Valley, Stonehenge, parishes of Clifton, Fletcher, Ben Lomond and Macintyre, county of Gough, land district of Glen Innes.

Sir,

Glen Innes, 20 April, 1897.

In accordance with instruction No. 9,744 of March 17th, to inspect and report upon the improvements standing upon the surrender lands of the Stonehenge (Graham's Valley) exchange, I have the honor to forward herewith a schedule giving particulars and values of the same, as upon each separate portion surrendered.

In fixing the prices, the value to an incoming tenant has been taken throughout, and that put as low as possible, consistent with the ordinary reductions made for deterioration by the effect of age and weather on the various items.

As will be seen, the fencing improvements are of an extensive character, and although the land is yet occupied by the surrenders, in the possible event of their complete removal from the same, the appointment of a caretaker would, in my opinion be most necessary, until such time as the land is to be thrown open for settlement.

No. 101.

The District Surveyor, Armidale, to The Under Secretary for Lands.

OFFICE MEMORANDUM: "Stonehenge-Yanga" Exchange—Costs, &c.

Department of Lands, District Survey Office, Armidale, 17 May, 1897.

IN compliance with paragraph 1, in memorandum of the 17th February, 1897 (Aln., 96-13,673—L.B., 97-1,255), particulars are forwarded of the improvements at present existing on the various portions for surrender, together with the approximate present value of same (*vide* Surveyor Legge's report herewith).

For design for resubdivision of the surrendered and adjoining available Crown lands, *vide* my report of even date on L.B., 97-3,005.

The total cost of the inquiry is as follows:—

	£	s.	d.
Land Board expenses	5	5	0
Attendance thereto of District Surveyor and Surveyor Legge...	3	3	0
Survey, &c., including Land Board inquiry under former small exchange	68	8	0
Time of District Surveyor on field inspection, preparing report, &c. ...	7	7	0
	£84 3 0		

D. M. MITTLAND,
District Surveyor.

Charting Branch.—E.A.B. (per G.H.), 19/5/97. To await return of Yanga papers, now with District Surveyor, Hay, for measurement.—R. M'LEAN (per C.W.B.), 25/5/97. Mr. Bronsden.

No. 102.

Question and Answer, Legislative Assembly, Thursday, 24th June, 1897.

(11.) PROPOSED SURRENDER OF FREEHOLD LAND, NEAR BALRANALD:—MR. CHANTER ASKED THE SECRETARY FOR LANDS,—

- (1.) Was a proposal made to him last year by the proprietor of Yanga Station, near Balranald, for the surrender of freehold land in exchange for other land?
- (2.) What was the area of land proposed to be surrendered, and its distance from the town of Balranald?
- (3.) What was the area asked in exchange from the Crown; and in what part of the Colony is it situated?
- (4.) Was this matter submitted to the Local Land Board for inquiry and report?
- (5.) Did the Land Board report that this exchange would be detrimental in the interests of Balranald?
- (6.) Has he approved of this exchange; if not, what are his intentions regarding it?
- (7.) Has he any objection to laying upon the Table of this House all the papers connected with this exchange?

Mr. Carruthers answered,—

- (1.) Yes.
- (2.) 35,600 acres, including conditional purchase and freehold lands near Glen Innes and Narrabri, which towns are between 400 and 500 miles from Balranald.
- (3.) 35,600 acres, distant on an average about 15 miles from Balranald.
- (4.) Yes, to the Land Boards at Balranald, Glen Innes, and Narrabri.
- (5.) The Balranald Board, by a majority, did so report; but it appeared from the reports of the different Boards that the surrendered land was nearly twice as valuable as the land applied for, and would provide sufficient land for a far greater number of settlers.
- (6.) Yes.
- (7.) No.

EXCHANGE OF LAND.—CUPPACUMBALONG RUN, QUEANBEYAN DISTRICT.

REPORT.

THE Select Committee of the Legislative Assembly, appointed on 13th May, 1897,—
“to inquire into and report upon the proposed Exchange of Land on Cuppacumbalong Run, Queanbeyan District,”—have agreed to the following Report:—

Your Committee having examined the witnesses named in the List,* and studied the evidence taken on the same subject by the Local Land Board at Queanbeyan, as well as the various documents submitted to them, have arrived at the following conclusions:—

1. That the offer of an exchange first made by the Union Bank was a one-sided and unfair one, as the 1,000 acres they proposed to give were not worth more than 7s. 6d. per acre, while the 945 acres at The Angle which they proposed to accept were worth 27s. 6d. per acre—both valuations being by Surveyor Halliday.
2. That the second offer by the Bank, of 1,802½ acres at Coffey's Flat, and 560 acres at Naas Creek was not an equivalent for the 1,290 acres at The Angle (several small pieces having been added to the original lot). From the evidence adduced it is clear that the 560 acres of land at Naas Creek are of little value, while the land at Coffey's Flat is not in itself a fair compensation for the 1,290 acres at The Angle.
3. It appears, however, to your Committee that an equitable transaction in the matter could be arranged upon the following basis:—The 1,802½ acres at Coffey's Flat; 222 acres out of Nos. 2, 17, and 18, adjoining Coffey's Flat; the 560 acres at Naas Creek; and an exchange of the 6 acres of village allotments at Tharwa Bridge (recently purchased by the Union Bank) for 6 acres south of the homestead,—should be given for 1,190 acres at The Angle; the remaining 100 acres of the land there being devoted to a camping reserve, which appears to be required in that locality. The Bank should also give up all right to the fencing and improvements upon the land surrendered by it. The 560 acres at Naas Creek are of little use for settlement, but would make an excellent reserve in the interests of the public. If such an exchange were made, then two, if not three, mixed farming selections might be made out of the land given up by the Bank, instead of the one grazing farm at The Angle, as originally proposed. The 6 acres of village allotments at Tharwa Bridge would again be open to the public. The Bank would also be enabled to consolidate its holding, and to carry on agriculture upon the 100 acres left of Nos. 2, 17, and 18. In order to prevent future disputes, and perhaps litigation, before any exchange of this kind is made it will be necessary to inquire into the claims of the Hon. L. F. De Salis to an equity of redemption in the land, and also with regard to the concessions of a road of access and a water-race to Mr. W. Farrer.
4. Your Committee are of opinion that, unless some concessions like those indicated in the foregoing paragraph are made by the Union Bank, it would be better to retain the land at The Angle, and again put it up for competition as a homestead selection.

In conclusion, your Committee desire to compliment Surveyor Halliday upon the stand he made against the first two proposals for exchange.

E. W. O'SULLIVAN,
 Chairman.

 24th June, 1897.

PROCEEDINGS OF THE COMMITTEE.

WEDNESDAY, 19 MAY, 1897.

MEMBERS PRESENT:—

Mr. Carroll,		Mr. Ferguson,
Mr. Travers Jones,		Mr. O'Sullivan.

Mr. O'Sullivan called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, read by the Clerk.

Committee deliberated.

Ordered.—That A. C. Betts, Chairman of the Land Board at Goulburn, and E. J. Halliday, Surveyor, Queanbeyan, be summoned to give evidence next meeting.

[Adjourned till Wednesday next at Twelve o'clock noon.]

WEDNESDAY, 26 MAY, 1897.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Carroll,		Mr. Travers Jones,
Mr. Mackay,		Mr. Miller,

Mr. W. H. B. Piddington.

Charles Bates called in, sworn, and examined.

Witness withdrew.

Edward Arnold Bronsdon (*Clerk-in-charge, Alienation Branch, Lands Department*) called in, sworn, and examined.Witness produced the papers in connection with the Cuppacumbalong Land Exchange, and handed in plan showing the land proposed to be exchanged [*Appendix A 1*]; report by Surveyor Halliday, dated 21st September, 1896 [*Appendix A 2*]; letter from Mr. O'Sullivan, M.P., to the Secretary for Lands, dated 20th October, 1896 [*Appendix A 3*]; letter, dated 21st November, 1896, Mr. O'Sullivan, M.P., to the Chairman of the Local Land Board [*Appendix A 4*]; letter, dated 27th November, 1896, from Mr. John Gale to the Chairman of the Local Land Board [*Appendix A 5*]; report by Surveyor Halliday, dated 30th November, 1896 [*Appendix A 6*]; letter, dated 2nd December, 1896, addressed to Messrs. Cox and Gale, and signed by a number of persons protesting against the exchange being carried out [*Appendix A 7*]; undated letter, addressed to the Chairman of the Local Land Board, signed by John Commins and others, objecting to the exchange [*Appendix A 8*]; report of the Local Land Board at Queanbeyan, dated 29th January, 1897, together with the evidence taken by the Board [*Appendix A 9*]; Summary of the case, signed by Mr. C. J. Saunders on the 23rd February, 1897, on which the Minister's decision of the 8th March, 1897, was given [*Appendix A 10*].

Witness withdrew.

Edward James Halliday (*Staff Surveyor, Lands Department*) called in, sworn, and examined.

Witness withdrew.

The Chairman handed in a letter from Mr. W. Farrer, of Tharwa, in reference to the inquiry.

Ordered to be appended. [*Appendix B.*]

[Adjourned till To-morrow at Twelve o'clock.]

THURSDAY, 27 MAY, 1897.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Travers Jones,		Mr. Mackay,
Mr. Miller,		Mr. W. H. B. Piddington.

Charles Bates recalled, and further examined.

Witness withdrew.

Edward James Halliday recalled, and further examined.

Witness withdrew.

Charles Bates further examined.

Witness withdrew.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

TUESDAY

TUESDAY, 1 JUNE, 1897.

MEMBERS PRESENT:—

Mr. Carroll, | Mr. Mackay,
Mr. W. H. B. Piddington.

In the absence of the Chairman, Mr. W. H. B. Piddington called to the Chair *pro tem*.
Entry from Votes and Proceedings in reference to the Petition of James Orr, of the Union Bank of Australia, Limited, praying to be heard by Counsel or Attorney, or in person, before the Committee, read by the Clerk.

Original Petition before the Committee.
Committee deliberated.

[Adjourned till To-morrow at Twelve o'clock noon.]

WEDNESDAY, 2 JUNE, 1897.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Carroll, | Mr. Mackay,
Mr. Miller, | Mr. W. H. B. Piddington.

Arthur Charles Betts (*Chairman of the Land Board, Goulburn District*) called in, sworn, and examined.

Witness withdrew.

John Sheedy called in, sworn, and examined.

The Committee adjourned till *Quarter-past Two* o'clock, and the Chairman not being present on re-assembling, Mr. Miller called to the Chair *pro tem*.

John Sheedy further examined.

Witness withdrew.

John Bell called in, sworn, and examined.

Witness withdrew.

Edward James Halliday recalled and further examined.

Witness withdrew.

James Harcourt Lees (*Station Manager for the Union Bank at Cuyracumbalong*) called in, sworn, and examined.

Witness withdrew.

Edward James Halliday further examined.

Witness withdrew.

[Adjourned till Tuesday next at Twelve o'clock noon.]

TUESDAY, 8 JUNE, 1897.

MEMBERS PRESENT:—

Mr. Carroll, | Mr. Mackay,
Mr. Miller, | Mr. W. H. B. Piddington.

In the absence of the Chairman, Mr. W. H. B. Piddington called to the Chair *pro tem*.

John Gale called in, sworn, and examined.

Witness withdrew.

James Harcourt Lees recalled and further examined.

Witness withdrew.

Ordered,—That the Union Bank be supplied with a copy of the evidence.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

WEDNESDAY, 16 JUNE, 1897.

MEMBERS PRESENT:—

Mr. Carroll, | Mr. Mackay.

In the absence of a quorum the meeting called for this day lapsed.

THURSDAY, 17 JUNE, 1897.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Mackay, | Mr. Miller,
Mr. W. H. B. Piddington.

The Chairman *handed in* a letter which had been addressed to him by Mr. W. Farrer of Tharwa.

Ordered to be appended. [*Appendix C.*]

Committee deliberated as to their Report.

[Adjourned till Thursday next at Twelve noon.]

THURSDAY,

THURSDAY, 24 JUNE, 1897.

MEMBERS PRESENT :—

Mr. O'Sullivan in the Chair.

Mr. Carroll,
Mr. Miller,

Mr. Mackay,
Mr. W. H. B. Piddington.

Chairman submitted Draft Report, which was read a first time as follows :—

Draft Report.

The Select Committee of the Legislative Assembly, appointed on 13th May, 1897,—“to inquire into and report upon the proposed Exchange of Land on Cuppacumbalong Run, Queanbeyan District,”—have agreed to the following Report :—

See List, page 7.

Your Committee having examined the witnesses named in the List,* and studied the evidence taken on the same subject by the Local Land Board at Queanbeyan, as well as the various documents submitted to them, have arrived at the following conclusions :—

- “1. That the offer of an exchange first made by the Union Bank was a one-sided and unfair one, as “the 1,000 acres they proposed to give were not worth more than 7s. 6d. per acre, while the 945 “acres at The Angle, which they proposed to accept, were worth 27s. 6d. per acre—both “valuations being by Surveyor Halliday.
 - “2. That the second offer by the Bank, of 1,802½ acres at Coffey's Flat and 560 acres at Naas Creek, “was not an equivalent for the 1,290 acres at The Angle (several small pieces having been added “to the original lot). ‘In the opinion of Surveyor Halliday, the most competent of the witnesses “on the matter, the 560 acres of land at Naas Creek are of little value, while the land at Coffey's “Flat is not in itself a fair compensation for the 1,290 acres at The Angle.
 - “3. It appears, however, to your Committee that an equitable transaction in the matter could be “arranged upon the following basis :—The 1,802½ acres at Coffey's Flat; ‘222’ acres out of Nos. “2, 17, and 18, adjoining Coffey's Flat; the 560 acres at Naas Creek; and an exchange of the “6 acres of village allotments at Tharwa Bridge (recently purchased by the Union Bank) for 6 “acres south of the homestead,—should be given for 1,190 acres at The Angle; the remaining “‘100’ acres of the land there being devoted to a camping reserve, which appears to be required “in that locality. The Bank should also give up all right to the fencing and improvements upon “the land surrendered by it. The 560 acres at Naas Creek are of little use for settlement, but “would make an excellent reserve in the interests of the public. If such an exchange were “made, then two, if not three, mixed farming selections might be made out of the land given up “by the Bank, instead of the one grazing farm at The Angle, as originally proposed. The 6 “acres of village allotments at Tharwa Bridge would again be open to the public. The Bank “would also be enabled to consolidate its holding, and to carry on agriculture upon the 100 “acres left of Nos. 2, 17, and 18. In order to prevent future disputes, and perhaps litigation, “before any exchange of this kind is made it will be necessary to inquire into the claims of the “Hon. L. F. De Salis to an equity of redemption in the land, ‘and also with regard to the “concessions of a road of access and a water-race to Mr. W. Farrer.’
 - “4. Your Committee are of opinion that, unless some concessions like those indicated in the fore- “going paragraph are made by the Union Bank, it would be better to retain the land at The “Angle, and again put it up for competition as a homestead selection.
- “In conclusion, your Committee desire to compliment Surveyor Halliday upon the stand he made “against the first two proposals for exchange.”

Report considered.

Paragraph 1 read.

Question put,—“That the paragraph as read stand paragraph 1 of the Report.”

Committee divided.

Ayes.

Mr. Carroll,
Mr. Mackay,
Mr. Miller.

No.

Mr. W. H. B. Piddington.

And so it was resolved in the affirmative.

Paragraph 2 read.

Mr. W. H. B. Piddington moved to leave out in lines 3 and 4 the words “In the opinion of Surveyor Halliday, the most competent of the witnesses in the matter,” with a view to the insertion of the words “From the evidence adduced it is clear”

Question put,—“That the words proposed to be left out stand part of the paragraph.”

Committee divided.

Aye.

Mr. Miller.

Noes.

Mr. Carroll,
Mr. Mackay,
Mr. W. H. B. Piddington.

And so it passed in the negative.

Question,—“That the words proposed to be inserted in place of the words left out be so inserted,”—
put and passed.

Question then put,—“That the paragraph as amended stand paragraph 2 of the Report.”

Committee divided.

Ayes.

Mr. Carroll,
Mr. Mackay,
Mr. W. H. B. Piddington.

No.

Mr. Miller.

And so it was resolved in the affirmative.

Paragraph

Paragraph 3 read.

Mr. Carroll moved to leave out in line 2 the figures "222" with a view to the insertion in their place of the figures "322."

Question put,—“That the figures proposed to be left out stand part of the paragraph.”

Committee divided.

Ayes.	Noes.
Mr. Mackay,	Mr. Carroll,
Mr. W. H. B. Piddington.	Mr. Miller.

The numbers being equal, the Chairman gave his casting vote with the *Ayes*, and declared the question to have been resolved in the affirmative.

Mr. Miller moved to leave out in line 6 the figures "100" with a view to the insertion in their place of the figures "200."

Question put,—“That the figures proposed to be left out stand part of the paragraph.”

Committee divided.

Ayes.	No.
Mr. Carroll,	Mr. Miller.
Mr. Mackay,	
Mr. W. H. B. Piddington.	

And so it was resolved in the affirmative.

Mr. Miller moved to leave out all the words after the word "land," lines 16 and 17 to the end of paragraph.

Question put,—“That the words proposed to be left out stand part of the paragraph.”

Committee divided.

Ayes.	No.
Mr. Carroll,	Mr. Miller.
Mr. Mackay,	
Mr. Piddington.	

And so it was resolved in the affirmative.

Paragraph, as read, agreed to.

Paragraph 4 read.

Mr. W. H. B. Piddington moved to leave out all the words after the word "In" in line 4 to the end of the paragraph.

Question put,—“That the words proposed to be left out stand part of the paragraph.”

Committee divided.

Ayes.	No.
Mr. Carroll,	Mr. W. H. B. Piddington.
Mr. Mackay,	
Mr. Miller.	

And so it was resolved in the affirmative.

Question then put,—“That the paragraph as read stand paragraph 4 of the Report.”

Committee divided.

Ayes.	No.
Mr. Carroll,	Mr. W. H. B. Piddington.
Mr. Mackay,	
Mr. Miller.	

And so it was resolved in the affirmative.

Mr. Carroll moved,—“That the Report, as amended, be the Report of the Committee.”

Committee divided.

Ayes.	Noes.
Mr. Carroll,	Mr. Miller,
Mr. Mackay.	Mr. W. H. B. Piddington.

The numbers being equal, the Chairman gave his casting vote with the *Ayes*, and declared the Question to have been resolved in the affirmative.

Question put,—“That the Chairman report to the House.”

Committee divided.

Ayes.	Noes.
Mr. Carroll.	Mr. Miller,
Mr. Mackay.	Mr. W. H. B. Piddington.

The numbers being equal, the Chairman gave his casting vote with the *Ayes*, and declared the Question to have been resolved in the affirmative.

LIST OF WITNESSES.

1897.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

EXCHANGE OF LAND, CUPPACUMBALONG
RUN, QUEANBEYAN DISTRICT.

WEDNESDAY, 26 MAY, 1897.

Present:—

MR. W. H. B. PIDDINGTON,		MR. MILLER,
MR. CARROLL,		MR. MACKAY,
MR. TRAVERS JONES.		

E. W. O'SULLIVAN, ESQ., IN THE CHAIR.

Charles Bates called in, sworn, and examined:—

1. *Chairman.*] What are you? A farmer.
2. Where do you reside? At Williamsdale, near Queanbeyan.
3. Are you acquainted with the land on the Cuppacumbalong run which it is proposed to exchange for another piece of land near Coffey's Flat? Yes.
4. Do you consider that the land offered by the Union Bank, who own the Cuppacumbalong run, is of sufficient value for the land which the Lands Department propose to give them? It is not as good as the 945 acres at The Angle.
5. Do you remember that some time ago this land was advertised as homestead selections? Yes.
6. Were there a great number of intending applicants for that land? There were.
7. How many do you think intended to go in for it? A hundred, if not more.
8. And when the land was withdrawn from selection, and it was intimated that it would be exchanged, there was some indignation expressed? Yes; there was great work about it.
9. Was there a meeting held at Queanbeyan in regard to it? Yes.
10. Were you present at that meeting? I was not; I was away from home.
11. Can you speak, then, with any confidence as to the indignation expressed by intending applicants on the withdrawal of the land? They were all against its being withdrawn; they would rather have the 945 acres than the other land.
12. Why? Because it is better grazing land.
13. Is it only better grazing land? There is a little cultivation land on it for anybody who might get it for their own use.
14. How far would that be from Williamsdale station? 1½ mile.
15. The Murrumbidgee River intervenes? Yes.
16. Is it possible to cross that river? Yes; it always has been crossed. You can cross there when you cannot cross at Tharwa.
17. So that if anyone had taken up this land at The Angle he would be within 1½ mile of the railway station at Williamsdale, with sufficient means of crossing the river? Yes; when the river was not flooded.
18. At flood-time he would have to go round by the bridge at Tharwa? Yes.

C. Bates.

26 May, 1897.

- C. Bates. 19. Then it cannot be correct, as some advocates of the exchange assert, that this land at Coffey's Flat is nearer to a railway station than the land at The Angle? No; it is not.
- 26 May, 1897. 20. Do you know the land at Coffey's Flat well? I do.
21. What is the character of it? Some patches are very good, and some of it is very bad.
22. The area proposed to be given at Coffey's Flat was larger than the area at The Angle, was it not? Yes.
23. With an additional area, do you think it would be of the same value for selectors to take up as the land at The Angle? I do not think so.
24. From what you know of the intending applicants, do you think they would have been satisfied to have received land at Coffey's Flat for homestead selections instead of land at The Angle? Some people would have been, but the majority would not.
25. Who were the persons who would have been satisfied? Two or three persons living there.
26. Two or three residents in the immediate vicinity preferred the land at Coffey's Flat to the land at The Angle? Yes.
27. Do you think that would arise merely from the fact of their being close to it? That was it.
28. You have been a long time resident in that locality? About twenty-one years.
29. And you know the land across the Murrumbidgee as well as you do the land in your own neighbourhood? Yes.
30. I presume that you have travelled past The Angle pretty often? Yes. I suppose it is as sound a bit of ground for stock as you would find in the district.
31. Is there good water and grass up there now? There is very little now.
32. I mean in comparison with other parts? It seems to have a lot of stock on it, and the stock seem to do well.
33. Are there settlers going in that direction now, up near The Angle, and on towards Gudgenby? A great lot of people go through that way.
34. Are they settling about there now? There is not much land to settle on unless you go back.
35. But, as a matter of fact, there have been several selections made there lately, have there not? Yes; further out there is no land on the frontage of the river to be taken up.
36. Is there any other land about the angle that is open for selection? I do not think there is. There are only two or three small reserves, and I heard that they were exchanged.
37. Mr. Miller.] Can you tell us how many sheep the 945 acres would graze? One and a half sheep to the acre, when the seasons are very good.
38. How many sheep would the other land, which it is proposed to exchange, carry to the acre? It would take 5 acres to carry a sheep.
39. What is the area of the land which they propose to exchange? I do not remember.
40. It would take three or four times as much of the land that the Bank propose to exchange to be of equal value, as far as grazing is concerned, to the 945 acres? Some of the land is very scrubby on Coffey's Flat.
41. How much agricultural land is there in the 945 acres? You might get 40 acres of fair land.
42. And how much on the other land that is to be exchanged? I do not know; it is in patches.
43. How far is that from the railway station? I suppose about 6 miles.
44. And the other land is 1½ mile? Yes.
45. So that if it is agricultural land it is further removed from the railway station? Yes.
46. Mr. Mackay.] Both these pieces of land have a frontage to the river? Yes.
47. Which has the better frontage with regard to length? I could not say at present.
48. Do you think they both have about the same amount? I could not say.
49. Going away from the frontage, which is the better watered with regard to the back? I think that Coffey's Flat waters from two rivers.
50. That is the piece that the Union Bank propose to give? Yes. I have not been right out to the back.
51. With regard to the crossing, you say that the crossing at The Angle is a fair crossing? It wants a little repair done to it.
52. With regard to the crossing at the land which it is proposed to exchange for it—what is that like? They have got the bridge. On the 945 acres you have no scrubbing or ringbarking to do.
53. On the other land there would be a considerable amount of that, would there? Yes; a lot.
54. Mr. Miller.] The grazing capabilities of the land at Coffey's Flat are not as good as those of the 945 acres? No.
55. Then, in your opinion, would it be a fair exchange as between the Government and the Bank? It would not for the people.
56. Mr. Carroll.] Has this land known as The Angle been at one time scrubbed and ringbarked? No, never.
57. What class of timber grows on it? Peppermint, box, and apple-tree.
58. What kind of timber grows on Coffey's Flat? Peppermint, bastard apple-tree, gum, and every sort.
59. In your opinion, if the timber were taken off, would that land be as good then? I do not think it would.
60. Is any of it flooded? There are swamps on it.
61. Are the swamps an advantage for water? Not for sheep.
62. Is any of the land stony? Yes.
63. Is Coffey's Flat stony? Parts of it.
64. What do you mean by the land not being sound? It is fluky. On Coffey's Flat a great number of sheep have died at times.
65. How much of the land do you consider is swampy and useless? I could not say. I know that plenty of springs break out on it in wet weather.
66. Mr. Piddington.] Do you know whether this proposed exchange ever came before the Local Land Board? Yes.
67. What was their decision in the matter? I heard that it was given in favour of the Bank.
68. You say that the area of the land known as The Angle is 945 acres, and only about 40 acres of that is suitable for cultivation? Yes; but people do not want it for cultivation—they want it for grazing.
69. But the whole area is only 945 acres? That is all.
70. This land, known as Coffey's Flat, has an area of 1,802 acres, and both portions of land have a frontage to the Murrumbidgee? Yes.

71. Do you know what reason was given why the land was withdrawn from homestead selection;—was any reason given at all? I do not know.
72. How long after the land had been advertised for homestead selection was it withdrawn? About five days before it was to be open for selection. C. Bates.
28 May, 1897
73. And then the Land Board reported in favour of the exchange? As far as I know.
74. So that the whole area suitable for cultivation on The Angle is, in your opinion, only about 40 acres, and the area suitable for agriculture on Coffey's Flat consists of several patches? Yes.
75. What do you think the total area of the patches would be? I could not say.
76. What do you think would be the actual value of the 945 acres of land at The Angle? Land is very cheap now. I suppose it ought to be worth about £1 an acre. We have to pay £1 an acre to the Government.
77. Regardless of what you would have to pay the Government for land, do you consider the actual value of the 1,802 acres at Coffey's Flat to be £1 an acre? No.
78. What would it be worth? Some of it about 10s. an acre.
79. What would be the value? The land at Coffey's Flat might be worth 12s. 6d. an acre.
80. That is to say that the Bank offer 1,802 acres of land, worth 12s. 6d. an acre, for 945 acres of land, which, in your opinion, is worth £1 an acre? Yes.
81. They are practically giving a better value to the Crown? I do not consider that it is as good.
82. *Mr. Mackay.*] Do you think the land at The Angle would be worth £1 an acre? Yes; I would rather give £1 an acre for that than for the other.
83. *Mr. Miller.*] In answer to a question of mine, you said that it would take 1½ acre at The Angle to feed a sheep? No; I said that it would carry one and a half sheep to the acre in good seasons.
84. And you say that it would take 5 acres of Coffey's Flat land to feed a sheep? In places.
85. But what would it average? It will not average much more in my estimation. A lot of the Coffey's Flat land has timber on it, and you would have to keep scrubbing it every year.
86. According to your statement, the 945 acres would be worth at least three times as much as the land at Coffey's Flat, and still you say that the land is only worth £1 an acre at The Angle, and that the land at Coffey's Flat is worth 12s. 6d. an acre;—how do you reconcile your statements? I would not take land at Coffey's Flat at all.
87. *Chairman.*] Putting aside the carrying capacity of these two pieces of land and their estimated value, which would you consider would be the most valuable as a site for a selection, taking into account its surroundings and proximity to a market? I would sooner have The Angle. I never went all round Coffey's Flat, but I have been across it often enough.
88. You said that Coffey's Flat was 6 miles from the railway platform? Yes; it must be 6 miles to Tuggeranong.
89. The Angle is only 1½ mile from Williamsdale platform? That is all.
90. Therefore, as regards means of access to a market, The Angle must be a much more valuable property than Coffey's Flat? Yes.
91. When you were giving an estimate of £1 per acre, did you mean what you would give for the land, or what you might have to pay the Government for it? I would give that if I had the money to-morrow.
92. Having had time to reflect on the grazing capacity of the two pieces of land, do you think it is a fair valuation for you to give 12s. 6d. per acre for as the value of Coffey's Flat? I think that would be enough taking it all through.
93. *Mr. Mackay.*] That would be a fair average for the whole 1,800 acres? I think so.
94. *Chairman.*] That does not correspond with your statement about the carrying capacity of the two pieces of land;—are you swayed by other considerations than the carrying capacity? I do not think they could run such a great deal more sheep on the 1,800 acres than on the 945 acres.
95. According to your estimate they must run a great deal less on the 1,800 acres than on the 945 acres? The 945 acres will carry one and a half sheep to the acre in good seasons.
96. According to your estimate of one and a half sheep to the acre, the land at The Angle would carry about 1,300 sheep, whilst the land at Coffey's Flat, at the rate of 4 acres to a sheep, would only carry under 500 sheep? I do not mean that. I mean where the ground is bad on the hills. There it would take 4 acres to keep a sheep. I do not mean on the low ground; the low ground is right enough.
97. How much of the low ground is there upon which you could run more sheep? All down to the road it is all very good grazing land.
98. Would it carry a sheep to the acre? Yes.
99. How many sheep can they run on the 1,800 acres all the year round? I could not say.
100. *Mr. Mackay.*] Have you any idea how much good land there is approximately that would carry a sheep to the acre? I could not tell.
101. *Mr. Carroll.*] How much would it cost to fence the land at The Angle to make it stock-proof? About 1½ mile.
102. And that would cost how much? Wire is about £8 a ton. It would cost £16 to put it up.
103. Can you do fencing up there for £32 a mile? It can be done cheaper. You could get a mile of fencing put up, if you find the wire, for £12.
104. The wire would cost £8 placed on the ground? About £9 there.
105. How much would it cost to fence in Coffey's Flat? That I could not say.
106. You say that 1½ mile would fence The Angle;—how much would it take to fence Coffey's Flat? I could not tell.
107. Five or 6 miles? It might, or it might not; but it must be fenced in.
108. *Chairman.*] I was not quite clear about your answer as to the carrying capacity of Coffey's Flat;—would it carry 1,000 sheep? It ought.
109. And you say that The Angle would carry 1,300 sheep? With good seasons it might. I suppose there is that number on it now.
110. Then it will be a fair estimate to say that The Angle would carry 1,300 sheep all the year round, and Coffey's Flat would carry 1,000 sheep all the year round? Yes.
111. Do you know whether the Bank offered anything in addition to Coffey's Flat? I could not say.
112. *Mr. Piddington.*] This land known as The Angle is situated in the middle of the run, is it not? I suppose it is pretty well in the middle.

- C. Bates.
26 May, 1897.
113. Of course, it would be of great advantage to the Bank to have that attached to the holding? I suppose it would.
114. Do you know the number of blocks that the 945 acres was cut up into when it was to be offered for a homestead selection in the first instance? It was cut up into three blocks.
115. So that it would only be a matter of three selectors occupying that land? It was a special area first in three blocks, then it was all in one block of 945 acres.
116. So that the actual result would have been that only one person could have got the lot? Yes.
117. How many people do you think could settle on Coffey's Flat;—in answer to a question you said that several people would like to select on Coffey's Flat? People who lived right on the boundary of it spoke in favour of it.
118. *Mr. Miller.*] You are a practical farmer or grazier, are you not? I am not very practical.
119. You have some knowledge of grazing? A little.
120. As a man wanting to take up a homestead, suppose you went to the two places to-morrow morning, having seen neither of them before, which would you select to make a home for your family? I would select The Angle.
121. You could make a better living off that than off the 1,802 acres? I should select it for grazing.
122. What would you select the other for? I suppose it would be mixed.
123. Do you think that a better living could be made off The Angle than off the other land? I think so, by using it for grazing purposes.
124. *Mr. Mackay.*] If you went in for farming and grazing, you think that a better living could be made off Coffey's Flat? I do not know; I could get enough farming on The Angle to satisfy me.

Edward Arnold Bronsdon called in, sworn, and examined:—

- E. A.
Bronsdon.
26 May, 1897.
125. *Chairman.*] What position do you hold? I have charge of the Alienation Branch at the Lands Office.
126. Do you produce papers in connection with the Cuppacumbalong land exchange? Yes.
127. Do they contain the decision of the Local Land Board? Yes.
128. And all other communications relating to the matter which have been lodged with the Department? Yes.
129. Do you produce the plan of the proposed exchange? Yes; a plan (*handed in*) showing by colours the different proposals. [*Appendix A 1.*]
130. Which colours indicate the land on The Angle? The blue edging indicates all the land proposed to be granted to the Bank. It includes The Angle and other pieces.
131. What colour have you taken for Coffey's Flat? Brown hatching shows Coffey's Flat, but that is only part of the land proposed to be surrendered by the Bank. The proposal was that the land edged red (several pieces) should be given up by the Bank, in exchange for which they were to get pieces edged blue.
132. Do you know the total area of all the pieces in question? The total area proposed to be given up by the Bank is 2,362 acres, in exchange for 1,298 acres.
133. They add on 300 odd acres to The Angle? They add 353 acres to The Angle.
134. And the full terms of the exchange are 1,298 acres at The Angle for 2,362 acres elsewhere? Yes.
135. What we really ought to consider is, not an exchange of Coffey's Flat for The Angle, but the exchange of 1,298 acres, including The Angle, for 2,362 acres in various portions of the run? In two portions.—Coffey's Flat and a block to the south. That is the form of exchange upon which the Board reported.
136. Can you give the Committee a synopsis of the case? Yes. The case, according to the papers which I produce, started in 1893 with a report by the District Surveyor at Cooma, to the effect that reserve 67 was not further required in its entirety in the public interest. Nothing further was done till 1895. In May, 1895, Du Faur and Gerard made an application on behalf of the Union Bank to have the reserve offered for sale by auction. In July, 1895, the District Surveyor made a report on that application, and he recommended that the reserve should be subdivided, but that the disposal of the land be left over until after the measurements had been made. In August, 1895, Du Faur and Gerard, on behalf of the Union Bank, lodged an application for the exchange of certain land for the reserve. The land offered for exchange under that application is indicated by red hatching on the helio. On November, 1895, Mr. O'Sullivan forwarded a letter from Mr. O'Loughlin, asking that the reserve should be made available for homestead selection. In May, 1896, Surveyor Goodridge measured the reserve into four portions— one to be retained as a reserve, the other three with a view to alienation in some form. In May, 1896, the District Surveyor reported upon the measurement, and requested that a decision should be arrived at as to how the land was to be disposed of, and the Minister, after reports, approved of the three portions being made available as one homestead selection area. In August, 1896, the Executive Council approved of this course, and homestead selection area No. 225, comprising one block, was gazetted on the 15th August, 1896. Subsequently, it was decided to cancel the homestead selection area, pending consideration of the exchange application made by the Union Bank. In July, 1896, the exchange application lodged in August, 1895, was refused, it being considered that the exchange as then proposed was not desirable in the public interest. In September, 1896, the Bank modified their proposal for exchange, offering to surrender 1,802½ acres, indicated by brown hatching upon helio., in exchange for the reserve and other land, altogether about 1,300 acres. In the same month—September, 1896—the Minister referred this proposal to the Land Board for consideration. In November, 1896, the Bank still further modified the proposal by offering to surrender, in addition to the land previously offered, a further area of 510 acres. In the same month—November, 1896—the papers were recalled from the Land Board, the matter was again considered, and the amended proposal as it then stood, namely, that the Bank should surrender 2,362½ acres, indicated by red edging on the helio., in exchange for 1,300 acres, indicated by blue edging, was referred to the Board for full inquiry and report. In February, 1897, the Board reported and recommended that the exchange should be entertained. In March, 1897, the Board's report was considered by the Minister; but he decided to allow the matter to stand over, stating that he did not care very much for the exchange. That is how the matter stands.

137. Have you any papers? I hand in, at the request of the Chairman, the following papers:—

Report made by Surveyor Halliday, dated 21st September, 1896. [Appendix A 2.] Letter dated 20th October, 1896, from Mr. O'Sullivan to the Minister for Lands. [Appendix A 3.] Letter dated 21st November, 1896, from Mr. O'Sullivan to the Chairman of the Local Land Board. [Appendix A 4.] Letter dated 27th November, 1896, from Mr. John Gale to the Chairman of the Local Land Board. [Appendix A 5.] Report of the 30th November, 1896, by Surveyor Halliday. [Appendix A 6.] Letter dated 2nd December, 1896, addressed to Messrs. Cox and Gale, and signed by a number of persons protesting against the exchange being carried out. [Appendix A 7.] Undated letter received in December, 1896, addressed to the Chairman of the Local Land Board, signed by John Commens and others, objecting to the exchange. [Appendix A 8.] Report of the Local Land Board at Queanbeyan, dated the 29th January, 1897, together with the evidence taken by the Board. [Appendix A 9.] Summary of the case signed by Mr. C. J. Saunders on the 23rd February, 1897, on which the Minister's decision of the 8th March, 1897, was given. [Appendix A 10.]

E. A.
Bronsdon.
26 May, 1897.

138. Are there any records to show that when the Minister received the protest against the exchange he stopped the exchange, and proposed to put the land up again for homestead selection? No, there was no decision to that effect. The homestead selection area was cancelled with a view to the second exchange application being considered, and a final decision upon that has not yet been arrived at. The homestead selection area stands as cancelled for the time being.

139. You have a letter from myself, calling the Minister's attention to a telegram which appeared in the *Daily Telegraph*? Yes; the letter is dated 20th October, 1896.

140. Does that not go to show that the Minister at one time intended to put up the land again for selection? The telegram states that the selectors are jubilant in consequence of Mr. Carruthers stopping the exchange, and deciding to have the land submitted for settlement.

Edward James Halliday called in, sworn, and examined:—

141. *Chairman.*] What are you? Staff surveyor, Lands Department.

142. You are stationed in the Queanbeyan district? Yes, as part of the Goulburn Land Board District. My headquarters is at Cooma.

143. Your duties take you to the Queanbeyan district? Yes.

144. You gave evidence before the Local Land Board with regard to the proposed exchange of land on Cuppacumbalong run? Yes.

145. Do you still adhere to that evidence? Yes.

146. Tell the Committee briefly your opinion about this proposed exchange? I gave that evidence very shortly after the inspection, whilst everything was fresh in my mind. I think the best way would be to read my brief reports. I might say that the exchange is not at all in the way in which it was at first proposed. First of all, the Bank made a proposal for an exchange, and I was asked to report upon it. I reported that the land which the Bank wished to get was four times as valuable as the land they offered. The reason why I make that statement is because that report takes that into cognisance. The next thing the Bank did was to leave the proposal in the hands of the Department to make. Then I was instructed to make an inspection. I went to the run, and asked if they were prepared to give the land at Coffey's Flat, to the extent of 1,802 acres, for about 1,290 acres of The Angle, inclusive of three small detached areas. I said that if they would do that I was prepared to recommend it for consideration; and they did it. At the same time I pointed out certain objections to the exchange, and the Bank offered an additional area of 560 acres, making a total of 2,362 acres for an area of 1,290 acres at The Angle. My report was as follows:—

Sir,

Camp, near Yass, 30 November, 1896.

Referring to your instructions of 19th November, 1896, I have the honor, after inspection on the 26th instant, to report as follows:—

First as to the additional portions offered in surrender—5, 63, 87, and 88, parish Cuppacumbalong—about 10 acres at the north-west corner of portion 88 and about 10 acres along frontage of portions 63 and 87 is flat arable loamy land with light soil of granite formation; the balance west of road is light-soiled hilly land, rocky in parts, granite formation, moderately thickly timbered mainly with apple; the 350 acres east of road is so precipitous and rocky as to be almost, if not quite valueless, except perhaps for the oak timber on it, which may be used in time of drought when the more accessible oak elsewhere has been used up. The adjoining Crown land is of the same rocky, barren, mountainous character, and in fact is almost if not wholly inaccessible from the frontage of portions 63, 87, and 88, which taken together I value at £120 for the 510 acres as freehold value, apart from any existing fencing.

About half of portion 5 is flat, arable, light-soiled, loamy land of granite formation; the rest is undulating, fairly grassed openly timbered land, rocky in parts, the freehold value of which I estimate at £60. The adjoining Crown land, however, is almost worthless, being precipitously steep, excessively barren and rocky.

For settlement purposes this additional land offered in surrender is not of much value, and could be best worked as part of a large holding. It might of course be selected for the sake of forming a home, but it is on the fringe of settlement, and far removed from school provision, &c.

Again, as to exchanging land on south of head station on section 3, village of Tharwa, for allotments recently bought at auction by Bank, it is probable that if the same allotments were put up again after exchange they would be similarly purchased, as naturally enough, perhaps, a possible public-house may not be desired so close to the station residence. Speaking generally, it may be said that nearly all the trouble in this case has arisen through the extremely one-sided exchange proposal first made by the Bank.

Further, I am unable to see that the application of Bank is made mainly for consolidation purposes, inasmuch as the land offered in surrender leaves a small area entirely cut off from the rest of the Bank's property. This small area comprises portions 2, 17, and 18, parish Tharwa, totalling 322 acres. About 25 acres of portion 2 is under cultivation on terms, but the terms are not such, I believe, as would prevent surrender—the rest of the land is occupied by Bank. The 322 acres is not so good as the 522½ acres adjoining revoked reserve 67. It has already been pointed out that revoked reserve 67 is not wholly surrounded by the Bank's land, and should this revoked reserve pass into other hands than the Bank's, there is no reason why the 522½ acres should not be satisfactorily rented or otherwise arranged for in a give and take manner, with one or more of the four adjacent holders, especially as there is on it both water and a considerable area of good cultivation ground, and the Bank would still hold a large compact area to the south. When called upon to suggest an exchange for water reserve 67, I found it difficult, because there is not apparently in the whole of Cuppacumbalong Estate another equally compact area of equally average quality. When in locality a few days ago I had a further look at water reserve 67 and the lands offered in surrender to the north. I consider my first valuation of the latter as high rather than otherwise. There is on it certainly about 100 acres in all of fair arable land, but on the other hand there is a considerable part of it light-soiled inferior land, especially on the south-west half; some of it through neglected suckering is densely scrubby; sweetfebrary is rather thick on one part. It is not so hilly as water reserve 67; a great deal of it in fact being too level for satisfactory natural drainage in a wet time, and is not nearly so sound for sheep as water reserve 67.

My first doubts in respect to exchange are increased upon further inspection, and considering the additional offers by Bank, do not satisfactorily remove them. I would, therefore, advise, in view of the foregoing, and having regard to the expression of public opinion against the proposal, and the fact that about £2,000 worth of land on each side is involved, that the proposal be declined unless a further inspection be made, say, by some successful and level-headed grazier from another district, such as Messrs. A. J. Litchfield or J. Crisp, of Cooma district, at a probable cost of less than £10, or that the Bank give up portions 2, 17, and 18 (on the same terms as the rest) as suggested by the Minister.

Mr. L. F. De Salis, M.L.C., informed me that as owner with equity of redemption he claimed that his consent to any proposed exchange would be required to give it legal effect. This has not been given.

E. J.
Halliday.
26 May, 1897.

E. J.
Halliday.
26 May, 1896.

147. With regard to the original proposal made by the Union Bank, what were your chief objections to it? Simply that the proposal was altogether one-sided, inasmuch as the land they wished to surrender was only one-quarter of the value of the land they wished to secure. I could not understand how such a one-sided proposal came to be made.
148. Then they have extended it? Yes. The proposal was completely altered.
149. The first proposal you objected to on the ground stated? Yes.
150. Will you state what their second proposal was? It was to give 1,802½ acres at Coffey's Flat for 1,290 acres at The Angle, and land adjacent thereto.
151. And did they propose to add anything on to the land on Coffey's Flat? Yes; they then modified it by offering to give up 560 acres in addition to the 1,802½ acres.
152. And do you object to that proposal? Yes; I am not satisfied that it would be in the interest of the Crown to make the exchange, even on the modified terms.
153. What are the grounds of your objection? My grounds of objection are that the land they wish to give up is very irregular in shape for one thing. It is also, speaking generally, unsound for sheep in comparison with the land they wish to secure. Therefore, it is not nearly so valuable. Thirdly, the settlers in that locality have to depend mainly on grazing for a livelihood. It is not proved that cultivation will pay so well as grazing. The Angle land being sounder for sheep, it is, therefore, more valuable. Another reason is, that the land they wish to give up has been very much neglected, so that scrub has grown up very thickly, and it would require a certain amount of capital to bring the land into proper working condition. But The Angle land is compact in shape, and requires no improvement whatever beyond fencing. In regard to fencing, the homestead lessee would only have to pay half the fencing on the boundaries. In other words, a man with a very little capital could go on The Angle land, and make a living straight away. There are some advantages in favour of the land at Coffey's Flat. It would be better for mixed farming, inasmuch as there is considerably more agricultural land in it, and sheep would also do well on it for a time. It is slightly nearer the market.
154. I presume by the nearest market you refer to the market town of Queanbeyan? Yes, or the railway platform, Tuggeranong, by nearest practical vehicular route.
155. What is the distance from Coffey's Flat to Tuggeranong platform? The land at Coffey's Flat is 4½ miles from the centre to Tharwa Bridge, and from Tharwa Bridge to Tuggeranong platform is 6 or 8 miles. I remember it is 12 miles altogether from Coffey's Flat to Tuggeranong platform, and 15 miles from The Angle to Tuggeranong platform. The road from the land at Coffey's Flat is somewhat better than the road from The Angle. But the land at The Angle is only 1½ mile from Williamsdale railway platform on the opposite side of the river; although this road from Williamsdale station to The Angle is not practicable for wheeled traffic. It is a packing road, but it is quite good enough for the occupation of The Angle land, for the purposes of a grazing settlement.
156. Is there a passable crossing at the river? It is not a good crossing, but for eight months out of twelve it would be practicable.
157. Would it be possible to get sheep across? No; they prefer to take sheep by the bridge.
158. They will get their wool across there to Williamsdale station? They could, but they would prefer to go round by the road to the Tuggeranong platform.
159. The crossing-place would only be for passengers? Yes, and for supplies and business communications with Queanbeyan. An adjoining selector named Kelly has a grazing settlement, and he has a private boat, and works the place that way.
160. Is Kelly's place near The Angle? Yes; it adjoins it.
161. Have you any other objections to this modified proposal? Speaking of the comparative merits of the two, it is a difficult case to decide. There are about 50 acres of cultivation land in one area on the Coffey's Flat land, but, except for about 15 acres on the river bank, it is not of a rich character, and it is questionable whether it would pay to cultivate it, except for a short time. It might admit of light cultivation for two or three years. On The Angle reserve there is 25 or 30 acres of cultivation land in several patches, and quite sufficient to work the place as a sheep-grazing settlement. The Coffey's Flat land is irregular shape, and would be more costly to fence. The Coffey's Flat land would be very much more costly to improve, and owing to the unsoundness of the land it would require draining and different working.
162. Do you know if the Union Bank purchased allotments in the village of Tharwa? Yes.
163. Did they ever add these village allotments on to their proposal for exchange? They offered, I believe, to do so. I reported upon it in connection with proposed exchange, and stated that if they did surrender them, and they were offered at auction, they would naturally buy them again.
164. If they surrendered these lots and got The Angle land, and these allotments became the property of the Crown, and were put up for sale again, the Union Bank would buy them a second time? I should say that they naturally would; but the Minister would have a right not to put them up for sale, but lease them.
165. What would be their object in buying the allotment a second time? The "head station" is amongst those allotments, and if the allotments were sold there might be a public-house at their door, and perhaps they would not like it so near the head station house.
166. But do you think the public-house is the only objection? I think that the owners of all station properties of that character do not like land to be held adversely to them right against the head station.
167. Do you think the objection to the hotel is the only objection they have to a village being erected there? No; I think that the land being mainly grazing country, they would naturally wish to secure the land right against the head station.
168. Then the homestead really forms a portion of the village reserve? It is on some of the allotments.
169. And you think that the station-owners objected to settlement going there? It would certainly interfere with the convenience of working the station.
170. There is no other place about there where a village could be established? Not on Crown land.
171. And this village reserve is just at the crossing of the river by an expensive bridge, put up at a cost of £6,000? It is.
172. And that is the only spot in the locality where a village would be likely to rise? Yes; on Crown land.
173. Do you know if there is any spot about there where a village could be founded? No. There is no other Crown land about there suitable for a village site.

E. J.
Halliday,

26 May, 1897.

174. Is there any land available on the other side of the river? Not Crown land. Mr. Cunningham owns the land on the other side of the river.

175. Then if the Bank were to again buy up the village allotments no village could be established at Tharwa Bridge? Unless by permission of the Union Bank.

176. Do you know whether the Union Bank would object to a village there if an hotel was prohibited? I could not say. I have an impression that under certain conditions the owners would not have any objection to a business place being erected there. But it is very doubtful whether the settlement in the surrounding country would maintain a business place of any kind there at present.

177. But you know it is usual in the history of these villages in country towns for a blacksmith's shop, a store, and an hotel to follow in natural order? From my knowledge of the locality, I think it is doubtful whether any one of those three could be successfully established.

178. Although they added these village allotments to their previous offer, did you still consider that the proposed exchange was an unfair one? Yes; I considered the additional offer of very little use for purposes of settlement. The land was of very inferior quality. The value of 510 acres only came to £120, which amounts to about 4s. 9d. an acre. The other land across the creek is a little better, but of small area.

179. Then as the case stands, with all these modifications and additions, you still report adversely? Yes; unless some further concession be made. I mentioned the further concession on which I should be prepared to recommend the exchange. That is the giving up of three portions—No. 2, No. 17, and No. 18—adjoining Coffey's Flat. Then I think the proposal would be in favour of the Crown.

180. That is with the village lots as well? Yes; I take it in regard to the village lots that they will get their money back again. But there was nothing definitely arranged as to what further course will be taken whether, if the land were offered at auction again, they would not purchase them.

181. If the village lots were given up you would suggest that they should be retained in the hands of the Government, and only leased? Yes, only leased, in the interest of future settlement.

182. What is your opinion as to the carrying capacity of the Coffey's Flat land, and also of the land at The Angle? I estimate the carrying capacity of the Coffey's Flat land, taking an average of years, to be one sheep to 2 acres. The western part is very poor and rocky, and I do not think that is worth more than 10s. an acre. The other land is flat, and stands droughts better than the land at The Angle. The Angle land is very much sounder for sheep and has a better carrying capacity. I estimate that on the average it will carry one sheep to the acre.

183. *Mr. Mackay.*] A witness to-day has given it as his opinion that The Angle land is worth £1 an acre and the land at Coffey's Flat is worth 12s. 6d. an acre;—I would like to hear your opinion? My valuation of The Angle land, on the basis that it will carry a sheep to the acre, is £1 7s. 6d. The 1,800 acres of land at Coffey's Flat I value at £1,600. That is based on the carrying capacity, and also its capacity to respond to improvement. A great deal of that land can be very much improved. The Angle land does not admit of improvement beyond fencing.

184. *Mr. Carroll.*] Will you show me what great necessity there is for the station to exchange the land and give so much more for that small patch? Because the land at Coffey's Flat is, as a whole, inferior. The 2,362½ acres are, in money value, about the same as The Angle land.

185. I do not see where the consolidation comes in, because other parties have land all round? The map before the Committee is not, I think, now quite correct, inasmuch as some of the land tinted blue on the map, which was held adversely to the station, has since, I understand, come into the possession of the Bank.

186. How would the proposed change benefit the station in the way of consolidation? I fail to see that it does tend to consolidate the station property.

187. Do you consider it is necessary for the station to acquire that land? It would certainly be an advantage. The Angle land is the best sheep land in the whole run. The more good land they can get altogether for grazing the cheaper it will be to work it. As regards the Coffey's Flat land, an objection in the interest of settlement is that it is intercepted by two roads which carry considerable traffic; but the traffic through The Angle land is practically nil.

188. As far as you can see, the exchange is intended so as to acquire better land, not so much for consolidation? Not so much as getting land which they could work with more profitable results.

189. *Mr. Jones.*] Is your valuation of the land based on the property as a whole? I could not value the property as a whole. It is about 60 square miles in extent. I was only instructed to value the two blocks.

190. *Mr. Carroll.*] Are any of those reserves required for the public use? Yes; there is a piece of land proposed to be retained permanently at The Angle crossing—30 or 40 acres—in the interest of settlement, as a camping reserve for a turn-out, &c.

191. Is 40 acres sufficient for a camping reserve? Ample.

192. *Mr. Jones.*] There is no advantage to be gained on either side according to the report? Yes. I have stated that, in my opinion, it is not to the advantage of the Crown to accept that offer, for the reasons I have already given, unless the Bank is prepared to give something further.

193. Are the Crown lands superior to the other? They are superior for the purposes of settlement.

194. *Mr. Miller.*] Supposing the exchange were granted for the run-holders, do you think that the Coffey's Flat area would be taken up as homestead area or as selections, or would it still remain in the hands of the Crown, to be ultimately leased by the run-holder? This land would undoubtedly be taken up, because the district is a closely-settled one, and as proof I may mention that some of the land was selected as far back as 1873—some as far back as 1868 and 1867.

195. The Angle land would be equally sought after for settlement? It would be more so, for the reason that it is compact in shape, would cost less to fence, and would not require capital beyond that necessary to fence and stock it.

196. *Chairman.*] Do you think it is possible that Coffey's Flat land would maintain two families? I think so, judging by the position of Sheedy, a *bona fide* man there, and others; but I do not think it would maintain two families unless they combined other labouring pursuits with the working of the land.

197. Do you think that The Angle land would maintain two families? Certainly not, by itself. The 510 acres on Naas Creek is about 8 miles from the Williamsdale platform. The capital value of this land is only about 5s. an acre, but it being fenced in on the outside boundaries, and Crown land being so scarce, I believe it would be taken up as homestead selection by a man labouring in the locality. 198.

- E. J. Halliday.
26 May, 1897.
198. It contains how many acres? 560 acres in all.
199. Is there any cultivation? Yes; altogether about 35 acres.
200. I understand the position you take up is this: You were strongly opposed to the first proposal for an exchange, because you believed it was at a disadvantage of four to one against the public? The land which they first offered for exchange fronted Gudgenby River, and not only is The Angle land four times as valuable as that, but the road access to Gudgenby River land is bad in the extreme.
201. Then you consider that it would be unfair to the public to entertain the first offer at all? It was altogether out of the question.
202. With regard to the subsequent offer of land at Coffey's Flat and land near Naas Creek; if to this the piece of land near Coffey's Flat, marked portions 2, 17, and 18, and allotments in the village reserve, were returned to the Government, these might be considered a fair equivalent for the land asked for by the Union Bank? No; I would say then that it would be to the interest of the Crown to make the exchange.

THURSDAY, 27 MAY, 1897.

Present:—

MR. W. H. B. PIDDINGTON, | MR. MILLER,
MR. T. JONES, | MR. MACKAY.
E. W. O'SULLIVAN, Esq., IN THE CHAIR.

Charles Bates further examined:—

- C. Bates.
27 May, 1897.
203. *Chairman.*] You have taken a stand in opposition to this proposed land exchange? Yes.
204. I understand from your evidence that you desire that The Angle land should be retained as homestead selections? Yes.
205. Supposing the Government are determined to have an exchange of some kind, do you think it would be right in the public interest to accept the last offer suggested by the Union Bank to the Government—that is, to give the land at Coffey's Flat, and the other at Naas Valley? No, I do not think it would.
206. You do not think that these lands, put together, would be a proper equivalent for the land which the Union Bank would obtain at The Angle? I do not.
207. Suppose that, as suggested by Mr. Halliday, the Union Bank were to give in addition a piece of land near Coffey's Flat, running down towards the river, and the village allotments on the reserve near Tharwa Bridge, and the land at Naas Valley—would that be a fair equivalent for the land which they propose to take at The Angle? I do not think so. I think the land at The Angle is better than the other lot.
208. You think that the land at The Angle by itself is better for the public than all the other pieces? Yes.
209. Am I to understand that you would be opposed to the land exchange even then? Yes.
210. Supposing it was pointed out that this land on Coffey's Flat, combined with the land at Naas Valley, would form two homestead selections, instead of one, at The Angle, would that be more conducive to the public interests? It would not go in two. I expect they would split Coffey's Flat in two; but I do not think there would be as good benefit to the public then.
211. Are you guided in this answer by the quality of the land at Coffey's Flat and Naas Valley? Yes; the 1,802 acres will not run 1,802 sheep all the year round; but the land at The Angle will run a sheep to the acre if even the seasons be bad. I made a mistake yesterday.
212. Would you care to correct that mistake now? Yes; the 1,802 acres will not run 1,802 sheep all the year; but the 945 acres at The Angle will run one sheep to the acre.
213. When you gave your answer just now were you aware that in addition to the land at Coffey's Flat and the three pieces running down from there to the river, there were over 500 acres at Naas Creek to be given? I was not aware about the ground near the river.
214. I want you to thoroughly understand the question;—would you approve of the carrying out of Mr. Halliday's suggestion, which is as follows:—That 1,802 acres at Coffey's Flat, 322 acres in three pieces running down from Coffey's Flat to the river, and 560 acres at Naas Creek, as well as the allotments on the village reserve at Tharwa, should be put into one property and exchanged for the 1,200 odd acres near The Angle? The Bank then might lose the money which they have paid on the allotments. I would not like to see that done.
215. I do not think the Bank would lose their money—the Government might return it;—but suppose that were done, do you think it would be a fair exchange? I do not know. It is a lot of land—more than I thought it was yesterday.
216. It is not a proposal from the Union Bank, but simply a suggestion made by the surveyor;—with that knowledge would you consider that all these pieces combined would be a fair equivalent for the 1,200 odd acres to be taken near The Angle? I do not know what to say about it.
217. You might just give us your opinion? I think it would be fair.
218. You think that the suggestion of Mr. Halliday would constitute a fair equivalent for the land to be taken at The Angle? I think so.
219. But suppose that the Union Bank will not advance upon their offer, what would you recommend? I would recommend that the exchange should not be made.

Edward James Halliday further examined:—

- E. J. Halliday.
27 May, 1897.
220. *Chairman.*] Do you wish to make a statement? I wish to correct a wrong impression that I think I have conveyed. The Chairman asked whether I should be prepared to recommend for exchange by the Union Bank 1,802 acres at Coffey's Flat, plus 560 acres at Naas Creek, plus 322 acres adjoining Coffey's Flat, and certain village allotments. He asked would I consider that a fair exchange, and I said, yes. I did not exactly mean that. That would be asking more than we could fairly expect the Bank to give. If I were asked to make a proposal myself, I would say that if the Union Bank would give the 1,802 acres with the 322 acres, their money to be returned for the Tharwa allotments, this 560 acres at Naas Creek being

being rejected altogether, not included in the exchange, that would be my proposal. I said, of course, that I would recommend it then, because the Crown would be getting the best of it; but I think the 1,802 acres and the 322 acres would be a fair exchange. The Government would be able to settle three families on that land for homestead selection purposes—that is, three families could, by combining other pursuits, make a living there with mixed farming. This 560 acres at Naas Creek I do not think are wanted in the interests of settlement. The Bank has contracted to conditionally purchase them at £1 an acre; but the land is not worth it, and it would pay the Bank to give it up.

E. J.
Halliday.
27 May, 1897.

221. In order to make your proposal clear, I would ask you to repeat exactly what you consider a fair equivalent for the 1,200 odd acres to be taken by the Bank at The Angle? I repeat, 1,802 acres at Coffey's Flat, together with 322 acres comprised in portions No. 2, No. 17, and No. 18, to be surrendered, together with the cancellation of the recent purchase of allotments near the village of Tharwa. I should consider that a fair exchange.

222. Is there any other point that you would like to clear up? No; I would recommend that as a proposal for a fair exchange.

223. You put on one side the land at Naas Creek for settlement? Yes; which is inferior land, and far away from school provision, and not very suitable.

224. *Mr. Miller.*] Could not a family live by it? No; it is only worth about 5s. an acre.

225. *Mr. Jones.*] Has it been abandoned by a family? It is in the hands of the station.

226. *Chairman.*] Is that the land which the Bank first offered in exchange for the land at The Angle? No.

227. Which was it that they first offered? That is further removed from settlement still.

228. Was it of less value than the land you referred to just now? About the same.

229. About 5s. an acre? I should say about 7s. 6d. an acre, taking it all through.

230. How much is there in that piece? About the same area as there is at The Angle—about 1,000 acres.

231. Then, at first the Bank was virtually offering 1,000 acres, worth 7s. 6d. an acre, for 945 acres, which you value at 27s. 6d. an acre? Exactly.

232. I understand that you reported in the public interests against that proposed exchange? Yes, giving these values at the time.

233. Well, that offer appears to have disappeared altogether now? Yes.

234. What the Bank proposes now is an entirely distinct offer of land at Coffey's Flat? Yes; together with this land at Naas Creek—1,802 acres at Coffey's Flat, with 560 acres at Naas Creek. The question of the allotments, I understand, was not considered by the Land Board.

235. *Mr. Jones.*] What do you value the land at at Coffey's Flat? The 1,802 acres at £1,600; the 322 acres at £280.

236. *Chairman.*] The Committee has received a letter from Mr. Farrar, who is resident in that locality, suggesting that a road should be made from Williamsdale platform, across the river from The Angle, leading over Coolamon Plains, to the Yarrangobilly Caves;—do you think it is practicable? It depends upon what kind of a road you mean. If Mr. Farrar means a road on which a dray could travel, the expense would be out of proportion to the benefits that would arise. If he speaks of a horseback road, they have that at present.

237. Would it be possible to take a buggy over there? The expense involved in making a road fit to carry buggy traffic would be altogether incommensurate with the benefits to be received from it.

238. As a matter of fact, buggies have travelled over there? I took one over The Angle crossing myself.

239. I mean a way to the caves? Yes.

240. Then you would not recommend this as a road to be carried out? No; I think the proposal is altogether out of the question.

241. I suppose that some day such a road may be constructed when there is a very numerous body of tourists going out to the caves? No; I think the alternative route by railway to Cooma, then by the existing main road, will always be the preferable route.

242. Is there a road from Tumut to the caves? Yes; a made road, and there is a made road from Kiandra to the caves.

243. Then I understand that you do not attach much weight to this suggestion of Mr. Farrar's about a road to The Angle? No; I consider that it is impracticable, and not required.

244. *Mr. Piddington.*] Is the area of The Angle 1,280 acres or 945 acres? The area of these three portions spoken of as The Angle is 945 acres. There are three small detached areas of the same class of country, totalling 1,290 acres, and the Bank wish to secure that in exchange for land at Coffey's Flat and Naas Creek.

245. Then the value of the land known as The Angle and the other detached allotments comes to about £1,800, and the value of the land at Coffey's Flat and that other piece comes to about £1,780;—they are about the same value? £1,600 is the value of the land at Coffey's Flat, and £180 the value of the 560 acres at Naas Creek.

246. The land offered by the Union Bank in exchange is about the same value as the other three detached allotments? Yes; but in my opinion not so suitable in the interests of settlement.

Charles Bates further examined:—

247. *Chairman.*] You have heard the correction made by Mr. Halliday to the effect that what he recommends as a fair exchange would be 1,802 acres of land at Coffey's Flat and 322 acres leading down to the river, with the surrender of the allotments in the village reserve at the bridge, excluding the 560 acres which you were led to believe would form a portion of Mr. Halliday's proposal;—having heard his evidence, would you consider that a fair exchange? I think so. As long as they have nothing to do with Naas Creek, I do not believe in that. I would not fence in the Naas Creek land if I had it to-morrow.

C. Bates.
27 May, 1897.

248. I understand now that you think, although that 560 acres is taken away, what is left would make a fair exchange? Yes; I think so.

WEDNESDAY, 2 JUNE, 1897.

Present:—

Mr. MILLER,		Mr. MACKAY,
Mr. W. H. B. PIDDINGTON,		Mr. CARROLL.
E. W. O'SULLIVAN, Esq., IN THE CHAIR.		

Arthur Charles Betts called in, sworn, and examined:—

- A. C. Betts. 249. *Chairman.*] What position do you hold? I am Chairman of the Land Board of the Goulburn district.
 2 June, 1897. 250. You and two other members of the Board held an inquiry into this case at Queanbeyan? Yes.
 251. Who were the other two gentlemen? Alexander Dyce and John James Wright.
 252. Were you unanimous in the decision you arrived at? Yes.
 253. What was the decision? It was in favour of the exchange as heard before us.
 254. The second offer or the first? The second offer. The first never came before us.
 255. Do you know the particulars of the first offer? I cannot say that I do.
 256. In regard to the second offer, you considered that that was a fair exchange for the 1,200 odd acres at The Angle? Yes.
 257. You consider that the offer of the Union Bank of 1,802 acres at Coffey's Flat and of 560 acres at the Naas Creek is a fair equivalent for the 1,200 odd acres of land at The Angle? Yes; on the evidence before us.
 258. What would be the use of 560 acres to any man on the Gudgenby Creek? If the 50 acres could be taken in with it, as suggested, it could be made of use, I think.
 259. Do you think any man could make a living on it? I do not think he could; but there is other land around it, and with that they might, though it is very rough.
 260. You know the country there—it is very mountainous? I do.
 261. Would there be a fair monetary value in those two lots—the one near Gudgenby Creek and the other for the land at The Angle? It appeared to us so, taking the proposal as a whole, but I do not say that the land at the Gudgenby Creek is equal to the land at Coffey's Flat or at The Angle. Of course, what I say is based upon the evidence that I took as President of the Land Board.
 262. Mr. Halliday's evidence is strongly against it, is it not? I do not think it is strongly against it. The evidence is before you, I presume.
 263. Mr. Halliday estimates the value of the Gudgenby land at about 7s. 6d. per acre? There is no doubt that it is inferior land.
 264. And it would be useless for anyone to take it up? Yes; unless in connection with land adjoining it.
 265. You still adhere to your opinion that the second proposal would be a just exchange? Yes; taking the evidence that we have before us, I do.
 266. *Mr. Miller.*] Is that land at Naas Creek of the value of £1 an acre? Fifty acres of it is, undoubtedly.
 267. And if a person whose property adjoined the land took it up, would he not have to pay £1 an acre to the Government? Yes. They would have to take it up as an addition.
 268. No man would be foolish enough to take it up as an addition if it is only worth 7s. 6d. an acre? I cannot say.
 269. *Chairman.*] We have the evidence of Mr. Halliday that the land is only worth 7s. 5d. an acre? I agreed to the proposal as a whole.
 270. Have you valued the two pieces of land which it is proposed to give in exchange for The Angle? We made an estimate when treating the proposal as a whole.
 271. And you think the monetary value of the two is about equal? I think the decision was, and I am prepared to stand by that. But taking into consideration that the three isolated pieces along the river would be thrown in, the offer was a fair one.
 272. *Mr. Miller.*] Is it a fact that you have some shares in the Union Bank? No.
 273. Have you ever had any shares in that Bank? Yes.
 274. Had you any shares in this Bank while this case was pending? I had shares in the Bank; but on the first day of its sitting, and before the evidence of the first witness was concluded, I adjourned the Court, and my shares were sold a few days after.
 275. *Chairman.*] You had shares in the Bank, and you were told that that disqualified you? Yes; it was purely accidentally that I remembered it. It occurred to me that I was a shareholder, and I adjourned the Court at once. I also informed the Minister, and sold the shares a few days after.
 276. Did you inform the Minister of that? I informed him at once.
 277. And who authorised you to go on? Mr. Marsden was nominated as Chairman. Then after that I received a letter to say that as my shares were disposed of I could go on with the case. I had six shares in the Bank.

John Sheedy called in, sworn, and examined:—

- J. Sheedy. 278. *Chairman.*] What position do you hold? I am a farmer and grazier.
 279. Have you the post office also? No.
 2 June, 1897. 280. Who has the post office? A son of mine.
 281. You are a farmer and grazier, living near Cuppacumbalong? Yes.
 282. Do you know the block of land offered by the Union Bank, the proprietors of the Cuppacumbalong station, in exchange for the 1,200 odd acres of land at The Angle? Yes.
 283. Do you know Coffey's Flat well? Yes.
 284. What is your opinion of that land? It is good land.
 285. What do you mean by good land? Part of it is good grazing land, and part of it is good land for cultivation.
 286. Is it liable to fluke? Coffey's Flat alone is. It is not fit for sheep to run over.
 287. You say that the land at Coffey's Flat is good land? Yes.
 288. Yet you admit that it is a bit flukey? Coffey's Flat is not a sound pasture for sheep to run on. About 140 acres of it wants cutting off, but the remainder is really sound. 289.

J. Sheedy.
2 June, 1897.

289. Is it swamp land? It is, and that is the best for cultivation.
290. Is there not a danger whilst it is a breeding-place for fluke? If that part were fenced off and cultivated sheep could not get on to it.
291. At what would you value the 1,802 acres at Coffey's Flat per acre? It is hard to tell at present. If it was improved the same as the land at The Angle—if the timber on it was dead—it would be worth as much as the land at The Angle.
292. In your opinion the land at Coffey's Flat is as good grazing land as the land at The Angle? Yes, if it was improved; but Coffey's Flat is in its wild state.
293. What value would you put on Coffey's Flat to buy it? If I were going to buy it I should value it at 15s. an acre. I should be satisfied to take it at that.
294. Would you be surprised to hear that the land at The Angle has been valued at 27s. 6d. per acre? It may be; but that does not prove that it is worth it.
295. What makes people so anxious to get this bit of land at The Angle? I cannot make that out. It is people at the other end who are fighting for The Angle. I cannot see anything in The Angle to suit a poor family at all. If Coffey's Flat were cut into two blocks two families could make a good living on it.
296. Do you know the 560 acres of land near Gudgenby Creek? No.
297. Can you give us an opinion on this proposed exchange? If I owned Coffey's Flat I should not think of giving it for The Angle.
298. Your opinion is that Coffey's Flat by itself is quite as good as the land at The Angle? My opinion is that it is worth more than the land at The Angle without the Naas Creek land at all.
299. What would you give for the land at The Angle if you wanted to buy it? I would not give any more for it; it is only a mere sheep run.
300. *Mr. Mackay.*] You say that this land at Coffey's Flat is suitable for both grazing and farming? Yes, and for dairying. It is suitable for three purposes.
301. How much of it do you think would be suitable for farming? About 300 acres is suitable for farming, and the rest is fit for grazing.
302. You say that you know nothing whatever about this other land at Gudgenby Creek? I know nothing at all about that.
303. *Mr. Miller.*] Have you been all over the Coffey's Flat land? I have.
304. Have you been all over the land at The Angle? Yes, for twenty-eight years. I have been going backward and forward there.
305. How many sheep to the acre will The Angle land run, or how many acres will it take to carry a sheep? The Angle land in good seasons will no doubt carry a sheep to the acre.
306. And how many will Coffey's Flat carry? In good seasons Coffey's Flat will carry one sheep to the acre.
307. Then in your opinion the Bank is offering property of more value to the Government in offering Coffey's Flat by itself than the value of The Angle? Yes, in my opinion, they are offering a lot more.
308. Where do you live? I live at a place adjoining Coffey's Flat. I know both places well. I am cultivating part of Coffey's Flat.
309. *Mr. Mackay.*] Are you cultivating, or is this land you live on your own? It is my own property.
310. *Mr. Miller.*] How much do you think it would cost per acre to ringbark Coffey's Flat? The general charge for ringbarking is about 1s. an acre up there.
311. And you say that two families could live comfortably at Coffey's Flat? They should do.
312. And how many on The Angle? Only one family could make a living on the land at The Angle.
313. Then you think that Mr. Holliday is entirely wrong in estimating the value of The Angle land at 27s. 6d. per acre? I would not think of giving 27s. 6d. per acre for it.
314. I do not know the answer that you gave to the Chairman when he asked you why people are more inclined to take up The Angle land than the other? A great many of the people who are singing out about The Angle land have never seen the Coffey's Flat land at all.
315. Who are these people? I saw a man at a meeting one day who had a good deal to say about Coffey's Flat and The Angle, and I asked him if he knew those two pieces of land, and he said no, he had never seen either of them.
316. Do you know that any of the men who gave evidence before the Land Board know nothing about this Coffey's Flat or Angle land? No. I heard some give evidence on The Angle land who did not know a great deal about Coffey's Flat.
317. Have you any relatives living near Coffey's Flat besides your own family? I have not.
318. *Chairman.*] Are you a native of the Cuppacumbalong district? I am a native of Uriarra, about 20 miles from Cuppacumbalong.
319. You are inclined to adhere to what you have said, that Coffey's Flat alone, putting aside the 560 acres at Naas Creek, is a fair equivalent for the 1,200 odd acres of land at The Angle? Yes, in my opinion, it is.
320. How is it that you cannot find many people in the district to endorse that? I cannot make it out.
321. Have you read a letter that appeared in the *Queanbeyan Age* from some settlers about this exchange? No, I have not seen it.
322. *Mr. Piddington.*] You said that there were some portions of Coffey's Flat that was not fit to run sheep upon? Yes.
323. What is the area? About 140 acres.
324. Is it swampy land? There is a bit of swamp on it, not a great lot, about 2 acres altogether.
325. Is that 2 acres the only part that is not fit to run sheep on, or is it the whole area of 240 acres? It would be better to have the 140 acres cut off to make the run a sound pasture.
326. You said that there were about 300 acres fit for farming? Yes, on the 1,802 acres, but it is not all together. It is in pieces here and there.
327. What area would be suitable for dairying out of that 300 acres? Any part along the river is suitable for dairying. Any part of the 1,802 acres would be suitable for dairying.
328. You say that this 300 acres is in detached pieces? It is.
329. What is the largest piece that you could get for farming? I am cultivating 30 acres, and putting that with land in Coffey's Flat, that would come to 160 or 170 acres of cultivation land.
330. How many acres of cultivation land are there at The Angle? Not more than about 20 acres.
331. What class of cultivation is it suitable for? It is not too good. 332.

- J. Sheedy. 332. In your opinion, there are about 20 acres of land at The Angle suitable for farming, and 300 acres in detached pieces at Coffey's Flat? Yes.
- 2 June, 1897. 333. You said that The Angle would run about a sheep to the acre in good seasons? Yes.
334. And how many in ordinary seasons? Not quite a sheep to the acre. I should think that it would carry about 800 sheep in ordinary seasons.
335. Were you present at the public meeting held at Queanbeyan? I was at one public meeting.
336. Were the selectors represented there, or were the majority of people there townspeople? They were townspeople. There were very few country people there.
337. Have you heard of any selectors who would be likely to take up land at Coffey's Flat? I have heard of any number who would take up Coffey's Flat if it was thrown open to homestead selection.
338. *Mr. Carroll.*] You said that you had resided for twenty-seven years on this station? I never worked on the station, but I was backward and forward through the land. I selected on the opposite side of the river, about 2 miles from The Angle, twenty-seven years ago.
339. You do not know anything about the land at Naas Creek? I have been over it, but I cannot say that I know it.
340. *Mr. Miller.*] Then you have not lived near The Angle? I lived for nine months within 2 miles of it, on the opposite side of the river, but I used to be crossing backward and forward.
341. Have you any knowledge of the original proposal of the Bank? No; I have been called here as a witness.
342. *Mr. Carroll.*] Who called you as a witness? I was summoned by the station.
343. *Mr. Piddington.*] I suppose you are absolutely certain about your evidence in regard to the value of these two pieces of land? To the best of my knowledge.
344. You value the 1,802 acres at Coffey's Flat at 15s. an acre? Yes.
345. And you say that the 945 acres at The Angle is worth 15s. an acre also? I say that if the Coffey's Flat land was in the same state as The Angle land, with the timber on it dead, it would be as good as The Angle land.
346. Then you say that if the timber were dead on the Coffey's Flat land the Union Bank would be giving double value to the Crown for this exchange? I would say that they were giving above the value, any way.
347. *Mr. Carroll.*] In your opinion, what is the reason for the Bank or station people wanting this exchange? My opinion is that the station people want to have all their own land together. Coffey's Flat is cut off the run by selections.
348. Do you work your selection, or let it? I work it all myself.
349. *Mr. Piddington.*] You have been working Coffey's Flat land on the halves system? I have been working on halves with the Bank.
350. What area have you been working? Thirty acres.
351. Could you give us any idea of the returns that you have received from it? Yes. There were 120 bushels of wheat off the 30 acres, 16 tons of hay.
352. *Mr. Miller.*] Then you are interested in the exchange? My interest is against the exchange. If Coffey's Flat is exchanged for The Angle I shall lose my farm.
353. Have you any selections in your own name? Yes.
354. How many acres? 400 or 500 acres.
355. Is it grazing or agricultural land? It is all grazing land.
356. *Mr. Piddington.*] You said that you had got 120 bushels of wheat, 16 tons of hay, and what else? Twelve tons of potatoes, and as nearly as I can remember £3 worth of pumpkins.
357. What are the values of this produce? Wheat was 4s. 6d. a bushel. The hay I am selling at 6s. per cwt., and I am selling potatoes at 5s. per cwt. There were 6 tons of straw which should be worth £2 a ton in a year like this, and 100 bags of wheat chaff which is selling freely at 1s. a bag.

[G. T. C. Miller, Esq., in the Chair.]

John Sheedy (continued):—

358. *Mr. Mackay.*] Which of the two places, The Angle or Coffey's Flat, do you think has the best access to the market? There is a good road from Coffey's Flat to the railway station. Coffey's Flat has the easiest access to the railway station, but it is not the nearest.
359. What is the crossing of the river like at The Angle? It is rough at high water.
360. Is it possible for teams or vehicular traffic to cross? During the last twelve months light vehicles could cross very well.
361. With regard to Coffey's Flat, what means of crossing the river is there there? There is the Tharwa Bridge.
362. Then you think that as far as access to the market is concerned Coffey's Flat is in a better position than The Angle? Yes.
363. *Chairman.*] How far is The Angle from the nearest railway station? I suppose from 1½ to 2 miles.
364. How far is it from Coffey's Flat to the nearest railway station? From the centre of Coffey's Flat it is about 10 miles.
365. Still you say that Coffey's Flat has the best road? Yes; the best road, but not the shortest.
366. *Mr. Mackay.*] What are the approaches like to The Angle crossing? Very steep on one side.
367. Then it would not be good, I presume, for traffic? You could not take heavy traffic across.

John Bell called in, sworn, and examined:—

- J. Bell. 368. *Chairman.*] Where do you reside? At Booroomba.
- 2 June, 1897. 369. What are you? A station hand.
370. Where are you employed? At Mr. McKeechie's, Booroomba.
371. Did you give evidence at the Land Board inquiry in respect to a certain proposal made by the Union Bank to exchange a piece of land for Government land? No.
372. Do you know anything about the proposed exchange? Yes; I know both places.
373. There is a piece of land known as Coffey's Flat which the Bank propose to exchange for a piece of land known as The Angle? Yes.

J. Bell.

2 June, 1897.

374. In your estimation, is the proposed exchange a fair one? It is, to the best of my belief.
375. Do you know the grazing capabilities of the two lands? I know a little about it.
376. How many sheep to the acre would the land at Coffey's Flat carry? I could not say by the acre. I think that Coffey's Flat and Connell's Corner ought to carry 1,500 or 1,600 sheep in a good season.
377. And how many sheep would The Angle property carry? I think 700 or 800.
378. Can you estimate the value per acre of the land at The Angle? I could not.
379. Have you any idea of the value of the land at Coffey's Flat? I think it will be 14s. or 15s. per acre.
380. Do you know anything at all about The Angle property? I have been all over it.
381. Could you not give an estimate of the value of the land? I should say it would be worth from 18s. to £1 an acre.
382. *Mr. Mackay.*] Did you not go into Queanbeyan to give voluntary evidence before the Land Court; and were you not unable to stay to give evidence because of the Court being held over for two days? Yes; I was unable to stay.
383. Is it a fact that you inspected both these pieces of land—Coffey's Flat and The Angle—and that you decided to select on Coffey's Flat, if it was thrown open, in preference to The Angle? Yes, I did; I would not take the land at The Angle at all.
384. It did not strike you as being suitable? No.
385. *Chairman.*] For what reason was it not suitable? I thought it was too high, and I did not think there was enough cultivation land for me to make a home on it.
386. *Mr. Mackay.*] There is another piece of land here at Naas Creek that also is proposed to be given in exchange for The Angle land;—do you know anything of that land? No; I know very little about that.
387. Do you know sufficient about it to be able to say whether, in your opinion, it would afford a living for a man if he took it up? I could not say.
388. You know this land at Coffey's Flat and this land at The Angle;—do you think that the land at Coffey's Flat would be a fair equivalent in the interest of the public for the land at The Angle? To the best of my belief it would be.
389. A witness to-day said that the Coffey's Flat land is suitable for both grazing and farming;—can you tell us how much land at Coffey's Flat is fit for farming, including Connell's Corner? I should say between 200 and 300 acres.
390. How much land do you think there is at The Angle suitable for cultivation? It is so patchy that it would be hard to say.
391. To the best of your belief, boxing it all together? There may be 15 acres, but I do not think so.
392. In your opinion there would only be 15 acres fit for cultivation at The Angle? Yes.
393. What would be the largest-sized patch of cultivation land at The Angle? You might get one or two of 2 or 3 acres.
394. A witness has said that there is a lot of good dairying land at Coffey's Flat;—do you bear that out? To the best of my belief there is.
395. Land on the river frontage, I suppose? Yes; and on Coffey's Flat too.
396. *Mr. Carroll.*] Have you ever been a selector? Yes.
397. Where? At Booroomba.
398. Is that on the other side of the river? Yes.
399. Who owns the station? Mr. McKechnie.
400. Did you ever work on the station at Tharwa? No.
401. Are you a married man? Yes.
402. What induced you to go into Queanbeyan to give voluntary evidence in this case? I wanted the place to make a home for myself.
403. But if The Angle were thrown open, would you not be satisfied to go for that? No; I could not see my way clear to take that.
404. Have you ever applied for a selection before? I had a selection on the Booroomba run fourteen years ago.
405. *Chairman.*] Where is that selection now? On the run still.
406. Did you transfer it? No; I sold it out to Mr. McKechnie.
407. *Mr. Carroll.*] Did you ever give evidence at the Land Court before? Never.
408. *Mr. Mackay.*] In the event of a man taking up The Angle land, how much fencing would he require to put up to make it secure? He would want a good bit.
409. How much in your opinion would be required? Over 2 miles.
410. Would it be 3 miles? It might be.
411. *Chairman.*] How many miles would you require to enclose the Coffey's Flat property? I think it is all fenced.
412. Do you think that two selectors could make homes on Coffey's Flat? I think they should.
413. *Mr. Carroll.*] Were you asked by anybody to go into Court to give evidence? No.
414. Were there any other people who came forward and gave voluntary evidence at the Land Court? Not that I know of.
415. Could you tell me what this 560 acres at Naas Creek is suitable for? I could not.
416. *Mr. Mackay.*] What is the general feeling amongst the selecting class in the district with regard to these two pieces of land;—which of the two pieces would the majority of the farming class prefer to have? I think Coffey's Flat. There is some difference of opinion.
417. Opinion is divided, but you think the majority would prefer to have Coffey's Flat thrown open? Yes.
418. *Chairman.*] So you think it is a fair proposal by the Bank to exchange Coffey's Flat for The Angle property? Yes.
419. It is a fair exchange in the interests of the public? I think so.
420. *Mr. Mackay.*] In your opinion, would it be a fair thing for the Bank to give 2,124 acres at Coffey's Flat and that other piece for the 1,290 acres at The Angle, and those three detached areas? I think it would be.
421. You think that would be more than a fair thing from the standpoint of the Bank that they would be giving more in value than they were getting? I think they would.

- J. Bell.
2 June, 1897.
422. Do you think it would be a fair thing for the Bank to give up Coffey's Flat for The Angle without those blocks? It is a thing I could not decide.
423. You have a general idea of the character of the country? Yes.
424. Take it from the area standpoint alone;—do you think it would be a fair thing for the Bank to give up 1,802 acres at Coffey's Flat for 940 acres at The Angle? I could not decide on that very well.
425. In your opinion, would it be a fair thing? My opinion is that Coffey's Flat is the best piece in the lot.
426. *Mr. Carroll.*] Are you at present in the employ of any party? I am in the employ of Mr. McKechnie.
427. Do you think it would be a fair thing to exchange Coffey's Flat for The Angle and those three pieces? I should think it would be.
428. You think it would be a fair thing in the interests of the public? Yes.
429. Have you ever had any experience before of exchanges of land made to consolidate runs? No.
430. *Mr. Mackay.*] Do you think that those three isolated blocks would be of any use to the public, the largest being 170 acres? No, they would be too small.
431. Knowing that those three blocks are surrounded by station land, would they be of any value at all to anyone else? I do not think they would be.
432. *Chairman.*] Mr. Halliday has given evidence to the effect that The Angle property is worth 27s. 6d. per acre, and that the Coffey's Flat property, 1,802 acres, is worth £1,600;—do you think that Mr. Halliday's estimate of the value of the property is a fair one, or that he has over-estimated its value? I think the estimate is too high.
433. What is your valuation of that land? I would say from 18s. to £1 an acre.
434. And I think you said the same with regard to Coffey's Flat? I should think that Coffey's Flat is worth about 15s. an acre.

Edward James Halliday further examined:—

- E. J. Halliday.
June, 1897.
435. *Mr. Mackay.*] In your former evidence you stated that you had crossed the river at The Angle? Yes.
436. I should like to ask where it was you crossed the river—whether it was not at block No. 68, and not at reserve No. 67? I crossed at block No. 68, that being the usual crossing-place.
437. But, as a matter of fact, is not block No. 68 the private property of C. Dyball; so that there is no road through? There is no practicable dray road; but I am of opinion that a horseback road at The Angle crossing can be obtained through The Angle block, the Crown land now under consideration. I saw stock tracks leading through there.
438. You think that a crossing could be made on the public lands there? I believe that a crossing exists, so far as horseback traffic is concerned, on the public land; but I could not speak very decidedly on that point, because I never crossed there myself. I saw that stock had crossed there.
439. Do you think this particular crossing would be passable for vehicular traffic of a heavier sort, because that is what would be required? It would not be fit for drays.
440. Would it cost a large amount of money to make it fit for drays? I did not study that point closely at the time, but I believe that the approach to the river is so precipitous that a road could not be made fit for dray traffic without a very large expenditure. The difficulty is not so much in respect to the crossing.
441. Consequently, to make a road sufficiently good to allow people at The Angle to get their produce away would cost so much that, in your opinion, it would never be constructed? No. It is not so much the river crossing as the steepness of the approaches to the river.
442. Consequently the only way to get from The Angle to the market would be to go round by the bridge at Tuggeranong, and the distance would be about 13 miles? Yes; about 13 miles.
443. It would mean a distance of 13 miles? Yes; as far as heavy traffic is concerned.
444. With regard to Coffey's Flat, I understand that the distance there would only be about 10 miles? Yes. I have already said that it was in favour of Coffey's Flat by about 3 miles, using Tharwa Bridge in each case.
445. You stated in your former evidence with regard to consolidation that if the exchange were effected it would not consolidate the run? Not in my opinion. I gave the reasons at the time. I stated that in one case, if the exchange were made in accordance with the Bank's wishes, it would leave a detached area of 322 acres. On the other hand, if the exchange were not made in accordance with the Bank's wishes, it would leave a detached area of 512 acres.
446. As a matter of fact, these strips would be almost useless for the station? No. I am unable to see why a reasonable arrangement could not be made with adjoining adverse owners for the rental of those lands on fair conditions, because the land is very valuable. For one thing, there is a good deal of agricultural land—I reckon that there is 50 acres of agricultural land along portion No. 1, &c., belonging to the Bank adjoining The Angle on the west.
447. You say that there is a strip of about 50 acres of cultivation land? Yes.
448. About what breadth would that be? I think, from my recollection, in the widest part probably 30 chains wide. At all events, there is a considerable extent of cultivable land there.
449. But it is in the nature of a strip? Not altogether; not any more so than the strip at Coffey's Flat, and, in my opinion, it is richer soil. I think the Bank could come to terms with adjoining owners. The irregular shape of this land would place the Bank at a disadvantage. I should like to state that in giving the value of the Coffey's Flat land and Naas Creek land as compared with The Angle land, I have said that practically the value is about the same, but, in my opinion, it is not so desirable in the interests of settlement.
450. *Chairman.*] Still you hold the opinion that the Bank should add three detached areas to Coffey's Flat? Yes; and cancel the Naas Creek piece.
451. *Mr. Mackay.*] If the Bank were to lose The Angle, would it not practically cut them off from all their land on the southern side of the run? I understand that the land, which was originally in the name of Gray, at the time this map was prepared was held in hands adversely to the station, but is now in the hands of the station. They have only to go 10 chains by road to connect the Bank land with the land at The Angle, but if they lost the reserve at The Angle they would then have to go through this strip of land; and then, under arranged terms possibly, they would have about half a mile of private property to go through.

452. You admit that from a pastoralist's standpoint it would make it very inconvenient to work that part of the run? Yes; the shortest connection by road would be at least half a mile.

453. This land through which the Bank would have to get the road is held by people adverse to the Bank;—do you think it possible for the Bank to make an arrangement to get the road? Yes; a road is already reserved through The Angle land for access in a northerly and southerly direction.

454. Putting all these things aside, you admit that, from a station standpoint, it would be a serious matter of severance—that is, as to working the other property? Yes, decidedly. At present they have only 10 chains of road to traverse; otherwise they would have a road of considerable length along which to drive their stock.

455. *Mr. Carroll.*] I suppose you have had a good deal to do with the exchange of land on various stations? I have had to do, I think, with about half a dozen cases altogether.

456. Do you remember in your experience where the Government have got the best of any exchange? I think that only one exchange that I have been concerned with has got through. They have mostly been attempts. I cannot understand any grazier offering to make an exchange unless it would suit his interest at the same time. There are, of course, cases in which it suits the Crown also.

E. J.
Halliday

2 June, 1897

James Harcourt Lees called in, sworn, and examined:—

457. *Chairman.*] What are you? Station manager for the Union Bank at Cuppacumbalong.

458. You know about the original proposal made by the Union Bank to exchange these properties? Yes. That was land at the back of the Half Moon Creek, an area of 1,100 acres approximately.

459. That was to be exchanged for what land? For The Angle land.

460. In your opinion, was that a fair proposal by the Bank to the Government? Not taking the value of the land alone into consideration; but at the time we thought that under the Act we should be able to pay the difference in cash.

461. Did you propose to pay the difference if there was any? We were quite agreeable to do so.

462. Did you propose to do so? I do not know whether it was in the proposal or not—that was the intention.

463. That proposal, at any rate, was put on one side altogether? Yes.

464. And you next proposed to give the Coffey's Flat property in exchange for The Angle property? Yes, for the 1,290 acres.

465. Would it enable the Bank to consolidate their property more if the exchange were made? That is the only reason why we wanted to get the exchange made. It was to consolidate the holding. This Angle land is of a better class than Coffey's Flat land, but we are giving more of it.

466. What do you estimate to be the value of the Coffey's Flat land? Taking it right through with the cultivation land, 16s. an acre.

467. And The Angle land? The Angle land and those small blocks all through, 25s. an acre.

468. In your opinion, would the Coffey's Flat land maintain two families? I am quite sure it would, with mixed farming and grazing.

469. And The Angle land? It is only fit for grazing. It would carry from 700 to 800 sheep, and that is as much as will keep one man.

470. It would not carry one and a half sheep to the acre? Certainly not. All that land runs about a sheep to the acre in ordinary seasons, but you have to take into consideration the flat, which is very rich land. It will carry two sheep to the acre in ordinary seasons, or one and a half any way.

471. Then I understand that the sole desire of the Bank is to consolidate its property, and that for this reason you have proposed this exchange? Yes; that is the sole reason. If we lose this area we are severed from the southern end of the run. The 1,802 acres will also be cut off from the run.

472. Where is the station? The homestead is at the bridge.

473. You understand the suggestion made by Mr. Halliday;—in your opinion, is that a fair proposal towards the Bank? No; I think it is an unfair proposal. We are making a sacrifice now to secure this land to consolidate without the extra 322 acres.

474. Do you recognise the fact that the Bank has been forced into the position of sacrificing land on account of their original proposal being so one-sided? We have to make a sacrifice to try and secure this Angle land, because the run is already cut up in different places, and if we lose this it will be worse still. In place of having 2,000 acres on the Coffey's Flat end of the run we should only have 322 acres, and the intention is to turn that 322 acres into a farm. It is the only bit of cultivation land that we have left. We already have a farm on Coffey's Flat, and we agree to give that up.

475. What is the extent of that farm? There is 30 acres so far enclosed.

476. Is it improved? Yes; it is being stumped and cleared.

477. Are there any buildings on it? There is one building.

478. Is it fenced? Yes; and there are also two other buildings on the Coffey's Flat land that we give up all claim to as well as the fencing.

479. Would you recommend the Bank to make the exchange which Halliday proposes? Not the whole of these blocks. If we were allowed to hold 200 acres of block No. 2 I think the Bank would agree to it.

480. To have block No. 2 in addition to what they already propose to give? As long as they give us 200 acres on the river.

481. I suppose it is the cream of it? It is the only bit of cultivation land left for us.

482. As far as these Tharwa allotments are concerned, what would you recommend the Bank to do? They have agreed to give up all claim to the allotments that have been purchased near the bridge—about 6 acres—on condition that they got an equal acreage to the south of the station.

483. The Bank is prepared to make that exchange? Yes.

484. *Mr. Mackay.*] In your opinion, would that piece of land at Naas Creek keep a family? It would not altogether keep a family, but the selectors have homes on the land, and they go working on the roads contracting.

485. Then it must be very bad land indeed? It is not good land.

486. It could be taken up, I suppose, as an additional by some of the farmers round it? Yes; there are men on both sides of it.

J. H. Lees

2 June, 1897

J. Gale.

8 June, 1897.

that nothing further should be done in the matter until some inquiry was made. Whether there was any inquiry made or not I do not know; but, notwithstanding this, another notification appeared in due time announcing that it was proposed to hear before the Land Board sitting at Queanbeyan a proposal for the exchange of certain areas of land some miles north of this locality, but still on the western bank of the river, for the 960 acres of land originally offered to the public. The matter in due time came before the Land Board. Before the sitting of the Land Board the public protest assumed a more pronounced shape. Public meetings were called, and not by me, nor moved for by me; they took place voluntarily. There were two of these meetings, of which I was elected chairman, and resolutions were passed at those meetings protesting against the action of the Minister, and the resolutions were duly forwarded to the Minister, notwithstanding that the day was fast approaching when the case in regard to the proposed exchange was to be heard by the Land Board. At the latter of these two meetings, Mr. Cox, the proprietor of the *Queanbeyan Age*, and myself, were requested to attend the sitting of the Land Board, and watch the proceedings in the interest of the objectors. This we did. I presume that this Committee knows what the upshot of that hearing was, and what recommendations the Board made.

507. We have the evidence which was given before the Land Board and also the report of the Land Board? I may say that I have no interest, either personally or as a partisan, in the matter, but from my knowledge of the locality I was always of opinion that the offer for the land by the owners of the Cuppacumbalong run was not satisfactory.

508. Is that the first or second offer? I know of only one offer; there may have been a little variation in the areas. A proposal was made to give a certain quantity of land away down the river, at a place called Coffey's Flat, and, perhaps, ultimately, it was offered. There was a little modification, I think, of the offer—about 500 acres of very inferior land at Naas Creek being included. Knowing both the areas I have formed the opinion that the Bank would be very considerably the gainers by the exchange. Their object in making this overture was to consolidate their holding, and though they are offering a much larger area than that which they desired to obtain, it occurred to me that the land was not of as great value. I have not dabbled much in land, but having a great deal of knowledge of these things, if I had been asked to exchange one for the other, I should have preferred the 960 acres to the areas offered by the Bank in exchange for it.

509. You said that there were a great many people who signified their intention to apply for this 960 acres of land if it was thrown open at The Angle? Yes.

510. Do you remember how this land was divided—was it to be put up in separate lots or in one block? In one block.

511. So that only one family could get it? Only one family.

512. Who attended the public meetings held at Queanbeyan? Country people mainly. There may have been half-a-dozen townspeople who would be interested as agents in the country people, but it was a representative country meeting on each occasion.

513. How many would be present? I should think that at one meeting there would be about forty present, and at the other a less number.

514. You said that you knew this land intimately? Yes; the lower part particularly.

515. Do you know the land at The Angle? Yes; I know it is a cleaner, sweeter, better piece of land than the portion which is offered in exchange for it.

516. What do you value that land at? I do not profess to be in a position to say what is the value of it.

517. Have you ever been on Coffey's Flat land? Yes; many times—thirty years ago.

518. How much of that land is fit for agriculture? A considerable area of it in patches.

519. And what area would be available for agriculture of The Angle land? A smaller proportion, certainly.

520. Can you give us any idea of the value of the land at Coffey's Flat? Taking into account the heavily timbered and the broken, rugged, and swampy character of that land generally, I should take it to be inferior land, because it would cost a great deal of money to fit it for occupation for either agricultural or pastoral purposes.

521. You say that the land at Naas Creek is very inferior;—have you seen it? Yes; it is literally worthless. It may carry a few sheep, but it is a rugged piece of waste land.

522. Another great objection which you have to the exchange is that you think the Union Bank would be benefiting themselves very largely by it? No; I cannot say that that is my objection. It would be a very improper feeling; I think that every man has a right to strive for himself. If I were in the position of the Bank I should perhaps do as they have done, but it was clear to me from the first that the Bank meant to consolidate their Cuppacumbalong holding, and were willing to give a larger area in order that they might so consolidate it; but that larger area which they offer is, in my opinion, inferior land, and would be more expensive to bring into a fit state for occupation.

523. Do you think that the Coffey's Flat land is only half the value of the land at The Angle, because there are 1,802 acres in the one and 960 acres in the other, leaving out the land at Naas Creek? There is nearly double the area, but I hold that it is inferior land. I may say that I was surprised when I heard the decision of the Land Board that they valued the two areas respectively at about an equal amount, there being only a difference of some £5 or £7.

524. *Mr. Miller.*] You said that you knew all about this transaction from the beginning to the present time? Yes.

525. Were you aware of any previous offer being made by the Bank to the Government for the exchange of land? I do not know what private overtures may have been made.

526. You are not aware that this offer of Coffey's Flat is the second proposal made by the Bank for an exchange? I was not. My attention was called to it by a notification in the *Gazette* and the local excitement that it brought forth, much competition being promised for the possession of the land.

527. How many families do you think could live on the land, supposing that Coffey's Flat was put into a proper state for grazing or cultivation;—do you think that the 1,802 acres would be sufficient for two families to reside upon? It could be divided into three occupation holdings by the Government, but whether any one of those three would give a yield under cultivation or pasturage equal to that of the 960 acres is a question. Those who occupied those three holdings would be put to a great deal more expense than the occupant of the land at The Angle in preparing the land for use.

- J. Gale
8 June, 1897.
528. How many families do you think The Angle land would carry? Only one; but I should like the Committee not to lose sight of the fact that there were literally scores of persons interested; it was said that over 100 had expressed their intention to strive for the possession of the land at The Angle, and I have not heard of any who wanted the other land or who cared for it.
529. There is not such a public demand for the Coffey's Flat land as there is for the other? No; and never was.
530. *Mr. Mackay.*] We have been told that persons residing near the Coffey's Flat land preferred that land? That may be.
531. Then you believe that opinion is divided on the subject, and that those who are nearest The Angle land prefer that, and that those nearest Coffey's Flat prefer the land at Coffey's Flat? Naturally so; but you must bear in mind that the population near Coffey's Flat is small compared with the population near Michelago.
532. In your opinion, the Bank's proposal is not a fair proposal as regards the general public? No, bearing in mind this fact that The Angle being contiguous to a much larger settlement there would be a much larger number of persons striving for possession of it.
533. Then it is not a question of the quality of the land so much as the fact that there are more people near The Angle than at Coffey's Flat? I do not hold that at all; I merely state, as a fact, that to the southward there are a great number of persons to whom it is convenient who are anxious to possess the land. In my opinion, the land offered by the Bank is not of a monetary value more than equal to that small area which they propose to accept in exchange for the larger one.
534. You say that, in your opinion, The Angle land would only comfortably occupy one family? It would be a nice piece with plenty of elbow-room for one.
535. Would not Coffey's Flat afford room for two families? I say that Coffey's Flat and Naas Creek would settle three families, but it would not profit them so well. It would not be such a fat holding for anyone of them.
536. Suppose that the Bank offered to give this 120 acres adjoining Coffey's Flat in lieu of the 560 acres at Naas Creek, do you think then that it would be a fair thing in the interests of the public? It would enhance the value of it, because that 120 acres is better land.
537. Do you think that this proposal to give Coffey's Flat 125 acres of these three portions would be a fair exchange for The Angle? I have already said that the 125 acres adjoining Coffey's Flat is of greater value than the Naas Creek land.
538. I want to get your opinion as to whether Coffey's Flat, with that 120 acres, and those three detached blocks, would be a fair exchange for The Angle? I am asked whether I consider that a fair exchange for The Angle. This 120 acres is to be given in lieu of Naas Creek. There is more cultivation land there than there is altogether on the Naas Creek portion of holding. It will take 8 or 10 acres of Naas Creek land to maintain a sheep.
539. Putting on one side all question as to the Naas Creek land, I want to know whether you think that, in the interests of the public, it is a fair thing to exchange Coffey's Flat and that 120 acres of land for The Angle land, including the other three portions? As regards the public interests I am in doubt, because, although this modification will admit of the land being divided into three homesteads, the holder of any one portion would not be in such a good position as he would be in if he had The Angle land; but you will tell me that he is not the only one to be considered, but that there are two other persons. Then those three persons settled there will not, in my opinion, make more out of the land, if as much, as one would out of the holding of 960 acres comprising The Angle land. On Coffey's Flat you may be able to settle three persons, but the aggregate wealth which they would get out of it would not be equal to the aggregate wealth which one person would get out of The Angle land.
540. *Mr. Carroll.*] The Angle land, with the other portions, totals 1,280 acres;—suppose the Bank were to offer Coffey's Flat and those other portions, amounting to over 2,400 acres, and also to give up 6 acres at the bridge, do you think, in the interests of the public, it would be a fair exchange? The question seems to be complicated when you include an offer to surrender 6 acres of village land at the bridge for some 6 acres elsewhere. Is not that a transaction entirely independent of this one?
541. No, it is in the proposed exchange; the Bank are willing to give up 6 acres which the public require for a township;—if the Bank were to give the whole of this land and the 6 acres, do you think that would be a fair exchange? The proposal thus modified would give a greater area of land than the original proposal which came before the Land Board.
542. In your opinion, if the Bank gave up this 320 acres at Coffey's Flat, and gave the 120 acres in lieu of the land at Naas Creek, would it be a fair exchange? It approaches very much nearer to an equitable exchange than anything that has been yet considered.
543. In your opinion would it be a fair exchange? It would bring it much nearer to an equitable transaction, because it would give an added area of useful land to the public.
544. If we got land upon which three families could live, would not that be better than retaining land which would support only one family? If they could only live from hand to mouth they will be provided for; but the question is, is it better that we should have three struggling selectors at Coffey's Flat just eking out an existence, or one much more prosperous at The Angle.
545. If all that land was all given up by the Bank would it not be a fair exchange? It is a better arrangement than anything that has come before me yet.
546. Taking all the circumstances into consideration, do you think it would be a fair exchange in the interests of the public? I think that a Crown lessee holding a run like Cuppacumbalong should be encouraged to consolidate, so far as it does not prejudice the public interest; but the original overture did seem to prejudice the public interest; but now a proposal is submitted to me which is very much modified as compared with that which came before the Land Board, and which makes it, in my opinion, more advantageous to the public than was the original overture.
547. *Mr. Miller.*] Supposing that Coffey's Flat holding and the land at Naas Creek were all included, do you think that that would be a fair exchange for The Angle land? It would not be too much to give for it.
548. *Chairman.*] Then what, in your opinion, is the value of The Angle land per acre? The Angle land ought to be worth 15s. an acre, taking the good and the bad together.
549. Then what is the value of the land at Coffey's Flat? I would not give 7s. 6d. an acre for it.

550. So that shows that Coffey's Flat, 1,802 acres, is of the same value as the 960 acres at The Angle? That is what it comes to.

J. Gale.

551. In addition to that you throw in 320 acres, blocks Nos. 2, 17, and 18? Yes.

8 June, 1897.

552. What would you value that 320 acres at? If taken up by selectors, it ought to be worth 20s. an acre.

553. What do you value the 560 acres of Naas Creek land at? It is not worth 2s. 6d. an acre.

554. Is it worth 2s.? That is about its value.

555. *Mr. Mackay.*] Does that include the cultivation land? Yes; that is only a little strip down the creek.

556. How much do you think would be comprised in that strip? It is some years since I saw it, but I should think 8 or 10 acres.

557. *Chairman.*] You value the land at The Angle at £720? Yes.

558. You value the land at Coffey's Flat at 7s. 6d. an acre, and there are 1,802 acres, so that it is practically of the same value as the land at The Angle. You value the 320 acres comprising blocks Nos. 2, 17, and 18 at £1 an acre to selectors;—that is £320; and you value Naas Creek land, 560 acres, at 2s. an acre, which is about £50 altogether. Then do not the Bank get a piece of land valued at £720 and give up to the Crown land valued at £1,090? If I were in the position of the Bank I would gladly do that, and should consider myself a gainer.

559. *Mr. Mackay.*] How would that be? The Bank own Coffey's Flat, and if they find it would be more profitable to them to have a less area better consolidated, it seems to me that that ought to be taken into account. I am not a land agent or a land valuer, but I have lived upwards of forty years in the locality, and I have watched the variation in the prices of land.

560. *Mr. Miller.*] Are the Committee to understand that the Coffey's Flat proposal with the Naas Creek land, as against The Angle and those separate blocks, is not, in your opinion, a fair equivalent for the public? It is not; but with the modification since submitted to me, it becomes a more reasonable proposal.

561. *Mr. Mackay.*] Have you inspected both the portions of land to be surrendered? Not very recently. I have a knowledge of them. I have a knowledge of the main areas.

562. Could you give me any idea when you last inspected them? It is years ago; it is seven years since I saw Coffey's Flat.

563. You have not seen Coffey's Flat for at least seven years, and you have not seen the other portions for even a longer period? That is so.

564. Are you a practical man with regard to grazing and farming? Not at all; but I have lived amongst graziers and farmers all my life in the Colony.

565. You have had no practical experience? None.

566. Is there a practicable crossing-place from The Angle land to Williamsdale? People have crossed there; I have not; but I have crossed worse places. By packing, communication could be had with Williamsdale.

567. There is no crossing for heavy vehicular traffic? There is a little way down, but it is not safe.

568. Is not that on private land? It is.

569. Then as far as the public are concerned, you do not think there is a crossing suitable for heavy vehicular traffic? If I were going in for The Angle as a holding, the river and the nature of the crossing there would be no bar to me.

570. Is it not a fact that there is no crossing which would be suitable for heavy traffic? I have heard on good authority that bullock-drays have been taken across there.

571. Do you mean that bullock-drays have been taken across at The Angle? No; I do not think a bullock-dray could be taken across at The Angle, from the nature of the banks.

572. Then, as a matter of fact, it is not practicable? Except for packhorses; but it would be nearly as practicable as the crossing at Tharwa before the bridge was made.

573. How is it that when this matter came before the Land Board only two objectors came forward to give evidence? The objectors lived a long way off, and at the public meeting they said they could safely leave the matter in the hands of Mr. Cox and myself.

574. Is it a fact that the indignation meeting at Queanbeyan was composed chiefly of townspeople? Certainly not; the country people numbered two to one, and the townspeople present were people who had an indirect interest, being land agents.

575. Was not opinion divided at the meeting in reference to the proposed exchange? Yes; it was divided, in so far as there were two dissentients from the resolution.

576. There were some dissentients in favour of the exchange? Yes.

577. *Mr. Carroll.*] Who were the people who were in favour of the exchange? I said one or two. I can only distinctly remember one, and that is W. Davis Wright, auctioneer.

578. What class of people, as an agent, does Mr. Wright represent at the Land Board? I suppose he represents the grazier more than the selectors, but I am not prepared to say that positively. He has not been long in business in Queanbeyan.

579. Did he appear to you to be in the interest of the stations? I know that his antecedents were all connected with stations. His father was the original holder of Cuppacumbalong run.

James Harcourt Lees further examined:—

580. *Chairman.*] You wish to make a further statement in reference to your evidence? Yes. In my evidence I stated that in blocks Nos. 2, 17, and 18 there were between 50 and 60 acres of cultivation land. I should have said that there are 30 or 35 acres of cultivation land. With regard to the fencing, we have already stated that we give up all claim to the fencing on Coffey's Flat, and on the 560 acres of land which are all enclosed and subdivided. We give up all claim to that which will include about 15 miles of fencing, and the land proposed to be surrendered was valued by the Land Board exclusive of the improvements. That is my reason for stating that if we gave up this 560 acres plus that 120 acres it would be more than a fair exchange.

J. H. Lees.

8 June, 1897.

581. That is the 120 acres on block No. 2? Yes; that is the extra piece included with this 560 acres.

582. *Mr. Miller.*] Do you not think that the proposal of the Bank is in the Bank's interest, and that the Bank should be prepared to concede something to the Government in a matter of this sort—something for

J. H. Lees. for the concession? I think the Bank is already doing so. It is giving up Coffey's Flat, and we lose in the carrying capacity; we lose all claim to the improvements; but at The Angle we gain by consolidation, because if we were to lose that land at The Angle you can see how it would cut up that part of the run; it would leave us a long strip of 560 acres which would be practically useless. Mr. Halliday says that we could come to terms with the adjoining holders; but I do not think that they would take up that land and pay a fair rent for it. As it is, they have as much as they can do to hold what they have got without renting any more. Then we are completely severed from the southern end of the run. It would be like working six separate small pieces, owing to the way we are cut off on different sides. It is difficult to work the place when it is cut up in that manner, and we wish to try and consolidate it. That is the sole reason for the proposal to exchange this land, and we make a sacrifice in giving up what land we have.

EXCHANGE OF LAND, CUPPACUMBALONG RUN, QUEANBEYAN DISTRICT.

APPENDIX.

A 2.

[To Evidence of Mr. E. A. Bronsdon.]

CUPPACUMBALONG EXCHANGE (398, EASTERN).

Surveyor E. J. Halliday to the District Surveyor, reporting on proposed exchange of lands at Cuppacumbalong, county of Cowley, Land Board District of Goulburn.

No. 96-109.

Sir,

Cooma, 21 September, 1896.

Referring to your instructions, No. 96-147, dated 26th August, 1896, see enclosed papers, Aln. 96-8,812 (L.B. 96-4,326, C'n.), I have the honor, after inspection on the 23th August last, to report as follows:—

2. The representative of the Union Bank, Mr. Davidson, informed me that the Bank was willing to surrender an area on the northern end of the estate, and I inspected this country with him.

3. By a letter dated 7th September, 1896 (copy enclosed), I made a proposal to the Bank, which has been accepted by it. (See its enclosed letter, marked "X," dated 10th September.) The 1,802½ acres offered for surrender is hatched sienna on enclosed helio. of Cuppacumbalong. The 1,300 acres (about) desired in exchange is hatched blue on this helio. I consider the value of the 1,802½ acres to be equal to that of the 1,300 acres (about).

4. One disadvantage to the land offered in surrender is that the land is irregular in form, but not, I consider, prohibitively so. The holdings of many *bona fide* settlers are, unfortunately, more irregular than this area. Another disadvantage, which applies in a lesser degree, is that the country is not naturally so sound for sheep, and, therefore, not so valuable; but this feature can be improved by clearing and draining. There is more cultivation land in the area offered for surrender; but, with the exception of about 15 to 20 acres along part of Murrumbidgee frontage, the cultivatable land is not of a rich character.

5. Observing map it will be noticed that there is a good deal of land alienated adversely to the Bank near to, and in part, adjoining water reserve 67. P. Kelly and P. Smith, adjacent holders, are settlers of a good and *bona fide* type. If, however, water reserve 67 became alienated adversely to the Bank, a narrow strip of country, comprised within portions 66, 10, 11, 1, 12, 15, and 16, aggregating in area 522½ acres, would be injuriously severed from the rest of the Bank's lands. This 522½ acres is all excellent sheep country, and probably 50 acres in patches could be cultivated. If, therefore, water reserve 67 came under adverse occupation of a permanent character the Bank submits that it would be at a disadvantage in renting or disposing of this 522½ acres: and the area being so extremely irregular it would be too expensive to work separately. I also understand that the Bank is in treaty to secure the adjacent lands standing in the name of Dyball and Grey. The land in this locality is the most valuable part of the run for sheep, being the soundest. If the proposal suggested by me is approved of the advantage to the Crown is that the three isolated areas comprised within the vacant land north of portion 68, vacant portions 67 and 45, an aggregate area of about 330 acres, would be absorbed by the Bank. In each case, however, part of the adjoining land is held adversely to the Bank, or at least nominally so; but I do not consider the prospects of disposing of this land, except to the Bank, at all probable, at a fair value, say, 27s. 6d. or 30s. per acre. This 330 acres, as already indicated, is excellent sheep country, not requiring any improvement (beyond fencing). Another and more important advantage to the Crown is that, I consider, the 1,802½ acres will be found sufficient to support two resident settlers, by their combining sheep and cattle grazing, cultivation, and ordinary labouring pursuits in district. In the case of water reserve 67, the rock is so near the surface that the land cuts up in time of drought; the 1,802½ acres stands drought better, but, on the other hand, much of it gets what is termed "spuey" in wet seasons. But, after weighing these and other considerations, I think the proposal might fairly be considered. Owing, however, to the irregular shape of the 1,802½ acres, the comparative unsoundness of much of the land for sheep, and the comparative poorness of most of the land fitted for cultivation, I have come to this conclusion with a considerable degree of doubt.

6. The request made by the Bank in the latter part of its letter of 10th September, that it be allowed to retain the 30-acre farm, should not, I consider, be complied with. This land has been cleared at some considerable expense, say £25, and made fit for cultivation; but, on the other hand, a good deal of the country has been ringed and then allowed to sucker, so that its present state is far worse than it was in the beginning. Further, the fact of securing this small area of cultivatable land is an important factor in favour of the proposed exchange on the part of the Crown.

7. The improvements are not of a character that would benefit incoming homestead selectors, and I think the suggestion made by me in this connection (see my letter dated 7th inst.) should be followed. The improvements are indicated on helio. Except where log fencing is noted, the rest is wire fencing, all being old except that round cultivation paddock in south-east corner, which is new and worth £50 per mile. The rest is worth about £15 per mile.

8. As water reserve 67 has been proclaimed a homestead selection and will be available for applications on the 15th October next, I would respectfully suggest that the land be at once withdrawn from such pending the consideration of this proposed exchange.

9. If the proposal be accepted, then the question of roads will require to be considered before the land is made available. For instance, the main road as now in use northerly from the north-west corner of portion 83 is not provided for by survey; again, the road running southerly through portions 24, 25, and 26, &c., parallel to and a short distance from main road, is not required in its present position; a shorter road from portion 7 to main road would be required in lieu.

10. Further (if the proposal be accepted), a slight exchange might be advantageously made by adding the western part of portion 19 to conditional lease 90/72, and taking therefrom the parts of lease to the east of the Freshford Road; this arrangement has already been given effect to on the ground (see position of existing fencing). The most northern part of portion 88 might also be treated for in the same way.

11. There is also a school building on portion 27 used on sufferance (see helio.); this should also perhaps be provided for by surveying, say, 2 acres.

12. The 1,802½ acres can, I think, be best subdivided into two areas of 1,043½ acres and 759 acres, as indicated on helio. The 1,043½ acres I would estimate as being worth £1 per acre, and the 759 acres £1 2s. 6d. per acre. Each area contains a little agricultural land.

13. The opening of a road known as the Point Hut Road is now under consideration. Part of this road is surveyed through the most northern part of the 1,802½ acres.

14. The time occupied in service was at field-work one day and at office-work two days, the rest of party being at other service.

I have, &c.,

E. J. HALLIDAY,

Surveyor.

Aln. 96-8,812 (L.B. 96-4,326, C'n.) herewith.

L.B. 96-5,746. Aln. 96-8,812 enclosed. The form this exchange has now assumed appears to justify reference to the Board. It is unfortunate that the previous offer was so one-sided as to lead to the land formerly water reserve 67 being notified as a homestead selection, which will be open 15th October next. Withdrawal from homestead selection, if approved, should be effected as soon as possible, and the Land Agent at Queanbeyan informed, so as to avoid as far as practicable disappointing intending applicants.—G. H. SIEARPE, D.S., 24/9/96. The Under Secretary.

A 3.

A 3.

Dear Sir,

Legislative Assembly, N.S.W., Sydney, 20 October, 1896.

The following telegram is from the *Daily Telegraph* of Friday last:—"Queanbeyan, Thursday. The selectors here are jubilant in consequence of Mr. Carruthers stopping the exchange of the revoked homestead selection, No. 225, parish of Cuppacumbalong, and deciding to have the land submitted for settlement."

I have now to request that you will follow up your laudable action by at once declaring the area (No. 225, parish of Cuppacumbalong) again open for homestead selection.

There are nearly 200 persons waiting to apply for the area, most of them selectors' sons, and they are just the stamp of men to turn the land in the mountain country to good account.

I have, &c.,

E. W. O'SULLIVAN.

A 4.

Dear Sir,

Parliament House, Sydney, 21 November, 1896.

On behalf of nearly 200 applicants for the proposed homestead selection on Cuppacumbalong Holding, formerly water reserve 67, and now reserve 24,997, and adjoining blocks, I desire to lodge a protest against the proposed exchange of that land for 2,362 acres on Cuppacumbalong and Tharwa holdings.

The grounds of my protest are:—That the lands proposed to be given in exchange for the land formerly open to homestead selection are inferior in quality and inconveniently situated. So well understood are these facts that I have no hesitation in asserting that you will have no *bona fide* applications for homestead selections on the lands offered if the exchange should be made. The reason for this is obvious. Part of them are near Paddy's River, in mountainous country, and away from the bridge. The settlers who are in that region now complain bitterly of having to travel 7 or 8 miles to the bridge, and the same distance back, when they have to go to Queanbeyan. The land near Naas Valley offered is inferior in quality. On the other hand, the land on the old water reserve, which was first offered as a homestead selection, is of splendid quality, and lies within 2 miles of Williamsdale railway station and the main road to Cooma and Queanbeyan. The river is fordable at the locality. The block of land first offered as a selection is so highly appreciated that nearly 200 persons were prepared to take it up as a homestead selection.

Why should these 200 persons be deprived of the chance of obtaining a profitable homestead in order to oblige a Banking institution which already possesses or dominates an enormous territory in the vicinity?

Yours, &c.,

E. W. O'SULLIVAN.

A. C. Betts, Esq., Chairman of Local Land Board, Goulburn.

A 5.

Sir,

Queanbeyan, 27 November, 1896.

By a resolution passed at a public meeting of persons interested in the proposed surrender and exchange, Cuppacumbalong holding, No. 393, Eastern Division, held this day at Queanbeyan, I, the chairman of that meeting, was directed to forward to you the resolution attached hereto, also adopted by the meeting named, with a request that you will be good enough to submit the same for the consideration of the Local Land Board at its meeting to be held here on Saturday, 5th of December proximo.

I have, &c.,

JOHN GALE.

A. C. Betts, Esq., Chairman, Local Land Board, Goulburn.

Moved by Mr. J. Keefe, seconded by Mr. Timothy Keleher,—

"That this meeting is of opinion that it is against the public interest to grant to the Union Bank of Australia the land they ask for in exchange for the areas they offer, as shown on the map exhibited at the Court-house, Queanbeyan, or to appropriate to uses other than selection the homestead area near Williamsdale, recently withdrawn from selection, and being part of Cuppacumbalong holding, county of Cowley, parish of Cuppacumbalong, comprising 946 acres."

Resolution carried.

JOHN GALE, Chairman.

Referred to the District Surveyor in connection with previous papers in the case.—C. H. EMERY, 30/11/96.

A 6.

SURVEYOR E. J. HALLIDAY to the District Surveyor, reporting further as to proposed exchange of land at No. 96-115. Cuppacumbalong, county Cowley, Land Board District of Goulburn.

Sir,

Camp, near Yass, 30 November, 1896.

Referring to your instructions, No. 96-18), dated 19th November, 1896, on A.B. 96-12,404 (L.B. 96-7,699, Gn.), enclosure, I have the honor, after inspection on the 26th instant, to report as follows:—

First, as to the additional portions afforded in surrender—5, 63, 87, and 88, parish Cuppacumbalong. About 10 acres at the north-west corner of portion 88 and about 10 acres along frontage of portions 63 and 87 is flat, arable, loamy land, with light soil of granite formation; the balance west of road is light-soiled, hilly land, rocky in parts, granite formation, moderately thickly timbered, mainly with apple; the 350 acres east of road is so precipitous and rocky as to be almost, if not quite, valueless, except, perhaps, for the oak timber on it, which may be used in time of drought when the more accessible oak elsewhere has been used up. The adjoining Crown land is of the same rocky, barren, mountainous character, and, in fact, is almost, if not wholly, inaccessible from the frontage of portions 63, 87, and 88, which taken together, I value at £120 for the 510 acres as freehold value, apart from any existing fencing.

About half of portion 5 is flat, arable, light-soiled, loamy land, of granite formation; the rest is undulating, fairly grassed, openly timbered land, rocky in parts; the freehold value of which I estimate at £60. The adjoining Crown land, however, is almost worthless, being precipitously steep, excessively barren and rocky.

For settlement purposes this additional land offered in surrender is not of much value, and could be best worked as part of a large holding. It might, of course, be selected for the sake of forming a home, but it is on the fringe of settlement, and far removed from school provision, &c.

Again, as to exchanging land on south of head station on section 3, village of Tharwa, for allotments recently bought at auction by Bank, it is probable that if the same allotments were put up again after exchange they would be similarly purchased, as, naturally enough, perhaps, a possible public-house may not be desired so close to the station residence.

Speaking generally it may be said that nearly all the trouble in this case has arisen through the extremely one-sided exchange proposal first made by the Bank.

Further, I am unable to see that the application of Bank is made mainly for consolidation purposes, inasmuch as the land offered in surrender leaves a small area entirely cut off from the rest of the Bank's property. This small area comprises portions 2, 17, and 18, parish Tharwa, totalling 322 acres. About 25 acres of portion 2 is under cultivation on terms, but the terms are not such, I believe, as would prevent surrender; the rest of land is occupied by Bank. The 322 acres is not so good as the 522½ acres adjoining revoked reserve 67. It has already been pointed out that revoked reserve 67 is not wholly surrounded by the Bank's land, and should this revoked reserve pass into other hands than the Bank's there is no reason why the 522½ acres should not be satisfactorily rented, or otherwise arranged for, in a give and take manner, with one or more of the four adjacent holders, especially as there is on it both water and a considerable area of good cultivation ground, and the Bank would still hold a large compact area to the south.

When called upon to suggest an exchange for water reserve 67, I found it difficult, because there is not apparently in the whole of Cuppacumbalong Estate another equally compact area of equal average quality.

When in locality a few days ago I had a further look at water reserve 67 and the lands offered in surrender to the north. I consider my first valuation of the latter as high rather than otherwise. There is on it certainly about 100 acres in all of fair arable land; but, on the other hand, there is a considerable part of it light-soiled, inferior land, especially on the south-west half; some of it, through neglected suckering, is densely scrubby; sweetbriar is rather thick on one part. It is not so hilly as water reserve 67, a great deal of it, in fact, being too level for satisfactory natural drainage in a wet time, and is not nearly so sound for sheep as water reserve 67.

My

My first doubts in respect to exchange are increased upon further inspection and consideration, and the additional offers by Bank do not satisfactorily remove them. I would, therefore, advise, in view of the foregoing, and having regard to the expression of public opinion against the proposal, and the fact that about £2,090 worth of land on each side is involved, that the proposal be declined unless a further inspection be made (say) by some successful and level-headed grazier from another district, such as Messrs. A. J. Litchfield or J. Crisp, of Cooma district, at a probable cost of less than £10, or that the Bank give up portions 2, 17, and 18 (on the same terms as the rest), as suggested by the Minister.

Mr. L. F. De Sales, M.L.C., informed me that, as owner with equity of redemption, he claimed that his consent to any proposed exchange would be required to give it legal effect. This has not been given.

I have, &c.,
E. J. HALLIDAY,
Surveyor.

The time occupied in this service was:—At field-work, one day; and at office-work, half-day.—E.J.H.

CUPPACUMBALONG EXCHANGE.—The latest offer is to give 2,312½ acres for about 1,300 acres. Mr. Halliday has valued the 2,312½ acres at £2,077 7s. 6d. on a freehold basis, but much of the land is still incomplete conditional purchase, and portion 88, of 300 acres, part of the last offer, is only held as conditional lease 90-110. It is necessary to ascertain what the Bank proposes to do as to completing and exchanging as freehold. Mr. Halliday values portions 63, 87, and 88, in all 510 acres, at about 4s. 8½d. per acre (freehold), and portion 5, of 50 acres, at 24s. The addition last offered adds very little, therefore, to the value of the whole offered. I propose to be present at the Board meeting, and supply further particulars. At present I do not recommend the exchange.—G. H. SHEAFFE, D.S., 2/12/96. The Chairman.

A 7.

Yarralumla, 2 December, 1896.

Sirs,
Kindly oblige by entering a protest against the exchange of what is known as homestead selection on Cuppacumbalong Holding for that portion of land known as Coffey's Flat, on account of the inferior quality of latter land for grazing purposes.

By entering the protest on behalf of the undersigned, you will much oblige.

JOHN FLINT.
RODERICK McDONALD.
CORNELIUS O'ROURKE.
JOHN WARMAN.
GEORGE MORRIS.
AARON TAYLOR.
(And others.)

Messrs. Cox and Gale.

A 8.

To the Chairman and Members of the Queanbeyan Land Board,—
Gentlemen,

In the matter of the proposed surrender and exchange of land, Cuppacumbalong Pastoral Holding No. 398, county Cowley, parishes Tharwa and Cuppacumbalong, Land District of Queanbeyan, Eastern Division, by the Union Bank of Australia (Limited), for 1,300 acres of Crown lands, being part of the Cuppacumbalong Holding, including homestead area No. 225, county Cowley, parish of Cuppacumbalong, Land District, Queanbeyan.

We, the undersigned residents and intending applicants, of Micalago, Burra, and Williamsdale, strongly object to the above exchange being effected, as the same is against our interest and the public in general, which will be explained by our representatives, Messrs. Cox and Gale, and give expression to our voices.

We are, &c.,
JOHN COMMINS.
WILLIAM LENANE.
WALTER F. CRAWFORD.
PATRICK COMMINS.
MICHAEL J. COMMINS.
CHARLES SMITH.
(And others.)

A 9.

Crown Lands Act of 1884—(Part II. section 14, sub-section 4.)
Decision of Local Land Board.

New South Wales, to wit.

WHEREAS on the 5th day of December, 1896, and 28th and 29th days of January, 1897, it became a matter for investigation before us to consider an application to surrender and exchange lands within Cuppacumbalong Pastoral Holding No. 398, Eastern Division, in the Land District of Queanbeyan—the Union Bank of Australia (Limited)—and having taken evidence and inquired into the said matter, we appraise the freehold value of land proposed to be surrendered at £1,780, and of the land to be given in exchange at £1,785 7s. 6d., exclusive of improvements.

The balance of testimony adduced at inquiry is in favour of the proposal, and in this connection we desire to point out that out of the large number of objectors only two appeared in support of their objections, and these have but a very slight knowledge of the land proposed to be surrendered.

The area of 1,302 acres, fenced on exterior boundaries, appears to be sufficient for two homestead selections, and is suitable for mixed farming, part grazing and part agriculture.

The 560 acres to the south on Naas and Gudgeby Creeks embrace for the most part inferior land, but being fenced in, and containing in all about 35 acres of cultivatable land, would doubtless be taken in one block as a homestead selection.

The land to be given in exchange is good grazing, but only a few acres suitable for agriculture.

The proposal appears equitable, the lands to be surrendered being of greater area, easier of access, and more suitable for closer settlement under existing law than those to be given in exchange.

The improvements should not be disturbed.

Given under our hands at the Court-house at Queanbeyan, in the Colony of New South Wales, this 29th day of January, 1897.

A. C. BETTS, Chairman.
J. J. WRIGHT, }
ALEX. DYCE, } Members.

Charting Branch.—E.A'B. (per G.H.), 16/2/97.

Caption to Deposition of Witnesses.

New South Wales, to wit.

THE examination of Edward James Halliday, of Cooma, in the Colony of New South Wales, salaried surveyor (ten sheets); James Harcourt Lees, of Cuppacumbalong; William Davis Wright, of Queanbeyan; John Sheedy, of Cuppacumbalong; George White, of Cuppacumbalong; John Gregory, of Naas; William John Sheedy, of Tharwa; Jeremiah Keefe, of Williamsdale; and William Owens, of Taggeranong, in the said Colony.

Whereas it became a matter before the Board to consider an application for surrender and exchange by the Union Bank of Australia (Limited) in Cuppacumbalong Holding No. 398, Land District of Queanbeyan, and it hath been found necessary to investigate the said matter on oath, the depositions of the several witnesses are appended hereto.

Number of pages of evidence 30
Number of exhibits Nil.

This

This deponent, *Edward James Halliday*, of Cooma, salaried surveyor, being duly sworn, maketh oath and saith as follows:—

By Mr. Sheaffe (District Surveyor): I was instructed to inspect the lands proposed for surrender and those to be given in exchange, Cuppacumbalong holding; inspected portions 5, 63, 87, and 88 on 26th November, 1896; value portion 5 of 50 acres at £60 the lot; about 25 acres of it are fit for cultivation; water permanent; the Crown lands on the west adjoining portion 5 are precipitous and excessively rocky, worthless; portions 63, 87, and 88, of 510 acres altogether; about 10 acres along frontage of portions 63 and 87 and 88 are flat arable land, with a light loamy soil of granite formation; the balance west of road, approximate area 150 acres, is light soil, hilly land, rocky in parts, granite formation, moderately thickly timbered, mainly with apple; 350 acres (about) east of road are so precipitous and rocky as to be almost, if not quite, valueless, except for some oak timber on it, which possibly might be of some value in time of drought, when the more accessible oak elsewhere has been used; value the 510 acres as a whole at £120 freehold value, as apart from any fencing; this value represents about 4s. 8½d. per acre; believe the 510 acres would be taken as a homestead selection with a capital value of 5s. an acre; value the ringing on the land at £7; no other improvements besides boundary fencing; the ringing is suckering badly; the fencing near the creek is wire; did not see the fencing on the back; estimate the carrying capacity of the 510 acres, as they are now, at 7 acres to a sheep; know reserve 67; estimate it will carry about a sheep to an acre; the 510 acres will carry very little more if ringed; the part east of the road could not be payably improved; its carrying capacity cannot be materially increased; the 510 acres are not of any value to the Crown for settlement purposes; they are on the fringe of settlement, not near any centre of population, and native dogs are bad in the locality; inspected the 1,802 acres near Farrer's offered by the Bank; this land is not as sound for sheep as water reserve 67, but there is more cultivation land in the 1,802 acres; the cultivation land, about 100 acres, is open timber; as a whole the 1,802 acres are open, parts have been ringbarked, but it has been allowed to sucker, and the scrub has become dense in places; excepting 15 or 20 acres along the Murrumbidgee River, the cultivation land is not of a rich character; the balance of cultivation land might grow oats for hay; the 20 acres are rich alluvial; it would grow any kind of cultivation suitable to the district; the 1,802 acres are not fit for dairying, the soil is too light; it is best adapted for carrying sheep for a time; it is not sound enough to breed sheep on for a series of years; the carrying capacity is one sheep to 2 acres; on the average, a sheep to 2 acres on the 1,802 acres would not do as well as a sheep to the acre on the water reserve; know the three other detached portions applied for by the Bank; they are practically the same as water reserve; know portions 2, 17, and 18; they are better than the 1,802 acres as a whole; there is more agricultural land on portion 2 in proportion; the western half of the 1,802 acres is inferior compared to the eastern half; the average value of 1,802 acres in its present condition is £1,600, exclusive of improvements; the ringing has been neglected, and the land is as bad now as if it had never been touched; the fencing through the portion has not been included in my valuation; value portions 2, 17, and 18 at £330, area 322 acres, about 24s. an acre; the water supply is good, and about equal on the lands proposed to be surrendered and those to be got in exchange; value conditional lease 15,958 at 10s. an acre freehold; the 1,802 acres are not suitable for settlement in small holdings; they would not support two families without other pursuits; the eastern part is level, spuey soil; requires draining for sheep; Mr. De Salis gave Mr. Farrer permission, about ten years ago, to run a race from about north-west corner portion 1 north-east to portion 7, parish Tharwa: the race is still in use, and does not affect the country; it drains Coffey's Flat a little; reserve 67 requires no clearing; there is a little timber, only sufficient for shelter; most of the timber is dead; naturally the land was open; the reserve only requires fencing; the river is a natural boundary; about 30 acres, in patches, could be cultivated, but no patch would contain more than 10 acres; the cultivation land would be suitable for oats for hay; wheat, perhaps, at the south-west corner; it would not grow corn; no alluvial flat; it is steep towards the river; the rest is too stony for cultivation, there being numerous outcrops of rock; it is about the best of sheep country; it would fatten sheep, or it would do for sheep-breeding; the formation is slate and schistose; at one point there is a little limestone; consider reserve 24,606 is required; there is a road reserved through reserve 67 for access to Williamsdale; value reserve 67 at 27s. 6d. per acre freehold, total 945 acres, £1,300 (about); the reserve is very compact in form; the land offered is very irregular, and is intersected by roads carrying considerable traffic; the traffic through water reserve 67 is at present almost nil; think there would be a tremendous ballot for water reserve 67 at 30s. an acre even in one or three blocks; it would be eagerly sought after; value the three detached portions edged blue at 27s. 6d. an acre, about 353 acres; they are useless for new settlement; they are only useful for adjoining holders; the proposed exchange does not appear to me as a consolidation of the station property; am extremely doubtful if the exchange is in the interest of the Crown; the last offer of 510 acres and portion 5 of 50 acres does not remove my doubts as to whether the exchange is in the interest of the Crown; do not recommend the exchange; the land offered is extremely irregular in shape, and is not such good sheep country; it would require a considerable capital to improve the land; it is doubtful whether the agricultural land is good enough to pay to cultivate; it is not rich enough; its quality is doubtful; the reserve requires no improvement beyond fencing; a selector of any of the lands would have to depend mainly on grazing for a living; valued the land on its carrying capacity and its capability of being improved; my basis of valuation is that land which will carry a sheep to an acre is worth 27s. 6d. an acre apart from improvements; the 1,802 acres could be improved considerably by ringing, scrubbing, and draining; the western portion of the 1,802 acres is not objectionably steep, it is poor sandy soil; the 1,802 acres, after ringing and scrubbing, would be increased in carrying capacity 15 per cent.; south of Farrer's the scrub is very thick, about 50 or 60 acres; mainly the large timber has been killed, but there has been a great growth from stumps and seedlings, which has been neglected.

By Mr. Garraway (solicitor): Practically the land offered for surrender is fenced on the outside boundaries with good fences; the fence will save the public the expense of fencing the land; water reserve 67 is only fenced adjoining Kelly's; it would take 4½ miles of fencing; the west of the 1,802 acres is inferior to the east; the 1,802 acres have two river frontages; water reserve 67 has only one river frontage; the greater part of the east boundary of the 1,802 acres is fair land; 30 acres, in patches, of water reserve 67 fit for cultivation—about five patches; they would require fencing; the cultivation land on the 1,802 acres contains about 50 acres in one block; saw about 25 acres under cultivation at south-east corner of portion 1; saw it 28th August; no doubt the crops would grow very well for three years; noticed where land had been cultivated previously; water reserve 67 and the 1,802 acres would carry about the same number of sheep; water reserve 67 is only 1½ mile in a straight line to Williamsdale railway station; practically the road is not fit for vehicle traffic; vehicle traffic would use Tharwa Bridge, about 6 miles distant or 7 miles—an excellent road, made by the Works Department; know road through Dyball's; a creek on the road is impassable at present; travellers use a track through Dyball's by his permission; they have to trespass; the crossing could be mended in a few days; at present travellers have to trespass through portion 66 belonging to the Bank; the 1,802 acres are 4½ miles from the centre to Tharwa Bridge—an excellent road, better access than water reserve 67; the road is always passable; the access is in favour of the Bank's proposal; the Bank will lose over 1,000 acres; doubt whether the Bank would lose in carrying capacity; the Bank will lose in cultivation land the difference between 30 and 100 acres; water reserve 67 does not cut alone into the Bank's land; Kelly adjoins it; the Bank has only 10 chains to travel from one piece to another, at present separated by the reserve; the Bank holds the three detached areas under occupation license; 25 of the 50-acre portion fit for cultivation; it could be made into a cultivation paddock; the other portions offered are together, and contain 10 acres fit for cultivation; there are oak-trees growing on the portions; believe the road from the 510 acres is good; the creek on road from water reserve 67 is avoided; the 350 acres would carry nearly three times as many sheep as the 510 acres offered; the greater part of the 210 acres on west of road will carry a sheep to 3 acres; the 560 acres will carry about 135 sheep; no land fit for cultivation on the isolated blocks belonging to the Government; the station has the lease of the blocks; there would not be a living for a man on these blocks; do not consider the exchange an advantage to the Government.

By Board. No means of adding to portion 5; the land around is very rough.

By Mr. Garraway (solicitor): Know portions 101 and 102; roughly speaking, they are same as the 510 acres; portions 101 and 102 have been selected.

By Mr. Sheaffe (District Surveyor): A homestead selector would only have to pay half the cost of fencing water reserve; the single frontage of the reserve is about as good as the double frontage of the 1,802 acres; Paddy's River is not a natural boundary; half the traffic is from the south of water reserve 67; think the road will be improved in time as far as water reserve 67; the profit on a sheep from country that will carry a sheep to an acre is greater than that on a sheep from country which only carries a sheep to 3 acres.

By Mr. Gale: Goods could be packed to Williamsdale; the approach to the river is bad.

By Mr. Cox: The internal fencing on the 1,802 acres would not be of use to a selector.

By Mr. Gale: It is 15 miles from water reserve 67 round the made road to Tuggeranong platform, and about 12 miles from the 1,802 acres.

By Mr. Garraway (solicitor): There are settlers beyond the 510 acres, adjoining; Cotter, Lenane, and Oldfield have selections on the south of the portions offered for surrender on Naas Creek; dogs are bad in that particular corner.

This deponent, *Edward James Halliday*, of Cooma, salaried surveyor, being duly sworn, maketh oath and saith as follows:—

By Mr. Garraway (solicitor): At time of inspection did not know that Gray's land belonged to the Bank; if the Bank acquired the reserve, 322 acres would be cut off; the Bank has land on three sides of the reserve; the southern end of the estate would be consolidated if the Bank obtained the water reserve; know Conlou's corner; I do not consider the soil good enough for cultivation; it is good grazing land; I am certain there are not 300 acres fit for cultivation; am aware the Bank has offered to give up the improvements on the land; the ringbarking is worse than when the land was in its natural state; consider the fencing balances the injury done to the land through the ringbarking being neglected; the fencing on the outside boundary would be an advantage; the crossing opposite the reserve is not practicable for wheel traffic; do not think that a good road could be made there.

By Mr. Sheaffe (District Surveyor): Think portions 2, 17, and 18 would work in with the land offered for exchange, and that they are more valuable than the 560 acres, Naas Creek; if portions 2, 17, and 18 are acquired by the Crown they would improve the prospects of settlement of the land offered; do not consider the land could be cultivated profitably for more than four or five years; there is a ford within the 945 acres, generally known as The Angle Crossing.

By Mr. Garraway (solicitor): The Bank has 50 acres cultivation land near the reserve; did not inspect all the estate as to land fit for cultivation; the 130 acres are not particularly good cultivation land.

By Mr. Cox: The improvements on the land about balance the injury done by the neglected ringbarking; consider the improvements of very little value.

By Mr. Garraway (solicitor): Would recommend the exchange if portions 2, 17, and 18 were offered, and the portions on Naas Creek containing 560 acres excluded.

By Board: The 50 acres, portion 5, on Gudgenby Creek, would be of no value to the Crown unless an adjoining holder bought it; the portion would be of no use by itself.

By Mr. Garraway (solicitor): The little reserves are not much good to the Government by themselves.

By Mr. Sheaffe (District Surveyor): Value the 300-acre conditional lease on Naas Creek at 4s. 8½d. an acre freehold; value the conditional lease, portion 47, on Paddy's River, at 10s. an acre freehold.

By Mr. Garraway (solicitor): Value portions 63, 87, and 88 at 4s. 8½d. per acre freehold.

This deponent, *James Harcourt Lees*, Manager, Cuppacumbalong Estate, for the Union Bank, being duly sworn, maketh oath and saith as follows:—

By Mr. Garraway (solicitor): Am thoroughly acquainted with the lands proposed for surrender and exchange; the 1,802 acres have two frontages—1½ mile to Paddy's River, and 2½ miles to the Murrumbidgee; with fair usage I consider 300 to 350 acres fit for cultivation; the 1,802 acres will run 1,600 sheep continuously; there were 1,800 sheep in the paddock all last winter, and they did very well; the paddock includes portions 2, 17, and 18; the 1,802 acres from the centre to Tharwa Bridge is 4 miles, a good vehicle road; the Bank has had 30 acres of the 1,802 acres under cultivation this season, which has been a rather bad one; the land yielded 200 bushels of wheat, at 4s. 6d., 17 tons oat-hay, at £3; there will be about 5 tons of straw, at 25s.; 2½ acres potatoes, 12 tons, at £2 a ton; a man named John Sheedy worked the place on the halves; roughly, the 1,600 sheep will return £200 per annum; the 30 acres cultivation are in one block; expenses have to be paid out of the amount given; about 300 acres more could be cultivated; it would yield fair crops, but not quite as good as the 30 acres; about 25 acres in detached pieces of reserve 67 fit for cultivation; it is only poor cultivation land; the reserve is good grazing land; estimate it will carry about 800 sheep; the reserve and the 1,802 acres are about the same grazing capacity; estimate that the 800 sheep would return about £100 per annum; it is doubtful whether a crop would grow on the reserve; reserve 67 is 4 miles from Williamsdale station, as the crow flies; it is not fit for vehicle traffic; for ordinary traffic it is about 15 miles to the nearest platform; between reserve 67 and the Tharwa Bridge the road is not very good, it is steep in places, and there are dangerous creeks; the road from the 1,802 acres is much shorter and better; consider the 1,802 acres will produce double the reserve No. 67; the Bank is willing to give up the 1,802 acres for consolidation, and nothing else; the Bank will lose grazing area for 700 sheep and cultivation land; the Bank has agreed to surrender boundary fences and the huts; the boundary fences are in good order, and will be of service to anyone taking the land; the fence is six-wire, and 1½ mile log-fence on Paddy's River; should say that Coffey's Flat, 300 acres, is fit for dairying; dairying is carried on on the adjoining block; reserves 67 is not by any means suitable for dairying; the 1,802 acres are better for settlement—twice as productive for mixed farming as the reserve; the Bank holds the small reserves under occupation license; they are good grazing, not suitable for cultivation; they are in isolated blocks, and a settler could not make a living off them; the Bank proposes to give 560 acres on Gudgenby Creek for the reserve; 25 acres of the 50-acre block, Gudgenby Creek, is good cultivation, and the balance of the 560 acres will carry 200 sheep; should think about the same could be made by mixed farming on the 560 acres as out of the three small reserves; the nearest of the reserves is 4½ miles from Tharwa Bridge, and the farthest 13 miles; the 560 acres are about 13 miles from the bridge; the road to the 560 acres is fair and practicable; no measured road to the reserve of 103 acres after Patrick Smith's; the road to the 560 acres is more accessible.

By Mr. Sheaffe (District Surveyor): Reserve 67 is partly free from timber; ringbarking has been done on the reserve; a number of trees have died naturally; it is good grazing land, not rich; consider half the 1,802 acres will carry as many sheep as the reserve in average seasons; estimate it will cost about 1s. 3d. an acre to ringbark and scrub the 1,802 acres; probably it would require a second scrubbing; one little bit is fairly thick near Paddy's River; the whole area is not scrubby; consider Coffey's Flat will fatten sheep better than the reserve; the reserve is sounder than Coffey's Flat; about 900 acres of the 1,802 acres are as sound as the reserve, and Coffey's Flat could be made sound by draining; value the 510 acres, Naas Creek, at about 7s. an acre; know Crown land on Paddy's River; value it about 10s. an acre freehold; value the balance of the 1,802 acres, excluding the Crown land, at 17s. 6d. per acre; the land, 30 acres cultivation, had been fallow for two or three years.

By Board: Value reserve 67 at 25s. an acre, the three little reserves at 17s. 6d. an acre, and portions 17 and 18 at 12s. 6d. an acre, and portion 2 at 25s. an acre, freehold values; value portion 5 at £1 per acre; 25 acres fit for cultivation, and 25 acres stony.

By Mr. Gale: Have been managing at Cuppacumbalong two years; there has been mortality at Coffey's Flat, but not greater than on the other part of the run; daresay 100 would ballot for the reserve, but I do not think most of the objectors know the land offered by the Bank.

By Mr. Garraway (solicitor): Know that when several of the objectors heard of the land offered they withdrew all objection to the exchange.

By Mr. Cox: They do not all live near Coffey's Flat; Mr. White adjoins portions 17 and 18, also portion 1, part of the land offered; Sheedy can get 140 acres; we had not time to get more than 30 acres ready; he has not been contracting since I have been at Tharwa; Sheedy does not work all the year on the land; the sole object of the Bank is consolidation of the estate.

By Board: Williamsdale station is about 4 miles from the river; there are two fordable places on the Murrumbidgee (between Williamsdale and Micalago) that I know of; they can only be used by horsemen.

This deponent, *William Davis Wright*, of Queanbeyan, auctioneer, being duly sworn, maketh oath and saith as follows:—

By Mr. Garraway (solicitor): Am intimately acquainted with the lands proposed for surrender and exchange, Cuppacumbalong; was born and grew up at Cuppacumbalong, and since then I have been managing there for Mr. De Salis; have not the slightest interest in the land; it is immaterial to me whether the land is exchanged or not; know block of 1,802 acres and the reserve; I would not give the 1,802 acres for the reserve; there is a good road to the 1,802-acre block, and it is nearer Queanbeyan; Tiggeranong is the nearest available station to the reserve; Williamsdale station is perfectly unavailable without trespassing; the river is dangerous at the crossing to Williamsdale—not fit for vehicular traffic; it is impossible to cross with a vehicle, and it is dangerous for horsemen; the 1,802-acre block is better for a homestead; more cultivation land, and it is better watered; the reserve has only one frontage; there may be 12 to 20 acres fit for cultivation; there are 250 to 300 acres of the 1,802 acres fit for cultivation; the 1,802 acres will carry 1,500 to 1,800 sheep, the reserve about a sheep to the acre in good seasons; a portion of the 1,802 acres is fit for dairying; none of the reserve is fit for cultivation or dairying, and the frontage to the river is very precipitous; for the purpose of settlement I consider the 1,802 acres better than the reserve; half as much again; mixed farming could be carried on on the 1,802-acre block, but not on the reserve; no garden or orchard land even on the reserve; think the Bank would lose by the exchange, except that it would consolidate the estate; the public would not lose by the consolidation; know the three little reserves; they are fair grazing; know the blocks, Naas Creek, 560 acres; would have the 560 acres in preference to the reserves, as the reserves are isolated; have had a good deal of experience with land; the reserve would return from £100 to £120 a year, and I think more than £200 a year could be made from the 1,802 acres.

By Mr. Sheaffe (District Surveyor): It is two years since I crossed at Angle Crossing; know Kelly's selection; he crosses at Redbank, I believe; he has a boat there as well; the reserve has not been ringbarked; a very few trees may have been ringbarked; they mostly died naturally; would call the land open box and apple-tree; no scrub; there may be a little gum; it is sounder for sheep than the 1,802 acres.

By Mr. Cox: Remember sheep running on Coffey's Flat; Coffey's Flat was never known as "Old Help"; had applications for the 945 acres when it was open, and I should think there would be more for the 1,802 acres; remember a meeting being called to consider the exchange; there were nearly all townspeople at the meeting, and they were divided in opinion as to the exchange; perhaps those who favoured the exchange, and who were present at the meeting, lived near the 1,802 acres.

By Board: Value the 1,802 acres at 12s. 6d. an acre, freehold; the reserve at 15s. an acre; think land that will carry a sheep to the acre is only worth 15s. an acre now; value the three reserves at 10s. an acre; value the 560 acres at 7s. 6d. an acre, including the cultivation.

ALEX. DYCE, }

W. DAVIS WRIGHT.

This deponent, *John Sheedy*, of Cuppacumbalong, farmer, being duly sworn, maketh oath and saith as follows:—

By Mr. Garraway (solicitor): Am a selector; live close to the 1,802 acres; farm part of it on the halves; if the Bank surrenders the land I will lose my farm; this last season I had about 30 acres under cultivation; it was only a middling season; got about 180 bushels wheat, not thrashed yet; value it at 4s. 6d. a bushel; and 17 tons oat hay, worth about £3 a ton, and there will be 4 tons wheat straw, which should be worth 25s. a ton; should get 12 tons of potatoes and £5 worth of pumpkins; total, about £125; there has been a sheep to the acre running on the 1,802 acres; they look well; reckon the wool from the sheep worth about £170; 1,500 acres of the 1,802 acres are as good as can be got for sheep; the rest is good agricultural land; one flat is too wet for sheep; 300 acres are fit for agriculture in patches; the 30 acres I cultivated are in one block, and there is more just as good—about 50 or 60 acres; the rest will grow any sort of crop, but not as heavy as the 30 acres; have been farming thirty-five years, off and on; have had practical experience; know the reserve No. 67; about 20 acres, in patches, fit for cultivation; the rest is good grazing land; have selections of my own, and do mixed farming; as far as I am concerned, I consider the 1,802-acre block as good, acre for acre, as the reserve; I am sure I would make double off the 1,802 acres than off the reserve; think the exchange in favour of the Crown; do not think I would make £100 a year from the reserve by running sheep on it; reckon the 1,802-acre block will return £200 if farmed and stocked.

By Mr. Sheaffe (District Surveyor): It would be more expensive to work the 1,802 acres; there is a good deal of timber on it, heavy in places; it would require ringing and clearing, but the reserve would not; ringing will cost 10d. to 1s. an acre for the 1,802-acre block; do not know what the scrubbing will cost; have taken four crops off the 30 acres, but it was idle for some time previous to this year; the 30 acres are on the river, not subject to floods.

By Mr. Gale: Have been living over the river fifteen years; Coffey's Flat will carry as many sheep as elsewhere; more sheep have not died on Coffey's Flat; there is a small place rather wet; the 1,802 acres will require ringbarking, but it will not cost much to improve the carrying capacity.

By Mr. Cox: Made my own estimate of the yield of the 30 acres; did not consult Mr. Lees; it would suit me better if the exchange does not take place.

By Board: Value the 1,802 acres at 20s. per acre, the reserve at about 20s. per acre; do not know the small reserves or the piece, Gudgenby Creek.

ALEX. DYCE, }

JOHN SHEEDY.

This deponent, *George White*, of Cuppacumbalong, selector, being duly sworn, maketh oath and saith as follows:—

By Mr. Garraway (solicitor): Live adjoining the 1,802-acre block offered by the Bank; know the 1,802 acres and reserve 67 very well; intended to apply for Coffey's Flat as a homestead selection; my land joins Coffey's Flat, and it would be more convenient for me; could make most money, twice as much out of the 1,802 acres as out of the reserve No. 67, apart from the fact that I adjoin the 1,802 acres; could use the 1,802 acres for farming, grazing, and dairying; there is only a small piece of cultivation land on the reserve; it is not fit for dairying; it could be used for grazing; mixed farming pays better than grazing; dairy on my own land, adjoining the 1,802 acres, and made butter pretty well all last winter; there are 150 acres as good and better on the 1,802 acres than on my place; there are about 250 acres fit for cultivation on the 1,802 acres; very fair land; Sheedy got a very good crop, the way the season was; the 1,802 acres will carry about a sheep to the acre, and reserve 67 a sheep to the acre; the 1,802 acres are much nearer market, a good level road; was across from the reserve 67 to Williamsdale; crossed at The Angle crossing at Dyball's land; it was a pretty rough crossing; might be able to drive across; do not know any crossing at the reserve; know the country pretty well; saw a crossing-place at the reserve; was not near it; can cross with horses, but not vehicles; the traffic comes via Tharwa Bridge; value the 1,802 acres at £1 an acre, and reserve 67 at about the same; no one has had any conversation with me as to the value of the land; I have given my own idea of its valuation; know the small reserves; no cultivation, grazing land; they are not as good as reserve 67; value the 170-acre one at 12s. an acre; value the 80 acres at 15s. an acre; value the 103 acres at 10s. an acre; know the land, Naas Creek, belonging to the Bank; there is some good land in it, and some bad; including the 50 acres, the 560 acres are worth 15s. an acre; there are about 13 to 14 acres of the 50-acre block fit for cultivation; the estate could be worked better if the Bank got the 945-acre reserve.

By Mr. Sheaffe (District Surveyor): Have been along the back lines of the 560 acres; can ride or walk the lines; it is sound sheep country; it will carry a sheep to the acre; was born on the station; have seen worse land carry a sheep to the acre.

GEORGE WHITE.

This deponent, *John Gregory*, of Naas, *via* Queanbeyan, grazier, being duly sworn, maketh oath and saith as follows:—

By Mr. Garraway (solicitor): Have nothing to do with the Union Bank or station; know the lands proposed to be surrendered and exchanged, Cuppacumbalong; know reserve, 945 acres; live nearer it than the 1,802-acre block; would rather have the 1,802 acres; they are nearer the market, and the land is pretty well as good as the other land, and the 1,802 acres would pay better than the 945-acre reserve; could have a mixed farm and cultivate on the 1,802 acres; no cultivation land on the reserve, or very little; the reserve is a good sheep run; it is ridgy country, slaty formation; good sheep country; do not think it would be any good for dairying; would have to go by Cuppacumbalong over the bridge to market; as a matter of fact, all the settlers in the locality travel *via* Tharwa Bridge; from the bridge to the reserve the road is rough; the road is much shorter and better from the bridge to the 1,802 acres; about 300 acres of the 1,802 acres fit for cultivation, and about 400 acres of a swamp, Coffey's Flat, fit for dairying; the rest is very good sheep country, not first-class, it is healthy; think a person should make £200 or £300 a year out of the 1,802 acres by working them as a mixed farm; have had twenty years' experience in farming in this and other districts; mixed farming pays better than grazing; consider a person may make £150 a year out of the reserve; the reserve will carry 900 or 1,000 sheep; value the reserve, 945 acres, at 25s. an acre, and the 1,802 acres at 20s. per acre freehold; know the 560 acres, Naas Creek; the 50-acre block is very good, all fit for cultivation; it is a narrow strip up the creek; the 510 acres are good sheep country; a road runs through it; one side of the road is better than the other; know some of the land runs to the top of a hill; value the 510 acres at 18s. an acre freehold; value the 50 acres at £1 per acre; the cultivation land will cost a good deal to clear; know reserve adjoining Dyball's on the south; it is good grazing country, about the same as reserve 67; value it at 25s. an acre freehold; do not know reserve joining Hamilton's; can only distinguish one of the Government reserves.

By Mr. Gale: Reside at Naas; am a free selector, not a tenant; the 510 acres, Naas Creek, will run a sheep to the acre; would give 18s. an acre freehold for the land; would be surprised to hear that the land was valued at 4s. 6d. an acre; the river crossing at the reserve is only fordable for horses; the reserve is about 2 miles from Williamsdale; have heard of sheep dying at Coffey's Flat, but not more than elsewhere; there are 300 acres fit for cultivation in the 1,802 acres; that is my own opinion.

By Board: The 1,802 acres are about the same as the reserve; parts of the 1,802 acres are heavily timbered; the reserve is ringbarked ready for use, and it will take some time before the 1,802-acre piece is brought to the same condition as the reserve as regards clearing; think the 1,802 acres would be readily taken as a homestead selection.

This deponent, *William John Sheedy*, of Tharwa, labourer, being duly sworn, maketh oath and saith as follows:—

By Mr. Garraway (solicitor): Have no land of my own; have nothing to do with Cuppacumbalong station; do not work for the station; intended to apply for reserve 67, of 945 acres; know the reserve well; know the Government stopped the land being available for selection; protested against the land being withdrawn; afterwards heard that 1,802 acres were offered for the reserve; know the 1,802 acres well; they are better than reserve 67 as a homestead selection; I am in favour of the 1,802 acres being thrown open instead of the reserve; a homestead settler could make more off the 1,802 acres than off the reserve; the 1,802 acres are easier to get at than the 945-acre reserve; the reserve is fit for grazing, slaty country, no cultivation worth speaking about; sound sheep country; it will run about 850 sheep; reserve 67 is close to Williamsdale, but one can only get to Williamsdale on horseback from the reserve; vehicle traffic is by Tharwa Bridge; that is the way the settlers in the locality go; the 945 acres are farther from the bridge than the 1,802 acres, and the road is worse; none of the 945 acres fit for dairying; crossed the river at Dyball's, but not on the reserve; the crossing at Dyball's is the only place where a dray can be taken over; took part of a threshing-machine across the river there, but I had to use ropes; about 300 acres of the 1,802 acres fit for cultivation; live alongside the 1,802-acre block, and know every inch of it; George White keeps cows near the 1,802 acres; his country is not as good as the dairying land on the 1,802 acres; mixed farming can be carried on on the 1,802 acres, but it would be impossible to dairy or farm on the reserve No. 67; this is one of my reasons for preferring the 1,802 acres; to the best of my opinion twice as much can be made off the 1,802 acres as off the reserve of 945 acres; the 1,802 acres will carry about 1,600 sheep; am used to sheep; sheep on the land now are doing well; would use Coffey's Flat for dairying; about 400 acres fit for dairying; about 12 or 20 acres are very wet; good cultivation land; the rest of the 400 acres is not too wet; it is better for cattle than sheep; the back land is good sheep country; know Conlon's Corner; it is sound for sheep, as sound as the reserve No. 67; know reserves joining Dyball on north, and Hamilton; they are good sheep country; no cultivation or dairying land; they will not carry as many sheep as the 945-acre reserve per acre; know the 510 acres and 50 acres, Naas Creek; a corner of the 50 acres fit for cultivation, not much; the whole area is not fit for cultivation; no cultivation land to speak of on the 510 acres; it is good sheep country, heavily timbered; not as good as reserve 67; the 560 acres will carry about 400 sheep.

By Mr. Gale: Live with my father; the only crossing is on Dyball's land; the crossing is $\frac{3}{4}$ mile below the reserve; my own opinion is that 300 acres of the 1,802 acres are fit for cultivation; have not spoken to Mr. Lees, Mr. Garraway, or anyone else as to the area fit for cultivation; sheep run on Coffey's Flat; have not heard of any sickness or mortality in sheep running on Coffey's Flat, not more than elsewhere.

By Board: Think the 1,802 acres would be taken as a homestead selection, also the 560 acres, Gudgenby Creek.

This deponent, *Jeremiah Keefe*, of Guise's Flat, Williamsdale, farmer and grazier, being duly sworn, maketh oath and saith as follows:—

By Mr. Gale: Know reserve 67 perfectly well; was an intending applicant for a portion of it; did not sign a petition for the revocation of the cancellation, as I was not at home; know Coffey's Flat; have been over a good deal of the 1,802 acres; would not have anything to do with the 1,802 acres; the reserve will carry 1,000 to 1,200 sheep; I dare say 25 to 30 acres could be cropped, enough for home use, but I would not call it good cultivation land; believe there is enough cultivation land for an orchard or garden; believe there is some cultivation land on the 1,802 acres, but I would not call it payable cultivation land; as far as I have seen there are 100 acres cultivation land on the 1,802 acres, but I am not prepared to swear that there is not more; know Coffey's Flat; it is low country; if it were drained it would do for cultivation; it is a wet flat; it may do for cattle; do not believe the 1,802 acres sound country; the 1,802-acre block will require draining; do not know if there is any scrub; cannot say if any ringbarking will be necessary; reserve 67, the timber has died naturally; the country is almost open; do not know the 560 acres, Naas Creek; live near Williamsdale; can cross the river on to the reserve; there is a crossing at Dyball's, but the approaches are bad; I believe an easy road can be made from the river to Williamsdale; have had conversations about applying for the reserve 67; have spoken to twenty about applying for the reserve; have heard half a dozen say that they would apply for the 1,802 acres, but they live about the place.

By Mr. Garraway (solicitor): The reserve is about 4 miles from my place by road; the 1,802 acres are about 8 miles from me; sheep-farming is better than mixed farming; I cultivate some land of my own for my own use; do not know Sheedy's farm, of 30 acres; do not know exactly where it is; do not know any particular spot on Coffey's Flat that has been farmed; I have only been across the 1,802 acres once, and only parts of it; have not been on Paddy's River; have seen the land back of Mr. Farrer's; saw it from the road; have ridden across the 1,802 acres in two directions; did not inspect the land; formed an opinion of the land by riding over it; will not swear I saw more than 500 acres; am only speaking from casual observation; will not swear there are not 300 acres fit for cultivation; would be surprised to hear that 30 acres, Sheedy's farm, yielded £126; if it did, the land is better than I thought it was; did not inspect Coffey's Flat;

Flat; consider reserve 67 superior ground, as far as I know; the best crossing is at Dyball's; the 1,802 acres are 3 miles from Tharwa Bridge, good road; believe Tharwa Bridge would be the best road from the reserve 945; would take produce to Williamsdale platform; believe it possible to take two or three bales across the river; the 945 acres would yield about fifteen bales of wool; would take my wool to Williamsdale.

By Board: Value reserve 67 at 25s. an acre.

JEREMIAH KEEFFE.

This deponent, *William Owens*, of Tuggeranong, labourer, being duly sworn, maketh oath and saith as follows:—

By *Mr. Gale*: Know reserve 67; was an intending applicant, and was disappointed when the land was withdrawn; know the portions proposed in exchange for reserve 67, known as Coffey's Flat; do not think I would apply for Coffey's Flat; do not think portion of the 1,802 acres as good as portion of the reserve; the reserve would require no clearing; most of the 1,802 acres has been ringbarked, but the scrub has grown up worse than it was at first; value the reserve at 20s. per acre, and the 1,802 acres at 7s. 6d. or 10s. per acre; cannot say that I know the reserve was measured for special area at 30s. per acre; if I had the money would have taken a block of the reserve at 30s. per acre.

By *Mr. Garraway (solicitor)*: Would graze on the reserve, a sheep to the acre; think they would yield £120 or £130 per year; small patches, scattered, fit for cultivation, about 30 acres; each block would have to be fenced; believe cows would do well on the land; know the 1,802 acres pretty well; 60 or 80 acres good cultivation land; 100 acres inferior cultivation land; know where Sheedy's farm is; have not seen it under cultivation; some of Coffey's Flat is fit for dairying; 60 acres are pretty moist; think parts are too damp for sheep; the moist part would do for cows; I included the 60 acres in the cultivation land; parts of the back land are good for sheep; the land will carry 700 or 800 sheep; parts of it are sour, and I do not think sheep would do well; think the reserve would be more profitable than the 1,802 acres; mixed farming would pay better than only sheep, in a good place; the 1,802 acres could be used for mixed farming; was not at meeting to protest against withdrawal of reserve 67; believe the fuss was made because the Government withdrew the land from selection; did not know at the time why the land was withdrawn; know some who were going to apply for the reserve; am not aware if they knew the reason of withdrawal; it made a difference when it was found that another place would be thrown open for homestead selection.

WILLIAM OWENS.

A 10.

OFFICE MEMORANDUM.

Cuppacumbalong Exchange (398, Eastern).

1. The Union Bank in 1895 applied to surrender the lands hatched red on the enclosed helio. "A," in exchange for water reserve 67 hatched blue, but the proposal was refused as not being in the public interests.

A representative of the Bank then interviewed the Minister, and it was decided that a report should be obtained as to what would be a suitable exchange.

Surveyor's report.

Mr. Surveyor Halliday finding that the station was prepared to surrender land from the northern part of their property, inspected the lands, with the result that the Bank was invited to lodge an application to surrender the 1,802½ acres, hatched brown, for the 1,300 acres edged blue, though Mr. Halliday admitted he had arrived at the conclusion to recommend the exchange with a considerable degree of doubt. Upon the application being lodged the homestead selection area, No. 225, covering the cancelled reserve, No. 67, was revoked. Dissatisfaction having been shown relative to the withdrawal of the area, the Bank offered to increase the extent of the surrenders so as to embrace all the lands edged red. Mr. Halliday has inspected these additional lands, and values portion 5 of 60 acres, parish of Cuppacumbalong, at £60, but reports that the Crown land to the west of it is useless. The other three additional surrender portions marked A, in area 510 acres, he values at £120, *i.e.*, 4s. 8½d. per acre, the greater part of it being precipitous and rocky; and he states that even the addition of these extra portions does not remove his doubts as to the utility of carrying out the exchange.

Area "A."

Protests.

Two protests, one bearing thirty-four signatures, and the other twenty-eight, have been put in against the proposals, and both the District Surveyor and Mr. Halliday, in view of the opposition raised, advise that the exchange be not entertained.

Concessions granted to Mr. Farrer.

With regard to the northern surrender area, Mr. Farrer, owner of portion 2, writes that concessions were granted to him by his father-in-law, the Honorable L. F. De Salis, of a road of access and a water-race over the portions as shown to a dam on his portion 2, and he also forwards a declaration signed by De Salis, to the effect that he has never considered himself at liberty to withdraw the concessions.

Village of Tharwa.

Some objections were raised to the station having purchased all the allotments sold in the village of Tharwa, and the Bank has offered to surrender all the allotments in sections 1 and 6, near the bridge, for a like area southerly of the homestead, which is on section 3. Mr. Halliday thinks that the station would repurchase the lots if surrendered, when again offered, so as to prevent the possibility of a public-house being erected at the bridge in such close proximity to the homestead. If the exchange proposals be otherwise carried out it is submitted that this town exchange should form part of the scheme.

Board's report.

The Land Board, after taking thirty sheets of closely-written evidence, concludes that the testimony adduced is in favour of the exchange proposals. The respective areas are considered as practically of equal value. The Board reports that the northern surrender area is sufficient for two homestead selections, and is suitable for mixed farming, part agriculture and part grazing; that the southern surrender area, containing 35 acres of cultivatable land, would doubtless be taken as a homestead selection; that the lands for granting are good grazing, with only a few acres suitable for agriculture; and that the surrender lands are easier of access and more suitable for close settlement than the lands for exchange.

Mr. O'Sullivan's objections.

Mr. E. W. O'Sullivan, M.P., has throughout strongly opposed the exchange, and since the case came from the Board has written asking that the exchange shall not be completed until he has had an opportunity of inquiring into the whole matter by means of a Select Committee of the Legislative Assembly.

Advantages.

The advantages of the exchange seem to be that the Crown would get over 1,000 acres more land than it gives; that three selectors could be settled on the surrenders, whereas only one or two could be put upon reserve 67; and the three remaining areas edged blue, which are too small for independent occupation, would be disposed of.

Station for sale.

It is observed that the Cuppacumbalong property is advertised in Saturday's *Herald* as being in the market for disposal by order of the mortgagees.

Submission.

Attention is specially invited to Mr. O'Sullivan's objections to the exchange, but in view of the Board's very careful and lengthy inquiry into the merits of the case, it is submitted that the exchange might be proceeded with on condition that (1) applicants cancel the concessions granted to Farrer relative to the water-race and road over the surrender land; (2) they pay a further sum of £50 towards expenses; (3) now lodge the deeds of the freehold surrender portions; and (4) agree to relinquish all claim to the improvements on the surrender portions, leaving them undisturbed on the land.

Conditions.

The Under Secretary for Lands.

C. J. SAUNDERS,

23/2/97.

Having read the evidence, and especially Surveyor Halliday's reports, I agree with the conclusion arrived at by the Land Board, and submit that the exchange is in the public interests, and may be proceeded with subject to the conditions above mentioned. It is a matter for special consideration whether the operation of the law is to be deferred, to the inquiries of a proposed Select Committee of the Legislative Assembly.—J. HOSKIN, Under Secretary, 24/2/97.

Resubmit next Friday.—J.H.C., 27/2/97.

May stand over, as I do not care for this proposal.—J.H.C., 8/3/97.

B.

B.

[Appended by the Committee.]

E. W. O'Sullivan, Esq., M.L.A., Legislative Assembly, Sydney,—

Sir,

Lambrigg, Queanbeyan, 24 May, 1897.

As I see you are interesting yourself in the exchange of land applied for by the Union Bank on the Cuppacumbalong Run, I write now for the purpose of furnishing you with facts which bear on the matter.

The main reason given by the Land Board for recommending the Government to agree to this exchange is that the land at The Angle is so much less accessible than is the land offered by the Union Bank. I may point out that the land at The Angle is within less than $1\frac{1}{2}$ miles from the Williamsdale platform, and that a road will shortly have to be opened between The Angle, where there is an excellent ford and that platform. My reason for saying that "a road will shortly have to be opened" is that the Roads Department has decided upon shortly making (I believe that tenders have already been called for) a road from Naas to the Rocky Crossing, on the Gudgenby River. This new road is intended to lead to both Gudgenby and Ororal. As soon as this road has been made, the only serious obstacle on a road from Williamsdale to Cooleman will have been removed.

During a recent trip to Cooleman, I took much interest in the road leading to that place from Naas—enough, in fact, to be able to furnish a fair preliminary report on it, as I had with me a theodolite which I made some use of.

I may state briefly that there is no serious obstacle to a road between the Rocky Crossing and Ororal. Between Ororal and the Cotter River, at Mr. Thomas Oldfield's, there is no obstacle which cannot be readily overcome by clearing timber and making some side-cuttings in ground which is easy for that purpose. On the Ororal side of the Waverley Gap and near the Gap there is a short and rather steep pinch of some 60 or 70 yards. This, I think, could be got over by making a slight detour and some side-cutting. Further on, the present track goes right over a conical hill, around which it could easily be taken without any climbing whatever; nothing more would be needed than the clearing away of some timber and some side-cutting. The last obstacle before reaching Mr. Thomas Oldfield's is the range east of the Cotter River. This range is neither high nor steep, but as the sides are even (little broken by gullies or creeks) and not rocky, and are covered by decomposed shale, which is easy for side-cutting and makes the best of roads, an excellent road of almost any gradient could be made at little expense over this range.

On the west side of the Cotter River the first obstacle is Bimbery Mountain. This mountain consists of two separate hills, with a slight depression or flat about half a mile wide between them. The first or lower hill consists of two parts. The lower is less steep than the upper part, and for the present would do for traffic; the upper part of this first hill is too steep for horse-drays, although bullock-drays with relatively light loads could ascend it. I dealt with this steep place, and surveyed and temporarily marked a zigzag road up it in such a manner that the ascent never exceeded an angle of $7^{\circ} 40'$ (about 1 in 7). Like the range on the east side of the Cotter, the lower hill of Bimbery Mountain is little broken by creeks and covered by decomposed shale and free from rocks; the side-cuttings, therefore, which would be required to make my road available could be made easily and inexpensively. The second hill leading to the Murray Gap on the top of the mountain is not steep, and the main work required on it would be timber clearing and a little side-cutting. The ground in the Murray Gap is springy and swampy, but I am of opinion that an open drain about 300 yards long and 3 ft. 6 in. deep would make the ground to be firm and good for a road.

On the western fall from the Murray Gap there is a steep pinch of about 100 yards, beginning some 200 or 300 yards from the Gap. I could not spare time enough to see whether this pinch could be avoided, but am of opinion that it could be considerably mitigated in such a manner that little excavation other than side-cutting would be needed. This is the only place on the whole road where, I think, excavation might be required. Proceeding down the mountain, little work beyond the clearing away of timber appeared to be needed until we came to a steep pinch about 500 yards on the east side of Murray Creek. With the object of avoiding this pinch, I surveyed and temporarily marked a detour road, on which the gradient is relatively easy. The greatest descent on it is an angle of $8^{\circ} 40'$ (or 1 in $6\frac{1}{2}$). Some clearing away of timber and a little side-cutting would be required on this deviation to make it available for use. From Murray Creek to Cooleman there is no obstacle of any importance. I am of opinion that £250 judiciously spent on the road between the Rocky Crossing and Cooleman would make a road on which travelling would be at least fairly easy for all vehicular traffic.

I will now deal with the distances between the different places which would be served by this road, and the advantages which would attend the opening of it. The distances given are approximate, but, I believe, fairly correct.

- (1) From Williamsdale platform to The Angle (where the Union Bank is desirous of acquiring land by exchange), $1\frac{1}{2}$ miles.
- (2) From The Angle to Naas (this road has been surveyed), $4\frac{1}{2}$ miles.
- (3) From Naas to Ororal, 8 miles.
- (4) From Ororal to the Cotter River (Mr. Thos. Oldfield's), 12 miles.
- (5) From the Cotter to Cooleman Homestead, 8 miles.
- (6) From Cooleman to Kiandra, 19 miles.
- (6¹) From Cooleman to Yarrangobilly Caves, 17 miles.

From this you will see that the distance from Williamsdale to Kiandra is practically the same as from Cooma Railway Station to Kiandra, while Williamsdale is 40 miles nearer to Sydney than is Cooma. Also with regard to the Yarrangobilly Caves, you will see that the distance to them from Williamsdale is actually less than from the railway at Cooma to Kiandra, which is still about 20 miles short of the Caves. In going to the Caves from Williamsdale, therefore, instead of from Cooma, 40 miles is saved by rail and fully 20 miles by road; while the scenery between Williamsdale and Yarrangobilly is much superior to that between Cooma and the same place. Good caves can also be seen at Cooleman by tourists on their way to Yarrangobilly.

When I was up at Cooleman I learnt that the settlers thereabouts would, if the road I am advocating were made practicable, greatly prefer to get their supplies from Queanbeyan than from Innut, as they have to do at present. The making also of this road would lead to a large amount of settlement taking place in the country west of Naas, and adjacent to this road. The want, in fact, of a practicable outlet from it has been the cause of this country having been left so long to be a breeding ground for dingoes.

From the above you will see why I am justified in making the statement at the beginning of this letter, that "a road will shortly have to be opened from the ford at The Angle to the Williamsdale platform"; the land, therefore, at The Angle cannot be considered to have attached to it the disadvantage advanced by the Land Board, that it is much less accessible than is the land offered by the Union Bank, which, even when the Point Hut Road has been opened, will be fully 6 miles distant from the Tuggeranong platform. The opening also of a road from The Angle to Williamsdale ought to add sufficient to the value of the land at The Angle, which the Union Bank wishes to acquire by the exchange, to more than cover the cost of opening that road.

I am, &c.,

WILLIAM FARRER.

P.S.—I have omitted to state that, as far as I can learn, the opening of the road from Williamsdale to Cooleman would require the resumption of no private land between The Angle and Williamsdale.

I need hardly point out to you that the opening of this road would add materially to the trade of Queanbeyan.

C.

C.

[Appended by the Committee.]

E. W. O'Sullivan, Esq., M.L.A., Legislative Assembly, Sydney,—

Sir,

Lambrigg, Thurwa, 7 June, 1897.

As my letter to you is to be published, I think if opportunity of doing so still remains, that two mistakes in it ought to be corrected. The first is, that I stated that Williamsdale is 40 miles nearer to Sydney than is Cooma, and that 40 miles of travelling would be saved by traffic from Kiandra to Sydney joining the railway at Williamsdale instead of at Cooma. In both instances, 50 ought to have been used instead of 40, and 70 instead of 60 miles of travelling would be saved in going to the Yarrangobilly Caves from Williamsdale. Again, I stated in a parenthesis paragraph that I understood that tenders had already been advertised for making the road from Naas to the Rocky Crossing, on the Gudgenby River. I find I have been misinformed in regard to that matter, and that the tenders advertised for are for work on another part of the same road—from Queanbeyan to Gudgenby.

I hope that you will see that a good camping and travelling stock reserve is made at The Angle. The road from Williamsdale to Coolcman is sure to be made sooner or later, and will be much used by travelling stock; and provision ought most assuredly to be made for that traffic while it can be made. I myself think that travelling stock reserves ought to be large—200 or 300 acres.

I trust you have now recovered from your illness.

I am, &c.,
W. FARRER.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

EXCHANGE OF LAND, CUPPACUMBALONG RUN,
QUEANBEYAN DISTRICT.

(PETITION FROM JAMES ORR, OF THE UNION BANK OF AUSTRALIA (LIMITED), OF SYDNEY,
PRAYING TO BE REPRESENTED BY COUNSEL, OR ATTORNEY, OR IN PERSON, BEFORE SELECT
COMMITTEE ON.)

Received by the Legislative Assembly, 27 May, 1897.

To the Honorable the Speaker and Members of the Legislative Assembly in New South Wales in
Parliament assembled.

The Petition of the Union Bank of Australia (Limited), of Sydney, in the Colony of New South
Wales,—

HUMBLY SHOWETH :—

That on the 13th day of May, 1897, your Honorable House appointed a Select Committee to
inquire into and report upon the proposed exchange of land on Cuppacumbalong Run, Queanbeyan
District.

Your Petitioner humbly prays that he may be represented by counsel, or attorney, or in person,
before the Select Committee appointed to inquire into and report upon the said matter, with the right to
call witnesses and adduce evidence, and to examine and cross-examine such witnesses as may give evidence
before the said Committee.

And your Petitioner, as in duty bound, will ever pray.

THE UNION BANK OF AUSTRALIA (LIMITED), by its Attorney,—
JAMES ORR.

VOTES No. 39. TUESDAY, 27 JULY, 1897.

8. CLAIM OF JAMES AND PATRICK GUIHEN, OF KANGAROO VALLEY:—Mr. Alexander Campbell moved, pursuant to Notice,—
- (1.) That a Select Committee be appointed to inquire into and report upon the claim of James and Patrick Guihen, of Kangaroo Valley, against the Government, for loss sustained through the action of the Government in disputing their title to certain land at Lower Brogher's Creek, Kangaroo Valley.
- (2.) That such Committee consist of Mr. Carruthers, Mr. Robert Jones, Mr. Morton, Mr. Chapman, Mr. Pycers, Mr. Law, Mr. Rose, and the Mover.
- Question put and passed.
-

VOTES No. 60. TUESDAY, 19 OCTOBER, 1897.

9. CLAIM OF JAMES AND PATRICK GUIHEN, OF KANGAROO VALLEY:—Mr. Alexander Campbell, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee for whose consideration and report this subject was referred on 27th July, 1897, together with Appendix.

1897.

CLAIM OF JAMES AND PATRICK GUIHEN, OF KANGAROO VALLEY.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 27th July, 1897, to inquire into and report upon the claim of James and Patrick Guihen, of Kangaroo Valley, against the Government, for loss sustained through the action of the Government in disputing their title to certain land at Lower Brogher's Creek, Kangaroo Valley,—have agreed to the following Report:—

Your Committee, having examined the witnesses named in the List* *See List, p. 4. (whose evidence will be found appended hereto), find:—

1. That the land in question is and was the property of James and Patrick Guihen, which conclusion is borne out by the sworn evidence given before the Local Land Board.

2. That the Crown did dispute the title of the Guihens, by informing them that unless they applied to purchase the land under section 66 of the Crown Lands Act it would be brought to auction, and subsequently by stating that the Guihens should pay rent for the land.

3. That, by the Crown so disputing the ownership of the land, the Guihens were put to much trouble and loss through want of peaceful possession, and through having to incur legal and other expenses in maintaining their right to the land.

Your Committee consider that the recommendation of the Land Board should be given effect to, and recommend James and Patrick Guihen's case to the favourable consideration of the Government.

ALEX. CAMPBELL,

Chairman.

No. 3 Committee Room,

Legislative Assembly,

14th October, 1897.

PROCEEDINGS OF THE COMMITTEE.

WEDNESDAY, 4 AUGUST, 1897.

MEMBERS PRESENT :—

None.

In the absence of a Quorum the meeting called for this day lapsed.

TUESDAY, 10 AUGUST, 1897.

MEMBERS PRESENT :—

Mr. Chapman,		Mr. Alexander Campbell,
Mr. Law,		Mr. Pyers.

Mr. Alexander Campbell called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, *read* by the Clerk.

Committee deliberated.

William Lovegrove called in, sworn, and examined.

Witness withdrew.

James Guihen called in, sworn, and examined.

Witness withdrew.

Ordered,—That the Under Secretary for Lands be summoned to give evidence next meeting.

Adjourned till Thursday next at 11 o'clock.

THURSDAY, 12 AUGUST, 1897.

MEMBERS PRESENT :—

Mr. Alexander Campbell in the Chair.		
Mr. Chapman,		Mr. Pyers.

Edward Arnold Bronsdon (*Clerk-in-charge, Alienation Branch, Lands Department*) called in, sworn, and examined.

Witness *handed in* Report and Evidence of the inquiry by the Local Land Board held at Nowra in November, 1889 [*Appendix A 1*]; Report by the Board of Inquiry held at Nowra in February, 1891 [*Appendix A 2*]; Tracing showing the land [*Appendix A 3*].

Witness withdrew.

Reassembling of the Committee to be arranged by the Chairman.

[Adjourned.]

TUESDAY, 24 AUGUST, 1897.

MEMBERS PRESENT :—

Mr. Alexander Campbell in the Chair.		
Mr. Law,		Mr. Pyers,

The Clerk, by direction of the Chairman, read a letter from the Under Secretary for Lands, intimating that the Department desired to offer further evidence.

Edward Arnold Bronsdon recalled and further examined.

Witness withdrew.

William Lovegrove recalled and further examined.

Witness withdrew.

Committee deliberated as to their Report.

Reassembling of the Committee to be arranged by the Chairman.

[Adjourned.]

THURSDAY, 26 AUGUST, 1897.

MEMBER PRESENT :—

Mr. Alexander Campbell.

In the absence of a Quorum the meeting called for this day lapsed.

THURSDAY, 14 OCTOBER, 1897.

MEMBERS PRESENT :—

Mr. Alexander Campbell in the Chair.		
Mr. Robert Jones,		Mr. Law.
Mr. Pyers.		

Chairman submitted Draft Report.

Same read, amended, and *agreed to*.

Chairman to report to the House.

LIST OF WITNESSES.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

TO INQUIRE INTO

CLAIM OF JAMES AND PATRICK GUIHAN,
OF KANGAROO VALLEY.

TUESDAY, 10 AUGUST, 1897.

Present:—

MR. ALEXANDER CAMPBELL,		MR. LAW,
MR. CHAPMAN,		MR. PYERS.

ALEXANDER CAMPBELL, ESQ., IN THE CHAIR.

William Lovegrove called in, sworn, and examined:—

1. *Chairman.*] Did you act as agent for the Guihan Brothers in the dispute which occurred with regard to some land at Broger's Creek? Yes.
2. When did the case arise? I was Crown Lands Agent at Shoalhaven in 1886. Towards the end of that year Guihan and Erwin both came to me, Erwin wanting to know whether the island in dispute belonged to Guihan.
3. What island do you refer to? The island which forms the subject of this inquiry and is the subject of the claim. I told them both that the land belonged to Guihan, and that there was no doubt about it. I came to Sydney, having been a candidate for Parliament in February, 1887, and shortly afterwards Guihan came to me and said that he had been directed to give up the Island, as it was Crown land. I went to the Lands Office, and saw the original plan. I saw Mr Deering, and I said, "Mr. Deering, this land belongs to Guihan, there is not a shadow of doubt about it." His answer was, "Am I speaking to Mr. Lovegrove, my friend, or to Mr. Lovegrove, the Land Agent?" I said, "The Land Agent." Then he said, "I wish to tell you that Guihan shall never have the land."
4. Has not a large amount of correspondence passed between you and the Lands Department in connection with this Island? Yes, for several years. Guihan was told he would have to apply to purchase this land.
5. You have not said whether Erwin lodged an application to purchase? He had not lodged an application at this time, but he was being urged by an unseen hand to lodge it.
6. *Mr. Chapman.*] What do you mean by an unseen hand? I am not able to identify it; but Mr. Fraser Martin sent Guihan a form application to apply for half the land, and said it was no use fighting the Government—that Erwin should have the other half. He was to apply to purchase it. It was not to be given to him.
7. Can you state, of your own knowledge, that pressure was brought to bear on him to do that? I would rather leave that to Guihan to say.
8. Do you know, as a matter of fact, that pressure was brought to bear? The pressure is best disclosed by the letters, to which I will refer. The first in date which I have here is 13th January, 1888. It is from the Department of Lands, and is as follows:—

Sir,

Referring to your letter of the 19th ultimo and previous correspondence relative to the dispute between George Erwin and James Guihan as to ownership of about 19 acres on Broger's Creek, between Mr. Erwin's incomplete conditional purchase of 128 acres and Mr. Guihan's completed conditional purchase of 199 acres 2 roods and 20 perches, parish of Wallaya, county of Camden, I am directed to inform you that, upon a close investigation of plans and deed descriptions, the

the land in question is found to be owned by the Crown, and that Mr. Guihan should apply under section 66 for the area between his portion and the present northerly course of running water, as indicated in the accompanying tracing. I am to add that, in the event of Mr. Guihan failing to tender such application within one month, steps will be at once taken to sell the land by auction.

That is signed by the Under Secretary for Lands. I take it that that is a clear claim by the Crown. I then wrote, calling attention to the fact that the plan did not agree with the description in the application. The reply from the Department on 2nd February, 1888, says:—

Sir,

With reference to your letter of the 10th instant, conveying Mr. Guihan's determination not to give up possession of the land which it is proposed to give to Mr. Erwin, I have the honor to inform you that—1. Mr. Taylor's plan does agree with the deed in description. 2. Mr. McIlwraith was put in possession of the land by the deed. Twenty-five years adverse possession is nothing as against the Crown, and rent should be paid.

I have nothing stronger to read than that the Crown actually claims rent for the land. That disposes of the Crown Solicitor's opinion, delivered afterwards, that the Crown had never claimed the land—that it was merely a dispute between Erwin and Guihan.

9. *Mr. Law.*] What is the statement about "twenty-five years adverse possession not affecting the Crown"? I did not say anything about adverse possession, but I said the man had been in possession twenty-five years, and that all their plans showed that the land was Guihan's. Then commenced what seemed to me the worst feature of the whole business. The Lands Department began altering all the maps.

10. *Mr. Pyers.*] What was the amount of land that Guihan had? 199 acres 2 roods 20 perches.

11. Has the land been surveyed again to see if he has sufficient land without the piece which is in dispute? No; the plans showed it, and the Board of Inquiry said the facts were incontrovertible, and that the land must be given back again. Mr. Deering said, "No, there cannot be a re-survey."

12. *Mr. Chapman.*] Mr. Pyers asks you whether any survey has been made since, or whether the maps show that Mr. Guihan had not his area of land without the land in dispute? There has been no re-survey. The maps show from the very first that the land was Guihan's.

13. That he has not his area without it? The maps show the island was marked as part of Guihan's land.

14. Part of his 199 acres? Yes.

15. Do you know that Mr. Guihan had not in his holding 199 acres without including the land in dispute? I am certain he had not. When I spoke to Mr. Deering about it, I said, "What will you do for the 20 acres that are short?" He said, "Oh, give him back his five shillings an acre." The land had been cleared, grassed, and in all respects it was beautiful dairy paddocks, and according to the evidence worth £16 per acre.

16. *Mr. Pyers.*] Have you any correspondence to show that he said that Mr. Guihan was to get five shillings an acre back? No; it is simply what Mr. Deering told me, and I am on my oath. The correspondence went on, and at last Mr. Erwin was urged to put in a special application for the land, and it was gazetted. I think that was some time in October, 1889. A great deal of time passed before he could be persuaded to send in an application. I immediately lodged a caveat. I was asked to withdraw this caveat, and I would not. After considering this business for some time, the matter was referred to the Land Board for trial on 13th November, 1889.

17. *Chairman.*] What decision did the Land Board arrive at? The Land Board was curiously constituted. At that time one of the local members died and had not been replaced, therefore there were only Mr. Harriott and Mr. Bice. I applied to the Lands Department for certain papers to be produced at the trial. They said they would be produced on payment of £6. There is a letter to that effect. I pointed out that the papers really belonged to the Shoalhaven district, and as they were to be produced in the Shoalhaven district, I thought no charge should be made. They replied that they would be in the hands of the Chairman, and that I could have access to them.

18. Were those plans and papers produced? When I went down there, knowing all the maps had been altered, and that probably they had forgotten I had two maps in my office, I subpoenaed the Land Agent there to produce the two maps I thought would not have been tampered with. Then I asked the Chairman to allow me to see the papers which he had brought from Sydney. He said no, he would not do that, but that if I asked for any one by its departmental number, he would produce it. That, of course, was tantamount to shutting me out altogether, because I did not know the departmental numbers. However, I was content to rest my case on the facts, and on the production of maps by Mr. Galbraith, who succeeded me as Land Agent. The maps were produced accordingly, and they showed that the land belonged to Guihan. There being only one member of the local Board, and Mr. Harriott evidently having a strong bias in favour of the Department, the judgment appeared to me to be so ambiguous that I resolved to take a bold step. I therefore wrote and said that a much more serious thing had cropped up than the mere claim of Guihan to the land; that was, that the maps were altered in the Department *pendente lite*, in a most vital point. Mr. Brunner, the Minister, thought this was so serious a charge that he ordered a Board of Inquiry.

19. *Mr. Pyers.*] What decision did the Land Board come to? That the land was Guihan's if the starting point was right, and if so-and-so and so-and-so.

20. *Chairman.*] Was it soon after that referred to a Board of Inquiry? Yes; Mr. Condor was the Chairman. He wrote a note to me asking me to appear before the Board. I appeared, but, to my surprise, he said, "I am sorry to say that we do not want you to give any evidence. The thing is too palpable. The land must be restored to the Guihans. The plans which have been altered will have to be made right again, but we should like you to say that this might have been done without malice." I was taken aback for a moment, and I said, "Well, sir, the facts having been given in our favour, it is not for me to state what the intention was. It is for the Board of Inquiry to find out what the intention was." They said, "We shall report that the deed must be made right, and the land given up to Guihan."

21. Have you any further correspondence after that? Then comes this letter:—

Referring to your letter of 19th November last and subsequent communications respecting the claim made to certain land in the parish of Cambewarra, County of Camden, by Messrs J. and P. Guihan, in connection with which you made a statement that maps are altered in this Department in their most vital point, and this is done in view of matters *pendente lite*, I am directed by the Secretary for Lands to inform you that the Board of Inquiry, after a careful investigation of the whole of the circumstances surrounding this matter, have furnished a report to the effect that in one of the instances pointed out by you no alteration whatever has been made.

It was a case in which the colour appeared to have been tampered with, but it was not very certain.

And

INQUIRE INTO CLAIM OF JAMES AND PATRICK GUIHAN, OF KANGAROO VALLEY.

And in the others the alleged alterations have been carried out clearly and legitimately, as the sequence to a Ministerial decision upon alleged facts, and in no way partakes of the character implied by you.

That is a curious paragraph.

I am to add that the Board were of opinion that the island in dispute between Messrs. J. and P. Guihan and Mr. George Erwin should be added to the grant held by the former; but upon this matter you will receive a further communication.

I did receive a further communication as to when and where to lodge the Crown grant. The grant was altered, and the land was given back to these people.

22. Have you that further letter that he refers to there? No; the Government did not deny that they had to give up the land again.

23. *Mr. Law.*] Is it on record in the report that the land was to be given up to Guihan? I have never seen that report. This letter shows a bias, in my opinion, because Mr. Morton, when quoting in the House from the report, read the following passage—

The Board are of opinion that the facts presented are incontrovertible—

That is not merely an opinion, and there is no getting away from that statement. The quotation then goes on:—

and would respectfully advise that the Crown grant be recalled, with a view to the issue of a new deed, including the island, in accordance with the original survey; also that the recent survey of the island be cancelled, the marks obliterated, and the notations referred to as having been cancelled on the plan restored.—

So you see that the Government had been actually holding these men at bay for three and a half years on a matter which the Board said and I said from the beginning there was no shadow of doubt about.

The deed of grant was recalled accordingly, with a view of including the island in the proposed new deed.

I waited for a considerable time until the deed should be altered beyond recall. I had to wait seven or eight months. At the end of that time I wrote to the Government, pointing out the losses these men had sustained, the fact that their neighbours had been invited to trespass on their land, that their fences had been cut down by the Government surveyors, that the land had been thrown open to anybody and everybody, and they themselves held up as dishonest men who had taken what they did not own, that there had already been two inquiries.

24. *Mr. Law.*] Are these inquiries on record in print? Yes.

25. In one part you said the Board report that the land must be given up to Guihan;—is that in the printed report of the Board? Yes. I then wrote, after the deed was safe, to the Government, pointing out the litigation which had lasted for four years, and I asked would they not compensate Mr. Guihan for the terrible loss and expense they had put him to. They replied by letter, saying that they would require the items.

26. *Chairman.*] Did you submit a bill? Supplying Guihan with the dates, I sent a bill down to him to fill in the amounts, and it came back to me at, I think, £591.

27. Was that the claim Guihan made? Yes. I wrote to the Government, enclosing the claim; but I said I would recommend the sum of £300 as being, in my opinion, a fair amount to cover all losses.

28. What course did the Minister then take? The Government, after a lapse of four or five months or more, replied that the Secretary for Lands had decided to refer the papers in the case to the Local Land Board for investigation, and that the papers had been sent to the Chairman, at Goulburn.

29. *Mr. Pyers.*] What was the decision of the Land Board on that? Mr. Moriarty in the first place said it was only a dispute between two private individuals, and that if the Government gave way in this case, they might as well give way in all cases, but the majority of the Board recommended that £167 4s should be paid to Guihan. I have the items which they allowed. Looking over these I saw at once that the influence of the Chairman had been devoted to a thing which he spoke of to me at the trial, that was, that he would not advise any costs of the litigation, because it was only a dispute between Erwin and Guihan, and, therefore, the Crown was not responsible. On looking over the items I saw that they had been very much cut down, and I wrote to the Minister, Mr. Brunker, saying that the Board had returned a verdict of £167 4s., and I pointed out that they had left out the charge that had been paid to me by the Guihans for the four years, which was £50. It was not a charge by me, it was a voluntary offering by the men; that was £50 for four years litigation, hundreds of letters, interviews, plans, copies, and so on. Mr. Brunker replied to me, with regard to this award of £167 4s., that he would offer £50. The Guihans said they would sooner let the £50 go to the bottom of the sea than take it, as it did not represent anything of what they had suffered. You can consider that these men were not only put out of possession of this land, but under such circumstances of ignominy as to mark them out as dishonest men. They could not even sleep at night owing to their knowledge that their neighbours were putting cattle on their land. There had already been two inquiries, this being the third, and they had to bring witnesses hundreds of miles. Considering all these circumstances, it was a very mild cost for three law suits. My view was that, besides the actual loss, they had incurred expenses up to about £150.

30. *Chairman.*] If they had not taken the course they did, do you think the Government would have sold the land? Apparently so. The whole of the letters show it. One letter says the land will be brought to auction in a month. I cannot tell what the motive was in the whole of this; but it was a very bad disgraceful piece of work for the Lands Department.

31. *Mr. Law.*] How many reports are there? Three reports.

32. What are they? One by two members of the Local Board, the second was the report of the professional men of the Lands Department who said the facts were incontrovertible, and that the land must be made over to the Guihans, then there is the third report which gives the verdict for £167 4s. You will see by the items that the Board have allowed nothing on account of the £50 which the Guihans paid to me.

33. *Chairman.*] Are the items which they have allowed independent of that amount? Yes; not only that, but it cuts down their journeyings to Sydney to four, whereas the journeyings these men made were much more numerous; at that time they were paying bank interest, and the money they were out of pocket was adding to the interest. The Bank was anxious to get the land because it was part of their security.

34. *Mr. Pyers.*] According to your showing the Department do not now make any claim to this island—they have admitted that it is Guihans? Yes; he has the deed now.

35. *Chairman.*] While this matter was in dispute did they have trouble with their neighbours putting cattle on the land? Yes. I may mention a private conversation I had with a member of the Local Board afterwards.

W.
Lovegrove.
10 Aug., 1897.

W.
Lovegrove.
10 Aug., 1897.

afterwards. He said that that £50 was included. He said, "We gave the £50, Mr. Lovegrove," but it is not down there. I said to him, "I see you cut down the loss in grazing by one half which they charged at £2 10s. an acre for three years." He replied, "Yes, because we considered they had a sort of interrupted possession." I think it would have been better if the man had had no possession.

36. What is the quality of the land in dispute? The land has been valued by the Government Surveyor at £9 per acre and by an auctioneer down there at £16.

37. Is it first-class alluvial land? Yes; it is the best of their land. How the Crown Solicitor could report that the Crown never claimed the land I can quite understand, because by judicious selection of papers it could be made to appear that the dispute was between Guihan and Erwin, but in no other way.

38. *Chairman.*] Does the correspondence show clearly that the Crown did dispute it? Yes. Surely this man is entitled to bank interest. The bank held his deeds, and every particle of this money out of pocket was advanced by the bank.

39. *Mr. Law.*] Do you say that in the first instance they put in a claim for £591, and that then on your own account you suggested it should be brought down to £300? Yes; I suggested that because in the first place I had made up the whole thing fairly between man and man in my own mind and with a good knowledge of the locality. I thought £300 would cover it as a lump sum.

40. *Chairman.*] How did you arrive at your estimate? By the actual expenses out of pocket; by the annoyance and constant trespass; the action of the surveyor in cutting down the fences, and things of that kind. If I had been on a jury, £300 would be the amount I would be prepared to give.

41. *Mr. Pyers.*] Were you acting as agent for Guihan? Yes; but I never like to act unfairly.

42. *Mr. Law.*] Suppose you were Guihan, what would you think then? I think Guihan's estimate represents his real feelings; still I did not think it likely that the Government would take the same view, but would regard £300 as sufficient.

43. *Chairman.*] Do you still think £300 was sufficient? Yes; but I had in view the old Latin proverb, "He gives twice who gives quickly."

44. *Mr. Law.*] How long ago did they agree to take £300? In 1890 or 1891. I went again to Mr. Bruncker with Mr. Guihan, and told him they were altering the maps in the Lands Department, but some were still unaltered. He said, "Will you give me the number of one of them?" I replied, "I would rather not." He said, "You will be quite safe with me; I will see they are not altered." I gave him the number, having great doubts of his power in my mind. I called a fortnight afterwards and saw a gentleman, who I think is the chief draughtsman. I asked him for that map. He said, "I am sorry to say you will not find it in the same condition as it was." There was a sort of war going on in the Lands Office between those who were gentlemen and those who were not gentlemen, and that map was altered. It was then I made up my mind to rely on the maps in my own office. I said, "Surely they have not tampered with them."

James Guihan called in, sworn, and examined:—

J. Guihan.
10 Aug., 1897.

45. *Chairman.*] What is your occupation? Farmer.

46. Have you a claim against the Government for compensation over a disputed title to land? Yes.

47. How did it occur? The Sergeant of Police came there one day and said the Government had sent him as Crown Lands Agent to see about a piece of land belonging to me, and to make a report. He viewed it, and sent in a report. Bye-and-bye I got a letter from the Government, and a Government surveyor—Mr. Riley, I believe—came. I did not know how to deal with the Government, and I went to Mr. Lovegrove, who had started as land agent in Sydney. Mr. Riley measured the land, cut down the fences, and threw it open.

48. Did they say nothing about selling the land? Yes; I got a letter that the land would be sold.

49. *Mr. Law.*] Had you any title to the land? Yes; I always knew it was my land, and that the Government were wronging me.

50. *Chairman.*] How long had you been living on the farm at this time? About four or five years.

51. Had you been in occupation all that time? Yes. Mr. East had rented the place before I got it, and I agreed to allow him to take off a crop which was then on the land.

52. Did some one lodge an application to purchase the island? I believe Mr. Erwin did.

53. Did you get any notice from the Government after Erwin lodged his application? Yes; I got a notice that if there were any objections to be lodged they should be lodged within a certain time. I again came to Sydney to Mr. Lovegrove.

54. What did you do then? He lodged a caveat, and a Court was held at Nowra. I had to go about the country to get witnesses; I had to go to Moss Vale to get Mr. George Tate, and I had to go all round Sydney to find Mr. McIlwraith. I was two or three days in Sydney.

55. What did the Land Board decide? That the land was mine, and had always been mine.

56. Did the matter end there? Yes. Soon afterwards Mr. Riley went back to the land; he filled up the lock-pits which he had made; he pulled up the pegs which he had put down, and he threw them into the creek. That was after the Land Board gave their decision. He cut away the marks he made on the trees, and he destroyed everything that he had put up.

57. Were there any trees marked originally? Yes; but there were great floods which had washed them away in 1870. But I took Mr. McIlwraith's brother there, and he said that he had been there with the surveyor when the survey was made in 1861. He showed me the boundary line, and said, "That is the boundary. I was with the surveyor and helped him to mark the trees."

58. Was that one farm before you purchased the land or afterwards? It was always a kind of island, but the flood in 1870 broke through the centre and divided it into 12 acres on one side and 8 acres on the other.

59. How long was it from the time that Surveyor Riley went on to the land first until the Government officially wrote to you and told you they considered it was your property? They waited a long time—for some months.

60. Have they issued a deed to you now including the island? Yes; the same old deed. When I saw the plan with the deed it was as plain as it is now. It was charted on the plan with the deed.

61. *Mr. Law.*] Have they deprived you of any land? No; they tried to, but they could not do it.

62. *Chairman.*] Did you make a claim against the Government for compensation? Yes; after I got the deed properly fixed up.

63. *Mr. Pyers.*] What was the amount of the claim? Mr. Lovegrove advised me to send in a very low estimate, because he thought the Government might think that I was wanting to get more than my right. He advised me to say £300—whatever my expenses had been; but they were a great deal more than that. J. Guihan.
10 Aug., 1897.
64. Did you send in a claim for £300? Yes.
65. Did you not send in a claim for £590? When this claim for £300 went in Mr. Bruncker asked for the items, and they came to £561.
66. *Chairman.*] Did they give you that £300? No. I believe he then wrote, saying that he would have it investigated by the Land Board
67. Was that investigation held at Nowra? Yes.
68. What did the Board decide on? I think they recommended £167. I think that was in 1891. In that verdict I was not allowed Mr. Lovegrove's fees at all. That was not set down, although Mr. Byce and another member of the Board said they did allow it; that is why the amount is so small.
69. What action did the Government take upon that report? I think Mr. Moriarty began to write to the Ministry to give me nothing, that I was very well done for, and that I ought to get nothing.
70. Are you aware of that as a fact, or do you only think so? It is a fact; it is in the papers.
71. Did the Government offer you anything? Only £50.
72. Was that in full satisfaction of your claim for £300? That was for all my expenses before I got my title to the land. I made twelve journeys to Sydney, but they only allowed me for two journeys. I went to Mr. Garrett with Mr. Lovegrove. I thought he was not aware of the transactions. I asked him if he was aware of them. He said he was, and that he would sell the land inside of a month. He advised me to buy it. I said, "I have bought it already." Mr. Garrett was then Minister for Lands, and I believe he was also Land Agent at the same time. When he said that he would sell the land inside of a month, I said, "Then you will be selling my land." He said, "Well, I will refund you the money—5s. an acre—which has been paid on the selection." As I would not be entitled to anything unless it was my land, I thought he must be satisfied that it was my land.
73. Was the land cleared and in cultivation? It was under grass at the time that the surveyor threw it open. It was the best part of the land, and Mr. McIlwraith cleared that land first. It was the only cleared ground when we got the farm. When the surveyor cut down the fences the townspeople put their cattle on the land, and they used to put their working horses there on Saturday night and Sunday.
74. Was that after the surveyor threw the land open? Yes. Erwin used to threaten me with an action if I interfered with his cattle, and I had to leave them there.
75. Did you suffer annoyance by the trespass of other cattle, and through your own cattle getting out? Yes. It was troublesome for me to keep my cattle on the land, and the other people would not allow me to shift one beast of theirs.
76. Did you accept the offer made by the Government of £50? No; I would prefer that they should give me nothing rather than that. I would have been much better in pocket if they had taken the land away altogether, as it would have saved me a lot of expense.
77. *Mr. Pyers.*] Were there any fences around this land before the surveyor went there? Yes; and crops of corn had been taken off it. It was well fenced.
78. Was a great deal of the fence cut down? Yes; it was cut through in several places. It was destroyed so as to throw it open. That was before the Land Board decided it was my land. Everything was put right after the decision.
79. *Mr. Law.*] Did you have to put up the fences yourself afterwards? Yes; and the Government afterwards took away from me a road 1 chain wide, and they gave me nothing for it. That shows how very anxious they were to oblige Erwin in the matter. I have been completely robbed by them. I had to borrow money every time I got a notice from the Government. I had no money in the bank, and I had to borrow. Another loss I suffered was that I had thirteen heifers on the land, but I had to sell them to meet all these expenses. I sold them for £3 per head, and twelve months afterwards I offered the buyer £5 per head profit. If it had not been for this trouble I could have kept those cattle, but I never made any claim for that loss. I made no claim except for the borrowed money and the ready money that I spent; and I had to hire people to look after my business when I had to go away on this business.

THURSDAY, 12 AUGUST, 1897.

Present:—

MR. CHAPMAN, | MR. PYERS.

ALEXANDER CAMPBELL, Esq., IN THE CHAIR.

Edward Arnold Bronsdon called in, sworn, and examined:—

80. *Chairman.*] What office do you hold? I am in charge of the Alienation Branch of the Lands Department. E. A.
Bronsdon.
12 Aug., 1897.
81. Are you acquainted with the facts of a dispute which occurred between the Government and two persons named Guihan, in the Kangaroo Valley? Yes.
82. Have you some correspondence and documents in connection with that case? Yes; I produce the official papers.
83. Have you any knowledge of the case? It has come before me officially at various times.
84. Have you the reports of the Boards of Inquiry which have been held in connection with the case? Yes.
85. Have you the reports and evidence of the first Local Land Board which was held? Yes.
86. Have you also the report and evidence of the inquiry which was held at Nowra? Yes; it was held on the 13th November, 1889. I hand in the evidence and the report. [*Appendix A1.*]
87. There was a Board of Inquiry—it was the second one;—have you got the evidence and report of that Board? Yes; there is a printed paper containing that report. I produce the Board's report and evidence. [*Appendix A2.*] The inquiry was held on the 27th February, 1891, at Nowra.
88. Have you had any intimation that the Minister wishes to have any evidence given on behalf of the Department? No; I have no express instructions on that point; but there are a few things that I wish to mention. I wish to represent the Departmental view of this case. I would submit, first of all, that

E. A.
Bronsdon.
12 Aug., 1897.

that these men have no legal claim. That is very clear from the fact that they admit their deed did not embrace the land they have since claimed, and which has since been given to them. Further, we have the advice of the Crown Solicitor to the same effect, viz., that Guihan has no legal claim against the Department. That is shown by the fact that they have never attempted to take any civil action, although it appears they consulted a lawyer about it.

89. *Mr. Chapman.*] What admission do you refer to on their part? Because they submitted their deed and asked for an alteration, and it was altered.

90. *Chairman.*] Did they submit the deed or did the Department suggest that a fresh deed should be given? A letter sent by Mr. Lovegrove, dated 30th July, 1889, is practically a request for an alteration of the deed. He says in that letter:—

As the deed of the land includes a plan of the island, which is only excluded by colour.

That is his way of putting it.

And as the alteration of the word "south" into "north" would correct the mistake in description.

He admits a mistake there.

It would seem that a slight alteration in the deed itself would bring it in accordance with the facts, but it will be probably necessary to issue a new deed, describing the so-called island according to the latest survey (which does not correspond with the former tracings furnished to Mr. Guihan), and this deed should be delivered free of charge to Mr. Guihan, who has been put to great loss by the error.

91. *Mr. Chapman.*] I do not see an admission there. Was that letter written in answer to a request from the Department to send in the old deed? I think not. This letter was written before the Land Board inquiry. At that time the Department claimed that the island did not belong to Guihan.

92. What area has Guihan in the first deed? The area stated was 199 acres 2 roods 20 perches.

93. Is it a fact that without this island he would not have that area? Yes.

94. Did you issue a deed in the first instance for 199 acres 2 roods 20 perches? Yes; the area was stated as such, but, of course, the description in the deed is the important part.

95. *Chairman.*] If that island was formed by a flood after the first deed was issued, it would not be possible to describe the island in the first deed? There is no doubt of that, but the survey was made many years before that, and it did show the island.

96. *Mr. Chapman.*] Did the original owner of this land apply for 199 acres 2 roods 20 perches? He applied for 200 acres, but a road was taken, which reduced the area to 199 acres 2 roods 20 perches.

97. Would it be impossible to give that area without including the island? Yes; that is so.

98. Do you say that it is pretty clear that Mr. Guihan has no legal claim? Yes; I submit that.

99. As a matter of fact, in similar cases does not the Department very often recognise a moral claim? They do in certain cases, and they have to a certain extent done so here. Mr. Bruncker offered £50 in satisfaction of any moral claim Guihan might be supposed to have, but he did not admit any legal claim. I wish to submit to the Committee that, apart from the legal aspect of the case, if the Guihans are entitled to any compensation it should be limited to actual and necessary expenses—for instance, Mr. Guihan has employed an agent, he visited a solicitor, and made journeys here, there, and everywhere. It is not fair to expect the Department to pay for all these things. If a man thinks an agent can conduct his business better than himself it is hardly fair to expect the Department to pay that agent, although his case may prove successful. I would also like to call attention to the nature of the claims made on behalf of Mr. Guihan as contained in the printed document.

100. *Mr. Piers.*] Is it not a fact that if Guihan had not employed an agent the Crown would have sold the land? I do not think so.

101. Did they not threaten to sell the land? They invited an application for part of it, and they invited him to apply for the other part.

102. If he had not objected, and got an agent would they not have sold the land? If he had not objected, perhaps, but I am speaking of his engaging an agent to do his business, and then expecting the Department to pay for that. I should like to refer to the claim made by Mr. Lovegrove, which was referred to the Board for investigation only. The first item he puts down is £200 for want of possession of the land generally for three and a half years. The Crown never dispossessed Mr. Guihan, and never authorised anyone else to go into occupation of part of this island—that is a matter of importance.

103. *Mr. Chapman.*] Did you not just now state that the Crown offered part of this island to somebody else? They invited a man to lodge an application, which he did, but it was subsequently refused.

104. If the Department invited someone else to make application for portion of this land, would not that virtually be dispossessing the owner, because it would intimate to him that he could not utilise the land in a permanent way? Mr. Guihan claims that he was in possession of this island, and he disputed the correctness of the Crown's claim—so far as any evidence has yet been brought forward he has not shown that he went out of possession. I will read a letter by Mr. Lovegrove bearing on that point, dated 19th November, 1889. You will see that is only a few months before the second inquiry by the Board. He asks that the Government should refuse Mr. Erwin's application, "or have an additional deed prepared giving them the land sold to them, surveyed for them, occupied by them continuously for twenty-seven years, and whose value has been due to their money and labour." You will notice that the conditional purchase was originally taken up in 1862,—this letter was written in 1889, twenty-seven years afterwards. As Mr. Lovegrove claims that they have been in occupation twenty-seven years, it is clear they were in occupation in November, 1889, and that was after Erwin's application had been lodged, and only a few months prior to the second inquiry by the Land Board. Even if he did go out of occupation, the Crown certainly never gave Erwin the right to occupy. The lodging of an application of this sort gives no right to occupy the land until the application is approved, and this application was not approved.

105. *Chairman.*] Did not the Crown say to Guihan that if he did not apply to purchase, the land would be submitted to auction? I believe that was written with regard to one part of the island. It was divided into two parts; Erwin was invited to apply for one part, and Guihan for the other.

106. Did Guihan apply to purchase? No.

107. Did the Crown carry out their intention to sell by auction? No.

108. Can you account for that course being taken? Because, in connection with Erwin's application, charges were made by Mr. Lovegrove that certain plans had been altered. A Departmental Board of Inquiry was appointed to investigate those charges. They reported that no other alterations had been made,

made, except the alterations usual in office business; but they reported that, in their opinion, this island should have been included in the grant. That was contrary to the opinion that had been expressed by the District Surveyor previously and by the Deputy Surveyor-General; but the report of this Board was adopted. Mr. Guihan was asked to return his deed, and it was corrected so as to include the island.

E. A.
Bronson.
12 Aug., 1897.

109. The whole of it? Yes; for that reason no steps were taken to offer the land at auction. I would like to refer to the scale of charge that Mr. Lovegrove includes in the items. There is £200 (which is corrected afterwards to £210), which is stated to be at the rate of £3 per acre per annum for this island, including about 20 acres; yet the freehold value of the land as it then stood, according to the highest valuation, was £20 per acre. McIlwraith bought it for £1 per acre. It was afterwards improved, and that perhaps accounts for some of the difference; still, £3 per acre net profit on land worth only £20 per acre, to say the least of it, seems high. Then you will note that, having charged £210 for want of possession of 20 acres, later on Mr. Lovegrove charges £200 for want of possession of part of it—that is the last item of £200. He refers to the 8 acres applied for by Erwin, but that forms part of the island for which he has already charged £210. That illustrates how this claim for compensation has been made up. I would also submit that McIlwraith, the original purchaser in whose name the deed was issued, and Guihan, who purchased from him, must share the responsibility of any trouble that has arisen from this mistake. They accepted a deed, which, on the face of it, did not include this island. If they claimed that it was a mistake they should have pointed it out at the time, and possibly it might have been remedied. When years afterwards they did make a claim, the view taken by the District Surveyor, and approved of by the Minister (Mr. Garrett), was that they accepted a deed which did not cover the island; therefore the land did not belong to them, but to the Crown. I think a court of law would take that as the legal view.

110. *Mr. Chapman.*] But the Court holds that every man knows the law, while we know, as a matter of fact, everyone does not know the law? I am speaking of the interpretation that would be put upon the deed. It did not describe the island, and I think a court of law would say that, therefore, the land did not vest in McIlwraith or in Guihan. I submit that these men, by their own carelessness or something of that sort have been partly responsible for the trouble, admitting that there was a mistake. I would further point out that the subsequent action taken has vested in Guihan's land claimed to be worth £100 which was not covered by their deed. That may be considered as a set-off to the trouble they have been put to. Further, no less than three Secretaries of Lands have considered this claim for compensation, and they thought that £50 was ample. Mr. Brunner originally offered £50, and the case was afterwards reviewed by Mr. Copeland and Mr. Carruthers.

111. You say, in the first place, that you consider that if there is a claim—which evidently the Department admits—the Department should not be called upon to pay the costs of an agent or solicitor? I think not.

112. Are you aware that in all court cases where a man gains a verdict costs are awarded for a solicitor or agent? Yes, in a legal case; but, as I previously pointed out, if this claim were dealt with as a legal case he would be entitled to nothing.

113. You put it that the reason why these men should not be entitled to their claim is that their trouble is owing to their carelessness? Partly.

114. As a matter of fact, do you not know that very few men when taking a deed from the Government make any examination of it, but take it for granted that it is right? I do not think so. The deed contains not only a description, but a diagram. A man might not understand the description, but he would understand the diagram or the chart.

115. You lay stress on the fact that three Secretaries of Lands have agreed that £50 is sufficient; but is it not a fact that once a Minister makes a recommendation, it is only in very exceptional cases that his successor alters it? If a subsequent Minister thinks an injustice has been done he will alter it.

116. Is not that very rare? Possibly that is so.

117. *Chairman.*] You have stated that Guihan would not have had the area for which he paid without the inclusion of the island;—under those circumstances, was it Guihan's fault or McIlwraith's fault or the fault of the Crown that this land was not included? Of course the Department have admitted error; but I would point out that the claim of the Department was based on a report by Mr. District-Surveyor Deering, an officer of long standing, and also on a report signed by the late Mr. R. G. D. Fitzgerald, Deputy Surveyor-General. Their view was that the land did not belong to Guihan.

118. *Mr. Pyers.*] Both of them have since been proved wrong? That is a matter of opinion.

119. But you admit that he would not have his area of land if the island were excluded? Yes.

120. Then the opinion of both of those officers must be wrong? The Department have admitted that by altering the deed; but I have pointed out these facts to show that the matter was not dealt with without consideration, and it is not a case on which there are not two opinions.

121. *Chairman.*] Are you aware whether the Minister wishes any other witnesses from the Department to be examined here? I have no instructions on the subject. I am in attendance in answer to a notice sent to the Under Secretary.

122. *Mr. Pyers.*] Do you say that Guihan was never dispossessed of the land? Yes; as far as we know.

123. Did not a Surveyor go down there from the Department, cut down the fences, and divide the island into two parts? He surveyed the island into two blocks; but, as far as I know, he never cut down the fences.

124. Guihan stated that in his evidence? We have no evidence to that effect.

125. *Mr. Chapman.*] If one of your surveyors went down there and surveyed the land, would you still hold that no adverse possession of the land had taken place? The correspondence shows that he remained in possession. He said he would not go out—"this land is mine, and I will not give it up."

126. *Mr. Pyers.*] Does it not strike you that if he had not objected the land would have been sold? If he had not objected, no doubt it would have been.

127. Then, would he not have suffered a great wrong? That is the point. I may be allowed to call attention to the fact that the Board of investigation at Nowra, on 27th February, 1891, was authorised merely to collect information for the Minister. Of course, as the Committee are aware, the report of that Board was only by a majority. The Chairman of the Board (the expert member) dissenting from the finding. I put in a copy of the original plan of the land. [*Appendix A3.*]

128. Is this the oldest plan? It is a copy of it. It is the original plan.

TUESDAY, 24 AUGUST, 1897.

Present:—

MR. PYERS, | MR. LAW.

ALEXANDER CAMPBELL, Esq., IN THE CHAIR.

Edward Arnold Bronsdon recalled and examined:—

- E. A. Bronsdon.
24 Aug., 1897.
129. *Chairman.*] Do you appear before the Committee to-day on behalf of the Department of Lands? Yes; I appear for the Under Secretary for Lands.
130. Have you some further evidence to advance to-day? Yes. From a question that was asked me the other day I gathered that it had been stated before the Committee that Surveyor Riley had cut down Guihens' fences. In consequence of that a letter was sent to the District Surveyor at Goulburn asking him to make inquiries from Mr. Riley on that point, and also on the question of the occupation of the land. Mr. Riley's reply is as follows:—

14 August, 1897.

I FELT that I could not send the information by that night's mail, as I was on my way to Kangaroo Valley on leave of absence. I thought it desirable to make some inquiries. I deny that when making a survey of the island I cut down Guihens' fences in several places. Whenever it has been necessary to remove a rail I have always been most careful to properly replace it in its former position. I am quite confident that the Brothers Guihen did not go out of occupation of the island. Such an action on their part would have been withdrawing their claim to the land, and they did not in any manner withdraw. If a claim for compensation for want of occupation for three and half years has been set up by the Guihens, I am quite certain they cannot sustain it. That is, they cannot prove that they abandoned their occupation of the land.

V. B. RILEY.

131. Have you any further evidence to offer? No; that is the evidence I wish to produce on behalf of the Department. I did not read the evidence that had been given before the Committee, but from Question 124 I understood that Guihen had given evidence on this subject.

William Lovegrove recalled and examined:—

- W. Lovegrove.
24 Aug., 1897.
132. *Chairman.*] Are you in possession of any proof, or are you aware that Guihens' fence was cut down by the surveyors when they were surveying the land in dispute? Only from what Guihen told me, and by his sending to me a telegram, in reply to which I wrote to him and said, "Do not interfere in any way whatever with the surveyor." I was very much afraid of violence on their part.
133. Did you see the fence? No.
134. *Mr. Pyers.*] Did you send a telegram to the effect you have just stated? Yes.
135. Can you produce a copy of that telegram? I do not know that I can; but one of the items the Guihens put down in their claim is "Shifting the fences £8, by order of the Surveyor." Here is a memorandum of 10th December, 1887, from the Lands Department: "In a few days the inquirer will be invited to apply on behalf of Guihen to purchase half the island under section 66 of the Crown Lands Act, 1884, and the other abutting proprietor the same for the remaining half." You will notice the term "invited to apply." Erwin was invited to apply for the half.
136. *Chairman.*] Will you look through the correspondence to see if you have anything bearing on the question of the fence? I am afraid I have not; I confined myself practically to the correspondence which they could not possibly deny—that was their own correspondence.
137. *Mr. Pyers.*] Have you any knowledge as to whether anyone used the land, or part of the land, during the dispute;—do you know of your own knowledge whether they put cattle there? No; but I think you will find the affidavits by Guihen submitted to the two inquiries, and they will show what was done.
138. Do you know anything about it of your own knowledge? I was not on the spot; I was in Sydney the whole time. I am prepared to leave with you the whole of the letters relative to the dispute. You will notice that the fact of the dispute prevented Guihen from impounding. The Local Court could not deal with the matter. In consequence of being invited to apply, and being told that it was Crown land, Erwin was fully persuaded that he had a right to put his cattle on the land. I know that he had been doing that from his own statement to me. I had a conversation with Mr. Bice afterwards, and I asked him if he thought my estimate for trespass was too much. He said he did not think so, if Guihen had been deprived of total possession of the land, but he had a sort of interrupted possession, and therefore they gave him half.
139. Do you know of your own knowledge that Erwin threatened Guihen with an action if he removed Erwin's cattle from this land? No; but I know from Erwin's own lips that he did put his cattle on the land. I think you will find from Guihen's affidavits at both inquiries, that his fences were cut down.
140. *Mr. Law.*] The question is whether the surveyor found it necessary to remove the fences, and afterwards left them in their original state, and whether Guihen had to erect the fences? I think the item in the claim for shifting the fences by order of the surveyor shows that that is the case—that he had to re-erect them.
141. *Mr. Pyers.*] Do you know the area of land that was taken from Guihen for a road that was made through his land? It was measured through the land but not across it. It was measured along one boundary.
142. Do you say that none of Guihens' land was taken for that road? Yes; about seven-eighths of an acre, as far as I recollect. There was at least three-quarters of an acre.
143. *Chairman.*] Can you tell the Committee whether the action of the surveyor in causing the fence to be opened was on Guihens' land, or was it on the road that crossed through the island? It was only a proposed road.
144. Had it been surveyed at that time? No. Mr. Surveyor Riley got instructions to survey the road. I do not even know whether it has been carried out.
145. *Mr. Pyers.*] Do you know whether it has been gazetted? No.

CLAIM OF JAMES AND PATRICK GUIHAN.

APPENDIX.

[To Evidence of E. A. Bronsdon, Esq.]

A1.

CROWN LANDS ACT OF 1884—(PART II., SECTION 14, SUB-SECTION 4.)

Decision of Local Land Board.

New South Wales, }
to wit. }

WHEREAS on the thirteenth day of November, 1889, it became a matter for investigation before us whether the objections raised by James and Patrick Guihan to the sale of land to George Irwin are sufficient to set aside the division of the late Secretary for Lands, that the land is Crown land, and his recommendation that the land should be sold under section 66. (Referred by the Minister, under section, for report.) And having taken evidence, looked at plans and papers, and inquired into the said matter, we report:—

1. That if the copy of description in the Deed of Grant forwarded with the papers be correct, that description is identical with the description given in the application of 7th January, 1862, by W. J. M'Ilwraith, excepting with respect to the length of lines given.
2. That the land included within the island, shown on plan of survey by Mr. Licensed-Surveyor Taylor, was measured as part of the 200 acres applied for on 7th January, 1862, and was occupied and improved by W. J. M'Ilwraith immediately after survey, but there is nothing to show that the measurement was approved by the Surveyor-General.
3. That if the position of L. Duigan's grant—named as a starting point—be correct, as shown on southern channel and not on the main, or northern, channel of Broger's Creek, it is clear that the island cannot be claimed under the description; but there is nothing to show how that point has been determined, nor what point Mr. Taylor took as his starting point.
4. That the Proclamation of 16th April, 1862, having been made after the date of application, did not render the land unavailable for that conditional purchase, even if the island, formed by flood-waters, be such an island as is contemplated in that proclamation.
5. If the position of north-east corner of L. Duigan's 560 acres be absolutely as shown, and if the description in the Deed of Grant be conclusive, then the land is Crown land, and not included in W. J. M'Ilwraith's 200 acres. (Sec. 14, 39 Vic. No. 13.)
6. We place the value of the land in portion 106 at £12 10s. an acre.

NOTE.—Any deposit lodged with objections should be refunded.

Given under our hands, at Nowra, in the Colony of New South Wales, this 13th day of November, 1889,—

T. WARRE HARRIOTT, Chairman.
Z. G. BICE, Member.

This report is submitted specially, attention being invited to the serious charge against the Department made by Mr. Lovegrove, in his letter of 19th instant.—R.H.D., 29/11/89. Special. Submitted that the charge be investigated by the Board of Inquiry, before any further action is taken on the application of George Irwin for the purchase of the land in dispute.—G.F., 2/12/89. Approved.—J.N.B., 2/12/89. Mr. Lovegrove advised.—3/12/89.

THIS deponent, *Frederic H. Galbraith*, of Nowra, Crown Lands Agent, being duly sworn, maketh oath and saith as follows:—

By Mr. Lovegrove, agent for Caveator: I have charge of the registers, and produce the old register, showing a conditional purchase of William John M'Ilwraith, of 7th January, 1862; I produce a map and tracing, showing a certain road; it is a plan of survey made by Binstead, in 1871, and shows an island at the north-west corner of No. 9, M'Ilwraith's land; there is a note on it, "Portion of No. 2," being M'Ilwraith's conditional purchase of 200 acres; I produce a tracing of plan showing a road, a survey by Sheaffe, and dated 21st October, 1879; there is an island shown on it, and it is written over it, "2 over 2—W. J. M'Ilwraith, part of 200 acres."

By Mr. Blackmore, solicitor: I produce a parish plan of Cambewarra, now in use in my office; it shows the island is divided into two portions by survey; the creek forms a boundary between them; portion 106 is 8 acres, and portion 107 is 12 acres; portion 107 appears on the parish map; has marked on it the name of "Guihan," I think; it is not quite clear; this map is dated 5th June, 1896, and charted up to 22nd August, 1889, signed by G. Lewis.

By Mr. Lovegrove, agent: I produce another litho. of same parish, dated the same; they are the same editions, but it is not charted up beyond 5th June, 1896; there is no marking shown on the island—it is a blank; the island is not divided on the lithograph; there is an alteration upon additional charting made in the office map I produce, but I do not know who made the alteration; the map was sent from the Lands Department to me; the balance of money on M'Ilwraith's 200-acres conditional purchase was paid on 2nd September, 1881; the average time of issuing the deed is from 12 to 18 months; there is an entry showing when the amount of balance money was paid, in the register I produce; it is usual to mark reserves with the letter "R."

Sworn by deponent, at Nowra, this }
13th of November, 1889.— }

F. H. GALBRAITH.

T. WARRE HARRIOTT, Chairman.
Z. B. BICE, Member.

THIS deponent, *William Lovegrove*, of Sydney, being duly sworn, maketh oath and saith as follows:—In January, 1862, I was the Crown Land Agent for Nowra district, and in that capacity I took an application from Mr. J. M'Ilwraith, which I recognise; I see the description which I have now read; I produce the plan forwarded here as the original plan by the Lands Department; it is a plan of survey of Licensed-Surveyor Taylor's, dated 25th June, 1862; it shows the island coloured as part of the 200 acres, portion 2, and the western boundary is marked as 13 chains in length, and terminates at Broger's Creek at a point which may or may not be at north-east corner of Duguid's land, 650 acres; this termination coincides with the plan of portion shown on parish lithographs produced by the Land Agent; addition in pencil is made on this plan—a double line is along the western boundary, and the figures 935 are placed there, which I do not recollect seeing before; the plan shows that at time of survey there was an island there; I am unable to say whether the smaller island at the north was included or not; following the Broger's Creek, as I claim it, would not reach the north-east corner of L. Duguid's 650 acres; the claim of 20 chains from that point would throw this 7 x 10 chains into the conditional purchase, and add 70 acres to it; I know nothing about the description in the deed; I have never seen it or my client, as far as I know; I produce a tracing from plan marked 84/25127 87.14059; I see a plan from the Lands Department showing that it is written that the island is "part of portion of No. 2," and is crossed out; it is No. R. 1041.1603; I saw this map in custody of Colonel Wells some months ago—within six months ago, I think; the words "Part of por. No. 2" were not then struck out; I produce a plan from the Lands Department, a tracing, and No. 84/25127 and 87.14059, in which the distance from the south-east corner of M'Ilwraith's portion 2 to the south-west corner of Irwin's 120 acres is stated as 13 chains;

chains; I also produce a tracing Cat. No. C 1978.2041, which was forwarded to me as the description of portion 107, and in that the distance between the same two points appears to be 15 chains, or nearly so: on the first tracing it is stated that 13 chains is the distance, and the measurement is not carried across the creek; it is stated on first tracing that M'Ilwraith has 199 acres 2 roods and some perches, but, according to scale of the plan, he has about 20 acres less without the Island, which I find by scaling on the tracing; I am acting as agent for Mr. Guiguan in support of his claim.

By Mr. Blackmore: The tracing I produce shows that a deed was issued of 199 acres 2 roods 20 perches.

W. LOVEGROVE.

T. WARRE HARRIOTT, Chairman.
Z. G. BICE, Member.

THIS deponent, *William John M'Ilwraith*, agent, of Sydney, being duly sworn, maketh oath and saith as follows:—

By Mr. Lovegrove: I made an application, January, 1862, and recognise it; I went into possession immediately after I selected the 200 acres, and began working on what is now called "The Island," at the north-western corner; I was there when the land was surveyed in 1862; the surveyor started from Duguid's 650 acres at Brogher's Creek; the creek divided my land from my brother's selection; I selected first; there were about 2 chains between the two points; the surveyor measured along the northernmost stream; I have not seen the land since 1882; there was running water, running more south when it was raining very hard; there was never any other channel except Brogher's Creek; there was no island when I selected, or any land surrounded by water, even in very wet weather; I began to cultivate the land in 1862, on the opposite side of the channel; I don't know the length of the west boundary, but I had to fence it; no one ever told me that the Island was not mine till within about two years ago, but I cannot exactly say when I was told; no one has ever attempted to disturb my possession; I have sold the land to Mr. Guiguan, in 1882, for about £8 an acre; I started from Duguid's side in my description, at the north-eastern corner of Duguid's land; I am certain that the Island was included in the survey by Taylor; it is worth about £10 an acre; I cleared and cultivated some of it; it is worth £6 to £7 an acre to clear it; I sold the land as an incomplete purchase of 200 acres.

By Mr. Blackmore, solicitor: I cannot tell from the charts how my land exactly laid; I don't suppose I took more land than what was surveyed; I was on the land only a few days before the survey took place.

W. J. M'ILWRAITH.

THIS deponent, *George Tate*, of Moss Vale, being duly sworn, maketh oath and saith as follows:—

Mr. Lovegrove, agent: I know the land along Brogher's Creek very well; I see the island marked on the plan; I have always known this island as belonging to Mr. M'Ilwraith; it was not considered an island when I knew it first; at dry times there was only one stream; the northern side was called Brogher's Creek; I have never known the south side called Brogher's Creek; the first land M'Ilwraith cultivated was next to the northern channel; I selected on the northern side of the river; I never heard any dispute whatever as to ownership of this Island.

By Mr. Blackmore, solicitor: I don't know the north-east corner of Duguid's land, although I leased the property for ten years; it was fenced, and I took it as fenced; the fence did not run quite to the bank of Brogher's Creek; I was present when the land was surveyed, and saw the lines along the northern creek and no other: the land is worth £15 to £16 an acre, that is, the whole block of 20 acres; it would cost £5 to £6 an acre to clear and cultivate it; the northern portion of the island, to a certain extent, has been washed away, but the south has not; the northern portion is worth from £3 to £4 an acre; it cannot be cultivated.

GEORGE TATE.

THIS deponent, *George Erwin*, of Kangaroo Valley, farmer, being duly sworn, maketh oath and saith as follows:—

By Mr. Blackmore, solicitor: I am the applicant for the land now under inquiry; I purchased my land from Mr. Angus; portion 106 Mr. Angus had let to T. Davey; Guiguan's fence was on the side of the middle channel shown on the tracing, marked "C"; it was an old fence; I continued to graze my cattle on the land for three or four years; after this Guiguan put up a fence around my north bank—that is, on the north side of the creek; four or five years ago this fence was erected; it is a log fence, and enough to prevent my cattle getting to water; Mr. Surveyor Taylor told me that he never laid a chain on the island; I apply for the land to get access to water for my cattle, and also access to the road; there may be 1 or 2 acres of the northern portion of the island that can be cultivated; I have been ten years on the land.

By Mr. Lovegrove: Guiguan never had a fence on the south bank of Brogher's Creek.

A 2.

CROWN LANDS ACT OF 1884—(PART II, SECTION 14, SUB-SECTION 4).

New South Wales, }
to wit. }

Decision of Local Land Board.

WHEREAS on the 27th day of February, 1889, it became a matter for investigation before us as to a claim for compensation by James and Patrick Guiguan in respect of certain land in the parish of Cambewarra, county Camden, at Broger's Creek.

Mr. Lovegrove, appearing for the claimants, addressed the Board and gave his own evidence, and called James Guiguan.

1. After considering the evidence, the Chairman stated his opinion that the claim was wholly inadmissible, the action of the late Minister, Mr. Garrett, having been in pursuance of his function as Minister determining a question between parties which came before him in the regular course, and having been in accordance with the deed of grant held by the present claimant.
2. The item connected with the late inquiry before the Land Board should have been, if properly chargeable, claimed as costs against the other party to the proceeding before the Board, who were the proper authority to settle the question of costs. As no such were applied for or allowed, clearly they cannot now be included in a claim against the Government.
3. It appears that the land in question was (whether correctly or incorrectly is for this question immaterial) not included in the deed of grant. The owner cannot claim to be compensated for not having consulted his deed, which would have shown him that the land was not included, and enabled him to take the proper steps to have the error corrected at the time of the occurrence and protect himself from disturbance of his possession.
4. The majority of the Board—Messrs. Bice and M'Intyre—decided to recommend the claim for the items indicated by them, amounting to, in all, £167 4s., inclusive of £41 4s., costs of inquiry before the Board on the 13th November, 1889.

Given under our hands, at Nowra, this 27th day of February, 1891,—

A. O. MORIARTY, Chairman.
Z. G. BICE.
LEWIS M'INTYRE.

CROWN

CROWN LANDS ACT OF 1884—(PART II, SECTION 14, SUB-SECTION 1).

Caption to Deposition of Witnesses.

New South Wales, }
to wit. }

THE examination of William Lovegrove, of Sydney, in the Colony of New South Wales, and James Guihan, of Kangaroo Valley, in the said colony.

In the matter of a claim by James and Patrick Guihan for compensation against the Government for £569 4s. Before the Local Land Board at Nowra on the 27th February, 1891, and it hath been found necessary to investigate the said matter on oath, the depositions of the several witnesses are appended hereto.

William Lovegrove, of 109, Pitt-street, Sydney, being duly sworn, saith:—My letter to the Under Secretary for Lands, dated 7th October, 1890, with its enclosure headed "Item of Claim by Messrs. James and Patrick Guihan," &c., is the claim which I make on behalf of my clients; the first item in it (£200) should have been £210, being calculated by me at the rate of £3 per acre per annum for 3½ years; the journeys to the Crown Lands Office, which form the next item, I am aware were taken by the claimant whilst I was Crown Lands Agent; passing over the two next items I find certain attendances in Sydney which I know took place; I also know that the two attendances on the Honorable Thomas Garrett took place, and that the attendance on the Honorable J. N. Brunker took place; the first item of the expenses of the trial in this district being the subpoenaing of witness for which I paid £4; I know that the local solicitor, Mr. Whittell, attended, and that I also attended, and the witnesses, Messrs. George Tate, J.P., Messrs. J. and D. M'Ilwraith, and the two caveators, Messrs. Guihan; I know that I was paid altogether during those 3½ years a sum of £50, which included cost out of pocket.

By Chairman: I lodged the caveat, and appeared for him before this Board with great inconvenience; I lodged the usual deposit of £10 with my caveat, which the Board investigated; I did not ask the Board for costs, because I thought it was not the proper time—I think this is.

W. LOVEGROVE.

Recalled: I have seen the deed; the island was in the deed, but was excluded by color.

W. LOVEGROVE.

A. O. MORIARTY, Chairman.
Z. G. BICE, }
LEWIS M'INTYRE, } Members.

James Guihan, of Kangaroo Valley, being duly sworn, saith:—I am one of the owners of 199½ acres in the Kangaroo Valley; I have been troubled in the possession of it since I got possession of it; I recollect getting a letter from the Department of Lands, through Mr. Fraser Martin, about three and a half years ago [*letter produced, marked A*], to the effect that the land did not belong to me, but that I might apply for it; I never applied to be allowed to purchase the land; I came to the land agent to see him about this land; I went to the Commercial Bank in Berry to see the deeds; the distance between Kangaroo Valley and Nowra is 16 miles, and I would lose the whole day; I have attended about twelve times in Sydney on this business; I saw Mr. Thomas Garrett in Sydney; he told me if I did not apply for half of the land he would sell it inside of a month; I went twice to Sydney in consequence of receiving notice that my land would be sold; at the inquiry here, Mr. Tate, J.P., came from Moss Vale, Mr. J. M'Ilwraith came from Sydney, Mr. D. M'Ilwraith came from here, Mr. Lovegrove from Sydney, and I and my brother from Kangaroo Valley; I was interfered with in possession of the land, and lost the profit off it for three years and a half; Erwin has been trespassing on it for ten years; a sergeant of police came there, and made a report; I remember Mr. Riley going there, and sending Mr. Lovegrove a telegram to that effect; I suffered anxiety of mind, and often did not sleep; I do not think that item of £200 is an extravagant one; it is three months since I was advised that the new deed was prepared; since then I have taken steps to divide the land; I am employing Mr. Cook, of Berry, licensed surveyor and engineer.

By Mr. Deering: I was always sure that the land was mine; my anxiety was caused by the action of the Government; I purchased the land about nine or ten years ago; I got a conveyance of the land; the transaction was arranged between Mr. M'Ilwraith and me by a solicitor.

To the Bench: Mr. M'Ilwraith paid the balance of the purchase money; he paid it before I bought it; the transaction was delayed owing to the deed not having been issued; I knew when I bought that the deed was being prepared; the agreement was that the deed was to be produced; I never saw the deed at all; it was left at the bank by M'Ilwraith.

**CONDITIONAL PURCHASE MADE BY GEORGE VINCENT, IN THE
DISTRICT OF GUNDAGAI.**

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 10th August, 1897, "to inquire into and report upon all the circumstances attending the conditional purchase made by one George Vincent, in the district of Gundagai, on the 22nd day of August, 1878, of 640 acres, parish of Mooney Mooney, county of Harden," and to whom was referred, on the same date, the Report, Minutes of Proceedings and Evidence, of the Select Committee of Session 1894-5, on the same subject, have agreed to the following Report:—

Your Committee having examined the witness named in the margin,* and considered the Report and Evidence referred, find,—

*W. H. Sibthorpe.

1. That on the 22nd August, 1878, George Vincent conditionally purchased, at Gundagai, measured portion No. 93 of 640 acres, parish of Mooney Mooney, county of Harden.
2. That the conditional purchase was declared void on the 23rd October, 1878, the land having been allowed to Mr. Thomas Broughton as a pre-emptive right.
3. That the Secretary for Lands (Mr. Hoskins), in a minute dated 22nd April, 1881, stated that Mr. Farnell was not justified in declaring the conditional purchase void, and that the cancellation should be reversed and Vincent's conditional purchase held to be good.
4. That after Vincent had completed his three years' residence, and made his declaration, an action was brought against him in the Supreme Court, by Thomas Broughton, for trespass, and a verdict was given against Vincent on the ground that the measured portion had been improved to the value of over £40, which the Supreme Court decided barred selection.
5. That the evidence given before your Committee shows that improvements under the value of £40 had been effected before Vincent selected, and that Mr. Broughton continued fencing and improving the land for some time afterwards, and that the improvements declared by the Court to bar selection were effected after Vincent selected.
6. That the land has been reserved pending settlement of Vincent's claim.

Your Committee consider that Vincent should be reinstated on the land, and recommend his case to the favourable consideration of the Government.

TRAVERS JONES,
Chairman.

No. 3 Committee Room,
Legislative Assembly,
Sydney, 19th August, 1897.

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 17 AUGUST, 1897.

MEMBERS PRESENT :—

Mr. Affleck,		Mr. Anderson,
Mr. F. Clarke,		Mr. Gormly.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

CONDITIONAL PURCHASE BY GEORGE VINCENT, IN
THE DISTRICT OF GUNDAGAI.

WEDNESDAY, 18 AUGUST, 1897.

Present:—

MR. AFFLECK,
MR. GORMLY,MR. BARNES,
MR. T. JONES.

TRAVERS JONES, ESQ., IN THE CHAIR.

Walter Homan Sibthorpe called in, sworn, and examined:—

1. *Chairman.*] What are you? Butcher, at Gundagai.
2. Were you in the employment of Mr. Broughton when George Vincent selected on 22nd August, 1878? Yes.
3. Do you know this particular portion of 640 acres, which he selected? Yes.
4. Do you know if there was any fence on it when he selected? Yes.
5. Can you describe what the fence was like? It was a one-rail fence; it was to be a top-rail fence with five wires, but there was no wire in the fence.
6. Was it erected with the intention of being a five-wire fence? Yes.
7. Are you sure that there was no wire in the fence when he selected? I know there was no wire in the fence.
8. *Mr. Gormly.*] What length of fence was there? A little over a mile.
9. *Chairman.*] Was the section a mile right through? Yes.
10. Did the fence go right through the section? Yes; it turned the southern corner for a few panels; it was a couple of chains, I think.
11. *Mr. Gormly.*] What sort of material was used;—was it inferior or ordinary? It was an ordinary fence; it was not a good one.
12. *Mr. Affleck.*] Was it not new? It was new, but the timber was not good.
13. *Chairman.*] Was the timber close to the fence? Yes.
14. Might it have been a better fence if they had gone further for the timber? It might easily have been a better fence.
15. You say that a few panels were turned on the south corner;—do you know if that was on the selection, or was it erected on the reserve? I do not know for a certainty. I heard a few months afterwards that the fence was moved in a few yards, but I do not know that of my own knowledge.
16. Do you know if this was a roadside fence or a boundary fence that went right through the selection? I do not think it was a roadside fence.
17. Were you on Muttama Run when that fence was cut for the teams to use the road? No; it was cut afterwards.
18. Did you remain there for some time after Vincent selected? Yes; about two years.

W. H.
Sibthorpe.
18 Aug., 1897.

- W. H. Sibthorpe.
18 Aug., 1897.
19. Did Mr. Broughton's men continue to erect that fence and complete their work? Yes.
20. *Mr. Gormly.*] Was that after Vincent selected? Yes.
21. *Chairman.*] Are you quite satisfied there was no complete paddock fenced there when Vincent selected? I am quite sure of that.
22. When did you leave Muttama station? In 1880.
23. Had Mr. Broughton's men completed a paddock fence then? They had completed about one and a half miles; I suppose it might have been a little more.
24. That is, they ran the fence down both ends of the selection towards the creek? No; there was only one end of it fenced when I left.
25. Would you consider that the creek was a secure boundary fence? Certainly not.
26. Do you remember Mr. Broughton writing to you at the time he brought an action against Vincent? Yes; some time before.
27. Was it when he was about bringing the action? Yes.
28. What did he write to you about? As to giving evidence in the Supreme Court.
29. Did he suggest any evidence? He suggested that I knew that a fence was erected before Vincent selected, or something to that effect, and that the fence was finished.
30. *Mr. Affleck.*] Have you that letter now? No; I might have it, but I do not think so.
31. *Chairman.*] Did you decline to give evidence on the suggestion he made in that letter? I told him I could not give evidence in that way.
32. Was your reason for telling him that because you knew the fence was not erected, and that no wire was in it? Yes; I knew that.
33. *Mr. Barnes.*] What was the value of the fence before Vincent selected? I could tell you the contract price.
34. *Mr. Affleck.*] Have you any idea of the value of fences? Yes; I have had a lot to do with fencing.
35. What was the value of the fence, as completed, when Vincent selected? About £18 per mile.
36. That is as it was when he selected? Yes.
37. *Mr. Barnes.*] Was that about a mile? About a mile and 3 chains.
38. *Mr. Gormly.*] Would the value exceed £20? No.
39. *Chairman.*] Did you go from Muttama to take charge as overseer of another station? Yes.
40. Did you come back to Mr. Broughton's employment afterwards? Yes.
41. Were you in charge of the station for some time? Yes; I had charge of Muttama for ten years.
42. Had Vincent erected his house when you were there? Yes.
43. *Mr. Affleck.*] Was that before the action? Yes; he had not a house; he had a hut. It was after I left that he erected the house.
44. *Mr. Gormly.*] You said the value of the fence did not exceed £20. You have had some knowledge of fencing, and will you kindly tell the Committee how you came to that conclusion? I see I have made a mistake, now that you call my attention to it. After looking at the figures, I think it would be about £30; that is the value of the fence.
45. *Chairman.*] Is that according to the material on the ground? Yes.
46. Do you judge by the part of it that was completed compared with the contract price and from your general knowledge of fencing as station manager? Yes.
47. Do you come to the conclusion that it was worth about £30 when Vincent selected? Yes.
48. *Mr. Affleck.*] Do you mean to say that with the wires and everything in it the fence would be worth £30 per mile, or do you mean that the fence with the single rail was worth £30? As it stood.
49. Do you mean £30 per mile? £30 for a mile and 2 or 3 chains.
50. What would be the total cost per mile of the fence completed with five wires? You can get a fence completed now with five wires and a top-rail for about £32 per mile.
51. Was it more expensive then? Yes; that was about thirteen years ago.
52. What would wire be worth then—£16 or £17 per ton? I am not talking of the cost of the wire, but of the erection of the fence and the wire. When you give a man a contract the wire is found for him.
53. Then actually the value of the fence on that occasion complete would be worth about £40? Not complete; it would be more than that complete. I am speaking of the fence as it was when this man selected, when he gave notice to Mr. Broughton to desist fencing; then I consider the fence was worth £30.
54. *Chairman.*] Do you recognise the plan produced as the plan of the ground? Yes.
55. *Mr. Affleck.*] Which is the road, the dotted line or the straight line, when he selected? The dotted line was the road.
56. Mr. Broughton erected the fence along the straight line, and not the dotted line? Yes.
57. *Chairman.*] When the land was selected the road was inside the paddock, and there was no surveyed road outside the fence? That was the case.
58. *Mr. Affleck.*] Now the road is outside the fence? Yes.
59. *Chairman.*] Is the fence a roadside fence now? Yes.
60. When he selected it was not a roadside fence, and it was not a boundary fence? Yes.
61. In that case it was of no value to him unless he shifted it on to the boundary? Yes.
62. Do you remember Vincent going down to give notice to Mr. Broughton to cease fencing? Yes.
63. *Mr. Affleck.*] Do you know that of your own knowledge? Yes; I was standing by at the time.
64. Were you in Mr. Broughton's employ then? Yes; I met Mr. O'Donnell going through the land.
65. *Chairman.*] Do you know that Mr. O'Donnell was in the habit of going backwards and forwards on that road to his stations? Yes.
66. *Mr. Barnes.*] Did you hear the reply that Mr. Broughton gave to Vincent? Yes; he said he would go on with his fencing, or he used words to that effect; that he would take no notice of him.
67. *Chairman.*] Do you know of your own knowledge that Mr. Broughton ever wanted to buy Vincent out? Not of my own knowledge.

1897.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

CONDITIONAL PURCHASE OF JOHN ROCHE ARDILL.
(PETITION FROM JOHN ROCHE ARDILL IN REFERENCE TO HIS CONDITIONAL PURCHASE IN THE
LAND DISTRICT OF MOLONG.)

Received by the Legislative Assembly, 4 May, 1897.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in
Parliament assembled.

The humble Petition of John Roche Ardill,—

MOST FAITHFULLY SHOWETH—

That your Petitioner, in the year 1892, conditionally purchased 40 acres at the Land Office, Molong, and that the said land was reported to have contained improvements thereon to the value of £38 10s. sterling; that the said land was confirmed to your Petitioner by the Local Land Board at Cudal on the 30th day of October, 1893, and that the said improvements were not then and there valued in accordance with the 189th Regulation of the Crown Lands Act of 1884, nor was the land surveyed for your Petitioner, although paying £4 for such survey; and that your Petitioner called several times at the Survey Office, Orange, trying to get the land surveyed, but to no purpose; and that on the 9th day of October, 1894, the said Land Board held an inquiry as to the residence of your Petitioner on the land and valued the improvements at £12 12s., which your Petitioner protested against as being exorbitant, and that they should have been valued twelve months before; nevertheless, your Petitioner's land was declared forfeited, and your Petitioner's deposit and survey fee confiscated, although your Petitioner was at the time residing on the land and had the frame of a house on it.

Your Petitioner also made an application to lease, annually, 71½ acres of land in the Parish of Boree Nyrang, County of Ashburnham, Land District of Molong, and that your Petitioner was summoned to appear at Cudal on the 30th day of January, 1893, and that the Land Board was not then prepared to go on with the application, and adjourned the case to Molong, where it was held in January, 1894, and your Petitioner's application refused on the grounds that the land was not available for lease, but immediately after leased the said land to Thomas Joseph Keenan, although not applied for by him; my application being for 71½ acres of a travelling stock reserve, No. 659, proclaimed the 10th December, 1875, and here is Thomas Joseph Keenan's description for Annual Lease 93-10—"Eastern Division, Land District of Molong, County of Ashburnham, Parish of Boree Nyrang, 95 acres, water reserve No. 312, notified the 2nd July, 1867." So that the two portions, probably, were not near each other; and the 33rd section of the Crown Lands Act of 1889 sets forth that the first applicant shall have a right to the lease, and your Petitioner's application was about twelve months before Mr. Keenan's.

Your Petitioner therefore thinks that the land law was not administered in either case and feels aggrieved, and prays that your Honorable House may take the premises into your consideration and grant relief.

And your Petitioner, as in duty bound, will ever pray.

JOHN ROCHE ARDILL.

German's Hill, April 29th, 1897.

1897.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

HOMESTEAD LEASES IN NAMES OF W. BRADY, SENIOR, ANN E.
MORRIS, AND W. BRADY, JUNIOR, WILCANNIA DISTRICT.

(RETURN RESPECTING.)

Printed under No. 4 Report from Printing Committee, 20 May, 1897.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 5th May, 1897,—

“ That there be laid upon the Table of this House, all papers in connection
“ with the surrender and the withdrawal of surrender of homestead leases
“ 886, 887, and 888, Wilcannia District, in the names of W. Brady, senior,
“ Ann E. Morris, and W. Brady, junior, respectively.”

(*Mr. Sleath, for Mr. Copeland.*)

SCHEDULE.

No. 1.

Messrs. Brady and Mrs. Ann E. Morris to The Under Secretary for Lands.

Dear Sir,

Tilpa, Darling River, 2 February, 1892.

I hope we are not too late in sending in these forms to give up the homestead leases at the date I name in forms. I wired to the Lands Office in Bourke before I sent the letter. They followed after the wire, and I received no answer from Bourke for sixteen days after. In the wire I worded it the same as in forms, and same in letters.

We remain, &c.,

WILLIAM BRADY, SEN.
ANN E. MORRIS.
WILLIAM BRADY, JUN.

108—A

[Enclosures.]

[605 copies—Approximate Cost of Printing (labour and material), £5 3s. 9d.]

[Enclosures.]

Form 30.

Crown Lands Acts Regulations Nos. 100, 130, and 149.

Notice of intention to surrender a Homestead Lease.

TAKE notice that I, Ann Elizabeth Morris, being the holder of homestead lease No. 90-39, Land District of Bourke, now Wilcannia, intend to surrender the same on the 17th day of February, 1892.

Signed this 16th day of January, 1892.

ANN ELIZABETH MORRIS,

Post Office, Tilpa, Darling River.

To the Under Secretary for Lands.

Form 30.

Crown Lands Acts Regulations Nos. 100, 130, and 149.

Notice of intention to surrender a Homestead Lease.

TAKE notice that I, William Brady, junior, being the holder of homestead lease No. 90-40, Land District of Bourke, now Wilcannia, intend to surrender the same on the 17th day of February, 1892.

Signed this 16th day of January, 1892.

WILLIAM BRADY, JUNIOR,

Post Office, Tilpa, Darling River.

The Under Secretary for Lands.

Form 30.

Crown Lands Acts Regulations Nos. 100, 130, and 149.

Notice of intention to surrender a Homestead Lease.

TAKE notice that I, William Brady, senior, being the holder of homestead lease No. 90-38, Land District of Bourke, now Wilcannia, intend to surrender the same on the 17th February, 1892.

Signed this 16th day of January, 1892.

WILLIAM BRADY, SENIOR,

Post Office, Tilpa, Darling River.

The Under Secretary for Lands.

No. 2.

Notices of intention to surrender Homestead Leases.

THE enclosed notices to surrender the homestead leases, noted in the margin, are dated 16th January, 1892, and the lessees desire the surrenders to take effect from the 17th instant.

Section 34 of the Crown Lands Act of 1889, and Regulation 130, provides that a homestead lease may be surrendered upon the lessee giving the Minister not less than twelve months' notice; and if any rent due thereon be not paid within the prescribed time, or if any condition attaching thereto be not fulfilled, any homestead lease shall be liable to forfeiture.

All amounts due on the leases in question have been paid up to the 18th instant.

Submitted as to whether the surrenders may be allowed, notwithstanding that the twelve months' notice required by law has not been given.—E.L., 23/2/92.

The clause seems imperative for twelve months' notice. "The lease may be surrendered by giving the Minister not less than twelve months' notice." As the rent has been paid up to 18th instant, it may, of course, be open to question whether any more will be paid. Yet the difficulty is one—Can the Minister accept a surrender with a less notice than twelve months?—R.H.D., 23/2/92. F.H.W., 24/2/92.

The words of the section (34, Act of 1889) are clear and definite, and it is evident that the notice cannot take effect for twelve months after its lodgment with the Minister. To admit Mr. Brady's proposal would be to invite lessees to evade their obligations as to rent and otherwise, and encourage loose dealings in homestead leases.—W.H., 24/2/92.

The acceptance of the surrender becomes a question of policy, and unless there is an intention of recovering future rent by process of law, for which there does not appear to be any provision. I should think the better course would be to accept the surrender and endeavour to get it reoccupied even at a lower rent. You will get no rent if you do not accept surrender, and all the lessee has to do is to walk away and take his stock with him, if he has any. I admit the legal difficulty by wording of the Act, 34th section; and perhaps it would be better to treat this as the notice of surrender, which will mature twelve months hence.—H.C., 6/4/92.

Messrs. W. Brady, senior and junior, and Mrs. A. E. Morris, informed by registered letters, and Chairman, Bourke, so informed.—30/4/92.

No. 3.

The Under Secretary for Lands to Mrs. A. E. Morris, Post Office, Tilpa, Darling River.

Madam,

Department of Lands, Sydney, 30 April, 1892.

Referring to your notice of 16th January last, of intention to surrender the homestead lease mentioned in the margin, on 17th February, 1892, I have the honor to inform you that the Secretary for Lands has, in accordance with the provisions of section 34 of the Crown Lands Act of 1889, approved of the surrender being accepted, to take effect on 16th January, 1893.

I have, &c.,

WM. HOUSTON,

Under Secretary.

(Per R.H.D.)

No. 4.

The Under Secretary for Lands to Wm. Brady, jun., Esq., Post Office, Tilpa, Darling River.

Sir,

Department of Lands, Sydney, 30 April, 1892.

Referring to your notice of 16th January last, of intention to surrender the homestead lease mentioned in the margin, on 17th February, 1892, I have the honor to inform you that the Secretary for Lands has, in accordance with the provisions of section 34 of the Crown Lands Act of 1889, approved of the surrender being accepted, to take effect on 16th January, 1893.

I have, &c.,

Please pass on to District Surveyor, Bourke.

No. 7.

John Matheson, Esq., to The Under Secretary for Lands.

Sir,

Tilpa, 8 August, 1892.

Having become the purchaser from the Sheriff of the homestead lease named in the margin, without being aware that Mr. Brady had applied to surrender the said lease, I now respectfully ask that the surrender may be cancelled, as I am willing and prepared to fulfil all the conditions required by the Act.

W. Brady, senr.,
H. L. 886,
No. 90-38,
Bourke, now
Wilcannia.

I have, &c.,

JOHN MATHESON.

The surrender of the lease referred to has been accepted, *vide* Occ. 92-4,561, to mature twelve months from date of notice of surrender, viz., 16th January, 1892, and the lease is now liable to forfeiture for non-payment of rent for the current year. The transfer from the Sheriff has not yet been received, and it will, perhaps, be better to allow the matter to stand over until the transfer is received, when it can then be dealt with on its merits.—E.L., 18/8/92.

Inform Matheson fully of particulars by registered letter to-day, please.—R.H.D., 19/8/92. J. Matheson informed by registered letter, 19/8/92.

No. 8.

The Under Secretary for Lands to John Matheson, Esq., Tilpa.

Sir,

Department of Lands, Sydney, 19 August, 1892.

Referring to your letter of the 8th instant, intimating your purchase from the Sheriff of the homestead lease mentioned in the margin, without being aware of its surrender by W. Brady, senior, I have the honor to inform you that the notice of surrender lodged with this Department is dated 16th January, 1892, and, having been accepted, will mature on the 15th January, 1893.

Wilcannia—
H. L. No. 886,
W. Brady, senr.

I am to add that the instrument of transfer to you from the Sheriff has not yet been received, and that the lease in question is liable to forfeiture for non-payment of the current year's rent.

Rent to 15th
February, 1893,
£70 9s. 9d.

I have, &c.,

WM. HOUSTON,

Under Secretary.

(Per R.H.D.)

P.S.—The homestead lease will expire on the 15th January, 1893.

No. 9.

Mrs. Ann E. Morris to The Under Secretary for Lands.

Sir,

Care of E. J. Bloxham, Bourke, 10 October, 1892.

I respectfully ask that I may be allowed to withdraw my application to surrender the homestead lease noted in the margin.

Ann Elizabeth
Morris, H.L.
887, 80-89,
Bourke, now
Wilcannia,
10,240 acres,
county of Kil-
lara.

The disappearance of the rabbits to a great extent, and a moderate rainfall, lead me to hope that I shall now be able to fulfil the conditions required of the homestead lessee.

I believe the Honorable the Minister approved of the surrender taking effect from the 16th January, 1893.

I have, &c.,

ANN E. MORRIS.

If my application is granted, I am willing to pay any arrears that may be due on the homestead lease.—ANN MORRIS.

The

The homestead lease herein referred to was surrendered by the lessee, *vide* Occ. 92-1,491, and the surrender was accepted by the Minister to take effect from the 15th January next. This is an application to be allowed to withdraw the notice of surrender. This is one of the cases in which an action has recently been brought in No. 2 Jury Court to recover money advanced by E. M. Perrott to enable applicant to take up the lease, and the Crown Solicitor was asked on the 19th instant to obtain a copy of the Judge's minutes in this case, and also in the case of W. Brady, senr., and W. Brady, junr. Perhaps this matter had better stand over until the Judge's minutes have been received.—E.L., 29/10/92. R.H.D., 29/10/92. F.H.W., 31/10/92.

Yes. Acknowledge receipt of letter of 10th instant in usual terms.—W.H., 31/10/92. A. E. Morris informed, 4/11/92.

No. 10.

The Under Secretary for Lands to Mrs. Ann E. Morris, care of E. J. Bloxham, Esq., Bourke.

Madam,

Department of Lands, Sydney, 4 November, 1892.

I have the honor to acknowledge receipt of your letter of 10th ultimo, desiring permission to withdraw your application to surrender the homestead lease mentioned in the margin, and to inform you that the matter is now under consideration.

I have, &c.,

WM. HOUSTON,

Under Secretary.

(Per R.H.D.)

Wilcannia—
H.L. No. 887.

No. 11.

W. Brady, jun., Esq., to The Under Secretary for Lands.

Sir,

Care of E. J. Bloxham, Bourke, 31 October, 1892.

I respectfully ask that I may be allowed to withdraw my application to surrender the homestead lease noted in the margin.

The disappearance of the rabbits to a great extent, and a moderate rainfall, lead me to hope that I shall be able to fulfil the conditions required of the homestead lessee.

I believe the Honorable the Minister approved of the surrender taking effect from the 16th January, 1893.

I have, &c.,

W. BRADY, JUN.

This is a similar case to that of homestead lease No. 887, Wilcannia, Ann E. Morris; *vide* Occ. 92-12,149 herewith. Submitted that the same action be taken in this case as in the former one.—E.L., 19/11/92.

Yes. If the judge's notes have not been received, remind Crown Solicitor, please. Request early reply.—R.H.D. (for the Under Secretary), 21/11/92.

William Brady,
jun., H.L. 885,
90-40, 10,233
acres, county of
Killara.

No. 12.

E. J. Bloxham, Esq., to The Under Secretary for Lands.

Sir,

Bourke, 15 November, 1892.

I am desired by Mr. John Mathieson, who purchased a homestead lease from the Sheriff without being aware that the original holder had made application for the surrender of his lease, and who applied in August last that such application to surrender might be cancelled, to ask that his application may be considered with as little delay as possible, as the uncertainty of his position precludes him from carrying out the necessary fencing, &c.

Yours, &c.,

EDW. JNO. BLOXHAM.

Writer may be informed that the transfer from the Sheriff to John Mathieson has not yet been received in this Department.—E.L., 30/11/92. Yes; and register the letter in the General Post Office, and attach the receipt to this.—R.H.D., 1/12/92. E. J. Bloxham informed by registered letter.—5/12/92.

Occ. 92-12,223 herewith, and to be returned.

In the Supreme Court }
of New South Wales. }

Perrott v. Brady, senior.

Money paid, £378 6s. 4d. Money lent.
Plea—Never indebted.

Gannon for plaintiff.

Sly and Rolin for defendant.

Edward Montgomerie Perrott, plaintiff:—I live at Rosedale, Tilpa, 120 miles from Bourke. The defendant lives 12 miles from me, and 130 miles from Bourke. I am a grazier. In January, 1890, while in Bourke, defendant asked me to lend him some money to take up a homestead lease. I agreed to lend it to him on conditions that he should sign the necessary papers to secure its repayment, such papers to be prepared by my solicitor. The interest was 15 per cent. per annum. I advanced money—£42 13s. 4d.—on the 19th February. The promissory note and this document (the agreement) was signed by him the same day. I also advanced him £3 3s.; legal expenses, £1 1s.; cash, £5. I paid it to defendant by cheque, which was cashed; and on June the 23rd I paid £5 to Bloxham at Brady's request. That all comes to £56 17s. 4d. I made all the advances specified in the particulars on defendant's request, for his benefit. I rendered him an account to July, 1891. He objected to one item, and to one only (£60), and £60 cost of fencing. He did not ask me to pay that specially, but I thought that under the document I was at liberty to advance any such sum for defendant's benefit on account of the homestead lease. The homestead lease was gazetted 24th July, 1891, as Brady's. About the beginning of August, 1891, I asked him to execute a legal mortgage. He refused to. I paid the rent, £117 6s. 2d., on account of the homestead lease. He did not specially request me to do it, but I thought it was authorised. His homestead lease has been sold under a writ issued by another creditor.

Cross-examined: A summons was taken out in the District Court, at Bourke, for £199 13s. 4d.; but I withdrew it to go for the whole amount, £378 6s. 4d. I had some sheep running on the homestead lease, but the defendant had much more stock on it. I was once droving for Richardson—three years before February, 1890. In February, 1890, I was not in his employ, nor have I been since 1887. Defendant did not say at any time that I was to advance the money to Brady for Richardson to enable Brady to dummy for Richardson; and I never so advanced the money. Richardson is in Sydney. He is a relation of mine. I made all these advances for defendant as I have stated. He has no place now, but is camped on the river. He has a few head of stock. His homestead lease fetched £40 odd. A man named Matheson bought it. I have some five or six homestead leases with frontage.

For defence.

William Brady, defendant:—The first time I saw plaintiff in Bourke was on the 18th February, 1891, at night. Plaintiff said, "We must give Mr. Richardson a good start; would you mind pulling your shirt off to do fencing for Richardson, and will you lend me a horse and cart; that will save Richardson about £40." No more took place that night. I said to plaintiff, "I've come to terms with Richardson to take up three homestead leases—one myself, and my son and daughter one each." Richardson told me he would give me 25s. a week, rations, and £100 bonus at the end of five years; my son £1 a week, rations, and £100 bonus at the end of five years; my daughter 15s. a week, rations, and £50 at the end of five years. Next morning after I made the three applications, plaintiff said to me, "Will you give me a lien over the country for any money I will advance you to go on with your improvements?" I said, "Yes," and so he agreed to advance me money; but I've had no money at all from him except £15, and £51 11s. 4d. as a loan to me personally (nothing to do with Richardson). No. I mean those sums were on account of wages that Richardson owed me, and Perrott said he was making me those payments acting as Richardson's agent. I took up the homestead lease as dummy for Richardson. I would rather not say whether I knew at the time it was a crime. I told Perrott that I got £10 from Richardson to pay my expenses from Willaroon, on the Bogan (200 miles off), to Richardson's place. I went on to the leases first on the 13th July, 1891. The leases were not gazetted till July, 1891. I did nothing at all during those seventeen months but wait, I and my son and daughter; but I consider that I am entitled to wages. I did work for Richardson during those seventeen months away from the homestead leases. Perrott had about 25,000 sheep on his own homestead leases. I had between eighty and ninety head of cattle, no sheep. I authorised none of these payments made for me. My daughter was a married woman of 23, or rather a widow, at the time. I said, "I won't sign that death warrant, as you call it, the promissory note, and the mortgage for £1,500, because you won't pay me the fair wages that are coming from Richardson to me." The fencing was all done before I got to the place. I never admitted to plaintiff in any way that I owed him any money. Bloxham gave me the deposit money. Whether he got it from Perrott or not I don't know, but I understood I was getting it from Richardson for the purposes of the dummying. The store charges are for the rations Perrott knew Richardson had undertaken to give me. Never till I refused to sign the mortgage for the £1,500 did Perrott or anyone else ask me for any refund. Matheson was a bushman. I saw him on the plaintiff's country doing anything he could get to do for the plaintiff. By his appearance I don't think he is worth a sixpence.

Cross-examined: The country about there is supposed to be T. L. Richardson's. I worked for Richardson for many years. During those seventeen months I was working for Brown of the Bank on Murrawamby, the station Richardson owns or did own. I do not know that the Bank has got all Richardson's property. I made a declaration in the Land Court. I swore that I was taking up the land for my own use and benefit. I am not so sure that is not true. I was not asked whether anyone else was interested with me. I did not say in Bourke that I was sorry for Perrott, as he had advanced the money, but that I would do five years if I could get Richardson in with me. My son was present when I told plaintiff that I was to dummy for Richardson. I bought five sheep from Jacobson. I never knew they were stolen, nor have I heard it since. Carrying and fencing has been my general employ. I got a refund of £10. I do not know who had advanced it. I surrendered the land because I could get no wages, and I could get no money to carry on.

In reply—

Plaintiff: I tried to find Richardson last night. I caused a subpoena to be issued for him, and tried to get him this morning. I deny absolutely all that the defendant has said about Richardson's connection with the matter. I swear positively that I never had the slightest idea that Richardson was at all mixed up in the affair—until I heard defendant swear it in the box. Matheson did not directly or indirectly buy for me.

(I ask Gannon if he wishes to apply for an adjournment on the ground that he has been taken by surprise by the defence set up, for the purpose of getting Richardson—Gannon says he does not wish for an adjournment.)

After the speeches to the jury and summing up, the jury say they wish to postpone giving their verdict until Richardson is called. By consent it is arranged that the case stands over till to-morrow at 10 o'clock. Richardson, if then in attendance, to be examined by the jury (questions to be in accordance with the law of evidence), and to be liable to be cross-examined by both counsel—Gannon first—if Richardson is not then in attendance the jury are to find their verdict (if they can agree) without further evidence.

The other two cases to stand over until then.

Tottenham Lee Richardson: There is not one word of truth in the statement of Brady that he was dummying for me. I never asked him to dummy for me. I never arranged with Perrott to advance any money to Brady in respect of any homestead lease on my account.

Cross-examined

Cross-examined by Sly: I lent Brady £10 when he was leaving Murrawamba for Tilpa; I never got it back though I tried to. He told me that he wished to better himself; and I told him that if he applied to Perrott, Perrott might be able to put him in the way of getting a homestead lease. I have helped the man and his family for fifteen years. He has been in my service during that time.

(Two letters put in evidence from Richardson to Brady, which, witness says, simply have referred to Brady's desire to take up for himself the homestead lease.)

Verdict for plaintiff, £126 13s. 9d., with interest (by consent), £135.

Perrott v. Morris.—Verdict (by consent) for plaintiff, £118 15s. 3d.

Perrott v. Brady, junr.—Verdict (by consent) for plaintiff, £106 13s. 2d.

No. 15.

Office Memorandum.

THE three homestead leases in question were taken up by members of one family—by the father, the son, and the (widowed) daughter.

Against each of these an action was brought by E. M. Perrott to recover certain moneys, and in each instance the plaintiff succeeded.

Brady, in his evidence, said that he took up the land as a dummy, on behalf of T. J. Richardson and Perrott, but Richardson denied this.

At the same time, the relationship between the parties seems very suspicious; but it scarcely seems that there is anything tangible enough at present to suggest action under section 122 of the Act of 1884.

In each case the homestead lessees sent in notices of surrender, which were accepted by the Minister, to take effect in January next. They now desire to continue in occupation, and to pay up arrears.

One of the leases was sold by the Sheriff, the purchaser from whom states he was not aware the lease had been surrendered.

It is submitted that the surrender of the leases should be insisted on, and that rent should be charged up to date the surrender will take effect.

H.A.G.C., 20/12/92.

The course suggested in the last paragraph of this memo. may be adopted. The circumstances in connection with these cases, as disclosed by the Judge's notes, are in the highest degree suspicious, but there is not, apparently, a *prima facie* case for action under the 122 section of 1884.—W.H., 22/12/92.

Course suggested approved.—H.C., 23/12/92. Mrs. A. E. Wright and W. Brady, junior, informed, 9/1/93.

No. 16.

The Under Secretary for Lands to Mrs. Ann E. Wright, formerly Morris, care of E. J. Bloxham, Esq., Bourke.

Madam,

Department of Lands, Sydney, 9 January, 1893.

Referring to your letter of 10th October last, applying for permission to withdraw your application of 16th January, 1892, to surrender the homestead lease noted in the margin, I have the honor to inform you that your request cannot be complied with, and that the Secretary for Lands having accepted the surrender on the 6th April, 1892, now insists on the surrender in question being carried out. I am to add that the rent for the year ending 18th proximo, together with fine for late payment, must be paid at once, otherwise the question of taking legal proceeding to recover the same may have to be considered.

I have, &c.,

WM. HOUSTON,

Under Secretary.

(Per R.H.D.)

No. 19.

W. N. Willis, Esq., M.P., to The Under Secretary for Lands.

Sir,

Parliament House, Sydney, 27 January, 1893.

In reference to your communication of the 9th instant, addressed to Messrs. Norton, Smith, & Co. (numbered Occ. 92-14,006), on the subject of the surrender of the homestead lease No. 886, Wilcannia District, John Mathieson, holder, I would ask that the matter may be again further considered, as if the present decision to insist upon the surrender being carried out, be adhered to, a very great hardship will be inflicted on Mathieson who bought the lease in utter ignorance of the fact that W. Brady, the previous holder, had applied to surrender it.

The lease was purchased in all good faith by Mathieson at the Sheriff's sale, and having then given valuable consideration for it, it would under the circumstances appear very hard that he should now be made to suffer for the misfortune of another, or be made responsible for an act, of which he had no knowledge.

As this matter is not only of itself of serious importance to Mr. Mathieson; but is also intimately connected with the payment of the overdue rents on the homestead leases 887 and 888 (Wright and Brady), mentioned in your further letter of the 9th instant (Misc. 92 14,012); also addressed to Messrs. Norton, Smith, & Co., I would strongly appeal for a reconsideration of the Honorable Minister's decision, so that the application to surrender in each case may be withdrawn, the matter of rents adjusted, and a very serious hardship and loss to Mr. Mathieson prevented. Mr. Mathieson and Mrs. Wright, also W. Brady, senr., are all residing on their homestead leases, the two former have paid the station (when gazetted) for their improvements, and have also both just recently completed rabbit-fencing their boundaries with the adjoining stations.

Yours, &c.,

W. N. WILLIS.

Submit specially.—W.H., 30/1/93. Mr. De Low,—Submitted; the facts of the case are disclosed, *vide* Occ. 92-14,497.—E.L., 31/1/93. This asks for the homestead leases to be practically restored after having been surrendered, and the surrender accepted by the Minister.—R.H.D., 31/1/93. Special.—F.H.W. In view of the history of this and other cases referred to within, I do not think the surrender should be allowed to be withdrawn.—W.H., 6/2/93.

Considering the area of land we already have on hand, I think we may well be lenient in this matter, especially as there appear to be back rents to come in. The surrenders may, therefore, be allowed to be withdrawn.—H.C., 10/2/93.

Mr. Willis, M.P., informed, 18/2/93.

No. 20.

The Under Secretary for Lands to W. N. Willis, Esq., M.P.

Sir,

Department of Lands, Sydney, 16 February, 1893.

Referring to your letter of 27th ultimo, applying for a reconsideration of the refusal to permit the withdrawal of the application to surrender the homestead leases mentioned in the margin, I have the honor to inform you that in view of the circumstances recited in support of your appeal, the Secretary for Lands has approved of the withdrawal of the respective surrenders of the subject leases. I am to add that the rent and fine paid on No. 886 to the 18th instant is lodged in the Treasury Suspense Account. The rent due on No. 887 to the 18th instant, £80, together with fine of 10 per centum of £8, and also the rent, £90 13s., and fine of 10 per centum, £9 1s 3d, on No. 888 to the same date should be paid forthwith; the respective rents on the subject leases for the ensuing year are also due on the 18th instant.

I have, &c.,

WM. HOUSTON,

Under Secretary.

ANNUAL REPORT.

To The Honorable Sydney Smith, Esq., M.P., Minister for Mines and Agriculture,
&c., &c.

Sir,

I do myself the honor to submit the following report upon the working of that division of the Department under your control, which deals with mining interests, also the progress of mining and the results obtained during the year 1896.

The following statement conveys some idea of the clerical work of the Department during the year:—

STATEMENT of the Number of Papers registered and Letters despatched by the several Branches of the Department of Mines and Agriculture.

	Papers Registered.		Letters Written.	
	1895.	1896.	1895.	1896.
Mines proper.....	62,799	*33,909	32,647	†20,136
Agriculture		11,680	5,047
Public Watering Places		11,230	4,975
Forests		7,626	2,886
Stock Branch	10,982	12,836	4,548	5,172
Account Branch	14,113	15,483
Lease Branch, applications and plans registered	2,963	4,041
Geological Branch.....	2,059	2,089	3,947	4,762
Inspection of Mines.....	4,551	2,447	3,311	1,322

	97,907	102,623	44,663	44,876

* Exclusive of Agriculture, Forestry, and Public Watering Places papers, and Executive minutes and telegrams,

† Exclusive of Agriculture, Forestry, and Public Watering

The above statement of the work of the Department shows an increase in nearly every branch. My predecessor, Mr. Harrie Wood, who so ably filled the position of Under Secretary since the formation of the Department of Mines in 1874, retired early in the year; and consequent on the retrenchment of Mr. R. H. Ormiston, Mr. H. B. Sullivan was transferred to the position of Chief Clerk, his duties as Chief Mining Surveyor being amalgamated with that of Government Geologist, under Mr. E. F. Pittman, A.R.S.M. In view of the passing of the Coal Mines Regulation Act, 1896, which repealed the Act of 1876, and abolished the position of Examiner of Coal-fields, Mr. John McKenzie, F.G.S., retired, after completing thirty-three years zealous service. It affords me much pleasure to bear testimony to the zeal and ability with which the officers as a whole have performed their duties. They have at all times cheerfully worked after office hours when necessary, for which I take this opportunity to express my thanks and appreciation.

LEASE BRANCH.

Mining on Private Lands.—The number of applications for special or owners' leases, lodged in terms of section 25, during the year ending 31st December, 1896, was 183, covering an area of 3,193 acres.

The number of ordinary or general leases applied for during the same period was 307, covering an area of 3,423 acres 37 perches.

The total number of applications lodged during the year was 490.

The aggregate area applied for was 6,616 acres 37 perches, as under:—

	a.	r.	p.		a.	r.	p.
Gold	5,501	0	37	Silver, lead, and tin	80	0	0
Gold, silver, and antimony	10	0	0	Tin	351	0	0
Gold, silver, and lead.....	10	0	0	Leases for water rights, &c., &c. ...	82	0	0
Gold and silver	31	0	0				
Silver.....	421	0	0				
Silver and lead	130	0	0		6,616	0	37

The number of applications approved is as under, with areas:—

	a.	r.	p.		a.	r.	p.
213 for gold	12,510	3	5	1 for gold, silver, and lead.....	44	0	0
10 for tin	660	0	0	2 for water rights, &c.....	12	0	0
1 for silver	120	0	0				
3 for gold and silver	717	0	0		14,063	3	5

Besides these, 277 applications had to be refused for various reasons, covering an area of 10,879 acres, making a total number of 507 applications dealt with, embracing some 24,942 acres of land.

In addition to the areas shown in the above tables, a very considerable area of private lands is being worked by miners, under agreements with the owners, made and registered in terms of section 33 of the Mining on Private Lands Act of 1894, and under prospecting licenses in terms of section 40 of that Act, but the areas so worked are not readily obtainable.

On the 11th December the Governor gave his assent to the Mining Laws Amendment Act of 1896, in terms of section 2 of which Act the holder of a miner's right or mineral license may obtain an authority to enter on any private land, which is subject to the provisions of the Mining on Private Lands Act, and on payment to the owner of the rent fixed by the Warden, and to the Warden of the compensation assessed by him, may carry on mining operations without waiting for a lease to issue. Owing to the Act not coming into operation until near the middle of December only very few persons took advantage of the privileges conferred by the Act, but it is anticipated that during the coming year a large number of these authorities will be taken out, and an extensive area will be worked under them, and that in many cases leases will not be applied for until the land has been proved under the authorities to enter.

Under this Act also, provision is made for the granting by the owner, subject to the Minister's concurrence, of private leases or agreements, to the holders of miner's rights or mineral licenses to mine for gold (other than alluvial) or other minerals, which are subject to be mined under the Act, but the areas cannot exceed those which may be granted by the Governor, and each such lease or agreement must be registered with the local Mining Registrar. Up to the end of December, very few persons had attempted to take advantage of this section. Under this Act provision is made for the proclamation of conditionally leased land to be deemed to be private lands, subject to the provisions of the Mining on Private Lands Act, and as very considerable difficulty has hitherto been experienced in dealing with this class of lands, it is expected that the provision will in the near future be extensively used.

On July 31st, the Governor also assented to the Mining Act Amendment Act of 1896, under which the charges for miner's rights and mineral licenses are reduced, and which provides that a miner's right confers upon the holder all the privileges conferred upon the holder of a mineral license for the prospecting for and working of minerals other than gold, thus obviating the necessity of a miner holding a miner's right to prospect for gold, and a mineral license to prospect for other minerals.

The cost of a miner's right or a mineral license is now 5s. for twelve months, or 2s. 6d. for six months, from date of issue. The right does not necessarily expire on 31st December, as formerly.

With regard to the acquisition of Crown lands for mining purposes. The number of applications made to lease Crown lands for mining purposes during the year, was 2,449, an increase of 1,020 on the number received in 1895. Of the 2,449 applications so made, 1,931 were for auriferous land, comprising an area of 13,395 acres, 2 roods, 36 perches, and 518 were for mineral lands, embracing an area of 22,086 acres, 1 rood.

The

The number of applications dealt with during 1896, was 2,429, which shows an increase of 1,518, as compared with 1895.

Every effort is made to deal with these applications expeditiously, and with the exception of a very few applications which are the subject of litigation, none of any long standing remain to be dealt with.

Of the 2,429 applications dealt with during 1896—1,952 were for gold-mining leases, embracing an area of over 12,702 acres, and 477 were for mineral leases, embracing an area of 25,171 acres.

The area of auriferous land applied for in 1896, was more by 5,710 acres, 2 roods, 10 perches, than in 1895, and the mineral land 9,860 acres 15 perches, more during the same period.

SCHEDULE I.

TABLE showing the land applied for to be leased during 1896, and the minerals to be mined:—

	a.	r.	p.		a.	r.	p.
Gold	13,395	2	36	Tin and diamonds	1,257	0	0
Silver	1,530	1	0	Tin and emeralds	40	0	0
Silver and lead	4,068	0	0	Copper	1,182	0	0
Silver, lead, and copper	1,848	0	0	Limestone	5	0	0
Silver, lead, and ironstone	376	0	0	Cinnabar	80	0	0
Silver, lead, copper, and zinc	224	0	0	Emeralds	40	0	0
Silver, lead, and zinc	60	0	0	Wolfram and manganese	40	0	0
Silver, lead, copper, and iron	430	0	0	Pigments	110	0	0
Silver, lead, antimony, and copper	87	0	0	Antimony	454	0	0
Silver, lead, asbestos, and bismuth	29	0	0	Chrome and iron	40	0	0
Silver, bismuth, and cirium	149	0	0	Platinum	20	0	0
Silver, lead, iron, and lime	40	0	0	Asbestos	20	0	0
Silver and manganese	50	0	0	Opals	368	0	0
Silver and bismuth	120	0	0	Wolfram	40	0	0
Silver and tin	40	0	0	Diamonds	1,810	0	0
Silver and galena	40	0	0	Coal	616	0	0
Silver and copper	308	0	0	Coal and shale	7,114	0	0
Tin	171	0	0				
Tin, bismuth, antimony, and copper	120	0	0				
Tin, copper, and lead	160	0	0	Grand total.....	35,481	3	36

As shown in the foregoing table, the aggregate area applied for is 15,570 acres 2 roods 25 perches more than that applied for in 1895.

The increase occurs principally in gold, silver, lead, copper, antimony, opal, diamonds, and coal and shale.

AREA held under application to lease on 31st December, 1896.

	a.	r.	p.		a.	r.	p.
Gold	5,128	0	0	Silver and manganese	50	1	12
Coal	158	0	0	Silver, copper, and lead	437	0	0
Coal and shale	640	0	0	Diamonds	250	0	0
Antimony	100	0	0	Platinum	20	0	0
Tin	80	0	0	Tin, bismuth, antimony, and copper	120	0	0
Tin and diamonds	739	0	0	Silver, lead, and ironstone	40	0	0
Silver	380	0	0	Silver, lead, and zinc	40	0	0
Silver and bismuth	120	0	0	Opal	12	0	0
Silver and copper	60	0	0				
Silver and lead	285	0	0				
					8,659	1	12

The area of Crown lands held under application to lease on 31st December, 1896, shows a marked decrease, the area being 8,659 acres 1 rood 12 perches, as against 13,535 acres 2 roods 12 perches so held on 31st December, 1895.

This may be accounted for by the more expeditious issue of the leases applied for than was formerly the case.

The number of applications received for permits or authorities to mine (sections 27 and 28, Mining Act, 1874) on and under roads, reserves, &c., during the year was 246—24 less than in 1895.

The number dealt with was 302, an increase of 120 on the number dealt with in 1895.

As will be seen from the following table, the area of the lands embraced by the permits and authorities granted in 1896 shows the very large increase of 21,483 acres 10 perches over the area granted during the previous year. The principal increase is in coal, shale, and gold.

TABLE

TABLE showing area of reserved land comprised in permits and authorities granted during 1896 and the minerals to be mined thereunder.

	a.	r.	p.		a.	r.	p.
Coal	7,206	0	3	Cinnabar	81	1	25
Coal and shale	27,108	3	4	Manganese	3	0	0

Tin	144	3	3	Cinnabar	81	1	25
Copper	58	2	18				
Copper and cobalt	4	0	28		22,995	2	36

The number of applications for authorities to dig and search for gold and other minerals on alienated and conditionally leased lands was 305, but of these only 15 were granted, and they were for authorities to search for minerals other than gold, silver, lead, tin, or antimony, which minerals are capable of being dealt with under the Mining on Private Lands Act.

The number of applications for permits in terms of section 7 of the Crown Lands Act to win and remove minerals reserved in the Crown grants was 31. Of these, 5 were granted and 23 were refused. The small number of such applications made is no doubt due to the operations of the Mining on Private Lands Acts, in terms of which, leases to mine for gold, silver, lead, tin, and antimony may be granted, and it is only with regard to minerals other than these that permits are applied for.

The foregoing tables, &c., show all lands held for mining purposes other than alienated lands which are not affected by the provisions of the Mining on Private Land laws, and Crown lands held and worked under miners' rights and mineral licenses, and private lands the subject of private leases or agreements between the owners and holders of miners' rights, or held under authorities to enter, or prospecting licenses.

The areas comprised in these exceptions are very considerable.

The investigation of titles under the Mining on Private Lands Act has, since April, 1896, been carried out in the Department. This work has been very heavy owing to the large number of applications for leases, the complicated nature of some of the titles, and the circumstance that in many cases the deeds and abstracts of title were not available. Where titles were found to be defective or incomplete, the owners had to be communicated with and the necessary steps taken to enable the proper parties to be dealt with as owners. The number of applications dealt with from the above date to the end of the year was as follows:—Titles investigated and reports made, 417; titles investigated but not in order at the end of the year, 58; awaiting particulars of title, 32.

Circulars have been issued during the year to all the Mining Wardens of the Colony, with reference to the following subjects, which are considered of sufficient importance to warrant their being brought under the notice of the mining community in this report:—

1st. *Homestead Selections.*—There being some doubt as to whether such selections came within the operations of the Mining on Private Lands Act, legal advice was sought on the question, and the Department was advised that Homestead Selections are private lands within the meaning of the Act.

2nd.

2nd. Respecting *Refunds of Deposits on Mineral and Gold Lease Applications*, which read as follows:—"With reference to the practice of refunding deposits lodged with Mineral and Gold Lease Applications, it is considered that such refunds should be refused when there is reason to believe that the land applied for has been taken up only for speculative purposes, and without intention of carrying on mining operations in a *bonâ fide* manner. In some cases persons who have held land for a lengthy period, and whose application has entailed upon the Department a considerable amount of work, expect their deposits returned.

The Secretary for Mines and Agriculture has therefore decided that in future no such refunds shall be made unless circumstances justify the concession, that is to say, when evidence is forthcoming that the land has been taken up for *bonâ fide* mining purposes, and that honest work has been done to test the ground and prove it unpayable."

The following Table shows the area of Crown and Private Lands held under Lease at 31st December, 1896, and the Minerals, &c., to be mined for:—

Minerals.	Crown Lands Occupation Act, 1861.		Mining Act, 1874.		Mining Act Further Amendment Act, 1884.		Mining on Private Lands Act, 1894.		Total.

The foregoing table, giving the area of Crown and private lands held under lease at the 31st December, 1896, and the minerals to be mined for, shows, I am pleased to say, a very large increase in the acreage so held—an all round increase of about 30 per cent. On comparing the table with that of the

the previous year, 1895, it will be seen that the largest increase is in gold-bearing land. On the 31st December, 1895, 6,431 acres were held under lease for gold, whereas the corresponding period in 1896 shows 17,936 acres, nearly three times the area. This is very satisfactory, and, I think, shows a growing activity in the most important class of mining. During the year a large amount of capital (mostly English) has been invested in New South Wales, and, as it is believed that a great deal of dead work has been done in connection with the various properties, it is likely that the current year will show an increased output in gold.

In silver-bearing land it will also be noticed that we have a considerable increase in the acreage held, probably owing to the fact that improved appliances for the treatment of sulphide ores are in course of erection.

Another important improvement is noticeable in the diamond-mining industry. As against 457 acres in 1895, we have an area of upwards of 2,000 acres under lease, the Bingara district specially showing a revival in this important class of mining.

During the year the leases cancelled show a decrease. 269 gold leases, representing 1,604 acres, and 81 mineral leases, representing 2,474 acres, were cancelled. This, it may be said, is evidence of a greater tendency to comply with the conditions of the leases issued.

Attention is invited to the fact that during the last six months of 1896 nearly 90 per cent. of the leases tendered were issued. Some two or three years back it was safe to say that as much as 70 per cent. of those tendered for execution were returned to the Department for avoidance. An increase is also noticeable in the number of transfers of mining properties registered in the Department, in many cases involving a large amount of capital.

The return showing the gold and mineral leases, and leases held under the Mining on Private Lands Act, 1894, is being published half-yearly with commendable punctuality. This return was until recently published at the end of each quarter, but it was considered that a half-yearly return would be sufficient to meet all requirements. It is feared that the mining community do not avail themselves of the information contained in this return to such an extent as they might do with much advantage to themselves.

THE COAL-MINES REGULATION ACT, 1896.

On the 1st October a new Act for the Regulation of Coal-mines and Collieries and certain other Mines came into operation, repealing an Act which had been in force since 1876. This Act is in many respects similar to the Imperial enactment on the same subject made in 1887. Many important changes are effected in it.

The responsibility for the management of these mines is cast upon the manager in each case, who is required to be the holder of a first-class certificate of competency, or a certificate of service as manager. To the close of the year 42 certificates of service as manager and 53 certificates of service as under-manager were issued, whilst 2 Imperial certificates of service as manager, 19 Imperial certificates of competency as manager, and 2 as under-manager were registered.

On the 1st October the following gentlemen were appointed Members of the Board for appointing Examiners in connection with the granting of certificates of competency:—

Jesse Gregson,	David Leake,
William Sandford,	Daniel Alexander Wilberforce Robertson,
Thomas Saywell,	Richard Thomas,
Adam Cook,	Louis Buckland Blackwell, and
William Thompson Philpot,	John Dixon, Esquires.

On the 7th October the Board met for the first time, subsequently meeting on three occasions before the close of the year. The Board at these meetings, after making the necessary rules for regulating the conduct of its business, made rules as to the conduct of examinations and the qualification of applicants for certificates, and appointed Messrs. W. Humble, F.G.S., H. Osborne MacCabe, J.P., and T. Cater as examiners for the first batch of examinations. The Board recommended that examinations should be held early in 1897 at Newcastle and Sydney.

The

The following information has been extracted from the rules made by the Board:—

The candidate must be twenty-three years of age, and must have had practical experience in a mine for at least five years.

A period of three years' apprenticeship to a mining engineer may be substituted by a candidate for a first-class certificate, as an alternative for an equivalent period of regular employment in a mine under the Act, if the apprentice has, in the discharge of his duties, to go down mines and obtain practical experience therein.

The subjects fixed for examination are the following:—

For First-class Certificates.

	Marks.
1. Arithmetic, including elementary rules, use of decimals and vulgar fractions and square root	8
2. Surveying and levelling, use and care of the dumpy level and theodolite, construction of plans and the use of scales, principles and practice of mine surveying	9
3. Geology, elements of, and knowledge of the coal measures in the candidate's district	8
4. Machinery, boilers, and other structures in use at coal mines, systems of haulage, pumping, and sinking	20
5. Theory and practice of ventilation, and a knowledge of the nature and properties of gases met with in mines, and of the precautions against danger from the firing of coal-dust	20
6. The winning and working of coal and shale	25
7. The Coal Mines Regulation Act, 1896 (60 Vic. No. 12)	10
Total	100

The examination will be such as to ascertain, partly by written and partly by oral examination, the knowledge necessary for the practical working of mines in New South Wales.

For Second-class Certificates.

The examination and qualification for second-class certificates will be suitable for practical working miners, and will be such as to ascertain, partly by written and partly by oral examination, the knowledge necessary for the practical working of mines in New South Wales.

The following will be the heads under which the examination will be held:—

	Marks.
1. Arithmetic, the elementary rules	12
2. Theory and practice of ventilation, and a knowledge of the nature and properties of gases met with in mines, and of the precautions against danger from the firing of coal-dust	32
3. The winning and working of coal and shale	40
4. The Coal Mines Regulation Act, 1896	16
Total	100

A candidate for either a first or second class certificate in order to pass must obtain at least 40 per cent. of the marks allowed for each of the subjects, and in the aggregate 66 per cent. of the total possible marks obtainable.

It will be necessary for him before his examination can be proceeded with to produce to the Examiners:—

- a. An authorisation from the Under-Secretary for Mines to appear for Examination.
- b. The prescribed evidence as to sobriety, experience, ability, and general good conduct, namely:—
 - (1) A statement of his age and of his occupation, where and by whom employed during at least the last five years, to which a statutory declaration made by him must be appended to the effect that all the allegations contained in such statement are true.
 - (2) Testimonials from his employer or two persons (whose addresses must be given) of his sobriety, experience, ability, and general good conduct. If a copy of the testimonials be forwarded along with the originals, the latter will be returned to the candidate at the examination.
- c. Satisfactory evidence that he has had practical experience in a mine for at least five years.

Candidates

Candidates appearing a second time must produce fresh evidence of their sobriety, experience, ability, and general good conduct.

A candidate for a first-class certificate of competency may not, in the event of his failure to obtain such a certificate, at the same examination obtain a second-class certificate.

Under the Act the maximum fee payable by applicants for examination for first and second class certificates is £2 and £1, respectively; but on representation being made that this would be a hardship on students and other intending candidates in receipt of small wages, you fixed the fee at 30s. and 15s., respectively. The fee admits to one examination only.

Provision is now made for the holding of a formal investigation of any explosion or accident and of its causes and circumstances when it appears expedient to the Minister to do so under the new Act.

The Minister on representation being made to him that a manager or under-manager holding a certificate, is by reason of incompetency or gross negligence unfit to discharge his duties or has been convicted of an offence against the Act, may if he think fit cause inquiry to be made into the conduct of the manager or under-manager. The Court of Inquiry thus appointed is empowered to cancel or suspend the certificate.

Payment by the standard weight system has been abolished.

Miners are not now limited in their choice of a check-weigher to the persons employed at that particular mine or at a mine belonging to the same company or proprietor. The check-weigher is by this Act authorised to require that the process of weighing shall be carried on continuously throughout the working hours during the whole time the pit is drawing coal.

The provisions of this Act in regard to single shafts are fuller than those of the Act repealed.

The size of man-holes required for travelling planes worked by machinery has been increased, and though at first some difficulty was experienced at several of the mines, full effect has now been given to this provision.

A person may not now be allowed to work alone as a coal getter in the face of the workings until he has had two year's experience of such work under the supervision of skilled workmen, or unless previously employed for two years in or about the face of the workings of a mine.

A penalty is provided for interference with the offices of check-inspector and check-weigher.

On the all important question of ventilation it is provided that pure air in quantity not less than 100 cubic feet per minute (with as much more as the Inspector shall direct) shall sweep along the air-ways and shall be forced as far as the face of and into each working-place. Some slight delay was occasioned in certain of the mines in carrying into effect this provision, but the Inspectors report that since the necessary alterations have been completed the provision has been complied with.

THE PROSPECTING BOARD.

The amount placed at the disposal of the Board for allotment this year is £25,000, an increase of £5,000 on the amount voted for 1895.

The mode of dealing with the applications received, is for a Member of the Board to visit and inspect the site for which aid is required, and make all necessary inquiries regarding the proposal, and report thereon. The reports are then considered at a meeting of the Board held in the Department every week, when each case is gone carefully into, and its prospects discussed. The rate is then fixed, not more than 50 per cent. of its estimated total cost being allowed, with a proviso that should payable minerals be discovered the amount paid is to be refunded. It will be seen therefore that each case is dealt with on its merits, and in no case is aid refused, when it can be shown that a grant from the vote is likely to benefit the district at large, by leading to the further employment of labour. So far as the Regulations will allow, the Board have offered every inducement to applicants for aid to test their reefs at a depth, but
only

only in a few instances has any serious attempt been made to carry out their proposals. In February, the Hon. the Minister offered a reward of £1,000 for the discovery of payable quartz within the Colony at a depth of 2,000 feet, but it is not known that any steps are being taken to earn it. Following is a copy of the notice referred to :—

NOTICE is hereby given that a Reward of One Thousand Pounds (£1,000) will be paid to the person who shall be the first to discover and make known to the Minister for Mines and Agriculture the discovery of payable Gold-bearing Quartz at a depth measured from the top of the shaft of 2,000 feet, the shaft may be perpendicular or follow the underlay; for the purpose of testing the reef 250 tons of stone taken from the reef at or below 2,000 feet perpendicular shall be crushed at a battery approved by the Minister; the stone shall be broken down, raised, and crushed under the supervision of officers of this Department; and if the 250 tons of stone yield an average of not less than 10 dwt. per ton it will be deemed payable.

If the Reward is not claimed within five (5) years it shall lapse.

Such Reward will be paid forthwith upon satisfactory proof being given to the Minister that the quartz is "payable," that it is from the required depth, and that the claimant is the first discoverer.

In May last operations were begun on the northern sea-beaches lying between the Esk River and Jerusalem Creek, with the object of discovering new leads of gold similar to that worked so successfully in McAuloy's Lead. In this locality 2,828 bores were put down, with an aggregate depth of 45,632 feet, and on towards the Evans' River other 187 bores were sunk, giving an aggregate of 2,782 feet. The five main lines of bores were carried from the beach due west across the heath on to the first of the sandstone ridges which form the water-shed between the Clarence and Richmond waters. The operations were ultimately extended to the Broadwater Heath, but, so far, no discovery of any great moment has been made.

Mr. Geological Surveyor Carne, in conjunction with an officer from the Victorian Department of Mines, has been engaged for some months prospecting and making a geological examination of the southern portion of the Colony, adjoining the Victorian Border. The work is still proceeding.

The diamond drill, subsidised from the Vote, is still working at Forest Reefs in search of the rich, deep lead, supposed to exist there. Very promising indications have been met with; and should the enterprise prove as satisfactory as anticipated by the projectors, the district will be vastly benefited by the opening up of a new and extensive gold-field. A considerable amount of boring work has also been done in the vicinity of Corowa, under the auspices of the Department, with a view of tracing the deep, alluvial leads, supposed to cross the Murray from Victorian territory. These leads have been worked on the Victorian side of the Murray for years, and proved very rich. So successful was the boring, that the position for a large shaft has been fixed, and sinking operations will be started at once.

Several parties of men have been aided to test the comparatively untried country beyond Wyalong and towards Lake Cudgellico, and between Condobolin and Fifield. This is considered a likely country, and the indications met with are very promising. There are large tracts of auriferous country within this Colony still untried; but the area is diminishing yearly.

The holding of regular weekly meetings of this Board was inaugurated in March last, and have been well attended by the members. The absence of the Geological Surveyors and Inspectors of Mines in the country on official duty, accounts for their non-attendance on many occasions. The number of meetings held since 13th March to 31st December, were 38. Of that number, the Chairman attended 36; Mr. Pittman, the Government Geologist, 26; Mr. Slee, the Chief Inspector of Mines, 24; Mr. Sullivan, the Chief Clerk, 21; Geological Surveyor Carne, 5; Geological Surveyor Jaquet, 16; Inspector Milne, 6; Inspector Godfrey, 2; Inspector Hooke, 1; and Mr. D. McCulloch, Secretary to the Board, 38.

Mr. E. C. Whittell, an Officer of the Geological Branch, who was engaged during the year reporting on application for prospecting aid, gave general satisfaction to the Board.

The number of applications for assistance appear to increase year by year, the number received being 1,901, as compared with 1,843 during 1895.

These were dealt with as follows :—

	1894.	1895.	1896.
Aid granted in	397 cases.	620 cases.	523 cases.
Aid refused in	584 „	818 „	985 „
Applications abandoned	27 „	42 „	39 „
Applications not dealt with	60 „	363 „	59 „
Applications for public batteries	41 „
For reward for the discovery of new gold-fields	21 „
For free treatment of ore.....	21 „
Miscellaneous cases	212 „
	1,068	1,843	1,901 cases.

It is very satisfactory to note from the above statement that the number of applications undealt with at the end of the year has been so materially reduced. Considering the large area of country and the number of applications received, which embrace every mining district in the Colony, it would be impossible, without augmenting the staff of Inspectors very considerably, to have each application reported upon as it is received, and so some little delay must necessarily occur, especially with regard to those applications received from a district which has just been inspected. Every effort is made, however, to have the applications disposed of with as little delay as possible. Amongst others, the following mining districts were visited by members of the Board during the year:—

Adaminaby	Canowindra	Guyra	Nundle
Adelong	Captain's Flat	Harden	Oberon
Albury	Carcoar	Hargraves	O'Connell
Alectown	Cargo	Hazelgrove	Ophir
Araluen	Casino	Hill End	Orange
Armidale	Clear Creek	Hillgrove	Pambula
Arable	Cobar	Hillston	Parkes
Back Creek	Cobargo	Holt's Flat	Peak Hill
Bald Nob	Cobbora	Home Rule	Pretty Gully
Ballina	Colinton	Inverell	Rockley
Barmedman	Condobolin	Jembaicumbene	Rylstone
Barraba	Coolac	Jindabyne	Sebastopol
Barber's Creek	Coolahie	Junction Point	Sofala
Bateman's Bay	Coolongolook	Junce	Stannifer
Batlow	Cooma	Kerr's Creek	Stockinbingal
Bear Hill	Copeland	Kiandra	Stuart Town
Bega	Corowa	King's Plain	Tamworth
Bell's Creek	Coramba	Lewis Ponds	Tarana
Bernagui	Cowra	Lincolns	Tarcutta
Bethungra	Cowra Creek	Lionsville	Tenterfield
Billy's Look-out	Crookwell	Lismore	Terminal
Bingara	Crudine	Long Creek	Tia
Blayney	Cudal	Lueknow	Tichborne
Bombala	Cudgegong	Lyndhurst	Tirghu
Bookham	Dalmorton	Macksville	Trundie
Boonoo-Boonoo	Davisville	Major's Creek	Trunkey Creek
Boro	Deepwater	Marulan	Tucklan
Bowling-alley Point	Delegate	Michellago	Tuena
Bowning	Demondrille	Milparinka	Tumut
Bowraville	Drake	Mogo	Uralla
Box Ridge	Dungog	Molong	Upper Turon
Braidwood	Eden	Moonan Brook	Wagga Wagga
Bredbo	Elsmore	Moruya	Wagonga
Brimbramalla	Emmaville	Mount Hope	Wallbundrie
Broken Hill	Essington	Mount M'Donald	Walcha
Brown's Creek	Euabalong	Mudgee	Wangat
Bull	Forbes	Murrumbateman	Warne
Bucca Bucca	Forest Reef	Muttama	Welcome Reef
Bundarra	Flyer's Creek	Nadgingomar	Wattle Flat
Bungendore	Gilgai	Narooma	Windyeyer
Bungonia	Gilgunnia	Nana Creek	Wombat
Burnt Yards	Glanmire	Narromine	Woodstock
Burrier	Glen Elgin	Narrandera	Woodgoolga
Burruga	Glen Innes	Nelligen	Wyalong
Burrowa	Goolma	Nerriga	Wyndham
Byng	Grafton	Nerrigundah	Yass
Byrock	Grenfell	Newbridge	Young
Byron Bay	Gulgong	Niangala	Yowaka
Cadia	Gundagai	Nimitybelle	
Caloola	Gundaroo	Nine-mile	
Canadian Lead	Guyong	Nowendoc	

As will be seen from the following statement the number of cases in which payable discoveries were made is sixteen, exactly the same number as the previous year, the most important of which is the finding of the Star Lead at Gulgong, which has been lost for years. Extensive machinery is now being erected on the mine:—

RETURN showing successful results from Prospecting Vote from 1st January, 1895, to 31st July, 1896.

1. *Watt, Wooderson, and Party, Pride of the Brook Claim, Stewart's Brook.*—This party were aided to continue their 40-feet shaft another 100 feet. They struck some very rich stone at the 90-feet level, and from 100 lb. weight of specimen obtained 102 oz. of retorted gold. Eighty tons of good looking stone are at grass, and the prospects of the claim are so favourable that the party intend erecting a crushing plant of their own.

2. *A. W. Cooper and Party, Star Lead, Gulgong.*—This party received aid to continue the driving from the bottom of their 200-foot shaft in the hope of striking one of the lost leads, which proved so rich in the early days of this field. The Board recognising the great importance of the work, gave every possible encouragement to the party, with the result that the lost Star Lead was struck, showing good prospects of gold. The width of the lead has already been proved to 100 feet, and when the deepest part of the lead or gutter is reached rich returns are expected.

3. *D. A. Penhall and Party, The Peak, near Cobar.*—This party received a grant in November, 1895. In April, 1896, they wrote in stating that, as they had now discovered payable gold, the aid would not be required, and thanking the Department for the assistance granted.

4. *J. M. Dodd and Party, Jones Creek, 6 miles from Gundagai.*—Owing to the discovery of payable alluvial gold by this party, who were in receipt of Government aid, a rush set in to this locality in April of this year. The sinking is from 14 to 25 feet, and the yield is from 4 to 9 dwt. per load. A large number of men are still on the ground, and prospecting work is being vigorously carried on in all directions from the discovery.

5. *Mullaney and Gough, Sally's Flat, Hill End.*—This party received aid to drive from the bottom of their 100-foot shaft, and were successful in striking a good run of 1-oz. stone. They have now a payable claim, and are still raising equally rich stone with increasing prospects.

6. *F. Fletcher, Gulgong.*—Received aid to sink and drive in search of the lost Perseverance Lead, Gulgong. The operations proved successful, as the lost lead was struck, presenting features identical with the last portion of the lead worked. The wash is 2 feet thick and prospects well for gold, but it is expected to improve as it gets away from the unsettled country where it was lost.

7. *George Stiff and Party, Native Bear Flat, Grenfell.*—This party received aid to prospect this alluvial flat, about 6 miles from Grenfell, and succeeded in striking a run of wash 1 foot 6 inches thick, which yields a little over 4 dwt. of gold per load. The party expect to make fair wages out of the claim.

8. *J. Gillan and Party, Hargraves.*—Received aid to prospect on the Mudgee line of reef, Hargraves. Some very rich stone was taken out by this party, which has led to other leases being taken up on either side of their claim.

9. *Perkins Bros., Surface Hill, Adelong.*—Received aid to continue their 56-foot shaft another 60 feet; and were successful in striking rich stone, a crushing from which of 32 tons 16 cwt. yielded 67 oz. 2 dwt. retorted gold, and other 10 oz. are expected from 2 tons of pyrites saved.

10. *J. J. Hoare and Party, Bell's Creek, Braidwood.*—Aid was granted to this party to continue their 98-foot shaft another 50 feet. At the lowest level the reef is 14 inches wide, from which a 5 ton's crushing yielded 1 oz. 5 dwt. of gold per ton; and it is expected another 15 oz. will be obtained from 1 ton of concentrates. This is the deepest shaft on Bell's Creek.

11. *The Cornish Copper Mining Company, The Gulf Creek, near Barraba.*—This company received aid to continue their shaft to a further depth of 100 feet, and were successful in opening out good ore, which during the year covered all current expenses in addition to the cost of extensive development work. It is expected that the company will be in a position to employ a large number of men at an early date.

12. *Jas. Garvan, Kangaroo Flat, about 4 miles west from Marlow.*—Aid was granted to this party to continue his 240-foot tunnel other 300 feet. He was successful in striking a vein of wash dirt 5 feet thick, yielding fully 1 dwt. to the load, with prospects of it improving. The present indications show that the party has several years work ahead of them.

13. *Martin Dunn, 2 miles south-east of the Paddy Lackey mine, Sunny Corner.*—Aid was granted to continue his shaft other 50 feet on the underlay. At the 90-foot level the reef was struck, averaging 3 feet wide, a trial crushing from which of 15 tons yielded 14½ oz. of gold. The reef is improving with depth, and the mine is now looked upon as a valuable property.

14. *Howard and Lawson, The Horse-shoe Reef, Tambaroora.*—Aid was granted to cross-cut from the bottom of their 80-foot shaft in search of the reef. They were successful in striking the reef which yields at the rate of ½ oz. of gold per ton.

15. *John M'Donough and Party.*—This party received aid to prospect for alluvial gold at Buddigower, near Wyalong. Payable gold was struck at a depth of 30 feet. From six loads they washed 13½ dwt. of gold, and a quantity of tin. The discovery resulted in a rush, and at one time 300 men were on the ground. So far the lead has not been proved to be of any great extent.

16. *John M'Leod.*—Three miles north of Brimbramulla was aided to sink on a reef discovered within his prospecting area. At 38 feet the reef widened out to 2 feet, a crushing from which yielded 12 dwt. per ton. This new find from later reports is turning out very satisfactory.

As stated in a foregoing table the Board have dealt with 21 applications for the free treatment of ore at the Government Metallurgical Works. In dealing with these applications it is the practice to enquire into the circumstances of the applicant, with a view of ascertaining whether he is in a position to bear the cost of the treatment, so that the revenue from the works may be guarded from imposition, the object of granting the concession being to assist the struggling prospectors only. The same remarks apply to free assays.

The granting of rewards for the discovery of new gold-fields is another matter which comes within the scope of the Board who, during the year, inquired into 21 applications for such discoveries, but unfortunately in no case was it found that the conditions attached to the reward had been fulfilled. An important alteration has been made in this reward, by extending it to the discovery of new mineral fields, embracing new reefing and alluvial gold or tin fields, or new deposits of silver, copper, diamonds, or precious opal. The notice is published in full for general information:—

REWARD FOR THE DISCOVERY OF NEW MINERAL FIELDS.

NOTICE is hereby given that the sums undermentioned will be paid as rewards for discovering, on and after this date, new Reefing or Alluvial Gold or Tin Fields, or new Deposits of Silver, Copper, Diamonds, or Precious Opal.

The sum of £500 will be paid to any person or persons who shall first discover a new Reefing or Alluvial Gold or Tin Field, or a new Deposit of Silver, Copper, Diamonds, or Precious Opal, provided—

- (1) That the site of the discovery be distant not less than 10 miles from the nearest mine in which similar payable mineral has been or is being obtained.
- (2) That such discovery be made known to the Minister for Mines and Agriculture within what he shall deem to be a reasonable time after such discovery.
- (3) That if it be proved to the satisfaction of the Minister that within six (6) months after he has been notified of such discovery not fewer than three hundred (300) miners have been profitably employed in mining upon such field or deposit.

In the event of the Minister being satisfied that at the expiration of twelve (12) months after he has been notified of such discovery not less than five hundred (500) miners have been profitably employed in mining upon such new field or deposit, the discoverer or discoverers shall be entitled to claim a further sum of £500.

The Minister shall be the sole judge as to any matter in dispute in regard to an application for reward.

GEOLOGICAL SURVEY.

The time of the Government Geologist (Mr. E. F. Pittman) has been devoted to the supervision of the geological survey staff, and to practical work in the field.

Early in January he was called upon to investigate the cause of the heating of the cargo of coal on the ship "Knight of St. Michael," and to report upon the advisability of the vessel putting to sea. This report was furnished at the request of the marine surveyors who had previously inspected the cargo, and who wished for the opinion of a government expert.

During the month of January he visited Glen Innes, Inverell, Bingara, Rocky Creek, Terry-Hie-Hie, and Warialda, and traced through those districts the eastern boundary of the Triassic coal measures, which form the principal artesian water-basin of the Colony. He also visited the principal gold mines at Spring Creek, near Bingara, and reported upon the proposal to establish a government quartz crushing battery in that district.

In February he inspected the auriferous and diamantiferous deposit at Kangaloon, near Mittagong. At this spot aid from the Prospecting Vote had been granted to sink a shaft with the object of prospecting the volcanic breccia which occurs there.

Mr. Pittman reports that the encountering of a heavy body of water caused the contractor to stop work, and he was therefore unable to descend the shaft. In his opinion, however, there is reason to believe that this is a true volcanic neck, and the occurrence of diamonds in the quartz pebble drift overlying it is of considerable interest, as pointing to the possibility of their being derived from the volcanic breccia, as in the celebrated diamond mines of Kimberley, in South Africa.

In May he visited Barraba, Wood's Reef, Ironbark, and Crow Mountain, and reported on the necessity for extending the reserves for gold-mining purposes in that district. He also made an examination of a large deposit of tripolite in the Nandewar Ranges, and reported upon some applications for prospecting aid at Ti-tree Creek.

In June he made an examination of the Mount Maude gold-field, and reported upon the proposal to resume an area of alienated land there for mining purposes. He also investigated an application for prospecting aid there. On the 15th July Mr. Pittman was appointed Chief Mining Surveyor, and thereafter undertook the duties of that office in addition to his duties as Government Geologist.

In July Professor Threlfall and Mr. Pittman were appointed a Royal Commission to enquire into the causes and prevention of spontaneous combustion in coal cargoes, and the work in connection with this important matter occupied a considerable portion of Mr. Pittman's time during the remainder of the year.

In October he accompanied Mr. Boulton, the Superintendent of Public Watering Places, to Girilambone, and drove thence, *via* Willaroon, to Coolibah, for the purpose of inspecting some mudsprings which occur about 18 miles to the north-east of the latter place. Mr. Pittman reports that these mudsprings are of considerable interest, furnishing as they do evidence of the extension of the lower cretaceous artesian water-bearing beds, a considerable distance further south than they were previously known to occur.

During the month of December he visited Gilgunnia, and reported upon a number of applications for aid to further prospect the reefs in that gold-field.

During November and December he, in conjunction with Professor David, examined a number of coal outcrops in the Wollongong and Kiama districts, and subsequently gave evidence as to their value before the Public Works Committee in connection with the proposal to construct a deep-water harbour at Port Kembla.

The vacancy on the Geological Survey Staff, caused by the resignation, in 1895, of Mr. G. A. Stonier, has not yet been filled, and consequently the Branch was under somewhat of a disadvantage.

During the greater part of the year Mr. Geological Surveyor Carne has been engaged in conducting a prospecting party along the New South Wales side of the Victorian border, from Cape Howe to the head of the Murray River. A similar party was despatched by the Victorian Government to prospect on their side of the border. Prospecting operations have been completed over about half the distance. Mr. Carne has done some important geological work in identifying both Devonian and Lower Silurian rocks, the former being recognised by plant remains and the latter by graptolites. This is the first identification of Lower Silurian rocks in this Colony.

Mr.

Mr. Carne has also furnished the undermentioned reports :--

1. On the Yowaka and Panbula Gold-field.
2. On the Geology and Mineral Resources of the Coast between Port Macquarie and Cape Hawke.
3. On an Alluvial Tin Deposit, Mann River.
4. On the Wolumla Gold-field.
5. On the Timbilica reefs.
6. On the auriferous deposit at Tingy's Plains, near Rocky Hall.

Mr. Geological Surveyor J. B. Jaquet's time has to a considerable extent been occupied in inspecting and reporting upon mining reserves which the Lands Department proposed to reduce or cancel. He has also inspected a number of gold and other mineral deposits, and has furnished a number of reports, as follow :--

1. On the Wattle Flat and Sofala Gold-field.
2. On the Gold and Tin fields of Jindabyne and Kosiusco.
3. On the Little River Gold-field.
4. On the Towga Creek Copper lodes.
5. On the Cullulla Silver Mine.
6. On the auriferous drift near Laggan.
7. On the Dairy Creek Gold-field.
8. On an ironstone bed at Seaham.
9. On the Gilgunnia Gold-field.
10. On the Gooda Creek Gold-field.
11. On the Mount Blundell lode.
12. On the Sunnyside Silver-Copper lode.

A report, together with plans and a section, have been furnished by Mr. D. W. Munro, giving details of the Government prospecting operations which have been conducted under his guidance in the auriferous beach deposits of the northern coast.

The officers of the Assay Branch have been kept extremely busy during the past year. No less than 6,013 assays and analyses have been made, or 1,000 in excess of the previous year's record. This is a direct result of the increased activity in mining matters, which has been so abundantly evident in all branches of the Department during the past year.

In addition to the above a large number of determinations of rocks and minerals has been made by the Curator and Mineralogist, Mr. Card. Considerable additions have been made to the Geological Museum collection, and these have been ably arranged by the Curator.

MINING SURVEYS.

Mr. E. F. Pittman was appointed Chief Mining Surveyor (in addition to his other duties as Government Geologist) on the 15th July.

The number of mining surveys made during the year 1896 was 2,225, as against 1,163 during the year 1895. Of these, 1,445 were gold leases on Crown lands, 147 were mineral leases, 218 were mining tenements, 54 were mining permits, and 361 were leases on private land; 1,313 were made by salaried surveyors and 912 by non-salaried surveyors. One underground survey was also made for the purpose of determining to what extent the workings of the Greta Colliery encroached upon adjoining lands. Owing to the great and continued increase of applications for unsurveyed land it was found necessary in October to appoint an additional salaried surveyor; the appointment was only made a temporary one however, as it is thought probable that applications for leases, &c., will not continue to be made at the same rate, and that five salaried surveyors will after a time be sufficient to deal with the ordinary work of the Department.

CHARTING.

Mr. G. A. McKay (formerly an officer of the Lands Department) was appointed Chief Draftsman on the 15th October, and it is satisfactory to note that since he took charge excellent results have been shown by the Charting Branch. The total number of gold and mineral lease applications on Crown lands dealt with during the year 1896 was 2,261 as against 855 during the previous year; the number of 27th and 28th section applications dealt with was 257 as against 189 during the previous year; and in addition to these 481 applications for leases on private land and 251 measurements under the Mining Board Regulations were dealt with.

The number of applications in hand at the end of the year were 208 for gold and mineral leases, 39 for 27th and 28th sections, and 57 for leases under the Mining on Private Lands Act.

In addition to lease applications, Surveyor's reports, and other unregistered documents, 5,100 papers were received and dealt with; 2,909 plans were noted; descriptions of 40 reserves under Section 26, and 21 Mining Divisions were prepared, gazetted, and charted; and 48 maps were prepared in connection with the alterations in Mining Wardens districts. During the year 1896, 301 copies of mining maps were charted up to date and forwarded to Wardens, 93 to District Surveyors, 47 to Mining Surveyors, and 8 to other persons!

COMPILATIONS.

COMPILATIONS.

Thirteen locality maps, embracing 18 parishes or portions of parishes, were completed; 11 were published and 3 remained in hand in various stages. Sixty-three proofs of parish and other maps showing mining measurements were received from the Department of Lands; 60 were revised and returned. Fourteen were adopted as mining maps and put into office use. In addition to the above, 4 sheets of the map of the Mining Districts of New South Wales, embracing an area of 80,496 square miles, were completed; 3 sheets were published and 2 sheets remained on hand awaiting examination.

It will be seen that there has been a very large increase of work thrown upon this Branch during the year but it has been satisfactorily dealt with owing to the steady application of the officers.

SCHOOL OF MINES.

The School of Mines at the University continues to do good work. This institution was started about four years ago with the assistance of the Hon. the Minister for Mines, Mr. Sydney Smith, the entire building and fittings having been paid for by the Government. One of the lecturers (viz., in Mining) at the School of Mines is also an officer of this Department. The Professors of the University deliver lectures and conduct practical classes in the different scientific subjects, such as Geology, Mineralogy, Chemistry, Engineering, Physics, Metallurgy and Assaying, Mathematics, &c., so that the teaching staff is the best that could be obtained.

In addition to six ex-students of the School of Mines who have secured lucrative employment in mines and smelting works in other Colonies, two have quite recently obtained important positions in the Geological Survey Department of Western Australia, one of them (Mr. Blatchford) having been appointed Geological Surveyor, while the other, Mr. E. S. Simpson, was chosen from a number of candidates, for the position of Analytical Chemist and Assayer.

It is extremely satisfactory to find that graduates of this school, in the foundation of which the Department has taken such an active part, are so successful in obtaining important posts in the neighbouring Colonies.

METALLURGICAL WORKS.

At the commencement of the year the machinery buildings were in course of construction by Messrs. Ritchie Bros. On completion of this contract, the machinery which had been stored in Sydney was carried to the Works, and its erection commenced.

A Tangye's Compound High-pressure Engine of 50 horse-power was fixed on a substantial concrete foundation, also a Babcock and Wilcox steam-boiler. This is nominally 45 horse-power, but is capable of developing much more power if necessary, at a maximum working pressure of 160 lb. per square inch.

The machinery for the treatment of ores consists of the following :—

Platform Weighing Machine sunk flush with the floor, so that ores are run over it and weighed as received from railway trucks in the Works siding.

No. 1 Gates' Rock Breaker, by which the ore is broken down to about $\frac{3}{4}$ -inch cubes for the purpose of sampling. This is done at the rate of a ton per hour, and this rate can be increased should it be found necessary by putting in a belt tightening pulley, so as to give the driving belt a firmer grip on the small driven pulley.

Link Belt Elevator, by which the coarsely-crushed ore is raised to the two 10-ton storage bins at the top of the building. This is capable of elevating all that the Gates' crusher can put through.

A No. 5 Clarkson's Rapid Sampler, which accurately samples a 10-ton lot in a comparatively short time. By this means every parcel is automatically sampled before it is further treated, and the miner's estimate of the value of his parcel can be verified or otherwise. Further, the loss incurred, due to the treatment, can be definitely ascertained, and the efficiency of the treatment properly determined. All ores submitted for treatment, whether reputed to be rich or poor, are subjected to this sampling process, with the result that some ores require no further treatment.

A Fraser and Chalmer's Sample Grinder reduces the sample first taken by the large sampler until it can be passed through the next machine, say to about pea-size.

A No. 1 Clarkson's Rapid Sampler takes the pea-size sample, and the second sample thus taken is ground still finer in the sample grinder, again passed through the sampler, and so these alternate operations of grinding and sampling are repeated until the final product is fine enough in grain and small enough in bulk to go to the Laboratory for final division into several identical samples by means of a Clarkson's Laboratory Divider, one of which is assayed, a second sealed for the owner, and a third sealed and kept for reference.

A large size Tustin Rotary Mill fine-crushes the ore so as to pass it through about a 26-mesh screen, finer or coarser as may be deemed necessary for the particular parcel under treatment. If the ore is to be amalgamated and concentrated it is crushed with the aid of water, but if chlorination or cyanide extraction is intended, the same machine is employed without water.

Up to this point the plant described will be employed whether the ore is to be subsequently amalgamated and concentrated, chlorinated, treated by the cyanide process, or subjected to any other lixiviation process. An amalgamation table, consisting of electro-plated and amalgamated copper plates, with mercury riffles and trap.

Two Frue Vanners, one of which is provided with an ordinary smooth rubber belt, and the other with a more recent Dick's felted belt. It is intended to introduce both a shaking copper plate and a hydraulic classifier between the plates and the vanners, with a view to improving the amalgamation and also the subsequent concentration. Some little contrivance will be required to get these in, as it is difficult to provide sufficient fall on a level site for all desirable operations without a largely increased cost for foundations and buildings.

Three tailings and slime pits. In the first of these the coarse tailings settle completely, whilst the finer slimes are largely carried over into the following pits, each of which is so arranged that the current of water entering charged with slime is reduced greatly in velocity, the water thus leaving the pit with a minimum velocity carries away the minimum amount of slime. This slowing down of the current takes place three times in the two slime pits, thus affording every opportunity to the slime to deposit in the pits. Between the vanners and the tailings pits, samples of the mixed tailings and slimes are taken at frequent and regular intervals all the time a parcel of ore is under treatment. These samples are allowed to settle, the liquid is filtered off, and the deposit is assayed. Further, the tailings and slimes are assayed. The concentrates produced by the vanners are reserved for further treatment or can be removed by the owner. The same remark holds good with respect to the tailings, each parcel being kept separate for a time.

Up to the end of the year nineteen parcels were treated. One each of argentiferous lead ore, auriferous antimony ore, and auriferous copper ore were sampled only with the view of determining their value as smelting ores. One parcel of gold ore was sampled only. The remaining parcels were gold ores, which were amalgamated and concentrated and reported on to their owners.

Now the amalgamating and fine concentrating has been got to work the erection of chlorinating and cyanide plant has been commenced, and will be in operation very shortly.

REGULATIONS IN CONNECTION WITH THE GOVERNMENT METALLURGICAL WORKS, CLYDE.

Bulk samples of gold ores up to 10 tons in weight from any one mine or distinctive section of a mine will be received with a view of determining the value of the ore and the best and most economical method to be adopted for its treatment. The local conditions prevailing at the mine will be a factor in any determination arrived at.

Only in cases of doubt or special difficulty, or by express sanction of the Secretary for Mines and Agriculture, will more than 10 tons be taken from the same source.

Each parcel will be weighed, passed through a rock-breaker, if necessary, accurately sampled by special machinery, and the actual value of the ore determined by assay before the extraction of the gold is commenced.

Samples will be taken at various stages during the treatment, so that the whole process can be studied, and upon the completion of the work a report will be made showing the value of the ore, the treatment to which it has been subjected, the yield of gold and the loss, and suggestions offered as to the further treatment of similar ore, in order that the loss may be reduced to a minimum.

The Government Metallurgist must be notified of the intention to forward any parcel of ore before despatch thereof to enable that officer to make the necessary arrangements.

The fee, in accordance with the scale of charges, must be remitted to the "Registrar," Department of Mines.

The ore must be delivered at the works with fees and carriage prepaid, otherwise it will not be treated.

The charge for crushing, sampling, assaying, amalgamating, and concentrating gold ores will be as follows:—

	s.	d.	
For 1 ton the charge will be	45	0	
2 tons	30	0	per ton.
3 " ..	25	0	"
4 " ..	22	6	"
5 " ..	21	0	"
6 " ..	20	0	"
7 " ..	19	6	"
8 " ..	19	0	"
9 " ..	18	6	"
10 " ..	18	0	"

Less than one ton will be charged as one ton.

For weighing, coarse crushing, and sampling only, other ores or materials, without assaying, the charges will be one-fifth of the above rates.

For weighing and sampling materials already crushed, *i.e.*, tailings, concentrates, &c., the charges will be one-tenth of the rates quoted.

The owner of the parcel of ore or his representative may attend at the works to see the parcel sampled, and watch, with the permission of the Superintendent, the further treatment of the ore, but no interference with the work in hand will be permitted.

Products held to be of value by the owner must be removed promptly after the report on the treatment has been supplied. It will not be possible to keep all parcels distinct for an indefinite period, and the Department accepts no risk or responsibility in connection with any of the samples or products.

In cases where it can be clearly shown that the owner is not in a position to pay for the cost of treatment, the work may, on the recommendation of the Prospecting Board, be undertaken at the expense of the Department.

All samples will, as far as practicable, be treated in the order in which they are received.

Regulations relating to the Assaying of Small Samples of Ores and the Examination of Minerals.

With the object of encouraging prospecting, auriferous and other ores will be assayed and minerals will be examined and named free of cost, on the following conditions:—

The samples should be addressed to the Government Geologist, Department of Mines, Sydney.

The ores or minerals must be from deposits occurring within the Colony of New South Wales.

Each sample must bear a distinguishing mark, in order that it may be identified readily.

Samples must be accompanied by a letter, in which must be stated the distinguishing mark placed upon each sample and the locality where the deposit occurs.

The samples of ore for assay should weigh about 1 lb. each, and should be fairly representative samples of the lode or deposit, and not picked specimens.

Samples of ore in which free gold is visible to the naked eye will not be assayed.

Assays for the purpose of checking the work of private assayers will not be made by the Department.

Assays of tailings or concentrates from batteries or other crushing mills will not be made, unless reasons are furnished which appear to the Secretary for Mines and Agriculture sufficient to justify such being made at the expense of the Department.

The Department reserves to itself the right to refuse to make an assay of any sample sent.

The Analysis and Assaying Staff under Mr. Mingaye has been transferred from Sydney to the Works and incorporated with the Metallurgical Branch. In view of the increased work resulting from the investigations connected with the works, an additional assistant assayer has been appointed in the person of Mr. R. Vale, who received the appointment after a searching competitive examination, both theoretical and practical.

Several new processes for the extraction of metals have been submitted for examination, but nothing of special value has been proposed, except, perhaps, a process for the treatment of auriferous antimony ores. This process will be investigated in the new leaching works, and if it prove successful it will be of great value to this Colony.

The construction of a small plant for crushing quartz, which shall be both portable and efficient, is always present to the mind of the inventor. Several attempts have been made during the past year to produce a workable plant; perhaps the most successful is Carver's hand jaw-crusher, which has, however, only a small output.

Saunders' Rapid Stamp Battery has been erected at the works by the makers, to demonstrate the value of the machine, and has done very good work, but is not quite out of the experimental stage yet. This is a light 3-stamp battery making 120 or more drops per minute, and claimed to do the work of five ordinary stamps.

Mr.

Mr. John C. H. Mingaye, F.C.S., Analyst Assayer to the Department, reports respecting the work performed in the Chemical Laboratory and progress made during the year 1896 that 6,013 numbered samples were received for assay and analysis, 123 quantitative and qualitative analyses made, and a large number of reports given, and special examinations made for the presence of the rarer elements.

The following figures show the increase of work received in the laboratory since the year 1883:—

Year.	Samples.	Year.	Samples.
1883.....	242	1890.....	3,323
1884.....	664	1891.....	4,082
1885.....	1,423	1892.....	3,570
1886.....	1,807	1893.....	3,015
1887.....	2,222	1894.....	3,816
1888.....	5,245	1895.....	4,826
1889.....	3,287	1896.....	6,013

or an increase of 1,187 numbered samples over last years.

The following assays have been made for various metals:—

Antimony.....	30	Mercury.....	4
Bismuth.....	20	Nickel.....	7
Chrome.....	24	Iron.....	22
Cobalt.....	16	Platinum.....	14
Copper.....	276	Tin.....	87
Lead.....	47	Tungstic acid.....	6
Manganese.....	24	Zinc.....	6

Gold and Silver, 5,719 assays.

The following analyses were made of waters:—

(1.)	Water from Sandy Creek Artesian Bore.
(2.)	" Brigalow Artesian Bore.
(3.)	" well at Kogarah supposed to be contaminated with sewage.
(4.)	" underground River, Imperial Caves, Jenolan Caves.
(5.)	" still water from New Caves, Jenolan Caves.
(6.)	" Bore at Nevertire.
(7.)	" well furnished for analysis if suitable for stock.
(8.)	" Woolabra Artesian Bore.
(9.)	" Euroka Artesian Bore.
(10.)	" well on Eulonga River, Parish Wallaly, County Warrigery.
(11.)	" Tinaroo Artesian Bore.
(12.)	" spring near Singleton.
(13.)	" Gil Gil Artesian Bore.
(14.)	" Warratta Artesian Bore.
(15.)	" Teuandra Artesian Bore.

The following are a few of the analyses made, which I give, as they are interesting:—

(1909.) Apatite crystals ($3\text{Ca}_3\text{P}_2\text{O}_8\text{Ca}(\text{FCl})$), from Gordon Brook. Two analyses of clean crystals carefully separated from the matrix yielded as follows:—

Chemical Composition.	(1.)	(2.)
Lime (CaO).....	48.73	48.63
Phosphoric acid (P_2O_5).....	41.22	41.11
Calcium (Ca).....	3.81	3.82
Chlorine (Cl).....	1.24	1.32
Fluorine (F).....	2.86	2.92
Magnesia (MgO).....	.19	.21
Ferric oxide (Fe_2O_3).....	.76	.72
Gangue.....	1.32	1.25
Water.....	.29	.29
	<hr/> 100.45	<hr/> 100.27

A qualitative analysis of the gangue found it to consist of silica, alumina, ferric oxide, lime, magnesia, and a minute trace of phosphoric acid.

(1593.) Telluric bismuth ore, from Shippery Creek, near Oberon. Several small pieces of this mineral were furnished for analysis. A partial analysis yielded as follows:—

	Per cent.	Per cent.
Metallie bismuth.....	70.82	70.95
Tellurium.....	19.59	
Sulphur.....	4.69	
Gangue.....	.06	

No selenium, gold, or silver detected.

On examining this mineral under the microscope, the oxidation product of tetradyrite was observed, Montanite Bi_2O_3 , $\text{TeO}_3 + \text{H}_2\text{O}$ (or $2\text{H}_2\text{O}$). The sample received was too small to enable a more detailed analysis being made. This mineral has been previously recorded as occurring in fair quantity at Captain's Flat, Norongo.

(602.) Fine gem sand from the Tooloom Alluvial Gold-fields. An estimation of the rare earths yielded as follows:—

	Per cent.
Cerium oxide	6.20
Thorium oxide45
Lanthanum oxide	4.30
Didymium	
Phosphoric acid	3.07

(603.) Coarse gem sand, from the Tooloom Alluvial Gold-fields:—

	Per cent.
Cerium earths as oxides	1.96
Phosphoric acid	1.10

Both these samples consist largely of small zircons. A small quantity of chrome iron-ore is also present, and a few dwt. of gold per ton.

(5733.) Sample of gem sand from the Delegate River. This sample on examination was found to consist largely of monazite.

(1638.) Grey sandstone, from near Bulli:—

<i>Chemical composition.</i>		
Moisture, at 100° C.....		1.65
Combined water		4.02
Silica (SiO ₂).....		72.38
Alumina (Al ₂ O ₃).....		14.35
Ferric oxide (Fe ₂ O ₃)		2.42
Lime (CaO)51
Magnesia (MgO)68
Potash (K ₂ O)		2.34
Soda (Na ₂ O)69
Phosphoric acid (P ₂ O ₅)		minute trace
Sulphuric trioxide (SO ₃)09
		100.13
	(1.)	(2.)
	oz. dwt. gr.	oz. dwt. gr.
Fine silver, at the rate of	1 3 11	1 3 0 per ton of stone
„ gold „	under 15 gr.	under 15 gr. „

(1639.) White sandstone, from near Bulli:—

<i>Chemical composition.</i>		
Moisture, at 100°49
Combined water		1.17
Silica (SiO ₂)		92.11
Alumina (Al ₂ O ₃).....		4.89
Ferric oxide (Fe ₂ O ₃)23
Lime (CaO)		absent
Magnesia (MgO).....		.15
Potash (K ₂ O)		1.29
Soda (Na ₂ O).....		absent.
Phosphoric acid (P ₂ O ₅)		„
Sulphuric acid (SO ₃)		trace.
		100.54
	(1.)	(2.)
Fine silver at the rate of.....	2 dwt. 14 gr.	2 dwt. 14 gr. per ton.
„ gold „	under 10 gr.	under 10 gr. „

The occurrence of gold and silver in this formation is one of peculiar interest, especially as the beach sands further down the coast (Shell Harbour) are known to contain gold, silver, platinum, and tin. The presence of gold and silver in these sandstones may possibly account, to some extent, for the gold found in the beach sands.

(2427.) White earthy mineral from the Jenolan Caves.

<i>Chemical Composition.</i>	(1.)	(2.)
Alumina (Al ₂ O ₃)	20.48	20.70
Potash (K ₂ O)	8.89	9.01
Ferric Oxide (Fe ₂ O ₃)18	.20
Lime (CaO)	trace.	trace.
Magnesia (MgO)	„	„
Insoluble matter (sand, &c.)	1.07	1.12
Phosphoric acid (P ₂ O ₅)	49.85	49.83
Moisture at 200° C.	9.67	9.50
„ from 200° to red heat	18.23	18.19
	99.38	99.55

No fluorine, chlorine, or sulphuric acid detected.

This mineral, if it exists in sufficient quantity, is of good marketable value for manurial purposes, the percentages of phosphoric acid and potash being high. The substance may be described as minervite, a hydrated phosphate of alumina and potash.

An analysis is in hand of the clay found close to this substance which contains a fair percentage of phosphoric acid.

Metallurgical

Metallurgical Branch. —Forty-six samples of average samples of crushed ore, concentrates, tailings, amalgam, &c., were received for assay and treatment.

INSPECTION OF MINES OTHER THAN COAL AND SHALE MINES.

Mr. Slee, F.G.S., Chief Inspector of Mines, reports 35 fatal and 36 non-fatal accidents in the metalliferous mines of New South Wales during the year, which is a decrease of 1 fatal and an increase of 8 non-fatal over the previous year.

Of the 35 fatal accidents,—12 took place in silver, 14 in auriferous quartz, 8 in auriferous alluvial, and 1 in copper mines.

The percentage of fatal accidents in 1896 is 1·14 as compared with 1·25 during 1895, and non-fatal 1·18 as against ·97 for the same period.

The number of men employed in and about the metallic mines in the Colony during the year was 30,478 as compared with 28,923 in 1895.

The undermentioned localities were visited and inspected during the year:—

By the Chief Inspector.

Broken Hill, Stringy Bark, Back Creek, Captain's Flat, Bywong, Dairy Creek, Condobolin, Cugong, Cream of Hill, Errenbendery, Mount Wilga, Carlisle, Fifield, Platina, Peak Hill, Alectown, Junee Reefs, Eurongilly, Murrumburrah, Bobadah, and numerous other places.

The Chief Inspector, while visiting said districts, also dealt with applications for aid from the Prospecting Vote, and during the year as Warden for the Colony adjudicated at several places.

By Inspector Milne.

In the South:—Bongolong, Billy's-look-out, Cootamundra, Combaning, Gundagai, Grenfell, Meragie, Paddy's River, Scrubyard, Temora, Reefton, Wyalong, and Yalgogrin;—also Bathurst, Brown's Creek, Burrendong, Balderadgery, Binni Creek, Boney's Rocks, Blayney, Burruga, Black Bullock Mountain, Cobar, Cowra, Canowindra, Cargo, Crudine, Clear Creek, Cheshire Creek, Forest Reef, Flyers Creek, Forbes, Gulgong, Galley Swamp, Hargraves, Hill End, Hill Top, Kerr's Creek, Lucknow, Lewis' Ponds, Luc, Mudgee, Mount Drysdale, Mount McDonald, Macquarie River, Mandurama, Mullion Creek, Naromine, Newbridge, Oberon, Orange, Ophir, Parkes, Peak Hill, Pinnacles, Palmer's Oakey, Sofala, Sunny Corner, Slattery's Creek, Stuart Town, Stringy Bark, Tuena, Trunkey, Tomingley, Tarana, Wattle Flat, Windeyer, and Woodstock.

The principal mining centres in the foregoing list have been inspected two or three times during the year.

The Inspector reports a general compliance with the Regulations.

While visiting the various districts Mr. Milne reported on a large number of applications for aid from the Prospecting Vote.

By Inspector Hebbard.

In addition to the frequent inspections of all the very extensive mines at Broken Hill the outlying parts of the district were also visited by Inspector Hebbard with exception of Mount Browne.

By Inspector Godfrey.

For the greater part of the year Mr. Godfrey was engaged in the Northern District inspecting the following places:—Armidale, Avery's Creek, Bucca Creek, Boggy Camp, Bowling Alley Point, Boonoo Boonoo, Barraba, Bingara, Canguai, Cell's Creek, Crow Mountain, Dalmorton, Drake, Dungog, Elsmore (twice), Grafton, Hillgrove (three times), Inverell, Melrose (twice), Monkerai, Nana Creek, Niangula (twice), Nundle, Rockvale (twice), Tilbuster (twice), Tingha, Tralla (three times), Wangat, Woods' Reef, Warialda, Wallengra, and Yarrowitch. Mr. Godfrey reports that the Regulations are generally complied with. While in the various districts, the Inspector reported on a considerable number of applications for aid from the Prospecting Vote, and from 18th September to 30th November was engaged on work in connection with the Land and Income Tax Department.

By Inspector Hooke.

During last half of the year Mr. Hooke visited the following places, viz.:—Adelong, Wyalong, Inverell, Tingha, Boggy Camp, Borah Creek, Glen Innes, Glen Elgin, Langothlin, Deepwater, Emmaville, Tenterfield, Boonoo Boonoo, Drake, Pretty Gully, Tooloom, Rivertree, Lionsville, Coramba, Orara, Hillgrove, Metz, Moonan and Stewarts' Brooks, Burrowa, Binalong, and Cowra Creek, and reports that the Regulations are generally complied with.

Inspector Hooke, while visiting the various districts, also dealt with a considerable number of applications for aid from the Prospecting Vote.

DIAMOND

DIAMOND DRILLS.

The total depth bored in 1896 (exclusive of the work at Funafuli, Ellice Group, South Pacific) was 2,142 ft. 9 in., or 1,843 ft. 9 in. more than during the year 1895.

The average cost per foot for boring as above was 11s. 4½d., as compared with 30s. 3¼d. in 1895.

The reduction of the rate per foot is owing to shallow boring and better strata.

Diamonds used in 1896 cost, per foot, 2s. 1½d., as compared with 3s. 9½d. in 1895.

The earnings of the diamond drills for the year was £1,432 7s. 3d., and the amount paid into Treasury as revenue from diamond drills was £825 3s. 9d., in addition to the sum of £937 6s. 3d. transferred from Prospecting Vote to credit of Revenue Account Drills—in all, £1,762 10s.

MINERAL PRODUCTS.

The aggregate value of the mineral products of this Colony to the end of 1896 is £118,367,234 5s. The following table will show that the value of such products for 1896 was £4,478,368 15s. 5d., a net decrease of £73,649 3s. 4d. on the value of the minerals won in 1895. The large decrease in the value of the gold won is traceable to the great scarcity of water on many of our gold-fields occasioned by the recent drought, and to the falling off in the output from the Lucknow Mines, in which extensive prospecting operations were carried on during the year. There has been a decrease of £55,340 in the value of bar-silver exported, but this has been more than compensated for by a rise of £198,120 in the value of the silver-lead bullion. The additions now being made by the Broken Hill Proprietary Company to their plant, and the extensive smelting works now nearing completion at Newcastle and Illawarra for the treatment of sulphide ores, may be expected to largely increase the silver product of the Colony. The consumption of coal at these works will amount to many thousands of tons annually, and help to sustain an increased output in that mineral. The activity displayed in the mines at Cobar is responsible for the growing increase in the output of copper, and there is every appearance that such will be maintained. The decrease in the output of tin can be traced to the low price prevailing for that metal during the year, and partly to the fact that the shallow alluvial deposits on the Tingha Tin-field are becoming worked out. The reduction in the output of shale is also in the main due to the exhaustion of the higher-class deposits.

The following table shows the aggregate value of minerals, the product of New South Wales, for the years 1895 and 1896 respectively compared:—

Minerals.	Quantity.	Value.		Quantity.	Value.		Increase in Value.		Decrease in Value.			
		£	s. d.		£	s. d.	£	s. d.	£	s. d.		
		1895.		1896.

GOLD.

Although there is apparently an increase of 773 men employed in the gold-mining industry, it is to be regretted that the output of the precious metal has not risen proportionately. As will be seen from the table following, there has been a decrease of 64,091 oz. and £242,569 in value as compared with 1895. As is stated elsewhere this is traceable to the recent excessive drought and to the reduction in the output from the Lucknow mines. The mines at Hillgrove and Wyalong have largely increased their yield during the year, and with the many improvements being made in the gold-saving machinery on the mines throughout the Colony the reduction is not likely to continue. The employment of suitable machinery in the treatment of our ores has been responsible for many of the failures witnessed in past years; but it is confidently asserted that with such improved appliances as will enable us to avoid the sinful waste of the past, gold-mining will become, as it ought to be, one of the leading industries of New South Wales.

TABLE showing the Quantity and Value of Gold won in the Colony of New South Wales from 1851 to 1896.

Owing to the numerous changes made by the Public Service Board among the Wardens and Mining Registrars during the latter part of the year, and the fact that those officers had barely time to make themselves sufficiently well acquainted with their districts to enable them to furnish their Annual Mining Reports as complete as formerly, I regret that my notes on the gold-mining industry this year must necessarily lack many of the details given in previous Reports. My object is to put the information in as concise a form as possible; and any noteworthy fact in connection with this very important industry is brought under notice.

THE BATHURST MINING DISTRICT.

Canowindra Division.

The gold won at Canowindra during the year amounted to 358 oz., which is a reduction of 300 oz. on the year 1895. A number of the leases have been taken over by a new company who intend to thoroughly try the ground. The indications met with so far are very encouraging.

Cowra Division.

The improvement in the output of gold from this Division reported last year has not been maintained, the yield being 1,190 oz., as compared with 1,310 oz. in 1895. The Binni Creek discoveries did not reach expectations. A large number of men are still carrying on prospecting operations in the locality, a few parties being in receipt of Government aid. The Gospel Oak Battery, near Woodstock, was, unfortunately, shut down during the greater part of the year, special appliances being required to save the very fine gold it had to deal with.

Mount M'Donald.

The gold yield from Mount M'Donald was 586 oz., as compared with 421 oz. the previous year. The Hong Kong Company are still carrying on prospecting work, and put through some stone, but the returns were not available; the Great Eastern Company, 355 tons for 157½ oz.; the All Nations Claim, 32 tons for 72 oz. 13 dwt.; and the Lord Hampden Company, 30 tons for 15 oz. At Scrubby Rush the Woodstock Gold-mining Company have erected a 10-head battery, and treated 500 tons during the year for a yield of 220 oz. A number of men are still fossicking in the Division with varying success.

Carcoar Division.

Carcoar Division, which embraces Mandurama, returned 1,913 oz., as compared with 1,165 oz. the previous year—a very satisfactory increase. At Galley Swamp, in this Division, the gold leases have been amalgamated and floated into a Company, with a capital of £300,000. Extensive machinery is in course of erection, and three shafts have been sunk. These reefs proved very rich near the surface, and the object of the Company is to work them at a depth where they are said to improve. At the present time the Company employ about 100 men, but that number will be largely increased at an early date. At Lyndhurst a number of men are employed building a dam in the Belabula River, and fixing piping to be used in hydraulic sluicing. The extensive auriferous deposits to be found here were formerly worked by tunnelling. It is now proposed to work it open cut, and crush everything from surface to 50 feet, which it is stated will yield about 10 dwt. per ton. In the neighbourhood of Burnt Yards, Flyer's Creek, and Slattery's Creek, about 120 men are vigorously carrying on prospecting work, but no discoveries of any great importance were reported during the year.

Blayney

Blayney Division.

Yield from Blayney Division 994 oz. as against 612 oz. in 1895. It is to be regretted that the expectations formed with regard to the Compagnie des Mines d'Or at Brown's Creek have not been fulfilled, the company being compelled to cease work pending its reconstruction and the raising of more capital. A splendid plant has been erected on the mines at great cost, and it is to be hoped that the stoppage is only a temporary one, their yield during the year being 694 oz. from 7,277 tons of stuff. A number of men have been at work during the year on Cowper's freehold, where a large pyritous lode occurs, which assays well for gold. A trial crushing is being sent to England for treatment. At King's Plains the Last Chance Gold-mining Company are erecting powerful pumping machinery to cope with the water at the lower levels, and it is thought, with systematic and economical management, this mine should give a good account of itself. Numerous small parties are scattered throughout this Division prospecting and fossicking, to some of whom Government aid has been granted.

Newbridge Division.

The gold won at Newbridge was 434 oz., being nearly 400 oz. less than in 1895. The principal decrease was in quartz gold, many of the reefs being left unworked awaiting the erection of a battery. One is now in course of erection on Larnach and Warren's mine, and there is a probability that the erection of another will be started shortly. Several parties received aid from the Prospecting Vote in this locality, but no important discoveries have been reported so far.

Trunkey Division.

The gold yield from Trunkey during the year is 1,447, as compared with 2,340 oz. during 1895. The Mount Gray Mine has been taken up by Mr. Clarth, who has erected a large 30-head battery on it and powerful pumping machinery. The Bathurst Gold-mine (Limited) also erected a new crushing plant during the year, and it may safely be predicted that when their plants get into full working order the yield from this Division will be largely increased. At Wilson's Reef, Messrs. Crees, Francis, and party crushed all the available mullock from the old shafts with very good results. Weir and party, prospecting on Church and School lands near Caloola Creek, discovered a large lode, which returned 1 oz. per ton when treated at the local mill. The batteries and alluvial mines, especially the sluicers, suffered somewhat during the year from the scarcity of water, and were not able to work continuously.

Tuena Division.

The returns from Tuena show that the yield for the year was 1,961 oz., as compared with 1,674 oz. in 1895, the bulk of it being obtained from alluvium. Numerous parties of three and four men are working old abandoned reefs and making good wages out of them, the average returns being about 1 oz. to the ton. A tunnel has just been completed by Goldspink and party on the Abercrombie River, which struck a large body of wash, averaging about 1 oz. to the load. At Junction Point, M'Guire and party won nearly £1,500 worth of gold from the Red Jacket Reef, and several crushings from the old Victoria Reef gave over an ounce to the ton. The owners of the Caledonian mine have just effected extensive improvements to their machinery. They have a large deposit of low-grade ore, but anticipate it will pay when large quantities of stone are dealt with. A few parties in the vicinity of Dog Trap are working under aid from the Prospecting Vote.

Rockley Division.

Rockley returned 1,306 oz., or a little over 200 oz. less than the previous year. This is essentially an alluvial district, but the discovery of payable quartz at Mount Maud has stimulated reefing considerably. Litigation as to the possession of the land retarded the development of this discovery, but the matter having been decided the ground has been taken over by the Mount David Gold-mining Company, who are proceeding vigorously with development work and the erection of winding and crushing plant. When such have been completed employment will be given to a large number of men. The principal seat of alluvial mining in this district is at Lawson's Plains, on private property, and Stony Creek, where a large number of men make a fairly good living all the year round.

Burruga Division.

Burruga produced 328 oz. only, an increase of 57 oz. on the previous year's production, the majority of the men there being employed in the copper-mines. At Golden Gully, 8 miles east of Burruga, M'Vicar and party have a very nice looking reef, from which a trial crushing of 6 tons gave the handsome return of 2 oz. 13 dwt. per ton. The reef has been proved to 130 feet, where it measures 18 inches wide, and improving with depth. The party are now sinking a shaft for ventilation, and preparing for the erection of a battery. Some long tunnels have been put in on the Isabella River, to test the wash underlying the basalt, but the heavy influx of water compelled their abandonment. A large number of men are still working the alluvial ground on Mount Werong, and appear satisfied with the results from their labours, but the quantity of gold won by them could not be ascertained.

O'Connell Division.

There are about fifty men working in the neighbourhood of O'Connell, principally engaged in fossicking, and among them they won 300 oz. of gold, valued at about £1,050. There is no other mining of importance being carried on in this Division.

Oberon Division.

The quantity of gold produced in this Division was 382 oz., which is a few ounces more than that won in 1895. A number of leases have been applied for on the Black Bullock Hill, situated about 5 miles north of Oberon, where a large pyritous lode can be traced on Crown lands, extending into private property. This Division is a favourite one with fossickers, scarcely a creek or gully being without a number of men who, apparently, make a living at the work.

Bathurst Division.

The 1,081 oz. of gold won in this Division was all from alluvial ground, and is just 134 oz. less than the quantity won the previous year. At the present time there are about 360 men at work throughout this Division, the majority engaged in prospecting work. Dewar and party are still persevering with their shaft on the Bald Hills, near the town of Bathurst, but have not yet succeeded in reaching bottom. These operations are being watched with some interest by the local mining community, as the deep ground has not yet been tested at this point. The party are in receipt of Government assistance.

Wyagdon Division.

All the mining work being carried on at Wyagdon is purely of a fossicking nature, and it is impossible to arrive at more than a rough estimate of the quantity of gold won. The returns, however, give the yield at 80 oz., which is probably a very low estimate, seeing that about the same number of men won 215 oz. the previous year.

Sunny Corner (Mitchell) Division.

This year's returns from Sunny Corner are disappointing, the figures being 1,826 oz., as compared with 3,645 oz. in 1895. It is very questionable if all the gold won is accounted for in the return, as about 300 gold-miners were constantly at work during the year. The Paddy Lackey mine is still raising good stone, but the results from the crushing are not available. Dunn Brothers struck some good stone during the year in the vicinity of Dark Corner, which led to a large area of land being taken up under lease. This party were in receipt of aid from the Prospecting Vote. A considerable number of fossickers are still employed all through this Division, and when a good supply of water is available they do fairly well.

Orange District.

This year's returns from the Orange Division are disappointing, the figures being 20,446 oz. as compared with 83,342 oz. in 1895. The decrease is traceable to the mines at Lucknow.

The Wentworth Proprietary Company are still in full work, employing about 400 men, and during the year they have been carrying out extensive prospecting work. They put through 9,368 tons, which yielded 12,048 oz.—a decrease of 46,052 oz. on their previous year's output; the Aladdin's Lamp Company, 3,052 tons, for 16,718 oz.—a reduction of 6,360 oz. on 1895. From these two mines alone the aggregate quantity of gold won was less by 62,412 oz. than the previous year, which nearly accounts for the decrease of 64,094 oz. in our total yield for the year as compared with 1895. The D'Arcy Estate Company

Company are now down 900 feet, with good prospects at that level. The Wentworth Extension (Limited) are sinking for the lode, and have reached a depth of 480 feet. A large area of land has been taken up on the supposed line of lode adjoining this company's property. On the Bletchington Estate the syndicate have their shaft down 180 feet on a similar formation to the Lucknow Mine, but yet not payable. Prospecting work is being pushed forward on Kerr and Gilmour's private land west of Lucknow, where occurs a formation similar to that so successfully worked at Lucknow. At Forest Reefs the Government diamond drill is being worked under a subsidy from the Prospecting Board to test the trend of the deep leads underlying the basalt. At Byng, the Witney Green Company is the subject of litigation, which is hindering the mining interests in this locality very much. Many prospectors are scouring this Division in every direction, both on private and Crown lands.

Molong Division.

The work carried on about Molong is purely of a prospecting nature. At Delaney's Dyke very fair indications are being obtained, but no discovery worthy of note has been made so far.

THE MUDGEES MINING DISTRICT.

Cobbora Division.

All the gold won from this Division is from alluvium, and amounted to 234 oz., taken from about 1,560 loads. This does not include the gold from the Tucklan or Stringybark Gold-field, which is now within the Denison Town Division, but relates to the yield from the Cobbora Gold-field, better known locally as Hughey's Waterhole Creek. The men have been working under serious difficulties owing to the great scarcity of water, the last rain of any consequence falling as far back as January, 1894.

Denison Town Division.

The principal seat of mining in this Division is the Stringybark Diggings, situated on Tucklan Run, between Denison Town and Gulgong. Some 250 men found profitable employment during the year; and as far as can be ascertained 4,091 loads of wash-dirt were treated for 2,220 oz. of gold, which is a very marked increase on the yield for the previous year. As in the Cobbora Division the want of water has been the great drawback to this field, as the dirt has to be carted 3 miles, then washed by the primitive method of trough and cradle. The water is drawn from wells, which the miners have to pay for.

Gulgong Division.

Gulgong contributed 7,000 oz. to the returns for the year, which is an increase of 3,000 oz. over 1895. There has been a good deal of activity in this Division during the past year, both in quartz and alluvial mining, and some very good results have been obtained from stone sent to the Clyde Works from new finds. Adams and party, of Cudjebegong, sent 6 tons which yielded 30 oz. of gold, and 24 tons sent by Hutton and party, from their lease at the Happy Valley, produced 92 oz. A small rush took place about the end of the year to Rouse's Paddock, where a few claims are on fair gold. About fifty men are working at Helvetia, situated about 3 miles from Gulgong. About 8,600 loads were washed, which averaged 3½ dwt. per load, the richest yielding 8 dwt., and the poorest 1½ dwt. per load. The Star Lead No. 1 Company are now erecting machinery to systematically work their mine, and they will shortly be in a position to employ a large number of men. Mr. W. S. Brice, the late manager of the mine, states:—

“Gulgong, 7 February, 1897.

“Important developments have occurred at the Star Lead No. 1 Mine during the year, which must be satisfactory to the gentlemen who, for the last two years, have persevered in their endeavours to find and test the deep ground of that almost unknown Star Lead. In the main eastern drive, at 195 feet level, auriferous wash was discovered in April, 1896, occurring overhead 388 feet from the shaft, and prospecting drives were tunnelled north, east, south, and west, to prove the extent of wash, and the auriferous deposit proved to extend over an area of 200 feet, with a very severe dip to the south, with strong water coming in from that direction. The whole of the eastern drive, for a distance of 400 feet, has proved interesting on account of the remarkable changes which have taken place, in tunnelling, a very hard massive diorite, in some instances, being met with; and at intervals of about 50 feet, soft decomposed diorite, thickly impregnated with very hard nodules which varied in size from about 4 inches up to 5 feet. Some of the smaller ones I submitted to the Government Geologist, Mr. Pittman, for analysis, and which proved to be nodules of a very much altered undesite occurring under the auriferous deposit; but as far as I can learn these nodules have never been found above the wash, which, I think, ought to act as a guide for any parties prospecting Gulgong for deep leads.”

Hargraves Division.

The yield from Hargraves during the year is 2,250 oz., about 1,000 oz. less than in 1895. Notwithstanding the decrease, accounted for by the large amount of prospecting and developing work in operation, mining has been carried on very successfully through the Division during the past twelve months. There are three batteries on the field, one of which put through 2,600 tons for 1,300 oz., and the other 482 tons for 245 oz., the third being idle for repairs. It is anticipated that 1897 will be a prosperous year for this field.

Mudgee Division.

It is estimated that 1,050 oz. of gold were got in the Mudgee Division during the year, won principally by fossickers, who are scattered throughout the whole of the Division. Several parties are in receipt of aid from the Prospecting Vote in this locality, but no new discovery of any moment has been made during the year.

Windeyer Division.

There is still improvement to report in the output of gold from Windeyer. In 1894 the yield was 2,000 oz., in 1895 2,400 oz., and this year 2,440 oz. The stone crushed during the year aggregated 1,300 tons, which returned 994 oz. At Long Gully, Clarke's Creek, Leffley Brothers' claim is still turning out good stone, the 500 tons raised by them yielding 540 oz. A number of parties are prospecting for a continuation of this vein. The Jubilee Mine is now in the hands of a company, who have it under offer to a London syndicate.

Peak Hill Division.

The Peak Hill Field has not improved its position during the year as a gold producer, the total yield being 6,428 oz., as compared with 8,192 oz. in 1895 and 12,231 oz. in 1894. Although no new discoveries have been made during the past twelve months, still the mines have been steadily developed, the want of water, however, being a great drawback to the crushing of the ore. The Myall United is considered a very promising mine, its value being enhanced by the discovery of large bodies of payable ore at the 320-foot level, which were hitherto unknown. With a view to the treatment of large quantities of stone the company have erected a new 40-head stamper battery. The Peak Hill Proprietary Company are now calcining their ore, and have erected a furnace for that purpose. They have also added concentrating machinery to their plant. These additions enable them to deal profitably with the pyritous ore which abounds in their mine. The new Crown of Peak Hill Company have erected a winding engine, and have their main shaft down 470 feet. There is nothing of note to report in connection with the other mines. The returns from a few of the principal mines may be of interest:—

Peak Hill Proprietary	4,246 tons	1,858 oz.
Crown of Peak Hill	1,013 "	387 "
Wythes and Mooney	836 "	304 "
Great Eastern Reformed	719 "	496 "
Bobbie Burns	440 "	106 "

Alluvial mining in this Division is almost a thing of the past, being confined to a few fossickers.

Prospecting work is still being carried on at Tomingley, and Crowhurst and party, who are in receipt of aid from the Prospecting Vote, have a very promising mine.

Wollington Division.

The only mining of any importance in this Division is carried on by the Mitchell's Creek Freehold Gold Estate Company, at Daviesville, who treated during the year 11,239 tons for 7,130 oz., valued at £26,617. With the exception of this company there is little quartz-mining going on in the Division, and alluvial mining is chiefly confined to the Macquarie River and its tributaries.

TAMBAROORA AND TURON MINING DISTRICT.

Hill End Division.

Hill End turned out 891 tons of stone for 1,319 oz., and 2,684 oz. from alluvium, which give a grand total of 4,003 oz. of gold, which is a reduction of 356 oz. on the yield for 1895. The reduction may be explained by the fact that a number of the miners were employed in sinking deep shafts at Red Hill, Tambaroora, from which place no returns were received. Many of the well known mines at Hawkins' Hill, which for the past few years have not yielded well, had first-rate crushings during the year, and it is expected that the next crushings will exceed anything in the early days of the field. Altogether, the field has not looked so well for years past. The Tambaroora Creek Gold-mining Company, at Tambaroora, are sinking their shafts and erecting extensive machinery. At Sally's Flat, Mullaney and Gough, who received aid from the Prospecting Vote, have opened up a payable mine. Their reef is 18 inches thick and yields 1 oz. per ton. At Quartz-Ridge a Sydney syndicate have taken up some leases and discovered gold which they consider payable. At the Cement Hills two companies have been formed to work the wash under the basalt, and are now busily erecting the necessary machinery.

Sofala Division.

The Sofala Gold-field shows a very decided improvement, the returns being 4,753 oz. as against 3,801 oz. the previous year. Quartz-mining especially has received quite an impetus owing to the fact that nearly every recent crushing made on the field has paid fair returns. On Bateman's Hill McCudden and party were working under aid from the Prospecting Vote, and struck a good reef from which they treated 43 tons for 102 oz. Several new reefs have also been opened up in the neighbourhood of Spring Creek which yield from 12 dwt. to 1 oz. per ton. Brailey and party at the Old Solitary are still getting good returns, and one crushing of quartz gave 230 oz. The Great Victoria Gold-mining Company have taken over the Solitary Extended, and propose expending a large sum in thoroughly opening up the mine. The last crushings from this mine were taken from the 300-foot level where the lode is 2 feet 6 inches thick, and gave a result of from $\frac{1}{2}$ oz. to 1 oz. per ton. At Bullock Flat a vertical shaft is being sunk to strike Heagney's Reef at the 178-foot level, where the reef averages 16 inches. The Big Oakey Gold-mining Company are now down 600 feet on the underlay of a promising looking lode 5 feet thick. At Surface Hill the Newcastle and Stockton Company are under suspension. They propose constructing a tramway to the Turon River $1\frac{1}{2}$ mile, where extensive machinery will be erected. In the same locality the Caledonian claim received a prospecting grant and found a large lode 12 feet wide, a trial crushing from which averaged 13 dwt. per ton. The leases at Whalen's Hill are now under suspension, with a view to flotation on the English market. A trial crushing from this ground returned 100 oz. from 10 tons of stone. The Turon Gold-mining Company at Spring Creek have several shafts down, the deepest being 300 feet, and have about forty men employed getting the mine into working order. The Queenslander Gold-mining Company have done little work during the year; one cause being an insufficiency of water. They now propose to run a tramway to the Turon River, and erect machinery there. A large number of leases were taken up at Back Creek, Crudine, during the latter part of the year, owing to a trial crushing from Bosenberg's claim yielding about 2 oz. per ton. The vicinity is now being well tried. A large number of fossickers are working in the neighbourhood of Wattle Flat, but it is questionable if they average more than 3 dwt. per week. A party of them, however, averaged 25 dwt. per week for some time. The best alluvial ground at present is in the vicinity of Old Station Point, Turon Point, 8 miles from Sofala, where some men are making high wages.

Ironbarks Division.

There is a slight increase in the yield of gold from the Ironbarks Field, or better known as Stuart Town, which aggregated 3,524 oz., as compared with 2,694 oz. in 1895. The quartz-mining outlook is brighter now on this field than it has been since its opening, and has attracted outside capital, which should bear good fruit during the coming year.

LACHLAN MINING DISTRICT.

Cargo Division.

There is very little mining work being carried on around Cargo, and is chiefly confined to fossickers who won about 200 oz. of gold. The Ironclad mine, after being idle some years, has been restarted and the erection of a water-jacket furnace is being proceeded with. An English syndicate has taken up the Dalcouth mine, at Sam Flat, who have called for tenders for the construction of a large dam to conserve water. Altogether the prospects at Cargo are much better, from a mining point of view, than they have been for some years back.

Cudal Division.

Some gold was obtained near Cudal during the year, but the figures are not available. At Paling Yards a shaft has been put down 70 feet, cutting a reef 3 feet wide, but a trial crushing has not been made from it yet. A few men are carrying on prospecting work on Coats and Ready Creeks.

Forbes Division.

Prospecting and developing was the principal work carried on at Forbes during the past year, consequently very little gold was won. Nevertheless, there is a decided improvement in the prospects of the field. Close to the town, on the old Britannia lead, a good many leases were taken up, owing to some very rich stone having been found in the prospector's claim. Some very rich stone was found on the North Hill, near the trucking-yards, by Foster and party, who crushed 8 tons 15 cwt. for 45 oz. 16 dwt. 8 gr. of gold. The vein averages from 3 to 12 in. thick. North of Foster's lease Hampton and party have a shaft down 40 feet on payable stone. Several parties are at work in the vicinity of Thompson's lead, and have much difficulty in contending with the heavy water and drift sand. They were supplied by the Department with a diving dress to assist them in their efforts to bottom. Some very rich finds were made on this lead in the early days. At the Pinnacle, situated about 20 miles south of Forbes, which was virtually abandoned for years, a revival has taken place through the taking up of several abandoned leases by an English company, who have erected a 30-head battery and excavated a large dam. The reefs there are large but poor, so far as is known; but if economically worked they should pay, and the stone may become richer with depth. It is to be hoped the company's operations may prove successful, as such would probably lead to the opening up of other such reefs which occur in this district.

Parke's Division.

Parke's is one of the fields in the Colony that has for the past four years been steadily increasing its output of gold, as will be seen from the following figures:—

1893	5,178 oz.	£17,583
1894	9,746 ,,	33,997
1895	10,372 ,,	38,098
1896	12,500 ,,	44,885

The new Bushman's Hill mine has given constant employment during the year to over 100 men, who were engaged "stopping." The main shaft, now 430 feet deep, is being continued; and as the erection of a cyanide plant is contemplated by this company employment will shortly be found for a large number of extra hands. There were 5,124 tons of quartz raised from this mine during the year, which returned 5,000 oz. of gold, valued at £17,500. The Phoenix mine (late Hazlehurst's) is being worked by tributors, and yields 1½-oz. stone; but the vein is small. The Koh-i-nor is also being worked on tribute, and its prospects are improving. The Birthday mine, on Bartley's Creek, is now in the hands of a company, who are erecting a 10-head stamper battery on it. This mine has been worked for years past, but not extensively. The Dayspring mine is also in the hands of a syndicate, who are carrying out prospecting operations vigorously. Another mine of importance in this locality is that owned by Messrs. Burgess and Smith, in Reid's Gully. They are working a formation about 40 feet wide which yields 8 dwt. per load all through. An 8-head battery is now in course of erection. A great many other quartz-mines are working in this division, and the majority of them seem to be yielding fairly well. The belt of auriferous country in this district is very extensive, and the large increase in the number of payable mines at work might confidently be expected. During the year under notice cyanide works have been erected in the neighbourhood for the treatment of tailings, but the returns of gold from them are not available.

Esfield

Fifield Division.

Fifield has suffered greatly from want of water for the past few years, which has retarded operations considerably, and prevented the treatment of large heaps of wash dirt lying at grass. In face of this great difficulty, however, the miners managed to turn out 980 oz. of gold and 2,900 oz. of platinum found associated with the gold, which is a very satisfactory increase on the previous year. At Platina, 3 miles from Fifield, where the platinum is found, the same water difficulty exists, and many of the claims have been temporarily abandoned pending a sufficient supply of water. There are now about 1,500 loads of wash-dirt on the surface, which is estimated to carry 15 dwt. to 1 oz. of gold per ton.

Condoholin Division.

In May of last year payable alluvial gold was reported at Carlisle, 85 miles N.W. of Forbes, but the want of water has greatly retarded the development of the discovery. The same remarks apply to the quartz-reefs which have been discovered in this locality. Work is being carried on under aid from the Prospecting Vote with very promising indications of success.

Alectown Division.

The returns from Alectown are satisfactory, being 822 oz. as compared with 594 oz. in 1895 and 362 oz. in 1894. The returns would have been much larger had a supply of water been available for crushing purposes, and ultimately the battery was removed to Parkes and erected there by a company. This is unfortunate as the development of this field will be retarded in consequence. Several new discoveries have been made during the year, notably that made by Mead and party, and known as the Emu Reef, from which they crushed 312 tons for 1 oz. per ton. Another is the "Monte Carlo," situated midway between Alectown and Peak Hill, which returned 227 oz. from 75 tons. Another very promising reef has been found on Robertson's conditional lease, but as yet no trial crushing has been made from it. Alluvial mining will now be a thing of the past at Alectown unless some fresh discoveries are made, the only alluvial gold got during the year being washed from 1,040 loads raised from the spare blocks in the old leads, and this is now exhausted.

Grenfell Division.

There is a material increase in the returns from Grenfell this year as compared with 1895, the figures being 1895 1,377 oz., 1896 1,761 oz. George O'Brien and party are still prospecting the Lucknow mine by means of assistance from the Prospecting Vote. The shaft is now down 450 feet, and it is to be continued to 500 feet. The other quartz-claims in the locality are looking well. One noteworthy fact has been the establishment during the year of cyanide works for the treatment of tailings, and from the information procurable in connection with the operations it may be assumed that the industry is a profitable one.

Murrumburrah Division.

There were 1,637 oz. of gold won in this Division, nearly all from alluvium, being a slight decrease on the previous year's yield. Work is principally carried on along the Cunningham Creek southwards towards its confluence with the Murrumbidgee River, about 80 miles from Murrumburrah. The ground is certainly very patchy, but occasionally the men do fairly well, but in any case, if at all industrious, they can always earn sufficient to keep them in rations. A few quartz-reefs are being worked, but so far they have produced very little crushing stone. Since the passing of the Amended Mining on Private Lands Act increased activity is noticeable among the miners, and numerous applications have been lodged with the Warden for authorities to search, and it is expected that some new discoveries will be the result.

Gundagai Division.

Gundagai produced 2,000 oz. of alluvial, and 600 oz. of quartz gold, a very satisfactory increase on the previous year—which was only 1,876 oz. A good deal of prospecting is going on in this district. At Jackalass 100 men are still working the alluvial ground, and make good wages, but no large individual returns have been reported. About fifty men are working similar ground at Jones' Creek, and getting fair returns for their labour. A new lead has lately been discovered in this locality by a party working under Government aid. Some good finds were recently made on private property, near Muttama and Kino, but nothing can be said about them till they are further developed. A large increase in the gold yield is expected from this district in 1897.

Temora Division.

There were 4,066 oz. of quartz gold got in this Division during the year, but the quantity won from alluvium could not be ascertained. A large number of applications were received for permits to search on conditional leases, and ten new finds were reported, four of which are considered payable. A good deal of prospecting work is being carried on at Scrub Yards and Springdale, where crushing-machines have been erected. Altogether the prospects for Temora during the coming year are very promising.

Barmeldman Division.

Mining matters are very slack in this Division, and no crushings took place during the year. The Fiery Cross Company have their main shaft down about 185 feet, where the water has become very troublesome. A new company is erecting a cyanide plant with the object of treating the 40,000 or 50,000 tons of tailings lying in the district.

Reefton Division.

Reefton shows a slightly increased gold yield, the figures being 1,820 oz., or about 200 oz. more than won in 1895. The want of capital retards the development of the field greatly. The claims are now down to water level, but the owners have not the means to go below that depth. The Enterprise and Pioneer claims were constantly worked during the past twelve months, and the latter put through 1,191 tons for 1,485 oz. The total quantity of stone raised on the field being 2,255 tons, which gave a little under 1 oz. per ton.

Wyalong and Wyalong West Division.

The Wyalong Gold-field may now be said to hold the premier position among the gold-fields of New South Wales. Although a few hundred ounces behind the yield from the Hillgrove field, the number of men employed at Wyalong is very much greater. There are indications that the year 1897 will see the yield of gold from this field maintained, as a very large number of men were engaged during the past year in work of a developing nature, from which no immediate returns might be expected. Wyalong was first brought prominently under notice about the end of 1893, and with a view of showing the strides it has made since its discovery, the yield for the past three years is given:—

	oz.	Value.
1894	9,649	£35,946
1895	24,497	91,863
1896	33,495	130,000

It is estimated that the yield for last year, as given above, was taken from 18,279 tons of stone, a very satisfactory record indeed. Large sums have been expended in machinery and the erection of extensive chlorination and cyanide works for the treatment of the refractory ore met with below the water level, which is strong proof that the belief in the permanency of the field has been fully established. The depth reached by some of the shafts may be of interest:—

The Currajong	245 feet.	Neill's	180 feet.
Three Star	235 "	Barrier	253 "
Lucknow	243 "	Hidden Treasure.....	200 "
New South Wales	175 "	Lighthouse	310 "
Junction	270 "	Shamrock and Thistle	240 "

Notably

Notably high yields per ton were obtained from Bolte's Lucknow claim, which returned 2,506 oz. from 377 tons, or at the rate of 6 oz. 13 dwt. per ton; and the New South Wales, 352 tons for 2,338 oz., equal to over 6 oz. 12 dwt. per ton. The pioneers of the field, the Messrs. Neild, may also be congratulated on the yields from their mine, as from 738 tons put through they obtained 1,541 oz. 8 dwt. of gold. The Messrs. Neild, however, have erected chlorination works of their own, which were started on the 1st November. By the 24th December following they had treated 120 tons, which gave the splendid return of 765 oz. 18 dwt. 4 gr. of smelted gold. These gentlemen have expended a large sum on the field, and cannot be too highly commended for their individual pluck and energy under very great difficulties.

Yalgogrin Division.

Yalgogrin is situated about 28 miles south-west of Wyalong, and until a few years ago was comparatively unknown. There are now 300 men employed there. In 1894 the yield was 348 oz.; in 1895, 804 oz.; and 1896, 1,250 oz. The country is hard and expensive to work, but the reefs improve with depth, and several of them have proved highly payable. Among the deepest shafts are the

J. B. J.	174 feet	Democrat	94 feet
Black Coon	94 "	Democrat Extended	110 "
Eureka	120 "	The Piccaninny	94 "
Lady Cook	100 "		

The best crushings were taken from the Black Coon, which gave 794 oz. from 215 tons of stone, and 65 tons from the Piccaninny averaged 2 oz. per ton. Several of the other claims yielded from 9 to 18 dwt. per ton. A battery is likely to be erected on the field, but as the ore at a depth requires special treatment it will be taken to Wyalong for that purpose. As a direct main road is being opened between the two places, the development of the field should be rapid, providing the seasons are at all favourable, as this locality suffers considerably from a scarcity of water for mining and even domestic purposes.

Young Division.

Mining matters in this division have for some years past presented but little change. This is chiefly an alluvial field, and produced 3,657 oz., as compared with 2,228 oz. in 1895. The Burrangong Gold-mining Company have added a puddling machine to their plant, and were successful during the last four months of the year in saving 542 oz. of gold. It is questionable, however, if the lead is of any great extent. This district is being extensively prospected throughout, and it is said the men are doing fairly well. Work at the sluicing claims has been intermittent, insufficient rain having fallen to enable the owners to work them to much advantage. During the year fifteen agreements with owners were registered under the Mining on Private Lands Act.

TUMUT AND ADELONG MINING DISTRICT.

Albury Division.

No alluvial mining has been done in the Albury Division during the year, the whole of the 1,050 oz. won being got from the quartz reefs worked on the Black Range, Cumberoona, and Stony Park. On the Black Range there are four lines of leaders known as the Portuguese, May Day, One-tree, and Blackfellows', worked by small parties, who manage to make wages out of them. At 120 feet water stops the operations, and work is discontinued for want of capital to contend with the difficulty. At Cumberoona and Stony Park the mines are on leases held under the provisions of the Mining on Private Land Act, 1894.

About 170 miners are employed in this division.

Walbundrie Division.

Although quite recently discovered, Walbundrie has made satisfactory progress, as shown by the quantity of gold won during the year, which was 884 oz., valued at £3,050. The principal claims at work are the Lone Hand, True Blue, Welcome Find, and Show Day, and eight or ten others, but it is considered that those mentioned are likely to be fairly permanent. A large amount of prospecting is being done in this locality, which is expected to lead to fresh discoveries, as the district is considered promising for the occurrence of payable gold.

Germantown Division.

There was very little mining carried on in this division during the year, and 20 oz. would probably cover the quantity of gold won. Some leases have been applied for at Four-mile, but no work of importance has been attempted so far.

Corowa Division.

Seventy-five oz. of gold were won within the Corowa Division during the year. The Corowa Deep Lead Company have just about completed their boring operations, and it is expected that the proposed shaft will be commenced at an early date. Much importance is attached to the operation of this company, and the Department is doing everything possible in the way of assistance from the Prospecting Vote.

Adelong Division.

The return of 2,754 oz. for the year, as compared with 3,923 oz. won during 1895, would lead to the belief that mining around Adelong must be in a very depressed state. As a matter of fact, such is far from being the case. The reduction in the yield is traceable to the large quantity of stone raised but not treated; one company alone having about 3,000 tons of excellent stone at grass ready for the battery. It is estimated that 9,000 oz. of gold will be credited to 1897 from this source. This is often the cause of the fluctuations in the yearly returns from many of our gold fields. The principal mine working at Adelong is the Gibraltar Consolidated Gold-mining Company, who have expended a very large sum in putting the mine in first-class order, and erecting the best class of machinery for the treatment of their ore. The Lady Mary Company's mine on the Gap Reef is still producing fairly well, having crushed 791 tons for 580 oz. It is thought the quality of the stone in this mine will improve with depth, and the advisability of sinking is being considered by the company. The Adelong Proprietary, the Union, the Kurrangong, the Caledonian, and the Gibraltar South Companies are all carrying on prospecting work, and it is expected that work will be resumed on the Victoria and Old Hill Lease during the forthcoming year. The battery owned by Messrs. Wilson and Ritchie treated 1,656 tons for 1,330 oz. exclusive of the yield expected from concentrates. At Mount Adrah, Victorian syndicates have acquired properties and erected a battery and other machinery. With regard to alluvial mining the Adelong Creek and its tributaries still have attractions for the fossicker. More than usual industry is required to make a living now in this old ground. The scarcity of water has greatly retarded work during the last six months of the year.

Junce Division.

The slight revival in mining at Junce dates from the pegging out of the Old Dust-hole Claim by Mitchell and party in 1895. During the year under notice Mitchell and party sold out to an English Syndicate for £5,000, who have also acquired the "Just in Time" and "Doctor's Reef" properties. The mines are now being developed on a small scale preparatory to more extensive operations later on. In addition to these, work is being carried on vigorously at the Rockdale, Perseverance, Specimen Hill, and Walle's Reef mines. A scarcity of water has been a great drawback on the field. All the quartz in the surface workings is well oxidised, but sulphide ore has been met with in the Dust-hole mine at the 125-ft. level. The average width of the reefs, so far as tested, is about 2 feet, and a crushing from Walle's mine yielded as high as 4½ oz. per ton, and one from the Dust-hole 3½ oz. Rich assays have been obtained from the Rockdale mine, but no bulk trial has yet been made. In Specimen Hill a large body of quartz is to be noticed heavily impregnated with black tourmaline. Work is still being carried on at Eurongilly and Wantool, some of the parties being in receipt of prospecting aid.

Tumut Division.

The Mining Registrar reports that the quantity of gold won within the division during the past year was not obtainable, but that gold-mining seemed to be making steady progress.

Tarcutta

Tarcutta Division.

The only mine at work at Tarcutta is that owned by Best and party, who are in receipt of aid from the Department. The reef has not yet been struck in their shaft. Mining here will get a much required impetus should it prove payable when struck. Alluvial mining is confined to a few men near Humula, who make little more than a bare living.

Batlow Division.

Batlow is essentially an alluvial gold-field and is, perhaps, better known as Reedy Creek. The gold won amounted to 1,350 oz., exactly 400 oz. over the quantity won during 1895. Some good-looking reefs, however, have been lately discovered at Paddy's River, about 15 miles from Batlow, and the erection of a battery is in contemplation. A large formation, known as Walsh's Dyke, said to be 150 feet wide and of low grade, is under offer to an English syndicate, who propose erecting extensive machinery.

Tumbarumba.

It is very satisfactory to be able to report a very large increase in the gold yield from this division, which was 3,021 oz., as compared with 1,850 oz. in 1895. The principal mines at Tumbarumba are the Barra and the Tumbarumba Flat Sluicing Companies, and in quartz there is Storey and party's at Paddy's River and Henicks's at Back Creek. Some reports of sensational finds at Back Creek were circulated, which led to a mild rush, but nothing came of it, although the locality and the supposed line of reef were well prospected. It is thought that improved machinery would make Storey's reef payable, and is likely to be acquired by a Melbourne syndicate, who will erect the necessary plant. This will be a good thing for the district generally, and will certainly stimulate reef mining to a great extent. Henicks and party are now erecting a five-head battery 3 miles north of the town, which they propose driving by water-power.

Narrandera Division.

The only mining work being carried on within this Division is in the "Harry Smith" mine, Grong Grong, and its vicinity, and at Cowabbie. At the latter place Singleton and party, who are in receipt of Government prospecting aid, have sunk a shaft 172 feet deep. The gold won is estimated to be \$44 oz., valued at £3,289, which is about the quantity won the previous year.

Cooma Division.

The Cooma Division furnished 1,682 ozs. to swell the grand total for the year, 602 oz. of which were won from alluvium, the balance from reefs. Although a large amount of prospecting work has been done in this division during the last twelve months, there are no new finds to report. Cowra Creek appears the most promising part of the field, where eight leases are being fully worked, some of them by tributors. Four batteries, representing thirty-three head of stamps, are kept well employed. The fineness of the gold is a matter of some difficulty, but owners are now making efforts to obtain machinery to deal with it.

Kiandra Division.

The Kiandra gold-field returned 777 oz., or 40 oz. less than the previous year. The New Chum Hill mine has changed hands, and work is being vigorously carried on with satisfactory results. The tunnel put in by John Robyns by means of prospecting aid has now struck the wash, which prospects well. J. M. Lett has also a tunnel in about 1,000 feet long, and is now rising to tap the wash. This tunnel has also been put in by means of aid. These mines alone should now be in a position to give employment to a large number of extra hands. Moulton and party have erected a battery, and have had a few crushings, averaging $\frac{1}{2}$ oz. per ton. This party experience much trouble with water in their claim. The reefs at the Eight-mile Ridge are still being worked, with results scarcely up to the average of the field. This is a favourite district with fossickers during the summer months, the abundance of water being a great inducement. The men, from their contented appearance, seem able to win sufficient gold to supply their immediate wants.

Nimitybelle Division.

This is a very extensive outlying division, and it is very difficult to get a correct record of the gold won by the men working the creeks and river-beds among the mountains, but the quantity is estimated at 150 oz. M'Court and party are still working their gold leases at Kydra, and a trial crushing sent to Sydney for treatment yielded about $\frac{1}{2}$ oz. per ton.

Captain's Flat

At Captain's Flat the whole of the mining is represented by the work carried on by the Lake George United Mining and Smelting Co. This company has lately been floated on the English market for £60,000, and is now known as the Lake George Mine (Limited). The mine produces copper principally, but also large quantities of silver, and gold and lead in lesser proportions. The total value of their output for the year was £24,608 5s. 11d. The company only worked about eleven months of the year, a strike among the wood-carriers to the mine having delayed work some four weeks. At the present time about from 300 to 350 men are employed mining, and excavating sites for the erection of new furnaces and machinery for the treatment of crude ores direct from the mine. When in full work it is expected that employment will be found for over 1,000 men.

Bungendore Division.

Mining matters in this division have not been too flourishing during the past year, the output of gold being only 363 oz. as compared with 814 oz. in 1895. Contrary to anticipations very little work has been done at Bywong during the past twelve months, the principal object of the mine owners would seem to be the successful sale of their properties, leaving the work to the buyer. A great outcry was made for a village site, and when that was laid out only one application was received for an allotment. Then an agitation was got up for the erection of a battery, when it was erected the mine owners made no attempt to raise stone, and there are now three plants lying idle for want of stone to crush. Mac's Reef is again practically deserted.

Gundaroo Division.

The only payable claim in the Gundaroo Division is that owned by Kershaw and party at Dairy Creek, who treated 26 tons for 80 oz. of gold, and applications have been lodged to lease the adjoining ground. A few men fossicking on Brooks Creek manage to make a little more than a living at the work. The total quantity of gold won is said to be 195 oz.

Queanbeyan Division.

The discovery of gold at Gooda Creek on O'Rourke's prospecting area caused considerable excitement for the time being, but with the exception of the Prospectors' claim nothing of much value was found in the immediate vicinity. The prospectors sent 8 tons to Sydney for treatment, which yielded 12 $\frac{1}{2}$ oz. per ton. Prospecting work is being vigorously carried on in the locality. It is said a very promising reef has been found on private land about 2 miles south of Gooda Creek.

Wagga Wagga Division.

There is little mining of importance being carried on around Wagga Wagga. Several grants have been made from the Prospecting Vote to test some well-defined reefs in the locality, but no noteworthy discovery has been reported so far. There is only one crushing to record, and that was by Holland and party, working on the high ranges at Pullitop, who got 38 oz. from 76 tons of stone.

Welaregang Division.

This is quite a new division of the Tamut and Adelong Mining District, and is situated to the west of Kiandra. The principal mine at work is owned by "The Bogong Reefing Co.," who have 300 tons of stone at grass awaiting the completion of their machinery. This stone is estimated to go 2 $\frac{1}{2}$ oz. per ton, and should the result prove the correctness of the estimate greater attention will be given to the development of this district. Some alluvial gold is being got at Toolong, Kancholan, and O'Gilvie Creeks, but the exact quantity could not be ascertained. At Bringalong, a party are prospecting a 10-in. vein which assays 1 $\frac{1}{2}$ oz. of fine gold per ton. The returns show that 1,000 oz. of gold were won in this division during the past 12 months, valued at £3,600.

THE SOUTHERN MINING DISTRICT.

Braidwood Division.

In the Braidwood Division there was little mining work beyond fossicking carried on during the year, which resulted in 775 oz. of gold being won, valued at £2,862 7s. 3d. The Braidwood Proprietary Company's works at Colombo are nearing completion, which will probably afford employment to a large number of men. At Jembaicumbene Creek, Harness and Jelfcoat's claim on private land is turning out payable gold, and the party have the erection of modern pumping machinery in contemplation. Several other claims are being worked with fair success.

Araluen Division.

Araluen has been affected with drought during the past twelve months perhaps more than any other portion of the Southern Mining District, and was severely felt, more especially by the sluicing claims. Barrett and Wood, who received aid from the Prospecting Vote, have opened up a very promising claim on new ground. The yield of gold during the year from the whole of the Division was 2,773 oz., or 224 oz. less than 1895, which, in view of the unfavourable season, might be considered very satisfactory. With the introduction of improved appliances this field is expected to yield even better returns.

Major's Creek Division.

The Major's Creek Gold-field, it is satisfactory to say, is still increasing its output of gold; and during the year under review returned 3,720 oz., valued at £14,774, which is nearly treble the quantity won in 1895. The greater portion of the gold was won by sluicing and the returns vary according to the season and the water available for carrying on work. During the latter part of the year the puddling-machines at Long Flat were idle through scarcity of water. No new finds are reported from Snowball. About twenty-five men are still on the ground, having faith that heavy deposits of gold will still be discovered there. A small patch is discovered occasionally, which strengthens their faith in the locality; but beyond that they only make a bare living. The new find at Back Creek has given employment to a large number of men with varying success. Back Creek can hardly be considered a new gold-field; but in reality is only an extension of an old field, worked some thirty years ago. It is said that 1,746 oz. of gold from this rush were purchased during the year. This quantity would have been greatly increased if water had been available to keep the puddling-machines in full work. The Eureka Gold-mining Company's mine on Snobb's Reef, Big Hill, near Major's Creek, is being worked by tributors, who raised 1,178 tons for 863 oz. The shaft is now down about 186 feet, and the vein is 10 to 12 inches wide. Several other parties are working quartz-claims with fair results.

Little River Division.

This Division produced 2,191 oz. of gold during the year, which might be considered satisfactory when the low average rainfall is taken into account; and, owing to the drought, mining was confined principally to the banks of the river. Contrary to expectations the Day Dawn mine did not start work during the year; but arrangements are being completed to have the mine reopened.

Nerriga Division.

It is regrettable to learn that many of the companies formed to work the Shoalhaven drifts, from which so much was expected, have ceased operations, and, from present appearances, there is little hope of them resuming work. Some attention is being given to the quartz-reefs in the locality, from some of which very satisfactory results are being obtained. The gold won during the year was 971 oz., which compares favourably with 1895.

Yalwal Division.

Approximately, Yalwal produced 1,495 oz., valued at £4,530, during 1896. Litigation is still proceeding in connection with the Homeward Bound Gold-mining Company's property, and, in consequence, the mine has been idle all the year. The Pioneer Company, who employ about thirty men, raised and treated about 10,000 tons of stuff during the year; King's mine, 1,468 tons; the Eclipse Company, 551 tons; and the Caledonian Company, 400 tons. Although the ore is low grade, it can be cheaply raised and treated. Other five quartz-claims are at work, who each had several small crushings for fair yields. A few men are working in Grassy Gully and obtain a little gold.

Ulladulla Division.

Ulladulla has quite recently been created a separate mining Division of the Southern District. Several parties are prospecting in the locality, and aid has been granted in some cases. A gold lease has been taken up at Conjola Creek, 6 miles from Conjola, and work is about to start. About 20 miles south from Milton, a party of three are working the Murrumbidgee sea-beach for gold, and in six months obtained 27 oz., valued at £108. These operations extend over an area of about 9 acres. Greater attention will probably be given to these sea-beaches on the southern coast during the forthcoming year.

Nelligen Division.

The Nelligen Division yielded 324 oz. for the year, as against 190 oz. for 1895, the bulk of it being obtained from the few quartz-claims working at Brimbramalla. The Clyne Mallow reefs have not yielded as anticipated in the last report, but prospecting and developing work seems to be carried on with even greater briskness than ever. A few men are still working at Currawan with fair inducements. Several grants were made from the Prospecting Vote in this locality, and one to J. McLeod and party resulted in the discovery of a nice reef, and a battery is now being erected on the mine. The alluvial mining carried on throughout the Division is of little consequence.

Bateman's Bay Division.

The Division of Bateman's Bay was formed during 1895, when it returned 294 oz. of gold. This year the yield is 817 oz. The Big Hill Company have obtained suspension for a few months, but will shortly restart work. During the year they crushed 600 tons for 600 oz. A new line of reef was discovered on the Big Hill about the end of the year, showing gold freely, but the value of the discovery has not yet been tested. Several leases have been taken up in consequence of this find. At Stony Creek, White Bros. had a small crushing of 36 tons for 32 oz. A large quantity of genuine prospecting work is being carried on in this locality at the present time, which is expected to lead to some fresh discoveries.

Moruya Division.

At Bimbimbic, situated between Mogo and Moruya, a number of gold leases have been applied for, chiefly by the Anglo-Australian Exploration Co., who, it is stated, intend to introduce a large amount of capital into the district. At Wauban Creek, 3½ miles south of Moruya, extensive prospecting work is being carried forward, and a grant has been made to thoroughly test Donkey Hill by means of a tunnel. Further to the south of Moruya about 11 miles the Italia mine, at Turlingah, is being worked by tributors. It is satisfactory to be able to say that the gold won, throughout the Division, during the year was 1,453 oz., valued at £5,468, as compared with 330 oz., valued at £1,195, won in 1895.

Nerrigundah Division.

Nerrigundah contributed 1,003 oz. to the general total, which is very little short of the yield for 1895. Quartz-mining in this Division is nearly at a standstill, as only 43 oz. of the total yield were taken from that source. A company has been formed to work some leases at Tin-pot and Bumbo, and operations will be commenced at once. A battery is to be erected, and the ground systematically worked. This would point to a revival of quartz-mining in the locality. The alluvial gold has been won principally from those creeks and gullies said to have been worked out years ago; and it is a noteworthy fact that a majority of the men so employed made fair wages at the work.

Wagonga

Wagonga Division.

There has been a slight revival in gold-mining within this Division during the year, the quantity of gold won being 675 oz. The reefs on Mount Dromedary were given another trial but the results proved unsatisfactory. As the ground is hard and also very wet, it requires a good yield per ton to cover working expenses. Several tunnels have been put in by working miners, but the want of capital for development compelled them in some cases to abandon their holdings. The New Hope mine, near Wagonga, has a considerable quantity of stone at grass, and crushing will be started very shortly. About 2 miles westerly of this mine, near The Bluff, gold prospecting operations are being carried on. This same ground was previously taken up for turquoise, but so far it has not been found in payable quantities. In the vicinity of Bermagui and Montreal, there are only a few fossickers at work. At Coolagilite, a shaft is being sunk 100 feet, with a view of further testing this, at one time, promising field. The party are receiving Government aid for the work. This Department's attention has been repeatedly drawn to a very large quartz-lode which traverses this Division, and is traceable on the surface for some miles. With a view of having the fullest information on the subject, Mr. Taylor, the Government Metallurgist was, in October, 1894, instructed to furnish a report on the deposit, which is herewith published for the information of the miners, and the mining community generally:—

"I HAVE the honor to report that, in accordance with your instructions, I have visited the district of Mummuga Creek and Wagonga River in Dampier County, accompanied by Mr. C. L. Garland, who has spent a great deal of time in prospecting in those localities. The object of the visit was to examine the enormous quartzite deposits occurring there, and to select places from which bulk samples of 10 tons could be taken and brought to Sydney for treatment, for the purpose of ascertaining whether those deposits would yield sufficient gold to pay for extraction if worked on an economical and, therefore, necessarily large scale.

"Some eight or ten test samples had already been taken from the bluffs, which rise 200 to 300 feet above Mummuga Creek on its north bank; these were reported to yield from 2 to 9 dwt. of gold to the ton, 3, 5, 6, 8 dwt. being amounts quoted, and not a single blank crushing, the average being over 6 dwts; but trials made with mortar and dish did not confirm these results. It was only occasionally that any gold appeared in panning off a sample. Thus arose considerable doubt and perplexity. If it could be shown undoubtedly that at least 2 dwt. of gold to the ton could be extracted there would be sufficient inducement to establish an industry capable of almost infinite development, the raw material being so abundant and so advantageously situated for economical treatment.

"As practically no gold could be found by panning, it was considered to be impossible to select the stone in any way—in fact, some of the lower results obtained in the trials just mentioned were yielded by stone that seemed the most promising.

"A Huntingdon mill was erected on Mummuga Creek by the Hon. J. C. F. Johnson, M.L.A., South Australia, to thoroughly test the bluffs on that creek; this rendered the taking of samples from that locality quite unnecessary, consequently our attention was mainly directed to the similar quartzite deposits on the Wagonga River.

"On the north side of this river, from Billa Billa Creek to its mouth, a continuous deposit of quartzite is found. In places on the south side of the river are similar deposits. We walked over the hilly ground between Barlow's Bay and Mummuga Creek along the course approximately shown by the dotted line on the accompanying tracing, and found the entire route to be on quartzite, ascending to a height of 750 feet or more above sea-level. Over the whole district the stratification as observed in the quartzite, has a dip almost always vertical or nearly so, and a strike N.W. to N. by W., or approximately parallel to the upper reach of the Wagonga River.

"After going well over the ground, seven different places were selected from each of which to take 10 tons of the stone, and these parcels have been mined, brought to Sydney, and treated in the Huntingdon mill of Messrs. Parke and Lacy. The localities from which the samples were taken are indicated on the tracing by a full circle and cross (⊕) with letters which marked the sample. The same sign dotted shows where other samples have been taken by private individuals.

"In each of the seven samples gold was obtained in the mill, but in no case was there sufficient to pay for extraction, even when treating the stone on a large scale.

"Particulars of the crushings are given in the following table:—

Brand.	Weight crushed. Tons.	Retorted gold per ton.	Concentrates.		
			Per cent. of Ore.	Gold per ton conc.	Silver per ton conc.
W S	9.45	0.9 grains.	0.18	oz. dwt. gr. 0 7 6	oz. dwt. gr. 0 14 12
W N	10.59	Less than 0.54	0.21	Traces.	0 5 10.
B	9.42	13.3 grains.	0.20	0 10 21	0 5 0
C	11.00	10.0 "	0.15	0 3 6	0 4 14
O P	9.41	10.2 "	0.20	1 1 18	1 1 18
G B	9.79	6.9 "	0.20	0 3 6	0 3 6
G T	10.31	4.4 "	0.13	0 2 22	0 3 6

"It will thus be seen that the highest yield, namely, the sample marked B, from Barlow's Bay, 13.3 grains of retorted gold to the ton of ore, is only about one-fourth of the amount required for economical working under favourable conditions.

"Since these samples were taken the Huntingdon mill on Mummuga Creek has crushed 50 tons or more with unsatisfactory results, and Mr. Johnson has ceased operations there. These later trials leave unexplained the higher results mentioned at the commencement of this report. Had those earlier results been confirmed the development of the gold-mining industry in the district in question would have been phenomenal."

Cobargo Division.

The few fossickers working around Cobargo won among them about 20 oz. of gold, valued at £77, got chiefly in the vicinity of Montreal. It is questionable if they made enough to purchase their rations.

Bega Division.

With the exception of the recent discovery at Wolumba, there is little mining being carried on within the Bega Division. In the prospectors' claim the reef was struck in the main shaft at 40 feet from the surface, and proved to be 4 feet wide. A trial crushing of 55 tons was sent to Pambula and treated at the Mount Gahan battery, which gave a return of 275 oz. of gold and 392 oz. of silver; the tailings also assayed 4 oz. gold and 50 oz. silver per ton. The shaft is being continued, and the erection of a 10-head battery proceeded with. Vigorous prospecting work is being carried on, with a view of picking up a continuation of the lode, but without success so far. This is a very favourable locality for the miner, there being an abundance of timber and water.

Pambula Division.

The Pambula Gold-field returned 2,550 oz., valued at £8,879. This is a very considerable reduction on the yield for 1895, which is explained by the fact that a large quantity of the stone raised during the year was not treated. In addition to the ore put through by the Mount Gahan Company, they also treated, by the cyanide process, 3,050 tons tailings and 362 tons slimes, which yielded 617 oz. of gold, valued at £1,777. The Great Victory Company's shaft is now down 215 feet, and the 365 tons of ore treated by them returned 887 oz., valued at £3,519. It is stated that the company propose continuing their shaft to 600 feet. The Falkner Company raised 307 tons, but only treated 62 tons, which yielded 837 oz., valued at £2,845. The Hidden Treasure had one small crushing of 42 tons, which gave 52 oz. A large amount of prospecting work has been carried out in the neighbourhood of Wyndham. About the end of the year a discovery of gold was made in honeycombed quartz, and entirely different to anything previously found in the district. The discovery was made on a cancelled mineral lease, and the miners are now sinking on it. In November Sinclair and party reported the discovery

discovery of payable gold, 15 feet from the surface, in their claim situated in the parish of Nangatta. A sample of quartz sent for assay yielded at the rate of 8 oz. 16 dwt. per ton. A second discovery was made by John Laird at a depth of 50 feet which assayed 9 oz. 10 dwt. per ton, the reef being 10 inches wide. A small rush took place in consequence, and a lot of prospecting work is being done. Andrew Brown and party, the prospectors of this locality, have good ore in sight, but have no proper machinery for testing it. Several reports have gained currency of good finds having been made in the parish of Coolaugubra, situated about 35 miles from Pambula, and a few tons tested at the Mount Gaban battery yielded a little over 1 oz. per ton. This has caused a large number of men to go out prospecting, and more land is likely to be taken up. It is thought that the year 1897 will see a great revival in mining throughout the Pambula Division.

Bombala Division.

Very little mining work has been done within this Division during the year, and the gold won amounted to 52 oz. Although several parties were in the field prospecting they failed to make any new discovery worthy of note.

THE HUNTER AND MACLEAY MINING DISTRICT.

Copeland Division.

The one noteworthy fact to be recorded of the Copeland Gold-field during the year is the finding of good gold at a lower level than ever previously attempted, but more powerful machinery is required before any progress can be made. The Lady Belmore and Centennial mines are still working, but have much trouble with the water in the mine. The Old Mountain Maid is being worked by Tressider and party, who have erected a small winding engine, to raise stone from the old workings. The old Rainbow mine has been taken up by a company, who intend erecting pumping machinery. Johnson and James received aid to further test the Prince Charlie mine, but although they drove about 400 feet on the reef, they were unsuccessful in striking payable stone. Brockwell and party have started to sink on the Mechanics' line of reef, and are down about 70 feet. The bulk crushings were taken from The Lady Belmore mine, viz., 74 tons for 135 oz. The Mountain Maid Company put through 312 tons for 111 oz., and a small parcel of 25 tons from the Centennial yielded 29 oz. of gold. At Boranel, McDonald and party put through 14 tons for 23 oz., and the Gloucester River Syndicate 24 tons for 30 oz. The Mint Claim at Bowman is still raising good stone, the last crushing of 20 tons taken from it returned 28½ oz. of gold. There has been no new discovery of alluvial gold, the work being confined to a few fossickers, who won among them 108 oz. from the creeks and gullies. Mining operations at Coolongolook and Paddy's Creek are brisker now than they have been for years past, and some good returns are looked forward to from the claims now being opened out. The total yield from the Division during the year was 503 oz., a slight increase on the year 1895.

Dungog Division.

Mining has been rather dull during the past year in the Dungog District, and the gold yield shows a slight falling-off. There are now only two mines at work at Monkerai, the work done being mostly of a prospecting nature. The same state of things exist at Whispering Gully. At Upper Wangat there is nothing doing of any importance, and at Cherry-tree Hill, plant valued at about £1,500 is lying idle. Several grants from the Prospecting Vote have been made in the locality, but till outside capital is introduced into the field, and practical demonstration given that the reefs in this district will pay if economically and systematically worked, mining will probably remain in its present dormant state on this field.

Kempsey Division.

There is very little gold-mining being carried on in the Kempsey Division. The Nambucca Heads Gold-mining Syndicate raised a few tons of stone during the year, but did not treat it. Several mines are, however, being worked for copper, silver, tin, and antimony.

Taree Division.

It is estimated that this Division yielded during the year 800 oz. of gold, won principally in the vicinity of the Cella River, situated some 55 miles from the township of Taree. Some very good stone is being raised, and there is every indication that this locality will yet become a scene of great mining activity. At the present time about sixty men are on the diggings.

PEEL AND URALLA MINING DISTRICT.

Glen Innes Division.

The gold returns from Glen Innes are much the same as the previous year, the quantity being 569 oz. The principal operations in quartz-mining are carried on by the Glen Elgin Gold-mining Company at Glen Elgin. This company have a valuable and extensive plant, and are working a reef 2 feet wide, yielding about 1 oz. per ton, and may therefore be presumed to be working at a profit. Thomas and party's reef in the same locality has not been further developed owing to some misunderstanding amongst the partners, and the battery has been idle. The alluvial ground at Glen Elgin gives employment to about thirty men, but the ground is patchy and unreliable. The bulk of the miners in this Division are employed mining for tin.

Kookabookra Division.

This Division produced 620 oz. of alluvial gold, which is 15 oz. less than the quantity won during 1895. This gold was won on the old Oban Gold-field, Nowland's Creek, and on the Mitchell River, but a scarcity of water greatly reduced the usual average earnings of the men. Quartz-mining at Kookabookra is at a complete standstill, and the two batteries on the field have been idle during the year.

Armidale Division.

The mines around Armidale are steadily increasing their output of gold. In 1894 the yield was 432 oz., in 1895 554 oz., and 1896 1,700 oz. Work is chiefly confined to the localities of Tilbuster and Puddledock. Some of the mines there have been granted suspension, but are likely to resume work again shortly. A large number of men are still working the alluvial ground in the vicinity with varying success. Some very promising deposits of silver ore have been found in the neighbourhood of Rockvale, and are now being tried.

Hillgrove Division.

The returns from Hillgrove show a very satisfactory increase for the year, being 24,420 oz. as compared with 21,617 oz. in 1895. This field is divided into two Divisions, and when the 13,481 oz. returned by the Hillgrove West Division is added the aggregate total is 37,852, which is the highest yield from any gold-field in the Colony for 1896, Wyalong not excepted. The Baker's Creek mine is still the principal mine at Hillgrove, and crushed during the year 13,095 tons for 12,550 oz., valued at £43,830, which has allowed of £10,000 being paid away in dividends and a substantial sum carried forward. Woodbury's vanners have been added to the concentrating machinery with good results. Since November, 1887, this company have mined 72,352 tons of stone for 152,356 oz. of gold and have paid in dividends, £237,500. The Eleanora mine has had their 30-head stamper battery working continuously during the year and treated 13,453 tons for 8,057 oz. and 365 tons of concentrates yielded other 3,062 oz., the total value of the gold won being £40,577. This company paid £5,000 in dividends, a considerable overdraft paid off and a large sum carried forward. Ten additional Fruc vanners have been added to the machinery whereby a large quantity of valuable tailings have been profitably treated. The Garibaldi mine is now the property of an English Company who have sunk the main shaft to 260 feet, and are now cross-cutting from that level to strike the reef. Winding engines have been erected, and five Fruc vanners have added to their battery and crushing will be started at an early date. The Golden Gate Gold-mining Company treated 196 tons for 300 oz. of gold, the machinery being driven by electricity generated at the Gara Falls. The prospects of this mine have greatly improved with the extensive driving on the main lode, and it is expected that the battery will now be able to run continuously. This company were greatly assisted by means of a small grant from the Prospecting Vote. The Baker's Creek Consols mine is now held by an Adelaide Company. The main shaft has been sunk to 210 feet and driving is now being done at the 200-foot level. This mine promises well. The Baker's Creek No. 1 Extended is under suspension with a view of flotation on the London market. The tunnel is now in 400 feet, and it is thought it will have to be continued other 500 feet before the reef is struck. The want of capital has retarded the development of the Baal Gannum claim. Several

trial crushings have been taken from the Phoenix mine at Rock Vale, which have proved sufficiently good to induce the owners to proceed with its further development. The results from the trial crushings are, however, not available. J. M'Carthy and party are sinking on Surface Hill by means of aid from the Prospecting Vote, with very promising indications. Mining operations on the field have been considerably interfered with owing to a scarcity of water for mining purposes. The Baker's Creek mine was idle for three weeks, and the Eleanora Company were prevented from working a portion of their vanners used in the treatment of old tailings. The Hillgrove public crushing battery was idle for some considerable time from the same cause. This field is now attracting the attention of English investors, and it is thought that a judicious expenditure of capital will be the means of discovering yet further deposits of payable ore.

Hillgrove West Division.

As stated above, the yield for the year reached 13,431 oz., valued at £47,551, which is nearly double the quantity won in 1895. The scarcity of water proved a great hindrance to work, but the batteries were only compelled to stop for about one week. The Sunlight Gold-mining Company are now paying dividends. The Company raised and treated 13,089 tons for 8,536 oz., valued at £29,342. Their plant consists of 40-head of stamp, with the necessary concentrating machinery. The deepest level is 600 feet, and the lode averages from 1 to 10 feet wide. The West Sunlight Company crushed 7,480 tons for a yield of 4,581 oz., valued at £16,910. The East Sunlight Company are driving for the Sunlight reef, and have a tunnel in about 400 feet to intersect it. Very little work has been done on the Starlight quartz claims during the year. A party of miners worked them on tribute for a few months, and crushed 8½ tons for 27 oz. The Earl of Hopetoun mine has changed hands, and is now worked by the owners, who raised 230 tons which returned 336 oz. It is expected that the forthcoming year will see increased activity on this field, as there is a probability of outside capital being introduced into some of the mines.

Uralla Division.

Work on the Rocky River diggings was greatly retarded owing to the scarcity of water during the year. Although a large amount of prospecting was carried on, there is no discovery of note to report.

Walcha Division.

The quantity of gold won in this division is estimated at 1,070 oz. A number of miners have settled themselves in the vicinity of Nowendoc and can make fair wages. At Tia several grants have been made from the Prospecting Vote, and work is being carried on vigorously. Only one crushing has been reported, and that was from the Sleeping Beauty mine of 300 tons for 100 oz.

Swamp Oak Division.

Two new discoveries were reported in this division during the year—the first being at Eulo, on the M'Donald River, and the second on Shearin's Creek, 7 miles N.E. of Swamp Oak township. The discovery on the M'Donald River did not turn out as expected, but that at Shearin's Creek promises to be of some note. A trial crushing of 6 tons made at the Hillgrove Battery yielded 2 oz. 8 dwt. 19 gr. per ton. As the stone was taken from the surface it may be considered highly satisfactory; but another 6 tons is being taken out from a point 400 feet lower down the hill. The Highland Mary mine has been taken over by an English company, who have also acquired other properties at Niangala. Very little work is being done either at Paradise or Glen Morrison, although very good returns were at one time got at both these places. The fact that a number of cancelled leases have been applied for recently would seem to denote a revival in the mining industry in the Swamp Oak District. The gold won for the year was 2,037 oz., valued at £7,320.

Tamworth Division.

There were about 260 oz. of gold won within this division during the year, but as the bulk of it was obtained by fossickers it is difficult to arrive at an exact estimate. Efforts are still being made to develop some likely looking ground at Levy's Springs. At Spring Creek, near Moonbi, a few parties seem to be doing fairly well, and recently some very nice specimens have been obtained.

Nandlc Division.

The mines in this division, the principal ones being situated at Bowling Alley Point and Hanging Rock, produced about 2,836 oz. of gold. Some very good crushings have been made during the year, notably one by Gagley and party, the Excelsior mine, who put through 20 tons for 90 oz., and another of 19 tons from the Black Snake mine for 190 oz. Deegan and party's mine produced 300 oz. during the year, and the Peel River Prospecting Company crushed 790 tons for 530 oz. Alluvial mining is always fairly brisk in this division, the locality being a favourite one with fossickers.

Bendemeer Division.

About sixty men are working on the banks of the Congi and M'Donald Rivers, but the scarcity of water has hampered their operations severely. They, however, succeeded in winning 341 oz. of gold, valued at £1,294 15s.

Stewart's Brook Division.

This division also embraces Moonanbrook, Omadale Brook, and the Denison diggings. The principal mine in this division is the New Royal Standard, which produced 3,383 oz. of gold from 796 tons of stone. The New Stewart's Brook Company employ 31 men, and raised 650 tons for 456 oz.; The Lady Grace, 64 tons for 61 oz.; The Lady Maud, 24 tons for 51 oz.; and many other crushings, aggregating 2,243 tons, yielding 4,444 oz., valued at £23,253. The splendid results from the New Royal Standard mine have given a fresh impetus to the field, and operations have now been commenced on the other side of Stewart's Brook. Attention is being particularly directed to Castle Gully, which is considered very promising for the occurrence of payable reefs.

Barraba Division.

The Barraba Division returned 600 oz. of gold for the year, valued at £2,340. At Crow Mountain prospecting work is being carried out vigorously, and several grants of aid have been made in this locality from the Prospecting Vote. The "Dodger" mine is still producing rich stone from about the 60-ft. level. The Black Mountain mine is looking well, and work is now being carried on at the 320-ft. level. At Woods' Reef the owners of the Woods' Reef extended claim are raising rich stone from the 18-ft. level, with every appearance of it continuing. Operations at the 'old Woods' Reef mine have been much impeded owing to the scarcity of water for crushing purposes. Very rich patches are occasionally met with, and many of the veins assay up to 20 oz. per ton.

Bingara Division.

The rich finds near Top Bingara, reported in April, did not last, but pinched out at a shallow depth. These discoveries and the finding of new lodes subsequently led to the pegging out of a large area of land, but they also proved patchy. Monie & Co. are still carrying on work at Barrack Creek. Their shaft is now down 150 feet, and they have a tunnel in 300 feet. A 5-head battery and a wire rope tramway have been erected. The lode is said to be 3 feet wide. At Spring Creek, a party are working the Mountain Maid Lease, and are getting fair gold. A large number of men are still engaged fossicking among the old workings in the vicinity of Snob's Hill, Bobby Whitlow, Spring Creek, and Upper Bingara. Some nice "pockets" are occasionally met with, but it is questionable, if taken all the year around, they make more than a bare living.

NEW ENGLAND MINING DISTRICT.

Fairfield (Drake) Division.

This division produced gold to the value of £21,730 10s. during the year. The principal quartz mines in full work were the All Nations, Nil Desperandum, Rainbow, Pig and Whistle, Great Boulder, Lone Hand, American Barber, Lady Hampden, and The Lady Jersey, all of which have yielded satisfactorily. The depth of the mines referred to, with the exception of the Lady Jersey, is from 80 to 100 feet. As in all the claims, particularly those around Mount Carrington, the oxidised ore is passed through at that depth. Below that depth, the sulphide ore is met with, which is so refractory that the present machinery employed cannot deal with it. Consequently, operations are confined to the oxidised material. The "Pioneer" shaft, on the top of Mount Carrington, is now down 200 feet where the reef is 1 foot wide. About 200 tons of this refractory ore has been raised, but there is no suitable machinery on the field to treat it. The erection of works to deal

deal with the complex ores seems now to be a necessity, as the oxidised is quickly becoming exhausted. In the Lady Hampden mine a very large body of this complex ore has been proved to exist. The lode is about 50 feet wide and runs due north and south. Several parcels have been taken from this immense formation and treated in the ordinary way at a quartz-battery with satisfactory results. From 350 tons, 270 oz of bullion were obtained, containing gold to the value of £244 and silver £20. With proper machinery it is thought this body of ore could be worked very successfully.

There are about 250 Europeans and 100 Chinese profitably employed in alluvial mining throughout this district, principally on the old diggings at Timbarra, Poverty Point, M'Leod's Creek, and Tooloom. It is said that some of the Europeans earn on an average £2 10s. per week, the majority, however, from 30s. to 35s. per week. Lionsville seems to be on the eve of a mining revival. A quartz-mill has been erected near the Shellmalac Band of Hope, and other lines of reefs, which have been idle for years, and trial crushings have proved so encouraging that in all probability a large number of men will again find employment at Lionsville. Alluvial mining is not so brisk as usual at Yulgilbar, owing to the fact that no fresh discoveries have lately been made. A new line of reef has, however, been discovered in that locality—on the east side of the Clarence River. A parcel of 2 tons from the reef was treated in Sydney, and yielded 7 oz. per ton.

Tenterfield Division.

Operations on the Buck line of reef, Boonoo Boonoo, have ceased owing to heavy water in the shaft; the party had aid from the Prospecting Vote to sink to 300 feet, but stopped at 204 feet. Several other parties are in receipt of aid in this locality but no discovery has resulted so far. The quantity of gold won in the division during the year is 160 oz. valued at £520.

Wilson's Downfall Division.

Acacia Creek and locality, where a little gold-mining was carried on in former years, have now been abandoned, and mining work is now confined in this division to silver and tin, which is dealt with under their respective heads.

CLARENCE AND RICHMOND MINING DISTRICT.

Grafton Division.

There were only about 780 oz. of gold got in this division during the year, many of the miners having applied for suspension with a view of obtaining more efficient machinery for the treatment of the refractory ores to be dealt with. It is confidently asserted that many of these reefs would pay well if the mines were equipped with proper plant as they give good promise of permanency, and are of a good average width.

Nana Creek Division.

Gold-mining in this Division has made great progress during the past few years, as will be seen from the following figures:—

1894—Yield of gold	427 oz.
1895	1,554 „
1896	2,256 „

There are now no less than nine crushing plants scattered throughout this division, viz., at Coramba, Coramba Queen, Upper Bucca Creek, Lower Bucca Creek, Nymboi, Little Nymboi, Upper Orara, Nana Creek, and Tallegwah Creek. As far as can be ascertained, the quantity of stone put through by these plants was 1,980 tons, which yielded 2,256 oz. of gold. Some of the properties in this District have recently changed hands at a very satisfactory figure, which has stimulated prospecting to a great extent. There are now 350 men in the locality, and fresh discoveries are looked forward to.

Dalmorton Division.

The recent rush to Coramba and Bucca Creek, which are within easy distance of Dalmorton, drew the greater part of the miners from that place, and accounts for the falling off in the output of gold, which was only 339 oz., as compared with 572 in 1895. The Mount Rea mine has been floated into a company in London, who are erecting a 10-head stamper battery, Berdan pans, &c., at a cost of about £3,000. The mine has been well developed, and there is plenty of ore for this machinery when completed. The Little Dora syndicate on the Mann River has been working vigorously during the year, and has added a Woodbury concentrator to their machinery. The mines on the Mann River seem to be attracting the attention of outside investors, as a few of the unworked leases have been taken up, and a deposit paid on several others, with a view to purchase. The Black Snake mine is in course of flotation, and, if successful, a large number of men will find employment on this property. A tunnel is now being driven into Mount Remarkable by means of aid from the Prospecting Vote. The prospects for the coming year look much brighter for this field.

Ballina Division.

The principal seat of mining in this division is still M'Auley's lead, near Jerusalem Creek, and it is estimated that the 93,600 loads of black sand were treated for a yield of 2,437 oz., valued at £9,291. Formerly, operations were confined to the sea-beach, but during the year a large quantity of the gold has been got some distance back from the beach. During the greater part of the year a gang of men have been working, under aid from the Prospecting Vote, in testing the beaches by boring between the Esk River and Jerusalem Creek for new leads, but so far no success has attended their operations in this locality. The men have now been removed to the vicinity of Byron Bay.

Woogoolya Division.

This is a new division, and was formed consequent on the discoveries in the vicinity of Corinda. A number of gold-mining leases have been applied for, but, in the absence of crushing machinery, very little stone has been raised, as the nearest battery is at Bucca Creek, 23 miles distant. The principal claim on the field is worked by Cameron and party, who have a shaft down 65 feet on a good reef 10 inches wide. They raised 28 tons from the vein, which gave 84 oz. of gold. Other reefs have been opened up which prospect well, but work is delayed pending the erection of a local battery, as the cost of cartage to Bucca Creek is very great. It is very probable that a large number of men will yet find employment on this field. Efforts have been made to work the creeks for alluvial gold, but with little success.

THE COBAR MINING DISTRICT.

Cobar Division.

Some very good work has been carried out in some of the mines during the year, but unfortunately for about two months the batteries were hung up through want of water, and advantage was taken of the drought to enlarge some of the dams. Nevertheless the quantity of gold produced exceeds the previous year by about 16,000 oz., the total quantity won being 25,750 oz., valued at £83,525. The best yield was from Barrass and Conley's mine, who treated 1,500 tons for 3,205 oz.; the Occidental, 9,900 tons for 1,651 oz.; the Great Western, 919 tons for 1,063 oz.; the Cobar Mining Company, 2,440 tons for 436 oz.; the Cobar Gold-mine (Limited), 1,474 tons for 509 oz.; and the Young Australian Mine, 1,900 tons for 1,003 oz. Barrass and Conley are erecting new machinery, and the Cobar Gold-mine (Limited), late Fort Bourke Tunnel, has now a cyanide plant and a 100-head of stamps, with the latest improvements, working on it. A tank, with a capacity of 100,000 cubic yards, is being constructed, and the mine is shortly expected to employ over 150 men. On almost every mine on the field improvements and additions to the machinery have been made during the year—which is satisfactory proof of the future prospects of gold-mining in the Cobar District.

Mount Drysdale.

About 70 men are now working on the Mount Drysdale Field. The Mount Drysdale Gold-mining Co. are still working, and raised during the year 3,070 tons for 1,514 oz.; the New Eldorado Co., 2,891 tons for 954 oz.; and the Mount Billigue mine, 45 tons for 120 oz. These are the only mines of any note working in this division, as nearly the whole of the mining tenements were abandoned. Several grants have been made from the Prospecting Vote in this locality, and work is now being carried on, but as compared with a few years ago the field wears a deserted appearance.

Gilgunnia Division.

During the early part of the year 32 quartz-claims were at work at Gilgunnia, employing 135 men; but by the end of the year this number had been reduced to 12 employing 51 men, which does not speak well for the prospects of the field. Some of the claims at work are still being vigorously tried, and prospecting aid has been granted with a view of trying some of the reefs at a greater depth, which in some instances improve as depth is attained, more especially in the "Dream," "Rising Sun," "Last Rose," and "Tarcombe" prospecting claims. It is worthy of note that 7 tons taken from the Rising Sun claim yielded 18 oz. 6 dwt. 7 gr. of gold. The reefs average from 6 to 24 inches wide. A first-class 15-head battery has been erected on the field, but unfortunately there is not sufficient stone available to keep it employed.

Mount Hope Division.

The Mount Allen Gold Mining Co.'s mine at Mount Allen, 12 miles from Mount Hope, may be said to be the only gold-mine at work in this division of any note. During the year the company raised 3,175 tons which yielded 561 oz., valued at £2,073 12s. 2d. Very little has been done in the vicinity of Mount Dromedary, and although a lot of prospecting work has been carried on, there are no new discoveries to report.

ALBERT MINING DISTRICT.

Milparinka Division.

This division still suffers from severe drought, and, in consequence, the yield of gold is much below the average. In 1894, when water for mining was available, the output was 2,300 oz., but the drought in 1895 reduced the yield to 320 oz., and in 1896 to 977 oz. Most of the gold has been won by dry-blowing, and, where it is fine, much of it is lost. The reefs at Bendigo and Warratta could not be worked from the same cause, the nearest water supply being 7 miles east of Warratta and 5 miles north-east of Bendigo. The men were, therefore, forced to abandon their claims, although some of the trial crushings went as high as 4 oz. per ton.

Tiboobarra Division.

Some of the best reefs in this division occur in the vicinity of Evan's Gully, but the scarcity of water has retarded their development. With a good fall of rain good returns may be expected from this locality.

Broken Hill Division.

The only gold won in the Broken Hill District, so far as can be traced, was saved by the Broken Hill Proprietary Silver-mining Company in connection with their smelting operations, the quantity saved being 4,389 oz., valued at £17,117 2s.

I am indebted to J. MacDonald Cameron, Esq., F.I.C., the Deputy Master of the Royal Mint, for the following information:—

QUANTITIES of Gold, the produce of New South Wales, received into the Royal Mint, Sydney, during 1895 and 1896, compared.

District.	Division.	1895.	1896.	Increase.	Decrease.
		oz.	oz.	oz.	oz.

SUMMARY.

District.	1895.	1896.
	oz.	oz.
Bathurst	46,209·88	8,103·23
Tambaroora and Turon	3,827·31	3,345·30
Mudgee	6,354·81	9,799·86
Lachlan	16,845·02	12,061·72
Albert	1,421·42	1,137·67
Southern	4,306·27	4,285·00
Tumut and Adelong	7,184·44	6,785·45
Peel and Uralla	2,578·19	11,715·26
Hunter and Macleay	47·07	126·92
Clarence and Richmond	1,543·51	1,776·26
New England	2,240·87	2,392·83
Mixed—Western, Northern, and Southern	42,682·38	34,342·73
Localities unknown	67,075·86	107,463·96
	202,317·03	203,336·19

From the foregoing tables it will be seen that the quantity of gold sent to the Mint in 1896 exceeds that sent in 1895 by 1,019 oz. A satisfactory increase is noticeable from the Armidale district, due to the mines at Hillgrove; but the reduced output from the Lucknow Mine is very evident in the returns from Orange, which is less than the previous year by about 35,000 oz.

The following table is compiled from information kindly furnished by the Collector of Customs:—

EXPORT OF GOLD, 1896.

Gold.		Quartz Tailings and Pyrites.		Total.	
Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
oz.	£	packages.	£	oz.	£
82,707	283,093	22,400	97,541	26,010	380,634

The system adopted by the Department in arriving at the output of gold for the year is to add the quantity received at the Royal Mint to that exported through the Customs, deducting, of course, the quantity exported by the Mint which appears in the Customs Return. The following figures show how the yield for the year is arrived at:—

	oz.	£	s.	d.
Gold exported in bars and dust	82,707	283,093	0	0
" quartz and concentrates	26,010	97,541	0	0
	108,717	380,634	0	0
Gold received by the Mint, the product of the Colony	203,336·19	759,852	17	11
	312,053·19	1,140,486	17	11
Less the quantity exported by the Mint through the Customs	15,982·00	67,126	13	4
Estimated yield for 1896	296,071·19	1,073,360	4	7
The yield for the year 1895 was	300,165·45	valued at £1,315,929	5	4

Consequently there is a decrease of 64,094 oz., and in value £242,569 Os. 9d., as compared with the previous year. Although every care is taken, it would be difficult to prevent certain quantities of gold from being sent out of the Colony without being recorded, more especially when it is associated with other than auriferous ores and bullion. For instance, during the year the Proprietary Company, at Broken Hill, saved in connection with their silver-smelting operations 4,389 oz., and this is the only company on the Barrier who gave any return of gold saved.

RETURNS

RETURNS of Gold for 1896 from Mint and Mining Registrars compared.

				141,806·69
The returns from Mining Registrars exceed returns from Mint by				85,246·81

Much difficulty is experienced by the Mining Registrars in obtaining complete and correct returns from lessees, claim-holders, and others for the purpose of the above table; and the difficulty is greatly increased when dealing with the class of miners termed "fossickers," whose operations are spread over a large area, and who dispose of their gold as it is won to the nearest storckeeper for rations. Large quantities of refractory auriferous ore from the Wyalong, Pambula, Orange, Cobar, Hillgrove, and Drake gold-fields are sent out of the Colony for treatment, the yield from which is included in the returns sent in by the Mining Registrars, but not in that from the Mint. The difference of 85,246 oz. may partially be accounted for in this way. It is very gratifying to note, however, that the yield as shown by the Mining Registrars, viz., 288,582 oz., is only 7,489 oz. less than the estimated total yield for the year, thus showing that these officers had exercised some care in the preparation of their returns. Owing to the numerous changes made by the Public Service Board, many of the Registrars are new to the duties, or unacquainted with the district they have been removed to; but it is hoped by the end of the forthcoming year they will be in a position to supply still fuller information, without which some of these tables must necessarily be incomplete.

MINING Registrars' Returns of Gold for 1895 and 1896 compared.

District.	1895.	1896.	Increase.	Decrease.

Note.—The above Table only shows the yield where the quantity of stuff treated is ascertainable.

Without full and correct data a table such as the foregoing is almost worthless for the purpose of comparison, and it can be seen at a glance that the information supplied is not as complete as it should be. It is freely admitted that the Mining Registrars experience much difficulty in obtaining the necessary particulars regarding our alluvial mines, as in many cases no account is kept either of the dirt treated or the gold won. When the ground is worked by sluicing it would be almost impossible to get at the exact quantity of alluvium put through, but when the ordinary method of washing is resorted to, with very little trouble the miners could assist the Department greatly in this respect. The opinion prevails among the miners that the public have no right to know the result of their private operations; but when the benefit that reliable information of this nature would be to the mining community is considered, it might be said with truth that the opinion is an erroneous one.

Note.—This Table only shows the yield of gold where the quantity of stone treated can be ascertained.

The foregoing Table, showing the average yield from our quartz mines for the year, gives rather more information than usual, and we are able to compare the returns from 158,838 tons of stone treated. The reduction in the total average yield is accounted for by the rich stone raised in 1895 from the Lucknow Mine, in the Bathurst Mining District. It is gratifying to be able to point to an improvement in the completeness of the data supplied regarding the quartz mines, but there is still much left to be desired. Instances occurred during the year where the mine-owners declined to give the figures. This is to be regretted, as a complete and reliable table of this nature would prove of the greatest benefit and interest to those engaged in mining throughout the Colony. Battery-owners who crush for the public could assist the Mining Registrars immensely in obtaining the desired result, as they are compelled to keep some record of their operations, and it is to be hoped that they will see their way to assist in this matter.

The number of miners employed in gold-mining during the year were 12,069 in reefing, 9,428 Europeans and 710 Chinese in alluvial workings, making a total of 22,207 men—an increase of 773 on the number so employed during 1895. A reduction occurs of 1,193 Europeans and Chinese on the alluvial fields, but there is an increase of 1,960 in the number of quartz-miners at work.

Taking the quantity of gold won during the year, viz., 296,071 oz., and dividing it by the number of men employed, it is found that the average earnings of each man was 13 oz. 6 dwt. 15·5 gr., valued at about £51 13s. 3d.

It must be borne in mind in regard to these estimates of earnings that a large number of the men do not work as miners all the year around. Many of the men, more especially the alluvial workers, combine farming, shearing, &c., &c., with their mining operations as opportunity offers, or when water becomes too scarce in the creeks. The figures can, therefore, be taken only as a rough approximation of the actual earnings of each man employed, but they are sufficient to show that, with ordinary energy, a man settling on one of our gold-fields can at least make a living, with the ever present prospects of striking something richer than usual.

COAL.

The output of coal for 1896 shows, as compared with that of 1895, an increase of 170,927 tons. As will be seen from the following tables, the year's output, with the exception of 1891, is the highest since the opening of the coal-fields in 1829. On the other hand, it will be seen that the average price per ton, viz., 5s. 9 0/6d., is the lowest yet recorded, and is 1·23d. per ton lower than the previous year, and fully 50 per cent. lower than the price prevailing twenty years ago. The result is that, although our output is increasing its value only increased by about £30,000. It is gratifying to note that our foreign export trade is still increasing

still increasing, and is likely to completely recover from the severe shock it received during the troubles of recent years. The coal trade, as a whole, is likely to benefit greatly from the erection of the extensive smelting works at Cockle Creek, in the Newcastle District, and on Lake Illawarra, in the Southern District. It is expected these works will consume an immense amount of coal when in full swing. The Sydney Collieries Company have at length secured a suitable site for their operations in Long Bay, Port Jackson. The site is on the Balmain side of the harbour, and has every facility for coaling ships of any size. Wharfs have been erected, and extensive surface-works are now being carried out preparatory to commencing the shaft, a contract for which has been let. At the 31st December, 1896, there were 96 coal and 5 shale mines under inspection within the Colony, which is a decrease of 3 coal and 2 shale mines as compared with 1895.

During the year 17 notices were received of new mines opening out or in course of development by sinking or adits.

QUANTITY and Value of Coal raised from the opening of the Coal-seams to 1857, inclusive :—

The following comparative statement shows a decrease in the output of the Northern collieries, as compared with 1895, of 8,205 tons, and in value £10,271, whereas the output of the Western and Southern collieries show an increase as compared with 1895—the former of 87,259 tons, and £16,377 in value, and the latter to the extent of 91,873 tons in quantity, and £23,848 in value.

COMPARATIVE Statement of Output of Coal in the Northern, Western, and Southern Districts.

There were 9,233 men employed in and about the New South Wales collieries during 1896, and 227 in the shale mines, making a total of 9,460 men, an increase of 438 on the previous year. I regret to say that the fatal accident list has been greatly swelled during the year, owing to the outburst of carbon monoxide gas in the Stockton Colliery early in December. This lamentable accident caused the loss of eleven lives. The total number of fatal accidents for the year were 24, and non-fatal, 62, as compared with 10 fatal and 47 non-fatal during 1895.

The following table is intended to show that the safety of our mines can bear comparison with the coal-mines in the United Kingdom:—

SUMMARY of persons employed, number of fatal accidents (deaths), and ratios of the number of persons employed, and the number of fatal accidents in and about the "United Kingdom" and "New South Wales" Coal-mines, since 1874.

Year.	United Kingdom.				New South Wales.			
	Persons employed.	Lives lost by accident.	Persons employed per life lost.	Death-rate from accidents per 1,000 persons employed.	Persons employed.	Lives lost by accident.	Persons employed per life lost.	Death-rate from accidents per 1,000 persons employed.

* Excessive number of falls of coal and Lithgow disaster caused this high death-rate.

† Bulli catastrophe and excessive falls of coal caused this high death-rate.

‡ Hamilton pit crush, excessive falls of coal, and over-winding of four men at South Burwood sinking pit caused this high death-rate.

TABLE showing the quantity and Value of Coke made in the Colony of New South Wales.

Year.	Quantity.				Total Value.	
	Northern District.		Southern and Western Districts.			
	tons	cwt.	tons	cwt.	£	s. d.
1890	15,886	2	15,211	0	41,147	3 7
1891	9,474	2	20,836	5	34,473	5 10

1893	12,262	0	5,506	0	20,233	2 0
1894	13,602	5	20,855	19	33,209	5 7
1895	11,326	8	16,304	0	24,683	5 0
1896	10,398	10	15,953	0	21,850	16 3
Totals	78,194	7	97,410	4	184,449	6 9

There is a decrease of 1,279 tons in the quantity of coke manufactured during the year, as will be seen from the foregoing table. In the Northern District this industry is carried on by the Messrs. Brown, and the Purified Coal and Coke Company, at Newcastle, and the Singleton Coal and Coke Company, at Singleton. In the Southern District works are established at Mount Pleasant and South Clifton, and also at Lithgow, in the Western District. The valuable and exhaustive report furnished by Mr. E. F. Pittman, A.R.S.M., Government Geologist, on Colonial cokes, and published in the Annual Report of this Department for 1892, deals fully with this question, and proves conclusively that, by the introduction of a more perfect system of cleaning and washing the coal, and the use of a more modern type of coke oven, an article equal, if not superior, to that imported can be produced from the New South Wales coal.

The following table shows the quantity and value of Kerosene Shale produced during the years 1865 to 1896 :—

Year.	Quantity.	Average price per ton.	Total Value.	Year.	Quantity.	Average price per ton.	Total Value.
	tons.	£ s. d.	£ s. d.		tons.	£ s. d.	£ s. d.

1879	32,519	2 1 1·96	66,930 10 0	1896	31,839	1 1 5·81	34,201 18 0
1880	19,201	2 6 7·03	44,724 15 0				
1881	27,894	1 9 2·59	40,748 0 0		895,834	2 0 1·22	1,795,213 15 2

The above table shows a very large decrease in the output of shale, as compared with the year 1895. This is not due to a falling off in the demand, but to the fact that some of the deposits are now partially exhausted or altogether worked out. The higher-class shale finds a ready market, at a good price, for shipment to Europe; and, in consequence, prospecting operations are constantly being carried on by the shale companies and private individuals.

SILVER AND LEAD.

The quantity of silver and lead exported during the year exceeded that in 1895 by 67,056 tons, and in value £198,120. The world-famed mines in the Barrier Ranges, Broken Hill, still produced the bulk of silver won in New South Wales. The successful treatment of the sulphide, on which the life of this field so much depended, has now been practically solved, and the mines have now immense bodies of ore at their disposal which can be profitably worked. The Proprietary Company's new works, erected for the treatment of these ores, will be ready during the forthcoming year, when a large increase in the yield of silver and lead may be expected. A further increase in these metals may be anticipated on completion of the extensive smelting-works in course of erection at Newcastle and Illawarra. The erection of these works has led to the reopening of some of our silver-mines which have been idle for years, notably the well-known White Rock mine, in the Drake District.

QUANTITY

* NOTE.—In the Annual Report for 1888, 11,739 tons 7 cwt. of silver ore, valued at £164,620, was omitted from the table. The bulk of the silver is exported in the form of silver-lead.

The information for the following notes relating to silver-mining in New South Wales is gleaned from the reports sent in by the Wardens and Mining Registrars:—

THE ALBERT MINING DISTRICT.

Broken Hill Division.

Broken Hill is the only Division within the Albert Mining District where silver is found in payable quantities, and at the same time is the principal seat of silver-mining in Australasia. The famous mine owned by the Broken Hill Proprietary Company, Limited, employed on an average 2,582 men during the year, and produced 420,747 tons of ore, from which silver, lead, copper, and gold were obtained to the value of £1,354,287 9s. 6d. The Broken Hill South Company raised 66,272 tons, which produced 22,517 tons of silver-lead concentrates, valued at £180,136. Block 14 Company, 71,583 tons, valued at £278,628. The British Block Company, 53,000 tons valued at £116,000. Block 10 Company, 57,353 tons, valued at £286,762. Broken Hill Junction, 74,275 tons, valued at £395,153. The Junction North Company, 12,500 tons, valued at £100,000, and the North Broken Hill Company, 16,976 tons, valued at £33,752. Those mentioned are the principal mines working on the Barrier Silver Field:—

It is estimated that the value of the mineral product from this field during the year was as under:—

		£	s.	d.
Roasted sulphide of silver	132 tons	99,811	10	0
Matte	1,652 "	32,503	7	6
Silver lead bullion	18,987 "	870,522	12	6
Concentrates	40,736 "	325,888	0	0
Ore	331,412 "	1,635,633	10	0
Copper	570 "	29,070	0	0
Gold	4,389 oz.	17,117	2	0
		£3,010,546	2	0

These figures present a satisfactory account of the progress of the field, and should tend to inspire confidence in its stability and productiveness. The improved methods for treating the sulphide ore now being introduced will benefit the mines greatly. It is expected that the Proprietary Company's new works, which embrace the latest improvements, are likely to be completed about the middle of 1897. The output of silver from this field during the year may be set down approximately at 19,592,943 oz. As the silver is exported from the field to Europe in the form of silver-lead there is some difficulty in arriving at the exact quantity. The total quantity of ore raised on the field during the year is 828,366 tons.

THE BATHURST MINING DISTRICT.

Mitchell Division.

The only silver-mining in this district is being carried on at Mitchell. The Sunny Corner Silver-mining Company's mine is still being worked on tribute, and produced during the year 395 tons of silver, gold, and copper matte, valued at £22,396. This property is looking well, and is being systematically developed, and the machinery improved. The number of men employed still averages about 100 all the year round.

THE NEW ENGLAND MINING DISTRICT.

Fairfield Division.

Silver-mining is likely to come into prominence again in this Division—work having been resumed at the White Rock Silver-mine during the last six months. An improved winding engine has been erected, and a main shaft started 15 feet x 5 feet in the clear, with a view of testing the immense mineral formation at a depth. The shaft is now down 70 feet, and it is said that ore from that level yielded on assay 56 oz. of silver and 6 dwt. of gold per ton. The owners of the mine will shortly be in a position to offer employment to about 100 men.

Emmaville Division.

Very little work has been done in silver-mining around Emmaville during the year. A few men have been at work at Webb's mine, but no ore has been put out or despatched. There are indications, however, that an improvement is likely to take place, as arrangements are being completed for the transport of ore to the new smelting works at Illawarra.

Wilson's Downfall Division.

Silver-mining has almost been abandoned in this Division. At Rivertree there are still about a dozen men at work in the old abandoned mines making good wages. They pick their ore and send it to Aldershot, Queensland, for smelting. Of the 160 tons of ore raised only 67 tons of the best were sent which realised £1,374.

PEEL

PEEL AND URALLA MINING DISTRICT.
Hillgrove Division.

Some interest is being taken in the silver lodes which are found to occur in this Division in the neighbourhood of Rock Vale, and several parties are now sinking on very promising deposits. A parcel of 69 tons was despatched from this locality by Messrs. Wade and Baker, which realised £3,377. The lode which contains a great variety of silver-bearing minerals averages 14 inches in width. There are a considerable number of silver-bearing lodes between Wollombi and Rockvale, but none of these have yet been worked with profitable results. As a general rule the silver-bearing minerals occur in small quantities throughout the lodes, and extensive mining operations with efficient concentrating plant are necessary to give payable results.

THE SOUTHERN MINING DISTRICT.
Rye Park Division.

The Walla-Walla Silver-mining Company, near Rye Park, have about 1,000 tons of ore awaiting the completion of one of the smelting works now in course of erection within this Colony. The mine has been well opened up, and stoping can be commenced as soon as arrangements have been completed for treating the ore.

Captain's Flat Division.

The Lake George United Mining and Smelting Company, at Captain's Flat, are extending their operations, and during the year found employment for about 275 men. Their output of silver was over 70,000 oz., and the ore also contains gold, copper, and lead in considerable quantities. The company are making very extensive alterations and additions to their machinery, and it is expected that work will be found for close on 1,000 men when the new works are finished.

Queanbeyan Division.

Near London Bridge a silver and lead deposit has been found, and aid has been granted from the Prospecting Vote to test it. There are several other such deposits in this neighbourhood which have a very promising appearance.

Pambula Division.

About twenty men are still employed prospecting for silver lodes in this Division, but no discovery of note has been made so far. Several promising lodes have been opened up which assay well, but they will have to improve before they can be considered payable with silver at 2s. 6d. per oz. Applications have, however, been lodged for mineral leases in the locality aggregating 270 acres.

Kiandra Division.

The old silver-mine at Yarrangobilly has been taken up during the year in two 20-acre leases, and 10 tons of ore sent to the Clyde Works for treatment. The results were so satisfactory that this year will probably see the mine in full work again.

TIN.

The information contained in the following notes on the tin-mining industry is taken from the reports sent in by the Wardens and Mining Registrars:—

THE NORTHERN DISTRICT.
Tingha and Inverell Divisions.

The output of tin-ore from the Tingha Tin-field during the last twelve months is estimated at 500 tons, of a local value of about £16,000. A large quantity of that amount was obtained from wash-dirt raised in former years and stacked awaiting water to treat it. The opening of the tin and diamond mines at Boggy Camp, 15 miles west of Tingha, has provided employment for a number of men. It is said that some of the mines are doing very well at Boggy Camp, averaging from £3 to £6 per week each. It is considered that Dasey's and Gray's claims are the best on the field, and the former is now in course of flotation on the English market. The sinking in these mines is from 30 to 50 feet deep, and the wash averages from 2 to 7 feet thick, the width of the lead not yet ascertained. In Gray's claim the wash averages 4 feet thick, and is said to carry tin and 10 carats of diamonds to the load. The Elsmore Valley Tin-mining Company have successfully bottomed their shaft at 225 feet on rich wash, and prospecting work is now being carried on preparatory to erecting machinery on the mine. Some difficulty was experienced in getting this shaft down owing to the influx of water. The prospects of this company are so encouraging that a revival in tin-mining is looked for in the locality, notwithstanding the low price of that metal at the present time. In the immediate vicinity of Inverell there is no mining of any importance being carried on.

Glen Innes Division.

The quantity of tin won in this Division during the year was 175 tons, or 10 tons more than last year, the value of which is put down at £5,425. Thomas and party, at Shannon Vale, are vigorously carrying on prospecting work there with fair success. Moses and party, and several others in the same vicinity, have also good claims. Tin has been found under the basalt there, but so far not in payable quantities, but the wash is being followed in.

Emmonsille Division.

There is a considerable reduction in the quantity and value of the tin won from this field, as compared with previous years. The output was, in—

1894.....	1,108½ tons	£44,386
1895.....	900 "	£29,700
1896.....	723 "	£22,402

The low price still prevailing for tin-ore is no doubt accountable for the reduced output, and, unless a rise in the price takes place, an improved state of matters can hardly be expected. The Ottery Tin-mine, at Tent Hill, has been in full work all the year, and gave employment to about seventy men. The output was 10,678 tons of ore which yielded 360 tons of tin, valued at £10,981. The works are, however, now closed, but will probably be reopened about the middle of the year. Alluvial tin-mining is still going on as usual, about 300 Europeans and 270 Chinese finding constant work, and do fairly well when a good supply of water is available.

Deepwater Division.

About 200 Europeans and 30 Chinese were employed mining for tin within this Division during the past year, and the quantity won was 300 tons, valued at £9,300, an increase of about 100 tons on the previous year. The metal is won principally from alluvial ground by small parties who employ no machinery in the work. A few parties are working lode claims, with fair results, and one or two fresh deposits have been found which are now being tried.

Wilson's Downfall Division.

Tin-mining in the Wilson's Downfall Division is confined more to fossicking among the abandoned workings than to opening up new ground. The quantity won is 150 tons valued at £4,650, an increase of 52 tons on the previous year. The increase is due to the favourable season, and not due to any new find. At the present time there are about ninety men on the field.

Kookabookra Division.

A few men are employed prospecting for tin in this Division, and it is estimated that they won about 12 tons, valued at £336. More attention will probably be given to the tin deposits in this locality during the forthcoming year.

Kempsey

Kempsey Division.

There were 500 tons of tin-ore raised from the Gundle Tin-mine during the year, but the value could not be ascertained. No new discoveries have been made in this district, although a lot of prospecting work is still being carried on. A Sydney syndicate has taken up some land at Gundle for tin, and has some men employed testing its value.

Bendemeer Division.

Although some prospecting for fresh deposits of tin was carried on in this division during the latter part of the year, nothing worthy of note was discovered. Work is therefore confined to the deposit at Giant's Den, which is found at a depth of from 1 to 12 feet from the surface, the wash being about 4 feet thick, but limited in extent. The year's output was 12 tons 2 cwt., valued at £420.

SOUTHERN AND WESTERN DISTRICTS.

Tin-mining in New South Wales is solely confined to the Northern Districts of this Colony. Although good indications have been obtained in the Upper Murray Districts, at Palletop, near Wagga Wagga, in the vicinity of Tumut and Yalgogrin, still no deposits have been found, so far, in the Southern and Western Districts of this Colony that might be considered payable. At Euriovic, in the Broken Hill Division, some tin-bearing land has been recently taken up, but up to the present but little work has been done on it.

TABLE showing the quantity and value of Tin exported from, and the product of, the Colony of New South Wales, since the opening of the Tin-fields in 1872.

COPPER.

A glance at the following table will show that a very gratifying revival has taken place in copper-mining within this Colony, and that this very important industry is quickly regaining the position it held in 1884, when the value of this export was £416,179. The reopening of the copper-mines at Cobar is directly responsible for the major portion of the increase, the remainder being due to the extension of operations at Captain's Flat, Nymagee, Mount Hope, and Burruga. The Great Cobar Mining Syndicate own the largest copper-mines in New South Wales, which now give employment to about 450 men. They have now two 60-ton water jacket furnaces at work, and during the year the Syndicate raised 66,431 tons of ore, which yielded 2,650 tons of smelted copper, valued at £107,200. The plant is still being added to and improved, which will permit of the output being greatly increased. The ore is converted into "matte," when it is conveyed to the refining works at Lithgow, recently erected there by the Syndicate. The New Burrumine has been purchased by a syndicate, who propose overhauling the mine and plant, and working them in a systematic manner. During the year the Nymagee Copper Mine raised 3,249 tons of ore, which yielded 380½ tons of copper, valued at £17,948. This mine has just been acquired by the Great Cobar Mining Syndicate, and water jackets are now being erected. The whole district of Cobar is to be congratulated on the progress made in copper-mining during the year just past. At Mount Hope the New Mount Hope Copper Co. raised 1,092 tons for 141½ tons refined copper, valued at £5,660 18s. 3d. The company employ on an average 36 men. The Proprietary Great Central Co., at South Mount Hope, raised 454 tons for 55 tons smelted copper, valued at £2,195. This mine was only worked for about six months during the year. Another important copper-mine is situated on the Abercrombie Mountains,

Mountains, near Burruga, and owned by the Burruga Copper-mining Co., where 150 men find constant employment. Their output during the year was 4,241 tons refined copper, valued at £19,928, or at the rate of £47 per ton. The ore is run into matte at the mine, and then sent to Lithgow for refining purposes. A new copper-lode was discovered during the year in the immediate vicinity of Blayney by Messrs. Wright and Osborne. The lode has been traced into Church and School Lands, and is being vigorously prospected. From present indications this lode is likely to rank among the best in the Colony. Another lode on Quigley's Hill is being prospected by Tibbs and party, which also looks well, and the ore is of good percentage. The locality of these mines is within 5 miles of Blayney, and is likely to develop into a large copper-producing centre in the near future. The Sunny Corner Company's mine at Mitchell is also producing copper in considerable quantities, but the yield for the year was not available. In the southern district the Lake George United Mining Co. produced 205 tons of smelted copper, valued at £10,274, and also large quantities of gold, silver, and lead. This company is making very extensive improvements and additions to their plant, and a very large increase in the quantity of copper from this source may be expected. At Rye Park a promising copper deposit known as the Mayfield lode is being developed by T. R. Rowe and party. Some of this ore on assay yielded 20 per cent. copper, 16 dwt. of gold, and 7 oz. silver per ton. In the Northern District some new and very promising copper lodes have been discovered in the neighbourhood of Barraba, and aid has been granted from the Prospecting Vote to test them. The Cornish Copper Company in the same locality are now raising payable ore and are adding to their machinery. The Broken Hill Proprietary Company at Broken Hill saved in connection with their silver-mining operations during the year copper to the value of £29,070. From the same district it is reported that the mines formerly held by the Balaklava Iron and Copper-mining Company, south of Rockwell, are being reopened by the Wallaroo Copper-mining Company, of South Australia. Several adjoining blocks have been applied for by the same Company and it is expected that work will soon be in full progress. As a whole, copper-mining in this Colony has brighter prospects at the present time than has been the case for many years past.

TABLE showing the quantity and value of Copper, the produce of the Colony, exported from New South Wales, from 1858 to 1896.

Year.	Ingots.		Ore and Regulus.		Total.

IRON.

Negotiations are still proceeding with a view to establishing works for the manufacture of iron from the crude ores which have been proved to abound in several localities within this Colony. The many natural advantages possessed by New South Wales for the establishment of such an industry have been brought prominently before English capitalists, with the result that they have promised their co-operation, and it is confidently expected that the proposal will take a practical shape during the forthcoming year. Some very promising iron-ore deposits are being tested by Mr. Thos. Adams, in the neighbourhood of Raymond Terrace, under aid from the Prospecting Vote. They are situated on Church and School Lands, and are of considerable extent. The Pioneer mine, at Thackaringa, in the Broken Hill district, is raising iron ore, to be used as flux in the smelters at Broken Hill. At the Eskbank Iron Works, Lithgow, owned by Mr. W. Sandford, over 200 men and boys find constant employment. The finished iron manufactured from scrap during the year under notice was 4,721 tons, valued at £33,253.

ANTIMONY.

The low price prevailing for this metal at the present time has reduced its output very much. The Hillgrove field, which produced 632 tons in 1895, valued at £9,480, returns 71 tons, valued at £907, as the output for 1896, and there is no prospect of the output being increased till the price is higher. About 30 tons were raised during the year at Bowraville, in the Kempsey district, and realised £7 per ton.

Several parties have taken up ground in the vicinity of Oakey Creek, near the road from Bingara to Barraba. So far they are merely prospecting, but they are said to have a very good show of antimony on the surface.

The total quantity exported during the last twelve months was 132 tons, valued at £1,834, which, as compared with 1895, was a decrease in value of £5,417.

BISMUTH.

There were 41 tons of this ore exported from the Colony during the year, the declared value being £490. This metal is found in the Glen Innes, Pambula, and Nymagee Districts, but the demand for it is limited.

PLATINUM.

The wash-dirt being raised at Platina, near Fifield, still continues to carry platinum with the gold, and the quantity saved during the year was 2,900 oz., valued at £3,915. Work on this field is carried on by individual miners or small parties of two or three, and the yield is controlled by the quantity of water available for mining purposes. Operations have been greatly retarded during the past few years from this cause, and many of the claims had to be abandoned. If any platinum was got on the northern beaches by the men working the sand for gold, the quantity could not be ascertained. The quantity exported through the Customs during the year was 2,438 oz., valued at £3,479.

CHROMIUM.

The very low price of chrome in the market has restricted its output greatly. The mines in the Gundagai Division yielded, in 1895, 5,500 tons, valued at about £20,000. This year the output is set down at 1,000 tons, valued at £3,000. In many of the northern districts prospecting work has been carried on for chrome during the past twelve months, and many samples of the ore have been sent to this Department for assay, but they have not proved sufficiently rich to warrant mines being opened up at the present time.

MANGANESE, NICKEL, AND COBALT.

There practically is no actual mining being carried on for these minerals within the Colony at the present time. The cobalt deposits near Carcoar are still lying dormant, the only work done on them being a little surface prospecting.

TUNGSTEN.

Although there was a little prospecting carried on during the year for wolfram deposits there are no new discoveries to report. The mine near Emmaville, from which a few tons of ore were taken in 1895, has now been shut down. Inquiries have been received from Germany for small parcels of wolfram, but ore of exceptional purity is required.

MERCURY.

Very large and rich deposits of this ore have been discovered on Noggriga Creek, near Yulgilbar, 8 miles from Louisville, by Messrs. T. B. Bassetti and party, who are working under aid from the Prospecting Vote. A 40-acre Mineral Lease has been secured by the party who have sunk a shaft to a depth of 100 feet, at which depth the lode carries a high percentage of metal. Two other 40-acre blocks have been taken up on the line of the lode, and two shafts sunk with very encouraging prospects. Cinnabar mining bids fair to become an industry in this locality. Some Cinnabar Leases were applied for in the Bingara District about the end of the year, but no information is to hand regarding the prospects.

DIAMONDS:

DIAMONDS.

Prospecting work has been carried out on all the leases on the Bingara Diamond-field during the year. A considerable area of the ground was taken up by a Victorian syndicate. The Monte Christo mine, through want of water, only treated 20 tons of wash. The Australian Diamond Mines Proprietary Company, No Liability, kept 16 men at prospecting work, and have sunk 1,500 feet and driven 1,200 feet in the aggregate during the past 12 months. A large sum has been expended by this Company in the erection of machinery and water conservation. Some stuff was treated, but the result is not known. The Eagle Hawk Company treated 500 tons of drift, which returned gold and diamonds to the value of £325. The Murchison Diamond and Gold-mining Syndicate are chiefly prospecting and constructing dams to conserve water. It is estimated that the output from the field was 3,000 carats, the lowest value obtained being 6s. per carat. The Boggy Camp Diamond mines, situated about 15 miles west of Tingha, employ about 60 men. The best mines on the field are said to be those owned by Dasey and party and Gray and party, and in some of their drives the wash is found 4 feet thick and yields about 10 carats to the load. The stones are of good quality and pure white. It is expected that with the advent of capital to provide good powerful pumping machinery to allow of the deep ground being worked, the mines in this locality will give a good account of themselves. The Kangaloon Gold and Diamond-mining Company, in the Berrima District, have obtained suspension and the mine is now idle. Only a few stones were obtained by the Company during the year. Several packages of supposed diamonds were received from the Hanging Rock and Nundle. These proved to be colourless zircons in every case, no diamonds being detected.

OPALS.

The White Cliffs Opal-field, situated in the Wilcannia Division of the Albert Mining District, has made very satisfactory progress during the past twelve months. The stability of the field has been fully proved by the steady increase in the population since its opening. The principal gem merchants in Europe have now agents on the field for the purchase of opal, which is a great convenience to the miners. At the present time there are 400 miners on the field, and all the claims are being fully worked. Some difficulty is experienced in obtaining complete returns from the men, but from information obtained from the buyers the value of the output for the year is estimated at £25,000.

EMERALD AND TURQUOISE.

The emerald mine in the Emuville District and the turquoise mine near Wogonga are both closed down, and there is nothing to report regarding them.

MARBLE.

Marble deposits are known to exist in several districts in this Colony, and it may be said that they have not received the attention their importance deserves. Fine samples of red brown to almost black can be obtained at Fern Bank, near Bathurst, and a beautiful grey tint from Buckeroo, near Mudgee. A nicely marked brown is obtainable in the neighbourhood of Molong, and a pure white from Caloola, near Newbridge, said to be equal to the second class marble from the famous Carrara quarries. A deposit near Rylstone is of a black colour with white streaks and gold markings. Immense deposits of green serpentine also exist in the vicinity of Lucknow, which are well worth attention.

LIMESTONE FLUX.

The Tarrawingie Flux and Tramway Company (Limited) at Tarrawingie, near Broken Hill, raised during the past year 88,924 tons of limestone flux, valued at £54,261, which was all used by the Broken Hill Company in connection with their smelting operations. Over 120 men are employed by the company in and about their quarries. The opening of the large works at Cockle Creek and Dapto has occasioned inquiry for suitable flux and led to a certain amount of prospecting in these localities.

ALUNITE.

The shipments of alunite to England by the Australian Alum Company during the year was 1,372 tons, valued at £4,116. The extensive works at Bulladelah still remain closed. There is a growing demand for this mineral, the quantity shipped in 1895 being only 332 tons.

PLUMBAGO.

The plumbago lease held by Messrs. Smith and party near Wilson's Downfall has been worked with some energy during the past twelve months, and some 80 tons have been taken out and sent as samples to various parts of the globe, and has given satisfactory results. A large sum has been expended in prospecting the adjoining lease held by Messrs. Young and Pike, with the result that a superior class of ore has been struck, but in smaller veins.

KIESELGUHR.

This substance, commonly known as "Diatomaceous, or infusorial earth," is only being worked at one place within the Colony at the present time, *i.e.*, at Wyrallah, in the Lismore District. During the year the lessee, Mr. E. Wren, of Wyrallah, sent away 676 bushels, for which he received 3s. 6d. per bushel, out of which he had to pay freight to Sydney, cost of bags, filling, &c. The deposit is a very extensive one, and very easily worked, by open cutting. The deposit at Cooma is very extensive, and a few tons have been raised for experimental purposes. An American article now being introduced as an abrasive, &c., under the name of tripoli, is a different substance altogether.

SUMMARY.

SUMMARY.

The total value of the mineral products of this Colony to the end of 1895 is £118,367,231 5s., details of which are given in the following table:—

	Quantity.	Value.	Total Values.

The value of mining plant and machinery in and about the mines of New South Wales at the 31st December, 1896, is estimated as under:—

Metalliferous mines	£1,708,098
Coal and shale mines	£1,126,855

£2,834,953

The value of railway lines to the collieries, or plant in connection with oil refineries at the shale mines, is not included in the above estimate.

THE following recapitulation for the years 1895-6 will show the largely increased amount of business transacted by the Department in the latter year.

Particulars	1895.	1896.	Increase.	Decrease.	Percentages.

I have the honor to be,

Sir,

Your obedient servant,

Under Secretary for Mines and Agriculture.

Department of Mines and Agriculture,
4 April, 1897.

CHIEF INSPECTOR OF MINES AND SUPERINTENDENT OF DIAMOND DRILLS' REPORT.

Chief Inspector of Mines and Diamond Drill Branch,

Sir,

Department of Mines and Agriculture, Sydney, 26 January, 1897.

In submitting my annual report for the year 1896, I have the honor to inform you that the following is a list of accidents reported to me by Wardens, Coroners, Inspectors of Mines, and Mining Registrars, as having occurred in the Metalliferous Mines in New South Wales during 1896.

Table A.—Showing fatal, serious, and minor accidents, which may be cited as true mining accidents, being exclusive of the accidents which occurred on the surface.

Table B.—Showing fatal, serious, and minor accidents, which occurred on the surface; therefore not true mining accidents.

Table C.—Number of persons who suffered through lead-poisoning in connection with the Broken Hill Mines, as given by monthly reports by the Managers of the Broken Hill Mines for 1895-96.

Table D.—Number of persons employed in the Metalliferous Mines of New South Wales; also percentage of persons killed or injured; also value of machinery up to 31st December, 1896.

Out of the total of 35 persons killed, 12 lost their lives in silver-mining, 14 in auriferous quartz, 8 in auriferous alluvial, 1 in copper. This is inclusive of the accidents which occurred on the surface, as noted in Table B.

It will be seen by the above Tables that in the Broken Hill Mines there were nine (9) fatal accidents less in 1896, and eight (8) fatal accidents more in the other mining districts than in the previous year; or one fatal accident less in all the Metalliferous Mining Districts of New South Wales than in 1895.

There were four more serious accidents in the Broken Hill mines during 1896 than the previous year, but a total of five (5) accidents less than in 1895.

The fatal accidents during the year with verdicts of coroners' juries or magisterial inquiries are as follows:—

January 24th, W. K. Manego, Green's Mine, Big Hill, working party of miners. Fell off ladder owing to bad air, while making repairs to ventilate. Verdict: Accidental death, caused by foul air.

January 24th, P. B. Kane, Native Courage Mine, Wyalong. Was being hauled up shaft in bucket, lost hold of rope and fell to bottom; supposed to have been overcome by excessive heat. Verdict: Lost his hold of rope, but how he lost it there is no evidence to show.

February 7th, W. Johnson, D'Arcy Estate, Lucknow. Fell off bucket down shaft. Known to have been subject to fits, and complained of feeling unwell. Verdict: Accidental death; no one to blame.

February 14th, John Maher, Oakey Creek, Hill End. Killed by fall of earth which he had undermined. Verdict: Accidental; no one to blame.

February 14th, T. I. A. Clark, Great Britain Mine, Tilbuster, Armidale district. Killed by bucket running down shaft; engine-driver lost control of engine. Verdict: Accidental death; no one to blame.

February 28th, J. Gordon, Big Badja Sluicing, Cooma. Buried by fall of earth in a sluicing claim. Verdict: Accidental death; no blame attached to any one.

March 21st, R. Mitchell and A. Dunford, Occidental Mine, Cobar. Charging a hole with powder while it was still hot from "bulking," the charge exploded. Verdict: Accidental death.

April 15th, J. H. Nicholls, Nymagee Copper Mine. Fell down a winze. No evidence to show how it occurred. Verdict: Accidental death; no one to blame.

August 12th, R. Flynn, Princess Mine, Wyalong. Was prising out a block of ground preparing for timber when ground fell on him. Verdict: Accidental death; no blame attachable to any one.

August 14th, J. Tickle, Congi, Bendemeer. Working alone in sluicing claim. Killed by fall of earth. Verdict: Accidentally killed in his claim by fall of earth.

September 8th, F. R. Williams, Native Dog, Hope's Creek, Rockley. Killed by fall of earth when working alone in his own claim. Magisterial inquiry. Verdict: Accidentally killed while working alone.

October 10th, Hugh Connors, Fifteen-mile, Kiandra. Working alone when his dam used for sluicing burst and drowned him. Magisterial inquiry. Accidentally killed by being overwhelmed with water while working in his own claim.

October 31st, S. Unwin and J. Butler, Prince of Wales Mine, Wyalong. Started drilling in the socket of an old hole, which had been fired two shifts back; supposed some unexploded dynamite remained in the hole. Verdict: Accidental, while drilling in an old hole; no negligence.

November 19th, John Dore, Gibraltar Consolidated, Sheppardtown, near Adelong. Fall down winze; no evidence to show cause of falling. Verdict: Died from falling down winze; no evidence to show how he fell.

November

November 23rd, W. H. Naylor, Prince of Wales, Wyalong. Man coming up shaft in bucket with drills, one of the drills fell out, fell on Naylor, who was working on the bottom of the shaft, and killed him. Verdict: Died from injuries caused by a drill falling down shaft; added a rider *re* General Rule 12.

November 24th, John Tobin, House's Claim, Enmore, Uralla District. Fell off a ladder down shaft. Verdict: Accidental.

December 2nd, S. Webb and J. Wilson, Powell's Claim, Gundagai. Working party, alluvial claim; killed by fall of earth. Verdict: Accidental death; no one to blame.

December 5th, Alfred Nicholls, Star Gully, Grenfell. Fossicking near old ground with two mates; fall of earth. Verdict: Accidental death; no blame attached to anyone.

December 12th, A. E. Gaffin, Solferino. Killed by the fall of a stump of tree under which he was tunnelling. Magisterial inquiry: Accidental death.

December 19th, S. Quetti, Democrat Mine, Cowra Creek, Cooma District. Killed by fall of earth in drive. Verdict: Accidental death.

Broken Hill District.

February 24th, Fred. Rohu, Broken Hill Proprietary. Was assisting to pull a truck out of Drew's ore bin, and fell into the tip hole, which is only 28 x 17 inches in size. Verdict: Accidental; no blame attached to anyone.

February 24th, Thomas Halls, Block 10, Broken Hill. Ascending the shaft with his mate in a cage; he stooped down to adjust some tools in the bottom of the cage and fell out. Verdict: Accidental; no blame attached to anyone.

June 12th, W. D. Reed, Broken Hill Proprietary. Jumped off a railway truck at the Chloridising Works, as he was afraid that the hot ore would fall on him; he fell under the wheels. Evidence showed no danger of ore falling. Verdict: Accidental death; no blame attached to anyone.

June 30th, Phillip Eddy, May Bell Mine, Broken Hill. Was climbing up on a rope in an old shaft which he had been examining, and for some reason fell off. There was no work being done at the mine. Verdict: Met his death accidentally by falling down a shaft at May Bell.

July 6th, M. J. Purcell, Broken Hill Proprietary. Fell off the brace of Dickenson's shaft owing to a defective temporary hand-rail, which he had altered and fixed himself. Verdict: Met his death by accident.

July 22nd, S. T. Vivian, South Broken Hill Mine. Fell into pass at South Mine. Evidence showed that everything about the place was in good order. Verdict: Died from injuries received by falling into shoot; no evidence to show by what means he fell.

July 25th, J. J. Pearce, Proprietary, Broken Hill. Fall of ground in stope; men were experienced miners, and believed the ground to be safe. Verdict: Accidental death; no blame attachable to anyone.

August 8th, Otto von der Rodda, Consols, Broken Hill. Truck running away on incline through hook becoming disconnected; the hook was a safety one, and the supposition is that it was not properly adjusted. Verdict: Accidental death; jury of opinion that hook was not properly fastened in first case.

August 29th, D. G. Pendrith, Broken Hill Central. Employed to water and sweep stopes; and went into a disused drive, when ground fell on him. He was not a miner, and evidently did not understand that there was any risk. Verdict: Accidental death; no blame attachable to any one.

November 26th, George White and E. H. Barnes, British Mine, Broken Hill. Drilling in the socket of an old hole, where probably owing to insufficient strength of detonator some unexploded explosives remained. They had drilled the former hole (in the socket of which some explosives had remained) themselves. Verdict: Accidental death; no blame attachable to any one.

December 16th, Levi Worsley, British Mine, Broken Hill. Fall of ore in stope. Verdict: Met his death accidentally by fall of ore.

I have given the cause, and juries verdicts, of the fatal accidents which have occurred in the Metalliferous Mines of New South Wales during the year 1896 with a view to give the public a correct idea how these accidents really occur; and by the perusal of the above no other reasonable conclusion can be arrived at than that, in a large majority of cases, the accidents could only have been prevented by the unfortunate persons who lost their lives, and the same conclusion can only be come to as regards the serious accidents throughout the Colony. See table noted above.

During the year I have made visits of inspection and dealt with various official matters in my capacity as Chief Inspector of Mines, Superintendent of Diamond Drills, Mining Warden, &c., &c., in the southern, northern, and western districts, including Broken Hill, which necessitated my travelling by railway 8,596 miles, and other conveyances 2,136 miles, or a total of 10,732 miles.

The Inspectors of Mines and clerks in my branch have given me considerable assistance in the multifarious duties of my office whenever it has been possible for them to do so. They have taken considerable pride in their work, and, notwithstanding some of the unpleasant work an Inspector of Mines has often to do in performing his duty without fear or favour, they have, one and all, given general satisfaction; and although the clerical work is steadily increasing, it has been kept well in hand, and the clerks have done their duties faithfully and well.

Papers registered in my Branch during the year 1896:—

Chief Inspector of Mines.....	2,447
Diamond drills	1,277
Total.....	3,724

The

The above registration is exclusive of papers received from the Record Branch of the Department, to be dealt with by the Chief Inspector of Mines on various matters connected with the Department, and which papers have to be noted in the books, on receipt and return, to prevent miscarriage; the number for the year being 4,189.

Letters written :—

Chief Inspector of Mines	1,322
Diamond drills	576
Total.....	1,898

The above letters written are exclusive of telegrams and circulars, which total 700.

The Inspectors of Mines' reports are attached herewith.

Diamond drill work for the year has been confined to Captain's Flat, the Forest Reef district, and Funafuti Island.

At Captain's Flat two bores were put down. No. 1 bore was continued from the 299 feet to the 546 feet level, and No. 2 bore to 646 feet, making a total of 893 feet. In the first bore a lode of sulphide ores was passed through; but boring operations were discontinued by the company before the lode was reached in the second bore.

At the Forest Reef district six different bores were put through the basalt, prospecting for a payable alluvial lead in that extensive tract of country stretching from the lost extended lead towards Lucknow and on to the Connobles. The first bore reached the depth of 161 feet; No. 2 bore, 218 feet 9 inches; No. 3 bore, 237 feet 5 inches; No. 4 bore, 213 feet 6 inches; No. 5 bore, 216 feet; and No. 6 bore, 202 feet 6 inches; making a total of 1,250 feet. No. 5 bore is supposed to be on the siding of the lead, as a thickness of 4 inches of wash was brought to the surface in the shape of a core, yielding prospects of gold considered payable. The diamond drill has now been removed about 340 yards north-east of No. 5 bore. Should payable gold be struck in No. 7 bore, then the boring operations may be discontinued in the neighbourhood.

The use of a diamond drill was also allowed to the Royal Society of London (but under my supervision) to gain more authentic scientific information in connection with the coral beds; for which purpose the British Government allotted the man-of-war ship "Penguin" to ship the whole diamond drill plant, the men engaged to work said drill, and members of the expedition from Sydney to Funafuti, one of the Ellice Group of islands, and return the same.

The first bore was put down to the depth of 105 feet, of which 12 feet was coral. The remainder had to be driven through sand and loose pieces of coral, making it very difficult for tubing to be driven down.

No. 2 bore, 12 feet, and No. 3 bore, 72 feet in depth, 12 feet of coral core obtained.

The time allowed to do the work was too short, and the time for preparation from the arrival of Professor Sollas, the London Royal Society's representative, and departure of the man-of-war ship, was totally inadequate; hence before the arrival of a consignment of material and appliances to overcome the drift-sand difficulty, the man-of-war ship, with drill, plant, and members of the expedition, were on their return trip. Therefore, the appliances forwarded were returned without being used.

I am in great hopes that the Australian scientific societies will not let this interesting and important matter drop, but follow up the subject determinedly and bring it to a successful issue. The last expedition, although not fully successful, has certainly proved more than was ever known before, and has gathered information which will certainly be a great guide for further operations. The knowledge gained by a further expedition and boring operations through the coral beds would be of great interest, also beneficial to the whole scientific world. Surely the small difficulties which have been encountered, and the comparatively small expenditure which has been made, will not deter the Australian scientific societies to try again, and if successful, then the Royal Society of London should be supplied with all the information gained and half of the core obtained—in fact the same condition as the said society would have given had they been more successful.

A diamond drill bore was also started a few days before the end of the year at Grassy Gully, about 18 miles from Nowra and 4 miles from Burrier, up the Shoalhaven River, to bore horizontally through a hill of felsite formation for auriferous quartz veins.

Herewith I also attach my reports (eleven in number) for various districts and on various matters. Also, the Inspectors of Mines' reports as appendices to my Annual Report, and diagram sections of bores, during the year 1896.

I may also note that 656 fossickers going to the gold-fields received letters from me for railway passes for the year 1896.

I have, &c.,

W. H. J. SLEE, F.G.S.,

Chief Inspector of Mines and Superintendent of Diamond Drills.

The Under Secretary for Mines and Agriculture.

TABLE A.

Showing Fatal, Serious, and Minor Accidents during 1896, as True Mining Accidents.

No.	Date.	Name of Mine.	Locality.	Person Killed.	Person seriously Injured.	Minor Accidents	Occupation.	Nature and Cause of Injury or Death.
1	9 Jan.	Reilly's Mine	Gilgannia		John Osmatho		Miner	Fell off ladder owing to foul air—general injuries
2	24 "	George Green's Mine	Big Hill	Wm. K. Manego			"	"
3	24 "	Native Courage	Wyalong West	Pat. B. Kane			"	"
4	3 Feb.	Sunny Corner	Sunny Corner			Wm. Rickard	"	Fell down shaft.
5	6 "	Proprietary Mine	Broken Hill		James Jones		"	Fall of ground, open cut—leg cut.
6	7 "	D'Arcy Estate	Lucknow	W. Johnson			"	Fall of bucket down shaft.
7	9 "	Spring Flat	Gundagai			J. Crowley	Fossicker	Fall of earth—bruised.
8	14 "	Oakey Creek	Hill End	John Maher			"	Neck broken by fall of alluvial earth.
9	14 "	Great Britain Mine	Tilbustler	T. J. A. Clark			Miner	Struck by falling bucket in shaft.
10	19 "	Central Mine	Broken Hill			Henry Bode	"	Fell into shoot—cut head.
11	25 "	Block 10 Mine	"	Thos. Halls			"	Fell out of cage.
12	28 "	Big Badja Sluicing	Cooma	Jas. Gordon			"	Buried by fall of earth.
13	2 Mar.	Central Mine	Broken Hill		F. Schelmkopf		"	Fell into ore shoot—injured hip.
14	5 "	Great Cobar Company	Cobar			F. Critcher	"	Stone rolled on finger, breaking it.
15	6 "	Mount Gahan	Pambula			Jas. Murphy	"	Premature explosion—cuts.
16	7 "	Proprietary Mine	Broken Hill			John Mathers	"	Fell through floor of stope—bruises.
17	10 "					Thos. Croxton	Trucker	Running chute—stone fell on foot.
18	10 "	Portion 15, Parish Yowaka	Pambula			Edward Leonard	Miner	Fall of ground while retimbering—leg broken.
19	20 "	Dushman's Hill G. M. Co.	Parkes			R. Hudson	"	Recharging warm hole which exploded
20	20 "					R. Wells	"	"
21	21 "	Occidental Mine	Cobar	Robert Mitchell			"	Explosion of shot while tamping.
22	21 "			Alfred Dunford			"	"
23	31 "	Proprietary Mine	Broken Hill		Fred. Rolfe		"	Barring down rock, which fell and broke his leg.
24	6 April	Nymagee Copper Mine	Nymagee			J. Copeland	"	Returned to missed hole—explosion—cuts.
25	11 "	Proprietary Mine	Broken Hill			John Hendry	"	Rock fell and displaced floor of stope—fall and bruised.
26	15 "	Nymagee Copper Mine	Nymagee	John H. Nicholls			"	Fell down shaft—injured, and died later.
27	16 "	Block 14	Broken Hill		James Wyatt		"	Fall of ground—scalp wounds and fractured knee.
28	17 "	Yamble	Gulgong		Chas. Laut		"	Fall of ground in drive—crushed.
29	18 "	Proprietary Mine	Broken Hill		James Baker		"	Clearing partly charged hole with scraper—explosion.
30	18 "					Wm. Thompson	"	"
31	18 "					Wm. Roach	Trucker	Clearing "out pass—stone" fell—scalp wounds.
32	30 "	Central Mine	"		Wm. Norris		Miner	Explosion of shot—loss of an eye.
33	5 May	Proprietary Mine	"			J. O'Loughlin	"	Fall of ground in stope—bruises and cuts.
34	23 "	Great Cobark Mine	Cobark		George Watson		"	Explosion when returning to missed hole—cuts on arms and head.
35	23 "				John Cochran		"	"
36	25 "	Tarrawongee Flux	Tarrawongee		John Holmes		Quarryman	Explosion of shot—returned too soon—thigh fractured.
37	9 June	Proprietary Mine	Broken Hill		John McLennan		Miner	Fall of ground—leg fractured below knee.
38	15 "	Great Britain Mine	Tilbustler			—Cummins	"	Fall of ground—loss of little finger.
39	19 "	Proprietary Mine	Broken Hill		George Skillbock		Trucker	Horse bolted with truck and knocked him down—broken leg.
40	25 "	Junction Point	Tuena		Jas. Miller		Fossicker	Fall of ground in old workings—internal.
41	30 "	May Bell	Broken Hill	Philip Eddy			Miner	Climbing down shaft on rope and fell off.
42	1 July	Birthday Syndicate	Yalgogrin			W. Stoppelbein	"	Windlass rope broke, fell down shaft—ankle hurt.
43	11 "	Block 7	White Cliffs		Jas. A. Orth		"	Windlass stand broke and bucket fell on head.
44	11 "	Williwa Creek	Capertee		—Lancaster		Fossicker	Fall of ground—leg broken.
45	14 "	Mount Gahan	Pambula			Chas. Lake	Miner	Explosion while breaking rock with a plug of dynamite in it.
46	14 "					Chs. Richardson	"	"
47	21 "	Cobar Mining Co.	Cobar			John Titus	"	Slab fell down shaft inflicting flesh wounds.
48	22 "	South Broken Hill	Broken Hill	Samp. T. Vivian			"	Fell into ore chute—neck broken.
49	23 "	J. B. J. Mine	Yalgogrin		Wm. Slade		"	Explosion of dynamite—loss of eye.
50	23 "					Thos. Manners	"	cuts and bruises.
51	25 "	Proprietary Mine	Broken Hill	John Pearce			"	Fall of ground in stope—general injuries.
52	27 "	Junction Mine	"			John Matters	Flatman	Fall of stone down shaft—puncturing arm.
53	5 Aug.	Consols Mine	"	Otto von der Rothe			Miner	Truck run away with him and killed him.
54	8 "	Hong Kong G. M. Co.	Mt. McDonald		Jappa Matheson		"	Stone fell down shaft injuring eye.
55	8 "	Great Cobar G. M. Co.	Cobar		Jno. Weingartner		"	Fall into pass—broken leg.
56	12 "	Princess Mine	Wyalong	Richard Flynn			"	Fall of earth—crushed.
57	14 "	Shilong Claim, Cougi	Bendemeer	James Tickle			Fossicker	Fall of earth.
58	28 "	Hill End United	Hill End			John Gayner	Miner	—bruises.
59	29 "	Central Mine	Broken Hill	Drd. G. Pendrith			"	in old workings.
60	2 Sept.					E. V. Morrow	"	Tipping ore into chute, and fell in himself.
61	8 "	Native Dog, Hope's Creek	Rockley	I. R. Williams			Fossicker	Fall of ground in sluicing claim.
62	24 "	Proprietary Mine	Broken Hill			John Ryan	Trucker	Knocked down by truck.
63	30 Oct.	Fifteen-mile Creek	Kinnabra	Hugh Connors			Fossicker	Drowned in tail race by dam bursting.
64	19 "	Central Mine	Broken Hill			Jas. Somerville	Miner	Stripping shaft and stage collapsed—shock.
65	20 "	Trunkey G. M. Co.	Trunkey Creek			Ed. Deacon	"	Fall of sapling down shaft—skull cut.
66	24 "	South Mine	Broken Hill			John Tonkin	"	Piece of stone fell from stope—scalp wound.
67	28 "	Proprietary Mine	"		Alf. Griffiths		"	Fall of rock down winze—crushed foot.
68	31 "	Prince of Wales	Wyalong	Saml. Unwin			"	Boring in old socket, which exploded.
69	31 "			James Butler			"	"
70	4 Nov.	British Mine	Broken Hill		Wm. Bray		"	Timber fell on him, breaking his thigh.
71	10 "	Black Cocu	Yalgogrin		Jas. Petel		"	Scraper fell down shaft, puncturing back.
72	12 "	Occidental Mine	Cobar			John Reece	Quarryman	Fall of earth.
73	19 "	Gibraltar Consolidated	Shepardtown	John Dore			Miner	Fell down winze—fractured skull.
74	23 "	Prince of Wales	Wyalong	W. H. Naylor			"	Drill fell down shaft—punctured back.
75	34 "	House's Claim	Enmore	John Tobin			"	Fell off ladder down shaft.
76	37 "	British Mine	Broken Hill	G. White			"	Explosion when drilling old hole.
77	27 "			Ed. Barnes			"	"
78	2 Dec.	Powell's Claim	Gundagai	Stephen Webb			"	Fall of ground—buried.
79	2 "			George Wilson			"	"
80	4 "	Proprietary Mine	Broken Hill			Thos. Hebron	"	Premature explosion—bruised.
81	5 "	Star Gully	Grenfell	Alf. Nicholls			"	Fall of ground.
82	8 "	British Mine	Broken Hill		Anthony Blozza		"	"
83	12 "		Solferino	Ernest A. Gaffin			Fossicker	Fall of stump of tree into tunnel.
84	14 "	Newbridge G. M. Co.	Newbridge		Thos. Wright		Miner	Fall of quartz—internal injuries.
85	14 "	Proprietary Mine	Broken Hill		Edwin Prior		"	Fall of ore in stope—broken ribs.
86	16 "	British Mine	"	Levi Worsley			"	Fall of ore in stope.
87	19 "	Democrat Mine	Cowra Creek	Stephen Quetti			"	Fall of rock.
88	22 "	Great Cobar Co.	Cobar			—Gibson	"	Fall of ore in chute when casing it.
89	22 "	Eleanora	Hillgrove			Josh. Chad	"	Returned to missed hole, which exploded

ABSTRACT.

Fatal—14 quartz, 8 gold alluvial, 9 silver, 1 copper. Serious—0 quartz, 2 gold alluvial, 12 silver, 1 copper, 1 limestone, 1 opal. Minor—12 quartz, 1 gold alluvial, 13 silver, 5 copper

TABLE B.

SHOWING Fatal, Serious, and Minor Accidents on Surface as distinguished from true Mining Accidents, during 1896.
Surface Accidents, 1896.

No.	Date.	Name of Mine.	Locality.	Person killed.	Person seriously injured.	Minor Accidents.	Occupation.	Nature and cause of injury or death.
1	3 Feb.	Lake George Copper Mine.	Captain's Flat.	M. J. Currie	Slag-wheeler	Slag spilt into water, exploded, and cut his face.
2	10 "	Proprietary Mine ..	Broken Hill	J. Triplett	Furnace-hand	Hit by his mate with hammer when repairing furnace.
3	13 "	Block 14 ..	"	Jas. Eastwood.	Trucker	While trucking tallings slipped and cut his head.
4	14 "	Proprietary Mine ..	"	Wm. Killaway	Surface-hand	Hand cut by circular saw.
5	23 "	Sunlight Mine ..	Hilgrove	A. Cavanagh	Trucker	Pulled tip truck on to leg—breaking it.
6	24 "	Proprietary Mine ..	Broken Hill	Fred Rohu	Platman	Fell into Drew's ore bins on surface.
7	5 Mar.	Great Cobar Co.	Cobar	B. Meterunc	Braceman	Toe broken by rock rolling off heap on to him
8	6 "	Proprietary Mine ..	Broken Hill	Thos. Marc	Quarry man	Stone rolled down batter on to his leg.
9	15 "	"	"	Thos. Farley	Shunter	Fell from viaduct near Wigg's shaft.
10	31 "	Block 10 ..	"	Chas. Berridge	Engineer	While cleaning disc of engine fingers torn off.
11	2 April	Great Cobar Copper Co.	Cobar	Thos. Neims	Trucker	Part of thumb cut off when spragging wheel.
12	9 "	Proprietary Mine ..	Broken Hill	Mich. Torpy	Run into by truck at Leaching works.
13	10 "	"	"	W. J. Clark	Surface-hand	Fell off ladder while cleaning vats.
14	22 "	British Mine ..	"	W. Elbe	Electrician	Repairing wires on pole, which fell.
15	4 May	Yamble	Gulgong	Rch. Strike	Possicker	Removing logs from shaft, and they fell on him.
16	20 "	Proprietary Mine ..	Broken Hill	John Temby	Quarryman	Thrown off mullock waggon.
17	10 June	"	"	Jas. McGowan	Trucker	Fall of stone in open cut, while having crib.
18	12 "	"	"	Walter D. Reed	Shunter	Braking truck on railway, slipped, and run over.
19	4 July	Block 10 ..	"	Geo. Elvidge	Engineer	Adjusting Vanner belt—arm caught.
20	5 "	Proprietary	"	Alf Roddey	Furnace-hand	Slipped, and slag spilt over him—burns.
21	6 "	"	"	Mich. J. Purcell	Braceman	Fell off brace of shaft owing to rail being loose.
22	13 "	British Mine ..	"	R. Boldwell	Shunter	Trapped, and knocked down by truck.
23	14 "	Proprietary Mine ..	"	Geo. Gentle	Carter	Loading dray, stone fell and broke collar bone.
24	27 "	"	"	Thos. Conroy	Shunter	Braking truck—foot jambed.
25	28 "	"	"	Pat. Hogan	Quarryman	Filling skip, when stone rolled on him.
26	1 Aug.	"	"	Wm Smith	Trucker	Injured by collision of trucks.
27	2 "	Good-ya Creek	Yass	Ed. Mulligan	Miner	Explosion of powder when pointing picks.
28	21 "	"	"	Peter Knox	"	Explosion of powder when pointing picks.
29	24 "	Proprietary Mine ..	Broken Hill	Herman Bahm	Shunter	Jambed his thigh on truck.
30	29 "	"	"	Alf. Mayer	Pitfer	Fitting brasses to engine—wheel crushed him.
31	2 Nov.	Junction Mine ..	"	A. P. Quick	Surface-hand	Shifting machinery, and was jambed—leg broken.
32	2 "	"	"	Percy Phillips	"	Shifting machinery, and was jambed—small bone of arm broken.
33	2 "	Proprietary Mine ..	"	C. A. Walton	Trucker	Loading trucks and stone rolled on thumb.
34	10 "	Block 10 ..	"	Charles Leslie	Shunter	Jambed between trucks—broken pelvis.

ABSTRACT.

Fatal, 3 silver; serious, 2 quartz, 1 gold alluvial, 7 silver; minor, 1 quartz, 17 silver, 3 copper.

Report of W. H. J. Sloc, Esq., J.P., F.G.S., &c., Chief Inspector of Mines, on the Broken Hill Mines.

Chief Inspector of Mines' Office, Department of Mines and Agriculture,

Sydney, 21 November, 1896.

Sir,

I do myself the honor to inform you that during my inspection of the Broken Hill Mines, in the beginning of this month, I found that great improvements had taken place in the safety, ventilation, treatment of ores, observance of lead-poisoning regulations, and other matters since the date of my last inspection.

The large bodies of sulphide ores along the whole line of the principal Broken Hill mines is such that it will take many years with present and still further improved treatment to work them out. A system of working which has always been adopted in Block 14 Mine, that is, filling in solidly between the square set timbering, is now adopted as part and parcel of the system for working the principal Broken Hill mines; hence the creeps which formerly gave so much anxiety and trouble are greatly checked, and the dangers occurring through creeps are minimised accordingly.

The Lead-Poisoning Act Regulations have been gradually but surely enforced, the effects of which I intend to show in a table to be attached to my Annual Report for 1896, where the comparison of the two years during which the Act has been in force will be clearly shown.

The following was the state of affairs at the time of my last inspection, as verified by Mr. Inspector Hebbard's Report:—

Broken Hill North Mine.

Clauses 1, 2, 3, 4 are fulfilled. No special provision has so far been made to carry out clause 5, as the ore is not of a dusty character.

Clause 6.—Bathroom, containing both plunge and shower baths, is provided, and there is also provision for separate washing apart from bathing. Clause 7 is not much observed. There are no smelting furnaces on the mine.

Broken Hill Junction North.

Clauses 1, 2, 3, 4 are fulfilled; no special provision is made for the carrying out of clause 5, the ore not being of a dusty character. Clause 6. Plunge and shower baths are provided, and workmen's clothes are dried on top of the boiler. Clause 7 is not thoroughly observed, but the majority of miners change their clothes.

Broken Hill Junction.

Clauses 1, 2, 3, 4 are fulfilled. No special provisions are made to carry clause 5 into effect, the ore not being of a dusty character. Clause 6. Bath-room is provided containing both plunge and shower baths; also a changing room; the men dry their clothes on top of boiler. Extra room and provisions have been provided owing to larger numbers of persons being employed.

British Mine.

Clauses 1, 2, 3, 4 are observed. Under clause 5, water-pipes for sprinkling water are laid throughout the mine where necessary. Under clause 6, bath and changing rooms are provided, but are only partially availed of. No furnaces are in blast.

Block 14 Mine.

Clauses 1, 2, 3, 4 are fulfilled. Under clause 5, water for sprinkling floors, &c., is provided when needful. Clause 6. Bath and changing rooms are provided; the latter is fitted with steam-pipes for drying clothes. Clause 7. Although perhaps not thoroughly observed, but it is intended to be done at an early date. There are no furnaces in blast at the mine.

Broken Hill Proprietary.

Clauses 1, 2, 3, 4 are fulfilled. Clause 5. Water-pipes have been laid throughout the mine for sprinkling water when necessary. Clause 6. Bath and changing rooms are provided on each section of the mine, and also in such places as the chlorodising works, &c., &c. Clause 7 is only partially observed owing to the workmen frequently neglecting to change their clothing; the rest of the regulations are observed as near as circumstances will at present allow.

Central Mine (Sulphide Corporation Ashcroft's Process, Limited).

All the provisions of the Act, as far as they apply to the mine, are fulfilled.

Block 10.

Clauses 1, 2, 3, 4 are fulfilled. Clause 5. The ore is not of a dusty character. The rest of the clauses are fulfilled as far as circumstances will allow.

Broken Hill South Mine.

Clauses 1, 2, 3, 4 are fulfilled. Clause 5. The ore is not of a dusty character. Clauses 7 and 8 are observed in a satisfactory manner and the rest of clauses as far as circumstances require and will allow.

As stated in the beginning of this report the ventilation in all the Broken Hill mines is better than it has been for years past. The hot stopes which gave so much trouble, especially in the Central Mine and the Broken Hill South Mine, have disappeared, and purer air now prevails throughout the stopes. Improvements for the safety of persons employed in the Broken Hill mines is the order of the day; and I have great hopes that during next year the mining accidents which may occur will be considerably below the average of these last two years.

From the general managers to the shift bosses, who have reputations to lose, the general desire is to, as far as possible, prevent accidents, because an accident occurring in any mine means extra expense, trouble, and annoyance, not only to the manager, but to the company he represents. Considering the magnitude, deep and extensive mining operations, carried on at Broken Hill, and the large number of persons employed (a considerable percentage of which perhaps never saw a mine or were in a mine until the day they were engaged at Broken Hill), the percentage of accidents are such as favourably compare with any similar mining operations or conditions in any part of the globe.

Owing to the variety of concentrating plants and the various treatments adopted for any peculiar class of ore, the sulphide problem is becoming gradually unravelled, because ores which some two or three years ago were considered almost worthless are now yielding payable returns. Tens of thousands, if not hundreds of thousands, pounds sterling have already been spent on the sulphide treatment question, and there still remains a great deal to be learnt; nevertheless signs of the times are not wanting that in the near future the treatment of the sulphide ores will be so far advanced as to leave the loss of valuable minerals to a mere minimum.

This year's output, and the more successful treatment of the sulphides, has given fresh life to the Broken Hill district; a larger number of persons have found employment, and more confidence has been established in the permanency of the Broken Hill mines.

Having already reported on various questions and considerations in connection with the Broken Hill mining district in separate reports, I need not refer to them in this report.

I have, &c.,

W. H. J. SLEE,

The Under Secretary for Mines and Agriculture.

Chief Inspector of Mines.

Report on the Stringy Bark or Cobbara Rush, by W. H. J. Slec, Esq., J.P., F.G.S., &c., Chief Inspector of Mines, &c.

Sir,

Gulgong, 28 January, 1896.

I do myself the honor to inform you that I have inspected the locality known as the Stringy Bark or Cobbara Rush, which is situated about 22 miles from Gulgong, 5 miles from Tallawang, 13 miles from Cobbara, and about the same distance from Dennistown, on Mr. E. J. Rowe's Tucklan Run. The rush is an extension of the Tallawang Gold-field, and is only about 1 mile from Shuttleworth's 15 acres extended alluvial claim, which obtained aid out of the prospecting vote, and was working when the rush took place.

The prospectors, Marshall Brothers and party, washed from twelve loads of stuff 42 oz. of gold. The sinking is 15 feet in depth, and the run of gold is narrow, varying from 3 feet to 10 feet in width, with a thickness of about 1 foot of washdirt.

About twenty claims are on gold; of which six may be considered as payable, the remaining yielding "tucker." These claims are scattered over an area of about $\frac{1}{2}$ mile. The gold in every instance is found either in small patches or narrow, short runs. The washdirt consists of puggy clay with small pebbles. Present population is about 150; but should heavy rains fall, so that water will be available for mining purposes, then the population is likely to increase, as there is an extensive area of country totally unprospected, in which other small runs of gold or patches may be discovered. Although Marshall Brothers obtained a rich patch, the general yield of gold on the field is from 2 dwt. to 10 dwt. of gold per load, which, with a good water supply for mining purposes, may ensure a living for numbers of persons. It would be folly for persons to come from a distance while the dry weather continues.

I have, &c.,

W. H. J. SLEE,

The Under Secretary for Mines and Agriculture.

Chief Inspector of Mines.

Report by W. H. J. Slee, Esq., F.G.S., &c., on the new rush at Back Creek and the Lake George Mining Company's Property at Captain's Flat.

Sir,

Captain's Flat, 29 February, 1896.

I do myself the honor to inform you that, *en route* from Braidwood to Captain's Flat, I made an inspection of the new rush at Back Creek,

This rush is situated about 8 miles from Braidwood, 4 miles from Major's Creek, and 20 miles from Captain's Flat. On my arrival (which was unexpected) fully eighty miners gathered together and pointed out several matters, which will be dealt with by me in separate reports. The sinking is easy and shallow, varying from mere surfacing to 10 feet in depth; the auriferous stuff, which varies from 3 to 6 inches in thickness, consists of a puggy clay with fine grit or wash resting on a hard bottom; the gold is of a fine scaly nature. The discovery was made on a dried-up swamp, and although by present appearances it is a run of gold trending from the swamp, about half a mile from the Shoalhaven River, through a stock reserve, into Dopping's 100 acres selection, and Mr. Roberts' freehold, I am of opinion that there is a likelihood that several short narrow runs or patches are likely to be met with by systematic prospecting parallel to each other. The country is rather flat, and presents no surface indications as a guide to assist the prospector in search of payable gold.

The miners informed me that they earned from tucker to wages, and that the yield (at per one-horse load) was from $1\frac{1}{2}$ to 5 dwt. per load. Unless something new should be discovered, there are quite sufficient men on the ground for all purposes. I do not think it likely that any extensive and rich leads of gold will be discovered, but a living may, perhaps, be made for a number of persons between the Back Creek and Jembaicumbene Creek for some considerable time.

Captain's Flat.

The Lake George Mining Company is still employing a large number of persons. The company's able and energetic general manager and metallurgist, Mr. Trewenick, intends to erect additional machinery for the more expeditious and less costly treatment of refractory silver and copper ores. The Kohinoor shaft is now being sunk an additional 80 feet from the 300 feet level. It is intended to open a level at the 370 feet, so as to intersect the higher quality of ores known to exist southerly of the shaft, and in the meantime sinking the shaft to a still greater depth, which is really the best course to pursue in the interest of all concerned. The mining management is under Mr. Samuel Renfrey, an able, energetic, practical man.

The diamond drill is now down 522 feet, and has passed through lode stuff for some time. Some of the core which was brought up to-day in my presence looked fairly well; and although the drill has not passed through rich ore, it has certainly passed through some payable ore, and has proved beyond doubt the continuation of the lode as far as the drill has penetrated, and has thereby considerably added to the value of the company's property.

In my opinion it would be advantageous to the company to have their lode further tested by the diamond drill on one or more sites along the line of lode.

I have, &c.,

W. H. J. SLEE,

Chief Inspector of Mines.

The Under Secretary for Mines and Agriculture.

Report by Mr. W. H. J. Slee, Esq., F.G.S., &c., on the Bywong and Dairy Creek Mines.

Sir,

Bungendore, 3 March, 1896.

I do myself the honor to inform you that I have visited the Bywong and Dairy Creeks Mines.

At Bywong, mining has almost been at a standstill owing to the late severe drought; but as there is now a good supply of water for crushing purposes, and several parcels of quartz ready for crushing, an impetus will be given.

The mines which have the largest quantity of quartz at grass are Cartright and party, and Low and party. Characteristic of the whole district the quartz occurs in lenticular blocks, and the gold in shoots; hence the failure of parties in tracing the gold from an adjoining claim.

At Dairy Creek, Kershaw and party are obtaining some very rich specimens of gold. Their last crushing yielded 8 oz. of gold per ton; and they have again bagged some rich quartz ready for crushing. Their workings are in an open cutting about 30 feet in depth by about 150 feet in length, forming a lenticular block with a strike of N. 20° W. The quartz vein is narrow, and the country rock hard slate. On the south a party named Cassidy and Company, and on the north Mr. James Tait, of Bungendore, have taken up land to mine for gold.

I beg to draw particular attention to the Creek and Valley on the right hand going from Bungendore to Bywong, say, about from 5 to 8 miles from Bungendore, which has decided auriferous appearances, and is well worthy of thorough systematic prospecting. I was informed that the land is freehold, and belongs to a Mr. Donnelly.

I have, &c.,

W. H. J. SLEE,

Chief Inspector of Mines.

The Under Secretary for Mines and Agriculture.

Report by W. H. J. Slee, Esquire, J.P., F.G.S., &c., on Mining in the Condobolin, Cugong, Creamy Hill, Erronbendery, and Mount Wilga Mining Districts.

Sir,

Condobolin, 12 May, 1896.

I do myself the honor to inform you that I have so far completed my official work in connection with various mining matters in the Condobolin, Cugong, Creamy Hill, Erronbendery, and Mount Wilga Mining Districts.

The quartz reefs which have so far been discovered in the Condobolin district have been of a patchy nature; but there is no reason why the reefs within 3 to 4 miles of Condobolin should not be made to yield payable returns if worked with thorough system and economy. I inspected the underground workings of three of the reefs, which were the only ones I was able to examine below surface, the rest of the workings having either fallen in or there were no appliances to get below. The

The Julia Reuben reef, formerly known as the Red Paint, has a shaft down to the depth of 37 feet. There are about 30 tons of quartz at grass; very little work, if any, has been done of late. But I was informed that it was the intention of Messrs. Officer, Tough, and party to give the Julia Reuben Mine a thorough systematic test, both to a greater depth and length along the line of vein, and if this intention is carried out payable results will most likely be the consequence. I saw some very rich specimens near the surface, which taken by themselves would give very high yields, and by careful observation these patches may be successfully traced both downwards and along the fissure.

The Phoenix, or Sheppard and Party's Mine, whose main shaft is now down 86 feet, the reefs in parts being about 2 to 3 feet in width, had 6 tons crushed, yielding 13 dwt. per ton; and a crushing of 10 tons north of the large reef yielded 5 dwt. per ton. The party intend to sink to the 100 feet level and then drive along the reef. This claim is probably the best near Condobolin, and only requires a thorough system to be classed as a payable mine.

Messrs. Tough and party have lately cleared out an old shaft at the Surprise Mine, which shaft is 35 feet in depth, on the bottom of which the quartz veins largely associated with iron are rather broken and disturbed. The party, however, intend to sink the shaft 20 feet deeper and drive along the veins for about 30 feet, with the hope that the yield of gold may improve Cugong. The Cugong quartz-veins are situated about 30 miles below Condobolin, 4 miles north of the Lachlan River, and 20 miles from Euabalong.

There are several claims at work, of which the Yellow Streak and the Prospecting Claim (Linden, McClure, and party's) are the principal. Their deepest workings are 100 feet from surface, and 46 tons crushed yielded 15 dwt. per ton; and a crushing of 12 tons was put through the mill at the time of my visit, the amalgam on the copper plates showing about equal to former average.

The Yellow Streak, the deepest part of which is 120 feet, has crushed 193 tons of quartz, yielding 179 oz. 3 dwt., and there were about 120 tons at grass ready for crushing.

This is no doubt, so far, the best mine on the Cugong Gold-field.

There are a large number of other reefs, such as Bymer and party's, which crushed 54 tons, yielding about $\frac{1}{2}$ oz. per ton; the Caledonian, 14 tons, yielding $11\frac{1}{2}$ dwt. per ton; the Dry Blower, and others. In all these claims on the whole of the Cugong Field the veins occur in lenticular blocks, which necessitates a great deal of extra work of an unprofitable nature; hence, if it is intended to obtain payable returns, the system hitherto adopted to work out a block of quartz before seeking for another must be abolished, and sinking and driving for other blocks must be carried on simultaneously with working the quartz; otherwise the whole field will have to suffer by the closing up of the mines.

A 9-stamp crushing machine has been erected by Mr. J. J. Pooler on the north side of the Lachlan River, about 4 miles from the mines, and which at the time of my inspection was fully occupied in crushing, day and night, from the Cugong Reefs.

No one was at work at Creamy Hill nor at Errebandery, about 10 miles from Euabalong. The 5-stamp battery on the Lachlan River, near the road to Lake Cudgellico, belonging to the Errebandery Company, was idle.

I also inspected some gold discoveries on the south side of the river Lachlan, about 10 miles south of Mr. E. H. Moulder's Brothering Station. These discoveries were made by some energetic persevering prospectors known as Price Brothers. These are two different gold discoveries: one is known as Mount Wilga, the other as the Josephine Moulder Mine. The former consists of a large lode of quartz and quartzite, associated with iron, and iron and arsenical pyrites. The greatest depth reached is 65 feet. I saw a little gold in the lode with the naked eye; but very good prospects of fine gold were obtained by dollying. At present there is a scarcity of water; but there is a good site for a large tank in close proximity to the mine.

The Josephine Moulder Mine, which is about $\frac{1}{2}$ mile westerly of the Mount Wilga, appeared to me to be the best of the two discoveries. The quartz vein, which is largely associated with iron and arsenical pyrites, has not been sunk upon more than a few feet; but the reef has been exposed for a considerable length in an open cutting. Gold could be seen with the naked eye, and excellent prospects could be obtained by crushing in a mortar. Here, like Mount Wilga, want of water supply and crushing and gold-saving machinery is the great drawback to make this, probably, one of the best-paying mines on the Lower Lachlan.

I will visit Peak Hill, Alectown, and Forbes before returning to Sydney.

I have, &c.,

W. H. J. SLEE,

Chief Inspector of Mines.

The Under Secretary for Mines and Agriculture.

Report by W. H. J. Slee, Esq., J.P., F.G.S., &c., Chief Inspector of Mines, on the Carlisle Rush and Fifield and Platina Districts.

Sir,

Parkes, 21 May, 1896.

I do myself the honor to inform you that *en route* from Condobolin to Trundle I was requested by a miner named James Byron to make an inspection of his party's prospecting works on Carlisle Station (Messrs. Milne Bros.), about 17 miles north-east from Condobolin, 12 miles south-westerly from Fifield, and about 16 miles southerly of Trundle. The party consisted of three miners, namely, James Byron, Thomas Byron, and Neil Borrenson. I saw some gold obtained from the shallow alluvial workings, and also examined a reef about twelve (12) inches in width at a depth of 25 feet from surface. A little gold could be seen in the quartz with the naked eye, which however appeared to me not payable. Years ago I drew particular attention to the Carlisle Station as a locality likely to be auriferous, but so far nothing has been discovered to justify a rush. Nevertheless I am of the same opinion now as I was more than fifteen (15) years ago, when I first came through that district, that sooner or later payable gold discoveries will be made in an extensive area of country stretching from Dandeloo through Burra Burra, Melrose Plains, and Carlisle. Although perhaps there is very little probability of extensive rich alluvial leads, there are unmistakable indications that gold does exist, and the only drawback for the settlement of a mining population is the great scarcity of water. The country has far superior auriferous indications than the locality about Fifield and Platina, and if thoroughly prospected during rainy seasons is likely to lead to the settlement of an industrious prosperous mining population.

Fifield

Fisfield and Platina.

There are about 400 miners in this district exclusive of women and children. The majority of the miners are apparently making a living and some more than wages. A large area of the country in the vicinity of Jack's Look-out would, with a good supply of water, yield handsome returns. There are several puddling machines in the district, and as heavy rains have fallen since my inspection favourable results as to the increase in the yield of gold and platinum may be anticipated.

At Platina, where the lead of gold and platinum was lost in Simmons' late C.L., a fresh impetus has been given by the discovery of a continuation of said lead in the C.P. One piece of platinum which was shown to me (a solid nugget), weighing 28 dwt., is perhaps the largest piece ever found in New South Wales. Before closing this report, I may be permitted to draw the prospectors' attention to a tract of country about 17 miles from Trundle and about 15 miles from Parkes, where the Trundle to Parkes road passes over undulating country of tertiary formation, which is well worthy the careful attention of intending prospectors. Deep rich and probably wet leads may be discovered in that locality; but it would be almost worse than folly for parties without means to undertake such prospecting works.

I have, &c.,

W. H. J. SLEE,

Chief Inspector of Mines.

The Under Secretary for Mines and Agriculture.

Report by W. H. J. Slee, Esq., J.P., F.G.S., &c., Chief Inspector of Mines, on Mining in the Peak Hill and Allectown Districts.

Department of Mines and Agriculture, Chief Inspector of Mines' Office,

Sydney, 2 June, 1896.

Sir,

I do myself the honor to report that on my recent visit to the Peak Hill and Allectown districts I found that although alluvial mining was rather dull, the quartz-mining industry has received quite an impetus, owing to several new discoveries. Several quartz claims were in full work at Barrabadeen. Delaney's old reef, within $2\frac{1}{2}$ miles of Peak Hill, had been retaken and worked with fair prospects of success by H. Kelly and E. R. T. Bubard. At Paddy's Flat, about $1\frac{1}{2}$ mile east of Peak Hill, A. C. Walker and J. H. Wardell discovered a quartz vein, rather broken, near the surface, and are now sinking, in hopes that better results will be obtained at a greater depth. The New Year's Gift (Matson, Kelly, and party), who received aid out of the prospecting vote, crushed 6 tons, yielding 24 oz. 15 dwt. of gold. The Monte Carlo Reef has had several good crushings of late, of which the following are the principal:—20 tons from the 110-foot level yielded 9 oz. of gold; 11 tons from the 150-foot level yielded 369 oz.; and a crushing, which took place during my visit, of 22 tons, yielded 222 oz. of gold, exclusive of concentrates. Several other quartz reefs, such as the "Who-would-have-thought-it," Warner's, and others, have lately been retaken, and are obtaining fair encouragement. Several quartz claims have been retaken, and others discovered near Allectown, of which William Mead and party's mine, known as the Emu Reef, on Beaseley's conditional lease, is the principal one. Several crushings have lately been taken from said reef. 15 tons quartz yielded 2 oz. 5 dwt. per ton; 18 tons, 2 oz. $2\frac{1}{2}$ dwt. per ton; and 50 tons, 82 oz. per ton. At the time of my inspection there were about 60 tons of quartz at grass, in which gold could be seen with the naked eye. The reef was about 6 feet in width at the 70 feet level. Claims were at work both north and south of Mead and party's claim, but so far they have not been successful to strike a payable reef.

The quartz crushing battery at Allectown is to be put in good order and fitted up with improved gold-saving appliances under the management of Mr. Brown, who for years had charge of the Parkes crushing battery, where he has given general satisfaction, and as there are a large number of known quartz veins between Parkes, Allectown, and Peak Hill, a large increase in the quartz-mining industry may be expected.

I have, &c.,

W. H. J. SLEE,

Chief Inspector of Mines.

The Under Secretary for Mines and Agriculture.

Report by W. H. J. Slee, Esquire, F.G.S., &c., Chief Inspector of Mines, on the Mines at Junee Reefs and Eurongilly.

Junee, 14 August, 1896.

Sir,

I do myself the honor to inform you that I have completed inspection of the Junee Reefs and Eurongilly.

The principal mine at work at and near the Junee Reefs is the Dusthole Mine, Mr. E. Gallagher, Manager, the greatest depth of which is 200 feet from surface, and the reef varies from a narrow vein to several feet in thickness. Several crushings have been taken from this mine with highly payable results; the ore being very refractory requires special treatment; an ordinary crushing and gold-saving plant would be useless, hence the mine is placed under offer to Mr. Howell on behalf of British capitalists. Although the gold occurs in shoots, the walls are well-defined and present an appearance of permanency.

The Doctor Reef is situated about $\frac{3}{4}$ mile from the Dusthole; greatest depth, 105 feet; thickness of reef fully 5 feet with well-defined walls; the quartz, however, appears to be of lower quality than the Dusthole Reef. This, too, is under offer to Mr. Howell, at whose expense the sinking is at present carried on.

Should the prospecting now carried on under the guidance and at the expense of Mr. Howell prove successful, the influx of capital must do a large amount of good to the Junee district generally, and these hitherto neglected reefs may yet give profitable returns for capital judiciously invested.

There are several smaller reefs at work, such as the Shamrock, Wallett's, Specimen Hill (W. J. Doyle and Party), Allen's, and others who may be classed as prospecting.

Eurongilly.

The Eurongilly reefs are situated about 12 miles from Junee. At the time of my inspection I found about three different parties at work. The principal mine is the Pioneer, which is about 215 feet in depth, and at the lowest level has a well-defined formation consisting of two quartz veins, one about

15 inches, the other about 9 inches with a "horse" of 3 feet between. By present appearances these two veins will junction. Some very good crushings have been taken from this mine, and I think that if systematic prospecting were carried on both in depth and along the line of vein the results would probably be very satisfactory to all concerned.

Chalmers and Party and Weir and Party are also at work; the former on the Defiance Reef, and the latter on the Pioneer line.

A Huntington Mill has been erected near the reefs, but was idle at the time of my inspection. Taking a general view of the Eurongilly district, I am of opinion that by judicious and systematic prospecting at the lower levels profitable returns may be looked forward to for labour and capital expended.

I have, &c.,

W. H. J. SLEE,

Chief Inspector of Mines.

The Under Secretary for Mines and Agriculture.

Report by W. H. J. Slec, Esq., F.G.S., &c., Chief Inspector of Mines, on the New Rush and other mining portions in the Murrumburrah District.

Department of Mines and Agriculture, Chief Inspector of Mines Branch,

Sydney, 27 August, 1896.

Sir,

Having recently returned from the Murrumburrah district, I do myself the honor to furnish you with full particulars of the New Rush at Cunningham's Creek, which is about 15 miles from Murrumburrah and about 1 mile from Marshal MacMahon's Reef. The discovery is alluvial, sinking being shallow, from 15 to 30 feet in depth. The thickness of the auriferous wash varies from a few inches to five (5) feet in thickness, resting on decomposed granite.

At the time of my inspection there were about fifteen (15) claims on gold, which may be classed from mere "tucker" to wages claims. Total number of men at the rush, about two hundred (200).

The payable auriferous deposits so far discovered seem to be confined in and near the embankment of the creek. Other parts of the creek some distance from the present rush have been worked with payable results, and indications certainly point to the probability that payable auriferous deposits will be discovered by thorough prospecting on other hitherto untried parts of said creek.

The Crown Point Gold-mining Company (Limited), late Marshal MacMahon's Reef, of which Mr. Robt. W. Ditchburn is the mining manager.—This mine during former years has produced a large amount of gold, but owing to the ore being rather refractory, and the method for the treatment of the same perhaps faulty, results have not come up to the expectation of former owners, but the mine is now being worked with British capital. The deepest part of the mine is two hundred (200) feet; twelve miners are now employed below sinking. There are two lodes, one known as the quartz and the other as the pyrites lode; the former is about 18 inches, the latter several feet in width. The total number of men at present employed in the mine and in connection with the erection of machinery is thirty-five (35), but the manager expects to increase that number very considerably in a short time.

Machinery for the treatment of ore is now in course of erection, which consists of a complete chlorination plant, a battery for crushing, Blake's powerful stone breaker, a Kropp's mill, Morton's patent furnaces, &c., &c.

Should the company's operation prove successful to their shareholders the district above referred to would greatly benefit thereby.

On the Waratah Reef, about 6 miles from Harden, several claims are at work prospecting for the continuation of the reef in Bray and Party's holding, who crushed 6 oz. of gold by pestle and mortar. One ton was tested at the Clyde Works, yielding 2½ oz.; and a picked lot sent to Climo Works, of 1 ton, yielded 11 oz. 4 dwt. The information as to the above yield was kindly furnished to me by Mr. Bray. The ore in the Waratah reef is rather refractory.

There are a few other parties prospecting for reefs, but so far without success.

I have, &c.,

W. H. J. SLEE,

Chief Inspector of Mines.

The Under Secretary for Mines and Agriculture.

Report by W. H. J. Slec, Esq., F.G.S., &c., Chief Inspector of Mines, on the Overflow Silver Mines; township known as Bobadah.

Sir,

Nymagee, 30 September, 1896.

I have the honor to inform you that I have completed inspection and other official duties in connection with the Overflow Silver Mines.

These mines have considerably improved since my last inspection. The company's main shaft is now down 90 feet, on the bottom of which is a lode the whole width of the shaft, without touching the walls, the shaft being 9 ft. long by 4 feet 6 in. wide inside the timbers; 107 feet in length, have been driven in a north and south direction along the lode, the latter averaging from 5 ft. to 13 feet in width. The ore body contains gold, silver, copper, lead, and other minerals, and appears of higher value at the 90-foot level than on the higher levels. Only prospecting works are carried on by the primitive style of hauling with windlass. No engines nor furnaces (water jackets) have as yet been erected, nor even has any commencement been made to erect same.

In my opinion the prospects are such as to deserve more expensive development, and as soon as all the mines start to work a mining population of some hundreds ought to be able to obtain a living in the district.

A large area of this back country deserves to be more thoroughly prospected. Between Nymagee and the Overflow the whole country has certainly a decided mineralized appearance. Some very good outcrops of ironstone and quartz can be noticed along the road from 7 to 20 miles past Nymagee, which, apparently, has been overlooked, but are worthy of a thorough test.

By request of a number of persons at the Overflow, and on account of the increase of population, I marked off a street on a good eligible site west of the mineral lease, portions 1 and 2, and named the

the new township Bobadah, an aboriginal name. The blacks in former ages held large camping festivals in the vicinity, as can be seen by remaining traces, such as chips from tomahawks or war instruments in large quantities.

As stated before, I think that there is a great probability of a permanent mining settlement, of which the village or town of Bobadah will be a centre.

I have, &c.,

W. H. J. SLEE,

The Under Secretary for Mines and Agriculture.

Chief Inspector of Mines.

Report by W. H. J. Slee, Esq., F.G.S., &c., Chief Inspector of Mines, on Mining Accidents caused by Explosion through starting a new hole from the bottom of an old hole.

Sir,

Sydney, 1 December, 1896.

In view of the fact that an accident occurred at the British Broken Hill Mines, Broken Hill, caused by explosion, through which two (2) men lost their lives in an exactly similar manner to the accident which occurred at the Prince of Wales Mines, Wyalong, on the 31st October last, I do myself the honor to draw the attention of the Honorable the Minister for Mines and Agriculture, and, through him, the attention of the public, to the dangerous practice miners will adhere to to save a few minutes extra work, by starting drilling for blasting purposes from the bottom or remains of an exploded hole.

For years past have I drawn frequent attention to the above-mentioned dangerous practice. In the Wyalong accident above referred to I instructed Mr. Inspector Milne, by wire from Broken Hill, to inspect the site of accident, and attend the inquest to be careful to ascertain whether the explosion had or had not been caused by the injured persons having started a fresh hole from the bottom or socket of an exploded hole. My surmise was verified by the verdict given at the inquest, with the rider of the jury that a primer should be used in all cases when charging holes. In my opinion, the primer would have very little effect. These accidents have, so far, only occurred in holes where dynamite and kindred explosives have been used. Perhaps, to insufficient strength of the detonator, a small part of the explosive remained in the bottom of the hole.

The only remedy to prevent accidents of this nature is to have a rule strictly to be observed by all mining managers and miners, that in no case a new hole shall be started for blasting purposes from the bottom or remains of an old hole, and any person offending against said rule to be heavily fined and instantly dismissed from the mine.

If miners will run such risks as caused the above-mentioned accidents, and which practice has taught, ever since said explosives came into use, to be dangerous to life and limb, then the blame is their own, and Inspectors of Mines, even in large numbers, composed of the most intelligent and practical mining men, would be powerless to prevent such accidents.

I have, &c.,

W. H. J. SLEE,

The Under Secretary for Mines and Agriculture.

Chief Inspector of Mines.

INSPECTOR MILNE'S ANNUAL REPORT.

Sir,

Sydney, 9 January, 1897.

I have the honor to submit this, my Annual Report of the inspection of mines in the following districts for the year 1896:—

Bongalong, Billy's Look Out, Cootamundra, Combanning, Gundagai, Grenfell, Meragle, Paddy's River, Scrub Yard, Temora, Reefton, Wyalong, and Yalgogrin in the south.

Bathurst, Brown's Creek, Burrendong, Balderodgery, Binmi Creek, Boney's Rocks, Blayney, Burruga, Black Bullock Mountain, Cobar, Cowra, Canowindra, Cargo, Crudine, Clear Creek, Cheshire Creek, Forest Reefs, Flyer's Creek, Forbes, Gulgong, Galley's Swamp, Hargraves, Hill End, Hill Top, Kerr's Creek, Lucknow, Lewis Ponds, Lue, Mudgee, Mt. Drysdale, Mt. McDonald, Macquarie River, Mandurana, Mullion Creek, Narramine, Newbridge, Oberon, Orange, Ophir, Parkes, Peak Hill, Pinacles, Palmer's Oakley, Sofala, Sunny Corner, Slattery's Creek, Stuart Town, Stringy Bark, Tuena, Trunkey, Tomingly, Tarana, Wattle Flat, Windeyer, Woodstock.

The principal mining centres of this list have been inspected two or three times.

Taking the mines generally there is an improvement in the underground workings on previous years. In the larger mines where managers are employed, I usually find them ready and willing to remedy any defects that may be pointed out to them in or about their mines, and every care taken for the safety of persons under their charge; also to comply with the regulation for the inspection of mines other than coal and shale mines.

With the individual miner and fossickers the same difficulty occurs as mentioned in my last report, in getting them to secure their workings. Often where timber has been put in, it is so carelessly done that there is almost as much danger from the chance of it falling out as from the ground. This is accountable no doubt, from the fact that it is no one's particular duty to see that the work is done properly, and that each one does his own timbering as he likes.

I have been particularly careful in respect to storing and handling explosives underground, and now almost all the mines have properly constructed boxes for storing dynamite and detonators in the mine, but there is still a gross carelessness in handling and charging holes. It is surprising to note the recklessness of the miner, especially those who are in the habit of regularly using explosives. They appear to almost court accidents from explosion in charging holes by tamping with iron scrapers even when the wooden stemmer is close by.

Another very dangerous habit, and I think a very common one, especially at Wyalong. That is to start drilling in sockets left from previous shots, so as to save a little time, and few inches in drilling often in these sockets portions of unexploded fracture remains in the bottom or in a crack or joint of the rock and is exploded by contact with the drill. Again, in missed shots the miners return to the shots within a few minutes after the time they consider it should have exploded, and from this cause many accidents occur.

So long as the miners will continue to do these things and disregard the regulations set down for their own safety, so long will accidents occur from explosions, no matter how careful or strict an inspector may be, as it is next to impossible to find out any party or set of men that are so foolhardy. I

I always make it a practice, when in a mine where explosives are used, to draw the miners' attention to the liability of accidents from the abovementioned careless practices.

In the execution of my duties for the year I have travelled 7,436 miles, made up as follows :—
Train, 3,482 ; coach, 1,695 ; horse, 1,556 ; on foot, 343.

The number of mines inspected being 566 ; of this number 314 are working mines, 252 applications for aid from the prospecting vote. The number of men employed being about 5,900.

I have, &c.,

DAVID MILNE,

The Chief Inspector of Mines.

Inspector of Mines.

INSPECTOR HEBBARD'S ANNUAL REPORT.

Sir,

Broken Hill, 13 January, 1897.

I have the honor to present my Annual Report for the year 1896, as follows :—

During the year the mining industry, which received such an impetus during the year 1895 through the initiation of a successful treatment of the complex sulphide ores, has maintained its activity.

The trade in the sulphide ores, either crude or concentrated, has largely expanded, and there is now a constant and steadily increasing demand for the products of the concentrating mills.

The improvements in concentrating machinery and the experience gained by the engineers have also been factors in the present prosperity, and the results of the year's operations, I think, warrant me in stating that the industry is now established on a firm basis.

Hitherto the zinc contents of the ore have been regarded as waste, or put aside for future treatment ; but there now seems a probability of this also being added to the list of profitable products of treatment.

Large sums of money have been spent during the year in the erection of new plant and in the remodelling of the old, and there is no doubt that some of the present prosperity is due to the increased efficiency of the mills in dealing with the ore submitted for treatment.

The industry is now almost entirely dependent on the sulphide ores, as only the Broken Hill Proprietary, Block 14, and British Mines continue to mine oxidised ores.

The district now employs 5,800 men in the mining, smelting, and other operations incidental to the treatment of the ore.

With regard to underground operations, the filling up of the depleted stopes has now become recognised everywhere as part of the regular system of mining, and I have no hesitation in saying that the adoption of the system has in a very large measure added to the general stability of the mines and very much minimised the effect of creep.

The burning portion of Block 11 of the Broken Hill Proprietary Mine has been completely isolated, and there is hope that the fire has become a thing of the past, as no smoke has been seen to issue from the various vents for about three months.

As an instance of the amount of work accomplished in the district, I may mention that during the year 839,181 tons of ore have been raised, 454,720 cubic yards of mullock taken out of open cuts, 147,000 cubic yards of mullock filled into depleted stopes, 22,677 lineal feet of work in the way of shafts, crosscuts, drives, winzes, &c., accomplished, and £132,300 worth of new machinery erected.

In the underground workings alone, exclusive of all surface improvements, 14,529,000 superficial feet of timber have been used.

This does not comprise nearly all the work accomplished, as it does not include any of the operations in treatment of the ores or any railway work, which often involves the handling of the ore three times.

During the year there have been 13 fatal, 25 serious, and 28 slight accidents. Besides these, numerous cases have been reported to me, which, on investigation, I have deemed too trivial for further report.

The following is a detailed list of the fatal accidents, with a short account of the causes, and I also attach a list giving similar information regarding other accidents :—

Frederick Rohu, 24th February, at Drew's Shaft, Block 11, Broken Hill Proprietary Mine. A truck had been tipped over the bin, and was then hauled up by the "flying-fox" to level of top of bin. Rohu and another fastened a piece of hand-line to the truck to swing it on to the platform. The rope broke, and Rohu stumbled back into the tip-hole—a space of 17 inches by 28 inches—and broke his back by falling into the bin. He died on the 11th of March ensuing.

Thomas Halls, 25th February, at Block 10 Mine. Halls and his mate were ascending in a cage, having some tools in the bottom of the cage. Halls stooped to adjust the tools, and fell out, presumably at the 315 feet plat. He fell about 300 feet.

Thomas Kerr, 13th April, at North Smelter Dump, Broken Hill Proprietary Mine. Kerr was wandering about the dump in an intoxicated condition, and fell over edge of dump—a distance of about 60 feet. He was not in the employment of the company.

Walter Daniel Reed, 12th June, at Chlorodiser Railway Siding, Broken Hill Proprietary Mine. Reed was "braking down" a truck on the main line, and attempted to get out of the way of some hot ore that was being tipped by jumping off the truck. He fell and the truck passed over him. He died on the 4th July ensuing.

Phillip Eddy, 30th June, at Maybell. Eddy, with others, was exploring an abandoned mine with a view to leasing. In climbing up a rope he by some means missed his hold. He refused to be drawn up by the windlass, and the climb by the other rope was a comparatively easy one.

Michael John Purcell, 6th July, at Dickenson's Shaft, Broken Hill Proprietary Mine. A piece of the handrail around brace, about 30 feet long, had been broken by the bumping of the trucks, and the breach had been temporarily repaired by a piece of 5 in. x 2 in. timber fastened against the inner side of the stanchions. Purcell for some reason removed this to the position formerly occupied by the permanent guard rail. In leaning on this to talk to the engineer it gave way, Purcell falling on a stack of timber and breaking his neck.

Sampson Thomas Vivian, 22nd July, at third floor, 500 feet Level, Broken Hill South Mine. Vivian was missed by his mates when they returned to the third floor after firing, and was subsequently found in the ore pass. No evidence was forthcoming to show how Vivian had got there ; and the statements of the whole of the men on that floor showed that the pass was properly boarded over both before and after the accident.

John

Compiled from the foreman's weekly Return Sheets

John Pearce, 25th July, at No. 3 Level, McBride's Stopes, Block 11, Broken Hill Proprietary Mine. Pearce and his mate were preparing to put up a set of timber. A piece of ore fell out of the back, which was judged strong enough to stand temporarily without securing.

Otta Vounder Rodda, 5th August, at new A. Broken Hill Consols Mine. Rodda was descending a shaft in a truck on the incline. The truck by some means became detached from the rope, and ran away to the bottom of the shaft, about 200 feet. When examined, the tumbler hook was found in perfect condition, within half an hour of the accident.

Donald Gunn Pendreth, 29th August, at fourth floor, No. 4 Level, Central Mine (the Sulphide Corporation, Ashcroft's Process, Limited). Pendreth was engaged as a sweeper and cleaner, and was sitting against some loose ground in a portion of the stope that was not being worked, which fell on him.

George White and Edward Barnes, 28th November, South-west Drive, No. 2 Level, Blackwood's Shaft, British Mine. White and Barnes were working a rock drill, and pitched a new hole in an old "bottom" in the bottom of the drive. An explosion followed through the presence of unexploded gelignite left from the previous firing. There was no evidence to show that the old bottom had been examined in any way. From the appearances it was judged that all the gelignite had been exploded.

Levi Worsley, 16th December, at North Stope, 100 feet level, British Mine. Worsley and his mate were preparing to put up timber, but had misjudged the strength of the ground, and had not put up any temporary timber or driven any laths; while Worsley was easing for the strut the ground came away.

Only three accidents of these are the results of falls of ground—one is properly a railway accident; and one, that of Thomas Kerr, should not be regarded as a mining accident at all, but is inserted because it occurred on a mineral lease. The remainder are such accidents as in my opinion no forethought would have prevented, and may be regarded as pure accidents.

Of the serious accidents, 10 were caused by falls of ground, 2 by falling away, 2 by being caught in moving machinery, 3 by premature explosions, 3 on railway line, 2 in erecting machinery, 1 by a runaway truck horse underground, and 1 by burns from slag.

Forty-four cases of lead-poisoning have been reported to me during the year. Of these, 23 were miners, and 21 smelters, &c., as against 88 cases (32 miners and 56 smelters) for the year 1895. Of the 44, 37 were certified cases, and 7 uncertified.

The provisions of the Lead-poisoning Act are now fairly well carried into effect in this district, but the workmen do not yet fully avail themselves of the provisions for changing clothes and bathing. The sprinkling of the floors, &c., in carbonate of lead stopes has, I believe, considerably decreased the number of cases of lead-poisoning.

A little activity has been shown in the taking up of claims in the outlying portions of the districts, but not much work has yet been done.

Ore is still being won at Thackaringa, and there are a few men working at such places as Rockwell, Purnamoota, Apollyon Valley, &c.

At Tarrawingee flux continues to be mined up to the requirements of the local furnaces, the output being about 70,000 tons.

The increase of the number of men now employed, 5,329, as against 4,290 at the end of 1895, clearly shows the present prosperity of the industry in this district and the proved existence of enormous bodies of sulphide ore, together with the fact of the profitable treatment of the ores in nearly all the mines, indicates a likelihood of a continuance of the present prosperity.

I have, &c.,

JAMES HEBBARD,

Inspector of Mines.

The Chief Inspector of Mines, Department of Mines, Sydney.

INSPECTOR GODFREY'S ANNUAL REPORT.

Sir,

Sydney, 5 January, 1897.

I have the honor to forward you my Annual Report for the year 1896. For the greater part of the year I was engaged in the Northern District, where I inspected the following places:—Armidale, Avery's Creek, Bucca Creek, Boggy Camp, Bowling Alley Point, Boonoo Boonoo, Barraba, Bingara, Cangai, Cell's Creek, Crow Mountain, Dalmorton, Drake, Dungog, Elsmore (twice), Grafton, Hillgrove (three times), Inverell, Melrose (twice), Monkerai, Nana Creek, Njangala (twice), Nundle, Rockvale (twice), Tilbuster (twice), Tingha, Uralla (three times), Wangat, Woods' Reef, Warialda, Wallengra, Yarrowitch.

As in previous years the managers of the larger mines usually show a desire to carry out and enforce the rules in connection with the inspection and regulation of mines other than coal and shale mines, but the small working parties of fossickers often ignore these rules and show a recklessness in working which is nothing short of foolhardy. The probable reason was pointed out in my last year's report. During the year I had three fatal accidents to enquire into—one at the Great Britain Mine at Tilbuster, one at Powell's claim at Gundagai, causing the death of two men, and one at Star Gully, Grenfell. All three accidents were preventable.

From 18th September to 30th November I was engaged on work connected with the Land and Income Tax Department, and on the completion of this work I proceeded to Gundagai and Grenfell to investigate the abovementioned accidents. I finished my inspection for the year by visiting Dungog, Wangat, and The Monkerai.

During the year I travelled a distance of 8,151 miles, made up as follows:—4,123 miles by train, 2,820 miles by horse or buggy, 1,099 miles by coach, 86 miles on foot, and 23 miles by steamer.

I inspected 230 mines during the year and reported on 112 applications for aid under the Prospecting Vote.

I also served sixteen written notices drawing attention to defects in mines where the work done was in my opinion not satisfactory or safe. The same carelessness is used in regard to explosives as was the case last year, and the most experienced men are often the worst offenders, long immunity from accident perhaps making them careless.

I have, &c.,

J. R. GODFREY,

Inspector of Mines.

The Chief Inspector of Mines, Sydney.

INSPECTOR

INSPECTOR HOOKE'S ANNUAL REPORT.

Sydney, 1 January, 1897.

Sir,

I have the honor to submit my report on the inspection of mines, &c., performed by me during the half-year ending 31st December, 1896.

During that period I examined and reported upon 252 mines, &c., in the vicinity of the following places, viz. :—Adelong, Wyalong, Inverell, Tingha, Boggy Camp, Bora Creek, Glen Innes, Glen Elgin, Llangothlin, Deepwater, Emmaville, Tenterfield, Boonoo Boonoo, Drake, Pretty Gully, Tooloom, Rivertree, Lionsville, Coramba, Orara, Hillgrove, Metz, Moonan and Stewart's Brooks, Burrowa, Binalong, and Cowra Creek.

The total number of mines which came under my notice was 252, of which 67 were in connection with applications for aid from the Prospecting Vote, and in the execution of which 4,341 miles were travelled.

I also assisted in the investigation of two fatal accidents, which were fully reported at the time. One occurred at Wyalong and one at Cowra Creek. Both were caused by falls of stone from the roof, owing to the absence of required support, and serve to accentuate the need of inspection, as in the foregoing respect there seems to be the greatest neglect.

Many of the mines visited were found to be in bad condition, and requests for betterment were made in such cases, and these have been complied with.

I have, &c.,

HENRY HOOKE,

The Chief Inspector of Mines, Department of Mines and Agriculture, Sydney.

Inspector of Mines.

ACTING EXAMINER OF COAL-FIELDS' REPORT.

Sir,

Coal-fields Office, Newcastle, 19 February, 1897.

In compliance with the provisions of section 21 of the Coal-mines Regulation Act, 1896 (60 Vic., No. 12) I have the honor to submit the reports of Messrs. Bates and Humble, Inspectors of Collieries for Coal-mines at work, and opening out in the counties of Northumberland, Durham, Gloucester, and Pottinger, called the northern district; and that of Mr. Rowan, Inspector of Collieries for Coal and Shale (Boghead Mineral) Mines at work, and opening out in the counties of Camden, Cook, and Roxburgh, in the Illawarra or southern district, the south-western, and western districts. I may here be allowed to state, that although this report is written in compliance with section 21 of the present Act, this Act did not come into force until 1st October, 1896, therefore a period of nine months of the past year was embraced by the Act of 1876.

The information I have the honor to submit with respect to the number of accidents above and below ground, quantity and value of coal gotten, number of persons employed on the surface and underground, coal exported, and that used for home consumption, and notices received of new mines opening or in course of development, &c., during the year 1896, is as follows :—

In 1896, the year under notice, there have been 24 fatal and 62 non-fatal accidents—5 of the fatal accidents occurred through falls of coal, 2 by falls of stone (roof), 3 by an outburst of coal and gas, 1 whilst shunting waggons on surface, 1 by a waggon, 1 by a set of skips underground, 11 by inhaling noxious gas known as carbon mon-oxide gas.

Twenty-eight of the non-fatal accidents occurred by falls of coal, 5 by ignition of loose powder, 19 by skips, 1 by a locomotive engine, 1 by a stone slipping off the gob, 4 by falls of roof, 2 by a horse, 1 by a sprag whilst waggon in motion on jetty, and 1 by cage.

In 1895 the fatal accidents were 10, and the non-fatal accidents 47, 5 of the fatal accidents occurred through falls of coal, 1 by skips, 1 by a descending cage in shaft, and three by falls of stone.

Ten of the non-fatal accidents occurred by skips, 25 by falls of coal, 1 by a falling prop, 1 by a coal truck, 2 by being scalded by steam above ground, 5 by falls of stone roof, 1 by falling off a trolley, and 1 by jumping off a train of skips.

In 1894 there were 7 fatal accidents and 40 non-fatal accidents. Two of the fatal accidents happened from falls of coal, 1 by explosion of a shot, 1 by falling down an incline, 1 by falling on cage in incline, and 2 from falls of stone.

Five of the non-fatal accidents occurred by skips, 28 by falls of coal, 1 by a fall of stone, 1 by the bursting of a pin of machinery, 3 by ignition of powder, 1 by truck on surface, and 1 on engine plane underground.

Since the commencement of the Coal Mines Regulation Act, 1896, a great deal of my time has been taken up in the matter of service certificates and special rules. I have also visited several localities for the purpose of reporting upon applications to mine for coal on Crown lands, reserves, &c.; also checked and reported on royalties owing for coal gotten from Crown lands by different coal companies.

In conclusion, I have only to add that during the year 1896 there were 96 coal mines and 5 boghead mineral mines under inspection, and notices have been received of 17 new mines opening out or in course of development, such as sinking pits and driving adits, and of 5 having been abandoned altogether or suspended for a short time.

It will be seen that the year's return shows a decrease in the coal trade for 1896 in the Newcastle district of 8,205 tons of round and small coal raised, and a decrease of £10,271 in value.

In the South and South-western Districts for the same period there has been an increase of 91,873 tons of round and small coal raised and an increase of £23,848 in value. In the Western District for the year 1896 there has been an increase of 87,259 tons of round and small coal raised and an increase of £16,377 in value.

I have, &c.,

JOHN DIXON,

Acting Examiner of Coal-fields.

RETURN showing the number of fatal and non-fatal accidents; those caused by "falls of coal," stone "roof" and Lithgow, Ferndale, Bulli, A. A. Co.'s Hamilton Pit, South Burwood Sinking Pit, Metropolitan, and Stockton disasters, 1873 to 1896 inclusive.

* Figures not available.

From this return it will be seen that the fatal accidents exceed in number those of any previous year since 1889, and the extremely heavy list for the year named was considerably augmented by the crush in the A. A. Co.'s Hamilton Pit, and the case of over-winding at South Burwood Colliery.

From these returns we find that in the Northern District, in the year under notice, there has been an increase of 169 persons employed in and about the collieries, and a decrease of 8,205 tons of coal raised, and £19,271 in value.

In the South and South-western Districts there has been a decrease of 55 persons employed in and about the collieries, and an increase of 91,502 tons of coal raised and of £23,848 in value.

In the Western District there has been an decrease of 102 persons employed in and about the collieries, and 87,259 tons of coal raised, and of £16,377 in value.

THE following notices were received during the year of new mines opening out or in course of development, mines re-opened, sinking of pits, driving tunnels, change of ownership, and names of collieries; also, colliery management:—

Bulli.—On 24th January Mr. T. J. Evans gave notice that the ownership of the Bulli Steam Coal Colliery had changed to the firm known as the "Bulli Co-operative Steam Coal Company, Limited."

South Clifton.—Mr. Robert Wragg, on the 12th March, notified that he had been appointed manager of the South Clifton Colliery, *vice* W. Wilson, deceased.

Cardiff.—Mr. Henry Harper, on the 20th March, notified having sunk through a seam of coal on Mr. Honson's land with satisfactory results.

Waratah.—Mr. James Rutley, on March 19th, of having again opened up the Hillside Colliery.

Four-mile Creek.—Mr. James Race, on the 6th May, notified having started to draw coal from Blackett's and Brown's tunnels.

Bundanoon.—Messrs. Palmer and Coppard, on the 16th May, notified having started operations at the above colliery with six men.

Newcastle Pasturage Reserve.—Mr. D. Morris, on May 27, notified having commenced operations to mine coal on the allotments applied for. Name of colliery, "Morris."

Grovetown, Lambton.—Mr. Walter Jenkins, on the 27th May, notified having opened a colliery on his land, to be known as "Jenkins' Colliery."

Newcastle Pasturage Reserve.—Mr. William Mawks notified on June 30th of having sunk a shaft on his own land to work a little coal out.

Farley, West Maitland.—Messrs. Ralston and Morgan, on July 16th, notified having changed the name of the colliery from Font Hill to "South Greta."

Capertee.—The general manager (Mr. C. B. Roden), on July 7th, notified that the Glen Alice Coal and Shale Mining Company have commenced operations on their property at Glen Alice, near Capertee.

Charlestown.—Mr. John Waddell, on July 23rd, notified having started to open up the top seam of coal at Charlestown, on the leasehold part of the Waratah Coal Company's estate, and purpose to call it "Hillend Colliery."

Cardiff.—Mr. Archibald Gardener, notified on behalf of the Commercial Bank of Australia, Limited, of having taken over the South Wallsend Mine from the late lessee, Mr. John Johnstone, and the operations are being carried on under his supervision.

Capertee.—On the 13th August the General Manager, Mr. W. Hall, notifies, on behalf of the New South Wales Shale Oil Company, of having leased from J. W. King the property known as the "Airly" Shale Mine, situate in the parish of Airly, county of Roxburgh. The directors have appointed Mr. John Blackley to take charge of same. In future the mine will be known as the "New Hartley Shale Mine."

Greta.

Greta.—Mr. Clement Jones, on August 27th, notified that he had taken charge of the New Anvil Creek Colliery, *vice* Mr. D. Harris.

Plattsbury.—Mr. James Barr, Manager of the Co-operative Colliery, notified on 27th August that he had opened out a second coal-seam, 60 feet above that now worked, 5 feet in thickness; two adits have been completed and connected.

East Maitland.—Mr. S. Summerville, on August 31st, notified that he was prospecting for coal on land adjoining Newcastle Road, close to East Maitland; had sunk a small shaft on the crop of a seam of coal about 3 feet thick; if satisfactory, intended to work it.

Cardiff.—Mr. James Campbell, on September 7th, notified having started a tunnel to work coal out of Mr. Jones property, Cardiff.

Four-mile Creek, East Maitland.—Mr. G. Beatty, on September 7th, notified that he was driving a tunnel for coal on the Inganee Estate, and will be known as the Inganee Tunnel.

Tickhole, near Cardiff.—Mr. W. W. Johnson notified, on September 18th, of having commenced a tunnel for the purpose of proving a seam of coal inland, portion 32, at Tickhole, parish of Teralba.

West Wallsend.—Mr. James R. M. Robertson, on behalf of the Caledonia Coal Company, Limited, notified on the 26th September that the colliery and estate, formerly known as New Wallsend, situated near West Wallsend, have been purchased by this company. Operations necessary for sinking the air-shaft, so long suspended, have been resumed. The contractors are Messrs. Adam Frost & Co. Mr. Duncan McGeachie, on behalf of the company, will supervise the work. The colliery will hereafter be known as "Killingworth."

Curlwis.—Mr. John J. Poole, on the 9th September, notified having started a heading in coal crop above present workings.

Teralba.—On 10th October Mr. Andrew Sneddon notified, in accordance with Part I Clause 2 Part (B) of the Coal-mines Regulation Act, 1896, appoints William Sneddon, of Teralba, as manager of Gartlee Colliery; also gives notice that the name of the colliery has been changed to that of "Northern Extended."

Cardiff.—On 12th October Mr. James Campbell notified that the colliery being opened out by him shall be called "Cardiff Colliery."

North Lambton.—On 12th October Mr. John Russell notified having leased Rosehill Colliery, and had appointed William John Ritchie manager, in accordance with Section 2 of the Coal-mines Regulation Act, 1896.

New Anvil Creek Colliery.—On 11th November Mr. Percy Waddy notified, on behalf of the New Anvil Creek Coal Syndicate, that Mr. Benjamin Yates has been placed in charge of the colliery on behalf of the owners.

COAL-MINES ABANDONED OR OPERATIONS SUSPENDED DURING THE YEAR 1896.

Denton Park Colliery.—Mr. John Russell on the 4th March gave notice that work in the Denton Park Colliery, West Maitland, has been temporarily suspended operations for a short time.

Pioneer Colliery, West Maitland.—Mr. James H. Paul gave notice on the 20th March that he had severed his connection with the above-named colliery, and responsibility ceased from this date.

Waratah.—Messrs. H. Keys and B. Tonks notified on the 13th July having abandoned the colliery known as "Liddle's Colliery."

Mittagong.—Mr. Robert Snowden on the 29th June gave notice that the Box Vale Mine was closed and plant taken up.

New Anvil Creek Colliery.—Mr. Daniel R. Harris notified on the 22nd August that he had given up all charge of the above colliery, all being correct at time and date.

Sunderland Colliery.—Mr. M. Tulip notified on 24th October that he would abandon and cease to work the above colliery.

New Anvil Creek Colliery.—Mr. A. Thomas on the 31st October notified that from this date he ceased to be agent and manager for the New Anvil Creek Colliery.

Rylstone.—Mr. Colliery Inspector Rowan reports that the Rawdon Colliery has been abandoned.

The Half-yearly Report on the Collieries in the Northern District of New South Wales and Accidents investigated by the Inspectors of Collieries during the six months ending June 30th, 1896.

Sir,

Newcastle, 25 July, 1896.

Pursuant to the provisions of section 26 in the Coal-mines Regulation Act, 1876, we have the honor to transmit to you this our six-monthly report on the state of the various collieries in the Northern District for the half-year ending June 30th, 1896.

The total number of collieries under inspection in the Northern District during the half-year is 68.

Four collieries have been abandoned, *viz.*, Bebside, Green's, Sunlight, and Bell's. Three collieries have been added, *viz.*, Jenkins', Morris', and Mawkes'.

No work has been done at the following fifteen collieries, *viz.*, Awaba, Swansea, Young Wallsend, Summerhill, West Burwood, Fern Valley, Rotunda, Shamrock Hill, Richmond Vale, Maitland, Stamford Greta, Pioneer, Leonfield, Richmond Hill, and Nicholas' Tunnel.

PRESENT STATE OF MINES.

A. A. Co.'s No. 2 Colliery.—This mine has been completely shut down since the commencement of the labour trouble in April last, but was under inspection until that time.

A. A. Co.'s New Winning Colliery.—This colliery has been under inspection during the whole of the six months, but all work has been suspended since the commencement of the strike in April last. The workings are in good order and the Act complied with.

Wallsend Colliery.—About thirty men are employed underground repairing roads and attending to the pumps, &c., in readiness for resumption of work. As regards ventilation, the manager was, in March last,

last, proceeded against on a charge of inadequate ventilation of the No. 2 portion of the colliery, and the case decided in favour of the Crown. Against this the Company appealed to a higher court; such appeal has not yet been heard. The Act in other respects is complied with.

Newcastle Co's. Colliery.—A few men are employed in this colliery keeping the bords, &c., in repair. Everything is in good order, and the provisions of the Act carried out.

Lambton Colliery.—Only about 10 men are at present employed in this colliery, attending to the pumps and keeping the roads in repair in readiness for resumption of work. The provisions of the Act are complied with.

Co-operative Colliery.—About 230 men, &c., employed and supplied with about 40,000 cubic feet of air per minute. The face workings are divided into six separate and distinct districts. The provisions of the Act in other respects also are complied with.

Burwood Colliery.—Owing to the labour dispute this colliery is idle, with the exception of a few men who are engaged in timbering, &c. The ventilation is good, and the mine is in order for work at any time. The other provisions of the Act are also complied with.

Stockton Colliery.—There are about 180 men, &c., employed in this mine and supplied with about 26,000 cubic feet of air per minute. There are four separate and distinct districts. The Act is complied with.

Wickham and Bullock Island Colliery.—About 250 men, &c., are employed in this mine and supplied with about 35,000 cubic feet of air per minute. The face workings are divided into seven districts. The provisions of the Act in other respects also are complied with.

Hotton Colliery.—There are about 320 men, &c., employed in this mine and supplied with 75,000 cubic feet of air per minute. There are seven separate and distinct districts. The provisions of the Act are complied with.

Brown's Colliery.—About 310 men, &c., are employed in this mine and supplied with about 50,000 cubic feet of air per minute. The face workings are divided into six separate and distinct districts. The provisions of the Act are complied with.

Duckenfield Colliery.—There are about 230 men, &c., employed in this mine and supplied with about 50,000 cubic feet of air per minute. There are six separate and distinct districts. The provisions of the Act are complied with.

South Waratah Colliery.—Owing to the labour dispute, only a few men are at present engaged below ground, and the workings are kept in a good state of repair, and ready for full work at any time. The ventilation is good, and other provisions of the Act also complied with.

New Lambton Colliery.—About 110 men, &c., are employed in this colliery during the day time, and supplied with about 24,000 cubic feet of air per minute. The face workings are divided into two separate and distinct districts, and the other provisions of the Act are also fully carried out.

Ebbw Vale Colliery.—About 37 men, &c., are employed in this mine during the day time, and the quantity of air in circulation is about 10,000 cubic feet per minute. The Act is complied with in other respects also.

Hillside Colliery, Merewether.—About 8 men, &c., are at present employed in this mine. The ventilation is good, and the other provisions of the Act are also complied with.

Surprise Colliery, Lambton.—There are 3 men employed in this mine, and the provisions of the Act are fully complied with.

Sunnyside Colliery, Lambton.—Three men are employed in this mine. Everything is in good order, and the Act complied with.

Bayley's Reward Colliery, Lambton.—There are 2 men employed in this mine. Everything in good order; no cause for complaint.

Ray's Colliery, Lambton.—Only 1 man employed in this mine at present. The ventilation is good; no cause for complaint.

Meredith Colliery, Lambton.—There are 2 men employed in this mine. Everything is in good order; no cause for complaint.

Jenkins' Colliery, Lambton.—This mine has been lately opened, and 2 men are employed below ground. The ventilation is good, and everything is in good working order.

Morris's Colliery, Lambton.—This is a new mine lately opened, and at the present time 3 men are employed below ground. The provisions of the Act are fully observed.

Mawkes' Colliery, Lambton.—This is a new mine, lately opened on Mr. Mawkes' private property. There are two men employed below ground, and everything is in good working order.

Roshill Colliery, North Lambton.—At the present time there are 2 men employed in this mine. Everything is in good order, and no cause for complaint.

Jackson's Colliery, Lambton.—This mine is now completely abandoned.

Quarry Colliery, Waratah.—Only 2 men are employed in this mine. Everything is in good order, and no cause for complaint.

Mason's Colliery, Waratah.—Only 2 men are employed in this mine. Everything is in good order, and there is no cause for complaint.

Rushton's Colliery, Waratah.—This mine is now completely abandoned.

Liddle's Colliery, Waratah.—Only 2 men are employed in this mine. Everything is in good order. No cause for complaint.

Side Colliery, Waratah.—There are 5 men, &c., employed in this mine. The ventilation is good and every other provision of the Act is also complied with.

Wright's Colliery, Waratah.—This mine has been under inspection during the half year, but all work is at present suspended.

Elmore Vale Colliery, Wallsend.—There are about 40 men, &c., employed in this mine, and supplied with about 5,000 cubic feet of air per minute. The provisions of the Act in other respects also are complied with.

Maryland Colliery, Plattsburg.—About 36 men, &c., are employed in this mine, and supplied with about 9,000 cubic feet of air per minute in one current. The provisions of the Act are complied with.

Dudley Colliery, Charlestown.—After a stoppage of about three years work was resumed in May last. About 250 men, &c., are employed and supplied with 50,000 cubic feet of air per minute. There are four separate and distinct districts. The provisions of the Act are complied with.

Durham Colliery.—Only 2 men are at present employed at this mine, keeping the workings free from water accumulations. The provisions of the Act are complied with.

Burwood Extended Colliery.—Only 3 men are at the present time employed below ground at this colliery getting coal for the steam-engines, keeping the workings in repair, &c. The provisions of the Act are fully carried out.

South Hetton Colliery, Lake Macquarie.—Two men are employed in this mine. The ventilation is satisfactory and the Act complied with.

Morrisett Colliery, Lake Macquarie.—There are 6 men, &c., employed in this mine. The ventilation is satisfactory and the Act complied with.

Wallarah Colliery, Catherine Hill Bay.—About 120 men, &c., employed in this mine and supplied with about 20,000 cubic feet of air per minute in two currents. The provisions of the Act are complied with.

Northumberland Colliery, Passifern.—There are about 10 men, &c., employed in this mine and supplied with about 3,000 cubic feet of air per minute. The provisions of the Act are complied with.

Pacific Colliery, Teralba.—There are about 230 men, &c., employed in this mine and supplied with about 40,000 cubic feet of air per minute. There are four separate and distinct districts. The provisions of the Act are complied with.

Garlee Colliery, Teralba.—There are about 62 men &c., employed in this mine. The quantity of air circulating is about 10,000 cubic feet per minute. The provisions of the Act are complied with.

South Wallsend Colliery, Cardiff.—About 40 men, &c., are employed in this mine, and supplied with about 8,000 cubic feet of air per minute. The provisions of the Act are complied with.

West Wallsend Colliery.—There are about 260 men, &c., employed in this mine, and supplied with about 40,000 cubic feet of air per minute. There are six separate and distinct districts. The Act is complied with.

Seaham Colliery.—About 160 men, &c., are employed in this mine. The quantity of air circulating is about 25,000 cubic feet per minute in two currents. In August, 1895, a fire was discovered in the east side workings and in consequence thereof the shafts were sealed off and allowed to remain so until January, 1896, when the mine was reopened and the fire found still burning. Steps were then taken to seal off the east side workings with three brick stoppings. This was successfully accomplished on the 1st of February, 1896, and the work of coal getting resumed in the west side workings on the 17th of the same month. Since then everything has gone all right and the sealing stoppings are in good condition. The provisions of the Act are complied with.

Thornley Colliery, East Maitland.—About 15 men, &c., are employed in this mine. The ventilation is satisfactory, and the provisions of the Act complied with.

Bloomfield Colliery, East Maitland.—About 12 men, &c., are usually employed in this mine. The ventilation is good and the Act complied with.

Marshall's Colliery, East Maitland.—There are 2 men usually employed in this mine. The ventilation is satisfactory and the Act complied with.

Louis Vale Colliery, East Maitland.—Three men are usually employed in this mine. The ventilation is satisfactory and the Act complied with.

Scanton's Colliery, East Maitland.—There are 3 men employed in this mine. The ventilation is satisfactory and the provisions of the Act complied with.

Sunderland Colliery, East Maitland.—Four men, &c., are employed in this mine. The ventilation is good and the Act complied with.

East Greta Colliery, West Maitland.—There are about 180 men, &c., employed in this mine in the two shifts, and supplied with about 25,000 cubic feet of air per minute. The provisions of the Act are complied with.

Denton Park Colliery, West Maitland.—About 17 men, &c., are employed in this mine, and supplied with about 3,000 cubic feet of air per minute. The provisions of the Act are complied with.

Font Hill Colliery, Farley.—There are about 40 men, &c., employed in this mine, and supplied with about 7,000 cubic feet of air per minute. The provisions of the Act are complied with.

New Anvil Creek Colliery, Greta.—About 18 men, &c., are employed in this mine. The quantity of air circulating is about 9,000 cubic feet per minute in one current. The provisions of the Act are complied with.

Greta Colliery, Greta.—There are about 150 men, &c., employed in this mine, and supplied with about 50,000 cubic feet of air per minute. The face workings are divided into five separate and distinct districts. The provisions of the Act in other respects also are complied with.

Ellesmere Colliery, Singleton.—No coal has been drawn at this mine during the half-year; but the mine is kept open and ready for resumption of work at any time.

New Park Colliery, Singleton.—There are 32 men, &c., employed in this mine, and supplied with about 9,000 cubic feet of air per minute. The provisions of the Act are complied with.

Elliott's Colliery, Singleton.—Two men are occasionally employed in this mine. The ventilation is satisfactory, and the Act complied with.

Rosedale Colliery, Singleton.—There are usually 5 men employed. The ventilation is satisfactory, and the Act complied with.

Oakvale Colliery, Singleton.—Only 1 man occasionally employed in this mine. The ventilation is good, and the Act complied with.

Dulwich Colliery, Singleton.—There are 10 men employed in this mine. The ventilation is satisfactory, and the provisions of the Act complied with.

Kanyga Colliery, Muswellbrook.—Only 1 man is at present employed in this mine. Everything is in good order, and no cause for complaint.

Centenary Colliery, Curlewis.—About 28 men, &c., are employed in this mine, and the total quantity of air in circulation is about 10,000 cubic feet per minute. The Act is also complied with in other respects.

Gunnedah Colliery, Gunnedah.—About 14 men, &c., are employed in this mine, and supplied with about 6,000 cubic feet of air per minute in one current. The other provisions of the Act are also complied with.

Gladstone Colliery, Gunnedah.—Only 1 person is employed in this mine at present. The ventilation is good, and everything in good order.

Morley Colliery, Gunnedah.—This mine has been worked during the half-year; but at the present time all work is suspended. The mine is in good order and condition.

ACCIDENTS.

ACCIDENTS IN MINES.

THE accidents investigated by us in the Northern district, and fully reported upon during the six months ending June 30th, 1896, are 21 in number. We also investigated several other slight accidents which are not embraced in this report.

Of the 21 accidents in the annexed tabulated list, 4 proved fatal—3 from falls of coal and 1 from fall of roof. Of the non-fatal accidents, 9 were caused by falls of coal, 5 by skips, and 3 by ignition of powder.

The first fatal accident occurred to a miner named Richard Nicholls, by a fall of coal in the A.A. Company's No. 2 colliery, on 14th January. The District Coroner (G. C. Martin, Esq.) held an inquest on the body of deceased (who died on 26th January), at Newcastle, on 27th January. The inquest was attended by Inspector Dixon, who heard all the evidence, and fully agrees with the verdict of "accidental death" as returned by the jury.

The second occurred to a miner named John Stark, by a fall of coal in Stockton Colliery, on 5th March, terminating fatally on 6th March. The District Coroner (G. C. Martin, Esq.) held an inquest on the body of deceased on 6th March, at the Junction. The inquest was attended by Inspector Humble, who heard all the evidence, and fully agrees with the verdict of "accidental death" as returned by the jury.

The third occurred to a miner named Job Sheldon, by a fall of roof—coal and stone—at Wallsend Colliery, on 26th March. The District Coroner (G. C. Martin, Esq.) held an inquest on the body of deceased at Wallsend on 26th and 27th March. The inquest was attended by Inspector Bates, who heard all the evidence, and the following verdict was returned by the jury:—"We find that the said Job Sheldon, junior, in the Wallsend Colliery, at Wallsend, in the district of Newcastle, in the colony of New South Wales, on the 26th day of March, 1896, met his death from a fall of stone and coal from the roof of the said colliery. We further find that the accident is traceable to negligence on the part of Simon Millward, the deputy-overman of the district, in not seeing that the roof was properly secured in this district."

The fourth occurred to a miner named James Moffit Jackson, by a fall of coal in Hetton Colliery, on 23rd April. The District Coroner (G. C. Martin, Esq.) held an inquest on the body of deceased at Carrington, on 24th April. The inquest was attended by Inspector Humble, who heard all the evidence, and fully agrees with the verdict of "accidental death" as returned by the jury.

An accident occurred on 4th July, 1895, to a miner named James Lever, by a fall of coal in Elemore Vale Colliery. This terminated fatally on 9th March, 1896. The District Coroner (G. C. Martin, Esq.) held an inquest on the body of deceased at Wallsend on 10th March. The inquest was attended by Inspector Bates, who heard all the evidence, and fully agrees with the verdict of "accidental death" as returned by the jury.

The first of the non-fatal accidents occurred to a miner named William Brown, at South Wallsend Colliery, on 13th January, resulting in burns on chest and hands by ignition of loose powder.

The second occurred to a wheeler named Robert Brown, at Lambton Colliery, on January 16, by a loaded skip, resulting in fracture of arm.

The third occurred to a miner named Joseph Dodds, at Wallsend Colliery, on January 21, resulting in burns on face by ignition of powder.

The fourth occurred to a miner named D. Williams, at Hetton Colliery, on February 3, by ignition of powder, resulting in severe burns.

The fifth occurred to a flat-boy named John Durie, at Brown's No. 4 Colliery, on February 5, resulting in fracture of ribs and collar-bone by skips.

The sixth occurred to a miner named James Moon, at Newcastle Company's Colliery, on February 8, by fall of coal, resulting in fracture of arm and injury to head.

The seventh occurred to a miner named Robert Kean, at Duckenfield Colliery, on February 10, resulting in severe internal injuries by fall of coal.

The eighth occurred to a miner named Lewis Andrews, at Wallsend Colliery, on February 11, by a fall of coal, resulting in fracture of leg.

The ninth occurred to a wheeler named Henry Roxby, at Wallsend Colliery, on February 12, by loaded skip, resulting in injury to head.

The tenth occurred to a miner named Fredk. Burns, at Hetton Colliery, on February 24, resulting in fracture of leg by fall of coal.

The eleventh occurred to a roadman named George Cain, at Co-operative Colliery, on February 25, by a skip, resulting in fracture of leg.

The twelfth occurred to a miner named Richard Wardle, at Wallsend Colliery, on March 3, resulting in fracture of leg by fall of coal.

The thirteenth occurred to a miner named Abraham Andrews, at Wallsend Colliery, on March 16, by a fall of coal, resulting in fracture of leg.

The fourteenth occurred to a miner named Wm. Robertson, at Newcastle Company's Colliery, on April 8, resulting in fracture of leg and severe cuts by fall of coal.

The fifteenth occurred to a miner named Christopher Kafer, at Maryland Colliery, on April 15, by a fall of coal, resulting in fracture of thigh.

The sixteenth occurred to a miner named John Harrison, at Elemore Vale Colliery, on May 2, resulting in fracture of leg by fall of coal.

The seventeenth occurred to a miner named Michael Scanlon, at Pacific Colliery, on May 21, by a loaded skip, resulting in injury to foot.

ACCIDENTS ON SURFACE.

ONE non-fatal accident occurred to a shunter named George Henry Jones, at Grota Colliery, on February 8, resulting in injury to foot by locomotive engine.

The tabulated list of accidents is hereto appended.

The Half-yearly Report on the Collieries in the Northern District of New South Wales and Accidents investigated by the Inspectors of Collieries during the six months ending 31 December, 1896.

Sir,

Newcastle, 20 January, 1897.

In thus submitting our half-yearly report on the present state of mines in the northern district we have the honor to draw attention to the fact that on October 1 last the Coal Mines Regulation Act, 1896, became law, and it being much more comprehensive than the Act it superseded, many alterations were rendered necessary in the several mines, notably in ventilation, refuge holes, examination of working places, keeping of report books, and that manager and under-manager must hold certificates of competency or service.

At the present time these provisions have been in many cases reasonably well complied with, and in our opinion with very satisfactory results.

The provisions for ventilation requiring that at least 100 cubic feet per minute shall be forced to the face for every man employed there, is highly appreciated and of great benefit to the men.

The total number of collieries under inspection in the northern district during the half-year is 68.

Four collieries have been abandoned, viz., Jackson's, Rushton's, Liddle's, and Sunderland.

Two collieries have been added, viz., Cardiff and Ingueene.

No work has been done at the following collieries, viz., Awaba, Swansea, Young Wallsend, Summerhill, West Burwood, Fern Valley, Rotunda, Shamrock Hill, Richmond Vale, Maitland, Stanford Greta, Pioneer, Leconfield, Richmond Hill, and Nicholas Tunnel.

PRESENT STATE OF MINES.

A. A. Co.'s No. 2 Colliery.—At the time of last inspection this mine was in good condition. About 95 men &c., were employed. The work now consists entirely of pillar extraction.

A. A. Co.'s New Winning Colliery.—On the last inspection this mine was in good condition. There are about 150 men, &c., employed. The refuge places were not quite completed, but good progress was being made with the work to comply with the new Act.

Wallsend Colliery.—On the last inspection of the main tunnel workings everything was found in good condition. There were about 550 men, &c., employed. On the last inspection of No. 2 tunnel workings the mine was in fairly good condition. About 90 men, &c., were employed, half of whom were engaged in the extraction of pillars.

Newcastle Company's Colliery.—When last inspected this mine was in fair condition, a good deal of work had been necessary with regard to refuge places, but good progress was being made with the alterations rendered necessary by the new Act. About 480 men, &c., were employed.

Lambton Colliery.—At the time of last inspection this mine was in fair condition. A large amount of work has been done on the engine planes to bring the refuge places within the requirements of the new Act. About 130 men, &c., were employed.

Co-operative Colliery.—When last inspected this mine was in good condition. About 270 men, &c., were employed. During the last year the seam (known as the Young Wallsend) has been opened out in the hills on the Wentworth Estate for the purpose of providing fuel for the boilers of one of the hauling engines.

Burwood Colliery.—When last inspected was in good condition. As firedamp is occasionally found in the working faces additional care has been given to the ventilation, almost all the bords being well ventilated right up to the face. About 240 men, &c., were employed.

Stockton

Stockton Colliery.—At the last inspection made of the working faces all were found in good condition. For some time now the entire output has been from the upper section of the No. 6 Borehole seam. About one-third of the working places are proceeding eastward under the Pacific Ocean, the remainder working back westward over the bords previously driven in the bottom coal. Advance boreholes are bored in the face of the leading or winning bords, and vertical holes are put up in the roof at intervals to a height of at least 30 feet to test the character and nature of the overlying strata. There are about 160 men, &c., employed in the mine.

Wickham and Bullock Island Colliery.—At last inspection this mine was in good condition. About 180 men, &c., were employed. In August last an extension fall of roof took place in the dip workings, stopping the mine for four weeks. The fall originated and spread over a large area of 6-yard bords and 6-yard pillars workings from which the full section of available coal had been taken. Since the accident the manager has been asked to increase the size of future pillars, and refrain, as far as possible, from extracting "top band" coal in the bords. To these requests the manager agreed, and is now making all future pillars 8 yards wide instead of 6 as heretofore, and no "top band" coal was being got during the time of last inspection.

Hetton Colliery.—At the time of last inspection this mine was in fairly good condition. About 270 men, &c., were employed. As the output from the colliery is from under the harbour of Newcastle, advance boreholes are bored in the winning or leading places. The system of working was until quite recently 6-yard bords and 6-yard pillar, but at the same time as the request was made to Mr. Fletcher, at Wickham, and Bullock Island, a similar one was made to Mr. Mathieson here. He has complied with the request, and at the time of last inspection was making pillars 8 yards wide, and intimated his intention of stopping the few bords in which "top band" was then being extracted.

Brown's Nos. 2 and 4 Collieries.—When last inspected were in fair condition, but had not then quite completed the alterations required by the new act. About 240 men, &c., were employed. A Schiele Fan is now in course of erection at the shaft last sunk to the No. 4 colliery workings which, when fixed and started, is expected to improve the ventilation of both these and the Duckenfield Colliery.

Duckenfield Colliery.—When last inspected was in fair condition. A large amount of work has been done on the engine plane to comply with the provisions of the new Act regarding refuge holes. To do this the plane was being widened out so that men and boys can travel clear of the tramway. About 200 men and boys were employed.

South Waratah Colliery.—At the time of last inspection this mine was in good condition. A considerable amount of work has been necessary on the engine plane in making the refuge places to the requirements of the new Act which work was not quite completed when last inspected. There are about 150 men and boys employed.

New Lambton Colliery.—On this last inspection this mine was in good condition; some slight alterations required to be made on the engine plane to comply with the new Act. There were about 80 men and boys employed.

Ebbw Vale Colliery.—At the time of last inspection this mine was in good condition. The alterations to the engine plane to comply with the requirements of the new Act as regards refuge places were not quite completed. There are about 30 men and boys employed in this mine.

Hillside Colliery, Merewether.—At the last inspection this mine was in good condition. Four men were employed.

Surprise Colliery.—All work at this mine is at present suspended.

Sunnyside Colliery Lambton.—This mine was in good condition when last inspected. One man is employed.

Bayley's Reward Colliery, Lambton.—At the last inspection 2 men were employed, and the mine was in good condition.

Ray's Colliery, Lambton.—At the last inspection this mine was in good condition. One man is employed.

Meredith's Colliery, Lambton.—This mine was in good condition when last inspected. Two men were employed.

Jenkins' Colliery Lambton.—At the last inspection this mine was in good condition. One man is occasionally employed.

Morris' Colliery, Lambton.—At the last inspection 2 men were employed, and the mine was in good condition.

Mauke's Colliery, Lambton.—This mine was in good condition when last inspected. One man is employed.

Rosehill Colliery, North Lambton.—At the last inspection this mine was in good condition. One man is occasionally employed.

Quarry Colliery, Waratah.—This mine was in good condition when last inspected. Two men were employed.

Mason's Colliery, Waratah.—At the last inspection of this mine 2 men were employed, and the mine was in good condition.

Side Colliery, Waratah.—At the last inspection this mine was in good condition. Three men were employed.

Wright's Colliery, Waratah.—This mine was in good condition when last inspected. One man was employed.

Blomore Vale Colliery, Wallsend.—At the time of last inspection this mine was in fair condition. There are about 40 men and boys employed.

Maryland Colliery, Plattsburg.—When last inspected was in good condition. About 40 men and boys were employed. This mine is working coal under the streets and houses in the municipality of Plattsburg, which, together with a large area of 4-yard pillars, was left many years ago by the Co-operative Colliery.

Dudley Colliery, Charlestown.—At the time of last inspection everything was in fairly good condition. About 230 men and boys were employed. This mine yields a moderate amount of firedamp, but so far the amount is not such as to render the use of naked lights dangerous, providing ordinary care is taken in the coursing and distribution of the air current. A Waddle fan, 30 feet in diameter, now producing about 70,000 cubic feet of air per minute, provides excellent ventilation for the respective districts.

Durham

Durham Colliery.—At the last inspection 2 men were employed; and the mine in good condition, the only work being to keep the workings free from water accumulations.

Burwood Extended Colliery.—At the time of last inspection the mine was in good condition. Three men were employed keeping the workings, &c., in repair.

Morrisett and South Hetton Collieries.—At the time of last inspection were in good condition. These mines are on the shores of Lake Macquarie, and supply coal to the Sydney market *via* small sailing craft. Six and 2 men respectively were employed, and were working under very favourable conditions as regards ventilation, &c.

Wallarah Colliery, Catherine Hill Bay.—At the time of last inspection the mine was in fair condition. The ventilation of the face of each working place was not so good as it should be, but Mr. Parlon promised that the desired improvement would be made in a few days. It has since transpired that the ventilation has been improved. About 170 men and boys were employed.

Northumberland Colliery, Fassifern.—This mine was in good condition when last inspected. Five men were employed.

Pacific Colliery, Teralba.—At the time of last inspection this mine was in good condition. There are about 130 men and boys employed.

Northern Extended Colliery (formerly Gavlee), Teralba.—This mine was in fair condition when last inspected. Some alterations were rendered necessary in the engine plane to comply with the provisions of the new act regarding refuge places. There were about 60 men and boys employed.

South Wallsend Colliery, Cardiff.—At the time of last inspection this mine was in fair condition. Extensive alterations were being made to the engine plane and other portions of the workings which when completed will improve the ventilation. There were about 20 men and boys employed.

Cardiff Colliery, Cardiff.—This is a new mine in process of opening out in close proximity to South Wallsend Colliery. The mine when last inspected was in good condition. There were 6 men employed.

West Wallsend Colliery.—At the time of last inspection everything was in fairly good condition. About 200 men and boys were employed. The mine yields a moderate amount of firedamp but so far not to such an extent as to render the use of naked lights dangerous providing ordinary care is taken in the coursing and distribution of the air current, and the working places are examined with a locked safety lamp every morning before the miners are admitted. A Guibal fan now producing about 70,000 cubic feet of air per minute provides good ventilation for the whole of the working places.

Seaham Colliery.—At the time of last inspection everything was in fairly good condition, the ventilation being particularly good. About 180 men and boys were employed. The stoppings sealing off a fire discovered in the east side workings in August, 1895, continue in good condition and the pit's water is regularly pumped into these workings in the hope that the seat of fire will eventually be covered by it and the fire extinguished. A relief valve is inserted in one of the stoppings in the return, the escaping gases passing directly into the upcast or fan shaft without coming anywhere near the men at work with naked lights in the west side workings. All the working places and stoppings are examined every morning with a locked safety lamp before the men are admitted. The coal yields a moderate amount of firedamp but so far not to such an extent as to render the use of naked lights dangerous providing ordinary care is taken in the coursing and distribution of the air current. A Waddle fan, 30 feet in diameter, now producing about 60,000 cubic feet of air per minute provides splendid ventilation for the whole of the working places.

Killingworth Sinking Shaft.—Some six years ago a shaft was sunk to the Borehole seam at a depth of about 640 feet, but after finding the seam all work was abandoned until the latter part of last year when the Caledonian Coal Company having acquired the property a start was made to sink a second shaft near to the first one. This shaft, 13 feet in diameter, was inspected when down 135 feet. Six men in each of the eight hours shifts were employed and everything in and about the shaft appeared to be in good condition. A contract had been let to erect the iron pulley frame at the main shaft and this work was proceeding at the time of inspection.

Thornley, Marshall, Bloomfield, Louis Vale, Sunside (formerly Scanlon's), and Ingance Collieries, East Maitland.—At the time of last inspection these mines were in fairly good condition. As there is no railway to any one of them the coal has to be taken away in carts, the principal part of it being for local consumption in East and West Maitland, and Morpeth. About 9, 8, 2, 2, and 2 men and boys respectively were employed. The latter colliery is a recent venture by Lawson and Beatty on ground owned by a Mr. De Salis. An adit has been driven from the outcrop and connected with a shaft 42 feet deep. The seam is one of the Four-mile Creek series, and, judging by a number of old shafts in the immediate vicinity, has been extensively worked in past years. The ventilation and other things were in satisfactory condition.

Sunderland Colliery.—In this same district this mine was until quite recently worked by Mr. M. Tulip, who has since gone to Western Australia. The mine is on ground owned by a Mr. Reynolds, of the Paterson River, and is now abandoned.

East Greta Colliery, West Maitland.—At the time of last inspection this mine was in good condition. The coal is drawn from two adits driven the full dip of the seam, which is 45 inches. There are about 170 men and boys employed.

Denon Park Colliery, West Maitland.—On last inspection this mine was in good condition. The coal is drawn from an adit. There are about 30 men employed.

South Greta Colliery (formerly Font Hill).—At the time of last inspection this mine was in fair condition. Some alterations were necessary with regard to the refuge places to comply with the requirements of the new act. There are about 30 men and boys employed.

New Anvil Creek Colliery.—At the time of last inspection this mine was in fair condition. A considerable amount of work required to be done in the engine plane to comply with the new Act with regard to refuge places. Very little work has been done for some time, and only 3 men are employed.

Greta Colliery.—On last inspection this mine was in good condition. Good progress was made with the alterations necessary to comply with the new act. There were about 140 men and boys employed.

Ellesmere Colliery, Singleton.—On last inspection this mine was in good condition. No coal is at present being drawn, but 1 man is employed keeping the roads, &c., in repair.

New Park Colliery, Singleton.—At the time of last inspection this mine was in fair condition. Some slight alterations were necessary in the engine place with regard to refuge places to comply with the new Act. There were about 25 men and boys employed.

Elliott's Colliery, Singleton.—This mine was in good condition when last inspected. One man is occasionally employed.

Rosedale Colliery, Singleton.—At the time of last inspection this mine was in fair condition. Alterations were necessary to refuge places in the engine plane to comply with the Act. There were about 8 men employed.

Oakvale Colliery, Singleton.—This mine was in good condition when last inspected. Only 1 man is occasionally employed.

Dulwich Colliery, Singleton.—When last inspected this mine was in fair condition. About 7 men were employed.

Kayuga Colliery, Muswellbrook.—On last inspection this mine was in good condition. One man is employed.

Centenary Colliery, Curlweiss.—At the time of last inspection this mine was in good condition. There were about 25 men and boys employed.

Gunnedah Colliery, Gunnedah.—On last inspection this mine was in fair condition. There were about 18 men and boys employed.

Gladstone Colliery, Gunnedah.—At the time of last inspection this mine was in good condition. Three men were employed.

Morley Colliery, Gunnedah.—All work at this mine is at the present time suspended.

ACCIDENTS IN MINES.

The accidents investigated by us in the Northern District and fully reported upon during the six months ending December 31st, 1896, are 33 in number. We also investigated several slight accidents, which are not embraced in this report.

Of the 33 accidents in the annexed tabulated list 13 proved fatal, 2 from falls of coal and 11 from inhaling noxious gases. Of the non-fatal accidents 9 were caused by falls of coal, 5 by skips, 2 by explosion of powder, 2 by falls of roof, 1 by cage, and 1 by horse.

The first fatal accident occurred to a miner named William Howe by a fall of coal at Wallarah Colliery on September 17th. The injured man died on September 30th, but we were informed the coroner at Wyong did not deem it necessary to hold an inquest.

The next two fatal accidents occurred at Stockton Colliery on December 2nd to Charles Smith, furnaceman, and George Patrick Curran, shiftman, who lost their lives through inhaling noxious gases. The district coroner (G. C. Martin, Esq.) held an inquest on the bodies at Stockton on December 2nd, 3rd, and 8th. The inquest was attended by Inspector Humble, who heard all the evidence, and fully agrees with the verdict of "accidental death" as returned by the jury.

A second fatality occurred at Stockton Colliery on December 3rd and 4th, by which John Cockburn, Benjamin Bailey, Sydney Sinclair McAlpin, Thomas Laidlow McAlpin, James Sweeney, William Sneddon, William Gascoigne, John Charlesworth, and Daniel Fitzpatrick also lost their lives by inhaling noxious gases. The District Coroner (G. C. Martin, Esq.) opened an inquest on the bodies, commencing on 4th December and terminating on 13th January, 1897, at Stockton. The inquest was attended by Inspector Humble, who heard all the evidence. The jury were unable to agree, and were discharged without a verdict being given.

The last fatal accident occurred to a miner named Charles Blythe, at Newcastle Company's B pit, on 23rd December, by a fall of coal. The District Coroner (G. C. Martin, Esq.) held an inquest on the body of deceased at Adamstown on 24th December. The inquest was attended by Inspector Bates, who heard all the evidence, and fully agrees with the verdict of "accidental death" as returned by the jury.

The first of the non-fatal accidents occurred to a miner named Richard Tyson, at Dudley Colliery, on 6th July, by a fall of coal, resulting in fracture of the leg and collar-bone.

The second occurred to a wheeler named John Plain, at Duckenfield Colliery, on 16th July, resulting in fracture of leg and collar-bone, by skip.

The third occurred to a water bailer named J. Higginson, at Hetton Colliery, on 23rd July, by skip, resulting in injury to arm.

The fourth occurred to a miner named James McIlvenie, on 3rd August, at Greta Colliery, resulting in fracture of leg by fall of coal.

The fifth occurred to a miner named Thomas Moroney, at Hetton Colliery, on 13th August, by a fall of coal, resulting in injury to back, chest, and shoulder.

The sixth occurred to an onsetter named Henry Kelly, at Burwood Colliery, on 17th August, resulting in fractured leg, by skip.

The seventh occurred to a miner named William Parkes, at Co-operative Colliery, on 24th August, resulting in burns, by explosion of powder.

The eighth occurred to a miner named Hugh Parkes, at Co-operative Colliery, on 24th August, resulting in burns, by explosion of powder.

The ninth occurred to a driver named William Lewis, at Hetton Colliery, on 1st September, by a skip, resulting in loss of left leg.

The tenth occurred to a miner named John Rushforth, at Wallsend Colliery, on 22nd September, resulting in fracture of leg by fall of coal.

The eleventh occurred to a miner named Dennis Hughes, at Stockton Colliery, on 23rd October by a fall of coal, resulting in fracture of leg.

The twelfth occurred to a miner named Richard Nash, at Newcastle Company's A pit, on 11th November, resulting in internal injuries, by fall of coal.

The thirteenth occurred to a wheeler named William Garside, at Stockton Colliery, on 12th November, by fall of roof, resulting in injury to head and arm.

The fourteenth occurred to a miner named Henry Abrams, at Pacific Colliery, on November 18th, resulting in injury to hand and arm by fall of coal.

The fifteenth occurred to a miner named Thomas Murphy, at Burwood Colliery, on November 23rd, by a fall of coal, resulting in injury to loins.

The sixteenth occurred to a wheeler named Reginald Ryan, at East Greta Colliery, on November 23rd, by skip, resulting in fracture of arm.

The seventeenth occurred to an onsetter named Dennis Maher, at Wickham and Bullock Island Colliery, on November 24th, resulting in fracture of ribs by cage.

The eighteenth occurred to a miner named Benjamin Kellett, at Denton Park Colliery, on November 30th, by a fall of roof, resulting in fracture of leg.

The nineteenth occurred to a miner named John Davis, at Co-operative Colliery on December 9th, resulting in fracture of thigh by fall of coal.

The twentieth occurred to an under-manager named Thomas Brown, at Lambton Colliery, on December 28th, resulting in fracture of ribs by horse.

ACCIDENT ON SURFACE.

One fatal accident occurred at Greta Colliery on July 25th to a shunter named Oscar Emil Blomdahl whilst shunting railway waggons. The district coroner, H. Crothers, Esq., held an inquest on the body of deceased at Maitland on July 25th and 27th. The inquest was attended by Inspector Humble, who heard all the evidence and fully agrees with the verdict of "accidental death," as returned by the jury.

The tabulated list of accidents is hereto appended.

We have, &c.,

The Half-yearly Report of the Inspectors of Collieries on the state of the various Collieries in the Southern and Western Districts of the Colony of New South Wales, and Accidents therein, for the half-year ending 30 June, 1896.

Sir,

In compliance with the requirements of clause 26 in the Coal Mines Regulation Act, 1876, I have the honor to transmit to you this my six-monthly report on the state of the various collieries for the half-year ending 30 June, 1896.

The total number of collieries under inspection in the southern and western districts during the last six months is 39:—

Western District	17 coal mines and	5 shale mines.
Berrima	3 "	1 shale mine.
Southern	13 "	
	33	6 39

PRESENT STATE OF MINES.

Metropolitan Colliery.—About 300 men and horses are employed underground. The total quantity of air in circulation in this colliery is about 390,000 cubic feet of air per minute in six separate currents. All the headings and working places are bratticed up to within a few yards of the working faces. Every precaution

precaution is taken by the manager to see that the ventilation is properly conducted throughout the colliery, and strict discipline is exercised in carrying out the provisions of the Coal Mines Act and special rules for the conduct and guidance of the colliery. All the miners and wheelers work with locked safety lamps.

Coal Cliff Colliery.—About 30 men and horses are employed underground, and served with 18,000 cubic feet of air per minute. The Act in all matters complied with.

South Clifton Colliery.—One hundred men and horses are employed underground, and served with 70,000 cubic feet of air per minute in two separate shifts. The colliery is well ventilated throughout. The Act in all respects complied with.

Bulli Colliery.—About 68 men and horses are employed underground, and served with 22,000 cubic feet of air per minute, in two separate currents. The air currents are well conducted round the colliery, and the Act in all respects complied with.

Hill End Colliery.—Only two men are employed underground and served with 800 cubic feet of air per minute. The Act in all matters must be complied with.

Bellambi Colliery.—About 56 men and horses are employed underground and served with 23,000 cubic feet of air per minute. The in-take and return air-ways and second way to the day in good order. Act in all respects complied with.

South Bulli Colliery.—About 270 men are employed underground and supplied with 80,000 cubic feet of air per minute, in 6 separate currents. The colliery is well ventilated and the Act in all respects complied with.

Corrimal Colliery.—About 150 men and horses are employed underground and supplied with 28,000 cubic feet of air per minute. During the last six months two new air-ways have been driven into the mountain side and has greatly improved the ventilation throughout the colliery. The Act in all respects complied with.

Mount Pleasant.—About 120 men and horses are employed underground and supplied with 28,000 cubic feet of air per minute, in two separate currents. The Act in all respects complied with.

Osborne Wallsend Colliery.—About 165 men and horses are employed underground and supplied with 40,000 cubic ft. of air per minute, in four separate currents. The Act in all other matters complied with.

Mount Kembla Colliery.—About 230 men and horses are employed underground and supplied with 60,000 cubic feet of air per minute, in six separate currents. The in-take and return air-ways and second way to the day are in good order. The Act in all respects complied with. Work has been suspended at North Bulli Colliery since the middle of January last. Work has also been suspended at Bulli Steam Coal Colliery since February last.

WESTERN DISTRICTS.

Cullen Bullen Colliery.—About 46 men are in this mine during the daytime, and the total quantity of air circulated is about 16,000 cubic feet per minute. The provisions of the Act are also complied with in other matters.

Irondale Colliery.—Only two men employed and served with 4,000 cubic feet of air per minute. The Act also complied with in all other matters.

Ivanhoe Colliery.—Five men are employed underground, and served with 5,000 cubic feet of air per minute. The Act fully complied with.

Maddox's Folly Mine.—Only one man employed in this mine. The ventilation is good, and the provisions of the Act are fully carried out.

Bashforth's Mine.—During the first part of the half year one man was employed, no work has been done during the last four months. Every thing in the mine is in good order.

Wallace's Black Diamond Colliery.—This mine has been lately opened out, and an adit driven from a distance of about 40 yards into the coal seam. Only one man and one boy are employed, and the provisions of the Act are fully carried out.

Genowlan Shale Mine.—About 40 men are employed underground, and served with about 12,000 cubic feet of air per minute. This colliery is worked on the long-wall system. The Act in all matters complied with.

King's Shale Mine.—About 16 men are employed in this mine, and supplied with a current of about 4,000 cubic feet of air per minute. This colliery is worked on the long-wall system. The provisions of the Act are fully carried out.

Capertee Shale Mine (near Glen Allier).—This prospecting heading is still being driven into the mountain. Only one man is employed on the morning shift, and one man during the afternoon. The ventilation is adequate, and the provisions are also carried out according to the Act.

Crown Ridge.—Only one man occasionally employed in this mine. The mine is worked on the Longwall system. The ventilation is good, and the Act is fully carried out.

Roseden Colliery.—Only two men employed occasionally. The Act in all respects carried out.

Lithgow Valley Colliery.—About 28 men and horses employed underground, and supplied with 23,000 cubic feet of air per minute in one current. The Act in every respect complied with.

Hermitage Colliery.—About 26 men and horses are employed underground and supplied with 18,000 cubic feet of air per minute in one current. The intake and return airways and second way to the day in good order.

Esk Bank Pit.—About 26 men and horses are employed underground and served with 18,000 cubic feet of air per minute. The Act in all respects complied with.

Esk Bank Old Tunnel.—Eight men are employed, and supplied with 6,000 cubic feet of air per minute. The Act in other respects complied with.

Zigzag Colliery.—About 26 men and horses are employed underground, and supplied with about 15,000 cubic feet of air per minute. This colliery is worked on the double-stall system. The Act in all matters complied with.

Vale of Clwydd Colliery.—About 36 men and horses are employed underground, and served with 10,000 cubic feet of air per minute. This colliery is now being worked on the double-stall system. The Act in other matters complied with.

Oakey Park Colliery.—About 25 men and horses are employed underground, and supplied with 18,000 cubic feet of air per minute in one current. The Act in all other matters complied with.

Vale Colliery.—About 23 men and horses are employed underground, and supplied with 14,000 cubic feet of air per minute. The intake and return airways are in good order. The Act in other respects complied with.

New South Wales (Hartley Vale) Shale Mines.—About 45 men are employed underground, and served with about 16,000 cubic feet of air per minute. This colliery is worked on the long-wall system, and the working faces well built with pack-walls. The Act in all respects complied with.

Coal Tunnel.—Five men employed, and supplied with 5,000 cubic feet of air per minute. The Act in all respects complied with.

Coovervull Mine.—Only 1 man employed. The Act in all respects complied with.

Australian Kerosene Shale Mines (Katoomba).—About 40 men are employed underground, and supplied with 12,000 cubic feet of air per minute. This colliery is worked on the long-wall system, and the working faces built with substantial pack-walls. The provisions of the Act are fully carried out.

Mort's Shale Mines.—During the last half-year only a few men have been employed prospecting the mountain to further test the extent and thickness of the shale.

BERRIMA DISTRICT.

Australian Kerosene Shale Mines (Joadja).—About 30 men are employed underground, and supplied with 10,000 cubic feet of air per minute. This colliery is worked on the long-wall system. The provisions of the Act in all matters complied with.

Box Vale Colliery.—Only 3 men employed, and supplied with 1,000 cubic feet of air per minute. The Act complied with.

Great Southern Colliery.—During the first part of the half-year 5 men were employed. For the last three months work has been suspended.

Bundanoon Colliery.—This mine is situated about 2½ miles S.E. from Bundanoon Railway-station, and was formerly known as Erith Colliery, worked by E. Baker. It is now being re-opened by Mr. Palmer, who is manager and lessee. Six men are employed, and supplied with 2,000 cubic feet of air per minute in one current.

ACCIDENTS IN MINES.

During the last six months ending 30th June, 1896, I have investigated 16 separate accidents, 4 of which were fatal and 12 non-fatal, which were fully reported on at the time.

The first fatal accident occurred to a miner named Gilles Vickery, by a fall of stone roof at his working place in the Metropolitan Colliery on February 17th. The District Coroner, C. C. Russell, Esq., held an inquest on the body of deceased at Helensburgh on February 18th. I attended the inquest and heard all the evidence, and fully agree with the verdict of "accidental death," as returned by the jury.

The second, third, and fourth fatal accidents happened to two miners and a wheeler by an outburst of coal and gas at the Metropolitan Colliery on June 10th, named respectively Enoch Pugh (miner), James Barton (miner), H. Shipton (wheeler). The three men were working in the No. 7 west heading when an outburst of coal and gas took place, and the men were suffocated by gas (firedamp) and coal-dust before they could be rescued. This terrible accident was fully reported at the time. An inquest was held as touching the deaths of deceased at the Metropolitan Colliery Office, on 11th June, by the District Coroner, C. C. Russell, Esq. I attended the inquest and heard the evidence, and fully agree with the verdict of accidental death, as returned by the jury.

The first non-fatal accident happened on 7th January to a screenman named R. Scott, at the Metropolitan Colliery, who had two of his toes broken by a piece of coal falling off a skip at the screens.

The second occurred to a clip-boy named H. Delacea, at Metropolitan Colliery, on 21st January, who had his leg broken while coupling on a skip.

The third occurred to a miner named John Fenwick, at Bulli Colliery, on 24 January, resulting in fracture of the leg by a fall of coal.

The fourth occurred to a miner named Thomas Douse, at Wallsend Osborne Colliery, who was hurt about the back by a fall of coal.

The fifth occurred to a miner named Peter Hunter, at South Bulli Colliery, on 7th February, who was bruised about the back and arms by a fall of coal.

The sixth occurred to a clip-boy named James Browan, at Mount Kembla Colliery, on 19th February, who had his arm broken between two skips underground.

The seventh occurred to a miner named William Kerr, at Bulli Colliery, on 24th February, resulting in a broken leg by a fall of coal.

The eighth occurred to a screen-man named M. McSweeney, at the Metropolitan Colliery, on 4th April, who had his arm broken between two skips at the screens.

The ninth occurred to a miner named A. Mitchell, at Osborne Wallsend Colliery, on 28th April, who was bruised about the back by a fall of coal.

The tenth occurred to a bricklayer named A. Carter, who had his foot hurt by a skip underground, at the Metropolitan Colliery, on 13th May.

The eleventh occurred to a driver named William Coombes, at Oakey Park Colliery, on 16th May, who had his arm broken between two skips on the main road underground.

The twelfth occurred to a clip-boy at the Metropolitan Colliery, on 22nd June, who had his hand hurt while coupling on a skip underground.

The tabulated list of accidents is hereto appended.

I have, &c.,

JAMES ROWAN,
Inspector of Collieries.

John Mackenzie, Esq., Examiner of Coal-fields,
Mines Department, Sydney.

TABLED List of Fatal and Non-fatal Accidents in the Southern and Western Collieries of New South Wales investigated by the Inspector of Collieries during the half-year ending 30th June, 1896.

No.	Date.	Colliery.	Sufferer.	Occupation.	Remarks on nature and extent of injuries.	Fatal.		Non-fatal.

Accidents : Fatal, 4; non-fatal, 12.

The Half-yearly Report of the Inspector of Collieries on the state of the various Collieries in the Southern and Western Districts of the Colony of New South Wales, and Accidents therein, for the half-year ending 31st December, 1896.

Sir,

Wollongong, 3 February, 1897.

In compliance with the requirements of the Coal Mines Regulation Act, 1896, I have the honor to transmit to you this my six-monthly report on the state of the various collieries, for the half-year ending 31st December, 1896.

The total number of collieries under inspection in the Southern and Western Districts during the last six months is 33.

Western District.....	15	coal-mines and 4 shale-mines.
Southern	11	" "
Berrima	2	" 1 shale-mine.
	28	" 5 = 33

PRESENT STATE OF MINES.

I have much pleasure in stating that all the collieries in the Southern and Western Districts have made good progress towards carrying out the requirements of the new Coal-mines Regulation Act of 1896. At the first there was a good deal of friction and misunderstanding with the colliery managers as to the legal meaning of certain sections such as the ventilation question, &c., but now all the collieries in the Southern district have adopted the system of brattice, &c., to direct the air-current up to the working places. In the Western district the managers have adopted in a number of the collieries the "double stall" system, viz., the bords are driven 12 yards wide with a centre pack-wall whereby the air passes up the one side of the bord and returns on the other.

In some of the collieries in the Southern and Western districts new travelling roads have been made, as they considered the expense too great to form man-holes on the engine-plane, especially where it was much intersected with stone "rolls."

SOUTHERN DISTRICT.

Metropolitan Colliery.—About 260 men and horses are employed underground. The total quantity of air introduced into the mine is about 300,000 cubic feet per minute. The above volume of air is divided into eight separate currents. Each district is well ventilated, and all the bords and headings are bratticed up to within a few feet of the working faces. This is a very dry and dusty mine, but great care is taken by the manager to ensure safety. All the miners and wheelers work with locked safety-lamps, and the Act in all other matters complied with.

Coal Cliff Colliery.—About 30 men and horses are employed underground, and served with about 10,000 cubic feet of air per minute in one current. The colliery is fairly well ventilated throughout, and the Act in other matters complied with.

South Clifton Colliery.—About 90 men and horses are employed underground. The total quantity of air introduced into the mine is about 60,000 cubic feet. This amount is divided into two separate currents. Since the passing of the Act the manager has put brattice into every heading and bord in the colliery to within a few feet of the face. The ventilating currents are sweeping round every working-place in the colliery.

Bulli Colliery.—About 80 men and horses are employed underground, and supplied with about 30,000 cubic feet of air per minute in three separate currents. The colliery is fairly well ventilated throughout, and the Act in other matters complied with.

Hill End Colliery.—Only 2 men employed getting coal for local purposes. The Act complied with.

Bellambi Colliery.—About 60 men and horses are employed underground, and served with 12,000 cubic feet of air per minute in one current. The air current is fairly well directed to the working faces by means of brattice. The Act complied with.

South Bulli Colliery.—About 250 men and horses are employed underground. The total quantity of air introduced into the mine is about 49,500 cubic feet, the same being divided into five separate splits. Each district is fairly well ventilated, and the Act in other matters complied with.

Corrimal

Corrimal Colliery.—About 120 men and horses are employed underground, and served with 22,000 cubic feet of air per minute in two separate splits. Two headings have been driven out on to the mountain side at the extreme end of the workings. These headings are the intakes for the air currents which has greatly improved the ventilation throughout the colliery. The Act in other matters complied with.

Mt. Pleasant Colliery.—About 120 men are employed underground. The total quantity of air introduced into the mine is about 25,000 cubic feet diverted into two separate splits. During the last six months a new return airway has been made from the extreme end of the workings up to the furnace. Two overcasts have been put in, and with a few alterations, which the manager is pushing forward, the ventilation will be greatly improved throughout the colliery. The Act meanwhile is being complied with.

Osborne Wallsend Colliery.—About 150 men and horses are employed underground, and served with about 26,000 cubic feet of air per minute in three separate splits. The ventilating currents are fairly well conducted round the colliery, and the Act in other matters complied with.

Mt. Kembla Colliery.—About 165 men and horses employed underground. The total quantity of air introduced into this mine is about 56,000 cubic feet per minute in six separate splits. The ventilation and other requirements of the Act are complied with.

WESTERN DISTRICT.

Genowlan Shale Mine, Capertee.—Twenty-seven men are employed underground, and supplied with 8,300 cubic feet of air per minute. This colliery is worked on the long-wall system, and the air is brought in straight line with the working faces. The Act in all matters complied with.

New South Wales Shale Mine, Capertee.—About 30 men are employed underground, and served with 6,000 cubic feet of air per minute. This colliery is worked on the long-wall system, and the ventilating current brought in straight line with the working faces, and the Act in other matters complied with.

Cullen Bullen Colliery.—About 43 men and horses are employed underground. The manager is making an effort to comply with the requirements of the Act by putting in brattice to direct the air-current to the working faces; also overhauling the man-holes on the travelling roads.

Crown Ridge Shale-mine.—Very little work has been done during the last six months. Meanwhile labour conditions are suspended for three months.

Ivanhoe Colliery.—Eight men are employed underground, and served with about 4,000 cubic feet of air per minute. The manager has informed me he will put in brattice to direct the air up to the working face.

Irondale Colliery.—Two men are employed underground contracting, and supplied with 2,000 cubic feet of air per minute. The Act complied with.

Lithgow Valley Colliery.—About 30 men are employed underground, and served with 15,000 cubic feet of air per minute in one current. The ventilation currents are fairly well conducted to the working faces by means of brattice. The Act complied with.

Hermitage Colliery.—Twenty-eight men and horses are employed underground, and served with 12,000 cubic feet of air per minute. I found the intake and return airways and second-way to the day in good order. The Act in all matters complied with.

Coorwul Coal-mine.—One man employed getting a few tons of coal for local purposes.

Esik Bank Pit.—About 35 men and horses employed underground and supplied with 8,000 cubic feet of air per minute. The manager is putting in brattice to direct the air-current up to the working faces.

Old Tunnel.—Eight men employed, and served with 8,000 cubic feet of air per minute. The ventilation throughout the Colliery is good, and the Act in other matters complied with.

Zigzag Colliery.—Twenty-eight men are employed underground, and served with about 9,000 cubic feet of air per minute in one current. The ventilation is very good throughout the colliery. The manager has adopted the double-stall system. The Act in all matters complied with.

Vale of Clwydd Colliery.—About 35 men are employed underground, and served with 8,000 cubic feet of air per minute. The manager has adopted the double-stall system, which will carry the air up to the working faces. The Act complied with.

Oakey Park Colliery.—Twenty-eight men employed underground, and served with 6,000 cubic feet of air per minute. The ventilation was fairly well conducted round the workings. The manager has commenced to conduct the air currents to the working faces by means of brattice. The Act otherwise complied with.

Vale Colliery.—About 30 men and horses are employed underground, and served with 10,000 cubic feet of air per minute. The ventilating current was well conducted round the colliery, and the Act complied with.

New South Wales Shale Mines, Hartley Vale.—About 24 men are employed underground, and supplied with 10,000 cubic feet of air per minute. The colliery is conducted on the long-wall system, and the ventilation very good throughout the workings.

Retort Coal-mine, Hartley Vale.—Eight men employed, and supplied with 6,000 cubic feet of air per minute. This mine is worked on the long-wall system, and good pack-walls built along the working faces. The Act in all other respects complied with.

Black Diamond Colliery.—Only one man at work, getting coal for local purposes.

Faily Coal-mine.—One man employed getting coal for local purposes.

The Australian Kerosene Oil Company, Katoomba.—During the last half-year very little work has been done. At Ruined Castle 4 men have been employed to further test the field of shale. Mort's Shale Mine: 5 to 6 men have been employed prospecting to further test the thickness and quality of shale.

BERRIMA DISTRICT.

The Australian Kerosene Oil Company, Joadja.—About 20 men are employed underground, and supplied with 3,000 cubic feet of air per minute. This colliery is worked on the long-wall system, and the ventilating current brought in straight line with the working faces. The Act complied with.

Bundanoon Colliery.—Eight men employed underground, and served with 2,000 cubic feet of air per minute. The Act complied with.

Collins' Colliery.—One man employed getting coal. The Act complied with.

ACCIDENTS IN MINES.

During the last six months ending 31st December, 1896, I have investigated fourteen separate accidents. I also investigated several other minor accidents which are not embraced in this report. Two of the above number were fatal, and twelve non-fatal.

The first non-fatal happened to a miner named William Tait, at the Hermitage Colliery, on 1st July, who had his ear severely bruised by his head being jammed between a prop and a full skip.

The second non-fatal happened a miner named William Foster, who had his back hurt by a stone slipping from the gob on his back at Mount Kembla Colliery on 18th July.

The third happened a miner named H. Booth at Bellambi Colliery on 29th July, who was hurt about the back by a fall of stone from the roof at his working place.

The fourth happened a miner named William Shannon at the Metropolitan Colliery on 4th August, who had his leg broken by a fall of coal at his working place.

The fifth happened a miner named William Robertson on 5th August at Bundanoon Colliery, who was hurt about the back by a fall of stone from the roof of his working place.

The sixth was a fatal accident which happened to a lad named James Goldrick on 28th August, at Osborne Wallsend Colliery surface incline. The lad was going to his work in the morning, and attempted to jump on to one of the waggons as they were passing; in the act of doing so he fell under the wheels; both of his legs were nearly severed from his body. He was conveyed to the Wollongong Hospital and expired in about three hours after he was received. On the following day an inquest was held at Wollongong Court-house by the district coroner, C. C. Russell, Esq., which inquest I attended, and fully agree with the verdict of accidental death as returned by the jury.

The seventh was non-fatal, which happened to a horse-driver named John Irvine, on 29th August, at New South Wales Shale Mines, Hartley, who had his leg broken by a full skip underground.

The eighth was non-fatal, which happened to a miner named George Morris, on 3rd September, at Mount Kembla Colliery, who had his leg broken by a fall of coal at his working place.

The ninth happened to a lad named Albert Dixon, a horse-driver, on 16th September, at Zigzag Colliery, who had his arm broken while in the act of uncoupling two full skips on the main road underground.

The tenth happened to a wheeler named Alexander Price, at Bulli Colliery, on 22nd September, who had his leg broken by a kick from his horse.

The eleventh was a fatal accident, which happened to a lad named Frances Pullin, at Corrimal Colliery, on 15th October, who received fatal injuries whilst he was in the act of uncoupling a set of skips on the underground haulage incline. After receiving the injuries he only lived about an hour. On the same day an inquest was held by the district coroner, C. C. Russell, at the manager's house at Corrimal. I attended the inquest, and fully agree with the verdict of accidental death, as returned by the jury.

The twelfth happened to a labourer named O. McCluskey, at the jetty of South Bulli Colliery, on 19th October, who had his head bruised by a sprag flying out of one of the wheels of a loaded waggon.

The thirteenth happened to a labourer named John McKie, who had his leg broken on the surface incline at Katoomba shale mines on 16th November.

The fourteenth happened to a miner named Thomas Norwood, at Lithgow Valley Colliery, on 21st December, who lost one of his eyes by a piece of coal sparking out from his working face.

The tabulated list of accidents is hereto appended.

I have, &c.,

JAMES ROWAN,

Inspector of Collieries.

John Dixon, Esq., F.G.S., Acting Examiner of Coal Fields, Newcastle.

TABULATED List of Fatal and Non-Fatal Accidents in the Southern and Western Collieries of New South Wales, investigated by the Inspector of Collieries during the Half-year ending 31st December, 1896.

No.	Date.	Colliery.	Sufferer.	Occupation.	Remarks on Nature and Extent of Injuries.	Fatal.		Non-fatal.					Total.

GEOLOGICAL SURVEY OF NEW SOUTH WALES.

Progress Report for 1896 by The Government Geologist.

Sir,

I have the honor to hand you the following Progress Report of the Geological Survey Branch for the year 1896 :—

A portion of my time has been devoted to practical work in the field, the balance being consumed chiefly in the supervision of the work of the Geological Survey Branch, and also of the Mining Survey Branch, my reappointment to the position of Chief Mining Surveyor having been gazetted by the Public Service Board on the 15th July last.

My duties as a member of the Royal Commission on the Heating of Coal Cargoes (appointed in July) have necessarily occupied a considerable portion of my time, and for this reason I have been unable to carry out as much geological field work as usual.

During the month of January I visited Glen Innes, Inverell, Bingara, Rocky Creek, Terry-Hie-Hie, and Warialda, and mapped a portion of the eastern boundary of the triassic artesian water basin. While at Bingara I visited the mines at Spring Creek, and reported upon the proposal to establish a Government quartz-crushing battery in this district.

In February I inspected the auriferous and diamantiferous deposit at Kangaloon, where aid from the Prospecting Vote had been granted to sink a shaft with the object of prospecting the volcanic breccia which occurs there. Unfortunately, the occurrence of a heavy body of water caused the stoppage of the work, and I was unable to descend the shaft. Judging by the depth reached in the shaft (about 80 feet) and the material excavated, there is every reason to believe that this is a true volcanic neck, and the occurrence of diamonds in the quartz pebble drift overlying it is of considerable interest as pointing to the possibility of their being derived from the volcanic breccia, as in the celebrated diamond mines of Kimberley, in South Africa. It is, therefore, to be regretted that prospecting operations were not carried to a greater depth. In April I accompanied Professor Agassiz and a party of scientists from America to the Jenolan Caves.

In May I visited Barraba, Woodsreef, Ironbark, and Crow Mountain, and reported on the necessity for enlarging the reserves for gold-mining purposes in that district. I also made an examination of a large deposit of tripolite in the Nandewar Ranges, and inspected and reported upon some applications for aid from the Prospecting Vote in the neighbourhood of Ti-tree Creek.

In June I made an examination of the Mount Maude Gold-field, and reported upon the proposal to resume an area of alienated land there for mining purposes. I also reported upon an application for aid in this district. From July to October my time was occupied principally with work connected with the Royal Commission on the Heating of Coal Cargoes.

In October I accompanied the Superintendent of Public Watering-places (Mr. Boulton) to Girilambone, and drove thence, *via* Willaroon and Crawley's selection, to Coolibah, inspecting on the road some mud-springs situated about 18 miles north-east of the latter town. These mud-springs are of considerable interest as being much farther south than any previously known, and as furnishing evidence of the extension of the lower cretaceous rocks, and probably of artesian water southwards to near Coolibah.

During the month of November I visited Nymagee and Gilgunnia, and reported upon a number of applications for aid from the Prospecting Vote to prospect the reefs in the vicinity of Gilgunnia.

During the months of November and December I attended a number of meetings of the Coal Cargoes Commission, and in company with Professor David, of the Sydney University, I inspected a number of coal outcrops in the Wollongong and Kiama districts, and gave evidence in regard to their value before the Public Works Committee in connection with the proposal to construct a deep water harbour at Port Kembla.

Appended hereto is a report on the Wombeyan Caves, written in 1885 by Mr. Geological Surveyor (now Professor) David, but never previously published.

During the year the Geological Survey Staff has been short-handed, the vacancy caused by the resignation of Mr. G. A. Stonier in 1895 not having been filled yet.

During the greater part of the year Mr. Geological Surveyor Carne has been engaged in conducting a prospecting party along the surveyed line from Cape Howe to the head of the Murray River, forming the boundary between the colonies of New South Wales and Victoria. A similar party was equipped by the Victorian Department of Mines, and up to the present date about 60 miles of country have been examined.

Although no discovery of payable deposits of gold or other minerals has yet been made, Mr. Carne has done good geological work on this expedition, and has made interesting discoveries of Devonian plant remains, and of Lower Silurian graptolites. He has thus been the first to identify lower Silurian rocks within the Colony of New South Wales. These rocks occupy a considerable area in the adjoining Colony of Victoria, and it is in them that the celebrated saddle reefs of Bendigo occur.

Mr. Carne has also furnished an interesting report on the Yowaka and Panbula Gold-field, as well as reports on the following :—

1. On an Alluvial Tin Deposit, Mann River.
2. On the Geology and Mineral Resources of the Coast between Port Macquarie and Cape Hawke.
3. On the Wolumla Gold-field.
4. On the Timbilica Reefs.
5. On the Auriferous Deposit at Tingys' Plains, near Rocky Hill.

Mr. Geological Surveyor Jaquet's time has been chiefly occupied in inspecting and reporting upon Mining Reserves, which the Lands Department proposed to reduce or revoke. He has also inspected a number of gold and other mineral deposits, and has furnished the following reports :—

- | | |
|---|--|
| 1. On the Wattle Flat and Sofala Gold-field. | 7. On the Dairy Creek Gold-field. |
| 2. On the gold and tin-fields of Jinderbayne and Kosciusko. | 8. On an ironstone bed at Seaham. |
| 3. On the Little River Gold-field. | 9. On the Gilgunnia Gold-field. |
| 4. On the Tonga Creek Copper-lodes. | 10. On the Goola Creek Gold-field. |
| 5. On the Cullulla Silver-mine. | 11. On the Mount Blundell lode. |
| 6. On the auriferous drift near Laggan. | 12. On the Sunnyside Silver Copper-lode. |

Mr.

Mr. E. C. Whittell, Field Assistant, has been employed during the whole year in reporting upon applications for aid from the Prospecting Vote in various parts of the Colony.

Mr. D. W. Munro, the officer in charge of the prospecting operations in the beach deposits of the northern coast, has furnished a report on the work done, together with two plans and a section which are appended hereto. The plans and section are of considerable geological interest, as showing the position and extent of the raised beaches, or former coast line of this portion of the country.

Owing to increased activity in the mining industry there has been an unusual demand upon the services of the Assay Branch. During the twelve months ending 31st December, 1896, no less than 6,013 assays and analyses have been made, or one thousand in excess of the previous year. In addition to these a large number of rocks and minerals have been examined and reported upon by the Curator and Mineralogist, Mr. G. W. Card.

The museum collection has been largely increased, and much care and enthusiasm has been shown by the Curator in its arrangement.

Towards the end of the year the supervision of the Assay Branch was transferred from me to Mr. Taylor, the Government Metallurgist, and the laboratories were removed to Clyde. The office of Superintendent of Caves having been abolished, the active supervision of the limestone caves has been undertaken by Mr. Oliver Trickett, L.S., in addition to his ordinary duties as Geological Survey Draftsman. Mr. Trickett has already furnished valuable reports on a number of the caves, giving details of past expenditure, and has prepared sketch plans which will be of great use to visitors, and which it is proposed to publish.

During the year Volume V, Part 1, of the Records of the Geological Survey of New South Wales has been published, and Part 2 will shortly be issued.

The Assistant Paleontologist, Mr. Dun, has made determinations of a large number of fossils collected by the members of the staff, particulars of these will be found in his report appended hereto. He has also performed a considerable amount of very satisfactory work in connection with the departmental library.

Mr. W. D. Campbell, Licensed Surveyor, has been employed for some months in surveying the aboriginal carvings in the Hawkesbury sandstones of the coast district north and south of Sydney. These are being reproduced in plan form by Mr. O. Trickett, and will shortly be published. It is believed that they will form an extremely interesting ethnological record, and the work has not been undertaken too soon, as many of the carvings in the suburban districts are becoming obliterated as population increases.

I have, &c.,

E. F. PITTMAN,
Government Geologist.

APPENDIX I.

Report on Coal Cargo of Ship "Knight of St. Michael."

Geological Survey Branch, Department of Mines and Agriculture, Sydney, 27 February, 1896.

Sir,

I have the honor to report that I have made two inspections (on the 25th and 27th instants) of the coal cargo of the ship "Knight of St. Michael," and have to report as follows:—

Previous to my visit the cargo had been inspected several times by the Marine Surveyors, copies of whose reports are herewith. From these reports it will be seen that the ship left Newcastle on the 1st of February with a cargo of 3,216 tons of Wallsend coal. On the 2nd February the Master took the temperature at intervals between 8 a.m. and noon, and found that in No. 2 Hatch it rose from 96° to 104°. He therefore put into Sydney Harbour, and on the 4th of February the cargo was surveyed, and the temperature in No. 2 Hatch was found to be 105°. The surveyors thereupon recommended the discharge of 300 tons of coal from the hatch.

On the 6th of February the surveyors made a second inspection, after the 300 tons had been nearly discharged, and, finding the coals still much heated on the surface, they recommended the discharge of a further quantity of about 500 tons, or until the ceiling was left practically clear.

The cargo was again inspected by the surveyors on the 11th, 12th, and 14th instants, and on the latter date they were of the opinion that all the heated coal had been taken out and that the remainder was fit to be carried on.

On the 14th instant, the captain reported that the temperature of the coal in No. 3 Hatch was rising; the surveyors confirmed this on the 17th, and also found a slight increase of the temperature in the coal in No. 4 Hatch. They therefore recommended that coal be shifted from hatches Nos. 3 and 4 into No. 2 until the heated coal was reached, and that the heated portion be then removed and sold. On the 21st they reported, after another inspection, that there were no sign of heating in the remainder of the cargo, and it was therefore assumed that the difficulty had been overcome.

Subsequently, however, it was ascertained that the temperature was again rising in No. 2 Hatch, and I was then requested to report upon the matter.

At about 9:30 a.m. on the 25th instant I found a temperature of 84° Fah. in the centre of the coal immediately under No. 2 Hatch, while in the hold near the side of the vessel the temperature was only 77°. It was noticeable that the coal contained a large proportion of "smalls" and "dust."

At about 9:45 a.m. on the 27th February I found that the temperature had risen to 88° Fah. in the centre of the coal under No. 2 Hatch, while in the hold near the side of the vessel it was 76°. At the same hour the temperature of the coal in No. 3 Hatch was 79°, and in No. 4 Hatch it was 73°, while the shade temperature on deck was 69°.

It is clear, from the foregoing remarks, that the temperature of portions of the cargo is at the present time abnormally high, and there is reason for believing that, if left alone, it would continue to increase until spontaneous combustion ensued. Samples of the coal taken by me have been analysed by Mr. J. C. H. Mingaye, in the Departmental Laboratory, with the following results:—

	No. 1 Hatch.	No. 2 Hatch.	No. 4 Hatch.
Hygroscopic moisture	2.65	2.81	2.45
Volatile hydrocarbons	35.80	35.32	37.55
Fixed carbon	55.30	54.47	52.30
Ash	6.25	7.40	7.70
	100.00	100.00	100.00
Sulphur	0.535	0.453	0.508

It may be stated, therefore, that the cargo consists of semi-bituminous coal of good quality, but containing a large proportion of "dust" and "smalls." The coal was, I am informed, screened at the pit-mouth, and its present condition is, I presume, due to subsequent handling.

From the investigations of eminent European authorities, such as Richters, Fayol, Lewes, and others, there can be little doubt—(1st.) that the principal cause of spontaneous combustion in coal is the absorption of oxygen by the coal; and (2nd.) that the most favourable conditions for the self-heating of coal are a mixture of "pieces" and "dust," an elevated temperature, a large mass or volume of coal to act as a non-conducting covering, and a certain volume of air. These conditions are precisely those which exist in the "Knight of St. Michael's" cargo. The cargo was, I understand, loaded during the abnormally hot weather which prevailed at the end of January, and it is probable, therefore, that it reached the hold with an initial temperature of from 120° to 150° Fah. In loading from the trucks at Newcastle a considerable proportion of "smalls" and "dust" has been produced by the fall and by the process of trimming. By the filling up of the hold the volume of coal necessary to form a non-conducting covering has been provided, while just about sufficient air has access to the hold to complete the necessary conditions.

I am of opinion, therefore, that the heating of the cargo of the ship "Knight of St. Michael" is due, firstly, to the fact that the coal contains a large proportion of "smalls" and "dust," and, secondly, its having been loaded during abnormally hot weather.

The proportion of "smalls" and "dust" has no doubt been increased by the shifting operations which have taken place since the arrival of the ship in Port Jackson, and I am of opinion that considerable risk would be incurred if the "Knight of St. Michael" were allowed to put to sea with her cargo in its present state.

I have, &c.,

EDWARD F. PITTMAN,

Government Geologist.

The Under Secretary for Mines and Agriculture.

APPENDIX 2.

Report on John Hope's Conditional Lease.

Geological Survey Branch, 16 June, 1896.

I HAVE inspected John Hope's Conditional Lease, Portion 76, Parish of Mount Lawson, County of Georgiana, and particularly that part of it (containing 173 acres 1 rood 9 perches) recommended for resumption by Mr. Warden Smith on account of auriferous alluvial deposits.

The greater part of the area proposed to be resumed consists of hills of micaceous schists capped in places by basalt. The basalt covers a drift consisting of very angular fragments of quartz and schist, and containing a little gold. A small gully—shown on the sketch plan herewith—intersects the portion which has been recommended for resumption. It is in this gully that payable alluvial gold has been reported by John Hope. The drift in this gully consists of angular fragments of quartz and country rock (schist). The greatest depth of sinking in the alluvium on Hope's Conditional Lease is 12 feet, and on Warby's land (Portion 84) it is 14 feet. The total thickness of the wash is about 2 feet; but only about 2 inches of the lower part of this is auriferous. The width of the lead on Hope's conditional lease is only from 3 feet to 9 feet. The length of the auriferous gutter or lead on Hope's conditional lease is about 680 yards, and about two-thirds of this length has been pretty well worked out. The workings have only extended for a few yards into Warby's land, and the most easterly workings tend to show that the lead is widening out and becoming poorer.

It will be understood, therefore, that the lead is of comparatively insignificant dimensions, that the sinking is shallow, and the wash-dirt of no great thickness.

The gold has probably been derived, in the first instance, from Crozier's Reef—the position of which is shown upon the sketch—and, possibly, from other reefs in the neighbourhood. By the denudation of these reefs the lead under the basalt received a certain proportion of gold; and when, subsequently, the present gully was formed, intersecting the basalt-covered lead, the gold was still further concentrated in the narrow gutter in which it is now being worked.

In view of the fact that the alluvial deposit in the gully has nowhere been extraordinarily rich, I do not think that the drift under the basalt—from which the gully alluvium was concentrated—is likely to prove payable to any extent, even if it were found to contain no water, which is by no means certain.

In my opinion, fifty men would completely work the gully out in a few weeks, and in view of the limited nature of the deposit, and of the patchy nature of the deposits of the district generally, I do not feel justified in recommending the resumption of the land. In any case the area (173 acres) surveyed for resumption appears to me to be excessive.

E. F. PITTMAN,

Government Geologist.

The Under Secretary for Mines and Agriculture.

APPENDIX 3.

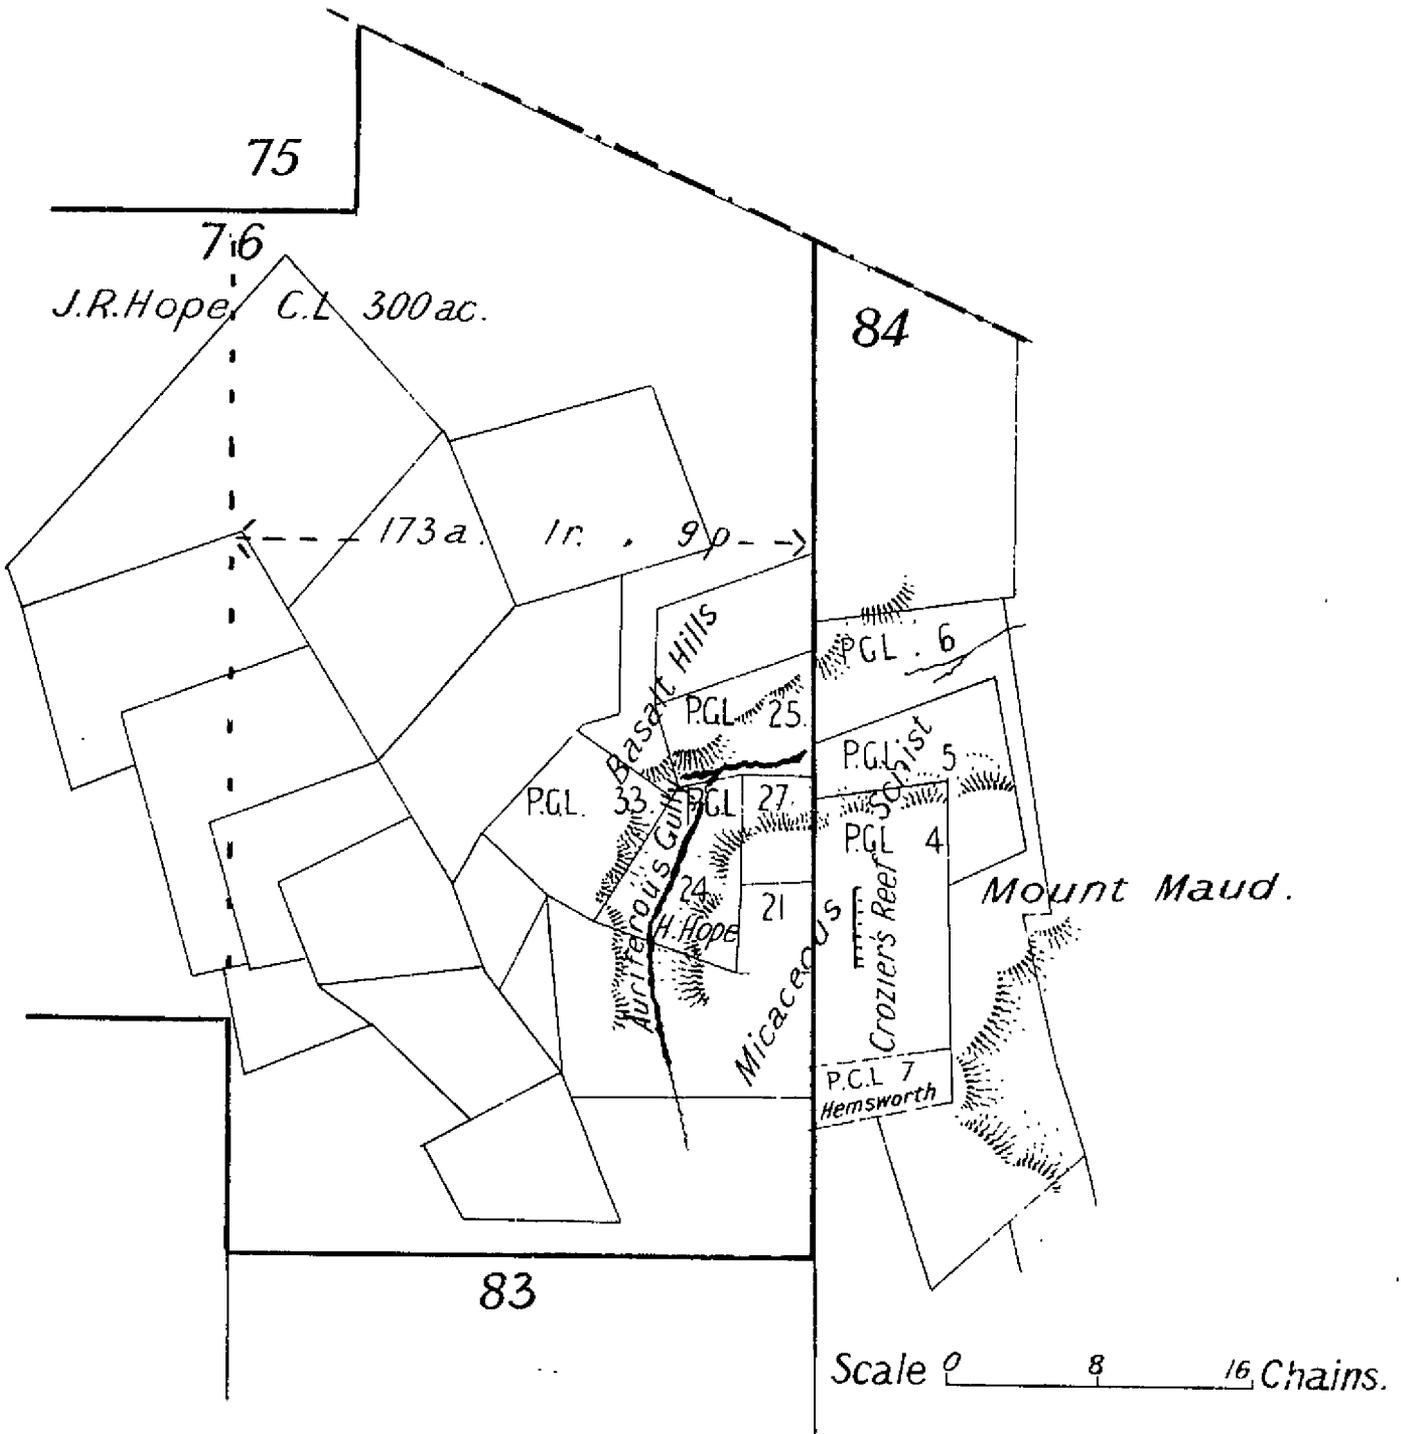

Report on Boggy Camp Diamond Field.

I INSPECTED the Boggy Camp Diamond Field in November last. It is situated near the junction of Cope's Creek with the Big River, in the Parish of Mayo, County of Hardinge. Diamantiferous drifts have been worked in the neighbourhood for years; but last year a new find was made, and this has proved extremely rich in places. I was informed that from one load of drift from Aitken, Dasey, and Party's Claim no fewer than 515 diamonds were washed, weighing in the aggregate 184 carats. At the time of my visit the total quantity of drift which had been treated was forty-two loads, for an aggregate yield of 600 carats, and the wash had also yielded tin ore at the rate of 13 lb. per load. It will be seen from the Acting Warden's report of the 13th ultimo that the deposit has been found to increase in richness since I inspected it.

The quartz pebble drift in which the diamonds occur underlies a large basalt hill, about 1¼ mile long and perhaps ½ mile wide. It appears as if the basalt had filled in what was formerly a large oval-shaped hollow or depression, for bed-rock, consisting of granite for the most part, can be traced nearly all round the base of the hill, and apparently forming the banks as well as the floor of the ancient depression.

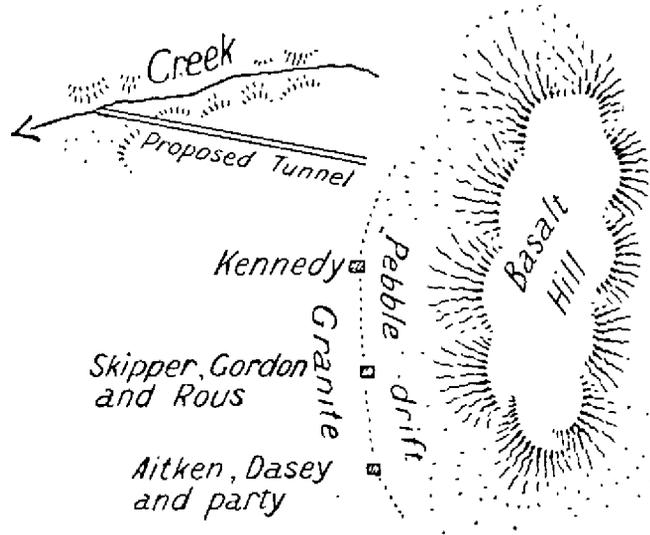

There

Sketch to accompany report by E.F. Pittman A.R.S.M.
 Government Geologist on part of portion 76
 Parish of Mount Lawson. County of Georgiana.

There was no water in Dasey and Party's working at the time of my visit ; but I was informed that a deep shaft further back on the hill had proved the existence of a considerable body of water in the deeper ground, which is what might naturally be expected.

Prior to my visit several of the claim-holders had applied for aid from the Prospecting Vote ; but it was considered by the Board that, in view of the fact that payable wash had been reported in one claim, the granting of aid to adjoining claim-holders was not justifiable ; and subsequent press notices tend to show that the miners have found a market for their diamonds and are making a good profit—at any rate, in Aitken, Dasey, and Party's Claim.

It would, I think, be possible to drive a tunnel which would drain the whole deposit ; but it would, probably, require to be about 800 feet long, and some part of it would be through hard granite, though I am of opinion that for the greater portion of the distance the granite would be found to be decomposed. Part of the tunnel would also run through alienated land, viz., Portion 371, Parish of Mayo, County of Hardinge.

E. F. PITTMAN,

Government Geologist.

The Under Secretary for Mines and Agriculture. 5/6/96.

APPENDIX 4.

Report on Chadwick and Gane's Prospecting Operations at Long Bay.

Sir, Geological Survey Branch, Department of Mines and Agriculture, 30 March, 1896.

I have the honor to report that I have inspected the workings near Long Bay, in connection with which Messrs. Chadwick and Gane are applying for aid from the Prospecting Vote.

The workings are situated in a steep gulch or inlet immediately to the north of Long Bay. A wide dyke of basalt here intersects the Hawkesbury sandstones of the coast in an east and west direction, and it is to the decomposition of the basalt, by atmospheric influences, that the inlet owes its origin ; the white clay resulting from the weathering of the basalt being soft and more easily denuded than the surrounding beds of sandstone.

The basalt dyke is similar to many others which are known to intersect the Hawkesbury rocks in the neighbourhood of Port Jackson.

In places in this dyke, portions of the Hawkesbury sandstone have been "included" or caught up by the basalt when the latter was in a molten state, and these have been so baked and metamorphosed that they now consist of a granular quartz rock, heavily charged with secondary pyrites. This rock is what the prospectors have been regarding as quartz reefs, and it is to further test this material that they now apply for aid.

I collected a number of samples of what Messrs. Chadwick and Gane regarded as the most promising of this material, and three assays were made of these in the Departmental Laboratory, twice the customary amount of stone being taken for each assay. The results were the same in all three instances, namely, neither gold nor silver.

I may mention that the statement made by Chadwick and Gane with reference to previous assays by the Department is incorrect. I have had the records of all previous assays looked up, and I find that in no case has a return of 2 dwts. per ton been given for stone from this locality.

I recommend that the application for aid be refused, as I am of opinion that there is no reason to hope that payable quantities of gold occur in these rocks.

EDWARD F. PITTMAN,
Government Geologist.

The Prospecting Board.

APPENDIX 5.

Report on Artesian Water, Town of Warialda.

Sir, Geological Survey Branch, Department of Mines and Agriculture, 18 February, 1896.

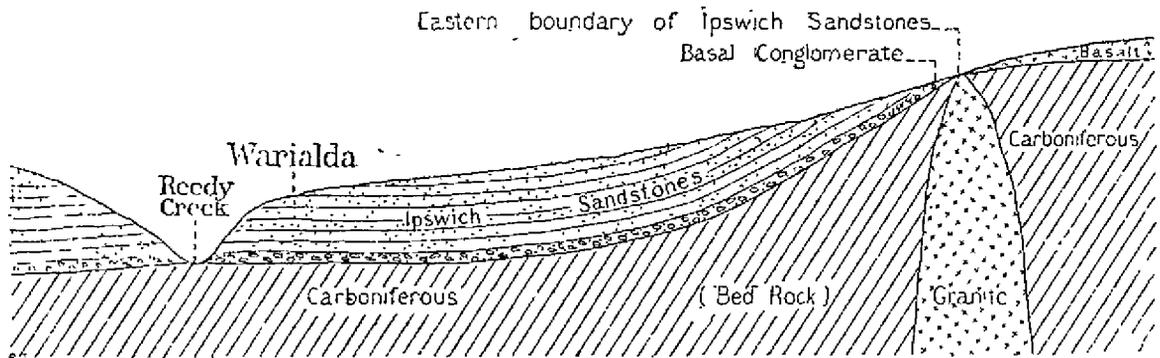

I have the honor to inform you that I have made a geological examination of the country in the neighbourhood of Warialda, in connection with the question of the occurrence of artesian water in the vicinity of that town, and I have to report as follows :—

The Ipswich Coal Measures (*i.e.*, the rocks from which the artesian water supplies of the Moree and Coonamble Bores are obtained) have been traced by me from Southern Queensland into the northern portion of New South Wales, west of the Dividing Range, where they form an artesian water-bearing basin of considerable

considerable extent. The eastern boundary of this basin crosses the Dumaresq River (the northern border of this Colony) at a point about 15 miles west of the town of Texas, and from there it trends in a general direction of about S.S.W., crossing the road between Warialda and Inverell, at a point about 6 miles to the eastward of the former town. The dip of the beds is to the west.

Approaching Warialda from Bingara these Ipswich sandstones are also met with about 6 miles south of the former town, but they occur here as a mere outlier, forming a hill, the base of which is composed of Carboniferous rocks. Two miles south of Warialda the Ipswich sandstones are again seen occupying the higher ground, and they continue right into the north of the town, which is, in fact, built upon rocks of this age.

About three-quarters of a mile west of the town the carboniferous rocks outcrop in the bed of Reedy Creek, while the Ipswich sandstones cap the higher portions of the banks. A geological section along an east and west line passing through the town of Warialda would, therefore, appear as follows:—

It will be seen by the above that the town of Warialda is situated on the Ipswich sandstones which are the water-bearing rocks of the Moree and Coonamble Bores; but its position is comparatively close to the eastern margin of the basin, and, moreover, the outcrop of the Carboniferous rocks in Reedy Creek to the west of the town indicates (firstly) that there can be no great thickness—possibly not more than 100 or 150 feet—of the water-bearing beds at Warialda; and (secondly) that the water absorbed by the Ipswich sandstones, to the east, must escape at the surface where the Carboniferous bed-rock is exposed, and this escape would probably prevent the water from rising to the surface of a bore put down on the higher ground. Even if the resistance of the beds were sufficient to cause the water to rise to the surface at any time, the flow would probably be intermittent, in view of the limited area of the intake beds to the eastward.

I am of opinion, therefore, that, on geological grounds, there is not sufficient justification for the expense of an artesian bore at Warialda.

There can, I think, be little doubt that a permanent water supply is required, not only in the interests of the townspeople, but for the purpose of travelling stock. Reedy Creek, which runs through the town of Warialda, has a very sandy bed into which the water sinks readily, and although water can always be obtained by sinking holes in the sand it frequently happens that there is little or no water flowing in the creek bed. Hence there are no facilities for watering stock. The banks of the creek are covered in many places by a thick alluvial deposit of Pleistocene age, through which wells have in a few instances been put down with satisfactory results. The best method of providing a permanent water supply for the town would probably be to put down a pumping well on the bank of the creek some distance above the town. The yield could be increased by putting in timbered drives from the bottom of the well. An engine would of course be required for raising the water to the surface.

I have, &c.,

EDWARD F. PITTMAN,
Government Geologist.

Progress Report of Mr. J. E. Carne for 1896.

Sir, Geological Survey, Department of Mines and Agriculture, 12 January, 1897.

I have the honor to briefly summarise the work performed by me during the past year.

In January I was engaged in office writing up reports of work performed, &c.

In February I inspected the auriferous beach ores at Shellharbour, and reported thereon to the Prospecting Board. Later I examined a defined site at Hillgrove, and attended the local Court at Armidale to give expert evidence in connection therewith. I inspected land for alienation within gold-field reserves near Armidale and in the Upper Hunter district, and examined and reported on sites for prospecting aid at Stewart's Brook.

In March I inspected prospecting sites at Drake, Lunatic, Pretty Gully, Tooloom, Rivertree, Boonoo Boonoo, and Sandy Creek, and examined portions of the Maryland Tin Reserve 857 (near Wilson's Downfall), Uralla and Guyra Gold-field Reserves.

In April I inspected limestone deposits near Taree, and examined and reported on the mineral resources of the coast between Port Macquarie and Cape Hawke; also on prospecting sites at Coolongoolook.

In May I was engaged in office writing reports on work performed, and preparing equipment, &c., for leading a prospecting party along the Victorian Border from Cape Howe to the head of the Murray River at Forest Hill, a distance of about 120 miles. In June a start was made from the coast district near Cape Howe, and at the close of the year a strip, nominally one mile wide, but frequently more, had been tested as far west as the Irondoon Range, near Delegate.

The

The results from a mining view have been very disappointing, and equally poor fortune has befallen the Victorian Party engaged in similar work on their side of the Border, notwithstanding that the latter party has been two months longer in the field.

As the country passed over will form the subject of a special report on completion of the work, it will, perhaps, be sufficient at the present time to briefly epitomise the main geological and mining features of the area already tested.

From the coast to the Howe Range the formations consist of Devonian sandstones, conglomerates, and clay shales. At the range, about 300 feet of conglomerate overlies the granite, which forms the base of the elevated ridge stretching northerly from Mallacoota Lake to Twofold Bay. From the Howe Range to about one and a half mile west of the Eden-Genoa road at Timbilica, the formations consist of slates, sandstone, and schists, with occasional intrusions of porphyry; from the intermediate position of these beds between the overlying Devonian and the more cleavable slates and sandstones and schists of the Monaro Tableland further west, they may be provisionally classed as Upper Silurian, though continuous search has failed to discover palaeontological evidence to definitely establish their proper geological horizon. West of the Timbilica Road granite occurs, being the southern extension of the Wyndham, Wolumla, and Bega outcrops. Stretching westerly into the Parish of Yambula it remains the surface rock. Frequent diorite intrusions were noted, but usually quite barren of quartz at the junction. A narrow belt of Upper Silurian slates and sandstones stretches northerly from the Border across Mount Waalimma. West from this belt the granite is overlaid in the Yambula and Nungatta Range by massive beds of sandstone, conglomerate, and grey and ferruginous clay shales, reaching a thickness at some points of over 1,200 feet. These beds are practically horizontal or gently dipping. From the shale bands the party were successful in securing sufficient palaeontological evidence to enable the Assistant Palaeontologist, Mr. W. S. Dun, to determine on reasonable grounds the true age of this series, which I believe is identical with beds of similar character in the Eden-Pambula district.

The Devonian beds extend west along the Border to the junction of the Bondi River and Hopping Joe Creek, in the Parish of Bondi, County Auckland. From thence to the Main Coast Range, in the same parish, granite extends to near the brow of the tableland; here a narrow belt of slate and schist is separated from the main mass by a narrow intrusive offshoot of granite which forms the eastern escarpment of the Monaro Tableland on the Border. From this point to the Irondoon Range, just west of the Little River, slates, sandstones, and schists occur. At the Irondoon a narrow intrusion of gneissic granite occurs, but pinches out a short distance north from the Border. The sedimentary formations of the tableland fortunately afforded an interesting suite of Graptolites, which were identified by Mr. Dun as characteristic Lower Silurian types. This is the first definite determination of Lower Silurian rocks in the Colony, which, however, was anticipated upon the occasion of the first geological examination of the district, opposite which in Victoria this formation had been identified.

Of the mineral resources of the area tested little can be said; gold occurs, sparingly distributed in extremely fine colours, throughout the alluvial of most of the country traversed; but nothing even affording reasonable inducement for further test was discovered. In one instance only was gold found in reefstone, viz., near Mount Buckle, in Parish Buckle, County Auckland. The matrix was quartz, occurring as veins, leaders, and bunches in granite. The gold is extremely fine, and occurs not only in drusy cavities resulting from oxidation of pyrites, but also distributed in almost microscopic particles throughout portions of the quartz. Galena is also present in very small quantity. A selected sample from the best looking stone assayed 18 dwts. 12 grs. gold per ton, but the average of the surface stone may be roughly estimated as 5 or 6 dwts. per ton. Authority was given to draw attention to the discovery through the medium of the local press, and as a result a party of prospectors were on the 10th ultimo engaged in opening up the reef.

In the Lower Silurian rocks of the Monaro Tableland better prospects were expected, but not realised. The gold deposits extensively worked along the Quinburra and Little Rivers near Delegate have undoubtedly been derived from the auriferous ranges in which they have their source in Victoria, as the gold becomes coarser as the channels are followed up, and finer as they extend into New South Wales territory.

Operations in the latter have been confined to testing the flats and gullies falling into the streams mentioned for the purpose of ascertaining whether any local sources of gold supply existed, but entirely without avail.

Traces of tinstone were obtained from the wash near Timbilica, but no lodestuff was detected. Operations will shortly be resumed between Delegate and the Snowy Ranges, where, it is hoped, better fortune will await the systematic attempt now being made by the Department to discover economic metals and minerals in this locality.

I beg to append herewith the following reports on work performed during the year:—

Report on an Alluvial Tin Deposit, Mann River.

Report on the Geology and Mineral Resources of the Coast between Port Macquarie and Cape Howe.

Preliminary Notes on the Yowaka or Pambula Gold-field.

Report on the Wolumla Gold-field.

Report on the Timbilica Reefs near Nungatta.

Report on the Auriferous Deposit at Tingys' Plains, near Rocky Hall.

I have, &c.,

JOSEPH E. CARNE, F.G.S.,

Geological Surveyor.

The Government Geologist.

APPENDIX 6.

Sir,

Report on an Alluvial Tin Deposit, Mann River.

I have examined the above site, which is situated on the bank of the Mann River, Portion 155, Parish Stonehenge, County Gough. The river just below the site (where tin-mining operations have and are being carried on) runs through a narrow rocky gorge, which when the river bed stood at a higher level formed a dam, and caused accumulations of drift and sediment to be backed up on the flanks of the sloping ground above the bar. The drift or wash now being worked is well waterworn, and has clearly been transported for some little distance; the tinstone and gemstones are all well rounded. The Applicant's
idea

idea was, I believe, that the tin drift had resulted from the neighbouring granite hill; but this view is clearly opposed to the natural evidence. Tin has been worked hereabouts, but rarely, for the past twenty-four years. At the present time steam pumping power and a puddling machine are being erected by Mr. B. Moses, of Glen Innes, who has purchased the mine from the applicant. Judging from a sample of the stream tin sand, the quality is much deteriorated by the presence of a large percentage of ilmenite. As no mining was proceeding at the time of inspection, I could not ascertain the actual thickness of the stanniferous drift, because of the presence of water; but judging from the portion exposed, the yield will be very fairly good; the vital question, however, is the purity of the tin sand.

I have, &c.,
JOSEPH E. CARNE,
Geological Surveyor.

The Government Geologist.

APPENDIX 7.

Report on the Geology and Mineral Resources of the Coast between Port Macquarie and Cape Hawke.

Sir, Geological Survey Branch, Department of Mines and Agriculture, 29 May, 1896.

I have the honor to report that, in accordance with your instructions, I have examined the coast-line between Port Macquarie and Cape Hawke, with a view of ascertaining the extent, and possibility of successful development, of the intervening beach sands, which, as the Hon. J. H. Young states in papers 96-4,967, have been more or less spasmodically worked for gold for a number of years past. Also for the purpose of endeavouring to determine the probability, from the local physical conditions, of the existence of earlier auriferous shore-lines. And finally, by careful examination of the nature and condition of the auriferous sands, to advise as to the best method of treatment.

The distance between Port Macquarie and Cape Hawke is about 60 miles; but following the contour of the shore-line it is, approximately, not far short of 100 miles. Port Macquarie lies about 150 miles south of the Esk and Jerusalem Creeks auriferous coast areas, which at the present time are attracting considerable attention.

Physical Geography.

The coast-line from Port Macquarie to Cape Hawke is destitute of any continuous cliff-sections, the few headlands which occur—such as Grant's Head, Camden Haven, Diamond and Crowdy Heads, Wallaby and Halliday Points, and Cape Hawke—are widely separated by long stretches of sandy beach fringing lowland areas.

The principal elevations adjacent to the coast are the conspicuous isolated mountains known as the North, South, and Middle Brothers, near Camden Haven and Stewart Rivers; and further west the Kere Wong or Broken Bago Range, trending north-easterly towards Port Macquarie. Between the Manning and Wollumba Rivers, Talawah and other peaks towards Tinonee and Coolongolook are conspicuous elevations above the general level.

The principal drainage channels entering the sea between the extreme points of investigation are the Hastings and Wilson Rivers, entering at Port Macquarie; the Camden Haven and Stewart Rivers at Camden Haven; the Manning River, with its divided outlet, at Harrington and Farquhar Inlets; and the Wollumba River, entering at Cape Hawke.

The above rivers, with their principal tributaries, drain a large tract of country lying between the Macleay watershed on the north, Cape Hawke on the south, and the high lands of New England on the west. Included in this area are portions of the Orara, Gyra, and almost all the Gloucester Gold-field, as well as the Gundle Tin-field on the Wilson River.

Between Tacking Point and Diamond Head are five lakes close to the sea-line, four of which are of considerable size. Lake Imes or Burrawan, Lake Swamp, and Cathie Lake lie nearest to the coast, from which they are separated only by swampy sandy areas. These lakes lie opposite the long beach between Tacking Point and Grant's Head.

Queen's Lake and Watson-Taylor Lake are tidal waters connected with Camden Haven River; they lie north and south of the North Brother, at a distance of about 3 miles apart, and $1\frac{1}{2}$ from the coast.

General Geology.

The geological formations represented in the coast section consist of Carboniferous marine beds at Cape Hawke, Halliday and Wallaby Points; fresh-water Mesozoic beds at Camden Haven, Grant's and Crowdy Heads; and Tertiary and Recent deposits in the low-lying intervening areas.

Igneous rocks are represented by serpentine and dolerite at Port Macquarie; and felsite, rhyolite, and diorite at Diamond Head.

Between Port Macquarie and Tacking Point, patches of altered sedimentary rock occur in contact with serpentine and dolerite. The Signal-station at the former, for instance, stands on a peninsula of such a rock where the junction with the serpentine is well marked. The sedimentary rock, owing to intense silicification induced by igneous intrusion, has in places assumed cherty, chalcedonic, and jasperoid characters.

At Nobbys, the South Head of Port Macquarie, across a narrow neck connecting the headland with the mainland, several shafts have been sunk in the altered rock where it is much decomposed. In one of them a mass of loose, rubbly quartz has been opened, evidently under the impression that it was a vein; but a glance at the large solid masses of similar material lying at sea-level on the west side of the neck is sufficiently convincing of its secondary character. In some instances the infiltration of the colloidal silica has converted the original rock into a homogeneous chalcedonic or jasperoid mass, in others it has reticulated it with thin seams and threads. A specially interested example of complete silicic metamorphism is represented in some isolated rocks exposed on Tacking Point beach, at the site of the "Wodonga" wreck, the bedding planes of which are distinctly preserved, striking N. 52° E., and dipping N. 38° W. at 44°.

Fragments of the silicified rocks and of true quartz occur loose or mingled with the deep red soil of the surface just above the beaches between Nobbys and Tacking Point, to which further attention will be given when the occurrences of gold are to be considered.

Owing

Owing to contact metamorphism and absence of any palæontological evidence, the correct geological horizon of the above-described sedimentary rocks cannot be authoritatively determined at the present time, but from correlative evidence there is little doubt that they will eventually prove to belong to the Carboniferous Period.

Carboniferous Marine Beds.—Rocks of this age form the headlands at Cape Hawke, Halliday and Wallaby Points, and a smaller unnamed headland just north of the latter, where these rocks are first seen in the coast section when followed southerly from Port Macquarie.

The strata consist of alternating beds of indurated sandstones and mudstones with intercalated beds of coarser grits and conglomerates.

The prevailing strike at Cape Hawke—where the largest outcrop occurs—is about 1 degree from east and west. The dip is southerly, but variable in amount, ranging from 30° to 52°. At the low headland above-mentioned, the strike is apparently nearer north-west, but here the strata have been subjected to anticlinal and synclinal folding.

Wallaby Point consists chiefly of massive beds of indurated sandstones, grits, and conglomerates. A special feature of this outcrop is the curious concretionary weathering of some of the sandstones. Hard cores of greenish-gray colour are seen embedded in weathered yellowish-brown shaly layers from $\frac{1}{8}$ of an inch in thickness. The cores vary in size from small pellets to massive blocks, according to the thickness of the individual beds. The concretionary or rounded structure assumed in weathering, probably arises from a series of parallel cross-joints or shrinkage cracks at right angles to the bedding planes, which divide the rock into blocks, and allow free access of the weathering agencies to the whole surfaces, which would naturally tend to the rounding of the angles in the manner displayed by the beds in question.

From the strata exposed in the coast section, near the Signal-station at Forster, Cape Hawke, a number of fossils were collected, which have since been examined by Mr. W. S. Dun, Assistant Palæontologist, who has supplied the following descriptions:—

“The fossils collected by Mr. Geological Surveyor Carne, from near the Flagstaff, Parish of Forster, County Gloucester, indicate rocks of true Carboniferous age. They are mostly imperfectly preserved as casts and impressions.

Chonetes, sp.—(Very closely allied to *C. hardrensis*, Phillips, of the English Carboniferous).

Productus semireticulatus, Martin.

Spirifera—(A few specimens which indicate a species of the type of *S. grandicostata*, McCoy).

Gossetina australis, Eth. fil.

Fenestella.

Orthoceras—(Remains of an internal cast of a very large species, showing remains of two septa; about 7 inches wide, as preserved).

Corals—(Very abundant; occurring as internal casts, evidently of a branching dendroid form).

Bellerophon.

Entolium?

Knorrina.

From the neighbourhood of Cape Hawke Mr. Etheridge has already recorded *Cyrtina carbonaria* var. *australasica*, Eth. fil. *Productus cornu*, D'Orb., and *Leptodomus*.*

The identification by Mr. Dun of the fossils *Productus semireticulatus*, and *Gossetina australis* in abundance in the Cape Hawke carboniferous rocks is of special importance, because such forms are typically characteristic of the beds beneath the Productive Coal-Measures (Permo-Carboniferous) of New South Wales. Thin coal seams, however, do occur in the Carboniferous beds, but so far as the present state of our knowledge goes, of inferior, unworkable quality only.

Mesozoic—Clarence Measures.—The cliffs forming the headlands north and south of Camden Haven and at Crowdy Head belong to this period. At the first-mentioned the strata consists of massive conglomerates and sandstones, with fine shaly sandstones and clay shales, and are specially distinguished by general horizontality and by the highly ferruginous character of the conglomerates and sandstones. The latter feature has given rise to an erroneous belief that beds of iron ore and ochre of economic importance occur here.

Crowdy Head, situated about 8 miles north of the main outlet of the Manning River, consists of more or less horizontally bedded massive grey sandstones, in which reed-like stems (probably *Equisetum*) are occasionally exposed during quarrying operations now being carried on in connection with the construction of retaining-walls at the entrance of the Manning River at Harrington.

The dip of the Mesozoic strata is to the south-west; at Grant's Head it amounts to about 7 degrees only from the horizontal.

The conglomerates consist essentially of chalcedonic quartz and jasperoid pebbles in a cementing paste of sand and oxide of iron, the latter rendering some portions extremely compact and hard.

At the southern end of the south head of Camden Haven, where the cliffs give place to the beach which stretches to Diamond Head, the section consists of massive beds of the conglomerate overlying a thick bed of very ferruginous clay shale, which in turn overlies a grey sandy shale containing plant remains, and a few thin streaks of coal about half an inch thick.

In a collection of plant remains from the latter, Mr. Dun determined the following well-known forms:—

“(a) *Thinnfeldia odontopteroides*, Morris.

(b) *Alethopteris lindleayana*, Royle.

(c) *Equisetum*.

(d) *Cycad*. (Frond imperfectly preserved, the base of the pinnules being indistinct. Probably a *Ptilophyllum*. *P. oligoneurum*, Ten-Woods, occurs in the Ipswich Coal-Measures of Queensland.

(e) *Gleichenites?* There is also present a fern with small lobate pinnules, somewhat similar to *Didymosorus (Gleichenites) gleichenoides*, Oldham, from the Rajmahal Coal-Measures (Lower Mesozoic), of India, but differing from it in the distance apart of the pinnae and their less head-shaped and more elongate form; but it is very indistinctly preserved. This species (Indian) has been also described from the Desert Sandstone of Croydon, Queensland.

(f) *Cardiocarpum*.

(g)

* Records Geol. Survey N.S. Wales, 1892, iii, p. 60.

- (g) *Phyllothea* sp. This form is unlike any that has hitherto been described from Australia Mesozoic rocks. It is characterised by the very elongate fine leaf bracts, and the narrow stem. It is of the type of *Phyllothea deliquescens*, Schmalhausen, from the Jurassic of Western Russia, and *P. sibirica*, Heer, from rocks of similar age in Siberia."

The fossils identified establish the Mesozoic Age of the rocks on the coast at Camden Haven, and, therefore, point to the possibility of strata of the Productive (Permian-Carboniferous) Coal-Measures underlying them. This question will, however, be further considered under the head of coal.

Igneous Rocks.—I am indebted to Mr. G. W. Card, A.R.S.M., Curator of the Mining Museum for the following petrographical notes on igneous rocks from the localities mentioned:—

- [819] 53-mile peg—Port Macquarie to Taree Road. Ophitic dolerite (olivine absent).
 [820] First point south of Nobbys, near Port Macquarie. Similar to 819, but coarser in grain.
 [821] Tacking Point, (by some regarded as granite. J.E.C.) Similar to 820, but less ophitic in structure and much altered. Would appear to be of considerable geological age.

NOTE.—These three [819, 820, 821,] would be termed diabase by some. The absence of olivine brings them somewhat nearer the diorites.

- [823] Diamond Head. Diorite.

Mr. Card also confirmed my field determinations of the Diamond Head quartz felsites, and the silicified fine-grained sedimentary rock already described.

Economic Geology.

The economic metals and minerals represented in or near the coast-line between Port Macquarie and Cape Hawke consist of gold, copper, cobalt, manganese, iron and limestone, which will be dealt with in due order, and followed by reference to the reported occurrence, and probable existence of coal and kerosene shale.

Gold.—Gold naturally first claims attention, not, however, because of any importance attaching to the beach-mining operations which have hitherto been attempted. It occurs in reefs at Coolongolook, and Paddy's Creek, near Bungwall, west and a little south-west of Cape Hawke, in rocks of Lower Carboniferous age. In Bunt and Ort's Claim, at Paddy's Creek, the gold-reefs occur as thin flat-lying veins in conglomerate, which caps at this point the claystones and slates in which the neighbouring reefs occur.

At Coolongolook the gold reefs are thin and have been mostly characterised by the occasional occurrence of very rich, but extremely small shoots; a mode of occurrence usually if not invariably leading to loss and disappointment. The regular persistence of good stone with depth in the Curriki Reef should, however, encourage prospecting at lower levels.

Coming nearer to the sea-beaches, gold in the matrix, or more correctly, loose gold derived from local matrix, has been found in fairly coarse pieces, at intervals, between Nobbys and Tacking Point, near Port Macquarie, where, as before stated, igneous and sedimentary rocks occur in contact. The gold is here found in the red soil and rubble which covers the surface and accumulates as small tali at the foot of the elevated land at the back of the beaches.

In December last a local resident, Mr. A. Wade, pointed out several localities further inland where prospects were obtainable.

Both the igneous and sedimentary rocks, as before mentioned, are scamed with small veins, chiefly of a secondary or chaledonic silica, in which pyrites is rarely seen. From a few of the most favourable-looking, samples were taken, which, however, failed to reveal the presence of gold on assay.

That the gold obtained under the conditions stated differs distinctly in character and derivation from the uniformly minute particles in the beach sand, is easily apparent to those who occasionally find it when trying the latter at the junction of the red soil.

The indications in this locality point to dissemination of gold in small quantities through the country rather than concentration in defined matrices or reefs. The loose gold of the red soil probably represents the naturally concentrated yield of a large amount of weathered and denuded country.

At Diamond or Indian Head, two distinct intrusions of igneous rock occur in conjunction, the oldest consisting of diorite, and the younger of quartz-felsite. Rhyolite occurs in the latter, filling an irregular fissure, through which it has welled up in well-marked lines of viscid fluxion structure.

On the surface of the quartz felsite, crystalline quartz veins occur, having a maximum thickness of from one to one and a half inches in thickness; the apices of the crystals are free, symmetrical and perfectly transparent, hence, perhaps, the name of "Diamond" Head. Pyrites is associated with portions of the country rock and some of the veins. The discovery of the quartz veins and pyrites caused a small rush to the locality, and a number of shallow shafts and trenches were sunk on the top and western falls of the headland, but the indications are decidedly unfavourable both as regards the character and permanence of the veins.

Marine denudation has exposed the quartz felsite to a depth of 300 to 400 feet in the coast section without revealing any favourable mining indications. It is true that the felsitic intrusion in its composition is allied to the Pambula auriferous rock, more especially as regards the very thin and limited rhyolitic bands; but this approximate resemblance counts for nothing unless gold occurs in the mass itself, which there is at present no ground for assuming. This suggestion, however, is thrown out for the guidance of any further prospecting, so that attention may be directed to, perhaps, the chief point upon which any prospects, however slight, appear to rest.

It may also be stated that the most successful method of prospecting similar rocks at Pambula is "loaming," or scraping up of the loose, weathered material (soil) lying on the bed-rock on the slopes of the ridges, and panning for prospects; trails of fine shed-gold discovered in this way were in many instances followed to the outcrop of their respective matrices.

Beach Gold-mining.

So far as could be ascertained, remunerative beach-mining has only been possible in about three localities between Port Macquarie and Cape Hawke, viz., Tacking Point beach, Camden Haven, and Harrington Inlet, and even in these cases for very limited periods and yields only. The most important—Harrington Inlet—yielded about £70 worth of gold before the supply of material was exhausted.

Messrs.

Messrs. Atkinson and Hannay discovered the deposit about fifteen months ago just north of the retaining wall now being constructed. The auriferous sand extended for about 400 yards along the shoreline at and near sea-level. The bluish layer of "sniggers," averaging from 4 to 15 inches in thickness, rested on altered sandstone, and filled its numerous joints and crevices.

On Tacking Point beach, near the "Wodonga" wreck, Osbiston Brothers last year worked a "snigger" deposit of a reported yield of 20 oz., which exhausted the present supply of workable sand. The best results were obtained from the deepest layers, which averaged from 1 to 2 inches in thickness under from 5 to 10 feet of stripping. This party has just removed to Camden Haven beach, where at the most rations were formerly made.

Messrs. Woods and Partner have cut a race about 1½ mile long, taking advantage of the course of a small creek which trends northerly behind and parallel to the coast dunes, for the purpose of ground-slucing a deposit of sand close to Tacking Point. At the head of the race a small conserving dam has been constructed, from which the water had just been turned on, the volume being about equal to two sluice-heads. On the beach plates and boxes have been laid on the sand. Coir matting and blanketing are both used for lining the boxes and the bed of the race above the plates. Judging from the altogether ineffective fall of the water and its consequent gentle silting effect on the plates and boxes—which were almost entirely buried beneath the drifted sand, and the extreme liability to damage by even moderately high tides and gales, nothing but failure can be predicted for this venture, even if the deposit is a payable one, which has yet to be demonstrated.

A little of the blanketings or concentrates supplied by one of the Party—which, however, was not regarded as altogether a fair sample—yielded no trace of gold in the Departmental Laboratory. This evidence is only an indication of poverty, not of complete absence of gold, for the gold particles being free might, if few, be missed in sampling.

At Nobbys a few pot-holes have been sunk for gold amongst rounded boulders and pebbles, but with what result is not known. A noticeable feature is the association of well-worn pebbles and shingle with the auriferous black sand in almost every instance where it occurs on the beaches.

In June, 1894, a prospector named Warbrick began testing the sand inside the Old Bar, at the entrance of the south channel of the Manning River, at Farquhar Inlet. His operations attracted attention, and caused a small rush of about thirty men; few, however, remained after a short interval. The only protracted trial being that of Messrs. Crofton and Party, who worked intermittently for about seven months, their chief efforts being concentrated in a small depression about 75 yards back from the beach, close to the border of the mainland. Here the sinking is about 7 feet, in dry, clean, sand; the bottom consists of stiff pug-clay with pebbles derived from the conglomerate beds of the country.

The black sand layer exposed in the bottom of a shaft sunk at the time of inspection averaged from 10 to 13 inches in thickness.

The same party also worked for a time on the beach opposite the Recreation Pavilion. Holes sunk at this spot as deep as the water would allow revealed extremely fine thin layers of black sand, alternating with ordinary white quartz sand. In working, however, the whole available thickness of black and white layers would have to be operated on, because separation would be impossible. Shovel-panning of selected samples yielded a few very minute gold specks, but no platinum.

Methods of Working.

Carpet concentration of the extremely fine gold particles in the beach sands has not been tried in the localities mentioned, amalgam plates alone being used, usually on ordinary tables, with single or double feed hoppers. The water supply is raised by speer (jigger) pumps and generally evenly and continuously distributed from a small box reservoir, which prevents the intermittent, gushing flow from the pump direct, a source of undoubted loss if unchecked.

Crofton and Party's plates, however, were set up on a different plan, the frame being an upright stand about 4 feet high and 2 feet square, surmounted with a hopper. The plates (three in number) were set in a vertical zigzag at an angle of about 11° from the horizontal, and these were followed underneath by a bag-covered tray with a riffle at the line of discharge.

Supposed Causes of Non-successful Working.

In one locality only—viz., Old Bar, Farquhar Inlet—is the non-success of beach gold mining attributed to a cause other than the natural poverty of the sands. Crofton and Party, whose operations, extending over seven months, resulted in a net return of 2¾ oz. of amalgam, containing about 8 dwt. of gold, attributed their failure to the action of some deleterious substances in the sand which in a mysterious way caused the hard amalgam accumulated on the plates to vanish in a few moments after resumption of operations. No attempt, however, was made at any time to remove and retort the amalgam when in greatest supposed abundance, or to test the tailings for escaped particles.

The absorbent power, especially of new copper plates, is a well-known fact, but to this can hardly be attributed the sudden disappearance of accumulated amalgam. Another possible source of loss is the use of cyanide of potassium for cleaning the plates, unless followed by adequate washing.

Two samples of sand, one from the site of the main workings, the other from the thin slack sand layers of the beach, selected in the usual way by mixing and parting, were carefully assayed in the Departmental Laboratory in duplicate, with the following results in each case:—Gold, a trace (under 2 dwt. per ton).

The sand of this locality being quite clean, or but slightly discoloured, and perfectly free from percolating humic acid, or iron solutions, requires no cleansing by caustic washings as has been suggested. A careful examination of the locality, with full consideration of the facts connected therewith, leads to but one conclusion as to the cause of non-success of mining operations, viz., natural poverty of the sands in gold.

Evidences of the existence of earlier beaches landwards.

In two localities, viz., Tacking Point Beach, north of Cathie Creek, and the beach near the outlet of Khappinghat or Saltwater Creek, between Wallaby and Halliday Points, there is evidence of Recent and Tertiary sea-made areas extending inland. At the foot of the beach dunes in these localities, a hardened black sand-bed occurs about, and a little above, sea-level, consisting of ordinary quartz sand grains coloured and cemented by organic matter and iron salts. The essential differences between these and similar occurrences in the Esk River District are the extreme poverty of the present beaches opposite these outcrops, and the conspicuous rarity of the genuine black sand (titanic iron and zircon) which forms such a common and characteristic feature of the more northern auriferous beaches. In fact, this constant associate of the gold particles becomes markedly less and less discernible as the coast line is followed southwards from Port Macquarie.

It is true that Osbiston Bros. reported a yield of 20 oz. of gold for twelve months' work from a patch of natural concentrates or "sniggers" on Tacking Point Beach, just about the north end of the "black rock" outcrop; but opposite the outcrop itself no good results were obtainable.

At the other locality mentioned, near Saltwater Creek outlet, the "black rock" rises in some places to a height of 6 feet above the beach level, and through it fresh water is continuously soaking from the made ground at the back. A feature of this outcrop is the occurrence in it of large, altered sandstone pebbles, mostly in layers, which would render testing by sludger extremely difficult, if not impossible.

Iron salts play an important part in the colouration of this bed, and where such has been converted into peroxides at the exposed outcrop, the rock is of a yellowish or reddish-brown hue.

On the banks of Saltwater Creek outlet, and for a very limited distance south, thin layers of the true black sand occur. An average sample taken carefully from the surface layers—which cake as they dry in the sun—yielded a trace of gold only when tested in duplicate in the Departmental Laboratory. From the position of the true black sand at the base of the loose sand of the dunes, and its marked absence on the beach opposite the long outcrop of "black rock," it would appear as if it were derived from the former.

A large swamp closely paralled to the beach south of Old Bar was regarded by some as evidence of a former encroachment of the sea, but a very slight test was sufficient to disprove this conjecture.

I am indebted to Mr. Hannay, of Taree, for the following particulars of the nature of the sinking about 200 yards inland from the mouth of Abby Creek between Diamond and Crowdy Heads:—

Wind-blown sand	2 ft. 6 in.
Boulders and sand with fine gold particles	2 ft. 0 in.
Chocolate-coloured slimy sand	6 ft. 0 in.
Coarse gravel with coarse colours of gold regarded as bottom

Three men at this point were engaged, partly in trying the beach sands at the creek mouth, and partly in prospecting in the neighbourhood.

Absence of Basalt-covered Drifts.

In the strip of country under consideration there is, apparently, an entire absence of basaltic outflows covering earlier drainage channels. The original richness of the sea-beaches adjacent to such phenomena in the Richmond and Tweed River Districts, and their gradually but surely increasing poverty in ratio with the distance from those localities, adds immensely to the importance of the drifts as a source of the beach gold, and to their undoubted influence on the richness of adjacent beaches.

In a previous report* I dealt with the question of origin of the beach gold. The opinion therein expressed has been strengthened by phenomena observed during recent examination of beach areas further south. Such an opinion, however, can be but a tentative one, to be confirmed or rejected by future detailed survey and observation. The tests being carried out at the present time in the Tertiary and Recent sea-made areas, under the able and careful supervision of Mr. D. Munro, should afford valuable data for future guidance.

Metals other than Gold—Cobalt Ore.

Nine or ten years ago cobaltiferous manganese oxide (Wad) was discovered by Mr. E. H. Becke, at Nobbys, Port Macquarie, which attracted some attention because of the establishment at Sydney about that date of works for treatment of ore of a similar composition from near Bungonia (where it occurs as a cementing material, and in small concretionary nodules, in a coarse grit); but the nature of the ore, its chief mode of occurrence being thin coatings, stainings, and encrustations in the joints and divisional planes of serpentine, renders it extremely doubtful whether any form of mechanical treatment could be successfully adopted. The ore was first detected in the serpentine country at Windmill Hill, and street cuttings and levelings reveal its presence in the town of Port Macquarie itself.

Iron Ores.

With the cobalt ore is associated a little magnetic iron ore, which, in some places, is altering into soft red iron ochre (red hematite), having a deceptive appearance to some of the uninitiated, who are apt to mistake it for cinnabar. The rich red colour of the neighbouring soil is most probably due to the above chemical or molecular change.

At Tacking Point, at the foot of the cliffs on the south side, magnetite occurs as a crust of no great thickness, which, when broken, reveals an altered rock highly charged with pyrites.

At Honeysuckle Flat, close to the 43-mile peg on the Port Macquarie-Taree Road, magnetite occurs as gravel, both loose and in fairly large cemented lumps. Its physical character is very deceptive, causing it to be readily mistaken for ordinary brown iron ore (limonite). The occurrence is in a low flat of serpentine country, which here has a width of about 25 chains. The iron-ore gravel has doubtless been shed from the serpentine, and concentrated and partly cemented in a swampy area; judging from the road trenches, the deposit appears to be very superficial. About

*Ann. Rept. Dept. Mines and Agric. N.S. Wales for 1895 (1896), pp. 140-160.

Copper.

About twenty-five years ago attention was directed to a deposit of copper and iron sulphides at Nobbys, Port Macquarie, and a shaft was sunk, but evidently without satisfactory result, for operations were not continued. A few broken specimens, chiefly of iron sulphide, near a later opening, is all that is now visible, hence no opinion can be offered.

Copper ore is also reported from Hanging Rock, about 3 miles west from Green Hills; but this site, through inadvertence, escaped attention.

Coal and Kerosene Shale—Reported Discoveries.

Local reports are current as to several separate discoveries of coal and kerosene shale, generally in loose pieces. About three years ago a Mr. A. McLeod reported finding loose specimens of kerosene shale on Broken Bago Range, which resulted in four sections of land being applied for by a Sydney mining agent; later, these areas were re-applied for; but in neither case does actual prospecting appear to have been done. Loose drifted specimens of kerosene shale are also reported from near Saltwater Creek, at some distance from the coast.

Coal has been reported from the headlands at Camden Haven, and substantial accounts given of burning tests. These headlands, as already stated, consist of Mesozoic rocks. Whether a coal-seam does actually outcrop beneath them at or below sea-level I am not prepared to dispute, because I did not follow the headlands completely round their sea-face, being blocked in one instance by the sea, and in the other by the approach of night. It is probable, however, under the circumstances, that the reported coal was from the thin coal-streaks near the plant-beds already described in this report.

The identification of Secondary (Clarence) Beds at Camden Haven and Crowdy Head opens up an interesting question relative to further extension of our already extensive coal-basins. Looking at the Broken Bago Range, from Wauchope, attention is at once arrested by the bold, vertical, western escarpments of the range towards Mounts Kerewong and Combine, a feature which affords reasonable presumption for the existence of horizontal beds, and which is strengthened by the later determination of Mesozoic strata on the coast at Camden Haven. The isolated Brother Mountains will also probably prove of this period. The coast outcrop is of little importance, because of its limited extent; but greater scope is afforded by the Broken Bago Range, which, if proved to belong to the same period, may overlie productive coal-measures. A special detail examination would be necessary to determine this interesting and important question.

I have, &c.,

JOSEPH CARNE, F.G.S.,

Geological Surveyor.

The Government Geologist.

APPENDIX 8.

Preliminary Notes on the Yowaka or Pambula Gold-field.

Sir,

Geological Survey, Department of Mines and Agriculture, 16 September, 1896.

I have the honor to report that, in accordance with your instructions, I visited the Yowaka or Pambula Gold-field for the purpose of reporting on its prospects and the nature of the auriferous rocks and surrounding country. The perplexing character of the gold-bearing matrix and the entire absence of any apparent distinction between it and the enclosing country rendered it imperative that careful petrological investigation should precede detailed examination of the field, and for this reason a large number of representative specimens were chosen from which a series of sections was subsequently prepared for microscopic study. Care was taken to select not only those possessing special characteristics of determinative value in the question of origin, but those also of peculiarly deceptive physical appearance when separated from their surroundings, and others again possessing broad markings which constitute easily recognisable data in field work.

The proposed sections were independently examined by Mr. G. W. Card, A.R.S.M., Curator of the Mining Museum, and Professor David of the Sydney University. The harmonious agreement in the results of their careful microscopic determinations may be accepted as practical demonstration of the origin and nature of the Pambula auriferous matrix, viz., devitrified and silicated felsites, rhyolite, and quartz felsite, or quartz porphyry, and of its complete identity with the country enclosing the gold-bearing shoots and joint fillings.

Equipped with the valuable knowledge thus obtained, field work was begun and carried on for two weeks in 1895, and further continued for a few days in August of the present year, in conjunction with an examination on behalf of the Prospecting Board for the purpose of selecting the most advantageous site for testing the field at a depth, the result of which forms a separate report.

The following preliminary notes with sections and rough sketch map embody the results of geological observations made during the periods mentioned, sufficient, perhaps, to indicate the possibilities as well as the difficulties of this unique gold occurrence, and also the desirability of a more elaborate survey, which, however, would occupy several months. The tracing, mapping, and practical testing of the apparently extensive felsite outcrop is a matter of supreme importance to the mining interests of the district, for little real prospecting has yet been attempted outside the extremely restricted limits of the proved gold-bearing area; and, in the present absence of any recognised distinction between the auriferous and non-auriferous portions of the felsite, it is but reasonable to infer that gold may be found in any part of it.

Previous Mention of Locality.

The Rev. W. B. Clarke, M.A., F.R.S., &c., in his "Southern Gold-fields," 1860,* describes in some detail the country lying between the mountain peaks of Inlay, Jingery, and Wolumla, and the sea coast from Eden north to Pambula.

Mr. E. F. Pittman, A.R.S.M., in 1880† examined the coast between the points mentioned with reference to the supposed occurrence of coal in certain approximately horizontally-bedded sandstones.

Mr. Geological Surveyor Anderson, in 1890,‡ examined the newly-discovered Yowaka or Pambula gold-field.

Mr. Danvers Power, F.G.S., in 1893,§ contributed a paper on the Pambula gold deposits to the Geological Society of London.

Discovery of Gold in the Pambula District.

In his Report No. XIII, dated Pambula, 10th March, 1852, the Rev. W. B. Clarke thus alludes to the vicinity of the present gold-field—"I have reason to believe that it (gold) will be found in the creeks running north-east from the Jingery Range, which is about 13 miles south-west of Pambula, as in Greig's Creek, the salt water portion of which is crossed by the road from Pambula to Eden, a noticeable specimen of gold has been found under peculiar conditions. Gold also exists at what is called Honeysuckle Flat near Eden."

Greig's Creek is identical with what is now known as Yowaka River, which flows through Greig's Flat, and is joined at this point by Pipeclay Creek, which, with its tributary gullies, forms the main drainage system of the auriferous formation at Pambula, the nearest gold workings being about $1\frac{1}{2}$ mile west from the junction, though the associated felsitic rocks extend to the river.

Mr. Clarke describes Honeysuckle Flat as near Eden, but the only locality bearing that name at the present time is a creek situated between Whipstick and Wyndham, about 11 miles west from Greig's Flat, with a southerly course to the Towamba River. Notwithstanding the apparent discrepancy, it is highly probable that the localities are identical; the recent discoveries of gold at Whipstick and Jingery also tend to increase the probability.

No further allusion to the "peculiar" occurrence of gold at Greig's Flat can be traced in Mr. Clarke's publications. Amongst old residents, however, a report is current that gold was discovered at the above locality in the early days of settlement by an employee of Captain Lloyd, who occupied a Crown grant near the present Village of Pambula. Very probably this report and Mr. Clarke's reference are based on the same fact.

It was not, however, until 1889 that payable gold was discovered. In that year Messrs. James Gahan and Samuel Furner, who had been prospecting for several months in the country lying between Mount Imlay and Pambula found payable gold in the matrix about $2\frac{1}{2}$ miles south-west of the latter on a ridge since named Mount Gahan, after one of the discoverers. In November of the same year they applied for the first lease on the new gold-field.

Mr. B. Carragher, a settler on the Pambula River, claims to have discovered alluvial gold in a small creek, since named The Crevices, on the northern fall of Mt. Gahan ridge a few months prior to the discovery reported by Messrs. Gahan and Furner, and asserts that the endeavour of the latter to trace the source of the gold in The Crevices led to the finding of gold in the matrix at the site of the Mount Gahan Mine, distant about 50 chains a little west of south. Though Mr. Carragher's discovery may have been the guide and incentive to the prospectors' subsequent efforts, still the fact remains that their exertions led to the practical opening of the field, for which they received a Government reward of £500.

The alluvial gold found in The Crevices—in all about 4 oz.—differed entirely in character from that usually occurring in the matrix of the Pambula Gold-field, being in coarse, waterworn pieces, in size up to 2 dwt. Under the head of "Alluvial gold" this subject will receive further attention.

The announcement of payable gold at Mount Gahan caused an influx of miners, and the early finding of the principal mines. About 200 old leases were surveyed, but in about ten only was payable gold bearing stone obtained in any quantity, though several others yielded more or less rich stone in very limited quantities.

The area of proved auriferous country at Pambula is very limited, not exceeding 400 acres. A rectangular block about three-quarters of a mile long by a little more than half a mile, with its longest sides in a N.N.W. direction, and its western boundary extending from Portion 59 on the south to G.L. 39 on the north, would practically enclose all the country in which gold of any importance has yet been found, with the exception of a small but rich shoot discovered by Messrs. Gahan and Conlon in G.L. 157, a few chains west of the area described.

Physical Geography.

The main physical features of the country under consideration may be briefly described as the Bimmil Range, about 500 to 800 feet high, trending north-easterly between Pambula and Eden; the Mount Gahan ridge, 400 to 700 feet high, trending easterly to the Yowaka River; and the Bald Hills trending northerly from the latter from which it is separated by the Pambula River. Westerly the country rises to the Main North and South Range, of which Mts. Imlay, Jingera, and Welnorth are conspicuous features. Lower subsidiary ridges and spurs occur between those above-mentioned.

The higher ridges, according to their geological formation, present rugged or rounded conformations, the surfaces consisting either of massive rocky outcrops and loose shingle or a superficial covering of loose conglomeritic detritus and sandy soil of poor quality. Others, again, are wholly or in part covered with rich loamy soil as the formations change from rocks poor in fertilising constituents to those possessing them in abundance. The change in the nature of the soils resulting from surface weathering and decomposition of the different rocks of the locality is not more marked or more abrupt than the change in the indigenous flora. Between the hardy stringybark eucalypt of the barren, stony habitat, and the more luxurious box eucalypt of the rich volcanic soil, the line of demarcation is sudden and distinct. So marked, indeed, is the boundary between the two timbers that it becomes quite possible, from a sufficient elevation, to follow with the eye the junction line by the white-topped branches of the box trees.

The main drainage channels are the Pambula and Yowaka Rivers, the latter being formed by the junction of Back and Old Hut Creeks. The Pambula River runs easterly, and the Yowaka north-easterly to its junction with the former near the head of Pambula Lake.

The triangle formed by the junction of these streams with its base lying between and a little west of Nethercorte and Lochiel—a distance of about 5 miles—practically contains, so far as yet ascertained, the main outcrop of rocks identical with the auriferous matrix of the field.

The country within the triangle is intersected by Pipeclay Creek and its tributary, Little Pipeclay. The main channel divides unequally the proved auriferous area to a depth of between 400 and 450 feet, the larger half lying to the north. Little Pipeclay Creek practically forms the southern boundary of the gold workings

workings, though gold in small quantity has been found as far south as near Back Creek. Pipeclay Creek joins the Yowaka River at Greig's Flat, about 2 miles above its junction with the Pambula River. At this point, and along the latter stream north of Mount Gahan, fertile alluvial flats of some extent occur. These will be considered in connection with the occurrence of alluvial gold.

Geology.

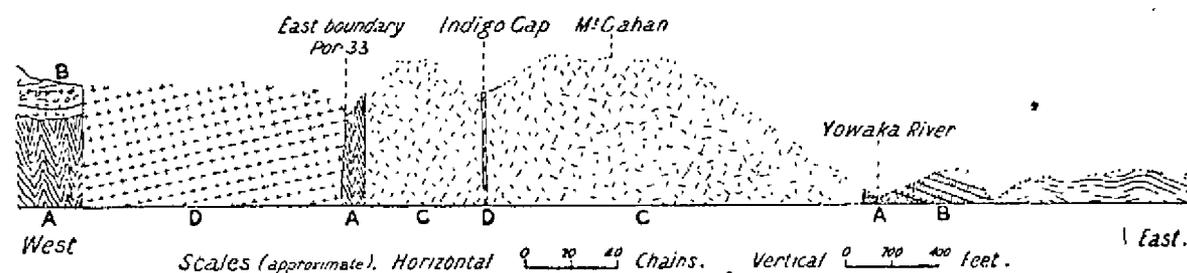

The sedimentary formations of the Eden-Pambula District have so far yielded no palæontological evidence of their true geological horizon. The Rev. W. B. Clarke regarded the whole series as belonging to one system, viz., Devonian, for reasons entered into rather fully in his report on the locality.*

Mr. Pittman regarded the lower beds exposed at Eden as of Silurian age, and the more or less horizontally-bedded sandstones, coarse grits, conglomerates, and red clay slates along the coast between there and Pambula as equally referable on lithological grounds to the Hawkesbury (Triassic) series, or to the Devonian System of North Gippsland.†

The strong Triassic facies of these beds evidently also struck Mr. Clarke, for in the work already quoted he was at some pains to point out specific differences which, happily, were thrown into relief by actual contrast, for near the mouth of the Pambula River he came on a quantity of discharged ballast of Hawkesbury (Triassic) sandstone.

Mr. Anderson regarded the whole series, with the exception of an upper conglomerate bed, as of Silurian age, the exception being assigned to Devonian.‡

The results of the observations recorded herein practically accord with Mr. Pittman's classification, for there is undoubted evidence both in the neighbourhood of Eden and Pambula of unconformability between the highly-inclined and sharply-folded beds exposed in the harbour sections west of Eden and the gently undulating series of beds which overlie the former between there and Pambula. The lowest beds exposed near Pambula are in contact with the felsite and basalts, and the alteration thereby induced prevents their identity with the lowest Eden rocks being determined. The following section represents approximately the result of recent observations:—

- A. *Silurian* (?). Best seen in Bay Section, west of Eden. Sharply folded aluminous slates, finely laminated, and massive sandstones. Colour, greenish-yellow to reddish-brown; prevailing tone, yellowish-brown. At the Gold-field a limited exposure of altered rock (brecciated), quartzite, schist, and massive conglomerate containing boulders and pebbles of granite and quartzite.
- B. *Devonian* (?). Gently undulating beds of coarse, gritty, friable conglomerate containing abundant felsite pebbles; coarse friable grits, indurated in bands, interstices filled with felspathic material, and very ferruginous, red and purple sandstones, and roughly-cleaved clay slates. Alternations of these beds very regular throughout the district.
- C. Intrusive felsite, rhyolite, and quartz porphyry.
- D. Basalt, massive, and amygdaloidal, epidote largely developed in parts. Frequently intrusive in felsite.

Silurian (?).—The sedimentary rocks, provisionally classed as Silurian, occurring in the Bay Section west of the Lighthouse at Eden, consist of fine fissile clay slates, fine-grained and laminated, and massive sandstones, folded into sharp anticlines and synclines, excellent instances of which are to be seen in the cliff sections. In colour the prevailing tones are yellowish and reddish brown. There is a noticeable absence of coarse-grained and highly ferruginous rocks such as characterise the unconformable Upper Series. A small wedge of the lower beds occurs within the felsite area just west of the Lighthouse. At Murrumbalga Point, Quarantine Ground, a narrow dyke of quartz porphyry has intruded and broken up the beds, fragments of which have been subsequently partially or wholly rounded, probably in a drainage channel resulting from the intrusion. The narrow bed of conglomerate exposed at the above point consists entirely of worn fragments of the enclosing sandstones and clay slates in a mud formed from similar materials.

At the Gold-field on the east side of the felsite on Mount Gahan Ridge a mass of highly altered, brecciated rock is seen outcropping on the upper road, and also in the bed of the Yowaka River further south. Felsite is seen intruding the outcrop on the road. This rock, which indicates the lowest exposed bed of the Upper Series at Yowaka River, viz., a gritty felsitic conglomerate, probably belongs to the Silurian System. Further north on the east side of Bald Hills, due west of Pambula, is a large outcrop of very coarse conglomerate adjoining schists and slates; and on the west of the same hills are thinner outcrops of a similar conglomerate and quartzite in contact with basalt. About $1\frac{1}{2}$ mile west of Mount Gahan a small exposure of quartzite is seen in a creek at the junction of basalt also.

The conglomerate is distinguished by the size and composition of its boulders and pebbles which range up to a foot in diameter, and consist of quartzite and granite in a highly quartzitic paste. The conglomerates, quartzite, schist, and slate of the falls of Bald Hills are distinctly unconformable to the over-lying coarse friable grits, felsitic conglomerates, and ferruginous clay slates so largely developed to the eastward along the coast. In the sedimentary wedge on the west side of the Eden Lighthouse a thin band of a similar quartzitic conglomerate occurs close to the intrusive felsite.

Devonian

‡ Ann. Rept. Dept. Mines N. S. Wales for 1880 [1881], p. 263.

Devonian (?).—The lowest bed of the Upper Series which has been provisionally classed as Devonian. It consists of conglomerate, and can be seen overlying the vertical beds of Silurian (?) sandstone in the Quarantine Ground, close to the junction of the Towamba and Old Hut roads. The pebbles consist chiefly of quartz porphyry, and felsite, with red slate, quartz, and chalcedony, or agate, in lesser proportions. The chalcedony or agate pebbles frequently afford undoubted evidence of derivation from septarian felsite nodules. The pebbles are embedded in coarse, friable, quartz grit. Where the Upper Series is in contact with the quartz porphyry and felsite at the back of the Church of England, Eden, the conglomerate beds consist principally of felsitic fragments, with red slate and occasional quartz pebbles, these are bedded in felspathic material exactly resembling the felsite. Several bands of conglomerate occur at this point, alternating with highly ferruginous red clay slates; the conglomerates become less coarse in the upper bands.

The red clay slates (of Mr. Clarke's "Southern Gold-fields") are very characteristic of the Upper Series, and the alternation of these with the conglomerates, grits, and sandstones is very persistent throughout the district, though more massive beds occur at intervals, as at Eden. The slates are roughly cleaved north and south; in colour they vary from deep red to purple. Where slightly hardened by contact the material from these beds forms the best road material of the district. At Yowaka River and Eden, where contact with felsitic rocks occurs, the red slates are highly saturated with felspathic material. Further research may prove them to be of tuffaceous origin, either wholly or in part.

The grits and sandstone consist of coarse quartz grains, with the interstices filled with felspathic material. The joint faces exposed in cliff sections are coated with a thin skin of quartz which imparts a particularly solid quartzose appearance to the outcrop, but its superficial character is manifest upon the lightest touch with the hammer. Fragments of cherty black slate occur in the grits and conglomerates, but felsitic pebbles are most conspicuous. The most striking feature of the sandstones, however, is the occurrence of abundant quartz veins and inclusions, which are entirely absent in the red slates. At the mouth of the Pambula River a most remarkable instance of quartz masses, veins, and threads ramifying in all directions from a centre has been described fully by Mr. Clarke. The quartz in these beds is quite barren.

At the Pinnacles, about midway on the coast between Eden and Pambula, an interesting spectacular effect is produced by sharply contrasted deep red and pure white sand, which, as the cliff section recedes under atmospheric denudation, is ornamented with spires, which have each been protected by a fragment of quartz—as miniature perched blocks in fact.

Judging from the cliff section, the site of the Pinnacles was the work of a channel, which became filled with sand and boulders, and finally covered by a pure white sand dune. The bedding of the filling is roughly horizontal, whilst the solid beds on either hand dip at about 16° across and from it. The contrasting colours are perhaps due to decomposition of existing vegetation causing precipitation of iron salts, which, as the cliff recedes, is converted into red oxide of iron by exposure, the uniform porosity of the sand allowing equal penetration of the ferruginous waters to a fairly horizontal level. The unusual whiteness of the sand beneath is perhaps largely due to kaolinization of fine particles of felspar.

The accompanying sections show the sequence of the beds of the Devonian (?) series at Yowaka River, opposite the east end of Mount Gahan Ridge, and behind the Church of England at Eden, where they occur in contact with quartz felsite and amygdaloid. The Sketch A accompanying the above illustrates a very frequent and characteristic mode of occurrence of quartz veins or inclusions in the sandstone beds.

In addition to the dips shown in the sections, the following were taken on the road between Eden and Pambula, along which the Upper Series are developed:—

South of Yowaka Bridge, strike N. 20° W.; dip N. 70° E. at 16°.

Half-way or Jiggamy Creek, strike N. and S.; dip E. at 21°.

Bell Bird Creek, strike N. 29° W.; dip N. 61° E. at 15°.

The prevailing dip on the coast at Eden where these beds occur ranges from about 12° to 17°.

Igneous.—Three distinct periods of igneous action are represented by the igneous rocks of the Pambula and Eden District, viz.:—

(a) Granite, in the Main Range.

(b) Quartz felsite (or quartz porphyry), felsite and rhyolite of the Gold-field and Eden.

(c) Basalt, at Old Hut, Lochiel, and Bald Hills. Probably the decomposed dykes (east and west cross courses of the miners) belong to this class, but are of different age.

The felsite being partly intrusive in the youngest sedimentary beds of the locality, which have evidently been largely derived from the granite, is doubtless younger than the latter, whilst the basalt is clearly intrusive in the felsite wherever they occur in conjunction.

The granite has been fully discussed by Mr. Clarke in his work, already quoted, and as it lies outside the particular area under consideration no further reference need be made of it.

The felsite, quartz felsite, and rhyolite are of special interest because of the gold occurring in portions of them.

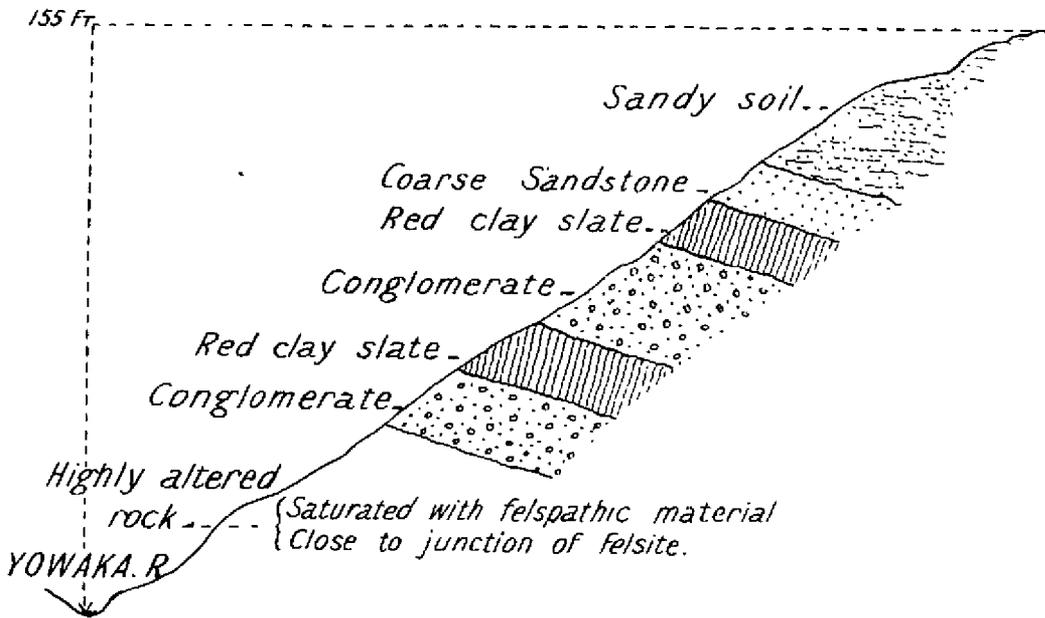

The basalt is also of great importance to the district, because it has afforded the limited patches of rich farming lands which occur at intervals amid very barren surroundings.

The quartz felsite, or porphyry, may be best studied at Eden, where it has its largest development, for on the goldfield it is more rarely developed. Peculiar features are connected with its occurrence and structural character at Eden; here it occurs intimately associated with corneous and brecciated felsite. No satisfactory evidence can be obtained as to whether it is part of the latter or an intrusion in it. It is not confined to a central position, but ramifies in several places in the felsite. At Yallungo Cove it exhibits most pronounced fluxion structure; one semi-circular floor just below the cliff affords a most realistic picture of the welling up and serpentine flow of a viscid mass. Connected with the porphyry at this point is, apparently, a thin upper layer of amygdaloid having the amygdulic cavities drawn out in the direction of flow. The amygdules consist chiefly of chalcedonic quartz.

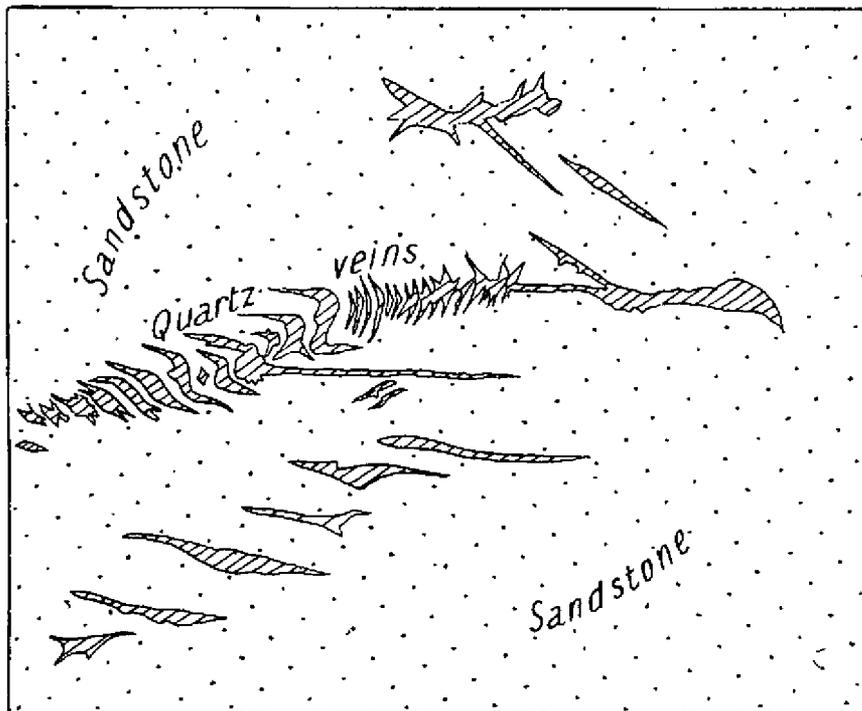

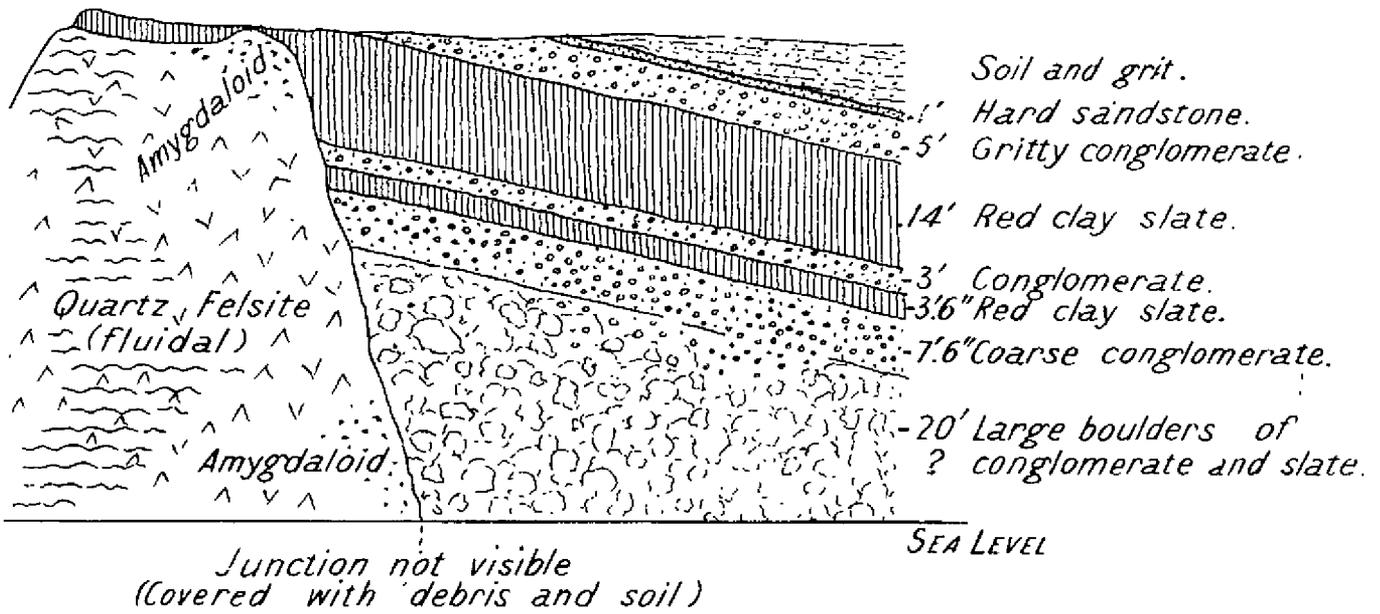

The quartz crystals in the porphyry are of small size but well developed,

SKETCH A.

The most characteristic features of the felsite at Eden are columnar and nodular structure and brecciation. East of the Lighthouse at Lookout Point the columnar structure is most distinct as will be seen from the following sections. The texture of the columns is hard and corneous.

Perhaps the most interesting feature in the felsite, however, is the large development of the nodular structure. In some instances on the Gold-field the surface is strewn with nodules ranging from the size of a small pea to upwards of a foot in diameter; at Eden, just north of the end of the pier, some have been measured up to 14 inches in diameter. As the felsite weathers, the nodules become readily detachable. They all possess a roughly mammillary surface, and generally are lighter in colour and harder than the enclosing felsite. Internally they are frequently septarian, being either solidly filled with chalcedony or agate, or possessing cavities lined with quartz crystals. At Back Creek, nodules of a polygonal form constitute the bulk of an outcrop of felsite. The following sketches of portion of the nodular felsite at Eden illustrates the occurrence of the largest nodules observed in corneous felsite, 14 inches in diameter.

Macroscopic

Macroscopic rhyolitic structure strongly characterises the felsite in all parts of its outcrop, whilst under the microscope fluidal and perlitic structures are readily discernible even in those portions apparently devoid of it.

Between the nodular felsite opposite the Eden Pier and the junction of the sedimentary rock close by on the west is a mass of felsite decidedly highly brecciated. A similar mass occurs in Yallungo Cove, a little west of the flow structure of the porphyry; in fact, the porphyry itself near this point is brecciated.

Crushing may account for the occurrence of the breccia, but the association of such pronounced columnar and fluxion structures with massive breccias somewhat tuffaceous in character is probably unusual in an undoubted intrusive quartz porphyry and felsite.*

The felsite in parts has been greatly altered by devitrification and infiltration of secondary silica, which, under the microscope, is seen to permeate the whole mass in the form of veins and segregations, wavy chalcedonic bands and semi-crystalline aggregates.

Following is a list of the sections determined by Mr. Card and confirmed by Professor David:—

- Brecciated felsite, Hidden Treasure Mine, Yowaka.
- Brecciated fluidal rhyolite (devitrified), Bland's Tunnel, Yowaka.
- Brecciated felsite, Bland's Tunnel, Yowaka.
- Felsite (probably), hanging wall, Bland's Tunnel, Yowaka.
- Felsite, footwall, Bland's Tunnel, Yowaka.
- Fluidal rhyolite (devitrified), footwall, Bland's Tunnel, Yowaka.
- Quartz felsite (perlitic), Parson's Nob G.L. 29, Yowaka.
- Crushed quartz felsite (spherulitic), Falkner's winze shoot, Yowaka.
- Felsite, Bartley's Lease, Yowaka.
- Felsite (highly silicified), G.L. 176, Yowaka.
- Felsite (country), Falkner's, Yowaka.
- Felsite (pebble from conglomerated ore shoot), Falkner's, Yowaka.
- Quartz felsite (surface), Mount Gahan, Yowaka.
- Felsite, Mount Gahan, Yowaka.
- Felsite (highly silicified), Mount Lewisson, Yowaka.

NOTE.—Among the early slides in the collection are various felsites from Pambula, one showing perlitic structure.

The accompanying plan of portion of the Parish of Eden, and two sections across it, will illustrate the principal geological features of this interesting locality. To the north-west the quartz porphyry and felsite are covered by the grits, conglomerates, and red clay slates of the upper sedimentary series, but it is highly probable that this outcrop is connected with the main mass at Pambula Diggings. The basalt is chiefly remarkable for the abundance of epidote developed during alteration in weathering, which renders portions quite green (the epidote trap of Mr. Clarke). A specimen from the narrow intrusion in the felsite at Indigo Gap, about three-quarters of a mile west of Mount Gahan Mine, has been determined by Mr. Carne as ophitic dolerite. In several other instances in the neighbourhood tongues of basalt intrude the felsite, whilst further south, at Old Hut, the mass of it cuts through the latter. Near Lochiel the basalt splits, one portion going northerly to Boggy Creek and near Wolumla, the other north-westerly, crossing the Pambula-Wyndham Road at the Six-mile Creek Bridge.

On its western margin in Portion 83, Parish Gunpa, near Mr. Moore's residence, an excellent illustration of its intrusive character is exposed in a small creek. Here it occurs in contact with sandstone and conglomerate, to which it has imparted a semi-crystalline structure. A large block of the sandstone is seen engulfed in the basalt and baked into quartzite. On its eastern margin, on the east boundary of Portion 33, Parish Yowata, it also occurs in contact with quartzite in a manner indicative of a flow, as the quartzite appears to dip under it; but doubtless over the margin of contact the viscid intrusive mass did flow for short distances at favourable points.

In the gold workings several cross-courses (east and west) have been cut; these consist of unctuous clay, but they are too decomposed to determine their previous character or composition. It is highly probable that these "clay bars" represent intrusive dykes of earlier age than the basalt.

A mass of highly decomposed rock between the undoubted slates and the felsite on the west side of the Lighthouse at Eden, with rough ferruginous lattice jointing or veining, was thought to be probably of igneous origin; but an analysis of an average sample yielded silica only 43.22 per cent., alumina 28.16, and iron 12.85, which renders it too basic for inclusion in the contiguous felsite group.

Briefly summarising the geology of the Eden-Pambula District, it would appear that the igneous rocks are intrusive in the older Sedimentary Series (Silurian?), and partly so in the Upper Series (Devonian?), for undoubtedly the former are overlaid in parts by the latter. The Rev. W. B. Clarke remarked this in his examination of the district, for he wrote that the quartz porphyry was overlaid by the Bimmil Range, between Pambula and Eden.†

The absence of any marked alteration at apparent points of contact, and the disappearance of the intrusive rocks under beds of the Upper Series, induced the belief that portions at least of the latter were either older or contemporaneously bedded in the latter; but data recently obtained in the Bay Section (East), at Eden, in company with Mr. Smeeth, of the Sydney University, appears to point to a partial intrusion in the Upper Sedimentary Series, and subsequent exposure in places by denudation. The composition of the conglomerates in the latter beds at Eden, where they are seen dipping at a low angle (12°) off the quartz felsite is most remarkable, for they consist mostly of little worn fragments of quartz porphyry and felsite in a paste of felspathic material, the whole exactly similar to the composition of the intrusive masses. Were it not for fragments of red clay slate, they might reasonably be supposed to have been derived from the latter.

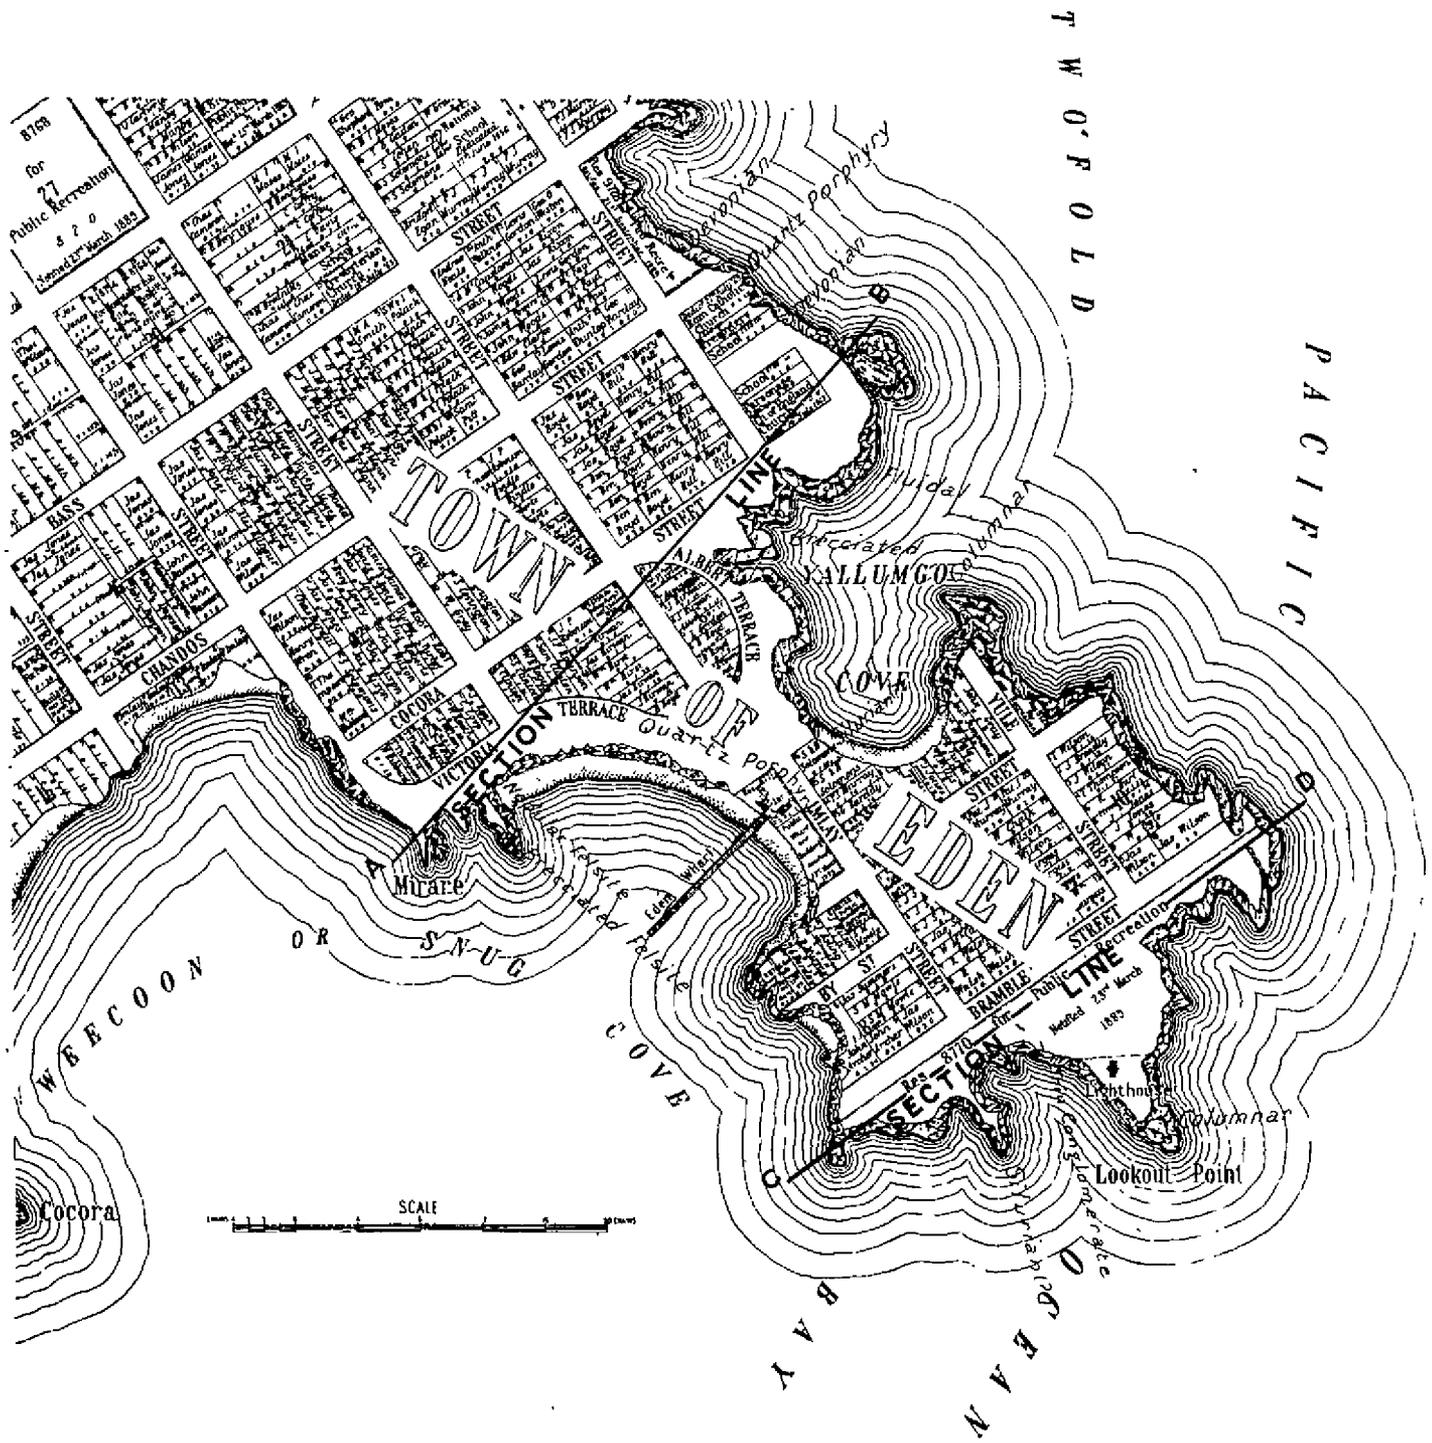

A small mass of quartz felsite occurs just near the north-east corner of the Convent ground, overlaid by the upper beds, which appear to have been shattered to some extent, though no alteration or disturbance has ensued at the point of contact of the lower intruded beds; though the next point, about 6 chains distant, exhibits anticlinal puckering; the intervening portions of the beds, however, dip uniformly without disturbance.

The determinations herein recorded must be regarded as purely tentative, pending accurate mapping and detailed examination and study of the boundaries of the intrusive rocks.‡

PHOTOGRAPHED AT THE GOVT. PRINTING OFFICE, SYDNEY, NEW SOUTH WALES.

Occurrence of the gold at Pambula.

The most puzzling feature confronting the miners attracted to the Pambula Gold-field was the total absence of two defined walls to the auriferous deposits. In every instance one main wall alone was encountered; occasionally for short distances a fairly smooth and parallel face formed a deceptive foot or hanging wall—as, for instance, at the entrance to Bland's Tunnel—but these were never persistent either vertically or horizontally; as they appeared abruptly in broken or jumbled country others were met with at intervals striking the main wall at various angles, and frequently in different vertical planes.

The determination of the true nature of the auriferous matrix and its identity with the country at once accounted for the unusual occurrence just recorded. The so-called main or single wall in each case is actually the remaining face of an original joint or crack caused by the cooling and contraction of the eruptive rock, the opposite face being broken up by subsequent movements into the present ore bodies, the limits of which have been determined by parallel joints or harder masses which have resisted the crushing and grinding stress, and formed the so-called inconstant foot or hanging walls.

The two parallel joint cracks at the entrance to Bland's Tunnel are most misleading in the nearness of their approach to the appearance of true walls enclosing a defined ore body. The supposed footwall, however, at about 30 feet from the entrance, gives place to broken country. Further in other joints make their appearance, striking at an acute angle to the main joint (hanging wall). The filling between the walls consists of a breccia, formed of fragments of felsite identical with the walls, the cementing medium being crushed felsite material and secondary silica. The brecciated character of the filling can readily be determined by the unassisted eye, and to great advantage in a polished slab. Following is a sketch of the tunnel entrance:—

ENTRANCE TO BLAND'S TUNNEL, PIPECLAY CREEK, PAMBULA.

The principal auriferous joints strike to various points of the compass between north, east, and north 30° west, and all dip easterly, though occasionally for short distances the dip may take an opposite direction, but the change is never persistent, and only occurs when the strike becomes uncertain.

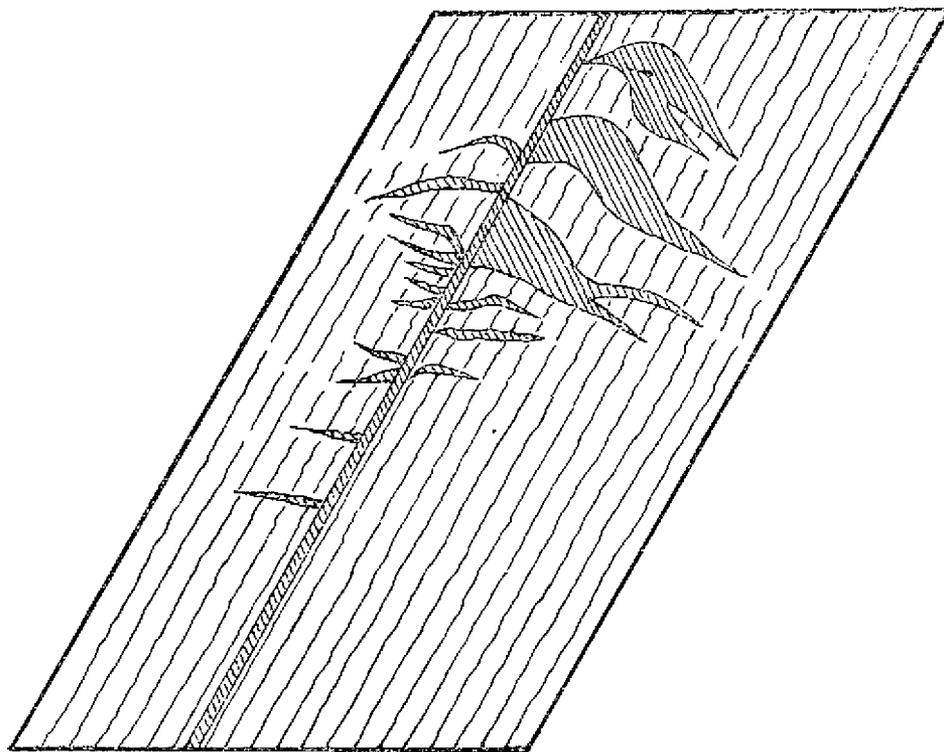

In the proved auriferous country gold has been found in numerous places other than in the main workings, in fact, alongside most of the main joint cracks within the above area it has been found, but in too limited quantities to pay. In some instances a few cwts. to a few tons have been extracted from the most promising, which yielded exceedingly high returns, but subsequent developments and trials were as disappointing as the first prospects were favourable. In Bland's Proprietary, for instance, a joint crack, showing at surface, yielded 95 oz. of gold from 10 tons of stone, but the deposit proved only 12 feet long, by 30 feet deep, and 3 inches thick.

In the Hidden Treasure Lease it is stated on the authority of one of the successful tributors—Mr. Hough, junr.—that gold-bearing stone was found in no less than two joint cracks, but in payable or workable quantity in one only.

The locally well-known "Pilot" or "Indicator" quartz vein which has been traced from the Southern Cross lease on the south to G.I. 39 on the north—a distance of about 70 chains—evidently fills the channel of a true fissure along an original line of weakness in the country, and therefore marks the only really

really defined belt as yet discovered on the field. Though the vein is now mostly bounded—at least on one side—by soft schistose material, it is evident that the quartz-filling must have originally been deposited in a clear crack in solid rock, for it is impossible to conceive of a narrow fissure inclined at an angle of about 45° (or even if vertical), remaining open during the slow process of infiltration and deposition. The absolute barrenness of the quartz in gold, even when, as frequently happens, it is highly pyritiferous, further indicates deposition prior to the introduction of the gold into the country.

In addition to the filling of the main fissure, true primary or crystalline quartz occurs abundantly in the felsite in the form of short, flat, irregular veins, bunches, and threads, and all equally barren. From the Pilot fissure lateral cracks and small cavities have been filled with quartz, after the manner shown in the following sketch of the face of the Pambula Tunnel in G.L. 15.

All the quartz associated with the gold in the felsite is of a secondary chalcedonic character, with, perhaps, a very rare exception lately noticed at the 80-foot level in the Falkner Mine, where occasional specimens have been obtained in which a thin thread of true crystalline quartz is associated with gold and zinc blende.

In the latest discovered shoot in the same mines known as the "Winze Shoot" (which dipped at 80 feet below the point of discovery into the adjoining Victory Mine on the east) the gold-bearing soft kaolinized material adjoined the Pilot quartz vein, and in one part enclosed it on both sides for a short distance, yet, notwithstanding that the gold particles invested the outer surface of the quartz, and even penetrated its rubbly cracks, the perfectly cleaned quartz yielded no trace of gold, nor when pyritiferous could gold be detected on assaying, though the pyrites of the enclosing felsite contain varying proportions of gold. These facts point as before stated to but one conclusion, viz., infiltration and deposition of the barren crystalloid quartz prior to the advent of the gold solutions and secondary or colloidal silica. This would also account for the presence of partly abraded quartz fragments in the crushed conglomeratoid portions of the felsite.

After the deposition of the barren quartz in the cracks and jointings of the felsite, great mechanical movements must have ensued, particularly along the Pilot fissure, or original line of weakness, and to a lesser extent along some of the main jointings. This movement was most probably caused by the eruption of the basalt, which closely intrudes the felsite in several places; possibly, also, the secondary silica and gold solutions followed the latter intrusion.

The Pilot quartz vein itself affords evidence which may be regarded as the result of subjection to secondary movement in its characteristic grooved or corrugated sides, and in some instances, particularly in the Killarney Lease by the splintery nature of the quartz which may be due to flattened crystals, but certainly presents more the appearance of incipient cleavage resulting from pressure.

The fillings of the original cracks or fissures in the felsite are of four kinds—(a) clayey, kaolinized; (b) schistose, kaolinized; (c) conglomeratoid, less kaolinized; (d) brecciated, kaolinized:—

- (a) *Clayey*.—This filling occurs chiefly in joint cracks, generally not more than from $\frac{1}{2}$ inch to 2 inches in thickness, between hard walls. Usually the heaviest of the gold in the productive fissures has been obtained from this soft filling, upwards of 1 lb. weight of gold being recorded from one dish of clay. Water percolates freely in the joints so filled.
- (b) *Schistose*.—This form of filling occurs in bands from a few inches to a few feet in thickness, generally extending outwards from the clayey joint filling and shading off into conglomeratoid material. Its maximum development appears to be along the Pilot fissure.
- (c) *Conglomeratoid*.—This character of filling is specially distinctive of the auriferous belt stretching along the Pilot line, but occurs freely also in other parts of the field. The wholly or partly rounded pebbles, and subangular fragments with abraded edges, consist of hard, highly-silicated felsite, and, possibly, of occasional quartz fragments embedded in a schistose paste of soft felsitic material formed from abrasion. In this form of lodestuff the gold is entirely confined to the soft material between the fragments.

- (d) *Brecciated*.—This form of filling is characteristic of all parts of the field, and occurs abundantly. The fragments consist of hard felsite, with sharp edges and angles embedded in a hard silicated felsitic cement.

The fillings above described may have resulted from the following causes:—

- (a) *Clayey*.—From slow grinding movement of two hard homogeneous walls against each other.
 (b) *Schistose*.—From more extensive crushing stress of similar faces, combined with greater vertical movement.
 (c) *Conglomeratoid*.—From grinding, crushing, and rolling of broken fragments of country (felsite) between the walls of more extensive fissures, which have resulted in abrading and more or less rounding the intervening fragments, and embedding them in a paste of their own triburated material.
 (d) *Brecciated*.—From quiet cementation, by infiltration of colloidal silica and felsitic material, of angular fragments fallen from the walls into a crack in which no subsequent movement took place.

An ordinary superficial examination of the Yowaka Gold-field is very liable to produce an erroneous impression as to the correct classification of the various conditions of the same rock, and especially so when the deceptive-looking conglomeratoid and schistose bands are under consideration, for these present macroscopical physical characteristics so closely approaching those of transmuted sedimentary rocks as to be readily mistaken for them. The pebbles of the conglomeratoid bands are frequently well rounded and very quartziferous in appearance and easily detachable from the mass, especially after exposure to the weather or heat. So closely do some of the smaller felsite pebbles in the ore at the Falkner and adjoining mines resemble waterworn quartz pebbles both in physical appearance and in hardness that a microscopic examination of prepared sections is necessary to establish their identity. The increased hardness is doubtless due to the secondary silica which has saturated the felsite.

The schistose structure of the crushed felsite which fills the spaces between the fragments or pebbles, and which, as before stated, occurs also in bands free from the latter, is identical in chemical composition and frequently in structure with the filling of the joint fissures, which has surely resulted from the movement of the walls.

True structural nodules occurs plentifully in the corneous felsite from which they separate readily on weathering. Doubtless the conglomeratoid bands contain some of these nodules; but the bulk of the pebbles are evidently crushed and worn fragments of felsite devoid of nodular structure.

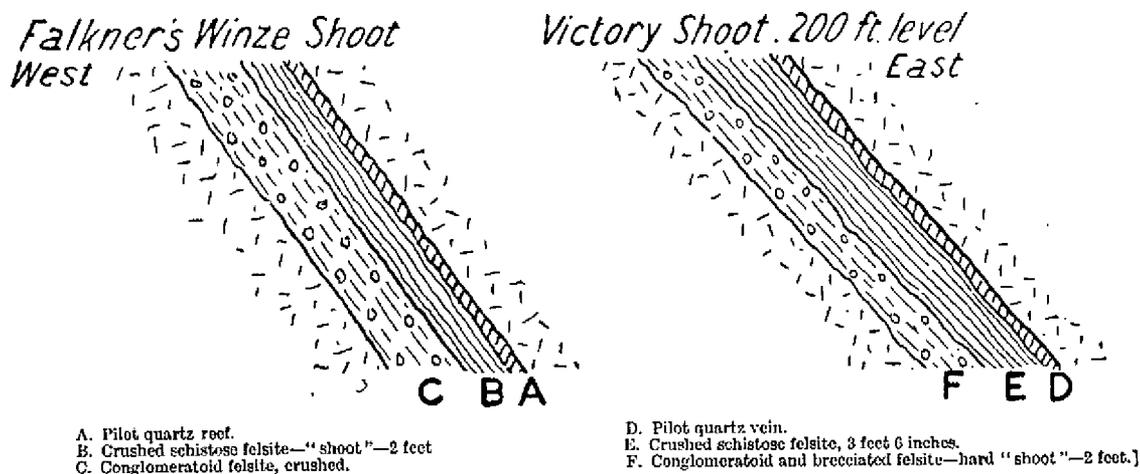

Introduction of the Gold.

The bulk of the evidence afforded by the nature and mode of occurrence of the gold in crushed felsite at Pambula favours the supposition that it was introduced in solution through a system of joint cracks, and in one instance at least through a reopened original line of true fissuring, and by soakage penetrated into the crushed and broken country on one, and sometimes both sides of the circulating channels. Generally the payable gold is confined to one side of the fissure, though, as at Mount Gahan and Hidden Treasure Mines, both sides have proved payable for limited distances. Where the walls are solid and unbroken, which is generally the case in the more corneous felsite, the gold is confined to the soft, kaolinised filling usually from $\frac{1}{2}$ inch to 2 inches in thickness; and more rarely in such cases a rich scale of gold is deposited on the solid walls, as at the Hidden Treasure and Falkner Mines, from which it was removed with chisel and mallet.

The deposition of the major portion of the gold in or near the fissure might naturally be expected from the greater permeability of the soft filling to the auriferous solutions, and from the fact that once the first particles of gold were precipitated in the free state they would by chemical attraction or affinity be continually enriched by succeeding percolations; whilst into the less permeable country bounding the fissure impoverished and gradually diminishing quantities of the percolating solutions would penetrate.

An exception to the above rule must be quoted as occurring in the Victory Mine. Here the soft schistose filling forming the west wall of the Pilot quartz vein—about 3 ft. 6 in. in thickness—is almost barren of gold, whilst the hard brecciated material adjoining it is richly auriferous. In this instance it might be that originally the crushed breccia afforded freer passage to the auriferous solutions than the more clayey schistose material, but subsequently became hardened into its present condition by deposition of secondary silica from the auriferous solutions, whilst subsequent movement of the walls and kaolinization would tend to keep the schistose material in its present condition.

The following sections of the original "Winze" shoot in the Falkner Mine, and the present shoot in the 200-ft. level in the Victory Mine will serve to illustrate the modes of occurrence.

A. Pilot quartz reef.
 B. Crushed schistose felsite—"shoot"—2 feet
 C. Conglomeratoid felsite, crushed.

D. Pilot quartz vein.
 E. Crushed schistose felsite, 3 feet 6 inches.
 F. Conglomeratoid and brecciated felsite—hard "shoot"—2 feet.]

The

The crushed, conglomeratoid, and brecciated ore bodies afford strong evidence of the deposition of the gold from solution, after or perhaps during the grinding and crushing movements, because of the constant association of the gold with the softer schistose material between the pebbles, and its invariable absence within the latter.

The cause of the precipitation of the gold from the percolating solutions may have been the formation of a neutralising solution of silicate of potash from the decomposition of the constituents of the country, which, in contact with an auriferous solution would set up the reaction quoted by Mr. A. W. Howitt as having been obtained by the great Chemist, Bischoff,* "that in adding to a solution of chloride of gold a solution of silicate of potash, if the resulting precipitate be allowed to remain undisturbed for some months under water a decomposition takes place, and in the silicate appear partly microscopical specks of gold."

The gold of the Pambula field is characterised by the uniform minuteness of the individual particles. Two analyses of lodestuff from Mount Gahan and Mount Lewisson Mines yielded 2.78 and 5.32 per cent. of potash. The stone in each case was essentially silicate of alumina, as will be seen from the following analyses made by Mr. J. C. H. Mingaye, F.C.S., Analyst to the Department of Mines.

	Mt. Gahan.	Mt. Lewisson.
Moisture at 100° C30	.40
Combined water	1.35	.70

Sulphuric acid..... (S O ₂)	nil.	nil.

Treatment of Pambula Stone.

As might be expected from the peculiar nature of the matrix and the extreme fineness of the gold particles, ordinary milling appliances soon proved inefficient for the extraction of even a moderate proportion of the gold contents. The best milling returns were obtained at the Mount Gahan Battery—the most complete on the field—when the stone was hard and broke under the stamps into a granular pulp. Under such conditions it was estimated that 75 per cent. of the gold could be obtained by careful treatment; the average saving, however, being about 60 per cent.

The greatest losses resulted with the softer material, which formed an abnormal quantity of slimes; but these results did not hold good at other batteries; for instance, the fairly hard stone from the rich Hidden Treasure shoot yielded only 1½ oz. of gold per ton, under milling treatment, from 1,100 odd tons of stone, whilst 327 tons of tailings resulting therefrom yielded about 3 oz. of gold per ton at Wallaroo, South Australia.

In addition to ordinary stamp batteries and Huntingdon mills, a Jordan roller-ball mill was tried, but unsuccessfully. Since the recent introduction of cyanide vats in conjunction with two of the local milling plants, the tailing-heaps have been successfully treated; and fresh material from recent workings has also been passed through the double treatment with satisfactory and hopeful results.

The excessively rich stone found in some of the shoots on the Falkner line has chiefly been disposed of by sale on assay. This class of ore, as pointed out by Mr. Pittman in 1891, † can be most advantageously treated by chlorination. Some considerable difficulty, however, was experienced in the first tests by chlorination, owing to the plastic nature of the crushed material causing it to settle as an almost impervious cement at the bottom of the filter vats. Roasting would destroy the plasticity of the felsite, and convert it into the nature of pottery or porcelain, for in composition it closely approximates to the ordinary Stonebridge clay. Mixing with coarse quartz tailings would also render filtering more easy and rapid.

With very rich ores such difficulties are not of such moment as they are with low-grade seconds and thirds. One of the chief—if not the chief—difficulties in connection with the cyanide process is the slimes. When treatment of the tailings have to be simultaneous or directly following the milling process, it will undoubtedly be best to let the bulk of the slimes escape; but where such speedy treatment is not necessary, with a tailing pit of extended area having a fall from the intake, the difficulty would be lessened by the natural gravity separation of the slimes from the tailings. The former could then be properly sampled, and, if sufficiently rich, might be judiciously mixed with the clean tailings when charging the vats. If tough and leathery, puddling, baking, and re-grinding might first be necessary.

At the present time there are three stamper batteries and three Huntingdon mills on the field. Of these Mount Gahan and Mr. Hough's are fitted with Cyanide plants.

The Pambula Mines Company (Limited) are preparing for the erection of an extensive plant on Pipeclay Creek.

Yields from the Principal Mines

It is almost impossible to ascertain the actual amount of gold won from the Pambula Gold-field. The Manager of the A.J.S. Bank at Pambula kindly supplied the following figures, under date 22/5/95, which represented all the gold he was able to trace to that date, viz., 17,249 oz.

The following returns will convey an idea of the richness of the principal shoots.

Mr. S. Solomon, of Eden, one of the leading shareholders in the Falkner Mine, states that 555 tons of stone from that mine, sold on assay, yielded 6,534 oz. of gold which realised £23,042.

The

* Prog. Rept. Geol. Survey, Victoria, 1876, p. 242.

† Mines, 01-13, 653.

The following extracts from the Falkner Company's half-yearly reports in June, 1895, and January, 1896, which happened to be at the mine at the time of recent inspection will illustrate the extreme richness of the Falkner shoots:—

Half-yearly Report, Falkner Gold-mining Company, 30th June, 1895.

	£	s.	d.
Result by trial of Sutton chlorination process	7	0	8
Sold, 8 tons 11 cwt. yield	145	0	11
„ 31 „	4,551	2	9
Total.....	£4,703	4	4

Half-yearly Report, Falkner Gold-mining Company, 29th January, 1896.

	£	s.	d.
Sutton process	21	11	8
Sold in Sydney, 48½ tons..... yield	3,341	14	9
„ „ 14½ „	581	18	0
„ „ 42½ „	2,946	18	0
„ „ 17½ „	1,025	15	6
Total.....	£7,917	17	11

The parcels just recorded represent the firsts and seconds picked from the winze shoot. The thirds from all parts of the mine are stacked pending decision as to method of treatment. It is estimated that about 2,500 tons of this class of ore at surface will average not less than an oz. per ton, and it is probable that this estimate is below the average.

According to the last half-yearly report of the Mount Gahan Gold-mining Company, dated 1st August, 1896, the output from Mount Gahan from the opening of the mine to the 30th June, 1896, amounted to 11,598 tons, which, crushed and treated, yielded 9,767½ oz. of smelted gold.

This company deserves the place of honor in any description of the Pambula Mines for energy and plucky persistence against difficulties both in mining and treatment, and this without any incentive from excessively rich shoots such as were discovered in other mines on the field. Having now exhausted its visible supply of payable stone, the Company is sinking a deep shaft near its west boundary for the purpose of cutting the Pilot quartz vein on the underlay at a depth estimated at between 500 and 600 feet. It is sincerely to be hoped that success awaits their efforts, though the attempt must certainly be regarded as pure prospecting.

The following particulars of the output from the Hidden Treasure Mine, from November, 1892, to January, 1895, were supplied by the legal manager:—

	Oz.	dwt.	grs.
Nov., 1892. Treated in Sydney, 14½ tons	42	9	6
July, 1893, to Nov., 1894. Crushed in local mills, 1,119½ tons	1815	6	23
„ „ „ Tailings treated at Walleroo, S.A., 327 tons...	955	16	13
Jan., 1895. Crushed at local mills, 22½ tons.....	1	17	0
Equal to 1,156½ tons for 2,815 oz. 10 dwt. 4 grs. of gold.			

According to the Mining Registrar's Report for 1895,* in addition to the above returns, 43 tons were locally treated for 94 oz. 10 dwt.

The same authority also states that the output for the Victory Mine for the same year was 17 tons, for 119½ oz., this stone being from the upper portion of the present working shoot, which was struck about June, 1895, on the Falkner boundary.†

Mr. Davidge, mine manager for the Pambula Mines Company (Limited), states that so far as he could learn about £6,000 worth of gold was obtained from that portion of the company's property originally known as Black and Barry's.

From the Mount Lewisson Mine 10 tons of firsts, from a thin clayey joint filling, yielded 14 oz. 11 dwt. of gold per ton; and 10 tons of seconds yielded 2 oz. 14 dwt. per ton; 17 tons, crushed locally, yielded only 7 dwt. per ton. In August, 1896, 46 tons from the surface stack yielded 18 oz. of free gold in the Mount Gahan battery, and 28 tons of the tailings therefrom yielded 8 oz. by cyanide treatment, making a total of 26 oz. from 46 tons of stone. Output, 63 tons, for 204 oz. 9 dwt. of gold.

In addition to the above authentic returns, the following are currently reported:—

- Killarney Mine G.L. 25. 11 tons, 50 oz.; 28 tons, 10 dwt.; 48 tons, 3 dwt. per ton.
- Maxwell's Block G.L. 157. 14 tons for 14 oz. of gold.
- G.L. 71. 5 tons yielded 8 dwt. per ton; tailings reported rich.
- Speculation G.L. 39. Trial crushing yielded 8 dwt. per ton.
- Britannia G.L. 61. Trial crushing (15 tons) yielded 7 dwt. per ton.
- The Gem G.L. 44. Trial crushing yielded 5 dwt. per ton.
- Morning Star G.L. 21. Trial crushing (50 tons) yielded 1 oz. per ton.
- Ancient Britain G.L. 23. Trial crushing yielded 10 dwt. per ton.
- Lloyd's Grant, Portion 4½. Sydney lease, trial crushing yielded 5 dwt. per ton.
- Lloyd's Grant, Portion 4½. Melbourne lease, trial crushing yielded 5 dwt. per ton.
- Bland's Proprietary, Portion 55. Trial crushing (10 tons) yielded 9 oz. 10 dwt. per ton.
- Bland's Tunnel, Portion 55. Trial crushing (10 tons) yielded 8 dwt. per ton.
- Bland's Tunnel, Portion 55. Trial crushing (10 tons) yielded 5 dwt. per ton.
- Bland's Portion 55, behind Eureka Hotel. 100 tons yielded 1 oz. per ton.

Small trial crushings were also taken from several other leases.

Brief Descriptive Notes of Main Workings.

Mount Gahan G.L. 1.—In the Mount Gahan the greatest depth of actual sinking has been reached, viz., 373 feet from the surface. Very little gold was found below the 100 feet level, though it continued for about 30 feet lower. The gold shoot was traced horizontally for about 200 feet, and stopped from the 100 feet level to surface. The thickness of workable stone varied from 2 feet up to 24 feet. From the 40 feet level to surface the latter thickness prevailed. The joint forming the main wall strikes N. 10° E. and

* Ann. Rept., Dept. Mines, N.S. Wales, for 1895 (1896), p. 26.

† The output is 268 tons, yielding 1,114 oz. 8 dwt. 23 grs.

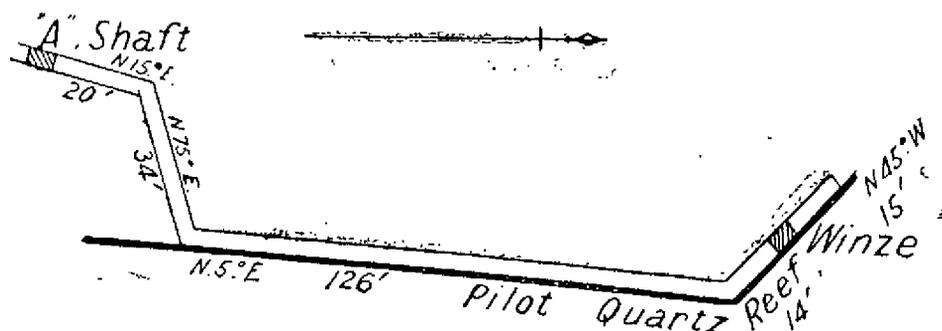

and underlays easterly at 23°. The joint was on the footwall side, and carried soft schistose felsite. At the 100 feet level conglomeratoid and brecciated felsite occur. At intervals parallel joints formed a deceptive "hanging wall" for a short distance. The gold occurred chiefly in the footwall side, but occasionally in the hanging wall, and sometimes in both. The gold-bearing stone possessed in parts all the characteristic features of the different forms of filling, viz., conglomeratoid, brecciated, schistose, and even corneous. The richest was associated with much staining of oxide of iron, due to oxidation of pyrites near the surface. The appearance of the stoping is very irregular on the hanging wall side, owing to the varying richness of the stone in that direction; the width of the workings have been determined by constant test of drillings. Haulage was performed by means of a whip, and transport to the battery on Pipeclay Creek—about three-quarters of a mile—by an aerial endless wire rope tramway, having seventy cars or buckets of a capacity of about 80 lb. each.

Falkner Mine G.L. 19.—The workings in the Falkner Mine have been carried on by a shaft, tunnel, and winze from the latter. The deepest level is 90 feet in the shaft. The main wall of the fissure above the tunnel strikes N. 30° W. At the 90 feet level, in the shaft, the footwall of the present rich shoot strikes N. 15 to 20° E., and underlays east at 20° from the vertical. The rich winze shoot followed the Pilot quartz vein, which at the winze strikes N. 45° W.; but about 14 feet southerly makes a sharp bend to S. 5° W. The underlay of the winze shoot was about 36° from the vertical. At 80 feet from the tunnel floor it passed into the adjoining Victory Mine.

The thin clay joint filling followed down from the surface in the shaft was seldom more than an inch thick; but the gold was not confined to it, but impregnated also the schistose, conglomerated, and brecciated felsite on either side, making, however, chiefly on the "footwall" side down to 60 feet, then passing to the hanging wall side, but never entirely deserting either. In sinking the payable gold was lost at 40 feet, found again at 70 feet, and again lost. At the present time rich stone is being stoped between the 90 feet and 60 feet levels, from 4 to 5 feet wide being extracted, the object being to remove all stone prospecting not less than $\frac{1}{2}$ oz. to the ton, whilst securing the workings for extraction of the lower grade remainder when required.

At 40 feet a level has been driven south 108 feet and north 20 feet. Payable stone continued southerly for about 60 feet from the north end when the wall broke and bulged out of its corner, to which, however, it returned at about 100 feet; but from the break to the present face, though the clay filling continues, colours of gold only are obtainable.

From the north end of the shoot at 60 feet level, a crosscut bearing N. 75° E. at 34 feet struck the Pilot fissure, and a level along its north course at 56 feet reached the winze shoot. The following plan will illustrate the workings and an instance of the occasional bending of the course of the Pilot vein fissure:—

Pumping and haulage in the shaft are performed with steam power. Water makes at the rate of about 700 gallons per hour. A Jordan ball-mill forms part of the plant, but was not found suitable.

Hidden Treasure G.L. 12.—This mine was originally prospected by the Hidden Treasure Company by means of a tunnel of about 300 feet, starting from the bank of Pipeclay Creek, about 145 feet below the upper workings, which consisted of a shallow tunnel, open cut, and 80 feet shaft. In the long tunnel two winzes near the entrance were sunk 25 and 30 feet. A little gold is reported to have been found in them, but nothing payable. Tributors subsequently, at 190 feet from the tunnel entrance, cross-cut 52 feet without result.

The rich shoot from which over 2,800 oz. of gold were extracted was discovered by tributors whilst "loaming" or washing prospects of the soil. Having found a trail of fine gold, they traced it up to its matrix which had actually been covered with mullock from the upper tunnel. The main joint wall of the shoot strikes N.E. The payable stone continued along the joint for about 120 feet horizontally, and 35 feet vertically; it was cut off on the south-west by a cross clay joint, and north-easterly it split up into thin strings. A winze was sunk 22 feet below the bottom of the shoot, making 50 feet from surface, but no gold was obtained from it.

At surface to a depth of 4 feet the shoot appeared as a thin clay filling from $\frac{1}{2}$ an inch to 3 in. in thickness, and of exceeding richness, gradually widening with depth it reached its maximum thickness—4 feet—and at 35 feet ended in hard pyritiferous country, the blanketings from which contained but little gold. On the face of the walls in places, as already stated, gold occurred as a thin superficial coating which was chipped off with chisels.

Pambula Mines Company's Leases.—An English company under the above name has recently been formed to develop Gold Leases 14, 15, and 303, which embrace the properties of the original Pambula (Black and Barry's) and Pambula Tunnel Companies, and the, as yet, unprospected Water Reserve G.L. 203, situated between the Victory, Falkner, Pambula Tunnel, Great Southern, and Hidden Treasure Mines.

The main shaft (on G.L. 15) is now down about 150 feet, and the present intention is to continue it to the 250 feet level. The original shoot opened by this shaft, which is situated about 20 feet south of the Falkner boundary, occurred about 24 feet west from the Pilot reef, alongside a main joint wall striking N. 15° E., which at 60 feet is almost vertical. This shoot was stoped from 90 feet to surface, for a length of 45 feet and a width varying from 6 feet to 20 feet. About £6,000 worth of gold is reported to have been obtained from the stone extracted.

The

The main shaft underlays easterly at an angle of about $16\frac{1}{2}^{\circ}$ from the vertical, and at 90 feet is 14 ft. 6 in. west of the Pilot, which here underlays in the same direction at an angle of about 31° from the vertical. (G.L. 14 (Pambula Tunnel) was opened by means of a cross-cut tunnel to the east boundary of G.L. 15, near which the Pilot reef was struck; but though the tunnel was continued for several hundred feet along the reef, no payable stone was struck; in fact, little gold of any kind. One or two cross-cuts were also driven west with like result. No attempt, either in this or the adjoining Mount Lewisson Lease, has been made to cross-cut eastward, though several cross-cuts have been extended fruitlessly to the west. An eastern cross-cut would certainly be advisable, for gold shoots occur eastward of the Pilot, as well as west; but no attempt has been made closer than the Great Southern and Hidden Treasure.

A clay cross-course dyke about 3 or 4 feet thick disturbed the Pilot in the Pambula Tunnel, and threw it some little distance to the west.

The present company is also sinking a shaft on the Water Reserve (G.L. 203) close to the Great Southern Shaft, and is preparing a dam and battery site for an extensive milling plant.

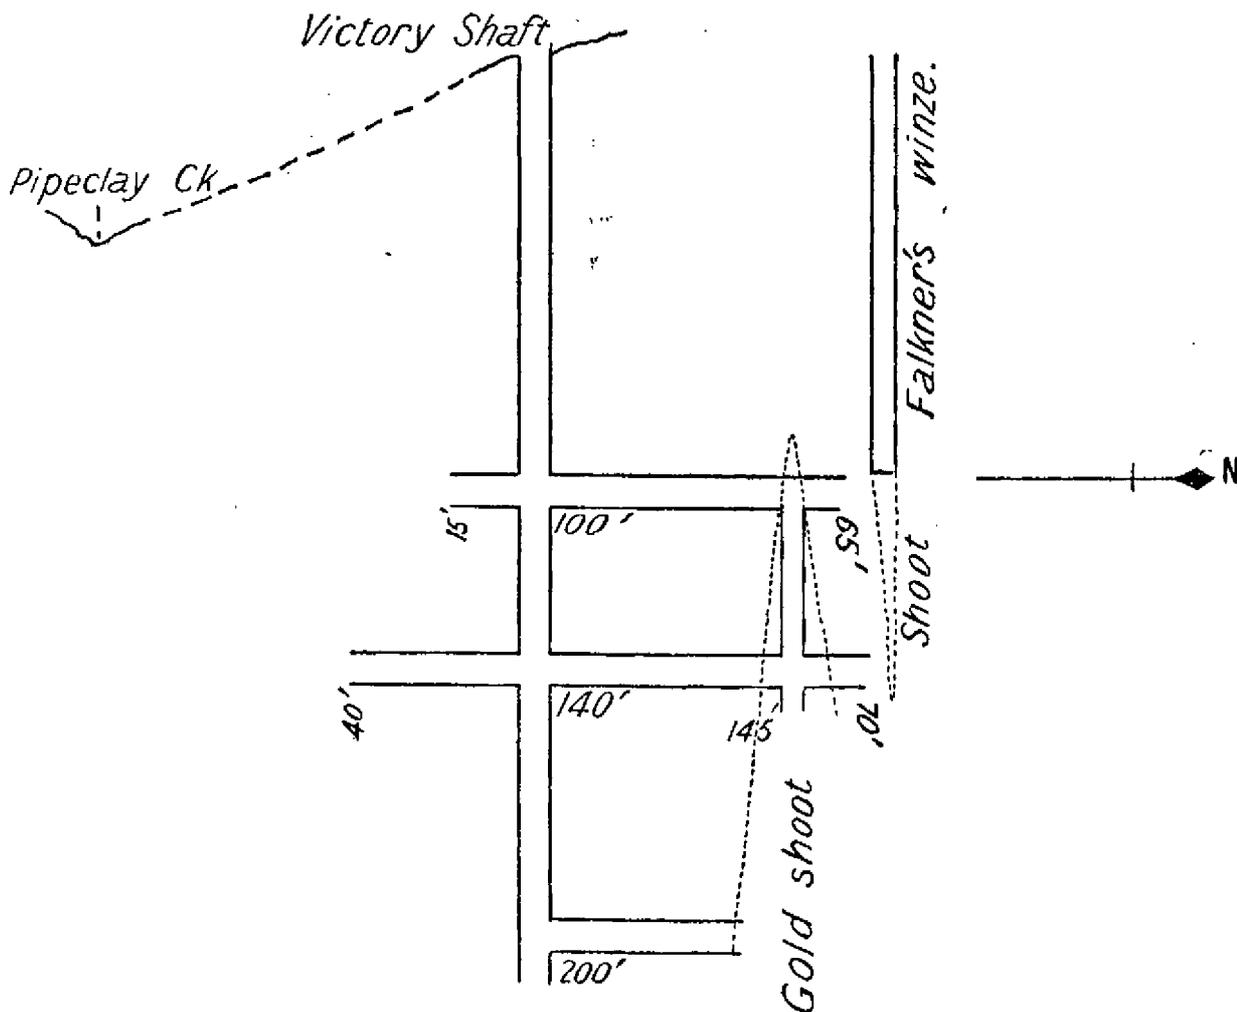

Mount Lewisson G.L. 45.—This mine was opened by means of two tunnels, several crosscuts, a winze, and a shaft. The main tunnel started from the bank of Little Pipeclay Creek, and was driven for about 200 feet along the Pilot fissure, which is here splendidly defined, and regular in strike and underlay. No gold made alongside of the Pilot Reef, but a thin joint was struck at 180 feet from the entrance; its course was at an acute angle to the Pilot. The filling consisted of about 2 or 3 inches of soft schistose crushed felsite, and was exceedingly rich; the gold being almost confined to it alone. The shoot, or payable filling, continued for 20 feet along the joint when it was cut off by a cross-joint; a winze was sunk on it 60 feet, but the gold was lost. A little gold continued for 70 feet in a rise above the tunnel-level, but nothing payable was obtained.

Victory Mine G.Ls. 20 and 38.—The two leases are known respectively as the Big and Little Victory, the former joins the Mount Gahan boundary on the north. This lease has been opened by a tunnel about 240 feet long, and a shaft (near the Mount Gahan boundary) 113 feet deep; from the shaft a crosscut was driven west for 97 feet, and a winze sunk at the end to a depth of 37 feet. A drive to the east was extended 130 feet, and subsequently connected with the surface by a shaft. From the east drive several crushings are reported, viz., about 30 tons for 3 oz. per ton; 50 tons for 15 dwt. per ton; and 15 tons for $12\frac{1}{2}$ dwt. per ton.

The present working shaft on the Little Victory (G.L. 38) was started at the east boundary of the Falkner Mine for the purpose of cutting the rich winze shoot in the latter, which was successfully accomplished at about 78 feet vertical, and the present rich shoot in a drive a few feet south along the boundary line. The surface level at the shaft is about 40 feet above the bed of Pipeclay Creek.

Following the Pilot from the 78 feet level to the 140 feet, the underlay is about 48° from the vertical, but steepens down to the 200 feet level to about 42° .

As before stated, the gold-bearing stone, instead of being soft and adjoining the Pilot vein, is hard, and separated from the latter by an almost barren wedge. The following section shows the position of the two shoots and the extent of provings. Sinking the shaft with the Pilot as the hanging wall is easy picking, but naturally wet, the present rate of bailing being equal to about 250 gallons per hour.

Diorite

Diorite Mine G.Ls. 5 and 6.—The main shaft was carried down 193 feet and stoped from 175 feet, to surface for a length of 35 feet. A tunnel, driven from the south side for about 200 feet, connects with the shaft, and extends northerly beyond it. A winze sunk at north end about 20 feet is stated to have yielded stone equal to about half an ounce to the ton, which would not pay.

To the east of the main workings a shaft was sunk 100 feet on a point striking N. 15° E., called the "New Find." At the above level a stope 32 feet long was opened, and brought to surface in the form of an inverted wedge. The yield from the stone raised is stated to have just about cleared expenses.

Another shaft on one of the leases was carried down about 60 feet on a point striking N. 30° W.; the stone from which is reported to have yielded from 5 to 9 dwt. per ton.

Ethel Mine G.L. 7.—A shaft was sunk on this lease about 160 feet on a point striking N. 10° W.; at 60 feet a level was driven 100 feet north. Some 4-oz. stone is reported from the surface, and one-ounce stone below it.

Bland's Proprietary, Portion 55, Parish of Yowaka.—Worked by an open cut on a well-defined joint striking N. and S. The auriferous clay filling forming the shoot proved 12 feet long, 30 feet deep, and 3 inches thick, and yielded 10 tons of stone, averaging 9½ oz. per ton.

Bland's Tunnel, Portion 55.—Opened by a tunnel 70 feet in length, which started from the bank of Pipeclay Creek; 20 tons yielded from 5 to 8 dwt. per ton.

Vulcan Mine G.L. 80.—Worked by an open cut 70 feet long and 20 feet deep, and later by a tunnel about 50 feet below the open cut. The tunnel was extended 100 feet, and a trial crushing from it is reported to have yielded 4 dwt. per ton.

Great Southern G.L. 13.—Opened by shaft to a depth of 70 feet; at 40 feet driven north and south for 70 feet; latest discovered shoot struck at 55 feet against hanging wall which dipped east at about 21° vertical; its length was about 30 feet, and its thickness about 1 foot 6 inches. The gold-bearing stone was cut off at 70 feet by a flat floor covered with quartz.

Killarney Mine G.L. 25.—Main shaft sunk 200 feet, and driven 134 feet at 70 feet level.

Waterworn or Alluvial Gold at Pambula.

The waterworn gold discovered by Mr. Carragher in the Crevices, about 50 chains a little east of north from the Mount Gahan Mine, presents some puzzling features because of its proximity to the auriferous lodestuff of Mount Gahan ridge, and yet complete dissimilarity to the gold contained therein. The Crevice gold consisted of coarse, waterworn pieces—the largest weighing 2 dwt. It was found for some chains along a crack in the solid rock-bed of a small creek which only runs during actual rainfall. Statements conflict as to the occurrence of any coarse gold in the surface or "leaming" tests made on the slopes between the Crevices and the discovery in the matrix at Mount Gahan; but there is no doubt that several grain-pieces have been taken out of the matrix in G.L. 204 close by, and out of the Killarney stone, from which 7 or 8 dwt. were obtained. The Great Southern Mine also yielded 3 or 4 dwt. of similar gold from the last rich shoot; but in each of these instances the gold, instead of being solid, appeared to be an aggregate of small particles which could be separated by rubbing.

Mr. Tweedie, of the Victory Mine, reports finding a specimen weighing 1 dwt. 2 grs., and several small pieces in a small creek in the Victory Lease in the southern fall of Mount Gahan ridge.

Apart from the difference in constitution between the coarse gold of the mines mentioned and that of the Crevices, there still remains the well worn condition of the latter, which could hardly have been produced in such close proximity to its source, especially when it is remembered that the Crevices only run during actual rainfall. The failure to discover an undoubted source for the Crevice gold engendered doubt in many minds as to the authenticity of the discovery; but there is no reason to doubt its genuineness. The good faith of the discoverer was exemplified at the time by the strenuous efforts of himself and party to find a lead in the deep made ground lying to the north. The exceedingly heavy water met with, however, prevented them bottoming the deepest shaft—60 feet—or driving in a shallow one. The sinking was in coarse rubble and sand which had evidently resulted from denudation of the coarse, gritty, conglomerate which originally covered the auriferous rocks at Pambula, as witnessed by the outcrops *in situ* in the neighbourhood.

Other deep shafts were sunk in similar ground near Lochiel, but without result. One of these was sunk to a depth of 240 feet under Government aid, but no gold was obtained.

A shaft was also sunk in the early days of the field at Greig's Flat, but was not bottomed owing to the heavy water.

Geological Surveyor Anderson, in his report, states "that when the Pleistocene and recent gullies draining from the conglomerate-capped ridges have been prospected, traces of gold have been obtained which have no doubt been largely derived from the denudation of the Devonian conglomerate."

No mention is made of the character of the gold thus alluded to, but it is possible that the Crevice gold may have had a similar source.

Testing the Pambula Gold-fields by Drill bores or Deep Shaft.

A desire has frequently been expressed by many connected with the Pambula mines that the Government should assist in elucidating the mysteries of the field by means of a diamond drill, or deep test-shaft, chiefly by way of determining whether payable gold exists at a depth, proof of which, it is believed, would establish confidence which at present is lacking, and encourage systematic sinking at deep levels. Any assistance likely to have the desired effect would be of special benefit to those endeavouring to cope with the unaccustomed difficulties encountered in this unique gold-field. It must, however, be pointed out that the element of chance in prospecting is rendered unusually predominant in this instance by the absence of any true connected run of auriferous matrix, and of the usual guides pertaining to normal conditions of reefing, combined with the capricious occurrence of the ore bodies as isolated shoots and thin flucan seams (or joint fillings), generally hanging to or near a joint crack, but not always in the same vertical or horizontal planes. The most important point, however, to be considered in connection with a public test is the amount of public benefit derivable from the necessarily large expenditure—in other words, how many mines or how much country would be proved by the test; and here it must be stated that, with the possible exception of the

the Pilot fissure at Pipeclay Creek, no site could be selected in which a shaft striking gold-bearing stone at a depth below the present workings would be of direct advantage to any but the individual claim in which it is situated; every other on the field would still remain an enigma to be solved only by the efforts of the owners. On the other hand, the failure to strike payable stone in a single deep test-shaft would not be regarded as conclusive evidence of its absence, whilst excessive cost would perhaps prevent the test being repeated.

Setting aside, however, all objections, the most advantageous site for a deep shaft would certainly be on the Pilot fissure close to the bed of Pipeclay Creek, in the vicinity of which the richest shoots on the field have been discovered, the latest and deepest of which is still going down strongly close to the Pilot, in the Victory Mine.

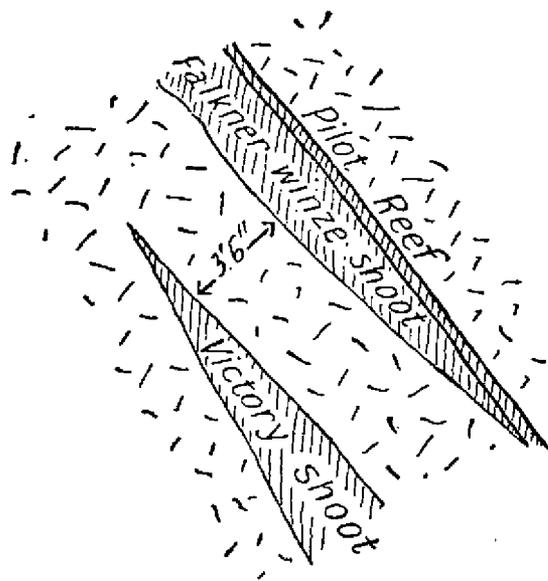

Pipeclay Creek has cut its channel through the felsite to a depth of about 450 feet below the surface of Mount Gahan Mine; hence a shaft at the site indicated, carried down about 400 feet below the lowest level yet attained—200 feet—in the Little Victory Shaft, would represent 1,000 feet below the outcrop of the Mount Gahan shoot.

In selecting a site for a deep test shaft solely for the purpose of proving the existence of payable gold at a depth of not less than 1,000 feet below the highest outcrop, questions of ownership and present richness must be disregarded; the best defined conditions of occurrence alone are to be considered in arriving at a decision.

In sinking the test shaft the underlay of the Indicator or Pilot should be followed, which in the deepest shaft amounts to about 45°. As steam-power would be necessary in sinking, the incline would not be of special consequence in connection with the water, for which a pump would be required. A vertical shaft would be objectionable, because it is imperative that the underlay of the ore shoots or the Pilot should be followed, for once the indications are left the gold is lost, and the absence of any difference between the auriferous and the barren portions of fissure fillings makes recovery of a left or lost shoot at a lower level almost a matter of chance. Hence most of the winning or exploratory work already performed presents a very irregular appearance owing to the recognised necessity of closely following the ore bodies or indications. Experience has proved that in practical working on the field the gad or drill is the only reliable guide, and that beyond the end of the drill-hole it is neither safe to calculate, or even conjecture, for the length and width of a shoot is frequently as uncertain in permanency as it is capricious in occurrences.

As an instance of the uncertain and unexpected occurrence of rich shoots the recent find in the Falkner Mine may be cited. The payable stone which occurred near the entrance of the tunnel had long been passed through, and its face in March, 1895, was in comparatively barren country. Subsequently, in fulfilling labour conditions, two men, in extending the tunnel, cut the cap of an exceedingly rich shoot, which would probably have been missed if the floor of the tunnel had been a couple of feet higher. This shoot proved about 9 feet long horizontally, and 2 feet thick, with an easterly underlay about 36° from the vertical. At 80 feet it passed into the Victory Lease, and gradually tapered off against the Pilot with increasing depth. Just outside the Victory boundary the apex of another shoot, in the form of an inverted wedge, was discovered some feet south of the upper (winze) shoot, and this is now being followed in the Little Victory Shaft.

Not only was the Victory shoot separated from the winze shoot by a barren wedge of rock, but also from the Pilot by a similar occurrence. The following sketch, cross section, will illustrate the occurrence of the neighbouring shoots:—

In, perhaps, the majority of instances the discovered shoots were found to be connected with the surface by thin clay seams or joint fillings, hence nearly all the deposits were originally discovered by surfacing or "loaming." It is, however, equally certain that shoots have been discovered without this connection.

Another feature in the occurrence of the shoots which adds to the uncertainty in working is the shifting from one vertical plane to another, perhaps several feet apart; instances could be multiplied when this has occurred. One instance may be quoted from the Great Southern Mine. The original shoot ended abruptly on the footwall side of the joint. After abandonment for some time, the same or another shoot was struck about June, 1895, against a false hanging wall at a lower level further to the east; at 20 feet it also ended abruptly on a flat floor.

In view of the proved occurrence of shoots closely approximate, yet in different vertical and horizontal planes, it is highly important in devising a deep test that provision should be made for frequent strike drives and cross-cuts, which to make a single test as adequate as conditions will allow, should be extended to their possible limits; and therein the shaft test has the advantage over the drill, and is therefore now preferred.

Perhaps

Perhaps in view of the exceptional difficulties of the field the usual regulations governing the distribution of aid should be most liberally construed, or even set aside in this case, otherwise the conditions clash with them in several important particulars.

In conclusion it is but a reasonable supposition that other rich shoots exist in the gold-field; "loaming" may lead, as in the past, to surface discoveries, but experience has furnished no guide in the deep or solid ground where pluck and hard work are largely discounted by blind chance.

I desire to record my hearty thanks to Mr. Ubric, manager of the Falkner Mine, Mr. Doridge, of the Pambula Mines (Limited), Mr. Creighton, Mr. Martin, Mr. Tweedie, of the Victory Mine, Mr. Harrison, and many others, both managers and miners, who most courteously at all times afforded me every assistance and information.

I have, &c.,

JOSEPH E. CARNE, F.G.S.,
Geological Surveyor.

The Government Geologist.

APPENDIX 9.

Report on Gold Find, Wolumla.

Sir,

Prospecting Camp, near Timbilica, 19 September, 1896.

I have the honor to report that on the 18th ultimo I paid a brief visit of inspection to the recent gold find at Wolumla, known as Momsen's, chiefly for the purpose of ascertaining the nature of the gold matrix, for reports were current that it was similar to the Pambula felsite.

The discovery is on a high narrow ridge trending south-westerly to the Wolumla Peak, the distance from the village of Wolumla being about one mile, and the elevation above it about 580 feet at Momsen's Claim. A short distance west of the Prospector's Claim, the main north and south granite belt is met, whilst on the east is a narrow off-shoot from it. Between the two occurrences is a thin wedge of altered slates, sandstones, and conglomerates, which is capped unconformably by massive conglomerates and sandstones dipping gently easterly.

Momsen's Claim occurs on the west side and near the top of a portion of the ridge which has been denuded of its upper conglomerate and sandstone capping. The gold occurs in the altered slates, sandstone, and conglomerate chiefly in small nests and veins in oxidised joints and cavities, which afford clear evidence of its pyritous origin. No defined body of gold-bearing stone has yet been determined, no walls or other guides being visible. The conditions point to impregnation of the country, but to what extent prospecting alone can prove. The main shaft was down 25 feet, and an underlay towards it had been started a short distance away. The stone for the recent rich trial crushing was taken from an open cut near by, which reveals layers of decomposed clay, slate, and bands of quartzite, with ferruginous impregnations.

Closer by in the adjoining claims on the north and west a considerable amount of trenching has been done, but so far unsuccessfully.

A few chains southerly from Momsen's Claim Brady and Party are sinking alongside a large outcrop of the altered rocks mentioned. The shaft is within about 100 feet of the narrow granite intrusion on the east, hence the lodestuff is largely saturated with felspathic material as well as brecciated. In a trench close by specimens of felsite rock occur closely resembling the Pambula felsite. Fair prospects are obtainable from this claim, but the occurrence is also ill-defined. Momsen's and Brady and Party's claims are on Crown lands, being within R.R. 863, Parish of Wolumla, County of Auckland.

Gahan, McKay, and Party have a lease under agreement with the owner on private land, Portion 16, Parish Cobra, in the same county. This party's claim—the third on gold—is of special interest, as it is situated within the narrow granite belt close to the junction of basalt. The gold occurs in rotten granite, chiefly in the ferruginous joints. The only shaft on the claim was down 12 feet. A drill hole had been put down at an angle from both sides of the bottom portion of the shaft with reported good results. So far no other claim has obtained gold in the vicinity. The amount of work as yet performed on the Claim is insufficient to afford any guide as to strike, dip, or thickness; as in the case of Momsen's, the conditions point to impregnation of a portion of the country.

I have, &c.,

JOSEPH E. CARNE,
Geological Surveyor.

The Government Geologist.

APPENDIX 10.

Report on the Timbilica Reefs, near Nungatta.

Sir,

Geological Survey, Department of Mines and Agriculture, 12 January, 1897.

I have the honor to report that, in accordance with your instructions, I visited the Timbilica Reefs on the 9th and 10th December, for the purpose of reporting on their extent and prospects.

The reefs occur in granite country on the south side of the Timbilica River, in the Parish of Yambula, County Auckland, and are distant about 7 miles east from Nungatta Station Homestead and 10 miles southerly from Perico.

The Timbilica forms one of the tributaries of the Wallagaraugh River, on which the Timbilica Homestead—one of the oldest in the district—is situated, about 14 miles south-easterly from the reefs, hence confusion frequently arises as to the exact location of the latter.

The geological formation consists of granite, in which frequent diorite intrusions occur. Several are conspicuous on the track to Nungatta, and are worthy of attention, though quartz was not noticed in their vicinity.

So far as ascertainable, gold was first discovered on the Timbilica by W. Lang, who, in the early part of 1891, obtained a small quantity of alluvial gold from a creek bed about 2 miles west of the present workings. About the middle of the same year A. Brown, in following up the discovery, found gold in veinstone near by. After sinking shafts 18, 20, and 30 feet deep, and cutting short trenches, he abandoned the ground in favour of a later discovery at the site of his present claim, about 2 miles easterly. After sinking 26 feet on the reef in the latter, Government aid was obtained to continue the shaft a further depth of 60 feet, but was only availed of for 30 feet, as the prospects were not sufficiently encouraging below the 26 feet level.

Later a two-stamp (90 lb. each) battery was erected and worked by a 5 h.p. Tangye engine. The first grade stone, picked from the material stoped above the 26 feet level, was put through the battery, but the results being unsatisfactory the stamps and plates were removed. The actual yield obtained during operations

operations could not be definitely ascertained, but less than half an ounce is estimated. About 10 tons of tailings remain at the mill site, but no reliable tests have been made to ascertain loss. Assay tests have certainly been made, but the returns were misleading owing to the presence of escaped amalgam and free mercury. In fact, judging from panning tests, it would pay to run the tailings through a sluice-box to recover the quicksilver alone. Such a loss points to defect in setting up the plant or unskilful manipulation.

The plant was estimated to treat 2 tons per twenty-four hours, but the full working capacity could never be approached during the trial made, in fact it fell below half the estimate.

Reports having been periodically circulated as to the richness of the stone in this mine, and that of the alluvial in the creek beds, small rushes ensued at intervals, the latest resulting in the discovery of several other shows in the neighbourhood.

With reference to a certain class of reports which occasionally find their way into newspapers, I desire in the interests of genuine miners to urge the necessity for extreme caution in the publication of unauthenticated contributions from new or alleged new gold discoveries, because of the hardship entailed to many unfortunates who accept the reports in good faith. Frequently through misleading contributions to the local press, and repetition through the medium of exchange, men are stranded on worthless, or to them unremunerative, fields, after exhausting their means in reaching them. Such reports invariably emanate from interested parties, who unwittingly defeat their own ends by gross exaggeration or misrepresentation, for impartial official statements of actual facts following such inflation naturally have a disappointing or depressing influence, frequently solely arising from violent contrast, which detracts from even fair and legitimate prospects.

The latest local announcement of the field under description was to the effect that "over 100 leases have been taken up, many of which are on gold;" inspection a few days later discovered twenty-three men on the field holding about twelve claims under miners' rights, in about ten of which varying prospects of gold had been obtained at or near the surface. The only approach to a lease was a notice posted intimating intention to apply for one, though no work had been done on the ground.

Descriptive.

A. Brown & Son's Claim consists of a prospecting area for five men. The auriferous joint or veinstuff strikes N. 70° E. and underlays N. 20° W. at 76°. It consists of granite with several thin ferruginous quartz leaders from $\frac{1}{4}$ to $\frac{1}{2}$ inch thick, and occasional occurrences of barren crystallized quartz of greater thickness. In the ferruginous cavities resulting from oxidation of pyrites free gold is occasionally visible. The thin quartz leaders are undoubtedly rich, but bear an infinitesimal proportion to the mass of the so-called veinstuff.

This claim has been held over four years, during which the following developmental work has been performed:—Original prospecting shaft (No. 1) sunk 26 feet; new shaft (No. 2), started 17 feet distant on strikes, sunk about 60 feet (30 feet under aid). The two shafts connected by level at about 20 feet, and level continued westerly for a reported distance of 30 feet. From the 20 feet level the veinstuff has been stoped up for a few feet. The stone raised during these operations was picked over, the firsts going to the local battery, the seconds being stacked at the claim. The firsts consisted largely of the quartz leaders, the seconds of the friable granite rubble with small fragments of the quartz leader. Lately 3 tons of stone were picked from veinstuff raised from short drives each way at the 26 feet level or bottom of No. 1 shaft for the purpose of a further test in Sydney. This consignment, according to Mr. Brown, jun., represented a picked sample of the first grade stone. The results obtained from it at the Government Metallurgical Works under the supervision of Mr. J. Taylor, Government Metallurgist, may be briefly stated as follows:

Net weight of stone crushed—2 tons 6 cwt. 2 qr. 14 lb.
Assay value—Gold, 18 dwt. 22 gr. per ton; silver, 9 dwt. 11 gr. per ton.
Smelted gold obtained—2 oz. 5 dwt. 17 gr. (practically equal to 1 oz. per ton).
Concentrates—Less than 1 per cent.
Tailings (assay value)—Gold, 3 dwt. 6 gr. per ton; silver, 1 dwt. 7 gr. per ton.

About 145 feet S. 70° E. from the above shafts gold has been found at surface in a flat-lying quartz vein, and a shaft to cut it on the underlay is now down 12 feet.

The following samples were selected for assay:—

- B¹ Picked sample from small ferruginous veins and joints in face of drive at bottom of 26-foot shaft. Yield: Neither gold nor silver.
- B² Granite rubble (seconds) from surface heap. Neither gold nor silver.
- B³ Picked sample (firsts) of small quartz leaders in surface heap. Yield: Gold, 12 dwt. 22 gr.; silver, 6 dwt. 12 gr. per ton.
- B⁴ Quartz and granitic veinstones from new find at surface near No. 3 shaft. Yield: Gold, 1 oz. 1 dwt. 18 gr. per ton; silver, 8 dwt. 17 gr. per ton.

On the west of Brown's Claim W. Douch has sunk 12 feet in soft rotten granite without any visible quartz vein. From a ferruginous joint at the bottom of the shaft a dish of material broken with a pick yielded a few minute particles of gold which had evidently been liberated from pyrites originally occupying the jointing, the oxidation of which has freed the gold and stained the enclosing granite.

To the north of the Prospector's Claim, McCloy Bros. are sinking to cut on the underlay vein cropping at surface. The party being absent at the time of inspection no particulars were available. The shaft was down about 18 feet.

Laird and Party occupy five men's ground a short distance south-easterly from Brown's Mine. Gold was found at surface in this claim about four months ago, and traced for about 100 feet along the strike of the reef. A vertical shaft was started which struck the reef channel at 28 feet, the latter then being followed for 30 feet. The strike of the reef at surface is N.E., and the underlay N.W. at 33°. The reef occurs at the junction of a narrow diorite dyke about 3 feet thick, which forms the footwall. The dyke is much decomposed, and closely resembles similar occurrences in the Tumbaramba Gold-field, locally designated "clay-bars." Its surface outcrop has been covered by loose granite soil. The quartz-vein stone in this claim is not continuous and solid, but occurs in short lenticular blocks—the longest vertical axis yet exposed being 7 feet—separated by stiff pug-clay containing rubbly quartz, which affords evidence from the partly rounded fragments of considerable movement and abrasion. On

On the footwall (dyke) a thin layer of stiff pug selvage carries fine gold particles, which are also present more or less in the rubbly clay, but blank intervals occur in the channel.

From the pug and rubble forming the present face at 30 feet on the underlay, and from similar material on the surface heap, fair tails of very fine gold were obtained from dish prospects. From the narrow quartz vein-stone in the shaft, and from surface, small dolly prospects yielded a payable proportion of gold mixed with iron pyrites. Assays of samples from the 7-foot block in the underlay shaft, and from a small surface opening on the N.E. strike from the shaft, yielded the following results:—

(1.) SHAFT.		(2.) SURFACE.	
	Oz. dwt. gr.		Oz. dwt. gr.
Gold	2 10 1 per ton.	Gold.....	3 7 12 per ton.
Silver	1 3 22 ,,	Silver	1 12 16 ,,

The occurrence of an auriferous vein or channel at the junction of an intrusive diorite dyke in granite, judged by ordinary experience, must be regarded as a favourable feature, modified, however, in this instance by the uncertain permanency of the quartz vein, which alone can be regarded as yielding payable prospects. The indications are certainly good enough to encourage further testing by sinking and driving to prove the extent of the quartz blocks upon which depends the workableness of the mine.

S. Axam and Party, holding a claim in the vicinity, had just commenced sinking on a narrow quartz vein in soft rotten granite, striking nearly east and west, and underlaying south at 61°. From surface to 9 feet (bottom of shaft) the vein varies from 3 to 6 inches in thickness, and consists of about 1½ inch of ferruginous quartz, with a selvage of soft ferruginous granite. In the drusy cavities of the quartz free gold was visible, but pyrites was also discernible, which points to probable speedy loss of the free gold in sinking. A selected sample of the ferruginous quartz veins yielded on assay—gold, 1 oz. 6 dwt. 2 gr. per ton; silver, 12 dwt. 22 gr.

The latest discovered group of claims is situated about 1½ mile easterly from Brown's Mine. Reports concerning Sinclair and Party's claim caused the most recent rush to the locality. The reef in this claim was discovered about three months ago. It strikes N. 70° W., and underlays N. 20° E. at 74° in No. 1 shaft but nearly vertical in No. 2. The vein channel is from 7 to 16 inches wide, and is filled with rotten granite traversed by a quartz vein about 6 inches at thickest, and by several thin leaders. On the footwall the granite is becoming hard. On the surface close by the shaft, solid granite outcrops, which indicates hard country at a shallow depth on the reef.

Two shafts have been sunk about 100 feet apart—No. 1 shaft to 20 feet, and No. 2 to 25 feet—and these constitute all the developmental work on the claim to the 10th December.

As some sensational yields had been reported from this claim, careful tests were made after the following manner:—The exposed faces of vein stuff in both ends of the two shafts were chipped away for a vertical depth of about 5 ft. 6 in., and the broken material removed. A cloth then being spread, a large sample was obtained from each shaft by chipping the freshly exposed faces. On a sheet of bark at the surface the selected samples were mixed, and parted after the ordinary sampling method, the selected portions being bagged for assay, and the remainder panned off. In the latter case neither sample yielded a trace of gold, though it must be stated that the harder portions were not crushed. Following are the assay results:—

- Sp. 1.—Average sample of quartz and rotten granite from face of No. 1 shaft, about 1 foot wide. Yield—Gold, nil; silver, nil.
- Sp. 2.—Quartz from vein in No. 1 shaft. Yield—Gold, nil; silver, nil.
- Sp. 3.—Average sample of quartz and rotten granite from face in No. 2 shaft, about 8 inches wide. Yield—Gold, nil; silver, nil.
- Sp. 4.—Picked sample of quartz, with undecomposed pyrites, from No. 1 shaft. Yield—Gold, 1 oz. 12 dwt. 16 gr. per ton; silver, 1 oz. 1 dwt. 18 gr. per ton.

Dolly tests of the most oxidised quartz in No. 1 shaft yielded a little fine gold. In making these preliminary tests every facility was offered by the claim-holders.

J. Smith and Party hold six men's ground a short distance southerly from Sinclair and Party's claim. Gold was found on the surface about three weeks prior to inspection by "loaming" or washing the soil. In an open cut about 8 feet deep about 1 foot of decomposing granite alongside a rotten felsite footwall is regarded as lode stuff. From the loose, friable portion broken down with a pick a tail of fine gold was obtained in the dish. The harder also yielded a fair prospect by dollying. An assayed sample of this material yielded—Gold, 8 dwt. 17 gr. per ton; silver, 14 dwt. 8 gr. per ton. The gold has evidently been liberated from pyrites disseminated through a portion of the granite. No quartz is visible in this claim. The auriferous band strikes about N. 35° W., and underlays N. 55° E. at 70°. It is doubtful, however, whether these features will be persistent, in view of the mode of occurrence.

F. Falkner and Party, Smith and Party, Gordon and Party, and Axam and Party are also engaged in surface prospecting in the vicinity.

Summary and Conclusion.

Colours of fine gold are sparsely distributed through the country traversed by the Timbilica and Wallagarough Rivers; but having regard only to those localities wherein reasonable prospects have been obtained, the auriferous area extends about 3 miles easterly from the site of the original discovery by Lang in 1891, and southerly about 6 miles to near Mount Buckle, where the New South Wales Border Prospecting Party found an auriferous reef, which is now being opened by local prospectors.

Briefly summarised, the Timbilica auriferous country is granite, much weathered and soft at surface. The gold occurs associated with very thin pyritous quartz veins and thin ferruginous jointings, and in some instances disseminated through bands of the country. Abundant evidence is available of its derivation from pyrites, which in an undecomposed or unoxidised condition is already making its appearance in the shallow workings on the field, a fact which further indicates the probable disappearance of the free gold at a shallow depth.

With its disappearance water and harder country must be expected, with their natural accompaniments of more costly extraction and treatment. In Sinclair and Party's and Brown and Sons' claims the ground is already hardening at about 25 feet from the surface.

The

The best prospects are obtainable from the thin quartz leaders ; but, as already pointed out, these bear a very infinitesimal proportion to the regarded vein material, which consists of selvages of rotten granite, decomposed and discoloured by percolation of surface water, containing soluble iron salts arising from oxidation of pyrites in the quartz vein and on the wall faces. With the encountering of water and hard country, the soft selvage with its contained free gold will disappear.

Having regard to the indications afforded by the surface conditions, no payably workable deposit has yet been proved on the field ; on the other hand, it must be borne in mind that little actual proving has yet been done, nor judging from appearances presented during inspection is vigorous prospecting being prosecuted. The erection of a battery has been advocated, but it would be premature to discuss the question until prospecting has been considerably advanced.

The conditions of the gold occurrence at Timbilica River afford indications only of possible profitable employment for small parties of working miners to such depths as the country remains soft and dry. Water and timber are abundant for all purposes. The special need of the field at the present time is vigorous prospecting, which is quite within the compass of working miners in view of the softness and dryness of the country near the surface. In deepening the present shafts timbering will be required, as the softer portions of the rotten granite are likely to be treacherous.

A small stamp battery, with Frue Vanner concentration, would be most suitable for treatment of the auriferous material ; but, as before stated, the erection of such a plant must be contingent upon the results of more extended prospecting operations, for it cannot be disguised that at the present time the visible or possible supply of crushing material is very limited.

I desire to express my thanks to Mr. Brown, jun., for kindly guiding me to the different claims.

I have, &c.,

JOSEPH E. CARNE, F.G.S.,
Government Surveyor.

The Government Geologist.

APPENDIX 11.

Report on the Auriferous Deposit at Tingys' Plains, near Rocky Hall.

Sir, Geological Survey, Department of Mines and Agriculture, 12 January, 1897.

I have the honor to report that whilst inspecting a portion of a timber reserve (T.R. 282), in Parish Burrumbucca, County Auckland, I took the opportunity of visiting the gold deposits at Tingys' Plains, in the neighbouring parish of Coolangabra.

The discovery of gold in matrix at Tingys' Plains, in 1895, by Messrs. Ellingwood and Jacobson, caused a small rush, but little work resulted therefrom. The locality is on the eastern fall of the Main Coast Range, about 14 miles E.S.E. from Bombala, and 6 miles S.W. from Rocky Hall.

The geological formation is granite, being part of the same outcrop which contains the gold at Timbilica River, and near Mount Buckle on the Victorian Border.

Shortly after the announcement of the discovery the site was inspected and reported on by Mr. Warden King, of Cooma, who recommended aid for deepening the prospecting shaft from 14 feet to 39 feet, and for cross-cutting to ascertain the width of the lodestuff. The prospectors, however, only availed themselves of part of the aid for sinking, because of the pinching out of the auriferous stone at a shallow depth. Inspection of the lowest level attained was not possible owing to removal of the ladders ; but judging from the tipstuff, there was no material which could properly be designated lodestuff. Prospects were found by "loaming" at the surface, but gave out at a depth of 15 feet.

The following results were obtained from samples selected by Mr. King at the time of his inspection :

No. 1.—Gold, 2 dwt. 4 gr. per ton ; silver, 4 dwt. 8 gr. per ton.

Nos. 2 and 3.—Neither gold nor silver.

No. 4.—Gold, 4 dwt. 8 gr. per ton ; silver, 2 dwt. 4 gr. per ton.

No. 5.—Gold, a trace (under 2 dwt. per ton).

Shortly after the pinching out of the gold-bearing stone in the prospecting shaft, Jacobson abandoned his share, and the claim is now held by Ellingwood alone.

About 450 feet S. 25° W. from the aided site a shaft was sunk on a well-defined quartz reef striking N. 55° E., to a reported depth of 19 feet. Owing to the partial collapse of the shaft, inspection could only be carried down to a depth of 10 feet. To this level the veinstone varies from 1 to 3 feet in thickness, and consists of partially oxidised pyritous quartz and granite material of a kindly appearance. Dolly tests of oxidised stone yielded fair prospects. This vein constitutes the best defined and most promising occurrence in the locality, and should, I think, have received the Government aid instead of the site further N.E. A sample taken at random from the stone at grass yielded on assay—Gold, 3 dwt. 6 gr. per ton ; silver, 3 dwt. 6 gr. per ton.

About 175 feet S. 25° E. from the shaft in the quartz reef Hagah and Party sank a shaft about 30 feet deep alongside an open cut about 12 feet long and deep. No quartz occurs in these workings, the lodestuff consisting of hard, pyritous, aplitic granite, occurring as hard floors in the ordinary rotten granite country. These bodies are not defined, but appear to have a general dip to the west. In the oxidised portions fair prospects of free gold are obtainable on crushing, but it is very doubtful whether the unoxidised stone would pay to treat. The derivation of the gold from the pyrites is readily manifested by examination of the zone of oxidation observable even in hand specimens, free gold can frequently be seen in the rusty cavities formed by decomposition of pyrites just bordering the unaltered pyrites.

It is very evident that at very shallow depths the gold will be found entirely confined to the pyrites, and unless richer shoots occur than those already discovered, it is doubtful whether the deposits will prove payable. Some of the surface stone could be profitably worked, but the quantity available is very limited. No work was being carried on at the time of inspection, Ellingwood being the only one retaining an interest in it.

I have, &c.,

JOSEPH E. CARNE, F.G.S.,
Geological Surveyor.

The Government Geologist.

Progress Report of Geological Surveyor Jaquet for 1896.

Geological Survey Branch, Department of Mines and Agriculture,

New South Wales, 13 January, 1897.

Sir,

I now have the honor to hand you a progress report of the work performed by me during the year 1896.

I left Sydney upon the 14th January for Drake, and was engaged until the 17th of the month inspecting the auriferous reefs at Lunatic in connection with a proposal to erect a Government crushing plant. My report forms Appendix 12.

Upon the 28th January I left headquarters for the purpose of making a geological examination of the Wattle Flat and Sofala Gold-fields (*vide* Appendix 13). I also, before returning to town, visited the following localities in reference to proposals to curtail or enlarge various gold-field reserves, and as a member of the Prospecting Board:—Gulgong, Hargreaves, Hill End, Kirkconnel, Newbridge, and Rockley.

Upon the 20th March I left for the Monaro district and made an examination of the gold and tin fields in the vicinity of Jinderbayne (*vide* Appendix 16). Before returning to headquarters I visited Kiandra, Michelago, Braidwood, Captain's Flat, Brimbramaila, Nelligen, Araluen, and Jingera. In conjunction with Mr. Warden Maitland, I inspected and reported upon the Little River Gold-field (*vide* Appendix 15).

I also examined the newly-discovered Back Creek Gold-field, near Braidwood, in reference to a petition from the miners asking the Department to resume certain lands. While in the Nerriga district I inspected the copper lodes at Touga Creek (Appendix 17).

Upon 15th June I left for Tarago, and made an examination of the Cullulla silver-lead mine. (Appendix 19). I afterwards visited the following localities in connection with geological work:—Cooma, Holt's Flat, Bowna, Caraboost, Junees Reefs, Wyalong, Crookwell, and Bungendore. I inspected and reported upon an auriferous drift near Laggan (Appendix 19), and the Dairy Creek Gold-field, near Gundaroo (Appendix 14).

Upon the 23rd July I left Sydney for the northern district, visiting Inverell, Armidale, Rockvale, and Yarrawitch.

Upon the 10th August I visited Raymond Terrace, and spent a few days tracing the outcrop of a newly-discovered bed of ironstone, near Seaham (Appendix 20).

Upon the 17th August I left Sydney for the purpose of making an inspection of the Gilgunnia Gold-field (Appendix 21). I also visited Peak Hill, Lewis Ponds Parkes, Forbes, Newbridge, Trunkey, Clear Creek, Oberon, Gulgong, and Rylstone.

Upon the 2nd October I left Sydney for the Southern District, visiting Yalwal, Moruya, Mogo, Wagonga, Mount Dromedary, and Queanbeyan.

I inspected the recently discovered gold deposits at Gooda Creek (Appendix 22), and also the Mount Blundell lode (Appendix 23).

Upon the 5th November I journeyed to the Hillgrove district and inspected an argentiferous copper lode upon the Wollomombi River (Appendix 22). Before returning to town I visited Tenterfield, Uralla, Nundle, and Copeland.

Upon the 7th December I started for Cooma and visited the Kydra, Kiandra, and Bogong Gold-fields.

During the year I have contributed two papers to the "Records of the Geological Survey of New South Wales," "The Intrusive and Metamorphic Rocks of Berthong, county Bland, with especial reference to the occurrence of serpentine after amphibolite," and "The Occurrence of Platinum in New South Wales."

APPENDIX 12.

Report on Lunatic Gold-field.

Geological Survey Branch, Department of Mines and Agriculture,

Sydney, 20 January, 1897.

Sir,

I have the honor to inform you that, in accordance with instructions received, I have made an examination of the Lunatic Reefs Gold-field, near Drake, in connection with a proposal to erect a public crushing plant.

Batteries which have hitherto been erected at Lunatic have been supplied with stone from the following lines of reef:—Lunatic, Golden Crown, Perseverance, Caledonian, Victorian, Little Victoria, Martin's Reef.

Lunatic.

Upon the southern end of the reef three shafts were sunk about twenty years ago. No bulk crushings were ever made of stone from these shafts, and they have long since fallen in.

In No. 8 Claim, about four claims north of the last-mentioned shafts, four shafts, each about 100 feet deep, have been sunk, and some driving has been carried out. One of the shafts would seem to be intact. I was informed by Mr. Curran, Mining Registrar, that a small quantity of rich stone was obtained here, and that heavy water was encountered. Claim has been abandoned for nearly twenty years.

Exhibition Claim (Phoenix) is situated immediately north of No. 8 Claim. A shaft was sunk to a depth of 150 feet by a Sydney company. It has now fallen in, and the claim has long been abandoned. Mr. Curran informed me that some small patches of good ore were obtained.

Upon the claim next in order several shafts have been sunk, and a considerable amount of driving carried out. The sides of the shaft have all fallen in.

At intervals the reef has been proved by shallow shafts between the last-mentioned claim and the Prospecting Claim, which is situated upon the southern end of the reef.

Prospector's Claim.—This is practically the only claim that was worked for any length of time. A main shaft, which is now intact, has been sunk to a depth of 283 feet, and five lesser shafts have been sunk to depths of from 50 feet to 80 feet. The claim was worked intermittently for seven years, and several hundred

hundred tons of ore raised from it. After it had been abandoned for some years it was again taken up by Ashbury and Party, who received Government aid to sink the shaft from 144 to 290 feet. No stoping was ever done by the party, and having exhausted their grant they abandoned the mine, and it has been idle ever since. The reef at the bottom of the shaft was, I am informed, only 3 inches thick.

Golden Crown.

This reef has been worked by a multitude of shafts for a distance of 700 feet along its course. It varies in width from 2 to 12 inches, and has yielded some rich stone. No claims are at present being worked. Near Mr. R. Hooton's house a tunnel has been driven into the hillside for a distance of 200 feet. It has cut the reef at a depth of 108 feet below the surface. Hooton and Party have sunk a winze to a depth of 40 feet below the floor of the tunnel upon the reef. They recently raised 4 tons of stone, which, when crushed in Drake, yielded 2 oz. of gold per ton. The reef would seem to be too narrow to pay for working, and no work is being done at the present time.

Perseverance.

This reef runs parallel to the Golden Crown Reef, and is distant from it about 600 feet. It is from 2 to 4 inches wide, and most of the stone raised from it has yielded from 2 to 4 oz. per ton. It was worked many years ago for a length of 900 feet, and to a depth of from 40 to 170 feet, and a considerable quantity of stone has been raised. I was informed that work was suspended because the reef was too narrow and too poor at a depth to pay for mining.

Caledonian.

This reef is situated about half a mile N.E. of the main workings upon the Perseverance Reef. A tunnel has been driven upon the vein into the hillside for a distance of 200 feet, and stone has been stoped out up to the surface for a distance of 90 feet in from the mouth of the tunnel. The reef is about 6 inches wide, and the stone which was treated from it averaged, so I was informed, over 1 oz. of gold to the ton.

About 3 chains south of the tunnel, upon the bank of Kangaroo Creek, a shaft has been sunk upon the reef, which is here about 6 inches wide, to a depth of 50 feet. I was informed that 10 tons of ore which were obtained from this shaft yielded gold at the rate of 18 dwt. per ton.

All the claims on the Caledonian line of reef are now abandoned.

Victoria.

Mount Hooton Claim.—About eight years ago, when a battery was upon the field, a tunnel was driven for a distance of 200 feet along the reef, which is about 4 inches wide. The stone won from this tunnel would not pay for crushing, and is now dumped upon the surface. Subsequently Mr. Richard Hooton received Government aid to sink a shaft upon the reef a little higher up the hill. No payable stone was encountered in the shaft, and upon its completion the claim was abandoned.

Upon Johnson's Claim the reef was proved by a shaft and drives to a depth of 100 feet. Several tons of quartz obtained from the workings were treated, but there is no word as to what they yielded.

About 100 yards south of Johnson's Claim a shaft has been sunk by Mr. J. K. Wear to a depth of 116 feet, with Government aid. At a depth of 80 feet a patch of payable stone was met with, but no bulk crushings seem to have been made.

Messrs. Gay, Grey, and Party, who originally owned the claim south of Wear's, proved the reef to a depth of 172 feet, and raised a considerable quantity of ore. There would seem to be no record as to what the ore yielded.

Little Victoria.

This is a short reef situated 200 feet east of Wear's shaft, upon the Victoria line. Two shafts, each 60 feet deep, and distant from one another 30 feet, have been sunk upon it, and practically the whole of the ore between them has been stoped out. I was informed that the ore, on being treated, yielded from 1 to 2 oz. of gold per ton. The reef has an average width of 6 inches.

Martin's Reef.

Upon a low hill which overlooks Mr. Richard Hooton's house from the west a short reef was discovered about fifteen years ago by Mr. Edward Martin. He worked the reef intermittently for six years, and during this period raised about £1,000 worth of gold. The rich stone having run out, Martin, in 1889, received Government aid to further prospect his claim; but he did not succeed in finding any payable quartz.

Particulars concerning Batteries which have hitherto been erected upon the Field.

The first battery (10-head) was erected in 1873 upon Gerrard's Creek. It crushed about 1,000 tons of stone from the various reefs, most of which had been raised prior to the arrival of the battery. It was removed after nine months to Boorook, because sufficient stone could not be obtained to keep so large a battery working. Just before its removal a small 3-head battery was put up upon Kangaroo Creek by Messrs. Muirstone and Giles. The smaller battery remained upon the field for thirteen years, treating from time to time small parcels of stone as they were raised from the mines. It never ran continuously for any length of time, and in 1886 was sold to Messrs. Stewart and Brown, who removed it to Fairfield. In the following year the same battery was re-erected by Mr. Cair, at Lunatic. However, only 10 tons of stone were crushed, and the battery remained idle for two years.

At the end of this period it was bought by Messrs. Wann and Son, who again removed it to Fairfield, and there has been no crushing-machine upon the field since.

Cost of treating Stone upon the Field.

The proprietors of the little 3-head battery charged 20s. per ton for crushing, and 5s. extra per ton of ore for grinding the blanketings in a Chilean mill. The average cost of carting from various claims to the battery was 5s. per ton.

Upon

Upon other gold-fields in the Colony the cost of crushing varies from 7s. 6d. to 15s. per ton, and the figures quoted above may seem excessive; but it must be remembered that enough stone could never be obtained to keep the battery running continuously for any length of time, and under these circumstances a high charge was imperative.

The charges made for crushing at Drake are as follows:—

For lots under 20 tons	15s. per ton
Chilian mill	2s. extra
For lots over 20 tons	12s. 6d. per ton
Chilian mill	2s. extra.

Cost of carting from claims at Lunatic to battery at Drake is 12s. per ton.

Comparison of cost of crushing a ton of ore at Lunatic and Drake respectively:—

<i>Lunatic.</i>	
Cost of carting from claims to battery	5s.
Cost of crushing, with use of Chilian mill	25s.
Total.....	30s.
<i>Drake.</i>	
Cost of carting from claims to battery	12s.
Cost of crushing, with use of Chilian mill.....	18s.
Total	30s.

It will be noticed that the greater cost for carting to Drake is balanced by a cheaper rate for crushing.

General Conclusion.

The reefs at Lunatic seem to have yielded small shoots of rich stone. Even during its most prosperous days the field does not seem to have produced enough ore to provide profitable employment for a battery; still less, I would submit, is success likely to be obtained now that all the claims are deserted.

It has been shown that stone can now be carted to Drake and treated there as cheaply as was formerly the case upon the field when it was supplied with a battery; so it cannot be stated that the removal of the battery has checked mining enterprise in any way.

I am of opinion that the circumstances do not warrant the erection of a public battery at Lunatic.

I have, &c.,

JOHN B. JAQUET,

Geological Surveyor.

The Government Geologist.

APPENDIX 13.

Report on Wattle Flat and Sofala.

Sir, Geological Branch, Department of Mines and Agriculture, Sydney, 16 March, 1896.

I have the honor to report that, according to instructions received, I have made a geological examination of the auriferous deposits in the vicinity of Wattle Flat and Sofala.

The geographical formations consist of Silurian (?) slate and lime-stones, intruded by dykes of felsite and basic andesite. The intrusive rocks, when examined under the microscope, are seen to be much crushed and generally altered.

Near the head of Little Oakey Creek I found fossiliferous shales and lime-stones. Mr. W. S. Dun, Assistant Palaeontologist, has identified the following forms as occurring in them:—*Helicolites*, *Rhynchonella*, *Spirifera* (?), crinoid stems, and a fragment of a gasteropod.

The auriferous deposits naturally group themselves into two divisions—igneous rocks traversed by a network of narrow and rich auriferous veins or impregnated with iron pyrites, and quartz reefs.

Queensland Mine is situated upon the left-hand bank of Spring Creek, about 1½ mile south of Sofala Township. It has been working intermittently for the last eight or nine years.

The ore deposit consists of a belt of much altered igneous rock, more or less impregnated with arsenical pyrites and of ferruginous products resulting from the decomposition of this mineral, and traversed with numerous narrow quartz veins. The gold is present both in the quartz veins and in the pyrites.

Three quarries have been carried into the hillside upon the auriferous rock. The northern quarry has only recently been excavated by the present Company, and no parcels of ore have, so far as I could learn, been crushed from it. About 130 yards south of this new quarry there is another open working, from which, I was informed, 100 or 200 tons of stone had been won, which yielded on the average 3½ dwt. of gold per ton.

The largest quarry of all is situated about 100 yards south of the last-mentioned one. From Mr. W. Brazenall, of Sofala, one of a party of tributors who worked the mine prior to its being taken over by the present Company, I received information of the yields obtained from various parcels of stone mined from this quarry in 1894 and 1895.

Date.	Quantity crushed, in tons	Yield, Gold.	
		Oz. dwt. grs.	Average per Ton.
19 May, 1894	11	2 5 0	0 2 7
1 June, 1894	27½	4 5 0	0 3 2
22 " 1894	30	3 1 4	0 2 0
27 " 1894	14	5 14 0	0 8 3
23 July, 1894	30	10 3 6	0 2 6
3 Nov., 1894	87	16 12 0	0 3 18
1 Dec., 1894	48	8 17 10	0 3 17
8 " 1894	8	1 14 0	0 4 6
17 " 1894	18	4 0 0
8 April, 1895	31	5 18 6	0 3 20
25 May, 1895	27	4 12 10	0 3 10
20 June, 1895	41	7 6 6	0 3 13
5 July, 1895	17	7 11 0	0 3 0

It will be noticed that the stone gave an average yield of 3 dwt. 17 grs. of free gold. Mr. Brazenall's party crushed with a 10-head battery 60 tons of ore per week. The stone was quarried and delivered at the battery under contract for 6s. 6d. per ton. Two men were employed at the battery—an engine-driver and a feeder. The boiler furnace consumed from 11 to 12 cords of wood per week, which cost 11s. per cord. So taking the two men's wages at £5, the total weekly expense of the tributing party was as follows:—

Wages.....	£	s.	d.
Fuel.....	5	0	0
60 tons of stone, @ 6s. 6d.	6	0	0
	19	10	0
Total	£30	10	0

An inspection of the returns given above will show that the stone yielded on the average 3 dwt. 17 grs. per ton. Taking the value of the gold as £3 16s. per oz., the value of the gold obtained per week would be £42 6s.; so there should be, in round numbers, £12 per week available to provide for interest on the capital outlay, depreciation of and repairs to machinery, and profit. Besides the free gold obtained in the form of amalgam, a large quantity of blanketings was obtained, which, I was informed, yielded upon assay gold at the rate of 3 oz. per ton. The tributors used to feed the blanketings back into the battery with barren quartz. With proper concentrating machinery the concentrates obtained should form a valuable asset.

It must be remembered that the ore already treated was raised, comparatively speaking, near the surface, and it may be that, under the influence of atmospheric oxidation, it has been secondarily enriched. If such be the case, we should expect the ore obtained, as the quarries pushed further into the hillside, to yield less gold, and to be of a more refractory character. On the other hand, it should be pointed out that the ore consists of a compact rock which, when examined by me, did not appear to have undergone much decomposition; and, moreover, I was informed that the ore won from the southern quarry did not deteriorate as the face was carried forward into the hillside.

On the whole I was favourably impressed by the property. However, I am of opinion that a low-grade ore deposit of this character can only be profitably worked upon a very large scale. The present company have only a 10-head stamp battery upon the mine, whereas if the ore deposit be proved to run from the northern to the southern quarry a number of faces could be opened upon it, and 100 head of stamps could be kept running. By the adoption of a more judicious system of quarrying, and with the assistance of a tramway, I believe that the price (6s. 6d.) paid by the tributors for winning the ore and delivering it at the battery might be reduced by one-half. I would recommend that a series of short tunnels be driven into the hillside between the various cuttings. By this means the full extent and character of the ore deposit could be quickly determined. If it should be proved that a belt of rock yielding 3½ dwt. per ton of free gold runs from the southern to the northern quarry, then there would be years of profitable work in sight for a large battery.

Golconda Hill.—This name has been given to a high hill which rises abruptly from the left-hand bank of Bell's Creek, about 1½ mile S.W. of Sofala. It is composed of quartz felsite, and may be part of the formation occurring in the Queensland Mine. The quartz felsite is more or less impregnated with arsenical pyrites and traversed by thin quartz veins. In some places portions of it appear to have undergone a process of silicification. A little exploratory work has been carried out by Messrs. Herriot and Bennett, but no stone has been crushed, and I am unable to give any information as to what amount of gold the ore is likely to yield. However, I saw free gold in some of the stone which I examined, and a sample of pyritous rock which I picked out at random yielded, upon assay by Mr. J. C. H. Mingaye, Analyst to the Mines Department, gold at the rate of 6 dwt. 12 gr. per ton. I am of opinion that the circumstances warrant a thorough prospecting of the hill being undertaken, and would recommend that several parcels of 3 or 4 tons weight be taken from various parts and crushed. In any case the deposit should be worked in a manner similar to that adopted in the Queensland Mine, viz., by quarries carried in from the hillside. It will probably be found that a considerable portion of the gold is locked up in the arsenical pyrites; and it will be necessary, in order that the test may be a complete one, to treat the parcels of ore in a battery provided with fine vanners or other efficient concentrators.

Surface Hill is situated upon the right-hand side of the Wattle Flat, Sofala Road, and about midway between the two townships. It is composed of a much altered basic andesite, which would appear to have been at one time composed essentially of lath-shaped feldspars and augite. The southern portion of the hill is traversed by thin veins of auriferous pyrites, which trend in all directions. These veins vary in width from 1 inch to 3 or 4 inches. Their superficial portions have yielded in many instances fabulously rich ore. Indeed, I have reason to believe that during the last thirty-five years the aggregate gold won from them has totalled several tons. The hill is riddled with shallow shafts and trenches put down in exploiting the veins. At a certain depth below the surface, probably at the point where the gozzanous ore (coffee of the miners) gave place to pyrites, work has in each instance been stopped on account of the rich ore giving place to ore of a lower grade. In some instances the veins themselves may have "pinched out," but I have no authentic information upon this subject. An idea has long been prevalent in the district that a hill which was superficially so rich must contain still more rich ore at a depth. Imbued with this idea, a company some years ago sunk a shaft upon the hill to a depth of 170 feet without meeting with any payable ore; and I understand another company has recently been formed to drive a tunnel into the hill from its base. I am of opinion that the chances are against any of these pyrites veins being worked profitably at a depth. Their great richness at the surface is without doubt due to a natural process of concentration. The hill was originally much higher than we see it to-day. Under the ordinary processes of denudation the andesitic rock of which it is composed, and the auriferous pyrites veins ramifying through it, would be slowly worn away. The pyrites veins would succumb before the country rock and the greater portion of the gold as it was set free would fall downwards and be retained within the walls of the veins. If this process were continued for any length of time the gold contents of any particular vein might be increased a hundredfold and a low grade pyrites transformed into an ore of extraordinary richness.

The *Monarch Syndicate* have taken up a 30-acre G.L. upon the north-east side of the hill, where very little work has hitherto been effected. They have started an open face 40 feet long at a point 60 feet below the summit; and it is their intention, I am informed, to quarry away the whole of the upper portion of the hill.

hill. The rock as it is broken down will be examined, and the contents of any auriferous veins which may be met with culled out. It is proposed to construct a self-acting inclined tramway from the quarry to the Turon River, where a battery site has been procured.

Whalan's Hill is situated about midway between Wattle Flat and Sofala, upon the left-hand side of the road. Near its base Silurian (?) slates and limestones are to be found. These sedimentary rocks are, apparently, intruded by felspathic rocks, which form the summit. The igneous rocks have been much crushed and otherwise altered since their consolidation. Some of the specimens examined had a micro-crystalline ground mass, and others may have been originally holo-crystalline. Through the upper portion of the hill numerous thin veins of quartz ramify. Some of these veins have yielded small quantities of very rich gold ore, and a number of shallow shafts have been sunk upon them. An unsuccessful attempt has been made upon the western side of the hill to work these leaders upon a large scale in open quarries. I shall refer elsewhere to the large quartz vein which runs through this hill.

Wattle Flat Hill.—This hill overlooks the town of Wattle Flat from the west. It is composed in part of an exceedingly close-grained felsite, and in part of a basic andesite closely analogous to the Surface Hill rock. Both these igneous rocks have been much altered since their consolidation. The felsite is highly charged with iron pyrites, which probably has minute quantities of gold associated with it. Some very rich leaders have been worked in the andesite.

Quartz Reefs.

Big Oakey (Mini's Reef).—This reef has been worked intermittently for the last twenty years. It has frequently been abandoned and taken up again. Four years ago the Big Oakey Mine was bought by four miners, Messrs. J. Mini and Party, who had been previously working it upon tribute. I am indebted to Mr. Mini for the following particulars concerning the ore raised by his party:—

Date	Tons crushed.	Gold yield.	Average per ton.
18th July, 1891 to 28th July, 1892	688	oz. dwt. gr. 285 19 4	oz. dwt. gr. 0 8 7
28th July, 1892, to 19th Sept., 1895	1869	2,272 16 8	1 11 19

The reef underlays to the west at a very low angle; in some places it is perfectly horizontal. It varies in thickness from 6 inches to 10 feet, and has well defined walls. I believe the reef will be found to continue downwards to a great depth. The whole of the rich ore won by Mini and Party has been obtained from one shoot.

The reef has been worked by means of a tunnel 160 feet long, driven in from the side of the hill. From the end of the tunnel an underlay shaft has been carried down upon the shoot of ore to a depth of 350 feet. The rich ground on either side of the shaft has been stoped out for a length of from 25 to 40 feet; but, notwithstanding its well defined character, no levels have been driven, or other attempts made to explore the reef with a view of finding other shoots or payable stone. The system of mining which has been adopted is a most expensive one, and if the reef is to be developed and exploited upon a large scale, it will be necessary that a fresh tunnel be driven from some more convenient point, or that a working shaft be sunk. The ore is delivered by means of a shoot from the mouth of the tunnel to a ten-head battery in the gully below.

Solitary Reef.—This reef is situated about 1 mile south of Wattle Flat Township. It strikes N.E. and S.W., and can be traced for a distance of over half a mile. A few chains S.W. of the point where the reef passes across the Bathurst-Wattle Flat Road, a shaft, which is now in a dilapidated and unsafe condition, has been sunk to a depth of 390 feet. Mr. O. P. Clayton has kindly supplied me with the returns obtained by Messrs. Webb and Party, who worked the reef upon tribute during the five years ending December, 1887. It would appear that they raised 4,188 tons of ore, which yielded 2,177 ounces of gold, this being at the rate of a little over half an ounce to the ton.

A few chains north of this abandoned deep shaft Brailey and Party have sunk an underlay shaft to a depth of 80 feet upon the reef. At this depth the vein which had been dipping to the S.E. turned over and dipped N.W. Under these circumstances it was impossible to continue the underlay shaft, and a new vertical shaft was started from the surface. The new shaft has now cut the reef at a depth of 97 feet, and two short levels have been driven. The reef as seen in the levels is from 6 inches to 2 feet wide, with well defined walls. It would seem to be a "fissure vein," and will probably continue to a great depth. I was informed by Mr. Brailey that 6 tons of ore raised while sinking the underlay shaft yielded 17 dwt. of free gold per ton, and some concentrates, which assayed 12 oz. per ton.

Messrs. Ireland and Party are engaged in proving the Solitary Reef at a point distant about 400 yards S.W. of Brailey's shaft. It is here about 3 feet thick. They have sunk upon it 70 feet, and driven 25 feet each way, at a depth of 50 feet. The gold raised from these workings yielded gold at the rate of 3½ dwt. per ton.

The Solitary Extended Claim is situated a few chains N.E. of the Bathurst-Wattle Flat Road upon the Solitary Reef. Here a shaft has been sunk to a depth of 260 feet. I was unable to examine the reef in this shaft on account of the mine being closed down pending its being taken over by a new company who have recently purchased it. I was informed by Messrs. Webb and Party, who have been working the mine upon tribute, that they have raised from it between 500 and 600 tons of stone, which yielded upon the average 8 dwt. of gold per ton. The stone obtained in the lowest levels is highly charged with arsenical pyrites, and is of a refractory character.

Magenta Reef.—This reef runs parallel to the Solitary upon the east. At the time of my inspection no work was being carried out upon it; but Messrs. Webb and Party are erecting machinery with a view of pumping water from an old shaft and starting work afresh. The reef has been proved along its outcrop for a distance of 10 chains, and worked in one place to a depth of 170 ft. I was informed that the reef in this shaft had an average width of 15 inches, and that the stone raised yielded upon an average 9 dwt. per ton. Heavy water was met with in the shaft.

Riley's

Riley's Creek Reef.—The outcrop of this reef runs along the high ridge which overlooks Riley's Creek from the east. It was first worked thirty-five years ago. A level has been driven in from the hillside along the reef for a distance of 400 feet. In this level the vein is seen to be well defined, and to vary in width from 6 inches to 6 feet. Four distinct shoots of payable ore have been met with, and a considerable amount of stoping carried out upon the upper portion of them. Several shafts have been sunk, but the deepest workings, I was informed, were only 70 feet below the surface. In the lower workings a refractory ore largely composed of arsenical pyrites has been encountered. The ore already won has yielded from 8 to 15 dwt. of free gold per ton. Messrs. Grice and Party have recently been aided from the prospecting vote to drive a tunnel in from the level of the creek. This tunnel it is estimated will strike the reef at a depth of 200 feet.

Whalan's Hill Reef.—This reef underlays S.W. at an angle of 30°. An underlay shaft has recently been sunk, with assistance of aid from the Prospecting Vote, to a depth of 203 feet. The reef in this shaft has an average width of 3 feet 6 inches. The body of the reef for about 190 feet from the surface is composed of a compact barren looking quartz. A thin layer of foliated quartz is present in most places upon the hanging wall. Below the depth mentioned the general character of the quartz is changed. It becomes charged with ferric oxide, is less compact and more foliated, and it has yielded some rich specimens with coarse specks of free gold. No attempt has yet been made to prove the extent of the rich shoot.

A little work would seem to have been done from time to time upon the upper portions of the reef south of the underlay shaft, and several tons of stone have been stoped. In one place the shaft passes through these old workings.

McCudden's Reef.—Messrs. McCudden and Party, with assistance from the Prospecting Vote, have sunk a shaft to a depth of 80 ft. upon a newly discovered reef at Paling Yards, about 5 miles east of Wattle Flat. From the bottom of the shaft they have raised 17 tons of ore, which yielded upon crushing 34 ozs. of gold. The reef is made up of a series of quartz lenses, separated from one another by partings of slate. Reefs of this character are very common among the older slate rocks in the colony. The rich gold which they yield generally occurs in patches and not defined shoots.

Cox and McPeak's Claim is situated at Redbank, about 2 miles south of Wattle Flat. Two narrow and parallel leaders have been discovered which are distant from one another 2 feet. From a shaft which was only 25 feet deep over 100 oz. of gold had been won previous to my inspection. The gold is coarse and occurs for the most part not in the substance of the veins, but in a soft casing which runs between the veins and the country rock. I am informed that since my return to Sydney the country rock between the veins has been crushed and given a high return of gold.

Concluding remarks.

The gold deposits of Wattle Flat and Sofala consist of narrow veins which yield in their upper portions ore of extraordinary richness and which are now for the most part worked out. Also of large and irregular shaped masses of country rock, impregnated with gold-bearing minerals, and traversed by auriferous quartz veinlets. These formations taken *en masse* are of a low grade character, but judging from results hitherto obtained they would be payable if worked upon a large scale by a system of quarrying.

Several well defined and permanent quartz reefs occur upon the field. These reefs, as a rule, yield an ore of medium grade, though occasional rich shoots are to be found in them. It would seem to me that in a number of instances they have not hitherto been worked as they should have been. When a payable shoot of ore has been discovered the workings have been confined within its limits until it was exhausted, and no attempts made at the same time to explore the reef for other shoots. In other words exploration has not gone on simultaneously with exploitation. It is probably owing to this principle being neglected that the yields of gold have not been more regular in the past. I have, &c.,

JOHN B. JAQUET,

Geological Surveyor.

The Government Geologist.

APPENDIX 14.

Report on Dairy Creek Gold-field.

Sir,

Geological Survey Branch, Department of Mines, Sydney, 3rd June, 1896.

I have the honor to report that according to your instructions I have made a geological examination of the Dairy Creek Gold-field which is situated about 7 miles from Gundaroo in an easterly direction.

The formation in which the reefs occur consist of much indurated and highly cleaved slates, probably of Upper Silurian age.

Gold was worked upon this field twenty-five years ago. About 200 yards south of Cox and Kershaw's Claim a long open cutting is to be seen from which ore was raised at the period named.

Cox and Kershaw's Claim.

This party have excavated a cutting which at the period of my inspection was 30 yards long and 20 feet deep. The cutting runs parallel with the cleavage planes, which have a slight easterly dip. Altogether, I was informed 32 tons of stone have been raised, and the following crushings obtained:—5½ tons crushed at Bywong yielded 8 oz. of gold per ton; 5 tons crushed at Parke and Lacy's yielded 1 oz. 7 dwt. The ore was obtained from a series of short veins which vary in width from a fraction of an inch to 3 inches, and conform with the cleavage planes of the slates. Sometimes three or four of these veins all yielding gold will be found running parallel to one another for a short distance. I was shown specimens of quartz obtained which contained as much gold as stone, and at both ends of the cutting I knocked off pieces of ore which showed gold freely. The quartz in places is charged with mispickel (arsenical pyrites).

Outside of the cutting, and about 15 feet west of its southern end, another thin vein carrying gold has been struck.

A number of claims have been pegged out along a line running north and south through that one of Cox and Kershaw, and in most of them quartz veins similar to those already described have been met with. Some of these veins yield a little gold, but none of them have been shown to contain it in a payable quantity. Upon Cassidy's ground, about 30 yards south of Cox's cutting, a shaft has been sunk to a depth of 40 feet.

It

It was suggested to me that the numerous thin quartz lenses may run together and make a defined reef at depth. Auriferous veins of this description are very common in the older stratified rocks of the Colony, and in no instance am I aware of their having coalesced and formed a defined reef when sunk upon, nor do I think they are likely to do so in this instance.

The reefs were without doubt formed long before the country had, under the influence of the ordinary processes of denudation, attained its present configuration; and those portions of them which we examine at the surface to-day were probably many years ago several hundred feet below the surface. On the other hand, it should be pointed out that there is no reason why the reefs should not yield stone equally as good as that now being raised at any point along their course; but such ore, I believe, will be in scattered bunches and not defined shoots.

The cost of exploring and exploiting such narrow veins at a depth below the surface would be great, the quantity of stone which they would yield would be small, and the bunches of rich ore might be far apart; so on the whole I am of the opinion that the chances are against these reefs being mined profitably at a depth.

It is probable that future prospecting may result in other rich patches of ore being discovered upon the surface when they could be cheaply mined.

I have, &c.,

JOHN B. JAQUET,

Geological Surveyor.

The Government Geologist.

APPENDIX 15.

Report on Little River Gold-field.

Sir,

Department of Mines and Agriculture, New South Wales, 8 June, 1896.

We have the honor to report that according to instructions received, we have made a joint inspection of the Little River Gold-field, and beg to report concerning the same as follows:—

The Little River has its source in the Monga Mountains, and runs into the Shoalhaven River about 15 miles from Braidwood, in a northerly direction. The geological formations represented are much indurated Silurian (?) slates, with outliers of Devonian sandstone and conglomerate resting upon them. Near the base of the Monga Mountains there is a long sheet of basalt.

On either side of the river, for a distance back from its banks of from 100 yards to 2 miles, deposits of auriferous gravel occur. Similar drift deposits are to be found upon the banks of the various tributaries. We should roughly estimate that in the aggregate there must be at least 30 square miles of country covered with gold-bearing gravel within the watershed of the river.

The drifts are situated at various altitudes not exceeding 200 feet above the bed of the river. They vary in depth from a few inches to 10 feet.

The gold is for the most part coarse, and heavy nuggets have from time to time been obtained. It does not occur in defined leads, but is widely and irregularly distributed.

In the past the drifts have been worked with considerable success by a system of ground-slucing wherever water could be obtained for the purpose. Again, patches of ground have been rich enough to permit of their being profitably carted to the nearest water-course for treatment. The fact that large numbers of miners, notwithstanding the comparative shortage of water, have gained a livelihood upon the field is evidence of its richness. At the present time the diggings are supporting about 250 men.

The field languishes for want of a sufficient quantity of water for sluicing purposes, and it is only by supplying this deficiency that the output of gold could be largely increased.

The drifts are admirably adapted for sluicing. In nearly all instances they are upon elevated ground, so there would be no difficulty in obtaining the requisite fall for the tail-races. In this respect, and in containing upon the whole a larger quantity of gold, the Little River gravels differ from those accompanying the Shoalhaven River which were reported upon by one of the Writers in 1893.

Having regard to the altitude of the drifts, it would be necessary that any race intended to carry the waters of the Little River itself should head from near its source, where the supply during the greater portion of the year is small. The same remark applies in a lesser degree to the various tributaries.

Upon the western bank a race was constructed some years ago, which headed from the river a little below Macrae's Saw-mill. This race was found to be too low, and another one was brought higher up from the Northangera Creek, a tributary. These races were never carried far down the river, and they have long since fallen into disuse. They were only capable of delivering a small quantity of water.

A company is, we believe, now being formed to bring down another and larger race from a point above Macrae's Saw-mill and carry the same on to Bentley's and Leech's Points. It is proposed to augment the supply of water by tapping the heads of Northangera, and possibly other tributary creeks, with subsidiary races.

Upon the eastern side of the river numerous races have been constructed, which head from points high up upon the Currawang, Bob's, and Egan's Creeks respectively, and command large areas of ground. Numerous small races which cover limited areas of drift have also been made.

In conclusion, we would state that there are very large areas covered with auriferous gravel within the watershed of the Little River which could be profitably sluiced in the event of a supply of water being made available for the purpose at a not too expensive cost. We are unable, however, to point out where such water could be brought from. The amount which could be obtained by diverting the river and its affluent streams into races is, for reasons already given, very limited, and parties of miners and companies have largely made use of this source of supply in the past. It has been suggested to us that it might be possible to construct a large reservoir somewhere in the Budawang Mountains, which would conserve large volumes of storm-water. We consider that this question can only be answered by an engineer skilled in such work.

For many years to come the gold-field will probably give employment to a large number of fossickers. We believe, however, that any sudden influx of miners to the field at the present time would lead to disastrous consequences.

We have, &c.,

JOHN B. JAQUET,

Geological Surveyor.

E. L. MAITLAND,

Warden.

APPENDIX

APPENDIX 16.

Report on the Jinderbayne District.

Geological Survey Branch, Department of Mines and Agriculture,
New South Wales, 9 June, 1896.

Sir,

I have the honor to report that, in accordance with your instructions, I have made a geological examination of various mineral deposits in the Jinderbayne District.

Piper's Creek Diggings are situated high up on the Snowy Mountains, about 11 miles in a direct line from Mount Kosciusko. The gold occurs in shallow drift deposits consisting of black loam with subangular pebbles of granite and quartz. It is found in patches and not defined "runs." At the time of my inspection there were only two men mining upon the field, and I have reason to believe that they were making fair wages. During several months of the year the field cannot be approached with safety on account of the snow; and the rigorous climate and the long distance over which supplies have to be brought will always be against its advancement. There are large areas of drift deposits along the gullies in the vicinity of the workings, and I am of opinion that further prospecting may result in other payable patches being found.

From Piper's Creek I proceeded *via* Kosciusko and the Crackenback River to the Thredbo Diggings. The time at my disposal did not permit of my making an exhaustive examination of the rocks I passed over, and I have but few facts to add to those recorded by observers who had gone before me.

The dominant country rock is granite, which, under dynamo-metamorphic influences, has been changed in places into gneiss. It seemed to me that the gneissoid character became more pronounced as the summit of the range was approached. The foliation planes of the gneiss run approximately N.E. and S.W. and parallel with the main ridge.

Upon the eastern end of Boggy Plains at the head of Wilson's Valley I found dykes of basic augite andesite intruding the granite. I had a microscopic section prepared from a specimen of this rock which I collected. It consisted essentially of porphyritic crystals and rarely felspar imbedded in a micro-crystalline base.

Near the summit of Kosciusko micaceous slates and schists are to be found. These rocks possess a perfect cleavage with planes which are approximately parallel with the foliation planes of the gneiss. They have been much crumpled and contorted, and in places have undergone a process of silicification. These characteristics can be particularly well observed in the gap between the highest peak upon the Kosciusko Plateau and the Ram's Head Range. Here they include lenticular quartz veins of a character similar to those which yield gold elsewhere in the Colony. I knocked off a piece of the quartz and had the same assayed upon my return to Sydney, but it yielded neither gold nor silver. A gold reef is now being worked at the Grey Mare's, Bogong, about 17 miles north of Kosciusko, in this same belt of rocks, and in my opinion the circumstances warrant a careful prospecting of the country between these two places being undertaken.

The question as to whether evidence of a former glaciation are to be seen upon the Snowy Mountains has long exercised the minds of geologists. Dr. R. von Lendenfeld who examined the country in January, 1885, answers this query most emphatically in the affirmative.* He states that he found "rocks polished by glacial action in several places," and illustrated his report with a photograph of one of such rocks. Mr. Richard Helms, in a paper communicated by Prof. T. W. E. David to the Linnean Society,† states that he searched carefully in the Wilkinson Valley and elsewhere for striae and polished surfaces without finding them, though, he adds, the general appearance of the rocks at a distance suggested that they had been ground down by glaciers. Mr. Helms also records having found one piece of what he believes to be glacier-polished rock. In speaking of this specimen he says, "There are, however, no striae noticeable, which is rather remarkable as they are generally present on glacier-polished surfaces."

I did not see any polished surfaces or ground rocks which might reasonably be supposed to have been produced by moving ice. Upon Thompson's Flat (Tom's Flat) I was able to identify by means of the photograph which accompanies Dr. Von Lendenfeld's report the granite rock which he specially mentions as exhibiting glacier-polish. The smooth surface of this rock might well be the result of ordinary subaerial denudation. At the base of the mountain and elsewhere in the colony where granitic formations occur similar smooth surfaces are to be found. The grooves upon the rock are in section more or less V shaped. They consist of ordinary planes of parting which have been enlarged by weathering along their lines of emergence. A penknife blade can in many instances be inserted into these cracks. I agree with Mr. Helms when he states that the rocks forming the range would disintegrate too rapidly to permit of glacier-striae being retained upon their surfaces for any length of time.

Mr. Helms states that he found several terminal moraines, and he has prepared a map showing the localities where he believes glacier deposits exist. My stay upon the higher portion of the range was too brief to permit of my coming to any conclusion upon this point.

Thredbo Diggings are situated upon the Crackenback River, about 12 miles from Jinderbayne in a westerly direction. They consist of a wide alluvial flat which is covered with drift material to a depth of from 6 to 20 feet. The gold occurs in patches. At one time the field supported a number of miners, but there are now only one or two fossickers upon it.

Bark Huts and Boggy Plains Gold-fields are situated upon a granite formation near the head of the Mowambah River. Here I found between thirty and forty miners at work making from 10s. to £1 per week. The deposits closely resemble those which I have described as occurring at Piper's Creek. The drift consists of a black loam with subangular quartz pebbles. The sinking is never more than 3 feet. The gold is found in patches. It is for the most part rough and would not appear to have travelled very far. One nugget over half an ounce in weight has been obtained.

I am of opinion that the gold in the various alluvial diggings described has been probably derived from pipe-like reefs and narrow quartz veins in the granite. Near Piper's Creek several quartz reefs of unpromising appearance can be seen. Upon one of these, where the quartz had a little pyrites associated with it, a shallow shaft had been sunk. I was informed that only traces of gold were found in the stone. Upon the Bark Huts Diggings I picked up an angular fragment of highly pyritous quartz which without doubt had been shed from a vein near at hand. This specimen when assayed by Mr. Mingaye, Assayer to the Mines Department, yielded traces of gold and silver. I did not see any well-defined reefs in the vicinity.

At Mowambah, about 6 miles south of Jinderbayne, tin was discovered in quartz a few years ago. All the workings were abandoned, and I was only able to examine the lodes upon the surface. They appeared

* Government Printer, Misc. Pub., 1886. By Authority.

† Proc. Linn. Soc. N. S. Wales, 1893, viii, p. 349.

appeared to me to be short and not of great extent. I picked out from the heaps some good specimens of tin-ore consisting of coarse blebs of cassiterite embedded in white quartz. I was informed, however, that this rich ore only occurred in small pockets. A few bags of alluvial tin were obtained from the creek below the reefs. It is possible that other tin lodes may be discovered in the granite.

I visited Paupong and was shown several shafts which had been sunk upon quartz reefs. No work was being carried out upon the field, and I was unable to descend any of the shafts.

I have, &c.,

JOHN B. JAQUET,
Geological Surveyor.

The Government Geologist.

APPENDIX 17.

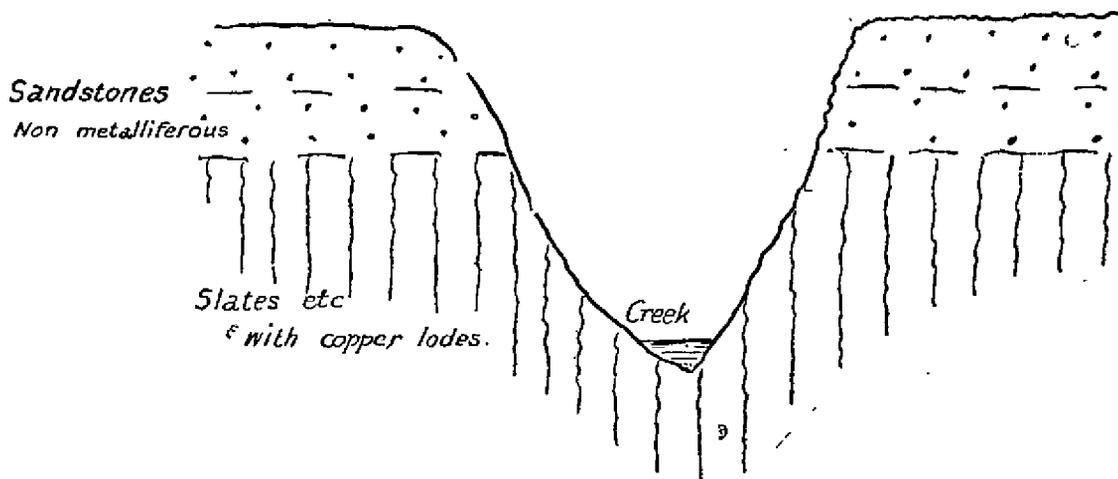

Report on Deposits of Copper Ore, Touga Creek.

Geological Survey Branch, Department of Mines,
New South Wales, 11 June, 1896.

Sir,

I have the honor to report that I have made a geological examination of the deposits of copper ore at Touga Creek, in the Parish of Touga, County St. Vincent, about 10 miles from Nerriga in a northerly direction.

The geological formations represented are horizontally bedded sandstones belonging to the Devonian or Upper Marine Series and much indurated slates and quartzites of Silurian age.

The copper lodes are confined to the slates, &c., and these rocks are only exposed along the lower portions of deep gullies which have cut through the sandstones, so the area available for prospecting is much restricted. (*Vide* sketch section .)

Messrs. Green, Wallace, & Co. have exposed the outcrop of a copper lode for a distance of 36 feet at a point distant about 100 yards below the junction of Touga and Quera Creeks. The lode is about 2 feet 6 inches wide. It does not appear to have defined walls, but like many other deposits of this metal seems to consist of country rock more or less impregnated with quartz and copper pyrites. I took three samples of the best ore, and these were assayed by Mr. Mingaye, Assayer and Analyst to the Mines Department, with the following results:—

(a) Copper	7.06 per cent.
Silver.....	2 oz. 18 dwt. per ton.
Gold	Nil.
(b) Copper	13.92 per cent.
Silver.....	15 dwt. per ton.
Gold	Nil.
(c) Copper	5.90 per cent.
Silver.....	4 dwt. per ton.
Gold	2 dwt. „

About 200 yards north of the lode last described another one has been discovered and traced for several chains upon the surface. It is about 1 foot wide. The country here is softer, and a little oxidation has taken place, the copper pyrites having a little copper carbonate (malachite) and black oxide (tenorite) associated with it. A picked specimen of this ore which I selected yielded on assay by Mr. Mingaye, as follows:—

Copper	13.16 per cent.
Silver.....	1 oz. 12 dwt. per ton.
Gold	A trace.

A little south of the junction of the two creeks the outcrop of a copper lode can be seen running up the precipitous banks of the Touga Creek.

In so far as no sinking or driving has been carried out upon these lodes, one would not be justified in expressing any opinion as to their value at the present time. However, the assays given above show that they are capable of yielding some fair ore.

I have recommended, and it has been approved by the Prospecting Board, that Messrs. Green, Wallace, and Party be assisted to sink a shaft to a depth of 50 feet, and to drive 50 feet from the bottom of the same upon the lode first described in this report.

Two circumstances will greatly increase the cost of working the lodes: one is the hardness of the country and the other the difficulty of transport to and from the top of the tableland.

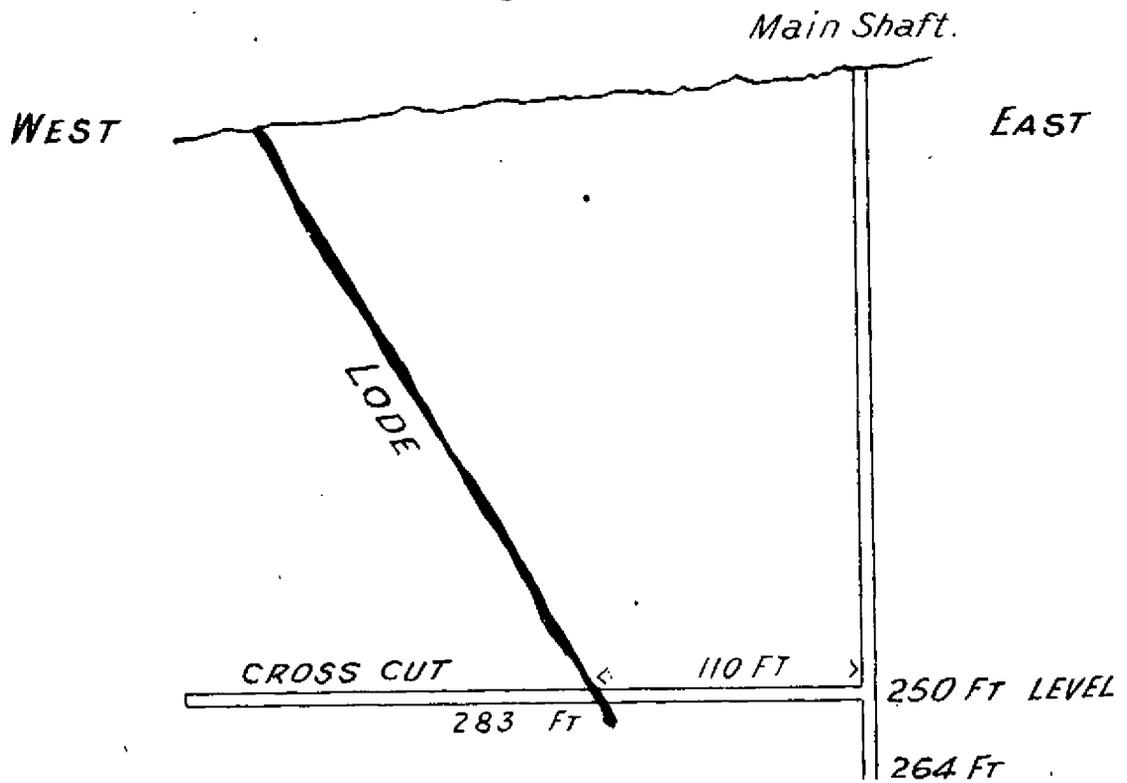

I have, &c.,

JOHN B. JAQUET,
Geological Surveyor.

The Government Geologist.

APPENDIX 18.

Report upon McMahon's Land, near Crookwell.

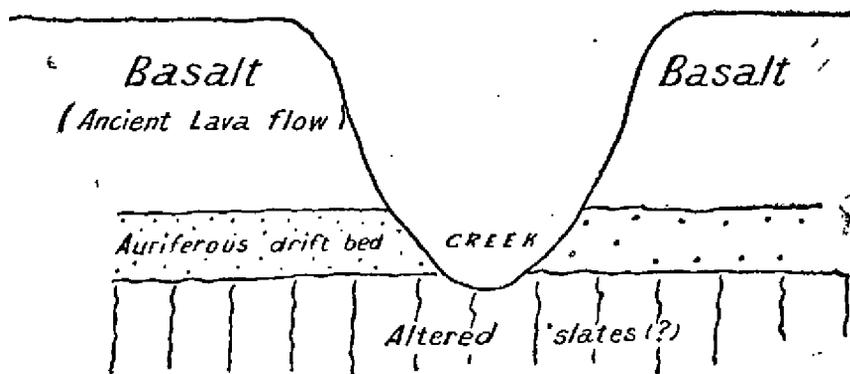

Geological Survey Branch, Department of Mines and Agriculture,
New South Wales, 21 July, 1896.

Sir,

I have the honor to report that, according to instructions received, I have made a geological inspection of the land of Mr. Murty MacMahon, near Crookwell.

I found upon the land an extensive sheet of basalt which had flowed over and covered up an ancient auriferous river bed.

In one place a creek had cut through the basalt and exposed the drift below.

A little gold has been obtained from the drift, including one nugget, which weighs 7 dwt. The precious metal would seem to occur in patches, and not defined "runs."

The drift bed could only be satisfactorily prospected by means of a tunnel. In order to provide for the bed-rock dipping downwards, it is necessary in cases of this description to start the tunnel a considerable distance below the outcrop of the bed it is intended to exploit. Now, upon Mr. MacMahon's property the floor of the deposit is sometimes below the bed of the creek, and never more than a few feet above it, hence no suitable site for a tunnel can be found.

I do not think the prospects sufficiently good to warrant the sinking of shafts through the hard basalt.

A few "fossickers" may from time to time earn a living by exploiting the drift bed along its line of outcrop.

I have, &c.,

JOHN B. JAQUET,

Geological Surveyor.

The Government Geologist.

APPENDIX 19.

Report on Cullulla Silver-lead Mine.

Geological Survey Branch, Department of Mines and Agriculture, 22 July, 1896.

Sir,

I have the honor to inform you that, in accordance with your instructions, I have made an inspection of the Cullulla Silver-lead Mine.

The lode which is being worked in this mine was reported upon by you in 1892.* You mention having taken a representative sample across the full width of the lode, which was found upon assay to contain 15.45 per cent. of lead and 2 oz. 9 dwt. of silver per ton.

The two shafts which you mention as having been sunk at the time of your inspection have been closed down. A new shaft has, however, been sunk about 200 yards north of the abandoned workings to a depth of 264 feet.

Upon the accompanying diagram I have shown the workings in connection with this shaft.

The level winds about and does not closely follow the lode. The end is now in country rock and apparently upon the eastern side of the lode.

The lode as seen in the level is not well defined, and I am of opinion would not pay for exploitation unless the galena contained a large quantity of silver.

I have, &c.,

JOHN B. JAQUET,

Geological Surveyor.

The Government Geologist.

APPENDIX 20.

Report on Ironstone Deposit, in Parish Wilmot.

Geological Survey Branch, Department Mines and Agriculture,
Sydney, 17 August, 1896.

Sir,

I have the honor to report that, in accordance with your instructions, I have made a preliminary geological examination of the deposit of ironstone which has been discovered by Mr. Thomas Adams, senior, in the Parish of Wilmot, County of Gloucester, near Seaham.

The ironstone consists of a compact granular rock composed essentially of magnetite with sand grains.

It occurs as a bed which is interstratified with arkose sandstones and conglomerates of Carboniferous age. In places the stratification planes can be seen in the ironstone. It is possible that a further examination may show that this bed forms an horizon of some importance in the *Rhacopteris* Beds.

Upon

Upon Portions 31, 32, and 33, and upon the land situated immediately west of these portions, the ironstone bed can be seen cropping out in places for a distance of about 60 chains. Towards the east the outcrop strikes nearly east and west, but as one travels in a westerly direction it would seem to swing round towards the north. I should mention that in view of the magnetic character of the ironstone, compass bearings taken in the vicinity may be only approximately correct.

A shallow trench has been put across the bed, but unfortunately at the period of my inspection it was full of water. I was informed by Mr. Thomas Adams, who accompanied me, that the bed was found in the trench to be 3 feet thick. It dips 1 in 2 a little east of south.

In the vicinity of Nine-mile Creek, about 3 miles distant in a north-easterly direction from the portions mentioned above, the same (?) bed of ironstone can be seen cropping up. It would seem here to dip a little west of north. Upon the attached sketch which has only been prepared tentatively, pending a further investigation of the geology of the district, I have shown how the intrusive mass of quartz-felsite forming the range east of Nine-mile Creek may have tilted the beds and brought the ironstone to the surface. If such a section be correct, then we might expect to find the ironstone bed cropping out again upon the eastern side of the range.

An analysis of the iron ore has been made by Mr. J. C. H. Mingaye, Analyst to the Mines Department. It was as follows:—

<i>Chemical Composition.</i>	
Moisture at 100° C.....	1.82
Combined Water	2.14
Silica (SiO ₂)	20.60
* Ferric Oxide (Fe ₂ O ₃)	60.72
* Ferrous Oxide (FeO)	4.73
Manganous Oxide (MnO).....	.22
Alumina (Al ₂ O ₃)	7.56
Lime (CaO).....	trace
Magnesia (MgO)	1.40
Phosphoric Acid (P ₂ O ₅)31
Sulphuric Acid (So ₃).....	.05
Titanic Acid (TiO ₂)	trace
Organic Matter	trace
	99.55

This analysis shows the stone to be a good iron ore which would compare favourably with the great majority of ores available for mining in the Colony. It differs from the ore at Ironstone Mountain in containing only a trace of that objectionable matter, Titanic acid. The percentage of silica is rather high, and the quantity of phosphorus present would probably render the pig-iron from the ore unfit for the manufacture of steel by the ordinary Bessemer process.

I have, &c.,
JOHN B. JAQUET.

NOTE.—The analyses below were made by Mr. J. C. H. Mingaye, Analyst to the Mines Department, from samples which I obtained from various points along the outcrop, and the results were not available till after the Report was submitted.

3,792	Fe. 46.48
3,793	Fe. 45.96
3,794	Fe. 47.85
3,795	Fe. 49.70
3,796	Fe. 41.50
3,797	Fe. 47.51
3,798	Fe. 53.35
3,799	3,792 to 3,798 mixed, yielded:—
Moisture at 100° C	1.45
Combined Water	1.79
Silica (Si O ₂)	16.52

APPENDIX 21.

Report on the Gilgunnia Gold-field.

Geological Survey Branch, Department of Mines and Agriculture,

Sydney, 24 September, 1896.

Sir,

I have the honor to inform you that, in accordance with your instructions, I have made a geological examination of the Gilgunnia Gold-field, situated 30 miles from Nymagee, in a south-westerly direction.

Gold, I have been informed, was first discovered upon the field by an aboriginal—Jacky Owen—about eighteen months ago.

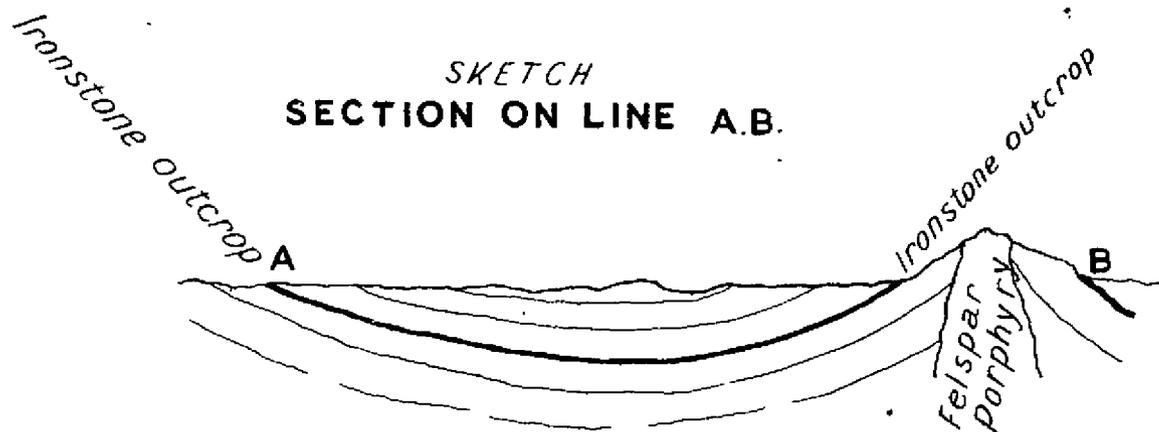

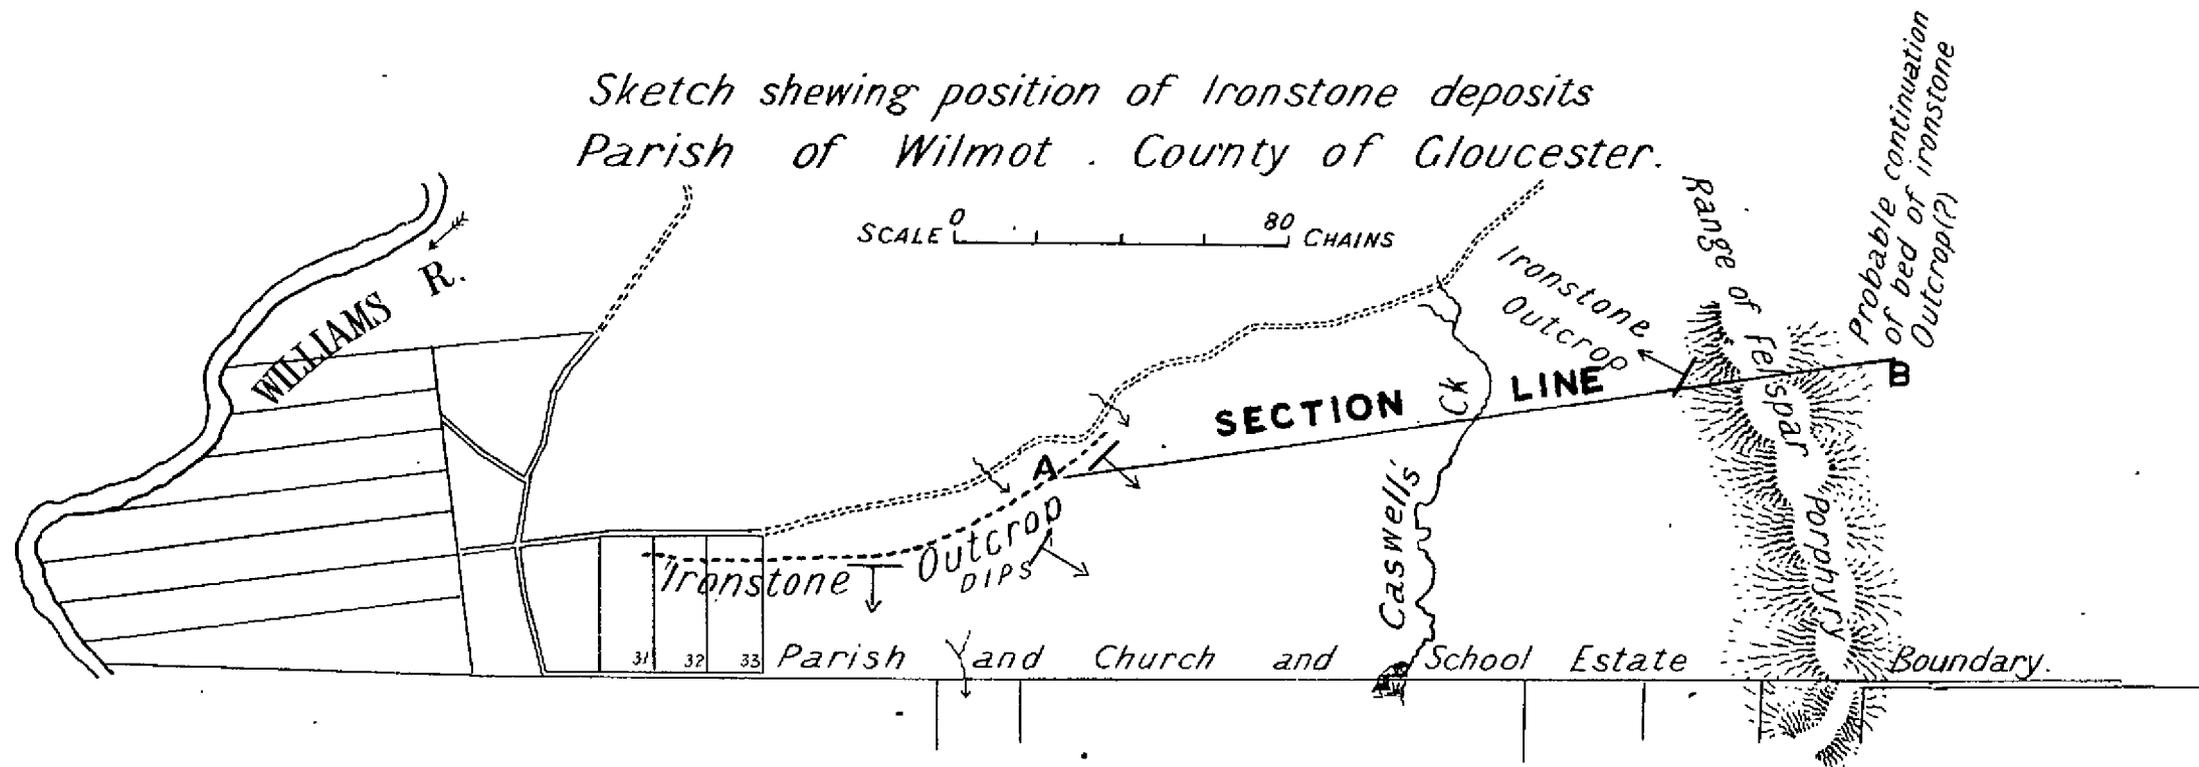

The field was reported upon by Mr. W. H. J. Slee, F.G.S., Chief Inspector of Mines, in July last year. †
