It is neither just nor suitable that an institution which has an average daily number of 224 beds, occupied by cases of which a large majority are acute, should be in charge of a staff of only three medical men. If all of them were at all times on duty, they might possibly manage without excessive labour; but they must occasionally have leave; and in this connection the remote and inaccessible position of this hospital must again be mentioned, which, while it renders change desirable for those whose work confines them within its boundaries, makes it necessary that that leave should be somewhat longer than is customary, since much of it is necessarily consumed in travelling by road towards any place it may be desired to visit. When, therefore, one of the staff is absent on leave, the whole of the work has to be done by the remaining two; and it need not be pointed out that it is scarcely possible for two to transact all the business of a day, or even of an afternoon. As a matter of fact, the present Medical Superintendent has never felt able to take the leave to which, by the rules of the Service, he is entitled.

The following recommendations have accordingly been already made:—A third junior resident should be appointed without delay, thus raising the medical staff to four; but provision should be made on the Estimates for a fourth junior, who should not be appointed until he is found necessary after trial; these appointments to be made, as heretofore, from the best of the students annually attaining to their degrees at the University. Secondly, while these gentlemen should severally be engaged for the term of one year only, one among them should be selected for a second year, in order that the Medical Superintendent should have at command a deputy to whom he could entrust more important matters, and who might to some extent be charged with supervision of the juniors. The junior members should receive a smaller honorarium than they do at present, while the senior among them should receive something more.

In the second place, the post of Medical Superintendent should be so increased in value that some gentleman who has practical familiarity with hospital management, and who has proved his competency therein, may be attracted and retained. Here, again, the situation of the hospital must be insisted upon in connection with its remoteness, or, rather, with the time consumed in reaching it, from the department. I have thus far kept it under supervision; but I am obliged to say that my increasing duties render it difficult for me to devote as much time to visiting it as would be necessary for efficient control. It is desirable that the Medical Superintendent should for the future be entirely responsible for conduct of this establishment, in a sense which would render such visits of inspection as I shall alone have time for sufficient to my efficient control and departmental administration.

Certain other matters are involved in these recommendations. It will be necessary to increase the accommodation at the quarters occupied by the junior medical staff, and it will be necessary either to increase the accommodation at the present quarters occupied by the Medical Superintendent, or to erect a new dwelling for him, with a view to using his present quarters for another purpose.

In the third place the outdoor staff is no longer able to attend to the duties to which they were appointed, and in consequence the extensive roads and grounds have fallen into a state of disorder which, while unavoidable, is not creditable. This same difficulty has arisen before, and in the same way; attendants appointed to outdoor work have gradually been withdrawn therefrom by increase of number of patients, and have not been promptly replaced. The men referred to, besides attending to minor road-mending and some gardening, are responsible for cleanliness and tidiness of yards and the extensive verandahs, and are necessary.

During the year the Public Service Board, perceiving some inequality between the leave granted to members of the nursing and female serving staffs of this and of other Government institutions, appointed a sub-board to consider and recommend an uniform plan. This sub-board, which consisted of the Chief Medical Officer of the Government, the Inspector-General of the Insane, the Comptroller-General of Prisons, and the Director of Government Asylums, recommended a regulation to the Board by which fifty-two days clear leave per annum should be secured to nurses in the Service; and, in the case of this hospital, that the times at which that leave should be taken should be left to departmental regulation. After consideration and consultation with the superior officers of the institution, by whom the wishes of the nursing staff were ascertained, I decided that twenty-eight of the days should be taken as annual leave, and that the other twenty-four should be devoted to granting two days' leave a month.

In order to carry out this arrangement, however, it was necessary to increase both the nursing and the female serving staffs—the former by nine members, the latter by three. This it was impossible to do until new buildings to accommodate them should have been erected. You approved the proposed arrangement, provided salaries for the increased staff, and appropriated a sum to the erection of the required buildings; but the latter were not erected during the year, and, consequently, neither were all the new members of staff appointed, nor was it possible to allow the increased leave authorised. The matron, however, voluntarily found room for two additional nurses by giving up to them a portion of her private quarters, and those two were appointed. The nursing staff for part of the year thus amounted to thirty-nine, as already mentioned above.

During the year a new infectious ward was erected, to hold twenty beds, in the best position which offered, but it did not begin to be occupied. This increase was rendered necessary by the number, and even more by the variety of kinds and combinations, of infectious cases so fully occupying the available parts of the institution, that many cases for which isolation was sought had to be refused; especially cases of diphtheria had to be refused. Convalescents from diphtheria, whom it is customary to admit from the only other hospital at which such cases are regularly treated,—the diphtheria branch of the Children's Hospital at the Glebe—also had to be excluded. This latter hospital can accommodate only twelve patients. After introduction of the antitoxin treatment of that disease, it began to be largely occupied with convalescents (who before that treatment would in all likelihood have died); and, since a hospital which is near the homes of those who are compelled to send their children away for treatment is always preferred to one which, like the Coast, is so situated as to be practically inaccessible to such people, it was necessary to devise some means of so relieving the Glebe hospital of its convalescents that it might be kept available for receipt of new and acute cases. Refusal, for want of room, to take over further convalescents (who, though in course of recovery, were still infective, and, therefore, could not be discharged to their homes) was a very serious matter to the sick poor and to the country, since failure to admit to hospital too often means death of the patients in the case of this fatal disease. The addition mentioned was, therefore, urgently required; and, as far as it goes, will afford most useful accommodation during the ensuing year.

No institution for relief of the treatment of disease in any place can be considered apart from all other such institutions in the same place, nor apart from those which are designed to house the infirm poor. Broadly speaking, they all have one object, and, though their managements may be differently constituted, they all subserve each other in ways which are more or less direct. This, which is always the case, is especially clear in this country, where almost all of such institutions are supported in large measure from public moneys regularly granted them. A reason for increasing the number and status of the medical staff, which has not yet been mentioned, furnishes another illustration of this interdependence than that just given above. This is the increasing need there is that those operations of surgery which are called "minor" should be performed there. The greater operations, which never are performed except in the presence of several competent surgeons, can never be done there; because the distance of the place is such that it cannot enjoy the advantage of a large honorary staff, nor, indeed, of any other than the resident staff. But the lesser operations may, and should be, done there; and the reason is the following. The diseases which necessitate them are incapacitating, and the patient cannot resume work, be it household or outdoor, until relieved; they are often not progressive, and most often merely incapacitate those who suffer from them until some operation shall have been performed. Now the metropolitan hospitals are usually full, and, at all events, have many beds occupied by those persons who require major operations. When, therefore, some of the less severe cases apply to them for admission, they are too often of necessity refused; but, when the applicants are poor, they must be provided for somewhere, since, until they are operated on, they cannot work. Such persons, therefore, are often transmitted to the Coast, and are retained there until a vacancy for them at a metropolitan hospital occurs. But, since all that these persons require to re-establish them is the operation, it follows that their stay in bed where no operation can be done is a sheer waste of time and unnecessary expense to the country, it might, and in future must, be avoided. By increasing the medical staff, a portion of it will be at liberty to devote the time to these cases which, for the present, they are ill able to spare; and, though at first sight this expansion appears to be a mere increase of expense, it will, by enabling the cases referred to to be dealt with immediately and discharged soon, in reality be an economy.

As to use of a part of this institution as a hospital for isolation of cases of infectious disease, it may be pointed out, first of all, that the number received has very largely increased during the past four or five years, and that the total number of such cases admitted during 1897 was nearly 500. This was due, mainly, to prevalence of epidemics of scarlet fever and diphtheria; partly also, no doubt, to better understanding of the uses of isolation by the public. Secondly, it must be mentioned that the buildings which alone are available for isolation of such diseases are entirely unsuitable in point of construction and arrangement, and that successful management of this branch reflects great credit on the Medical Superintendent. Thirdly, though it may be true that freer use of this hospital for isolation purposes—there being no other devoted to this work in the country—is due, in part, to improved knowledge on the part of the public, yet I am of opinion that it has been chiefly due to prevalence of diseases in epidemic form, and, therefore, I point out that it is entirely unsuited to that purpose, not merely by construction, but also by remote position. It is most important that the early cases of infectious disease in any epidemic, and in any household, should be at once isolated, but universal experience shows that the public will not willingly or freely send their children to a place at such a distance from their homes that they are, practically, precluded from at least calling at the gates frequently to inquire after them. And, in fact, this hospital cannot be reached except at a real expense for travelling, and, which is perhaps more important, the loss of a day's work. It is, therefore, not nearly as useful as it might, or should, be, and, probably, the isolation work done by it is, for that reason, not fully commensurate with its cost. It is necessary that isolation hospitals should be erected at certain points of the metropolitan area which are near the houses whose inhabitants are to be served by them, and, were this done, not only would they furnish an important means of controlling infectious diseases, but also they would set free about eighty beds at the Coast Hospital, which are much wanted for general cases. The hospital accommodation for Sydney is once more becoming reduced below what is required.

At beginning of the year some effort began to be made to introduce the eight-hours' system into this hospital, and, in short, to regulate it in accordance with the recently-enacted Factories and Workshops Act. The agitation was carried into Parliament, where its impracticability was recognised in a protracted debate, and it fell, consequently, to the ground. No particular reason for selecting the Coast Hospital as the subject of this proposal appeared; and it is due to the members of the nursing staff to say that they had never at any time invited it, nor did they at any time join in it. In short, the result, before the discussion (which was conducted with much freedom of assertion on one side) was brought to a close, was that the nursing staff became much irritated and offended at what they regarded as a gratuitous and unwarranted intrusion on their private affairs.

Dr. R. U. Russell continued to discharge the duties of medical superintendent during the year; Miss MacMaster continued in the position of matron; Drs. Higgins and Farrell, of the temporary medical staff, were replaced on termination of their engagement, by effluxion of time, by Drs. Cooley and Dey; Mr. Willman continued in the post of storekeeper. I am happy to be able to report that all these officers, and the staff as a whole, performed their duties entirely to my satisfaction.

I have, &c.,

J. ASHBURTON THOMPSON,

Chief Medical Officer of the Government.

APPENDIX A.

TABLE I.—General Statement showing Total Admissions, Transfers, Discharges, Deaths, Average Daily Number, and Average Stay of each Patient during the year 1897.

1898.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

REPORT
OF THE
ROYAL COMMISSION

APPOINTED TO MAKE

A diligent and full inquiry into the Home-teaching Society for the Blind, and the Industrial Home for Blind Women and Retreat for the Aged Female Blind, Strathfield, and other matters connected therewith.

(APPOINTED 22ND DECEMBER, 1897.)

Printed under No. 1 Report from Printing Committee, 30 June, 1898.

SYDNEY: WILLIAM APPLIGATE GULLICK, GOVERNMENT PRINTER.

Commission.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen,
Defender of the Faith, and so forth,—

To Our Trusty and Well-beloved—

JOSEPH BARLING, Esquire, Chairman of the Public Service Board, and one of Our Justices of the Peace of Our Colony of New South Wales, Associate of the Institution of Civil Engineers ;

GEORGE ALEXANDER WILSON, Esquire, a Member of the Public Service Board, and one of Our Justices of the Peace of Our said Colony ; and

JAMES POWELL, Esquire, Deputy Member of the Public Service Board, and one of Our Justices of the Peace of Our said Colony,—

Greeting :—

KNOW ye, That We, reposing great trust and confidence in your ability, zeal, industry, discretion, and integrity, do, by these presents, authorise and appoint you, or any two of you, as hereinafter mentioned, to make a diligent and full inquiry into the "Home-teaching Society for the Blind" and the "Industrial Home for Blind Women and Retreat for the Aged Female Blind," Strathfield, and other matters connected therewith : And We do, by these presents, grant to you, or any two of you, at any meeting or meetings to which all of you shall have been duly summoned, full power and authority to call before you all such persons as you may judge necessary, by whom you may be better informed of the truth in the premises, and to require the production of all such books, papers, writings, and all other documents as you may deem expedient, and to visit and inspect the same at the offices or places where the same or any of them may be deposited, and to inquire of the premises by all lawful ways and means : And We do give you power, at your discretion, to procure such clerical and other assistance as you may deem necessary for enabling you duly to execute this Our Commission : And Our further will and pleasure is that you do, within three months after the date of this Our Commission, certify to Us, in the office of Our Chief Secretary, under your or any two of your hands and seals, what you shall find touching the premises : And We hereby command all Government Officers and other persons whomsoever within Our said Colony, that they be assistant to you and each of you in the execution of these presents : And We appoint you, the said JOSEPH BARLING, Esquire, to be President of this Our Commission, which said Commission We declare to be a Commission for all purposes of the Act 44 Victoria No. 1, intituled "*An Act to regulate the taking of Evidence by Commissioners under the Great Seal.*"

In testimony whereof, We have caused these Our Letters to be made Patent, and the Great Seal of Our said Colony of New South Wales to be hereunto affixed.

Witness Our Trusty and Well-beloved the Honorable SIE FREDERICK MATTHEW DARLEY, Knight Commander of Our most distinguished Order of Saint Michael and Saint George, Our Lieutenant-Governor of Our Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this twenty-second day of December, in the year of Our Lord one thousand eight hundred and ninety-seven, and in the sixty-first year of Our Reign.

(L.S.)

FREDK. M. DARLEY, Lieutenant-Governor.

By His Excellency's Command,

JAMES N. BRUNKER.

Entered on Record by me, in REGISTER OF PATENTS No. 19, page 179, this twenty-fourth day of December, one thousand eight hundred and ninety-seven.

For the Colonial Secretary and Registrar of Records,

CRITCHETT WALKER,
Principal Under Secretary.

ROYAL COMMISSION OF INQUIRY INTO THE INSTITUTION FOR THE
BLIND, STRATHFIELD.

REPORT.

To His Excellency The Right Honorable Henry Robert, Viscount Hampden,
Governor and Commander-in-Chief of the Colony of New South Wales
and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY:—

We, your Commissioners, appointed on the 22nd December, by letters patent, to make a “diligent and full inquiry into the Home-teaching Society for the Blind,” and the “Industrial Home for Blind Women and Retreat for the Aged Female Blind,” Strathfield, have now the honor to submit our Report.

Amongst the papers which were submitted to us by the Honorable the Chief Secretary was a report of the late Director of Government Asylums on the affairs of this Institution, together with minutes of evidence which that officer had taken and on which his report was based. The allegations contained in these minutes have formed the basis of our inquiry.

We were anxious to avoid printing the documents above referred to, because the statements therein have been to a great extent repeated before the Commission, but inasmuch as they formed the foundation of our investigation we felt compelled, though with some reluctance, to include them in the report of our proceedings, especially as they were often referred to in the course of our inquiry, and throw considerable light on the subject.

The Commission suggested to Mr. Bruncker that it would facilitate their work if Mr. Maxted were authorised to appear before them and conduct the case on behalf of the Government, and this the Minister was pleased to give his consent to.

In carrying out the inquiry we decided to allow the members of the two Committees of the Institution and also Mr. H. S. Prescott, one of their officers, who is blind, the privilege of calling witnesses and of cross-examining all witnesses brought before the Commission, and this privilege, it will be seen from the evidence, was availed of to the fullest extent.

We propose to deal with the subject under three distinct heads ;

1. The financial administration and general management of the Institution as an organisation in receipt of subsidy from the Government ;
2. The utility of its work in meeting a public requirement ; and
3. The conduct of Mr. Prescott.

We will first, however, give a brief account of the Institution and the circumstances which led to its formation.

It has two distinct branches—one known as the “Industrial Home for Blind Women and the Retreat for the Aged Female Blind” and the other as “The Home-teaching Society for the Blind.”

Until recently there have been two committees of management ; a committee of ladies had charge of the conduct and internal economy of the Home, and a committee of gentlemen controlled the work of the Home-teaching Department and the finances of both branches. At a recent date, and at a late stage in our inquiry, it was decided by the committees to have one general committee, from which sub-committees responsible to it should be appointed to control the two branches of the Institution.

In

In the year 1877, through the instrumentality of Mr. H. S. Prescott, who had come from Melbourne to Sydney, the work of the home-teaching department was initiated under a committee of management, with Mr. Prescott in the position of "Teacher and Missionary."

In March, 1884, steps were taken by Mrs. Prescott, with the assistance of her husband, towards the formation of a home for indigent blind women, where industries of a nature suitable to blind persons might be conducted. No such institution for the accommodation and employment of women was at that time in existence in the Colony, and Mrs. Prescott having been successful in equipping a home at Alexandria (in which at the end of that year there were seven inmates), a committee of ladies interested in the work was formed for its control, Mrs. Prescott occupying the position of Hon. Corresponding Secretary and Honorary Collector.

At the end of 1884, the finances of the two branches, of what was then termed the New South Wales Mission to the Blind, were amalgamated, all receipts being placed to the credit of one general fund, and no complete separation of the expenditure under each head was made. This system has continued to the present time.

In 1886, the Home was removed to Petersham, and the need having been felt for more suitable premises, a "building fund" was established in the following year.

In 1887, a change was made in the name of the institution, which was henceforward known as "The New South Wales Home Teaching Society for the Blind and the Industrial Home for Blind Women," with the addition to the title, in 1891, of the words "and Retreat for the Aged Female Blind. From the latter year it has been styled for general purposes as the "Institution for the Blind." In 1891 premises were erected at Strathfield and occupied at the close of that year.

(I) THE FINANCIAL ADMINISTRATION AND GENERAL MANAGEMENT OF THE INSTITUTION.

Government Assistance.

The assistance which this Institution has received from the State has been of a most liberal character. Early in its career Government aid was sought and obtained, and for several years past its funds have been supplemented by subsidies at the rate of £2 per pound on a portion of the subscriptions collected from private sources, and £1 per pound on another portion, with a limit of subsidy of £500 per annum in each case.

The former subsidy has been obtained from the Public Instruction Department under a Parliamentary vote taken for "Instruction to the Blind," and the latter has been paid by the Chief Secretary from a vote taken in aid of the "Home for Indigent Blind Women."

From the year 1884 to 1897 the amounts of Government subsidies so received have been as under:—

For the Home-teaching Department	£6,356
For the Industrial Home	4,845
Total	£11,201

and there has been in addition a Government grant of £1,650 made to enable the institution to purchase the site on which the present Home was erected in 1891. Besides the assistance rendered in this direction, the Government have, since 1894, paid at the rate of £10 per head per annum for the maintenance of inmates transferred to the Home from Newington Asylum, and the officers of the Home-teaching branch have been granted free railway passes for themselves and guides, the cost of which, amounting in 1897 to £177 (before which it was considerably higher), has been borne by the Chief Secretary's Department.

Finances.

As before stated, the finances of the Institution have been under the control of the Committee of gentlemen which also administered the Home-teaching Department. The expenses of the Home were defrayed by that Committee placing to the credit of the Home Committee, in a local bank, amounts periodically certified to by the latter as being required.

It

It has been already mentioned that a building fund was started in 1887, to the credit of which were placed at the end of every subsequent year unexpended portions of revenue, supplemented by collections raised specially for that fund. The following table, taken from the "Abstracts of Receipts and Expenditure" in the Annual Reports, shows to what extent the Institution was able to utilise its funds for building purposes.

Year.	Government Subsidies.	All other receipts, excluding subscriptions received for special objects.	Total.	Expenditure.	Balance transferred to Building Fund.
	£	£	£	£	£
1887	389	830	1,219	927	250
1888	650	861	1,511	1,111	350
1889	1,144	988	2,132	1,146	900
1890	1,000	1,150	2,150	1,192	900
1891	1,150	1,620	2,770	1,603	1,100
1892	1,000	1,800	2,800	1,547	1,200
1893	1,500	1,467	2,967	1,397	1,500
1894	1,000	1,229	2,229	1,381	800
1895	500	1,279	1,779	1,597	150
1896	1,000	1,254	2,254	1,589	650
1897	1,000	1,037	2,037	1,702	400
	10,333	13,515	23,848	15,192	8,200

These abstracts do not give the entire financial operations of the Institution; but, after reference to other portions of the reports, the following statement has been prepared, covering the period mentioned in the foregoing table.

Revenue and Expenditure of period 1887 to 1897.
(Since inception of Building Fund.)

<i>Revenue.</i>				<i>Expenditure.</i>			
	£	£		£	£		£
Balance from 1886		376	Cost of building, fencing, &c. ...	9,588			
Government subsidies	10,333		" land	2,150		11,738	
" grant for land	1,650						
		11,983

		1,472*					
Government allowance for support of inmates	206		Other expenses		16,374		
Other receipts	3,537						
		3,743					
		27,640					
Dr. balance at end of 1897		472					
		£28,112					£28,112
		£					
Outstanding accounts	45						
Stock and material in hand	326†						
		£371					
Chief Secretary's subsidy for year 1897, paid in 1898	£450						
Government allowance for support of inmates in 1897, paid in 1898	£60						
		£510					

I certify that I have compared this Statement with an Abstract of Receipts and Expenditure compiled from the Accounts in the Annual Reports of the Institution for the Blind, Strathfield, from 1887 to 1897 inclusive, and found the same to be correct.

Department of Audit,
21st March, 1898.

G. E. BRODIE,
Chief Inspector of Public Accounts.

* These funds having been expended interest must be allowed on them out of revenue until they are restored.
† The stock and material were valued by a Government official on the 19th March, 1898, at about £215.

It will be seen from this that the moneys received from the Government more than equal the total cost of the building and the land.

The propriety of expending Government subsidies in the erection of buildings has been questioned, but as we find the subsidies are granted free of conditions as regards expenditure, we cannot attach any blame to the Committee of the Institution for appropriating them in that way.

It may be doubted, however, whether it was clearly before the minds of the Government and Parliament that so large a portion of the annual income was used for such a purpose.

No Government control is exercised in the expenditure of these subsidies after they have left the hands of the Colonial Treasurer, and that such is the case your Commission think indicates a grave defect in the administration of the large amounts granted by the bounty of Parliament for charitable objects.

INDUSTRIAL HOME FOR BLIND WOMEN AND RETREAT FOR THE AGED FEMALE BLIND.

The Commission visited the Home at the outset of their inquiry.

It is a plain brick structure of two storeys, with a frontage to the Albert-road, Strathfield, of about 120 feet, and provides accommodation for about 50 inmates. A wing of the building is occupied by Mr. and Mrs. Prescott, who pay an annual rental of £55. The land upon which the building is situated is about $4\frac{3}{4}$ acres in extent, including an allotment recently purchased.

In 1894 a wing was erected at the rear of the building at a cost of about £300, for the separate treatment of infirm inmates. It contains twelve beds, but nine only were in occupation when your Commissioners visited the Home.

When proposing the erection of the present building the Committee had naturally in view a probable expansion of their operations and provision was made accordingly; how far this anticipation has been borne out will be seen from the following table of the number of inmates in the Home at the end of each of the years named:—

1890	...	15			
1891	...	13	The new building was occupied at the end of this year.		
1892	...	23			
1893	...	27	Includes 6 transferred from Newington Asylum.		
1894	...	27	„	7	„
1895	...	31	„	8	„
1896	...	29	„	6	„
1897	...	31	„	6	„

In arriving at the average annual cost per head of the inmates during the period 1892 to 1897, we are met with the difficulty of not being in possession of figures showing the separate expenditure on account of the Home, owing to the amalgamation of the accounts, but it is estimated at about £23 14s., made up as follows:—

Provisions, clothing, medicine, &c., fuel and gas	...	£10	2	0
Salaries and wages	...	8	6	0
Travelling	...	1	16	0
Furniture, repairs, and general expenses	...	3	10	0
		<hr/>		
		£23	14	0

This is exclusive of any charge for rent.

As the name of the Institution implies, it is one in which industries are carried on. These consist in the main of brush and broom making, chair-caning, halter-making, netting, and the manufacture of clothes-lines. The inmates also make and repair their own clothing, and do a large portion of the housework under the guidance of sighted officials.

The

The Annual Report for 1897 contains the following information as to the articles made during the year :—

4,268 brushes of different descriptions.
 1,691 halters.
 132 chairs re-caned.
 4 netted articles.
 7 pairs of stockings knitted.
 391 undergarments.
 20 yards tatted lace.
 16 horse nets.

It will be seen that the first item is of by far the most importance. A portion only of the brush-work, however, is performed by the inmates. The preparation of the wood-work for the reception of the hair, fibre, &c., and the final finishing off of the rough articles for the market are done by a salaried instructor. Through the recent resignation of this latter official the industry has for the present ceased.

The following table shows the ages of the inmates and the work in which they are now mainly engaged during the hours of employment, which are from 9 o'clock a.m. to 6 o'clock p.m., with an interval of one and a half hours in the middle of the day :—

No.	Age.	Occupation.	No.	Age.	Occupation.
1*	16	Learning to knit.	16	61	Needle-work and chair-caning.
2*	21	Chair-caning and knitting.	17	62	Needle-work.
3*	22	Knitting.	18	63	Needle-work and learning to knit.
4*	29	Knitting.	19	66	Needle-work.
5*	29	Knitting.	20	50	} Do not work.
6*	30	Chair-caning and knitting.	21	57	
7	33	Housework.	22	60	
8	35	Previously in the Home, recently returned.	23	69	
9	39	Housework.	24	71	
10	48	Mending.	25	72	
11	48	Chair-caning and netting.	26	74	
12*	52	Chair-caning and learning to knit.	27	77	
13*	53	Brush-work only.	28	78	
14	54	Housework.	29	81	
15	55	Halter-making.	30	82	
			31	88	

* Engaged in brush-making before the resignation of the instructor.

Two of the inmates now in the Home were for some years maintained at the cost of the Colony of Tasmania from whence they came. The payments on their behalf have been withdrawn since the beginning of the year 1897, and your Commission suggests that these persons should not be allowed to become a permanent charge upon the charities of New South Wales, but that the Government of Tasmania should be asked to continue the support before given, or provide for their return and maintenance in that Colony.

During the period 1884–91, the profit to the credit of the manufacturing account was £441, since then (*i.e.*, since the erection of the present building) to the end of 1897, the net earnings have been £174, excluding from the expenditure a portion of the salaries of the officials for time occupied in the supervision of the work, other than brushmaking, and the disposal of the goods, and assuming that the value of the stock and material on hand at the 31st December last was as stated in the Annual Report of the Institution.

The following statement shows how this latter profit has been arrived at:—

Manufacturing Account—1892–1897.

Sale of work	£1,339	Outstanding Accounts at end of 1891	£114
Outstanding Accounts at end of 1897	45	Stock and material at end of 1891	76
Stock and material at end of 1897	*326	Wages of officials	389
		Material and tools	890
		Cartages	41
		Premiums	26
		Profit on work	174
	<hr/>		<hr/>
	£1,710		£1,710
	<hr/>		<hr/>

I certify that I have compared this statement with an Abstract of Receipts and Expenditure compiled from the accounts in the Annual Reports of the Institution for the Blind, Strathfield, and found the same to be correct.

Department of Audit,
21st March, 1898.

G. E. BRODIE,
Chief Inspector of Public Accounts.

It will be seen that were this manufacturing account dealt with as a business concern, it would have to be debited with the cost of maintenance of the workers and a charge for rent.

The amount £26, for premiums paid during the last six years, is the sum which has been given to the working inmates in consideration of the goods which have been made by them; and is so small, being under 2 per cent. of the total sales, divided amongst several persons, that it can not be regarded as remuneration for labour. It need hardly be said that the small amount of premiums is a cause of dissatisfaction to the workers, but we propose to deal with this subject more at length when we come to report on the question of charities generally.

The Home since its inception has been under the active guidance of Mrs. Prescott, who has given her services gratuitously, aided by a small staff of servants.

Of the interest which Mrs. Prescott has exhibited in the work evidence is not lacking, but it has been stated by some of the inmates and ex-inmates that her general treatment of them has been of a somewhat harsh character. The Commission does not express any opinion on this matter, but if such has been the case, it has in all probability been confined to recent years, as the life of the inmates of the Home since its removal to Strathfield has been unfavourably contrasted with their condition, which has been described as happy, before that time. Evidence has been given which shows that in some respects Mrs. Prescott has been a severe sufferer in health, and this may have given rise to general irritability.

Mrs. Prescott is at present away from the Colony, and for many reasons it is unfortunate that we have not had an opportunity to obtain her sworn evidence.

During Mrs. Prescott's absence her place has been filled by a paid matron—Mrs. Gordon—who appears to be much appreciated by the inmates. Mrs. Gordon's authority, however, over the other servants of the Home seems for some time to have been greatly restricted, in consequence of instructions left by Mrs. Prescott before her departure, and misunderstandings have arisen which have been prejudicial to good management and discipline. This, however, has now been set right by the action of the ladies' committee.

A rigid economy has evidently been exercised at the Home, as a reference to the items of expenditure for provisions and clothing (Appendix No. 6) will show. Though no serious complaint in regard to the food is made, the clothing of the inmates has not been of so good a character as it should have been, old garments having been made to do service beyond the period of neatness. The evidence points, however, to a great improvement in the diet and general treatment having taken place since the inquiry instituted by Mr. Brunner.

The

* The stock and material were valued by a Government official on the 19th March, 1898, at about £215.

The wing before referred to at the rear of the premises, designated "The Retreat," is in reality a dormitory only, and contained at the time of the visit of the Commission, as before stated, twelve beds, nine of which were occupied.

It was clearly apparent that this room provides inadequate accommodation, even for the latter number. Two of the occupants of this portion of the premises were found to be suffering from physical infirmities which rendered an immediate change imperatively necessary.

Strong reasons have for some time past existed for providing a night attendant for the proper care of these unfortunate persons and it is to be much regretted that steps in this direction have not been taken. One, and the most afflicted of these inmates has, since our visit, we are glad to learn, been removed to Newington Asylum, where she had been prior to entering the Home. The inmates of this division are all too infirm for work of any kind, and it appears to us that their lives would be more endurable if they were associated with elderly women, who, enjoying sight, would be eyes to the blind and convey to the sightless, impressions and ideas to which unassisted they must be strangers. At present they seem to have little enjoyment beyond tobacco smoking, and have not the pleasurable excitement of a larger range of acquaintanceship which might be opened up to them in other Asylums. The impression made on the minds of your Commissioners on their visit to this portion of the Institution was a painful one.

With a view to gaining a closer knowledge of the internal management of the Home, the services of Miss McMaster, the Matron of the Coast Hospital, were availed of, and her report, which forms part of her evidence, is of an interesting nature. From this it will be seen that, as one of the consequences of the conflict in the management just referred to, strict cleanliness in regard to the inmates of "The Retreat" was not secured. The many defects pointed out by Miss McMaster are, in her opinion, such as may be easily remedied. They exist, Miss McMaster says, "because they have existed," and are due to a conservative disposition to continue a mere routine irrespective of daily wants and changing conditions. The inmates are reported as patient and reasonable under their infirmities. Miss McMaster's report is, however, a serious indictment against the management of the Strathfield Home. The old women have been neglected, there has been neglect of the sick, disloyalty of servants, and troubles which a competent, resolute, firm but withal kind supervision, would soon surmount.

HOME-TEACHING DEPARTMENT.

As we have before pointed out, the formation of this branch of the Institution was the work of Mr. Prescott, who has since been its chief salaried officer, and who is also an ex-officio member of the Committee.

The objects of this department are stated in the annual reports of the Institution, as follows :—

1. To employ teachers to visit the blind at their homes throughout the province; teach them embossed reading, writing, music, type-writing, mat-making, halter-making, chair-caning, netting, knitting, and such other handicraft as shall appear practicable; lend embossed books, visit those unable to read for themselves, and by reading, music, or other means, do all in their power to relieve the tedium of their lives.
2. To administer pecuniary aid from a benevolent fund in times of sickness and in other cases of special need; the income of this fund to be derived from an annual grant from the maintenance fund.
3. With the interest from an endowment fund to purchase materials or goods, which shall be given to the blind, to be used by them at their homes, with a view of supporting themselves by their own industry; the income of this fund to be derived from an annual grant from the maintenance fund, the principal to be invested, the interest only to be expended.

In the carrying out of these objects two officers have since 1888 been employed, prior to which time Mr. Prescott was alone engaged in the work. Both of these officials are blind. Mr. Prescott's duties are now confined to the metropolitan district, and those of his assistant mainly to the country.

With

With a view to ascertaining what benefit resulted to the blind from the operations of this branch, the subject has received close attention on the part of the Commissioners, one of whose number has visited several of the blind persons mentioned as receiving the ministrations of the Society, and whose report appears as Appendix No. 25 hereto.

Detailed reports of the work of each of the teachers were sought to be obtained, but it was ascertained that no complete diary had been kept by Mr. Prescott, and in the case of his assistant, such a record had only been kept since July, 1897, *i.e.*, since Mr. Maxted's inquiry. (*See Appendices 28 and 29.*)

An analysis of the latter's diary reveals the fact that during the greater portion of his time he has been engaged in collecting subscriptions for the Institution as a whole; and he has admitted in his evidence that, of his year's work, about seven or eight months is devoted to collecting (Questions 1572-3.) Until the last few years visits to the country were also made by Mr. Prescott, and collecting undertaken by him.

Appendix No. 30 affords particulars regarding the work of the Home-teaching Department for the years 1892 to 1897. Of the 259 persons (180 males and 79 females) at the end of last year who were visited by the teachers, 81 resided in the country and 178 in Sydney, 63 of the latter being in Government and other institutions.

During that year 44 persons only received instructions as under:—

Taught to read	17
„ write Braille type	6
„ read and write embossed music	1
„ use typewriter	10
„ write with pencil and card	2
						<hr/> 36
Taught chair-caning	3
„ halter-making	3
„ netting	2
						<hr/> 8
						<hr/> 44

This number is much above the average for the past six years. The benefit which the remaining 215 individuals received from the Institution is of a very doubtful character, especially when it is considered that those in the country were visited not more than two or three times in the year. Those in the metropolitan district have been visited by Mr. Prescott about once a month.

Appendix No. 26 contains a report by one of your Commissioners in reference to the library of the Institution, from which books in embossed type are distributed on loan to blind persons free of charge.

The second object of the Society is, as stated, to administer pecuniary aid in times of sickness and in other cases of special need, and for five years of the past six the sum of £50 has been expended in each year for this purpose. The amount spent in the other year was £27. It has been admitted in evidence that, apart from interrogating the recipients of this relief, no steps were taken to ascertain whether they were helped by other charitable organisations.

The third object is to enable indigent blind persons to support themselves by their own labour, upon material supplied gratuitously to them by the Institution.

The interest on the endowment fund is utilised for the purchase of such material; but, as all available credit balances upon the operations of the Institution have gone to reduce the debt on the property, this object of the Home-teaching Department has been much restricted. For the past six years an average of only £51 per annum has been so spent, which clearly could only have been of limited assistance to very few persons.

Mr. Powell has dealt more particularly with this branch of our subject, and his conclusions are that the work done appears to be very small for the amount shown in the general account of expenditure. No person cares to learn the arithmetic board; mat-making is entirely neglected, also knitting; and in twenty years only one skewer-maker has been instructed.

(2.) THE UTILITY OF THE WORK OF THE INSTITUTION.

The Industrial Home and Retreat.

Irrespective of the personal and serious charges made against Mr. Prescott, we are, after very careful consideration, forced to the conclusion that the Strathfield Institution for the Blind has not realised the expectations of its promoters and supporters.

The inmates of the Home may be divided into two classes—those capable of earning or partially-earning a livelihood from their labour, and those who from old age and infirmity are incapable of so doing.

There are at present thirty-one inmates, about fifteen of whom may be classed under the latter head. Towards the maintenance of five of these the Government is at the present time contributing £10 per head per annum.

As a retreat or refuge for the old women we believe that the Newington Asylum, as now managed and conducted, is likely to prove a far better and more comfortable home for them than the Strathfield Institution, where, evidence is not wanting to show, they have been neglected. They will be better taken care of at Newington at a less cost, and they will enjoy greater comforts in addition to a wider range of companionship.

The two inmates from Tasmania, before referred to, should be immediately returned, or their cost of maintenance here be borne by the Government of that Colony. The remaining fourteen are, it is believed, capable of working sufficiently to earn a means of livelihood with, perhaps in a few cases, some slight assistance from the State.

The industrial work of the Home has not been a success. The profits are exceedingly doubtful and the premiums to workers so insignificant as to be unworthy of notice. It may of course be urged that the work has furnished employment for the inmates; but even in this respect, as regards the brush-making, the facts dispel the illusion, because the work upon which the blind have been engaged has been small compared with that done by the instructor to turn out the goods in a manner suitable for the market.

Home-teaching Department.

The Home-teaching Department has fallen far short of the objects set forth in the Annual Reports of the Institution. The visits to the blind at their homes have been few in numbers and the meagre records furnished indicate that very few blind persons have received the educational and industrial training referred to in the Annual Reports. A reference to Appendix 30 will show that the teaching of embossed reading, writing, music, typewriting, mat-making, &c., &c., has been subordinated to the business of collecting money.

With a comparatively limited field for its operations, we fail to see the necessity of the continuance of this branch in its present form, the benefits it affords being entirely incommensurate with the large expenditure of money involved.

We are of opinion that assistance required by the blind in the country would be more economically afforded by local charitable bodies. Where instruction in any particular industry is desired, the aid of the Industrial Blind Institution might be sought; and the assistance of the Institution for the Deaf and Dumb and Blind might be obtained for purposes of education. The blind might be either visited as occasion required by an officer of either of those institutions, or be brought to Sydney temporarily to receive instruction.

As a result of our inquiries as to the utility of this institution we have reluctantly come to the conclusion that under the present conditions no further aid should be extended to it by the Government. We, as the Royal Commission on Public Charities, propose, when dealing generally with the institutions for the blind, to make definite recommendations in regard to the future of the inmates employed in industrial occupations.

(3.) THE CONDUCT OF MR. PRESCOTT.

At the inquiry held by the late Director of Government Asylums in 1897, charges of a serious nature were preferred against Mr. Prescott, teacher and librarian of the Strathfield Institution, in regard to his conduct towards certain of the inmates of the Home. These charges have been substantially re-stated on oath before this Commission.

Mr.

Mr. Prescott, who, as before stated, is blind, has, ostensibly, no voice in the management of the Home; but it is evident that he has exercised a great deal of influence in its conduct, and as he has resided, with his wife, on the premises, and has his office in the building, he has been brought into daily contact with the inmates. This control has now ceased, the Ladies' Committee having found it necessary to inform him that the responsibility of management rested with Mrs. Gordon, the matron.

The accusations preferred against Mr. Prescott may be summarised as follows:—

1. Illicit intercourse with two of the inmates;
2. Indecent assault upon the same two inmates;
3. Immoral conduct with a third;
4. Indecent conversation with several of the inmates and other conduct of a compromising character.

With regard to the charges which may involve indictable offences, the Commission refrain from expressing any opinion which might prejudice the case in the event of it being found necessary to submit it to the decision of a jury. Your Commissioners, therefore, recommend that the evidence be referred to the Crown Law Officers with a view to a determination being arrived at as to what further action, if any, shall be taken. It should be stated that Mr. Prescott emphatically denies the truth of these charges.

Some of the less serious allegations have, to a certain extent, been admitted, either directly or inferentially, by Mr. Prescott, and the evidence in connection therewith your Commissioners think is sufficient to justify their coming to the conclusion that he is not fit to be longer continued in the position he occupies. Of the many instances which might be quoted, the following, your Commissioners think, fully establish the justice of this conclusion.

An inmate, a little over 16 years of age, was alone on one occasion with Mr. Prescott in his office. He asked her to place her feet up on the couch at the head of which she was sitting. She refused to do so and when he said he would make her, she ran away. He followed, took her up in his arms and laid her upon the couch. She struggled, and freeing herself, left the room. She was so much alarmed at his conduct that she avoided his company for some weeks after. She thought at the time he meant to do her a wrong; and though, when before the Commission, she said that, as a woman, looking back on the occurrence, she considered his intentions to have been playful, the circumstances of the case, particularly in the light of other evidence, lead us to the conclusion that the promptings of her instincts at the time led her to a correct course of action. It is significant that this occurrence followed on a conversation which Mr. Prescott had with her in regard to an act of immorality that took place between another inmate and a man employed about the grounds, who has since been discharged. The following are a few extracts from the evidence bearing on this subject:—

5118. *Mr. Prescott to witness Miss* — Have I a tendency or a weakness if I hear a person say they won't do a thing, to make them do it in a playful manner? Yes, you have.

5119. So, if I said to you, "Put your feet on the couch," and if you said you would not, and ran away from the couch, and I put you on the couch, would that be my usual method of making a person do a thing in play? Yes.

5123. While you know that you absented yourself from me, you don't know that I did inform other persons, Mrs. Prescott among them, that you having so misunderstood me and become so frightened, I, for your own sake and for my own, would not allow you to be with me alone again? I never heard of such a thing.

5131. Did Mrs. Prescott ever speak to you about it? Never.

7454. *Mr. Maxted to Mr. Prescott.*] I will ask you whether — in her evidence before the Commission, has given a strictly correct account of what took place on the occasion to which you refer? As far as my knowledge goes; but it was years ago, and I had not thought of it until I returned from England. As far as my memory serves me, she did.

7455. Give a strictly accurate account of what took place? I do not know about strictly—I will say accurate.

7458. *Mr. Maxted to Mr. Prescott.*] Did you hear — say here that when she met you some weeks after what she says happened, you said to her, "You little fool, you are bad-minded"? I think she said something like that, but I should not use the word fool.

7459. Do you remember making use of such an expression, and telling her that she was bad-minded? No, I do not remember it. If I had noticed a statement of that kind I should have cross-examined her. It is quite likely that I should say to her, "You are a little silly for having such bad thoughts." I would not, in speaking to a person of M.'s years, call her a fool.

7465. I ask you whether you do not think that the first act of a father who had caused to his favourite child, as you have described her to be, who was approaching womanhood, so serious a misunderstanding, should not have been to send for her and to remove from her mind the belief that you admit that she entertained about this matter? I asked Mrs. Prescott. I explained to her what had occurred, and asked her to explain it to —, which she did.

7466. Why did you not go to her yourself? I have nothing to do with the inside of the building. I was not supposed to go into the institution and converse with the inmates. I told Mrs. Prescott, and she spoke to —. When I saw — I probably spoke to her. I do not remember having done so; it is most natural that I should do so.

7467. Have you not stated that you really declined to see her unless it was in the presence of some other person? No; I did not say "declined." I said I told the other girls that it would be best in future that as — acted in such a way that I should only see her in their company.

7468. Is your explanation that your reason for not going with these girls before Mrs. Prescott was because you had nothing to do with the inside of the building? No; that is not my answer. That is the reason why I did not go into the institution amongst the inmates. I did the same in the case of Mrs. N., and I reported the matter to Mrs. Prescott. Mrs. Prescott saw — and gave me to understand that she and — were perfectly satisfied in regard to the matter.

7469. That is why you kept away from her for so long a time? I never kept away from her; she kept away from me.

7470. Have you not said that you declined to see her unless in the presence of another inmate? No; I repudiated the word "declined" two minutes ago.

7471. Did you not use a word of exactly the same meaning? *I told the other girls of the occurrence*, and I said that in future I should be careful that — was not in the room with me alone. I did not avoid —; — would not be where I should avoid her. I could go from the house to the office, and from the office to the house, and I should not see her.

7485. You heard — describe the details and say that you asked her on the couch to put her feet up;—is that true? I am not prepared to deny it. When I was in the office having writing to do any girl coming in would probably go to the couch, and if the day was cold I would take down a macintosh or overcoat and wrap them in it, and if the girl was not reclining properly I would say, "Put your feet up, and I will tuck you in nicely."

7486. Do you recollect whether it happened on the day when — says you asked her to put her feet up? It may have been between the seasons before we had started with fires; when the weather happens to be cold, and girls have come in, I have covered them up to keep them warm.

7487. You heard it said to the Commission that when she refused to put her feet up you chased her and she got away from you, after a struggle, in great fear? Yes; she did say that.

Mr. Prescott, p. 201.] — was practically the baby of the institution; so much so that I have—of course, it was not an important matter to bring out in a cross-examination—had — in my arms, carrying her up and down the verandah and pretending that she was a baby. We all liked her very much. She came there with the name of "M.," and she was such a nice girl that we thought the name not poetic enough, and so we christened her "M." We were all very happy together. I remember the incident of —. I didn't remember it at first. When I returned from England and was given a list of names of persons who had made certain statements to Mr. Maxted, and I heard — name was amongst them, I could have been knocked down with a feather, because I regarded her as such a pure little innocent thing, and she being from 15 to 16 years of age and I a man of over 40, the thing was most appalling to me. And I apply the same remark to — as I do to B.H. in regard to my conduct to her, also adding that after I saw she had so misunderstood me and was so frightened, I decided that for her sake and my own she should not remain in any room with me unless another person was with her. I may say that it goes without saying that if — and I were speaking of the unfortunate occurrence between the gardener and E.J. — said that I said she was more to be pitied than blamed—regarding — as an innocent child, I would not in any way make any allusion to the occurrence that was suggestive to her because she was too much of a baby.

5071. *Mr. Maxted to witness* " — "] Tell what you do know? All I know is that N. was behaving improperly with F.B., the gardener, while Mr. and Mrs. Prescott were away. S. was left as caretaker of Mrs. Prescott's house, while she was away up country. I heard she was behaving improperly. N. used to go in and keep S. company, and from what I heard F. used to go also, and from what I afterwards heard N. had been behaving improperly with F.B. The only conversation I had with Mr. Prescott on this subject was the afternoon of the day on which Mr. Prescott did not behave, as I thought he should. We were talking about her, and I said how sorry I was for her, and we both said we thought she was more to be pitied than blamed.

5142. *Mr. Prescott to witness* " — "] Can you remember if when I said that I was sorry that N. had misconducted herself or that I used coarse words descriptive of an immoral action; what was my general demeanour, was it that of a man who would select words to express a low meaning, or of a man who would select nice words to express his meaning? You expressed it, as far as I can remember, as delicately as you possibly could.

On another occasion, Mr. Prescott sang before the inmates a song, which in its original form contains something like the following words:—"They must wear their waistcoats loose who dine with Gipsy John." This song of itself is not of a character that one would wish sung before a number of young women, and the impropriety of doing so was accentuated when he substituted the word "corsets" for "waistcoats," as stated in the following evidence, to which he has given no denial:—

3495. *Mr. Prescott to witness Miss L. —. N. —.]* Please inform the Commission how I came to talk about stays? One time you sang "Gipsy John," and instead of saying, "He must wear his waistcoat loose who dines with Gipsy John," you put in the words, "She must wear her corsets loose who dines with Gipsy John."

3496. Were you at the time shocked that I used that word in that connection? No; not about stays.

3497. What did you suppose to be my object in substituting the word corset for waistcoat in the line of a well-known song? I don't know.

3498. Was it to excite merriment or was it from some low feeling that I had at the time? I don't know what it was.
4867. *Mr. Prescott to witness Mrs. N.*] You referred to a song in which I substituted the word corset for the word waistcoat, and said that it shocked you? It didn't shock me, but I didn't think it very gentlemanly of you.
4868. Are you aware that in the daily newspapers corsets are advertised for sale? I am quite aware of it.
4869. Are you aware that pictures of corsets appear in English magazines in the advertisements? You know as well as I do, Mr. Prescott, that you really like these comic songs, and not only that, but that you like, shall I say, low songs. It is hardly, perhaps, right of me, but the chief reason why I make this statement is, because you probably remember the time you got Mr. H. to sing to us, "We don't speak to one another now." Anyone is privileged to find out for himself about that song. And there were only women in the room then.
4870. Do you know Mr. H.? I have just met him.
4871. Is he a respectable man, do you know? I should suppose him to be; although that evening he sang several comic songs that I would not care for.
4872. Do you know that he has had for many years the special permission of the directors of the North Shore Ferry Company to sing on their wharf? I do not doubt that for a moment.
4873. Do you know that the songs he sung at Strathfield were the songs he is constantly in the habit of singing on the Milson's Point wharf? I do not doubt that; but that does not say that they are fit to be sung.
4874. Do you suppose that any song the directors would allow him to sing on the wharf would be improper for the women at Strathfield to hear? The directors are not always standing listening to these songs, and no one cares to report them.
4875. What was the nature of that song? I do not know, because I only know part of the words. It is something about a fellow taking his baby for a walk, and he stepped into a little pub. to have a little talk, and when he lifted his hat the barmaid said, "Life and mercies, its the baby's; anybody got a pin," and they don't speak to one another now. It referred to a piece of the baby's underlinen. That is the song; and the last verse is a different one altogether, and not a nice one to sing.
4876. Is that the worst part of that song? I could not state it, because it is about someone going for a bathe, and he met his girl on the beach without anything on, and they don't speak to one another now.
4877. Is that the worst part of that song? Do you want anything worse than that?
4878. But is that the worst part of the song? I think that is bad enough.
4879. Having frequently conversed with me, and heard me converse with other persons at Strathfield, and having heard my character, as you doubtless have, are you of opinion that I am a man who is pleased to hear low songs? You were pleased to hear that one, because you made him sing it twice. You said it was the gem of the evening; but I think it is a disgusting thing.
4880. Was that song more loudly applauded by the blind women than by the others? I do not know that it was; I took very little notice of what the women did; it was the song that troubled me.
4881. Having asked him to sing that song twice, the only construction you can put on my action is that it was because I liked it, and not because it had been very heartily applauded? You must have liked it.
4882. Could I not have been guided by the amount of applause from the women? Every gentlemanly instinct in your nature should have forbidden you to encourage such a song.
4883. And you think that substituting corset for waistcoat had a lowering tendency? It does not sound very nice.
4884. You heard me do this—what would be the probable object;—would it be to produce merriment? I suppose not; I hardly know why.
4885. Had you any reason to think that I did it to stimulate low feelings in the listeners? That is not for me to say; you know your own motives best.
4886. Have you any reason to think I was a man who seemed to have a tendency for liking these things? Whether it was done for the merriment of others or for your own merriment, I don't know.
4887. But you are of opinion that it is highly improper to substitute corset for waistcoat? I don't know about being highly improper. I leave every person to judge for himself.

Another instance is where Mr. Prescott is stated to have given whisky to an inmate. Mr. Prescott admits having given the whisky, but says it was administered as a remedy for stomacic pains, and not in sufficient quantity to produce intoxication. It was not, however, his business to thus attend to inmates, but clearly that of the officials of the Home, and though by his questions in cross-examining one of the witnesses, he leads up to the assumption that the girl was pretending to be intoxicated, he virtually admits having asked her to repeat certain words that would have been difficult for any one under the influence of liquor to properly articulate. The impropriety of this proceeding requires no comment.

The next instance of injudicious conduct is to be found in his having indulged in a game with the younger inmates, which he called "sacks on the mill," and which he explains as follows:—

8472. *Mr. Prescott to witness Miss C. B.*] In speaking of the dining-room incident, you say that I was playing with Blanche;—do you mean tickling and things like that? Yes, and pushing her about.
8506. *President to Mr. Prescott.*] I gather from your questions that it was your practice to play with the inmates;—it is just as well for us to understand what you mean by that? Yes. You will think I am very boyish—have you ever seen children play "sacks on the mill"? Sometimes I would be lying on the lawn and there would be three, four, or five about; one would say "sacks on the mill,"

mill," and one would throw herself across me, another on her, and another on her, until the weight would become so oppressive that the underneath one would have to say "enough." That is the way we would play. Sometimes they would be talking about not being ticklish under the arm; frequently they have said, you cannot make me laugh by tickling me. It was things of that kind that I meant by playing.

On another occasion the complaint was made that Mr. Prescott roughly used one of the inmates by putting a strap round her neck, and raising her from the ground. His explanation of this is as under:—

Mr. Prescott: That is a matter which had escaped my memory altogether. But last evening in L.M.'s presence I asked N.J. if she knew anything about it, and she said she was in the office at the time. I assure you I had forgotten the circumstance. I will give it you in N.J.'s words. Perhaps some execution was near at hand at the time, and naturally the subject of hanging had come up in some way, and I give you these words because I assure you I had forgotten the circumstance. It is said that I took a book strap—that is, a strap that the books are wrapped up in—and slipped it round N.J.'s neck, pretending to hang her, and N.J. slipped it from her neck to B.H.'s neck. That is N.J.'s theory. I don't know whether it was so or not, but I do know that I have never lifted any person from the floor by means of her head. To say that I would put a strap round a girl's neck, and hold it up, and let that person be suspended with the feet off the ground, I say most positively I never could do it. That I may have caused B.H. temporary inconvenience; that the strap may have pressed on her neck I don't doubt for one moment; but I most positively say that anything like that would be done in play, but not to cause any inconvenience. I may inform you that a good deal of the familiarity which has existed in the girls being so much with me, and patting me, and feeling my hair and my beard, has been from my desire to make the girls feel happy. I may inform you that I have a strong taste for the ludicrous; I have a great love for humour, and, knowing that, I did things which would make the girls laugh and make them happier. I did many things in play with the girls that a man of my years without my temperament is too old to do. I do not remember the circumstance of the strap. I repeat it to you as N.J. told it to me last night, but I do assure you that I never willingly or intentionally hurt any person, blind or seeing.

Mr. Prescott admits, as will be seen in the following extract, to having held a girl of 20 years of age by the feet with her head to the ground. He states the act was treated as a joke, but it is one which we think should certainly not have been indulged in.

8761. *President.*] At a former meeting of the Commission you made some statement about a girl being taken and held up by her feet;—will you please explain what you did on that occasion? On the afternoon of a public holiday Mrs. Prescott, I, and the majority of the inmates were at the back of the summer-house, at the rear of the building, and we were singing, separately or together. I asked M.L. to sing, and she declined. I am not quite clear about these last few words. I am telling you to the best of my knowledge, but it happened four years ago. I then said, "If you do not I will stand you on your head." She said, "You are not game." Now, what I am going to state now is what I have been told lately. L.N. and Mrs. Prescott assisted in catching M.L. I do not know whether she was standing or lying on the ground, but I carefully put her clothing above the tops of her boots and placed her in a vertical position—not on her head, but with her head near the ground. Then, of course, I liberated her, and she sang.

As a final instance, we quote Mr. Prescott's explanation of an occurrence which took place after the appointment of the Commission on the 22nd December last. The inmate, B.H., referred to, had, at the inquiry held by the Director of Government Asylums, made charges against Mr. Prescott of indecent assault, and assuming her allegations to be false, it would be difficult to understand his consenting to be in her company. The girl's statement is that he sent for her to go with him; but in any case, knowing, as we must presume he did, that the Commission had been appointed, the impropriety of his conduct is apparent.

8505. *Mr. Prescott.*] A blind friend of mine named C. lives within a quarter of a mile of the Strathfield Institution with Mr. D. During the holidays on several occasions I visited Mr. C. alone. On the morning of New Year's Day last I was about to revisit him, and N.J. intimated her wish to go for a walk. I told her that she might go with me to Mr. C.'s. She said, "B.H. is very miserable during the holidays; may she go with us?" I said, "If you think B.H. would like to come, let her do so by all means." She then went for B.H., and, as far as my memory serves me, came into my house with B.H. That is a matter which I am not quite clear about. I was on my couch, and B.H. was standing about the middle of the room. N.J. went, I think, for my walking-stick, and, so far as my memory serves me, I had not spoken to B.H. after she entered the room. I then said, "Hullo! trouble the house!" and she, adopting a most impertinent tone, said, "I have never caused any trouble to your house." I said, "Have you not? The lies that you and your companions have told would make some men grey-haired; and I consider that you and your companions are despicable," and I think I said "contemptible." N.J. returned to the room, and B.H. left the room with her, as if we were all about to leave the house. N.J. said to me half a minute later, "B.H. has told me that she will not go for a walk." I then said, "Well, if B.H. does not go, it will be better for you not to go."

8507. *Mr. Macted to Mr. Prescott.*] When you spoke to B.H., as you have just described, were you aware that this Royal Commission had been appointed? I knew there was likely to be one; I do not know whether I knew that it had been appointed.

Other evidence of many alleged improprieties exists, particulars of which will be found in the evidence, an analysis of which accompanies it, but they are of such a disgusting nature that we consider it undesirable to repeat them.

At the time the inquiry of the Director of Government Asylums was held Mr. Prescott was in England, and on his return, although he was aware that certain charges had been made against him, he took no steps to clear himself, but waited until sent for, three months afterwards. He gives as his reason for doing so that he thought it was Mr. Maxted's duty to communicate with him, and he states (Question 10212) that had he been at all shrewd he would not have gone to Mr. Maxted when he did. Neither did he communicate with his Committee on the matter, as he did not consider it his place to do so (Question 10215).

In conclusion we beg to submit a summary of our recommendations, as follows:—

- (1.) That the aged and infirm inmates of the Strathfield Home be removed to the Newington Asylum.
- (2.) That the two inmates from Tasmania be returned to the care of the Government of that Colony.
- (3.) That pending the receipt of the report of the Royal Commission on Public Charities, no further subsidy be paid to the Institution for the Blind, Strathfield.
- (4.) That in the case of all Institutions to which Government subsidies are granted, the strictest Government supervision be exercised over the expenditure of those subsidies, and that the operations of the Institutions be open to the most rigorous scrutiny of any officer appointed by the Government to make inquiry in regard thereto.
- (5.) That the evidence be referred to the Crown Law Officers with a view to a determination being arrived at as to what further action, if any, shall be taken in regard to the more serious charges disclosed therein.

Before closing our report we wish to acknowledge the able services rendered by Mr. Maxted during the inquiry, and also to thank the members of the Committee of the Institution for the ready manner in which they afforded us any information that we desired.

We have also to express our obligation to Mr. Walter Wilson for the efficient manner in which he has discharged the duties of his office as Secretary to the Commission.

We have the honor to be,

Your Excellency's most obedient Servants,

JOSEPH BARLING,
President.

GEO. A. WILSON.

JAMES POWELL.

WALTER WILSON,
Secretary,
22/3/98.

1898.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

REPORT

OF THE

ROYAL COMMISSION

APPOINTED TO MAKE

A diligent and full Inquiry into and Report upon the
methods of carrying on Government Charitable
Institutions.

PART I.—INSTITUTIONS DEALING WITH THE BLIND AND
WITH THE DEAF AND DUMB;

TOGETHER WITH

APPENDIX AND MINUTES OF EVIDENCE.

REPORT 1
MINUTES OF PROCEEDINGS OF THE COMMISSION 36
INDEX TO WITNESSES 40
MINUTES OF EVIDENCE 41
APPENDIX 91

Commission.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen,
Defender of the Faith and so forth,—

To Our Trusty and Well-beloved—

JOSEPH BARLING, Esquire, Chairman of the Public Service Board, and one of Our Justices of the Peace of Our Colony of New South Wales, Associate of the Institution of Civil Engineers;

GEORGE ALEXANDER WILSON, Esquire, a Member of the Public Service Board, and one of Our Justices of the Peace of Our said Colony; and

JAMES POWELL, Esquire, Deputy Member of the Public Service Board, and one of Our Justices of the Peace of Our said Colony,—

Greeting:—

KNOW Ye, That We, reposing great trust and confidence in your ability, zeal, industry, discretion, and integrity, do, by these presents, authorise and appoint you, or any two of you, as herein-after mentioned, to make a diligent and full inquiry into, and report upon the methods of carrying on Government Charitable Institutions, and the way in which Grants of public money to charitable objects under the control of the Government are administered, including Grants for the Aborigines; and to report also upon the methods of administration and relief in force in all charitable organizations which receive aid from the public Treasury, including the Hospitals of the Colony; with further power to suggest desirable changes in the existing state of affairs, with a view to placing the expenditure of public moneys in such directions upon a more satisfactory footing: And We do, by these presents, grant to you, or any two of you, at any meeting or meetings to which all of you shall have been duly summoned, full power and authority to call before you all such persons as you may judge necessary, by whom you may be better informed of the truth in the premises, and to require the production of all such books, papers, writings, and all other documents as you may deem expedient, and to visit and inspect the same at the offices or places where the same or any of them may be deposited, and to inquire of the premises by all lawful ways and means: And We do give you power at your discretion to procure such clerical and other assistance as you may deem necessary for enabling you duly to execute this Our Commission: And Our further will and pleasure is that you do within three months after the date of this Our Commission, certify to Us, in the office of Our Chief Secretary under your or any two of your hands and seals, what you shall find touching the premises: And We hereby command all Government Officers and other persons whomsoever within Our said Colony, that they be assistant to you and each of you in the execution of these presents: And We appoint you the said JOSEPH BARLING, Esquire, to be President of this Our Commission; which said Commission We declare to be a Commission for all purposes of the Act 44 Victoria, No. 1, intituled "*An Act to regulate the taking of Evidence by Commissioners under the Great Seal.*"

In testimony whereof, We have caused these Our Letters to be made Patent, and the Great Seal of Our said Colony of New South Wales to be hereunto affixed.

Witness Our Right Trusty and Well-beloved Cousin, HENRY ROBERT, VISCOUNT HAMPDEN, Our Governor and Commander-in-Chief of Our Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this tenth day of November, in the year of Our Lord one thousand eight hundred and ninety-seven, and in the sixty-first year of Our Reign.

(L.S.)

HAMPDEN.

By His Excellency's Command,
JAMES N. BRUNKER.

Entered on Record by me, in Register of Patents No. 19, page 151, this eleventh day of November, one thousand eight hundred and ninety-seven.

For the Colonial Secretary and Registrar of Records,

CRITCHETT WALKER,
Principal Under Secretary.

VICTORIA,

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen,
Defender of the Faith, and so forth,—

To our Trusty and Well-beloved—

GEORGE ALEXANDER WILSON, Esquire, a Member of the Public Service Board, and one of Our
Justices of the Peace of Our said Colony,—

Greeting :—

WHEREAS by an instrument under the Great Seal of Our Colony of New South Wales, bearing date the tenth day of November, one thousand eight hundred and ninety-seven, We did, *inter alia*, appoint JOSEPH BARLING, Esquire, to be a Member, and also President of the Royal Commission of Inquiry in connexion with Charitable Institutions: And whereas the said JOSEPH BARLING has now resigned the Office of President: Now, therefore, know You, that We, of Our especial grace, have thought fit to appoint, and do hereby appoint you, the said GEORGE ALEXANDER WILSON, to be President of such Commission.

In testimony whereof, We have caused these Our Letters to be made Patent, and the Great Seal of Our said Colony of New South Wales to be hereunto affixed.

Witness Our Right Trusty and Well-beloved Cousin, HENRY ROBERT, VISCOUNT HAMPDEN, Our Governor and Commander-in-Chief of Our Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this eighth day of February, in the year of Our Lord one thousand eight hundred and ninety-eight, and in the sixty-first year of Our Reign.

(L.S.)

HAMPDEN.

By His Excellency's Command,
JAMES N. BRUNKER.

Entered on record by me, in Register of Patents No. 19, page 263, this eighth day of February, one thousand eight hundred and ninety-eight.

For the Colonial Secretary and Registrar of Records,

CRITCHETT WALKER,
Principal Under Secretary.

ROYAL COMMISSION OF INQUIRY ON PUBLIC CHARITIES.

WHEREAS it is necessary to extend the time within which the Commissioners are to make their report in the above matter: Now, therefore, I do hereby, with the advice of the Executive Council, extend the time within which the said Commissioners are to make such report for a period of six months,—to take effect from the 10th February, 1898.

Given under my hand at Government House, Sydney, this second day of March, one thousand eight hundred and ninety-eight.

HAMPDEN, 5/3/98.
By His Excellency's Command,
JAMES N. BRUNKER.

ROYAL COMMISSION ON PUBLIC CHARITIES.

 REPORT.

To His Excellency the Right Honorable Henry Robert, Viscount Hampden,
 Governor and Commander-in-Chief of the Colony of New South Wales
 and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,

We, your Commissioners, were appointed on the 10th day of November, 1897, by Letters Patent, to make a diligent and full inquiry into, and report upon, the methods of carrying on Government Charitable Institutions, and the way in which grants of public money to charitable objects under the control of the Government are administered, including grants for Aborigines; and to report also upon the methods of administration and relief in force in all charitable organizations which receive aid from the Public Treasury, including hospitals of the Colony; with further power to suggest desirable changes in the existing state of affairs, with a view of placing the expenditure of public moneys in such directions upon a more satisfactory footing.

1. Owing to pressure of other public duties, Mr. J. Barling, while remaining on the Commission, found it necessary to resign the office of President, to which Mr. G. A. Wilson was in consequence appointed on February 8.

2. The scope of our Commission is so extensive, embracing, as it does, nearly two hundred institutions, and the evidence to be taken will be so voluminous, that your Commissioners propose, for the sake of clearness and despatch, to group the institutions as follows, and to furnish *interim* reports on each group, but not necessarily in the order here given:—

- I. Institutions dealing with the Blind and with the Deaf and Dumb.
- II. Subsidized charitable bodies, such as the Benevolent Societies, and kindred institutions.
- III. The Hospitals.
- IV. The Aborigines.
- V. Government Institutions controlled by the Director of Charities, and also the operations of the State Children's Relief Board.

3. Your Commissioners have compiled very valuable statistical information with reference to the financial history of all the institutions in the above groups, but do not propose to take formal evidence with respect to all of them. With regard to Groups II and III, we propose to report only on important typical institutions, and on such of the less important as may appear on an analysis of their accounts to require special investigation and report. It may further be found desirable to report separately on any institution in the event of immediate reforms of policy or of management being considered necessary.

We have now the honor to furnish our report on the first of the above groups.

GROUP I.

GROUP I.

INSTITUTIONS DEALING WITH THE BLIND AND WITH THE
DEAF AND DUMB.

4. There are three institutions subsidized by the State, viz. :—

- (1.) The Institution for the Blind at Strathfield.
- (2.) The New South Wales Institution for the Deaf and Dumb and the Blind, Newtown Road.
- (3.) The Sydney Industrial Blind Institution, William and Boomerang streets.

5. Besides these, there are connected with the Roman Catholic Church, but receiving no State subsidies, two institutions—the St. Patrick's Institute for the Blind, Lewisham, and the Institution for the Deaf and Dumb, Waratah. These institutions, not being subsidized, do not fall within the scope of our Commission; but the authorities having courteously permitted your Commissioners to inspect them, they will be further referred to in this Report.

6. Under a separate Commission from your Excellency we have already held an investigation into the Institution for the Blind at Strathfield, and reported upon it, except in regard to the future of the inmates employed in its industrial division, which is definitely dealt with in the final portion of this Report. We now proceed to report on the other institutions included in Group I.

THE INSTITUTION FOR THE DEAF AND DUMB AND THE BLIND.

Its Constitution and Management.

7. This Institution, which is situated on the Newtown Road, was established in 1861 for the education of deaf and dumb children, and in 1869 its scope was extended to include the blind. Its objects are stated to be “the education and maintenance, and, as far as practicable, the advancement in life of deaf and dumb and blind children.” The Institution is under the control of a Board of Directors, who are annually elected by the subscribers; and there is also a committee of ladies, appointed by the Directors, which supervises the domestic arrangements, subject to the control of the governing Board. In addition to these elected and appointed bodies, there are Life Directors, who are qualified for their position either by services rendered, or as donors of £50 or upwards in one payment.

Absence of Government Supervision.

8. Although the State contributions from the Consolidated Revenue, in the form of fees and subsidy, now usually exceed the total amount of subscriptions from the public, no responsible Government official has any supervisory powers in connection with the management of the Institution.

9. Your Commissioners attach considerable importance to this matter, and thus give prominence to it at the outset of this Report, because it has been found that non-participation of the Government in the supervision of State-aided institutions—many of which obtain the greater portion of their funds from the Consolidated Revenue—is common throughout the Colony; and, without referring to any particular institution, it has been made evident that this rule has probably not only resulted in serious defects of management, which might have been prevented by the supervision of an independent responsible official, but also to large, and in some instances unnecessary, demands upon the Public Treasury. Indeed, this is a question which we consider to be of so much gravity in connection with the efficient and economical administration of the Public Charities of this Colony, that it will be considerably enlarged upon in our General Report.

Management

Management and Teaching Staff.

10. The teaching and internal management are conducted by a highly competent staff, the members of which are liberally but not excessively paid. The authority of the Superintendent, who is a well qualified trained teacher, extends to the whole staff, both teaching and domestic; but the actual responsibility of domestic management, and of the material comfort of the children, rests with the matron, who, previous to holding her present position, had some years' experience as matron of a hospital branch of a large asylum for destitute children. In addition to the Superintendent there are nine teachers in the school, and four other instructors in the technical divisions.

11. This staff, although apparently unduly strong for the number of pupils, is not really so, because of the much greater individual teaching required than in ordinary schools, and the impossibility of having anything like class teaching in the case of the junior pupils. The secretarial duties are, under the supervision of the hon. secretary, performed by the assistant secretary and accountant, who is also the collector. This officer is under a fidelity bond of £200.

462,
Cooke.*Directors, and Ladies' Committee.*

12. The institution is practically a large boarding-school; and the Committee cannot be too highly commended in regard to the provision they have made for the comfort and happiness of the pupils so far as education and maintenance are concerned.

172,
Robinson.

13. Your Commissioners could have no doubt, from close personal observation during their visits, of the great interest taken by the Board of Directors, the Ladies' Committee, and the official staff, in the welfare of their charges. The Institution was in perfect order; the physical condition of the children was excellent; they were well clad, and they were generally happy and contented. They are amply supplied with means of recreation and gymnastic appliances, outdoor games being liberally provided. There is also a sufficient library, which appears to be well used.

124,
Robinson.
434-438,
Watson.*Methods of Teaching.*

14. It is unnecessary to offer any opinion on the methods of teaching adopted at the Institution, further than to say that they are effective, and the results, under the circumstances, compare satisfactorily with those of the primary public schools in the case of sighted children. The oral and sign-manual systems of instruction are adopted, and they are carried out under the most modern methods of the English, American, and some Continental institutions. There is also a class consisting of children whose hearing is sufficiently good to lead to the hope that it may be possible to further develop it.

363, 365,
Watson.

15. There is diversity of opinion among experts as to whether the deaf and dumb should not be taught the oral system exclusively; but if they were instructed in that method only, it appears that communication between the blind and the deaf and dumb would, to a large extent, be restricted, and this statement applies to adults as well as to the children at school.

Paras.
450 to 473,
Imperial
Charity
Commission's
Report, 1889.

16. The Superintendent, who appears to be well acquainted with the latest literature on this subject, stated in his last Annual Report:—

“The teachers continue the wholesome plan of trying to adjust their system or methods to the needs, capacity, and character of their pupils, bearing in mind the varied and subtle differences which exist among children, and the fact that no hard and fast lines can wisely be adopted in an institution like this, where one finds a proportion of the children who are apt to pick up speech and lip-reading; others, again, to whom the acquisition of these is almost an impossibility.”

Dr. Gallaudet, President of the National College for Deaf Mutes, at Washington, has expressed the opinion that “the method of the future” will be “the combined or American method, in which the best features of both systems are incorporated.”

School

School Inspectors' Reports.

17. The educational results are tested at intervals by the Government School Inspectors, and the following extract from their Report sufficiently indicates that, in regard to the education of the inmates, the Institution is satisfactorily fulfilling its obligations:—

The class-rooms afford ample accommodation for existing requirements, and are well found, not only in the ordinary school requisites, but also in the modern technical appliances necessary for the work of teachers employed in an institution of this kind.

While under instruction, the pupils behave admirably. They are respectful, orderly, attentive to duty, and obedient. The government is of a genial but firm and thoroughly effective character, and the general discipline of the school is *excellent*.

The course of instruction adopted is a varied and liberal one. It includes all the subjects taught in a primary school, together with Drawing, Music, Latin, French, Modelling, Carpentry, and Cookery.

The instruction is suitably arranged, and is imparted by intelligent and effective methods. The general proficiency of each class in the several departments is given in the following statement:—

Manual Department—General Proficiency.—Class 1, 80 per cent.; Class 2, 77 per cent.; Class 3, 73 per cent.; Class 4, 74 per cent.; Class 5, 70 per cent.; Class 6, 70 per cent.

Oral Department—General Proficiency.—Class 1, 75 per cent.; Class 2, 70 per cent.; Class 3, 62 per cent.; Class 4, 72 per cent.; Class 5, 80 per cent.; Class 6, 60 per cent.

Blind Department—General Proficiency.—Class 1, 88 per cent.; Class 2, 81 per cent.; Class 3, 75 per cent.; Class 4, 82 per cent.; Class 5, 75 per cent.

To sum up: The pupils are making satisfactory progress in their studies, the teachers are attentive to duty and efficient, and the general management of the school is in the highest degree creditable to the Superintendent and his staff of workers.

Ability of the Deaf and Dumb.

442,
Watson.

18. As evidence of the mental capacity of the deaf and dumb, the Superintendent of the New South Wales Institution for the Deaf and Dumb and the Blind stated that in the United States of America, which appears to be in advance of any nation in regard to the higher education of deaf mutes, a college exists which educates up to the degree of Bachelor of Arts, and that it had turned out a large number of capable men.

Exclusion of Day Scholars.

19. The operations of the Institution for the Deaf and Dumb and the Blind are exclusively confined to boarders; and the question was raised as to whether or not it would be advisable to extend them to day pupils also, in order to reduce the cost of administration. The Victorian Institution for the Deaf and Dumb is open to day pupils as well as to weekly and quarterly boarders, and the fees per annum charged for each division are 12, 38, and 44 guineas respectively.

168,
Robinson.

20. The hon. secretary of the Institution on the Newtown Road strongly condemns the admission of day pupils. He states that they are not regular in coming to school, the control of them is not so good as if they were constantly subjected to the wholesome discipline of the Institution, their parents are not able to teach them at home, and there is difficulty in getting them to and from school. He also stated that the London School Board some time ago determined to have only day scholars, but the experiment had not been successful.

396,
Watson.

21. The Superintendent also gave evidence that the experiment of taking day pupils had been tried in the institution at which he was trained at Home, but was not a success, and later developments in England had tended to confirm the belief that it was not desirable to have day scholars.

Para. 343,
Imperial
Charity
Commission's
Report.

22. There appears to be some weight in the objections; but if there are children residing within reasonable distance of the Institution whose parents desire that they should be treated as day scholars, some provision should be made for their education. The case of children residing too far from the central institutions to attend as day scholars has been met in London and on the Continent in this way: "The children attending these schools, unless their parents or friends live sufficiently near, are boarded-out in families of their own station in life, not more than two or three in a family; and the teachers of the schools from time to time visit the houses where the pupils are lodged, to see that they are properly fed and cared for. The parents pay towards the maintenance of their children in accordance with their means."

23. If the Directors could see their way, without impairing the efficiency of their Institution, to adopt some plan of this kind, it might materially lessen future expenditure for accommodation of inmates; and if their anticipation of increased numbers is fully realised, it will be necessary to seriously consider this question from the standpoint of economy.

Technical Education.

24. Under the heading "Technical Instruction, &c.," the following divisions are included:—Carpentry and woodwork, modelling in clay, drawing, painting, fancy work, cookery (practice and theory); music (singing, pianoforte, and theory). Drilling and gymnastics are also taught. The reports of the various teachers are satisfactory.

Outside Employment of the Children.

25. The testimony of the witnesses is somewhat conflicting as to the difficulty of obtaining outside employment for the deaf and dumb children, but the difficulty does not, on the whole, appear to have been great. The Superintendent stated that as a rule they are valued, and learned trades as well as boys who possessed all their faculties.

192-3,
Robinson.

406,
Watson.

26. The blind children to whom it is necessary to provide occupations after their school period are sent to the Industrial Blind Institution at Woolloomooloo, where they are qualified as far as possible in the various industries which are taught there. The arrangement is said to be sufficient to meet the existing requirements of this class, and the Superintendent of the Institution for the Deaf and Dumb and the Blind states that it has been attended with satisfactory results, while the authorities of the Industrial Blind Institution testify that they "have not had a bad boy from the Newtown Institution," that the lads "turn out well," and are "cleaner and better conducted than the general run."

406-10,
Watson.

670,
Hedger.

Education of Blind Children in State Schools.

27. There is now a tendency in some parts of England to depart from the system of educating the younger blind children exclusively in institutions devoted solely to the instruction of the blind, and to send them to the ordinary schools for sighted children. The Report of the Royal Commission which investigated the various methods of dealing with the blind in the United Kingdom in 1888, states that the opinion of the highest authorities upon this question is now in favour of the blind being taught in Board Schools with the seeing, and of separating education from technical instruction. It is also the unanimous opinion of the London Teachers of the Home-teaching Society that, say to the age of ten, children should be educated during a portion of their time with the sighted.

Pars.
36 to 39,
Imperial
Charity
Commission's
Report.

28. The Report also states that "fears that the blind might be subjected to ill-treatment from their sighted play-fellows have been shown by experience to be groundless; on the contrary, owing to the compassion with which they are regarded, they meet with the greatest kindness. The free intercourse with the seeing gives courage and self-reliance to the blind, and a healthy stimulus, which enables them to compete more successfully with the seeing in after life than those who have been brought up altogether in blind institutions."

Number of Inmates and Age of Admission and Discharge.

29. The number of inmates on 30th September, 1897, is given in the following table, which also shows the admissions and discharges during the year ending on that date:—

	Deaf and Dumb.		Blind.		Totals.		Grand Total.
	Male.	Female.	Male.	Female.	Male.	Female.	
In the Institution on 30th September, 1896	44	39	12	10	56	49	105
Admitted since	15	7	...	2	15	9	24
Discharged or removed	59	46	12	12	71	58	129
On the rolls on 30th September, 1897... ..	11	4	...	1	11	5	16
	48	42	12	11	60	53	113

30. There is no fixed minimum or maximum age of admission and discharge; and although the practice is stated to be to admit children at the age of 7 years, the official records show that the majority of the pupils under instruction during 1897 were not admitted until their ages were in excess of 7 years. This applies to 71 out of 110 in the deaf and dumb section, and to 14 of the 25 blind children mentioned in the Annual Report of the Institution. The average age of all the children at the time of admission was under 9 years. The maximum age of discharge is 17 to 18 years, but in special cases pupils have been retained beyond that age. The evidence on this point is as follows, the witness being Mr. Ellis Robinson, the honorary secretary:—

44. What is the general rule as regards the maximum age? The maximum is generally about 17 or 18 years of age.

45. The maximum is generally about 17? Yes; 17 to 18. We keep girls longer than boys.

46. Under what circumstances do you keep them longer than that? We keep them when we think that a year or two more would help them, when they have entered rather old, and are slow, and seem to need a year or two more schooling. Girls do not often go out to work for a living as boys do. Boys ought to leave here when they are about 16. They can then have five years' apprenticeship by the time they are 21. We have one boy older than that, but we are keeping him to pass the matriculation examination, partly to show what the deaf can do, and to fit him for a higher sphere of life than boys who go to carpentering or anything like that. He is a boy in a better position in life.

47. An ordinary citizen cannot keep his children at school until they are 18 or 20 years of age? No, he cannot; he has to put them to work, and the Government school-age is up to 14.

48. These inmates, who are supported by public subscription, have advantages as regards that which the ordinary citizen has not? To a certain extent they have; but in most cases where we keep them that time their fathers pay us a little more in school fees.

47,
Robinson.

31. This matter is important on several grounds. The great majority of heads of families cannot afford to keep their children at school for so long a period, and the question may be asked why an institution which is mainly supported by the benevolent contributions of the public, State subsidies, and fees for children admitted at the cost of the Government, should prolong the care of its inmates beyond the ordinary school age. The Superintendent is of opinion that bright and capable pupils should be fit to leave school after having had seven years' tuition. He states that their help is often wanted at home much sooner, and that consequently not a few leave after from three to five years' schooling (*Appendix No. 1*). The honorary secretary admits that the boys should not be retained beyond 16 years of age, because they can then have five years' apprenticeship by the time they are 21; and he states that the reason for keeping them is that "when they have entered they have been rather old and slow." The expert evidence indicates that deaf and dumb children should be sent to school, particularly for oral instruction, at from 6 to 7 years of age, and the remedy appears to lie in the adoption of a maximum age for admission.

430,
Watson.

520,
Bateman.

Report on
South Australia-
lian Blind
Institution,
1896, p. 6.

32. The other colonies have experienced the same difficulty as New South Wales in regard to the school age; and in England, not very long ago, this matter was considered to be of such importance to the welfare of the children that a law was passed making the attendance at school of the deaf and dumb and the blind compulsory. A very strong reason for such a measure in the case of the pupils who have to earn their own livelihood is that unless they are sent to school early they must either go out insufficiently educated or remain until they are of an age that precludes them from learning a trade by the time they attain their majority.

33. So far as the Institution is concerned, the additional year or two which they are required to spend at school under the present system not only causes an undue strain upon its resources by keeping up the number of inmates, but in any establishment in which the sexes must largely associate it is desirable that above a certain age they should be separated as schoolmates.

Association of Inmates.

34. Your Commissioners have given a good deal of attention to the advisability or otherwise of associating the sexes in the same institution. There are advantages, particularly in the case of these afflicted children, in dealing with them as far as possible under the family system while their characters are being moulded, by allowing the sexes to mix together under proper safeguards, and any evil likely to result from it could be largely prevented by discharging the inmates at a younger age than at present.

35. The Superintendent is of opinion, from his long experience, that the principle of the association is a healthy one, because "a somewhat finer type of character is produced in boys" by the influence of girls, as in family life; and "with due care and watchfulness," the authorities had not found any disadvantage in having the boys and girls together. "If they were older," said this officer, "the difficulty would be greater; with children there is no difficulty." So far as the humanising effects upon the children are concerned this opinion is endorsed by some very good European authorities.

373,
Watson.
Para. 561,
Imperial
Charity
Commission's
Report.

36. The experience of older communities,—where intermarriages of the congenital deaf and dumb have been so numerous that the results could be ascertained with sufficient accuracy to admit of a theory being founded upon them,—has been that the affliction becomes hereditary in a very marked degree, and on this ground scientific authorities strongly discourage not only these marriages, but also the marriage of persons connected by consanguinity, as being likely to produce deaf-mute offspring. One high American authority (Mr. Graham Bell) states that marriages between deaf and dumb have been so frequent, and the hereditary results have been so marked, as "to lead to speculation on the possibility of a deaf variety of the human race," and the latest Royal Commission on the Charities of Great Britain, which included some of the ablest men in the kingdom, reported that various cases had come under its notice where several deaf and dumb members of the family were the offspring of deaf-mute parents.

Paras.
302, 559,
Imperial
Charity
Commission's
Report.

37. The English Commissioners gave much attention to this subject, and made a strong recommendation relating to it. Dr. Peet, who is referred to in their Report as an authority in connection with the New York College, states that one out of every ten congenital deaf mutes in America is the offspring of a consanguineous marriage; and that statistics show similar results in Liverpool and London. An analysis of 607 cases of the deaf-mute offspring of deaf-mute parents showed that 328 of the children were born deaf and dumb, that 40 cases were non-congenital; and the causes in the balance of 239 cases could not be ascertained. In the Alpine regions in Lombardy and Piedmont the percentage of deaf mutes was found to be three times greater than in any other part of Italy as the result of marriages between blood relations. Generally the scientific evidence showed that with one parent who is a congenitally deaf mute one-tenth of the children were deaf mutes, and where both parents were congenitally deaf mutes one-third of the children were born similarly afflicted. A return prepared by Mr. Graham Bell indicated that out of 2,262 deaf mutes, whose cases had been investigated, more than one-half of the number, or 54.5 per cent., had other members of their family deaf and dumb.

Paras.
566, 314, 311,
306, 307, 309,
300,
Imperial
Charity
Commission's
Report.

38. Your Commissioners quote these statistics thus fully from a report which has been prepared with great ability, because they are of considerable value to those engaged in the charitable task of ameliorating the social condition of this afflicted class of the community.

39. The statistics of these colonies do not at present furnish any reliable data for presenting the results of either consanguineous marriages, or intermarriages of the deaf and dumb, and the last census in this Colony showed that out of 383 deaf mutes there were not more than 65 to 70 of both sexes of ages likely to make marriages probable. There have been ten marriages between deaf mutes from the Institution for the Deaf and Dumb and the Blind, and the Secretary gave evidence that he had no reason to suppose the offspring were similarly afflicted; but there does not appear to be any recorded information on this point.

184-5,
Robinson.

40. On the whole, and in view of the precautions taken by the authorities to allow boys and girls to mix together only when they are under supervision, the association of the sexes up to a certain age does not appear to be objectionable; but it is not advisable to allow it in the case of the elder children, because it leads to intermarriages which for the reasons stated are undesirable in the interests of the body politic.

Education of Deaf and Dumb and the Blind in one Institution.

41. The opinions of expert authorities with reference to educating the deaf and dumb and the blind in the same institution differ so widely that it is not possible
to

to recommend any fixed rule in connection with the matter ; but, as no uniform policy appears to have been adopted, it is safe to assume that the association is not distinctly objectionable, while several reasons exist in favour of it.

42. In New Zealand and Victoria the two classes are taught in separate institutions. In West Australia there is an institution for deaf mutes only, so that it is probable the separate system will prevail there. In Queensland and South Australia the deaf and dumb and the blind are associated as in New South Wales, and no objectionable results have been ascertained. In Europe the same diversity exists.

43. The institution in this Colony first dealt only with the deaf and dumb. After waiting six or seven years in the hope that a school for the blind would be founded, in compliance with the solicitation of parents the Committee determined to admit both classes. The two objections which have been made to association are that it prejudicially affects the education of both classes, and that deaf and dumb children are frequently unkind to the blind. The school inspectors' reports satisfactorily dispose of the first point; and with reference to the second, the Superintendent stated that he had always found that the deaf were really good to the blind, and did not suffer by comparison with ordinary children in that respect. His evidence is quoted fully because it should remove any unfavourable impression upon this point:—

376. What is your opinion with regard to having the deaf and dumb and blind together? I know that our plan is different from that existing in many other institutions; but as far as I can judge, it is a very good thing, and a very wholesome thing, and beneficial in some respects to both, especially in what one may call ethical or moral development. That the helplessness of the blind gives an opportunity to the deaf to offer a little help and sympathy, and thus develops in them in a kind of reflex way much that is good.

377. Do you find that the deaf and dumb occasionally tease, and are spiteful to the blind? Not at all; I have always found that the deaf were really good to the blind. Of course there are exceptions.

378. The deaf and dumb do not suffer by comparison with ordinary children in that respect? No; I think they are very good to the blind, and good in other respects too.

379. So you think that the deaf and dumb and the blind help each other to some extent? I think so. I do not think a deaf child can be helped much by the blind, but merely seeing the helplessness of the blind and doing them a kind turn, as they often do, is good and wholesome ethical training.

44. Your Commissioners believe that there is no force in the objections, and, in view of the circumstances of this Colony, and of the limited number of deaf and dumb, and of blind children of school age, are of opinion that the training of these two classes in the same institution is justified by moral and economic considerations. It requires no argument to show that one institution can deal more economically than two with the care and teaching of so small a number of inmates.

FINANCIAL.

Cost of Buildings, Administration, &c.

45. The Institution is in a much stronger position financially than any other kindred institution in Australia. So satisfactory is the condition of its finances, that the committee might well now consider whether they should not set an example worthy of being followed in other directions, and forego all further claims to State aid, except for services rendered.

46. The opinion of your Commissioners on this point will be found expressed among the recommendations; but if these are anticipated by the directors, the Institution for the Deaf and Dumb and the Blind will be in the independent position of voluntarily relying for support upon public philanthropy, which there can be little doubt will be found quite equal to any necessary demands upon it to carry on operations without assistance from the Consolidated Revenue. The continued receipt of State aid, when it is not really required as a matter of necessity, must to a large extent dry up the springs of private charity, and there is evidence that this has probably been the case in connection with this useful institution. A plethora of funds also affords temptation to all public bodies having the administration of such funds to incur expenditure extravagantly; and it will be shown that, notwithstanding the excellence of their methods of administration, that is precisely the position into which the committee have drifted in regard to the excessive cost of buildings to which reference is made in paragraphs 55 to 67.

Accumulated Funds.

47. The accumulated funds at the end of the last official year (September 30, 1897) amounted to upwards of £30,000; the buildings and improvements, which are unencumbered by debt, cost nearly £48,000, of which sum the Government contributed £5,599; and the site, which is vested in trustees, is under-valued at £5,000. The present capital of the institution in funds, and in property, is therefore represented by a sum of more than £83,000, which we are informed by the honorary secretary will be augmented by a bequest from the late Mrs. Hunter-Baillie, amounting at present to £7,850. This sum may be increased to £10,000, and it is stipulated under the will that the amount shall be invested in Government securities.

27-32,
Robinson.*Income and Expenditure.*

48. The income for the past year, amounting to £4,134 12s. 11d., was derived from the following sources:—

	£	s.	d.
Subscriptions and donations, &c.	1,068	18	4
Government subsidy... ..	450	0	0
Interest from perpetual subscribers' fund	1,103	18	2
Pupils' fees (including £718 received from the Government)	1,428	15	8
Repayments for clothing	76	7	9
Sundries	6	13	0

49. The expenditure during the same period amounted to £4,238 9s. 1d., of which £2,101 11s. 10d. was paid as salaries and wages. The cause of this item bearing so high a proportion to the total disbursements is previously explained in a separate paragraph relating to the constitution of the staff. In addition to the Government grant, and the payment of fees for State children, the Government also allows free passes to all children visiting their friends during the Christmas and Midwinter vacations.

Falling-off in Subscriptions.

50. There is reason to believe that the income of the institution might have been increased if greater efforts had been made to obtain subscriptions from the country districts, from which the majority of the pupils are received. The institution has only one collector, whose time is fully employed, as he also acts as assistant secretary and accountant. He is only able to make three fortnightly visits to the country during each year, which extend south as far as Albury, west as far as Dubbo and Forbes, and north as far as Tenterfield.

460-464,
Cooke.

51. If the time occupied in travelling to these localities and the intermediate townships is considered, it is obvious that the time available for collecting is very limited. This officer is admittedly overworked, and it would be well for the committee to consider whether it would not be economical to provide him with an assistant, whose services would enable him to devote more of his time to collecting in the country. The subscriptions have fallen from £1,613 5s. 7d. in 1891 to £1,068 18s. 4d. in 1897. The interest from the perpetual subscribers' fund exceeded the total amount of the general collections last year.

52. It is probable that the large endowment fund may have been a factor in connection with the falling off in the amount of the general subscriptions; indeed, this is practically admitted by the honorary secretary, who has taken an active interest in the management of the institution for thirty-six years:—

284. Looking at the work done by this institution, does it not appear to you that the number of subscribers is very small? It is not so large as it ought to be?

285. And especially in the country? It is not so big in the country as it ought to be. During the last few years we have not sent into the country as much as we used to do. We used to have one collector down the rivers, one up north, and one in Queensland.

286. Yet you get the largest number of children from the country? Yes.

287. Taking into consideration the fact that this fine building that we are in now is entirely paid for, and that you have an endowment fund of £28,000, do you not think that the public for these reasons are disinclined to subscribe? To a very small extent.

288. The suggestion has been made that you seem to be so well off that people are not inclined to give? Yes.

289. Do you not think that this endowment fund is likely to prove a kind of dead hand on the institution? I have always argued that it does and it does not. It does from one point of view, and it does not from another. From a director's point of view it is nice to have an endowment to make you to a certain extent independent of the fluctuations of the times; but subscribers say, "You have plenty of money; we will not subscribe."

*Average Cost per Inmate.*100-6,
Robinson.

53. The average capitation cost during 1897 was between £38 and £39, irrespective of interest on the value of buildings and land, which is usually, in this Colony and elsewhere, not treated as an item of working expenditure by charitable institutions. This cost per child is not excessive, in view of the nature of the institution, and it does not compare unfavourably with the expense of administering similar institutions in the other colonies, and in England and America.

Excessive Expenditure on Buildings.

54. While the administrative cost of the institution is sufficiently economical, the same satisfactory statement cannot be made with reference to the expenditure upon buildings, which, after making the most liberal allowances, your Commissioners are of opinion has been excessively out of proportion to the necessary requirements of an establishment of this character.

55. It is requisite that this matter should be considered of prime importance now, because the Directors have recently asked for a special grant from the Government of £6,000 to provide increased accommodation for pupils, a kitchen, and dining-room, &c. This request has been made upon the grounds that there is practically no building fund at present; that the institution is occupied to its full capacity; and that the statistics of past years indicate that there will, in the near future, be necessity for largely increased dormitory accommodation. There is good reason for believing that the first two conditions can be overcome, and the information furnished to the Government with reference to the third was unintentionally misleading. The evidence bearing upon this matter is as follows:—

221. You propose to build? Yes.

222. What are the extensions required for? For dormitory accommodation and increased kitchen and dining-room accommodation, also a new laundry.

223. Is the dormitory accommodation insufficient for 112 persons? It is just about full.

224. What is wrong with the kitchen? It is twenty-six years old, it is too small, and not up to date. We cannot do the cooking very well in it. During the last four years the number of pupils has increased from seventy-six to 114.

225. Was that return for the Chief Secretary prepared with reference to the extension? Yes.

226. How many persons can be seated in the dining-room? I think it is just about comfortably full now. My proposal for the addition is to give us room for about 170 pupils in the dining-room. At present the officers have their meals in the dining-room—that is to say, they dine in the same room where the children dine, but a little after them. They have their breakfast about the same time and tea or dinner at night about the same time. I propose that we should take that table out of the dining-room, because, whilst theoretically the officers are supposed to have an oversight during the meal hour, practically they do not, and my proposal is that the officers shall have a separate dining-room. It will contribute in more ways than one to the comfort and convenience of the officers and pupils; one officer will be detailed to remain on duty whilst pupils are taking their meals, to see that they behave properly and that they get enough to eat. We shall perhaps have 140 children next year.

227. Do you know that you will get them? Yes; we know of a good many now that are too young.

228. But some of the others will be retiring? We have considered that; but unfortunately the retiring children will be very few.

229. Have you had to refuse admission owing to insufficient accommodation? No, and we shall not have to do that. We can dismiss some of the elder ones to make room.

230. Have you names on your books that lead you to suppose that you will get the increased number? No; but we hear of them. Mr. Cooke can tell of a good many in the country.

231. What number will be provided for with the increased accommodation? About 170; an increase of from seventy to eighty.

232. That means about 50 per cent. more? That is what we are going to arrange for.

233. What sum have you asked for from the Colonial Secretary? £6,000.

234. What is the estimated cost? The architect's is about £6,000; but it will cost more.

235. Have you asked for the whole £6,000? Yes. We have spent £47,000 on buildings, and we have had only £5,000 from the Government.

56. There was a credit balance to the building fund on September 30, 1896, of £2,348 3s. 8d., which consisted wholly of legacies. Without any apparent satisfactory reason, and shortly before making their heavy demand upon the Government, the Directors transferred £2,265 from the amount at credit of the building fund to the perpetual subscribers' fund. If this course had not been adopted the building fund would have been in a condition to provide a new kitchen and laundry, which are undoubtedly required. The Hon. Secretary's evidence contains the details of this transaction:—

81. What is the amount of your accumulated funds? When we were making our building up and completing it we had a building fund account into which we used to pay all legacies that were not conditional, and we used to transfer periodically any surplus of money from subscriptions at the end of

of the year to our building account, to be used for the completion of the building. If you look through our reports, you will find that nearly every year we transferred from £100 to £400 or £500 to that fund.

82. Your accumulated funds will be balances to the credit of these various accounts? Yes.

83. Which consists of these accounts—a balance to the credit of the perpetual subscribers, balance to the building account, Spittles' legacy account, and the blind pupils' prize account? Yes; that last is the interest on the Spittles' orphan fund.

84. Your funds will be these balances less any debit balances on any other fund? Yes.

85. Have you transferred any sum from the building account back again? Yes.

86. Why was that done? Because the Committee thought that in our building fund account there were several legacies which it was undecided whether they were conditional or not. The Committee transferred them because there was a doubt whether they ought to have gone to the building fund, and we transferred them back recently.

87. That would have the effect of depleting the building fund to that extent? Yes.

88. Then I understand that your institution has asked the Government for a grant in aid of the building fund;—was that since these re-transfers were made? Yes; since that we had asked the Government to help us—to give us something towards the amount that we had spent.

89. So that if this £2,265 had remained in the building fund it would have shown that you were so much less in need of a Government grant? I am pretty well sure that Mrs. Grose's legacy was a conditional one. It is difficult for us to find it out in these cases. This legacy is a pretty old one. Latterly we have been more diligent.

90. Surely there can be no difficulty in ascertaining the conditions of a legacy? We have had some difficulty.

91. These legacies have been in the building fund for years, have they not? Yes; in Mr. Cameron's case it was three years before we got all of his.

92. The effect of the transfer is that the building fund is £2,265 less, and the endowment fund is so much the better? Yes. I think it is a proper thing to have an endowment fund as a provision against bad times.

93. These legacies have been deliberately put to the building fund in the past, and afterwards transferred? Our old rule was to do that; now we have passed a new resolution, that all legacies of £100 shall go to the perpetual subscribers' fund.

57. As to the probable additional requirements for pupils, overcrowding in the dormitories could be relieved by an arrangement with similar institutions, and by a readjustment of the ages at which the elder pupils should be discharged, both of which matters are referred to elsewhere in our Report.

58. As evidence that the statement that expenditure upon the buildings of this institution has been extravagant is justified, your Commissioners submit a comparison of its cost with that of a similar establishment which has been erected in accordance with modern requirements. The Assistant Government Architect, by request of your Commissioners, has furnished a report on the St. Patrick's Hospital for the Blind at Lewisham, a portion of which has been erected and is in operation. The Report states:—

In accordance with instructions received from the Chairman of the Royal Commission on Charities, I visited St. Patrick's Institution for Blind Women and Children at Lewisham, and have the honor to submit the following report:—This building was erected in 1896, at a cost of £1,726, and forms the northern wing of a proposed block of buildings. Through the courtesy of the architect, Mr. H. E. Wardell, I have been allowed to make copies of the plans, which are herewith attached. On these plans, the walls of the portion already built are tinted red, and the future extension and completion of the building blue. The accommodation provided in the wing now erected is as follows, viz.:—Ground Floor: Dining-room, 50' x 19' 6"; staircase hall, 19' 6" x 18'; day-room, 37' 6" x 19' 6"; reception hall, 12' x 6'; verandah, kitchen, and laundry. First floor: Dormitory (No. 1), 50' x 19' 6"; dormitory (No. 2), 37' 6" x 19' 6"; sisters' room, 20' 6" x 11'; sisters' room, 11' 6" x 9'; lavatory, 2 bath-rooms, and water closet. The kitchen, laundry, lavatory, and bath-rooms are temporary structures, and are intended to be removed when the remainder of the building, as designed, is carried out. The two dormitories on the first floor will not, in my opinion, comfortably accommodate more than thirty-five persons, but if the large room on the ground floor is used as a dormitory, twenty more could be provided for, making a total of fifty-five. This arrangement would not, however, be a satisfactory one, as it would necessitate the day-room being utilised also as a dining-room, which I consider is objectionable. The number of inmates that can be properly provided for in the present block must, therefore, be taken as only thirty-five, and (say) six nurses. This would make the cost of the erection of this portion of the building £49 6s. 3d. per head, exclusive of the nursing staff. In the completed building, according to the plans, there are six dormitories shown, giving accommodation for 110 inmates, three day-rooms, refectory, two reception rooms, seven sisters' rooms, kitchen, pantries, stores, &c. Bathrooms, lavatories, and water-closets will be provided in detached wings entering from the main staircase on each floor. Taking the cost of the present portion as a guide, the south wing and centre block should be erected for about £4,774; the total cost would, therefore, be (say) £6,500. This would make a cost per inmate of £59 1s. 9d. The building is well planned; the general arrangement is simple and very satisfactory; the rooms are lofty, well ventilated, and lighted. In the design, superfluous ornamentation has been avoided, but a very good and pleasing architectural effect has been obtained by the careful and artistic grouping of the buildings. The work in the portion already erected has been well and faithfully carried out.

59. As already mentioned, your Commissioners were permitted to inspect this institution. The general arrangement of it was excellent, and the effect upon their minds was very pleasing. The architect's report fully justifies the impression thus made, and, it will be seen, states that the total estimated cost of the completed buildings will be £6,500, and they will contain provision for 110 inmates, the accommodation or bed-cost thus being £59 1s. 9d. per head.

60. The institution for the Deaf and Dumb and the Blind on the Newtown Road cost nearly £48,000, and as, with 113 pupils, the Directors state that it is occupied to its full capacity, the expenditure for accommodation alone has amounted to over £430 per pupil.

61. Even making every proper allowance that may be due in consideration of the period of its erection, and the difference between the cost of labour and material then and now, the figures thus presented do not require any comment to emphasise the fact that a large expenditure has been unnecessarily incurred upon the buildings of the last-named institution, and that if due economy had been practised in this particular its Directors would some years ago have been in a position to forego help in any form from the Government, and at the same time to afford the most liberal education and treatment to the pupils committed to their charge.

62. With reference to the further reason urged by the Directors in support of their request for a grant of £6,000 for new buildings—namely, that the probable increase of numbers made additional accommodation necessary—their estimate is based upon the figures of the past four years, during which, judging from the abnormal increase in the number of pupils, special efforts seem to have been made to induce parents to send their children to the institution, and on this basis it was represented that there had been an “increase of numbers from 76 to 114,” or exactly 50 per cent.

224,
Robinson.

63. The figures, to be of value, however, and to make the comparison fair, ought to have extended over a longer period. It should be understood that a general annual average percentage of increase has not been accurately placed before the Government. It will be seen that the figures of 1893, when the number of inmates was exceptionally low, were selected for comparison with those of 1897, when the number was abnormally high. A statement compiled from the Directors' Annual Reports shows that with the exception of the year 1897 the general increase during the past eight years has been very small, and that in some years during that period there was a decrease. The following figures make the matter clear, and indicate that the increase since 1889 has been less than 18 per cent. :—

Year.					Deaf and Dumb.	Blind.	Total.
1889	71	25	96
1890	72	24	96
1891	61	24	85
1892	73	23	96
1893	61	15	76
1894	66	19	85
1895	75	16	91
1896	83	22	105
1897	90	23	113

64. It is most unlikely that the abnormal advance in the number of pupils during the past two years will be maintained, because all the latest literature on the subject of the deaf and dumb and the blind shows that the number of these afflicted persons is decreasing in its proportion to the number of the general population, while there does not seem to be any source at present from which a large increase of pupils can be expected.

65. The total number of blind and of deaf and dumb persons in New South Wales under 15 years of age, at the last census, was 194; and if those under 7 years, at which age children are considered eligible to be first taught apart from their parents, are excluded, and the fact that other institutions than that on the Newtown Road are now receiving pupils is considered, it will be seen that the number of such children in this Colony who are not now being educated must be comparatively small

small. As a matter of fact, there are not at present any applications for the admission of new pupils; and in view of the provision now existing for the education of the Deaf and Dumb and the Blind in the other colonies, it is neither necessary nor desirable for the Directors to receive pupils in future from outside New South Wales.

230,
Robinson.

66. On all these grounds the recent application to the Government for additional funds for building purposes should not, in our opinion, be complied with. Your Commissioners have given special prominence to the large cost incurred upon buildings, because considerable sums have been thus expended which might, in our opinion, have been more properly devoted to ameliorating the condition of the indigent deaf and dumb and the blind; and also in order to impress upon any organizations that may be entrusted with the expenditure of Government subsidies and public subscriptions for philanthropic purposes the necessity for practising economy in regard to buildings.

Investments—Lending Money on Mortgage.

67. At the end of last year the accumulated funds of the institution were invested as follows:—

Savings Bank of New South Wales, £28,014 4s. 4d.
Government Debentures, £900.
On Mortgages of Real Estate, £1,176 8s. 5d.

68. In consequence of the Savings Bank authorities having decided that they would not retain large sums at interest, the Directors of the Institution for the Deaf and Dumb and the Blind determined to increase their mortgages on real estate, and to lend money on suburban property at a higher rate of interest. We quote the Hon. Secretary's evidence with reference to this matter:—

256. I think you said that a large sum of your money, £25,000, was in the Commercial Bank? Yes.
257. For which you get 3 per cent.? Yes.
258. Finding that a small rate of interest, you are putting it out on real property? Yes.
259. What regulations have you for that? We have no special regulations, but we have the Board of Directors. The treasurer, myself, and Mr. Harrison have to supervise investments. We have to be satisfied that they are right before we accept them, and we get a valuation.
260. Is it known that you have money to invest? No.
261. How do people come to know it? It is only during the last six months we have done anything in that way. Messrs. Iceton and Faithfull have been acting for us, and they have charged us very little.
262. Then you lend out the money through Messrs. Iceton and Faithfull? We have not lent through them yet; we have only taken three mortgages. This came about through J. T. Neale's legacy. The executors said that if we liked we could take over some mortgages, and we took £800 in mortgages. We had the pick of them.
263. How many mortgages have you out? Four altogether. The first we had was many years ago. A drill instructor was either building or buying a cottage, and we let him have a mortgage on the cottage. It has been a most unfortunate speculation for us. The mortgage was effected twelve or fourteen years ago, and it is in existence now, except that we have virtually foreclosed. We are receiving the rents.
264. You are not lending anything on station property? No; on city and suburban property.
265. And on a proper valuation? Yes.
266. What proportion would you lend on a valuation? Except in very rare cases, not more than half. In this last case we lent two-thirds—£550, at 5 per cent.; and a house, valued by the owner at £1,000, and by Richardson and Wrench at £900; but it happens to be in a very exceptional position—it is a choice block of ground.

69. The risk attached to this method of dealing with the capital, arising from unforeseen fluctuations in the value of real estate, was pointed out to the hon. secretary, and our President recommended that in order to provide in some measure against possible loss the Directors should establish a sinking fund with the increased amount derived from interest. The hon. secretary thereupon intimated that the Committee would at their next meeting consider the question of establishing a fund to provide against the depreciation of investments on mortgage by carrying any surplus of interest above that allowed by the Savings Bank to a reserve interest account, with a view to meet any loss of the capital thus invested. Your Commissioners have been informed that the Directors have since adopted the following resolution:—“ Having agreed to
lend

lend certain moneys on mortgage security, it is resolved that from the interest received on same an amount equal to the interest allowed by the Savings Bank be carried to income account, and the balance placed to a reserved interest account, with a view to meet, should such occur, any loss of the principal sum so invested."

70. The practice, however, of investing the funds of such institutions on mortgage of freehold property is not to be commended; and if it is pursued the utmost care should be taken as to the nature and actual value of the securities, and the extent to which advances are made upon them. It will be seen from the foregoing evidence that a loss was incurred some years ago in connection with the only transaction of this character at that time entered into by the Directors.

71. We feel sure that the present Directors will exercise great care in regard to the investment of their funds; but they are not a perpetual Board, and it is possible that another Committee, not so competent to deal with this matter, might in their desire to obtain higher interest so conduct lending on mortgage that serious loss might be the consequence.

72. In view of the possible vicissitudes of investments on mortgage of freehold property, your Commissioners are of opinion that the Directors should adopt the safe plan of investing the whole of their accumulated funds in Government Stock.

Audit of Accounts, &c.

73. Although the accounts of the institution are audited by professional accountants, the important duty of checking the collections is performed by the hon. treasurer. Without in any way impugning the honesty of the collectors your Commissioners are of opinion that this duty should be transferred to professional auditors otherwise unconnected with the institution. The hon. secretary's evidence explains the present method:—

69. About the accounts, have you had any special subsidy? The special subsidies were—in 1871, £2,000 for building purposes; in 1873, £1,000; in 1879, £2,000; total, £5,000.

70. Have you a yearly subsidy? Yes, £450 a year.

71. Has it ever been more than that? No; at the start it was £100 a year, then £150 a year, then £250 a year, and now it is £450 a year. We have received two donations of £200 each for asphalt-ing the footpaths outside the institution. We are not in any municipality; we are a municipality to ourselves, and we have not any rates and taxes to pay.

72. These grants were made by the Government? Yes.

73. By whom are the auditors appointed? By the subscribers at their annual meeting. We generally have recognised accountants in the city—anybody we can get.

74. They are not paid? No. There was another grant of £199. We had dry earth closets, and we were told to do away with them, and we had a drain made connecting with the sewer that goes into the Prince Alfred Hospital drain. That cost about £200. The Water and Sewerage Board wanted to charge rates for it, but we said, "No; we object; if you are going to do that, pay us back the £199 that we have expended," and they paid us that sum. It was really a refund.

75. Have the accounts ever been audited by a Government auditor? They come here to check our subscriptions.

76. They see whether you are in a position to claim the subsidy? Yes; I think they look through our books a little. Mr. McKern was here recently and looked through all our books.

77. They have not gone into matters of expenditure? No; an Inspector of Charities, Mr. Robison, used to come and ask about different matters, and so did Mr. Maxted, but they never checked the expenditure.

78. What conditions are imposed by the department for getting the subsidy? We simply send in a statement that we have received certain sums.

79. They do not follow that up by any further inquiry? We send a duplicate slip to the Treasury, and they pay the grant in to the account of the institution in the Commercial Bank.

80. And they have no further control? No. We always make a point of sending the annual report to the Colonial Secretary, and we have to furnish returns to several departments.

* * * * *
211. What checks do the auditors apply? Mr. Cooke has a collecting book. I do not think they check every butt, but the treasurer does. He comes every month, and goes through everything.

212. But the auditors do not? No, they do not check the butts.

213. The real check should be from outside the institution? Mr. Phillips goes through them very carefully.

214. Still he is your own officer? You can hardly cast suspicion in the matter.

215. I am simply asserting a principle? No doubt it is a correct principle, but if we had any other check we should have to pay for it. If the Government would check the accounts of these institutions it would be a very good thing.

216. That is the object of my question? I do not know how they do it in America. There they give every detail in their report. If they buy a broom it is put down so many cents. They are all State institutions there. They send in a report to the State legislature, and say, "We want 250,000 dollars," and the money is put on the Estimates and voted.

217. The check which you rely on chiefly is that of Mr. Phillips? Yes. I used to do it at one time, but it became a serious task. I used to go through every butt, but when you collect a sum of 2s. 6d. or 7s. 6d. in the country we do not put that in the butt; we do not profess to give receipts for sums under 5s.

218. Has any collector ever appropriated any of the money collected? Yes; a collector whom we had before Mr. Cooke came.

219. How did he manage to do it? He did not fill out the butts, and did not put the amounts in his sheets.

220. Did you have butts? Yes; and I checked them, but I did not check them sufficiently. The Committee had the man before them, and he promised to repay the amount, and lest the interests of the institution should suffer by publicity we did not say much about it. We took from him promissory notes for the amount, but they were never met. He did good work; he brought in a lot of children and a good amount of money. He worked hard. His deficiency amounted to about £200.

74. It will thus be seen that although some years ago the collection books were checked by the hon. secretary, a fraud to the extent of £200 was discovered to have been perpetrated by a former collector, and that it does not appear to be the practice to give receipts for subscriptions under 5s. It is, consequently, not possible to check, by means of the receipt butts, these small sums, which are numerous and reach a considerable amount in the aggregate. The principle of giving receipts for all collections is a sound one, and should be adopted, as the existing method affords facilities for misappropriation which it would be very difficult to detect. Its adoption would also be more satisfactory to the collectors, as well as to the public.

217-220,
Robinson.

Non-payment of School Fees.

75. With regard to the payment of fees for the children, the practice hitherto has resulted in heavy losses to the institution. It has been the custom to occasionally write off arrears, and large sums appear to have been thus sacrificed, some of which could have been obtained if more earnest efforts had been made to recover them. Seeing that this institution is largely supported both by the Government and the public, and that although its objects are educational, it is practically a charitable institution also, those parents who, there is reason to believe, can pay but will not, should be dealt with more severely as defaulting debtors.

149 to 156,
Robinson.

76. The evidence disclosed that at the end of December, 1897, the amount due to the institution for arrears of fees was £1,946 18s. 10d., that only £1,038 3s. 6d. was regarded as recoverable, and that about £920 had already been written off as bad debts.

474, Cooke.

77. It was elicited that several comparatively well-to-do parents were among these debtors. The committee have made it a rule not to issue summonses for the recovery of arrears. No valid reason was given for the adoption of such a rule, and owing to its existence the institution must have been deprived of a considerable portion of its revenue, as it is not difficult to understand that parents who do not desire to pay soon become aware of any loophole of escape from their liability to do so. A grave responsibility rests upon the Directors in regard to the recovery of these fees. The form of security which they have provided for admitting pupils stipulates that fees shall be paid in advance, "half-yearly or quarterly (as most convenient)," and that parents or guardians shall also provide the children's clothing. If these conditions had been carried out in their integrity, when practicable, there can be no doubt that many losses which have fallen upon the Institution through neglect to give effect to them, would have been prevented.

141 to 147,
161,
Robinson.

78. The question was raised as to whether the nominal amount of the standard fee fixed by the committee for private pupils, namely, £40 a year, with an additional charge for clothing, was sufficient in the case of wealthy people. It was admitted that, including the actual cost of maintenance, education, and interest upon capital, the expense to the State and the institution *per capita* was about £50 10s. a year. The Honorary Secretary expressed the opinion that, inclusive of all incidental charges, it would be fair to fix the standard rate at £55 a year for those who were able to pay it:—

248. Our great object here is to see whether the funds of the institution are economically managed, and, of course, the great test will be as to the cost. It appears to me that the cost per pupil, as far as the staff is concerned, is £21 6s.; for provisions per pupil, about £14 10s.; that is, £35 16s., and the interest on the debt, reckoned at 3½ per cent., estimated at £48,000, would be £1,680, which would have to be divided amongst 113 pupils; that would come to about £15 per head; so that each pupil

costs

costs the State and the institution about £50 10s. a year, and you get fees that would average about £10 13s. per head, bringing down the actual cost to £37 17s. per head? Yes. In some American institutions it costs £30 apart from the staff. I have an impression that the cost of the education of the deaf and dumb and blind here averages about the same as it is in America. I am sorry to say that I have lost the book that I had which gave the cost per head in dollars at about thirty institutions in America. I think it was from £38 to £60 per annum.

249. Do they include the cost of the buildings? I do not know whether they do.

250. Do you think that £50 10s. per annum per child is a reasonable cost? I think, considering the nature of the institution and the education given, that it is.

251. You tell us that there are some children here of wealthy people? Yes.

252. Then, according to that, they are paying too little? Yes; I think they are charged too little. They could not put their children to the ordinary boarding schools at a charge of less than £40 or £50 per year.

253. Then do you not think it would be a fair thing to charge them at least £55 a year? It would. We consider that the subscribers to the institution contribute something in that way.

254. You are taking them at the expense of both the State and the institution;—do you not think it will be wise to revise your charges in view of that? I do not think we should get the money. Only a small minority pay up the full rate.

79. The existing maximum rate is about equal to the expense of education and maintenance in cognate American institutions, which are administered wholly from State funds, and where the methods of management and instruction are similar to those adopted in New South Wales; and as a fairer comparison it may also be mentioned that in other colonies where the general conditions are similar to those prevailing in New South Wales, and where the institutions are also managed by voluntary bodies by means of public subscriptions, State subsidies, and pupils' payments, the standard fees are about the same in amount as those fixed in this Colony.

480,
Cooke.

80. The returns of last year show that any increase of the fees to be fixed as a standard would probably not, in the great majority of cases, be attended with any considerable increase of revenue. The parents and relatives of the children, as a rule, appear to be in poor circumstances, and the fees actually received consequently ranged from as low as £1 a year upward. There were altogether 118 pupils in the Institution during 1897. Of these 2 paid under £1 (for clothing only); 24 paid from £1 to £5; 20 from £5 to £10; 12 from £10 to £15; 3, £15 to £20; 4, £20 to £25; 1, £25 to £30; 1, £35 to £40; 2, £40 to £45; and 3 paid from £45 to £50 each. There were thus 72 pupils under arrangement with parents for payment, and the total amount received (£735 12s. 2d.) did not average more than £10 4s. 4d. per head of paying pupils. There were in addition during the same period 27 children maintained at the expense of the Government of New South Wales at a capitation charge of £36 per annum, and 3 at the cost of the Tasmanian Government at the same rate, while 16 parents did not contribute anything.

81. Finally, with reference to the matter of fees, it appears that the efforts of the Committee should rather be directed towards compelling parents to fulfil their obligations under existing arrangements, so far as they are able to do so, than to the consideration of the question of increasing the standard amount.

Children paid for by the Government, &c.

82. The arrangement with regard to the charges for children whose parents should be classed as destitute does not appear to be adjusted on any logical basis. For example, the twenty-seven children for whom the New South Wales Government paid £36 a year, and the sixteen who were not paid for at all, so far as could be ascertained, belong to the same class; and it therefore seems obvious either that the former ought to be received as free pupils or the latter should be made a charge against the State. Otherwise the classification of these children is not equitable, as the first section are practically classified as State paupers, and the second as pupils sent in by their relations.

83. In the opinion of your Commissioners, a better way to deal with this matter would be to confine Government payments to children who are, before their admission into the Institution, made wards of the State under the State Children's Relief Act. They would then be under the legal control of the State Children's Relief Board, which stands *in loco parentis* to the dependent children of the Colony who are maintained from the Consolidated Revenue. All other non-paying inmates should be maintained by the Institution, in accordance with the provisions made by the Directors for that purpose.

84. The increase in the number of children paid for wholly at the Government cost has been singularly rapid during the past six years as is shown in the following table:—

SCHOOL FEES.

Year.	From pupils including clothing repayments.	From New South Wales Government.	From Queensland Government.	From Tasmanian Government.	From New Zealand Government.	Total.
	£	£	£	£	£	£
1891	780	247	432	246	80	1,785
1892	741	325	393	183	84	1,726
1893	567	349	500	104	1,520
1894	604	336	96	1,036
1895	613	480	108	1,201
1896	719	551	108	1,378
1897	708	718	79	1,505

There has thus been an increase of over 100 per cent. in the amount of these fees since 1894.

85. The Committee, as a part of their system, admit a number of destitute children free of charge; and it will be seen that the increase in the number paid for by the Government was coincident with the withdrawal of large payments from the other colonies, from one of which (Queensland) no less than £1,325. was received in school fees during the three years ending September 30th, 1893, while from Tasmania and New Zealand in the same time pupils' fees amounting to £697 were received; the total amount thus obtained being £2,022.

Directors' Reports, 1891 to 1897.

86. A misapprehension may be created by the evidence of the Hon. Secretary with reference to the children received under payment from the Government:—

243. Are the children for whom the Government pay £36 a year sent here by the State Children's Relief Board? Yes; they all come through them now, and they recommend the payment. We do not put every child on the Government; we educate some free. Of course, owing to the pressure of the times, we are obliged now to ask the Government to pay more than we otherwise should ask them to pay.

244. What we want to get at is how those children come here who are sent by the State Children's Relief Board? They are responsible for them to a certain extent; they help us very much. Last year we had five, and we could not tell where their fathers and mothers were. The Board took them away to Mittagong, and sent them back to us in splendid health. We sent them away fagged out with hard work in the middle of December, and got them back in February in good health.

245. So that your children who have no home to go to are taken away? They oblige us by taking some.

246. Do the children get free passes to Mittagong? Yes.

247. This institution is not charged for them in any way? No; the Colonial Secretary's Department is, I think. We get free passes, which we change for tickets.

87. It is stated in this evidence that children paid for by the Government (who are admitted mainly upon the application of the Committee) are all sent to the institution by the State Children's Relief Board, which implies that they were already wards of that body, and consequently State children, when they were admitted. With several exceptions these pupils are not under the control of the State Children's Relief Board, nor is the latter responsible for their admission. The custom is either for the authorities of the Institution for the Deaf and Dumb and the Blind to bring the cases under the notice of the Government in the first instance and request payment for them, or, very rarely, for parents themselves to make direct applications to the Chief Secretary.

88. The expense of maintaining and educating these pupils is not defrayed from the fund voted by Parliament for the service of the State Children's Relief Department, but from the vote for the maintenance of destitute women and children in asylums. The applications are forwarded to the Director of Government Asylums for his report, and upon his recommendation the children are admitted at the Government cost, or rejected. The error referred to has doubtless arisen from the fact that the Director of Asylums is the official who as boarding-out officer also legally administers the State Children's Relief Act, under which the State Children's Relief Board is an honorary board of advice. The point at issue is of some importance, because it affects the legal and social status of a large section of these children, who are really under the legal control of their own parents, instead of the organization which governs the pauper children of this Colony.

RELIGIOUS CLASSIFICATION.

Directors'
Report, 1897.

89. Your Commissioners briefly refer to the religious classification of the children for the purpose of making a suggestion, which, if carried into effect, will ease the strain upon the accommodation of the institution now and in the future. The inmates are broadly classified as "Protestant" and "Roman Catholic," and in the latter section there were during the year ending September 30, 1897, only 13 deaf-mutes and 4 blind children. The small number of Roman Catholic inmates is doubtless to some extent due to the operations of the institutions at Lewisham and Waratah, which are referred to in this report, and which carry on the education of the deaf and dumb and of the blind, with methods of instruction similar to those adopted at the Newtown Road institution.

90. Your Commissioners see no reason why the Roman Catholic children in the latter institution should not be transferred to the institutions at Lewisham and Waratah, subject to arrangement with the Church authorities, and to the consent of parents; nor why any other such children, for whose admission application may be made to the Institution for the Deaf and Dumb and the Blind, or who may come under the control of the State Children's Relief Board, should not be similarly dealt with. It does not seem that any reasonable objection can be made to this proposal, and any principle involved in it is clearly recognised in the regulation made under the State Children's Relief Act, which provides that, when practicable, all State children shall be boarded out with guardians of their own faith. We are also aware that the Board administering that Act endeavours to carry the regulation to its logical conclusion by permitting Roman Catholic guardians to send children to schools of their own denomination.

CHILDREN FROM OTHER COLONIES.

91. Under the rules of the institution children may be received from other colonies, subject to payment of school and maintenance charges by their respective Governments, or by parents, and this arrangement has been taken advantage of in a number of cases in which it was not possible for children to receive instruction in their own colonies. It is not necessary to continue this practice. In New Zealand, Victoria, South Australia, and Queensland, provision has been made for the instruction of deaf mutes and the blind; and Western Australia has a school for instructing the deaf and dumb, so that there is no necessity for the New South Wales institution to extend its operations beyond the boundary of this Colony.

477-8,
Cooke.

92. Due care appears to have been taken to prevent arrears of fees accruing either under a Government guarantee of payment, or from parents in other colonies. With the exception of a few small amounts due from parents who had undertaken to bear the cost of clothing in addition to the usual school charges, all fees due beyond the limits of this Colony have been paid, and there has not been any loss worth mentioning under this heading.

159,
Robinson.

93. It appears to your Commissioners that the rule for returning children to the colonies in which they should properly be domiciled has hitherto not been adhered to with sufficient strictness. Two girls belonging to Tasmania, discharged from this institution to the Institution for the Blind at Strathfield, have, in consequence of the action of the authorities of the latter institution, been maintained at the public cost since 1896. It also seems from the evidence of the Hon. Secretary, that there is a distinct tendency on the part of pupils from abroad who have been educated or trained here to drift back again, and become a charge upon the State.

94. The evidence of the Superintendent relates one glaring case of this kind, which will be found more fully referred to in the division of this report which deals with the Industrial Blind Institution at Woolloomooloo, and there do not appear to be any reliable data for ascertaining how many such cases have occurred:—

385. Do you find the ex-inmates from the other colonies when they have left this institution have a tendency to return to this Colony? I have noticed that in a few cases; but this arose, as far as I could judge, from the fact that here there may be openings for work which they had not in Tasmania. For instance, in Tasmania, which is a little backward in that respect, we have found a few blind who were very glad to come back here in the hope of getting something to do; but I think, with that exception, there is not any special inducement to them to return.

386. You do not think they do that to any great extent? No.

387. It might be a serious matter to this Colony if they did it to any great extent? I do not think they do. I could only name three or four who have returned who I thought should have stayed in their own colony; but on inquiring into their cases I have felt that, labouring under so many disadvantages, in Tasmania, they could hardly do anything else than come back to earn a livelihood.

388. Are you aware whether any of those people who came back became a charge on the State, either wholly or partially? Yes; I fear that the last one who came over from Tasmania, * * * will become a burden on the State. He was educated here. I advised him as strongly as I could. He wrote to me for money, but I sent him none. His wife came, and I had to give her a little; but it was merely out of pity for her, and not as an inducement to return here.

389. You say that he and his family are likely to become a charge on the State? I understood from her letter that he was a much better worker than he turned out to be. I have heard that he is rather incapable and lazy.

390. Is he in town? He was in the Blind Asylum at Woolloomooloo, but he left there.

391. Have they children? Yes; I think one or two.

This man now begs on the streets of Sydney, and draws rations from the Benevolent Asylum.

95. Apart from the economic aspect of this matter, it is most undesirable on social grounds that these afflicted persons should be encouraged, or even permitted, to settle in New South Wales from elsewhere. In several of the other colonies the laws prohibit the immigration of the indigent blind and deaf and dumb in common with other destitute classes under a heavy penalty; but no such law exists in this Colony.

SUGGESTED AMENDMENTS.

96. In connection with the investigation recently held into the management of the Institution for the Blind at Strathfield, it was suggested in the evidence then taken that there should be an amalgamation of the management of that institution, the Sydney Industrial Blind Institution, and the New South Wales Institution for the Deaf and Dumb and the Blind. The latter institution, however, is *sui generis*; it is altogether so distinct from the others both in regard to its prime objects and general operations that the question of its amalgamation with them need not be considered, as it would be neither practicable nor desirable. It is only referred to here because it was seriously discussed by several of the witnesses at the inquiry referred to, and in order that the opinion of your Commissioners with reference to it may be recorded.

97. Our recommendations in regard to the institutions dealt with in this Report will be found on pages 32 to 34.

SYDNEY INDUSTRIAL BLIND INSTITUTION, BOOMERANG-STREET.

ITS FOUNDATION AND OBJECTS.

98. The foundation of this institution was due to a bequest of £5,000 from Mr. John William Wood, to provide a building "for the use of poor blind persons," and the building, which is erected on a site granted by the Government at the corner of William and Boomerang streets, was opened in 1879. Its objects, as first set forth in the rules, were "to furnish to the industrious among the blind efficient instruction in work, convenient rooms for working in, materials with which to work, and a place in which the work may advantageously be displayed and disposed of."

MODE OF GOVERNMENT.

99. The institution, which until two years ago admitted men only, but since then has also received women as pupils, is governed by a Board of Directors, who are annually elected by the subscribers, and there is also a ladies' committee, appointed by the Directors, the functions of which are to see that the institution is kept in a state of cleanliness, consider applications for increases of wages from the female workers, and generally to deal with matters specially affecting the women. There are several life members, whose qualification is a subscription of £10 or upwards, and whose privilege consists of two more votes than the ordinary subscribers of one guinea possess.

ABSENCE OF GOVERNMENT SUPERVISION.

100. Although it is the largest contributor to the funds, the Government exercises no supervision over management.

OFFICIAL

OFFICIAL STAFF.

101. The official staff consists of a manager, who is assisted by three sighted instructors of the blind, and there are also a clerk, a collector, saleswoman, carter, and assistant. It appears to be efficient, and the salaries are not excessive.

WORKERS.

102. The workers, male and female, reside outside the premises, either in their own homes, with friends, or in boarding-houses approved by the management. The principal occupations taught are mat-making, matting, brush and broom making, basket, and wicker chair making, chair-caning, netting, and halter-making. The ages of admission are nominally fixed at from 14 to 40 years, but in special cases inmates are received up to 45 years.

LIBRARY AND AMUSEMENTS.

103. There is a library attached to the institution, but it appears to be seldom used. It is stated that among the forty workers hardly one book a week is taken out, one reason for this being that because of their industrial occupations their touch becomes so blunted that it is very difficult for them to read the Braille type. These workers also do not seem to care for amusements provided for them. The committee, for example, subscribed to give them annual picnics. On the first occasion ten inmates came out of thirty-four, and on the following year seventeen attended. On another occasion the President sent twenty tickets for a public entertainment, and only four were used.

759 to 764,
Hedger.

FINANCIAL.

Revenue, Cost of Management, Buildings, Payments to Workers, &c.

104. The institution is supported by means of voluntary contributions, State subsidies, payments from Government towards maintenance of probationers, and interest on investments. The revenue account for the year ending 31st December, 1897, shows the total receipts to have been £5,912 15s. 6d., but excluding legacies and donations received and invested, sums withdrawn from invested funds, and cash balance brought forward from 1896, the actual working income amounted to £4,840 14s. 8d. This sum is made up as follows:—

	£	s.	d.
Sale of goods... ..	2,999	6	9
Subsidy received in 1897 on account of 1896 ...	972	9	0
General subscriptions	672	1	11
Allowance from Government towards maintenance of probationers	99	8	11
Interest	96	9	1
Other items	0	19	0

105. The actual cost of working the institution during 1897 was £4,742 3s. 11d., or £98 10s. 9d. less than the working revenue.

	£	s.	d.
106. The items of expenditure were:—			
Material purchased	1,491	16	8
Wages to the blind	1,460	11	6
Working probationers' allowances	130	18	4
(of which the Government contributed £99 8s. 11d., in addition to the usual subsidy).			
Salaries to officers and teachers	767	12	6
Freight and van-hire	126	16	5
Discount and allowances	85	10	3
Commission to officers on sales'	142	11	0
Travelling expenses of collectors... ..	109	7	6
Labour and cleaning institution	68	14	0
Printing, stationery, and advertising	81	8	1
Commission to collectors	66	6	4
Buildings and repairs	55	9	1
Fuel and light	40	2	11
And there are minor items amounting to ...	114	19	4

107. The following table shows for the past six years the variation which has taken place in the revenue from the main sources; the amounts paid to the workers in the institution, and the cost of the staff. It will be noticed that whereas in 1892 the workers received an amount in excess of the sum derived from the sale of goods, the amount paid to them in 1897 was only slightly over one-half of the cash sales. The increased cost of the staff is due mainly to the appointment in 1896 of an Instructor in brush making, which industry was commenced in that year:—

Year.	Voluntary Contributions.	Government Payments.			Cash for goods sold.	Amounts paid to Workers as wages and allowances.	Cost of Staff.
		Subsidy.	Probationers' maintenance allowance.	Total received from Government.			
	£	£	£	£	£	£	£
1892	1,124	1,283	1,283	1,325	1,434	756
1893	1,226	790	790	1,712	1,376	741
1894	639	995	8	1,003	2,011	1,188	747
1895	579	958	63	1,021	2,451	1,270	748
1896	612	758	32	790	2,519	1,381	943
1897	672	962	99	1,061	2,999	1,591	976

Falling off in Subscriptions.

108. It will be noticed that the contributions from the public in 1893 were £1,226; in 1894, £639; 1895, £579; 1896, £612; and in 1897, £672.

109. It is difficult to fully account for the reduction which has taken place, as there is no reason to suppose there has been lack of energy on the part of the collector, who, in addition to a salary, receives a commission of 10 per cent. It appears, however, that in connection with this institution, as with the Institution for the Deaf and Dumb and the Blind, the country districts have not been so thoroughly canvassed for collections as they might have been. The institution does not appear to have suffered much pressure from want of funds at any time, and it will be seen that the Government has been liberal in regard to the subsidies.

Hedger,
892-804.

110. Formerly the secretary was collector also, but the committee have recently recognised the desirability of making additional efforts to obtain direct subscriptions from the public, as they have decided that the collector shall devote his whole time to that duty in future. The evidence of the manager shows that the collector's efforts in the country have, owing to his secretarial duties, been restricted to very short trips, but that he is now beginning to visit more remote districts.

Hedger,
796-799.

111. It would be well for the committee to consider the advisability of obtaining voluntary help in this direction. With the additional time now at his disposal, it should not be difficult for the collector, during his circuit of the Colony, to organise local agencies in the larger centres of population by whose efforts the funds might be largely augmented.

Manufacturing Account.

112. A manufacturing account is presented in the balance-sheet, which appears from the evidence of the manager to be made up on an entirely wrong basis, and this officer states that "the auditor has called attention to that very point."

113. The charges against this account, mentioned in the Annual Report of the year 1897, amount to £3,897 10s. 7d., including £1,460 11s. 6d. wages to blind workers, and £1,491 16s. 8d. for materials purchased. The account is not debited with any portion of the cost of supervision and other items, which, it has been admitted in evidence, should be included, to show properly the loss on manufacturing.

699 to 703,
Hedger.

Accumulated

Accumulated Funds.

114. The endowment fund, which consists of bequests, stood at £3,320 10s. 10d., on 31st December, and the amount was deposited at interest as follows:—

	£	s.	d.
Savings Bank of New South Wales... ..	480	0	0
New South Wales Government Savings Bank ...	2,780	10	10
Bank of New South Wales	60	0	0

115. A bequest under Mrs. Hunter Baillie's will should be received shortly. The amount will not be less than £8,000, and may be £10,000.

Cost of Buildings.

717, 719,
Hedger.

116. The present buildings have cost, approximately, £9,500; and an addition is being made at a cost of £2,500, which will be named the "Stephen Memorial Wing," as a tribute to the memory of the late Sir Alfred Stephen, to whom, after the founder, the initiation of the institution was mainly owing, and who was the president from the time of its foundation until his death. This addition is intended for workshops, dining-room, and store, and it is considered that for these purposes the building is a costly one. When providing for an addition upon this expensive scale, the Committee were doubtless actuated by a desire to make it harmonise with the main building.

659
Hedger.

117. There is at present practically no building fund. Therefore, unless there is a generous response from the public on this account the cost of the additions will have to be met from the general funds.

Suitability of Premises and Site.

720-3,
Hedger.

118. The premises were erected with the intention of making the establishment partially a residential one, and the manager states that, no doubt, had the Committee then anticipated the use to which it was subsequently put it would have been built on a different plan. As a workshop it is an expensive structure.

119. The evidence shows, however, that the site is considered a suitable one; and though some years ago the Committee had under consideration the question of renting a shop in the city at which to dispose of their goods, that proposal was abandoned in favour of altering the front portion of the present building to form a shop. This plan was acted upon, and the change resulted in a large increase in the sale of goods.

Sick Fund.

809 to 821,
Hedger.

120. There is a Sick Fund for the benefit of the workers, which at the end of 1897 showed a credit balance of £130 3s. 8d.; and it is stated that under the scale of distribution the fund is increasing. Contributions, which are optional, are made at the rate of 1s. a month by the men and 8d. by the women; and these payments are supplemented by equal amounts from the general funds of the institution.

121. Only about half the number of inmates contribute to this fund. The benefits derived from it are an allowance of 15s. a week in the case of men, and 10s. in the case of women, extending over thirty days in the aggregate during the year, after which cases of sickness are specially considered, and the allowance fixed by the trustees of the fund. The sick also receive medical attendance and medicines free of charge.

Destitute Workers' Fund.

122. There has also been a Destitute Workers' Fund during the past two years, maintained by public subscriptions, at which there was a credit balance on 31st December last of £14 19s. This fund is utilised when additional assistance is required by the workers.

123. The payments to inmates from the Destitute Workers' Fund during the past two years have not amounted to more than £20, so that there has, altogether, been only £34 19s. contributed to it.

Audit of Accounts and Valuation of Stock.

698, Hedger.

704 to 709,
Hedger.

124. The accounts are audited by a paid auditor, appointed by the Committee; but the goods in stock at the end of each year are valued by the officers of the institution. We have no reason to suppose that a fictitious value is put upon them; out, as a matter of business, there should be an independent valuation of the stock for the information of the Committee and the public.

FINANCIAL

FINANCIAL COMPARISON WITH KINDRED INSTITUTIONS.

125. While dealing with the question of finance, a comparison between the operations of the South Australian institution with those of the kindred institutions of New South Wales and Victoria, during 1897, will be interesting, as showing that the contention of your Commissioners that direct aid from State funds is calculated to largely restrict the generous benevolence of the public appears to be sustained. The following return is instructive on this point:—

	Sydney, 1897— 42 workers.	Melbourne, 1897— 50 workers. †	Adelaide, 1897— 41 workers. ‡
	£	£	£
Goods sold... ..	2,999	3,773	2,851
General subscriptions	672	*1,533	1,492
Government subsidy	972	2,000	Nil.
Material purchased	1,491	2,086	1,531
Value of stock and material on hand	895	2,173	1,680
Wages and allowances paid to blind	1,591	1,705	1,828

* Includes £197 received from Municipal Councils, so that the voluntary subscriptions amounted to £1,336.
† Also a residential school for children. ‡ This Institution has also a Home Teaching Branch.

126. The most prominent features of this return are that, in the very much smaller community of South Australia, where there is no Government subsidy, the voluntary contributions exceeded the amount thus raised in Victoria by £156, and in New South Wales by £820; while the Victorian Government gave a subsidy of £2,000, and the New South Wales Government granted £972. In South Australia the amount of the subscriptions is largely due to the efforts of the voluntary collectors; to the large number of the subscribers; and to the thorough canvass of the country as well as the metropolitan districts. It is only fair, however, to say that in South Australia there has been only one institution for the blind for which subscriptions have been collected, while in New South Wales there have been three institutions to collect for.

PAYMENTS TO WORKERS, &c.

127. The method of dealing with the learners is as follows:—When they enter they are expected to work for three months without wages, or support of any kind from the institution if they have friends able to pay for their board and lodging. After that period 10s. a week is paid during the first year of employment, 12s. 6d. per week during the second year, and 15s. a week during the third year. During the fourth year the amount paid is according to the work done, with a bonus of 5s. a week in addition. During the fifth year the payment is the same, except that the bonus is reduced to 2s. 6d.

Hedger,
617-629.

128. The instruction term is nominally five years, but it is regulated according to circumstances. When a learner has attained a sufficient degree of efficiency in trades other than basket-making he may be advanced one or more years, and thus placed in a position to earn full wages before the expiration of the full period. After five years a worker is supposed to have learnt his trade, and to be able to earn a living, and he may then be required to leave the institution. The committee may, however, retain him for a longer period, in which case he is paid by piece-work at rates regulated by the committee.

129. In cases of destitute persons without friends, special allowances of money are made by the institution to help them over the time of their probation; and when probationers are admitted on the order of the Government the latter pays them 15s. a week during the first three or four months and supplements by 5s. the 10s. paid to them by the institution for the following nine months, at the end of which time the Government contribution ceases.

Hedger,
623-629.

130. The following return shows the average weekly wages and allowances received by the workers from 1st July to 31st December, 1897, and the number of years they have been employed at the institution :—

Trade.	Time in Institution.		Average Weekly Payments for work done.			Additional amount granted by Institution.			Amount granted by Government.			Total average Weekly Payments.

* Received a small sum for over-time.

131. This table indicates that only 11 of the 36 men working at the institution are earning sufficient to enable them to live with even moderate comfort, and their wages vary from £1 upwards, the maximum payment being £1 6s. a week. The earnings of 15 were from 11s. to 18s. weekly; 8 earned from 7s. to 9s. 6d.; 1 earned 4s., and another 5s. 3d. a week. Subsidies were allowed in 15 cases by the institution, and in 3 of these additionally by the Government, but only in 1 such instance did the total reach as much as 18s. 3d. a week; in 8 it was 15s. a week; in 5, 12s. 6d.; and in 3 as low as 10s. Seventeen of these workers are stated to have received small sums for overtime, but these amounts have been so small as to be hardly worth mentioning.

132. There are 5 women employed whose term of service thus far varies from eighteen months to two years—1 has earned 6s. 6d. a week; 2, 7s. 6d.; 1, 8s.; 1, 8s. 6d. They all receive subsidies from the institution, but in no instance has their income exceeded 12s. 6d. weekly on the average.

133. The hours of labour are 8 daily in the summer, and $7\frac{1}{2}$ in winter for men ; and $7\frac{1}{2}$ in the summer and $7\frac{1}{4}$ in winter for women, except on Saturdays, when both work $4\frac{1}{2}$ hours.

134. Five of the men are married, and 9 live with relatives. One of the 5 women lives with her mother. All the others, men and women, have to pay for their board and lodging and clothing from their earnings.

135. A further analysis of the figures shows that one worker has been 17 years at the institution, 3 have been there over 14 years, 3 over 13, 2 over 12, 2 over 11, 2 over 10, 1 over 9, 3 over 8, 1 over 7, 2 over 6, and 1 over 5 years. Thus 21 have remained at the institution over the 5-year period, which is supposed to be sufficient to qualify them to earn a livelihood outside ; and there were 20 there on the 31st December, who had not completed that term.

136. It has been stated in evidence that a higher rate is paid to these blind piece-workers than the rates usually paid to sighted men in factories ; but that an ordinary seeing workman will do as much work as two or three blind people, and that the latter could not, if working on their own account, complete the finishing work as well as seeing workmen. It was also stated by one of the teachers that a "blind man may often have to undo some of his work," and "that an intelligent sighted workman who makes a mistake can see it ; but a blind man goes on until it is pointed out to him."

901.
Sinclair.
1,005,
Ashton.
.1,033,
Bell.
1006, 1007,
Ashton.

137. It is admitted that there have been a good many workers who were not competent to acquire much knowledge of any trade, and that in their case particularly there has been great waste of material in addition to the cost of teaching and maintaining them.

1247-55,
875-80,
Hedger.
1026-7,
Bell.

138. There has further to be considered in connection with this matter the inherent disability of the blind in competition with seeing workers ; also that waste of materials by the blind is much greater than by workmen not thus affected ; that from philanthropic considerations inefficiency and idleness on the part of the blind have to be submitted to that would not be tolerated for a moment in ordinary manufacturing ; and that the trades open to the blind are those most easily learned, and, therefore, those liable to keenest competition from sighted workers.

139. The Manager first expressed the opinion that in time the institution would be self-supporting. Subsequently he modified it by stating that it might be able to do without the Government subsidy, but not without outside support. Another experienced witness stated that he did not see any possibility at all of the institution being worked except at a loss.

916,
Hedger.

900,
Sinclair.

140. As a commercial undertaking the institution has necessarily failed, in consequence of the special disabilities attaching to the workers ; if viewed as a philanthropic or quasi-benevolent institution, it is dealing with the blind under methods which barely provide them with the necessaries of life ; and as a teaching establishment for qualifying blind tradesmen to go forth into the world and earn a livelihood, its operations thus far have been of very little actual service.

CONFERENCE WITH THE COMMITTEE.

141. On the 14th of June, 1898, your Commissioners had a conference with the committee of the institution. The committee admitted that it was impossible to carry on the institution except at a heavy loss ; that workers who could not attain a certain standard of efficiency were a severe obstacle to the economical working of the institution, but that it was difficult to know how to deal with them otherwise than as workers ; that the institution should be conducted for teaching as well as industrial purposes, with the object of instructing workers up to the best standard of efficiency possible ; and that it must, in order to secure its objects, be conducted largely on philanthropic lines. The committee evinced a strong desire to fall in with any proposals that would be likely to secure the more effective administration of the institution in future, under conditions which would also increase the comfort of the blind workers.

COST OF ADMINISTRATION, &C.

142. During the last five years the average yearly cost to the Government and subscribers per worker has been £46 13s., of which £39 7s. 10d. has been received in wages by the blind. The following table shows how the figures are arrived at:—

Year.	Total Expenditure.	Less goods sold.	Net cost to Government and Subscribers.	Average number of workers.	Average Cost per head per annum.	Total amount paid to workers (including sick fund).	Average amount per head paid to workers.
	£	£	£		£ s. d.	£	£ s. d.
1893	3,272	1,712	1,560	34	45 17 8	1,401	41 4 1
1894	3,401	2,011	1,390	30	46 6 8	1,200	40 0 0
1895	3,837	2,451	*1,286	31	41 9 8	1,295	41 15 6
1896	4,704	2,519	2,185	35	62 8 7	1,399	39 19 5
1897	4,742	2,999	1,743	42	41 10 0	1,599	38 1 5
	19,956	11,692	* 8,164	Mean number (say) 35	Mean cost per head— 46 13 0	6,894	Mean amount per head— 39 7 10

* Less £100, paid by the Government of West Australia.

In stating the average number of workers fractional parts have been regarded as whole numbers.
In a return prepared by the Secretary of the institution the cost per head is presented at £49 14s. 9d.

143. Although the average cost is £46 odd per head, in voluntary contributions and Government aid, after giving credit for the product of the labour of the blind, it will be understood that in the case of the probationer or learner, the cost stands very much higher, and diminishes as the worker becomes more proficient. A large proportion of the cost is, of course, accountable for by the fact of the Institution being a teaching as well as a manufacturing one, and the product of the men's labour not being equivalent in value to the amount which it is necessary to pay them for their decent support. Some of the men, it appears, will never become fairly efficient workers, and their cost must necessarily remain high in comparison with that of the more expert workers.

144. Had these blind people been provided for in Government charitable institutions, the yearly cost to the Government would, at the outside, have been £16 a head, or a total amount of under £560, which is £373 a year less than the average yearly amount contributed during the past five years to this institution by the Government alone, in addition to which there have been the contributions received from the general public. Your Commissioners do not suggest that these people should be sent to Government Asylums, but merely draw attention to the fact that the cost to the community of this form of charity is very much greater than that incurred on behalf of other sections of our poor.

145. There were on an average 42 blind workers in 1897 who received £1,599. The cost of the supervising and teaching staff (consisting of the Manager and three sighted teachers) amounted in the year to £645, so that the cost of instruction, supervision, and the "finishing off" of the goods produced equals about 40 per cent. of the amount paid to the blind. It is stated that it is not possible to reduce this item by allowing one teacher to deal with more than one trade, as the teachers are to a large extent employed in completing the work of the blind. It is also stated that when the number of workers at the institution is increased the cost of instruction will only be the same as at present, but this does not materially affect the question that the institution is handicapped with a heavy charge for instruction which would not exist in connection with a private enterprise.

604,
Hedger.

862,
Hedger.

INSTITUTION MUST BE A CHARITY.

146. It is clear that if the institution is to fully meet its objects it must be a charity, and from that point of view it does not appear that sufficient provision has been made to enable the majority of the blind workers to obtain the comforts they may reasonably expect to enjoy in their own homes.

147. Even where the wages are occasionally supplemented by small receipts from overtime, there are cases where both blind men and women do not receive enough to enable them to live with moderate comfort.

148. One states that he is in receipt of 14s. a week, which does not enable him to keep himself, as he has to pay 13s. for his board; he is otherwise "well treated," and "likes the place." 1210 to 1225,
Spiers.

149. Another worker states he is a brushmaker, earning about 7s. 9d. a week, which the institution makes up to 10s. He gets 4s. from the Government, and pays 12s. for board and lodging;—"I shall never be able to earn 10s. a week." 1087 to 1102,
Evans.

150. Another says, "I am a brushmaker, and earn 7s. 6d.; I get 2s. 6d. from the institution, and 5s. from the Government. I am not very strong." 1103 to 1114,
Doyle.

151. Another man states, "I am engaged on matting; my wages are 12s. 6d. for my second year; I did three months for nothing." 1127 to 1132,
Northcote.

152. One of the women workers said, "I am getting 12s. 6d. a week now; if I am put on piecework it would be just as well to go into an Asylum." 1043 to 1061,
M'Kenzie.

153. Another said, "I have been here two years, and would be satisfied with 12s. 6d. a week; at piecework one cannot possibly earn a livelihood. I pay 8s. a week for board; if I am put on piecework I must seek employment elsewhere." 1062 to 1067,
Nairn.

154. Another woman stated, "I am now getting 12s. 6d., and at the end of two years, if I go on piecework, and then earn only 5s. a week, I should get no more; I can live on 12s. 6d. a week, but I could not earn so much on piecework." 1069 to 1086,
Norman.

155. At one time the fixed-wage system was adopted instead of piecework. The men received 20s. to 25s. a week, including and irrespective of what they earned; "but," said the manager, "the committee saw it would not run to it—the men were earning 6s. 3d. to 10s. 3d. and getting 20s." 1275,
Hedger.

156. This witness pointed out the difficulty arising from paying workers whose labour was comparatively valueless. He instanced one man who had received £400, and earned only £70, and the greater part of whose work had been thrown away. Another man had been twelve years in the institution, and could only earn 9s. 6d. a week; his earnings were supplemented by a bonus of 5s. 6d. a week. 1255,
Hedger.

1247,
Hedger.

157. There can be no doubt whatever of the benevolent intentions of the committee, nor of the personal sacrifices they have made both in time and money to make the institution successful, and to secure the welfare of the inmates. The evidence showed that they have "subscribed no less than £1,450 out of their own pockets." 1276,
Hedger.

HOMES OF BLIND WORKERS.

158. A member of your Commission visited a number of the homes, and found the accommodation of the very poorest description; it was, indeed, such as might have been expected from the small payments which these particular workers were in a position to make for it. The bodily condition of several of these persons was not robust, particularly in the case of the women; and it was shown that not only did they require board and lodging of a better class, but that enforced exertion to obtain the means to secure it would in several cases be an undue tax upon them physically.

SAXON SYSTEM OF DEALING WITH THE BLIND.

159. The Imperial Charity Commissioners gave very great attention to this matter; they recommended the adoption of the "Saxon system" in Great Britain, and stated that "during their tour the Commissioners saw no blind beggars in Saxony, and were informed that begging, on the part of the blind, had practically ceased to exist." Imperial
Report on
Charities,
paras., 119,
261.

160. The following extracts from a memorandum to the Imperial Commissioners from the Director of the Dresden Institution for the Blind shortly describe the system, and the causes of its foundation:—

The institution at Dresden, at first only a school, afterwards became an establishment for the industrial training of the blind. After their discharge they seldom, however, carried on the trade learned, but became beggars whether with or without some musical instrument. This state of things convinced us that the blind were incapable of becoming independent labourers in the world, and steps were taken to establish an asylum in which they might live free from care and the chicaneries of the world. This asylum was not a success. * * * There was great discontent in the asylum. The men thought it beneath their dignity to rise, take their meals, and work by the clock. They only thought of restriction

restriction to their liberty. * * * The women living without care and distraction became shrewish, and embittered their own lives for mere trifles. From this ingratitude and discontent it became evident that man, if he suffers from blindness only, will not surrender his liberty, and will not be separated from his relations, and that his happiness cannot be attained without the cares of life, and without work. * * * The asylum was closed and the old begging system was resumed. After much deliberation it was decided to remain in touch with the discharged blind, to visit them in their places of abode, to learn their wants, to study the difficulties which they experienced in supporting themselves independently, and, as far as possible, to remove their grievances. * * * It was therefore decided, that on the discharge of the blind person, the director should select a trustworthy person, residing in his future place of abode to give him advice and practical help, to protect him from imposition, and to keep up communication with the director, who, if necessary, comes to the place. The result of these visits, as well as all communications from the guardian, the letters from the blind person, and every document relating to him, are entered in a register kept at the institution. These guardians are respectable, benevolent, practical men, capable of procuring custom for their wards. But there was no doubt that in spite of these arrangements the discharged blind were unable to support themselves without the assistance of capital, whether in money or outfit. The blind man can do as good work as the man who can see; but, as a rule, he does not work so quickly, and if the man who is not blind has to use every exertion to support himself and his family, the blind man to do the same requires some special help, without which he will either not be able to compete, or will have to lead a life of great privation. The first difficulty when a blind pupil is starting in life is to provide himself with the necessary tools and material. These the institution supplies to him, and continues through life to afford him moral and material help. * * * The assistance is by no means always given in actual money, but always in such a way that the blind are encouraged by it to work. Mere money assistance is often actual poison to the blind. They, therefore, receive the assistance in materials for work, clothing, &c. * * *. The number of donations has for a long time been very considerable, for there are in the country many wealthy people who have learned from their own experience the value of work for every man. These men it is who give liberal donations of money to that fund, because they do not wish their money to be spent in alms, but to be used to enable the afflicted to gain a livelihood. The fund for the discharged blind is administered by the director of the institution. The number of those assisted amounts at present to about 400, who live respectably in all parts of Saxony, are almost self-supporting, and feel themselves free men. For just as a son does not feel galled by a gift from his father, so they are not ashamed to receive assistance from their second paternal home, the institution.

Para. 122.

161. The Imperial Commissioners stated that the Saxon system had not been fully tried in England, though its introduction had for some years been advocated by Dr. Armitage, one of the best authorities of the time in matters pertaining to the treatment of the blind. A plan similar in its main provisions had been adopted in Paris, and its example had been followed by similar institutions in the French provinces.

The report states :—

Paras. 64, 67,
117.

Out of 1,267 blind men who had learnt trades in various institutions in the United Kingdom, only 734, or 58 per cent., proved, according to their own account, to be following the trade which they had learnt at those institutions. Of these 1,267 men, about 15 per cent. were earning under 5s. per week; about 25 per cent. were earning between 5s. and 10s. per week; about 16 per cent. were earning between 10s. and 15s. per week; and about 10 per cent. were earning above 15s. per week. But the 42 per cent. who had found themselves compelled to seek other means of livelihood were earning far smaller wages in the aggregate than the 58 per cent. who were still following the trades taught to them at the institution. * * * Out of the total number of 5,848 who replied to our questions no less than 4,605 declare their inability to maintain themselves without charitable assistance; while only 959 state that they can so maintain themselves. 3,282 state that they earn nothing at all. * * * A leading defect in the present condition of the blind is that, with a few exceptions, no care or supervision is exercised by institutions over the past pupils who have been trained in the institutions, and consequently many fail to earn their living or maintain themselves by honest labour after they leave school.

162. Your Commissioners have quoted these extracts as showing what has been done in a country to which the term "Blind Man's Paradise" has been applied, but they do not think that the conditions here are such as would lead, at present, to a similar system being successfully adopted in its entirety.

163. The principle of having a central workshop appears to this Commission to most effectually meet the present requirements of the blind in this Colony, bearing in view the fact that their number is comparatively small, and that the working by them in their own homes—probably in very small rooms—would generally be found impracticable, and if attempted in this climate would be likely to lead to insanitary conditions.

164. With the central agency there is organization in the sale of the products, and the blind are thus relieved of considerable trouble and loss of time which would be incurred had they each to seek customers for the disposal of the wares they produced. As mentioned in the Industrial Blind Institution's Annual Reports its

immediate

immediate objects are, "to furnish the industrious among the blind with instruction in work, convenient rooms for working in, materials with which to work, and a place in which the work may advantageously be sold;" and, with careful administration, we can conceive of no more efficient method of dealing with the blind whose labour under instruction and guidance can be made productive of fair results.

165. In the country the blind are too few and scattered for effective organisation to be secured, nor does there appear to be any necessity for bringing any such new machinery into operation.

NUMBER OF BLIND IN THE COLONY.

166. It does not appear that the task of providing for the adult blind capable of learning trades, who are probably not being cared for by their own friends, or in other ways, is likely to be a very heavy additional tax upon the community or the resources of the Industrial Blind Institution for some time to come. The following table shows the total number of the blind of both sexes in New South Wales at the census of 1891:—

Ages.	Males.	Females.	Total.
Under 15 years	23	30	53
15 and under 25	31	29	60
25 " 40	54	32	86
40 " 50	49	33	82
50 years and over	259	201	460
Total	416	325	741

There are at present seventy-four blind inmates in the Government charitable institutions, nearly all of whom are of advanced ages. There are not more than eight or nine of these of ages at which it is considered that the blind can learn trades if they are quite free from disabilities other than blindness. The rule of the Industrial Blind Institution for taking pupils from 14 up to 40 years of age, is relaxed when it is ascertained the blind are likely to be capable of learning if they are over the maximum age. The manager stated that it was impossible to teach any blind person over 50 years of age a trade.

642,
Hedger, and
Committee's
Rules.
640,
Hedger.

167. Considering the proportion of blind of all ages to the seeing population in this Colony at the census of 1891, as shown in another table, and that this afflicted class does not increase at the same ratio as the general population, it is not likely that during the past six years there has been any material increase in the number of the blind who are able to learn trades.

168. The number of this class between 15 and 45 years indicated by the statistics quoted as being resident in this Colony in 1891, would probably be about 187—that is taking half the number between 40 and 50 as being 45 years of age. From these have to be deducted about sixty being taught in the institutions at Strathfield and Woolloomooloo, apart from those who may be earning a livelihood outside without assistance. This reduces the total number of both sexes between 15 and 45 to 127. A number are women whose friends would probably not allow them to leave home to be taught at any institution, and this remark doubtless applies to some of the men also.

169. Therefore, if there are deducted the blind who are too old to be taught; those of learning age, but incapable from various causes of being taught; and others whose friends prefer keeping them at home, it is safe to assume that the remainder to be reached by the Industrial Blind Institution would be under 100. With reference to the probable demands upon the resources of the institution under its existing methods, it is suggestive that at present there are only a few applications for admission.

170. The following table indicates the proportion of blind to the seeing population in the Australasian colonies at the last census:—

Colony.	Males.		Females.		Total.	
	Number.	Proportion to Seeing Population.	Number.	Proportion to Seeing Population.	Number.	Proportion to Seeing Population.
		Per 100,000.		Per 100,000.		Per 100,000.
New South Wales ...	416	68·5	325	63·0	741	66·0
Victoria	612	102·4	383	70·7	995	87·4
Queensland	138	61·7	61	35·9	199	50·6
South Australia ...	142	85·2	105	68·4	247	77·1
Western Australia ...	38	127·6	16	80·2	54	108·6
Tasmania	97	125·2	68	98·5	165	112·6
New Zealand	164	49·3	110	37·4	274	43·7

171. These figures are interesting as showing that the ratio of the blind to the seeing population varies very considerably in the Colonies; and as bearing upon the question of whether the blind largely migrate from the neighbouring Colonies to New South Wales, in order to take advantage of the easier conditions under which charity is dispensed here to the indigent classes generally. As stated in the report upon another institution, your Commissioners have sought to elicit evidence as to whether or not there has been any material influx of the blind into New South Wales from other colonies; but such evidence is difficult to obtain, and, for various reasons, the information supplied by the blind may be unreliable.

172. There are certainly three cases of this kind recorded, one of them being of a very glaring character. In addition to two women at the Strathfield Institution, who have been retained there largely at the public cost, since an agreement with the Tasmanian Government to pay for their maintenance and education in this Colony expired in 1896, there is another case of a young man from Tasmania, who had been taught at the Newtown Institution for some years, and who went with his wife to Tasmania to try and earn a living in the Colony he belonged to. He did not succeed, and he and his wife and child came to Sydney, the man, "because he was stranded," being admitted to the Boomerang-street Institution, where he received 12s. 6d. per week, and which he left without notice. This man is now a pauper and a street beggar. He draws rations from the Sydney Benevolent Society, and his wife earns a little by knitting. He has no other means of support, except small sums of money which are given him occasionally on the streets.

AVERAGE AGE OF THE BLIND.

173. It is stated in the Report of the Imperial Commissioners that the "average age of the blind in the United Kingdom is 49, and the average age at which blindness commences is 31 years." The same report states that certain trades, such as iron-puddling, glass-blowing, and railway engine driving are the occasional cause of blindness. A return recently received from the Government Statistician's Department shows that the average age of the blind in this Colony is 53, but there are not any reliable means of ascertaining the average age at which blindness commences here.

SAVING UNDER AMALGAMATION.

174. If your Commissioners' recommendations with reference to the Institution for the Blind at Strathfield and the Sydney Industrial Blind Institution are carried into effect, the probable saving in payments from the Consolidated Revenue will amount to nearly £1,200 per annum, and the funds available for the relief of the deserving blind will be expended under methods which should secure the greater comfort of this afflicted class of the community. Apart from the Government subsidy, there should also be a considerable saving in the cost of administration, the amount of which cannot be accurately stated until it is ascertained after amalgamation, but which must result from the work connected with the industrial blind being carried on by one institution instead of two.

FREE

FREE RAILWAY PASSES TO APPLICANTS FOR INDUSTRIAL TRAINING.

175. Your Commissioners' attention has been forcibly drawn to an alleged abuse of the system of issuing free railway passes to applicants for admission to the institution, which, in addition to an improper use of the passes, had led to money loss to the Government and to the institution.

176. A witness stated that "there had been men who had applied to the Government and said their friends were not able to keep them. They came to the institution, were paid for there for three months, and then returned home. The committee had to call the attention of the Director of Public Charities to this matter last month, and to point out that it was very desirable to find out whether the individuals wanted to be taught or simply wished to come to Sydney for a holiday." We recommend that these passes be not granted until it is discovered that applicants are in circumstances to justify the belief that they really intend to become pupils of the institution, and then only after consultation with the committee, in order that it may be ascertained if there is accommodation for them.

656,
Hedger.

PROPOSED AMALGAMATION OF INSTITUTIONS.

177. We have already dealt fully with the affairs of the Strathfield Institution in a previous report, under a special Commission; but, when doing so, reserved our recommendations with reference to the future of the inmates employed in its industrial division, pending further inquiry into the operations of other institutions, and the general condition of the blind.

178. The home at Strathfield provides for the accommodation of women only, and the number of inmates in the industrial section is so small that the committees might arrange for their employment at the Sydney Industrial Blind Institution, and board and residence outside.

179. The question of the future use of the buildings of the Strathfield institution—which, if our proposals in regard to it are carried out, will not be further required—should also be discussed by the Government and the committee of that institution, in order that they may be utilised as may be deemed advisable in the interests of the blind.

180. The Sydney Industrial Blind Institution can then be utilised to carry on the industrial education of blind pupils from the Institution for the Deaf and Dumb and the Blind on the Newtown Road, and of capable blind pupils generally; and there can under such an arrangement be a concentration of previously-divided efforts on their behalf that should operate beneficially in the interests of all concerned.

ST. PATRICK'S INSTITUTE FOR THE BLIND, LEWISHAM.

181. Your Commissioners inspected this institution, which is a school for the education and maintenance of the blind only. It is under the control of a Roman Catholic order, but it is open to children of all creeds. There were at the time of our visit nine pupils residing at the school, and the greatest care and attention were bestowed upon them.

182. The building is erected only in part, the portion already provided consisting of the northern wing of what will eventually be a handsome block of buildings. The present structure cost £1,726. There are two dormitories on the first floor, containing comfortable accommodation for thirty-five inmates. This institution, which when completed according to the plans will accommodate 110 inmates, was reported on by the Assistant Government Architect, as described on page 11 of our Report. We believe that when fully erected the buildings may be accepted as a standard example of an institution containing all the requirements necessary for the instruction and accommodation of the blind in a thoroughly sufficient manner, and with due regard to their comfort, at a cost per bed for buildings which should not be greatly exceeded by any similar institutions that may be erected by public benevolence with or without assistance from the Government. In fact your Commissioners are of opinion that these buildings as a whole afford an object lesson in economy and also adaptability to the purposes for which they have been designed.

THE

THE INSTITUTION FOR THE DEAF AND DUMB AT WARATAH.

183. A member of your Commission visited this institution, which is situated about 4 miles from Newcastle, in connection with the proposal relating to the education of deaf and dumb Roman Catholic children. The instruction of the deaf and dumb in the Northern District was commenced at Newcastle in the year 1875 by Dominican Nuns, who were chosen for the work by reason of the special training which some members of their community had undergone in the famous institution for deaf mutes, conducted at Cabragh, near Dublin. The increasing number of pupils, and the necessity for sufficient accommodation, rendered it necessary for a building to be erected suitable for school purposes, and in 1885 the authorities secured a site at Waratah, upon which the present building was erected in the year 1888, at a cost of nearly £12,000. The site is an excellent one, being well drained and healthy, with 4 acres for a garden, playground, and other purposes. The building is imposing in appearance, and has good entrance and reception rooms to right and left, classrooms in the wings, and dormitories above, and it is well provided with necessary offices and sanitary arrangements. The institution contains thirty beds, twenty-six of which are occupied; but the building has accommodation for a much larger number of inmates. Day pupils are received as well as boarders. Children of any religious denomination are received, and their attendance at the usual religious services is not insisted upon if the parents object. The teaching staff consists of the Superior with an assistant (a lady of the same religious order, who is deaf), and two pupil-teachers, both deaf and dumb, who were trained at the institution. Both the oral and sign-manual methods of teaching are adopted. Only a few of the children are paid for, the highest fee received being £25 a year, and there are two or three other fees ranging from £5 to £8 per annum. Occasionally some of the parents send a little money for clothing, and some thoughtful friends of the institution supply materials, which the Superior and assistants make up for the more needy little ones. Many of the parents are in such necessitous circumstances that they cannot contribute at all, and if this institution did not exist the children would probably become State children, and, as such, be educated at the cost of the Government elsewhere. The institution is conducted with the greatest economy, its main support depending upon voluntary contributions and the efforts of sympathizing friends, who contribute in other ways than by gifts of money. The subscriptions do not amount to more than £300 a year. The children, several of whom, it was stated, entered the institution in an enfeebled condition, are all in good health, and appeared to be well nourished, contented, and cheerful.

SUMMARY OF RECOMMENDATIONS.

184. Your Commissioners make the following recommendations:—

INSTITUTION FOR THE DEAF AND DUMB AND THE BLIND.

1. That, as long as State aid is continued, a responsible officer of the Government shall have power (1) to audit the accounts at any time; (2) to ascertain if the funds are expended for proper purposes, and with due regard to economy; (3) to see that the rules and By-laws are carried out in their integrity; (4) to report generally on the management of the institution, with a view to bringing under the notice of the Government and the Committee any defects that may, in his opinion, exist in connection therewith.
2. That receipts be given for all subscriptions, and that the auditor should include in his audit a thorough check of the receipt-book butts.
3. That the request of the Committee for a grant of £6,000 for building purposes be declined, the Committee having ample funds for necessary buildings.
4. That a more extended energetic canvass for public subscriptions be made, particularly in the country districts of the Colony.

5. That measures be taken to collect all arrears of fees now recoverable, and that in future payment in advance should, as far as possible, be insisted on as provided in the Committee's form of security; and that any special arrangements for reduced payments which it may be necessary to make with parents or guardians who may not be in a position to pay the prescribed fees, be strictly enforced, and any payments so arranged for be made in advance.
6. That Government payments for the maintenance of inmates of the institution be confined in future to children under the control of the State Children's Relief Board; and that the fees for such children be paid from the Parliamentary Vote for the service of the State Children's Relief Department.
7. That in order to secure the additional accommodation at the Institution for the Deaf and Dumb and the Blind which the Committee state is required, the Roman Catholic children now there should be transferred to the Roman Catholic institutions at Lewisham and Waratah, if satisfactory arrangements can be made for such transfer; and that, in future, all deaf and dumb and blind children of that Church, who may be at any time under the control of the State Children's Relief Board, should be maintained in the institutions established for that purpose at Lewisham and Waratah.
8. That the age at which pupils should be discharged from institutions in receipt of aid from the Government for the education of the deaf and dumb and the blind should not exceed 16 years.
9. That there should be legislation for the purpose of controlling the admission of indigent deaf and dumb and blind persons from other colonies into New South Wales.
10. That in view of the risk attendant upon lending money on mortgage of freehold property the Directors in future invest their accumulated funds in Government securities.

SYDNEY INDUSTRIAL BLIND INSTITUTION.

1. That, in view of the very considerable increase in the funds of the institution which will accrue from the Hunter-Baillie legacy, and of the extended canvas which it has been determined to make for the purpose of obtaining increased voluntary contributions, the subsidy to be paid in future by the Government towards the maintenance and instruction of the workers shall not exceed £15 per head per annum, at which rate indigent persons can be maintained in Government Asylums for the Infirm and Destitute.
2. That as long as State aid is continued, a responsible officer of the Government shall have power—(1) To audit the accounts at any time; (2) to ascertain if the funds are expended for proper purposes, with due regard to economy; (3) to see that the by-laws are carried out in their integrity; (4) to report generally on the management of the institution, with a view to bringing under the notice of the Government and the Committee any defects that may in his opinion exist in connection therewith.
3. That in order to enable blind workers at the institution to live with reasonable comfort in their homes, their minimum weekly remuneration (inclusive of allowances) should be fixed at 17s. 6d. for men and 15s. for women, except in the case of workers who have other means of support.
4. That, in order to confine expenditure as far as possible to the instruction of blind workers who are capable of becoming fairly expert in the trades taught at the institution, it should be a condition in the case of any male worker that he should earn from the proceeds of his own labour not less than 10s. a week on the average, and in the case of any female worker that she should earn not less than 7s. 6d. a week on the average. The average for the purpose of this calculation to be the average of the immediately preceding quarter, ending 31st March, 30th June, 30th September, or 31st December, as the case may be.

5. That, as it is possible some of the workers may endeavour to take improper advantage of the provision for a standard minimum wage by not earning more than 10s. a week in the case of men, and 7s. 6d. in the case of women, the Committee provide against any such default by making mandatory instead of permissive By-law 11, which provides: "*If at any time a learner or worker shall appear to be unsuited to the employment or incapable of efficiency in it, or his conduct shall appear to be detrimental to the credit of the institution, or he shall become intoxicated, or conduct himself in a disorderly or unbecoming manner, or behave disrespectfully to the officers, the Committee may require him to leave.*"
6. That, should any worker be found to be incapable, after receiving two years' instruction, of attaining the standard of efficiency necessary to qualify to obtain the minimum wage, or should it be obvious at any earlier period that any worker cannot or will not reach the standard, such worker shall be required to leave the institution, in accordance with the provisions of the foregoing By-law.
7. That, as the By-laws only relate to male workers, a by-law be adopted providing for the appointment of a ladies' committee (which is already in existence without any such by-law) to deal with the women who are now admitted as workers at the institution.
8. That the periodical valuation of the stock, in the form of material and manufactured goods, be made by an expert not connected with the institution, whose certificate should be published in the Committee's Annual Report.

INSTITUTION FOR THE BLIND AT STRATHFIELD.

That, in view of the fact that two industrial establishments for the blind are unnecessary, and that their maintenance separately causes great waste of public money, the Committees of the Sydney Industrial Blind Institution, and the Institution for the Blind at Strathfield be invited to meet and discuss with the Government proposals for the amalgamation of their institutions, in order that the women now employed in the industrial division of the home at Strathfield may be transferred to the Sydney Institution at Boomerang-street, and boarded and lodged in respectable homes, and utilising the buildings at Strathfield for other public purposes. As stated on page 13 of our Report on the Institution for the Blind at Strathfield, in view of the limited scope of the Home Teaching Department and the large expenditure incurred upon its administration, we fail to see any necessity for continuing its operations.

185. Your Commissioners anticipate that in the event of the foregoing recommendations being carried into effect the administration of the institutions under review will be placed upon a more satisfactory footing, and that a direct saving will be effected in the public expenditure of something like £1,200 per annum. There will also, as pointed out in paragraph 174 of our Report, be large savings in future, apart from the Government subsidies, consequent upon the reduced cost of management, &c., which will arise from the amalgamation of the institutions at present carrying on the instruction of the industrial blind.

186. We also wish to emphasise the opinion expressed in the body of our Report that the expenditure upon buildings has been excessive, and out of all proportion to the necessities of the case. In support of this opinion we would specially draw attention to paragraphs 59, 60, and 61, in which it is shown that a building that answers all requirements has been erected at a cost of under £60 per bed, as against £430 at the institution on the Newtown Road. If our recommendations and suggestions are fully carried out in this regard, the result will be a large diminution in the cost of all buildings erected in the future for charitable purposes without sacrificing utility in any way.

187. In concluding this our first Report, or, taking into account that furnished under a separate Commission on the Strathfield Blind Institution, our second Report, we have to express our obligation to Mr. Sydney Maxted for the help he has afforded us in carrying out our inquiries. His long connection with the Charities Department has made that help peculiarly valuable. We also desire to acknowledge the zealous labours of our secretary, Mr. Walter Wilson.

188. It will, perhaps, be admitted that the scope of our inquiry is very extensive, and that considerable time must be occupied in thoroughly carrying out the important duties devolving upon us under our Commission. It must also be borne in mind that the time of two of our members has been largely taken up in performing the not less important duties of members of the Public Service Board, which consideration must be taken into account in explaining any apparent delay in presenting this report.

We have the honor to be,

Your Excellency's most obedient Servants,

GEO. A. WILSON, President.

JOSEPH BARLING.

JAMES POWELL.

WALTER WILSON,
Secretary,
29/6/98.

ROYAL COMMISSION ON PUBLIC CHARITIES.

MINUTES OF PROCEEDINGS.

FRIDAY 19 NOVEMBER, 1897.

The Commission met at the Offices of the Public Service Board, at 12 o'clock noon.

PRESENT:—

Joseph Barling, Esq., J.P., President.

George Alexander Wilson, Esq., J.P.

James Powell, Esq., J.P.

Mr. A. F. Basset Hull was appointed Secretary to the Commission.

The President called upon Mr. A. F. Basset Hull to read the Commission.

Mr. Hull then read the Commission appointing and authorising the Commissioners to make a diligent and full inquiry into, and report upon the methods of carrying on Government Charitable Institutions, and the way in which grants of public moneys to charitable objects under the control of the Government are administered, including grants for the aborigines; and to report also upon the methods of administration and relief in force in all charitable organisations which receive aid from the public Treasury, including the hospitals of the Colony, with a view to placing the expenditure of public moneys in such directions upon a more satisfactory footing. The Commission was dated the 10th day of November, 1897.

The Secretary was instructed to write authorising Mr. George E. Brodie, Assistant Auditor-General and Chief Inspector of Public Accounts, or his deputies or assistants, to inspect the books of the various institutions coming within the scope of the Commission; and to request the Principal Under-Secretary to furnish a list of all Charitable Institutions throughout the Colony subsidised by the Government, specifying in each case the conditions under which subsidies have been granted and the amounts paid for the financial year ending 30th June, 1897, or the year 1896, whichever is most convenient.

The Secretary was also instructed to summon Mr. E. Hanson, Acting Director of Government Charitable Institutions, to attend before the Commission on the following day.

The Commission adjourned at 12:45 p.m. until 10 a.m. on Saturday, 20th November.

SATURDAY, 20 NOVEMBER, 1897.

The Commission met at the Offices of the Public Service Board, at 10:10 a.m.

PRESENT:—

Joseph Barling, Esq., J.P., President.

George Alexander Wilson, Esq., J.P.

James Powell, Esq., J.P.

Mr. E. Hanson, Acting Director of Charitable Institutions, was in attendance.

Mr. Hanson was requested to furnish certain returns as to the cost of each institution administered by his Department, showing cost per head of each inmate, cost of management, and cost per head of boarded-out children.

The Commission adjourned at 10:30 a.m., *sine die*.

WEDNESDAY, 1 DECEMBER, 1897.

The Commission met at the Offices of the Public Service Board, at 11:30 a.m.

PRESENT:—

Joseph Barling, Esq., J.P., President.

George Alexander Wilson, Esq., J.P.

James Powell, Esq., J.P.

The minutes of the two previous meetings were read and confirmed.

Letters were read from:—1. The Mother Superior, Good Samaritan Industrial School, Manly; 2. H. Rigg, President, St. Peter's Ladies Benevolent Society; 3. H. W. Stratha; 4. A. E. Brackenbury; 5. F. G. Corcoran; 6. C. Merrigan; 7. J. D. D. Jackson; and 8. G. E. Ardill, offering to give evidence before the Commission.

The Secretary was instructed to take steps to ascertain the nature of the evidence proposed to be tendered by the writers and to report to the Commissioners.

The Secretary was instructed to apply for an advance of £50 to be placed at the disposal of the Commission to meet incidental expenses to be hereafter accounted for; and to write to the Principal Under-Secretary requesting him to take the necessary steps to procure copies of any reports of Royal Commissions on Charitable Institutions, Departmental Reports, and other official publications of the Australian Colonies and Great Britain, bearing upon similar institutions to those coming within the scope of the Commission.

The Commission adjourned at 12 noon, *sine die*.

WEDNESDAY,

WEDNESDAY, 8 DECEMBER, 1897.

The Commission met at the Offices of the Public Service Board, at 11·30 a.m.

PRESENT :—

Joseph Barling, Esq., J.P., President.
George Alexander Wilson, Esq., J.P., | James Powell, Esq., J.P.

Mr. Walter Wilson, who had been transferred from the Chief Secretary's Department on the 3rd instant to fill the position of Secretary to the Commission, *vice* Mr. Hull, was formally directed to proceed in the performance of his duties.

FRIDAY, 28 JANUARY, 1898.

The Commission met at the Offices of the Public Service Board, at 10·15 a.m.

PRESENT :—

Joseph Barling, Esq., J.P., President.
George Alexander Wilson, Esq., J.P., | James Powell, Esq., J.P.
F. N. Manning, Esq., M.D., sworn and examined.

THURSDAY, 3 FEBRUARY, 1898.

The Commission met at the New South Wales Deaf and Dumb and Blind Institution, Newtown Road, at 3·30 p.m.

PRESENT :—

Joseph Barling, Esq., J.P., President.
George Alexander Wilson, Esq., J.P., | James Powell, Esq., J.P.

An inspection was made of the premises, and of the work of the institution in each of its branches.

FRIDAY, 4 FEBRUARY, 1898.

The Commission met at the Industrial Blind Institution, Boomerang-street, at 9 a.m.

PRESENT :—

Joseph Barling, Esq., J.P., President.
George Alexander Wilson, Esq., J.P., | James Powell, Esq., J.P.

Inquiries were made into the various industries conducted at the institution, the work of each Department being at the time in active progress.

TUESDAY, 29 MARCH, 1898.

The Commission met at the Institution for the Deaf and Dumb and the Blind, Newtown Road, at 9·30 a.m.

PRESENT :—

George Alexander Wilson, Esq., J.P., President.
Joseph Barling, Esq., J.P., | James Powell, Esq., J.P.

The Secretary read a letter from the Principal Under Secretary notifying the appointment of Mr. Wilson as President of the Commission, *vice* Mr. Barling, who, while remaining a member of the Commission, tendered his resignation of the office of President on the 19th ultimo.

Mr. Ellis Robinson was sworn and examined.

The Commission saw the pupils at their midday meal.

The Commission adjourned at 1 o'clock and sat again at 2·15 p.m., Mr. Wilson and Mr. Powell being present.

The Commission witnessed the method of imparting instruction in the "articulation" class.

The examination of Mr. Robinson was continued.

The following witnesses were sworn and examined:—Mrs. Jesse MacLeod, Mr. S. Watson, and Mr. Cooke.

The Commission adjourned at 5 o'clock p.m.

WEDNESDAY, 30 MARCH, 1898.

The Commission met at the Institution for the Deaf and Dumb and the Blind, Newtown Road, at 9·30 a.m.

PRESENT :—

George Alexander Wilson, Esq., J.P., President.
James Powell Esq., J.P.

Miss A. M. Bateman and Miss G. Watt were sworn and examined.

The Commission saw the class for the Blind and the "Manual" class of the Deaf and Dumb, and interrogated several of the pupils.

The Commission adjourned at 11·30 a.m.

THURSDAY,

THURSDAY, 31 MARCH, 1898.

The Commission met at the St. Patrick's Institute for the Blind, Lewisham, at 3 o'clock p.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.

Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

The premises were inspected and inquiry made as to the conduct of the establishment.
The adjoining hospital, under the care of the same authorities, was also visited.
The Commission adjourned at 4:45 p.m.

FRIDAY, 1 APRIL, 1898.

The Commission met at the Sydney Industrial Blind Institution, Boomerang-street, at 9:30 a.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.

James Powell, Esq., J.P.

The following witnesses were sworn and examined:—Messrs. H. J. Hedger, S. Sinclair, and E. Dixon.

The Commission adjourned at 1 o'clock, and sat again at 2:15 p.m.

The following witnesses were sworn and examined:—A. Ashton and S. Bell, instructors; Susan Mackenzie, Mrs. M. A. Nairn, Lilian Norman, George Evans, and John Doyle.

The Commission adjourned at 4:15 p.m.

SATURDAY, 2 APRIL, 1898.

The Commission met at the Sydney Industrial Blind Institution, Boomerang-street, at 9:30 a.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.

James Powell, Esq., J.P.

The following witnesses were sworn and examined:—C. Henderson, W. Northcote, W. Milne, and John Spears.

Mr. Hedger was recalled and examined.

The Commission adjourned at 11 o'clock a.m.

FRIDAY, 15 APRIL, 1898.

The Commission met at the Offices of the Public Service Board, at 10:15 a.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.

James Powell, Esq., J.P.

The following witnesses were sworn and examined:—Thomas Mercer and F. A. Crowther.

Mr. H. Hedger was re-examined.

Correspondence was read and received.

The Commission adjourned at 12:30 p.m.

TUESDAY, 3 MAY, 1898.

The Commission met at the Offices of the Public Service Board, at 12 o'clock noon.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.

Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

Correspondence was read and received, and accounts passed.

The minutes of the eighth and subsequent meetings were read and confirmed.

It was proposed that the Commission should secure the services of Mr. Sydney Maxted in connection with their inquiry, and that the Honorable the Chief Secretary be asked to approve of his employment.

The Commission adjourned at 12:40 p.m.

THURSDAY, 12 MAY, 1898.

The Commission met at the Infants' Home, Ashfield, at 3:30 p.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.

James Powell, Esq., J.P.

The Commission inspected the Home, and made inquiries into its general management.

The Commission adjourned at 5:15 p.m.

MONDAY,

MONDAY, 23 MAY, 1898.

The Commission met at the Offices of the Public Service Board, at 10:15 a.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.
Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

Correspondence read and received.

The minutes of the last two meetings were read and confirmed.

Consideration was given to the Draft Report upon the Institution for the Deaf and Dumb and the Blind.

The Commission adjourned at 1 o'clock p.m., and sat again at 3:30 p.m. until 4:30 p.m.

WEDNESDAY, 25 MAY, 1898.

The Commission met at the Benevolent Asylum, Pitt-street, at 10 a.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.
Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

The method of distributing provisions and monetary allowances for rent to applicants for charitable relief was observed, and an inspection was made of the Asylum.

The Commission adjourned at 12 o'clock noon.

THURSDAY, 2 JUNE, 1898.

The Commission met at the Offices of the Public Service Board, at 10 o'clock a.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.
Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

Mr. Powell was sworn and examined.

Further consideration was given to the Draft Report on the Institutions for the Deaf and Dumb and the Blind.

Correspondence read and received.

The minutes of the last two meetings were read and confirmed.

The Commission adjourned at 12:45 p.m.

MONDAY, 6 JUNE, 1898.

The Commission met at the Offices of the Public Service Board, at 11 a.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.
Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

The Draft Reports on the Institutions for the Deaf and Dumb and the Blind was further considered.

The Commission adjourned at 12:30 p.m.

TUESDAY, 14 JUNE, 1898.

The Commission met at the Offices of the Public Service Board, at 3:30 p.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.
Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

The Commission conferred with the following members of the Committee of the Industrial Blind Institution, Boomerang-street—His Honor Mr. Justice Stephen and Messrs. A. Consett Stephen, John Keep, T. F. Waller, and S. Sinclair—as to whether any steps could be taken to reduce the cost of working the institution.

The Commission adjourned at 4:30 p.m.

THURSDAY, 16 JUNE, 1898.

The Commission met at the Offices of the Public Service Board, at 11:45 a.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.
Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

Further consideration was given to the Draft Report on the Institution for the Deaf and Dumb and the Blind.

The Commission adjourned at 1 o'clock p.m.

FRIDAY, 17 JUNE, 1898.

The Commission met at the Offices of the Public Service Board, at 10 o'clock a.m.

PRESENT :—

George Alexander Wilson, Esq, J.P., President.
James Powell, Esq., J.P.

The Draft Report on the Institution for the Deaf and Dumb and the Blind was again under consideration.

The Commission adjourned at 1:15 p.m.

WEDNESDAY, 22 JUNE, 1898.

The Commission met at the Offices of the Public Service Board, at 10 o'clock a.m.

PRESENT :—

George Alexander Wilson, Esq, J.P., President.
Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

The Draft Report of the Institution for the Deaf and Dumb and the Blind was further considered.
The Commission adjourned at 12:30 p.m.

THURSDAY, 23 JUNE, 1898.

The Commission met at the Offices of the Public Service Board, at 2:30 p.m.

PRESENT :—

George Alexander Wilson, Esq, J.P., President.
James Powell Esq, J.P.

The Draft Reports on the Institution for the Deaf and Dumb and the Blind and the Sydney Industrial Blind Institution were further considered.
The Commission adjourned at 4:30 p.m.

WEDNESDAY, 29 JUNE, 1898.

The Commission met at the Offices of the Public Service Board, at 10 o'clock a.m.

PRESENT :—

George Alexander Wilson, Esq., J.P., President.
Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

The Draft Report on Institutions dealing with the Blind and with the Deaf and Dumb was further considered and adopted.

The Commission adjourned at 11 a.m.

ROYAL COMMISSION ON PUBLIC CHARITIES.

MINUTES OF EVIDENCE.

TUESDAY, 29 MARCH, 1898.

[The Commission met at the Institution for the Deaf and the Dumb and the Blind, Newtown Road, Sydney, at 9:30 a.m.]

Present:—

GEORGE ALEXANDER WILSON, Esq., J.P., President.
JOSEPH BARLING, Esq., J.P.
JAMES POWELL, Esq., J.P.

Ellis Robinson sworn, and examined:—

1. *President.*] You are the honorary secretary of this institution? Yes.
2. How long have you been connected with it? About thirty-six years. There was a secretary before me—a Mr. Wilson, jeweller—but he gave it up, and at the first annual meeting I was asked to take the position. E. Robinson.
29 Mar., 1898.
3. You know all about the institution from its inception? Yes; I have been actively connected with it from the beginning.
4. When was it founded? I think it was in 1861. It was founded, I believe, for the deaf and dumb; but in 1869 they commenced to take in the blind. It had then become a public institution. Previously it had been carried on for a year or more by a teacher as a private school, and the founders took it over from him.
5. What are the objects of the institution as regards the deaf and dumb and blind? To educate them, because they cannot be educated in ordinary schools.
6. You take in children at school age? Yes; we take them from the age of 7 to about 13 or 14 years.
7. How is the institution managed;—have you directors? We have a body of directors, who are elected according to the rules at the annual meeting of subscribers. A certain number retire each year—those who have attended meetings the smallest number of times. They are eligible for re-election, and their names are placed before the subscribers at the annual meeting. In all cases they are re-elected.
8. Are those members who have attended the fewest number of times generally re-elected? Oh, yes; I do not know of any case in which they have not been re-elected if they desired to be.
9. Is that the only governing body that you have? Yes; they have the general control of the institution in every respect. Then there is the Ladies' Visiting Committee, who meet here on the last Friday in every month. Their duties are of a domestic nature—they are a sort of House Committee.
10. How far are those ladies responsible to the other committee? They report anything which needs reporting upon.
11. Is there any conflict of jurisdiction between the two committees? No. As a rule, our Ladies' Committee are, as far as possible, associated with the directors—that is to say, where it is possible, the members of the Ladies' Committee are wives of directors. The new directors when elected generally appoint the Ladies' Committee.
12. Then the directors have complete control over the whole institution? Yes, complete control.
13. The Visiting Committee control the domestic arrangements subject to the supreme control of the Board of Directors? Yes.
14. Have you any life directors or life members? We have life directors. They are elected for services rendered, in accordance with the rule. When life directors were first elected they were elected under four or five different headings. The first heading was as "Founders of the institution"; there are only two of these remaining, the Rev. Dr. King and Mr. F. R. Robinson. Then "For five years' continuous service as an honorary officer." That would take in medical men and, I suppose, the secretary and treasurer. Dr. Dixon, Dr. Wilkinson, and myself are life members under clause 2.
15. The qualifications of life members are various? There are three qualifications, and they are: "As donors of £50 and upwards in one payment"; "For special services rendered to the institution." This is for anything done for the institution which the directors consider deserves life directorship. One of these is Mr. Edward Joy, who served many years gratuitously as an instructor. The Hon. Sir Arthur Renwick, Dr. Warren, Mr. F. H. Dangar, Mr. Slee, and the Hon. R. H. D. White and others.
16. The Ladies' Committee have the internal management? Yes; they meet here every Friday, and through the matron they make the necessary domestic arrangements.
17. Attend to the clothing and bedding? Two of their number visit the institution nearly every week, and the work is portioned out.
18. The official visit is made once a month? Yes; and the communication *re* the Ladies' Visiting Committee and the directors is made through Mrs. J. H. Goodlet and myself, as hon. secretaries.
19. Have you returns showing the attendances of the directors and the members of the Ladies' Committee? Not of the Ladies' Visiting Committee; we have returns showing the attendance of the directors.
20. You have no record of the visits of the Ladies' Committee? We have a record, but I am not quite

- E. Robinson, 29 Mar., 1898. sure if it is reliable. One of the ladies writes the names in the visitors' book on each meeting; but I should not like to say that it is a correct record.
21. Have you life members? We have life members who are elected. The qualification is the collection of £25 in one year, or £50 in several years.
22. Have they any special privileges as regards voting? Only the same as ordinary subscribers. They are entitled whilst they live to come here and vote at our meetings.
23. Mr. Love is absent? Mr. Love and Mr. Chadwick are both absent on leave.
24. Then there is Mr. John Harris and Mr. Henry Fraser? Mr. Fraser had been ill for two or three years. We kept his name on the list because we did not like to take it off; he is dead.
25. I see that Mr. R. H. D. White has made one attendance? He is often away, and it is difficult to get him.
26. Mr. Simpson has to his credit four attendances; would he be re-elected? The four who attended the least number of times would retire and be eligible for re-election.
27. What is the area of land occupied by the institution? Five acres exactly.
28. Have you had any valuation of it? I do not think we have ever had a valuation of it.
29. What did it cost? It did not cost anything. It was a Crown grant from the Government.
30. Have you put any valuation on it yourself? I could hardly say; it is very valuable.
31. What do you think it is worth per acre? I should think about £1,000 per acre is the lowest.
32. What is the cost of the building? The cost of the buildings was £47,754 5s. 5d.—the buildings and improvements.
33. Is it freehold land? Yes; we have the deeds in the bank in the names of five trustees. The trustees are nominated by the Board of Directors, and the names are submitted to the Colonial Secretary; then gazetted. The trustees are the Rev. Dr. King, the Honorable Sir Arthur Renwick, Mr. James Fairfax, Mr. F. R. Robinson, and the Honorary Secretary. The invested funds are invested in the names of the president, treasurer, and the secretary for the time being. By resolution of the Board they hold all the invested funds, they draw cheques, and invest the funds.
34. Now, with regard to the paid staff—I presume that the head of the staff is the superintendent? Yes; then comes the matron.
35. What is his salary? £500 a year and residence, which will come to about £120 a year.
36. Is there anything else allowed besides residence? No, nothing else.
37. You estimate his whole income at £620 a year? Yes; we reckon his residence worth about £200 a year. It cost £1,800.
38. What is the total of all the salaries and wages that you pay? £2,379 6s. last year.
39. What is the number of inmates? 112 at present.
40. How many males and how many females? On the 30th September, 1897, there were 48 deaf and dumb males, 42 deaf and dumb females, 12 male blind, and 11 female blind; making a total of 60 males and 53 females; one is in the hospital.
41. What are the maximum and minimum ages of the pupils? The maximum age is about 20, and the minimum about 7.
42. Do you keep them till they are 20 years of age? Yes.
43. For educational purposes? Sometimes we do. Some are pupil-teachers being educated at the same time.
44. What is the general rule as regards the maximum age? The maximum is generally about 17 or 18 years of age.
45. The maximum is generally about 17? Yes; 17 to 18. We keep girls longer than boys.
46. Under what circumstances do you keep them longer than that? We keep them when we think that a year or two more would help them, when they have entered rather old, and are slow, and seem to need a year or two more schooling. Girls do not often go out to work for a living as boys do. Boys ought to leave here when they are about 16. They can then have five years apprenticeship by the time they are 21. We have one boy older than that, but we are keeping him to pass the matriculation examination, partly to show what the deaf can do, and to fit him for a higher sphere of life than boys who go to carpentering or anything like that. He is a boy in a better position in life.
47. An ordinary citizen cannot keep his children at school until they are 18 or 20 years of age? No, he cannot; he has to put them to work, and the Government school age is up to 14.
48. These inmates, who are supported by public subscription, have advantages as regards that which the ordinary citizen has not? To a certain extent they have; but in most cases where we keep them that time their fathers pay us a little more in school fees.
49. Now, with regard to the minimum age? We had one child in the institution some years ago 5½ years of age, but it was under very exceptional circumstances; the child had no father or mother. Our rules are not hard and fast. In America and in Great Britain the consensus of opinion seems to be that 7 is a fit age at which to bring children into these institutions, and that up to that age they are better with their parents. That is what I gather from the American and English reports.
50. This report gives the number on the rolls on the 30th September? Yes; that is the end of our year. The report says as to the number of pupils:—

The number of pupils in attendance at the date of last report was 105. Two former pupils were readmitted and twenty-two new scholars were received. Sixteen were discharged or removed by their friends, leaving 113 at present on the rolls; the net increase for the year being eight.

The following tabulated statement gives the usual details in regard to the pupils who have been under instruction during the year:—

	Deaf and Dumb.		Blind.		Totals.	
	Male.	Female.	Male.	Female.	Male.	Female.
In the Institution on 30th September, 1896.....	44	39	12	10	56	49
Admitted since	15	7	2	15	9
Discharged or removed.....	59	46	12	12	71	58
On the rolls on 30th September, 1897	11	4	1	11	5
	48	42	12	11	60	53

51. Is not the teaching staff very large in proportion to the number of pupils? No; it is not large enough. Mr. Watson is now casting about for more help. The maximum number for a teacher to have in a class of afflicted pupils is ten, but as we have not a very large institution our classes are not so big. E. Robinson.
29 Mar., 1898.
52. Do you mean that the teaching staff is small for such an institution as this? The internal teaching staff is small for the number of children. There is so much individual teaching.
53. You cannot have the class system as they have it in the Public schools? No; you must take each one individually, and it takes a deal of time. If we had the room, and our funds were more flourishing, I think we should get another teacher at the end of this year. The Committee has decided to wait till we get our new additions.
54. That is the reason that you give for the large proportion of teachers—that you had to specialise your teaching to individual cases? Yes; we cannot have class teaching to such an extent as you could have it with children who are not afflicted. We article our teachers. All our present staff, except two deaf and dumb, have been article to the Board for three years. Mr. Hewitt is the last. We take them at about 18 years of age, and article them for three years.
55. You have to specially train your teachers? Yes; the ordinary trained teacher is only of use to us inasmuch as he has had a Public school training, which we try to utilise.
56. What subjects do you teach? The synopsis of the inspector's report in our last annual report will give that. It says:—

The course of instruction adopted is a varied and liberal one. It includes all the subjects taught in a primary school, together with drawing, music, Latin, French, modelling, carpentry, and cookery.

57. What number of pupils went up for that inspection? All of them. The report says:—

The instruction is suitably arranged, and is imparted by intelligent and effective methods. The general proficiency of each class in the several departments is given in the following statement:—

Manual Department.—General Proficiency.—Class 1, 80 per cent.; class 2, 77 per cent.; class 3, 73 per cent.; class 4, 74 per cent.; class 5, 70 per cent.; class 6, 70 per cent.

Oral Department.—General Proficiency.—Class 1, 75 per cent.; class 2, 70 per cent.; class 3, 62 per cent.; class 4, 72 per cent.; class 5, 80 per cent.; class 6, 60 per cent.

Blind Department.—General Proficiency.—Class 1, 88 per cent.; class 2, 81 per cent.; class 3, 75 per cent.; class 4, 82 per cent.; class 5, 75 per cent.

It is a complete report—it covers the whole question.

58. Have you a dietary scale? Yes; but I am not sure whether it has not gone out of print. We have it on large cards. It was fixed by the Ladies' Committee, and there may be some hanging about now. We have a dietary scale and also a time-table. We do not adhere strictly to it, it is more of a direction than an actual dietary scale, because our children cannot all take porridge for instance. We allow a great deal of latitude. We feed our children well, because we have children from homes superior to this institution. We could hardly bring some of these children down to the charity scale of diet.

59. What method of discipline have you in school and out of school? The children are all under the control of the Superintendent whose discipline is mild and firm.

60. Has he power to corporally punish them? Yes; he is the only one who has the power. No one else is permitted to punish the children except the Superintendent, unless he directs anyone to do it.

61. What other means of punishment are there? Putting them in a corner and depriving them of little privileges.

62. Although you have a dietary scale you do not go by it? Not strictly.

63. Practically you have not got one? No.

64. The reason why you have not got one is, that the conditions of the children are so varied that you cannot have a hard and fast dietary scale? Yes; the Ladies' Committee give directions in that matter. The Matron brings these things under their notice.

65. With regard to the discipline of the children you say that there are various punishments, including the withdrawal of privileges? Yes; the children have a great deal of outing. That is one of their privileges and they are left at home if their behaviour is not what the Superintendent considers it should be; but they are well behaved. We have very little trouble in that respect. When the Agricultural Show opens the children are all going there. Mr. Watson consulted me about it; he said, "We have an invitation to go to the Agricultural Show, shall we accept?" He said, "I will not take any but the big ones; the tram authorities will give me passes to the Zoo." The deaf and dumb children go to Watson's Bay once or twice a year, and the blind go to hear the Town Hall organ occasionally. We cannot take the blind to a cricket match. When the last test match was played here Mr. Watson said, "I propose to take the deaf and dumb to see the cricket match." I said, "What are you going to do with the blind?" and he replied, "We will take them to hear the organ."

66. You think the discipline is mild? Yes.

67. What are Mr. Watson's duties and powers? He has the general supervision of the internal management of the institution and is responsible to the Committee for the whole management of matters inside the building. He has no responsibility with regard to collecting. His duties are set forth in this regulation:—

1. He shall be appointed by, and be responsible to, the Board of Management, and he shall have the supervision of the whole establishment, together with such other duties as the Board may from time to time appoint.

2. He shall be responsible for the full and effective discharge of all duties connected with the schoolrooms, and will make such arrangements with the Matron and other officers as shall result in the efficient care and supervision of the pupils during recreation.

He orders the necessary supplies, and he receives instructions from the directors through me.

68. What are the Matron's duties? She is appointed by the Board, and to her is entrusted the internal management of the house. The first regulation is as follows:—

1. The Matron shall be appointed by the Board, and to her shall be entrusted the entire direction of the household, taking care it is conducted with the greatest regularity and economy. To her the female domestic servants of the institution shall be responsible for the performance of their respective duties, and they shall not absent themselves without her permission. Any irregularity must be immediately reported by her to the Superintendent.

E. Robinson. She has charge of the stores, &c. The rules were made by Sir Arthur Renwick, Mr. R. Hills, Mr. Goodlet, myself, and some others. We spent nearly a fortnight over them. We had the rules of other institutions to guide us and our own old rules and regulations.

29 Mar., 1898.

69. About the accounts, have you had any special subsidy? The special subsidies were in 1871 £2,000 for building purposes. In 1873, £1,000; in 1879, £2,000. Total, £5,000.
70. Have you a yearly subsidy? Yes, £450 a year.
71. Has it ever been more than that? No; at the start it was £100 a year, then £150 a year, then £250 a year, and now it is £450 a year. We have received two donations of £200 each for asphaltting the footpaths outside the institution. We are not in any municipality; we are a municipality to ourselves, and we have not any rates and taxes to pay.
72. These grants were made by the Government? Yes.
73. By whom are the auditors appointed? By the subscribers at their annual meeting. We generally have recognised accountants in the city—anybody we can get.
74. They are not paid? No. There was another grant of £199. We had dry earth closets, and we were told to do away with them, and we had a drain made connecting with the sewer that goes into the Prince Alfred Hospital drain. That cost about £200. The Water and Sewerage Board wanted to charge rates for it, but we said, "No; we object; if you are going to do that, pay us back the £199 that we have expended," and they paid us that sum;—it was really a refund.
75. Have the accounts ever been audited by a Government auditor? They come here to check our subscriptions.
76. They see whether you are in a position to claim the subsidy? Yes; I think they look through our books a little. Mr. McKern was here recently and looked through all our books.
77. They have not gone into matters of expenditure? No; an Inspector of Charities, Mr. Robison, used to come and ask about different matters, and so did Mr. Maxted, but they never checked the expenditure.
78. What conditions are imposed by the department for getting the subsidy? We simply send in a statement that we have received certain sums.
79. They do not follow that up by any further inquiry? We send a duplicate slip to the Treasury, and they pay the grant in to the account of the institution in the Commercial Bank.
80. And they have no further control? No. We always make a point of sending the annual report to the Colonial Secretary, and we have to furnish returns to several departments.
81. What is the amount of your accumulated funds? When we were making our building up and completing it we had a building fund account into which we used to pay all legacies that were not conditional, and we used to transfer periodically any surplus of money from subscriptions at the end of the year to our building account, to be used for the completion of the building. If you look through our reports, you will find that nearly every year we transferred from £100 to £400 or £500 to that fund.
82. Your accumulated funds will be balances to the credit of these various accounts? Yes.
83. Which consists of these accounts—a balance to the credit of the perpetual subscribers, balance to the building account, Spittles' legacy account, and the blind pupils' prize account? Yes; that last is the interest on the Spittles' orphan fund.
84. Your funds will be these balances less any debit balances on any other fund? Yes.
85. Have you transferred any sum from the building account back again? Yes.
86. Why was that done? Because the Committee thought that in our building fund account there were several legacies which it was undecided whether they were conditional or not. The Committee transferred them because there was a doubt whether they ought to have gone to the building fund, and we transferred them back recently.
87. That would have the effect of depleting the building fund to that extent? Yes.
88. Then I understand that your institution has asked the Government for a grant in aid of the building fund;—was that since these re-transfers were made? Yes. Since that we had asked the Government to help us, to give us something towards the amount that we had spent.
89. So that if this £2,265 had remained in the building fund it would have shown that you were so much less in need of a Government grant? I am pretty well sure that Mrs. Grose's legacy was a conditional one. It is difficult for us to find it out in these cases. This legacy is a pretty old one. Latterly we have been more diligent.
90. Surely there can be no difficulty in ascertaining the conditions of a legacy? We have had some difficulty.
91. These legacies have been in the building fund for years, have they not? Yes. In Mr. Cameron's case it was three years before we got all of his.
92. The effect of the transfer is that the building fund is £2,265 less, and the endowment fund is so much the better? Yes. I think it is a proper thing to have an endowment fund as a provision against bad times.
93. These legacies have been deliberately put to the building fund in the past, and afterwards transferred? Our old rule was to do that; now we have passed a new resolution, that all legacies of £100 shall go to the perpetual subscribers' fund.
94. How are these accumulated funds invested? They have been in the Savings Bank, Barrack-street, up to recently, and we have received interest annually; but they have decided recently that they will not keep these large sums, and the directors are casting about to get a better return for our money. We are letting our money out on mortgage—according to the conditions of one bequest—upon suburban or city property, and getting 5 per cent. for it.
95. The tendency is to take money out of deposit and put it on mortgage? Yes.
96. Besides the £5,000 in the Commercial Bank have you any Government securities? We have £900 worth of Government debentures.
97. And you are increasing your mortgages? Yes, we are increasing them where we can.
98. What was the income last year from accumulated funds? The interest from the perpetual subscribers' fund was £1,103 18s. 2d.
99. You expect to make up the deficiency in interest by other investments? Yes; we have had a good many discussions at the Board upon the subject. We have two gentlemen on the Board—Mr. Phillips, the treasurer, and Mr. Harrison—who, to a certain extent, are financial experts.

100. Have you calculated the cost per day of the maintenance of the institution? Yes. The maintenance per head for the year ending 31 December, 1886, was £36 16s. 6d.; for the year ending 30 September, 1897, £38 10s. 7½d. E. Robinson.
29 Mar., 1898.
101. Does that include everything? Yes.
102. Does it include charges for interest or rent? No; we pay no rent.
103. But there is a capital of £52,000? We do not include that.
104. That includes no charge for rent? No charge for rent or interest on the cost.
105. There is a very big capital involved? I do not know whether they do that in other parts of the world. In one report from an institution in America they estimated the cost per head at £38, and they had nearly 400 children.
106. I simply want to bring out whether it is done? It is not. Our estimate is for general maintenance of the institution, including salaries.
107. You have males and females associated together here? Yes.
108. How far is this association permitted? It is a question which Mr. Watson can give you more particulars about than I could. The pupils associate together in school and at their meals, but not at play. It is understood that the boys shall not go to the girls' department. The children are not permitted to be in any front portion of the ground except under the supervision of some of the officers. That is in order to keep the grounds nice. One regulation is that the boys and girls must keep their own side of the premises respectively. The rule says:—"Boys and girls must keep on their own side of the premises. The officer who fails to check or report any breach of this rule will incur the displeasure of the Board." The kitchen department and the dining-room divide the boys from the girls portion, and, as far as we can, we keep the female work on the female side and the male work on the male side.
109. The pupils associate together at meals and in class? Yes. And, of course, out walking the boys and girls walk separately, though they go out at the same time. One of the standing rules of the institution at first was to make it, as far as possible, of a family nature. We do not want to draw hard-and-fast lines that may not have satisfactory results.
110. How far do you consider the association of the two sexes advantageous? I think it softens them down. If you separate boys and girls and tell them that they must not look at one another you do more harm than good.
111. You think that the amount of association that they have here is advantageous? Yes, decidedly. The report tells us that in so many families there are more than one deaf and dumb brother and sister, so that when they go home they are associated.
112. Has any serious trouble ever arisen from the association of these children? No, we have never had any trouble. There has been trouble outside, after they have left, with some of them. Some have married.
113. You mean to say that ex inmates have married? Yes. In one or two cases the girls became *enccinte* before they were married. We do not bring them here much after they have left. We rather discourage their coming here for safety sake.
114. You have had no serious trouble whilst they were in the institution? No. Sometimes we found boys making towards the girls' side, but we have had no serious trouble.
115. Would you call that affair of * * * a serious trouble? It might have become serious; it was not serious as far as it went; it was checked.
116. Are you quite sure that these older boys and girls cannot meet together after dark? No, I am not quite sure. Of course, anybody can do anything if they undertake to do it. We lock the doors to keep them in, but if a big boy makes up his mind to get to a big girl, and both are willing, no doubt it can be done.
117. Have they done it? No; I cannot say that it has ever come to my knowledge that they did, except in the case of * * * ; and that teacher, some years ago, who was found taking a blind girl into one of the rooms—for what purpose I could only guess. He used to go about with his hands held out in front of his chest; he was a man about 25 years of age. He ran against the girl, and he pushed her backwards into the visitors' room. Some of the girls in the dining-room saw him pushing her, and they ran round and stood in the front and saw him pulling her about or doing something that they thought was wrong in the visitors' room. They told the matron, who immediately went and brought the girl away. They sent for me, and I ran him out into the street. I followed him into the street, and he said, "What about my clothes," and I said his clothes would be sent to him. I reported the matter to the Board, and he was dismissed.
118. What about the association of the deaf and dumb and blind;—do you find that it answers well? Yes; I think it is beneficial to both. I think it causes them to have sympathy for each other's afflictions. In Great Britain and America it is a common thing for the deaf and dumb and the blind to be associated together in one institution, partly, perhaps, for economy. I do not know any other reason. There is nothing in common in their affliction. You could, perhaps, deal with the blind better in another institution. When we started, in 1861, we waited year after year, in the hope that some body of gentlemen would take up the cause of the blind, but we had many applications for the admission of blind persons. They seemed to link the two together. People asked us to teach their blind children; and after waiting six or seven years, and finding that no one took up the cause of the blind, our directors decided to admit blind children, and to obtain teachers.
119. Do you think that in a small community like this it is an economical arrangement? Yes; I think it is.
120. In America they can specialise? Yes, but they do not do it. I do not know of any institutions for the deaf and blind in England or America that separate the blind from the deaf and dumb.
121. Do you find that the deaf and dumb are spiteful, and that they tease the blind? No, I never heard of anything of the sort.
122. You have observed them at play? I am not here very often, but I have seen them at play, and I do not recollect an instance of deaf and dumb and blind children ill-using each other.
123. You think they are mutually helpful? Yes, I am sure they are. If you saw them all mixed up together you could hardly tell. I met two, and I said "good morning," when one answered and the other said nothing, being deaf and dumb.
124. What amusements have the children out of school hours? They play at cricket and rounders, they have drill and gymnastics.

- E. Robinson.
29 Mar., 1898.
125. You have a teacher of gymnastics have you not? Yes, Mr. Everingham teaches gymnastics.
126. You have a concert hall, what do you do about that? It is used for lessons and drawing and modelling, for drill, and for meetings.
127. Do you have any entertainments there? Sometimes we have people who come and give entertainments now and then.
128. How often? We have had lectures and magic-lantern entertainments, but during the last year or two we have not done so much. We found it a big task to get up entertainments and issue tickets. It was really a losing spec. by the time we came to pay the expenses. We did not charge for tickets—we did not feel justified in doing so in an institution like this. We made a collection at the door, and we used to be £2 or £3 short of our expenses. We did it to advertise the institution and keep it before the public. The children's friends came, and it did have the effect of developing the talents of blind pupils, because we made them sing, and give solos, and do other things at the entertainment.
129. How are the stores purchased? The matron is responsible for receiving the stores, which are all bought by tender.
130. She is responsible for passing the stores? Yes, and for the quantity.
131. How long are the contracts for? Twelve months. They are called for in December, and they start in January.
132. Do you make frequent changes in your contracts? No; we do not. If the superintendent and the matron find that the contracts are properly fulfilled, and if the price is as low as other people's, we take them again. We call for fresh tenders each year.
133. These tenders are called for publicly? Yes, under printed conditions.
134. And if the contractor has done his work well you renew his contract? If he fulfils his contract he does not lose it if his price is low. The accounts are paid monthly, being checked by the matron. She signs as having received the goods, and Mr. Watson as having ordered them. Mr. Cook, the accountant, checks the prices and the totals, and the treasurer submits the accounts to the Board.
135. The matron is responsible for the quality and the quantity? Yes. If a man leaves forty loaves he leaves a slip of paper with the number on, and the matron has to see that the loaves are there.
136. How many paying inmates have you at £40 a year? I had better give you a return, showing what each pupil pays.
137. £40 is your maximum? Yes; it is.
138. Do you think that £40 is sufficient, seeing that the cost according to your own statement is about £38? Yes, we reckon that that about covers it.
139. Does that include clothing? It does and it does not. It does not in the case of a person who pays £40 a year. Those people pay extra for clothing. The Government pay £36 a year and that includes clothing. It is £30 for maintenance and £6 for clothing. I think £6 is about a fair thing for the clothing of each child. We reckon that we can clothe a child for £6 a year and do repairs to clothing.
140. What are the conditions of admission here? Simply that they are afflicted and of the proper age. The application must be made in writing, addressed to the secretary, and it must be sent before the child is brought to the institution. There are no disabilities in the way of admitting children, each application has to go before the Board. We had a child here about whom we had some discussion, an Indian deaf and dumb girl, who had been brought over here by somebody who made application for her to be admitted to this institution, in order that she might be taught, and eventually sent back to India, to become a teacher of similarly afflicted children, but she was so dull and stupid that we could not do much good with her, and after a year had elapsed they took her away. We are always careful to get some payment, we do not take children without a guarantee that they will be paid for.
141. In New South Wales what efforts are made to inquire whether parents and guardians are able to pay? We require them to fill up a series of forms, they fill up application forms for admission, in which they are supposed to give us all the information that is necessary. We write to magistrates and to clergymen to ask them for information; to clergymen by preference, because they can generally give more information than a magistrate. By this means we ascertain the position of the parents of the afflicted child. We may write to a clergyman and say that a person whom he knows offers to pay £2 a year for his child, and ask if he cannot pay more, and we say to him, "What you tell us will be regarded as confidential." Then we get a letter giving details of the man's position, and if we are still not satisfied we have of late years invoked the aid of the police. The Inspector-General of Police has permitted us to communicate with the police authorities in whatever district the parents of an afflicted child were situated. By these means we generally get at the facts.
142. In all cases, you make inquiries of that nature? In nearly all cases; in some it is not necessary.
143. A man may be in bad circumstances this year, but six months hence he may have recovered? We watch that.
144. How often do you make inquiries? About every year. We do more than that; when Mr. Cook goes collecting in a district, it is part of his duty to inquire into the circumstances of the parents of any of the inmates living in that district, and I think he does it.
145. Do you ever sue them when they do not pay? I do not think that our directors would sue.
146. Do you think it is fair to the subscribers not to do so? It is a charity.
147. It is not a charity for the well-to-do people? Well, we get the money; I'll tell you what we do. When we send a child home at Christmas we tell them they had better keep them at home. After a while, I say to the committee, "I have requested this man to keep his child at home four weeks, but it does not make any impression, had I not better take the child back?" and the answer generally is, "Yes; take the child back."
148. Do you receive pupils from outside of New South Wales? We only receive two classes—one from the other colonies when they are prepared to pay us the full fee; we have one from Tasmania now for whom the Government are paying, and that will cease at the end of the year, because I have received a communication saying that it was their intention to establish an institution in Tasmania.
149. Before you receive pupils from another colony, you have to have either a substantial private guarantee or a Government guarantee? Yes; we require the Government of New South Wales and the Government of Tasmania to sign guarantees; we are informed on legal authority that we could take proceedings upon them. They say there is no doubt about our being able to sue upon the documents.
150. Are there any arrears in respect of inmates from outside New South Wales? No; they are all paid up.

E. Robinson.
29 Mar., 1898.

151. Are they all recoverable? I do not know how you could recover in Queensland.
152. I mean as between the Government of New South Wales and the Government of Queensland? The Government of New South Wales sign a guarantee for the children of New South Wales only.
153. You are sure there are no arrears of payment for children from the other colonies? No; there are no arrears.
154. There are no arrears for any children from outside New South Wales? No.
155. What are the arrears for the children of New South Wales? A good deal;—some hundreds of pounds. We write them off periodically.
156. Then we should like to know the amount written off? I will get the book. Some are very much in arrears. When we find any chance to get the arrears we go for them.
157. You take a guarantee from the Governments of other colonies? Yes.
158. That provides for the return of those children? Yes.
159. Do you find that inmates from the other colonies who have been here for some years, and have been returned to their own colony, have a tendency to drift back to New South Wales? I think there is a tendency to do that.
160. Can you give an instance? The adults do not come under my notice. I know that there are some here; Mr. Watson can give you some information. He has a list of the occupations of all the children who have left.
161. Have you on your books any children whose parents and guardians you think can pay, and will not? There are about two cases in arrears, and the money will be got, I think.
162. Have you pressed them? Yes.
163. Where there is any possibility of a debt becoming good, you retain it on your books? Yes; you may say that we retain them all. We never lose sight of them, and if the people can pay we try to get the money.
164. Do you find that there is any difficulty with children brought up under different circumstances;—you have some from poor homes and some from good homes? We do not make any distinction.
165. Do they mix? They mix fairly well, I think. Of course children from rough homes are not as refined in their manners as the others. I do not think that the others would come down, but I think the rough ones would come up to their standard.
166. About the articulation system of teaching;—what are the qualifications of the teacher? There is a certificated teacher from the Ealing College for teaching the German method of articulation—the oral method.
167. Your pupils are all boarders, I believe? Yes; day scholars cannot be educated so effectually as those who are resident in the institution.
168. Why would it not answer to have day pupils? In the first place they are not regular in coming and going; in the next place the control of them is not so good, and their parents are not able to teach them at home. There is a difficulty in getting day pupils to and from school. The London School Board determined that they would do away with institutions to a certain extent and have only day scholars, but they have since come to the conclusion that it will not succeed, and they are now building an institution. The Rev. Dr. Stainer is convinced that there must be an institution. They are being trained in the institution from the time they get up in the morning until they go to bed at night. Where you could educate a boy in a public school in five years it would take from seven to ten years to educate a deaf and dumb boy. The process is so much slower. The blind do not require to remain so long in the institution as the deaf and dumb. Taking them generally they cannot receive the same amount of education as the boy in possession of his seeing faculties.
169. Do you give manual training? We have carpentry work and gymnastics.
170. Anything for the girls? Yes; fancy work, household duties, and laundry work.
171. You do not carry on any industrial work? No; we have not time.
172. It is a large boarding school? That is practically what it is. Every afternoon and evening there are lessons and necessary recreation, then going to organ recitals, and one or two other things takes up a lot of time. It appears to me that they are always at it.
173. What regulations have you for the visits of children's friends to the institution? People are permitted to visit the institution on two days a week. Page 68 of the report says:—"The institution is open to subscribers and other visitors on Tuesdays and Fridays from 2 to 4 p.m., and at other times on special order from the hon. secretary or a director." That special order rule comes in with regard to people from other colonies, and other people who, perhaps, want to bring a child in. If a father and mother come to me with a deaf child, many having serious scruples about putting them in the institution, I give them an order to enable them to come out here and look at the place, and to be shown through the building. Another rule is as follows:—"That children are permitted to leave the institution to visit their friends once a month on special written application being made to the hon. secretary." That applies mostly to children about the suburbs; some parents like to have them home once a month. There is another rule with regard to cases of serious illness. Deaf and dumb and blind children are more likely to catch complaints than other children, and if a child goes to a home where there is any infectious disease, we do not re-admit that child for a time. The matron's instructions are, that on a child's return, before the child is taken back into the institution, he or she shall be questioned in the visitors' room. They are asked how they have been getting on, and whether there has been any serious illness at home. Last year I telegraphed to the parents of one child "Do not send your boy back until I know what has been the matter." They had had a death in the family, and I did not know what had been the cause of death.
174. Are the friends of the children allowed to see them without any undue restriction? Yes; we never bother.
175. Do they go into the grounds? They sit in the room or go outside as they please.
176. They have free intercourse? Free intercourse on regulation days. The friends bring lollies and cakes, and they sit together in the rooms. For the first six months the friends of the children come pretty often; afterwards they come less often.
177. As regards your officers, who have the handling of money, have you any fidelity guarantees? Yes; Mr. Cooke is the only one. Mr. Watson handles a little money, perhaps £10 or £20 a year, from the sale of things made by the deaf and dumb boys. I think last year the amount was £11.
178. What amount of guarantee have you from Mr. Cooke? It is £250.

- E. Robinson. 179. Is he the only collector? He is the only one at present. We shall have to have another, I think.
- 29 Mar., 1898. 180. Do you find that your ex-inmates intermarry after leaving here? I think they do. We place no obstacle in the way, and it does not seem to be objected to in any other part of the world. I do not know of any afflicted children resulting from it.
181. Does it not tend in the case of the deaf and dumb to perpetuate the affliction? I do not think it does. I cannot find out that it does. The Americans go largely into that question.
182. Have you any literature on that subject? No, none; except a report. It may be that the deaf and dumb will produce deaf and dumb; but I do not think they do any more than the unafflicted do.
183. It would appear that there would be a tendency to perpetuate it? I do not think so.
184. You think they do intermarry? Yes; we have ten cases of their intermarriage in the Colony.
185. *Mr. Powell.*] In all cases are the offspring sound? Yes; so far as I know.
186. *President.*] Do you find that your ex-inmates take to mendicancy or street music? No; I know of two—one sells peanuts at the corner of George-street, but he blows the organ in St. Andrew's Cathedral. He is blind. The deaf and dumb are too high-spirited to go begging after they leave here.
187. I see from your report that you make great efforts to get children from the country to the institution? Our efforts are never ceasing, and a large proportion of the time of our collector in years gone by was devoted to searching the country for afflicted children to bring them within the influence of this institution. We issued circulars and advertised in almost every newspaper in New South Wales. We send copies of our reports to every newspaper, and we advertised in the *Town and Country Journal* and in the *Mail* for six months. When Mr. Cooke goes to such places as Wagga Wagga and Albury, apart from the fact of his being there to collect, he does his utmost to put the institution before the public. I attribute the success of the institution to the publicity given to its existence.
188. It appears that you have to use persuasion to get many persons to send their children? Yes; sometimes they do not like to part with them. They have scruples about letting them out of their control. They doubt whether the children will be taken care of in the institution. A man came to me from Lithgow in December who had a deaf and dumb boy. I gave him all the forms, and told him to have them filled up and posted to me; and then I said "when you come back bring the child with you, and I will get the sanction of the committee for him to be admitted." He promised to do that, but I have not got that child yet. There should be no need to persuade parents to send their children to the institution. In the case to which I have referred the man worked at the shale mines, and was a decent, respectable man. He has five other children.
189. Do you keep in touch with the pupils after they have left the institution? We do a little. Our rule is to educate them, and put them out into the world if we can. We send the blind boys to the Woolloomooloo Institute, and to recoup that institution for loss whilst they are training for the first six or twelve months we give them a bonus. The deaf and dumb girls go out to do housework. We have not a great number of blind, only about twenty-five.
190. Do you find more difficulty in placing the blind out than in placing the deaf and dumb? Yes; the deaf and dumb we have not much trouble with. In one instance we sent a boy out, and said that we were prepared to pay £10 to a man who would teach that boy a trade. I was asked if I was going to pay the man £10 straight away; I was told that if I did in two weeks he would be in the street. That was not our intention. After the boy had been learning his trade for several months I would pay £5, and another £5 subsequently.
191. Then you have very little difficulty in placing the deaf and dumb, and the blind you send to the Woolloomooloo Institution? We have to advertise. Mr. Cooke is issuing advertisements for next Saturday that we have deaf and dumb boys to place out to learn trades.
192. But you do manage to place them? Yes; but there is a lot of trouble.
193. The blind you send to Woolloomooloo? Yes.
194. Those who require to learn a trade? Yes; of course the directors place the responsibility of putting the children into the world upon the parents if they can. I think it is the parents' duty.
195. Have you given any consideration to the general question of the adult blind? No, not very much. We are giving more attention to the deaf just now. The blind are a very small class with us. We are going to try to get a home for the adult deaf, a very important part of the work. My impression is that at Woolloomooloo they do all that is necessary in regard to the blind.
196. There are only fifty-three blind persons of school age in the Colony? That was some years ago; there are more now. We have received 114 blind since 1869.
197. What about the health of the inmates? We are wonderfully free from sickness. We rarely, if ever, have any infectious disease here. When we have we send the patient away. We had a case the other day of an inflamed eye. Our matron is a qualified nurse, holding certificates from several doctors, and she does all the nursing here; but we could not employ her on a case like that; we sent the boy away to the hospital.
198. You do not attempt to isolate them here? Yes; we have two hospital rooms, and when any complaint makes its appearance the patient is isolated.
199. And if anything develops you send the patient away? Yes.
200. Do the children go away in vacation time? Yes.
201. Who pays the expenses? At the annual vacation the Government grant them free passes by railway, the parents have to pay for those who go by steamer. The vacations are five weeks at Christmas and one week at mid-winter. We send 112 children away each vacation. Those residing in the suburbs are fetched by their friends, and in some cases those who come from the country are fetched by their friends. A large number of them go into the country. We send them all away in two days. We submit a list to the Government showing where the children have to go, and get the necessary passes. It is a tremendous task getting them away. We have three van-loads of boxes to go to the railway station. We watch all the steamers and all the trains, and we send officers to see them off safely. We give the children in charge of the railway guard for him to see that they get out at the right station, and, where there is a branch line, to see that the child changes at the proper place.
202. You send them without a guide? Yes; we are opposed to guides. The children have to go about sooner or later, and we say that they must learn as quickly as they can. We only had one pupil who went astray.

203. I understand that Mr. Cooke does all the collecting? Yes, except that done by friends of the institution. A task is to persuade the people to keep the thing up. The collections from friends of the institution came to under £100, but it helps, and make the institution known. In some instances we get the friends of the pupils to collect.

204. Is Mr. Cooke paid by salary? Yes.

205. He receives no commission? No commission. His travelling expenses are paid, and he gets a salary.

206. Has he a great deal to do? Yes; too much.

207. I suppose he keeps all the books? Yes; he keeps all the accounts, he pays all the bills, draws all the cheques, attends the Board meetings, prepares three copies of the minutes each month, and he comes to me every morning and receives the letters. We have three or four mortgages, and he collects the interest each quarter.

208. How many hours a day does he work? He is with me at five minutes to 9 in the morning, and he leaves here at 5 o'clock at night; but he is here two or three nights a week as well.

209. What provision is made for the work when he is away collecting? It waits until he comes back, except what I can do. The letters all come to me. I give an interim receipt for moneys.

210. But the books must get into arrears? He pulls that up by working overtime.

211. What checks do the auditors apply? Mr. Cooke has a collecting book. I do not think they check every butt, but the treasurer does. He comes every month, and goes through everything.

212. But the auditors do not? No, they do not check the butts.

213. The real check should be from outside the institution? Mr. Phillips goes through them very carefully.

214. Still he is your own officer? You can hardly cast suspicion in the matter.

215. I am simply asserting a principle? No doubt it is a correct principle, but if we had any other check we should have to pay for it. If the Government would check the accounts of these institutions it would be a very good thing.

216. That is the object of my question? I do not know how they do it in America. There they give every detail in their report. If they buy a broom it is put down so many cents; they are all State institutions there. They send in a report to the State legislature, and say, "We want 250,000 dollars," and the money is put on the Estimates and voted.

217. The check which you rely on chiefly is that of Mr. Phillips? Yes. I used to do it at one time, but it became a serious task. I used to go through every butt, but when you collect a sum of 2s. 6d. or 7s. 6d. in the country we do not put that in the butt; we do not profess to give receipts for sums under 5s.

218. Has any collector ever appropriated any of the money collected? Yes; a collector whom we had before Mr. Cooke came.

219. How did he manage to do it? He did not fill out the butts, and did not put the amounts in his sheets.

220. Did you have butts? Yes; and I checked them, but I did not check them sufficiently. The Committee had the man before them, and he promised to repay the amount, and lest the interests of the institution should suffer by publicity we did not say much about it. We took from him promissory notes for the amount, but they were never met. He did good work; he brought in a lot of children and a good amount of money. He worked hard. His deficiency amounted to about £200.

221. You propose to build? Yes.

222. What are the extensions required for? For dormitory accommodation and increased kitchen and dining-room accommodation, also a new laundry.

223. Is the dormitory accommodation insufficient for 112 persons? It is just about full.

224. What is wrong with the kitchen? It is twenty-six years old, it is too small and not up to date. We cannot do the cooking very well in it. During the last four years the number of pupils has increased from seventy-six to 114.

225. Was that return for the Chief Secretary prepared with reference to the extension? Yes.

226. How many persons can be seated in the dining-room? I think it is just about comfortably full now. My proposal for the addition is to give us room for about 170 pupils in the dining-room. At present the officers have their meals in the dining-room; that is to say, they dine in the same room where the children dine, but a little after them. They have their breakfast about the same time and tea or dinner at night about the same time. I propose that we should take that table out of the dining-room, because, whilst theoretically the officers are supposed to have an oversight during the meal-hour, practically they do not, and my proposal is that the officers shall have a separate dining-room. It will contribute in more ways than one to the comfort and convenience of the officers and pupils, one officer will be detailed to remain on duty whilst pupils are taking their meals, to see that they behave properly and that they get enough to eat. We shall perhaps have 140 children next year.

227. Do you know that you will get them? Yes; we know of a good many now that are too young.

228. But some of the others will be retiring? We have considered that; but unfortunately the retiring children will be very few.

229. Have you had to refuse admission owing to insufficient accommodation? No, and we shall not have to do that. We can dismiss some of the elder ones to make room.

230. Have you names on your books that lead you to suppose that you will get the increased number? No; but we hear of them. Mr. Cooke can tell of a good many in the country.

231. What number will be provided for with the increased accommodation? About 170; an increase of from seventy to eighty.

232. That means about 50 per cent. more? That is what we are going to arrange for.

233. What sum have you asked for from the Colonial Secretary? £6,000.

234. What is the estimated cost? The architect's is about £6,000; but it will cost more.

235. Have you asked for the whole £6,000? Yes. We have spent £47,000 on buildings, and we have had only £5,000 from the Government.

236. Are your ordinary operations hampered at all for want of funds? No. I am sanguine enough to hope that we shall never want for funds here whilst we keep our good name.

237. Are you and the Committee satisfied with the staff as a whole? Yes; it is a splendid staff.

E. Robinson.
29 Mar., 1898.

- E. Robinson. 238. Do you think the salaries and wages are fair? I think they are below fair, taking into account what I see is paid in other parts of the world. There are one or two that, if I had the power, I would increase right away. Mr. Watson is very anxious to get more for the teacher of carpentry. He is worth more, except that he is an afflicted man; he is very deaf, and we get him at his present wages because he could not get work outside. He does all the repairs in the place, and instructs the carpentry class, being a fairly good carpenter. With regard to the other pupil-teachers, there is one for drawing and modelling, Mr. Bennett, who gets £100 a year.
239. There is no extravagance? None at all.
240. Does the Public Instruction Department recognise the training that you give to the teachers? Yes. We arrange with them, so that they do not lose their status in the Department. They can go up for examination and get their certificates.
241. They become, in fact, pupil-teachers of the Public Instruction Department? Yes, indirectly.
242. How many pupil-teachers have you? We have Mr. Byrne, Miss Beaumont, and Mr. Hewitt.
243. Are the children for whom the Government pay £36 a year sent here by the State Children's Relief Board? Yes; they all come through them now, and they recommend the payment. We do not put every child on the Government; we educate some free. Of course, owing to the pressure of the times, we are obliged now to ask the Government to pay more than we otherwise should ask them to pay.
244. What we want to get at is how those children come here who are sent by the State Children's Relief Board? They are responsible for them to a certain extent; they help us very much. Last year we had five, and we could not tell where their fathers and mothers were. The Board took them away to Mittagong, and sent them back to us in splendid health. We sent them away fagged out with hard work in the middle of December, and got them back in February in good health.
245. So that your children who have no home to go to are taken away? They oblige us by taking some.
246. Do the children get free passes to Mittagong? Yes.
247. This institution is not charged for them in any way? No; the Colonial Secretary's Department is, I think. We get free passes, which we change for tickets.
248. *Mr. Barling.*] Our object here is to see whether the funds of the institution are economically managed, and, of course, the test will be as to the cost. It appears to me that the cost per pupil, as far as the staff is concerned, is £21 6s.; for provisions per pupil, about £14 10s.—that is, £35 16s.; and the interest on the debt, reckoned at $3\frac{1}{2}$ per cent., estimated at £48,000, would be £1,680, which would have to be divided amongst 113 pupils; that would come to about £15 per head; so that each pupil costs the State and the institution about £50 10s. a year, and you get fees that would average about £10 13s. per head, bringing down the actual cost to £37 17s. per head? Yes. In some American institutions it costs £30 apart from the staff. I have an impression that the cost of the education of the deaf and dumb and blind here averages about the same as it is in America. I am sorry to say that I have lost the book that I had which gave the cost per head in dollars at about thirty institutions in America. I think that it was from £38 to £60 per annum.
249. Do they include interest on the cost of the buildings? I do not know whether they do.
250. Do you think that £50 10s. per annum per child is a reasonable cost? I think, considering the nature of the institution and the education given, that it is.
251. You tell us that there are some children here of wealthy people? Yes.
252. Then, according to that, they are paying too little? Yes; I think they are charged too little. They could not put their children to the ordinary boarding schools at a charge of less than £40 or £50 per year.
253. Then do you not think it would be a fair thing to charge them at least £55 a year? It would. We consider that the subscribers to the institution contribute something in that way.
254. You are taking them at the expense of both the State and the institution;—do you not think it will be wise to revise your charges in view of that? I do not think we should get the money. Only a small minority pay up the full rate. One parent pays us £40 a year, and it must cost him £10 or £15 a year to take his boy from New South Wales to Queensland and back. Another, a squatter, pays us very liberally. We buy clothing for those boys at the wholesale houses, and we buy a little better clothing for those children than we should for some of the others. The parents pay us for it at the end of the year.
255. In the account you do not include the cost of clothing obtained from persons of the better class, do you? Yes.
256. I think you said that a large sum of your money, £25,000, was in the Commercial Bank? Yes.
257. For which you get 3 per cent.? Yes.
258. Finding that a small rate of interest, you are putting it out on real property? Yes.
259. What regulations have you for that? We have no special regulations, but we have the Board of Directors. The treasurer, myself, and Mr. Harrison have to supervise investments. We have to be satisfied that they are right before we accept them, and we get a valuation.
260. Is it known that you have money to invest? No.
261. How do people come to know it? It is only during the last six months we have done anything in that way. Messrs. Iceton and Faithfull have been acting for us, and they have charged us very little.
262. Then you lend out the money through Messrs. Iceton and Faithfull? We have not lent through them yet; we have only taken three mortgages. This came about through J. T. Neale's legacy. The executors said that if we liked we could take over some mortgages, and we took £800 in mortgages. We had the pick of them.
263. How many mortgages have you out? Four altogether. The first we had was many years ago. A drill instructor was either building or buying a cottage, and we let him have a mortgage on the cottage. It has been a most unfortunate speculation for us. The mortgage was effected twelve or fourteen years ago, and it is in existence now, except that we have virtually foreclosed. We are receiving the rents.
264. You are not lending anything on station property? No; on city and suburban property.
265. And on a proper valuation? Yes.
266. What proportion would you lend on a valuation? Except in very rare cases not more than half. In this last case we lent two-thirds—£550, at 5 per cent.; and a house, valued by the owner at £1,000, and by Richardson and Wrench at £900; but it happens to be in a very exceptional position; it is a choice block of ground.

[The Commission adjourned at half-past 12 o'clock, and resumed at 1.45 p.m.]

Ellis Robinson (examination continued):—

267. *Mr. Powell.*] Referring to the published accounts, I suppose we may say that the expenditure for 1897 was £4,238? Yes, less something in hand. E. Robinson.
268. And that the salaries and wages for the year, according to the secretary, amount to £2,379—according to these accounts to £2,101? Probably there is something included in that which was paid since the 30th September. 29 Mar., 1898.
269. Your subscribers at Sydney gave £674, but you take off £42 17s. 3d.? Yes; that was received after the account was closed. We have to put it in that way; we should not get it again next year. Sometimes the subscription for 1896 is not given till the following year.
270. The Sydney collections for that year were £674? Yes.
271. Then did not the country collections amount altogether to £92? No, £411.
272. £105 was collected by friends, and you collected £306, making a total of £411? Yes.
273. Does not that make the total collections £1,068? Yes.
274. Then the interest you receive amounts to more than the whole amount of your subscriptions from the public? Yes.
275. Then you have invested in varying interest £28,000? Yes.
276. Your buildings and land unencumbered you value at £50,000? £52,000.
277. I notice that your collector only collects along the railway lines? He does not go off the railway line. It is questionable whether it would pay to go anywhere else and he has not the time.
278. I suppose that the statement on page 65 of the Annual Report as to school fees we may take as reliable? Yes, that is taken from our books.
279. I have gone into this account, and I find that there were eighty-three of the children from whom school fees were contributed, and thirty who appear to be entirely free? I do not think that so many as thirty are free. I think they are paid for by the Government. You must divide the thirty into two lots, and say that some should be paid for.
280. But the thirty are not paid for? No.
281. Do you think this will be right—thirty-three pay under £10 a year each, six pay £10 a year each, four pay £12 a year each, three pay under £14 each, one pays £14, one pays £15, seven pay £20, one pays £25, twenty-one pay £36 each, six pay £40 each, then according to this statement, with the exception of the six children paying £40 a year each, the Government pay £36 each for twenty children, that is £720 which the New South Wales Government pay, and the Tasmanian Government pay for two. What I want to ask you is—are not the Government actually paying the highest rate, except those who are paying £40 a year each for those six children? Yes; that includes clothing, it is £30 for fees, and £6 for clothing.
282. From the report it seems to me that the subscribers have fallen off very much since 1891? Yes, they have not fallen off in numbers so much as in amounts. Many who used to give three guineas now give only one guinea.
283. They have fallen off both in town and country? Yes; they have fallen off in the country partly because there are so many competing institutions collecting against us. Years ago there was no other benevolent institution sending round, now there are the cottage hospitals, the Strathfield institution, and the Woolloomooloo institution all competing.
284. Looking at the work done by this institution does it not appear to you that the number of subscribers is very small? It is not so large as it ought to be.
285. And especially in the country? It is not so big in the country as it ought to be. During the last few years we have not sent into the country as much as we used to do. We used to have one collector down the rivers, one up north, and one in Queensland.
286. Yet you get the largest number of children from the country? Yes.
287. Taking into consideration the fact that this fine building that we are in now is entirely paid for, and that you have an endowment fund of £28,000, do you not think that the public for these reasons are disinclined to subscribe? To a very small extent.
288. The suggestion has been made that you seem to be so well off that people are not inclined to give? Yes.
289. Do you not think that this endowment fund is likely to prove a kind of dead hand on the institution? I have always argued that it does and it does not. It does from one point of view and it does not from another. From a director's point of view it is nice to have an endowment to make you to a certain extent independent of the fluctuations of the times. But subscribers say you have plenty of money we will not subscribe.
290. One gentleman has told us at a public meeting that it is not a charity at all? I do not recollect that.
291. He said it is not a charity in the true sense of the term, and another gentleman told us at the same meeting that it was a boarding-school? The President said that I think. The inmates in whose interests the place is carried on could not be educated except by an institution of this kind.
292. *President.*] Is there anything else that you would like to tell us? The only other question is that of amalgamation. I do not see how it would be possible to amalgamate this institution with the others. The main object, I suppose, would be economy, but I do not see where that would be affected by amalgamation. One collector could not collect for all the three institutions; one accountant could not do all the work; and one manager, probably, could not manage them all. One committee could manage the three.
293. But there would be no saving would there in having one committee instead of three or two? No; I do not see how the expenditure in salaries and wages could be much reduced. The expenditure on provisions would be no less, or on ironmongery, crockery, and bedding. We may be extravagant in our printing expenditure, we have so much done. An expenditure on fuel, gas, and medicine of £95 is a small amount. Alterations, repairs, sundries, and travelling expenses would not be much less. I have thought the matter over and I think that Woolloomooloo and Strathfield institutions might be amalgamated because they work on similar lines.
294. Yours is a purely educational institution for children of school age? Yes.
295. The others are industrial institutions? Yes.

- E. Robinson. 296. Yours being purely educational, you think there is nothing to be gained by amalgamation with institutions which have different objects altogether? Yes. They follow up where we leave off.
- 29 Mar., 1898. 297. Have you any views with regard to those other two institutions? My view is that they can be amalgamated. The only reason for the Strathfield institution is that the Woolloomooloo institution did not take in females, but now they do take in females.
298. Have you any opinion as to the question of home-teaching which Mr. Prescott was so strong upon? I am not a strong advocate for home-teaching.
299. He included two things, educational teaching and industrial teaching;—as far as the young are concerned, you provide for education? Yes.
300. Do you think that a blind person of 40 or 50 years of age is capable of thoroughly learning, so as to make a living by her home-teaching? No.
301. Suppose a man or a woman at Tamworth, or anywhere else, wanted to learn a trade, instead of sending a man to teach him or her would you have the person brought to Sydney and taught? Yes; because it can be done so much more expeditiously and practically, even should it involve extra expense, which I do not think it would. Then I would send the person back again.
302. You would send him to his own town, where local sympathy would assist him? Yes. It is a proper principle not to put two blind men in one town. In America they equip a man with plant, and he can go and squat down anywhere, make American brooms and supply the district.
303. The question of local sympathy would come in? Not alone local sympathy, but the person might have relatives.
304. *Mr. Powell.*] Have you known blind people who had been educated in the Strathfield or Woolloomooloo institutions to make a living outside the institution? It has not come under my notice.
305. *President.*] Is it not a matter of organisation? I think that owing to the disabilities which the blind labour under they ought always to be attached to an institution.
306. Supposing persons were brought to Sydney and taught, then sent back to their own homes, should there not be some supervision by the institution? It would be a good thing if there could be, but I do not think it is necessary. It could not be done without expense.
307. *Mr. Powell.*] You have had no experience in manufacturing carried on by blind people? No. We had basket-making done here, and we had an instructor, but we really had not the numbers to carry it out. Of our twenty-five blind children only seven or eight were really fit to undertake manual labour.
308. *President.*] You say that the Woolloomooloo and Strathfield institutions might be amalgamated;—does that mean that one could be extinguished or that both should go on? I would extinguish one.
309. And the idea would be to have the industries carried on at Strathfield? Yes, or out of Sydney, in some suburb where land is cheap.
310. You would devote those two properties to some other use? Yes, and that I have no doubt could be done.
311. Do you think the Woolloomooloo institution is a desirable place for a number of people to be employed in? I do not think it is, but it was the only place they could get. I do not look upon it as a healthy place. The situation is too low, and there is a sewer very near it. They could enlarge their establishment and economise very much by shifting.
312. You think there should be a suitable workshop in the neighbourhood? Yes; not too far from Sydney.
313. And a proper sale-room in Sydney? Yes; I think it would pay better; you would get more trade. I believe the Woolloomooloo institution is admirably managed. We give them all the help that we can.
314. *Mr. Powell.*] Are not the earnings very small? They are small in all blind institutions.
315. *President.*] Do you think that the scope for the employment of the blind could be extended? Not very much. In America they have not extended very much. Piano-tuning is the only thing that they have done much in.
316. *Mr. Powell.*] Have the Roman Catholics any objection to their people coming into this institution? I do not know. We get applications from Catholics.
317. As a body do they object? I think they like to have their own institution; that is their system.

Jessie Macleod, sworn and examined:—

- Jessie Macleod.
29 Mar., 1898.
318. *President.*] You are matron of this institution? Yes.
319. How long have you been matron? Nearly twelve years.
320. Did you join as matron? Yes.
321. What is your salary? £120 a year, and board and lodgings.
322. Any other allowances? No other allowances.
323. What are your duties? The duties are just the duties of a mother in the home. To see to everything that is going on, buying and ordering, the charge of the servants, and the nursing of the children when sick.
324. Have you had any experience of similar work elsewhere? Yes. I had charge of the Catherine Hayes Hospital, Randwick, for six and a quarter years.
325. Have you been trained in nursing? Yes. I was in entire charge there.
326. Are you a trained nurse? I have only had the training that I got there, but I have testimonials from four doctors.
327. What arrangements are made for nursing inmates here when they are sick? That is part of my duty.
328. Do you do that personally? Yes.
329. Do you attend to their clothing? An assistant does that under my instructions.
330. You are responsible for everything inside the institution? Yes.
331. Are you under Mr. Watson's directions? Yes, to a certain extent; but I am more under the Ladies Committee.
332. But you are really responsible for all the internal management of the institution? Yes.
333. Do you purchase the stores? Yes.
334. Do you pass them? Yes.
335. Do you check them? Yes.
336. Do you often reject them? No, we do not need to do so. The directors are very particular.

337. Then your assistant is the one immediately responsible for the clothing and the bedding? Yes; she is responsible for mending and putting clothes away. That is her immediate duty.
338. Who has charge of the laundry? I have.
339. It is not up to date is it? No, we need a new laundry badly.
340. Who is immediately in charge of it? We have a head laundress and an under laundress.
341. Is she assisted by the inmates? The girls go to learn ironing, but she is not assisted much.
342. They cannot learn without doing it can they? No; but we do not look upon it as assistance in the laundry.
343. You have the care of all the stores, the storeroom, and charge of the servants? Yes.
344. Do you dismiss servants? Yes.
345. Without reference to anyone? I make a note of it and report to the Ladies Committee.
346. Who engages the servants? I do. Two ladies visit here each week.
347. Is there anything else you want to say? Nothing whatever.
348. *Mr. Robinson.*] What do you do with cases of serious illness? They are sent away.
349. *President.*] The inmates generally have very good health? Yes; we have had only one epidemic since I have been here.
350. *Mr. Robinson.*] All your staff under you give you satisfaction? Yes.
351. *President.*] The kitchen is not up to date? No, and our dormitory space is too small—it is crowded.

Jessie
Macleod.
29 Mar., 1898.

Samuel Watson, sworn and examined:—

352. *President.*] You are Superintendent of this Institution? Yes.
353. Are you a trained teacher? Yes.
354. Were you trained to this particular branch of teaching—the blind and deaf and dumb? Yes. In the Institution where I was we had both classes when I was training.
355. You had ten years' training? Seven years training; ten years' experience before I came out here.
356. Do you do any actual teaching? Yes, daily.
357. Is the teaching staff properly manned? Yes.
358. In proportion to the number of inmates, is it high? No, it is just reasonable. It may seem to an outsider somewhat high, but when you consider that that in cases of oral teaching there is a great deal of individual tuition required, it will be understood that our staff is just about equal to the work.
359. You cannot have class teaching to any great extent? Not with juniors, but with others we can.
360. That would account for what seems to be the high proportion of teachers? Yes.
361. What subjects do you teach yourself? I take several classes, but mainly the elder ones. I also take the younger ones occasionally, but the greater part of my time is taken up with the elder and middle classes.
362. I understand that you take them in all subjects, and take them occasionally as a check upon the staff? As a sort of test.
363. Are the methods of teaching here modern methods? Yes; I think they are quite the same as the methods adopted at Home and in America.
364. Has there been any change of recent years in the mode of teaching? Within the last twenty years, what we call the oral system, has made very considerable advances in both England and America. I may say particularly in England. We have tried to keep abreast of these improvements.
365. Where did the oral system originate? In Germany.
366. Who is the teacher of that system here? We have Miss Bateman, who is head of the Department; Mr. Everingham and Mr. Byrne, Miss Beaumont and Mr. Hewitt.
367. Miss Bateman, I understand, was trained for the system? She was trained at home. Miss Beaumont was trained here, and the other teachers have all been duly trained except Mr. Hewitt, who has only been here six or eight months, and is being trained.
368. You are responsible for the discipline of the establishment? Yes.
369. What are your duties generally besides teaching? The general supervision of the whole institution.
370. You are responsible to the Board for the whole administration? Yes. I think my position was made a little more clear in that respect within the last twelve months.
371. How is that? I think with reference to not only the scholastic but also the domestic part of the institution a little more responsibility was placed upon me, and a little increased authority put in my hands within the last twelve months.
372. Does your jurisdiction conflict at all with that of the matron—what are the limits of your jurisdiction and of hers? So far as I interpret the wishes of the committee my duties comprise a general supervision comprehending almost everything about the house. Of course in saying that I wish to make it clear that I never interfere with domestic matters, which are all under the control of the matron. At the same time the matron has been to some extent made—I will not use the word subordinate, but, rather, responsible to the superintendent.
373. About the association of the males and females, what is your opinion about that;—is it an advantage or otherwise? I think it is an advantage on the whole. At any rate, with due care and watchfulness, we have not found any disadvantages in having the boys and girls together. If they were older the difficulty would be greater. With children there is no difficulty. I often think by the influence of girls a somewhat finer type of character is produced in boys. It is so in family life, and I think it must be so in schools under proper control.
374. You allow them to associate at meals and in class? Yes.
375. But not at play? No; at odd times, in summer evenings, we have allowed it; but always under the supervision of some one we could trust.
376. What is your opinion with regard to having the deaf and dumb and blind together? I know that our plan is different from that existing in many other institutions; but, as far as I can judge, it is a very good thing, and a very wholesome thing, and beneficial in some respects to both, especially in what one may call ethical or moral development. That the helplessness of the blind gives an opportunity to the deaf to offer a little help and sympathy, and thus develops in them in a kind of reflex way much that is good.

S. Watson.
29 Mar., 1898.

- S. Watson. 377. Do you find that the deaf and dumb occasionally tease, and are spiteful to the blind? Not at all. I have always found that the deaf were really good to the blind. Of course, there are exceptions.
- 29 Mar., 1898. 378. The deaf and dumb do not suffer by comparison with ordinary children in that respect? No; I think they are very good to the blind, and good in other respects too.
379. So you think that the deaf and dumb and the blind help each other to some extent? I think so. I do not think a deaf child can be helped much by the blind, but merely seeing the helplessness of the blind and doing them a kind turn, as they often do, is good and wholesome ethical training.
380. What is done for the amusement of the children on winter evenings or out of school hours? We have evening school always from 7 o'clock to half-past 8. Part of the time is taken up with the recapitulation of the day's work, and part of the time in telling them little stories; sometimes in friendly chat about ordinary occurrences. In the case of the deaf their great want is language, and one has to give to them that which, owing to their affliction, they could not otherwise possess.
381. Do they play games? Yes, from tea time until 7 o'clock; the boys by themselves and the girls by themselves.
382. I suppose that by the time they finish their lessons they have to go to bed? The elder boys go to bed at half-past eight, the younger ones at 7 o'clock.
383. Do you keep in touch with them when they leave this institution? Yes, we are in touch with them; not in any official way, but still in a friendly manner. We know the history of most of them.
384. Do you find that they marry? Yes. About Sydney there are about eight couples who have intermarried.
385. Do you find the ex-inmates from the other colonies when they have left this Institution have a tendency to return to this Colony? I have noticed that in a few cases; but this arose, as far as I could judge, from the fact that here there may be openings for work which they had not in Tasmania. For instance, in Tasmania, which is a little backward in that respect, we have found a few blind who were very glad to come back here in the hope of getting something to do; but I think, with that exception, there is not any special inducement to them to return.
386. You do not think they do that to any great extent? No.
387. It might be a serious matter to this Colony if they did it to any great extent? I do not think they do. I could only name three or four who have returned who I thought should have stayed in their own colony; but on inquiring into their cases I have felt that, labouring under so many disadvantages, in Tasmania, they could hardly do anything else than come back to earn a livelihood.
388. Are you aware whether any of those people who came back became a charge on the State, either wholly or partially? Yes; I fear that the last one who came over from Tasmania, * * * will become a burden on the State. He was educated here. I advised him as strongly as I could. He wrote to me for money, but I sent him none. His wife came, and I had to give her a little; but it was merely out of pity for her, and not as an inducement to return here.
389. You say that he and his family are likely to become a charge on the State? I understood from her letter that he was a much better worker than he turned out to be. I have heard that he is rather incapable and lazy.
390. Is he in town? He was in the Blind Asylum at Woolloomooloo, but he left there.
391. Have they children? Yes; I think one or two.
392. Do you know whether any of your ex-inmates have taken to begging, or anything of that kind? I have seen very few, two or three in the streets who have done so; but I must state that one who married, and another who is unmarried still, did not stay long enough here, nor had I ever very much hope of their ever turning out independent characters. Even in childhood, one can see how a child will turn out—whether he has any backbone or not. One is married, and the other girl left far too soon. I think her parents were responsible for sending her out to earn her living in this way.
393. Have you any inmates at present from outside New South Wales? Yes, from Tasmania.
394. Are they under a guarantee from the Tasmanian Government? Yes.
395. You have no day pupils here. No, they are all boarders.
396. Would you approve of day pupils? I do not think so. I remember seeing it tried in the institution where I was trained at home, but we found that it was not a success, and I have never advocated it here. The directors, I think, agree with me that it is not desirable. Later developments in England have tended to confirm the idea that it is not desirable to have day scholars. I mean by developments, information that one gets from magazines about the deaf and dumb.
397. Is the manual training and carpentering found to be very beneficial to the pupils? I think it is a very great advantage. I think that though they do not, in after life, become carpenters, still the manual training is a great boon to them. I think experience is showing everyone now that the training of the head and hand should go together. One helps the other very much.
398. You have no industrial occupation here at all? Only carpentering; of late we have had a few boys who do a little gardening.
399. What is the school curriculum? History, grammar, and geography, &c.
400. Does it agree with the Public School course? No; it is not on the same lines; but judging from what the inspectors have said, the results eventually are almost equal to results obtained in the Public Schools; we have to work on very different material, and on different lines.
401. You have the ordinary subjects—geography, grammar, object lessons, &c.? Yes; and composition, which is one of the things that we have to attend to day by day.
402. That is because the pupils, being deficient in certain faculties, have to be supplied with ideas? Yes.
403. *Mr. Robinson.*] Is not the kindergarten system adopted here? Yes, in a modified form.
404. *President.*] When the inspector's report was written, were all the inmates examined? All but two, I think.
405. *Mr. Robinson.*] Were they very young? No; we did not bring in one girl, because she is a little bit silly.
406. *President.*] Have you ever given any consideration to the question as to what is to be done with these people when they leave this institution? In the case of the blind it is a great puzzle sometimes to know what to do with them; however, of late years, by the opening of the asylum at Woolloomooloo, we have been very fortunate in getting a good many drafted off from here to that asylum, where they learn basket-making and other trades. With regard to the deaf and dumb, there is no serious difficulty
in

- in getting employment for them. We find that as a rule they are valued, and that they pick up their trade about as well as boys who have all their faculties. S. Watson-
29 Mar., 1898.
407. As regards the blind, the only outlet of any consequence is the Woolloomooloo institution? Yes.
408. And for some time you have to subsidise the pupils who are sent there, have you not? Yes; the committee have on several occasions given small sums of money to the committee there for a child's training—about £10.
409. Have any of the ex-inmates conversed with you on their prospects there? Yes; very often.
410. Are they satisfied with their treatment? Yes, I think so.
411. Did they tell you what they are earning? I could not exactly say. I have heard that it is from 30s. a week down to (say) 15s. a week. I understand that they are paid in accordance with their work.
412. *Mr. Robinson.*] The pupils we send there are about the best that they get there, are they not? I think so. I have often felt very thankful that that institution is in existence. It seems such a happy opening for these boys, some of whom are poor and friendless. An institution opening its doors as it does, being nearly always ready for these pupils of ours, one feels thankful for.
413. *President.*] You work in a friendly way with that institution? I have a very great regard for it.
414. Do you think there is room here for two industrial blind institutions? I really think that the multiplication of these institutions is an unwise direction. One sees it not only in the case of the deaf and dumb and the blind, but in other directions. A great disposition to foster pet societies which means a good deal of expense and perhaps difficulties with subscribers who are puzzled to know where to send their subscriptions.
415. There is necessarily a good deal of competition between the institutions? Yes, but I do think that it has been a good thing to have a home for some of these blind women.
416. You are referring now to the fact that at Woolloomooloo they are non-resident, and you think it would be well if residence were provided? I think not, except in the cases of those who are very helpless. I think it is a most wholesome principle on which the Woolloomooloo institution is carried on. Let them go to their own homes, and in an independent way try to live. I think that when they are put together in large numbers they get an unwholesome, grumbling, dissatisfied spirit, whereas when they mix with people in possession of all their faculties, they get more correct views of life and duty, and have a proper sense of independence.
417. Then I understand that those blind persons who are not fit to earn a living at Woolloomooloo and elsewhere should be otherwise provided for? I have a great deal of pity for some blind people who are perhaps unfit to compete in the battle of life. Of course there are asylums like those at Liverpool and other places. I hear that in America and in London they have a few small homes for old blind people; in New York they have a very nice home for old deaf and dumb people, such places may do good.
418. Is the matron of this institution a thoroughly efficient, satisfactory officer? Yes, I think so.
419. And the staff generally are satisfactory? There has been some little friction, but time and experience will, I hope, remove it entirely.
420. You are perfectly satisfied with the staff? Perfectly satisfied.
421. *Mr. Powell.*] About these Tasmanian children—is there any arrangement made for their return to Tasmania when their period of instruction has ceased? Yes. As a rule if they have relatives they go to their relatives. Two or three who have not had friends have gone back to an asylum which they have for poor people in Hobart.
422. It is understood that these people go back when their period of tuition is completed? Yes.
423. Do you adopt the combined methods of teaching here—the purely oral and the sign manual? Yes; we have both here, and we have also what I may call an aural class, a class of those who hear a little, whose hearing is sufficiently good to make us hope that we may be able to develop it a good deal.
424. But you teach them the sign manual as well? Yes; we have the three classes; the pupils who are taught by the oral system, and the pupils who are taught the manual system using their fingers, and this other class the aural class.
425. But the sign manual is kept up still? Yes; there are thirty pupils in that class.
426. Then you are not an advocate of the purely oral system? Yes, I like the oral system very well, but we find that it does not suit for all the children. We find in the cases of a few that after a period of trial, say from two months to six months, some of them do not get on very well. If we find it is a waste of time they are drafted off to the manual school. If there is no possibility of their developing the oral system sufficiently to be understood in after life, they are taken over to the manual school. I understand from the literature that one gets from Home, and especially from America, that they work on these lines very much in both England and America.
427. Is it a fact from your knowledge that deaf mutes between themselves do not rely on the oral system, but use the sign system? You are quite right. It may be thought a pity, but still it is so; they are very apt to revert to the easier method of communicating, namely, the finger language.
428. And they make themselves understood by each other better in that way? Yes, it may seem strange, though it is not to me, that a sign language is a very easy language for the children to take up. I notice in the case of my child, who cannot speak properly, that he can carry on a conversation by signs with the deaf children, and they understand one another. I do not advocate sign language unless as a help in enabling a child to grasp ideas.
429. A trained knowledge of sound cannot be imparted to a deaf mute, and the teacher has all the advantage by the oral system, the deaf mute being only able to take the outlines of the mouth and lips? Yes, which, of course, as some have argued, is of itself a kind of mechanical movement.
430. At what age do you think instruction should commence with deaf children? I think from 6 to 7 years. I think it will depend upon the capacity of the child.
431. Can you commence too soon? No; I do not think you could. I think that if they are in their own homes, with intelligent surroundings, you could not commence too soon; but I do not think, on the other hand, that it is a good thing to take a child away from its parents when it is 3, 4, or 5 years of age, even though its mind has not been cultured much at home. Home is the best place for it until 6 or 7 years old.
432. You cannot say when the education of children who have their hearing commences? No; a hearing child is being educated, psychologists say, from 3 months and onwards.
433. Do you think that many parents refrain from sending their children to the institution in the hope that the hearing of the children may be restored by natural development? Yes; I have heard of cases of that kind, but it is a hope that is hardly ever realised. 434.

- S. Watson.
29 Mar., 1898.
434. *Mr. Robinson.*] You have a library for the deaf, dumb, and blind? Yes.
 435. Is it used pretty freely? Yes, it is; very freely. The blind library is used constantly.
 436. And both are fairly well supplied with books? Yes.
 437. And the committee provide you with all the books and magazines that you require? Yes.
 438. There is no stint on the part of the directors of material to carry on the work of the institution? No.
 439. How many times have you visited England? Once since I came to Australia, in 1878.
 440. Then you visited as many institutions as you could? Yes, nearly all the institutions in England. Unfortunately, whilst I was passing through America, it was the holiday time.
 441. You keep yourself posted up in what goes on in other parts of the world in regard to similar institutions? Yes.
 442. *Mr. Powell.*] Do you not think that in America they are in advance of England in regard to the education of the deaf and dumb and the blind? Yes, I think they are in advance in America, though of late very great strides have been made in England too. In America they have for a long time pushed on the education of the deaf and blind with splendid vigour and success. One might point out this fact as a sort of encouragement, that in America they have a college where the brighter pupils can push on and become thoroughly educated and gain the degree of B.A., and so on. In England there is not such a chance; and yet I have sometimes thought it a pity, because where there is an object of that kind in view it is a stimulus to both pupil and teacher to go on and do their best, and equip the children for graduating in the college. However, in a young community like this there is no chance of anything of that sort, nor will there be for years to come. They have a very fine college in America, from which they have turned out a great number of capable deaf and dumb men. There they keep the children at school from 8 to 10 and 12 years, and afterwards send them on to that college.
 443. *President.*] How long have you been in the colony? Twenty-seven and a half years.
 444. *Mr. Robinson.*] Do you think that this institution is as good as the institutions in Great Britain and America;—do you think we are abreast of the times? I hope so. It might seem a little egotistic to say it, but we try to keep abreast of the times, and in touch with all modern methods.
 445. *President.*] Is there anything else that you would like to add,—anything that we have not touched upon? I do not think so. In most things in connection with the education of the children here the committee give me pretty well *carte blanche* as to how to proceed, consequently I feel very glad and grateful on that score.
 446. You equip them up to a certain point, and we want to know how the State could deal with them after? I could wish that we had a church for the deaf and dumb, but this is not a matter for the State. The committee have for a long time rented a schoolroom, where we meet on Sunday evenings, but the adult deaf have a longing for a church. Last Sunday evening we had nearly thirty present. I think it is a most wholesome thing to have an opportunity of meeting on Sunday evenings, otherwise they would forget much of what they learn at school here. At Home they have beautiful churches, and generally in connection with them a secretary's office and a reading-room. This applies to America as well.

Henry Cooke, sworn and examined:—

- H. Cooke.
29 Mar., 1898.
447. *President.*] You are assistant secretary, accountant, and collector? Yes.
 448. What is your salary? £350 a year.
 449. Have you any allowances? No.
 450. How long have you been employed here? Eighteen years.
 451. In that capacity all the time? Yes.
 452. What do you do? I prepare the business for the Board, do the correspondence, keep the accounts. I have here a list of my duties (*See Q. 483*).
 453. Is that list up to date? Yes. I produce also a report upon my work, drawn up by the honorary secretary.
 454. Do you keep accounts? Yes; for all the children.
 455. For each child? Yes. I keep the Spittles' legacy account, and show a balance-sheet.
 456. You keep the account of all the different funds? Yes.
 457. Do you keep a separate account for each child? Yes, where parents are charged the school fees or where the children receive clothing. In some cases they neither pay fees nor are provided with clothing.
 458. Do you keep the store account? Mrs. McLeod keeps that; I check the accounts that come in monthly. Mrs. McLeod gives me the tickets, and I check the accounts with the tickets.
 459. How are your secretarial duties provided for when you are out collecting? I am generally out in the morning, and do the office work in the afternoon.
 460. But when you are in the country? I only go into the country three times a year, and for a fortnight each trip.
 461. Who does the banking? I do the paying in; all the money passes through my hands.
 462. What security do you give? A surety for £200.
 463. How many days in the year are you out collecting? About 300; in the country six or seven weeks in the year.
 464. What districts do you cover in the country? I go south as far as Albury, west as far as Dubbo and Forbes, and north as far as Tenterfield.
 465. And do you find that you cannot cover any further ground? Yes; I cannot do any more.
 466. Do you keep any diary of your movements when you are out? Yes. I submit a report at the end of every trip.
 467. In addition to collecting, you call upon people who have blind children here, and report upon the children? Yes. I also try to ascertain the existence of other afflicted children.
 468. I want to know whether the decrease in the collections as compared with 1891 in your opinion arises from the generally distressed condition of business people? Yes, it does. I may state our subscription list has fallen off by nearly one-half.
 469. Instead of giving £5 they give £2? Yes; and people who used to give a guinea now give 5s.
 470. Do you think it is owing to the less interest being taken in the institution or to the force of circumstances? It is owing to their inability to give so freely as they used to give.
 471. How many hours of office work do you do daily? I am generally here till 6 o'clock at night, and very often take work home or come back here when very busy.
 472. How do you arrive at the cost of maintenance? By dividing the total expenditure by the average number of pupils. Two boys may be in the institution only half a year each, and I call that one year.

473. Do you take into account in that statement the resident officers? No; only the pupils.
474. What arrears of school fees are there either written up or on the books? At the end of December last the amount owing was £1,946 18s. 10d. I estimate that £1,038 3s. 6d. of that is recoverable. In addition to this there is a large amount that we have written off in the past—£920. Besides those that the Government pay for there are eighteen pupils whose parents have not undertaken to pay anything, and there are some who have undertaken to pay and do not pay.
475. Those eighteen are practically paupers? Yes.
476. You contend that you might fairly ask the Government to pay for them? Yes; twenty-eight pupils paid nothing in 1897; ten of those who undertook to pay paid nothing; twenty-eight out of 118 in 1897 paid nothing.
477. Are there any arrears of payment for children from other colonies? No; this morning there was to the amount of £6 9s., but we got a cheque to-day.
478. Has the institution ever suffered loss in connection with children from other colonies? Not to a very large extent, because in the case of children from other colonies if the parents were not able to pay the fees have been paid by the Governments of those colonies.
479. *Mr. Powell.*] If all these children were paid for at the rate which the Government are paying, £36, this institution ought to be self-supporting? It would be. One quarter of our income is from invested funds.
480. Most of these children are the children of poor parents? Yes.
481. I understand that some if not educated here would have to become State children? Yes; and be a continual charge to the State.
482. *Mr. Robinson.*] You get every assistance from the directors and from me in connection with your work? Yes.
483. And it is satisfactory to you and to them? Yes. The following is a list of my duties as Assistant Secretary:—

H. Cooke.
29 Mar., 1898.

1. Collecting and receiving subscriptions, legacies, interest, school fees and rent, and paying same into the bank. This takes up more than half the time at my disposal.
2. Keeping a proper record of all financial affairs of the institution.
3. Conducting the correspondence with the parents and friends of the various pupils, with the different Governments who send children here, and others, and keeping records of same.
4. Keeping account of all clothing supplied and school fees, and furnishing statements to the parents and Governments periodically.
5. Keeping a record of goods supplied to the institution, and of all advertisements ordered. Examining and checking all accounts before submitting them for payment, afterwards drawing cheques, paying same away, and taking receipts.
6. Preparing the business sheets for board meetings, attending the meetings, keeping minutes of all transactions, writing out reports for the newspapers, and carrying out the Board's instructions, sending invitations for all meetings or entertainments, and keeping a record of same.
7. At the end of each financial year, preparing balance-sheets and abstracts for the auditors, the annual report for the Board, and full details of all receipts, &c., during the year for the printer; checking and correcting proofs, and circulating the reports when published.
8. Notifying parents of the annual vacation, arranging children's passages, securing berths, and advising parents when the children will leave, meeting children on arrival, and seeing them off when going away.
9. Preparing statistical information for the Government.
10. Attending to the business of the institution generally.

HENRY COOKE,
Assistant Secretary.

January 17, 1890.

N.B. With reference to the first paragraph, I may state that the amount received for subscriptions and donations on General Fund Account only during the ten years I have been in office is £18,373 9s. 2d., or an average of £1,837 per annum. During the year 1879, when Mr. Luff and Mr. Stevens were both collecting, the amount received was only £1,724 5s. 4d., of which over £900 was swallowed up in salary and expenses.

The following is Mr. Ellis Robinson's Report to the Directors upon my duties:—

Re Mr. COOKE'S DUTY.

In accordance with your request, that I should report on the work of, and the growing necessity (in the near future) for some assistance, I beg to state my reason for drawing the attention of the Board to this subject is the fact that for the last year or more Mr. Cooke has been in the constant habit of working at least three evenings in the week. This is neither proper nor is it likely to conduce to the health of the person who performs such an amount of night-work.

There is a possibility also of work not having full care bestowed upon it.

The work done by the Assistant Secretary is shown by the Memo. herewith; the Board will notice that it entails a large amount of labour.

I have carefully considered the routine of work carried on, and confess I see a difficulty in finding a remedy. There is admittedly more work than one pair of hands can perform, yet not sufficient to fully occupy two. To obtain a clerk or lad to assist would not be of much service, as the directing of him would entail such an amount of oversight that one could almost do the work oneself in the same time.

The training Mr. Cooke has had at my hands for some years has enabled him to get such a grasp of the affairs of the Institution that I have been able to transfer to his hands many matters of detail that I had hitherto done, and so relieved myself of much personal effort.

WEDNESDAY, 30 MARCH, 1898.

[The Commission met at the Institution for the Deaf and Dumb and the Blind, Newtown Road, Sydney, at 9:30 a.m.]

Present:—

GEORGE ALEXANDER WILSON, Esq.; J.P. (PRESIDENT).
JAMES POWELL, Esq., J.P.

Mr. Ellis Robinson, Secretary of the Institution.

The Commission again referring to the subject of the proposed investment of the funds of the institution in mortgages, suggested the desirability of setting aside the additional interest which would accrue from that source to the credit of a fund to meet possible losses on such investments. Mr. Robinson stated that at the next meeting of the Committee the following motion was to be submitted for consideration:—“Having agreed to lend certain moneys on mortgage security, it is resolved that from the interest on same an amount equal to the interest allowed by the Savings Bank be carried to the Income Account and the balance placed to a Reserve Interest Account, with a view to meet, should such occur, any loss of the principal sum so invested.”

E. Robinson.
30 Mar., 1898.

Miss Ada Marie Bateman, teacher of the deaf, was sworn:—

- Miss A. M. Bateman.
30 Mar., 1898.
484. *President.*] You are a teacher of the deaf here? Yes, sir.
485. How long have you been employed here? Nearly eighteen months.
486. You came from England? Yes.
487. Where were you trained? At the Training College for Teachers of the Deaf at Ealing; and after I had finished my course there as a student I passed the examination and received their certificate, and was requested by the principal to stay on as his assistant; and I stayed there for ten years as the assistant teacher at the college.
488. What is your salary? £80.
489. And board and lodging? Yes.
490. Have you an engagement for a term of years? Three years after the first six months.
491. What are your hours of teaching? Half-past 8 to half-past 12, a quarter to 2 to a quarter past 3, and 7 till half-past 8 two days a week.
492. Your teaching is confined to the deaf and dumb? Yes, to the oral deaf.
493. You teach the oral system entirely? Yes.
494. Do you find the pupils apt to learn the system? Yes; many of them are very quick at it.
495. Is that system extending in Europe? Yes, all the German schools teach it entirely; they have no other; and the French schools, which have held out the longest against it, are now coming round very much to it.
496. It was originated in Germany? Yes; at least it was systematised in Germany.
497. Is it found that the children use the system amongst themselves? Yes; but here, being mixed up with the signs deaf school, they use the signs a good deal. Our own children at home where there are no signs always speak to each other.
498. Have you both systems of teaching here? Yes, there are two school-rooms here. In the school they are entirely separate, but they play together and have meals together, and so on.
499. And you find they do not use the oral system very much outside? They do, but they use signs a good deal more, and the great difficulty is that other people use signs to deaf children, instead of speaking to them, and that is worse than the children using the signs themselves.
500. Generally speaking, do you know whether the children use the oral system in talking to their people when they go back to their homes? Yes; they do use it, and they come back to us having learnt new words at home.
501. Have you had experience of that, too? In one or two cases.
502. It would depend upon the class of home? Yes; a good deal.
Mr. Robinson.] They would take more trouble in a better educated home.
503. *President.*] Are you satisfied with the position here? Yes, quite.
504. Have you every support from the Committee of Management? Yes.
505. You have the usual vacations, I suppose, Midsummer and Easter? Yes, we have a few days at Easter. The difficulty is that the children do not all go home, for it is a very long spell from June till Christmas.
506. *Mr. Powell.*] You advocate the purely oral system? Entirely.
507. Would you prefer to have the children untaught the manual system when you get them? Yes.
508. As it is, I suppose they acquire the manual system, in spite of whatever you can do? Oh, yes; you cannot stop it.
509. And I suppose you find between themselves they use it? Yes, they do.
510. Do you think that the deaf can communicate with you with the same ease that you can communicate with them—their knowing nothing of sound and you knowing sound? Yes, they can. When they have had so many years' education I should say yes, they can, without doubt.
511. Would that be only in connection with the school teaching;—do you think that they could understand what any person, not a teacher like yourself, desired to convey, in the ordinary business of life? Yes.
512. You think they could? Yes.
513. Well, I know nothing about it, but I will ask you this: When it comes to words, can they understand the individual words? Yes.
514. Take such words as “when” and “which,” “what,” “white,” and “want”: Can they understand them unless in connection with what follows? Can they understand them?
515. Except in connection with what follows. You see in these words I have quoted, “when,” “which,” “what,” “white,” and “want,” it appears to me that the lips do not disclose them? They do to the children.
516. That is as between teacher and taught. I am trying to put that to you as an outsider. When I am talking to these children will I so shape the expression of my lips as to convey to them my meaning? Yes, you would.
517. You think that outside and away from the school-room they would be as able to read from the lips of any person as from your own? Yes.
518. I noticed you yesterday in teaching put the book before your pupils, and they shaped the lip to suit the book,—that is to say, the lip-teaching conveyed the meaning and sound of the particular word, and they identified that movement of the lip with the word in the book? Of course that was a reading lesson that you saw yesterday, the same as a hearing child would have, reading from a book.
519. But you connect the movement of the lip with the particular word in the book? Yes.
520. Now, at what age do you think you should commence with the oral system to make it of great advantage to the pupil? Not under 6; 6 is a very good age to begin.
521. You would have very much to unlearn in the way of signs by that time? They would be little natural gestures; they would not be artificial signs, and the little child getting the word would drop the sign and use the word instead. I would never try to make them unlearn these natural gestures, and if they made them to me I would understand them, but would not make them back to the child, because they can learn to lip-read what you say without being able to say the word themselves. There is a little girl in the school now who has been there about two months, and for some time her teacher said to her when she came to her lesson “Chalk,” and she looked at him, and she went off to fetch the chalk.
522. Are you an advocate of the pure oral method? Yes, sir.
523. That is as it is taught at Ealing? Yes.

524. *President.*] Is the institution at Ealing an institution somewhat similar to this? No; it is founded for training teachers. Miss A. M. Bateman.
525. It is a training school, then? Yes; and there are only a few pupils as a practice for those being trained. 30 Mar., 1898.
526. Have you any knowledge of the institutions in England for the deaf and dumb apart from that? I have never been to one of them. I have heard of them a good deal from teachers who have been there.
527. But the Ealing institution is really a training school? Yes. I have been to institutions in Germany and seen theirs.
528. Of a similar character to this? Yes.
529. And how would the methods compare here with those in Germany? Of course, in all the schools in Germany the methods of teaching are purely oral.
530. Is it under Government inspection in Germany? No; they have done away with that inspection. They said that the teaching of the deaf was hardly suitable for inspection—it could not be inspected as hearing schools could be—but the inspectors go every now and then, whenever they like, to see that everything is going on right, and that the children are making progress.
531. *Mr. Robinson.*] There are manual institutions in Germany;—are there? Everybody in the towns we went to expected the children to speak, and spoke to them.
532. *Mr. Powell.*] Do you know of any school in England where the oral method only is followed? Yes; there is a large school in London, Van Praag's. It is a private day-school. They have about fifty children. They have gone under Government inspection now—not under the London School Board.
533. Do you not think that the manual system is likely to be the more useful in communication between the deaf and dumb and people generally in the world, because the methods of verbal expression differ so much with different people according to their culture. Say I have to convey an idea to a deaf mute, well, I might so convey it that he would understand it, but the chances are that he might meet with a number of persons who might not shape their words in such a way as to convey the same meaning that I would wish to convey? I think the child would understand it.
534. No matter how the words were uttered? He would get the main idea of the sentence, and, of course, that is what they do in the end. They do not lip-read every word that is said; they get the idea—the sense.
535. And then put it together? Yes.
536. But for general communication it seems to me that the manual system will outlive the oral; of course, that is only a matter of opinion without any experience;—that is not your opinion, I take it? No; it is not my opinion. You take a little child and want to teach that child French, and give it a French lesson every day; and then the child goes away from you, and nobody says a French word to it at all. The child will naturally forget.
537. I suppose every child in your class can also use the manual system? Yes; they can.
538. And they do? Yes.
539. So that really it is a combined system here? Hardly, because it is not used in school.
540. But they use it among themselves; they all acquire it;—they can all talk with the fingers? Yes; every one of them. They must acquire it. They play with the other children and are friends with them, and they must be able to communicate. So long as they mix with the other children it would be unkind to stop it. They separated them at Margate. They took another house until all those who had been taught signs had left.
541. Margate School was originally the Old Kent Road School? Yes, it was.
542. And the manual system only was taught there? Yes; and they still have that institution there now.
543. They teach both systems at Margate? Well, then, they separate them entirely, because I know they took a house at Ramsgate, and when they had only a few oral children they put them in the Ramsgate Home.
544. *Mr. Robinson.*] There are some children who could not learn the oral system? I have never seen any yet.
545. You think they can all be taught? Yes.
546. Our practice is to try them all in your school first? Yes.
547. And if they fail to make a satisfactory advance they are transferred to the manual school? What we find here is that some of them come too old, and they will only stay perhaps a couple of years; and it is not right to the child to spend those two years simply getting articulation, which, of course, is not language.
548. *Mr. Powell.*] In the oral system you prefer to have the child for seven years? Yes. A deaf child at 6 coming to school does not know half as much as a hearing child would know.
549. *Mr. Robinson.*] What character does the college at Ealing bear among institutions of that kind;—does it stand second, or third, or last as a training college? As a training college it comes first.
550. It is supposed to be the best training college in Great Britain for the purpose? Yes.
551. *Mr. Powell.*] I suppose it is the only college for training? No; there is another—Mr. Van Praag's. There is an examining body of teachers. They do not train. They tell the teachers what books to read up, and they examine them afterwards.
552. You get all you want in the way of books and papers and apparatus from the Board, at all times, here? Yes.
553. You are fully equipped? Yes.
554. You keep yourself posted up in the latest methods? Yes.

Miss Georgina Watt, teacher of the blind, was sworn:—

555. *President.*] You are a teacher of the blind? Yes. Miss Georgina Watt.
556. How long have you been here? I have been here fourteen years. I said twelve or thirteen the other day, but I was not very sure. 30 Mar., 1898.
557. What qualification have you as a teacher;—are you a trained teacher? No, sir, I am not. *Mr. Robinson:* She was trained here under Mr. Watson, the superintendent.
558. *President.*] Had you any experience of teaching the blind before you came here? None whatever.
559. What is your salary? £100.
560. And board and lodging? Yes. 561.

Miss Georgina Watt. 561. Is your duty entirely confined to teaching the blind? Yes.

Mr. Robinson: Except that Miss Watt, like other teachers, takes a turn on duty on Saturday afternoons and Sundays—every fifth Saturday and every fourth Sunday.

30 Mar., 1898. 562. Is your school fairly well equipped with all necessaries? Yes; I think I have everything that is new at all, and, of course, I teach the children when they come here. I learn the new machines and teach the children afterwards.

563. And the Committee have subscribed to some periodicals which you get the use of in the school? Yes, the recreations.

564. Where we can find a publication printed in other parts of the world for the blind or deaf and dumb, we subscribe and get them for the school, and the teachers get the benefit of it;—do the children get the books? Oh, they use all the books, and I get other books besides.

565. *President*.] What class of literature do you read to the children? Biographies and the best novels—all the latest books.

Mr. Robinson: They have Shakespeares, and the "History of the Queen" is coming out for them now. Whatever new histories are out (Thompson's and Ransome's) I always get myself. Just now I am preparing three or four of them for the Junior University Examination in June.

566. Do you teach the Braille? Yes.

567. Do they all learn Braille? Yes, and the last two children I have in have only been in three months, but one little girl writes all her Braille letters now, and she is only 8, and the other is not quite so forward.

568. The Braille is superseding the Moon? Yes. They used to learn Moon's system when first I came here a great deal, but I find none of the other institutions are using Moon's now, so I do not bother so much with it. They all know Moon's alphabet, but do not read it.

569. *Mr. Powell*.] Do you teach the blind children the manual alphabet for the deaf and dumb? No; but they know it all.

570. That is their only medium of communication with the deaf and dumb? Yes.

571. So that is an advantage where the blind and the deaf are together? Yes, because they always tell one another everything.

572. Then, of course, the oral system would be no good in that case? No; but I used to have some blind girls who could talk nicely to one of the oral children. A little deaf girl named * * * could talk very nicely to them.

573. How could they see the movements of the lips? They could hear her.

574. But with each of the pupils we heard yesterday the sounds seemed to be different? This girl I am speaking of spoke remarkably well. I do not know about being able to speak to any of the others, but this one girl they could always understand.

575. So that really the best mode of communication between the blind and the deaf is by the manual alphabet? Yes; they can talk very well on their fingers, and they can talk to themselves, holding one another's hands.

576. *Mr. Robinson*.] And when the children leave the institution we furnish them with two or three copies of the type? Yes, and they get a frame.

577. *President*.] Do you like the work? Yes, very much indeed.

The Commission then proceeded to the schoolrooms and interrogated the undermentioned pupils:—

Tillie Holland said she had been eight years in the institution, was quite happy in it and was kindly treated; she caught cold in her eyes which brought on blight, and eventually blindness; the doctors say they do not think she will get her sight again; she can tell if there is anything in front of her, but cannot distinguish objects nor persons; she likes her lessons; is learning spelling, reading, writing, geography, history and music, and plays the piano; does not know how much longer she is to stay at the institution, nor what she will do when she leaves; she goes home every month.

Teresa Rogers said she had been in the institution five years; is quite blind; can see persons before her, but cannot tell who they are; is quite comfortable; does not know how she lost her sight; lost it when she was 3 months old; has plenty to eat and is kindly treated; parents live in Newcastle; learns music and sings; expects to stay at institution for a couple of years more; does not know what she will do when she leaves.

Maggie Moffatt said her home was at Mosman's; she had been in the institution ten years; does not expect to stay after next year; does not know whether she is going to learn any business; thinks her friends would like her to be a teacher of the blind; would learn at the institution as a pupil-teacher; learns music; is very happy at the institution; has no complaint to make at all; is kindly treated; the deaf and dumb children do not treat the elder blind children unkindly, but she does not know about the little ones; reads and writes the Braille; is learning spelling, geography, history, physical geography, and physiology; likes the school very much.

Arthur Webster, a deaf mute, was questioned through *Mr. Watson*, the Superintendent, and said he was 16 years of age; he has been in the institution eight years; has another brother who is also deaf; is learning history, geography, arithmetic, algebra, language lessons and object lessons, his father has told him that when he leaves the institution he will be a gardener; is comfortable and happy; would not like to leave.

Webster then made signs indicating a sower, a blacksmith, a tailor, a carpenter, a dentist, a doctor, lying down, writing, eating, sleeping, and "I will go home to-morrow"; he said he got quite enough food to eat.

Esther Scott, another deaf mute, was also questioned through the Superintendent by the manual system; she said she was 14 years of age, and had been in the school seven years; she has one sister, who is also deaf and dumb; is comfortable and happy; learns geography, English history, Bible history, arithmetic, physical geography, and object lessons; likes English history best.

[The Commission adjourned at 11 a.m.]

FRIDAY, 1 APRIL, 1898.

[The Commission met at the Sydney Industrial Blind Institution at 9:30 a.m.]

Present:—

GEORGE ALEXANDER WILSON, Esq., J.P. (PRESIDENT).
JAMES POWELL, Esq., J.P.

Henry James Hedger sworn, and examined:—

578. *President.*] You are manager of this institution? Yes.
579. How long have you been manager? About five years.
580. Were you in the service of the institution before? Yes.
581. In what capacity? As head teacher.
582. What did you teach? I taught the whole of the work that is getting done here at the present time with the exception of brush-making.
583. Where did you get your own training? I had no previous training at all before coming here.
584. You picked it up? Of course, I had a practical idea of some of the trades that were getting taught, and the Comptroller-General of Prisons gave us permission to visit Darlinghurst Gaol to find out anything we wanted to know in reference to mat-making or anything of that kind.
585. How long were you a teacher? A little over twelve years.
586. Was that from the founding of the institution? Yes, right from its foundation.
587. When was it founded? In 1879.
588. Who was the founder? Mr. John Woods was the founder. He left £5,000 to put up a building for this specific object. Mr. Woods, who had a blind mother, saw that there was nothing done for the adult blind in the way of teaching them to earn a living, and he consulted several prominent men in Sydney, amongst whom were the late Sir Alfred Stephen, Mr. John Dawson, and Mr. Benjamin Palmer, with the result that when he made his will he left £5,000, and appointed those three gentlemen executors of the will. He expressed his desire that something should be done for the indigent adult blind; he saw that the Newtown institution was accomplishing everything desirable in the way of teaching young children, but that after they were discharged from Newtown, when the battle of life began, there was no provision for them at all; that they either had to beg in the streets or go into the poor-house. He expressly stipulated in his will that unless the building was started within twelve months the legacy should lapse.
589. Then the object of the institution is not primarily the education of the blind, but it is to give them industrial training? No; we have nothing to do with educating the blind further than this: That if a blind man comes and wants to be taught the embossed type we should be happy to teach him.
590. The theory is that the Newtown-road institution provides for their education, and this institution does something for them where the Newtown-road institution leaves off? Yes; up to the present all the inmates that have left there that were eligible have been drafted in here. There have been some boys and girls who left Newtown and went to their friends, their friends being able to keep them; but those who were entirely destitute have been drafted in here, and have been here ever since. I suppose that half of our inmates have been educated at Newtown.
591. Is the institution governed by a committee of gentlemen and a committee of ladies? Yes.
592. Is the committee elected by the subscribers? Yes, at every annual meeting.
593. How is the Ladies' Committee elected? By themselves. In the first place, the members of the Ladies' Committee were elected by the committee of the institution; but when any vacancy has occurred since, the ladies have nominated a person to fill it.
594. What does the Ladies' Committee do? The particular function of the Ladies' Committee is to meet here once a month, and look round the institution, seeing to the cleanliness of it and to the domestic arrangements. They take over the women entirely. They consider all the applications of the women for increase of wages. Any matters that crop up in regard to the women they deal with, and then forward a copy of the report to the General Committee for adoption.
595. Have you a statement showing the number of committee meetings held, and the attendance of members? Yes. The average attendance per meeting is, I think, six.
596. Have you any life members? Yes, we have several.
597. What is the qualification of a life member? He must be a subscriber of £10 and upwards.
598. Are the life members on the same footing as the ordinary subscribers, as far as voting is concerned? They have two more votes than the ordinary subscriber of 1 guinea.
599. Have you a copy of the rules and by-laws? Yes.
600. Have you a list of the paid staff? Yes.
601. You have three instructors? Yes; a brush instructor, basket instructor, and mat instructor.
602. You have three sighted instructors? Yes.
603. Would it not be possible after a time to do with a less number? I do not think so. They have to be practical men. If a man is not thoroughly practical in every branch of his trade, it is impossible for him to teach blind men successfully. You can get a man who is only half a tradesman a little cheaper than a practical man, but you would lose in the long run by having bad workmen about.
604. You have a brush instructor, a basket instructor, and a mat instructor—suppose that the brush instructor is a thoroughly competent man, would he not be able to pick up enough of the other businesses to be able to teach them? I do not think so. Not only that, these three instructors are fully employed. They have not only to teach, but also to do a fair amount of work; besides, there is always a certain amount of the work which the blind cannot do themselves.
605. What is the number of workers? Forty-three at present.
606. How is the average weekly wage calculated? It is a complicated matter to make up the costs of blind workers' piece-work. You might make it up for one twelve months, and the following twelve months it might come out quite differently. Therefore, we take six months' earnings credited in the wages book. That is to say, piece-workers' earnings—it shows what they actually get. Then the learners are credited with their earnings. They are credited with the full amount of wages earned just the same as the piece-workers are for their work. If a man comes in to-day and starts learning, and makes two clothes-baskets, we credit him with 1s. 3d., but probably we should not get 9d. per basket. In making up the learners wages we have not allowed for unsaleable work or waste of material.

H. J. Hedger.
1 April, 1898.

- H. J. Hedger. 607. Is it your idea that a man should receive not less than 15s. a week from all sources? Yes; and the women 12s. 6d. a week.
- 1 April, 1898. 608. If their earnings are very small you will supplement them to a certain extent, and in some cases the State supplements their earnings? Yes. If a man is in his fourth year he gets 5s. bonus per week. If a basket-maker is in his fourth year he starts on piece-work and gets 5s. per week on the top of his earnings, and in the fifth year 2s. 6d. bonus; after that they are put on piece-work. In the sixth year they are supposed to be competent to earn their own living, and they go on piece-work.
609. It appears that the women do not earn so much as the men? Not nearly so much. I think it is the case in every walk in life, and these women are under the disadvantage of having been taught in the Strathfield institution. I always say that where a man and woman are brought up in an asylum to learn a trade they have no incentive to work, because it makes no difference to them whether they earn 5s. or 10s. They get into a slipshod way of working, with no ambition, and when you try to get them to work harder they cannot realise that they have to do it. Quite possibly they think they are earning more than they are getting.
610. *Mr. Powell.*] Are these people brush-makers or brush-makers' assistants? Brush-makers. Assistants would be the finishers. They make the brush by putting the hair into the holes. The finishing is a trade by itself. The brush-maker is the person who puts the hair into the holes. The finisher is the person who puts it into shape.
611. *President.*] You have no resident workers at all? No.
612. What supervision is exercised over these girls? There is no actual supervision over them after they leave here any more than that we know where they live, and the kind of people they are living with.
613. Do the Ladies' Committee take any interest in that matter? Yes. They always know where the women live; but I think it is very likely that the Ladies' Committee will take the matter up in a more practical way by visiting the girls at their own homes.
614. Do they visit them now? Not to my knowledge.
615. The supervision is simply that the institution takes the trouble to ascertain where these people are quartered? Yes; in most cases we find places for them to reside in.
616. The homes are not visited occasionally to see how they are going on? No.
617. Then, when a person comes in here not knowing anything of industrial blind work, what arrangement do you make? He enters as a learner for three months on probation.
618. Do they get anything during that time? In some cases, according to our rules, when entirely destitute, they do. As a rule they get nothing for the first few months. In former years, when the committee used to pay as much as 15s. a week to a person from the time of admission, the committee found that we were getting a lot of people into the institution who could not be taught—people who were only fit for a benevolent asylum.
619. Now you take them on probation for three months? Yes; and if we find at the end of three months that they can be taught, a report is sent to the committee to that effect; then they are admitted and paid 10s. per week.
620. That is from the institution? Yes.
621. In some cases that amount would have to be supplemented from other sources? Yes. We have an application form on which it has to be stated in what position the applicant is or his relations.
622. You give them 10s. a week; but who makes up the balance, because they must live? Their friends in some cases; in other cases the Government.
623. How do they live during the three months' probation? If they come out of a Government asylum the Government pays for them for three months.
624. And if not their friends keep them? Yes.
625. In special cases you make some allowance? Yes. If the person is entirely destitute, the committee make an allowance of 10s. or 14s. per week.
626. After the three months, if you are satisfied that they are of some use, you would give them 10s. a week, and what is necessary beyond that is found by their friends or by the Government? Yes; the Government 5s. for nine months, and after they get 15s. from the institution. When a man is admitted, after serving his probation, we give 10s. and the Government 5s.
627. *Mr. Powell.*] When a man comes in for the first time who pays? The Government, if he comes out of a Government asylum, or his friends.
628. If he does not come out of a Government asylum, what then? Then his friends pay for him.
629. Then when he gets up to the period you mention he receives a wage of 10s. a week? Yes.
630. *President.*] Do you find that this work tends to make them happy and more comfortable? Yes; I think that a blind man when working is far happier and more comfortable than he would be loafing about doing nothing; in fact, we have had men from the Government asylums who have been distracted—more insane than sane—but when they got to work they seemed to make up their minds to do what others were doing.
631. You find that blind people who are idle have a tendency to become morbid, I suppose? Yes; they become very shrewd, and their lives are embittered if they are not at work. We have had people who said that they could hardly bear them at home in their houses.
632. What do you find that blind people, who have not been brought up as tradesmen, can be taught? Some of the trades you can teach are so much more simple than others. There are some intricate trades which you could not teach a man who is over 30 years of age. It would be of no use putting a man to basket-making after he was 30, unless he was very clever; but you can teach them bed-making or mat-making. But the difficulty is with regard to the outlet—getting rid of the work. Competition is so keen outside; what with German production and the products of prison labour from America, they can undersell us to such an extent. I have no doubt that a trade could be opened up for the blind if the times were better. If times were better we should be able to open up other trades in addition to those that are now taught here.
633. Assuming that the Newtown-road institution attends to the education of the young blind, is this institution prepared to take up their industrial training? We always have been prepared to do that. We have never refused anyone admission here yet, if we had room.
634. Are you in a position to take over all the industrial training of the blind, so that, instead of having dual industrial blind institutions, we should have only one? Yes, I am quite sure we are.

635. Scattered all over the country, there are about 750 blind, many of them, of course, too old, and many too young for work, and many of an age suitable for work, have you considered the question of the employment of those people? Yes, I have given a lot of thought to the question of teaching the blind, both at their own homes and in the institution. I have read reports of different institutions from various parts of the world, and I have come to the conclusion that you would divide the indigent blind into three classes. The first class would consist of infants up to 15 years of age, who would be provided for in the Newtown institution. Then you would have to take those from 15 up to 40 or 45 years of age, or even up to 50, and you would find that those between 15 and 50 years of age would comprise the greater number of blind in the Colony.

H. J. Hedger.
1 April, 1898.

636. In 1891 there were fifty-three blind persons in the Colony up to 15 years of age; from 15 to 50, 228; 50 years and over, 460? I believe that the average would be altered if the numbers were taken now. I believe there are far more young blind in the Colony now than there were then. I think that there must be in Sydney at present over 100 blind persons between 14 and 16 years of age.

637. *Mr. Powell.*] Do you think that blindness is on the increase? I do.

638. That is not the experience in other places? It certainly seems on the increase in Sydney, judging by what you see in the streets.

639. *President.*] It would be very easy for the police to run them off the street, but that would not get rid of the blind? No; but it would make it easier for the institutions to deal with them. At present a man can make himself objectionable and get put out of the institution; there are dozens about who have been here and who are begging about the streets—men who have given up a fair wage and gone begging.

640. You divide them into three classes? Yes; the other class would be those from 50 up to any other age. They are not provided for in any way, and I do not see how they can be as far as any industry is concerned. You would not find one that you could teach.

641. As far as industrial occupation is concerned you would leave them out of consideration? Certainly.

642. Those whom you have to deal with are from 16 up to 50 years of age? Our present rule says 40 years of age, but the committee relaxed that rule several times.

643. How do you propose to deal with that class from 16 up to 45 years of age who are scattered all over the country? I do not know what we could do more than this: If a man is in any part of the country, no matter how far away, if he wants to be taught a trade he can come to Sydney and be taught.

644. Suppose there were local agencies in the country to discover and assist these people, could you, if they were sent here, arrange to train them in industrial pursuits? Yes, most of our men now are from the country.

645. Then do you think there would be a living for those people if they went back to their own districts after having been taught? That is a difficult question to answer. At present, the Colony being so young, there is not a living to be earned by many blind men outside of the institution. If you turn out men to start in the country for themselves in nine cases out of ten they would fail and come back to the institution. Except under special circumstances I do not think it possible for blind men to make a success of trying to do for themselves outside the institution.

646. Why? Suppose a man is married and has become a successful worker, if that man has a good wife and some children possibly he could be located in an up-country town, and he could earn a good living, because he would have his wife and children to help him; but a single man, with no means and no friends, would generally prove a failure. What I am saying applies not only to this Colony but to every part of the world. I have read the reports of every institution in the world bearing on industrial work. I have read of the scheme being tried, but only in one place, and that was Dresden, have they made a success. There they have very large funds and they are able to assist the blind after they have left the training institution. There are men who have been trained here and who have left the Colony and are earning a good living through what they have been taught here, but those are exceptional cases. There is a man in Northern Queensland whom we taught basket-making; he has relations there. He left this institution; we supplied him with material and gave him all the advice that we could; and so late as last month we had a Judge here from Northern Queensland who made a minute in the visitors' book stating that he knew this man and that he was pleased to know that he was earning a good living; but that is a case where a man has friends to help him to dispose of his work.

647. Assuming that a man is sent to a place where there is a considerable population, and there is an active local committee to assist and advise him, do you still think that he would be a failure? That would be an exceptional case in a large town. There are not many towns in the country where you could locate a man under favourable circumstances. A man with friends to stick to him might earn a living, but a man with no friends and no money would find a difficulty in earning a living; not only that, the blind seem to lose all self-reliance when they leave the institution. They have not a teacher to refer to, and when they become isolated in the country, without anybody to depend on, they go back in their work to such an extent that they make it unsaleable. There are cases, however, where men trained here are earning a fair living; there are no less than seven cases at the present time. One man left last month, and settled at Picton.

648. How would you deal with young people who desire to learn a trade;—would you advise that they be brought to Sydney, or would you advocate home-teaching? I should not advocate home-teaching; that is thoroughly impracticable. It is not possible to teach the blind man in his own home. Anyone who states that it is only states what he knows to be untrue. It is impossible to train a blind man in his own home. They have to be four or five years in an institution, with all the necessary appliances. To visit a man in his own home, and spend a few hours a week with him, and expect him to learn sufficient to earn his own living is hopeless. We give a man five years to learn basket-making at the institution, with practical teaching, and all necessary appliances.

649. *Mr. Powell.*] You divide the blind into three classes? Yes.

650. The first class consists of children up to 15, who would be provided for at Newtown? Yes.

651. The second class comprises persons from 15 up to 50 years of age, who would come here if they required assistance? From 15 to 40, according to our rules.

652. All over that age you think should be provided for, if necessary, in the asylums? Yes; I think a home ought to be provided for them by the State.

653. Are you overwhelmed with applications now? No; we have only three or four.

654. Are they from the country or from the town? There is one from Wallsend.

- H. J. Hedger. 655. May we not assume that those in the country are provided for by their own friends? No doubt the majority of them are. A blind man who wishes to come and learn a trade has only to apply through a Member of Parliament for a free pass and he will have no difficulty in coming here.
- 1 April, 1898. 656. You have only three or four applicants at present? Yes. We have had to refuse them on account of not having space. As regards the question of bringing blind men from the country to Sydney. We have had men who applied to the Government and said that their friends were not able to keep them. They came to the institution, were paid for for three months, and then returned home. We had to call the attention of the Director of Public Charities to that last month, and to point out that it was very desirable to find out whether the individuals wanted to be taught or simply wished to come to Sydney for a holiday.
657. *President.*] Is your committee opposed to the principle of resident workers? I could not say that they are actually opposed to it. They work the institution on what they consider a more humane principle, allowing a man to live outside with sighted people.
658. You are making additions to this building? Yes.
659. What are they intended for? For workshops. There will be a basement for storage, three large workrooms, and a men's dining-room, so that the present dining-room will be for women only.
660. Is it necessary to have two dining-rooms in a small institution like this? I think it is desirable to have one for the men and one for the women. We expect the number of inmates to increase very materially when the new building is completed. It is quite possible that we may have sixty inmates.
661. Have you any difficulty in selling your products? We have no difficulty whatever. We have sold all that we have made at present. The sales last year amounted to £3,017. In 1892 the sales amounted to £1,200, and the subscriptions have fallen off about 40 per cent. in the same time.
662. The subscriptions have fallen off and the sales are increasing? Yes.
663. You work in harmony with the Newtown-road institution, I understand? Yes; we have never had any trouble with them up to the present time.
664. Does your collector work with theirs;—do they arrange what ground they will cover? I do not think it is done officially, but I believe the collectors do make arrangements between themselves, and they have tried to keep clear of one another. If one was going up the Western Line the other would go up the Northern Line.
665. Have you had many pupils from the Newtown-road institution here? About twenty-five, to the best of my knowledge.
666. Do you receive a grant in aid with each of them? I think that with most of them we receive £10.
667. In this summary of your operations from 1881 to 1897 there is "trust money from deaf and dumb, £20 received," and on the expenditure side, £6? Yes.
668. Are all the operations included here? Yes; but it may be possible that in paying a man 15s. a week, as they did at one time when he came into the institution, that most of the money was not given in trust, but handed to them.
669. Some of the money handed over is not stated in this document? No, I do not think it is. In some cases they got an allowance of 5s. a week until the £10 was exhausted.
670. As regards the pupils that you received from the Newtown institution, do you find that they are specially good or specially bad, or well educated, well equipped, and intelligent? I think that I can say that we have not had a bad boy from the Newtown institution; they turn out well; they are far more tractable than other people that we get here, and they are cleaner and better educated than the general run.
671. They have had advantages which most blind people have not got? No doubt about that; I think they are better in every way than ordinary blind people.
672. What is your salary? £140 a year, and there was £120 last year for commission.
673. Five per cent. on the goods sold? Yes; but I do not sell them all.
674. And you have quarters allowed? Yes.
675. What is the valuation of the quarters? They have not been valued yet. My quarters have been very bad up to the present time.
676. What do you value them at? I suppose at £50 a year.
677. What are your duties generally? Simply the supervision of the employees of the establishment; selling, as we have no salesman; looking after the staff, buying material, attending the committee meetings, and all the clerical work.
678. Do you act as secretary as well? Yes.
679. Do you attend the committee meetings and prepare the business for the committee? Yes.
680. Is it part of your duty to purchase material? Yes.
681. How far do the committee deal with purchases? We have to obtain a requisition for everything; we have a requisition book. Everything is imported; large quantities of brush material are imported.
682. By what firms? John Keep, Henry Markwald, in Pitt-street; Warren & Holdship, J. T. Burnip, and Potts & Paul. We buy absolutely nothing in the colonies if we can possibly import it cheaper.
683. Is there any expert to deal with these things? Yes; Mr. John Keep, who seems to be an expert with regard to brushware.
684. On what terms does he do your business? Mr. Keep gets nothing at all.
685. No commission? No. Mr. Keep attended ten meetings last year.
686. You say that you buy as little as possible locally? Yes; if we did we should have to go to the local brushmakers, and they are rather antagonistic to this institution. Consequently, if we are to purchase material from them, we shall have to pay 20 per cent. more than we ought to pay, and we should be practically shut out of the market for our goods through having to pay so much for material. We tried one firm here, but we found that they were charging us an exorbitant price, and we had to cease to deal with them.
687. Have you had any special subsidies at any time? No. I think the only amount that we have had was a grant of £500, some years back, from the Government.
688. What was that for? We had a large overdraft.
689. What was the subsidy for last year? £700 odd.
690. On what basis? £ for £.
691. Is there any maximum? No.
692. It says here, "Government subsidy, £900, and general subscriptions, £612," which is more than £ for £? Perhaps there was some legacies; perhaps three of £100 each. The Government send a special auditor to audit the books before any subsidy is paid.

693. In addition to general subscriptions, they take in special donations? We get £100 on them, and £^{H. J. Hedger.} for £ on ordinary subscriptions.
694. If anyone left £5,000 to the institution, would you claim from the Government a subsidy of £5,000? ^{1 April, 1898.} No; they do not give you anything over £100.
695. What condition does the Department impose as regards expenditure? No conditions at all, as far as I know.
696. Who appoints your auditors? The committee appoints the auditors.
697. Is that according to the by-laws of the institution? No; there is nothing in the by-laws referring to auditors.
698. Or in the rules? No; Mr. J. C. Taylor audited the books for some years gratuitously, but now he charges.
699. The manufacturing account for 1896 shows a loss of £281 17s. 5d. There are "materials purchased," "commission on sales of goods, &c.," "freight and van hire"; should not some of the following items be charged to the manufacturing account? There are travelling expenses, general expenses, cleaning the institution, gas, wood and coal, printing, stationery, advertising, insurance on building and stock,—is not that a charge which should go to the manufacturing account? Yes; it is purely a manufacturing institution. I think that the whole of those items could be charged against the manufacturing account, but it does not make any material difference.
700. I do not say that it is an important thing, but the manufacturing account should be properly stated; if a man were manufacturing on his own account would he not charge these items against that account? Yes; but we cannot put the Blind Institution on the same footing.
701. Is it not best that it should be stated with absolute correctness, instead of showing that the loss is £10, and perhaps it is hundreds of pounds? Yes, I believe you are correct in saying that; but every year the committee have been adding charges against the manufacturing department until it has brought it very low. No doubt as we progress, and get more workers, the charges will be less against it.
702. The progressing has no material bearing on the fact,—it does not make it more correct? It is a matter of book-keeping, I suppose; the auditor has called attention to that very point. You could legitimately charge the whole of these items.
703. No doubt about it; if it does make it come out hundreds of pounds to the bad it is all the better; why not face the facts? Would not any business man charge these items to the manufacturing account? Certainly.
704. Who values the stock? It is always valued by the teachers and myself every year.
705. You have no outside valuation? No; it is simply audited by the auditors.
706. The valuation is made by the officers of the institution,—not by an outsider? Only by the officers of the institution.
707. Has a valuation ever been made by an outsider? No.
708. Has it ever been discussed or suggested that the valuation should be made by an outsider? Not to my knowledge. Of course if the auditor took exception to any item he could have it altered.
709. We think that you ought to have an independent valuation of the stock? I suppose the committee would have no objection to that.
710. The endowment fund amounts to £3,320 10s. 10d. That has been made up from [bequests chiefly, I suppose? Yes; legacies and bequests.
711. You appear to have drawn £200 out of that fund during the year? Yes; that is not from the permanent endowment fund. That is in one Bank, and we have another fund which is not permanent, but which can be used. It amounts to something like £400. There is £500 which is beyond our control.
712. The funds seem to be invested in the Savings Bank of New South Wales, in the Government Savings Bank, and the Bank of New South Wales? Yes.
713. What is the area of the land which the institution occupies? It is shown on the sketch [*produced*].
714. The land was given by the Government? Yes.
715. How is the land vested? It is vested in trustees.
716. Who are the trustees? Mr. John Dawson, Mr. R. L. Tooth, and Mr. A. Tooth.
717. What has the building cost, excluding the present additions? £9,500, approximately.
718. What is the estimate for the new additions? £2,500.
719. That will make the cost of the buildings about £12,000? Yes.
720. Is the building in every way suitable for its purpose? It was not suitable some time ago, but when we get the additions up it will be very suitable, but not so suitable as it might have been. If the committee had anticipated from the inception of the institution what would be wanted, no doubt it would have been built on a different principle.
721. The idea is to have workshops and sale-rooms? Yes; but the original idea was simply to have a residential institution.
722. Is the site considered by the committee to be entirely a suitable one for a business of this kind? Yes; I think it is an excellent site, and the committee think the same. Some years ago I believe it was thought by the committee that if we had a shop in some part of the town we should do much better. Then shortly after that it was decided to make the front shop which we have now. After that shop was opened the business increased over 100 per cent. The cash takings through the sale-room amounts to about £60 a month now, whereas formerly they only amounted to £15 a month. The business was increased materially through the opening of the front shop.*
723. Has the committee ever discussed the advisability of removing from this site? I do not think so.
724. Is there any legal obstacle to their moving, I mean as regards any bequest? I do not know, unless the trustees would object. The trustees of the will of Mr. Wood are permanent trustees.
725. Have you given any consideration to the extension of the industries that you are teaching here? Yes, the committee have talked about it at different times, and I think it is probable that within another twelve months we may start some other trades. It is only a question of first cost.
726. *Mr. Powell.*] What other trades do you contemplate? Wire-working for example; and on one occasion when Mr. Sinclair visited England he was very much struck by the wire-work done in the Glasgow institution, and he reported to the committee upon it. 727.

* NOTE (*on revision*):—I would not favour the idea of the institution having a shop to dispose of goods in the city, as the sales, in my opinion, would not be sufficiently large to compensate the institution for the extra outlay, viz., rent of shop, salesman, &c.

- H. J. Hedger.
1 April, 1898.
727. Is it likely that, when the additions are finished, the committee will have to consider something of the kind? I do not think there is any immediate necessity. We can find plenty of employment at present in the trades that we are teaching. No doubt, a much larger trade can be done than we are doing. It is only a matter of getting the public to support the institution better than they hitherto have done. The committee have expressed a strong hope that the Government will help them, and that we should get some Government work.
728. What are the hours of labour here? From 8.30 a.m. to 5.30 p.m. in summer, and from 8.30 a.m. to 5 p.m. in winter. The women work half-an-hour less.
729. What is the interval for dinner? One hour.
730. How do these blind people get to and from the institution? They find their own way about everywhere. They have no difficulty in getting about. The women experience some difficulty. They do not care about going out without a guide—in fact, now and again, they take a cab rather than walk.
731. What industries are carried on here? Basket-making, brush-making, mat-making, and bedding, halter-making, netting, and chair-caning. These are the principal industries.
732. Is the bedding the manufacture of mattresses? Yes, kapok beds and fibre beds.
733. Is that done to any extent here? We are doing more than we formerly did. We are employing one man regularly at it—sometimes two and even three.
734. What kind of work is the most profitable for the workers? I think that bed-making trades are the best.
735. That business is not so much cut as the brush-making? It is cut enough, but bed making does not take long to learn.
736. What is looked upon as the least profitable occupation for the workers? I think that chair-caning would be about the worst. Unfortunately that forms a great part of our work here, we get a great number of chairs to do.
737. Bed-making could not be carried on away from the institution? Yes, they can easily carry it on in their homes. They only want a table to work on and they can tease the material in the yard. It is a trade that is specially suitable for blind people.
738. *President.*] That return gives the amount paid in overtime during the year? Yes; it is very small.
739. It was stated in the Strathfield Asylum that the people here had to work all hours at home to make a living? The amount for overtime is so small that it would not help them much. We never give work outside if we can have it done in the institution; it is only when there is a rush. A person might send all the chairs in his house to be done, and we might give a man or a woman a chair to take home, and if they only do one a week they get 2s. 6d. which is a little help for them. If we can give the blind a little work to do at their own homes we give it.
740. Is this price list the price list for the trade? Yes.
741. There is not much work taken by the workers to their own homes? Very little; but there are blind men outside the institution to whom we give work.
742. Is that done to any great extent? No, probably it would amount to about £12 paid to a man in six months.
743. Under what circumstances do you give work to be done in their own homes in that way;—is it where a man is living with his own family? To blind men living at home.
744. In that case his people can help him, of course? Yes. Some of the blind, when they leave here, set up for themselves, and any work that they cannot get rid of they want the institution to take; that is a matter which the committee has not considered yet. A man might start at his own home and employ his wife and family, and we should have to take all that they could make as well as what he made himself.
745. That could be got over by taking work up to a certain amount only? Yes.
746. How many workers have you from outside the Colony? I do not know whether we have any from other colonies, but we have men who have been in the other colonies.
747. Do people come from the other colonies and apply for work here? Only two have done so direct, one from Tasmania.
748. It is a question whether this institution is not attracting people from other colonies who may have to be assisted by the taxpayers of this Colony? I had an application from a woman in Northern Queensland about two boys, but we wrote back and told her that we could not take them, and referred her to the institution in Queensland.
749. So you have had no experience of anything of that kind? We have only had two from other colonies, one from Western Australia and one from Tasmania, the man * * *
750. In taking that man from Western Australia, had you any guarantee from the Government of that colony that they should take him back? It was understood that when the man had learnt his trade here he was to settle at Fremantle, the place where his eyes were injured by an explosion. We had not a guarantee, but the man was anxious to go back. He knew that he would have a better chance there than in a strange place.
751. Your committee will see the propriety of protecting this Colony against having to support the blind from other colonies? Yes, I do not think there is any fear of the committee taking blind people from other colonies, especially when we are getting too many applications from people in our own Colony.
752. Those cases from the other colonies,—did the Governments of the other colonies give a grant in aid of the work? In only one case; we received £100 from the Government of Western Australia. In the other case we received nothing. The young man from Tasmania was an inmate of the Newtown institution for some years. He went to Melbourne, then went to Tasmania, to try and earn a living with his wife, but he found that he could not earn a living there; he and his wife and child came over to Sydney, and got stranded here, and he made application to be admitted to this institution. The committee, taking into consideration that he was married and destitute, took him at 12s. 6d. a week.
753. Was he earning that? No, not quite; he earned 11s. the first week.
754. Should not the committee have called upon the Tasmanian Government to pay for him? We do not know that he is a native of Tasmania.
755. You should inquire? It was not inquired into. The man was stranded here, and the committee took him in temporarily.

756. Assuming that he was stranded here, would it not be the duty of the committee to call upon the Government of Tasmania to keep him? It was understood that he was to earn 12s. 6d. a week. Assuming that he would improve as he went on, the committee could very well give 12s. 6d. a week. H. J. Hedger.
1 April, 1898.
757. How could a man and his wife and children live on 12s. 6d. a week? That is a matter that was arranged with somebody in the Chief Secretary's Department. The wife wrote to the Chief Secretary's office, asking them to allow * * * to land here, and she must have got a favourable reply.
758. *Mr. Powell.*] Where is he now? He left here without giving any notice, and we do not know where he is. I have heard that he is living at Botany.
759. *President.*] Have you any amusement for the workers here? There is nothing specially got up for their amusement, because they live at their own homes and prefer to amuse themselves in their own way. The committee subscribed money to give them an annual picnic with a nice lunch and tea. The first year ten of them turned up out of thirty-four, and the following year I think seventeen, so the committee thought it was not worth while to keep it up and it fell through. The committee have purchased concert tickets and given them to the blind. One occasion Sir Alfred Stephen purchased twenty tickets and out of that number only four were used.
760. Have you a library? Yes.
761. *Mr. Powell.*] Is it freely used? No; it is very little used; I do not think that one book a week is taken out of it.
762. One book a week among forty workers? Yes; the men rarely use the library at all, it is mostly used by the women.
763. Of course they can get the newspapers read to them? Yes; ladies come here four days a week to read to them; some read novels to them.
764. Do you think that their work unfits them for reading the Braille type? Yes; their touch becomes numbed by hard work and they really cannot feel it. It would take them ten minutes to read a line.
765. *President.*] How many workers have you passed through the institution? About a hundred.
766. The report for 1896 says, "130 individuals, who otherwise would have been thrown on the street"? It was an approximate number given by the chairman.
767. It was not correct? No; we do not know where he got that from.
768. It has been taken exception to? I do not think it is correct, but it is what the chairman said.
769. Do you find that your workers get tired of labour, and leave and take up a life of idleness or go begging? A certain proportion of them do. Ten left last year.
770. Then some of these workers do get tired of work, and leave the institution? They do.
771. What becomes of them then? They simply go to their own homes. We find some begging in the streets. One young fellow we had here for three months, who had been brought by the Government from Newbridge. It was reported that his friends were very poor, and he obtained 14s. a week here during his probation term. That term expired at Christmas, when he went home for a month. He then applied to the institution for work; but the first week after his return he said he would go home again.
772. He had had a month's holiday? Yes.
773. Did he receive anything from the institution during that month? No. I asked what was the matter with him. I told him that he was getting on well. He was one of the best men that we had, and was making extraordinary progress. I pointed out that in twelve or sixteen months time he would be earning £1 a week. I said it would be a pity for him to go to his parents, who could not afford to keep him. He told me that Mr. Mattingley was going to teach him at home, and that he could probably do better there than here. We could not keep him here. I tried to get his free-pass stopped. I went to the Colonial Secretary's Office, and pointed out that it was a pity to let these men come and go as they liked; and they tried to keep the pass from him, thinking that he might stop here; but eventually he got the Member for his district to apply for the pass, and he got it. That was three free-passes he had in four months.
774. Have you reason to believe that Mr. Mattingley induced him to leave? I do not know; but from other things that have come to light, I believe that Mr. Prescott has tried to induce them to leave this institution. He has gone to their own homes, and told them that So-and-so was selling tea and making so much profit, and ask them what was the good of working hard when they could do that. He induced several men to leave—good workers, too. Why I know that is so, is that when they leave here they go and get tea from Mr. Prescott.
775. Have you given any consideration to the question of blind mendicants? Not much, but we know a good many about the town. They are not very desirable people to have in an institution of this sort. After they have become accustomed to begging and leading dissolute lives, they spend all their money in beer, and become unfit to learn a trade. We find that it is not desirable for them to mix up with young people. It is like putting young fellows in prison with hardened criminals.
776. Have any of your workers at any time supplemented their earnings here by mendicancy or playing music in the streets? Not that I know of. There was one case of a man who was found selling matches in the street and it was stopped. He was receiving enough to pay for his keep. When that man was arrested and taken to the Woollloomooloo Lock-up, it was found that he had on him deposit receipts for over £900, yet he stood in the streets begging.
777. Is that the only case you know of of any worker in this institution supplementing his earnings here by begging in the streets? That is the only case that I can recollect.
778. *Mr. Powell.*] Some of them do supplement their earnings, though I do not say by begging? Yes; some supplement their earnings by blowing organs.
779. And two have Corporation carts, have they not? Yes; I believe two or three have Corporation carts. If they said that they had not enough to live on, the committee would not let them beg for the sake of a few shillings a week. The object is to take the men off the streets not to put them on the streets, that was the great object of the founder of this institution.
780. *President.*] How long had the man Stephen been in the home at work? I suppose he had been here about seven years.
781. What has become of him? He is working at his own home, but we supply him with material.
782. So he has not severed his connection with the institution? No.
783. *Mr. Powell.*] Do you sell his stuff? No, we do not; it takes us all our time to sell the work which we make in the institution.

- H. J. Hedger. 784. If there was a sufficient number of men outside working could they not combine and have a shop?
 Yes, that might be done.
- 1 April, 1898. 785. *President.*] How long was G. Brown here? About two years.
786. What is he doing now? I do not know what he is doing. He was a miner, and came from Wallsend. He was a Government man—we found his wife work. He had only two children grown up. We used to give his wife bed-tick to make. He had 12s. 6d. from the institution and 2s. 6d. from the Government. He simply sent in his resignation, and said he was going to leave, and the next thing we heard was that his mother had died at Wallsend and left him a house, and that he was making a living there.
787. Who was G. McKay? He was brought down from Armidale on a free-pass, and stayed here twelve months. He was one of the best hands in the institution. He was getting 15s. a week, but he went back home.
788. What is he doing now? I do not know. I asked Mr. Lonsdale, the Member for Armidale. I said that it was a pity that the man left. Mr. Lonsdale said that he asked when the man left, and he could not tell him. I have heard that he gained a little sight in one eye.
789. Where is Barry? He has gone to the Asylum for Insane.
790. And Hillery? He is a man who came out of the Government Asylum at Parramatta. We had him on probation for four months. We found that he was too difficult to teach, and that he was in very bad health, quite unfit for work.
791. What has become of him? He went back to the asylum.
792. The next man on my list is Brewer? He was here about four months; he was another man who had to leave; he could not be taught; he was almost an imbecile.
793. Where is Fox? He left. He came from Orange, and was here three months on probation. When the case was reported to the committee they would not admit him. He was always drinking, and used to come to work intoxicated, although he was only a boy. About a fortnight after he left I saw him in the street with an organ.
794. The next is Stapleton? He was here about eight months. He had served his probation, and was getting 10s. a week. He used to absent himself from the institution one week out of every four. He was suspended, and promised to do better, but afterwards stopped away again for another seven days. Then the committee told his father that he must keep him at home.
795. What about Pound? That is the man whom I have mentioned, who came from Newbridge.
796. You have one collector, I think? Yes.
797. That is Mr. Tuckwell? Yes.
798. What part of the country does he travel in? He is beginning to take the whole Colony now; formerly he was restricted to very short trips.
799. He is styled Secretary and Collector? Yes, that is in our last Report, but he is simply collector now. The committee found that the subscriptions were falling off, and that he would have to devote the whole of his time to collecting.
800. Has the falling off in the subscriptions occurred during his term of office? Yes; he had secretarial duties before.
801. Since what date has he been simply collector? I think about two years.
802. How does that show as regards the subscriptions? Last year they kept about the same; this year they will be a little more.
803. How is he paid? £2 a week and a commission of 10 per cent.
804. What was the commission on his collections last year? The commission on the collections last year was £60, I think.
805. Did that all go to him? Yes, he is the only collector.
806. You have no persons in the country districts collecting for you then? Not one; we never have had.
807. I suppose you know that the Newtown institution has several? Yes. I think they are principally friends of the inmates. People have promised us that in the event of blind persons being admitted they would collect money for this institution, but they have generally disappeared, and we have never heard any more about them.
808. What check is there on the collector? We have a receipt-book out of which he has to give everybody receipts for every item, and he is under a bond of £200. He has to keep a diary of his doings, and to forward it to the committee.
809. Have you a provident fund for the workers? We have a sick fund.
810. Do you find that under the scale of distribution of the benefits the fund is increasing or being depleted? It has been increasing.
811. Have you considered the question of extending the funds or increasing the distribution? We increased the benefits last year by making the medicine free. We allow them medicine when they are sick.
812. In addition to the money payments made, do they get medical attendance? Yes, we have two doctors, who attend them free of charge.
813. So that, in addition to this sum of 15s. a week, they get medical advice and medicine free? Yes.
814. How long does this last when they are sick? It extends over thirty days during the year, except in special cases. A very severe case of illness has to be considered by the committee.
815. There is no provision made on the fund for extended illness? No; such a case would be considered by the trustees of the fund. Formerly it was worked by the men themselves, but the committee found that abuses existed.
816. Is contribution to the fund compulsory? No; it is optional.
817. How many contribute? About twenty-six.
818. A little more than half? Yes.
819. Have the advantages of this fund ever been pointed out to them? Yes; and they all have a copy of the rules handed to them.
820. The rules do not show the advantages of the fund to ignorant people? They all know the advantages of it.
821. *Mr. Powell.*] What do they contribute? Eight-pence a month for females and one shilling per month for males.
822. You spoke of the competition of prison-made goods from America? Yes.

823. They can land their goods here at rates to compete with you? Yes. I mentioned that to show the difficulty that we have in disposing of our products. We have to contend with the competition of American and German prison-made goods, which almost shut us out of the market. H. J. Hedger.
1 April, 1898.
824. Is it not a fact that millet brooms are imported here? Yes. They are mostly made in America, but many are made here now.
825. Do you know that most of the millet brooms made in America are made in blind institutions? I know that some are, but not to any great extent.
826. I find that it is the principal industry in America for the blind? Do the blind make them entirely themselves?
827. They are pretty well all made by the blind? I have had some experience of them. I went to Brisbane to learn to make these brooms so as to be able to start an industry here.
828. It was stated in a report of the Blind institution there that they made millet brooms, and that the industry was very successful? When I got there they showed me to the room where they made these brooms, and I found two men making them, one deaf and dumb man doing the principal part, and the other man who was sewing them was only partly blind. The fact is that no blind man could make them. The principal part of a millet broom would have to be made by a sighted person. The only part that is done by the blind people is the sewing.
829. I understand that the only part requiring the labour of a sighted person is cutting the millet, even when the broom is made? We should have no difficulty to get the blind to do that, because there is the machine to do it. It is the wiring and shaping of the broom that the blind would not be able to do. We all know that in the institutions in England and on the Continent they take credit for teaching the blind certain things, but we find that much of the work is done by sighted people. We could get credit for that sort of thing by employing a larger number of sighted men, but the committee want to employ blind labour without the aid of sighted people any more than is absolutely necessary. I do not know whether it is a wise thing in the long run, because if by having sighted men and opening up another trade we could employ twelve or fourteen more blind men, that would be a good thing. I agree with this, that if you teach blind men you have a right to teach them the difficult parts of the work as well as any other, because if he is to go and earn his own living, how is he to do it unless he is taught properly? We have always endeavoured to teach the blind everything that it is possible to teach, so that when they leave the institution they can rely on their own individual exertion.
830. How many sighted instructors have you? Three.
831. Tell us what work they supervise? One teaches brush-making.
832. What is he paid? £2 15s. a week. The teacher of basket-making is paid £2 5s. a week, and the teacher of mat-making £2 2s. 6d. a week. He is a man whom we taught ourselves.
833. You are paying £7 a week? Yes.
834. You are paying £364 a year to instruct forty-three people? Yes.
835. That is to be added, of course, to the cost of the articles,—you pay in wages £1,460, and £364, and you pay 25 per cent. on the wages for supervision? Yes.
836. Do you think that those who are working outside are making a living wage? In most cases they appear to be making a decent living.
837. I suppose they are people who have to pay rent? In some cases they are married men.
838. Are you not competing with those men by selling your work? They are rather competing with us.
839. Are you not placing them at the disadvantage, inasmuch as you have no rent to pay and they have? No; I do not think so. We paid 25 per cent. over and above the trade value.
840. If they are paying rent, and you are not, are they not handicapped to that extent? I do not see that that follows. We have to sell our articles at the market rate, and we have to pay so much above the ordinary trade value to get an article made.
841. But they cannot undersell you? I do not know. Our men work only eight hours, but a man in his own home may work ten or twelve hours.
842. Can a man working at home without the oversight of a sighted person turn out as good an article as you can? I do not think he can.
843. Is not the outside worker seriously handicapped in his operations by the action of this institution? I think that is not a fair way of putting it, seeing that we teach the blind. The work must be sold.
844. But you can under-sell him? I do not admit that at all. If any blind man working at his own home can get our prices he will do fairly well. My experience of blind people living in their own homes is, that if they are making £2 or £3 a week they will make you believe they are only earning a few shillings. You cannot find out what means they have.
845. You admit that the blind worker outside is seriously handicapped as against a blind man in the institution? I believe he is. He has not the aid that he would have in the institution.
846. How many are there working outside that you know of, who are getting a good living? Six or seven.
847. What work are they doing? Two are basket-making, two are chair-caning, and I think three are at mat-making. One man lives at Mount Druitt. He is a mat-maker, and judging from the appearance of himself and his children and considering that he gave up £1 a week here he must be making a good living.
848. Do you know what the maximum and minimum wages are in the brush trade? They get paid for piece-work.
849. What are the earnings? I could not say.
850. Is it fair to take Mr. Coghlan's estimate given in his book, he says, "That £2 is the maximum earnings for a man and 25s. is the minimum, and a woman's earnings are the maximum, £1, the minimum 10s.";—are not your wages considerably under that? A blind person could not earn so much as a sighted person, even if you paid him 25 per cent. more. One sighted person will do as much as three blind people.
851. Then the blind man is very seriously handicapped all through? No doubt about that.
852. Therefore he cannot turn out an article to compete with the products of the outside workers? No; I do not suppose he could.
853. The question is whether it is worth while to continue these industries;—is it not a fact that you are really carrying on trading operations at a loss? Yes.
854. The loss in 1897 in manufacturing is shown in your statement to be £10? Yes.
855. In the year 1896 the loss was shown to be £281;—will you explain why there appears to be so much loss in 1896 as compared with 1897? Yes; I can explain it this way. The very fact of our starting into the

H. J. Hedger. the brush-making has put the institution on a better footing. We have got better profits out of that than out of the other trades, and during the last two years we have indented our material which gives a considerable saving as against buying in the city.

1 April, 1898.

856. Do you know what your loss has been since 1885 according to your published statements? I do not know the total.

857. Would you be prepared to accept the statement taken from your own figures that the loss on the manufacturing account since 1881 has been over £7,000? Yes, if that is taken from the reports.

858. Your highest loss in one year appears to have been £593? Yes.

859. Now, do you think you are going to make profits in the future? No, I do not think we are going to make profits; but I think that the institution can be more economically worked now than it was in former years. The greater the number of learners the greater the loss will be. If we could take men in and keep them for twenty years we might possibly make it pay, but when they come and go as they like it is different. When the most expensive part of their tuition is finished they leave and you have to take other learners, and that increases the cost.

860. Take your forty-four workers—you paid £146 in wages in 1897, which gives an average wage of under 13s. a week. You admit that you have made a loss since 1881 of nearly £8,000. You are paying an average wage to forty-four persons of 13s. a week, and you are competing with people whom you have instructed, and have gone out to earn their own living? I cannot admit that we are competing with those whom we have instructed. The institution is here to teach the blind, and, whilst teaching them, you have to get rid of their work, and while we keep up our price I do not see how we are competing with the blind.

861. Do you charge the manufacturing account with the rent for the building? No; but that would not affect the matter of competing with the blind.

862. I see that your subscriptions for 1897 amounted to £672, and you received from the Government, by way of subsidy, £972—that is a total of £1,644 for the year; your sales amounted to £826, being in excess of the amount subscribed by the public, and your incidental expenses were £492—that is, £1,318 in expenses, against £1,644;—don't you think the institution is severely weighted by the amount from the sales and the expense of keeping it going? No, I do not think so, considering that we are purely a teaching institution. If we are compared with the institutions of the various colonies it will be found that this institution is far more economically managed than any other in Australia. For the number of workers that we have we must keep up a sufficient staff. The staff will always have to be the same as I pointed out on a former occasion. The staff that we have now would be able to teach another fifteen or twenty people, and that would bring down the cost considerably. The brush-making industry is in its infancy here. It is only two years since we started with three men, now we have twelve at brush-making. It is possible that when the new buildings are up we shall have twenty or more, and the instructor has to do a considerable amount of work himself. As I said, if we could get the people to remain here permanently it should be possible with two of the instructors.

863. Do you see any prospect of making this institution self-supporting by making and selling articles;—can you pay the expenses of the institution in that way, with the addition of the subscriptions given by the public, without the Government subsidy? I am in hopes that we shall be able to do it some day; that in a short time we shall be able to do without the Government subsidy. If we could do without the subsidy the committee would be only too willing to give it up.

864. What are the additions to cost? £2,500.

865. How many more people will the institution accommodate when the additions are made? About fifty.

866. At present you have only three applications? Yes; we seldom have more than that. People are continually coming in, and mostly from Government asylums lately.

867. Do you think the workers are contented? I am sure they are. I intend to ask the Commission to examine the workers, with the view of eliciting whether they are content or not.

868. Do you think, from what we saw when I went round with you, that they are lodged in a satisfactory manner? In every case except one; in that case the man has not much furniture. He is an exceptionally good man, and I have offered to furnish a room for him, but it is not always that the blind like you to interfere with these matters. They are inclined to resent interference sometimes.

869. Do you not think, taking it all round, that these people would have better conveniences and better sleeping apartments—that their surroundings would be far healthier and better in one of the Government institutions? I could not answer that question. From what conversation I have had with our own blind, who come out of Government institutions, I find that they abhor the Government asylums. They consider them an abomination. We have a fair percentage now from the Government asylums, and the Commission can examine them on that point.

870. Have you not found in your reading about these matters that the general opinion in the United States and in England is that people who have been educated in blind institutions very rarely follow the occupation which they have been taught, and in very few cases make a living by it? Yes. In most cases when the blind leave the institution in which they have been trained, and having no friends and no money, they find their way back to the institution. A blind man leaving the institution without money or friends to stick to him cannot keep going.

871. You say that directly a man leaves this institution he feels that he has lost his crutch, that he has nothing to lean on? Yes, except in exceptional cases.

872. And unless they are working in this institution, whatever its merits or demerits may be, they would become chargeable upon the State in some other way? No; I would not admit that.

873. Do you think their friends would help them? Yes; if they are trained to a trade, their friends ought to take them in hand. If the institution teaches them, it is surely not too much to expect their friends to do what they can to push them on.

874. Viewing this as a trading concern, you are carrying it on without any profit? Yes, certainly.

875. And there is a great waste of material? Yes.

876. That is a disadvantage? Yes; especially when they are in the institution, because during the first twelve months of their tuition they waste a great deal of material. They do not waste much after they have been taught.

877. What check have you upon them when you supply the material? There is an instructor in each room.

878. I mean the outside people? We really have no check except that we expect them to pay as soon as they can. In some cases they have not paid. In other cases they pay regularly. If they want to pay they pay almost as soon as they get the stuff. In some cases they let it go on indefinitely.
879. So it becomes a disadvantage to the institution? If we lose money it does.
880. You do not know what they do with the material? My idea is that they work it up and sell it, getting the material for nothing.
881. Do you know what it costs to support indigent blind people in the asylums of the country? I suppose it averages from £15 to £20 a year.
882. £15 is the amount, so that the whole of these forty-four people in this institution could be supported in Government institutions for £660 a year? Yes.
883. And the Government are paying you a subsidy of £900 a year? Yes.
884. And there is £672 a year drawn from the public in the shape of subscriptions? Yes; but you surely would not pauperise all the blind for £900 a year and expect them to go into the asylums all their lives.
885. I am showing that these people would be better provided for and better lodged in every respect in the asylums for a less sum than the Government are paying you to carry on this institution at a loss? Yes.
886. *President.*] Is the attention of the instructors confined to supervision, or do they work? They have to do any little thing to help the blind. In the basket-making they have to do anything that it is difficult for a blind man to do.
887. And in regard to the brushes? The instructor has to finish the brushes.
888. Their work is not solely that of supervision? Not quite, but very nearly. In the mat-making and basket-making the articles have to be finished by the instructor.

H. J. Hedger.
1 April, 1898.

Sutherland Sinclair, sworn and examined:—

889. *President.*] You are a member of the committee of the institution? Yes.
890. With regard to the additions, how many additional workers do you suppose it will accommodate? We calculate there will be room for forty or fifty.
891. Have you a considerable number of these in prospect? No; we gather that from the number of blind there are in the Colony, and the applications that are made for admission.
892. These people that you will get will be the old workers who will come back to you, or persons knowing very little of the trades that are taught? Yes; we prefer the learners.
893. Because your institution is primarily a teaching institution? Yes.
894. And, secondly, you become a manufacturing institution? Yes.
895. If you get forty or fifty learners, will not that still further handicap your finances? Yes, very heavily.
896. You will not get forty or fifty learners all at once? No.
897. But, in proportion as your learners increase in number your financial position will be so much weaker? Yes.
898. And the chances of making the institution less unprofitable will be, for some years at any rate, not very great? The last time I made a calculation, I estimated that each learner cost us £40 for the first twelve months. Mr. Hedger brings it down, under present conditions, to something between £20 and £30.
899. The 15s. a week that you pay to the workers is nearly £40, then there is the loss on the products? Yes.
900. In regard to Mr. Hedger's idea that in time the institution will be self-supporting, what is your opinion? I do not see any possibility of it at all.
901. What are the particular handicaps? In the first place, the outlay for the first twelve months. A learner is entirely unprofitable; it is all expense and no return. Then the waste is greater in the case of a blind man than in the case of a sighted man, then we pay a blind man a slightly higher rate of wages than a similar person would obtain in a factory.
902. In order that he may live? Yes.
903. The meaning of that is that blind labour is less effective than other labour? Yes, then there is supervision.
904. Blind labour requires more supervision? Yes, and our men are not merely foremen, they are teachers. I consider that the salary of the manager should be a charge against the subscriptions, not against the manufacturing account.
905. Is it not equivalent to the living that a manufacturer would get out of a similar business? If there were any profit it might be so.
906. You are of opinion that under no circumstances can manufacturing be carried on here at a profit? It cannot.
907. Is it the idea of the committee to take in these other persons gradually? Yes, as applications come in and as we can afford to pay them.
908. As you can sell the articles? Yes, as we can make satisfactory use of their work. It would be a mistake to take in too many at once. If we took ten or twelve a year, that would be as many as we could do with.
909. Have the committee ever discussed the question of getting any share of Government business? Yes, frequently; but it is a matter of some difficulty. We have invited members of the Government to inspect the institution, and once or twice deputations have gone and asked them for a share of the work.
910. The chief producers of such work, apart from yourselves, are the gaols? Yes.
911. *Mr. Powell.*] In competition with you? Yes, in a way, and yet we are on very friendly terms. Most of the Government requirements are supplied from the gaols. We should like to supply some of the mats required for the Government offices.
912. *President.*] Do you know that the price lists at the gaols have been very much reduced? I have not looked into that recently.
913. If the gaols are selling cheaper than you you could not expect the Government to take your goods? No, not if it is put on a strictly commercial basis; but should it not be on a philanthropic basis?

S. Sinclair.
1 April, 1898.

- S. Sinclair.* 914. The philanthropy is represented by the subsidy of £900 a year? Yes; that is a considerable subsidy, but at the same time there is only a certain amount of trade in the Colony, and if we are to employ the men we must get a sufficient share to enable us to keep them at work.
 1 April, 1898. 915. Have you ever discussed the matter with the Comptroller-General? No.

Henry James Hedger, further examined:—

- H. J. Hedger.* 916. *President.*] With regard to your statement that the institution might be self-supporting, you think it might be self-supporting in the sense that in time you would be able to do without the Government subsidy? Yes; that is all I meant. I did not mean to convey that we could ever do without outside support.
 1 April, 1898.

Edward Dixon, sworn and examined:—

- E. Dixon.* 917. *President.*] What are you? I am the brush instructor.
 1 April, 1898. 918. What is your salary? £2 15s. a week.
 919. Where did you learn the business? At Thomas Mitchell's, in Melbourne.
 920. How long have you been here? Twelve months.
 921. Did you come from Melbourne? Yes.
 922. How many workers have you in the brush-making? Eleven.
 923. How many of these are learners and how many are tradesmen? There is only one at piece-work.
 924. Does that mean that there is only one whom you consider to be a tradesman? Yes; only one who has passed through his time.
 925. The others are more like apprentices? Yes.
 926. How long do you think it takes to teach a blind person brush-making? That lies with the person himself. Some are far quicker than others at picking it up. Some you can never properly teach.
 927. But suppose that an ordinarily quick individual commenced to-day when would he be fairly competent? He could do it in six months. You could trust his work if he was an intelligent man, but he would always be able to improve on it.
 928. What are the wages of an ordinary brush-maker outside? I could not say as regards Sydney.
 929. What is it in Melbourne? My wages as a journeyman were £2 7s. and upwards. I do not suppose that it was ever under £2 6s. a week. I was only twelve months a journeyman. I was in charge of the place over there.
 930. What would a competent journeyman earn? Say from £2 5s. a week upwards.
 931. How does the work of the blind compare with the work of sighted people? Some of it has turned out very well. Some of it you can put against the work of sighted people as regards workmanship.
 932. Can they turn out the same quantity? Oh, no!
 933. So that a blind worker is always at a disadvantage, as regards the product of his labour, as compared with sighted workers? Yes; he could not compete with a sighted man.
 934. How much of the work do you do for a blind worker? I have to do different parts of it. I have to trim off certain work and to finish off.
 935. Do you finish the woodwork of the brushes? Yes, what I can do of it.
 936. Who does the rest? None has been done outside since I have been here; only at the commencement some little was sent out.
 937. When you came there was an accumulation which had to be finished outside? Yes.
 938. But now you have overtaken that work, and it is all done inside;—is that what you mean? Yes.
 939. You do it? Yes.
 940. The finishing is done by you? Yes.
 941. *Mr. Powell.*] No work can go out until you have dealt with it? No.
 942. *President.*] What sort of brushware do you make here? Pretty well every class.
 943. Do you make any fine fancy brushes at all? Yes.
 944. Have you any trouble with the workers, are they willing to learn? One or two are always complaining.
 945. *Mr. Powell.*] You have eleven people to instruct, I think? Eleven or twelve.
 946. One man is on his own account? There is one man who has been on the brushes much longer than he has, but still his work is inferior.
 947. Could the man to whom I have referred make any kind of a brush from start to finish? Yes, on the line he is at. He is on pan work, making hair-brooms.
 948. Does he make that class of broom from start to finish? Yes.
 949. Does he make the holes? No, they never do that; the holes are all bored for them.
 950. It is impossible for them to make a brush from start to finish? No.
 951. Could any of these people with the instruction that they get here, go outside and get a living at brush-making if they had anyone to overlook their work such as yourself? The only difficulty would be as to the trimming their work off.
 952. And they could not do that you say? I dare say they could overcome the difficulty in some way.
 953. Suppose a man goes to Goulburn and commences to make brushes, could he commence and finish, and turn out the brush without any assistance? No; in the first place he could not bore the wood.
 954. In the institution he can work and make wages, but outside he could not make a living? A shop would not bother to take a blind man in most cases. Some small shop might.
 955. *President.*] I suppose that in a place like Sydney a man could arrange to have the finishing done for him? They can get their stocks bored from the mill.
 956. But the final touches could be arranged for in Sydney, could they not? I do not quite understand.
 957. You said you thought he could overcome the difficulty of not being able to finish these brushes; how could he overcome it? By using a small pair of hand-shears.
 958. You are referring to the trimming? Yes.
 959. *Mr. Powell.*] Will you show us a sample of the best work turned out in brushes? [*Samples produced.*]

[The Commission adjourned at 1 p.m. and resumed at 2'15 p.m.]

Ashbury Ashton sworn and examined :—

A. Ashton.
1 April, 1898.

960. *President.*] What do you instruct in? In basket-making.
961. What remuneration do you get? £2 5s. a week.
962. Where did you learn your business? I learned my trade at Pettitt's, in Melbourne.
963. How long were you there? I was four years apprenticed there, but I had been working there previously. I served nine years at my trade altogether.
964. Is your instruction confined to basket-making? To basket-making and chair-caning.
965. How many workers have you under you? I have twelve basket-makers and four chair-caners—two men and two women—sixteen altogether.
966. How many of these basket-makers are experts, and how many are learners? As a rule, they are always learning, even the old hands. I have two learners.
967. Are the other ten expert hands? About half of them are. Some of them you can change on to anything, but the others you can only put on to two or three articles.
968. There are two whom you consider to be learners, and half a dozen whom you consider to be experts, but you cannot put them to the different branches of the basket-making? Not all of them.
969. The others would be pretty expert workers? Yes, on three or four different lines.
970. There would be two learners, six medium, and four pretty well-skilled hands? There are more than four. I would say six skilled workmen.
971. Two learners and six skilled workmen—what are the other four? They are only confined to two or three articles.
972. Do you employ only men in this business? Only men in the basket department.
973. Do these men finish the basket from beginning to end, or do you do anything to it? Some they do and some they do not.
974. Those are the expert tradesmen? Yes. If a basket is out of shape I rectify it by putting a little of my own labour to it.
975. Do you consider that the best of your basket-makers could get along without any supervision, such as you give, if they were working at their own homes? They could on half a dozen articles, such as butchers' baskets and clothes' and linen baskets, but it would be very awkward for them in making perambulators, basinettes, and some other things. Under any circumstances they would want someone to strain the fitches up.
976. You are of opinion that if they are not under constant supervision the best men have a tendency to go off in their work? They would confine themselves to the things that they were best able to do.
977. They could not do the variety of work that they do in the institution? No; I do not think so.
978. As regards the best of these workers, you only occasionally put a little of your own work into their work when you see that they are going wrong? Yes.
979. As regards the bulk of them, you have to do more? Yes. Those who are not so far advanced.
980. What is the average wages of basket-makers in Melbourne? I could always earn £3 a week and over, but, of course, things have altered since then.
981. When were you working in Melbourne? Between nine and ten years ago.
982. Do you know what they are paying here? A good man on piecework can earn £2 5s. a week. I do not know whether they can do that all the year round. Some weeks a man might earn £3. It would depend upon how the orders came in.
983. How many hours a day do they work? Eight and nine hours. Some shops are working day and night on account of the prices being so low.
984. Do you think that a man working eight or nine hours a day can earn £2 5s. a week in Sydney? Not on all round work, he may at different classes of work—some are paid better than others; there are so many branches. One man might be making clothes-baskets and another doing other work at which he could make double the money.
985. Then the tendency is for a man to confine himself to a few different lines? Yes, to earn money he must do so. If a man is changed about he will not have a chance to earn much.
986. How long have you been there? Nearly five years.
987. You have a man named Clapham employed—is he a good man? Yes; and Croft is another good man, but he is not so good all round as Clapham. He is one of our best men. Allen is another good workman at all round work, and Georgeson is a good one.
988. Those are three of your best men? Yes.
989. Jones seems to earn a small amount of money? He is not expert like the other men.
990. Is Jones a learner? No; he has been at it for some years.
991. What is the branch that a man can make the most money on? Some do best at clothes-basket making. Judd could earn more at clothes-basket making than anything else. Georgeson could earn just as much on two or three other articles.
992. Are these men dissatisfied with their position? I do not know. They grumble when put on work that they are not used to it.
993. *Mr. Powell.*] Do you think that these men, if thrown upon their own resources, could get a living from what you have taught them here? They may or they may not. People can get things so cheap now that even in Bathurst a sighted basket-maker could not live, because everything is got cheaper from Sydney.
994. You say some are clever at one thing and not at another? Yes.
995. So that if a man is good only at clothes-basket making he would soon overstock the market in a country place? Yes.
996. So that if they were not in an institution like this they would not be able to get along? No, I do not think they would.
997. You told us that an expert basket-maker could earn (say) £2 5s. a week? Yes; but I do not say that he can do that constantly.
998. Do you think that these men are paid all that they are worth? Some are earning as much inside the institution as some outside. We have fast men and slow men.
999. What is the average wage outside the institution? They are paying different rates now, but an all-round man was advertised for this week to get £2 5s. a week.

- A. Ashton. 1000. Do you consider that these men are underpaid for the work they do? No; not according to the prices that they are paying outside. This institution pays better prices than are paid outside. The blind men are making more money than some of the sighted men outside.
- 1 April, 1898. 1001. On the whole, you think that these men could not do better elsewhere? No; not as things are at present. They may go into a country town and do fairly well, but they would not have to confine themselves to basket-making.
1002. *President.*] Do these men get the full value of their labour, as compared with those outside? They may and they may not.
1003. These men produce a certain amount of work every week? Yes.
1004. Do you think that they get a fair remuneration for the amount of work they produce? Yes; I do.
1005. Considering that they are blind men? Yes. One sighted man can do as much as two or three blind men.
1006. I suppose that sometimes a blind man may have to undo some of his work? Yes, that often happens.
1007. An intelligent sighted workman, if he makes a mistake, can see it, but a blind man goes on until it is pointed out to him? Yes.
1008. *Mr. Powell.*] Do they cut themselves more than ordinary sighted workmen would? I have seen them cut themselves, but I put that down to their using a blunt knife. You will also see that amongst sighted workmen.
1009. Is there more of it here? Not so much of it.
- Mr. Hedger:* About teaching different branches, Mr. Ashton explained that some of the blind could do more at one branch than another. The same thing applies to every trade. One man may be expert on square work, another on oval work, and another at round work. We, as far as possible, keep the blind to one branch, because, if they can do one branch satisfactorily, they will have a better chance of getting employment. I know a man who employed four blind men who had been working in the Melbourne institution. Some men are very expert upon certain kinds of work. The same thing applies to blind men. They cannot make everything. One or two who have left here were quite good enough to go into any sighted shop and compete with sighted workmen.

Stannus Bell sworn and examined:—

- S. Bell. 1010. *President.*] You are a teacher of mat-making? Yes. In mat-making and weaving.
- 1 April, 1898. 1011. What is your salary? £2 2s. 6d. a week.
1012. How many workers have you? I have thirteen now. Sometimes I have fourteen; one or two at the bedding.
1013. How many have you at mat-making? Nine.
1014. Nine at mat-making, four at weaving, and two at bedding? Yes.
1015. Where did you learn your business? At this institution, from Mr. Foster and Mr. Hedger, the Manager.
1016. Mr. Foster was the previous officer? No; he was an officer at the gaol.
1017. How long were you learning the business? About four years.
1018. Did you learn all the branches of the business? Yes.
1019. How many of these mat-makers are expert men? Three of them.
1020. Are the other six learners? Yes.
1021. What can the three earn per week on the average? From 15s. up to 22s. 6d.
1022. Is that working the ordinary hours? They earn 15s. working the ordinary hours. Mat-makers work about nine hours a day, and earn from £1 to £1 2s. 6d. a week.
1023. And these are expert men? Yes.
1024. What do the nine men earn? I could not tell. I do not go into the money value of the work done.
1025. Is much material wasted in learning the business? Yes, more than one-third is wasted.
1026. Is there more waste than there would be in teaching sighted people? There is.
1027. Is the waste in the matting? There is about 5 lb. wasted out of 57 lb. of raw material, that is in the weaving.
1028. Are the men fairly satisfied with the work? Yes; they seem quite happy and contented.
1029. When they come into the institution are they anxious to learn? Yes; of course we sometimes get an obstinate man.
1030. Are those mats that are on show in the shop made specially for showing? No; they are ordinary work. I will fetch a mat in. [*Mats produced.*]
1031. *Mr. Powell.*] Could any of these men get a living at mat-making outside? They could with help.
1032. Could they turn out work without the assistance that you give them here? In a rough way they could.
1033. They would not turn out such good work? They could not finish off their work as well.
1034. If they are away in the country they would be under a still greater disadvantage? No; one man made a very good line, that was Lachlan up at Mount Druitt. He told me that he was doing fairly well at it. Another man named Gorrick left three weeks ago, and I believe he was going to start.
1035. They cannot do fancy border work? Yes, they can do the border work.
1036. If they could do that work here could they do the same work in the country? Yes. Of course it would be rougher work, but the mat would be there.
1037. How far do you deal with the work? I finish it off after it comes off the frame.
1038. Could they do that themselves? They could not do it so well as a sighted person.
- Mr. Hedger:* Mr. Bell mentioned a man named Lachlan at Mount Druitt. I remember him. At the Sydney Town Hall they wanted new mats. I went to the man about it, and he told me that he was thinking about giving the work to a blind man at Mount Druitt. I said, "Oh, he is one of the men whom we have taught, and if you are going to give it to him we do not want it." He turned the mats out very satisfactorily, and got a good price for them. The other man, Gorrick, two weeks ago wrote a nice letter thanking the committee for what he had been taught here, and I had no doubt that he would make a fair living. He has a family who will be able to help him.

Henry James Hedger further examined :—

H. J. Hedger.

1 April, 1898.

1039. *President.*] Is this clerk, Smith, fully employed here? Yes.
 1040. Is he a youth? Yes.
 1041. Is Miss Hedger a daughter of yours? Yes.
 1042. There is a boy at 10s. 6d. a week, what does he do? He carries the cane up and down, and keeps the workshops clean.

Susan McKenzie sworn and examined :—

Susan
McKenzie.

1 April, 1898.

1043. *President.*] Do you wish to make any statement? I made a few statements at the inquiry concerning the Strathfield institution. I wish to go a little further now. I would not have left Strathfield only that I knew I could come here. I came one Tuesday in 1895. When I left Strathfield this institution was not ready for women to come into. Mr. Hedger said, when learning the brush-making I should get at least 10s. a week from the time I started. I said that would not keep a woman and pay her board, and he replied I daresay that the committee in your case, you not having friends, will give you 12s. 6d. He said he would let me know when the Board met. And they did not take me that year, they took me the next year. I was in the country and I was sent for. Mr. Hedger got Mr. Ardill to send for me. Mr. Ardill told me that I should get 12s. 6d. a week. When I got here I saw the ladies and they asked me if I knew that I should have to work here for nothing for three months. I said that I had never heard anything about that, and that I could not do it, as I had no friends in a position to keep me for that time. Then they said they would see what could be done. That was in 1896. On the Tuesday after Easter Monday I came to work. I worked three weeks for nothing at all with Mrs. Nairn and Miss Henderson. I said I could not do this any longer. Then a friend borrowed some money for me, £1 2s. 6d. altogether. Mrs. Nairn and I used to live together, and that kept us about three weeks. Then, the fourth week I told Mr. Hedger that I should have to go back to Strathfield if I did not get wages. Then he gave me 5s., and at the end of the next week he gave us 5s. again, and he gave me a chair to do, and that made my wages that week 7s. 6d. Then the committee decided to give Mrs. Nairn and me 7s. 6d. a week each, and they used to give us work at night to make up the difference, and we used to pay 9s. for our board. We worked on like that from April until some time in the middle of August. Then in August I got some money after the committee met. I had been very bad but I tried to hold out as long as I could, then I got very ill and stayed away. The second week after I got the 10s. a week, I was too ill to go to work. Mr. Hedger grumbled that I was getting 10s. a week and was not at work. He did not say anything to me then. The next week I went to Dr. Crago, who said that a few days rest would do me good. He wrote a certificate, then I went out to Lewisham and my friends called in Dr. Cooti, who said I was to go to the Prince Alfred Hospital. I went there, and afterwards came back to work.
 1044. What are you getting now? 12s. 6d. a week, but it will stop when I have been here 2 years. Then I go on piece-work.
 1045. How will that affect you? I have earned about 8s. this week.
 1046. That is working ordinary hours? Yes, working ordinary hours, and working as well as I can.
 1047. So it is a serious matter for you? Yes, a serious matter about the wages. If one could get ordinary chairs to do—they are easier than the others—one might make 5s. a week. Sometimes you feel unwell and cannot work so well. We women decided to put it before you that we ought to have a stated wage and no piece-work.
 1048. When you came here had you learnt the business? Yes, I learnt at Strathfield all that I know, except netting, and Mr. Bell taught me that.
 1049. Were you as good when you came from Strathfield as you are now? I could do the brush-making as well as I can now; the chair-caning I was not so quick at.
 1050. Then you consider that your earnings last week, if you were paid for what you did, would amount to about 8s.? Yes. We thought that for bass brooms we should get 4d. each, but they are about 10d. a dozen, and you could not do more than a dozen a day however hard you worked.
 1051. *Mr. Powell.*] Do they not make the wages up to 12s.? I get 12s. 6d.
 1052. You can only earn 8s. at piece-work? Sometimes I can earn more if I am doing easy-chairs. Up to last night I made 8s., working as well as I possibly could. I have been working every day all the week.
 1053. That only just pays for your board? Yes; but I get constant wages now.
 1054. *President.*] Do you make much by overtime? We only get it when they have a great many chairs and cannot get them done; we have to sit up late at night to do them. If I work two hours each night, it will take nearly four nights to do a chair.
 1055. *Mr. Powell.*] How many hours does it take to do a chair? It takes a whole day.
 1056. About eight hours? We women work seven and a half hours a day. There is a man who has been working here for years, and he cannot cane more than 5 or 6 chairs in a week.
 1057. If you had your choice which would you rather do, go on as you are or go into an asylum? If I had a fixed salary of 12s. 6d. a week I would rather struggle on as I am, but if I am to be put on piece-work, it would be just as well to go into an asylum.
 1058. *President.*] If you can get 12s. 6d. a week would you prefer to remain as you are? Yes, if I could get it regularly. Mrs. Molloy with whom I board is very kind, and boards me for 8s. a week as an act of charity.
 1059. It is an advantage to you to be independent as you are? I should not like to go into an institution.
 1060. Do you consider that you were as well treated, fed, and housed at Strathfield, as you are now? Yes, I was as well fed at Strathfield as I am now where I am paying for board.
 1061. You would be satisfied if you could get a fixed wage of 12s. 6d. a week? Yes, I could manage. I get my board, washing, and everything done for 8s. a week.

Mary

Mary Ann Nairne sworn and examined :—

- Mary Ann Nairne.
1 April, 1898.
1062. *President.*] You are a worker in this institution? Yes.
1063. How long have you been here? Two years.
1064. You came from Strathfield? Yes.
1065. Do you want to make a statement to the Commission? I hesitated at first, because I scarcely thought it worth while. A rail has been put up separating the women from the men upstairs, and it is an annoyance to us. It has to be lifted, and we knock ourselves against it. It seems a trivial matter, but it has caused a good deal of trouble. I do not think that I shall be very long employed by the institution. There will be a meeting of the committee on Wednesday, when I shall know what the decision is. If I am put on piece-work I shall not be able to earn a livelihood, and I must seek employment elsewhere. The manager is dissatisfied with my earnings. The class of work that I did was heavy. The work that he was first dissatisfied with was chair-caning. That I was not used to. The next was the drawing of bass brooms. Of course, that is heavy work. Mr. Hedger said that the case would have to be considered, and, of course, I know that his dissatisfaction will mean piece-work. At piece-work one cannot possibly earn a livelihood here. I had 2 dozen and 9 brooms, and my earnings were supposed to be 2s. 6d. for the week. They were very little more than 10d. a dozen.
1066. How much did you earn last week? I do not know how much it would be. I think I have crossed Mr. Hedger, because I used to work at the pan; that is not only disagreeable work, but you are very apt to get seriously burnt at that work. No other woman was singled out for the work but me. I undertook to try it for twelve months, but I found that my health failed so much that I could not go on with it. I told the foreman, who spoke to Mr. Hedger, and since then I have had no pan work to do. He said I was unwilling to work at the pan, and it was work that I did better at than anything else. I am sorry I shall have positively to refuse to do that. There may be some constitutions that could stand the work, and I have every reason to believe that I have the best constitution in the building; everybody has been ill but myself. I hesitated to make any statement, but I think I shall have to do something else. Of course, there are the Charitable Institutions, and I daresay that I can get sufficient public sympathy to support me or get work from various sources.
1067. *Mr. Powell.*] Are you satisfied with the wage of 12s. 6d. a week? Well, it covers expenses. As we are placed now I am paying 8s. for board, that is because two of us are living together. Until now I have never paid less than 9s. a week. Then there is washing and 2s. 6d. a month for a guide; the guide is the landlady's child and she refuses to take the 2s. 6d. a month.
1068. *President.*] If you could get 12s. 6d. a week you would be satisfied? Yes; as a standing wage.

Lilian Norman sworn and examined :—

- Lilian Norman.
1 April, 1898.
1069. *President.*] You work at this institution? Yes.
1070. What is it you have to say? When we first came here the wages were 7s. 6d. a week, but a woman can hardly live on that when she has to pay 8s. or 9s. a week for her board.
1071. Was 7s. 6d. a week all that you got? We could do home work and make it up working till 1 o'clock in the morning.
1072. You got 7s. 6d. a week and an opportunity of doing home work, and you got nothing else; no gratuity from the Government, nor anything else? No; only overtime.
1073. Did you do any overtime last year? Yes, at Easter and at Christmas time.
1074. How much did you earn at Christmas? I think it was six chairs that I mended.
1075. I have a return which shows that you earned in six months, from 1st July to 31st September, 7s. 6d. by overtime? Yes, that is right.
1076. You said something about having to work until 1 o'clock in the morning? Yes; that is when we earned the 7s. 6d.
1077. Your weekly wage is now 7s. 6d.? No; it was 7s. 6d. a week for the first three months, and after that 10s. a week.
1078. What are you getting now? 12s. 6d. a week. It was 7s. 6d. for the first three months, then 10s. a week, and now it is 12s. 6d. I have just commenced my second year. At the end of the two years you go on to piece-work, and if you earn only 5s. a week you get only 5s. a week. You have to take whatever you can earn.
1079. You want to direct attention now to the wages you were earning for the first few months you were here? Yes.
1080. Where do you live? At 29, Bennett-street, Surry Hills.
1081. Are you comfortable? Yes; it is the best place I have been in.
1082. How do you go home? A child fetches us.
1083. *Mr. Powell.*] Can you live on 12s. 6d. a week? I have to do as well as I can.
1084. On piecework you think you would not be able to earn so much? No. Some weeks you fall ill. As a rule, I earn my wages; but last week and the week before I was ill, and I do not think that I earned half of it.
1085. *President.*] If you had a regular wage of 12s. 6d. a week you could get along? Yes. If I always had 12s. 6d. a week it would do. Mr. Hedger seems to have the power of suspending people, and directly a thing is done that he disapproves of he suspends some one or sends them away. I think the committee should do that, but he does not leave that for the committee. When I was suspended he never told me, but told me to go away, and for a long while he would not allow me to see the committee. When I told him that I would not leave the grounds until I saw the committee, he let me see them.
1086. *Mr. Powell.*] Did they allow you to return? Not until after three months.

George Evans sworn and examined :—

- G. Evans.
1 April, 1898.
1087. *President.*] What particular work are you doing here? I am brushmaking.
1088. How long have you been here? I came here on the 6th August, 1896.
1089. What do you earn per week on the average? About 7s. 9d.
1090. What does the institution give you? Ten shillings a week.
1091. You earn 7s. 9d. and they make it up to 10s.? Yes.
1092. Have you done any overtime? I have done a little. I get a chair sometimes to take home.
1093. What does it cost you for your lodgings? Twelve shillings a week. 1094.

1094. In addition to the 10s. a week, you get something from the Government? Yes; 4s. from the Government. I had 5s. granted, but I do not get the 5s.
1095. So you are drawing 14s. a week and you have had a little money for overtime? Yes, I suppose on the average it would not be 2s. 6d. a month for overtime.
1096. Where did you come from here? From the Parramatta Asylum.
1097. You earn 7s. a week and receive 3s. from the institution and 4s. from the Government, that is 14s. a week, and you pay 12s. for your board and lodging; how is it that you earn so little as 10s. a week? I cannot get along with my work any faster. It is twelve knots a penny. I am not on piece-work, and when I have nice stuff to work I can make 8s. a week, but that is very seldom. I have made 7s. 9d. pretty often, as nearly as we can make it up.
1098. Do you feel that you are getting on, and that you are likely to earn more money when you have had more experience? I may earn a little more, but I shall never be able to earn 10s. a week though I always try my best to see what I can do.
1099. Are you a steady worker? I work as fast as I can.
1100. Are your lodgings comfortable? Yes; everything is clean and comfortable.
1101. Have you anything to suggest for improving your position at all? I did send in a letter to the Commissioners; but I think it is useless now to say what I was intending to say. It has been impressed upon me that I shall never be changed to any other work whilst I am in this institution. I asked Mr. Hedger about putting me on basket-work, as I fancy I could get on better at that. He said, "You will never be off your present work; you will have either to stop at it or leave the institution." When we come into this institution we are supposed to learn a trade in five years. If we do not do that, what are we to do? The committee can put us out at the end of five years, and I do not want to always live here. I do not like to be shut up like this. I am of opinion that I could earn a living at basket-making, but at broom-making I am afraid I cannot earn enough to buy food.
1102. Were you put to broom-making at your own request? No. The smoke turns me quite sick. I am quite nervous, and the doctor gave me medicine to cure me; but it is too expensive for me to go on buying it.

G. Evans.

1 April, 1898.

John Doyle sworn and examined:—

1103. *President.*] You are a brush-maker? Yes.
1104. What is your weekly wage? 10s. from the institution.
1105. That is made up of two items—7s. 6d. and 2s. 6d.? Yes; and I get 5s. from the Government, that makes it 15s. a week.
1106. You have not done any overtime for some time, have you? I have never done any since I have been in the institution.
1107. Where did you come from to the institution? From an orphan school. I was first in the Randwick Asylum. I was taken out of there by Mr. Robison, the former Inspector of Public Charities, and I afterwards lost my sight. Then he got me put into this institution.
1108. What have you to say to the Commission? Well, if the Commissioners are to find out our grievances, this is my principal complaint: I am not very strong. There is nothing wrong with me except weakness of the chest. I am in a sick fund which allows 15s. a week when one is sick, but when I am sick for a week Mr. Hedger stops my Government money from me, by whose authority I do not know.
1109. You contend that you ought to get the 15s. from the sick fund and the 5s. from the Government? Yes; it does not happen every week. I may be sick four days and have to go to the doctor.
1110. Is not medical advice given from the sick fund as well? Medical advice is given now from the doctor of the institution, but not medicine.
1111. As a matter of fact, is not the medicine given free? Yes; just lately.
1112. And medical advice? Yes.
1113. Your complaint is that whilst you are sick and getting 15s. a week from the sick fund you do not also get the 5s. from the Government? Yes.
1114. When working you get 15s. a week, but when you are sick you think you ought to get £1 a week? I do not say that, but I want to know why the money was stopped.

J. Doyle.

1 April, 1898.

SATURDAY, 2 APRIL, 1898.

[The Commission met at the Sydney Industrial Blind Institution at 9 30 a.m.]

Present:—

GEORGE ALEXANDER WILSON, Esq., J.P. (PRESIDENT).
JAMES POWELL, Esq., J.P.

Catherine Henderson sworn and examined:—

1115. *President.*] You are a worker here? Yes.
1116. How long have you been here? Two years last Wednesday.
1117. You live with your people? My mother.
1118. What are your wages? Ten shillings.
1119. Have you any statement to make? Only that I am not satisfied with the wages. The first year I was here I worked one month for nothing, and then four months for 2s. 6d. and then I got 5s. Mr. Hedger told me I would get 10s. after the first three months, and all I got was 5s. My mother made inquiries, and he said that if I was not satisfied I would have to leave. He told me to leave.
1120. Is your mother able to keep you without work? No, she is not. She has kept me while I was away from here, but by hard work.
1121. *Mr. Powell.*] By having boarders? Yes. Up till I came here she was in different places, and had me with her for a time, and was paying for me for a time. She always kept me by hard work, and, of course, I came here to earn my own living instead of depending upon her, and that was all I got, and because mother spoke of the wages—5s. a week—Mr. Hedger told me I was to leave, that they could do no more. And then he said that I was to get 12s. 6d. the next year, but I only got 10s.

Catherine Henderson.

2 April, 1898.

1122.

- Catherine Henderson.
2 April, 1898.
1122. *President.*] Is there any prospect of your getting more? Next week I should get more. I do not know whether I shall or not until the Committee meets.
1123. You are a brush-maker? Yes.
1124. Is there anything else you wish to say? I do not think so.
1125. We will very carefully consider this as far as it comes within our province. We cannot promise you anything. We shall give it very great consideration? It is not much, and mother has got very bad health, and she cannot keep me now, and from one winter to another she always thinks it will be her last. I do not get the best of health, and if you lose a day or half a day, it is stopped from you.
1126. Do you contribute to the sick fund? Yes; now I do. I have been in it the last three months, but still you don't get a day's pay out of it, nor yet three days. You have got to be a week sick before you get anything, but there's many a time you don't feel well enough to work for a day, but of course you are not sick enough to go to a doctor, and you get nothing without a doctor's certificate.

Walter Northcote sworn and examined:—

- W. Northcote.
2 April, 1898.
1127. *President.*] You are engaged in matting here? Weaving on a hand loom.
1128. What is your weekly wage? At present my weekly wage is 12s. 6d. This is my second year this month.
1129. You have earned very little overtime? No overtime whatsoever. I have not been allowed that privilege. Oh, I made a mistake. One or two weeks I did have a little overtime on some work wanted in a hurry.
1130. You had overtime equal to 6s. 9d. in six months? I don't understand that, sir.
1131. Did you not have overtime the second six months in last year? Certainly not; only about two weeks some considerable time back now, and it was only just about half-an-hour in the evening and a Saturday afternoon on two occasions, as far as I can remember. I got about 15s., including my weekly wages.
1132. We have a return here showing that in the six months ending 31st December you earned 6s. 9d. overtime;—is that correct;—you may have mixed up the dates. However, there is really nothing in it. Have you anything to say to the Commission? When I came here I didn't come as a man from the Poor House in the first place, and receiving any State subsidy. I am the son of a widowed mother whom I used to help to support, and I had the misfortune to meet with this mishap, and my only opening was to come here. Well, they made me do three months here for nothing, and the manager told me that I should pay them to teach me a trade instead of them teaching me a trade and paying me. They asked me what my idea was in coming here, and I told them straight that my idea was that I might learn a trade to earn a living with. The trade they put me at is that I am doing now, and it is no earthly use to me outside, the work being done only in Darlinghurst Gaol. My ambition is to earn an independent living outside a charitable or uncharitable institution, and I can assure you that, to a man with any independent spirit at all, the associations in this place are irksome in the extreme.
1133. How is that? Well, there are men here who take a delight in irritating others younger than themselves, and perhaps possessing a little more spirit than themselves; and I think it is not right either that afflictions should be crowded together; and I say that there is one privilege which I am truly thankful for which I enjoy, and that is that the gates of this place are the bounds of our compulsory acquaintance as an afflicted community. I would much sooner work in solitary confinement than amongst a lot of blind people. My ambition is to get away from this place, and get some employment—I am not particular what it is so long as it is independent—outside this place.
1134. I am afraid that neither the Commission nor the committee can give each blind person a workshop to himself? I do not ask that, but, if I had received a little more money than I have since I have been here, I would certainly not be here now. I would take some other means of earning a livelihood.
1135. Is there anything else you wish to say? I can say a good deal yet, sir. I do not know why this place is founded on a basis which makes a man pauperise himself in order to obtain just a bare existence—that is, the 14s. a week—after doing the three months for nothing, which I did. I was asked my pecuniary condition when I came here, and I can assure you that it was only as a last resource that I came here; and I thought the place would be a little different from what I have found it in my two years' experience. And I may say that some men seem more privileged than others by receiving piece-work to do at home, which I never have had, but even then I don't hold with that idea, for I think it simply amounts to sweating.
1136. *Mr. Powell.*] What piece-work do you refer to? Making halters and netting, chair-caning, and such like work.
1137. You could not do your loom work anywhere but in the shop, could you? No, decidedly not. That would take at least eight hands, and one of those must be a sighted man in order to prepare the work, and it requires the machinery for so doing.
1138. When you have learned the mat-making you can do nothing with it except in an institution of this kind? Decidedly. That is my objection to it, and besides, I think I am not fit for the work. I am not fit now with the cold I have got on me, I suffer from aches and pains through it, and still I have to work or else I have my pittance, such as it is, stopped from me.
1139. You are not altogether dependent upon this? I have my widowed mother's home. I have no other means whatsoever. It places me in a very awkward position. I am almost become used to it now. I walk about without a penny in my pocket, and of course I try to keep up an appearance as far as I can.
1140. What age were you when you became blind? I was 27 or 28. I am now turned 31 last January.
1141. Then of course you feel your affliction more? I am willing to bear my affliction, but I feel most keenly my loss of independence.
1142. You say you become pauperised. In what way do you become pauperised. You work for what you get? The place is not self-supporting.
1143. You don't want the badge of charity put upon you? Certainly not.
1144. It is not very agreeable to you; but unfortunately you are the victim of circumstances to a certain extent, and you came here with a view to benefit yourself, didn't you? I did sir.
1145. Is there any reason why your wages are confined to the amount you have mentioned, 12s. 6d.? Simply it is the sum named in the rules of the place.

1146. According to the rules, how soon would you be entitled to 15s.? In my third year.
1147. How long will it be before you get to that? That three months which I did for nothing, which is called the probation, was not taken into consideration in the time for increases—that goes for nothing. I cannot say whether they will make it so the third year, but in the rules it also specifies that if a man becomes competent in his work before the three years have elapsed he can go on his work on the piece-work footing. I have asked to be put on that repeatedly, but have been refused on some pretext or another; although I make my work to order, no fault is found with it. I am about as expert a man as there is in the shop down below.
1148. How soon will you have completed your second year? I came to this place this month two years ago—the 13th April two years ago.
1149. After the 13th April you will be in your third year? Yes.
1150. Will you then be entitled to 15s.? Well, I do not know whether they will reckon that first three months in, as they didn't last time.
1151. You spoke of the association; but as the President pointed out, you cannot have a shop made for you—but would not the association perhaps be as objectionable to you almost in any workshop? Not amongst sighted people. I feel more happy and contented when I am amongst sighted people, but blind people—of course I could tell you a lot about the conversation and so forth that is irksome, and there is shoving, and some are a little more sighted than others, and they presume to take advantage of that to annoy. The place is a purgatory to me.
1152. *President.*] You complained just now of the place being not self-supporting. Of course the committee would be only too glad if it were? Well, to tell you the truth, I would sooner that the place was directly under Government control.
1153. *Mr. Powell.*] What advantage do you think you would secure by that? More justice, sir.
1154. But if you were subject to the same rules you would still have to follow them? Those rules would be more strictly adhered to and carried out properly. They would not make flesh of one and fish of another, as it is at present.
1155. Have you complained to the committee? I have been brought before the committee on one occasion because I have happened to be a few minutes late when I first came to the place, and I was admonished, and on one occasion sent away home and the pay for that day stopped because I was a few minutes late, by the manager himself; and, on another occasion, the manager suspended me, and I was taking other means to have that seen to, and he took the suspending part of it off me and allowed me to start work again.
1156. Do you think at piece-work you could earn as much as you are earning now? I would earn more; some weeks perhaps slightly under. If I am kept at my work regularly I could earn a couple of shillings more than I am earning now; but, even then, I would not mind if I did not earn perhaps more than I am receiving now as wages on some occasions, because I would feel I was getting what I earned.
1157. Are you limited here as to the hours you work when on piece-work;—can you work later if you like? I would not be allowed to work any more than the bare eight hours. The other men all work for the eight hours in the same shop. In the basket shop there is a bonus for the piece-workers; in our mat shop no bonus. I do not exactly understand how the bonus is paid.
1158. I suppose you view it almost as an impossibility to carry on your trade in your own home? Oh, decidedly I do.
1159. Have you acquired a knowledge of any other trade since you have been here? Oh well, the first three months I was here for nothing; they had me with a man making halters. Well, I learned that business, and I made a couple of dozen of halters or so, and I have not done any since, and I didn't get the option to do any at home.
1160. *President.*] Is there anything else you wish to say? I think that is about all.

W. Northcote.
2 April, 1898.

W. Milne sworn and examined:—

1161. *President.*] You are a mat-maker? Yes. I may as well tell you at once I have no complaints to make, to save any trouble; but it is about the aged blind—those that are working all their lives and become unfit to work, and to ask if anything can be done for them to save them from going to the poor-house. Of course they abhor the poor-house—I beg its pardon, I mean the Benevolent Institution.
1162. Something in the nature of a pension? Well, yes. Of course it is bad enough for a man to be old and go there, but it is still worse for a man to be old and blind and go there.
1163. Would your idea be something in the nature of cottage homes, or a pension;—where they have friends I presume you would recommend that they should have some sort of small pension? Yes.
1164. Where they had no friends a pension might not be of any advantage to them? I can quote you an instance. Mr. Clay, an old man who was working here, kept on till the last minute, and, of course, he got unfit for work at last, and he went out with an organ. He abhorred the idea of going into Parramatta,—of course it is not a pleasant place, by all accounts,—and to the last minute he kept outside, until he had to go into St. Vincent's. He was a steady man, and that sort of thing, and was over 70 when he died. Well, of course, a little pension to anyone like that would be a help. It is bad enough to be old and sighted, but to be old and blind—it is no comfort at all.
1165. Of course, the small pensions which might be given would be very useful to blind persons with friends to look after them, but would be insufficient for those with no friends to look after them, and cases of that kind would be better met by having a few cottage homes where half a dozen people could live together, a couple in each cottage? Yes. Well then it is this way with those that are up there in Parramatta—the sighted, I think, get up to tricks with them, and annoy them, and make their lives ten times worse than they otherwise would be. That is one thing.
1166. I suppose you are aware that in Parramatta there are twenty cottages in charge of a matron, where couples live together, a couple to each cottage. Would that meet the case better than a pension? Well, I suppose something like that would do where they had no friends,—something that would lighten the burden of their lives at the last run.

President.] We will give consideration to that question.

W. Milne.
2 April, 1898.

- W. Milne. 1167. *Mr. Powell.*] Do you find, as a rule, that the blind get along pretty well together, or otherwise? Well, I think they are best separated amongst sighted people.
- 2 April, 1898. 1168. You think they should be mixed up with sighted people? Yes, I do. For one thing, the blind are too apt to live within themselves.
1169. They are thrown inward necessarily? Yes. A sighted man, if he has any brains at all, his life will broaden; but a blind man, being thrown inward, his mind becomes cramped, and is likely to be more cramped if he mixes with other blind people, because he comes in contact with cramped minds, so that I think really it is the best thing to mix them with sighted persons.
1170. Do you find that amongst themselves they have little jealousies and unpleasantnesses that people generally, who are sighted would not have? Well, mixing in any class at all you will find that.
1171. But I mean particularly because of the affliction, and being thrown in amongst themselves. Have they sympathy with each other, do you think? Some have, and some have not; that is the only way I can answer.
1172. You would gauge them as you would ordinary people? Yes, as far as my experience of them goes. Of course I have seen some that have been blind for years, and they have plenty of sympathy.
1173. Sitting here as a Commission we find small matters spoken of as difficulties that I think ordinary people would not mention? Yes. Well, of course it may be the blindness.
1174. Do you think it is inseparable from the condition? Well, yes, I do, in one way, because blindness itself tends towards causing you to go downwards. I do believe it tends towards depravity, if anything.
1175. In what sense?—sense of right or justice? All through.
1176. Delicacy of feeling? Yes, and in sense of manhood. You know that there is a certain manhood that every man should carry with him, and a certain sense of justice and right and wrong, and I think the blindness tends to depravity.
1177. The moral sense becomes blunted? Yes, if you do not take care. It is a hard battle to fight when a man becomes blind at once, and everything before him becomes a chaos.
1178. That would be more the case with the illiterate blind? Yes, in the case of all blind. That is why I think a place where they have got work to do, and a trade to work at, is really the best thing out for the blind.
1179. What are you working at? The mats.
1180. You could not work at home at the mats? I think you could work a little at them, but you could not work at them altogether.
1181. You could not work at them generally? You could not work the lettered mats at home.
1182. Do you work at piecework? Yes.
1183. Do you manage to make a fair wage? Well, I think I do on the average—from 17s. 6d. to £1 a week, and some weeks I may go over the £1, according to the order of work that comes in. Of course you must take the good and the bad in orders.
1184. Do you find the others molest you, or trouble you, or worry you in any way? No. I would not let them.
1185. I suppose there are always butts in a workshop? Yes. I saw it at school, and in the University, and everywhere.
1186. *President.*] Do you look forward to doing anything on your own account? Well, if I can possibly do it I will. I say, "Never say die," that is my motto. If I can possibly manage to do anything I will; but it don't do to leap before you can see a chance. If I could see my way clear I would do for myself at once.
1187. *Mr. Powell.*] Is it not rather a disadvantage to most of the workers that they are obliged to live in the immediate vicinity of their work? I do not think so.
1188. Some of them seem to be quartered rather closely? It is their own fault, I think, because they can all get about as well as anyone else. They have no need to stop here; they can go twenty minutes out of the city. The walk in is merely exercise.
1189. You are pretty close? Yes, I am; but it is only lately. I used to be out at Forest Lodge. I was away out at Moore Park, and I never had any trouble to come in, and really if I felt to-morrow that I was suffering ill-health—I never did suffer ill-health in my life—I would not stay in the place; I would go out. It would mean getting up twenty minutes earlier, that's all.
1190. *President.*] Do you find a difficulty in taking suitable exercise—you appear to be an active man? Not a bit. If I did not have sufficient exercise at the work, if I cannot get out for a walk, I take the dumb-bells; it's all the same to me, and everyone can do that. The will has a lot to do with it in every man, I don't care where he is.
- Mr. Powell:* I think it is very nice to know that you are here to advocate the interests of others, and not for yourself.
- President:* We shall give very careful consideration to the general question you have raised.
- Witness:* Another thing, I think, that would benefit us a lot would be standing orders from the Government Departments. Sometimes we get slack for orders here from private persons, and of course we do not work. We can do better on lettered mats than we could on plain mats.
1191. *Mr. Powell.*] You are competed with by prison work? Yes, and also with American prison work coming in here free. The more work we can get the better. I think it is hard for a man to be 70 years of age and have to die almost on the Sydney streets.
1192. *President.*] Do you think as a whole the workers here are treated fairly well;—you yourself have no complaint, but you are a man that can take your own part—but some of the workers may not be so well able to take their own parts as you are;—do you think that on the whole these workers are fairly treated? Well, as far as I know—as far as I can conscientiously judge—I think they are. Of course, you may speak to a man and he may complain to you, but to judge that man you would want to live within him and know his environments and circumstances.
1193. That is why we ask you;—we know that there always will be complaints, and we want to get inside of these complaints and see what they really mean? Of course, I think that some of them would like the system of a fixed wage; I do believe that.
1194. *Mr. Powell.*] Don't you think that there should be a minimum living wage? I do not exactly understand you.
1195. Do you not think that a man should get enough to keep body and soul together? Yes, I do; some of them would like the fixed wage. Of course, there is one objection to that, and that is that one man may

may act conscientiously and do his work but another man may not; he may loaf, and say, "Well, at the end of the week my money is coming in." I should say that the committee should deal with, him, and if he did not do his work fine him or let him go.

1196. *President.*] That objection is apparent. But if the man is to be employed at all, should he not get the minimum wage?

1197. *Mr. Powell.*] Do you think a man can live on 15s. a week? Well, of course, they do it.

1198. I am only talking about the man himself purely? Well, I think that it is a push—of course it is a push; it is no use saying one thing and meaning another. There is no doubt it is a push, and really it may be better if they get 17s. 6d. to £1 until they came on to their piece-work and then it would be a different thing. Of course, I suppose that would be in the case of those that had no friends or anything like that.

1199. Piece-work is a very good check upon a man? Yes; only it is like everything else; you can make a drawback to everything if you like. A little more than the 15s., I think, would be better for them. If a person has to pay 14s. for his board, or even 12s. 6d., there is not much left for any other little necessity of life that he may require.

1200. *President.*] Do you contribute to the sick fund? Yes; and I have had the benefit of it two or three times.

1201. *Mr. Powell.*] The committee double the subscription? Yes; I give 1s. a month and they double it. If it is 40s. a month they give £2, of course.

1202. Does that fund meet the calls upon it? Oh, yes. I think there is £130 to the good now. Of course, I think that, as a whole, we have been a pretty healthy lot, and there has not been much strain on it as you can judge.

1203. I suppose the doctors do not charge anything? No, they do not charge anything, but of course I can get advice outside of the doctors here. Dr. Crago is very good, but Dr. Chisholm—I had a poisoned leg one time, and wanted to see him, and he said he would see me when he came out that road, and of course, my leg might have mortified if I had waited. He may have had so much to do that in the hurry and scurry of business life he could not come; but Dr. Crago is very good.

1204. *President.*] You quite approve of the fund? Yes; I think the fund is fair enough, but of course the way it is now we get the 15s. a week and the medicine; Hemmell, at the top of Liverpool and Oxford Streets is the one we go to. Of course, some think that a £1 a week and get your own medicine would be better, and perhaps in the cases of persons living at Woollahra it would not be desirable for them to have come in to Hemmell.

1205. *Mr. Powell.*] They might like to prescribe for themselves? Yes; of course these things cannot be helped. I should like you to give the mat-work your consideration. Of course I would like the lettered mats every day in the week.

1206. They pay best? Yes.

1207. Do not the bordered mats mean more? You get paid so much for the border, but for the lettered mats you get 4d. per letter, and if there are seven letters it means 2s. 4d. extra independently of the payment for the weight of the mat.

1208. Does it knock your hands about? Sometimes it may give you a cut, or a strand may break and the wire give you a nick, but even sighted men at their work are liable to that. I think really that the idea of the minimum wage for the beginner would be good for him.

1209. He should be assisted up to the time when he can do piece-work and then he must live by his own hand? Yes. I hope you will not forget us in the mats.

John Spiers sworn and examined:—

1210. *President.*] How long have you been here? Three months.

1211. What have you to say? The sum I receive will not enable me to keep myself? I get 14s. a week.

1212. You are a learner? Yes. I have got 13s. of that to pay for my board.

1213. What work are you engaged in? I am weaving.

1214. I presume that your work, of course as a learner, is not worth much to the institution? I cannot say exactly. I am getting on well with my work; I think I can very near make my wages.

1215. How long have you been blind? It will be five years when July comes.

1216. What had you been engaged in before you came to the institution? I started in business and got a bit "cronk" and lost all I had. Of course I was a coal-miner.

1217. Was that the cause of your blindness? Yes, at Newcastle.

1218. We shall consider as far as our duties lead us the whole question of the wages of the workers, and, of course, your representation will be considered. I do not know how far our duties will lead us in that way? It is like this: a fellow living down here, a stranger, wants a little to keep him in clothes and boots, and he cannot do it on that. Of course it is only a matter of time when I shall be forced to leave if I cannot get anything better. I will be driven away from it, and will have to try something else. There is not enough means of support. A man always needs some little thing in the way of clothes and boots. I am willing to work hard enough.

1219. *Mr. Powell.*] How long have you been on the 14s. pay? Three months since I came.

1220. How long will you have to remain on that pay? Well, I am supposed to be on it three years, and I may go on it for five years; it just depends upon how you go on with your work.

1221. Do you think you could get on with 15s. a week? I do not see how I could keep myself in clothes and boots on that.

1222. Fifteen shillings a week would not be sufficient? No; you need a little for the necessaries of life.

1223. Could you earn better wages at piece-work? I do not suppose I could. You have some very bad luck at times with your work. Anything under £1 a week is no good for a man to keep himself respectable on here in a town like this.

1224. *President.*] We will discuss the whole question of the wages, and consider that? As far as the place is concerned it is right enough.

1225. You have no complaint against your treatment in any way? I have been well treated since I came, and treated with civility. I like the place well enough.

Mr. Hedger, Manager of the Institution, was recalled and examined:—

- H. J. Hedger. 1226. *President.*] This is your overtime return? Yes.
- 2 April, 1898. 1227. I understand that your idea is that a man shall not receive less than 15s. a week, nor a woman less than 12s. 6d.? When they are learners.
1228. What becomes of them afterwards? They go on piece-work then.
1229. And if they only earn 8s., that is all they get? Yes.
1230. You say that while they are learners a man does not receive less than 15s., nor a woman less than 12s. 6d.;—now, how long does the period of learning last? Five years with basket-makers.
1231. Let us take a man first; he commences (say) on the 1st January, 1898? Yes.
1232. What does he get? He serves three months' probation.
1233. What does he get for that three months? If he has friends he gets nothing, and if he has no friends he gets 14s. a week.
1234. After the three months? Ten shillings a week, and if they are destitute they get another 4s., or in some cases 5s., from the Government asylums; that makes it up to 14s. or 15s. a week.
1235. And if they are not destitute you rely upon their friends making up the difference? Yes, of course; they are living in their own homes.
1236. If they are destitute, do you make application to the Government for the subsidy? No. In every case when a man has come here he has been sent here by the Charities Officer. In no cases have we had any application from a worker to the committee for extra remuneration.
1237. The first three months they get nothing unless they are destitute, and then they get 14s. or 15s.; and after the three months they get 10s. from you, which is partly the value of their work and partly made up by subsidy, and if they are destitute they get a grant from the Chief Secretary, which makes it up? Yes. If they come through the Chief Secretary's Office they get a grant of 5s. or 4s. a week.
1238. Do they make any declaration of destitution? I do not think so.
1239. Suppose two people come here on the 1st January and one is destitute, but you have reason to believe that the other is not destitute, how do you know? The application form gives us all the information. (*Application form produced.*) All this information has to be supplied to the committee and signed in the presence of a witness. In some cases, they say they have no friends and then the first Christmas they are here we find out they want a fortnight's or six weeks' holiday, and we find all of a sudden that they have friends.
1240. You take all the information you can get from the applicants and this shows those who are destitute and those who confess that they have some means? But in any case we have never had anybody who was willing to admit having means.
1241. Does the committee make any inquiry to test it? Well, in one or two cases we have police reports.
1242. You take it that those who do not claim the extra 5s. from the Chief Secretary's Office have means? Yes.
1243. After that? The second twelve months we take them off the hands of the Government altogether, and they get 15s. and those who have friends get 12s. 6d.
1244. And the third year? They get the same, 15s., and then the fourth year the basket-makers get put on piece-work and get 5s. bonus on top of what they earn.
1245. So that in order to still get the 15s. they would have to earn 10s. and get the 5s. bonus as well? Yes, but if they earn the 15s. they get a £1 and if they earn a £1 they get 25s. It is an incentive to them to push out. The fifth year they get what they earn and 2s. 6d. bonus, and after that they get what they earn and 20 per cent. bonus. I think if our wages were taken and compared with those of sighted persons outside, it would be found that we are paying fully 20 per cent. more all round.
1246. Do you not think that the piece-workers appear to be more favoured than the others? It might be so considered. The Committee are considering the advisability of making the weekly allowance for the third year more than for the second year, but the difficulty really is in finding out what these people really have. Taking this six months' earnings it would appear to me that some of the men do fairly well for the three years tuition, but on the other hand you might get a person who has been here for three or four years who might not get that much.
1247. Here is a man that has been here twelve years? (*Indicating on list.*) That is a man that would never earn any more. He earns 9s. 6d. and we have to supplement his earnings with 5s. 6d. Then there is another man who has been telling the woman where he lives that he only gets 10s. and she has had to keep him and do for him for that, whereas he gets 15s. from us.
1248. Here is another man who has been fourteen years in the institution and he is only getting 14s. a week;—how is it that a man on piecework is only getting 14s. a week after being here for 14 years? That is what he earns. Some weeks he earns 20s. and the next week he drops down to 13s. It all depends to a certain extent with the piece-workers on their exertions. One week he will earn a guinea and the next week he will only earn 12s. 6d. He is chair-caning. I am not quite sure but I think this man has means and where a man has means he won't exert himself so well as the others who have not means.
1249. Here is a man evidently experienced earning 14s. a week; it seems a poor wage? I think if inquiry were made it would be found that he has means.
1250. *Mr. Powell.*] I have got him down here as "small means"? If a man will not strike out and work we cannot make him work.
1251. *President.*] Having small means, I suppose he looks upon this as pocket-money? He keeps himself very clean and well-dressed.
1252. Coming to another man getting 12s. 9d. a week:—he has been six years in the institution? That man was a chair-caner the same as the other. He was doing fairly well, and then he asked to be put on brush-making, and we made it a point to put him on it, and he was not very particular as to what he earned. He has got a horse and cart in the corporation and a house of his own, and his father is a large squatter, and we know very well he does not want any more.
1253. Now, * * * ; he receives 15s., 10s. from you, and 5s. subsidy? The same applies to him as to * * *. He has been here ten or eleven years. We were paying him £1 a week for years, and his average wages were only 4s. 6d. The committee told him that if he could not do better than that after eight or nine years in the institution they could not keep him on. You cannot possibly subsidise a man to that extent, giving him the difference between 4s. 6d. and £1 a week. He has not got the strength to work. His work is not saleable.

1254. *Mr. Powell.*] Is it a charitable institution or is it self-supporting? It is charitable; but our object is to get men who are really strong enough to work. This * * * works as hard for that 7s. 6d. a week as some men do for 25s. He tries his best. He gets 10s. and 5s. from the Government permanently. There is no doubt about it, it is a charity to keep him here, although he does nothing, and all the brooms he makes come to pieces. We had a Railway contract last year, and all the brooms he made had to come back after a day or two. There is no room for a man like him here. If he left here he would have to work or go to Parramatta. Mr. Maxted offered to make special arrangements and put him in Macquarie-street, and he said he would jump over the Heads. That accounts for the loss in years gone by. Now, my idea is—and it is not the idea of the committee, for Mr. Sinclair said yesterday that he has not any hopes of making the institution self-supporting without the aid of the Government subsidy, but I have.
1255. *President.*] He modified that afterwards? My idea is that before long we would be able to do without the Government subsidy entirely. I would be very glad if we could do without it. It would do away with the political influence. * * * knows Mr. * * * and he kicked up a row. We paid * * * over £400 out of this institution as wages, and he earned £70, and the greater part of that we had to throw away; it was useless. He has been on chair-caning and brush-making and everything we could put him to, and he is not a success at anything. The institution ought not to be blamed for that. On the other hand, there is a man who has been here for five years. On an average he earns 26s. a week and sometimes 35s. He came from Parramatta Asylum.
1256. *Mr. Powell.*] You have helped him to that by teaching him a trade? Yes; and that man could go and compete with any sighted man in the trade. Mr. Ashton made a statement here that the sighted wages were £2 a week, but at the prices paid outside now there is no sighted person can get more than 30s. per week; they are selling the work so ridiculously low that we cannot compete with them. If we had any means of getting the prices higher—if we had a policy of protection, for instance, that would put a duty on the goods coming in here, I believe that the prices of the mats would go up at least 25 per cent.
1257. *President.*] You would then have competition;—others would start manufacturing? We do not mind competition. We rely on the sympathy of the public. They say if you can supply an article at the same price and equally good we will give you all our work. In proof of this you will see that during the worst period the Colony has experienced we have increased our sales.
1258. The next man is W. Northcote, who has been two years in the institution and receives 12s. 6d.;—is that the proper rate for a man who has been two years here? Yes; 12s. 6d. He has a mother and brothers and sisters all grown up. He is very discontented and has caused us a lot of trouble. He will not work. He seems to fancy he is earning double as much as he is getting. He has made very bad work since he has been here. I have had to complain to his mother that he comes here at 9 instead of 8 to work. His mother comes here and says she can do nothing with him and the whole household cannot get him to get up. She says he is such a trouble that she wishes he was in his grave.
1259. *Mr. Powell.*] What induces the committee to dismiss a worker? They give a man every possible chance before they do that. I think only four have been dismissed since the institution has been opened. I think there have only been four dismissed in eighteen years. One of them is that man who sings on the street with his wife whom everybody knows.
1260. *President.*] The next one is C. Pitman, 12s. 6d. a week;—is that the proper wage according to the time he has been here? Yes; he lives with his mother.
1261. Tracy? Yes; 10s. from us and 5s. from the Government.
1262. Evans, 10s. from you and 4s. from the Government? Yes.
1263. Now, with regard to the women;—we understand that every woman who supports herself is supposed to get 12s. 6d.? Yes.
1264. Now you told us how the women entered;—do they give three months' labour for nothing? Well, only in one case, Miss Henderson's. She was living with her mother.
1265. She had to serve the probation for nothing because she had friends? Yes; they wanted pay but the committee would not grant it.
1266. Those who have no friends are allowed something during the three months? Yes.
1267. After the three months what do they get? 10s., I think.
1268. And these others (without friends)? 12s. 6d.
1269. What do they get the following year? The same, and the third year also, and the fourth year they go on piece-work wages.
1270. The third year 12s. 6d.? Yes.
1271. And the fourth year piece-work? Yes; you see they run out in three years, but the basket-makers get five years to learn in.
1272. After they go on piece-work if they only earn 5s. or 7s. 6d. that is all they get? Well, I do not know. You see we are establishing a Destitute Workers' Fund. That has been established lately; in fact, we had it for some time only the money ran out. Possibly, if these people earning such small amounts at piece-work applied to the committee, the amount would be made up if they were doing their best, and if their conduct was satisfactory.
1273. Of course, at the end of next year, when these people go on piece-work, if they only earn 8s., 9s., or 10s., it is self-evident that it will not be enough to keep them? Yes; the committee know that as well as anybody.
1274. What will be the position of these women at the end of the third year, provided they do not earn 12s. 6d., assuming that 12s. 6d. is the minimum on which a woman can support life? We have never had a case where a man has come before the committee and said "I do not get enough to live on." The women have done extraordinarily well with the overtime. This return does not represent all the overtime that they have had. My experience since we started giving them this work at home is that it is a failure, because they do not think you pay them enough. If you pay them 2s. for a chair they think you ought to pay them 3s., or if you give them 3s. they want 3s. 6d. One says to another, "How much did you get for your chair?" and perhaps it was a slightly larger one than the first had, and she says "3s." "Oh," says the other, "I only got 2s. 6d.," and then there is trouble. The overtime is not given to them to supplement their wages, but simply when we get a rush of work. We might get a dozen chairs to-day that might be wanted in two or three days. I would give some to the women and some to the men, and they take them home and do them and are paid for it. The only time they get the overtime is when the work is really wanted. It causes a lot of trouble.

H. J. Hedger. 1275. The Committee have not as yet had to consider the question as to what is to become of these women when they are out of their third year? No, because we have not had the experience yet. I judge that they will be earning 15s. or 16s. a week. That is the experience of the other institutions.

2 April, 1898.

We cannot get the women to do the work they do in other institutions, the pan-work. I have written to the Adelaide institution, and was told that the women earned 15s. and 16s. a week at pan-work and they refused to come off it, but none of our women would do it. Mrs. Nairn tried it, but after a time she objected that the pitch made her head ache, and worried the ladies' committee until they took her off it. I will hand in this statement of wages before they adopted the piece-work system, when every man used to get so much a week. They were credited then with 20 per cent. more wages than they are now. You see all those men were getting from 20s. to 25s. a week, irrespective of what they earned, and then the committee saw it would not run to it. The men were earning 6s. 3d. to 10s. 3d. and getting 20s.

1276. A fixed wage would not answer, but should there not be some minimum wage for the men and women—a minimum that they can possibly exist on? Yes; but no person has come here but he has had enough to live on. Since the institution started the committee have subscribed no less than £1,450 out of their own pockets, in addition to giving their valuable time, and where you get a number of business gentlemen who will touch their pockets to that extent, as well as give their valuable time, it shows they have an interest in the institution. I am sure the committee would not let anyone want.

Mr. Powell: It is perfectly clear that the sympathies of the committee are with these poor people. There is Judge Stephen; he is always willing to see any of them, and Mr. Sinclair, up at the Museum, is always ready to see any of them.

1277. There are four men at 14s. and one woman at 10s.;—if you, as you told the President, take 15s. as your minimum for men, and 12s. 6d. for women, how is it that they are not receiving it? That girl has friends; she is living with her mother. I mean destitute workers. As Mr. Prescott says, there are some people here who ought to be paying the institution, instead of the institution paying them.

[The Commission then adjourned.]

FRIDAY, 15 APRIL, 1898.

[The Commission met at the Offices of the Public Service Board at 10.15 a.m.]

Present:—

GEORGE ALEXANDER WILSON, Esq., J.P. (President).
JAMES POWELL, Esq., J.P.

Mr. H. Hedger, Manager, Sydney Industrial Blind Institution.

Thomas Mercer sworn and examined:—

T. Mercer. 1278. *President.*] You were once an inmate of the Boomerang-street Blind Institution? Yes.

15 April, 1898.

1279. Of course we do not know what evidence you are going to give, but as it will have reference to the institution the Commission have decided that Mr. Hedger should be here to represent the committee of the institution, and he is here so that he may hear what is said, and if anything is said affecting the management of the institution he will have an opportunity of explaining matters to the committee. The Commission will be prepared to hear what you have to say, and Mr. Hedger will have an opportunity of replying to anything that you may say, and even of examining you. You have a statement to make? Yes.

1280. You will remember that it is useless to come here to make statements which you cannot substantiate? Yes. It is expected by all thinking blind that this present Commission, actuated by common sympathy, will investigate and determine for their future temporal well-being. We, the blind, being deprived of the chief of our five senses, are still sensitive to the unnumbered necessities and pleasures common to the human family.

President: Before you go any further you must remember that this is not a Commission to investigate the condition of the blind and to find means for improving their condition. The object of the Commission is to investigate the management of Government and other charitable institutions.

Witness: Knowing what we might be, and feeling ourselves bound by the stubborn cords of affliction, what think you must be the feelings of our inmost souls. Once more, we are not, as a rule, a miserable people, but our happiness or necessity depends largely on the gift of humanity developed in our seeing brethren. In undertaking to vouchsafe evidence to this Commission concerning the Sydney Industrial Blind Institution I deemed it best to relate my personal dealings and experiences with that place. It was in July or August, 1882, when I first was admitted a boy of 17 as a worker into the Sydney Industrial Blind Institution. In all, we, the workers, were under ten in number. The industries then pursued by us were basket-making and mattress-making: The staff of officials consisted of Mr. Pearson, manager and teacher of mattress-making, who, with his wife and family, resided in the building; and Mr. H. Hedger, the instructor in basket-making, whose residence was not in the institution. Mr. Pearson, the manager, was naturally of a kind and sympathetic temperament, being most amiable and agreeable to the men, and at the outset of his career commanded their undivided respect. On my advent to the place there was undoubted amity between the men and the manager. For some days after my admission I was allowed to remain in the building in perpetual idleness. Why this was so is only known to the secret heart of Mr. Hedger, who was the basket instructor. It was certainly not that his time was so fully occupied that he could not give me the attention due to me. He had many long bouts of leisure, in which intervals he might easily have imparted to me instruction without delay. Being always present with the workers in the basket-room, it was my miserable resource there to stand on my feet on the floor, or to sit down when I grew weary of standing, and I would often, very naturally, when tired of sitting and standing in turns, and of the idle talk of the workers, fall asleep upon the floor, out of which I should be speedily aroused by the stirring voice of Mr. Hedger. He was all alive to his duty in that direction, although I was not sleeping over my work. I repeat that this state of things lasted for some days, till at last, growing weary of my idleness; I, one day, in the hearing of a fellow-inmate, confided my opinion that I was dealt with most unfairly, and that Mr. Hedger was guilty of a breach of duty.

This

This *confidante* laid my views before Mr. Pearson, the manager. Then I was rapidly arraigned and confronted with it, and being an inexperienced boy, I was powerless to defend myself, and was designated a grumbler, and—as is generally the case—the stronger came to the front. After this, my tuition in basket-making began, but it was very indifferent and intermittent. I continued at that time to be a workman in the Sydney Industrial Blind Institution for two years and nine months, but in May, 1885, I was one of those who left the building on strike and refused to go back on the terms required. Of the period of two years and nine months spent by me in the Sydney Industrial Blind Institution fully one-third was wasted upon me, the reason being that I was made an errand boy of by the manager and teacher. For this work I was naturally unfit owing to my affliction, and it is no small wonder that often after being sent out to the suburbs to deliver small orders I returned, not being able to find the places of those who ordered the goods. This imposition practised upon me, I am persuaded, was known to the committee, and I may add that on several occasions my life was endangered.

T. Mercer.
15 April, 1898.

1281. Have you to read all this that is before you? Yes.

1282. *President.*] We want to know what you have to say about the present management of the institution;—we cannot listen to an account of your doings years ago? I come right down to the institution; I give all my personal experiences from beginning to end.

1283. We do not want your personal experiences—we want what you have to say about the institution, and in a few words? I was informed that in giving evidence before this Commission that I must put what I had to say in writing, and I understood that the Commission was here to investigate the conduct of the institution, past and present.

1284. Not the conduct of the institution years ago. The institution is now under different management. Mr. Hedger is now manager, not instructor, and the management may be entirely different. Even granting that the management was bad formerly, it may be good now? Mr. Hedger was in the Institution then, and he is there now. He was not there in the capacity of manager then, but he is at the present time, and his influence has gone right through the institution, affecting it materially.

President: Mr. Powell suggests that instead of reading this paper you could have it transcribed and hand it in, and you could supplement it by any statement of facts. However, you can go on for a little until we see what it leads up to.

Witness: Having already made mention of the strike that took place in the Sydney Industrial Blind Institution in 1885, I deem it necessary to give an account of its actual cause. I have already touched upon the amity that existed between the men and the manager; but I regret to state that the feeling between the men and the basket teacher was vastly different. The first man who left the institution was one named Hughes, whose resignation was due to an unfriendly dispute between himself and the basket instructor. Hughes, prior to his admission to the institution, earned his living as a street musician, and although he would have gladly remained in the institution at a small wage, he preferred his former peaceable occupation.

President: Take that as a sample. Here is a man named Hughes, who had some words with the manager, and he left the institution. What has that to do with the business of this Commission? As far as we know, he may have been properly expelled. Mr. Hedger may have been perfectly correct all through this matter. The Commission are not going to waste time listening to things of that kind. You have not attempted to show that Mr. Hedger was wrong.

Witness: I cannot attempt that; that is a matter between him and Hughes.

President: Then why should we listen to a narrative of that kind. We insist that you confine yourself to what is absolutely within your own knowledge.

Witness: Is the strike which has been referred to too far back?

President: We are not concerned with it at all. Deal with any substantial grievance. If you are wronged, or if you consider that the present workers are wronged, if it is within your knowledge that they are badly treated, we are prepared to hear you, but we are not prepared to go into ancient history.

Witness: I will briefly state that when the strike took place I refused to go back simply because the conditions on which we could go back were these—that every striker had to sign a paper to the effect that all the complaints lodged against the committee for neglect, and against the manager for bad treatment and neglect, and against Mr. Hedger of inciting the strike, were utterly false. I refused to sign it. That was in May, 1885. In 1894 I applied to the committee in March, and I was informed that in order to get into the institution I must go in as a married man for three months for nothing; for the next twelve months, receive 10s. a week; for another twelve months, 12s. 6d. a week, and for the third twelve months, 15s. a week. I could not find out how I was to live for three months without any wages. That is in opposition to the idea that the institution is for those blind people who have no friends to support them.

1285. Of course you cannot blame Mr. Hedger. If it is a matter of regulation the committee are responsible? I got into the institution by appealing to the Government who granted me, for six months, a sum of 16s. a week to tide me over the probation period. The Government subscribe largely to the institution, and it seems to be an injustice as the funds of the institution are supplemented by the people, and a great deal of goods are disposed of there. For some time after I went into the institution I was not there in the capacity of a learner, although I was there under the learners' regulations. I was taught to make halters when quite a boy, and in the institution I was put to halter-making, and I earned the money that was allowed to me. Where did that money go to? If it went to the institution, the institution was making a large profit out of me every week. At the end of that six months I was put to learning chair-caning—a most difficult kind of work for a blind person, very fine tedious work; and this was after I had worked for so many weeks earning from 16s. to 17s. a week.

1286. Do you state that you actually earned 16s. a week? I do. After I went into the institution I was put to halter-making. I was at halter-making during the greater part of that six months, and occasionally on netting, and at a later period I was put to caning chairs, and I could not earn my salt at it. Very few can. To earn anything at it they have to be very expert, to have extremely fine touch, and a very steady brain.

1287. Blind people do cane chairs? Yes, they cane chairs; and it is one of the worst paying games they can be put to. However, I was suffering—and the institution has a certificate to that effect—from a double complaint owing to my sedentary employment. The complaint brought on stricture and fissure of the bowel, which affected me very materially, and it kept me from work occasionally for a couple of days.

One

T. Mercer. One Thursday or Friday afternoon, at the time of taking the account of the work done for the week, I said to Mr. Hedger, "I feel this complaint a nuisance; I am not getting better, and the doctor says I ought to go into the hospital and submit to an operation, and I think I had better leave." He told me I could please myself. I said I would not go on Friday. I went for my wages on Saturday at noon, and Mr. Hedger then wanted me to have a resignation written. I told him I had not been able to get one written. It is not always convenient to get people to write for you. I wished to go before the committee and appeal to them for leave of absence for two or three months, so that in the meantime I might regain my former health. However, I was very briefly heard by the committee. What was said before that concerning me I do not know. I was led by the committee to believe that they had nothing against me, and they said that the complaint I was suffering from must be very annoying, and that they thought it would be better for me not to be a worker in the institution. I know there was a little thing against me. It was in connection with the nuisance caused by the trough in which the basket material is soaked. The cane is soaked for a while and it gives the water a bad smell. At this time I was informed by a boy employed there that the trough had not been emptied for three weeks. The nuisance was tremendous; it prevented me from eating my food.

President: This is personal history which we are not concerned with.

Witness: I am stating that this was against me, because I went to the inspector about it.

1288. We do not want to know what is against you, but what is pertinent to the inquiry into the institution? I left the institution, but I want to specify how I got there. The Government supported me; I was costing the institution nothing; I was earning money; where did that money go to?

1289. What is the next thing;—we do not want to know your personal history, we want to know what you have to say that is really of importance in regard to the institution? I mention these things, because I may be questioned on them by Mr. Hedger.

1290. What is the next thing in regard to the management of the institution? I sell brushes, brooms, baskets, &c. I go about soliciting orders, and take brushes with me. I ordered a couple of brushes two months ago from the brushmaker, and I complimented him on the workmanship, and he said, "Yes, these are good ones; I made some for the Industrial Blind Institution, for them to exhibit at the Show." I understand that the work exhibited at the Agricultural Show is represented to have been made by the blind.

1291. What is the name of their brushmaker? His name is McMahan.

1292. What is his address? Smith-street, off Reservoir-street. I have been informed by two inmates of the institution that independent of the seeing instructor, who must be always there, the brush inspector, outside Mr. McMahan and his son, has been employed even for three weeks at a stretch in the institution, and one of the inmates has informed me that as McMahan finished an article he would let her feel it, and ask what she thought of those beautiful crown brooms.

1293. Is this within your own knowledge? I have been informed by workers.

1294. Who are the workers? Mrs. Nairne and George Evans.

1295. What is the next thing? I am pretty well acquainted with all the blind who have passed through that institution. There may be three or four whom I have not met, but to my knowledge about forty-five have left the institution since its origin, and not one of them is holding his own by what he learnt in the institution. I say that is a proof that the institution is of no permanent benefit to the blind. They have a bylaw that those who go in to learn a trade must stay five years, but that is an outside term. Such simple handicrafts as mat and halter making and netting can be learnt in less than five years.

1296. Would you be surprised to hear that Mr. Hedger admits that it is extremely difficult for blind persons to make a living outside the institution? I am not surprised at all; that is one of the things which I wish to mention to the Commission.

1297. As I understand it, Mr. Hedger, the Commissioners and yourself are as one with this witness as regards the difficulty of blind persons earning a living outside the institution.

Mr. Hedger: Yes, except as I have stated, under exceptional circumstances.

President: You are at one with the witness upon that point?

Mr. Hedger: Yes, but not to his statement that not one is earning a living outside the institution.

President: What is the next thing?

Witness: I wish to imply that the institution is a failure as far as any permanent benefit to outsiders is concerned. I have tried to get orders for halters at two of the warehouses in town. Walkers' is one, but I forget the name of the other. They told me that they would gladly give orders to me and other blind people who had called, but that the institution carts the work into the country, having all the advantage of Government subsidies and public subscriptions; that they conveyed the work into the country at town prices, therefore taking the legitimate trade out of the hands of the warehouses. We are out of the institution, and we are supposed to earn our own living. If we beg in the streets we are treated with contumely, and we like to earn our living without begging, but the legitimate trade of those outside the institution is destroyed.

1298. The warehouses do not carry on the only legitimate trade. It is perfectly legitimate for anyone to engage in lawful business, and to compete with the warehouses? The point is, that when we leave the institution we do not apply to the institution for work—we apply to the warehouses. The institution stands in the light of outsiders—it is an obstacle.

1299. It stands to reason that if an institution is a manufacturing institution, and blind people outside are manufacturing the same goods, that they must be competitors to some extent? Yes; but then we are expected to earn our own living. The institution is really our great obstacle. It competes against the blind outside whom they profess to have fortified with the means of obtaining a livelihood so as to keep them off the streets. The institution being an obstacle in this way to blind individuals, there must be something wrong.

1300. What is the next thing you want to say? I suppose the Commission is open to receive a suggestion?

1301. Yes, if it is a practical one? I should have said that I have learnt from Mr. Hedger that two men who had their sight can turn out as much basket-work in a day as seven blind men can turn out. That will show at what a disadvantage the blind are. I have been informed by a brushmaker that brushmaking is too vast a trade for any blind person to earn anything at it outside of the institution. I believe that a great part of the work of brushmaking must be done by people who can see. I am informed that no blind person can do certain parts of brushmaking.

1302. What is your suggestion? That it is impossible for blind people to earn their living outside the institution; that the blind should be supported by the State; that begging should be stopped; that a sum should be granted to the needy blind to live upon, or they should be furnished with a home and food, so that they could, by their labour, provide themselves with clothes and other things. I cannot see how blind people are to get along successfully under any other circumstances. T. Mercer.
15 April, 1898.

1303. I must remind you that this is not a Commission to inquire into the condition of the blind; it is to investigate the management of the institutions? At present I can think of nothing more to say, but should anything occur to me, if I am not allowed the privilege of appearing again before the Commission, I may be allowed to send it along in writing.

Mr. Hedger: I knew pretty well what Mr. Mercer was going to bring forward here to-day before he came, and I have a few questions to ask him, showing, in the first place, that he is not a reliable man to take notice of, because he has been admitted to the institution three times at his own request.

President: I do not think it is advisable to recriminate. You should confine yourself to anything that has been said which is a reflection on or adverse to the management of the institution.

Mr. Hedger: In regard to the treatment that Mr. Mercer has had from the institution I will refer to that hereafter. His reflections on the management require a little explanation. I was going to refer to Mr. Mercer's career in other colonies, but I will not do that, in deference to your wish, Mr. President. Mr. Mercer stated, that after the strike, before they could return to work the men had to sign a paper to the effect that they would not make complaints against the committee or any of the officials again.

Witness: No.

President: What he said was, that they were required, before they were admitted, to withdraw everything that had been said.

Witness: We had to sign a paper to the effect that all the complaints which had been made against the manager and the teachers were utterly false.

Mr. Hedger: Was not that after an investigation had been held?

Witness: Yes, when we sued to get back.

1304. You informed the Commission that Mr. McMahon told some of the workers that he made work at the institution for the Agricultural Show? I stated that Mr. McMahon told me in the first instance.

1305. And that two workers said that he had shown them work? Yes;—George Evans and Mrs. Nairn.

1306. Do you not know that it is a fact that George Evans was not an inmate of the institution when McMahon was there? Evans told me.

1307. Do you know that McMahon was employed as an instructor temporarily? He was.

1308. And he would have to do what work was required of him? Yes.

1309. You know that that would be the case? Yes; he would have to do what work was required of him, but I do not understand that that work should be turned out of the institution and placed on show as being the work of the blind. I was informed, by those whose names I have mentioned, that Mr. McMahon and his son were at the institution independent of the regular teachers.

1310. Two at the same time? I say they were both there—it may have been at different times.

Mr. Hedger: Mercer has stated that out of forty-five men who have left the institution not one is earning a living at present. I may mention, in the first place, that a man named Tighe who went to Auckland and established an institution for the blind there, and he is not only the principal of the institution but he does all the teaching in the institution. He had no tuition beyond what he received at our institution. I have a letter from him, dated the 19th November, 1897, in which he asks me to get him some willow and other material and tools. Then there is a man in Northern Queensland, named Fearon, who has been making an excellent living for some years by basket-making. We correspond with him and send him material. No later than two months ago a Judge of the Supreme Court of Queensland visited the institution and made a minute in the visitors' book to the effect that he knew Fearon, and that he was pleased to state that the man is making an excellent living. Then there is a man named Brown, who left the institution, from whom I received a letter stating that he was going to Wallsend to try and do for himself. He is earning his living by chair-caning and other work. George Mackay, who was about twelve months on brush-making and six months chair-caning, has gone back to his mother at Armidale, and he is going about the district caning chairs. Another man, Laughlin, has settled at Mount Druitt, and, as far as I know, is making a very fair living at mat-making. We supply him with material, and he buys material from Forsyth's. A man named Gorrick left the institution last month, and we have received from him a letter thanking us, and asking to be allowed to purchase material from us for making mats, &c. The next matter is that of the institution competing with the blind outside.

Thomas Mercer (examination resumed) :—

1311. *Mr. Hedger*.] As regards this matter of the institution competing with the blind outside, I would like to ask what you do for a living? If I have any particular trade it is halter-making. T. Mercer.
15 April, 1898.

1312. You do not make a living at halter-making? Certainly not; I should like to.

1313. Do you know anybody that does? Not a complete living.

1314. Do you know anybody who goes round to the different firms soliciting orders? Yes.

1315. You made a statement that two firms had given some information to you, one being Walker Bros.; could you not think of the name of the other firm? No; I fancy it is a foreign name.

1316. You said they told you that on account of the Blind institution doing business in the country it prevented them from giving orders to the blind? Yes.

1317. Would you be surprised to hear that during the last twelve months we have not had one man on an average employed two days a week making halters in the institution? (*Not answered.*)

1318. Would you tell the Commission how many halters a man would make in a day? An expert man could make one dozen.

1319. That would be two dozen a week, working two days a week on the average, eight dozen a month, or ninety-six dozen in a year. Suppose that the institution did sell ninety-six dozen in a year, do you think that that would prevent the blind from earning a living outside at halter-making? They said the blind institution.

1320. I do not think that we have supplied the firm of Walker and Son with £5 worth of halters since the Institution has been established? They stated that they would have given the institution their orders, but they found out that the institution was selling the goods in the country. 1321.

T. Mercer. 1321. You might give the Royal Commission a little information on another thing; you think that the blind institution ought not to sell their work in competition with the blind outside;—will you tell the Commission what we ought to do with the work when we have taught the blind? I could not say what should be done with the work, but I do say that the institutions are of no permanent benefit to the blind in general.

15 April, 1898.

1322. You have referred to a man named Hughes. I have been on most friendly terms with him ever since he left the institution. He may have transgressed the rule, but we do not bear any vindictive feeling on that account. I would ask you has the institution ever helped you in any way since you left the last time? In what way.

1323. In any way whatever? Do you mean by donations.

1324. Have they helped you in any way, by giving you work, supplying you with material, or lending you money? You have given me work occasionally on halter-making and on netting at home.

1325. Have you ever been supplied with rope at cost price? Yes, pretty well at cost price, I think.

1326. How long were you given to pay the account;—what were you told by me when you were supplied? To pay the account when I finished the goods.

1327. How long were you given to pay it? I do not know.

1328. Is it not a fact that I told you that the committee would be quite satisfied if, when you were paid for the halters, you paid for the rope? Yes.

1329. Is it not a fact that we sent the rope to your house in our own cart? Yes.

1330. Is it not a fact that we delivered the halters in our cart? I do not remember that.

1331. If it was the case it does not look as if we were trying to compete with the blind? You brought the rope to the house, but you did not deliver any private orders of mine.

1332. Have you ever been helped with money by any official in this institution within the last three or four months? All the money that I received from the institution was not given to me; it was given to my wife, and it is right that the Commission should know how it was that I received this help.

I am only asking the question to show that, instead of being antagonistic to the institution, you ought to have a grateful feeling, and to appreciate what has been done for you.

1333. How much money did you receive from any official in the institution towards paying off any debts that you owe? I believe about £1. I did not receive any of the money myself; it was given in instalments of 5s. each.

1334. You were given so much a week to pay off a debt by one of the officials? Yes; but there are circumstances surrounding that which must be expatiated upon.

1335. You acknowledge that? Yes.

1336. Do you recollect after you left the second time you applied to the committee to be taken on as a canvasser? I did not apply. You suggested in the first instance that I should take certain goods and try to sell them.

1337. You were getting employment, and I told you that the committee would allow you 10 per cent. commission on what you sold? No, 7½ per cent.

1338. Do you remember that there was some difficulty about orders that you delivered, and you were given notice to discontinue canvassing, and warned that if you continued to represent yourself as connected with the institution you would be prosecuted? Yes.

1339. Have you ever since, in going about, represented that you canvassed for orders for the institution? I have not.

1340. Have you ever been paid by cheque for goods that you supplied from a manufacturer, representing that they were from the blind institution in William-street? In one instance, I was paid by cheque, but I could not read the cheque.

1341. You had a boy with you? Yes; but he cannot read writing.

1342. Did you not offer to give the gentleman a receipt, and say that the boy would write it out? Yes.

1343. Then how can you say that he could not read writing? He can write, but he cannot read strange handwriting.

Mr. Hedger: I received the following letter from Mr. Sadler:—

To Secretary, Industrial Blind Institute,—

28 December, 1897.

Sir,

On 20th instant I paid for a door-mat delivered to me on that day. Your representative promised to post me a receipt for the same, which he has failed to do. Will you kindly do so, and oblige.

Yours truly,

HENRY SADLER.

This gentleman has been dealing with the institution for some years. Mercer went to him and represented himself as a canvasser, and took an order for a mat. He charged more than would have been charged by the institution for the mat. The cheque was made out to the Sydney Industrial Blind Institution, and Mr. Sadler asked Mercer for a receipt, and Mercer said, "I can give you one now," but Mr. Sadler said, "No; I want an official receipt"; not getting one, he wrote and complained about it.

Thomas Mercer: I went into Mr. Sadler's place and got an order for a mat. Some time before this I went in, and Mr. Sadler said, "Are you a private agency, or are you connected with the Sydney Industrial Blind Institution?" I said, "I have a private agency," and he said, "I will do anything that I can." I gave him my address, and he bought a small article from me. The next time that I went into the shop, he gave me the measurements, in writing, for a door-mat. I delivered that mat to him, and he asked me for a receipt, but he mentioned no institution at all. It was his stupid blunder; he had my address at the time. As regards the cheque, I did not know whom it was made out to.

1344. Did you write a letter to Mr. Sadler after he had written to me? Yes.

1345. Did he write asking you for a receipt? He did not.

1346. How did you come to write to him? It was owing to a notification in the papers.

1347. Did you tell him that the Sydney Industrial Blind Institution could not make mats? I told him that they could not make a mat equal to that which I sent to him, and that the price charged for that mat was only the price charged by the firm who were considered the cheapest firm in the town.

1348. Did not Mr. Sadler ask you the name of the secretary? He asked who was secretary to the Industrial Blind Institution, and I told him that Mr. Sinclair was.

1349. Do you know Mr. Gumsden, of Bondi Junction? I do.

1350. Do you supply him with anything now? I do not.

1351.

1351. Did he give you an order for three dozen flower-baskets when you were canvassing for us? I believe he did. T. Mercer.
1352. Did you not take him three dozen supplied by a sighted manufacturer, and did he not refuse to take them? No; he never refused to take anything from me. 15 April, 1898.
1353. Did you ever solicit orders on behalf of the institution for a man named Cooghan at Newtown within the last four or five months? No.
1354. So at present you are not doing anything of the sort? No.
1355. And Mr. Sadler is quite wrong? Yes, he made a mistake; I wrote and told him so.
1356. You wrote and told him that anyone with common sense would see that your explanation was quite right without referring any further? I did not say without referring any further.
1357. You have been supplied with rope for the institution at cost price? Yes.
1358. When did you have the last supply of rope for making halters at your own home? I do not know.
1359. Is it two years ago? It must be.
1360. Have you paid for it? No.
1361. How much is it? About £2 15s.
1362. Did I write and ask you for the money recently? Not recently; you may have done so six months ago.
1363. You received a note requesting you to pay;—what was your answer? That I should be glad to pay the debt by working it off.
1364. What reply did you receive to that? That you would give me so much work every week if it would be agreeable to me.

Mr. Hedger: The following is a copy of my letter to Mr. Mercer on the subject:—

Mr. T. Mercer, 4, Kendall-street, S.H.,—
Sir,

6th January, 1898.

Yours of the 4th instant to hand. Referring to your offer to work off the amount you owe this institution, viz., £2 15s. Sd., if the institution supplies you with materials, I have to state that the committee are willing to accede to your request, and I will send you every week enough material to make one dozen halters, which will amount to 3s. 9d. per week off your account.

If this meets with your views you can let me know and I will send you the rope.

Yours, &c.,
H. HEDGER,
Manager.

We offered to let him make one dozen halters a week. It would not have hurt him to work the debt off in that manner, but he would not do it.

1365. In December last, did you stand up in the Domain one Sunday and make some remarks about the blind institution? Yes.
1366. That was at the time when you were receiving 5s. a week from the Industrial Blind Institution to help you to pay off a debt? I do not know where the money came from; I believe it came from you—not from the institution.
1367. *Mr. Hedger.*] You came down and got it every week, and when I went away for three weeks I left 15s. there for you, and at the same time you stood up in the Domain and asked the public to believe that that institution and the Deaf and Dumb and the Blind Institution were not doing their duty to the blind, and you appealed to the people to take the matter up? I did, but the Commission having heard Mr. Hedger on the subject, I should like now to make my statement. In November last, I asked a young man if he would come and board with me to help us to get along. He acceded to my request, and had made all preparations to come, and had gone to expense to provide for himself. When he told Mr. Hedger where he was going, Mr. Hedger raved and said, "No, I will not allow anybody from my institution to go and board with him." It was a matter of speculation on the part of my wife, and she went to Mr. Sinclair, told him about it, and said she would appeal to other gentlemen on the point. Mr. Sinclair said he would confer with Mr. Hedger, and she was to wait. Some twenty minutes after Mr. Hedger came and mentioned the matter to her and said he was sorry she had gone to any expense, and that he would give so much a week to pay the money off so as to prevent the man from coming to lodge with us. It was mere spite. He paid the money for four weeks, and then discontinued it.
1368. About refusing to let a man go to your place to live, is it a fact that Mrs. Nairn wanted to go and board there? She said she would like to do so.
1369. She was thinking about going to live at your place? We did not want any females.

Frederick Adolphus Crowther sworn and examined:—

1370. *President.*] You were at one time an inmate of the Woolloomooloo blind institution? Yes.
1371. I may tell you that you must confine your attention to the management of the institution;—what is it that you want to say? My complaint is that I cannot get into the institution to work. F. A. Crowther. 15 April, 1898.
1372. You have applied and been refused? Yes. There are men from other colonies employed there, but I, a Sydney man, cannot get into my own institution.
1373. Is there anything else? I was expelled from the institution.
1374. What were you expelled for? Because I went into Court against the Railway Commissioners to get damages for injury done to my arm.

Mr. Hedger further examined:—

1375. *President.*] Crowther says he was expelled from the institution;—can you say why he was expelled? He was never expelled. H. J. Hedger. 15 April, 1898.
1376. He was never formally expelled? He was not expelled at all.
1377. What were the circumstances under which he left? He fell out of a tram and hurt his shoulder, and was away from work for some months. After that he entered an action against the Railway Commissioners for £1,000 damages, with the result that certain matters were brought out during the trial with regard to his position which made the committee think that they would not be justified in admitting him to the institution again. 1378.

H. J. Hedger. 1378. What matters came out? In the first place, it was said that £1,000 had been left to his wife.

15 April, 1898.

Mr. Crowther: No; I deny it, and you know it is false.

Mr. Hedger: I am only stating what came out to show why the committee refused to again admit Mr. Crowther.

1379. *President*.] You say that certain circumstances came out showing that Crowther was in such circumstances that the committee thought that he ought not to be an inmate of the institution? Yes. The committee told Crowther that they would be glad to give him any work that he could do at home; that if we were very busy at any time we would help him in that way. We have supplied him with rope at different times at his own request at cost price, and we have given him work to do at home. He will acknowledge that I have helped him.

Mr. Crowther: In what way?

Mr. Hedger: By giving you work.

Mr. Crowther: How much did you give me?

Mr. Hedger: I say we have given you work.

F. A. Crowther's examination continued:—

F. A. Crowther.
15 April, 1898.

1380. *President*.] I understand that after you left the hospital you were not afterwards readmitted to the institution? No.

1381. That is what you call being expelled? Yes.

1382. You were going to say something? Yes. When I came out of the hospital, after having been nine months under doctors, I got permission from the doctor to go to work if I could get light work. The manager of the blind institution said that I should have to make application like a stranger for readmission. I did so; then they told me that I could not be admitted.

1383. *Mr. Powell*.] Are you in indigent circumstances now? Yes; all that I have to live on is a horse and cart that I work under the Council. That is all that I had at that time, barring one that I was renting. I am getting three guineas a week for the cart, and out of that I have to pay a man and to feed him and to feed the horses. You can see from that how much I have to live on.

1384. *President*.] Are you a married man? Yes.

1385. Has your wife any means? No, none at all. All she got was £340 on the death of her father. We thought of buying a house and paying £200 down, the rest to be paid off as we could raise the money. £10 went in legal expenses, and we never got more than £190 paid on the house, the debt on which stands just the same as when we bought it; the other £140 was spent in general household expenses.

1386. You say on your oath that that is all that your wife is possessed of, and that all that comes to you is the balance from the Corporation cart? Yes; I say that on my oath.

THURSDAY, 2 JUNE, 1898.

[The Commission met at the Offices of the Public Service Board, at 10 o'clock a.m.]

Present:—

GEORGE ALEXANDER WILSON, Esq., J.P. (PRESIDENT).

JOSEPH BARLING, Esq., J.P.

JAMES POWELL, Esq., J.P.

Mr. James Powell sworn and examined:—

J. Powell,
Esq., J.P.
2 June, 1898.

1387. *President*.] Will you inform us of the result of your visit to the Deaf and Dumb Institution at Waratah? I visited the Institution at the request of the Commission, and I now hand in a report, which I furnished to the secretary upon my return. The report is as follows:—

WARATAH DEAF AND DUMB INSTITUTION.

On the 29th April I visited the Deaf and Dumb Institution, situated at Waratah, about 4 miles from Newcastle. The teaching of the deaf and dumb in the Northern District was commenced at Newcastle in the year 1875 by Dominican Nuns, who were chosen for the work by reason of the special training which some members of their community had undergone in the famous institution for deaf mutes conducted at Cabragh, near Dublin. The increasing number of pupils, and the necessity for increased accommodation, demanded the foundation of a separate establishment, and in 1885 the Dominican Nuns secured a site of a most desirable kind at Waratah, upon which the present building was erected and completed in the year 1888, at a cost of nearly £12,000, about half of which sum remains a debt upon mortgage with interest amounting to £300 per annum. The site is undeniably good, well drained, and healthy, with 4 acres of ground for garden, playground, and other purposes. The building is an imposing feature in the locality in which it stands, with a good entrance and reception rooms, right and left, class-rooms in the wings and dormitories above, with all usual domestic offices and sanitary arrangements. At the time of my visit there were thirty beds, twenty-six of which were allotted to that number of pupils, and other pupils were expected. Day pupils, deaf and dumb, are also taken. The institution with its present appliances could take a much larger number of children. Children of any religious denomination are received, and attendance upon the usual religious services is not insisted upon if the parents object. The teaching staff consists of the Superior, with an assistant, a lady of the same religious order, who is deaf, and two pupil-teachers, both deaf and dumb, trained at the institution. The oral method of teaching is followed, but the combined method of oral, sign, and manual is considered best under existing circumstances. A few of the children are paid for—one £25, two or three from £5 to £8 per annum—and some of the parents send a little money for clothing. Several thoughtful friends of the institution send old clothing, which the Superior with her assistants remake up for the more needy little ones. The institution receives no support whatever from the Government, although many of the children's parents are in such necessitous circumstances that they cannot contribute anything, and the children would really become State children, and would be paid for as such by the Government if they were sent to the Deaf and Dumb and Blind Institution at Newtown. The institution is conducted with the greatest economy, its main support depending upon voluntary contributions and the efforts of many sympathising friends. The children, several of whom entered the institution in an enfeebled condition, look well, and appear to be well nourished, cheerful, and contented. The building, which is capable of housing many more children, was built when labour and materials were much dearer than they are at present; the heavy interest is a dead weight upon the institution, which is doing good work in an unostentatious but effective manner. I may add that the fullest information about the institution was given by the Superior, by whom I was informed that the accounts are audited at regular intervals. I think I may say that the total annual subscriptions do not reach £300.

1388. *Mr. Barling.*] You say the total amount of annual subscriptions does not reach £300;—how does the institution manage, as the annual cost must be much larger than that? The friends of the institution help it to a great extent in various ways, by means of entertainments, balls, &c.; but the Superior told me she found very great difficulty in getting sufficient money. The chief trouble is in regard to the interest they are called upon to pay.

J. Powell,
Esq., J.P.
2 June, 1898.

1389. The £300 received in subscriptions is, then, really absorbed in paying the interest, and the institution is carried on by the assistance of friends? Yes.

1390. I suppose the working expenses, so far as the sisters are concerned, have been practically nothing? Yes; the whole of the business is carried on voluntarily by those ladies.

APPENDIX.

Appendix No. 1.

The Superintendent of the N.S.W. Institution for the Deaf and Dumb and Blind to The Secretary of the Royal Commission.

N. S. W. Institution for the Deaf and Dumb and Blind, Sydney, 26 May, 1898.

The Secretary of The Royal Commission.

Sir,

In reply to your inquiry to hand, permit me to say that a bright and capable pupil should be fit to leave school after having had seven years tuition—indeed their help is often wanted at home much sooner; consequently not a few of them leave us after from three to five years schooling; but one or two or even three extra years would be an advantage to any deaf pupil, even to the brightest, since they are handicapped very seriously, not only while in school, but also in after life. And it is only a good education, touching the moral qualities, if possible, as well as the mental powers, which can really lift up these “children of silence” and fit them for all that awaits them in the future.

Indeed, in the case of these deaf young people, their education should tend both to awaken intelligence and inspire feelings of confidence; it should, if possible, create a certain quiet strength to resolve and to act, instead of that distrust in themselves and in their own powers so enervating in its effects and likely to mar progress.

All this can perhaps be best done with youths who have grown up fairly well and reached that stage when thoughts about life, its work and responsibilities, begin to dawn upon them.

And I need hardly observe that the mind of a deaf child, having lain dormant for so many years, unstirred by the helpful chit-chat of its mother and others, is singularly immature and undeveloped as compared with his hearing brothers and sisters. For these reasons, one is glad to find that both in England and in America especially, eight and even ten years are frequently devoted now to the education of these young people, thus fitting them for positions more in keeping with their own tastes and social standing. With much respect,

I have, &c.,
S. WATSON.

1898.

—
LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

STATE CHILDREN RELIEF BOARD.

REPORT

OF THE

PRESIDENT, THE HON. SIR ARTHUR RENWICK, K.B., M.L.C.,
&c., &c., &c.,

FOR THE

YEAR ENDING 5 APRIL, 1898.

Presented to Parliament, pursuant to Act 44 Vic. No. 24, sec. 12.

Printed under No. 3 Report from Printing Committee, 7 July, 1898.

SYDNEY: WILLIAM APPLIGATE GULLICK, GOVERNMENT PRINTER.

1898.

The President, State Children Relief Board, to The Chief Secretary.

Charitable Institutions of New South Wales,
State Children Relief Board,
Richmond-terrace, Sydney, 5 April, 1898.

Sir,

In accordance with the provisions of Act 44 Vic. No. 24, I have the honor to submit, for the information of the Honorable the Chief Secretary, my Report upon the operations of the State Children Relief Board for the official year which ended on the 5th April, 1898.

In my published reports of previous years I have so often referred to the success that has attended the administration of the State Children Relief Act, from an economical standpoint, and more especially in regard to the benefits secured to more than 11,000 children who have passed under the Board's control, that it is not necessary now, when reviewing the results of the eighteenth year's operations, to further enlarge upon the merits of a policy that the Legislature of this and other colonies, the Imperial Parliament itself and the Governments of other civilised countries have recognised as the best method of dealing with dependent children of the State.

The most serious difficulty that the State Children Relief Board has now to contend with is the absence of legislation enabling the President to recommend, and empowering the Chief Secretary to sanction, the transfer of incorrigible State children for corrective treatment in Industrial and Reformatory Schools, when, in the interests of the children themselves, such a course becomes a matter of urgent necessity. The absence of this provision in the Social Reform Acts of this Colony was not so seriously felt by my Board when the numbers under control were less, but now that the aggregate has reached 3,700 children, legislation is urgently required to remedy this omission. That this is so must be obvious when it is recognised that the Board's officials receive direct from the police almost the whole of the children who have been rescued from vicious parents and the deplorable surroundings of slum life; and, acting under my Board's instructions, place them with tried guardians in the country districts rather than press for commitment to Industrial Schools before first affording such children an opportunity to reform under the beneficial influence of wholesome family life. Experience has shown the wisdom of adopting this method of dealing with these waifs; but it is not to be expected that each and every child rescued in this way can be successfully treated under this system. Failures in isolated instances there must be, and it is to meet these exceptional cases that legislation has been introduced in other colonies, and requires to be brought into effect in the Social Reform Acts in New South Wales. There are at present under the control of the State Children Relief Board from thirty to forty incorrigible and indolent children cunning enough to know that even were they to thieve or wander, and thereby bring themselves within the jurisdiction of the Industrial Schools Act, the respectable guardians with whom they are placed would refuse to appear against them at the police courts in order to secure their commitment to an Industrial or Reformatory School; nor is it to be expected that they should do so, consequently these offenders have to be removed periodically from home to home at considerable expense

expense to the Government; the unsettled lives they lead, without firm discipline or proper punishment, encourages them to continue their misconduct; the impression they create on the minds of the public militates against the credit of the system, and numbers of excellent homes for apprentice children are lost to others whose good conduct and faithful service would have been appreciated. Were it not for the continuous misconduct of these children, who cannot be reformed in the absence of the legislation outlined, I have no hesitation in affirming that in this Colony there would have been very little, if any, occasion to pay for the maintenance of well-developed and healthy children after the age of 12 years.

REGULATIONS.

During the year now closed the regulations under the Principal Act and the State Children Relief Act of 1896 have been revised in conformity with the altered conditions of the system, and have now the force of law. These regulations, in addition to simplifying the method of collecting maintenance and other moneys, have led to a considerable saving in clerical labour, and have also enabled the State Children Relief Board to pay to deserving widows and deserted wives reasonable and necessary allowances instead of the standard rate of 5s. per week for each child, which the regulations under the Principal Act provided.

ANNUAL INCREASE IN NUMBER OF STATE CHILDREN SINCE THE INITIATION OF THE BOARDING-OUT SYSTEM.

The following table shows the rate at which the number of children under the care of the Board has increased annually since the initiation of the boarding-out system :—

Under control on	Supported by Govern- ment.			Adopted without payment.			Apprenticed.			Total under control.		
	Boys.	Girls.	Total.	Boys.	Girls.	Total.	Boys.	Girls.	Total.	Boys.	Girls.	Total.
5 April, 1881.....	24	35	59	24	35	59

5 ,, 1894.....	955	786	1,741	59	106	165	592	311	903	1,606	1,203	2,809
5 ,, 1895.....	1,167	927	2,094	56	91	147	599	334	933	1,822	1,352	3,174
5 ,, 1896.....	1,356	1,085	2,441	50	76	126	548	341	889	1,954	1,502	3,456
5 ,, 1897.....	1,506	1,145	2,651	55	71	126	524	370	894	2,085	1,586	3,671
5 ,, 1898.....	1,442	1,179	2,621*	69	80	149†	572	367	939‡	2,083	1,626	3,709

* This total includes 15 children in Hospital, 147 in Cottage Homes, 25 in Depot, 24 under 2½ years paid for at 7s. per week, 38 paid for at 6s., 6 infants paid for at 8s. per week, and 1 lad paid for at 10s. per week, 138 paid for at rates ranging from 2s. to 4s. 6d. per week, while the balance are paid for at 5s. per week.

† This total includes 38 children who are classed as "Boarders without subsidy," that is, placed with guardians who, as in the case of adopted children, do not receive payment for maintenance.

‡ This total includes 16 absconders, whose names still appear on the books, and 5 children classed as unofficial.

I consider it my duty to call the attention of those interested in the beneficent work of the State Children Relief Board to the fact that, for the first year since the appointment of the Board in 1881, there has been an actual decrease in the number of children paid for under the provisions of the Principal Act. It will be noticed that during the three preceding years the relative annual increase in numbers was over 300; while the total number supported by the Government and under control on the 5th April, 1898, was thirty less than the total shown under this division on the corresponding date of the preceding year. This variation is, of course, primarily due to the operation of the State Children Relief Act Amendment Act of 1896, which enabled the Board to pay deserving widows and deserted wives for the support of their own children; but it is also, to a less extent, due to the vigilance of the Board's officials in securing homes for the children without cost to the Government, and in apprenticing others, under the provisions of the Act passed in 1881, instead of continuing maintenance payments until each child reached the age of 14 years, which would have been done were it not for the special efforts in the direction I have indicated. Assuming, therefore, that if it were not for these influences the relative normal increase would have followed, 330 additional children would have had to be maintained under this division at a cost of over £4,000 per annum. Most of these children were, however, dealt with under section x of the Act passed in 1896, which provides for children being boarded-out with their mothers; but as half rates only were paid for supporting them, it is fair to assume that a cash saving of over £2,000 a year has been effected.

Including both divisions—paying and non-paying—there has been an increase during the year of thirty-eight children compared with the total under control on 5th April, 1897.

VARIATION IN NUMBERS.

Admissions.

There were 3,671 children under control on 5th April, 1897. Six hundred and sixty-six (666) children were admitted during the year ending 5th April, 1898, against 929 in 1897. Of this number 373 were boys, and 293 girls.

Discharged.

The number of children discharged during the year was 628—375 boys, and 253 girls; consequently the total number remaining under control in the general division on 5th April, 1897, was 3,709, or thirty-eight only more than the corresponding total of the previous year.

The sources from which the children were received will be found fully explained in Appendix D, the manner of the disposal of those discharged is shown in Appendix A, while Appendix F clearly explains how the 3,709 children now under control are distributed throughout the Colony.

FINANCIAL.

The sum standing to the credit of the State Children Relief Board on 5th April, 1897, was £2,998 7s. 10d. Advances were made from the Treasury during the year to the amount of £57,376 2s. 3d., while the amount of £59,596 1s. 1d. was withdrawn to cover the expenditure of the several branches of the Department during the same period—leaving to the credit of the Board on the 5th April, 1898, the sum of £778 9s. Of the amount, £59,596 1s. 1d., expended during the year, the sum of £34,499 17s. 1d. was utilised in maintenance, clothing, medical expenses, travelling, &c., in connection with the support of boarded-out children under the Principal Act; but allowing for the sum of £792 9s. 10d. collected from parents in part payment of maintenance, and £342 8s. 1d. refunded to the Treasury as over-issues, the net cost for the year was £33,364 19s. 2d., or (not including salaries) £13 10s. 6d. per head for the maintenance of an average number of 2,467 children.

As a rule there is little variation from year to year in the general classification of the occupations of the guardians of State children, and the statistics of the year under review are in no way exceptional. Most of the elder male children are under the care of farmers, orchardists, storekeepers, and artisans in healthy country districts, while the servant girls are generally placed with farmers and in the comfortable homes of the middle classes. A large proportion of the young children placed out as boarders are under license with the wives of labourers, miners, mechanics and others, and with widows having small incomes. Approximately, half are located in the metropolitan suburbs, and the other half in the country towns and districts. In all, there are 2,287 homes containing 3,506 children, against 2,115 homes in which there were 3,472 children in 1897. Although there has been no material increase in the number of children under control, there has been a great increase (172) in the number of homes in which they are placed—a gratifying result of the efforts of the Board to limit the number of children sent to each guardian. It is improbable that this number of homes can now be materially increased without separating the

the children of one family—a policy that the Board has resolutely determined not to adopt—until each child reaches the age when a transfer to the apprenticing division becomes a matter of necessity.

The following return shows the number of applications received during the past five years for State children, and explains the action taken by the State Children Relief Board in dealing with them:—

Year.	Approved.	Refused.	Not yet inquired into.	Total.
1894	667	186	244	1,097
1895	908	292	615	1,715
1896	858	398	264	1,520
1897	769	301	440	1,510
1898	927	332	529	1,788

Of the number received during the year ending 5th April, 1898, 1,384 were from Protestant and 404 from Roman Catholic applicants. The number of children applied for, and the conditions under which they were to be placed out, are explained hereunder:—

Religious Denomination.	Boarders.	For Adoption.	For Service.	Total asked for.
Protestant	1,466	30	527	2,023
Roman Catholic	532	11	94	637

The success of the Boarding-out System in any community depends entirely upon the quality of the homes available for the reception of the children to be disposed of. Fortunately for the operations of my Board the selection in this Colony is not restricted. It is becoming more noticeable from year to year that the number of applications is far in excess of the number of children available. No difficulty is experienced in securing good homes. It will, however, be seen that 36 per cent. of the total number of applications dealt with were declined—substantial reasons in each case having been submitted in support of their rejection. Notwithstanding this fact, and allowing for the cases already satisfied, fully 1,000 additional children could be provided for within a few weeks if they were available for boarding-out. The most remarkable feature that presents itself in dealing with these figures is the little difficulty that undesirable persons appear to experience in securing recommendation from responsible citizens. One thousand five hundred and nine applications have been rejected during the past five years, and each and every one has been supported by a strong recommendation from a clergyman, a magistrate, or other approved person.

INSPECTION OF HOMES AND CHILDREN.

The total number of visits to children and other inquiries made by Inspectors in all divisions during the year ended on April 5, 1898, was 21,115, against 14,808 recorded during the previous year. After adding to the former total 4,164 recorded visits made by the lady visitors, the total aggregate number of visits and inquiries made by permanent officials and lady visitors is shown to be 25,279. The figures included in this total, which directly bear upon the division under

under review (State children with non-relatives), are shown in the following table side by side with similar statistics of previous years:—

Year.	Permanent Staff.	Lady Visitors.	Total.
1894	6,323	1,666	7,989
1895	6,851	1,305	8,156
1896	6,606	2,008	8,614
1897	7,147	1,465	8,612
1898	5,950	4,164	10,114

Average 2·87 visits per child per annum.

It is satisfactory to notice that the lady visitors, who in their honorary capacity take a keen interest in the children under their local supervision, have substantially responded to the Board's request and sent in more numerous returns this year than heretofore. But it is well known to the Board that, even now, these returns form only a very small portion of the actual number of visits paid by these ladies throughout the year. The discrepancy is due to the fact that, although the visits are paid, the honorary visitors omit to prepare the required returns. Steps have, however, been taken to lessen the amount of clerical labour when satisfactory inquiries have been made; and I hope next year to be in a position to publish a more correct statement of actual results than the returns submitted this year afford me an opportunity of doing now.

The decrease in the number of visits paid to State Children by the experienced officers of my Department (5,950 in 1898 against 7,147 in 1897) forms the most serious defect in the year's operations. This is, however, in no way due to laxity, as I have already pointed out that the inspectors have increased the gross total of 14,808 in 1897 to 21,115 in 1898—an increase of 6,307 visits during the year under review. The decrease is due to pressure of work in administering the provisions of the Act passed in 1896; and as my Board has not until now been in a position to form an estimate of what the permanent work of my Department would be, I have hesitated, on economical grounds, to bring the matter under the notice of the Chief Secretary before the rush of applications from widows and deserted wives had ceased and the work of the Department had subsided into its normal condition. Such a condition is now noticeable in the Board's work, and it is anticipated that at an early date the required number of visits will be paid to these children at small extra cost to the Government.

NUMBER OF CHILDREN IN EACH HOME.

The principle of maintaining, as far as possible, the feelings of family affection, by not separating brothers and sisters, has been adhered to, with the results as shown hereunder:—

1,481	homes with 1 child.
483	” ” 2 children, including 249 with children of one family.
246	” ” 3 ” ” 156 ” ”
66	” ” 4 ” ” 57 ” ”
9	” ” 5 ” ” 8 ” ”
2	” ” 6 ” ” 1 ” ”

2,287 homes, containing 3,506 children (exclusive of 16 absconders, 15 in hospitals, 147 in cottage homes, and 25 in depôt):

It will be seen, therefore, that there are 471 homes with children of one family.

Exclusive of homes containing children of one family, there are:—

1,481	homes with 1 child.
234	” ” 2 children.
90	” ” 3 ” ”
9	” ” 4 ” ”
1	” ” 5 ” ”
1	” ” 6 ” ”

1,816 homes, containing 2,266 children, or an average of 1·24. (Last year the average was 1·41.)

HEALTH,

HEALTH, CONDITION, EDUCATION, AND GENERAL SURROUNDINGS OF STATE CHILDREN.

Although the experienced officials have not, for the reasons already stated, been enabled to visit the State children as frequently as my Board desire, still I am pleased to be able to report that the children have as a rule been found well and happily placed; they have been sufficiently clothed and fed, their education has not been neglected, their general surroundings have been found wholesome and clean, and, as will be observed upon reference to the appendices, the school teachers and lady visitors substantiate the opinions of the Board's inspectors that the boarded-out children compare favourably in appearance and in general behaviour with the children in the districts in which they are placed.

The usual number of transfers and removals have had to be made during the year, principally on account of the behaviour or health of the children and the altered circumstances of the persons with whom they have been placed, while one master had to be proceeded against for harshness to his servant; but considering the troublesome dispositions of many of the children, and the physical and mental weakness of others, and taking into consideration the large number of persons with whom they have been placed, the results compare favourably with the experience of previous years.

ADOPTED CHILDREN.

The number of children adopted by reputable citizens without payment has increased from 102 in 1897 to 111 in 1898.

APPRENTICED CHILDREN.

Until the passing of the State Children Relief Act in 1896, all children upon reaching the age of 12 years were transferred from the Boarding-out Division; and thereafter, apart from the cost of supervision, they ceased to form a further burden upon the public funds. It was, however, found that the whole of these children could not be apprenticed at 12 years, and power had to be obtained to pay maintenance until the age of 14, if situations could not be found for them before they reach that age.

On the 5th April, 1897, there were 860 children (497 boys and 363 girls) under indenture in various parts of the Colony: 173 boys and 71 girls were apprenticed during the year, and 116 boys and 70 girls were discharged—leaving 554 boys and 364 girls, or a total of 918, apprenticed on the 5th April, 1898. All the girls are at domestic service, while the boys are employed by bakers, blacksmiths, boot-makers, butchers, carpenters, chemists, coachbuilders, dairymen, dealers, drapers, farmers, gardeners, grooms, grocers, hairdressers, orchardists, plumbers, printers, saddlers, tailors, and vigneron, &c.

Since 1887 the sum of £18,607 2s. 9d. has been collected on account of wages earned by State children. £15,143 3s. 8d, of this amount has been paid over to those who have served their terms of service, and the cash balance now to the credit of the Apprentices' Trust Account is £3,463 19s. 1d.

Taking into consideration the many thousands of these accounts that have been opened, and allowing for the depression that has existed throughout the country in past years, a comparatively small amount of the wages claims has remained unadjusted; but endless trouble has been occasioned where obstacles have been thrown in the way of settlement, owing to the difficulties to be encountered in securing these moneys. The Inspectors, however, now promptly report upon the circumstances of employers where wages remain unpaid, so that the indentures may be cancelled if there is no prospect of settlement, while
the

the new regulations provide that wages payments must be made at the Board's offices, an arrangement that secures jurisdiction in Sydney, and will remove the necessity for sending officials into the country districts to recover these moneys, should extreme steps prove necessary.

THE CENTRAL HOME, PADDINGTON.

The policy of adopting a uniform system by placing all industrial and reformatory schools under the Minister of Public Instruction, necessitated the transfer of the Shaftesbury Reformatory from under the control of my Board; but the officials in charge were not relieved, and were, in consequence, unable to take over their duties at the Central Home until recently. The Reformatory had been utilised, perhaps, in a strictly legal sense, irregularly, as a receiving home for State children, and for disciplinary purposes wherever girls had shown themselves unfit for private service. This change necessitated recourse to the former practice of sending children to the Sydney Benevolent Asylum before being boarded out; and, in the absence of legislation, enabling incorrigible girls to be sent for a time to the Industrial School, before being again tried at service, the unwise policy of changing them from home to home had again to be resorted to. The transfer of the staff to the Central Home has, however, materially lessened these objections; a number of direct admissions are now made there, and some of the more troublesome children are also admitted to assist with the domestic work of the depôt. With a little extra accommodation, and provided the legislation outlined by me is given effect to, my Board will no doubt be able to admit all children direct to control, and discontinue the practice of sending children to the Benevolent Asylum.

The average daily number of children in the Central Home throughout the year was 24; the total cost for maintenance was £222 4s. 9d.; and the capitation cost, £9 5s. 2d. per annum.

COTTAGE HOMES FOR INVALID CHILDREN AT MITTAGONG AND PARRAMATTA.

There are nine of these homes—seven at Mittagong and two at Parramatta, containing in all 147 inmates—thirty-three males and 114 females.

The following tables furnish additional particulars:—

	Boys.	Girls.	Total.
Total number of children admitted to Cottage Homes to 5th April, 1898	655	913	1,568

On economical grounds, as well as for administrative purposes, and for other sufficient reasons, a rearrangement of the Cottage Home system is contemplated. A comprehensive statement of the changes suggested was submitted for the consideration of the State Children Relief Board in October last, when a deputation from the Board waited upon the Chief Secretary in order that the proposal might be carried into effect. The following memorandum, prepared after careful investigation, has not previously been published :—

State Children's Relief Department, Sydney, 25 October, 1897.

In accordance with my promise to the Board, I visited Mittagong during September last, accompanied by the Director of Government Asylums, for the purpose of making personal observations and inquiries with reference to the condition of the Cottage Homes for Invalid Children, which are under the control of this Department in that district; the methods adopted of classifying and treating the children; the internal economy of the homes; the rent value of the premises held under lease, and of the other buildings, which might be given up immediately if necessary; and, finally, for the purpose of arriving at some conclusion in my own mind with regard to the prime question of whether or not it would be advisable to continue the present method of dealing with this important division of the Board's business, or to substitute for it a system of partial centralisation with regard to which there has hitherto existed much difference of opinion among those members of the Board who have from time to time made official visits to the homes.

I remained two days in the neighbourhood, and made a critical examination into all the matters I have enumerated; and I now present, as shortly as possible, the result of my investigations for the consideration of the Board.

1. *The General Management.*

Considering the disadvantages under which the Cottage Home mothers are labouring with regard to the general unsuitableness of the buildings for hospital purposes, and the absence of proper sanitary arrangements, I found the general management of the homes on the whole satisfactory, with exceptions as to proper classification of children and minor matters of detail which it is not necessary to discuss at present. I may state, however, that I went carefully into all these questions, both from medical and administrative standpoints, and issued instructions which it will be the duty of the officers of the Department to have carried out in their integrity. I have not the slightest doubt from my observations, and the many interviews with the children individually, that the inmates of the Cottage Homes are generally receiving true motherly treatment,

treatment, and every necessary care and kindness; and that the defects I pointed out, and gave directions to have remedied, arose rather from ignorance on the part of the mothers than from any desire to evade the conscientious performance of their very responsible duties. And I may here fitly state my opinion that the results of the operation of the cottage-home system at Mittagong fully justify the selection of that locality as a sanatorium for the treatment of invalid children; and that with more suitable buildings and surroundings the most beneficial treatment possible for this class of State dependents may be secured for them in the climate of this district.

2. Rents of the present Buildings.

I spent much time in ascertaining the rent value of houses in the township and neighbourhood of Mittagong; and I have no hesitation in saying that, with one or two exceptions, the rents of the cottage homes are most excessive. It may be remembered that I drew attention to this matter some time ago, but it was not considered advisable to deal with it finally because I was not in possession of sufficient data to enable me to express a positive opinion for the guidance of the Board. At the time these premises were secured, house property at Mittagong was of very much higher value than it is at present; and the rents which were then paid were probably fair, as I have ascertained that they were in nearly every instance a continuation of the rents received from the previous occupants of these buildings. But the depreciation in the value of house property in this district has been so great during the past three or four years that the rents paid by this Department are now out of all proportion to the value of the buildings occupied; and the difficulty the Board will have to deal with in endeavouring to set this matter right is that no other premises of sufficient capacity to meet the requirements of the Department are obtainable in the district. Of that there can be no doubt, as I made careful inquiries throughout the neighbourhood. This, however, is a question which will have to be considered in connection with the principal proposals later on. At present the Board pays rents amounting in the aggregate to £443 10s. per annum, and this sum should, in my opinion, be immediately reduced by £100 (at least) a year in connection with premises which are not held under lease. The details are as follows:—

No. of Home.	Present Rent.	Estimated Value.	Nature of Holding.
	£ s. d.	£ s. d.	
No. 1 (and farm)	85 0 0	85 0 0	Leasehold.
No. 2	40 0 0	26 0 0	Monthly tenancy.
No. 3	70 0 0	70 0 0	Lease; 3 years to run.
No. 4	52 0 0	31 4 0	Monthly tenancy.
No. 5	60 0 0	60 0 0	Lease; 2 years to run.
No. 6	65 0 0	31 4 0	Monthly tenancy.
No. 7	71 10 0	40 0 0	"
	443 10 0	343 8 0	Excess, £100 2s.

NOTE.—Some of these rents have since been reduced, but the charges made are still considered excessive. Other suitable premises cannot be secured.

No. 3 premises, rented at £70 a year, and No. 5, rented at £60 (leased for three and two years longer respectively), are each not worth more than £50 per annum; so that under a fair arrangement with regard to these two buildings, when the leases expire, there should be a further reduction of £30 a year, or a total saving of £130 2s. a year upon the sum of £443 10s. now paid as rents of cottage home premises in the district of Mittagong. Of course, the buildings held under lease cannot at present be dealt with; but I recommend that the owners of the other buildings be at once informed that the Board cannot after the 1st day of December pay higher rents than the amounts which have been mentioned as being equitable, in view of the rents generally prevailing throughout the district, and that, in the event of their declining to accede to this proposal, other arrangements will have to be entered into on behalf of the Government. Two buildings should, in my opinion, be vacated immediately if possible—namely, No. 4 and No. 6—and I should have given instructions to that effect, on behalf of the Board, during my visit if it had been possible to obtain other premises, but there were not any other suitable houses empty. Directions were, however, left with the Manager to report as soon as he found an opportunity of giving up these premises, and procuring others sufficiently commodious for cottage-home purposes.

4. The Cottage Home Farm.

A pleasant contrast to all the other cottage homes and their surroundings is afforded by the new home and farm connected with it, rented by the Board on the Southwood Estate, about two and a half miles from the Mittagong Railway Station. There are existing facts and possibilities of development in connection with this establishment which I, freely confess have helped to convert me from views that I formerly held respecting the placing of all the cottage homes on one estate, and I would invite those members of the Board who have still any doubt upon this subject—the abstract arguments with regard to which have I know been frequently debated at this table—to visit Mittagong and go fully into the question in all its bearings, and postpone arriving at conclusions until after careful consideration of every matter of detail. This is a question, however, which I shall deal with more fully in the final and principal paragraph of this memorandum. The new building is fairly well adapted for cottage home purposes, and might, with modifications and minor alterations, be taken as

a model for future homes. It is sufficiently commodious to accommodate the full number of children that ought to be placed in one home; the rooms are lofty and well ventilated, and all the dormitories are under one roof, and therefore fully under the control of, and easily accessible to, the mother in charge. This is a point with regard to which I can now quite understand the anxiety of the Board ladies who have visited the other homes, in view of my discoveries respecting the character of some of the elder female inmates. The Board pays for the new building and 100 acres of land £85 a year, and it seems to me that this is the only good bargain that has been secured in connection with the premises rented at Mittagong. It is not my intention to discuss matters of detail with reference to the farm, but a return has been prepared which shows that, although the land was virgin soil (the greater part of it being uncleared) when the Board entered into occupancy little more than two years ago, it has, making the usual allowance for depreciation in the value of stock and perishable property, and notwithstanding bad seasons, thus far fully paid its expenses, and left a margin of profit of about £20. Vegetables, milk, eggs, and firewood are supplied to all the homes from this farm, which is worked by inmate labour from the Government asylums, and it was very pleasing on the day of my visit to see a number of hearty old fellows who could not, by reason of their age, earn a livelihood outside, healthfully employed on this estate in the manner indicated. It afforded an example which might well be adopted as a system in connection with our larger Government and public institutions. The payments to the old men are merely nominal, ranging from threepence to sixpence a day, according to the nature of their occupation, with tobacco allowances and extra indulgences for special good conduct. The farm buildings and their own dwelling were erected by the old men themselves with materials supplied by the landlord, whose undertaking with the Board was to bear the cost of erecting the cottage home only. These outbuildings are necessarily crude and imperfect, but still homelike and comfortable, as is seemly in connection with buildings placed partly at Government cost, as far as labour is concerned, upon land which is not the property of the Government, but they serve their temporary purpose well. The lease of the cottage home and estate is for five years, at the period of which the Board has the right to renew for another term of five years. The land as it is now improved would probably be valued on resumption at £15 an acre, and capitalising its value upon this basis, the amount represented would be £1,500. The interest upon this at the rate paid for State loans (say 3½ per cent.) would be £52 10s. a year; which leaves the amount of the main building occupied for cottage-home purposes at only £32 10s. a year. The outbuildings comprise piggeries, poultry-yard, dairy, &c.; and, if the information furnished to me is accurate, and fairly favourable seasons are experienced, the farm should prove very profitable during the current financial year.

5. *Visit to the Public School.*

I made a visit to the Public School, but unfortunately did not succeed in arriving there while the children were in attendance. A lengthy interview with the headmaster, however, enabled me to form an accurate opinion of the physical condition, behaviour, and general appearance of the large number of State children who attend this particular school. These are, of course, exclusive of the cottage-home children, for whose education special provision is made at the homes. The report of the master of the Mittagong Public School with reference to the children under the control of this Board, who are daily brought under his observation in the school and on the playground, was highly satisfactory, and left no room for doubt that so far as the district of Mittagong is concerned the boarding-out system is thoroughly fulfilling its objects. The school-teacher had evidently been induced to take particular notice of these children in consequence of the occasional visits to the school of the principal Boarding-out Officer, and I would suggest here that the Board ladies might, perhaps, make similar visits to this school when at Mittagong inspecting the cottage homes. I am sure they would gain a good deal of useful information by doing so, and would indirectly obtain a knowledge of the moral training and general treatment of the children in a large number of the boarding-out homes, which it would be impossible for them to visit separately without remaining several days in the district. The teacher's report was to the effect that, generally speaking, the State children compared favourably with the better class of children attending his school; that they did not present any distinctive features—either with regard to behaviour, clothing, or general intelligence—to mark them as State children; and that their attendance, in the majority of cases, was above the average.

6. *The Present Cottage Home System.*

The principal object of my visit to Mittagong was to give serious attention to the question of whether or not the present system of renting houses for cottage homes should be continued, or whether the Board should recommend the Government to grant or purchase an estate of sufficient area and build homes of its own. The existing method has, as the Board Members are aware, always been a source of trouble in connection with complaints from the townspeople, either with reference to alleged misconduct of the children, or the danger of these homes spreading contagious diseases throughout the community, or some other reason equally supposititious; and, although no tangible ground for such objections could ever be traced, still they have from time to time led to local agitation for the purpose of having the homes removed from this district to a more isolated locality; and so keen was this movement on two occasions that it led to deputations and petitions to more than one Chief Secretary from its promoters, and to one clergyman forbidding the attendance of the cottage-home children at his church. These are past matters, but they may recur at any time, and although, on the surface, they may appear to be unimportant, still they are decidedly unpleasant to meet and overcome.

overcome. Not only do such difficulties keep this small community in a state of turmoil, but they quite destroy the harmony and good feeling within the homes, which are essential to their good management, and which cannot prevail while the attitude of the outside public, both with regard to mothers and children, is unfriendly. The two main reasons which have led members of the Board to submit to frequent unpleasantness of the character I have pointed out have been that, on medical grounds, it would be a calamity to remove their weaklings from the climate of Mittagong; and that administrative reasons made it undesirable to adopt a system of comparative centralisation, instead of scattering the homes at points so remote from each other that the mothers in charge should not have favourable opportunities of intercommunication. There has always been such a division of opinion upon this latter point that, although a vote of £5,000 was once obtained from Parliament for the purpose of erecting cottage homes, nothing practical resulted from it, and it was, consequently, permitted to lapse. I have to admit that I was myself strongly opposed to any policy of centralisation, for reasons which I then considered valid; and if my enlarged experience and observations have led me to change my opinions in regard to this particular matter, they should probably have greater weight with the Board than the more hastily-formed convictions which previously guided me. One point that struck me very forcibly during my recent visit to Mittagong was that, although there are, in two instances, two homes quite close together, neither the mothers nor the children appeared to exchange visits, although their personal relationship was quite friendly; and so marked was this in the case of two homes (distant only half a dozen yards from each other) that, although the mother and children in one had prepared for my visit, the inmates of the other next door were not aware that I was at Mittagong. Again, my inquiries led me to discover that on their "off days" the cottage-home mothers seldom visit each other. Therefore the main reason which led me and other members of the Board to formerly object to placing the homes on one estate really does not exist. Having said so much by way of preface, I may now state definitely that the result of my visit to Mittagong has been to firmly convince me that on medical grounds as well as for purposes of economy, and in order to secure improved administration, the Board should immediately endeavour to obtain a sufficient area of land within a mile or two of Mittagong as a suitable site, and also funds to admit of the erection of the necessary buildings. Having arrived at this conviction I next proceeded to ascertain if any suitable sites were available, and particularly if it were possible to obtain Crown land. I found that the only Government land sufficiently near to the railway station to be conveniently accessible was situated on the western heights of the town, and I went carefully over it. It would, in my opinion, be most undesirable to select this land as a site. Its altitude and situation expose it to the full force of the westerly winds, which are peculiarly bitter in this district, and frequently blow continuously for days. These winds, from which it is impossible to obtain shelter at this spot, would not only cause suffering among the stronger children, but would almost certainly increase the mortality among those whose vital powers were not strong. Another fatal objection to this site is the absence of a suitable water supply. I tested the water in the neighbourhood from a spring well, and found that it lacked the essential qualities of the water obtained from the low-lying neighbourhoods. One prime factor in improving the health of the cottage-home invalids is the water that they drink. In many directions in the township it is strongly impregnated with iron, and is, in fact, obtained from chalybeate springs. This quality is absent from the water of the hills, which is as soft and sweet as rain-water; it is in consequence useless for the purpose of building up the constitutions of delicate children. I next proceeded to inquire as to whether it would be possible to obtain sufficient private land in the neighbourhood, and I could not discover any that would be more suitable than the land now leased by the Board on the Southwood Estate, a large portion of which is already cleared and under cultivation, and where there is the nucleus of the new system which I have advised the Board to adopt. The locality can be well sheltered; an ample supply of suitable water can be obtained; a sufficient area can be secured to admit of the separation of the homes; the land in different parts is well adapted for fruit-growing and farming purposes; it possesses admirable sites for cottage hospitals; and it is sufficiently near to the railway station and the township to secure all necessary conveniences, as well as medical attendance, without difficulty or extra expense. I devoted half a day to going over this land, and I had 150 acres of it measured in one block that I considered would be the best for the Board's requirements. This block includes the present farm and two cottage homes; and it has frontages to two main roads, each a chain wide, while two other roads could be opened, in order that the estate might be completely enclosed and rendered inaccessible to the public. This area would be sufficient to contain seven cottages, which could be placed quite a quarter of a mile apart.

I do not propose at this stage to go fully into all details of the cost of carrying out these proposals, but a mere outline of this very material aspect of the matter will show that they must result in a large saving of public money. I may state, however, that in my opinion it would be impossible to make any reasonable bargain in the shape of an ordinary purchase, and that the land would have to be resumed by the Government under the method of valuation which is usual in such cases. The owner, for example, suggested £25 an acre as a fair price; I believe that an all-round price of £10 would be nearer the mark; but, assuming that the Government valuation reached £15 an acre—and I do not think it possible that it could exceed that price—the cost of 150 acres would be £2,250. There are two buildings upon the land, rented as cottage homes, which could not possibly be valued at more than £450 and £200 respectively, and the smaller of which could be used for a farm manager's residence. It would then
be

be necessary to build six other cottage homes. Most suitable brick buildings, with all necessary appliances, could be erected for about £700 each; a building to be used as a school and church, with the usual adjuncts, would cost about £1,000; then I have allowed another £1,000 for sundries, including clearing, fencing, &c.; and also £1,000 for securing a sufficient water supply. These figures make a total of £10,100, which would represent an annual charge for interest, at $3\frac{1}{2}$ per cent., of £353 10s., or a saving of £90 a year upon the present rent charges, and a sum about equal to that reduced expenditure I have already proposed with regard to the imperfect accommodation at present provided. There would also be contingent savings of the expenditure that is incidental to the present system, the full extent of which it would be difficult to estimate until they came to be realised; such, for example, as about £60 a year for the night service (now charged by the Borough Council), which could be carried out without extra cost and beneficially utilised on the farm; the present expense of distributing wood, vegetables, and milk; the cost of carrying water in dry seasons; and other minor items of expenditure which cannot at once be taken into account. There would also be the better provision for educating the children, who can now only attend half-time schools; and also for providing a large number of them with some light industrial occupation, which no attempt can be made to secure for them under the existing system. But far above all these considerations there would, under the new system, be proper scientific provision for affording the best treatment possible to the unfortunate inmates of these homes, whose intellects are in many instances only partially developed, and many of whom, I assure the Board, suffer from inherited complaints of the most painful nature.

I think I have now said enough to show my reasons for the recommendations I have made in this memorandum; and, if these are approved, I would suggest the appointment of a sub-committee to formulate them in the most business-like and practicable form; and to wait as a deputation upon the Premier and Chief Secretary for the purpose of having them carried into effect. Probably, as the Public Service Board has been appointed a Royal Commission to deal comprehensively with all matters relating to Government expenditure upon charity, they will have to be referred to that body for consideration.

ARTHUR RENWICK,
President of the State Children Relief Board.

The total cost of these cottage-homes during the year was £3,981 7s. 4d.—£3,229 5s. 8d. being for maintenance, and £752 1s. 8d. for clothing, &c. The average number of inmates throughout the year was 176, and the capitation cost (not including salaries), £22 12s. 6d.

RELIEF TO DESERVING WIDOWS AND DESERTED WIVES.

The administration of the State Children Relief Act of 1896, under which power has been given to assist mothers in supporting their own children, has been a source of much anxiety to the State Children Relief Board since September, 1896, when this Act first had the force of law.

While fully recognising its humane intentions in providing against the forced separation of children from their natural guardians, whose distressed circumstances were in no way due to moral faults or indolent habits, the State Children Relief Board, strengthened by many years experience in dealing with destitution in all its phases, fully realised that, unless each and every case were carefully investigated and justly considered, this form of relief would be open to serious abuse, while thrift would be stifled by granting supporting allowances where assistance only should have been conceded. The Board was also prepared to find that a heavy expenditure would have to be incurred in meeting the numerous demands for assistance, but, at the same time it was considered, and experience has confirmed this opinion, that by cautious administration, and keen oversight the abuse of this relief could be reduced to a minimum, while its necessary and far-reaching benefits could be secured to deserving widows and deserted wives who through ill-health, dearth of employment, or other sufficient reasons were unequal to the strain of providing food and shelter for those dependent upon them, but who, in the absence of assistance in this form, would continue in misery and want rather than accept charity in any other way. To more forcibly explain the distress that some mothers will suffer rather than let their poverty be known,

I may cite the case of a refined but consumptive mother struggling to provide for her four children—one imbecile and the others delicate. This family I know to have lived for several days without fire or light, and with only a little bread in the house, which they ate with the extract of malt and cod-liver oil that had been issued to them. Yet the allowance for one child was instantly declined upon an inquiry being made at a Public School concerning the child referred to. The semi-starvation that this woman and her children suffered was not known even to my Inspectors who visited the home; the children were trained to conceal it. Whether the mother acted wisely is not for me to consider. I explain the case as I find it, and refer to it here merely to show that the money expended in this Branch of my Department is to a large extent disbursed in relieving destitution that would otherwise never be heard of, and which, in some cases at least, is never thoroughly understood. This, however, is but one of many pitiful and equally deserving cases.

Conceiving that it would be more judicious to grant small allowances, and increase them when it became expedient to do so than to pay the standard rate of 5s. per week provided under the Principal Act, the Regulations, upon my Board's recommendation, were revised, and a nominal standard rate of 3s. per week inserted, the Board reserving the power to increase or lower this rate according to the necessity of each case. The wisdom of adopting this course will be at once apparent upon reference to the following returns, which show that 2,363 children out of a total of 2,422 are being paid for at rates ranging from 1s. to 3s. per week, while fifty-nine only are paid for at rates exceeding the nominal standard. Were it not for my Board's action in this connection, the actual cost of this Branch of my Department for the past year alone would have been over £23,000, whereas the service was adequately met by an expenditure of £11,794 7s. 6d.—an amount that might be further reduced by over £2,000, seeing that there was no relative increase upon the general division during the past year, from which it can only be concluded that over 300 children are being provided for at half-rates who, but for the new Act, would have been wholly supported at the Government expense.

Statistical Returns relating to the issue of Relief to Deserving Widows and Deserted Wives.

The State Children Relief Board dealt with 1,207 cases during the year ended 5th April, 1898, with the results shown below:—

Allowances granted.	Allowances increased.	Allowances reduced.	Allowances continued.	Consideration postponed.	Refused.	Discharged.
501	66	137	278	62	154	109

The undermentioned Mothers are now in receipt of relief:—

Widows.	Deserted Wives.					Total.
	Deserted Wives.	Husbands Insane.	Husbands in Gaol.	Husbands in Govt. Asylums.	Husbands in Hospitals.	
567	132	26	25	15	5	770

During the year 1,618 children were admitted to control, 426 of whom have since been discharged from control, leaving the total number now on the books, inclusive of 1,230 on at end of previous year, as 2,422. The ages are as under:—

Under 1 year.	1 to 2.	2 to 3.	3 to 4.	4 to 5.	5 to 6.	6 to 7.	7 to 8.	8 to 9.	9 to 10.	10 to 11.	11 to 12.	Over 12.	
97	137	177	180	243	240	256	258	243	239	251	101	...	2,422
Discharges.													
11	14	19	26	31	34	31	39	32	33	35	62	59	426

The children now under control are being paid for at the following rates:—

5s.	4s. 6d.	4s.	3s. 9d.	3s. 6d.	3s.	2s. 6d.	2s.	1s. 6d.	1s.	Total.
24	2	24	1	8	466	324	813	227	33	2,422

The children now on the books belong to the religions set forth in the Schedule.

Church of England.	Roman Catholic.	Presbyterian.	Wesleyan.	Congregational.	Protestant.	Primitive Methodist.	Methodist.	No religion stated.	Baptist.	Salvation Army.	Plymouth Brethren.	English Episcopalian.	Protestant Catholic Apostolic.	Greeks.	Jews.	Total.
953	785	107	126	44	209	48	7	101	25	5	5	3	3	6	4	2,422
Discharged during period to 5/4/98.																
183	120	35	19	1	44	2	...	6	9	2	...	1	1	...	3	426

The daily average is 1877.

BOARD MEETINGS.

There were thirty-two (32) sittings of the Board during the year, viz., 12 general, 1 special, and 19 adjourned, at which the members attended as follows:—The Hon. Sir Arthur Renwick, Kt., M.D., M.L.C., President, 31; Mrs. Garran, 29; Lady Manning, 26; Mrs. McMillan, 26; Lady Renwick, 26; Mrs. Goodlet, 20; Mrs. Slattery, 8; the Hon. W. J. Trickett, M.L.C., 8; and the Hon. L. F. Heydon, M.L.C., 4.

On the 28th March, six (6) months' leave of absence was granted to Mrs. McMillan, who was proceeding to England.

The Regulations under the Principal Act provided for monthly meetings of the Board; but since the passing of the State Children Relief Act of 1896, the duties devolving upon the members of the Board have immeasurably increased. Thirty-two meetings had to be held during the past year, instead of twelve; and, in addition to the twenty extra sittings, the members of the Board, in their zeal to administer the Act with conscientious regard to its intentions, have paid regular monthly visits to the nine Cottage Homes at Mittagong and Parramatta; they have regularly inspected the material purchased for the children's clothing; they have as well held regular financial meetings, and have frequently attended at the Board's offices to gain an intimate knowledge of the working of the new department, in order that their subsequent decisions, when dealing with applications for assistance

assistance from widows and deserted wives, might be just to the mothers and their children without the interests of the Government being affected by the injudicious expenditure of the public money placed at their disposal for disbursement in the cause of charity.

LADY VISITORS.

As is now well known, the State homes in various parts of the Colony are placed under the supervision of lady visitors, whose voluntary services on behalf of the children cannot be too highly appreciated. The usual list is appended hereto, viz. :—Armidale, Mrs. Allingham, Mrs. J. J. Bliss; Albury, Mrs. E. Edmondson; Auburn, Mrs. C. Gannon, Miss Darmody; Bowral, Mrs. J. C. Bagot, Mrs. D'Arcy Irvine; Bega, Mrs. Evershed; Balmain, Miss C. B. R. Dixon, Mrs. W. McKenzie, Mrs. G. Boulton, Mrs. Venables, Mrs. Pole; Branxton, Mrs. J. A. Tulloch, Mrs. Bercini, Mrs. E. Smith; Bundanoon, Mrs. Osborn; Bathurst, Mrs. Marriott, Miss Newman, Miss C. White, Miss Meagher; Bulli, Mrs. H. Tate, Miss M. Hicks; Berrima, Mrs. G. Shephard, Mrs. Wilshire; Bethungra, Mrs. M. Sawyer; Baulkham Hills, Mrs. W. M. Best; Burwood, Mrs. Ireland; Box Creek, Mrs. E. Zouch; Brookfield, Mrs. S. Carlton; Berry, Mrs. E. Morris, Mrs. English; Boolong, Miss Grant; Burrawang, Mrs. W. F. Brenning; Burrowa, Mrs. C. Robinson, Mrs. J. H. Boucher; Barraba, Mrs. Kidd; Braidwood, Mrs. O'Brien, Mrs. Bayley; Cootamundra, Mrs. E. Barnes, Mrs. W. H. Mathews, Mrs. E. G. Webster; Cobbitty, Mrs. G. H. Allnutt; Camden, Miss Raymond; Camperdown, Mrs. E. Barnier; Chatswood, Mrs. A. M. Street; Canterbury, Mrs. Wilson; Croydon, Miss M. M. Stack; Cassilis, Mrs. Maria Traill; Crookwell, Miss Olivia Smith; Carlingford, Mrs. H. Cox; Cambewarra, Mrs. Brennan; Cobargo, Mrs. E. Tarlinton; Cessnock, Mrs. M'Donald; Campbelltown, Mrs. J. Kidd, Mrs. J. Loney; Deniliquin, Mrs. H. M'Cullough, Mrs. A. H. Noyes, Mrs. Holt; Dungog, Mrs. M. Day, Mrs. Waller; Dalton, Mrs. H. T. Beresford; Forbes, Mrs. Raymond; Goulburn, Mrs. Ross, Mrs. Oliver, Mrs. Arthur Chisholm, Mrs. Handcock-Burkitt, Mrs. William Chisholm, Mrs. De Lauret, Mrs. M'Killop, Mrs. E. Gillespie, Mrs. Jessop, Mrs. Craig, Mrs. E. Zouch, Mrs. T. M'Killop, Mrs. C. H. Emery, Mrs. G. Sheaffe, Mrs. E. Kingsmill; Gundaroo, Miss K. Elliott; Grafton, Mrs. E. A. Ebsworth, Mrs. M. A. Lee, Mrs. A. Saunders, Mrs. A. Lipman, Mrs. T. Creagh, Mrs. J. S. M'Kittrick; Gosford, Mrs. J. K. Brown, Mrs. Fielder; Gresford, Mrs. R. Boydell; George's Plains, Mrs. M. Young; Gladesville, Mrs. Lumsdaine; Guildford, Mrs. Gurney; Granville, Mrs. E. B. Docker; Gordon, Mrs. Richardson; Gunning, Mrs. Saxby; Gerringong, Miss M. Foley, Miss M. Devery; Gerogery, Miss M. Vile; Hay, Mrs. Johnson, Mrs. Lavender; Hunter's Hill, Mrs. Irving; Homebush, Mrs. H. C. Kent; Hoxton Park, Mrs. F. W. Biden; Ingleburn, Mrs. D. H. Warby; Jamberoo, Miss S. Boyle, Miss E. Colley; Junee, Mrs. Studds; Kempsey, Mrs. Minnet; Kurrajong, Mrs. M. Gray; Katoomba, Miss E. Gittins; Kelso, Mrs. G. S. Oakes; Kangaloon, Mrs. W. F. Brenning; Leichhardt, Mrs. J. J. Dougherty; Lambton, Mrs. Arnott, senr., Mrs. M. Turnbull; Largs, Mrs. Warden; Lismore, Mrs. N. J. Simmons; Liverpool, Mrs. E. J. Asheroft, Mrs. E. Simpson; Maclean, Mrs. M'Innes; Maitland, Mrs. M. Smith, Mrs. P. Rafferty, Mrs. W. G. Lipscombe; Menangle, Mrs. Onslow; Morpeth, Mrs. F. H. Thomas; Mudgee, Mrs. E. J. Willis, Mrs. M. Crossing; Moruya, Mrs. Williams; Milton, Miss Kendall; Marrickville, Mrs. W. W. Clarke, Mrs. A. E. Perkins; Marulan, Mrs. M. E. Shaw; Molong, Mrs. Alldis, Mrs. Browne, Mrs. Panton; Minmi, Mrs. M. A. Froome; Newcastle, Mrs. Berkeley; Muswellbrook, Miss Luke, Mrs. W. S. Wilson; Murrumbateman, Mrs. M. E. M'Clung; Manly, Mrs. S. C. Douglas; Mosman, Mrs. E. M. Sayers; Newcastle, Mrs. M'Donnell, Mrs. Cuthbertson, Mrs. Mulholland, Mrs. M. Timbury; North Sydney, Mrs. T. O'Sullivan;

T. O'Sullivan; Newtown, Mrs. R. Scott, Mrs. J. G. Clegg, Mrs. J. E. Lee, Mrs. Goldsmith, Mrs. Painter, Mrs. Howe, Mrs. M. Aszstalos; Narrandera, Mrs. E. Elwin; Parramatta, Mrs. Inglis, Mrs. Gunther, Mrs. Rook, Mrs. Holt, Mrs. A. Quirk, Mrs. R. L. Fitzpatrick, Mrs. G. Lee, Mrs. C. H. M'Ferran; Orange, Mrs. James Dalton; Penrith, Mrs. F. E. Lethbridge, Mrs. F. Woodriffe; Picton, Mrs. Gibson, Mrs. W. R. Antill, Mrs. Sheppard; Prospect, Mrs. Remmington; Pymont, Mrs. S. Fuller, Mrs. H. T. Holliday; Queanbeyan, Mrs. G. Campbell, Mrs. Willans; Redfern, Mrs. Boyce; Raymond Terrace, Mrs. J. Richardson; Ryde, Mrs. M. Plews, Mrs. M. F. Makinson; Richmond, Mrs. Onus, Miss Onus; Rooty Hill, Mrs. R. Lister; Rouse Hill, Mrs. M. Pearce; Randwick, Mrs. Hellicar; Rookwood, Mrs. A. Gormley; Sutton Forest, Mrs. A. G. Stoddart; Stroud, Mrs. Rushforth; Stockton, Mrs. S. W. Smith; Summer Hill, Mrs. Holland; St. Peter's, Mrs. E. D. Madgwick; Stanmore, Mrs. W. Clarke; Singleton, Mrs. Moylan, Miss Snelson; The Burrier, Mrs. Thompson; Tamworth, Mrs. Middleton; Tumut, Mrs. A. M. Brown; Toongabbie, Mrs. C. E. Wilmott, Mrs. E. Perry; Windsor, Mrs. J. B. Johnston, Mrs. Holland, Mrs. Hall, Miss Hall, Mrs. W. Dean, Mrs. Fitzpatrick; Wollongong, Mrs. Elder, Mrs. M. Fairweather; Wallsend, Mrs. Neilson; Waverley, Mrs. Best, Mrs. W. H. Simpson, Miss Walker; Wentworth, Mrs. W. B. Grang, Mrs. M. E. Morgan; Wallerawang, Mrs. Abbott; Wagga Wagga, Mrs. G. Coleman; Windeyer, Mrs. Mallon; Windellama, Mrs. Calthorpe; Wiseman's Ferry, Miss A. Wilson, Miss Laughton; Woodville, Mrs. Graham, Mrs. O. C. Thomas; Wybong Creek, Mrs. Cox; Wahrenoonga, Mrs. J. T. Toohey; Watson's Bay, Mrs. Fitz-William Wentworth; Waterloo, Mrs. J. L. Alderson; Yarrunga, Mrs. Throsby; Young, Mrs. Byrne, Mrs. Heeley; Yass, Mrs. B. Sheedy, Mrs. H. Faunce.

OFFICIALS.

On 23rd November, Mr. Sydney Maxted, who has held the office of Director of Charities and Principal Boarding-out Officer since the initiation of the present system, was compelled, in consequence of ill-health, to retire from the Public Service. On the occasion of his retirement the Board passed a resolution expressing its regret at the cause, and its appreciation of his long-continued services.

Mr. Hanson, formerly connected with the Audit Department, was appointed to act as Director of Charities and Principal Boarding-out Officer on the retirement of Mr. Maxted, and has given the Board every satisfaction in the performance of his onerous and very responsible official duties.

CONCLUDING REMARKS.

In conclusion, I have much pleasure in conveying the thanks of the members of the Board to Mr. Critchett Walker, C.M.G., the Principal Under Secretary, and to Mr. Fosbery, the Inspector-General of Police, for the valuable assistance rendered to the Department during the year.

I have, &c.,

ARTHUR RENWICK,

President.

APPENDIX J.

Mrs. Marriott, Deanery, Bathurst :—

It has always been a marvel to me that so much interest and affection should be shown by the foster-mothers under the provisions of the Act. I regard every guardian as a self-sacrificing benefactor to the State, and can only be thankful that there should be so many such for the children's sake. I regard the system as an ideal one.

Mrs. M. Antill, Picton :—

The boarding-out system answers well in this district. The children are well taken care of, and are very happy and healthy.

Miss M. A. Asztalos, Newtown :—

Judging from what has come under my personal knowledge, all the State children in my district are happily and comfortably placed. The guardians seem to treat them as they would their own.

Miss E. Colley, Jamberoo :—

So far as my observation has gone, the children who are under my supervision are well cared for and the best relations exist between children and guardians.

Mrs. J. J. Bliss, Armidale :—

The children boarded-out in my district compare favourably with children who are under their own parents' care. They all seem happy and look well.

Mrs. A. Berkeley, Newcastle :—

I think the boarding-out system an excellent arrangement. The State children boarded-out in my district are even more loved and better cared-for as wards of the State than those under the care of their own parents.

Mrs. M. M. Dalton, Orange :—

As far as my experience goes, the children boarded out by the State are better cared for than many children living with their parents.

Mrs. C. Gannon, Auburn :—

From my observation, as lady visitor in the Auburn district, I think that the children of the State compare favourably with children living with their own parents. The relations existing between the children and their guardians seem satisfactory.

Mrs. Gibson, Picton :—

The State children who come under my notice are better cared for than many others living with their parents. In some cases the guardians are quite proud of their foster-children.

Mrs. A. Gormley, Rookwood :—

I think the boarding-out system is working admirably, as the little ones seem to be contented and happy.

Mrs. R. Lipman, Grafton :—

I beg to express my pleasure at the result of the boarding-out system for dealing with State children.

Miss Maud Vile, Gerogery :—

From what I have seen of the boarding-out system of State children, my opinion is that it is highly successful.

Mrs. N. Oakes, Kelso :—

The State children under my supervision appear to be perfectly happy with their guardians, and could not, under any ordinary circumstances, be better cared for than at present.

Mrs. O'Brien, Braidwood :—

The children belonging to the State in this district are in good health, and are carefully looked after by their guardians.

Mrs. D. Osborn, Bundanoon :—

I have much pleasure in again giving my testimony as to the boarding-out system. The children in my district are doing well, and in every sense are comfortable, happy, and well attended. I believe the home life they have with their guardians is much preferable to the barrack system. Mrs.

Mrs. M. Pole, Balmain :—

I have much pleasure in expressing my opinion in favour of the boarding-out system. As a rule, the children are well cared for, and their health is exceptionally good.

Mrs. Richardson, "St. Ives," Sydney :—

As to the results of the boarding-out system, I should say, as far as I have been able to judge from the homes in my district, that it is undoubtedly successful. The children appear to be well cared for, and compare very favourably with those who are living with their own parents.

Mrs. E. M. Sayers, Mosman :—

The boarded-out children under my supervision seem very happy and contented, and look healthy and well cared for.

Mrs. M. Scott, Newtown :—

I have much pleasure in stating, from my personal experience during the past four years as lady visitor of State children, that the boarded-out system acts splendidly; all the children under my supervision have good homes and are well cared for, and as a rule a good feeling prevails between guardians and children; indeed, the children so provided for compare very favourably with those under the care of their own parents.

Mrs. B. A. Sheehy, Yass :—

I have always found that the State children boarded-out in the district under my supervision are neatly dressed and apparently well cared for. The relations existing between the children and their guardians seem to be very satisfactory. The children seem to be as well provided for as those under the care of their own parents.

Mrs. E. Simpson, Liverpool :—

I have much pleasure in stating that the relations existing between the children under my supervision and their guardians are those of sympathy, kindness, and affection. The children answer readily and satisfactorily the questions I ask them, and compare favourably with children under the care of their parents. I consider the present boarding-out system an excellent one.

Mrs. W. H. Simpson, Waverley :—

My experience as a visitor for the last ten years is that in most cases that have come under my notice the children are well cared for, and have the advantage of a comfortable home; in some instances they are loved and made much of, so that I come to the conclusion that the system is a good one.

Mrs. A. M. Street, Chatswood :—

I am happy to express my entire approval of the boarding-out system. The cases that have come under my notice enable me to say that I think boarded-out children compare favourably with those in their own homes who have their parents to look after them.

Mrs. M. Turnbull, Lambton :—

I am happy to say that as far as my district is concerned the boarding-out system works well; all the children under my supervision have good homes, and there seems a happy relationship between them and their guardians.

Miss Wilson, Wiseman's Ferry :—

So far as the children under my supervision are concerned, their behaviour and appearance compare very favourably with other children.

Mrs. U. S. Wilson, Muswellbrook :—

The State children in this district are all well treated, fed, and clothed. I have never had any complaints of unkindness or neglect from the children under my supervision.

Mrs. C. E. Willmot, Toongabbie :—

The State children who come under my supervision are well cared for, and take their place amongst the other children at the local school without any slur being cast upon them, as is generally the case with State children when reared in the Government institutions. There is no doubt that in after life these children, through receiving the same training as those of an ordinary family, will become useful members of society.

The Public School Teacher, Adamstown :—

The State children attend regularly, are well clothed, and indicate by their appearance that they are well cared for at home. They are all progressing satisfactorily in their school studies, and compare favourably with other pupils.

The Teacher, Superior Public School, Annandale :—

The majority of State children attending this school compare favourably with the other children.

The Teacher, Superior Public School, Annandale :—

The State children attending this school appear to have good homes. They compare favourably with the other pupils.

The Public School Teacher, Arncliffe :—

The children attending my school are well-clad and fed, and in behaviour and mental effort compare favourably with the other pupils.

The Public School Teacher, Auburn :—

I think the boarding-out system is very good, and feel quite certain that the children must be happier than they would be in an institution. They compare favourably with the other children in the school; in some cases looking cleaner and better in every way.

The Teacher, Superior Public School, Bathurst :—

The State children attending the school under my charge are healthy-looking, and seem quite happy and contented, and they attend regularly.

The Public School Teacher, Baulkham Hills :—

The children attending this school, who are boarded out, come to school clean and tidy, and appear to be well cared for, and in all respects compare favourably with other children attending this school.

The Public School Teacher, Balgownie :—

The State children appear to me to be well cared for, both as regards food and clothing. It would be impossible for a stranger to distinguish them from the other pupils. They appear in many cases to be even better provided for than many of the other children in the school.

The Public School Teacher, Baw Baw :—

The State children have been well looked after. They compare favourably with the other children under my supervision in their attendance at school, in attainments, and general conduct.

The

The Public School Teacher, Bowral :—

So far as the conduct of State children in school and school-grounds is concerned, they are as well behaved as the other children. They appear to be well looked after in their homes, being clean and tidy.

The Public School Teacher, Bondi :—

The four State children under my charge compare favourably with any pupils in the school. They seem to be as well cared for and as happy as the other children, and their behaviour in school is all that could be wished.

The Public School Teacher, Brookfield :—

From all appearances the State children are well cared for, and are suitably clothed and fed. They attend school regularly. It is a pleasure to me to hear the children speak of their guardians as "father" and "mother."

The Public School Teacher, Bundanoo :—

The State children attending this school compare favourably with other children in dress and cleanliness, and also in mental capacity.

The Public School Teacher, Canley Vale :—

Speaking from a nine years' acquaintance of the system of boarding-out children, in no case that has come under my supervision have I found cause for complaint. The children have invariably been well cared for and well conducted.

The Public School Teacher, Chatswood :—

There are three State children attending this school. They attend regularly; are well clothed and appear to be very kindly treated by those in whose charge they have been placed.

The Public School Teacher, Coolangatta :—

Two children, who are boarded out, attend this school. They attend very regularly, are always well clothed and seem very happy. I am sure they are well looked after. Their conduct at school is very good.

The Public School Teacher, Cobbitty :—

The boarding out of State children is a decided success. Those placed around Cobbitty, have good homes; are thoroughly well cared for; are neat, clean; regular in their attendance at school and evince good home-training by their general conduct.

The Teacher, Croydon Sup. Public School :—

The State children attending this school are well looked after; are regular in attendance, punctual; and compare very favourably with the other children attending this school.

The Public School Teacher, Cullinga :—

The two State children now attending my school are always clean, neat, and tidy, and are healthy looking, well-fed, and comfortably clothed; and are also well behaved. There are several young men working in this district who were boarded out some few years ago, they are now industrious and well-behaved young men, well able to compete in the battle of life.

The Public School Teacher, Ermington :—

The two State children under my charge at the present time have the appearance of being well cared for, and I should think they receive kind treatment. They compare favourably with others under my supervision.

The Public School Teacher, Forrester :—

The State children under my charge are progressing satisfactorily, and compare quite favourably with the other children.

The Public School Teacher, Gladesville :—

There are more than twenty State children among my scholars and they certainly do not appear to disadvantage when compared with the others. Amongst the best clad and nurtured of my pupils are some of these little ones.

The Public School Teacher, Glenhaven :—

The State children attending this school appear to me to be well-cared for, and they compare very favourably with the other children under my supervision.

The Public School Teacher, Eastgrove, Goulburn :—

The children, with few exceptions, appear to be well looked after, and compare favourably with other children, both in appearance and in attendance at school.

The Teacher, Public School, Gordon :—

The State girl who attends this school compares favourably with my other pupils, both as regards dress and behaviour, and I feel certain she receives every care at the hands of her guardian.

The Public School Teacher, Gundaroo :—

There are five State children attending my school; they attend more regularly than any other of my pupils, are always cleanly and tidily dressed, and appear healthy and well-fed. They show every indication of good treatment and of living in as much comfort and happiness as ordinary country children living with their parents.

The Public School Teacher, Gunning :—

There are at present five State children attending this school. They are well treated, their guardians making no distinction, apparently, between them and their own children. They are regular and punctual, and compare very favourably indeed with the other children. It is quite a pleasure to see the interest their guardians take in their welfare, and how very prompt they are to speak in their behalf when they consider them unjustly accused.

The Public School Teacher, Ingleburn :—

The result of my observations is that the boarding-out system works admirably. The State children compare favourably in dress, appearance, and general bearing with those of well-to-do parents, and, owing to more constant attendance at school, outstrip the latter in progress.

The Public School Teacher, Kayuga :—

My experience is limited to two cases. These State children compare very favourably with the other children under my supervision.

The Teacher, Kogarah Superior Public School :—

As far as my experience goes, the results of the boarding-out system appear to be eminently satisfactory. The children appear well cared for, and present no striking contrast to the other pupils of the school.

The Public School Teacher, Kellyville :—

The State children attending this school are well-cared for. They are kept scrupulously clean and tidy, and are sent regularly to school. Their conduct in school is good, and at home they appear to be contented and happy; their guardians take great interest in the children, and make great efforts to train them to be methodical and careful in their habits.

The Public School Teacher, Liverpool :—

The State children who have attended this school appeared to me to be well-cared for, kindly treated, and contented. As pupils they were well conducted, and compared favourably with the other children under my supervision.

The Public School Teacher, Spring Creek, Nadgingowar :—

At present there is only one State child attending the schools under my charge. He is always comfortably clad and has every appearance of being well-fed, and on the whole he has a much better time of it than many of the children living with their parents.

The Public School Teacher, Manar and Virginia, Manar :—

I have had two pupils only, under my supervision, one for a few months only, the other for a period of about one year and six months. From what I can observe of this latter child, as she has a good home and guardian, attends school regularly, and is always neatly and cleanly dressed, appears to have a sufficient supply of food, and compares favourably with the other children under my supervision.

The Public School Teacher, Mittagong :—

The State children attending this school compare favourably in appearance with the other children of the school. They come regularly, and are clean, tidy, and generally appear to be well-cared for.

The Teacher, Public Infants' School, Mittagong :—

I have thirty-nine State children enrolled in the Infants' department. These children appear to be well-fed, well-clad, and clean. They compare favourably in appearance with the other children.

The Public School Teacher, Cook's Hill, Newcastle :—

In the cases that have come under my notice the State children appear to be quite as well-cared for as those who are living with their parents—indeed, in some cases they are better off. In the matter of attendance at school and tidiness they compare very favourably with the other pupils.

The Public School Teacher, Nelson's Plains :—

At present there is only one State child that I know of in this school district. He is treated in every way as one of the family, and seems to be quite happy and well-cared for in every way.

The Teacher, Girls' Department, Superior Public School, Newcastle :—

The State children who attend this school compare very favourably with other children under my supervision.

The Public School Teacher, North Newtown :—

The children attending this school are in many cases more regular in attendance, better dressed, and more carefully taught at home than many of those whose parents have full charge of them. I am quite satisfied with those in my own department.

The Public School Teacher, Ourimbah :—

From what I have seen of the one State child under my care, I feel satisfied she is remarkably well-cared for. The child compares favourably in appearance with the children at this school.

The Teacher, Superior Public School, Picton :—

As far as my knowledge extends, the State children, in point of intelligence, and conduct, are of the average standard; they seem to have comfortable homes, and treated with such kindness and consideration as would be shown by parents rather than paid guardians.

The Teacher, Penrith Superior Public School :—

The children are uniformly neat, clean, and well-conducted. They do not compare unfavourably with other children in any respect.

The Teacher, Superior Public School, Parramatta North :—

From the evidence of my staff, and the general appearance of the State children, I have little doubt that here, as elsewhere, the system is a decided success.

The Public School Teacher, Raymond Terrace :—

I have noticed the condition of a great many of these children, and find in nearly every case that they are well-fed and cared for, are sent regularly to school, and are learning to become creditable members of the community. Their progress at school has been quite as satisfactory as that of the children under the care of their own parents.

The Public School Teacher, Shellharbour :—

The cases with which I am familiar cause me to speak in high terms of the boarding-out system. The boys seem willing and contented.

The Public School Teacher, St. Albans :—

The State children under my charge compare favourably with other children under my supervision. They are well-fed, lodged, and clothed, and their average attendance compares favourably with the other children.

The Public School Teacher, St. Ives :—

The children under my care in this district are well-fed and clothed, and while they have in all cases been well worked in healthy occupation (orchard work), their work would be exceedingly beneficial to them.

The Public School Teacher, South Strathfield :—

There are seven State children attending this school. They attend regularly, are well-behaved, and are making satisfactory progress. They look well-cared for, and compare favourably with the other pupils of this school.

The Public School Teacher, St. Peter's :—

Regarding the State children boarded out, my experience, here and elsewhere, is that they compare very favourably with the majority of pupils attending school.

The Public School Teacher, Sackville Reach :—

The six State children attending my school seem to be well looked after. They attend school regularly, are always clean and well dressed, and compare most favourably with the other children under my supervision.

The Public School Teacher, Thirlmere :—

I think that the State children attending this school compare favourably with majority of other pupils.

The Public School Teacher, Narrandera :—

The State children in attendance at this school appear, clean, well-fed, and are regular in their attendance. They compare most favourably with other children in the school.

The Public School Teacher, Ulladulla :—

So far as the State children in this district are concerned, the system has proved highly successful, the children being well-cared for in every way, and likely to become useful members of society.

The Public School Teacher, Ultimo :—

My experience of boarded-out children is that I have always found them to be in no way distinguishable from others in the humbler walks of life.

The Public School Teacher, Waverley :—

As far as I am able to judge, the boarding-out system is attended by very satisfactory results. The children appear to be well-fed, well-clothed ; they attend school regularly, and in all respects compare favourably with other children.

The Public School Teacher, Watson's Bay :—

There is only one State child attending this school ; her attendance, conduct, and tidiness of dress compare favourably with the other pupils.

The Teacher, Girls' Superior Public School, Woollahra :—

The half-dozen State children under my charge are comfortably clothed, well-nourished and cared for, and appear happy and contented. They compare favourably with the average child of our schools.

The Public School Teacher, Wiseman's Ferry :—

With reference to the State children attending the school under my charge, they appear to be well-cared for, well-clothed, and as happy as the other children. They are kept employed at some farm or orchard work on Saturdays, and in the mornings and evenings during the summer months—a good healthy training for boys. The guardians are sober, steady, and industrious people, likely to inculcate habits of frugality and industry.

The Public School Teacher, Woolwich :—

The State children who attended the Woolwich Public School appeared to be as well-cared for as most children who live with their parents.

The Public School Teacher, Woonona :—

Many State children have come under my notice, and in all cases they compare most favourably with other children, and are happy and content in the freedom and privilege they enjoy.

The Teacher, Wallsend Superior Public Girls' School :—

The State children attending this school compare favourably with the other children. They appear to be well-fed, are comfortably clothed, and their attendance is very satisfactory.

The Public School Teacher, Wentworth :—

There are three children boarded out in this town. They are well-cared for by their respective guardians, and come to school regularly ; and in appearance and attainments compare favourably with the other children under my charge.

REPORT.

The Clerk-in-Charge, Department of Labour and Industry, to The Honorable
Jacob Garrard, Minister for Public Instruction, Labour and Industry.

Sir, Department of Labour and Industry, 31st January, 1898.

I have the honor to furnish, in accordance with the provisions of section 17, the first Annual Report on the working of the Factories and Shops Act of 1896, for submission to Parliament.

The report covers the period from the proclamation of the Metropolitan district to the close of last year.

Unlike similar legislation in other Colonies, this Act did not on coming into force become applicable to the whole Colony, but only to such portions of it as were from time to time proclaimed to be factory districts.

In accordance with this provision, a proclamation was issued on the 25th of January last year, the Act having come into force on the first day of that month, declaring Sydney and a number of the suburban Electoral Districts to be a district bearing the title of "The Metropolitan Factories and Shops District." This district covers an area of over 500 square miles, and extends from Sydney as far west as Parramatta, north to Broken Bay, and south to George's River, embracing the following Electoral Districts:—Annandale, Ashfield, Balmain North, Balmain South, Botany, Burwood, Canterbury, Darlingtown, Glebe, Granville, Leichhardt, Marrickville, Paddington, Parramatta, Petersham, Randwick, Ryde, Redfern, St. George, St. Leonards, Waverley, Woollahra, Willoughby, Waterloo, and Warringah; Sydney-Belmore, Bligh, Lang, Phillip, Cook, Denison, Fitzroy, Pyrmont, Flinders, Gipps, King (excepting South Solitary, Montague, and Lord Howe Islands) Divisions; Newtown-Camperdown, Erskine, and St. Peters Divisions.

On January the 29th the regulations under the Act prescribing the sanitary requirements, also forms of notices to be given and returns and records to be made in accordance with its provisions, were published, and during the following month the Public Service Board selected Miss Annie Jane Duncan, late Inspector of Workrooms under the Vestry of St. Mary Abbots (Eng.), from a large number of applicants, to be the inspector on the women's side, and transferred Mr. W. I. Taylor, late of the Statistician's Office, and Mr. W. Armitage, civil engineer, from other branches of the Service, to be senior and junior male inspectors respectively. The Clerk-in-Charge of the department was also, for departmental purposes, appointed an inspector under the Act, and named as the person on whom occupiers of factories in the Metropolitan district should serve notices of registration.

Notices were inserted for several weeks in the columns of the local Press, notifying occupiers of factories of the provisions of the Act with regard to registration, and calling on them to apply for the formal notice to register. Simultaneously a concise abstract of the Act was published in pamphlet form, and on receipt of applications was posted to occupiers. Chinese residents were at the same time apprised of the provisions of the Act by advertisement in the journal published in their language, and by a specially translated abstract in the form of a poster distributed through their business quarters. Upon receipt of the required particulars the occupiers were registered, and certificates of registration issued to them in the prescribed form. At the close of the year 1,787 factories had been registered. Of this number, 114 registrations had been cancelled consequent on the removal of occupiers. This gives 1,673 as the number of registered factories in the Metropolitan district in occupation at the end of 1897.

It may be convenient at this stage to explain that the following places are factories within the meaning of the Act:—

- (I.) Any place (including a laundry, dyeworks, and bakehouse) in which four or more persons are engaged directly or indirectly in working at any handicraft, or in preparing or manufacturing articles for trade or sale.

This does not, however, include any place in which the persons engaged in working are shown, to the satisfaction of the Minister, to be all members of one family.

- (II.) Any place (irrespective of the number of persons employed, or the fact that they are members of the same family) in which steam or other mechanical power or appliance is used—

- (a) In manufacturing goods; or
(b) In packing them for transit.

- (III.) Any place in which two or more Chinese are so engaged.

Coincidentally with the work of registration, the district was divided into two parts for purposes of inspection. For a few weeks the inspectors worked together so as to acquire a similar method of carrying out their duties, but thereafter each worked systematically in his own division. As was expected, numerous cases were found of factory occupiers ignorant of the requirements of the Act, and these had to be instructed and their places registered. The female inspector at the same time commenced a systematic inspection of the factories and shops in the city where female labour was employed. A code of rules was issued to the inspectors for their guidance, and a general instruction given them that, inasmuch as legislation of this nature was new to the community, they must for some time regard their duties rather as those of instructors than of inspectors in search of violations of a law long established. They were directed to point out the provisions of the Act, and to endeavour to procure compliance with them by appeals to judgment and reason rather than by calling attention to the penalties the law imposed for their violation; in short, to so far as possible secure observance of the Act without appeal to the Courts. Subsequently it became necessary to punish certain offenders, but in no case was this course resorted to till ample opportunity had been given to conform to the law.

Instructions were also given to the inspectors to endeavour to immediately secure the carrying out of the health clauses of the Act, and so far as the women working in the factories were concerned, the provision for them of separate and adequate sanitary accommodation. The figures quoted under the special paragraphs devoted to sanitation will give some idea of the useful work already accomplished in these directions by the Department.

The work of the female inspector was, in the early part of the year, limited to those factories in the city in which women-labour alone was employed, such as laundries; she then extended her inspection to the women's side of those factories in which both sexes are employed, and subsequently visited the shops in which women were engaged. The experience gained in the first six months of inspection led her to express to me, in an interim report, her surprise at the absolute want of consideration from which women had to suffer in the lack of privacy and sanitary accommodation. In this respect, however, Sydney is not exceptional, for until the recent appointment in England of a corps of female inspectors, no better conditions prevailed in a country where factory inspection had been in active operation for years.

In the last English report Miss Squire states that "where separate accommodation already exists, it has not always been found to be suitable, sanitary conveniences without doors, or opening out of work-rooms where men and women are employed, or those for men and women placed side by side in a passage or yard." Exactly similar conditions were reported by our inspectors, whose statements will be found on a subsequent page, to exist here. When the factories in the city had been inspected, the shops were taken in hand, and a like state of affairs found in them.

The male inspectors, in addition to giving close attention to the sanitary conditions of factories, also enforced, so far as was practicable, the requirements of the Act with regard to the fencing of machinery. In connection with this branch of the work, the English Board of Trade and the United States Department of Labour were communicated with, for the purpose of obtaining diagrams of the machinery guards used in those countries. From both departments a number of valuable works of reference, plans, and diagrams have been received, and have proved of great use to the inspectors in carrying out this portion of their work.

During the year the inspectors made 2,786 official visits to factories and shops. This number does not, however, include many calls subsequent to the first to see that instructions had been carried out. In some cases as many as half a dozen such calls have been made.

In August last a deputation waited on you, representing the New South Wales Chamber of Manufactures, suggesting that certain amendments should be made in the Act. The following list of the principal suggestions and your replies thereto embodies the substance of the representations then made:—

Submitted by the deputation:—

Part I, section 7 (sub-section 1).—It is recommended before the inspector proceeds to examine the factory that he first notifies the proprietor or manager at the office at the works (sub-section v), and that a principal or managing employee may accompany the inspector through the works.

Reply:—

Instructions have been given to inspectors when proceeding to examine a factory for the first time to wait on the proprietor, explain to him the provisions of the Act, and ask him to accompany the inspector on his first visit of inspection. In order to avoid any appearance of discourtesy in this respect, visits have been made repeatedly at the same factory, but inspection deferred in the absence of the proprietor.

In all subsequent visits, however, the inspector is instructed to use his discretion whether he should first see the proprietor or not, as it is manifest that an inspection carried out in the presence of a proprietor would in many cases prove quite ineffectual. The Act advisedly gives the inspectors power to enter, inspect, and examine, at all reasonable hours, by day or night, any factory or shop; and this is a power which the Department, to do its work effectually, cannot yield. It would, for instance, be almost impossible to carry out an inquiry into an alleged or suspected grievance or infraction of the law with the eye of the employer upon a woman or lad who anticipated dismissal if she or he were suspected of giving evidence against the employer.

The powers given inspectors under our Act are identical with those given to factory inspectors in England.

Submitted by deputation:—

Part III, section 19.—The conditions of this clause are far too stringent, and should be considerably modified. Clause 20.—The exemptions should include the following factories and shops, viz.—Engineers, woollen mills, iron-rolling mills, belting, harness, boot, printing, tin-plate, and coach-building.

Reply:—

An order will be made under the powers given by section 20 granting a special exemption from the lime-washing requirements, &c., to engineers, iron-rolling mills, and tin-plate factories.

Submitted by deputation:—

Part IV, clause 28.—Applying to mill-gearing should apply to main shafting and main wheels and belting, and not to individual machines being driven, or to the gearing attached to individual machines.

Reply:—

The inspectors have been instructed to interpret "mill-gearing" in the light of the English Act of 1878, in which it is held to comprehend "every shaft, whether upright, oblique, or horizontal, and every wheel, drum, or pulley by which the motion of the first-moving power is communicated to any machine appertaining to a manufacturing process"; and in *Holmes versus Clarke*, decided in the English law courts, it was held that this definition included every wheel except the operative wheel with which the manufacturing process is directly effected.

Submitted by deputation:—

Part V, section 37.—In connection with boiler-making works, it is recommended that under this clause rivet-boys and boys employed in rolling-mills be exempted. Clause 40.—Be amended to read that such boys be allowed to work any eight hours in the twenty-four, and overtime be paid in accordance with the men's scale.

Reply:—

The question of exempting for a limited period rivet-boys in rolling-mills, certain lads employed in connection with the slaughtering trade, and lads and girls employed in the jam and fruit-preserving trade, from the restriction on their employment at night-time, is under consideration.

The discretionary power vested in the Minister under section 40 is sufficient to meet special cases of the kind referred to.

Submitted

Submitted by deputation :—

Regulation No. 9.—It is recommended that the Government appoint medical officers to examine children coming within the meaning of the Act free of charge.

Reply :—

In England, Victoria, and New Zealand the course adopted with regard to the issue of certificates of fitness is for the Government to appoint its own medical officers and fix a scale of fees to be charged by them. In Victoria the fee is 5s. per head. As, however, it was thought that in many cases a more advantageous arrangement might be made between parents and their lodge doctors, no further limitation was introduced into the New South Wales Act beyond that the persons granting the certificates should be legally qualified medical men.

In consequence of the representations of this deputation you subsequently made an order granting a special exemption to engineers' shops, iron-rolling mills, and tin-plate factories from all the requirements of the Act with regard to lime-washing and painting.

SANITATION.

The principal provisions with regard to the sanitary arrangements of factories and shops are contained in the regulations, and are to the following effect :—

- (a) That there shall be not less than 400 cubic feet of space for every employee.
- (b) That provision for ventilation be made in the proportion of not less than 12 square inches of inlet and a similar area of outlet opening for each employee.
- (c) That closet accommodation be provided separately for each sex, in the proportion of one closet to every twenty persons employed.
- (d) That all floors and windows be washed with hot water and soap once at least every three months, and the seats and floors of every closet thoroughly scrubbed with water and soap once at least every week.

The Act itself makes provision for the periodical painting, varnishing, or lime-washing of all the inside walls of the rooms of a factory, and the ceilings of such rooms.

It is, perhaps, in the direction of securing a higher degree of cleanliness and comfort in the environment of the factory hands' daily employment that the most successful work of the Department during the year has been done. It was considered that towards this end the first efforts of the Department should be concentrated, and at the present time, I believe that, making allowance for those structural difficulties which are traceable to the want of legislation of this kind in the past, and which will for some time to come stand in the way of any thoroughly satisfactory system of ventilation, the city of Sydney will compare not unfavourably with the capitals of the sister Colonies in the provision made in its factories for the comfort and health of the employees. There are certain factories producing well-known standard brands of food goods which for cleanliness and completeness are not excelled in the older countries.

On the other hand, inspectors have come across places which, in their utter disregard of cleanliness, are a menace to the health of the community. The task, not yet fully accomplished, of securing some degree of cleanliness and decency in these places has been, perhaps, the heaviest part of our work, and the following figures will give some idea of the cleaning-up process that has been in operation since the Act came into force :—

Number of factories in which lime-washing and cleaning have been carried out ...	652
„ sanitary conveniences either erected or set apart for separate use ...	110
„ sanitary conveniences ventilated, cleansed, or repaired ...	99
„ factories where additional space and ventilation have been provided ...	70

As will be seen from the inspectors' reports, they have in enforcing cleanliness been met in a good spirit, and here I must express the thanks of the Department for the co-operation that has been frequently and willingly given to it by the Municipal authorities; for this Department, while carrying out the duties assigned to it under the Act, has also kept an eye upon abuses and insanitary conditions that, whilst outside its own immediate province, have yet offended against public health and decency. In such cases it has referred the matters to the proper authorities. Similarly, the officials in connection with the Public Health and Water and Sewerage Boards have co-operated with our inspectors.

As an example of the sort of "factory" of which not a few were in existence at the beginning of the year, and had to be dealt with by the department, the following may be cited from the report furnished to me at the time. The place in question was used by an upholsterer. "We found," says the report, "a stable under the bedding-room, also a manure-heap at the foot of the stairs leading to the bedding-room, and a large rubbish heap under the stairs. The floor of the upholsterer's room, being on the natural soil, is very dirty. The men's water-closet is off a stall, and is filthy, the floor being covered with horse-manure, the seat broken, and the pan cracked. A sheet-iron soil-pipe leads from the females' water-closet (overhead); it is jointed with putty between the lead-pipe and sheet-iron pipe, and is without any flushing cistern. We found some crockery which had evidently been used in a recent meal stacked alongside this water-closet, also we ascertained that the butcher next door had his beef-salting tables next to the wall of the men's water-closets. We found some of the stock in trade in the stable placed on top of 6 to 12 inches of manure."

The occupier of this "factory," like so many of his kind, was prodigal in promises to amend, but as week after week went by and no material improvement was made in the place, he was given the option of making extensive alterations or vacating the premises within a given time. He accepted the alternative, and this eligible factory property is now to let. In passing, a word might be said as to the desirability of some proper system of disinfecting the flock from which flock-beds are made. This flock is simply disintegrated cloth, and for the purpose filthy remnants picked up on tips and wherever else they may be found are used, and are in some instances, as Miss Duncan reports elsewhere (p. 16), manufactured into flock without even the pretence of cleansing them being made. There are, however, said to be cases where steps more or less effectual and sufficient have been taken to disinfect the material from which this flock is made.

Complaints have been made to me both by letter and through the reports of inspectors concerning the insanitary premises used by printers and others in connection with their businesses. It frequently happens that basements or cellars, damp, lit by artificial light, and inadequately ventilated, are used as composing-rooms.

composing-rooms. As pointed out by Inspector Taylor, such steps have been taken, as under the circumstances were possible, to reduce the defects referred to; but it is hoped in time to prevent the use of these premises at all for such purposes. When the Act came into operation, leases and other obligations had been entered into, and it was recognized by the Department that arbitrary action in this direction would in some cases inflict serious loss, and perhaps do more harm than good; but it should be clearly understood that it will not sanction a continuance of this system in cases where it is proposed for the first time to so utilize a basement.

The questions of cubic space and ventilation are dealt with fully in the inspectors' reports, and it will be sufficient here to direct attention to the necessity for fixing a minimum superficial space for each employee in a factory, so as to prevent the crowding together that now frequently takes place even in rooms with ample cubic air-space and sufficient ventilation for all the workers if they were fairly distributed over the floor-space.

It is probable that during the new year a system will be adopted which has been found to work successfully in parts of England, where certain sections of the Factories Act are worked by the Municipal authorities. It is to provide for each workroom a card to be hung up on the wall, and maintained there, notifying how many persons such room may accommodate. By this means an inspector may on entering any workroom at once detect whether it contains more than the authorised number or not.

Mr. Taylor writes:—

Regulation 2 provides that every factory and shop shall contain not less than 400 cubic feet of air space for each person employed therein. This limit perhaps in some factories where the ventilation is very good, and heating appliances are not used, may be considered too high, but taking into account the badly ventilated condition of a majority of the work-rooms, and the impracticability, in a number of instances, of adequate provision for fair ventilation, the allowance or limit of 400 feet barely suffices.

The overcrowding of workrooms prevails in the clothing and boot trades. The larger clothing and boot factories, as a rule, act up to the requirements of the Act, and as to both ventilation and space of working, are fairly satisfactory.

Where the sides of a factory adjoin adjacent properties fans might very well be erected to supply the ventilation now deficient. This, obviously, is possible only where mechanical power may be employed. In smaller workrooms, such as tailoring and dressmaking establishments, it has in certain cases been found necessary, in order to meet the requirements of the Act, to induce occupiers to take larger premises to provide sufficient space for the number of persons employed. I have found it comparatively easy to induce occupiers or controllers to effect the necessary alterations in this respect.

With regard to overcrowding, the most frequent complaints are made of those establishments where machinery is not used. Full consideration has been shown in those cases where employers, endeavouring to faithfully comply with the provisions of the Act, have used their best efforts to meet the expressed orders of the inspector. Reasonable time is always allowed during which the employer may make the required alterations.

With regard to ventilation, the condition of the factories at the time of the enforcement of the Act could not by any stretch of imagination be regarded as good. Certainly the arrangements for air shafts, etc., in the better built modern factories may be spoken of in some instances as excellent. On the other hand in cases where the basement is used as a workroom, these being more frequently met with in the city and immediate vicinity where space is so valuable, the necessary supply of air is obviously deficient. Noticeably is this the case in the printing trade, where the dampness of walls and absence of ventilation are physically dangerous to employees. Moreover, artificial light has to be employed, increasing the density of the already humid atmosphere.

To obviate the physical inconvenience to which in such cases the employees are subjected, the use of "inhaling" and "exhaust" fans has been suggested. This being the first year of the operation of the Factories Act, employers have occasionally seemed to think the requirements of inspectors somewhat arbitrary. However, the Departmental demand being tempered with reason, the result has been that in most cases employers and employees have cheerfully co-operated with us in carrying out the requirements of the Act.

It may be remarked, while dealing with structural defects and the utter unsuitability of basements as workrooms, that every effort has been made towards—if not immediate alteration—in any case, such action as would tend towards the lessening of physical harm to employees.

As instances of the operation of the Act I may cite the following:—Upon my first visit to a certain factory, where I found in the basement below the street level about forty persons working, there was an undoubted absence of ventilation, added to which artificial light increased the insanitary condition of this portion of the building. The suggestion that air supply fans should be used was acted upon, and on my next visit of inspection the proprietor had this means of ventilation properly and systematically erected with undoubted benefit to the workers.

In another case I visited a factory within my district and found a number of females working in a comparatively small room, the roof and walls of which were built of iron. The stifling heat engendered by these unfavourable conditions induced me to make a comparative test with the result that while on the street in the shade the thermometer stood at 88°, in the room referred to it showed 98° Fahr.

Finding that the alteration of conditions was impracticable, I suggested removal to another portion of the building, where the necessary alterations could be carried out. This course the occupier adopted, and I am pleased to say, on a subsequent visit at the conclusion of the inspection both master and employees heartily thanked me for the suggestions made.

Generally considered, the water-closet accommodation of the various classes of factories coming under the Act are far from satisfactory. The causes for complaint may be ranged under three headings:—

1. Uncleanliness.
2. Inadequate accommodation.
3. The want of separate accommodation for the sexes.

As an illustration, I may mention the case of the owner of a factory where about 80 persons (50 males and 30 females) employees are daily at work. These persons, many of tender years, are obliged to use an exposed place, where are erected two seats—one for males and the other for females—the division between them consisting of a thin partition only. Both the places indicated can be viewed from any part of the factory.

Again, by way of showing the inadequacy of water-closet accommodation, I may mention a factory where, for about 250 persons, five seats only were provided, three being for males and two for females. I may state that here I have had seven more seats provided.

While in many cases the doors of these places are mere apologies for the purpose, in others where males alone are employed—and these form a considerable proportion—the water-closets are entirely open. Having brought this state of affairs under the notice of the employer, he invariably answers, "I cannot put up a door or screen, as the workers would loaf, and I could not watch them." To prevent this an open space, generally about 18 inches, is left between the bottom of the door and the floor of the water-closet. In justice to the employers, it must be remarked that the charge of "loafing" rests upon a good foundation, and I have repeatedly had evidence of it.

I may further add that the objectionable condition of many of these places is due to the employees themselves.

Another great evil is the "inside" water-closet, generally one simply screened off or separated by a light partition from the general workroom, and without direct ventilation from the outer air.

In order as far as possible to obviate the objections to this system, the occupier has been directed to erect, where practicable, strong partitions (reaching the ceiling) and thus in some measure by the aid of vent pipes to the outside, prevent possible ill effects to health.

Other cases may be mentioned in this connection where the water-closets are situated in the basement or ground floors, generally in a dark, damp corner, the existence of which is a direct generant of fever.

In other factories again the managers have provided, instead of the ordinary seating accommodation, a simple open cesspit (connected with the sewer), a plain thin bar being placed across it.

With regard to shops, the sanitary conveniences are little better than those of the factories, but it is to be hoped that as employers and managers are instructed as to the requirements of the Act, a vast improvement will be made in this direction.

The

The insanitary conditions that obtain at a great many of the factories and workshops seem to indicate either ignorance or disregard of the principles of hygiene.

Dirty premises seem to be regarded in many cases by the occupiers and workpeople alike as no ground of complaint, and when asked to limewash and have the floors and windows cleaned, have grumbled and made every excuse to evade carrying out the instructions.

In extensive and more cleanly factories, where large numbers of persons are employed, and the limewashing of the factory would mean the stopping of work, it was, under certain conditions, allowed to stand over for a specified time, generally sufficient to cover a public holiday, for as a rule the holidays are taken advantage of by these larger factories to limewash and effect general repairs.

In almost every factory visited, however, with the exception of those exempted by the Act, it was found necessary to order limewashing, and it is to be hoped that the present year will find these factories in a condition more cleanly and healthful.

Mr. Armitage, in his report, says:—

The space allowed by the regulations, viz., 400 cubic feet for each person, is little enough in our city, where the air is charged with an average of 75 per cent. of humidity over the whole year, and on some days reaches as high as 100 per cent., or little better than a vapour bath.

In one large factory in George-street, where upwards of 200 females are employed, the flats are divided into work-rooms holding from 20 to 30 persons, and the partitions are about 8 feet high. As the regulations now stand, the cubic contents of the whole room are taken, and not that of each subdivision, consequently a considerable portion is lost to the occupiers through the space taken up by communicating passages. Any advantage that might accrue from the air contained in the passages is lost through the low degree of expansion in the moisture-charged atmosphere preventing it from rising.

The facts are similar in a clothing factory in Clarence-street, where the rooms are sublet by the occupier to his contractors, who in most cases employ young girls, and often overcrowd the space. I have twice removed a sub-contractor from this building.

In the printing trade the space allowed for the persons employed is ample, but when the consumption of air by the gas jets is taken into consideration, a very unhealthy state of affairs exists. Most of these establishments are in the basement, and even when above the ground floor they have the gas burning all day.

Overcrowding is carried on in the tailoring, dressmaking, and other trades at certain seasons of the year.

In the matter of ventilation it cannot be said that we are abreast of modern requirements, a large percentage of the buildings used as factories having been built without provision for, or apparently a thought of, ventilation. This is noticeable in the clothing trade, and especially in the waterproof clothing trade, where naphtha is extensively used in the solution required for seaming. In the waterproof factories the work is done with the fingers by pressure and rubbing, the naphtha being smeared along the edges to be secured. A further application is made of a solution consisting of naphtha and rubber, and of the appearance of glue or jelly. For convenience, the workers have placed near to them small vessels of naphtha and solution, which are uncovered, and, in consequence, permit the free escape of the naphtha. In one large factory of this nature, two large hydraulic ventilators, with a discharging capacity of 1,000 cubic feet per minute, have been erected, which has had the effect of taking part of the naphtha vapour away. In another waterproof factory in the city, where there is no ventilation whatever (excepting by the windows), I have seen a female fall down in a dead faint, and the occupier (who was present at the time) turned to me and said that it was very unfortunate that it should happen while I was present (meaning that it was his ill luck). The factory in question is a very bad one, but, as the business has changed hands, the new firm are shifting to more suitable premises. I might add that in each of these factories from 50 to 100 females are at work, and they have to stand all day at their work, as it is impossible to do it sitting down.

As the majority of the occupiers are tenants, it is a difficult task to make them put in ventilators and other costly improvements, when they have only a 12 or 18 months lease. The best course is to visit every new factory (i.e., when an occupier removes from one building to another), and then insist on proper ventilators and other improvements being supplied.

In the boot trade, where trimming machines are used, and the exhaust is taken outside, as in the case of a large factory at Leichhardt, also one at Darlington, that portion of the factory where the machines are at work is always fresh and even cool. This is brought about by means of a fan attached to the back of each machine, which draws off the dust. There is no doubt that mechanical appliances may be of great assistance in removing bad air, dust, &c.

Regulation 4 provides for water closet accommodation in the proportion of 1 water-closet to 20 persons, to be separated for the different sexes. On my first visit to some factories, I found 1 water-closet serving 30 to 40 persons of both sexes. In some cases in the clothing trade, the water-closets open into the workrooms, and the entrances to them are only screened off by a piece of cloth. This is very common in the city factories, as the majority have their water-closets in the workroom, and some new factories which have not long been occupied have the same objectionable features. In some few cases they have made provision for ventilation through the roof.

In visiting some of the factories where no water-closet accommodation is provided, I found that the men had to go some three or four minutes' walk to the nearest public water-closet, and often to a hotel. In several shops in the engineering trade, I have had complaints from the men with regard to this, in one place they having to go to the public water-closet, which is 500 yards away from the shop. The custom of using the nearest hotel water-closet is very common in the smaller factories; but in the case of the largest factories in my division, the occupiers have met me in every way, and provided full accommodation.

The limewashing section in the Act is a great boon to all workers, providing them with additional light and cleanliness. At first there was great opposition to limewashing, but occupiers are coming to look upon it as a good investment, and, in many cases, occupiers do it of their own accord, without regard to the obligation placed on them by law.

Miss Duncan, in her report, states:—

Overcrowding of workrooms has been dealt with in several cases, and the regulation, which demands 400 cubic feet of space for each person, has done much for the improvement of workrooms in the clothing trade. Such extreme cases have been found as the employment of 12 girls and women in a room giving, on the basis of the regulation, space for 4, but such instances are rare. It has not been uncommon to find 4 and 5 persons in excess of the permissible number in rooms which might be occupied by 12 or 14.

With one phase of overcrowding it has been found impossible to deal.

A common form of workroom in large dressmaking establishments is that of a very large and lofty room subdivided, for purposes of convenience, by 6-feet high partitions, into numerous compartments set apart as workrooms, passage-ways, and places for heating irons. The partitions are provided with doors, the opening and shutting of which aid in changing the air in the workrooms, though not in its ventilation in the proper sense of the word.

The compartments are, of course, ventilated from the outer air by windows, and are often provided with roof ventilators, and employers contend that inasmuch as the room, taken as a whole, has cubic space for a certain number, the various partitions, however unevenly the numbers may be distributed therein, can not be held to be overcrowded unless the aggregate number of occupants exceeds that allowed for the whole room.

Practically it is found that these rooms compare unfavourably with those in which the ventilation is unimpeded by partitions, and in which the occupants are more evenly distributed throughout the rooms.

The regulations made under the Act are hardly sufficiently explicit to meet cases of this kind, and it would be well if they were amended so as to fix for purposes of measurement a maximum height of 12 or 14 feet, and a provision for floor space.

The popular fallacy that a lofty ceiling compensates for deficiencies in floor-space is combated by all authorities on hygiene. Dr. Newsholme says, "The impurities produced by respiration tend to accumulate about the persons who have evolved them, although it is true that in rooms heated by gaslight a large amount of hot and impure air collects near the ceiling. The necessity of an abundant floor-space is shown by the fact that a space enclosed by four high walls, and without a roof, would, if crowded, speedily become offensive, and persons in a crowd in the open air have been known to have been suffocated. In reckoning the practical cubic dimensions of a room the height should only be reckoned as 12 feet."

The logical deduction arrived at by a dressmaker with whom I had occasion to discuss the question of overcrowding is not without point in this connection, "Then all we have to do is to build a room with walls up to the sky, and we can put as many people as we like into it."

A higher standard of cleanliness in floors is needed. It is not uncommon to find large accumulations of bales of cloth, cardboard boxes, and tailors' cuttings in corners and beneath tables. These not only occupy valuable air-space, but serve to gather dust and harbour insects.

The periodical scrubbing of floors has been called for in many cases with very good results. Although this requisition is sometimes received with much surprise by occupiers, and has been suggested as a possible ground for "fighting" the Department, it can hardly be questioned that it is a matter of great necessity in all factories where clothing and food are prepared, as well as being desirable on sanitary grounds and for the comfort of workers. The habit of smoking, which is allowed in some tailors' rooms where men and women work together, need only be mentioned.

Whilst commenting upon defects which may have arisen from want of thought and want of personal supervision by the employer, rather than from want of means, it would be very unfair to forget to mention those factories in which every arrangement had been made for the comfort of employees long before the Act came into force, and which are always scrupulously clean.

And one is glad to mention the numerous instances in which it has only been necessary to point out a defect to have it immediately remedied with cheerful acquiescence. A pleasant incident to recall is that of the foreman who, with all his boys and girls, set to work to scrape, scrub, clean, repaint, and limewash, after the visit of the inspector, and took considerable trouble to keep the room in better order afterwards.

The presence of gas iron-heaters in workrooms is a great defect, and can only be effectively dealt with by prohibition. This course, however, presents many practical difficulties in small workrooms—thus, a tailor or dressmaker occupying one or two rooms in a flat, whose irons are in constant requisition, can often find no place for the heater but in the room itself; when the heater can be placed immediately under the flue of the chimney the ill-effects are not so apparent, but the air of a small room without a fireplace, in which tailors' irons are constantly being heated, is extremely gas-laden and disagreeable, as well as probably unhealthy.

"A medium gas-burner, which burns about 3 cubic feet of gas per hour, destroys 24 cubic feet of oxygen, and produces 6 cubic feet of carbonic acid," while a person at rest gives off 0.6 cubic feet of carbonic acid. This is popularly expressed by saying that a medium gas-burner produces as much carbonic acid as ten men, and although this statement does not cover the whole ground, it shows that in a room where gas is burning a much increased amount of ventilation is necessary in order to supply the requisite amount of oxygen for the consumption of the occupants of the room and the voracious gas-burner.

In many cases we have required the iron-heaters to be fitted with hoods and flues, and though this has much improved the air of the rooms, it is not perfectly satisfactory.

In the matter of ventilation a great deal remains to be done, although improvements have been effected in many factories. In many cases grave structural difficulties render it difficult to enforce the regulations.

I know of no sanitary arrangement which is more generally approved of theoretically than an abundance of ventilation without draught, nor one more difficult of carrying into effect.

In the summertime the need for air is so urgent that every available door and window is left open, and the condition of some rooms is fairly good, unless affected by the presence of gas iron-heaters. But in cold weather when long sitting and want of exercise render the workers susceptible to cold, the difficulty of getting windows kept open is very great. The provision of self-acting outlet-ventilators, though not theoretically the best, seems to be that which has the most chance of success in practice; all inlet ventilators, such as windows, valves, and tubes which are capable of being closed by the employees will seldom or never be open in cool weather, while the extracting ventilator or roof louvre being out of reach, and, presumably always in action by reason of the upward drift of heated air, is at least removing that which is bad.

An argument often advanced to prove that a room is healthy and needs no improvement is that an employee has never been known to leave because of illness; this may be true, and yet the general lowering of strength and vigour which is the immediate result of breathing impure air may lead to the colds and neuralgia which are thought little of and yet are often the punishment of a disregard of Nature's laws.

The close connection of phthisis also with overcrowding and the breathing of a vitiated atmosphere should not be forgotten.

The factories which are most difficult to ventilate properly, and of which there are many examples in the large warehouses in Kent and Sussex Streets, are those which occupy long and comparatively narrow rooms on the 1st and 2nd floors, reaching from the street in front to the lane at the back; the side walls being all dividing walls are useless for ventilation, the roof is not available, and the opening of windows at each end causes a draught; there is an inrush from the lifts and staircases, but it is generally drawn from an impure source, the light is deficient, and the workers are inclined to congregate at either end.

The heat of such rooms, when night work is going on and all the gas jets are alight, is intense. To ventilate such a room efficiently is sometimes a problem too difficult for the inspectors to solve, and removing to better premises is the only effectual remedy.

In the month of May I received instructions to carry out a systematic inspection of the sanitary conveniences of shops in the city; a great many orders to construct additional conveniences, and to properly light, cleanse, and ventilate those already in existence were the result. Although a considerable amount of work has been done, much still remains to do.

Of all the sanitary provisions of the Act none, perhaps, has been more urgently wanted than that which requires suitable, sufficient, and separate accommodation to be provided in factories and shops. It would not be too much to say that but few of the numerous premises which have been visited have been found to be in a thoroughly satisfactory condition. While some large and well ordered modern establishments are well and sufficiently provided, the greater number of places, large and small, are lamentably deficient in some important particular. This, however, does not apply to many small places of business where work is carried on in private houses, where the accommodation is generally satisfactory.

Faults of construction are numerous, leaking and deficient traps are not unknown, and light and ventilation are often entirely wanting. In some buildings there can be but little doubt that entire reconstruction of the drainage system on the modern plan is needed, but with this the Department has no power to deal.

One flagrant, but by no means isolated case, of bad accommodation may be quoted: The only provision made for about twenty men and women was one water-closet in the basement, so dark that it was necessary on a bright summer day to carry a lighted lantern to guide one's steps, and so offensive for want of ventilation, and cleansing, and leaking drain-pipes that it must have been a menace to the health of the employees; for months a conflict went on between the landlord and the tenant as to who should carry out the required improvements, which was only terminated by a notice being given to the occupier that this state of things would be no longer tolerated, and the threat of the Municipal Council, acting in concert with the Department, to do the work at the expense of the landlord if he failed to carry it out in a given time.

A deplorable custom has prevailed in many factories of constructing water-closets within the work-room, often in a corner far removed from any window or means of ventilation, and without any arrangement for shielding the approach. It is a great pity that it has not been absolutely forbidden to construct these conveniences within the four walls of a work-room where their presence is objectionable from every point of view.

It would be well if they could be removed to some more suitable position in the factory, or, failing this, be thrown out on cantilevers, where the strength of the wall will admit of it; though, unfortunately, this cannot always be done.

In the numerous chambers in the city which are let out as offices and workrooms, the conveniences are usually insufficient, and generally extremely ill-kept and dirty. This is partly due to the fact that a dispute arises between the caretaker and the occupier of rooms as to the person on whom the duty of cleaning should properly fall. It is always, of course, pointed out to the employer by the inspector that he alone is responsible to the Factory Department, but where the right of use is shared by different tenants, some difficulty undoubtedly arises. A periodical inspection of sanitary conveniences in chambers (to which this Department has no right of entrance) by the sanitary authorities would be a great boon to tenants, and might help to raise the standard of cleanliness.

It frequently happens, both in shops and in chambers, that no separate provision is made for women, and there has been some trouble in enforcing the regulation, in spite of its obvious necessity. In some rare cases our action has led to the dismissal of the women; in others to the premises being vacated.

The point at which the powers of this Department stop short is shown in a case in which, pressure having been brought to bear upon the employer, he forthwith left the premises complained of. Unfortunately, however, two women whose workroom could neither be classed as a factory nor a shop, were left unprovided for in the building, and the inspector could do nothing for their interests. Had the landlord been called upon to do the necessary work for these two women, he would probably have given them notice leave

DINING-ROOMS.

DINING-ROOMS.

Section 22 of the Act provides that "the Minister may, by notice in writing, forbid the occupier of a factory to permit any employees therein to take their meals in any room while work is being carried on therein, and may direct an occupier to erect or provide a suitable room or place in the factory, or in connection therewith, for the purpose of a dining or eating room for employees in such factory."

It will be seen from the attached reports by the Inspectors, that dining-rooms are in some cases already provided, or are, at the request of the Department, about to be provided. In the majority of cases, however, no such provision is made, and though the accommodation would be undoubtedly a great boon to the hands, yet the Department, not being desirous at the initiation of new legislation to involve factory occupiers in the heavy cost which would in some such cases be necessarily incurred to make the needful structural additions, has not yet pressed the matter.

A very useful and desirable provision was inserted in the Bill when presented to Parliament, but during the progress of the measure was struck out. It provided for the submission of the plans of all new factories to the Department, with a view to ascertaining that the sanitary and other provisions of the Act would be complied with. This provision, not having become law, there is now no compulsion on intending occupiers to submit their plans of new factories, but in many cases the advantages of such a course have been so obvious that the Department has been asked to put an Inspector in communication with the architect. In all these cases an endeavour has been made to secure the dining-room accommodation referred to. In other cases where alterations were being effected, it has been secured; but in many instances the structural alterations involved in securing the desired room would have been so costly and the difficulties so great that the Department has not, as stated, seen its way to an immediate insistence upon it being provided. However, as opportunity arises it hopes to go on increasing the number of these rooms.

Mr. Taylor reports:—

In only a few instances, in comparison to the number of existing factories, has a room been set apart totally for the use of employees in which to take their meals.

There are, however, I am pleased to say, some employers who study their hands in every particular, and who believe and seem to have proved that the better the hands are treated and their bodily comforts attended to, the more work can be obtained in a manner satisfactory alike to employer and employed.

There are factories in this city in which not only is a room set apart for meals, but attendants are kept and paid by the proprietors to look after hot water to wash up and clean the crockery, attend to the wants of employees during the meal hour, and also take charge of the dressing-room.

In the majority of cases the hands have either to take their meals in the same room where they have been working or take them outside, which, in many cases, means either a side street or lane.

Steps have been taken by the Department to secure the provision of satisfactory rooms for meals in certain factories where there are a large number of employees. Some of the rooms have been erected and others are in the course of erection.

Mr. Armitage writes:—

In connection with some of the factories in my division it has been found convenient in the interest of both employer and employees, to provide suitable apartments for the purpose of enabling the latter to take their meals without the necessity of leaving the premises. In some cases attendants are provided, who take charge of the food brought by the work people from their homes, and to whom falls the duty of boiling the water required for tea, &c. But in the larger number of factories no provision whatever is made for the heating or cooking of the food brought by the work people, who are either turned out of the factory at meal times or contrive to warm their food at gas jets or in other makeshift manner. In the clothing trade the girls have their meals at their work benches (generally saturated with machine oil), and when they let fall pieces of bread, &c., it brings the flies about the work tables.

I must express my thanks to one firm for the very liberal way in which they have taken this matter up. Their factories are at Leichhardt, the lower portion being used for boot-making, and the upper portion for clothing. A general dining-room was built with the factory, but the girls in the two trades refused to associate, and to overcome this the occupier is now building an additional dining-room, with separate and distinct approaches for the clothing portion of the factory, at a cost of £200.

Miss Duncan reports:—

A few of the larger factories have built special luncheon-rooms for their employees, fitting them up with tables, benches, and conveniences for boiling water; an attendant is provided to keep the room clean, to make tea and wash up crockery. Usually this service is paid for by the employer, but in one instance a small deduction was made from the wages of the employees to cover the cost; this was afterwards abated on representation by the Department.

In one case the men employed in a large shop are provided daily with an excellent hot dinner of two courses, a staff of men cooks being employed for the purpose. Strange to say, the women and girls employed in the same factory, though their wages are lower than those of the men, are only provided with a cup of tea.

An arrangement sometimes exists of setting apart one portion of the work-room for a luncheon-room. As a temporary expedient it may be of some convenience to the employees, but I do not regard it with much favour. One of the chief advantages derived from having a luncheon-room entirely apart from the working-room is that, in the absence of the workers, the rooms can be thoroughly flushed with air for the space of half an hour, by setting wide every door and window. Moreover, the sedentary life of a needlewomen or machinist is not a very healthy one under the most favourable conditions, and any little addition of exercise and change of scene to the daily plan of existence would be of benefit.

In many factories a large number of people spend the whole of every working day in one room. Some who are wise or fortunate, or whose homes are near at hand, take the opportunity of going home for their luncheon; but many never leave the work-room from 8 in the morning till 5 or 5:30 at night, and sometimes they may come back to work in the same room by gaslight.

This is bad enough, but when the room is pervaded by the smell of chemicals, which, even if it does no absolute harm, causes nausea and headache and disinclination for food, the case is much aggravated.

I would like to see this provision enforced in all cases of clothing, water-proofing and boot factories, and in any room in which chemicals and essences are prepared or used. It would be well if the taking of meals in such places were absolutely prohibited.

MACHINERY.

The provisions in the Act relating to the fencing of machinery are partly compulsory and partly discretionary. So far as the fencing of fly-wheels and mill-gearing is concerned, the Act leaves no discretion with the Minister or Department. All such parts of machinery must be fenced and the fencing constantly maintained in an efficient state so long as the parts in question are in motion or use for the purpose of any manufacturing process. With regard to other parts to which the compulsory clause does not apply, the Act provides that, if an Inspector considers that they are so dangerous as to be likely to cause bodily harm to any person employed, he may serve a written notice on the occupier to fence them. Should a difference of opinion arise as to the necessity for such fencing, the occupier may have the matter referred to arbitration.

It

It will have been noticed that among the parts of machinery which the Act requires to be fenced is the mill-gearing. As to what constitutes or is included in mill-gearing was a point raised early in the administration of the Act, and in its settlement recourse was had to English factory legislation and certain decided cases. The popular argument advanced against the fencing of dangerous machinery is that for five, ten, or twenty years, as the case may be, the machine has been left unguarded, and no accident, or "only a little one," has occurred through it during that time, and, of course, in the one or two isolated instances of accidents that may be admitted, the mishap was caused through the carelessness of the injured man. The "so many years without accident" argument is, perhaps, the most difficult one the Department has to contend against. Frequently, also, it is found that workmen themselves are instrumental in removing guards after they have been provided to secure the employees' safety.

Generally speaking, the Department has been met by employers in a very good spirit, it being generally recognised that the demands made on them were reasonable. In every instance the Department was content to pass guards that substantially effected their object, although they might be somewhat rough in appearance. It was felt that employers ought not to be put to a larger outlay than was absolutely necessary to effectually secure their hands from the risk of accidents. The utility of the guard was more thought of than its appearance. Despite this fact many occupiers have gone to considerable expense in fitting neat and well-furnished guards to their machinery, and, perhaps, in view of their permanency, this has been the wiser course.

Mr. Taylor reports:—

Almost all the factories in which mechanical power is used evidence the great necessity of the clauses in the Act requiring machinery to be fenced and guarded.

In few instances only had the occupiers attempted to affix guards other than those originally supplied with the machines, fencing having been carried out only as far as the engines and larger fly-wheels were concerned.

Many objections were made and obstacles placed in my way on my first visit, occupiers stating that these guards and fences were not necessary; that they would hamper the employees in their work; also, that, having worked the machines for so long without guards, the risk would be considerably increased if guards, &c., were now affixed. When I try to persuade a manufacturer to incur expense in providing guards he is invariably full of arguments as to the impossibility of applying them to his special branch of trade, and as, perhaps, no accident has occurred in his works, he refuses to see the necessity of supplying the suggested protection.

In all cases it was left to the occupier to adopt his own particular kind of guard or fence as long as it was effectual. The parts of machinery and gearing that were thought most dangerous and received first attention were exposed cogs, fly-wheels, and pulleys, and belts, and in some cases, only when firmly insisted on, did the occupiers follow the instructions and affix the necessary guards.

One of the first factories visited by me was a large printing establishment. Here machines were running in close proximity to each other, with only just space enough between for a person to walk. I drew the occupier's attention to the necessity for guards and fencing. He objected, telling me that he could not possibly erect any guards, for, as it was, there was not sufficient space between the machines, and if guards were erected the passages would be blocked. I pointed out that it would actually mean a saving of space, providing the guards were suitable, for then employees could go closer to the machinery without fear of being caught. He informed me that he had worked these machines for a number of years, and his accident list had been very slight in comparison with the hands employed. I told him that the fences were required by the Act, and they would be insisted on. He was at last persuaded to erect the fencing, and at a subsequent visit informed me that after the first few guards had been erected he was so pleased with them that he had given instructions to have the whole of the machinery fenced, and had done even a great deal more than I had asked for.

In boot factories, where so many varieties of machines are at work, and large numbers of boys and youths are employed, the necessity for fencing is clearly seen.

Large fly-wheels to presses, rollers, and large cogs are kept running without the slightest protection of any kind whatever, and the boys go to and fro between the machines, carrying bundles of boots, &c. In the majority of cases these machines are now fenced; some very satisfactorily, others temporarily, until the management is able to erect permanent ones, or in view of permanent alteration of machinery later on.

In the saw-mills and timber trade, guards were asked to be affixed to those machines which were considered most dangerous, and band-saws, circular saws, planing, and tenoning machines were asked to be especially guarded. In a number of cases these guards have now been affixed, and it is to be hoped that in the near future all such machines will be effectually guarded.

Although the Act stipulates that "every fly-wheel, whether in the engine-house or not, shall be securely fenced," this has at present only been strictly enforced where the engine is not within an engine-house, or where there is a right-of-way for employees through the engine-house, and in the former cases fences have been ordered, protecting both engine and fly-wheel.

Only lately I visited a factory in which the engine was in the centre of the workroom, and totally unprotected. I asked the occupier to fence it, and also the fly and driving wheels. He stated that it would be impossible to do so, as he had to put the belt on and off the driving wheel for the purpose of driving two distinct machines. I tried to show him how a fence would prevent a person from falling into the wheel. He gave me an illustration of how he took the belt off, saying, "This is how I always have to do," and taking a pole in his hand he slipped it under the belt, lifting and pushing at the same time. He exerted himself so much that when the belt came off he fell forward to the wheel, striking his arm severely, and barely escaping with his life. I remarked, "If that is the way you always take the belt off the sooner you have the engine and wheels properly fenced the better."

With the engineering establishments less trouble was experienced than expected, the proprietors in most cases expressing themselves perfectly willing to carry out my requests, in several instances going far beyond what I had asked. In fact, in all trades, I found that the most practical men were the most willing to comply with suggested improvements.

One of the greatest difficulties to be met with is that an Inspector receives little or no help from employees or managers, and it must be very evident that it is almost impossible for an Inspector to discover all the intricacies and out of the way parts of many of the factories. If the machinery, &c., is to be effectively guarded, he must have the co-operation of the managers and employees.

I have noticed that on most of the modern and recently imported machines the guards are taken greatly into account, and are now built as parts of the machine, and it will be a great point gained when the makers of machinery shall come to regard the construction of fences and guards, for all points of danger, as a necessary part of their business, without which the machinery would not be complete.

Mr. Armitage says:—

One of the most important duties in connection with the administration of the Act is the protection of work people from the dangers to which they are exposed from unfenced mill-gearing and machinery. In factories where there is careful supervision by managers and foremen, so that the points of danger may be detected, and where all the fences and guards are kept on the machines, and in good condition, there ought to be but little more danger to the workpeople than is met with in the ordinary vocations of life outside a factory. But, unfortunately, occupiers are not keen to the dangers which are associated with the use of machinery, and it is often at the cost of an accident that suitable guards are put on. The first accident that happened in my district was caused by a circular-saw at a cross-cut bench, where a lad had his arm cut off. After the accident a guard was put on the back of the saw. If this had been done in the first place the accident would never have happened.

The timber trade is the most dangerous that I have to deal with, on account of the circular saws and the knives of the hand planers. In some mills the hand planers have a guard so that the only exposed portion of the knives is that used for a plank 12 inches wide on a bench 2 feet wide. The guard is fixed half-way across the bench so that, should the operator slip, the knife will not injure him, it being covered with the guard and the piece of wood that is being planed.

The

The band saws are a source of danger, especially if they should break when the saw, flying off the wheel, will cut anything that it touches. In all the mills I have visited I have found the lower fly-wheel unguarded. This wheel is about 1 ft. 6 in. back from the outside of the bench, and is liable to catch the carpenter's apron and drag him down. Most of these saws now have guards at the top and bottom of the benches.

In the engineering trade I have had great assistance from the largest firms in the city. After these had put guards on their machines, the smaller shops followed in their wake. In all drills where the vertical cogs are within reach of the workmen, shields have been put on, and at the end of all screw lathes, where there is a passage, the ends have been fenced off. I was informed recently of a slight mishap, which might have been of a serious nature, that happened at a lathe. The man was bending over the machine for a tool when his vest was caught in the cogs, and he was dragged down to them just as the machine was stopped by means of the loose pulley.

In a recent case the stopping came out of the mouth of a foundry furnace, and the metal ran over the floor. One of the men did not get out of the way in time, and his boot was burned off. As a precaution against the recurrence of similar accidents, I have had a pit dug about 6 inches deep at the mouth of the furnace capable of holding the quantity of metal contained in it should the ladle overflow or the clay stopper come out. This will prevent the metal from running over the floor of the foundry.

In the boot trade four accidents have happened at the pressing machines. While cutting heels at these machines four fingers have been lost. In two of the largest boot factories they have adopted the American system—that is, cutting the small heels out on a block, the man striking the cutter with a green hide mallet. Doing this minimizes the danger of accidents of this kind, as they always occur when cutting small pieces under the press.

A painful accident, whereby a man lost his arm and had the other fractured, happened in a boot factory whilst the man was removing a belt. He got on the shafting overhead, and sat on it so that he could bring the belt up. He was carried around the shaft, his arm struck the ceiling, and he was jammed against a girder. The horizontal belting, which is so common in factories, should in every case have a piece of boarding under it, for if it gave way and struck anybody it would drag them up to the pulley.

Cleaning machinery while in motion was the cause of two accidents within the last few months. One occurred in a laundry where a girl was cleaning a mangle. To do so, the guard was taken off, and consequently her arm was caught in the hot rollers and badly crushed and burned. The other case was in a boot factory where a lad was cleaning a trimming machine when his fingers were caught in the cogs. In this factory the engine is stopped a quarter of an hour before "knock off" time, and the lad, to finish early, was cleaning the machine during the prohibited time.

The majority of fly-wheels on my first visit were unfenced. In one case a wheel, 15 feet in diameter, revolved into a narrow pit without any fence or guard whatever. There were several cases of this kind on my first visit of inspection. It is a very dangerous state of affairs on account of the close proximity of the engine, the driver having to go up against the fly-wheel to oil the bearings and clean the engine while it is in motion. These wheels are now fenced. Often only one rail was put around, leaving about 2 to 3 feet unprotected under the rail. This, however, was put right after the second or third visit.

LIFTS AND ELEVATORS.

The provision contained in the Act with regard to the working of lifts in factories and shops is one found in operation in nearly every State in the American Commonwealth, in whose cities the lift or elevator is more widely used than in our own. An inspector may prohibit the use, in a factory or shop, of any lift he considers to be unsafe. In the United States the usual practice is to placard the lift as unsafe, and penalise the removal of the placard and the use of the lift; this provision is also extended beyond the limits of a Factory Act, and is applied to elevators in warehouses, hotels, and public places.

The operation of these clauses is in our case confined strictly to factories and shops. And here it may be stated that with its limited staff the Department does not undertake to do more than make a cursory examination of lifts, and direct that obviously necessary precautions should be taken. From what the inspectors report, it appears that the safety of the public requires something more than this. The principles applied in the case of proposed land-boiler inspection might very well be applied to an inspection of all passenger lifts in the Colony. All proprietors in shops, hotels, &c., might be required to register their passenger lifts, and careful examinations by professional experts should then follow, and upon the report of such experts, a certificate of safety might issue, and without such certificate, granted after due examination, the use of the lift should be penalised. To answer for the security of a lift the inspector would require to make a minute examination of every part, a thorough test of the chains, shafts, &c.

It is very doubtful, indeed, if in half the instances where they have been attached the so-called safety-catches and other appliances would at the critical moment work successfully. A story is told by a leading manufacturer of this city of a patent lift-catch invented by one of his employees. This appliance was attached to a new lift in the factory, and the manufacturer invited his friends to a luncheon, and loaded the car with a ton weight. Then glasses were charged to drink to the success of the new appliance, the car was let go, and, as the manufacturer subsequently remarked, "That lot cost me a hundred pounds, and pretty well a new foundation."

It is not improbable that, unless some system for the thorough examination of passenger lifts in shops, hotels, and public buildings is provided, an accident may occur some day that will shock the city.

As it is individual accidents are not infrequent, due no doubt in some cases, though not in all, to the carelessness of the person injured. Not long since a one-time resident in an hotel in Sydney called at this office, to know if anything could be done to compel landlords to in all cases provide an attendant on the lift, and he related a number of narrow escapes he had had through persons on floors above or below him pulling the rope to raise or lower the car. Finally, the man had his hand crushed in one of these adventures, and had to obtain surgical assistance, and when he suggested that the expense should be met by the landlord, was told that the accident was due to his own carelessness.

So far as the factories and shops are concerned, a degree of good has been done in removing juveniles from the care of lifts, and requiring fencing to be provided round the well-holes, but no expert examination of material and appliances has, nor under the circumstances can be, carried out.

Mr. Taylor reports:—

Section 32 provides that a male under 16 years of age, or a female, shall not be allowed to have the care or working of any elevator or lift. About the time the Act came into force numerous lift accidents occurred, and on inspection of many lifts in the city, evidenced the necessity for the provision.

Most of the lifts and elevators were found to be worked by boys under 16 years of age, and the employers in each case having been informed of the clause in the Act bearing on this matter, the boys were subsequently replaced by lads of maturer years.

At an inquest held in the early part of the year on a lad under the statutory age, who was killed in a lift, several witnesses stated that the lad, who was both healthy and strong for his age (14 years), was not physically capable of working the lift, as to start and stop it required a man's strength. On

On a certain occasion, visiting a factory, I got in the elevator, and told the lad in charge to take me up to the manager's floor. The lift went up so slowly that I asked the lad would it not go faster; he replied, "Yes; but I am frightened to let it go faster, because if I do I won't be able to stop it." The lad was 14 years of age, and apparently not sturdy enough to be placed in charge of a lift which numbers of persons used daily. I informed the manager, and the boy was removed to another part of the factory, being replaced by a much older and stronger lad.

With regard to the unprotected state of most of the goods lifts and hoistways, I found that in a great many cases the lift openings and hoistways were totally unprotected, and it was necessary to order "gates" or hand-rails to be erected; but even these gates are not perfectly satisfactory, for the following reasons:—Doors which require opening and closing every time the lift is used are frequently found open; and shutters and gates, which should be lifted up and lowered again when the cage leaves the landing, are often found up some 5 or 6 feet above the floor level; and although in many cases the foremen and managers pass and repass these unprotected openings without comment, yet if their attention is drawn to the matter by the Inspector, they invariably condemn the carelessness of their workpeople.

Mr. Armitage says:—

Two fatal accidents have happened in my district owing to the unprotected state of the lifts. In one case a lad under 14 years was working a goods lift. In the evidence at the inquest nothing was given to show the cause of the lad's death; and after the inquest I visited the factory, and found that the cage of the lift was only boxed up 4 feet high, and at the back of the lift the girders of the floor joists ran across the well; and on looking at one of these girders I saw portions of the lad's hair and skin, and found that his head had been jammed between the top of the cage and the girder. In this case I had the valves attended to, as they were out of order.

The second lift accident was owing to the hauling-gear of the lift giving way. This was a friction lift in a flour mill. This lift was provided with safety-catches, but the guides were of Oregon, and the wire rope broke while the lift was up. The safety-catches failed, and the man in the lift was killed at the bottom. I am sorry to say that I have come across several friction lifts, and in every case have had to order some alteration. An hydraulic lift which I inspected recently was loaded with a ton weight, and the safety-catches in this case successfully held it against the guides. The well-hole is closed at night by trap-doors worked by hydraulic power. Perfect as this lift was, I had to order an addition which is a very common one, namely, that of two doors protecting the well. In nearly every case the doors already provided are just high enough to allow a person to look over and run the chance of having his head caught between the door and the cage.

One accident of this kind was brought under my notice. A man was looking over the door down the well, when the lift came down and caught his head. Fortunately it stopped in time to prevent the man's death, but not till he had his jaw fractured. The occupier of a shop in the city was asked to fence the lift-well, as the cage had no door. When I called again it had not been done, and he told me that in the building opposite (which was let as offices) there was a lift of similar construction. The occupier of the shop fenced his lift in accordance with the law; but the case he referred me to is similar to many in the city, where lifts are used in offices and warehouses, over which the Act gives us no control.

ACCIDENTS.

The Act provides that:—"Where there occurs in a factory any accident, produced either by machinery moved by steam, water, or other power, or through a vat, pan, or other structure, filled with hot liquid or molten metal, or other substance, or by explosion, or by escape of gas, steam, or metal, which either—

- (a) causes loss of life to an employee in the factory; or
- (b) causes bodily injury to an employee in the factory, such as to prevent him from returning to his work in the factory within forty-eight hours of the occurrence of the accident,

written notice of the accident shall forthwith be sent to the Inspector for the district, stating the cause of death or the nature and extent of the injury, as the case may be, and the residence of the person killed or injured, or the place to which he has been removed. The Minister may, if he thinks fit, obtain a report from a legally-qualified medical practitioner, or other competent person, upon the nature, extent, and cause of such death or injury."

In accordance with this provision, five fatal and fifty-four non-fatal accidents were reported to the Department during the year. Probably this number does not include the whole of such accidents during that period, taking into consideration the fact that the provisions of the Act were not as widely known as they will be in the course of time. The procedure adopted has been for an Inspector to visit the scene of the accident immediately after it has been reported, and where it has occurred through a cause which might have been prevented through any form of guard, to thereupon have such guard applied to the machinery. An Inspector has also attended inquests into the causes of certain deaths in factories with a view to giving evidence should any such death have arisen through non-compliance with the provisions of the Act. This course will be followed in all such cases, and it might be here pointed out that employers should bear in mind that non-compliance with a statutory duty (such as the requirements of the Factories and Shops Act), through which injury is caused to an employee, would probably give such employee an action for damages against his employer on the ground of negligence.

In order to check the reports of employers, an arrangement was come to with the Sydney and Prince Alfred Hospitals to forward to this office a weekly record of all the accidents in factories admitted to or treated by these institutions, and this has proved of considerable value to the Department.

The following list shows the number of accidents reported in each month the Act was in operation.

February	5	August	2
March	8	September	4
April	3	October	6
May	5	November	10
June	3	December	13
July	0		

Of the accidents enumerated—

14	were injuries to arms caused by crushing, burning, and cuts.
18	" hands " " " "
6	" legs " " " "
4	" (in each case fatal) caused through lifts. "

This classification of accidents indicates that the provision with regard to the guarding of machinery is one greatly needed in our factories as in a large proportion the injuries would have been avoided had proper guards been provided.

Miss Duncan remarks :—

There is a great danger of accident in laundries from steam mangles ; three cases were reported in the year in which girls had their hands crushed in the rollers. In two cases the injury done was very great, and the girls were unable to work for many weeks. In one instance the employer paid liberal wages and all expenses ; but in the second case, in which the girl went daily to the hospital for eight or ten weeks, the compensation received appears to have been by no means on the same scale.

I might also call attention to the very great danger run by girls in boot factories who wear their hair hanging down their back. Happily no cases have been reported this year, but it has happened both in Sydney and in New Zealand that the scalp has been frightfully injured by the hair being caught in machines running by steam.

Mr. Taylor reports :—

Many of the accidents that are met with are the result of carelessness and ignorance on the part of the person injured, and a number are also due to lads "playing" with machinery, and taking risks from which accidents result.

Often I have been told by the manager or foreman that the person injured had no right there—and had been repeatedly warned not to do so and so—and these statements have been admitted to be true.

On the other hand it must not be forgotten that a considerable number of accidents arise from the neglect of employers to place their people in a position where they are practically safe. The Employers' Liability Act has certainly been of use in making employers more ready to adopt measures of precaution. At the same time it has given rise to a system of insuring against the liabilities created by this Act.

Many of the employers rely on the fact that all their hands are insured against accident, and should any accident be met with, this insurance covers all likely damages, and that as the hands are insured, they should not be compelled to fence their machinery.

Apart from the carelessness of the person injured, there are many causes which lead to an accident, and it would not be out of place to mention some of the chief ones, viz. :—Unguarded parts of the machines ; exposed cogs, &c. ; unfenced driving-wheels, fly-wheels, &c. ; unprotected pulleys and belts ; low shafting ; small space allowed between the machines ; uneven and bad flooring.

In illustration of the features mentioned above, I may state that on one occasion I was called in to a large boot factory to approve of some suggested structural alterations, and whilst there noticed the unprotected state of the machinery. I pointed out to the proprietor the guards and fences necessary for the safe working of the machines and gearing, and noticing a lad at a "rolling" machine, I asked the occupier to protect this machine by boarding it up in the front and feeding through on a sort of slot. He said it was impracticable to so guard it without interfering with the working of the machine. I then told him that he could adopt any guard he liked, provided that it was sufficient ; that this was a dangerous machine, and some guard was necessary, and would have to be affixed. Within three days I had to visit this factory to inquire into an accident which had happened to this very lad who had had his sleeve caught between the rollers and his arm drawn in and terribly crushed, and found that the carpenter had then almost completed a guard, as previously suggested by me. Subsequent visits have proved that the guard is very effectual, and is not a hindrance in any way whatever. In fact, the whole of the boot factories in my district have now made these guards on similar lines.

CERTIFICATES OF FITNESS.

The Act provides that persons under the age of 16 years of either sex shall not be employed in such classes of factories as may from time to time be determined by Regulation, unless the occupier of the factory has obtained a certificate in the prescribed form of the fitness of such person for employment in that factory, and the Regulation issued under the authority of this provision determines these classes to be :—

FACTORIES :—

- (a) In which or in connection with which steam or other mechanical power is used ; except in factories in which slop clothing, white work, underclothing, shirts, or boots and shoes are prepared or manufactured.
- (b) In which or in connection with which work is carried on incidental to the following businesses, manufactures, or trades :—

Aerated Water Works.
 Blast Furnaces.
 Bleaching and Dyeing Works.
 Bookbinding Works.
 Candle, Soap, and Tallow Works.
 Cigars, Cigarettes, and Tobacco Works.
 Copper Mills.
 Die-sinking and Engraving Works.
 Earthenware Works.
 Foundries.
 Glass and Glass Bottle Works.
 Glass Bevelling and Cutting.
 Glass Silvering and Staining.
 Iron Mills.
 Lead and Shot Works.
 Letter-press Printing Works.
 Manure Works, Bone Mills, Glue Works, &c.
 Metal Works (that is to say) :—Any works in which the manufacture of any article of metal is carried out.
 Paint Works.
 Plumber's Works.
 Tinware Works.
 Varnish Works.
 White-lead Works.
 Wire Works.

In England and in the sister colonies certain medical men are appointed as "certifying medical practitioners" for this purpose, and are furnished with books of certificate forms, the butts of which are filled in and forwarded to the department. In our Act this almost universal rule in factory legislation has been departed from, and these certificates may be granted by any legally qualified medical practitioner. The practice meets the cases where lodge doctors are prepared to make these examinations at a small fee, but on the other hand it involves a much looser system. The course adopted by the department when application is made to it for a certificate is to procure from the Registrar a certificate of birth, and (being satisfied as to the age of the young person), to attach it to a blank form of certificate of fitness.

The certificates of birth and fitness may then be taken to any legally-qualified medical practitioner who, being satisfied that the applicant is physically fit for work in the class of factory he wishes to enter, fills in the certificate and butt to that effect. The recipient then detaches the butt and remits it to the department. From this it will be seen that the department is dependent on the persons receiving the certificates for the notification of such receipt. In the majority of cases the butt is returned and noted in the books, but in not a few it is only when the certificate is produced at the factory that the fact of it having been granted is definitely ascertained.

The

The value of these certificates necessarily depends upon the thoroughness of the medical examination, but there are grounds for believing that in many cases they are granted as a matter of course; or at least that they are not withheld, unless in extreme cases of physical disability. The Victorian Chief Inspector of Factories stated in his Annual Report for 1895 that during that year 711 boys and 521 girls obtained these certificates. "One boy and one girl were refused certificates on the grounds of physical unfitness for work in a factory. It would, therefore, appear that 1,234 children paid £308 10s. to medical men for the purpose of ascertaining that two of their number were not strong enough to work in factories."

In New South Wales the system in force does not admit of an accurate return of the certificates refused being made, but there is sufficient evidence to show that in very few cases indeed is the medical certificate withheld.

In Victoria the medical fee is fixed at 5s., but no such restriction applies here. A medical man may fix his own fee, and, in consequence of complaints that in some cases what, taking into consideration the circumstances of the young people examined, was a high fee, had been demanded, the department invited legally qualified medical men to send their names to this office, with a statement of the fee which they would be prepared to take for examination in these cases. By this means, a list has been drawn up, and is kept in the office for perusal by applicants, showing the fees charged by the medical men named thereon. These fees range from 2s. 6d. to 5s. In justice to the profession, it should be stated that in many cases it has come to the knowledge of the department that where the applicants have been unable to pay any fee at all the examination has been made free of charge.

The number of certificates of fitness granted since the Act came into force has been 1,235. Of this number 1,068 were granted to boys and 167 to girls, and were distributed as follows:—

Class of Factories.	No. of Certificates issued.
Condiment and Cordial.....	70
Jam	76
Saw and Flour Mills	13
Steam Laundries.....	30
Furniture and Pianos	33
Bricks and Pottery	12
Confectionery	89
Tobacco	47
Meat Works.....	43
Printing	152
Glass Works	12
Metal-works, Foundries, Tinsmiths, &c.	243
Box	28
Miscellaneous	387
Total.....	1,235

HOURS OF LABOUR.

The Act provides that ordinarily,—

- (a) Males under 16 years of age, and
- (b) Women at any age

may not be employed for more than forty-eight hours in any one week, but may work overtime for three hours on thirty days in the year, though not for more than three days consecutively. Under exceptional circumstances the Minister may extend the time to not more than in all sixty days in the year.

This provision has been more difficult to administer than any other in the Act. It is a not uncommon experience for a complaint to be made to the department, on behalf of the employees, and then to find that on the surface, at all events, they, upon the inspector's visit, as much resent the interference of the Act with their hours of labour as do the employers themselves. The unfortunate position of the department in having to get the condemnation of the employer out of the mouths of his own employees will always make it difficult to fully enforce these provisions.

However, in many cases the department finds the employer himself anxious to have the time limitation enforced, as it tends to fairer competition all round.

No provision is made in the Act, as in English legislation, for certain holidays being observed; consequently, it has been the custom in cases when a public holiday occurred in any week for the hands to be required to work overtime during the remainder of the week till the full period of forty-eight hours was made up. In consequence of this, an intimation was published, based on a Ministerial minute, that such a system was not only contrary to the spirit, but was also an infraction of the letter of the Act. Section 37 of the Act expressly refers to overtime, as time worked beyond the *ordinary working hours*, and section 12 requires these "working hours of the factory" to be posted up. The inspectors were, therefore, instructed to regard every period of time worked in a factory beyond the hours posted up, as overtime without regard to the fact that by reason of the intervention of a holiday a total of forty-eight hours in any one week may not have been worked in the factory by the women and lads concerned. The Bank Holidays Act in this Colony applies only to banks and public offices, whereas, in England, provision in this respect with regard to factories is made by the Factory Act. The English Factory and Workshop Act, 1878, s. 21, provides that "A child, young person, or woman shall not (save as is in this Act specially excepted) be employed on Sunday in a factory or workshop." The exemption referred to relates to Jews, who may substitute Saturday for Sunday. No such provision is made in our Act. Cases are known to the Department where Sunday work has been carried on in factories, and which it was powerless to check, the only proceedings that could be brought being under the Act 29 Car. II, c. 7.

Section 40 of the Act provides that no occupier of a factory shall employ a male under 16 years of age or a female under 18 years of age

- (a) in any factory,
- (b) in the business of, but outside any factory,

between the hours of 7 o'clock in the evening and 6 o'clock in the morning, unless in the case of overtime, but gives the Minister power to exempt from its operations any factory where the customs or exigencies of the trade carried on therein may require, or make it desirable, that such an exemption should be granted.

The

The department is naturally chary about granting permits of this kind, and it has only been in cases where perishable articles have had to be dealt with and in exceptional cases of pressure at a particular season that they have been granted. The number allowed last year was only five, and in each case special conditions were attached. For example, permits were granted to certain jam-making firms on the following conditions :—

- (a) That two shifts per day would be worked, and no boy or woman be worked in consecutive shifts.
- (b) The first shift to commence not earlier than 6 a.m., and the last to finish not later than 10 p.m.
- (c) Night work to be done in alternate shifts, so that no boy or girl be worked two consecutive weeks on night-work.
- (d) No overtime to be worked on night shifts.
- (e) Each shift to be allowed two breaks of not less than half an hour each for meals.

This arrangement has not, however, been found to work altogether satisfactorily in consequence of the intermittent nature of the fruit supply. With a constant and fairly equal supply such a system could be worked with complete satisfaction. In each case it should be understood that the permission was granted for a limited period only, sufficient to cover the fruit season.

Mr. Taylor says :—

Although the Act provides that females and boys under 16 years of age may be employed for forty-eight hours in any one week, there are many factories in the city in which the hands are employed for only forty-four hours. By far the greater number, however, work the full time allowed by the Act, and there are factories which are still working in excess of the statutory time.

Great difficulty was experienced in some of those factories in which the longer hours were worked in inducing the employer to lessen the hours of employment for boys and females. One objection raised was the upsetting of business arrangements, as it was necessary (in the case of males) that the boys should attend and feed the adults with work. Some of the manufacturers informed me that it was their intention to apply for exemption. But upon it being pointed out that the department had not the power to grant such exemption, and a reasonable time being allowed in which to make more satisfactory arrangements, the greater number limited the hours of these young persons to forty-eight per week.

Another objection (in the case of females more particularly) was that the hands were paid piecework, and that it was the wish of the employees themselves to work these long hours. In explanation it was said that in some weeks work would be slack, arising perhaps from dullness of trade, bad weather, and other causes, and the employees would, therefore, have a "bad week," and their earnings for that week be considerably reduced.

Many employers, whilst approving of the particular clauses wished, whilst trade was brisk, the opportunity of working their hands for longer hours.

The greater number of factories on receiving warning altered their hours, and are now working according to the provisions of the Act, but several factory owners, in spite of repeated warnings, continued to employ the younger lads and females contrary to the Act, and it was considered advisable to take proceedings against them, the result acting as a deterrent to others. Prosecutions were accordingly instituted and convictions obtained.

The hours worked by some of the factories were excessive, instances having come under my notice where boys and girls were worked up to and over sixty hours per week, for which they received a few shillings only.

One of the worst cases I had to deal with was at a factory in which the work was carried on night and day, both males and females being employed. At the time of my first visit all the employees were supposed to work in twelve hours' shifts, out of which they were allowed 1½ hours for meals, but, on inquiry, I found that even these long hours were exceeded. The proprietor was informed of the provisions of the Act with regard to hours of labour, and he promised compliance with my demands. An official notice was sent to him, and he was allowed one month in which to make necessary alterations. Some time afterwards I visited this factory, and the manager informed me that he had completed his arrangements, and that the hands were then working the prescribed hours, at the same time drawing my attention to the "notice of hours" posted in the factory. Not being perfectly satisfied with his assurance, I paid another visit to make strict investigation, and then found that the girls were still (according to their own statement) working from sixty to eighty hours per week. From one girl's statement I found that the hours worked by her during the week totalled over ninety. She also stated that she was kept going so much that she had not time to take the ordinary allowance for meals, but had to take her meals whilst at work.

Some of these females regularly commenced work at 3 a.m., and on the Saturday morning commenced at 2 o'clock after working up to as late as 10 p.m. the previous night. The majority commenced work at 4.30 a.m. and worked till 5, 6, and 8 p.m. every evening, out of which they were allowed half an hour for breakfast, three quarters of an hour for dinner, and half an hour for tea. Proceedings have been instituted in this case.

Mr. Armitage reports :—

In laundries the work is very irregular, and this necessarily has an effect on the hours of employment. As a rule, the ironers work from eight to twelve hours a day, doing no work on the first day of the week, so as to cut out the forty-eight hours allowed by the Act. It is very common for one to visit a laundry at 9 or 10 p.m. and find the ironers at work. I am glad to say that, notwithstanding the rush of work in some of the larger steam laundries, they seldom exceed the eight and a half hours per day.

In the season trades the temptation to work overtime and beyond the hours allowed by the Act is very strong, but in most cases the occupiers have overcome the difficulty by engaging more hands.

In factories overtime is frequently worked on Saturdays, and often on week-days; the women sometimes working on till 3 or 4 on Saturdays, and till 7 or 8 on week-nights, without a meal. This is done so that they can get away early. In the mills, where they work three shifts of eight hours each, the men have to take their meals whilst working.

Miss Duncan says :—

The weekly limit of forty-eight hours of work has certainly been of benefit to the women and boys in those trades which formerly worked very long hours.

In some classes of factories the ordinary week's work is forty-four hours, that is eight hours on five days in the week, and four or five hours on Saturday morning. This obtains largely in the boot trade. In some cases any excess of forty-four hours is paid as "overtime," as in many printers' workshops, and in places where the packing of tea, patent medicines, baking powder, &c., is carried on. There are instances of 6d. an hour and tea-money being paid when the ordinary hours of work are less than forty-four.

On the other hand, however, some instances have come under my notice of the working hours of the factory having been increased to forty-eight.

In some dressmaking establishments it was formerly the custom to expect the employees to work hard and late in busy times, in return for which an off-day was given in the following week, or in a slack time, and holidays were paid in full. When the law requiring payment for all overtime at the rate of time and a half, and demanding also reduced numbers in the work rooms came into force, this system was changed to meet the new condition.

In some isolated cases we have had to regret that the process of reducing all factories to the uniform system of forty-eight hours a week has not markedly improved matters, although the benefit reaped by the greater number enormously outweighs any disadvantages that may have accrued to the few.

There is unfortunately no provision made in the Act for the payment of overtime when worked by unpaid apprentices, a large number of whom are to be found in most dressmakers' rooms; although it is usually said that only the more skilled hands are kept back, there are undoubtedly cases in which these children work more than forty-eight hours in the week.

Short of absolutely forbidding unpaid hands to work "overtime" a minimum rate of pay per hour for overtime might be fixed, especially as the Act makes no provision for holidays.

It may be well doubted whether the 1d. per hour which is due to the apprentice receiving 2s. 6d. per week is a rate of remuneration in proportion to the loss which she sustains in working under gaslight. The provision in the English Amending Act of 1895, which forbids a person under 18 to work overtime, seems to be a very wise measure.

One of the grievances occasionally complained of in connection with overtime is that the weekly "workman's ticket," on which the young people travel, is not available by late trains; when good wages are received this is not a serious matter, but when they range from nothing to 3s. or 4s. per week the case is altered. Some employers pay train and tram fares in the case of overtime, but many do not.

The inspector is often faced with the question, "What is time and a half in the case of pieceworkers";—Is it rate and a half? If so, the rate per piece will have to be reduced."

It is not difficult to calculate time and a half for pieceworkers on the basis of the average weekly earnings, and this is what is done, but it would seem that a standard rate of payment per hour fixed by law would be more satisfactory.

In connection with payments, the subject of fines and deductions may be mentioned. These are not generally imposed in the smaller factories, but in some of the larger ones, where many persons are employed, a system of fines for late arrival obtains, from which even those workers who receive 2s. 6d. a week are not exempt. In one case the fine imposed is at the rate of time and a half. Deductions from the weekly wage are also made in cases of a short week's work.

[NOTE.—In the Truck Bill laid on the table of the House last Session special provision was made, following recent English legislation, to regulate deductions from wages. It was proposed to place considerable limitation on the power of employers to make such deductions from the wages of their employees on account of fines.]

OUTWORKERS.

The Act requires that every occupier of a factory employing outworkers must keep a record showing:—

- (a) The name of every person employed by him in the business of his factory outside such factory;
- (b) The places where those persons are employed;
- (c) The rate of payment in each instance, and furnish a summary of the same when required by the inspector to do so.

These are the only provisions that directly touch the question of sweating, and it cannot be contended that they provide any effectual check on the abuse. Probably they may have the effect of bringing cases of exceptional hardship under the notice of the department, and through it informing the public. Further than this they do not go. The iron law of supply and demand still works out to its logical and bitter end. How far any legislative system in restraint of sweating may be effectual cannot be discussed here, for the law as it at present stands does not attempt restraint, but aims only at inquiry into condition.

The net result of the information supplied to the department with regard to outworkers is that as a general rule the better wages in the clothing trade, and it is in this trade that the bulk of the outwork is done, are paid by the class of tradesmen who supply the better quality of goods. That in short, sweating is found to be a condition associated not so much with the making of clothes for the wealthier classes of the community as with the making of the slop clothing that finds its readiest though not exclusive market among the poor themselves. No reflection is cast upon any class by this statement, for the purchase of cheap goods is, generally speaking, itself the result of insufficient means to buy a better kind, but it brings about the paradox that the sweated employee is to some extent the outcome of his own demand for cheap commodities.

The following table illustrates this statement:—

Rates of payment for work done outside the factory or shop.

Article.	Factory.				Shop.	
	Slops.		Orders.		Orders.	
	From	To	From	To	From	To
Men's Trousers	4d.	1/1	1/-	3/-	3/-	12/6
Boys and Youths'	4½d.	1/-	9d.	2/9
Men's Denim Trousers	3d.	3½d.
Men's Mole Trousers	4d.	6½d.
Men's Vests	5½d.	1/9	1/-	3/6	3/3	10/6
Boys and Youths'	4½d.	1/3	1/-	2/6
Men's Sac Coats	1/5	2/3	5/-	20/-	10/-	28/-
Men's Silk Alpaca Coats (unlined)	1/-	2/-
Finishing Trousers	1½d.	3½d.
Ladies' Blouses	2½d.	1/6	6½d.	3/-
Ladies' Wrappers	4½d.	8d.	1/-	1/3
Ladies' Skirts	4d.	9d.	1/6	2/-
Children's Dresses	3½d.	5d.	1/-	14/6
Children's Sun Hats	2½d.	3½d.	1/9	2/6
Ladies' Underskirts	3½d.	4d.	8d.	2/-
Boys' Tunics	3½d.	8d.	3/6	5/6

Miss Duncan says:—

This table shows the prices given by tailors to their "outworkers" as compared with those paid by factory proprietors.

In comparing these, several important points should be noted.

In point of fact the two trades are not comparable; but they are so frequently confused in the discussion of "sweating," that it has been thought well to call attention to the matter.

The work done by private tailors is always "order" work, that is to say, is made to measure, is of better material, is made with much care, and is frequently hand-sewn. The work is done by skilled hands, who have passed through a long apprenticeship under a journeyman tailor. This accounts for the very much higher price paid for this class of work. Factory "orders" are also made to measure. They too are made by journeymen or tailoresses, but with more help from the machine.

"Slops," or articles sold ready-made, are only made by factories. They are of several classes, and, when made by piece, are paid for at different rates, according to the amount of work required. Within the factory these are usually made by persons receiving a weekly wage, as already shown. It is in the commonest class of slop trousers and vests that the evils of sweating are most seen amongst "outworkers." A large proportion of slops is made in the factory, and the balance is given out to be made by "outworkers," who carry them home, and return them to the factory when made.

Almost anyone who travels frequently in the omnibuses running to the suburbs is familiar with the small boy or girl struggling with a solid bundle pinned up in a cloth, which contains the dozen or so of "Colonials" which make up mother's tale of work for the day.

The

The weight of a dozen pairs of unmade moleskin trousers with trimmings, as taken from the factory, averages 27 lb. These are of middle value. Nos. 5, 6, 7, 8, 9, 10, and 2 dozen are sometimes carried away by the "outworker," a dead weight of nearly half a hundredweight.

The trousers are cut out in the factory, made up into bundles with their trimmings, buttons, the distinctive label of the warehouse, and a card of instructions, and carried to and from the factory by the "outworker" or her children. Cotton and threads are provided by the outworker.

The outworker puts the article together by machine, sews on the buttons, makes button-holes, and finishes the various parts by hand, and returns the bundle to the factory. The factory presser then goes over each article with a hot iron to give it a finished appearance, and make it ready to be sent into the warehouse, whence it finds its way to the retail shop or up-country store.

The work as it is often done is of the very poorest quality, a fact easily accounted for, when it is remembered that this industry is resorted to by women who have no other means of making a livelihood, and who are entirely untrained. In this, as in other occupations, the best worker commands the best prices, and is employed by the best factories, but there is only a limited amount of work at the higher prices, and a very large amount at low rates.

In some rare cases work is given out to be "finished" by "outworkers." "Finishing" consists in completing the garment by hand after it has been put together by machine, and is paid for at the rate of from 1½d. to 3½d. per pair.

I have investigated most of these cases, and find that although "finishing" is occasionally done by "outworkers," it cannot at present be looked upon as part of the system, nor from the very low rates given, is it likely ever to be much sought after. It has generally been undertaken by persons who have other means of support, and who in order to meet a temporary want, have turned to this as a possible means of adding a few shillings to the week's income. As a means of living, it is entirely out of the question at prevailing rates; although in one instance it is stated that a woman has been able to make 10s. or 12s. a week, this seems to have been a special case, and there is no reason to suppose that a constant supply of work would be forthcoming, except at the lowest rates, which seem to bring in from 5s. to 8s. a week, with continuous work.

I have visited many "outworkers" in their homes, and I do not think that at the rates of 4d. and 4½d., which are now given by some factories for making Colonial tweed trousers, a woman could make a living unless she had some other source of income.

It appears that slop vest-makers get much better prices, and that two persons working together can make from £1 to 36s. per week. There are two or three classes of slop vests, cotton-stitched, the lowest pay for which is 5s. 6d. per dozen, and silk-stitched 9s. and 11s. the dozen; a vest-maker also occasionally gets a machine order at somewhat higher pay.

Two women working together can make about eight vests a day, the buttons are sewn on by the "outworker," but button-holes are made by machine after the garment is returned to the factory.

The life of a trousers-maker, working on the lowest class of slop serge and tweed trousers, is a very hard one. Two persons can make from eight to twelve pairs a day, taking large and small sizes together. A small amount of pressing has to be done, and all button-holes made, whilst the worker also finds all cottons and threads; these are frequently bought voluntarily from the factory, because they are found to be cheaper and of better quality, and because it is difficult in small shops to match the numerous shades of colour required for different tweeds, of which there may be a considerable variety in one bundle; the ordinary weekly cost of cottons and threads is stated to be about 1s. 6d. or 2s.

The tailor's machine used for this purpose costs from about £10 to £12, and takes from two to four years to pay off on the time payment system; the usual terms are, first payment of £1, and weekly payments of 2s. 6d. It appears that most firms supplying machines deal leniently with their customers, and allow them to fall into arrears for some weeks.

Each "outworker" has a book in which the person who gives out the bundle from the factory enters the date, the cutter's number, the number of pairs given out, with the rate of pay; this is a check upon both the worker and the factory if the books are properly kept, but I have seen books so badly entered at the factory that it is impossible for the worker to know at what rate she is really being paid; this however seems to be exceptional.

The fact that in one factory, in which the rates of payment are very low, all odd half-pence are kept by the factory has several times been mentioned, and it has also been affirmed by more than one worker that in another factory mistakes as to payment due so frequently occur to the loss of the worker that they have given up taking out work from the firm.

The want of a regular supply of work, and the time lost in going in search of it, is so much felt amongst this class of workers, who generally live in distant suburbs, that a woman will often prefer to take work from factories which give a lower price in consideration of its being constant. It often happens that a woman after paying a 2d. tram fare each way between the home and the factory is given a bundle which will bring in only 9d. or 1s. gross earnings, and in a slack time she may go in day after day only to return disappointed.

It is probably true, as often stated, that many persons take out work from factories who are already well provided for, and that they reduce the amount of work available for those who really need it.

A large number of "outworkers" are women whose husbands are invalids or out of work, and who have several children, besides the numerous class of women who are widowed or deserted.

In addition to outworkers from clothing factories, there are others who take out work from the factories in which ladies and children's clothing is made, but by far the greater number appear to work directly for the retail shop-keepers, either as individual "outworkers" or as occupiers of small factories. The prices given by shops appear to be much better than those given by factories, but on this point the department has not a great deal of information, the occupiers of shops not being required, as in the case of factories, to furnish the information.

There appears to be a disinclination on the part of factory owners to give out work of this class, and as their premises are enlarged an increasing number of indoor workers is taken on.

As in clothing factories, the women employed are either "machinists" or "finishers," and are generally paid by piece, though sometimes by weekly wage. Neither hand, as a rule, completes the manufacture of any garment, so that the rates per piece paid to indoor and outdoor workers cannot be accurately compared.

Blouse-makers outside are paid by factories at rates varying from 2s. 6d. per dozen to 18s., according to the quality, style, and material of the blouse.

There is yet another class of home-workers who are employed directly by the warehouses and shops, viz., those who do stock work, and those who make flour-bags, tents, and tent-curtains, and house linen.

The sources of information on these matters are more limited than in the case of factory "outworkers," but the following prices for work may be quoted:—

For flour-bags.....	3d. to 3½d. per dozen.
Pillow-slips.....	1/6 to 2/-, according to the way in which they are made.
Table-cloths	2/- per dozen.
Table-napkins	1/- per "
Sheets	2/- per "
Towels and dusters	1/- per "

These are warehouse prices paid to a good worker and are said to compare favourably with the low lists. Prices paid by shops:—

Plain pillow-slips.....	1/9 per dozen.
Filled pillow-slips	2/6 per "
Paisley wrappers	12/- to 15/- per dozen.
Lined skirts	1/6 each.
Skirts lined and bound	2/- "
Flannel pyjamas	6/6 per dozen, all sizes.
Flannel shirts	4/3 per dozen.
Common blouses	6/6 "
Lined cashmere blouses	1/6 each.
Good cotton blouses.....	12/- per dozen.
Pyjamas	1/6 each.

These articles are made for stock. The material is sent to the outworker in bales. She cuts it to the best advantage, and is paid a fixed price per dozen for each class of goods. Tailors'

Tailors' cloth cuttings are sold both by the factory and the "outworker." When in large quantities, as in the factory, they are exported to be worked up again into flock or cloth, and in small quantities they are sold to bedding and flock factories at 1½d. per lb.

In the latter case they are passed through the flock-machine together with woollen rags of every description, to be worked up into the flock which is used for the stuffing of chairs, sofas, and bedding. That flock thus made is nearly always uncleaned is an undoubted fact; a certain amount of dust is carried off by means of a fan, but however dirty or infectious may be the old clothing which is brought in by the collectors from any and every source, it is ground up into a new form in the flock-machine and undergoes no cleansing by washing or boiling, though rude attempts are sometimes made to disinfect it.

Although manufacturers may exercise care in choice of woollen rags offered them for sale, it is manifestly impossible for them to distinguish between those which may contain the germs of disease and those which are only dirty, and until old articles of clothing are rejected by flock-makers cleanliness in flock cannot be looked for.

In this connection I may quote from an article which recently appeared in the *London Times*. "In commenting upon the report of the Committee appointed to inquire into the causes of workmen suffering from anthrax, the writer says,— 'We get some idea of the filthy condition of the materials worked up into stuffing for sofas, chairs, and beds, in learning that 40 per cent. of the weight is not unusually removed in the process of washing. It is unsatisfactory though not surprising to learn that some manufacturers in Gloucestershire, who used to wash rags before putting them into machines, now state that they are compelled in these days of low prices and keen competition to manufacture unwashed flocks in order to hold their own against Yorkshire makers. It is unpleasant to reflect that in cheaper articles of furniture there is probably dust containing enormous numbers of microbes.'"

Table V in the Appendices furnishes some statements made by outworkers relative to their wages, hours, and condition.

SWEATING.

Sweating has been defined by Mr. Schloss, a well-known writer on industrial subjects, as a "condition of industry under which workers are practically compelled to work at starvation wages for excessive hours and under insanitary conditions," and the system itself has been well described in a report to the Board of Trade as "one under which sub-contractors undertake to do work in their own houses or small workshops and employ others to do it, making a profit for themselves by the difference between the contract prices and the wages they pay their assistants." The commercial remedies that have been suggested are,—

- (a) For all the large contractors to have their work done in establishments of their own on the factory system.
- (b) For labour contractors themselves to adopt the large factory system under which such profits would be possible as to allow of better pay to the workers.

Other suggested remedies of a more or less philanthropic or experimental nature are co-operation, Government workshops, and so on.

In the neighbouring colony of Victoria a Legislative remedy is now in actual operation, but it is premature to express any opinion as to its success or otherwise.

As pointed out in the Report of the Select Committee of the House of Lords on the sweating system (1890), there exists in all large communities certain conditions of life which make a system of this kind possible; some of these are "the inefficiency of many of the lower class of workers, early marriages, and the tendency of the residuum of the population in large towns to form a helpless community, together with a low standard of life, and the excessive supply of unskilled labour." These are given as the chief factors in producing sweating, and the interesting statement drawn up by Miss Duncan, with its numerous facts and illustrations, bears out the conclusions arrived at in this report, and especially so with regard to the gradual establishment in our midst of a helpless industrial community for it is notoriously difficult to establish any permanent trade organisation among the widely scattered members of a poorly paid class untrained in co-operative action. Such a class are the women engaged in the clothing trades. The conditions of modern factory labour, such as the ever-increasing tendency to cheapen cost and increase output by the subdivision of work, are in themselves a special education in helplessness. Once away from their particular line of work the majority of these girls are helpless.

A vest-maker away from her vests is lost; she does not know the art of trouser-making, and that of coat-making is beyond her skill and strength. And as Miss Duncan points out, this is an increasing class—increasing not in normal proportion, but by reason of the continuous indraught of cheap or unpaid child-labour—increasing in excess of normal proportion. I find by a comparison of figures that the number of females employed in the clothing and textile trades has in the past five years largely increased, whereas the men have added to their number only in relatively small proportion.

A reference to the statistical return at the end of this report will show that out of a total of 1,191 females employed in the slop clothing factories, 423, or more than one-third, are under 18 years of age. The proportion of women of all ages to men in this class of trade is more than three to one.

Of recent years, here as in other communities, there has been a marked influx of middle-class young women to trades and callings. This tendency is due to causes both social and economic. Miss Collett, one of the Female Inspectors in England, a few years ago furnished the Board of Trade with a report on the "employment of women and girls," and there says, "In the middle class a high standard of comfort, a smaller field for domestic usefulness, a diminished probability of marriage, apprehension with regard to the future, have all combined to encourage the entrance into the labour market of middle-class girls." Indeed, the least observant person must have noticed this tendency in our own Colony within recent years, and especially since the period of financial crisis through which we have passed.

In connection with this matter, I cannot refrain from calling attention to Miss Duncan's comment on the competition of partially-supported women with those wholly dependent on wages for their maintenance. It is not, of course, a question of right, for all who wish to do so have a right to enter the labour market, but undoubtedly the competition of the partially-supported woman, regarding her wage as merely supplementary to her maintenance—a means of purchasing luxuries, not necessities—tells harshly against her to whom that wage represents the whole means of livelihood for herself and it may be others.

Miss Duncan says :—

The question of "Sweating," has been prominently before us throughout the year. It is one on which manufacturers of the best class feel and speak strongly. Instances might be mentioned of good firms, honorably known for many years as considerate employers and good paymasters, who have worked their hands for half-time for many weeks, and have at last been unwillingly obliged to lower their prices, in order to keep their factories open at all in the face of fierce underselling.

It is affirmed by all persons in the trade that there has been a steady fall in prices during the past few years. This is popularly attributed, amongst other causes, to the desire of the public for cheaper goods. In the trade it is attributed to the fall in prices offered by the warehouses, to the competition between retail shops, to the keen competition produced by the entrance of new firms into the trade, and to unscrupulous sweating.

Turning to the wholesale manufacture of clothing, in which sweating chiefly occurs, it seems certain that the responsibility lies between the warehouse, the shops, and the manufacturer.

While the ranks of "outworkers" are largely filled by deserted wives and mothers, and widows with children, who must take work at the price offered or starve, there is but little hope of organised resistance on their part to the system from which they suffer. And while factories are filled with young girls at low wages, there can be no hope that anything but low prices will be given, either to the indoor or the outdoor worker. The woman who, with a home and living already assured, takes work at a low price (and such cases are not unknown), must also take her share of the responsibility of helping to lower the standard of wages.

Clothing factories fall into two classes :—

1. Those which are under engagement to work for one warehouse or shop only, and which make order clothing and ready-made clothing of different qualities
2. Those which carry out Government contracts and work for different warehouses and shops, making some order clothing and all classes of ready-made clothing.

It is in the latter class that the fierce competition for the patronage of warehouses is carried on, and it is there we find the evidences of "sweating." Illustrative of this is the following incident, which is stated to be true :—A certain warehouse offered to manufacturers 1,000 pairs of slop trousers, of a certain kind. X, a well known manufacturer, engaged to do the work at 1s. per pair, and the parcel was made up and labelled for him. Y, becoming aware of this, fixed his price for making at 10d. per pair, and received the promise of the order, until a lower offer of 9d. from Z won the day. It may fairly be assumed that the original offer of 1s. would not have been entertained by the warehouse had it not expected to make some profit on the transaction; and that an actual gain to the warehouse over estimated profit is represented by the difference between the first and last offer. In order to understand how the cost of production comes to be so differently estimated by manufacturers, we turn to the constitution of the two factories. In X's factory it will be found that almost all the women are over 18, and receive an average weekly wage of about 16s.; the men, including a couple of apprentices, are also over 18, and receive an average wage of £2 1s. 6d. Z employs a similar number of women, but two-thirds of them are girls ranging between 14 and 17, whose average weekly wage is less than 5s. 6d., while the average wage for all the women employed is about 7s. In the case of males, two of whom are boys, the average weekly wage is about £1 7s. 6d. The rates of pay to "outworkers" will show a like variation between the two factories.

A weekly wage of 16s. 6d. is a bare living for a woman, yet it is a high average for factory work; 7s. is not a living at all; but as there are numbers of girls who have a home and wish to earn a few shillings weekly, the market is flooded with cheap girl-labour.

In the factory the contract is carried out somewhat on the following lines :—The machinist will be paid by weekly wage, the finisher by the piece, the cutter and presser by piece, and soap, heating, rent, and profit must be allowed for. Thus the wages of four persons must come out of 1s. before the manufacturer can look for any profit. If the price be reduced to 9d., there must be a reduction all the way round; it is not likely that either the cutter or presser, who can command good wages, will tolerate anything but a slight reduction; possibly there will be none in the case of the presser, who is sometimes paid at Union log rates. It is not, then, surprising that we find girls working as finishers at 2s. 6d., 3s., and 4s. per week, and the outworker, who is both machinist and finisher, and is at the cost of her own machine, making "colonials" at 5d., 4½d., and 4d. a pair.

The large proportion of young girls and women over 18 in clothing factories is not without its significance in the discussion of the matter. The presence of so many unskilled hands would hardly be tolerated by men in any trade. Cheap production appears to be accomplished, first by the reduction of the wages of adult workers in the factory, and, at a later stage, by the substitution of cheap girl-labour for that of women.

The various systems of sub-contracting should be mentioned. In some cases a room in the factory is rented at 8s. or 10s. per week, and constant work is guaranteed by the manufacturer to the tenant, who engages and pays a number of young hands to do the bulk of the work at low wages; the employer usually receives the outworker's price, and probably makes a profit upon it. Or persons engaging their own hands are charged a weekly sum of 4s. or 8s. for the use of machines, and possibly the services of a button-hole machinist. The case may be quoted of two women working in a factory, who make vests at 6s. per dozen, and a few better ones at 9s. They employ one girl at 6s. per week, one at 8s., and one unpaid "apprentice." These five persons working together make about two dozen vests a day, and are charged 4s. per week for the use of two machines. A trouser-maker, working independently in the factory, employs ten or twelve girls, all young, as "apprentices," giving them 2s. 6d. to 3s. 6d. per week; this person is charged rent for the room, and takes trousers at "outworkers'" prices. A vest-maker employs fifteen or seventeen hands, a coat-maker eight, ten, or twenty, and so on. The factory owner disclaims all knowledge of, or responsibility for, what is done by these contractors.

In the case of sub-contracting outside the factory, we find the same condition of things. The manufacturer gives out part of his contract in a considerable quantity to one person, who in his turn establishes a factory on a small scale, and employs a number of hands, either as unpaid "apprentices," at a weekly wage, or on piecework; their earnings vary from 2s. 6d. to 7s., with perhaps a small number of hands at 10s.; we even find married women earning a wage of 3s., 5s., and 6s. a week on piecework, and trousers being given out to finish at the low rates already spoken of.

I am of opinion that this system has done much towards lowering the rate of wages both inside and outside the factory.

One may venture to predict that in a year or two, when all the so-called "apprentices" who have been kept on have learnt their business, the number for whom there will be room in the factories will be very small, and they will have no little difficulty in finding employment in the clothing trade. These comments do not apply to those well-conducted factories in which the number of genuine learners bears a fair proportion to the adults employed, but to those in which the increasing number of young hands leads on to the gradual displacement of women whose years of employment entitle them to expect fair wages.

APPRENTICES.

This Department is charged with the administration of the Apprentices Act of 1894, and the system of apprenticeship generally has been brought under its notice in the administration of the Factories and Shops Act.

Apprentices may, so far as this Colony is concerned, be divided into two classes. The first, and they represent a rapidly decreasing number, are those who have been apprenticed in the old meaning of the word—to be instructed fully in the craft exercised by their master. In a few trades, such as saddlery, and in the case of certain bakehouses, no doubt the obligation is still fairly complied with by the master. What, however, is called apprenticeship in the clothing trade is a misapplication of the word.

The provisions of the Apprenticeship Act of 1894 are not as well known as might have been expected among the class it chiefly interests. Some time ago a mother called on me to complain of the treatment of her son by the master to whom he was apprenticed. It appeared that the apprentice resided in the house

of the master, and before and after the day's work at his trade had to perform a multitude of domestic duties, such as preparing the meals, making the beds, washing up dishes, cutting firewood, and exercising a general supervision over the children. This, of course, was quite in the mediæval style, when the apprentice was to all intents a member of the household, and if certain homely romances are to be believed, had in due time as the reward of his diligence the hand of his master's eldest daughter, and as the stimulus to his ambition the glory of a Lord Mayor's day.

Some masters appear to think that this old-time form of complete servitude still exists. In the case quoted the master had apparently no idea that the "forty-eight hours a week" principle had yet reached the venerable institution of apprenticeship, and the mother was much relieved at getting a note to the effect that no apprentice "shall be bound to serve his master for more than forty-eight hours during any one week." This restriction does not, however, apply to apprentices bound to farming occupation, or to other servants in husbandry or to domestic service.

On this subject Miss Duncan writes:—

The system of binding apprentices by indentures for a term of years at specified wages is undoubtedly on the decline, although it still exists amongst bootmakers, brushmakers, saddlers, and some other trades.

The term "apprentice" is loosely applied to learners in most trades. I have discussed the matter with many employers, and find that there is a growing distaste for the system, which they say causes them considerable trouble without any corresponding advantage; the difficulty is aggravated by the want of control shown by parents, and the indifference of a lad to his own interests or those of his master. Many employers express their intention of refusing to take apprentices, and of employing only young people who can be dismissed if they do not prove themselves satisfactory. This system of course would relieve the employer of the duty of teaching, and throws upon the boy the responsibility of learning the trade by his own diligence and aptitude, or leaving the factory as ignorant as he entered it.

As far as girls are concerned, they are seldom bound as apprentices, except in the boot trade.

In this case they are taught one of the branches only—they are apprenticed either as fitters, *i.e.*, persons who fit into place and join by some adhesive mixture the various parts of the uppers and linings; or as machinists, *i.e.*, persons who stitch together by machine the various pieces of the "uppers" which have been made ready by the "fitters." The cutting out of the leather and the joining of "uppers" and soles is always done by men.

The apprentices are bound for about three years at the rate of 4s. for the first year, 5s. the second year, and 6s. for the third year, but the length of terms and rate of pay differs in different factories. In one case a bonus is distributed at the end of every month, calculated on the earnings of the apprentice, and is known as "over-money."

In millinery girls are taken on as so-called apprentices for six months or a year without pay; at the end of that time, having presumably been taught something, they begin to receive from 2s. 6d. to 5s. per week.

In the dressmaking trade every workroom has a certain proportion of young girls who are taken on for three months without pay, make themselves generally useful in running messages, matching patterns, and in tidying up the workroom, and who are called "apprentices"; they do a little needlework also, but are said to be "very often out of the room," and I believe that as a rule no attempt is made to teach them the trade at this time, and that the first three months is more of a probationary time; if they prove themselves apt and willing they pass on to the more advanced stage of "improver," when they begin to receive wages at the rate of 2s. 6d. per week.

In some workrooms each girl is taught the trade all through, but this seems to be somewhat exceptional, and ordinarily they become in the course of time either bodice-hands, skirt-hands, or sleeve-hands.

It is not uncommon to find in small workrooms that the proportion of skilled and unskilled hands is as 1 to 6. Two sisters or friends will carry on a business with the aid of five or six hands at low wages or with no pay.

In tailors' workshops boys and girls are apprenticed to a journeyman tailor, and are taught and paid by him. In one workroom several journeymen tailors may be found each with one or two apprentices working under him; in this case they appear to be thoroughly taught the trade, and develop into competent tailors and tailoresses, working as they do all day under the immediate direction of their employer.

In clothing factories the terms of apprenticeship so-called seem to be as follows:—Young girls are paid at the rate of 2s. 6d. or 3s. for the first six months, and 5s. at the end of that time. During this time they are taught to be "machinists" and "finishers" in the slop trade.

Mr. Armitage says:—

Apprenticeship is not so common now as a few years back. A few apprentices are taken on in the clothing trade and in the engineering trade, but the majority of the lads now taken on and called apprentices have no written agreement as to articles. They are kept at one particular machine, when in a short time they become, so far as it is concerned, expert as a journeyman, but are never taught any other branch of the trade.

LAUNDRIES.

The restriction of the hours of women working in laundries has been received with much outcry. This appears to be an experience common to all centres where legislation of this kind has been applied. In the last Report of the Victorian Department the following passage appears, and is quoted to show that the experience in the sister colony is similar to that in our own:—

In England, where the statutory hours are much longer, the same outcry is raised, the plea being precisely the same, and the laundry proprietors in Melbourne are no exception to the rule; and probably if the hours of work in Victorian laundries were fifty-two per week instead of forty-eight the same difficulty would still be raised.

As will be seen from Miss Duncan's report, the work of women employed in laundries is not only laborious in itself but has to be performed under conditions which make it very exhausting, if not positively hurtful to health. The bulk of this work necessarily increases in summer, the season when the conditions under which it has to be carried out are least favourable to long-continued exertion. At the close of last summer a case was brought under the notice of the Department, where the proprietor complained that if he were not able to work his laundry continuously for three days and nights in succession he could not meet an exigency that had arisen, in connection with the despatch of a mail steamer, for cleansing the linen of which he had entered into a contract. He proposed to do this with his ordinary hands, but it was pointed out to him that he could not be allowed to work them for such excessive overtime, and that if he must carry out his contract it would have to be with extra assistance. He accordingly submitted a proposal to double his staff and divide the work into three shifts of eight hours each, half ordinary hands and half extra hands in each shift. This arrangement was sanctioned, and would no doubt have worked satisfactorily had not circumstances subsequently made it unnecessary to put it into force.

Following

Following the practice in England and the sister colony of Victoria, a proclamation was issued in the early part of the year exempting religious and charitable institutions from the provisions of the Act. As the proprietors of several laundries complained of the injustice of the competition under such circumstances, Miss Duncan was detailed to visit, with the consent of the responsible officers, a number of these places with the result stated in her report.

Miss Duncan says :—

Laundries may be divided into two classes, viz. :—

- (a) Hand laundries.
- (b) Steam laundries.

The hand laundries, in which no mechanical power is used, are much more numerous than those worked by steam.

The work is usually carried on either in the house of the employer or in a house devoted to the business only; the premises are usually old and often in bad repair, in consideration of which they are let at a low rent. This is often the fate of the old bungalow type of house, which is by no means unsuitable for the purpose; the front rooms, furnished as they are with numerous French and other windows, well shaded by the wide verandah, make pleasantly, airy, and cool ironing rooms, and as the house is often surrounded by a large drying-ground, formerly a garden, they are protected from the dust which is fatal to the success of good work.

In the city laundry work is often carried on in premises originally intended for shops, in which case the ventilation is usually deficient. The ironers are placed in a front room, which has a large shop window incapable of opening, and the only ventilation is obtained from the door opening out on the street, with a possible fanlight above, both of which are kept scrupulously closed in dusty weather; these rooms open into a room behind, which may be used either as a room for heating irons or as a living room, and which again has a door leading into the small yard at the back. The ventilation is poor, and it is difficult to see how it can be improved.

On the other hand, where a whole house of a fair size, and standing by itself, is given up to laundry work, the conditions are not at all unfavourable.

The trade of hand laundries is almost entirely confined to private customers, the work is regular, being collected on Monday and returned at the end of the week, and is only subject to the ordinary increase of work in summer due to the difference in attire.

The ordinary hours worked in this trade during the winter months appear to be well under the forty-eight allowed by law, and any excess due to increased summer work can be easily met by the provision made for "overtime" in the Act. As a rule, the "washers" work for two or three days in the beginning of the week, and the ironers begin on Tuesday and work till Friday or Saturday. The washers are paid by the day, and the ironers by piecework; the latter average excellent wages throughout the summer making from £1 to 30s. or £2, according to their own quickness.

The women employed in hand laundries are seldom under 18; a large proportion of them seem to be married women.

In steam laundries the conditions are widely different, and great opposition to the Act was at first shown by the proprietors, who protested strenuously that the enforcement of its provisions would lead to the giving up or breaking of contracts, greatly to their loss.

It was also said that the trade would be forced into the hands of adult foreigners, men who could and would work unlimited hours, whereas the hours of women now employed are limited. I venture to think that this danger is much over-rated, and in no case would it greatly affect the steam laundries, the bulk of whose trade is ship and hotel work, which small hand laundries could never attempt to undertake. It is true that contract work is done at such a low price that steam laundrymen state they cannot afford to dispense with a private trade also, but this they draw largely from hotels.

In the summer-time, when the ocean steamers are larger and more crowded, when intercolonial boats run more frequently, and when hotels are full, the ship and hotel contracts are very much heavier than in winter, and as these must be carried out at any cost, much private and chance work is said to be refused, in order that the laundry shall fall in with the provisions of the Act. In this I see no great hardship, as it cannot be supposed that laundries are carried on at a loss during the other months of the year, and therefore it is well in the interests of the women that a time limit should impose some restriction on the amount of work accepted by a laundry.

If ships, hotels, and railway contracts were not done at such abnormally low rates of pay, we should not hear so much of these complaints. The responsibility for this lies between the contracting parties, who cannot reasonably think that the payment is a fair one.

When the various processes through which linen passes in a laundry are taken into account, when it is remembered that in order to do the work in a given time costly machinery and large numbers of hands are necessary, the rates of 2½d., 3d. and 4d. a dozen which now prevail for sheets, pillow-slips, towels, and table-napery, seem very inadequate.

Only a few years ago the same work was done in Sydney at 1s. a dozen. It is not necessary to point out that all such contracts are carried out at the cost of reduction in wages.

The exclusion of laundries worked by charitable institutions from the operation of the Act is complained of, more especially in the case of a steam laundry, which having received gifts of expensive machinery is able to compete with the established laundries on their own ground, and with the superior advantage of being able to work without restriction of hours, and to a large extent without payment of wages.

This particular institution I have not been able to visit, and therefore I am unable to express an opinion on the subject, as I know nothing of the class of work which it undertakes or the hours worked.

I have, however, as a matter of courtesy been allowed to visit the other charitable laundries of Sydney, and I do not think that the complaint is well founded so far as they are concerned. In only one case is contract work undertaken at all, and in this instance the two contracts are very small; no work is done on Saturday; the work on other days does not exceed eight hours a day, and the work is done at the ordinary rate of charge.

This applies to all the charitable institutions visited.

The larger steam laundries are buildings specially erected for the purpose, well furnished with abundant window-space, and in some cases with fans. The "washers," male and female, the sorters, packers, and machinists are paid by weekly wage, while the hand ironers are usually paid by piece.

The ordinary working hours of laundries before the introduction of the Act were from 8 to 6 daily, with overtime in summer on two or three nights a week; but it is averred that for several months in the year there is little or no work done on Saturday afternoon.

It would appear that the real ground of objection to the provisions of the Act does not lie in the time allowed by law being insufficient for the completion of the work, as there is nothing to prevent a night shift being worked in case of great press, but in the unwillingness of proprietors to pay overtime in the case of "sorters" and "folders," whose work must necessarily continue after that of the employees in other branches is finished, and whose hours in any week may run to fifty or fifty-two and in busy times inevitably do so.

This has been shown by attempted evasions of the law in the payment of overtime in these branches.

It has been shown that those employers who were willing to face the difficulty have been able to overcome it by giving each girl in the sorting department a day off in rotation, so as to allow of her working an hour later than the other hands on two or three days in the week, without exceeding the forty-eight hours.

As a matter of fact only one laundry has as yet made application for the extension of overtime which the Minister has the power to grant.

Though it has been found necessary to prosecute in one or two cases of infraction of the law in laundries, it seems that, on the whole, the Act is working well; it is, however, early as yet to speak with certainty.

As in the case of hand laundries, the washers and hand ironers are usually married women and over 18; a good ironer commands a good wage.

The proportion of girls under 18 who are employed in the laundry trade is small, and their work is almost entirely confined to the steam laundries. Here they work as folders and machine hands, and receive wages varying from 5s. to 8s., those engaged in the sorting-room getting better wages, as their work is more responsible.

The work of the folders and machine hands is close, constant, and arduous, and is often done standing and sitting at steam mangles which give off a large amount of moisture.

In most steam laundries the washing-machines are worked by men, while women washers work only at the tubs; but in some laundries this work is done by women, and in one they work barefooted with the hot and cold water flowing alternately over their feet. In large laundries the floor is commonly laid with cement to a fall furnished with gullies to carry off the water, and with wooden gratings to enable the occupants to move about dry-footed; the wet condition of the floor is unavoidable, as the washing-machines are constantly being emptied.

Among the special rules for steam laundries in the English Act of 1895 is the following:—"All stoves for heating irons shall be sufficiently separated from any ironing room, and gas irons emitting any noxious fumes shall not be used."

The stoves referred to are of cast-iron and fitted to heat a large number of irons by means of a coke fire; the surface of the iron, often in a red hot condition, throws off an enormous amount of heat, and it is no uncommon thing in a hand laundry to find women working within a few feet of it in a small room.

It would seem that such an unnecessary aggravation of the heat in such a climate as that of Sydney should be met by special regulation.

In the best hand laundries one room is given up for a stove-room, and is very useful for drying purposes also; but where space is deficient the stove finds its way into the ironing-room, and in such cases the difficulty might be met by fencing it off to a height of 5 feet by means of a movable partition.

EMPLOYMENT AND WAGES.

In compiling the statistics which are appended to this Report it was thought judicious to follow as closely as possible the forms used by the Government Statistician, a somewhat similar body of industrial information having in previous years been collated by that officer. It was felt that departure from tried and recognised forms might possibly lead to confusion. It must, however, be borne in mind in any comparison of the figures given in these two sets of industrial statistics that this department includes in its lists all factories that come within the definition given in the Factories and Shops Act; and the figures must therefore be read in the light of this statutory interpretation.

These tables show that at the close of last year 1,673 factories stood registered on the books of the department. It is not, however, contended that this represents the total of all the factories in the metropolitan district which come under the provisions of the Act. Scarcely a week elapses but one or more factories are found by the inspectors which properly should be registered, but which, through ignorance of the provisions of the Act, have not been notified to us and consequently remain unregistered.

In the factories stated a total of 29,503 persons are returned as employed in the metropolitan district, representing in round numbers nearly 1 in 45 of the total population of the Colony. Probably with other populous districts, such as Newcastle added, the factory employees would represent 1 in 35 of the whole population. In the middle of last year the total population of the United Kingdom was estimated at in round numbers 40 millions, and the number of persons at all ages employed in factories at that date about 3½ millions, so that, assuming the estimate in the case of our own Colony to be well within the mark, the relative proportion of factory employees would be as, say, 3 per cent. of our population to nearly 9 per cent. of the population of the United Kingdom. In Victoria the proportion is about 1 in 28 of the population, or a shade less than 4 per cent.

Of the number of employees in registered factories considerably over half—namely, 19,168, are adult males. The adult women employed are in round numbers in the proportion of 1 to nearly 4 of the adult males—by adult being meant over the age of 18 years. The number of boys and girls in employment under 18 years of age together exceeds that of the adult females, the lads numbering 3,418 and the girls 2,079.

The principal classes of factories in which women labour is employed are those connected with the preparation of articles of food and drink, clothing and kindred trades, upholstery, furniture and bedding, books, paper, printing, &c. In the first-named class they are employed in considerable numbers in biscuit and pastry factories, in the preparation of various condiments, in making confectionery, in jam making and fruit-canning. The fairly large number of 77 are engaged in tea blending and packing.

In the "clothing and textile" class the largest number of women and girls—viz., 1,518, are employed in dressmaking and millinery, and the slop clothing trade absorbs 1,191, whilst the tailors' shops, where customers are measured to order, employ 759. In the tailoring trade Miss Duncan points out that the females under 18 years of age represent only one-sixth of the total number of women employed. In the clothing factory trade they reach nearly one-half of the total number.

The boot and shoe trade finds employments for 711 women, whilst "white work," that is, the making of underclothing, &c., employs 239. In the class "Shipbuilding, Repairing, &c.," the making of sails, tarpaulins, tents, &c., finds work for 25 women and girls.

"Furniture, bedding, &c.," gives employment to 101 women and girls, some engaged in upholstery work, others sewing carpets, making picture-frames, window-blinds, curtains, &c.

The "book, paper, and printing trades absorb 551 women and girls, the greater number of whom are engaged in folding and sewing. Making paper bags, boxes, &c., gives employment to 140.

In the laundries 662 women are returned as being employed, and the making of tobacco, cigars, and cigarettes finds work for 141, whilst 130 are employed in the preparation and packing of chemicals, drugs, and patent medicines.

Among isolated instances may be cited the case of one woman making fishing-lines and one engaged as a bottler of wine, &c.

The principal classes of factories in which lads over 14 and under 16 years of age are employed are those connected with the preparation of food and drink, and especially in bread, biscuit, and pastry factories, and in making condiments, confectionery, and jam. Lads between these ages are also employed in the meat-preserving factories as tinsmiths, packers, and attendants on the butchers; the factories where "clothing and textile fabrics" are made also find employment for a number of boys, by far the greater number being in the boot trade. Lads under 16 years are also to be found in the building trades, in metal-works, engineering shops, &c. In the printing trade there are 134 lads between these ages.

The tables of wages have been carefully compiled from the returns furnished to the department and the rates given have been computed on the basis of the lowest and highest wages of men in full work, and may, therefore, in some cases appear rather large, since in many instances full work is the exception rather than the rule.

These

These figures illustrate many interesting social and economic questions. For example, I have within narrow limits attempted to compare the earnings of men and women of presumably the same or about the same grade of efficiency in certain of the trades in which both sexes are engaged upon similar work with the following results:—

Tailors Orders—

Coat-makers ...	{ Males from 40s. to 60s. (a)
	{ Females from 15s. to 40s. (a)
Vest-makers ...	{ Males from 25s. to 46s. (a)
	{ Females from 10s. to 30s. (a)
Trousers Hands	{ Males from 30s. to 55s. (a)
	{ Females from 10s. to 35s. (a)

Clothing Factories—

Coat Hands	{ Males from 40s. to 60s. (a)
(order and slop).	{ Females from 10s. to 35s. (a)
Vest Hands ...	{ Males from 21s. to 44s. (a)
	{ Females from 7s. 6d. to 30s. (a)
Trousers Hands.	Females only, 10s. to 30s. (a)
Machinists ...	{ Males from 25s. to 60s. (b)
	{ Females from 12s. to 30s. (b)
Confectioners ...	{ Males from 17s. 6d. to 60s. (b)
	{ Females from 12s. to 30s. (b)
Packers ...	{ Males from 12s. to 50s. (a) and (b)
	{ Females from 7s. 6d. to 30s. (a) and (b)
Weavers ...	{ Males from 36s. to 50s. (a)
	{ Females from 18s. to 31s. (a)
Upholsterers ...	{ Males from 40s. to 60s. (a) and (b)
	{ Females from 12s. 6d. to 40s. (a) and (b)
Tobacco Stemmers...	{ Males from 12s. to 25s. (a)
	{ Females from 10s. to 20s. (a)
Coverers ...	{ Males from 15s. to 45s. (a)
	{ Females from 15s. to 33s. (a)

These figures show a material difference between the weekly earnings of the two sexes. In the instances marked (a) the earnings are at piece rates, but in those marked (b) the rates are weekly wages, at which it is presumed the standard quantity of work done is about the same.

The differences in the earnings of the sexes may be due to several causes:—

- (1.) The greater skill of men in certain kinds of labour, as, for example, in coat-making. On the better class of this work men are almost exclusively employed. Whether women would not become equally skilled if given equal opportunities of doing the work cannot be said, though it must not be forgotten that in the "pressing" of coats a special demand is made on strength as well as skill.
- (2.) In cases where the work is taken home and done at piece rates the larger earnings on the part of the men might to some extent be explained by the greater time given to the work, her domestic duties making special demands on the time of the woman.
- (3.) There may also be a slight advantage in favour of men in their powers of endurance, though the long hours worked by some of the women outworkers show that not much stress should be laid on this.

These considerations, however, are applicable more to the case of weekly earnings on piece work at like rates than they are to wages.

The fact with regard to the latter appears to be that, after making allowance for economic considerations, a further element that cannot be regarded as strictly economic enters largely into the question of this difference between the wages of men and women engaged on similar work. The man has always been regarded as the bread-winner for the family, and by virtue of this position, apart from other considerations, commands a higher wage than the woman, even though unsupported by any such economic reason as greater strength or endurance, higher skill, or what might be termed generally superior working capacity as a machine. It seems to be a fair statement to make that the cash return of a woman's work is to some extent discounted by reason of her sex—even though she may be equal to the man as to the work done, and as a matter of fact have an equal responsibility with regard to the maintenance of a family. This "sex-discount"—to coin a term—seems to prevail in all avenues of women's labour.

In a recent volume of Industrial Statistics, collected by the United States Labour Department, tables are given comparing the "earnings of women and children and of men, of the same grade of efficiency, by industries," and there I find a similar though not so marked variation in earnings in favour of males. For example, in the boot and shoe trade men earn from £3 to £4 a week, as stitchers, but women from about £2 10s. to about £3; tailors from £3 to £4 10s. and tailoresses from about £2 10s. to £4.

In the same volume a section is devoted to giving the "reasons for the employment of women and girls by States and industries." The following are the principal given:—"Cheaper, more reliable, and don't drink"; "Cheaper, neater, and more industrious"; "Better adapted, cheaper and more reliable"; "More easily procured"; "More easily controlled and less liable to strike"; "Cheaper and more polite and pleasing"; "Don't wish to learn trade, content to work at a certain branch"; and among the other virtues attributed to them besides the frequently recurring cheapness and adaptability are "cleanliness," "rapidity," "carefulness," and "good effect upon male employees."

The following table compares in a few instances the wages obtainable in this Colony with those paid in England, the English rates being taken from Board of Trade statistics.

Trade.	England.	New South Wales.
*Bricklayers	29s. to 43s.	48s. to 60s.
Masons	27s. to 41s.	40s. to 60s.
Carpenters and Joiners	24s. to 41s.	30s. to 60s.
Plumbers	31s. to 42s.	30s. to 60s.
Painters	22s. to 36s.	30s. to 54s.
Clickers	28s. to 30s.	25s. to 60s.
Lasters and Finishers	27s. to 30s.	22s. to 50s.
Tailors	21s. to 35s.	40s. to 60s.

*NOTE.—It should be borne in mind that the English rates are based on average wages, whereas the N.S.W. rates range from lowest to highest.

SHOPS.

With regard to shops, the principal sections in the Act affecting them are those with regard to sanitation, the safe-guarding of lifts, and the provision of sitting accommodation, and in each of these directions a good deal has been done during the year.

A shop within the meaning of the Act is any building or place, or portion thereof, in which goods are exposed or offered for sale by retail. From this it will be seen that shops do not include warehouses, concerning the lifts and sanitary conveniences in which it has been represented to the Department improvement might in some cases be made. Portions of certain warehouses, however, come within the definition of "factory," as for example, where four or more persons are engaged in preparing articles for trade or sale. Such articles are frequently made by breaking bulk into small packets, and putting labels on them, or combining portions of goods into single parcels for the retail trade.

In a number of shops lads under the prescribed age were found in charge of lifts and were removed, and in others separate accommodation for the females employed had to be insisted on. The regulation prescribing the cubic air space to be allowed, and inlet and outlet ventilation, is necessarily difficult to apply to a shop a great portion of whose floor-space is occupied by goods, and in and out of which there is a continuous flow of customers. In a number of cases where ventilation has been insufficient the Department has been met by the fact that nothing short of extensive structural alterations would effectually cure the defect. Where these alterations would involve a heavy expenditure a discretion has been exercised, and the Department has assisted occupiers in endeavouring to secure the best result possible under the circumstances. In all these cases, however, occupiers have been informed that such arrangements must not be regarded as permanent, but where opportunity arises the full requirements of the Act must be complied with.

The occupiers of shops are, by law, required to provide sitting accommodation for the females employed by them in the proportion of one seat to every three persons, and to allow the use of them to their assistants at all reasonable times during the day. This is one of those desirable principles more easily enunciated than put in practice. It is not difficult for an inspector to ensure that seats are provided, but it is practically impossible for that officer to see that the women have the use of them "at all reasonable times during the day." The inhumanity of keeping girls and women continuously on their feet for the long hours they have to work in shops, and the physical injuries that may, if indeed they must not, result from such a practice are manifest, but is difficult to see, however close the system of espionage may be, that by mere inspection the full intention of the Act can be secured. If public opinion exercised itself in more practical directions than the holding of meetings and the passing of abstract resolutions, something might be done in this direction. When the average woman, keenful of bargains, makes it a practice to insist that the fellow-woman on the other side of the counter has her fair share of sitting down during the business, the object of this provision may be accomplished, but until then the Department can only say that it endeavours to secure the accommodation but cannot guarantee that it is used, to quote the words of the Act, "at all reasonable times during the day, when such use would not necessarily interfere with the proper discharge by the females of their duties." At the same time it is due to some, and among them the largest employer of shop labour in the city, to say that the accommodation asked for has been well and permanently provided, and so far as inquiry goes, the women employees are allowed to make reasonable use of it without fear of incurring a charge of idleness and with it probable dismissal. The passing of laws does not necessarily create a conscience, nor do these enactments take the place of it. This is just such a question as depends more upon the conscience of the individual, than on any penalties the law may try to impose. There is a class of employer who carry out the spirit of this provision without regard merely to it being law; on the other, hand there is a class who, if they get as far as making a show of obedience to the compulsion of the law, evade its spirit, and when espionage is removed, its letter also.

During the year I had to report to you in a case representative of others where the Department had reason to believe that a lad, a mere child, was being overworked in a shop, as follows:—

I regret that I cannot recommend a prosecution in this case. The Department has good reason to believe that many lads, acting as messengers in shops, are worked for unduly long hours, but as the Factories and Shops Act provisions now stand it would not be possible to get a case against any employer. Section 43 of the Act limits the hours for lads under 16 years and females to fifty-two in the week, but allows overtime for three hours on fifty-two days in the year, whether consecutively or not is not stated. A record of such overtime was required to be kept under the provisions of the Bill as drafted, but this was struck out in Committee, consequently the inspectors are left in the dark as to when overtime has been worked, and if the fifty-two days have been exhausted or not.

It would be useless to prosecute, as the Department could not show that the lad was being worked beyond the time allowed by the Act. The employer might have worked him as a matter of fact for seventy hours in the week, namely, fifty-two ordinary and eighteen overtime hours, and yet have been within the law. The provisions relating to hours in shops are practically unworkable.

And here attention is directed to the hardships of many a "small boy" who for a few shillings a week is the general messenger in a shop. Many of these youngsters, no doubt, spend a considerable portion of their time in idling, whistling and playing, or in reading the penny sensational romances the small boy delights in, but the inspectors have come across not a few cases where lads have been kept on the walk or trot continuously in all kinds of weather for many hours in the day. The Act does not impose any limit of age in the case of boys or girls working in shops. If they are exempt from school attendance they may at once, though of fewer than 13 years of age, take a situation in a shop where often, at the close of a long sultry day spent at his duties, the condition of the small boy's legs must be indeed a weariness of the flesh to him.

Originally the Bill provided that "on one working day in each week no shops shall be open after 1 o'clock, p.m.;" but this was struck out during its progress through the Legislature, so that as it at present stands the Act does not make any provision with regard to a weekly half-holiday. However, a separate measure has been prepared by the Department which deals comprehensively with the half-holiday question. It is, I understand, your intention to introduce this proposed legislation at an early date. From information supplied by the Sydney and Suburban Early Closing Association, the hours of labour for shop assistants, advocated by the Association, are,—four days a week from 8.30 a.m. to 6 p.m., with one hour for meals. One day from 8.30 a.m. to 1 p.m., without any meal hour, and one day from 8.30 p.m. to 9 p.m., with two hours for meals. This makes a total of forty-nine working hours per week.

Mr.

Mr. Armitage says :—

In some large suburban shops girls under 18 are worked from 8 a.m. till 10 p.m., but they are allowed sufficiently long intervals for meals to cut their time down to the nine and a half hours allowed by the Act. In some cases the girls come long distances, as for example, from North Shore to Newtown, making it a very long day for them. Some of these shop hands work for as little as 2s. per week.

In other shops in George-street I have found boys aged 12 and 13 at work from 8 a.m. till 9 p.m., and it is very common to have lads, 12 to 14 years of age, standing outside a shop all day till 9.30 at night, and then to be sent a message on their way home.

Miss Duncan reports :—

The long hours worked by shop assistants and our inability to help them is the most unsatisfactory feature of the year's work. Shop assistants speak of the neglect of their interests :—"You have done something for the girls in the factories, but you have done nothing for us. When are we going to have early closing?" is the constant cry.

It is felt by all persons in the trade that nothing short of statutory authority will avail to bring about the early closing of shops. From time to time efforts have been made by influential shopkeepers to induce others to observe a half-holiday once a week, and to close early, and although it may have worked well for a time it has always been broken through in the end by some one firm which declined to be bound any longer by the wishes of others; unfortunately, one seceder can bring about the downfall of the system within a large area. It appears that late hours are on the increase rather than otherwise, and the hard-worked employees are beginning to lose heart.

The long hours, the fatigue of being always on their feet, the oppressive atmosphere of gas-lighted, crowded shops, the necessity for constant alertness and civility under great provocation, the shortening of meal hours, the tidying up of stock long after customers have gone, followed by the weary tramp home towards midnight—these are the price paid by the shop assistant for the allurements of the "cheap sale" which often means a "sacrifice" in more than the advertised sense.

The various enactments in force in other colonies do not appear to fully cover the ground.

In Victoria it is pointed out that although the hours of women are limited to 52, men are still obliged to work to a late hour.

In New Zealand it is shown that the sections in the Act which allow certain classes of shopkeepers to choose their own day for closing at 1 o'clock cause much friction and discontent.

Inspection has proved that the hours of girls under 18 often exceed 52 hours in a week, and that even when they are kept within the limit they exceed 9½ hours a day twice or thrice a week. As to the "shop boy," he is the first to arrive on the scene, and is at the beck and call of everyone all through the day. His hours often reach 66 in a week and 12 in a day.

Considerable time and attention have been devoted to enforcing section 24 of the Act, which requires that "suitable sitting accommodation shall be provided for all females in shops."

The seats may now be found, but it would be rash to affirm that the women are allowed to make use of them. In some shops both the letter and spirit of the Act in this particular are carried out, but in others it has never been my good fortune to see, or hear of any one who had seen, a shop assistant sitting down. On the contrary many complaints have reached me, but never one which was sufficiently definite or exact or recent to allow of its being verified or of any action being taken. I have good reason to think that in many instances shop assistants believe that their services will be dispensed with upon some sufficient pretext should they be seen sitting down.

It is a pity that inspectors are not empowered to make a recommendation as to the form of seat to be used. We are now often obliged to be satisfied with seats which in our opinion are entirely unsuitable in the circumstances of the case. Thus, no one can dispute that a chair is "suitable sitting accommodation," yet its size and height make it very unsuitable for a shop seat, to say nothing of the fact that it can be, and often is, lifted over the counter as soon as the inspector's back is turned, and probably remains there until the occasion of his next visit.

There is abundant medical testimony forthcoming as to the serious and far-reaching effects of long standing on shop women.

It is said that "customers do not like to see them sitting down," a statement which I believe to be more fanciful than real. It is said that "they have no time to sit down." If it be true that shop assistants are kept so closely to work, from 9 in the morning till 7, 9, or it may be 11 o'clock at night, that they cannot sit down for five minutes except in the intervals for meals, then the sooner their hours of labour are curtailed the better.

The testimony supplied to the Department by a leading medical man in this city on the effect on women's health of factory and shop life may here be quoted :—"The diseases to which they are most prone appear to be phthisis, pulmonalis, and womb troubles. The effect in later life will be a curtailment of life, diminished capacity to enjoy and work, and endure the strain of maternity and lessened vigour in the offspring. The effect of long standing is highly injurious, producing womb troubles, hæmorrhoids, varicose veins, spinal curvature. The above evils it is easy to see must re-act upon the State and the race."

BAKEHOUSES.

Special provision is made in the Act with respect to bakehouses. In addition to including them in the general definition of a factory, the Act goes further, and legislates in certain particulars with regard to bakehouses that otherwise would not come within such general definition. These special provisions, which apply to all bakehouses employing one or more than one person, have reference to sanitary requirements, and liability with regard to their being carried out is extended to the person who lets the premises or suffers them to be occupied, as well as to the occupier.

In a number of cases the inspectors reported upon the insanitary condition of bakehouses, and numerous directions had to be given to bring them into conformity with the Act. In some of these cases, in view of the radical alterations required, premises were vacated, and in others extensive additions were made. In every instance cleanliness and whitewashing were insisted on. This Department has also to acknowledge the assistance it received from the Department of Health, in pointing out the existence of certain abuses. No doubt in some directions which cannot be reached by the power given to this Department in the Factories and Shops Act, insanitary, or at least unsatisfactory, conditions still exist in these places, and doubtless some still remain undiscovered. In one case where directions had been given for certain alterations to be effected, and these had not been carried out, and where the sanitary provisions of the Act were grossly violated, the Department prosecuted and recovered a penalty against the occupier. As an instance of the condition in which some of the places were found, the following extracts from a report by an inspector may be quoted :—

At the end of the bread-room, and opening into it, is the earth-closet; and alongside the bread-room and bakehouse are the stables. Fluid from the manure of the stables flows in an open drain past the door of the bakehouse into an untrapped sink; the yard is covered with manure, and the premises are filthy dirty. The pan of the closet in the bread-room was, at the time of my visit, over three-quarters full, and the sink at the door of the bakehouse full of offensive matter.

Particular instructions have been given to inspectors to see that the sanitary conditions of the Act are fully enforced in the case of every factory where articles of food especially and clothing are manufactured.

Mr.

Mr. Taylor reports :—

The insertion of the clauses relating to the sanitary condition of bakehouses was, I am sorry to say, sorely needed ; and only with the strictest attention will the bakehouses attain a degree at all satisfactory.

Some of the modern and more recently-built bakehouses, however, are both in appointments and sanitary arrangements all that can be desired, every care apparently having been taken to see that no objection can be raised against them, and that their customers may rely on the most scrupulous rules with regard to cleanliness being observed ; but, on the other hand, there are many bakehouses, chiefly outside the city proper, where the proprietors have apparently never heard of the old adage, "Cleanliness is next to Godliness."

The structural conditions of many of the older places render them totally unfit for bakehouses. Some of them, having been built years ago, are now in a condition of decay. Patching and limewashing make very little difference, for in a short space of time the place becomes as bad as ever. I have impressed on occupiers the importance of keeping their bakehouses thoroughly clean, and am pleased to say that efforts have been made by most of them to conform with the Act.

Mr. Armitage states :—

The interiors of bakehouses in the district are in a much better state now than in the early part of the year, but much has yet to be done in the way of ventilation. The baker's trade is such that at times all ventilation must be shut off from the bakeroom, and as new bakehouses are built provision is made for the proper control of the ventilation.

Much has been done in the city and suburban bakehouses in the shifting of water-closets and stables from the bakehouses, and in other cases the gully-traps and sinks have been removed outside the bakehouse ; and where this is not practicable the sink is trapped, and discharges into a sink outside, the pipe from the bakehouse being above the water-seal of the outside trap ; this prevents any gas from coming into the bakeroom through the sink itself.

CHINESE.

In the report of the Royal Commission (1891-2) on alleged Chinese gambling and immorality, it is stated that, "The Chinese around Sydney follow the occupation of merchants, storekeepers, cabinet-makers, market-gardeners, hawkers, and gamblers. It is only in cabinet-making and vegetable-growing, however, that they come into serious competition with European tradesmen." Of recent years they have taken up laundry work, and from the experience in the United States it is highly probable that in this direction they may in time come into serious competition with Europeans.

In the same report, the stamping of Chinese furniture was suggested, and provisions for carrying this into effect were inserted in the Bill presented to the House, but were not carried into law.

In the case of Europeans, where steam or other mechanical power is not used, it requires four to constitute a factory, but it was specially provided that any office, building, or place occupied by Chinese working at any handicraft, etc., should be a factory within the meaning of the Act. This brings every cabinet-maker's shop where two Chinese are at work, within its scope. Considerable trouble and expense have been gone to in bringing the provisions of the Act under the notice of Chinese residents. One of the first duties undertaken by the Department was to visit the Chinese quarters, and look to the sanitary condition of places coming within the definition of factory. In several instances it has been found that the building which served as a factory by day was used as a dormitory by night. Extensive lime-washing has been ordered, and a general "clean up" instituted. Once the idea was conveyed to the minds of Chinese occupants that these requirements were in accordance with law, no great difficulty was experienced in enforcing them. Without exception, the Chinese factory hand works for longer hours than the European. As a general rule his hours are 72 in the week, but these may be cut down to 64 by allowance for meal hours. The average wages per week of the Chinese cabinet-maker is equal to that of the European, but with the longer time worked the rate per hour is considerably less, as will be seen from the accompanying table :—

Occupations.	Europeans.				Chinese.			
	No of Factories on Register.	Hours Worked per week.	Wages per Week.	Average rate of payment per hour.	No. of Factories on Register.	Hours Worked per week.	Wages per Week.	Average rate of payment per hour.
Cabinet maker	19	48½	15/- to 60/-	-/10	43	64	15/- to 60/-	-/7
French polishers	48½	30/- to 60/-	-/10	64	17/- to 36/-	-/5
Sand paperers	64	23/- to 24/-	-/4½
Turners	48½	20/- to 60/-	1/-	64	27/- to 30/-	-/5½

Mr. Taylor says :—

Mention may be made of the comparative cleanliness of the Chinese, who, despite their apparent indifference to hygiene in household matters, seem to pay great attention to their water-closets, the condition of which generally is satisfactory.

FIRE.

The Act provides, (a) that in every factory there shall be such means of extinguishing fire as the inspector acting under the regulations may direct, and furthermore, (b) requires that every factory three or more stories in height, in which persons are employed above the second story, shall be furnished with a certificate from the inspector that the factory is provided with such means of escape in case of fire for the persons employed therein as can reasonably be required under the circumstances of each case.

It is only recently that somewhat similar provisions were incorporated into English factory legislation, but in the United States very full precautions have for years past been taken in these respects.

On the recommendation of the Superintendent of Fire Brigades, it was provided in the regulations under our own Act that "Every factory and shop, when so required by the inspector, shall be fitted with a 2½-in. hydrant hose, branch and nozzle, inside the main staircase, and be supplied with such number of buckets as the inspector may determine, and of such pattern as he may approve, to be kept (filled with water) at all times on each floor of such factory or shop."

There

There is no doubt that in some of the business portions of the city where shop after shop is crowded with inflammable goods, in a narrow thoroughfare with a network of electric wires in front of second or third story windows, the risk in the event of fire would be not inconsiderable to the shop employees and customers alike. How much greater would it be to the millinery hands and others who carry on their employment, as is often the case, in a room at the top of the building, reached, perhaps, by a succession of narrow staircases? I have one such building in my mind's-eye. It is a large and nearly always crowded shop; a great square space is left open in the centre, so that each floor presents somewhat the appearance of a wide gallery. The customers reach flat after flat by means of broad stairways, but from the top flat a couple of dark narrow staircases take one up beneath the roof, and here the sewing girls ply their work. Wide windows open from the room on the street, but the verandah roof is far below, and the way of the fire escape is barred, at all events temporarily, by the festoon of electric wires. There are numerous entrances to this building, creating a continuous draft, and it does not require a vivid imagination to realise what the scene would be if a carelessly thrown match caught some of the fluttering stuff with which the place is swathed. The central opening would carry the flames up as if in a furnace-chimney, and then what hope would the women and girls in their room near the roof, from which the only exits are the narrow dark staircases where a crush would mean death, have of escape?

In such a case the provision of a few buckets filled with water is little better than useless. A bucket of water at hand at the outbreak of the fire may mean everything, but in the full strength of a fire it is worth nothing. What is required in such a case is that the work-people should either be provided with the fullest means of escape from their perilous position, or in view of the risk be removed to a safer place. To effect the first of these would in the case of many of the older shop buildings mean extensive structural alterations, and in the latter a serious encroachment on the shop space.

There is ground for apprehension with regard to a tendency within the last ten years to run up buildings, in some cases it is feared not too well built, to a height of many stories, a system of economising space much in vogue in such cities as New York and Chicago. There is a building in this city one floor of which, high up, is occupied as a factory, a lift-well answers as a flue its whole height, and without any external staircase or means of escape other than down the interior stairway or by lift, the place is little better than a death-trap.

It is the intention of the Department to make a special inspection of all factories three or more stories in height during the present year, and the Superintendent of Fire Brigades will, with your approval, be asked to put at our service an expert to accompany the inspectors, and assist them with his practical knowledge. Up to the present, the Department has not felt justified in issuing any "fire certificates."

The Act further provides as an additional safeguard to life in the event of fire that all the doors of every room in a factory in which persons are actually at work, or of passages leading to such rooms, or serving as entrances and exits shall neither be locked, bolted, or barred during working hours.

This provision, though obviously well intended, certainly does in some cases work a hardship of which, however, the Department cannot, as the section stands, take cognizance.

A case that recently came before me illustrates this. A well-known tailoring firm had a charge laid against it of locking the door of a certain room in which the tailors sat during working hours. The only other exit was across a wooden gangway and through the shop in front. There was no denial of the fact, but the proprietor explained that this door opened directly into a lane at the corner of which stood a public-house, and so long as the door remained unlocked the temptation to pay hurried visits to the public-house proved too much for the men, consequently they neglected their employer's work and squandered their own money. However, as this section stands, the Department could do nothing but advise the closing up of this exit if one equally good could be so placed as to prevent the men from visiting the public-house. Otherwise, the door must be left unlocked.

The English Act of 1895 makes a somewhat similar, but more elastic provision, namely, that any such rooms "shall not be locked, or bolted, or fastened in such a manner that they cannot be easily and immediately opened from the inside," and the Department there has adopted the fire-alarm plan of having the key hung in a glass-fronted box, and a notice put up that it is only to be used in case of emergency.

It may be said that an employer has always in his hands the power to dismiss an employee who drinks and neglects his work, but anyone engaged in business will know that this is a remedy not always available. In certain trades there are skilled hands whose fault is drunkenness, and who, despite that fault, are too good to be lightly parted with, since they cannot easily be replaced. It will be remembered that the plethora of labour is among the unskilled and least skilled.

Mr. Taylor, in his report, says:—

Notwithstanding the great risk of life and loss of property that would be likely to be met with in case of fire, the majority of factory and shop owners seem to be content with providing a few fire buckets which in a number of instances have been procured only after the representation of the inspector.

However, in some of the larger and better appointed houses, precautions have been taken to save the buildings and stock, in case of fire breaking out, by having a good supply of hydrants, hoses, and fire buckets, as well as sprinklers laid all over the building. But whilst this provision has been made for saving the stock means of escape for the employees have not been provided. In many such cases, were a fire to break out and get a fair start on the ground or first floors, whilst the employees were at work, there would be a sad tale to tell of the poor unfortunates in the higher stories.

The argument put forward by the proprietors, when asked to provide outside staircases, is that fire rarely breaks out in the daytime, when the employees are at work, and there is, therefore, no absolute necessity to provide these escapes.

Another objection is the considerable amount of expenditure that would be entailed in adding the above, whilst, in other cases the structural properties of the buildings practically preclude the possibility of their erection.

Mr. Armitage says:—

There is no building in my district to which a certificate under section 34 of the Act could be given; in fact, there are some very bad cases. In one building there are from 50 to 100 females at work on the top floor, which is from 90 to 100 feet above the street, and the highest fire-escape that the Metropolitan Fire Brigade has is only 80 feet high. In the back portion of the building, where the machines are running, about forty girls are at work; the door leading from this room is only 2 ft. 3 in. wide, this door opens on to the stairway, which is constructed of very inflammable material, and is only 2 ft. 6 in. wide; these stairs are constructed round the well of the lift, and have a turn at every 8 feet, so that in this case the means of escape for 150 to 200 people are practically nil. The lower flats of the building are used as sample-rooms and offices by warehousemen, their stores being of an inflammable nature, and should a fire break out below the top flat, then the lift well would act as a furnace shaft, and speedily cutting off all means of escape by the stairs.

In

In the majority of factories the stairs are within the workrooms, and generally the landings are blocked up with stock, and there is often only a passage-way of 2 feet provided. The probabilities of a fire spreading from floor to floor of a factory, even if such floors are of fire-resisting materials, are somewhat greater than they are in other buildings, inasmuch as openings are often unavoidable for shafting, belting, piping, and various mechanical appliances, and in many manufactures the materials stored and used are of a highly inflammable nature. Hence the necessity for providing structural arrangements in factories, carefully devised for the purpose of securing the safety of the workpeople, and more especially of those who, being employed upon the higher floor levels, are subject to the risk arising from dangerous manufactures or operations carried on upon the floor beneath them.

Of the various forms of defective staircases and step-ladders provided, even in recently-erected factories, none are more common than the apology for a stair formed by a construction of treads without risers, but with a boarded soffit. In the event of a fire, the treads and soffits are quickly consumed, and convey the fire with great rapidity from floor to floor, and yet many of the best factories in the district have nothing better, and, when accompanied by floor-joists unprotected by fire-resisting plaster, the entire destruction of the building would be effected in a very short space of time.

STEAM-BOILERS.

The only provision made in our Act with regard to the employment of competent persons to take charge of boilers used in connection with factories is in the nature of an extension of employers' liability. The fact of an injury occurring through a boiler is in itself *prima facie* evidence—

- (a) That the person so placed in charge was incompetent.
- (b) That the defendant was guilty of negligence in employing him.
- (c) That the plaintiff was injured through that person's incompetence.

This presumption may, however, be rebutted by the defendant if he proves that he took reasonable care to satisfy himself of the competency and fitness of such person to take charge of such boiler.

The Victorian Factories and Shops Act (1890) provides that persons in charge of machinery or boilers in factories shall hold certificates, and to obtain such certificates they are required to pass an examination.

There is no limitation either as to efficiency or age in our Act, except that a certificate of physical fitness is required where a lad under 16 years of age is in charge of a boiler. The consequence, as will be seen from the inspector's report, is that lads are frequently found in charge of boilers in places where an accident would imperil the lives of a number of employees. The necessity for legislation in this direction has been recognised, and during last Session a bill was prepared in the Department for introduction to Parliament. In that bill full provision was made to safeguard the lives of employees by restricting the charge of boilers to persons of sufficient age and qualification, and also for the inspection of all boilers—and there is good reason to believe that there are not a few in use at the present time that, if subjected to a thorough test, would be condemned as dangerous to life.

Inspector Armitage says:—

In the majority of factories in the timber trade I have found lads from 14 years of age upwards in charge of the boiler and engine. In one case I found a lad of 15 in charge of the boiler and engine, and putting in his spare time at the lathe and saw-bench. In other places, after the lads fire up the furnaces they go on with their work in the factory.

In a large pipe and pottery works I found a lad 14 years old sitting alongside the fly-wheel all day in charge of the engine and boiler. This lad had charge of the steam-cocks and other gear, and the chances were if anything went wrong he would have lost presence of mind. I have seen men run away when a piece of insertion has blown out and the steam escape. In a builder's shop I found a boiler at work in which one of the rivets had started, the steam was escaping, and I drew the attention of the occupier to this, when he coolly stated "that as soon as the plate got hot it would take up." This boiler did not blow off till 50.

In factories where an engineer or adult is in charge of the boiler and engine he is generally working all day in the factory at some of the machines, whilst a lad fires up the boiler.

The practice of having lads from 14 to 16 years of age firing up the boilers is very common in the building trade. One case came to my knowledge where it was the practice to put a weight on the safety-valve, so as to allow the power of the boiler (which far exceeded the safety factor) to increase so that certain logs might be cut through. There is nothing in the Factories and Shops Act to prevent a boy 14 years of age, provided he has a certificate of fitness, from taking charge of the boiler and engine if the occupier likes to take the risk of an explosion.

PROSECUTIONS.

As it was felt that on the introduction of new legislation such as this, ample opportunity should be given to occupiers of factories to bring their places into conformity with the Act and adjust the hours of employment to its requirements no steps were instituted with a view to prosecution for breaches of the Act till late in the year.

In at least one of the few cases brought within the year where the offence was that of working young persons beyond the statutory hours it was found that the experience in all countries where factory legislation is in force is repeated here. The Department necessarily depends for its evidence for the prosecution in cases of excessive hours on the employees of the factory in which the offence is committed. The witnesses are thus in the case of an unscrupulous employer placed in hazard of their employment, for should they be summoned and give truthful testimony then if punishment is inflicted on the employer he will probably at once dismiss the hand or hands who have given evidence against him.

Many anonymous letters are received by the Department. In a percentage of instances these emanate from persons who entertain an animus against their employer, but in others they come in good faith from employees who desire in the interests of their class to see the Act carried out, but are fearful that were their names made known to the employer they would be summarily dismissed. It need hardly be said that all communications giving information to the Department are treated as strictly confidential.

It was suggested in the last Victorian report that "it would greatly assist the Department if the employees formed some association for the assistance of those of their number who are dismissed in consequence of giving the necessary evidence to secure the benefits conferred by Act of Parliament."

Perhaps it is too much to expect such an association as this to be formed, though certainly a lad or girl who suffers for the common welfare of his or her class might expect some consideration at the hands of their fellow-workers. However, though individual cases of hardship do occur, there are, on the other hand, not a few self-reliant and independent spirits quite prepared to take the risk which assistance to the Department in a case of excessive hours necessarily involves.

It is gratifying to know that a feeling of confidence in the Department's officers is being gradually established, as evidenced by the increasing body of information placed at its disposal, the ready access given to books and documents by the employers on the one hand, and on the other the number of matters such as defective sanitation and so on to which attention is drawn by employees with a view to inquiry being made into them.

It is hoped that employees in factories will in time learn to appreciate the importance of assisting the inspectors in carrying out the provisions of the Act. Continuous espionage over factories is not practicable, and employees who are aware of systematic violations of the Act would, by communicating with the Department, aid in bringing about a closer observance of the Act, and, whilst improving their own condition, also assist in protecting the many employers who seek to scrupulously carry out the provisions of the Act, from the unfair competition of those who by violating them may obtain an undue advantage.

It may serve as a comparative illustration of factory and shop legislation in our Colony and that of New Zealand if I append a short list of some recent Magisterial decisions in the latter where the following penalties were inflicted in the cases of employers who violated the law by:—

- Allowing employees to take work to their homes. Penalty, £3, with 28s. costs.
- Holding an auction sale in business premises on the legal half-holiday. Penalty, 5s., with 34s. costs.
- Failing to grant the legal weekly half-holiday to female employees. Penalty, £3, with 28s. costs.
- Employing assistants beyond half an hour after the prescribed time of closing. Penalty, £3, with 38s. costs.
- Failing to provide a dining-room for female employees. Penalty, £5, with 38s. costs.
- Failing to give a lad under 18 years of age the Saturday half-holiday. Twenty shillings, with 7s. costs.
- Employing a carter on the weekly half-holiday. Ten shillings, with 37s. costs.
- Failing, he being a hotel-keeper, to give his assistant a weekly half-holiday. Penalty, 20s., with 28s. costs.

CONCLUSION.

In enforcing the provisions of new, and, so far as this Colony is concerned, novel legislation, many unanticipated difficulties have arisen, to successfully cope with which it was necessary to have not only an efficient staff, but one prepared to meet emergencies. The inspectors have had to go on night duty at any time the call has been made upon them, since one of the greatest factors toward maintaining respect for the provisions of the law is the fear of a "surprise visit" from one of these officers. I have to acknowledge the energy, tact, and willingness they have shown in carrying out their duties. Occasionally they have met with discourtesy, and have often had to exercise firmness in seeing that the law was observed, but in the great majority of cases they have been met by employers in the best spirit, and in some instances their demands for machine guards, for additional sanitary provision, increased ventilation, additional space, and so on, have been complied with beyond strict requirements. The collection of industrial statistics has necessarily involved a considerable amount of trouble on the part of employers, but in nearly every instance they have been furnished fully and willingly. Miss Duncan desires me to express her sense of the good spirit and courtesy with which she has been met in carrying out her duties on the women's side. She says:—"The rare instances of intentional discourtesy bear no proportion to the instances of conspicuous courtesy which I have had the good fortune to meet with."

I may say with regard to the machinery or system of the office, that it has necessarily undergone change in directions where experience has made change desirable. The general lines of the Victorian system were first adopted, but these have to a considerable extent been departed from, and a scheme evolved that will, it is believed, be more effectual, having regard to the scope of our Act and local circumstances.

I have the honor to be,

Sir,

Your obedient Servant,

T. B. CLEGG,

Clerk-in-Charge.

APPENDICES.

TABLE I.
Classification of Factories and Employees.

Class of Factory.	Number of Factories on Register	Hands employed.

TABLE V.
Evidence of Outworkers.

Persons Working.	Kind of Work.	Ordinary Prices.	Amount Earned in a day.	Average Gross Earnings per week.	Cost of Sewing to be deducted from Gross Earnings.	Cost of Sewing Machine.	Hours per day.	
(mother, 2 daughters, and several hands).	Making slop vests..	6d., 7d., 8d., and 11d. each; boys' vests, 4½d. and 5d.	Could do 1 in ½ hour, in less time if several are being made together; button-holes made in factory.	£4 10s.; average 180 vests per week, mostly at 6d. and 7d.; occasionally some at 11d.	2s. per dozen for cotton, and silk a little more.	3 machines, £11 10s. each; paid fortnightly; nearly paid for.	Paid hands, 48 hours per week; family (3), about 50 hours.	Widow with 2 daughters, usually works with 1 learner (unpaid), and employs several in busy time; average £2 per week working 3 only; was busy before Christmas, and the price was raised 1d, but has since fallen to its usual price; will get little or no work for a couple of months in the winter; comfortable home, good workroom, well kept.
1	Finishing trousers..	2s. and 3s. 6d. per dozen.	1 pair in about 1½ hour.	50 pairs, 10s. to 12s.	Find cotton.....	All day from breakfast, but must get lunch for self and 2 small children, and cook dinner for husband by 6 o'clock.	Young married woman with 2 children; husband labourer; wished to add to his weekly earnings; had worked in factory before marriage, and made good wages as a finisher 6 years ago; got 7d. each for finishing trousers then (now paid 2d. to 5½d. per pair in factory); does not think it worth while to go on at the pay, as she has to go backwards and forwards for the work.
2 (mother and daughter).	Making slop trousers.	4s. 6d. per dozen ..	8 pairs a day, 3s. ..	3 dozen pairs, sometimes a little more; 12s. 6d. to 13s.	Cotton, 1s. per dozen; button-hole thread, 6d. per reel; sewing thread, 9d. per reel; button thread, 1½d. per reel; average, 1s. 3d. per week.	1 machine bought, second-hand, from a friend.	8.30 to a little after 5; time lost in going to and from the factory.	Married woman with 7 children; 1 boy, 16, in a jam factory at 9s.; husband earns a little, but not much; dependent on the work and boy's wages; has worked regularly at this work for 18 months; work generally slack at stock-taking time and at Christmas; mother and daughter work only.
1	Making slop trousers and knickers for boys (lined).	Serge and tweed from 4s. per dozen and 5s.; knickers, 4s.; moles, 4s. 6d. per dozen.	6 pairs; once had a pair of slop "orders," 8d., 2 hours' work.	2 dozen and 4; average, 10s. 6d.	Cotton, 8d. per reel; thread, 9d. per reel; button-hole thread, 8d. per reel; bought at factory, better and cheaper.	One at £12 10s. paid £1 down and 2s. 6d. per week.	All day	Married woman with 5 children; husband a "beamsman," out of work some time in consequence of introduction of machinery; goes in for work and often has to come back without any, or with a couple of pairs; not worth while unless she gets a good bundle, as tram costs 2d. each way.
1 mother, and little girl of 12 who does a little finishing when not at school.	Making cols.....	4s. 6d. per dozen, and 5s. if with raised seams.	2 dozen and 1; 10s. to 12s.	do do ..	£11 11s.; took 4 years to pay off.	6 a.m. to 5, and often till 10 p.m.	Married woman with 4 children; husband a bricklayer, who has had a very bad year; no constant work. This factory pays no half-pence.
1	Making slop trousers and knickers (lined through); bound bottoms, and raised seams.	Cols, 5d.—knickers, 4d.	8 or 9 pairs; moles, 5 pairs.	28 to 36 pairs; 10s. to 14s.	do do ..	£10 10s.; nearly paid off in 2 years.	8 a.m. to 6.30 and 11 or 12 p.m., 3 or 4 times a week.	Single woman, living with sister.
.....	Finishing trousers—moles and cols.	Cols, 1s. 6d. per dozen; moles, 1s. 6d. and 2s. per dozen.	7 or 8 pairs	5s. 6d.; has never made more than 8s. 6d., when she had a woman to help.	Find thread; 2 reels, 50 yards, 1½d.	None	Early in morning till late at night, and on Sunday as well.	Widow with 1 child at home; blind mother with small means living with her; 10 years ago could make £2 10s. easily working as a coat hand finisher in factory; is no longer working at finishing; not a machinist, so cannot take trousers to make throughout.
.....	Finishing cols.....	1s. 6d. per dozen ..	1 pair an hour	5s. to 8s.	do do ..	do	Irregular hours; sick child; work all day and after tea.	Husband law-writer; very irregular work since type-writing came in; good pay when in work; woman only took this work in to make something to pay for operation on child. Has 6 children; 1 boy in florist's shop at 8s.
2	Making slop vests ..	Cotton stitched, 6s. 6d.; silk stitched, 9s.	8 per day; about ¾ of an hour each.	About 5 dozen; 30s. to 35s.	Cotton, 3d. per reel; silk, 2d. per reel; thread, 8d. per reel; 1s. 6d. to 2s. weekly.	1 machine; usual terms.	9 to 5 daily	Vest hand who had learnt trade in factory; living in parent's home; sister, dressmaker; father earns a little; not constant; works with 1 young sister as apprentice; work constant except during June and July.
2	Making trousers ..	Cols, 4d.; 2nd class, 5d.; 3rd class, 7d.	12 pairs	About 3½ or 4 dozen; 15s. to 22s.	Thread, 10d.; button-hole thread, 6d.; cotton, 1½d. and 2d.	£7 10s., second-hand; 2s. 6d. per week; about 10s. owing.	8.30 to 7.30; off Wednesday afternoon and all Saturday; takes the work in on these days.	Generally get cols at 5d. with raised seam and bound bottoms; this factory gives constant work, but the worst pay; mother and daughter work together and sometimes a young sister helps a little; not dependent on the work; father a fireman and brother in work.
2	Making "order" vests for factory ..	1s. 3d. each; 2s. 6d. to 2s. 9d. if with button-holes and extras.	3 or 4 per day	Cotton, 10½d. per dozen; silk, 1s. 4½d. per dozen; thread, 8d. to 10d. per reel.	£12; usual terms; £1 down and 2s. 6d. weekly.	Constant work.
2	Making slop vests ..	5s. 6d. per dozen; occasional "order," 1s. or 1s. 6d.	10 to 12 per day	11s. 6d. to £1 16s.; average, about 25s.	Cotton and thread; average, 3s. per week.	3 at £12 10s.; all fully paid up.	8.30 to 5 and sometimes at night, but seldom work Monday or Saturday.	2 sisters, and a little help from mother; living in mother's house; the factory pays no half-pence; comfortable home, largely supported by brothers.

NOTE.—It would probably be a fairly just statement to say that it takes one and a half hours to make a pair of ordinary Colonial trousers, and three-quarters to one hour to make a slop vest.

TABLE VI.

List of Prosecutions during the Year 1897.

Name, Address, and Occupation.	Offence.	Penalty.	Remarks.
H. S. Jeanneret, Troy Laundry, Harris-street, Ultimo.	Working females for more than 48 hours in one week.	10/-, with 1/11/6 costs, in each of two cases ; and in two other cases 2/6 each, with costs of Court.	In the two latter cases the defendant pleaded guilty.
Dyason Bros. and Johnson, jam manufacturers, Harris-street, Pyrmont.	Working lads for more than 48 hours in one week.	5/-, with costs of Court, in the cases of three lads.	Defendant pleaded guilty.
John James, baker, 656, Darling-street, Balmain.	Insanitary condition of premises.	10/-, with costs of Court, in one case, and 2/6, with costs of Court, in another.	Defendant has since left these premises.
Joseph Condie, laundry occupier, 48, Glebe-road.	Working females for more than 48 hours in a week.	5/- in each case (3), with costs of Court.	Defendant pleaded guilty.
Frederick Butcher, jam manufacturer, 33, Campbell-street, Glebe.	Insanitary condition of factory.	40/-, with costs of Court.

1898.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

FRIENDLY SOCIETIES AND TRADE UNIONS.

(REPORT OF REGISTRAR OF, FOR YEAR 1896.)

Presented to Parliament, pursuant to Acts 37 Vic. No. 4, sec. 45; and 45 Vic. No. 12, sec. 26.

Printed under No. 1 Report from the Printing Committee, 30 June, 1898.

The Registrar of Friendly Societies and Trade Unions to The Principal
Under Secretary.

Sir,

Sydney, 9 December, 1897.

I have the honor to submit herewith my report on the Friendly Societies and Trade Unions for the year 1896, to which are appended abstracts of the tables compiled from the returns of the Friendly Societies and of such of the Trade Unions as have forwarded them to this office.

I have, &c.,

A. DAVIS,

Registrar.

THE tabulation of the returns of Friendly Societies has now been brought up to date, those for the year 1896 having been examined simultaneously with those for the year 1895.

The result of this procedure has been the detection of many inaccuracies in the balance-sheets, which have in every case been carefully investigated, and each secretary, whether of lodge, court, or division, should now have in his possession a duplicate copy of what can be officially recognised as the starting point for the returns of the year 1897.

In my last year's report I had a paragraph as follows:—"The chief causes of this unsatisfactory condition of affairs have been the unfitness of secretaries, due to their ignorance, and the utter neglect of the auditors, to observe the faithful fulfilment of their duties." This has been remarked upon as being a somewhat strong expression of opinion; but, after the careful investigation which has been carried on by the officers who have dealt with the returns, I think it may be acknowledged that the words used rather understated the case.

In view of what had been previously discovered, the following circular was distributed as widely as possible, but does not appear to have received due attention:—

Instructions for filling in the Annual Returns to the Registrar.

1. The amount of funds at the beginning of the year must agree with the amount at the end of the year in the previous year's return.
2. The difference between the receipts and expenditure added to or subtracted from (as the case may be) the funds at the beginning of the year will give the amount of funds at the end of the year.
3. The cash in the Post Office Savings Bank, the Savings Bank of New South Wales, and at call or current account in Banks of issue and in Building Societies (the names of which should be stated), must agree with the bank pass-books.
4. The cash in the hands of officers should be counted and certified to by the auditors as being correct.
5. The total value of the hall and other freehold property must be given, and not the amount of funds of the society invested in the same.
6. Banner, furniture, goods, &c., must not be included in the "Disposal of funds."
7. From the total of the "Disposal of funds" the following must be deducted:—
 - (a) The amount of mortgage on hall and other freehold property.
 - (b) The amount of bank overdraft as per bank pass-book.
 - (c) Unpresented cheques.
 - (d) Accounts charged to expenditure, and not paid at date of balancing.

8. The net balance of the "Disposal of funds" must then agree with the amount of funds at the end of the year.
9. Investments repaid and cash withdrawn from the bank must not be included in the receipts.
10. Investments made and cash paid into the bank must not be included in the expenditure.
11. Under the heading "District or Grand Lodge dues" the name of the funds must be stated on account of which the payments have been made.
12. Funeral, superannuation, and widow and orphan's benefits received must agree with the amounts paid.

In reference to the above circular, I may mention that the latest Report of the Registrar of Great Britain contained the following statement with regard to the general practice of appointing auditors who are members of the society or branch, and not professional accountants. Mr. Brabrook says:—"There can be no doubt that the auditors so appointed are sometimes inefficient, and that defective audit gives opportunities for malversation, and even operates as a temptation to dishonesty."

I will state that in this Colony it has so operated, and that a very large proportion of the funds of Friendly Societies have been lost through inefficiency. Two English Societies (the M.U.I.O.O.F. and the A.O.F.) have for some years required auditors to give replies, accompanied by a declaration, to a series of questions which would appear to require more industry than is usually expected of auditors; and these forms of auditing accounts might well be adopted by others than the purely Friendly Societies.

The *Oddfellows Magazine* of October, 1897, a copy of which has been handed to me, and in which the leading article deals with "Auditors and Auditing," says:—"The first step necessary to counteract the evil when it exists is to invite and encourage the co-operation of those members whose capacity for the task is well known. The work involves the expenditure of time that is not compensated for by the fees which lodges pay, nor, in fact, are any of the services rendered under the voluntary system. The ruling principle of having books audited only by efficient auditors is, however, one which every lodge should act up to." I may observe in connection with this question of efficient officers that amongst some old documents was discovered a balance-sheet showing that an auditor was a marksman, yet presumed able to read and examine every document of the lodge; that in other cases no interest had been taken into consideration, although the bank, in its books, credited the society to a considerable amount; that in one society at the present time (the contributions to the Funeral Fund having been calculated on the belief that money would be invested at at least 4 per cent. interest) the whole of the Funeral Fund is banked as a current account, not bearing interest.

Several trustees have been appointed who are marksmen, and in at least one case, although the bank will not acknowledge those who cannot sign their names, an order for payment of money has been signed with a "cross" and a name alongside.

As a carefully-prepared Bill, framed so far as possible on the lines of the recent Act passed in the United Kingdom, has been introduced in the Legislative Assembly of this Colony, and will undoubtedly create much careful discussion amongst the more than 70,000 members of Friendly Societies and their families; and as it would perhaps be as well for the latest information to be placed before those interested, I would ask that the abstract tables contained in Appendices A and B may be distributed amongst the persons interested at the earliest possible date.

Trade Unions.

Although many more Unions have sent in returns for the year 1896, of which an abstract is given in Appendix C to this Report, it is to be regretted that their position generally is so unsatisfactory that they are unwilling to supply the desired information as to their membership and funds.

The following have been the principal operations under the Trade Unions Act during the year 1896. Amendments of existing rules were submitted for registration by:—

Illawarra District Council of the Australasian Labour Federation.
 Newcastle and Hunter River Shipwrights' Provident Union (since closed).
 Balmain Associated Labourers' Union,
 Masters and Engineers of Harbour and River Steamers Association and Consolidated Accident Fund.
 Brewery Employees' Association.
 Amalgamated Hotel and Caterers Employees' Mutual Benefit Association of New South Wales.
 New South Wales Locomotive Engine-drivers, Firemen, and Cleaners' Association.
 United Society of Boilermakers and Iron Ship Builders of New South Wales.
 Barrier Ranges Engine-drivers and Firemen's Association of New South Wales.
 Gas Stokers' Protective Association of New South Wales.

Notices of the appointment of Trustees were sent in by:—

Gas Stokers' Protective Association of New South Wales.
 Barrier Ranges Engine-drivers' Association of New South Wales.
 Barrier Branch of the Amalgamated Miners' Association.
 Sydney Wharf-labourers' Union.
 Brewery Employees' Association.

The dissolution has been registered of:—

The Sydney and Suburban Labourers' Protective Union (22nd December, 1896).
 Balranald Carriers' Union (23rd July, 1896).
 Newcastle Crane Employees' Association (31st December, 1896).

The following new unions have been established:—

Barrier District Council of the Australasian Labour Federation (2nd June, 1896).
 Cobar Miners and Workers' Association (6th July, 1896).
 Eight Hours Demonstration Committee (11th July, 1896).

[6d.]

1898.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

FIRE BRIGADES BOARD, SYDNEY.

(REPORT FOR 1897, BEING THE FOURTEENTH ANNUAL REPORT.)

Presented to Parliament, pursuant to Act 47 Vic. No. 3, sec. 7.

Printed under No. 1 Report from Printing Committee, 30 June, 1898.

The Chairman to The Chief Secretary.

Sir,

In conformity with the direction of the 7th section of the "Fire Brigades Act, 1884," I have the honor to present herewith the Report of the Fire Brigades Board, with regard to the administration of the department under its control, during the year 1897, in order that the Minister may lay the Report before Parliament, in compliance with the Act.

I have, &c.,

CHARLES BOWN,

Chairman, Fire Brigades Board.

The Principal Under Secretary.

REPORT OF THE FIRE BRIGADES BOARD FOR THE YEAR 1897.

The year 1897 has been characterised by a considerable increase in the number of outbreaks of fire, but happily few attained great magnitude, and the destruction was comparatively small.

No changes occurred in the constitution of the Board, the biennial term of office not having expired. Twenty-seven meetings were held during the year, besides numerous Committee meetings. Visits were paid to various districts in order that the members of the Board might by personal knowledge be enabled to judge as to their requirements with regard to protection from fire, and to decide upon the best positions for telephone fire-alarms.

The sum held at risk by the contributory Insurance Offices which were unchanged in number, showed an increase of £187,671, the contribution to the Board being equivalent to 2.68 pence per £100 on the total £59,907,953. The companies having their head offices in the Colony, having by amalgamation and absorption been reduced to five, and there being a possibility of further reduction of their number, an amendment of the regulations governing the election of their representative would be advisable, in order to meet the altered conditions, and prevent the occurrence of a possible deadlock.

The return of the assessed value of ratable property in the contributing municipalities amounted to £4,719,961. Allowing £18,734 for the assessment of Liverpool, which only became contributory at the beginning of the year, there is shown a decrease of £255,678 in values. The downward tendency of the ratable property in the municipalities has persistently continued for several years, and correspondingly the ratio which the contribution towards the maintenance of the Fire Brigade Department bears to the assessment valuation has slightly increased. This increase, upon a falling assessment, is unfortunate but unavoidable. In the year 1896 the figures were 2s. 6d. in every hundred pounds; last year the proportion rose to 2s. 10d. The city of Sydney returned a further decrease of £145,505, and reductions were very general throughout the municipalities,—in some cases being remarkably large. Only seven boroughs showed any advance, these being—Annandale, £1,228; Botany, £87; Manly, £309; Mosman, £2,978; North Botany, £383; Penrith, £157; and Willoughby, £3,596.

The calls to fires were 611, being 160 more than in 1896. Of these, 86 were false alarms, while chimneys on fire were responsible for 76. Other than those there were 449 fires, of which 27 were rubbish or bush fires. It is satisfactory to have again to report that, notwithstanding the increase of 158 actual fires, the firemen were able to hold them in check, and the destruction of property was relatively small—showing a repetition of the effective service of the previous year.

Four

Ship fires.

Four fires occurred upon vessels in Port Jackson, and creditable "saves" were effected. Fires of this class are very trying to those endeavouring to extinguish them, and frequently are attended by considerable risk. Usually the holds are filled with goods, whose nature, whether inflammable, explosive, or otherwise, is unknown at the moment, and the confined heat and smoke often become overpowering. Recently a Vajen Bader Patent Smoke Protector has been ordered from the manufacturers in Indiana, United States of America, and it is hoped that this will enable a fireman to endure very dense smoke for a time. If the protector prove the success which reports of its trials would indicate, others will be obtained. By its means a man is enabled to carry a supply of compressed air for breathing in smoke or dangerous gas.

Necessity for legislation for protection of the port.

Attention is again drawn to the necessity for legislative action to provide proper protection for the port, and to place the Board in a position to deal effectively with fires on shipping. In the meantime, acting upon advice obtained from counsel, it is proposed to make a salvage claim upon all vessels saved by the exertions of the Fire Brigade. In the last two Annual Reports particulars are given of certain of the requirements and difficulties with regard to the subject, and these are again earnestly submitted to the notice of the Minister.

Fire Brigades Act, imperfection of.

In other respects the Fire Brigades Act, 1884, remains in its original imperfect condition, and calls for recasting, in order that the intention may be more effectually carried out, and the scope of its usefulness extended in directions previously indicated.

To give an illustration of one of the shortcomings requiring rectification, it may be mentioned that applications are from time to time made by house owners or occupants for action to restrain neighbours from lighting fires in dangerous proximity to inflammable wooden portions of applicants' residences, or for protection from sparks poured out from some improperly built or situated chimney. To all such appeals there can be no satisfactory response by this Department, for the Act only provides for extinction of fire, and, unfortunately, omits to give power for its prevention.

Regulation of buildings, and of traffic in inflammable liquids and explosives.

Legislation for the regulation of the height and construction of buildings, especially in the city, and with regard to the traffic in explosives and inflammable liquids, still remains in abeyance, although the necessity for reform in these matters becomes every year more patent. The recent conflagration in Melbourne, which resulted in the destruction of more than half of one of the finest blocks in that city, representing with the contents a value of over £1,000,000, is an object lesson which should not be lightly disregarded.

Stations.

The alteration of the old court-house and police station in Redfern into a fire station was unexpectedly delayed; but the new building being now completed, it is probable that the transition will soon be accomplished.

Paddington.

For a station at Paddington, which also will be occupied by the Metropolitan Fire Brigade, a fifty years' lease of a portion of the Paddington reservoir reserve has been obtained from the Board of Water Supply and Sewerage, and it is proposed to proceed to build there as soon as possible. The establishment of this station will not alone be the means of providing better protection for the large and thickly-populated eastern suburbs, and of rendering additional assistance to the city, but also will enable some measure of relief to be afforded to headquarters fire station, where the limited space at disposal is seriously overcrowded with necessary fire-extinguishing appliances. With the spread of the Metropolitan population, and the increase of the city buildings in height, larger and more powerful appliances for dealing with fire have become requisite, and the space originally provided by the Government has become quite inadequate for their storage and for the proper drilling of the firemen in their manipulation. Valuable as the large modern appliances are, they have unfortunately to be left exposed to the weather in consequence of the want of room complained of. In taking them hurriedly to a fire considerable risk is incurred of breakdown in getting them out of the narrow yard in which they have to be kept ready for immediate action. The loss of life which might be consequent upon such an accident to the long escape ladders is most serious to contemplate. Moved by considerations such as these, the Board has repeatedly applied to the Government to seize opportunities afforded for extension of the area of ground at headquarters, but the applications have not been entertained. The need for such extension is still very urgent, and must become more so from year to year, while the opportunity for providing it, except at enormously increased cost, is being allowed to pass away.

Headquarters. Necessity for increased space.

Rockdale.

In Rockdale, as mentioned in the last report, a new fire station was completed early in the year, and the Rockdale Volunteer Fire Company were placed in possession. At Manly a station has just been built, which the Manly Volunteer Fire Brigade will occupy. The proposed erection of a fire station in Parramatta was postponed, but will now be immediately undertaken. Hurstville, with the assistance of a Government grant and of £100 from the Board, has built a station on ground provided by the Council. The Board holds a twenty-one years' lease of the premises at a nominal rental, and it supplied the necessary fire-extinguishing plant. The newly-formed Liverpool Volunteer Fire Company has just completed a small station, built on a site and out of moneys granted by the Government, the Board providing a hose-reel and gear. Advantageous sites for fire stations have been purchased in Ashfield, and at Chatswood in Willoughby, upon which it is proposed eventually to build.

Liverpool.

Ashfield.

Willoughby.

Telephones, fire-alarms, &c.

The extension of the telephone fire-alarm system during the year has been limited by the need for the greatest possible economy in expenditure of the funds at disposal. The number of street telephone fire-alarms has, however, been increased by 2 in Alexandria, a similar number in Waterloo, 1 in Annandale, and another in Randwick; these 6 bringing the total number to 168; 23 having been installed in the previous year. The mileage of wires was extended from 135 to 146 miles, an addition of 11, of which the connection of the Metropolitan Fire Brigade Station in Newtown to Rockdale and Kogarah Volunteer Fire Stations was responsible for some 7 miles. The distance per telephone will no doubt become greater as the alarm system spreads through the outlying suburbs with more scattered populations. A number of positions have been selected in various districts, at which it is proposed, as funds may permit, to establish other alarms; but the department is hampered in this very valuable work by the aforesaid necessity for extreme economy. The expenditure on this account has hitherto been entirely defrayed out of the Board's ordinary revenue; but section 5 of the Act indicates an intention that the Board should

be

be assisted by Parliament "to establish fire-alarms, telephones, and other appliances in connection with the extinction of fire." The previously mentioned falling assessments of the municipalities interested make it more and more apparent that some assistance of the kind should be afforded without delay.

The Metropolitan Fire Brigade at the end of the year numbered 70, of all ranks, being 6 more than the authorised strength in the previous year. A detachment of the Brigade now occupies the Fire Station in Alexandria, the local Volunteer Fire Company having disbanded. It having been decided to appoint a third Officer to the Brigade, who should be capable of taking the place of the Deputy Superintendent or Superintendent in case of their absence or disability, communications were opened with Commander Wells, Chief Officer of the London Metropolitan Fire Brigade, and upon his recommendation Assistant Officer Nicholas George Sparks, of that Brigade, received the appointment. Mr. Sparks has an unequivocal record of sixteen years' active service in the London Brigade; and since his arrival, on the 26th July, has proved an acquisition to the Sydney Brigade, and thoroughly justified his selection. Metropolitan Fire Brigade.

The Superintendent of Fire Brigades in his report, hereto appended, recommends that the practice of recruiting the Brigade with seamen be reverted to, instead of continuing the preference given to Auxiliary and Volunteer Firemen. It is claimed that the training of the former better fits them for the hazardous service. Recruits.

The Auxiliary Corps at the close of the year numbered 14, there being 6 vacancies. Difficulty is experienced in suitably recruiting this partially paid corps, and the roll is therefore seldom full. Auxiliaries.

In addition to the available fire-extinguishing appliances, a new steam fire engine has been ordered from Messrs. Shand, Mason, & Co., of London, at a cost, together with extra gear, of £914. This is to be of the double-vertical pattern, and capable of delivering 600 gallons a minute. A horse currie ladder costing £84, to reach a height of 50 feet, has also been ordered from the same firm, and will be stationed at Newtown; while the building of a 60 feet telescopic escape was completed by the Metropolitan Fire Brigade. Steam fire-engine, horse currie, &c.

The payments to Volunteer Fire Companies for subsidies and other grants amounted to £2,380, exclusive of considerable expenditure for renovation of plant, repair of stations, and other necessities. The work mentioned in the last report, of regulating the branches, nozzles, &c., to a uniform pattern, has been almost completed. The proposed establishment of a branch of the Metropolitan Fire Brigade, in Paddington, will remove the necessity for maintaining the two Volunteer Brigades which have hitherto served that district. On the 29th January, 1897, the Alexandria Volunteer Fire Company voluntarily disbanded. On the other hand, new companies have been formed at Hurstville and Liverpool, and a Brigade at Richmond is seeking registration. Volunteer Fire Companies.

The Superintendent's report, and various appendices, giving detailed information are, as customary, appended.

CHARLES BOWN,
Chairman.

Adopted at a meeting of the Fire Brigades Board, at Head-quarters Fire Station, Sydney, on the 2nd March, 1898.

Z COLLIS BARRY, Secretary.

Having examined the books and vouchers of the Fire Brigades' Board for the year ending 31st December, 1897, I certify the above-written Abstract of Receipts and Expenditure to be correct

31 January, 1898.

JAMES ROBERTSON, F S I A, Auditor

APPENDIX V.

Mr. Superintendent Bear's Report to the Fire Brigades Board.

Head-Quarters Fire Station, Castlereagh-street, Sydney, 18th January, 1898.

The Fire Brigades Board, Sydney,—
Gentlemen,—

I have the honor to submit my Fourteenth Annual Report on the working and general efficiency of your Brigade and of the several Volunteer Fire Companies, together with the details of fires attended in the City and Suburbs, for the year ending the 31st December, 1897.

The total number of alarms for fires or supposed fires was 557. Of these 86 were false alarms, 22 proved to be only chimney alarms, and 449 were for actual fires. In this number, however, are included 27 bush and rubbish fires.

Of the fires 384 were slight or trifling, 23 were serious, and 42 resulted in total destruction.

Of the 449 fires, 215 were insured, 205 not insured, and in 29 instances the insurances on the buildings or contents could not be ascertained.

In addition to the ordinary fires, there have been 54 chimney fires requiring the attendance of firemen with hand-pump only, making an aggregate total of 611 calls for fires, false alarms, and chimney-fires.

The fires of 1897, as compared with those of 1896, show an increase of 158, the chimney fires reported as houses on fire an increase of 9, and those attended by firemen with hand-pump only a decrease of 2.

In the fires which were slight, there has been an increase of 154; in serious, a decrease of 4; and in those which resulted in total destruction, an increase of 8.

Among the buildings totally destroyed, are classed sheds, weatherboard cottages, &c.; and of the buildings totally destroyed there are only two which were not constructed of weatherboard, wood, &c.

After diligent inquiry made into the cause of each false alarm, I find that, in almost every instance, there was something to account for the alarm, and that very few were given maliciously.

The most notable fires of the year are as follows:—

Under the heading of serious:—

- 18th January,—Sydney Jam Co.'s factory, Darlington.
- 19th January,—Eagle Tobacco Co.'s factory, Clarence-street.
- 1st April,—John Dynon & Co.'s warehouse, Margaret-lane.
- 10th April,—Waterloo Paper Mills, Waterloo.
- 6th August,—“*Australian Star*” Newspaper office, Castlereagh-street.
- 15th October,—George Murray & Co.'s, Clarence-street.
- 16th October,—City Chambers, Pitt-street.
- 27th November,—Residence of Mr. A. J. Brierley, Ashfield.
- 10th December,—Barque “*Socotra*,” Adelaide Wharf.
- 25th December,—Patrick Long's General Store, Parramatta.

Under the heading of total:—

- 3rd February,—Private residence, “*Greycliffe*,” Vacluse.
- 25th July,—“*Chicago Flour Mills*,” Willoughby.
- 20th November,—George F. Bailey's tannery, Willoughby.

Appended are detailed statements of the fires attended by the Brigade and by the Volunteer Companies, as well as those unattended, but which have been reported to the Brigade from various sources, and a member has been sent to obtain the necessary particulars.

The summaries appended show the particular dates, time of call, time of outbreak, trades, localities, insurances, hourly, daily, weekly, and monthly. There is also appended a summary of the supposed origin or cause of fires for the year.

Referring to the summary of localities it will be noticed that in the City of Sydney there were 253 calls, 166 of which were for actual fires, 37 were false alarms, 14 were for chimney fires reported as houses on fire, and 36 were for chimney fires attended by firemen with hand-pump only.

In the suburbs there were 358 calls, 283 of which were for actual fires, 49 were false alarms, 8 were for chimneys reported as houses on fire, and 18 were for chimney fires attended by firemen with hand-pump only.

For full details of fires, and for the particular wards of the City, and the municipalities in which the same have occurred, see Appendices attached. A summary of trades is also given.

Full particulars of the strength of the Brigade (members and plant), together with that of the Volunteer Companies are also given.

The total amount paid by your Board in subsidies and bonuses to the several Volunteer Fire Companies for the year was £2,380 6s. In addition to this, four Companies received £12 each for attendance on the telephone fire-alarms connected with their stations.

During the year, with the exception of Paddington No. 1 and the two companies at Parramatta, all the Volunteer Fire Companies have been supplied with the regulation branches, nozzles, and hose and nozzle spanners.

The two companies at Parramatta will, if possible, be supplied this year, but as the Paddington Company is to be superseded by a detachment of the permanent staff when the new station is built, there is no occasion for making any change there.

The approximate value of the whole of your Board's plant, including the land and stations held in trust by your Board, I estimate at £95,270. The value of the Volunteer Companies' plant outside of what they hold from your Board is not included in this sum.

Seventeen telephone fire-alarms were recommended to be erected during the year, but from want of funds your Board have been able to erect only six, viz.—two in Alexandria, one in Annandale, one in Randwick, and two in Waterloo.

Extension of telephone communication was made from the Newtown Station to the Rockdale Station, thence to the Kogarah Station, and from there to the Kogarah Exchange. I trust that during this year it will be extended to the new Fire Station at Hurstville, provided it can be effected at a reasonable cost, so as to enable the three companies to work together in this district, and thus save the engines being taken from the Newtown district.

The telephone and fire-alarm wire has been extended from 135 to 146 miles, or an increase of 11 miles during the year.

I trust your Board will continue to erect telephone fire-alarms each year around our permanent fire stations. Experience has shown that these alarms are a sure and ready means of getting early calls to fires, and as they are easily used and are accessible to any citizen, they are a great and invaluable preventative against large fires. One hundred and sixty-five first calls for actual fires were received through the street alarms during the year, and in several instances calls were received through the alarms immediately after the brigade had been called through some other source.

Fire-alarms

Fire-alarms are badly needed at Blue's Point and Neutral Bay districts at North Sydney, and additions to the system are required at Leichhardt, Marrickville, Petersham, Redfern, and other districts.

A complete list of the telephone fire-alarms erected to date is appended.

With the exception of Granville all the registered Volunteer Fire Stations are in telephonic communication with headquarters either by direct lines or through the different Exchanges. In many cases communication exists with the local police stations, public departments, &c., thereby placing us in the position of being able to rely on early calls from many different sources.

In the month of August the small steam fire-engine purchased by the Insurance Companies Brigade in the year 1871 was sent to the Darlinghurst Station, and a pair of horses placed there instead of one as previously. The one-horse hose carriage was then removed to Kogarah Station. I fear that this engine will give out very shortly, when it will have to be replaced by one of the steam fire-engines now at No. 2 Station.

The small steam fire-engine now at Headquarters will have to be removed to the Redfern Station to make room for the 600-gallon engine ordered during the first part of the year. This new engine is very much needed now, as I am rather anxious about the boilers of the four engines supplied by the Government during the year 1885, one of which (No. 10) must have a new boiler as soon as possible. As the old "Fire King," bought by the Insurance Brigade in the year 1870, and which is now at the northern station, cannot be depended on for large fires, it would, I consider, be advisable to order another 600-gallon engine for this station if that now ordered proves a success.

I may say that I am a strong believer in large jets of water from large steam fire-engines in dealing with large fires, if the water can be obtained, and as our water supply is improving from year to year these large engines are the best insurance against serious fires in the city.

This arrangement will allow of the smaller fire-engines being sent to the suburbs contiguous to the city, such as Paddington, Redfern, and Surry Hills; but, as I have already pointed out, the four engines built in the year 1885 will require new boilers very shortly.

I regret that nothing has been done towards establishing a small station at Surry Hills. This station, as I have frequently pointed out, is very much required as the district is wholly unprotected by either fire station or fire-alarms.

Redfern.—The old Police Court and Police Station at Redfern was closed in the month of December, but whether it is going to be transferred to your Board for the purpose of a fire station I am at present unable to say. A station is very much needed in this district to save the engines and plant from the city being taken to fires towards Botany, &c.

The Board of Water Supply and Sewerage having granted a fifty years' lease of a part of the Paddington Reservoir land for a site for a fire station to your Board, I trust that something will shortly be done towards the erection of a proper fire station for the protection of this densely populated district. I may further add that the sooner the present unsatisfactory arrangement is superseded the better.

During the month of May the Rockdale Fire Station was completed, at a cost of about £990 for the land and building, £100 of this amount being given to your Board by the company from a Government grant. The company was allowed to occupy the station on the 1st June, and were placed in the possession of an improved plant and a pair of good horses at a considerable cost to your Board; the old manual engine and some of the plant being transferred to your Board by the company.

I may here say that I recommended this station to be built with one object in view, viz.—The district of St. George, embracing Rockdale, Kogarah, and Hurstville, is a very large one, covering an area of over 24 square miles, and in the course of time it is bound to be very thickly populated owing to its being bounded by water frontages in all directions, and to the fact of its possessing a good railway service right through the centre of the three Municipalities. In a few years it will be necessary for your Board to place a permanent acting-foreman in charge of this station, who will manage the three Volunteer Fire Companies. When this time arrives the quarters, &c., are all ready.

About the third quarter of the year the Burwood Volunteer Fire Company removed from their old quarters in Belmore-street to premises at the corner of Burwood Road and Belmore-street for which they pay a rental of £52 per annum. The alterations were rather extensive considering the length of the lease, your Board assisting to the extent of £32 10s. I trust your Board will endeavour to obtain this site through the Government as a permanency, as it is one of the best sites in Burwood for the purpose of a fire station.

During the month of June the Granville Volunteer Fire Company were obliged to remove from their old quarters to a building a little further away, facing Sydney Road, for which your Board pay a nominal rental of 5s. per week, until such time as a new station is built on the land, which has been purchased with a Government grant.

About the middle of the present month the new Manly station will be finished at a cost of about £800 for the land and building. £100 of this amount was given by the Company from a Government grant. The volunteers will occupy the station about the beginning of February giving over their present station for a small sum to the Municipal Council on whose land it stands.

The new fire station at Hurstville being erected by the Municipal Council on their own land, to which your Board has assisted to the extent of £100, will be ready for occupation at the end of the present month. Your Board are supplying the plant, viz.—a hose reel for the present, which will later on be replaced by a light one-horse manual engine. Your Board has a lease of this station for twenty-one years.

A new station has lately been built at Liverpool on Government land, and with a Government grant of money, by the new Volunteer Fire Company formed there, on the understanding that your Board supply a hose reel and the necessary hose, &c. Up to the 31st of December no application has been received for the plant.

Land has been purchased by your Board during the year as a site for a new fire station at Ashfield, and one at Willoughby. Both sites are in good central positions, and stations are much needed in both districts.

An alteration of the present fire station at Leichhardt is much needed. The apartments of the engine-keeper are too much mixed up with the station. The land belongs to the Council, and I have been informed that the Company has just obtained a twenty-one years' lease of it.

Land has been obtained for new stations at Granville, Paddington, Parramatta, and Rookwood, and most likely the old Court-house and police station at Redfern will shortly be transferred to your Board for a similar purpose.

I again strongly recommend your Board to obtain power to borrow money, and to erect some of these stations each year, as they are badly needed. The rents now received from the members of the Brigade, added to the amounts which would be obtained from the new stations erected, would almost provide for the interest on the loan.

If power were obtained similar to that under the 52nd section of the Melbourne Fire Brigade Act for borrowing, say, from £25,000 to £30,000, and only from £5,000 to £6,000 to be raised and expended each year, it would prove a progressive policy for buildings alone.

The old plant which was turned over to your Board by the Insurance Brigade is now worn out, and the plant supplied by the Government in the years 1884 and 1885 is showing a good deal of wear and tear, after having done a good deal of hard work, and it will be necessary for your Board to replace this shortly by new plant. The different buildings, too, will be a source of expense in the shape of drainage, additions, repairs, &c.

About the end of the present year the 75-foot ladder, supplied by the Government in the year 1886, will be of no further use to the Brigade, as it is well nigh worn out, and it is not worth re-making again, as it is past its time and of too old a pattern, not being self-supporting from its base, as all such ladders should be for dealing with high and modern buildings, so that the men working on them may be quite safe from falling walls. Outside of this, the electric tram overhead cable will prevent this ladder from being used in a general way. The van itself can be used as a hose and coal tender for some time to come for large fires.

I have placed myself in communication with several firms, with a view of getting a self-supporting ladder to reach 100 feet with a water-tower combined. I propose that this ladder should be elevated to the first position by means of both compressed air and by manual labour, with spur wheels, cogs, &c., and I have every reason for believing that my idea will prove a success.

As this ladder will have to last for several years there is no good in thinking of getting one to reach a less height, for I have been informed that some buildings will shortly be erected in the city, to a height of 130 to 140 feet.

If this information is correct, and no provision made for the buildings being fire-resisting, there being no proper Building Act in existence, your Board must expect some very large fires in the future—much beyond what you have experienced up to the present date, and beyond the ability of the Brigade to grapple with.

Speaking of a new Building Act for this city, I may say that I obtained through the Government from the Agent-General the Building Acts of Birmingham, Manchester, Liverpool, and Glasgow, as well as the Electric Lighting Acts of these and other cities, all of which were up to the end of 1896, with a view of assisting the authorities in compiling a new Building Act, but no steps have, so far, been taken in the matter.

I may also say that Kansas City, in America, has some very good regulations worthy of imitation for fire escapes being provided to buildings over a certain height, and also in reference to the protection of hotels, theatres, &c., similar provision being sadly required for this city and suburbs.

A 60 foot ladder, for one horse, has been made, and stationed at No. 2 station, a good deal of the ironwork being used up from the old ladder lately stationed at No. 3 station.

A small currcle telescopic ladder for one horse has been ordered for the Newtown station.

During the year the Rookwood Volunteer Fire Company handed over their old manual and some plant to your Board, your Board supplying another engine in its place. The Company have procured a horse and the members appear to work together much better than formerly. I have given instructions to the Telegraph Department to place this station in telephonic communication with the local Exchange. At present it is in telephonic communication with the Asylum through the Exchange. As soon as convenient I should like to see this station placed in telephonic communication with the Auburn Meat Works Brigade to enable the two companies to work better together for the protection of the district.

During this year I propose to supply Drummoyne Company with a light manual engine suitable for their district; with a horse they would then be able to render more assistance to their own district, Balmain, Five Dock, &c.

I am changing the 5-inch manual engine at Burwood for a 7-inch manual, as the company now keep two horses. The 5-inch manual will be repaired and sent to North Botany, and, in time to come, if this company keep two horses, this manual will suit, as it is fitted with pole and sway bars besides the shafts. The Botany manual will then be done up and sent to Hurstville to take the place of the hand reel, which will be sent from there to the Mosman Municipal Council Chambers.

A new hose carriage was supplied to the Marrickville station during the year, enabling us to withdraw the manual engine for use elsewhere.

Richmond Volunteer Fire Company have not yet applied for registration, and a company has not yet been formed at Penrith.

When the Randwick Post Office is completed, I would recommend your Board to apply for a piece of the spare land for a site for a Fire station as it is a very central one for Randwick.

During the year we were rather unfortunate in four of our horses dying. Four others were sold and nine were purchased. At present we have thirty horses, viz.,—twenty-four at permanent stations and six on loan at four volunteer stations. This number, with sixteen owned by the Volunteers, makes the total number of horses forty-six.

About 4,000 feet of hose was condemned during the year. A good deal of this hose is what had been taken over from the Volunteers when introducing our own hose, couplings, &c., for the purposes of uniformity.

At the latter part of the year it will be necessary to order a liberal supply of hose to make up for some more which will have to be condemned very shortly.

I can only reiterate what I said in my last year's Annual Report, viz., "that every encouragement should be given to the Volunteers in the outer districts as long as they are amenable to discipline." Some companies give very little trouble, while others give a good deal in many ways, and neglect the important duty of keeping their younger members up to the mark in drill, &c.

I trust your Board will adopt my recommendations in reference to keeping the Volunteers to their own districts more, and discourage the growing tendency on their part of attending processions and demonstrations upon every little pretence, and going long distances away from their stations leaving their districts in many cases wholly unprotected.

As a practical fireman I fail to see why so much fuss should be made in these demonstrations by firemen simply because they wear a uniform, any more than there should be by a body of tradesmen who do not wear a uniform. I also entirely disapprove of the practice of according public funerals to firemen, whether permanent men or volunteers. It is only done for the purpose of display, and draws the men away from their legitimate duty of protecting the life and property of citizens.

The same practice prevailed in London in my time, and now exists even in cities like Sydney, where the brigades are very much undermined.

Many persons think we should be like the military. Our case is, however, quite different, as we of course get no previous notice of when or where a fire is to happen, and we must be always prepared for any emergency, otherwise a brigade is of very little service.

The Alexandria Volunteer Fire Company having resigned in the early part of the year your Board gave authority for four men to be added to the strength of the Brigade. This was done, and four permanent men and an auxiliary were stationed at Alexandria. This brought the total up to 68 men. Since then we have taken on a man for the Government buildings, for which duty the Government pay your Board the sum of £160 per annum. A third officer has been added to the Brigade, making in all a full total of 70 men, including myself. I append a list of the Government buildings which have to be attended to, in accordance with the arrangement made with the Public Service Board, and I may say that this duty is found to be a great strain on our small staff.

As I have repeatedly stated the Brigade is far too small and is very much undermanned for the work it has to accomplish over the very large area which comes within your Board's jurisdiction. I fully expected that our numbers would have been increased to 80 from the commencement of this year; this number to be further added to at the beginning of next year, and so on until we had about 100 permanent men and 50 auxiliaries for the protection of the city and the suburbs contiguous to it.

These men should be in six city stations, four suburban stations close to the city, and two others in the outer suburbs.

Under this arrangement the auxiliaries would be of great assistance at the time of a large fire for telephone duty, getting on hose, coal, &c., and for attending a second fire, if such were to happen.

The engineer, who formerly was employed only temporarily, was allowed to join the brigade as an ordinary fireman. Francis W. Brooks, who had to leave the brigade owing to ill health, was allowed by your Board to rejoin on the 4th August, but being taken ill almost immediately and having to be taken to the hospital, he had to leave the brigade again, with three months' salary allowed him by your Board from the 4th November.

The permanent staff attend to the electrical work of the brigade, the erection and repairs of all telephones, telephone fire-alarms, &c., the recharging of batteries, the making of all appliances for the quick opening of doors, and for harness, &c. The staff also attend to the blacksmithing, carpentering, engineering, hose-repairing, painting, plumbing, horse-shoeing, and the general repairs of the different stations.

During

During the year a good deal of repairs have been done to all the steam fire-engines, especially to the boilers. Both the large ladders have been dismantled, repaired, and repainted, and the turn-table ladder was altered so as to enable it to be turned round and extended quicker than previously.

During the years 1896 and 1897 twenty trained men left the brigade. In the year 1896 twelve men joined the brigade, and eighteen joined in 1897. Of this number, twenty-two are now in the brigade. One member of the staff left on the 31st of December owing to old age, and another man leaves at the end of the present month.

With a total of only seventy men, who are distributed through eight stations, and with twenty-two of this number with under two years' service, your Board will readily see that the brigade is very much under-manned, and not strong enough to cope with a serious fire in the city.

As to the general efficiency of the brigade, I am bound to say that it is not satisfactory. I am quite confident that to keep up the standard of efficiency it will be necessary to revert to the old regulation of filling all vacancies with seamen, and especially is this the more necessary in a brigade like ours where we have to deal with ships on fire. Men who come from country towns require far more training than we can afford to give them, and they are not so amenable to discipline, and do not adapt themselves so readily to the conditions of our service as seamen. We must have men who are possessed of the spirit of self-reliance, and who are accustomed to act on their own responsibility in cases of emergency.

I am afraid that it will be a very serious matter for Sydney some of these days when, with from 15 to 20 per cent. of the men on leave, sick, on telephone duty, attending to public buildings, away drilling volunteers, &c., we are called upon to deal with one of our dangerous blocks on fire (and I may be allowed to state that there are a good number of such places in the city) with very narrow lanes and streets intervening, and these buildings loaded with all kinds of combustibles, such as oils, spirits, chemicals, and explosives of all kinds, in fact everything necessary to burn the city down with a high wind blowing at the time.

It is only by accident and good luck that we have escaped so long, and also in a great measure owing to the prompt calls received through our telephone fire-alarms, to our getting on the scene so quickly, and to our water supply being so good.

I regret that nothing has yet been done towards providing a floating steam fire-engine for the protection of the shipping of our harbour and for the warehouses along the wharves. We had four ship fires during the year, making a total of fifty-one to the end of December since the Fire Brigades Act came into operation.

The Water and Sewerage Board have made great strides towards the improvement of the water supply in the city and suburbs since the beginning of the year, but still there are some very weak points in the city as well as in some of the suburbs. I am very pleased to notice that the Board are placing screw-down hydrants in some of the suburbs contiguous to the city. This is, no doubt, a step in the right direction, and it will be found much cheaper in the long run than to be always having to replace the balls in the ball-hydrants. It is very much better, from a hygienic point of view, for with the ball-hydrants in a hollow and the pressure off for a time, the ball falls down, allowing the slush and sand from the roadway to enter the water-main if the lid of the cast-iron box is not very tight. I have noticed that this is the case in hundreds of instances, especially so at the dead end of mains leading down to wharves, &c.

I have to thank the officers and members of the volunteer companies for their assistance, and also the officers and members of the police force for their valuable assistance during the year. I have also to return my thanks to the turn-cocks and to the public generally for their valuable co-operation.

In conclusion, I desire to return my best thanks to your Board for the cordial support you have accorded me.

I have, &c.,

WILLIAM D. BEAR,
Superintendent of Fire Brigades and Inspector of Kerosene.

APPENDIX VI.

GOVERNMENT buildings in which fire extinguishing appliances are attended to by the Metropolitan Fire Brigade, under arrangement with the Public Service Board, 23rd July, 1897.

Art Gallery.	Law Courts, Chancery Square.
Audit Office.	Parliament House.
Australian Museum.	Railway Booking Office, George-street.
Chief Secretary's Office.	Registrar-General's Office.
Custom House.	Stamp Duties Office.
Department of Lands.	Supreme Court, King-street.
General Post Office.	Technical College.
Government House.	Technological Museum.
Government Printing Office.	University.

APPENDIX VII.

STATIONS and Working Plant of the Metropolitan Fire Brigade and of the Volunteer Fire Companies.

	Permanent Men, including Superintendent.	Auxiliaries.	Horses.	Large Steam Fire-engines.	Small Steam Fire-engines.	Manual Engines.	Water Tower.	Large Ladders.	Small Ladders.	Scaling Ladders.	Hose Carriages.	Hose Reels.	Carts and Waggon for Visiting and for Hose.	Buggies.	Hose Tenders.	Hand-pumps, all kinds.	Caps for Hand-pump, Hose, and Engines.	Heaters for Steam Fire-engines.	Canvas Cisterns.	Hose, ft. of, 3½ in. Lined.	Hose, ft. of, 2½ in. Lined.	Hose, ft. of, 2¼ in. Unlined.	Suction Pipes, all sizes, ft. of.	Branches, metal or otherwise.	Breeching Deliveries, all sizes.	Elbow Deliveries.	Goose-necks.	Nozzles, all sizes.	Standpipes, for Ball Hydrants.	Jumping Sheets.	Telephone Fire-alarms.	Fire-alarm Boxes.	Telephone Shutter-boards, all Nos.	Telephones, erected and spare.	Telephone and Fire-alarm wire, miles of.	Bell-boards, in Station, and spare.	Bells, large.	Buckets, Leather and otherwise.	Lamps, various portable.	Respirators.	Spanners, Hose and Nozzles.	Subsidies, &c., to Volunteer Fire Companies.	Remarks.

APPENDIX VIII.
METROPOLITAN Fire Brigade.

Name.	Rank.	Date of Joining.	Salary.	Where stationed.
William Douglas Bear	Superintendent of Fire Brigades and Inspector of Kerosene.	1 July, 1884	Government Officer.	Head-quarters.
Alfred Webb	Deputy Superintendent	26 June, 1888	£425	do
Nicholas G. Sparks.....	Third Officer	1 June, 1897	£250	do
John F. Ford	Foreman	1 Aug., 1884	£182	No. 2 Station.
Sydney Watson	do	1 Jan., 1885	£182	No. 3 Station.
George Lang	do	7 Jan., 1885	£172	No. 7 Station.
John M'Knight	Engineer	18 July, 1884	£177	Head-quarters.
Thomas Gorman.....	Assistant Officer	18 June, 1885	£162	No. 4 Station.
Samuel Holman	do	11 Feb., 1886	£162	No. 6 Station.
Thomas G. Cutts.....	do	19 Mar., 1888	£162	Alexandria.
Harris S. Davis	do	18 April, 1888	£162	No. 2 Station.
Frank Jackson	do	7 Feb., 1889	£162	Head-quarters.
John Graham	do	15 April, 1889	£162	No. 5 Station.
George Parsons	do	6 Sept., 1889	£162	No. 3 Station.
Harrie B. Lee	do	19 Feb., 1891	£162	Head-quarters.
Joseph Stanchell.....	Farrier	1 July, 1884	£150	do
Thomas P. Gordon	1st-class fireman	3 Jan., 1885	£150	No. 7 Station.
George C. Gray	do	1 July, 1884	£150	Alexandria.
Robert W. Nash	do	1 Jan., 1887	£150	No. 3 Station.
George H. Dadd.....	do	13 Feb., 1890	£150	No. 5 Station.
Albert E. Pickering	do	18 Sept., 1890	£150	No. 2 Station.
Charles May	do	3 Oct., 1890	£150	No. 5 Station.
Edward Smith	do	7 May, 1891	£150	Head-quarters.
John A. Becker	do	12 Mar., 1891	£150	Alexandria.
William T. Corkill.....	do	25 May, 1891	£150	No. 2 Station.
James W. Morris	do	1 Dec., 1891	£150	do
Harry Skelton.....	do	24 Mar., 1891	£150	Head-quarters.
Robert Hunter	do	16 April, 1892	£150	do
John A. Nicoll	do	3 Aug., 1892	£150	No. 3 Station.
Augustus Gerard	do	21 Feb., 1890	£150	No. 4 Station.
Ephraim Stoneham	do	6 Jan., 1893	£150	Head-quarters.
Edward J. Roberts.....	do	9 Jan., 1893	£150	No. 2 Station.
Alexander Jamieson	do	18 Nov., 1892	£150	do
John Wiggins	do	17 Feb., 1893	£150	Head-quarters.
James Hancock	1st-class "A"	1 Aug., 1884	£140	No. 3 Station.
George Alchin.....	2nd-class fireman "A"	23 April, 1890	£140	Head-quarters.
William Whitnall	do do	19 June, 1893	£140	No. 3 Station.
George W. Barry	do do	21 Aug., 1893	£140	Head-quarters.
James Jones	2nd-class fireman "B"	1 June, 1893	£130	No. 7 Station.
Henry T. Dawes	do do	1 Nov., 1893	£130	No. 5 Station.
Christopher T. Digby.....	do do	30 Mar., 1894	£130	No. 2 Station.
George E. J. Wills.....	do do	21 May, 1894	£130	Head-quarters.
Arthur Houghton	do do	14 Sept., 1894	£130	do
William Best	3rd-class fireman "A"	9 Oct., 1894	£120	No. 2 Station.
Kenneth Arthurson	do do	8 April, 1895	£120	No. 3 Station.
Thomas L. Thomas.....	do do	9 April, 1895	£120	No. 6 Station.
Francis A. Tuck	do do	14 May, 1895	£120	No. 5 Station.
Archibald Murray	do do	5 Sept., 1895	£120	No. 4 Station.
James Carson	do do	9 Oct., 1895	£120	Head-quarters.
Thomas P. Nance	3rd-class fireman "B"	6 Dec., 1895	£112	No. 7 Station.
Francis Pickering	do do	1 Feb., 1896	£112	No. 4 Station.
James Eccleston	do do	1 April, 1896	£112	No. 6 Station.
James Sorlie	do do	1 April, 1896	£112	Head-quarters.
William Bernie	do do	7 April, 1896	£112	No. 4 Station.
John Chambers	do do	6 May, 1896	£112	No. 3 Station.
Arthur W. Vigay	do do	1 July, 1896	£112	No. 7 Station.
Sidney H. Lister	do do	27 July, 1896	£112	Head-quarters.
Charles Andrews	do do	14 Sept., 1896	£112	Alexandria.
William Pickering	On probation	25 Jan., 1897	£106	No. 3 Station.
Mark Saunders	do	2 Feb., 1897	£106	Head-quarters.
Arthur E. Hallett	do	1 Mar., 1897	£106	No. 2 Station.
George S. Grimmond.....	do	1 April, 1897	£106	do
James Josephson	do	20 April, 1897	£106	Head-quarters.
Percival W. Love	do	5 July, 1897	£106	do
George F. Cox.....	do	19 July, 1897	£106	do
Samuel Wilson	do	19 July, 1897	£106	do
John Etherington	do	1 Aug., 1897	£106	do
James A. Ryan	do	9 Aug., 1897	£106	do
Phillip Henry	do	9 Aug., 1897	£106	do
Charles R. Tranter.....	do	2 Nov., 1897	£106	do

NOTE.—Ten members left the Brigade during the year. John McKnight retired on the 31st December, 1897, owing to old age.

AUXILIARY CORPS.

Thomas H. Cook.....	Auxiliary Fireman	4 Oct., 1893	No. 5 Station.
David Anderson	do	23 Oct., 1893	do
David Vandine	do	17 June, 1895	No. 6 Station.
Ernest C. Evans	do	8 July, 1895	do
William Francis	do	20 Jan., 1896	No. 5 Station.
Arthur G. Reeves	do	1 May, 1896	No. 4 Station.
William B. Thorpe.....	do	6 Aug., 1896	No. 6 Station.
William R. Elders	do	10 Aug., 1896	do
George Harper	do	15 April, 1897	No. 4 Station.
James McNee	do	1 July, 1897	No. 6 Station.
Ambrose J. Smith	do	24 July, 1897	Alexandria.
Harry Tuck.....	do	23 Nov., 1897	No. 2 Station.
James Kehoe	do	13 Dec., 1897	do
Stuart D. Campbell	do	14 Dec., 1897	do

Seven members of the Auxiliary Corps left during the year, and four were transferred to the permanent staff.

1898.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PHARMACY BOARD OF NEW SOUTH WALES.

(REPORT OF THE PROCEEDINGS OF, FROM 1ST JULY TO 31ST DECEMBER, 1897.)

*Printed under No. 1 Report from Printing Committee, 30 June, 1898.*Report of the Proceedings of the Pharmacy Board of New South Wales from
1st July to 31st December, 1897.

Richmond Terrace, Domain, Sydney, 1 January, 1898.

THE Pharmacy Act having become law on the 1st July, 1897, a Pharmacy Board was appointed by Government on the 12th August, 1897, and met for the first time on the 18th August, 1897. The members of the first Board appointed by Government were Messrs. Dr. J. Ashburton Thompson, R. T. Bellemev, H. S. Brothwood, C. Butcher, W. G. Jones, C. A. Marshall, Ll. P. Williams, and I. R. Willows.

Mr. R. T. Bellemev was elected president, Mr. H. S. Brothwood, hon. treasurer, and Mr. A. Forster, registrar to the Board.

Mr. C. A. Marshall resigned his seat on the Board, but up to the present no person has been appointed to fill the vacancy.

The Board have held 11 meetings with the following attendance:—Dr. J. Ashburton Thompson, 5; R. T. Bellemev, 11; H. S. Brothwood, 9; C. Butcher, 11; W. G. Jones, 10; C. A. Marshall, 3; Ll. P. Williams, 10; I. R. Willows, 6.

The first work of the Board was to frame regulations under section 20 of the Pharmacy Act, and this was accomplished on the 9th September, after four meetings having been held for the purpose. The regulations were at once submitted to the Treasury, and were returned to the Board on the 5th October for some alterations, which were effected immediately, when the regulations were again sent to the Treasury on the 8th October, and having been confirmed by His Excellency the Governor, with the advice of the Executive Council, the regulations were gazetted in accordance with the requirements of the Act on the 12th November, 1897. Everything having been prepared for this event, notices and application forms were at once despatched, with the result that up to the 31st December, 1897, 521 applications for registration under the Act were received and dealt with.

Of these applications, 434 were granted, 71 were postponed for further inquiry, and 16 were refused.

Besides the above 521 applications there were 97 applications which have not yet been placed before the Board, on account of being incomplete or informal, or because the prescribed fee had not yet been paid.

The Board had to contest against the reckless manner in which certificates, recommendations, &c., have been given to candidates for registration under the Act.

The Board, seeing the necessity for providing the required accommodation for holding examinations, classes, &c., as provided for under the Pharmacy Act, waited upon the Hon. the Premier and Colonial Treasurer for the purpose of inducing him to grant the free use of the old building known as the Government Stores, in Lower George-street. The Premier, recognising the justice of the request, said the Board should have the use of the building if it were available, but later on informed the Board that they would have to pay £150 rent per annum for the use of the place. As this Board is not in a position to pay any such rent they are deprived of the necessary means for carrying out the examinations, &c., for qualifying candidates for registration as pharmacists. The Board desire to point out that though they are at present in possession of something like £450, which amount has been received for fees, &c., this will nearly be the total sum likely to be received for many years, as there is no other source of revenue at the disposal of the Board, and this amount will soon be expended for salaries, expenses, &c., so that in a year or two the Board will be absolutely without means, and would, therefore, not be justified in incurring the expenditure of £150 for rent. The Board desire to point out that in all other colonies ample accommodation has been provided by Government for the use of the various Pharmacy Boards.

FINANCE.

<i>Receipts :</i>						£	s.	d.

Fees to be returned	14	14	0	
Balance at the disposal of the Board	£450	2	5	

RECIPROCITY WITH OTHER COLONIES.

Negotiations were entered upon between New South Wales and Victoria for the purpose of recognising the certificates issued in the two colonies, but as the Victorian Board declined to register those persons who are admitted under clause 11, section D, of the New South Wales Pharmacy Act—that is to say, apprentices and assistants who have served a certain period before the passing of the Pharmacy Act of 1897, and who are registered in New South Wales without examination—the negotiations at present have fallen through.

R. T. BELLEMEY, President.
 CHAS. BUTCHER.
 H. S. BROTHWOOD.
 I. R. WILLOWS.
 LL. P. WILLIAMS.
 WILLIAM G. JONES.
 J. ASHBURTON THOMPSON.

Sydney, the 1st day of January, 1898.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

HAY IRRIGATION TRUST.

(STATEMENT OF RECEIPTS AND EXPENDITURE FOR THE YEAR 1897.)

Printed under No. 1 Report from Printing Committee, 30 June, 1898.

STATEMENT of the Receipts and Expenditure of the Hay Irrigation Trust, for the Year, 1897.

I, JAMES NEWTON, of Hay, in the Colony of New South Wales, do solemnly and sincerely declare that the attached exhibit marked "A" is a return showing the cost of management, together with a full account of all receipts and expenditure of the Hay Irrigation Trust, for the year ending 31st December, 1897.

And I make this solemn declaration, conscientiously believing the same to be true, and in virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of oaths and affirmations taken and made in various Departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of voluntary and extra-judicial oaths and affidavits."

JAMES NEWTON

Made and signed before me, at Hay, this 5th day of March, 1898,—

W. H. BARBER, J.P.

HAY IRRIGATION TRUST.

("A.")
